[Origineel op perkament met zegels van de oorkonders.

Tilman Portgens en Jan Ruitzen komen in andere akten voor als schepenen van Swalmen en Asselt en treden hier mogelijk op als laten van de laatbank van Asselt, waarvan Johan van Vlodrop eigenaar was.]

"I Johan van Vlodorp and Ariaen van Meroide, acknowledge in this open letter that we have given out to lease our weyrt off grient situated in Wynerden at the wide flat called Bocksweyrt [Boxweerd] for two years long and a half, we are pleased and mutually agreed that every year a half year in advance to stop Jan van den Bergh residing in Neer and Jan will give us every year in the weyrt amounting to twenty separate Haersch guilders or twelve separate Burgundian Brabantine stivers [dimes] for the guilder or for fourteen days that are unconditional to the town of Ruremunde there. Let us believe that Jan van den Bergh, in advance, has lent us two hundred modest postulates of Haersche guilders, which, in our great need and to cover more damages, were returned to Segher Tesser's seven children according to our wishes, as stated in the letter from us, when they spoketo us, and so we agreed that we would give Jan van den Bergh, in advance, of the two hundred Haersche guilders a regular

rent and will continue to do so from time to time, as long as the tribute is around, which would then be half of the entire period as before. Also so we agree with the
110395 tribute and the agreement if Jan van den Bergh is in debt for some time, then Johan van Vlodorp and Ariaen van Meroede, who are in debt to us, will be given to them immediately. Johan van den Bergh or his heirs will immediately owe him two hundred Haersch guilders, and the amount you lent us in our need will be returned to them and paid to their satisfaction. In the event that this does not happen, it will be found
110400 to be in short supply and Jan van den Bergh or his heirs do not receive their money in the same measure as in debt, then maybe Jan or his heirs will receive the Bocksweert in debt. The use of the annual tax of twenty Haersh guilders, with the borrowed money of two hundred Haersh guilders in the foregoing. We are not to give any of it until the borrowed money has been fully paid and given. The time of the tax
110405 will be the first day of April. All the guilders, if they found him in private, in an ordinance, this in truth, we have, Johan van Vlodorp and Ariaen van Meroede, each of us, and for our inheritance, our seals are attached to him, as he is also on the bank of the to the fact that this mystery and punishment occurred, the honorable Tyll Porttens, Jan Ruytzen and Katheryn op de Vrythoff were informed. Given at our house
110410 in Eelssen in the year of our dear lords one thousand five hundred and twenty-eight on Thursday after half-fast.

October 2, 1612 RIJKEL - Hendrick van Cruchten declares that on August 30, 1612, the superintendent of the Court of Audit and others leased him an accretion ('grindt')
110415 located opposite his farm at Rickel [=Rijkel] under Bezel [Beesel], as it is located there or may accrete in the future. For this, he will pay the Court of Audit (on behalf of the Duke of Guelders) 45 Brabant stuivers annually for each acre of 'holtgewasende' (wooded crops, green or pastureland). On October 26, 1611, Van Cruchten reported to the Court of Audit that he had taken over the lease from Andries Driessen, pastor of Neer, of "two gravels or middle sands located in the Maas River near Bezel, one against the Kessel Haege below the Handtsommerbeek stream, the other situated somewhat higher, opposite Deursdael's woods or his farmstead of Rickel." These accretions had been leased to the aforementioned pastor approximately four years earlier for 30 Brabant stuivers [dimes] for a period of six years. The
110420 accretions opposite the Kessel Haege [probably the Mussenberg] have since been completely washed away; the other was also "extensively washed away and scoured by the high waters two years ago, and also severely damaged by the most recent high waters," especially on the Horn side. This accretion is also threatened with complete erosion by high water and ice formation, but this can be prevented by revetment (bank
110425 revetment). Because Van Cruchten's farm lies opposite this accretion, he is willing to have it revetment and sanded at his own expense, provided he can lease it for a reasonable fee. The Court of Audit, following the advice of Engel van Offenbeeck, Montfort's steward, inspected the accretion and determined that the accretion, including the stones and sand, is less than a hectare {?} in size, and that it will
110430 cost 300 pounds Arthois or more to revet it and refill the pits and sewers created during the last high water. Starting on August 30, 1612, Van Cruchten was granted free use of the accretion for a period of 10 years, in exchange for the revetment costs. After this period expires, namely on August 30, 1622, the accretion will be measured at the joint expense by a sworn surveyor using the "measure or rod of Bezel." For each acre usable as "hollow crops, greenery, or barley, dug out stone and sand," he will pay the aforementioned 45 Brabant stuivers, "in the end measure, in the end money," for as long as the accretion exists. Every five years, a new survey will be conducted at the joint expense, and the rent will be increased or decreased. Van Cruchten will not be able
110435 to recover from the Duke any costs, damages, or labor costs incurred to maintain the accretion. Finally, on August 30, 1612, it was determined that Van Cruchten must issue a reversal letter to the Court of Audit, which is hereby done. [Andreas Driesen was pastor in Neer from 1598 to 1621 (Jan Hanssen, December 31, 2000). The place name "Ne..er" is not legible in the deed.]
110440

August 1, 1668, SWALMEN - Declaration regarding the levying of tithes and concerning the (lost) round tower of Hillenraad.
Johan de Verwer, inspector of His Royal Highness Licenses on the Maas, as the late scholtis of the court and lordship of Asselt, assisted by the licentiate Thomas
110455 Bordels on behalf of the Marquise de Wagniers, Peter Spee and Johan Obers, both late aldermen, and the secretary Suiverich, as well as the late messenger Tiel of Assel, certified that they had attended the presence of Geurt Quijten, tenant of the aforementioned court, regarding the Hillenraet house, where Gootsen Gerardts, aged 70

110460 and half-man on the Graetshoff, and Corst Stockmans, aged 50, declared that they had leased the tithe of the Asselterhof some 40 years ago ' ... and further designated these following limits of the same tithe, namely, the round horn of the Hillenraet house, which has now been demolished and the new hall on the site was built, standing on a thick old oak tree near the end of Cleutiens Straat, pointing from there to the thorn of the Count's House of Hoorn up to the Grip, situated in two plots together

110465 measuring 3 quarters of a square, currently belonging to Johan Henskens and Ruth Silkens 'as nieces and nephews'. 'And from there, along the lands to the Hillenraet house and Beeckerhoff lands of the Carthusians to Ruermondt, from where the thient [=one-tenth] in the field on the left-hand side belongs to the court of 't Asselt and thus continuing between the property of the aforementioned Carthusian lords on one

110470 side, along the Meulenwegh, shooting off with a pointed point at the Hillenraederwegh, and on the other side the Gasthuis and the lands of the reverend lords of the Capitulaeren, where the reverend Cartusian fathers have the tithe on their lands, on the right side, and on the Gasthuis and the lands of the reverend lords of the Capitulaeren on the left-hand side the aforementioned court of Asselt.

110475 Idem on the other side of the Hillenraederweg on the left-hand side, the reverend Carthuyser Fathers have a small plot of land separated from their other lands by the road, together measuring about seven morgen, on which property of the Carthuyser Fathers the tithe belongs to the pastor of Swalmen, called the Schoollaster's Tithe, and the remainder of the lands lying on the left-hand side, thief, the aforementioned

110480 Assel farm of the Carthuyser Fathers land on the right-hand side, then further on one and on the other sides of the aforementioned Gasthuis land, heard the thief of the Gasthuis land at the Assel farm, and from there going further to Goetsen Graets land, which is located at the the late pastor of Swalmen and the lords of Carthusiasm, and the other land belonging to the lords of the Capitulars, thief the court of Asselt up

110485 to the Leijtgraeff, from the Leijtgraeff going up along the Tigelerije to the Spurck Hegge on the other corner of the Laethwegh standing on the land of the Carthage Fathers, and from there on the left hand side along the bush belonging to the heirs of Bijl to Venlo up to the Carthage's small camp, which camp also the aforementioned heft thief to the lady Dursdal Spickter, from there on the oak stock at Wittengraeff

110490 up to the oak tree on the grave of the reverend lords of the Cappitulars farmyard at Graeterstraet standing and so further to the edge of the gap from the orchard to the thorn bush on Graterwegh against the aforementioned oak stake on the Wittengraeff tenth t'Cappittel and the other lands the aforementioned orchard.

110495 September 24, 1669 SWALMEN AND ASSELT - Declaration by several mayors associated with the Lordship of Asselt concerning the walking and taking possession of an influx into the Maas River near the Biesweerd.

"We Johan de Verver, scholtis, Johan Obers, Nelis Janssen, Corst Peckx, Corst

110500 Stockmans and Peter Raemaekers, leave the court and lordship of Assel, do hereby state and certify that we, along with the judge, have offered our services on behalf of the most noble and honorable young man. Irmgardt van Holthuysen, widow of Dursdal, and her son-in-law Franciscus Arnoldus van Dursdal, Marie Quyten, widow of Van Holt, the widow of Pueyn, Matthijs Stoffers, both for himself and for Leonard Tessers, and Hendrick Heijnen in the name of his mother Dirixken Bastiani, widow of Heijnen, all

110505 of us together on the 24th of September 1669, have transported and joined Assel past the Biesserweert on a certain run-on stone, where we also went on the 2nd of this current month, containing a deed thereof, against which run-on stone in the Biessen Baendt we found squire Baexen on the Baeckxhooff belonging to Aretz, half-man of the reverend Jesuit fathers Speck, Herman Spoerens, Jan Beeck, Jan Ruytzen, Sill

110510 Paulssen, Herman Heeskens, squire Baexen's aforementioned servant, and Johan Haewinkel of the aforementioned squire Baexen's half-man, who, seeing that someone was approaching the aforementioned run-on stone, quietly departed from there, and having arrived at the stone, found that the sieve had been set there on the 2nd of this month opposite Joncker Baexens Biesenbaendt had been pulled out, and a stock

110515 from there and so further army fire covered with other risers, which by order of the Lord scholts and judges on behalf of the applicants were pulled out and thrown into the water, the same place being again covered with other risers by Tiel Tielen's court messenger, and further had Corst Stockmans step down and found that the Maas had deviated from the same stone another fifty steps, so that the same stone that had

110520 been run down from the place from which the stone had first been stepped down, was found to be in total one hundred and twenty-nine steps long, and noted that the aforementioned applicants requested from all of them the aforementioned as their similar act with to be shared, for eventual justice, which one could not refuse, so that we have signed the minutes of this document with our own hands, in true

- 110525 knowledge, reserving the right of every lord, all without error, actum Asselt on 24 September 1669 and was signed J. de Verver, this signed [signature] Jan Obers, this signed [deviating signature] Nelis Janssen, this signed [signature] Corst Specx, this signed [signature] Corst Stockmans, Peter Ramekers, ...drich secretary."
- 110530 May 13, 1697 SWALMEN - Guardianship proceedings.
"Guardianship held in Swalmen under the haystacks on May 13, 1697.
Alderman Jan Janssen awards the order that the neighbors of Asselt make a footpath across his property to the Meelenbroeck, to the Slack, up to the Maas, where there has never been a footpath. He requests reparation.
- 110535 Senior Johannes Rutsen, on behalf of the Reverend P.P. Carthuijsers, complains that the neighbors make a footpath to their property, namely from Beeckerhoff right through the Broecxken, and through the Kempken to the Asselsche Straete, where there has never been a footpath before this. He requests reparation.
Is the Reverend P.P. Carthuijsers charged with having the case heard in court? Some
- 110540 elderly persons, regarding any knowledge they might have of the footpath in question, in order to be disposed of accordingly, in Swalmen, May 14, 1697.
The sworn here, on behalf of the neighbors, complain that they are being overburdened with services and request that everyone with horses, as he would with field, also serve.
- 110545 The petitioners will first submit this request to this court and, in response, provide further and substantive reasons, in order to then make further arrangements accordingly, in Swalmen, May 14, 1697.
The sworn, on behalf of the community, declare that this will not be withheld from them, for springhaingst [?], isere eight, as the owners of the large tithe are
- 110550 required to do, which is not observed, request that it may be provided for.
The large tithe holders are charged to maintain the vahere, bair, springhaingst, isere eight for the benefit of this community, unless they have any reason to the contrary, for which they will have to strengthen the judgment within 14 days, as of Swalmen, May 14, 1697.
- 110555 The neighbors of the Bouckoul complain that, next to Ruth's property in the Bonten Os, a common footpath runs straight to the Leijgraef at the Horstbrugge, which bridge is currently not constructed, nor is there any, that by the Captain Everard is being obstructed, preventing the passage of the thief carts. They request a remedy.
The neighbors of the Bouckoul are charged with locating the Horst bridge mentioned
- 110560 above and maintaining it in the future, and Captain Everard is requested to tolerate the footpath here, according to ancient custom, if he has reasons to the contrary, for which he will uphold the judgment within 14 days, effective Swalmen, May 14, 1697.
Fr. Johannes Rutsen, on behalf of the reverend Carthusians, requests that suitable
- 110565 thief routes be indicated to them, both on the Leucker and at the Boeckesstap to Asselt, as well as at the Heijcamp on the Luierken.
The Reverend P.P. Carthuijsers is charged with properly documenting this matter, so that certain senior citizens with knowledge of it can be questioned about it, in order to then make a decision on it, as of Swalmen, May 14, 1697.
- 110570 The sworn complain that no sworn tithe has been established, causing the community to suffer great harm, and request that it be made good.
These claim that the sheep of the Tichelereije are grazing in the Bouckoulder field without being authorized to do so, as they do not yield any livestock tribute, and request that it be made good.
- 110575 The heirs of the late Governor Bitot are charged with the sheep of the Tichelereije. Not to allow any further grazing or grazing except on their property located within this lordship, on a path that will be fenced off each way, according to Swalmen, May 14, 1697.
Jacob Spee complains that the neighbors are creating a footpath behind his house, for which they have not been held accountable and are requesting a remedy.
- 110580 The neighbors say that a trespass was previously attached to the Asselerhoff, pursuant to the guardianship proceedings of 1588, where none is present, for which they are requesting redress.
The half-owner of the hof in Asselt is charged with repairing the trespass above the
- 110585 field and along Linghe Straat. According to custom, within a fortnight, in Swalmen, May 14, 1697.
The reverend pastor complains that no pedestrian path can be used because there are no foundations over the stream, which prevents proper passage to Asselt, requesting a solution.
- 110590 Is ... [blank]

- The same pastor complains that the church bridges have not been properly repaired and requests a remedy.
The same pastor complains that the churchyard is starting to deteriorate, requesting that it be repaired.
- 110595 He requests that reflection be included in the church's plan.
Also, because it has been encroached upon in many places.
The sworn complain that some hollow vegetation once stood on the common in the stream behind Beeckerhoff, which was freed by public scourge, but was nevertheless removed by some neighbors without consent. They request that it be released.
- 110600 The sworn request that the fish caught in the common waters here be declared before they are brought for sale, and that a location be designated for this purpose, so that everyone may have access to it to their own advantage. The neighbors of Boutenstraat complain that the footpath along the Swalm to the Noenhoff is obstructed from their access and request a remedy.
- 110605 The neighbors of Bouckoul complain that Theel Theelen is not currently seeking to continue paying the cowgard's wages during his lease, as he previously did in his half-wine, and request reparation. Theel Theelen is charged with regulating him according to the old custom, as per Swalmen, May 14, 1697.
- 110610 February 16, 1701 SWALMEN - List of war damages suffered.
"List of those who had to provide Swalmen, in addition to food and drink, to the two companies and staff of the regiment of Lord Lutsbourg, Bavarian, lodged according to the orders of Lord Count van Horn, dated February 7, 1701, and lodged on the 14th. Firstly, to consider the regimental quartermaster's furious reprimand as good order and threatening not to advance before noon the following day, three pistols at eleven pounds each were to be issued. Two shillings, February 11, 0
The item had to give the halfman at the Aermenhof twelve shillings in addition to food and drink. April 1, 0

Henderick Slabbers had to give to a lieutenant a shilling and half a pig's head and February 2, 0

Henderick Spee had to give to a lieutenant 6 reixdaelder and two shillings

6-0-0 adding up to February 4, 47

110795 In addition, various persons had to give 13 uncooked shillings and 4 half pig's heads with several large pieces of beef.

That this above specification has been confirmed in person by the aldermen and sworn by the aforementioned persons in lieu of an oath. requested, is hereby testified, act Swalmen, February 16, 1701.

110800 By order [signed] G. Lubbers, secretary

June 14, 1729 SWALMEN - Guardianship proceedings: among other things, concerning peat cutting, sheep, ringing the bell, rabbits.

110805 "Guardianship proceedings held in Swalmen on June 14, 1729, at the market there.

The sworn witnesses have stated in court that they are not entitled to any boar, ver, squirrel, and ice harrow, which must be kept by the large tithe holders, requesting that they be provided for.

The court incorporates the ordinances issued on the previous guardianship proceedings, act ut supra.

110810 These sworn complained that the shippers and their sheep are driving along the small and narrow roads, causing great damage to the produce. They request that the military be instructed to keep a close eye on this and to pledge the shippers driving along the narrow roads with their sheep.

110815 The shippers are instructed not to drive their sheep on narrow roads and to graze them on a penny of half a guilder, except for the damage they will have caused, ordering the field guards to be carefully monitored and the shippers to be imprisoned, as stated above.

110820 These sworn officers have also stated that the neighbors of the church here are negligent and careless in the sounding and passing of the bells during times of thunder and storms, requesting that provision be made for this. The neighboring church is charged to promptly ring and toll the bells during thunder and storms, on the penalty of a quintal of beer, to be forfeited by each neighbor not attending and to be spent jointly by the attending neighbors, as stated above.

110825 The neighbors have complained that the rabbits are completely spoiling the fruits, requesting necessary provisions.

The court orders the mayors here to speak to the Lord of this Lordship about this matter and to devise necessary provisions in this regard. Actum ut supr

110830 November 12, 1739 SWALMEN - Buried: Petrus op den Camp [widower of Theodora Theelen, married in Swalmen on October 26, 1700, buried there on July 8, 1725; husband of Maria Heijnen, married in Swalmen on June 7, 1736].

110835 During the guardianship proceedings of 1588, Zill Kromvoets, the oldest alderman, declared "that there is no freedom of hoofage in this court, except the Hoppenrae, which is granted and worthy of the Beijswaard, except for what is demonstrably free." Two deeds from September 1669 make it clear that accrual was still taking place at that time. At the request of several land owners in the Biesweerd, several landowners

110840 moved from the Asselt court to the Maas, where we all went downstream the Maas, along the high and empty Biesenweert, where we noticed a certain stone that had run up, shooting off at an angle into the aforementioned Maas, along the high and empty Biessenweert and further along the estate of Jonker Hans Willem van Baexen, the Biessenweert Baendt, next to which we can no longer see, and besides the

110845 aforementioned run-up stone there is still a water channel, the same stone extending along Jonker Baexen's estate up to seventy-nine steps into the Maas, each step of about four feet, stepped down by the aforementioned Corst Stockmans, whose stone, situated between the ditch and the Maas River, the aforementioned applicants, as heirs of the high and empty Biessenweert, presented before us, the sole judge, in accordance with the aforementioned, according to which each of them inherited and was judged therein, namely, in the old inheritance, in actual and current possession, according to all observances and customs of rights required thereto, having adorned the same stone with willow wickerwork and subsequently enjoyed wine and wine there. Three weeks later, this ritual was more or less repeated. It was also found that the

110850

- stones set there on the 2nd of July had been pulled out opposite Joncker Baexens Biesenbaendt, and a stock had been laid from there, and a similar stock had been laid out with other stones, which, by order of the Lord scholts and magistrates, were pulled out and thrown into the water on behalf of the appellants. The court messenger of Tiel Tielen had the same place again laid out with other stones, and furthermore, Corst Stockmans had it stepped down and found that the Maas had deviated from the same stone by another fifty steps, so that the stone that had been run up from the place from which the stone had first been stepped down, was found to be in total one hundred and twenty-nine steps long. The fact that the Asselterhof estates were summoned for this occasion is closely related to a deed from 1275.
- In 1774, surveyor Smabers designated the Hooghen Biesweerth as parcel 1 on map 8, meaning the southernmost part of the weerd. For the surveyor, who drew up the maps of Swalmen on behalf of the collective tithe collectors, the Biesweerd was an exception. This addition had been made since for a long time, the land had been divided into nine so-called lots, which were sometimes combined through sale and inheritance, but sometimes further divided. For unclear reasons, it had been agreed in the past that the actual location of the land would change annually based on this division of ownership, making it impossible for Smabers to determine who actually owned which part of the large parcel. Ownership was clear for the adjacent parcels, owned by Baxhof and Hillenraad respectively, but Smabers also encountered the same problem with parcel 4, the Kleijn Biesweerth.
- In 1826, part of the Biestert was sold to Paulus Schiffers, "grutte mulder" (major miller) and citizen of Roermond.
- October 30, 1772 De Maasgouw, January 15, 1903
- The inheritance of Frans Arnold, Margrave of Hoensbroeck, and his wife, Maria Anna Sophia van Schönborn.
- Communicated by P. Doppler. When Frans Arnold dos H. R. Ryks, Count and Margrave of Hoensbroeck, hereditary marshal of the principality of Gelder and county of Zutphen, lord of the guardianships of the Lower District of Gelder, of Swalmen, Asselt, Hillenraedt, Grubbenvorst, Blyenbeeck, Afferden and Ruynen, bailiff of the city of Gelder, etc. (1) and his wife Maria Anna Sophia, née Countess of Schönborn, Buchheim and Wolfsthal (2), died, their surviving assets were not divided among themselves by their children. However, "not so much concerned with the preservation and, more importantly, the enhancement of our name and lineage, and also the luster of our van Hoensbroeck family," they "also with the intention and at the high command" of their parents and ancestors devised certain "pacta familiae sive gentiletien" and concluded it on October 30, 1772, whereby the entire estate of their parents was made a "fixed fidie commis." We found this agreement, recorded in the bailiff's register of the Lordship of Grubbenvorst for the years 1772-1797, November 18, no. 30.
- Article 2 of this agreement stipulates that these "fidie commissaire" goods will be owned and enjoyed by the eldest margrave or lord of the manor of their family and by his legal male successors, excluding all female heirs, with the stipulation that certain annual payments from the proceeds thereof be made to the other family members, as stipulated in a few subsequent articles.
- Presenting all fifteen of these articles here in their entirety would go too far; we will only mention the first article, which lists all the goods and is extremely important for the history of our province, and the second in their entirety.
- The confederates were: L. F. M. de Hoensbroeck, hereditary marshal of the Duchy of Gelderland and the County of Zutphen; Sophia Charlotta, Margravine of Hoensbroeck, born Countess von der Leyen Hohengerolseck; P. (1) of and at Hoensbroek, cathedral chapter lord of Speyer, provost of Emmerich, Archdeacon of Utrecht, privy councilor and government president of the Elector of Spires; Leopold, Margrave of Hoensbroeck, canon of the cathedral church of Spires; J. F. M. D. Hoensbroeck, canon of the cathedral chapter of Münster; Joseph, Margrave of Hoensbroeck, canon of the metropolitan church of Trier; Charles, Margrave of Hoensbroeck, canon of the metropolitan church of Trier and chamberlain of the Elector of Cologne. "... the castle and marquisate of Hoensbroeck with its high, middle, and low jurisdiction, hunting, fishing, forests, money and grain rents, tins, charters, liberties, pledges, and road tax, along with the corresponding building yards, banal brewhouse, and water gardens, as well as the other corresponding hunting yards, namely: the Schwemmgruggen court, the Nauenhof, the Aldenhof, the Lootbroeck court, half of the Eysden court, the Linderen court, the ter Weyer court, the Eyck court, the Weijhof, with all the respective corresponding lands, meadows, and pastures, hollow crops, hunting, fishing, rights, and justices;
- item the castle and lordship of Hillenraedt, Swalmen, and Asselt with Applicable

high, middle, and low jurisdiction, hunting, fishing, wardens, money and grain rents, tins, charters, liberties, and all rights and justifications, including applicable leaseholds such as Asselderhof, the Bockweilsdries farm, the Syperhof, the Noenhof, the small farm, with a parcel of land purchased in addition, furthermore all the lands, meadows, pastures, fisheries, tins, and leaseholds, bannal, grain, and oil mills, the Blanckwater fishery, the Boschheijde, and the Lothariebosch, items the Bochhulder and Raayerthiende, the Boxweerd estate located near Neer, the properties of the Jacquefort farm near Buggenum, the free noble House of Welten with the respective Annexed lands under Nieuwstad in the Montfort area,

110925 item the lordship of Grubbenvorst with its associated courts, named Grubben Castle and Court with a mill, the noble house of Baersdonck, and the Kleijnraeij, all with its associated lands, meadows and pastures, hollow crops, appurtenances and dependencies, furthermore the tins, bonds, leaseholds and fiefs belonging to Grubben and Baersdonck, as well as the tithe there at Grubbenvorst; Item: Blyenbeek Castle

110930 and the lordships of Afferden and Heukelom, with their associated jurisdiction, rights and justices, hunting and fishing, services, money and grain rents, tins, tithes, and liberties, with their associated courtyards and farms, namely Aldenhof, Bosserhof, Linderhof, Flammert, Bulshees, Vogelheck, Niefers, Neudorp, Freyenhof, with their associated lands, meadows, pastures, hollow crops, fisheries, and other

110935 appurtenances and dependencies;

110940 Item: Gelder Overampt, consisting of the following lordships and villages: Nieuwkerck, Aldekerck, Sevelen, Taeten, Stenden, Schaephuysen, St. Anthonyberg, and Reurt; item the Nederampt Gelder consisting of the following lordships and villages: Pont, Veerten, Capellen, Witten, Groot Kevelaer, Klein Kevelaer;

110945 the castle and knight's seat The Hague near Gelderland, and its respective noble estates, knight's seats, and courts, such as Ravenshof and Schuijrenhof, the Egelsom or Kynster, the large and small Bartel, the Voort, the Geysberg, Broekmanshof, Brouwenshof, Hoenslaer, Gesselen with the seventeen morgens purchased therewith, the Sloet, the Bremershorst, Knegtenhof, Weyschenhof, the Horst aan de Niers, the

110950 Weiherst, the Badenbergh, Steenolens, and the mills so-called "maybe" belonging to it, the Rijntzenhof, Hubenhof, Hornhof, Gijzenhof, the Heycamp with all the respective high, middle, and low jurisdictions, rights and justices, hunting grounds, Fisheries, services, fiefs, tins, corn and money tents, leaseholds, right of way, liberties and associated lands, forests, hollows, meadows, and pastures;

110955 The castle and knight's seat of Bellinghoven and the lordship of Haffer and Meer with their associated rights and rights, jurisdiction, tins, leaseholds, liberties, hunting and fishing, money and grain rents, and also farmyards, namely: Coepenhol, Hillemanshof, Obbergshof and their associated lands, meadows, meadows, hollows, and

110960 grain mills, Duysborger tithe, and furthermore the farm called Byvanck with its lands, meadows, meadows, meadows, and hollows;

Item: the farm called "den Grind" near Zanten, located with its associated lands, meadows, and pastures;

Item: the Oosterschen, Grubbenschen, and Asselder tol [customs] on the Maas River;

110965 Item: the free estate and knight's seat of Yversheim with its associated lands, meadows, pastures, hollow crops, rights and liens, hunting and fishing rights, liens, grain and gold rents, tithes, and so on;

Item: the Wiltinger vineyard, with its associated lands, tithes, rights and liens;

Item: the Vienna Fideicommiss, capital of one hundred thousand Rhine guilders;

110970 Item: a similar capital of one thousand Rhine guilders, payable by the Austrian land authorities;

Item: the bond payable by the Bohemian Landstätt of three thousand nine hundred and sixty-five Rhine guilders;

Another Austrian Landstätte bond of one thousand eight hundred and eighty Rhine

110975 guilders, all originating from the Countess of Straetman;

A similar capital of eighteen thousand Rhine guilders bequeathed by the aforementioned Her Excellency to the late His Highness, the Marquis of Hoensbroek, during his lifetime, Provost of Trier; item a ditto capital of eight thousand Rhine

110980 guilders at the hilt in Vienna, and through her Excellenz the Countess of Hodion bequeaths, to our joint counterparts, the usufructum of the last congregation Capital sum of eight thousand Rhine guilders reserved for our respective benefit ad dies vitae;

the High Office as Hereditary Marshal of the Principality of Gelderland and the

110985 County of Zutphen, with all the corresponding emoluments, prerogatives, rights and entitlements, and finally all the vassals, jewels, trinkets, and all other ready-

made goods and securities bequeathed by the late our highly esteemed parents and passed on to us in the other direction, as far as located or findable in the Netherlands, are made and constituted into a fidei-commissaire, and that it shall take effect as often and as long as the respective land rights under which the aforementioned fidei-commissaire goods fall are permitted, that those goods located in the Kingdom shall be and remain perpetually subject to the bond of fidei-commissaire, such that none of the aforementioned so loan as allodiaele goods, rents, pledges and so on by the respective possessors, or priors thereof and may be alienated, transferred or encumbered on whatever foundation or pretext it may be, then for us jointly signed contracts all and with the exception of our successors, reserving the faculty to negotiate on the aforementioned goods such sums as we deem necessary for the deposit of other capital and principal of those standing for higher interests. "Secondly, that the aforementioned fideicommissary goods will be possessed and defrauded by the eldest Marquis or ancestral lord of our Hoensbroeck family and thus successively by his lawful male heirs having the right to succeed, both with regard to the aforementioned fideicommissary goods and in the high office of Hereditary Marshal of the Duchy of Gelderland and the County of Zutphen, with the exclusion of the Marquises or female lineage, as long as any of us or our descendants are lawful male descendants alive, then nevertheless, thirdly, that the same will be held respectively to each of his brothers and uncles Marquises of Hoensbroeck ad dies vitae from the proceeds of the aforementioned fideicommissary to return three hundred patacons of specie annually and to contribute as much as possible to spiritual or secular employment or service and to bear the costs thereof."

(1) According to Eg. Hanghen, Het margraafschap Hoensbroek, p. 160, he died on 22 August 1760.
(2) Died 5 November 1760, idem p. 161.
(1) He called himself Philip Damien; he was solemnly inaugurated as Bishop of Roermond on 30 October 1775.

January 1, 1897 NEER OR "NÈRE."
The winter sun pierces the morning mist with dull rays. Every ray reflects in the millions of droplets from the frost-covered grasses of the meadow.
The trees pay their annual tribute to the winter frost, and from the branches a continuous rain of withered oak leaves descends, falling with a peculiar rustle onto the hard ground.
After a few days, the landscape is as bare as the field, where the green now offers little variety.
A white-gray mist drifts over the water, and the damp, sharp cold paints noses and ears black and blue.
The monotony of the landscape before Buggenum disappears as one approaches the village, whose long row of houses seems deserted on the winter morning. Above the oak chimney, a blue, upright cloud of smoke floats, proving how well they manage to ward off the cold inside.
Behind Buggenum, the view expands. We are standing on a high plain, crisscrossed by many roads, most of which lead to Neer.
On the left, we see Haelen and Nunhem, with their churches and castles leaning against the hills.
Green pine forests break straight lines.
To the right, far away, we see the old church of Asselt, with the houses of the village, which was once so prosperous when shipping on the Maas was still flourishing and Hanssum, near Neer, was a large and well-known ferry.
Before us lies Neer, with the church on a hill that displays simple yet proportionate shapes.
The houses of Neer are situated in the depression created by the small river from which it takes its name.
Whichever side you look at the village from, it is surrounded by a high plain. From the north, too, one has a beautiful view of the higher land toward Neer.
If one turns toward the Maas, which flows along a high ridge or steep bank on the side of Hanssum and Neer, one sees the village of Beesel, its houses reflected in the blue expanse of the Maas.
Behind, through the woods, where the towers of Swalmen and Reuver rise their dotted peaks, one sees the white plume of smoke from the locomotive and can follow its course along the line. If you pay close attention, the still winter air will carry the wail of the steam whistle long after you have seen the smoke plume move again.
The sun now breaks more powerfully through the mists, between which it has long tried to cast a doubtful light like a milky-white disk.
Although it does not dispel the cold, it does bring more inspiration and life around

us. Neer lies just before us, and the watermills on the stream rattle and clang with a delight.

Such a watermill has something appealing; it's a nice addition to the landscape. The watermill used to yield a considerable profit for its owners. The lord of the village, here the Keizersbosch monastery, held the monopoly on milling on the streams. Therefore, this privilege brought in money, while the millers took care of themselves and weren't lazy about shoveling flour sacks. Some millers, however, had wide sleeves, as legend has it, and shoveled with both their hands and sleeves. Whether this story, so often told in Limburg, is true, we'll let "God and the miller part ways."

The village of Neer is very old. Its name may derive from its location. We would like to remind you here, however, that the winding, deep river has many whirlpools (called "neer" in Limburgish), and the river also bears that name. In 870, it formed the border between the upper and lower Maasgouw regions.

The Salic Laws mention a place called Nara or Nare, which Wendelinus calls present-day Neer. The renowned minter Stiels, pastor of Neer, (1) also recounts in his work that gold and silver coins from the Merovingian period were found in Neer, including some minted in Wijk-bij-Duurstede, Wijk bij Maastricht, and Utrecht. This is a peculiarity that confirms the aforementioned conjecture. Mr. Stiels further wrote about the village, recording the following details, which we reproduce here:

Although the lords of Horne, who became Counts of the Empire in 1450, had their special residence at the castle near Weert, and Horne Castle, on the Maas, was considered the supreme head of this region, Neer has always excelled above other places. This is true for its antiquity, the number of its inhabitants, its privileges and advantages, and the excellence of its church (dedicated to Saint Martin), in which, as an immemorial, not only a pastor was appointed, but also a parish with four or five benefices. Since it is impossible to discover the foundations of these benefices, and it is certain that in 1203 the pastor was already mentioned, persona in Neer, as can be seen in Miraeus, and in several others, where it is said that Imaina, Countess of Loon and Abbess of Munsterbilsen, widow of Duke Godfried III of Brabant, ordered the

From the personate of Neer to the Lord Prelate of Averbode Abbey, etc., one can conclude that this parish must have already been established in the year 1000 or 1100, and that this community must have been very populous at that time; moreover, Neer was at that time a city with walls and gates, enjoying all the privileges customarily enjoyed by citizens. Although the author makes no mention of this, and over time, due to wars and other unfortunate circumstances, not a single remnant of this city remains, there are nevertheless enough examples to make this quite plausible. For all those familiar with the situation of the place, the following examples will also be noted:

Neer was first a personate, and that long before 1200; Five beneficiaries were established in our church, with such good revenues that their beneficiaries, residing in Neer, frequented the choir on Sundays and high holidays, as in chapter churches, singing vespers, matins, etc.

Moreover, in Neer there are three excellent brotherhoods or militias, whose antiquity and origins are impossible to determine; indeed, it is certain that these were enriched by the princes of Horn and also by subsequent counts with excellent privileges, with various lands and income, to come and recreate themselves honestly on certain appointed days, est in festo sancti Sebastiani and others, and also to take up arms for their counts in times of war and to protect their fellow citizens from violence and plunder in times of unforeseen unrest. There were other brotherhoods in the past, such as that of St. Anthony and Our Lady, whose income, after the cessation of this congregation, for unknown reasons, went to the poor table of this community.

The blacksmiths, weavers, and shoemakers also have their brotherhoods and patrons, on whose feast days they gather and a high mass is sung for them.

Thirdly, residents whose houses are located within the canals or city moats have a special privilege: on the day of their funeral, as is done in cities, the body, complete with cross and priest, must be collected from the deceased's house. But what most clearly indicates that Neer was a city before this are the remaining city ditches, which, having not yet been demolished at the beginning of this century, were gradually converted into farmland, but with such a privilege that the tithe on these ditches always belongs to the pastor, as a noval decimator, a right he has always enjoyed without any contest. These ditches (canals) begin at Bergerstraat, running along Zuiderhak, from there behind the Groote onto the Baent, and from the Baent to

the house of alderman Peter Windelmolen, and thus through Pasveld to the Keizer, being in some places only 16 feet wide, but in others much wider. The names of the gates, such as Bergepoort, Veerpoort, etc., can still be found in old documents. Over time, Neer has lost much; Whether this occurred due to the rise of other villages, such as Roggel, Heijthuijzen, etc., which were still unknown, or due to the ravages of war or fire, which destroyed our village several times, is uncertain. After all, this land, bordering the city of Roermond, also suffered greatly during the period of the iconoclasm, though never more so than during the life of the pastor-dean Leo van der Meer, between 1630 and 1650. After the plundering of the city of Thienen in 1635, Dutch and other troops were crushed here in the county, burning and destroying everything. This was followed by the plague, which not only decimated an infinite number of soldiers but also the country's inhabitants, leaving houses empty and lands uncultivated. But never has a more tragic misfortune befallen our municipality than in 1645, when the Hessian troops, after occupying the village for many days, finally set fire to all four corners of the village on August 11th, probably because they could not raise the demanded ransom. This resulted in not only the entire village, with a few exceptions, but also the parish house, with all its paperwork and records, both of church and poorhouse, of pastoral reasons and municipal affairs, being reduced to ashes. Pastor Leo van der Meer was then taken prisoner by the Hessians and held in custody for eight weeks in Nuijs.

So much for Pastor Stiels. His evidence of Neer's elevation to the status of city is quite remarkable. It certainly proves that Neer was a significant village at an early stage. In our opinion, it was surrounded by ditches to protect it from enemy attacks, as this provided easy access to water, and a redoubt was also built, the remains of which still exist.

Nothing is known about its actual elevation to city status. It is also possible that Neer was put in a state of resistance during the Guelderian War in the early 1500s. In 1504, when Echt was completely destroyed, Jacob III van Horne and his troops were stationed in Neer. Those from Roermond attacked him there, captured him along with "other people of the Prince's people, who were holding the night watch at the time," and "with greater joy" took him captive to Ruremonde. The civic guards still exist and possess fine silver, which is kept at the "port" or guildhall. One civic guard still possesses beautiful stone drinking jugs. The village of Neer is prosperous, although the circumstances of the times have not improved it. However, if one wishes to return to the past and see a striking image of the insignificance of the noblest and most dignified things of this world, one should walk towards the heath and behold the monotonous, tasteless, yet large and solid buildings that remain of the widely renowned and centuries-old Keizersbosch Abbey. 700 years ago, a possession of Averbode Abbey near Sichein, a monastery for women was founded here, following the generous donations of Count Engelbert van Horne in 1200. In 1226, a church was founded here, in 1232 there was a provost, and in 1350, a descendant of the powerful Horne family was prioress. In the church building, renovated in 1472, the high Hornes were buried, and for over five centuries, Keizersbosch was the meeting place of the pious and powerful. In 1786, the monastery was built; the foundations of the old farmhouses were still found. Some of these buildings still exist. During the French Republic, the nuns of this convent fled to the Meijerij and settled in Deurne, in the abandoned house of the minister. They also moved some of their furniture and archives there. An abbey cartulary, rediscovered there in 1885, was purchased by the archivist in Limburg for his repository. An old hymnal, containing the regulations to be followed when recording a religious service and during the choir service, was found by me in Neer and also donated to the National Archives in Maastricht. Keizersbosch, with all its possessions, was sold by the French Republicans on July 16, 1793 (poster 57), along with all its dependencies and dependencies, and purchased by Arnold Jan Baptista De Raedt of Roermond for the sum of 145,000 livres, largely payable in assignats, which were almost worthless. De Raedt soon had the church demolished, as well as part of the buildings renovated 82 years earlier. The De Raedt family sold this estate on August 8, 1876, comprising 7 hectares and 84 ares, including stables, barns, sheds, arable land, and pastureland, to the current owner, Alexander Steegh, married to Margaretha Antoinetta van Hegelsom. As mentioned above, the church contained the graves of most of the Counts of Horn. A few years ago, when excavating the grounds behind the building, the burial places were rediscovered. But the bones of the high rulers could not be distinguished from the lowly nun. The house now consists of about ten rooms with a hall, kitchens,

cellars, and stables, the exterior of which bears little resemblance to its former grandeur.

Besides the house Ghoor, Neer also includes the fortified farms of Aldenghoor, Kuikhoven, Brumholt, Gerheggen, Waay, Wijngaarden, and the hamlet of Hanssum, situated on the Maas River, where the ferry house is located.

A few hundred years ago, considerable controversy arose over this ferry. In 1700, the Bishop of Liège ordered a toll to be levied there, which displeased the States-General and, armed with weapons, prevented the levy.

In 1718, the game began again, this time with the Liège tax collector being arrested and thrown into prison in Roermond. The Bishop was not discouraged, and the skippers paid their dues until 1731, when the King of Prussia requested the Emperor to abolish it.

It is worth noting that the northern border of the municipality of Neer is formed by the Zuidwillemsvaart drainage canal to the Maas. The canal's drop into the Maas is considerable. This may well explain why the connection between the Maas and the Scheldt was not established here.

Before concluding this sketch of Neer, we must point out the peculiar dialect, quite different from that of the surrounding region. There, one hears letter variations, which almost turn "kerk" into "krek," from "verkes" into something like "vrèkes." For a hundred years, people spoke this way, for they faithfully adhered to old customs and traditions, and fortunately, Neer is still characterized by old-fashioned good faith, which radiates from everything.

History

To formulate archaeological expectations, the relationship between the location of archaeological sites and the landscape, or even specific landscape elements, is frequently used. This relationship (location selection factors) varies by archaeological period and complex type. Because location selection is strongly linked to the landscape, the Netherlands is divided into so-called archaeoregions in the National Research Agenda for Archaeology. The plan area is included in the Brabant sandy area. However, it lies on the outermost edge of this region, on the border with the Limburg sandy soils. Knowledge of the occupation history of both the Brabant sandy area and the Limburg sandy area is therefore essential for developing a sound expectation model and determining the location selection factors for each period.

The landscape of the Maas terraces consists of remnants of Pleistocene and Holocene riverbeds that have been incised into the Pleistocene river terraces. Some of the ancient riverbeds were drained by streams originating in the western cover sand landscapes, causing them to function as stream valleys (for example, the Neerbeek). This interplay of different landscape forms within close proximity of each other created an attractive area for hunter-gatherers during the Paleolithic and Mesolithic periods. The boundary zones between high and low, wet and dry, offered the greatest opportunities for a varied and reliable food supply. During the 200,000 years preceding the Neolithic, habitation opportunities were determined by climatic conditions. These were more limited during colder periods than during warmer ones. After the last ice age, approximately 11,000 years ago, a warm period began, leading to an increasingly rich and varied food supply. Areas like the Maas terraces, due to their diversity, offered sufficient opportunities for permanent habitation.

Mesolithic sites are primarily found on ridges and terrace edges with well-draining cover sand subsoils near a water source (fen, river, or cut-off meander). The slightly higher areas around streams, fens, and ponds were therefore likely the most favorable landscape locations for settlement. When choosing locations near open water, there appears to have been a preference for the (south)eastern flank of cover sand ridges, likely due to the prevailing (north)westerly winds. Settlements likely also existed in and near river and stream valleys that were later eroded or covered with sediments.

The Neolithic began around 5300 BC with the introduction of agriculture on the upstream loess soils. Agriculture on the light clay soils of the Maas terraces began approximately 1000 years later. The consequences for the landscape were drastic, primarily due to the clearing of forests to create fields, but also due to other activities aimed at shaping the landscape to better suit the new sedentary way of life. Agriculture also led to population growth, amplifying the effects of the transition from hunting and gathering to agriculture. The new sedentary way of life placed different demands on settlements, which were more often located on or near higher elevations, particularly where the soil was more fertile. However, fertilizing

agricultural land was not yet known, so yields were low, and fields had to be regularly moved to maintain fertility. Depending on the natural soil fertility, this could happen after just a few years. Most farms likely had a lifespan of several decades due to the perishability of the building materials. This system of habitation is described as the wandering farmstead system. This process of transformation from a natural to a cultivated landscape continued during the Bronze Age and the Iron Age. The settlement will have been permanent, but still not fixed in place.

In the Roman period, the Maas Valley was incorporated into a larger whole for the first time. A road was built on both banks of the river, connecting the towns and larger settlements in the Maas Valley with each other, with the military forts on the Limes, and with other parts of the Roman Empire. The military occupation of the Rhine and Maas delta at the beginning of the Common Era quickly led to a process of Romanization among the local population, with the adoption of a wide range of new products and techniques. One of the most important changes was the integration into a monetary economy. The ability to produce for a distant market led to a further expansion of the agricultural land, but also to the production of raw materials and consumer goods on a scale that exceeded local needs.

The opposite of this production for sale elsewhere was the supply of goods for personal use. This process was most visible in the new construction methods, which utilized Roman building techniques and materials. In the loess regions, but also along the Maas, villas—farms—were built with at least a coarse ceramic roof. But they often also featured other, luxurious amenities, such as underfloor heating and baths. Stone roofs were also found on ordinary farmsteads in settlements (Helden Schrames). Based on the 1991 picture of the settlement system in the Southern Netherlands, Slofstra draws a sharp contrast between the settlement and agricultural systems of the Late Iron Age and the Roman period. In the former period, Celtic fields and "wandering farms" are present. According to Slofstra, these changes are related to agricultural intensification, partly caused by Roman taxation. The "kinship" mode of production transformed into a "tributary" one. The settlement hierarchy has small rural settlements at its base and further includes enclosed rural settlements, rural centers or vici, and the proto-urban centers that developed into true towns over the course of the Roman period. Within the group of enclosed rural settlements, indications of elite residences can already be found in the pre-Flavian period, which in some cases developed into true villas but elsewhere often did not extend "beyond" what Slofstra calls proto-villas. The settlement system, as it were, reflects the hierarchical patronage system. This system already existed in late prehistory and was given additional levels in the Roman period, namely those of the (Gallo)Roman elite and the imperial family. The residents of the elite residences in the Southern Netherlands constituted the intermediaries with the highest levels, as they also functioned as decuriones of the civitates. The dependent population lived in the houses and small settlements surrounding the residences of elites.

The decline of the Roman Empire, a process that began as early as the 3rd century and continued into the 5th century, led to a decline that, among other things, resulted in a shrinking population and, consequently, agricultural land. This process appears to have been less drastic in the Maas Valley than elsewhere. The survival of place names from the Roman period (Heel, Blerick, Melick, and possibly Kessel) indicates a continuity of habitation. However, the population composition did change. Franks, sometimes as mercenaries defending the border, settled within the Empire, including in the abandoned villa complexes. The erosion of Roman authority led to the rise of local rulers, often from the Frankish elite, whose power was based on land ownership. This political autonomy coincided with economic autarky, in which trade virtually ground to a halt and production was limited to domestic consumption. Under the Merovingians (6th–7th centuries), a recovery began, not only of central authority, but also, and especially, of the economy. Agricultural land expanded again, and new settlements were founded. However, the Maas Valley remained on the periphery of the new kingdom, centered around Reims. The power base of the Carolingians (7th to 10th centuries), who took over from the Merovingians, lay further north, between Verdun and Herstal, thus placing the Maas Valley more centrally. The Carolingian Empire disintegrated into numerous smaller units in the 9th and 10th centuries. Local and regional rulers gained a high degree of independence.

In the Early Middle Ages, power was based on land ownership. This land ownership was exploited through the dominiale, or manorial system, in which unfree people—serfs—

worked the land. This system was based on payment in kind. In part, these domains may be related to older settlements, while in part they arose as new reclamations. A shift occurred toward growing more grain, resulting in the development of the three-field system. This system alternated two years of growing spring and winter wheat with a fallow year. Due to the lack of fertilizers to maintain soil fertility, this was the only way to prevent soil depletion. However, it did require additional land. The increasing emphasis on grain cultivation likely led to the development of the open fields surrounding many of the villages on the banks of the Maas. The three-field system also functions best in large, connected complexes. These fields were partly created by the confluence of smaller individual farms, probably as early as the 9th or 10th century. However, it cannot be ruled out that on the loamy soils

The Maas terraces, whose soil structure and natural fertility make them ideal for arable farming, have maintained a continuity since the Roman period, when these lands were already intensively used.

Inhabitation during the Roman period took place in indigenous settlements, which were Romanized to varying degrees, and in settlements that derived their origins from specific political and/or economic functions. In addition, there were individual villas, such as those at Maasbracht or Neer. In the Early Middle Ages, after an initial decline, habitation shifted to settlements along the streams, often in the form of villages, and, particularly in the cover sand landscape, to individual or collective reclamations. In these latter areas, farms likely remained for a considerable time, moving over time, while these were already fixed in place in the villages. The extent to which habitation still existed within the open fields (such as between Neer and Buggenum) during this period is unknown. Farmsteads situated amidst their fields were still common in the early Middle Ages, but gradually, habitation concentrated in settlement centers, although isolated farmsteads still exist today, as evidenced by the Wijnardenhof, for example. This farmstead consists partly of buildings already present before 1800 and partly of buildings built after 1800, replacing the De Beukel farmstead, which lay slightly further north in the Zwaarveld and was reportedly destroyed by flooding around 1800. Many of these isolated farmsteads are first mentioned in the late Middle Ages and were often owned by the nobility or monastic orders. Their current form dates from the 17th century and later. However, assuming that these fertile lands were very attractive for agriculture, it can be assumed that the concentration of habitation outside the arable areas began fairly early in the Middle Ages. The decline of the Roman Empire, the abandonment of villas, and the shrinking population will have resulted only in the partial abandonment of these lands. Other, less suitable lands for agriculture were more likely to have been abandoned to nature. This also seems to be confirmed by the reclamation of new arable lands in the Late Middle Ages and Modern Period, which primarily took place in the cover sand areas west of the terraced landscape along the Maas. The habitation pattern outlined above underlies the current landscape structure, in which a virtually undeveloped landscape remains between Buggenum and Neer. The oldest mentions of settlements date from the 13th and 14th centuries, but the settlements themselves appear to be older. Buggenum, for example, is first mentioned in 1230, but the church must date back to the early 11th century. Moreover, Buggenum (1230: Bugnem) is a local name, which often dates from the Early Middle Ages.

Arable farming would have been dominant on the terraces, while grasslands would have existed in the lower stream valleys and the active Maas river belt. Presumably, all land suitable for arable farming on the Maas terraces was put into use quite early on. Later expansion of arable land occurred primarily on the cover sands west of the Maas valley. Therefore, the landscape structure on the Maas terraces has been largely established since the Late Middle Ages. This can be seen in the cadastral map from 1811-32. All parcels within Sub-area West were then used as arable land. In Sub-area South, the higher northern section was also used as such, while the lower sections were used as pasture and hay meadows.

The easternmost section is formed by a cut-off channel of the Maas. The silting up of this arm can be clearly followed on the topographic maps of 1894 and 1938. These maps also show that during the century they cover, the land use remained unchanged: arable land remained arable (white) and grassland remained grassland (green). Major interventions only occurred in the last quarter of the 20th century, when the Maas River was straightened in 1967 and the area between Neer and Buggenum was re-parcelled in the 1970s. During those years, part of the arable land was also converted into grassland. Finally, in 1996, a dike and overflow channel were

constructed to protect Neer during high water.

Expectation Model

Based on the information acquired in the above steps regarding the current situation, the geoscientific and historical circumstances, and known archaeological values, a detailed forecast can be formulated. To arrive at a correct choice of the research method for the inventory field study, the following characteristics have been indicated as far as possible:

- Dating; at least in main periods (such as Paleolithicum, Mesolithic, etc.);
- Complex type (such as settlement, burial ground, field layer, etc.);
- Size;
- Depth (also visible/invisible);
- Location (with an indication of the sub-area, if applicable);
- External characteristics (artifacts and type indicators);

For all periods, in addition to the formative processes by the Maas that have given the landscape its current shape, the extent to which erosion resulting from the washing away of soil from fields can also be a determining factor in the loss of (parts of) the soil archive. The extent to which such erosion has occurred within the plan area is unclear. Only after the borehole survey has been conducted will this become clearer, and can this question potentially be answered. Therefore, the impact of erosion resulting from runoff from fields is not taken into account in the forecast model below. Specifically for the low-lying part of the Southern Sub-area, habitation has likely never occurred. Other activities will also have been limited in this part of the plan area. However, there is a good chance of finding special datasets from all periods, such as ritual deposits, waste dumps, or fishing- or shipping-related artifacts. Therefore, the expectation for this area is low in terms of habitation, but high for special datasets. However, these often concern point locations, which are difficult to detect using current inventory and mapping research methods.

Late Paleolithic-Mesolithic: Given the geomorphology of the plan area, there is a possibility that archaeological features from the early Prehistory (particularly the Mesolithic) may be present in the plan area. These features could consist of small settlement sites, so-called extraction camps of small size (approximately 5 to 10 m²), and base camps of larger size. Sites from this period are characterized by a scattering of flint. It is also possible that soil traces (hearths) may be found. The value of flint sites (artifacts) is largely determined by their intactness. To obtain as much information as possible from a flint site, it is therefore important that the internal structure of the site (the vertical and horizontal distribution) has been disturbed as little as possible. The value of a flint site is therefore largely determined by the degree of intactness of the soil profile. Even minor tillage can have led to disturbance of the site. It is therefore important to determine the degree of disturbance to the soil profile. If sites occur on or near the surface and the area is used as arable land, they are likely to be significantly disturbed. Paleolithic sites are particularly likely to be found on the terraces from the Allerød and Late Dryas (see Figure 2). The current Maas floodplain was formed in the final phase of the Paleolithic and later, so there is a high probability that any remains have been washed away. Given the age of the terraces, only remains from the Late Paleolithic are expected within the plan area. Mesolithic sites may occur throughout the plan area, with the caveat that, again, there is little chance that no erosion has occurred within the current Holocene floodplain. However, the chance that any sites will remain undisturbed is slim, as primarily erosive processes have taken place within the plan area. No cover sand has been deposited (the terraces are too young for that), nor has river sedimentation occurred. Therefore, any sites have always been directly on the surface, making them highly vulnerable to disturbance. Because the plan area lies in a zone highly suitable for agriculture, and will therefore have been used as such more or less continuously for a long time, the likelihood of intact sites within the plan area is very slim. Given the landscape of the plan area, on the edges of the terraces and near the river, the probability of encountering sites from the Late Paleolithic and Mesolithic is estimated to be medium to high. However, the probability of encountering intact sites is estimated to be low.

Table 6 categorizes the artifacts found by material category and time period. The approximate dating of the Archaeological Basic Register (ABR) is followed for the

latter. These dating ranges are sometimes very broad, as they are based on the fact that certain materials do not have a period-specific shape or application and therefore may have been used over a longer period. A good example of this is burnt clay, also known - incorrectly - as huts.

Loam. Loam has been used as a building material from the Neolithic period into the sub-recent past. Chunks of burnt loam can therefore date from this entire time span. The context in which it is found is therefore the only way to date it. The same applies to flint, in broad terms, except that it was used as a tool, resulting in a large number of period-specific shapes, but also a great deal of waste, the result of tool production, which is difficult to date. Furthermore, flint has been used into the sub-recent period (for example, as a fire striker), which also generated waste through use. The dating in the ABR is therefore Paleolithic (PALEO) to present (NTC), although the majority of use will be in the Paleolithic to Neolithic period. The dating of the recovered material must be considered with this in mind. The artifacts found generally fall into three periods and/or three material categories, some of which coincide. The material outside these clusters often consists of objects so unspecific that further identification is impossible. The majority likely dates from the Modern Period. Iron, with 54 objects, constitutes by far the largest group within this category. Many of the pieces consist of amorphous rust lumps, some of which can certainly be classified as shrapnel. Forged nails, which have been used since the Roman period, are also found. The other materials outside the three main clusters are always represented by one or two fragments and include bone, bronze (heavily worn coin), copper, mud brick, and charcoal. The three clusters mentioned above include flint, which dates primarily from the Prehistoric Period, pottery and coarse ceramics from the Roman Period, and glass, pottery, and coarse ceramics from the Late Middle Ages and/or Modern Period.

Flint

A total of 455 flint fragments and 6 fragments of other stone types fall within this cluster. In addition, two fragments of hand-formed pottery were found, but unfortunately, these cannot be further identified. The flint was identified by Huub Schmitz of the Roerstreek Local History Association. The vast majority of the flint - 335 fragments, see Table 7 - consists of debris and chunks that are difficult to identify. This material can therefore only be dated very broadly as Paleolithic to recent. The remaining material - 119 pieces - consists of (parts of) tools and materials created during tool making or working. This material, too, with the exception of a few objects, cannot be dated more precisely than Paleolithic to Iron Age. Only five objects can be dated as Mesolithic to Late Neolithic (transverse pointed), Middle Neolithic (pointed blade fragment), or Late Neolithic to Bronze Age (retouched axe flake from Lousberg flint; ground axe flakes from Valkenburg, Belgian Grey, and Rijkholt flint). The type of flint used for 162 objects could be determined. Certain types of flint were used primarily or exclusively in specific periods of prehistory, making it possible to establish a more precise dating. Table 8 lists the objects for which the flint type could be determined, as well as the approximate dating of their use. Flint from Rijckholt and Maasschotter constitutes more than two-thirds of the material. These types were used from the Paleolithic to the Neolithic. It should be noted, however, that the flint from Rijckholt was used extensively primarily in the Neolithic. Of the remaining flint types, the majority were used between the (Late) Paleolithic and Neolithic (32 fragments: Vetschau, Obourg, and Belgian Grey), and only a small portion exclusively in the Mesolithic and/or Neolithic (15 fragments: Wommersom Quartzite, Lousberg, Sijpeld, and Valkenburg). Therefore, it is virtually impossible to differentiate temporally based on the type of flint. With the exception of five fragments, the flint was found almost exclusively in the West Sub-area. No clear concentrations are visible within the plan area (see Figure 12). When examining often resemble each other. In general, Roman wares are somewhat more compact than those from later periods, but regional differences can be very small, especially when the same clay sources were apparently used. The material from Neer, which is well dated, could not be definitively identified as Roman, but it does strongly resemble the material that could be definitively identified as Roman. More than half of the Roman coarse ceramics could be attributed to a specific type. Roofing material predominates, with 159 fragments of tegulae and 117 fragments of imbrices. Furthermore, four fragments of tubules were found, rectangular or square hollow tubes used in heating systems. What is missing are laters, flat, square or rectangular stones used as masonry or, in the case of the large sizes, as floor

slabs. These floor slabs are part of a hypocaust heating system, in which the heat source was located outside the actual space and hot air circulated under the floor and through the walls - tubules. Heated spaces occur in both living and bathing areas and, given the presence of these types of coarse ceramics on Roman sites, must have been quite common.

With the exception of one fragment, the material was found exclusively in Sub-area West (Figure 15). The distribution across the sub-area is not even, but is concentrated in the northern and southeastern parts of this area. Within this distribution, two clear concentrations can be identified, both in the southeastern corner. Both sites are already known in ARCHIS: 17526 and 51303. In the northern part, slightly more material appears to have been found in the northwestern corner. This aligns with the known site at the corner of Hagendoorn and Eiland (AMK site 11196, ARCHIS numbers 15248 and 15360). However, in this northern part, a concentration can also be seen in the central section of the site. Its location generally corresponds to the concentration of ceramics in this part of the plan area. A similar clustering of ceramics and coarse ceramics is also observed at the two locations in the southeastern corner of Sub-area West, but is absent from the concentration in the northwestern corner. This could therefore be a new site.

Figure 16 compares the distribution of Roman ceramics and coarse ceramics found within the plan area with the known sites within the broader study area. It should be noted that the vast majority of observations within this study area are observations, usually field surveys and/or detector finds. Only the small excavation on Arixweg, the supervision of the construction of the Maas quays and overflow channel,¹⁸ and an observation during excavation work on the monument, all relate to excavation work, to a greater or lesser extent. The field survey finds were found in fields, but only the center coordinates of these fields are recorded in ARCHIS, preventing a more precise placement. Dredged finds from the Maas River form a separate category. While they can be roughly placed, they do provide a cross-section of the landscape and, moreover, represent the lowest-lying area. Regardless, it is clear that the area along the Maas between Buggenum and Neer was densely populated during the Roman period.

Early Middle Ages: A medium probability of finding the finds applies to Late Antiquity and the Early Middle Ages, based on the geomorphology and soil composition of the plan area and the historical data. Potential sites may consist of settlement traces and ditches. Settlements are characterized by a distribution of pottery remains and the presence of soil traces (postholes, waste pits, ditches, wells, and foundations). Ditches can indicate land division patterns (farm boundaries and parcel separations), water management (drainage ditches), or reclamation and soil improvement activities. The size of medieval sites varies greatly and depends on the nature of the site. Therefore, no conclusions can be drawn regarding this matter. Sites from this period will also likely be located in and/or just below the current tillage, with the deeper traces, in particular, remaining intact.

The expectation for finding sites from the Early Middle Ages is estimated to be medium. The expectation that these sites will still be intact is estimated to be high.

Late Middle Ages and Modern Period: Based on historical data, the expectation for finding archaeological sites in the plan area is low to medium. During this period, habitation was already largely concentrated in the settlement cores on the edges of the field, the contiguous arable land between Neer and Buggenum. Only in the full mi the distribution of the flint artifacts (Table 7, excluding flakes, fragments, cores, and debris), a somewhat stronger concentration of finds appears in the northern part of the West Sub-area. However, no clear locations emerge that could be interpreted as zones of habitation and/or activity. How this material should be interpreted, however, remains to be seen. The obvious approach is based on the degradation of sites due to later activities, in which agriculture played a particularly important role.

This is not only due to tillage itself, but also due to the movement of material through soil erosion resulting from denudation. The fact that no clear indications of erosion were observed in the core logs argues against this. Nor is there a concentration of material visible in the lower-lying eastern part of Sub-area West, where washed-out material, along with the soil, should have concentrated if erosive processes had moved material. Another explanation could be that only a very small portion of the material present within Sub-area West was collected. Only what was visible was included. However, the area was only walked on once; if this had happened

more often, undoubtedly more material would have been collected, especially if the area had been reworked (and rained out) between the various collection sessions. A larger amount of material might have revealed concentrations, but this is by no means certain. Finally, we may have to accept that the recovered material reflects several thousand years of primarily short-term activities at a location that was apparently attractive enough to attract regular visitors.

Late Prehistory and Roman Period: a high probability of detection based on the soil and geomorphology of the plan area. The area will have been among the most attractive for habitation in the Late Prehistory and Roman periods. Therefore, traces of habitation and activity can be found throughout the entire plan area, with the exception of the low-lying part of the Southern Sub-area. These will include settlements of various types, including stone buildings, graves and burial fields, traces of craft activities, and traces related to land development and communication in the Middle and Late Roman period. Here too, these activities will have taken place on and in the current ground level and will therefore have been disturbed by later activities. However, a significant portion of these traces will lie deeper or extend beyond the building layer and will therefore still be present. These include graves, (post)holes, foundations, wells, ditches, etc. In addition, it is expected that some of the material culture will still be present, albeit partially scattered within the building layer. For the terraces (Western Sub-area and the higher part of Southern Sub-area), the expectation of finding sites from the late Prehistory and Roman periods is therefore high. The expectation that these sites will still be intact is also estimated to be high.

Roman Ceramics and Coarse Ceramics

Roman Ceramics (Lieke van Diepen)

During the field survey in Neer, 55 sherds of Roman pottery were recovered. The best represented are the jugs/amphorae and the rough-walled pottery, with 13 and 16 fragments respectively. This is not surprising, as these categories often occupy the largest position within the Roman pottery spectrum. Table 9 provides an overview of the pottery categories found.

The appearance of the sherds clearly showed that they were material that had been on the surface. The fragments are relatively small, weathered, strongly rounded, and some specimens show stains. The covering layer of the terra sigillata and the painted ware is usually completely absent. That this concerns the average weight per sherd, which is only 8.9 grams, is also evident in the surface finds.

The find material is predominantly second-century, with the period 120-200 AD being particularly well represented. Only the cooking pot Niederbieber 89 is a third-century find. Pure first-century material is absent. It is noteworthy that the terra sigillata consists exclusively of East Gaulish material. Among the smooth-walled material and the jars/amphorae are likely some Heerlen products.

Coarse ceramics is the correct term for building materials made of clay. This term distinguishes it from fine ceramics - earthenware - which is not only made from the same raw material but also using the same process.

A total of 689 fragments of coarse ceramics were collected within the plan area. Of these, 131 fragments can be attributed to the Late Middle Ages or Modern Period, and 59 fragments cannot be further identified as Roman to Modern Period. The majority therefore dates from the Roman period.

Of the material that has been broadly dated (ROMM-NTB), a significant portion is likely Roman as well. These are fragments without diagnostic surfaces, but whose firing (particularly the matrix structure) indicates non-machine production and must therefore have been made before the mid-19th century. The shaping and firing of coarse ceramics remained essentially unchanged until the advent of industrial production, making Roman, medieval, and early modern products comparable in firing style.

In the early Middle Ages, there may have been more habitation within the plan area. In the Modern Era, habitation was limited to a few isolated farmsteads, one of which is located just northeast of the Southern Sub-area.

The size of medieval sites varies greatly and depends on the nature of the site. Therefore, no conclusions can be drawn regarding this. Sites from this period will also be located in and/or just below the current building layer, with the deeper traces, in particular, still intact.

The expectation for finding sites from the Late Middle Ages and Modern Era is estimated to be medium. The expectation that these sites will still be intact is estimated to be high.

- 111650 Glass, Ceramics, and Coarse Ceramics from the Late Middle Ages and Modern Era. The third find category consists of pottery, glass, and coarse ceramics from the Late Middle Ages and Modern Era. The largest find category is pottery, of which a total of 755 fragments were collected. Of these, 609 fragments have been identified. The coarse ceramics are represented by 131 fragments, and the glass by 45 fragments.
- 111655 The vast majority of the recovered ceramics date from the Late Middle Ages and/or the Modern Period. A third consists of material, primarily red-fired pottery, dating from the Late Middle Ages to the sub-recent past, while almost half consists of material dating exclusively to the Modern Period. This trend is even more pronounced in the glass and coarse ceramics, with only one fragment of coarse ceramics that is
- 111660 exclusively medieval and a number of fragments that could be medieval or Modern. These material categories almost certainly came onto the land during manuring. As waste from the house, stable, and/or yard, they were deposited on the manure heap along with the manure and then spread across the fields. This also explains the distribution of the material within the plan area. It is regular, but becomes thinner
- 111665 as the distance from Neer increases. This can be explained by the fact that the fields closest to the village were fertilized most intensively. The thinnest distribution is visible in the field in the Southern Sub-area. A possible explanation for this is that this plot was likely used alternately as arable land and pasture. Only two pieces date from the Early Middle Ages or the beginning of the Late Middle
- 111670 Ages, and twenty pieces from the High Middle Ages. Material from this period could be related to habitation at the site, but the small quantity found makes this unlikely. <https://archisarchief.cultureelerfgoed.nl/Archis2/Archeorapporten/37/AR32653/GAR%201044%20Neer%20-%20Hanssum%20%20%2040815.pdf>
- 111675 September 9, 1899: The St. Lambert Chapel in Reuver. Towards the end of the 7th century, the Maastricht bishop Lambert, whom history has honored with the title of apostle of Peel and Kempenland, disembarked opposite, and probably under the protection of, the former Roman, then Frankish Castellum (Kessel), in order to convert the inhabitants of our sandy region, the last remaining pagans of our region,
- 111680 to Christianity. On the right bank of the Maas stood a small hill, and there, built of river pebbles, stood a small building dating from the period of Roman rule. When his word had borne some fruit, the Holy Evangelist consecrated this building as a house of worship for the benefit of his new converts.
- 111685 Over time, as the number of believers continued to grow, it was enlarged and gradually transformed into a small church, later dedicated to Saint Lambert himself. Until the 14th century, the village of Beesel was elevated to a parish, and St. Lambert's Chapel continued to exist as an auxiliary church for the hamlets of Leeuwen and Offenbeek, which now belong to Reuver.
- 111690 Habets mentions Bezel and the Chapel of St. Lamberti in the year 1400. On April 2, 1661, the goods, gradually donated to the venerable shrine, were transferred to the Beesel church for the maintenance of the chaplain, who also served St. Lambert's Chapel.
- 111695 Habets mentions in the year 1669: Below Bezel, opposite Kessel, lies the chapel of St. Lambert, which provides pastoral care. Petrus Jacobs is the rector. On July 16, 1689, Charles II, King of Spain and Duke of Gelderland, granted the then chaplain-rector Joêls Beurskens "a patent for a free year and a horse-mark" for the maintenance of the chapel "afflicted and ruined by old age and war troubles," which "according to common tradition, was most likely built at a time when these lands were still in
- 111700 their natural state, and after the conversion in them, the first Christian and Catholic worship began."
- On May 19, 1787, the St. Lambertus Church was built.
- 111705 When in 1830 the chapel, which had already withstood so many days and storms, proved dilapidated, a new temple building soon arose on the site where a considerable basin had formed between the aforementioned hamlets. On St. Lambert's Hill, a smaller chapel was built in 1845—Reuver had become an independent parish in 1834—from the cobblestones of the ancient chapel, which kept the memory of the glorious past alive for posterity.
- 111710 Since the jubilee of the great Lambert's martyrdom was celebrated in 1896, the influx to that holy place became so great that it was decided to connect a more spacious place of worship to it, while preserving the existing building. This new chapel, now built according to a design by Mr. J. Gielen in Kessel, will be consecrated on Sunday, the 17th of this month, with the permission of His Eminence

the Bishop of Roermond.
During the excavation, the foundations of the ancient chapel were exposed. Like the building itself, the masonry of the foundations consisted of heavy stones, cemented together with flour and lime mortar into a virtually indivisible whole.
We also found a large quantity of fragments of Roman roof tiles, tegulae, and imbrices, as well as, in several places, bones, almost completely decayed, yet still clearly recognizable as belonging to bodies buried there a very long time ago. This confirms the ancient tradition recorded in the charters that in ancient times a Roman building stood there, and that "the Chapel of St. Lambert—as one of us modestly testifies—was a parish church."
Near the Lambert Hill, now planted with birch bushes, lies the Roman army camp mentioned in the 1864 Publications.
Although the burial mounds, or tumuli, located there had previously been searched by archaeologists, and a multitude of burial urns had been excavated from them, this year we were fortunate enough to unearth six, including three of Roman construction, filled with ash and bones.
This undeniably proves a relatively long Roman presence on Reuversein soil. Reuver is therefore privileged to possess a spot in his St. Lambertsheuvel, hallowed by the evangelical work of the great Maastricht native, who brought an entire nation to the benefits of Christianity and civilization.
J. VRANCKEN.

June 5, 1888 ASSELT AND SWALMEN

Through the flat meadow behind Leeuwen, along the path overgrown with dense, short grass, our walk leads us to Asselt, the old Asselon. It is delightful outside. The warm breath of a gentle breeze carries the balsamic scents of birch leaves. The daisies and buttercups sparkle like stars in the greenery, and on each leaf a dewdrop sparkles like a diamond in the morning sun. Before us, in the fresh meadows, numerous sheep graze under the care of the blue-collared shepherd and his restless dog. On the right, a birch forest, surrounded by slender poplar trees, closes off the view. Where the ground rises, the spacious buildings of the Zijperhof, the residence of the Mayor of Swalmen, stand against the black background. Through the lush trees, the gray-red tower of Swalmen and the old Hillenrade Castle gleam in their wooded surroundings; if we turn left, we see the sparkling waters of the Maas, and the modest tower of the Chapel of Asselt rises above the oaks. And above the entire colorful landscape arches the bright blue, transparent spring sky, in which not a speck can be seen but the lark, soaring upwards with song. Never before have we received such a soothing and favorable impression of the village than now.

Asselt, where the path leads us, is a small Maas village. Therefore, the history of Asselt speaks of a constant struggle for existence against the waves, of an uninterrupted struggle. While the Maas River brought Asselt many blessings in earlier days, when it was the depot for the Maas trade with the Rhine province, its waters often threatened churches and homes with destruction, and many a night of fear was spent by the inhabitants of Asselt, as the high waves crashed with all their might against the gray walls of their church.

The Maas, with its turbulent waters, has been quite unsteady in its course here. It has frequently shifted its course; in the past, it washed over the foot of the church. At that time, the opposite bank lay where the Asselt bank now lies. A few deep snails, overgrown with reed and aquatic plants, still mark the spot where ships with their cargo once anchored at the unloading dock. Later, the strong current near the church carved a different path, closer to Buggenum, leaving its old course. According to an old map, present at the town hall in Swalmen, a large flood plain, the Buggenum, formed between the old and new arm

Mer Tolwaard. Opposite the houses of Asselt, further along, at the so-called Gebrouwhuis (Brewery House), which we will pass shortly, the Maas pressed against the houses, gnawing away at the bank that supported them with an irresistible, slow-moving force. The ground, over a width of more than sixty meters, and three houses disappeared into the waters of the Maas, and only now, when the municipality has constructed a colossal stone revetment to preserve the other houses, has the greatest force of the waves been broken.

The low meadows and the heavy clay soils we just passed through, and the so-called Voelbeemden (Feel Meadows), also arose centuries ago from the fluctuating bed of the Maas.

The chapel of Asselt lies on a walled hill; it is a very old building with a cellar.

Its location on the Maas River, and the material of its walls, consisting of a mixture of rough field stones and Roman tiles, cemented together with lime, strongly support the assumption that it is of Roman origin. Tradition also holds that it was an old Roman tollhouse; the name "Tolwaard" (Toll Ward), which the meadow near the church bears, supports this assumption. It was later converted into a small church. The door, which is smaller than the original, faces north in the middle of the side wall.

The building consists of two parts: a square rear section, the eastern half of which protrudes slightly, and the tower, which is of a later date and made of brick. The rear of the building bears traces of restoration.

The church, however small, appears clean. "Small, but clean," one might say. One thing must not be forgotten. The Asselt church possesses an art treasure, well-known and highly prized by Limburg art lovers. It depicts the dying Christ on the cross, a painting so poignantly beautiful that one immediately recognizes it as the work of a master. The physical suffering of the God-man, the anguish of the Redeemer, are so masterfully rendered on the beautiful face and in the noble forms of the body that the sight is moving and touching. In its humble setting and old frame, the painter's masterpiece speaks to the heart, and the impression it makes is deeply imprinted on the viewer's mind.

The painting, we believe, must be a gift from the former lords of Hillenrade. How else could the humble church have acquired such a gem?

At the foot of the gray walls of the chapel, the deceased of the village find their final resting place. This elevated spot appears to have served as a burial ground early on, for we find a bluestone set into the tower's front wall, on which the inscription "Beet russe mit hare kyderen" (Be free with her children) is chiseled in Gothic letters. Judging by the form of the script, the stone may well date from the late 15th century. According to tradition, this stone was placed there in memory of a mother who, through an unfortunate accident, died in a fire with her children. That this family, "Russe of Ruesen," was native to the area is proven by another cross opposite, bearing the date 1558 and the inscription "Jan Ruesen." The other stone crosses inform us that, among them, Willem Quiten in 1615, Geurdt Quiten in 1629, members of an Asselt family, and Geurdt Lomen in 1616, were ordered to eternal sleep. From the cemetery, we descend again to the sandy village road, and we pass between hedges of flowering hawthorn on one side and along the elevated farmland on the other, to the white houses along the Maas, where we can rest for a moment. At the top of the hill, high and dry, yet somewhat airy, lies the rector's residence, a new building. Such a beautiful rectorate naturally also required a more beautiful church, for the building is rather small and old for Asselt, and yet we would hate to miss the old church with its stubby tower and rough walls in its picturesque setting.

Asselt with a new church would no longer be the unique Asselt it is. From the windows of Mother Theelen's neat common room, we have a wide view of the surrounding area.

Behind the large floodplains on the other side of the Maas, the towers of Horn, Buggenum, Haelen, Nunhem, and Neer lie in a row against the wooded backdrop. We don't want to luxuriate in the view for long, but instead continue through the Gebrouwhuis-Veld, towards Genaenhof.

Through the corn-rich field, we pass Genaenhof (old courtyard) on the left and Genoehof (new courtyard) on the right, and see before us the ruins we so often observed from the heights of the railway line that runs nearby. This is the Ouborg, formerly the seat of the noble family of Swalmen. Perhaps this is also the ancestral home of the 6th abbess of the noble convent in Roermond, Elisabeth de Swalmen, who lived around 1293. Later, the house belonged to the f

The Van Oest family, and later passed to the Schenck family of Nijdeggen and de Hoensbroeck. It already belonged to Hillenrade in 1381.

From the archival documents, we must conclude that the Ouborg was a knightly house or castle, albeit small in size. A small, thick tower forms the front of a pentagonal enclosure with thick walls, formerly completely surrounded by the Swalm River. The tower, now deprived of its roof, is accessible through a broken opening and could formerly be climbed by means of a stone spiral staircase, the remains of which can still be seen. As early as the 16th century, the Ouborg, or the house of Rothem, as it is also sometimes called, was destroyed. Few documents concerning the destruction of the fortress have come down to us. Today, the murmuring Swalm River with its ripples only washes one side of the beautiful ruin. A few pollarded oaks and canadas, a small bridge, and a beautiful background adorn the landscape, where painters usually choose the ruins as their focal point. Through the viaduct, along the stream,

our path turns towards Swalmen and brings us to the Market Square.

The Market Square, where the Town Hall and the church are situated, is not the most attractive part of Swalmen. Only a linden tree raises its tall, solemn trunk in the square, the appearance of which offers little indication of the prosperity that prevails in the village. The linden has been pruned in a strange way, and its lower crown has curved and grown together into a sort of flat surface. As a curiosity, we were told that the Fanfare, during the time it was under the now-renowned direction of Mr. Sagers, once had a strange idea. Standing on that crown, it gave a concert that must have been very well received by both the performers and the audience. In former times, the same fanfare band gave a concert on May 1st in the beautiful Bosch van Hillenrade; however, this custom seems to have disappeared.

We now step through the arch of the secretariat to take a look at the church.

The church of Swalmen is an old building. By 1452, the church was already dilapidated; even then, Duke Arnold permitted the municipality to sell 25 acres of communal land, using the proceeds to rebuild the church. In 1493, the church was restored by a citizen of Roermond, Michiel van der Sterren, for 28 Rhenish guilders. The Asselt church appears to be the mother church of that of Swalmen. In 1293, Mathias, pastor of Asselt and Swalmen, already appears.

June 12, 1888: The church of Swalmen was transformed into a Gothic church by the removal of Gothic windows and arches. Because of the additions, the basic form has not even been preserved. The interior is rather poor. The altar is not kept very clean; at least, we are walking over a finger-thick layer of sand and dust.

The three altars are built in Renaissance style. The central altar boasts a fairly good painting depicting the Holy Communion and the coats of arms of the altar's donors, the Schenck van Nijdeggen and the Hoensbroecks.

The side altar, dedicated to St. George, the patron saint of knights, features an altarpiece depicting St. George battling the dragon. The painter certainly never bothered to properly study the form of a horse; otherwise, he would not have sent St. George, who looks more like a common Landsknecht than a proud knight, on such a horse to the dragon battle. Under the tower used to hang a wicker or rush dragon, which the young men of Swalmen, just as they still do in Beesel every seven years, would lead triumphantly through the village and then fell with spear thrusts. This centuries-old custom, however, has fallen into disuse over the years.

The organ bears the coats of arms of Schenck and Hoensbroeck, as does the beautiful marble holy water font.

According to tradition, an Austrian general who fell in battle near Swalmen is buried under the organ. Neither stone nor inscription indicates his grave. We find nothing more remarkable, and through the low portal we return to the high cemetery.

With one of Swalmen's authorities, who was kind enough to accompany us, we climbed to the secretariat. Here we were shown a beautiful atlas of maps from the end of the last century, which shows all the parcels of land belonging to the lordships of Asselt, Swalmen, and Hillenrade. Furthermore, a gallows chain is present here, found a few years ago at Grietjesgericht.

At the edge of the municipality, on the Boschberg, stood the courthouse in former times, still known to the public as Grietjesgericht. There, criminals were "executed to the body with a rope or sword between their head and neck, until death followed." Clear evidence that death sentences were carried out at this location was found by some laborers who were planting pine trees there about five years ago. While digging, they came across

The shovel rested on a skull with a neck bone; attached to this was the chain that once served the sad purpose of fastening the criminal's body to the gallows after the execution. The pelvis was crushed to dust by one of the workers with a blow from the shovel. The chain was preserved.

The old archival documents from Swalmen were all sent to Maastricht upon request; only a few guild documents remain.

The militias in Swalmen were very ancient; their history was lost in the darkness of the Middle Ages. True, the beautiful royal silver that adorned the chest and shoulders of the shooting king during the ceremonial bird shooting and the procession has ended up in the melting pot, and the Schuttenkamp, Schuttenheide, and other goods have now passed into foreign hands. Nevertheless, one would have to conclude from the tall Schutsboom (shooting tree) that we see rising in the sky from afar in the village that the ambition of the old "schutters" has not yet entirely died out. The guild brothers of St. Joris van Swalmen were not only cheerful people in the past, but also thrifty stewards of their income.

The guild accounts prove that their meetings were lively. The jug of foaming barley brew was passed around merrily, and the fiddle cheerfully invited the younger brothers with their beautiful brethren to dance. And they were so frugal with all these recreations, for they brewed their own beer, bought the malt and hops for it, gave the brewer a fixed wage, and, meticulous as they were, even reimbursed him for his fire and light. Moreover, if he had to brew through the night, they would ply him with a generous pint of schnapps or "waggelwater." Not much of note remains in the small town hall; little remains of the former estate. The municipality no longer possesses a coat of arms, not even a seal.

A little distance from the town hall, closer to Roermond, lies the small river after which the village takes its name. The Swalm is a clear, fast-flowing stream that originates in the lowlands behind Wegberg near Tusschenbroek Castle. It flows through the pools and lakes near Brempt, past bridges across the heathland to Swalmen, past the old Roman cemetery, and flows through the village to pour into the Maas River a little south of Hanssum, below Neer. The stream runs for 30 kilometers. At Swalmen, it flows under a bridge, on which stands a small statue.

The statue depicts St. John Nepomucenus and was donated in 1823 by a gentleman from Liège. He had a trading house here, with which he did business and which often required him to visit Swalmen. He donated the statue in memory of a fortunate rescue from the Maas, which he had accidentally fallen into. Tradition still tells of the stone bridge over the Swalm, how the French, when the Prussians were hot on their heels, demolished it in 1791 to prevent them from crossing as much as possible. A wounded Frenchman, forced to remain behind after the French army crossed the bridge, hid in a beehive near the bridge. When the Prussians arrived, he loaded his rifle and shot one of the Prussians. He kept firing, and because of his concealed position, no one initially knew where the well-aimed shots were coming from. Only after the Frenchman had downed seven Prussians with his shots could he be reached after the bridge had been repaired; the brave Frenchman was then cut down by the furious Prussians.

From the bridge, there is an attractive view of the Swalm and the surrounding buildings. Before us, we see the Swalm's foaming water splashing down a side branch over a barrier; along the main branch, immediately adjacent to us, lies a busy sawmill, whose former chattering waterwheel has been replaced by a steaming steam engine. Further on, we see the stately trees of the Venlo road, and behind them, a few tile factories send thick clouds of smoke from their low, black chimneys into the air. In addition, we have a view of a few gardens, where apple and pear blossoms seem to cover the trees with a translucent white and pink blanket.

Industry in Swalmen has suffered a serious blow due to the increase in import duties. To cite an example, we need only cite Mr. Königs's factory, which, judging by its layout, is arguably the largest, or at least one of the most important, steam sawmills in Limburg. Most of the sawn timber used to be shipped to the Rhine region; the industry had boomed due to the large sales. Many people found work and bread in the factory. However, as soon as the increased import duties of 1 mark per 100 kilos were not levied in Prussia, the Germans stopped coming to buy, and the manufacturers could only produce the best quality planks with small profits to continue to operate. It is therefore not surprising that hundreds of sawmills in Holland are idle, especially since the Germans are allowed to import sawn timber by the shipload.

Previously, many agricultural implements were also manufactured in this factory, most of which were supplied to Prussian farmers in the border districts. However, when these machines were taxed at 1.80 guilders per 100 kilos, import was no longer possible. Even the smallest threshing machine weighs easily 700 kilos. The German tax authorities even went so far as to levy a new tax on implements that needed repairs upon their return, which had the unfortunate consequence that Dutch workers had to repair them on German soil. To make things even more difficult for these workers, they were also forced to pay a professional tax, which was also not very generous. This is how Germany protects its industry. By citing these examples, we do not intend to argue that this protection creates a healthy situation and that the industry, thus aided by any means necessary, will flourish vigorously. However, we believe we must conclude from these telling examples that levying protective duties as a means of revenge is the only way to save small-scale industry along the borders.

And what is best about the Germans is that they know exactly what not to tax; what they need for agriculture and obtain here is free; for example, no import duty is levied on animal feed, which results in the Rhinelanders buying up all the necessary supplies in and around Roermond at high prices, often leading to a shortage here. Similarly, no duty is levied on lime for agriculture, which is delivered cheapest along the Maas to Asselt and then transported further by road. And all of this is

done with the good purpose of protecting and supporting agriculture, the great source of national prosperity, in these calamitous times.

After this brief economic digression, to which our remarks have almost naturally led us, we would like to spend a few moments with our friendly companion, the secretary. Here we have the opportunity to see how the sound lessons in fruit tree cultivation given by the walking instructor yield wonderful results. We encountered numerous beautiful fruit trees in all shapes and sizes, but all of them, thanks to the scientific treatment they received, promised twice as much fruit as other trees, which here and there were abandoned. What a pity that these courses are not universally followed with the high level of interest they truly deserve.

After this, we visited the grisaille glass factory, strolled through the village, and the beautiful avenue to Roermond lay before us. Close to the main road to Roermond lies the large Beckerhof farm, entirely surrounded by ditches or meadows. This enclosure made it easier in the past, when a threat of war was looming, to secure livestock and possessions and protect them from the predatory hands of soldiers. Similar fortified farms were found in the vicinity of Roermond, and especially in the area around Swalmen, such as Boschhof [Baxhof] near Schoolbroek, the burnt Weijer near Roermond, the meadow near Maasniel, a boarding house at 't Gebroek, etc. In the Schoolbroek area, which formerly belonged to Beesel and Swalmen, there used to be a redoubt into which cattle could be driven at night. The following peculiarity was mentioned to us in passing about 't Schoolbroek. To prevent disputes between the residents of Beesel and Swalmen, sealed letters stipulated that Swalmen was the master of the Broek until noon, while Beesel could assert its right of ownership in the afternoon.

Arriving at the end of Swalmen, we bid farewell to our friendly guide, promising a return visit.

The gentle spring sun had already risen so high by the time of our walk that the shade cast by the beautiful elm trees along the long avenue to Roermond was very welcome.

The train whizzes past us, recalling an ode to Swalmen, which a rural genius wrote to his fellow citizens in 1863, in which he describes Swalmen in the following soulful verses, which we reproduce verbatim here.

De familie Theelen in Neer, Asselt en Swalmen

14 maart 1521

"Gegeven op onsen huyse to Eelssen in den jaer onss lieffe heren duysent vijffhondert ind eynentwintich op donredach nae halffasten"

ELSLOO/NEER/ASSELT - Johan van Vlodrop en Adriana van Merode verpachten de Boxweerd bij Maaswijnaarden ('Wienerte') gelegen met ingang van 1 april voor een periode van twee jaar aan Jan van den Bergh, wonend te Neer, voor jaarlijks 20 Hornse gulden. Tevens is afgesproken dat oorkonders gedurende deze pachttermijn geen rente zullen geven wegens de lening van 210 Hornse guldens die zij van Van den Bergh hebben opgenomen wegens een vordering door de kinderen van wijlen Seger Tessers. Na afloop van de termijn zal deze schuld alsnog worden afgelost.

"Ich Johan van Vlodorp ind Ariaen van Meroide, eluyde, bekennen oevermytz desen apenen brieff dat wye uitgegeven hebben te pacht onsen weyrt off grient gelegen tot Wynerden aen den breyen vleyck geheyt Bocksweyrt twee jaer lanck ind ten halven tij aeff te staen weem des niet en genuechden ende malckanderen dat ther gueder tijt eyn halff jaer te vorrens op te seggen Jan van den Bergh wonende tot Neer ind Jan sall onss alle jair geven ind waell betailen tot Pinxten twintich bescheiden Haersch gulden off twelff bescheyden Burgonisse Brabantze stuver vur den gulden off bennen veerteen daighen dair nae onbevangen bennen der stat van Ruremunde dair onss dat believen sall, ind Jan van den Bergh vursch. heeft onss geleent twe hondert bescheiden Haersche postulaetz gulden ind theen dy in onsen groten noeden ende merer schaiden te verhueden gekeert sijn aen Segher Tessers zelegghen kinderen nae vermoegen syegell ind brieve van onsen alderen sij op onss sprakende hebben ind zo ysset vurwert ind bededinght dat wye Jannen van den Bergh vursch. van den twee hondert Haerschen gulden egeyn lopend rent van geven en sullen ther tijt toe ind all zo lange sijnen tijt de pechtingen omme is, het were dan then halven off den ganssen tij als vursch. steyt. Ouch zo ysset mit vurwert ende bededinght als Jans van den Bergh vursch. tijt uit is under pechtinghe, dat ich dan Johan van Vlodorp ind Ariaen van Meroede eluide vursch. off onse even dan gehalden sullen sijn Johan van den Bergh of sijnen erven van stonden aen haem sijn twe hondert Haersch gulden ind theen dy hee onss zo in onsen noeden geleent heeft haem wederomme leggen ind betailen sullen tot haeren benoigen tue. Ind in geval dat off Got wyll nyt geschien en sall dair inne gebreecklicken gevonden worden ende Jannen van den Bergh vursch. off sijnen erven haer penninghen niet en betailden in maeten als vursch. steyt, soe sall ind maich dan Jan offte sijne erven dennen Bocksweert vursch. in sijnen handen halden, dennen nutten ind gebruycken ende van der jairlick pechtinghen der twintich Haersch gulden inhalden in aeffslaegghen der geleender penninghen der twee hondert Haersch gulden ind theen vursch. ind onss niet dair van te geven bis dy geleende penninghen geheellick betailt ind gegeven sijn. Ind der tijt van der pechtinghen sall aengaen den yersten daegh van den apryll. All argelist, loese vunde hyr inne genslicken uitgescheiden, in orkonde dis ind der waerheyt soe hebben weyr Johan van Vlodorp ind Ariaen van Meroede eluyde vursch. vur onss ind vur onsen erven elck onsen siegell hyr aen gehanghen, ind hyr synt ouch oever ind aen geweyst dair dese mytscap ind pechtinge geschiet is dy eerbaren Tyll Porttens, Jan Ruytzen ind Katheryn op den Vrythoff. Gegeven op onsen huyse to Eelssen in den jaer onss lieffe heren duysent vijffhondert ind eynentwintich op donredach nae halffasten.

Origineel op perkament met zegels van de oorkonders. Tilman Portgens en Jan Ruitzen komen in andere akten voor als schepenen van Swalmen en Asselt en treden hier mogelijk op als laten van de laatbank van Asselt, waarvan Johan van Vlodrop eigenaar was.

2 oktober 1612 RIJKE - Hendrick van Cruchten oorkondt dat de superintendent van de Rekenkamer en anderen op 30 augustus 1612 aan hem een aanwas ('grindt') hebben verpacht, gelegen tegenover zijn hof te Rickel onder Bezel, zoals deze daar gelegen is of in de toekomst nog aanwassen mag. Hiervoor zal hij aan de Rekenkamer (namens de hertog van Gelre) jaarlijks 45 stuiver Brabants betalen van elk bunder 'holtgewas, groen off weybaer wesende'. Van Cruchten heeft zich op 26 oktober 1611 bij de Rekenkamer gemeld met de mededeling dat hij van Andries Driessen, pastoor te Neer, de pacht heeft overgenomen van 'twee grinden ofte middelsanden gelegen in de Maese bij Bezel, die eene tegen die Kesselsche Haeghe onder die Handtsommerbeeck, het andere wat hooger gelegen sijnde, tegens over Deursdaels bossen oft sijnen hoff van Rickel'. Deze aanwassen waren ca. 4

Naspeuringen van Paul Theelen: Constantinus Imperator

jaar geleden aan voornoemde pastoor verpacht voor 30 stuiver Brabants voor een periode van 6 jaar. De aanwas tegenover de Kesselse haege [waarschijnlijk de Mussenberg] is inmiddels geheel weggespoeld; de andere is 2 jaar geleden eveneens door 'de hoge wateren zeer affgespuelt ende innegeschuert, oock mette leste hoge wateren daer naer zeer beschaedigt', vooral aan de Hornse zijde. Ook deze aanwas dreigt door hoog water en ijsgang geheel weggespoeld te worden, hetgeen echter kan worden voorkomen door de oevers te batten (beschoeien). Omdat de boerderij van Van Cruchten tegenover deze aanwas ligt, is deze genegen om de aanwas op zijn kosten te laten 'batten ende verscheren', mits hij deze tegen een redelijk bedrag kan pachten.

De Rekenkamer heeft de aanwas hierop, na advies van de rentmeester van Montfort, Engel van Offenbeeck, bezichtigd en heeft vastgesteld dat de aanwas met de stenen en zand nog geen bunder groot is, en dat het 300 pond Arthois of meer zal kosten om deze te batten en de 'putten ende riolen' die bij het laatste hoog water zijn ontstaan, weer op te vullen.

Met ingang van 30 augustus 1612 zal Van Cruchten de aanwas voor een periode van 10 jaar zonder kosten mogen gebruiken, in ruil voor de onkosten van het batten. Na het aflopen van deze termijn, te weten op 30 augustus 1622, zal de aanwas op gezamenlijke kosten door een beëdigd landmeter met de 'maete off roede van Bezel' gemeten worden. Per bunder die bruikbaar is als 'holtgewas, groenselyck off gersingen uytgesteken steen ende zandt' zal hij de eerder genoemde 45 stuiver Brabants betalen, 'teynde maete, teynde gelde', zolang de aanwas zal bestaan. Elke 5 jaar zal een nieuwe meting worden gedaan op gezamenlijke kosten en zal de pacht worden verhoogd of verlaagd. Van Cruchten zal van de hertog geen kosten, schade of arbeidsloon kunnen verhalen die hij maakt om de aanwas in stand te houden. Tenslotte is op 30 augustus 1612 bepaald dat Van Cruchten een reversaalbrief moet afgeven ten behoeve van de Rekenkamer, hetgeen bij deze gebeurt.

Andreas Driesen was pastoor te Neer 1598-1621 (mededeling Jan Hanssen, 31 december 2000). De plaatsnaam "Ne..er" is in de akte niet goed leesbaar.

1 augustus 1668 SWALMEN - Verklaring inzake de heffing van tienden en betreffende de (verdwenen) ronde toren van Hillenraed.

Johan de Verwer, contrerolleur van Z.K.M. Licenten op de Maas, als laatscholtis van de hof en heerlijkheid Asselt, bijgestaan door de licentiaat Thomas Bordels namens de markiezin de Wagniers, Peter Spee en Johan Obers, beide laatschepenen, en de secretaris Suiverich alsmede de laatbode Tiel van Assel oorkonden dat zij zich aanwezigheid van Geurt Quijten, pachter van voornoemde hof, hebben vervoegd omtrent het huis Hillenraet, alwaar Gootsen Gerardts, oud 70 jaar en halfman op de Graetshoff, en Corst Stockmans, oud 50 jaar, hebben verklaard dat ze de tiende van de Asselterhof zo'n 40 jaar geleden in pacht hadden '... ende voorts aangewesen dese naervolgende limiten derselbe thiende, als te weten, den ronden thoorn des huis Hillenraet, den welcken alsnu affgebroken ende den nieuwen sael op de plaetse getimmert is, wiesende op eenen dicken alden eycken boom ontrent t'eynde van Cleutiens straetgen staende, wijsende van daer op den thoorn des Graeffelijcken huys Hoorn tot aan den Grip stuckens gelegen' in twee percelen groot samen 3 vierdel plaats, tegenwoordig toebehorend aan Johan Henskens en Ruth Silkens 'als nichten ende neben kinderen'.

'Ende van daer langs de landerijen totten huise Hillenraet ende Beeckerhoff landerijen den Carthuiseren tot Ruermondt toecomende, daer aff de thient int velt ter slincker hant gelegen toebehoort aan den hoff t'Asselt ende soe voorts gaende tussen d'erff der voorschreven heeren Cartuiseren ter eenre, langs den Meulenwegh vuytschietende mit een spits punct bij den Hillenraeder wegh uyt, ende ter andere zijden Gasthuys ende der eerwaarden heeren Capittulaeren landerijen, alwaer de eerwaerde paters Cartuiseurs de thiende op hunne landerijen sijn hebbende, ter rechter zijden, ende op Gasthuis ende der eerwaarden heeren Capittulaeren landerijen ter slincker hant den voorschreven hoff t'Asselt.

Item over d'ander zijden van den Hillenraeder wegh ter slincker hant hebben d'eerwaarden paters Carthuysers eenen geer lant van hunnen anderen landerijen door den wegh affgescheiden, samen groot omtrent seven morgen, op welck erff van den paters Carthuiseurs den thienden toebehoort aan den heer pastoor tot Swalmen, des Schoollasters Thiende genoemd, ende die meerreste der landerijen op de slinckerhant liggende, thient den meergemelten hoff Assel van der paters Carthuysen lant ter rechterhant soe voorts ter eenren ende ter anderen zijden des voorschreven Gasthuys landt gehoordt den thient vant Gasthuis lant aan den hoff t'Assel, ende van daer voorts gaende tot op Goetsen Graets lant d'welck getient wordt bij den z[alige]r pastoor tot Swalmen ende den heeren Carthuyseren, ende t'ander lant der heeren Capittularen toebehoorende thient den hoff t'Asselt tot op den Leijtgraeff toe, van

den Leijtgraeff opgaende langs de Tigelerije tot op de Spurck Hegge op den anderen hoeck van den Laethwegh staende op den paters Cartuiseurs grondt, ende van daer ter slincker hant langs het busken d'erffgenamen van Bijl tot Venlo toebehoorende tot op Cartuiseurs kempken, welck kempken oick den voorschreven heft thient tot aen joffer Dursdal Spickter, van daer op den eickenstock aen Wittengraeff tot op den eyckenboom op den graeff van den eerwaarden heeren Cappittularen hoeffs bomgardt bij Graeterstraet staende ende soe voorts tot aent hort gatt van den moeshoff tot op den doornen struyck aen Graterwegh tegens den voorschreven eycken staeck op den Wittengraeff tient t'Cappittel ende d'ander landerijen den voorschreven hoff'.

24 september 1669 SWALMEN EN ASSELT - Verklaring door enkele laten verbonden aan de heerlijkheid Asselt over het belopen en in bezit nemen van een aanwas in de Maas bij de Biesweerd.

"Wij Johan de Verver, scholtis, Johan Obers, Nelis Janssen, Corst Peckx, Corst Stockmans ende Peter Raemaekers, laeten des hoffs ende heerlicheyt Assel, doen condit en attesteren hiermit en cracht deses dat wij neffens den gerichtsschrijver en booden ter instantie van de weledede en eerentrijcke jouff. Irmgardt van Holthuysen, weduwe Dursdal, en haeren soon joncker Franciscus Arnoldus van Dursdal, Marie Quyten, weduwe Van Holt, de weduwe Pueyn, Matthijs Stoffers, soo voor hem selfs als mede voor Leonard Tessers, en Hendrick Heijnen in naeme van sijne moedere Dirixken Bastiani weduwe Heijnen saliger, ons alle saemen op den 24 septembris 1669 wederom hebben getransporteert ende vervoegt onder Assel voorbij den Biesserweert op sekeren aengeloopenen steen, alwaer wij oick op den 2 deses loopenden maent sijn geweest, inhavts acte daarvan sijnde, tegens den welcken aengeloopen steen in den Biessen Baendt joncker Baexen op de Baeckxhooff toebehoerende hebben gevonden Aretz halfman op de eerw. patres Jesuiten Speck, Herman Spoerens, Jan Beeck, Jan Ruytzen, Sill Paulssen, Herman Heeskens, joncker Baexens voorss. knecht en Johan Haewinkel des gemelten joncker Baexens halfman, de welcke siende dat men naer den voorss. aengelopen steen toegingh, van daer stilswijgens vertrocken, ende op den steen gecommen sijnde, hebben aldaer bevonden dat de rijser aldaer gesteken op den 2 7bris tegens over joncker Baexens Biesenbaendt waren uutgetrocken, en eenen stock van daer en ende so voorts leger vuyt mit andere risers besteken, die welcke door last des heere scholtissen en gerichtsluyden ter instantie van requiranten uutgetrocken ende int waeter geworpen, sijnde door Tiel Tielen gerichtsbode de selve plaetse wederom met andere rijseren besteken, ende voorts door Corst Stockmans hebben laeten aftreden ende bevonden dat de Maese van den selven steen noch vifftich treden afgeweeken was, so dat den selven aengeloopen steen van de plaetse af van de welcke den steen ierstmael afgetreden was, in't geheel bevonden is woorden langh te sijn hondert en 29 treden, en gemerckt die/voorss. requiranten versochten van allen het gene voorss. hun gelijkfals acte met gedeilt te worden, voor gebeurlich gerechticheyt, d'welck men niet en heeft moegen verweygeren, soo ist dat wij dem ter warer oirkondt de minute deses met eygene handen onderteekent hebben, den heer jeder mallick sijn recht voorbehalden, alles sonder argelist, actum Assel den 24 septembris 1669 ende was onderteekent J. de Verver, dit tekenden [handmerk] Jan Obers, dit tekenden [afwijkend handmerk] Nelis Janssen, dit tekenden [handmerk] Corst Specx, dit tekenden [handmerk] Corst Stockmans, Peter Ramekers, ...drich secretaris."

13 mei 1697 SWALMEN - Voogdgeding.
"Voogdgedingh gehouden binnen Swalmen onder den hagendoren den 13 may 1697. Den schepen Jan Janssen becroont dat de naebuyren van Asselt eenen voethpatt maecken over sijn erve aen het Meelenbroeck, aen den Slack tot aen de Maese, alwaer noeyt eenen voethpatt is geweest, versoeck versieninghe.

Sr. Johannes Rutsen in naeme van den eerwaarden PP Carthuijsers claeght dat de naebuyren maecken eenen voethpatt aen hun erve, te weten van Beeckerhoff wijer recht door het Broecxken, ende door het kempken naer de Asselsche straete, daer noeyt voor desen eenen voetpaet is geweest, versoeckt redemie.

Wordt d'eerwaerde PP Carthuijsers belast alvooren gerichtelick te doen verhooren eenighe oude persoonen, over de kennisse die sij over den voetpatt in questie mochten hebben, om sulcx geschiedt voordert gedisponeert te worden naer behooren, actum Swalmen den 14 may 1697.

De geswoorens alhier in naeme van de naebuyren, claegen dat sij te seer overlast worden met diensten, versoecken dat iedereen mitte peerden, daer hij mit ackert, oock dienst sal doen.

De supplianten sullen alvooren hierover requeste aen desen gerichte presenteren ende daerinne te decuceren naerdere ende substantiële redenen, om alsdan

daerinne voorders te disponeren naer behooren, actum Swalmen den 14 may 1697.

De geswoorens in naeme van de gemeynte becroonen datter niet en wordt gehalden vahr, bair, springhaingst, isere eeght, gelijk de besitters van de groote thiende gehouden sijn te doen, welck niet en wordt geobserveert, versoecken dar daerinne magh worden versien.

Wordt die groote thienthebbers belast ten dienste van dese gemeynte te houden den vahere, bair, springhainghts, isere eeght, ten waere sij hadden eenige redenen ter contrarien waervan sij den gerichte sullen hebben te verstendighen binnen 14 daegen, actum Swalmen den 14 may 1697.

De naebuyren van de Bouckoul claegen datt neffens 't goet van Ruth in den Bonten Os, gaet eenen gemeynen voetpat recht op den Leijgraef aen de Horstbrugge, welcke brugge tegenwoordigh niet en is gemaect, nocte geen en is, dat door den heere capiteyn Everard wordt beleth, waardoor de passagie van de thientkarren wordt verhindert, versoecken daerinne remedie.

Wordt de naebuyren van de Bouckoul belast de Horstbrugge hierboven vermeldt te leggen ende deselve in't toecommende t'onderhouden, ende den heere capiteyn Everard den voetpaett hierinne geroert te gedoogen volgens oudt gebruyck, ten waere hij hadde redenen ter contrarien waervan hij den gerichte sal verstendighen binnen 14 daegen, actum Swalmen den 14 may 1697.

Fr. Johannes Rutsen in naeme van de eerwaerde Carthuijsers versoeck dat hun behoorlicke thientwegen moegen worden aangewesen, soo op den Leucker als tot Asselt aen den Boeckesstap, gelick oock aen den Heijcamp aen't Luierken.

Wordt d'eerw. PP Carthuijsers belast hierover t'exhiberen behoorlick bescheydt om daerover te doen verhooren eenige oude personen daervan kennis hebbende, om alsdan daerin te versien, actum Swalmen den 14 may 1697.

De geswoorens claegen datter geen geswooren thiendenaer en is gestelt, waardoor de gemeynte grooten schaede compt te lijden, versoecken dat daerinne magh worden versien.

Deselve becroonen dat de schaepen van de Tichelerei door het Bouckoulder veldt huyden, sonder daertoe gerechticht te sijn, als gevende geen beestenschatt, versoecken versieninghe.

Wordt d'erffgenaemen van wijlen den heere gouverneur Bitot belast hunne schaepen van de Tichelerei niet verders te doen drijven of weyden als op hunne erven onder dese heerlickheydt gelegen, op pene dar sij ieder reyse sullen wesen schutbaer, actum Swalmen den 14 may 1697.

Jacob Spee claeght, datter door de naebuyren achter sijn huys eenen voetpatt gemaect wordt, waertoe sij niet berechticht en sijn, versoecken remedie.

De naeburen seggen datter voor desen aen den Asselerhoff heeft gehangen een falderen, vuttwijsens het vooghtgedingh van den jaere 1588, alwaer tegenwoordigh geen en is, waerinne sij versoecken versieninghe.

Wordt den halffman van den hoff tot Asselt belast de falderen boven aen het velt ende aen de Linghe straete t'herstellen volgens oudt gebruyck binnen den tijt van 14 daegen, actum Swalmen den 14 may 1697.

Den eerw. heere pastoor claeght datter geen voetpatt can gebruijckt worden mits geen fonderen over de beeck en is waer door hem de rechte passagie wordt belet naer Asselt om te binneren, versoeckende daerinne versieninghe.

Wordt ... [blanco]

Den selven heere pastoor becroont dat de kerckebruggen niet behoorlick en sijn gerepareert, versoeckt remedie.

Den selven pastoor claeght dat de kerckhoffsmoeyr begint te vervallen, versoeckende dat deselve magh worden gerepareert.

Denselven versoeckt dat in't beleyt houden reflexie magh worden genoemen in't kerckbroeck, overmits daerlanghs op veel plaetse wordt affgedronghen.

De geswoorens claegen dat in de beeck achter Beeckerhoff eenigh holtgewas op de gemeynte gestaen hebbende, welck holtgewasch bij publycke kerckroen is bevrijdt geworden, is het selve dyenniettegenstaende door eenige naebuyren sonder consent weghgehaelt, versoecken daerinne versieninghe.

De geswoorens versoecken dat de vischen op gemeyne waeteren alhier gevanghen moegen worden aangegeven, voor ende aleer die te coop sullen worden gebrocht, ende daertoe gestelt eene plaetse, op dat een ieder daervan sijn gerief magh hebben.

De naebuyren van de Boutenstraet claegen dat den voetpatt langhs de Swalm naer den Noenhoff hun belet wordt, versoecken remedie.

De naebuyren van de Bouckoul claegen dat Theel Theelen nu in sijne pachtjaeren niet en soeckt te continueren in't betaalen van den loon van den koygardt, gelick hij van te vooren in sijne halffwininge heeft gedaen, versoecken

Naspeuringen van Paul Theelen: Constantinus Imperator

daerinne versieninghe.

112280 Wordt Theel Theelen belast hem te reguleren naer het oudt gebruyck, actum Swalmen den 14 may 1697."

16 februari 1701 SWALMEN - Lijst van geleden oorlogsschade.

"Lijste vant'ghene die van Swalmen hebben moeten geven boven cost ende dranck aen de twee compagnien ende den staff vant'regiment van den heere Lutsbourg Beijersche gelogeert volgens ordre van den heere grave van Horn gedateert den 7 februari 1701 ende gelogeert den 14 dito.

heerlickheydt daerover te spreken ende daeromtrent noodige voorsieninge te beraemen.
Actum ut supr
- 112400 12 november 1739 SWALMEN - Begraven: Petrus op den Camp [weduwenaar van Theodora
Theelen, gehuwd Swalmen 26 oktober 1700, begraven aldaar 8 juli 1725; echtg. van
Maria Heijnen, gehuwd Swalmen 7 juni 1736].
- 112405 Tijdens het voogdgeding van 1588 verklaarde Zill Kromvoets als oudste schepen 'dat
geine freyheyte van hoeffslach en sij inn diesen gerichte, dan dat Hoppenrae, dat
Gewijt unnd der Beijswert, behalven het geene dat beweysslich vrij gegolden ist'.
Twee akten uit september 1669 maken duidelijk dat toen nog steeds aanwas plaatsvondt.
Op verzoek van enkele eigenaren van land in de Biesweerd trokken toen diverse laten
- 112410 van de laathof van Asselt naar de Maas, alwaer wij altsaemen de Maese afwaerts gaende

langs den hoogen en legen Biesenweert, aen ons verthoent is seekeren aengeloopenen steen afwärts spits vuytschietende in de Maese voorss., langs den hoogen en legen Biessenweert ende soo voorts langs jonker Hans Willem van Baexens erff den Biessenweert Baendt genoemd neffens denwelcken unstaen, ende der voorss. aengeloopen

112415 steen noch eenen waetersloet is, sijnde de selven steen langs joncker Baexens erff aen tot in de Maese negenentseventich treden lanck, yeder treeft van ontrent vier voeten, afgetreden door den voorss. Corst Stockmans, denwelcken aengeloopen steen tussen den watersloet ende Maese, die voorss. requiranten als erfgenamen van den hoogen en legen Biessenweert ten overstaen van ons semptlijcke gerichtspersoonen

112420 voorss. naeradvenant dat een yeder van hun daer inne geerft ende berechticht is, te weeten in het aldt erff, in reele ende actuele possessie hebben genoemd naer alder observantien ende coustumen van rechten daer toe gerequireert als hebbende den selven steen met wilghen rijseren besteken ende vervolgens daer op wijn ende weyt genoten. Drie weken later werd dit ritueel nog eens min of meer herhaald. Daarbij bevonden de

112425 laten dat de rijser aldaer gesteken op den 27 bris tegens over joncker Baexens Biesenbaendt waren uitgetrocken, en eenen stock van daer en ende so voorts leger vuyt mit andere risers besteken, die welcke door last des heere scholtissen en gerichtsluyden ter instantie van requiranten uitgetrocken ende int waeter geworpen, sijnde door Tiel Tielen gerichtsbode de selve plaetse wederom met andere rijseren

112430 besteken, ende voorts door Corst Stockmans hebben laeten aftreden ende bevonden dat de Maese van den selven steen noch vijftich treden afgeweeke was, so dat den selven aengeloopen steen van de plaetse af van de welcke den steen ierstmael afgetreden was, in't geheel bevonden is woorden langh te sijn hondert en 29 trede. Het feit dat juist de laten van de Asselterhof werden opgetrommeld voor deze

112435 gelegenheid heeft alles te maken met een akte uit 1275. Landmeter Smabers gaf in 1774 de Hooghen Biesweerthaan als perceel 1 op kaart 8, dat wil zeggen het meest zuidelijke gedeelte van de weerd. Voor de landmeter, die de kaarten van Swalmen immers maakte in opdracht van de gezamenlijke tiendheffers, was de Biesweerd een uitzondering. Deze aanwas was namelijk sinds lange tijd verdeeld in

112440 negen zogenaamde loten, die door verkoop en vererving soms waren samengevoegd, maar ook soms nog verder waren gedeeld. Om onduidelijke redenen was in het verleden afgesproken dat de feitelijke ligging van de grond op basis van deze bezitsverdeling jaarlijks zou wisselen, waardoor Smabers onmogelijk kon aangeven wie nu eigenaar was van welk stukje van het grote perceel. Bij de aangrenzende percelen, eigendom van

112445 respectievelijk Baxhof en Hillenraad, waren de eigendomsverhoudingen duidelijk, maar ook bij perceel 4, de Kleijn Biesweerth, kwam Smabers hetzelfde probleem tegen. In 1826 werd een gedeelte van de Biestert verkocht aan Paulus Schiffers, 'grutte mulder' en burger van Roermond.

112450 30 oktober 1772 De maasgouw, 15 januari 1903
De erfmaking van Frans Arnold markgraaf van Hoensbroeck en van zijn echtgenoot Maria Anna Sophia van Schönborn.
Medegedeeld door P. Doppler.

112455 Toen Frans Arnold dos H. R. Ryks graaf en markgraaf van Hoensbroeck, erfmaarschalk van het vorstendom Gelder en graafschap Zutphen, heer der voogdijen des Nederambts Gelder, van Swalmen, Asselt, Hillenraedt, Grubbenvorst, Blyenbeeck, Afferden en Ruynen, drossaard der stad Gelder enz. (1) en zijne echtgenoot Maria Anna Sophia geboren gravin van Schönborn, Buchheim en Wolfsthal (2) overleden waren, werden hunne nagelaten goederen niet door hunne kinderen onder elkander verdeeld. Doch "niet soo

112460 seer betragtende dan de conservatie en voor soo veel doenelyck de vermeerderinge van onsen Naam en Stamme, voorts den lustre van onse familie van Hoensbroeck" hebben zij "mede ter intentie en op hoog bevel" hunner ouders en voorouders zekere "pacta familiae sive gentiletien" beraamd en 30 October 1772 gesloten, waarbij de geheele nalatenschap hunner ouders tot een "vast fidie commis" werd gemaakt.

112465 Deze overeenkomst vonden wij, ingeboekt in het gichtregister der heerlijkheid Grubbenvorst over de jaren 1772-1797 November 18 n° 30.
In artikel 2 dier overeenkomst wordt bepaald, dat die "fidie commissaire" goederen bezeten en genoten zullen worden door den oudsten markgraaf of stamheer hunner familie en door diens wettelijke mannelijke opvolgers met uitsluiting van alle

112470 vrouwelijke erfgenamen, onder bepaling jaarlijks aan de overige familieleden uit de opbrengsten daarvan zekere uitkeeringen te doen, die in een paar volgende artikelen zijn vastgesteld.
Al die artikelen, ten getale van vijftien, hier in hun geheel te geven zou te ver voeren; alleen laten wij hier het eerste artikel, waarin al de goederen opgesomd

112475 worden en dat hoogst belangrijk is voor de geschiedenis onzer provincie, en het tweede in hun geheel volgen.

Naspeuringen van Paul Theelen: Constantinus Imperator

De contrahenten waren: L. F. M. de Hoensbroeck erfmaarschalk van het hertogdom Gelder en graafschap Zutphen; Sophia Charlotta markgravin van Hoensbroeck, geboren gravin von der Leyen Hohengerolseck; P. - 112670 kind 4, 1. Mechtildis Thielen, gedoopt Asselt 23 juni 1670 (getuige Leonardus Stockmans namens Joannes Janessen en Cornelia Ceuven; dr. van Tillmannus x Catharina Cuijven), vermoedelijk jong overl.
- kind 5, 2. Theodora Tielen, gedoopt Asselt 5 november 1673 (getuige Jacobus Alardts en Meussen? ...; dr. van Tilmannus x Catharina ...ssen), weduwe Swalmen 8 juli 1725. Trouwt Swalmen 26 oktober 1700 met Petrus op den Camp.
- 112675 kind 6, 3. Joanna Tielen, gedoopt Asselt 1 september 1677 (getuige Jacobus Pecx en

Naspeuringen van Paul Theelen: Constantinus Imperator

Maria Joosten; dr. van Tilmannus x Catarina Gerarts), weduwe Swalmen 3 oktober 1747. Trouwt Asselt 7 september 1699 met Wilhelmus Stoffers.

112680 19 mei 1680 ASSELT - Begraven: Anna [Joanna Theelen, gedoopt Asselt 20 februari 1669], dochter van Theel Theelen [en Catharina Cuijven, gehuwd Asselt 20 februari 1669].

20 augustus 1680 ASSELT - Begraven: Henricus NN, knecht bij Theel Theelen.

112685 kind 7, 4. Mechtildis Theelen, gedoopt Asselt 25 juni of juli 1681 (getuige Paulus Arets en Catharina ..rens). Trouwt vermoedelijk Swalmen 10 februari 1714 met Martinus Jansen.

112690 25 juni 1682 SWALMEN - Gehuwd: Gulielmus Corsten en Agatha Smeets [zij is mogelijk doopgetuige te Swalmen 18 mei 1684, zie hiervoor huwelijk Ramekers-Janssen, Swalmen 24 juli 1682]. Getuigen: Tilmannus Theelen en Joannes Wiltshuts.

112695 Theel Theelen verkocht op 29 november 1685 de Theelenkamp onder Asselt, die op 11 januari 1686 werd genaast.

11 januari 1686 ASSELT - Aanvaarding naasting.

112700 Ten overstaan van Johan Swaack, scholtis, Jan Janssen en Thijs Coelen, schepenen van de vrijheerlijkheden Asselt en Swalmen, verklaart Johan Smits junior dat hij het beschut heeft aanvaard van Thelen Camp onder Asselt gelegen, groot ongeveer 90 roede gelegen tussen de erfgenamen van Willem Thelen en de erfgenamen van Derick Maessen, door comparant op 29 november 1685 aangekocht van Theel Teelen, alles volgens akkoord van diezelfde 29 november 1685 opgesteld tussen meester Jan Herpers? en Peter Engels enerzijds en Jan Smits voornoemd anderzijds.

112705 1. dochter NN [Cornelia], gedoopt Swalmen 27 oktober 1686 (getuige Thel Thelen en Maria Josten; dr. van Godefridus x Cornelia Kuven). Trouwt mogelijk Swalmen 11 september 1708 als Cornelia Willems met Ludovicus Heuijts.

112710 25 november 1686 SWALMEN - Gehuwd: Theodorus Willems [Godefridus, leeft 19 januari 1733, mogelijk zoon van Wilhelmus Teelen; hij hertrouwt NIET ... vóór 19 maart 1706 met Catharina Dirix] en Cornelia Kuven [mogelijk gedoopt Swalmen 14 februari 1647 als dr. van Gerardus Keuffen en Theodora Sijben, vermoedelijk weduwe Swalmen 20 april 1715]. Getuigen: Theel Telen en Willelmus Thelen.

112715 1. Petrus Bongarts, gedoopt Swalmen 26 juli 1688 (getuige Tylmannus Theelen en Anna Dreesen).

112720 15 maart 1693 SWALMEN - Gedoopt: Margreta, buitenechtelijke dochter van Joannes Silckens en Agnetis Houx. Getuigen: Tilmanus Thelen namens Gerardus Silkens en Leonarda Houx.

Op 7 juli 1693 verpandde Theel de helft van een huis op de Hoogstraat.

7 juli 1693 SWALMEN - Verpanding van de helft van een huis.

112725 Johan Swaken, scholtis, en de gezamenlijke schepenen van Asselt en Swalmen [geen namen] oorkonden dat Theel Theelen, met toestemming van zijn echtgenote, heeft verklaard schuldig te zijn aan Jan Peters, 'jaeger van den heere baron van Hillenraedt', een bedrag van 35 rijksdaalders tegen een jaarlijkse rente van 5% en met een opzegtermijn van een half jaar, met als onderpand een half huis met het derde deel van 1 morgen land daar achter gelegen tussen Geurt Cuijpers, mededeelhebber van genoemd huis enerzijds, en Peter Quijten anderzijds, korte zijden grenzend aan de erven van Henderick Schrievers en op de openbare straat.

112730 7 juli 1695. Heijncken Heijnen en Neulken Theelen c.s. verpandden op 22 april 1697 een huis te Asselt.

112735 20 september 1695 SWALMEN-ASSELT - Verpanding land.

112740 Ten overstaan van Johan Swaken, scholtis, Jan Janssen en Frans Gerardts, schepenen van de heerlijkheden Swalmen en Asselt, bekennen Thel Theelen en Jan Janssen, als voogden van de kinderen van wijlen Jacob Alerts en Truijten Theelen, en Jacob Janssen als man en voogd van Lisbet Alerts, dat Truijten Theelen voornoemd samen met wijlen haar man Jacob Alerts op 24 augustus 1677 op de dag van de apostel Bartholomaeus een bedrag van 100 gulden tegen een jaarlijkse rente van 6 gulden heeft

Naspeuringen van Paul Theelen: Constantinus Imperator

opgenomen van ook wijlen Daem Rauckus met al onderpand al hun roerende en onroerende goederen.

112745 Omdat deze obligatie na het overlijden van Daem Rauchus is toegevalen aan diens erfgenamen, wordt op hun verzoek en met toestemming van het gerecht d.d. 19 oktober 1694 nu afgesproken dat deze lening voortaan zal uitstaan tegen een rente van 5% te betalen op 24 augustus met een opzegtermijn van een half jaar, met als onderpand ongeveer 1 morgen land te Asselt gelegen op de Ubergh tussen de erfgenamen Ruth Silkens en de erfgenamen Jan Silkens, met de korte zijden grenzend aan de erfgenamen 112750 Heijncken Heijnen en het voetpad.

Theel Thelen en zijn kinderen Neulken en Willem kochten op 22 april 1697 een huis te Asselt welk zij op 22 april 1697 verpandden.

112755 Op 22 april 1697 kocht hij voor zijn voorkinderen de helft van een huis te Asselt. In 1697 verpandden Theel Thelen en zijn kinderen 5 vierdel morgen te Asselt gelegen, Theelencamp genaamd, tussen land van de hof te Asselt en eerste comparant, met de korte zijden grenzend aan de openbare straat en land van de Asselerhoff. 22 april 1697 ASSELT - Verpanding huis en hof.

112760 Ten overstaan van Johan Swaken, scholtis, Frans Gerardts en Corst Crijnen, schepenen van de heerlijkheden Swalmen en Asselt, bekennen Theel Thelen en zijn kinderen, te weten:

- Willem Theelen en
- Heijncken Heijnen gehuwd met Neulken Theelen, dat zij een bedrag van 150 gulden Roermonds tegen een jaarlijkse rente van 5%, te volstaan met 4½% bij betaling binnen 112765 drie à vier weken na de vervaldag, eerstmaals te betalen op 1 mei 1698 met een opzegtermijn van een half jaar, hebben opgenomen van de armen te Buggenum, met als onderpand 5 vierdel morgen te Asselt gelegen, Theelencamp genaamd, tussen land van de hof te Asselt en eerste comparant, met de korte zijden grenzend aan de openbare straat en land van voornoemde Asselerhoff, met huis en hof in het dorp Asselt. Louijs 112770 Kouwenbergh wordt namens de armen geërfd en gegoed. 22 april 1697 ASSELT - Overdracht huis en hof.

Ten overstaan van Johan Swaken, scholtis, Frans Gerardts en Corst Crijnen, schepenen van de heerlijkheden Swalmen en Asselt, dragen Jacob Janssen als man en voogd van 112775 Lijsbet Alerts en Jan Janssen als voogd van Willem Alerts, een half huis te Asselt in het dorp gelegen naast Aquarius en Theel Theelen, met de moesgaard groot 1 vierdel en een kwart roede, alsmede 16 roede in Theelen Camp gelegen, voor de helft van 250 gulden ten behoeve van de armen van Buggenum en Gerard Pelsers, over aan Theel Theelen voornoemd. Deze verklaart dat deze overdracht plaatsvindt ten behoeve van zijn voorkinderen, inclusief de last daarop staand.

112780 13 mei 1697 SWALMEN - Voogdgeding.

"Voogdgedingh gehouden binnen Swalmen onder den hagendoren den 13 may 1697.

Den schepen Jan Janssen becroont dat de naebuyren van Asselt eenen voethpatt maecken over sijn erve aen het Meelenbroeck, aen den Slack tot aen de Maese, alwaer noeyt 112785 eenen voethpatt is geweest, versoeck versieninghe. [...] De naebuyren van de Boutenstraet claegen dat den voetpatt langhs de Swalm naer den Noenhoff hun belet wordt, versoecken remedie.

De naebuyren van de Bouckoul claegen dat Theel Theelen nu in sijne pachtjaeren niet en soeckt te continueren in't betaelen van den loon van den koygardt, gelick hij van 112790 te voeren in sijne halffwininge heeft gedaen, versoecken daerinne versieninghe. Wordt Theel Theelen belast hem te reguleren naer het oudt gebruyck, actum Swalmen den 14 may 1697."

112795 7 september 1699 ASSELT - Gehuwd: Wilhelmus Stoffers [weduwe Swalmen 1 februari 1724]

en Joanna Tielen [Telen, Theelen, Thelen, gedoopt Asselt 1 juli 1677, weduwe Swalmen 3 oktober 1747, dr. van Tilmannus Teelen en Catharina Cuijven]. Getuigen: Wilhelmus Tielen en Joannes Bulders.

Thiel verpandde op 14 januari 1702 een half huis op de Hoogstraat.

112800 De aliasnaam Sloncxen wordt enkel vermeld in een akte van 14 januari 1702.

14 januari 1702 SWALMEN - Verpanding half huis Hoogstraat.

Ten overstaan van Johan Swaken, scholtis, Areth Meuter en Andries Mooren, schepenen van de heerlijkheid Swalmen en Asselt, bekent Thiel Theelen met toestemming van zijn 112805 vrouw Catharina Sloncxen dat zij een bedrag van 40 rijksdaalder (met inbegrip van 17 en 8 rijksdaalder zoals afgelegd aan Houbert Peters en Geurt Willems) tegen een jaarlijkse rente van 2 gelijke rijksdaalders eerstmaals te betalen op 14 januari 1703

Naspeuringen van Paul Theelen: Constantinus Imperator

en met een opzegtermijn van een half jaar, hebben opgenomen van hun schoonzoon Peter op den Camp en Dircxken Theelen, met als onderpand een half huis met het 1/3 deel van 1 morgen land op de Hoogstraete gelegen tussen de erfgenamen Cil Pauwelssen en Geurt Willems.

- 112940 kerckepublicatie tot convocatie der inwoonderen.
Tilman Tilmans
- vóór 24 april 1758 Z.P. - Gehuwd: Christophorus Theelen [Teelen, gedoopt Swalmen 29 maart 1732, bierbrouwer, overleden aldaar 17 april 1783, zoon van Petrus Theelen en Cornelia Spee] en Elisabetha Delissen [bij de volkstelling 1796 inwonend bij haar zoon Joannes op de Markt].
- 112945 Uit dit huwelijk:
1. Petrus Teelen, gedoopt Swalmen 24 april 1758 (getuige Joannes Delissen en Elisabeth Teelen), weduwe aldaar 17 mei 1758.
- 112950 2. Joannes Teelen, gedoopt Swalmen 10 november 1759 (getuige Hendericus Schaeraets en Maria Delissen). Trouwt Swalmen 19 oktober 1791 met Gertrudis Ceuven.
3. Petrus Theelen, gedoopt Swalmen 7 augustus 1768 (getuige Joannes Theelen en Sibilla Delissen), overleden aldaar 31 januari 1770.
- 112955 4. dochter NN, geboren en gedoopt Swalmen 5 februari 1773 (nooddoop door vroedvrouw; 'quae statim obiit'), overleden aldaar 5 februari 1773.
5. Petrus Theelen, geboren en gedoopt Swalmen 9 februari 1777 (nooddoop; geen get.; 'qui statim obiit'), overleden aldaar 9 februari 1777.
- Stoffer Theelen en Elisabeth Delissen verkochten op 19 december 1768 land te Swalmen. Stoffer Theelen was in 1774 eigenaar van een huis aan de Kroppestraat (smabers-15/34).
- 112960 Johannes Theelen te Neer en/of Swalmen
21 juni 1723 SWALMEN - Arrest wegens geweldpleging.
De bode Sibert Kuijven verklaart dat hij ... Theelen van Wijnarden heeft gearresteerd wegens 'begaene straeten rumoer ende andere insolentien tot Swalmen begaen'.
- 112965 17 januari 1753 6. Gertrudis Ceuven, gedoopt Swalmen 24 mei 1763 (getuige Henricus Moren en Maria Ceuven). Trouwt Swalmen 19 oktober 1791 met Joannes Theelen.
- 112970 11 juni 1774 SWALMEN - Verpanding huis en hof Kroppestraat.
Ten overstaan van Joannes Bernardus Chanoine, licentiaat in de rechten en scholtis van de heerlijkheid Swalmen en Asselt, Joannes Mevessen en Thomas Ubbels, schepenen aldaar, bekennen de echtelieden Jan Sillen en Geutruijd Schouwenbergh dat zij een bedrag van 50 pattacons tegen een jaarlijkse rente van 4% eerstmaal te betalen op 11
- 112975 juni 1775 en losbaar in termijnen van 25 pattacons met een opzegtermijn van drie maanden, hebben opgenomen van Jan Theelen, ongehuwd, met als onderpand:
- huis en hof op de Cropperstraete gelegen tussen de weduwe Stephen Roosen en de weduwe Linnert Tessers, belast met jaarlijks 2 vat rogge erfpacht aan de kapelanie en 1 greve aan de Gereserveerde Domeinen;
- 112980 - 3 vierdel akkerland in het Gratervelt gelegen tussen Jan Dousent en de gemeente;
- en ½ morgen in het Gratervelt gelegen tussen Jan Dousent voornoemd en de gemeente, beide percelen belast met 5 kop rogge aan de kapelanie aldaar en 1/3 deel van 1 greve aan de Gereserveerde Domeinen, alle onderpanden gezamenlijk eerder belast met 50 pattacons aan het begijnhof te Ruremonde.
- 112985 9 april 1777 BUGGENUM - Gehuwd: Anthonius Theelen [gedoopt Neer 20 april 1738, pachter, overleden Swalmen 25 november 1790, zoon van Joannes Tielen en Wilhelmina Snijders] en Lucia Winkelmeulen [gedoopt Neer 27 februari 1751, overleden Swalmen 17 februari 1794, dr. van Segerus Winckelmolen en Elisabetha van Baexen; zij hertrouwt
- 112990 Swalmen 3 mei 1791 met Jacobus Emets]. Getuigen: Matthias Winkelmeulen en Willemina Theelen.
Uit dit huwelijk:
1. Joannes Theelen, geboren en gedoopt Swalmen 10 december 1783 (getuige Segerus Winckelmolen wonende te Buggenum en Anna Maria Moren wonende te Neer), herbergier, landbouwer, raadslid vanaf 1820, secretaris 1822-1837 en burgemeester van Neer 1825-1853, overleden Neer 19 mei 1867. Trouwt Neer 24 oktober 1808 met Wilhelmina Geenen, gedoopt Neer 6 december 1777, overleden aldaar 2 februari 1848, dr. van Leonardus Geenen en Joanna Versondert, weduwe van Wilhelmus Geenen.
- 113000 21 maart 1786 SWALMEN - Akte van deling.
Om hun geschil over de nalatenschap van Peter Theelen en Cornelia Spee, gewezen echtelieden, bij te leggen, is ten overstaan van het gerecht het volgende overeengekomen.
Jan Theelen zal in volle eigendom verkrijgen:
- 113005 - 84 roede in de Meulendumpel gelegen tussen Willem Sanders en Jan van Lier;

Naspeuringen van Paul Theelen: Constantinus Imperator

- 30 roede grasgewas in de Batten gelegen tussen de erfgenamen Peter Naus en Jan van Lier;
- 42 roede akkerland tussen Peter Naus en Jan van Lier.
Hiervoor zal Jan Theelen aan zijn neef Joannes Theelen een bedrag van 23 pattacons 12 stuiver Kleefs betalen, van welk bedrag hij heden heeft betaald 6 pattacons 3 schelling 8½ stuiver. De resterende 16 pattacons 5 schelling 3½ stuiver zullen binnen twee maanden worden voldaan. Zij machtigen toonder tot de gerechtelijke overdracht.

27 maart 1786 SWALMEN - Overdracht landerijen.

Ten overstaan van Joannes Bernardus Chanoine, licentiaat in de beide rechten, schepen en eerste secretaris van het Hoofdgerecht te Ruremonde, scholtis van de heerlijkheden Swalmen en Asselt, Cornelis van Keeken en Joannes Mevissen, schepenen aldaar, draagt Joannes Theelen, jonkman, na gerechtelijke overeenkomst opgemaakt tussen hem comparant en zijn oom Jan Theelen d.d. 21 maart 1786,

- 84 roede akkerland te Asselt in de zogenoemde Molendompel gelegen tussen Willem Sanders en Jan van Lier;

- 32 roede grasgewas te Asselt in de Batten gelegen tussen de erfgenamen Peter Naus en Jan van Lier;

- 42 roede akkerland in de Lichte Ohe gelegen tussen de erfgenamen Peter Naus en Jan van Lier, voor een bedrag van 51 pattacons over aan zijn oom Jan Theelen, kosten van overdracht, lycop en armengeld ten laste van de aankoper, 'mits dat het vijfde deel van den aencooper aen de voorss. coopspenningen sal worden gekort.'

Bode J.L. Corens legt namens Joannes en Jan Theelen de eed af dat deze overdracht niet is geschied ten profijte van enige dode hand.

zondag 30 april 1786 SWALMEN - Gehuwd: Joannes Theelen [overleden Asselt 1x januari 1787], dienstknecht geboren en wonende te Swalmen, en Christina Willems [gedoopt Asselt 2 juli 1742; dr. van Joannes Willems en Aldegondis Pex; weduwe van Petrus Peters, gehuwd vóór 13 oktober 1774, overleden Asselt 4 januari 1783], weduwe geboren en wonende te Asselt. Getuigen: Joannes Theelen en Anna Heijnen wonende te Asselt.

30 april 1786 5. Tilmanus Stighner, geboren en gedoopt Swalmen 19 februari 1795 (getuige Joannes Theelen en Anna Maria Geraets, beiden wonende te Swalmen, 'den vader absent').

3 mei 1791 SWALMEN - Gehuwd met dispensatie in drie roepen: Jacobus Emets [gedoopt Asselt 23 augustus 1753, pachter, overleden Swalmen 27 juni 1795, zoon van Hubertus Emets en Cornelia Beurskens; hij hertrouwt Swalmen 4 mei 1794 met Elisabetha Wijnen] en Lucia Winckelmolen [gedoopt Neer 27 februari 1751, overleden Swalmen 17 februari 1794, dr. van Segerus Winckelmolen en Elisabetha van Baexen], weduwe [van Joannes Theelen, gehuwd Buggenum 9 april 1777, overleden Swalmen 25 november 1790]. Getuigen: Martinus Emets en Catharina Winckelmolen.

23 juli 1860 NEER - Openbare verkoop van een bouwhoeve genaamd Maaswijnaarden onder de gemeente Neer gelegen, op verzoek van:

1) Maria Anna Geenen, weduwe van Joannes Theelen te Maaswijnaarden en haar kinderen; en
2) Antoon Jozef Hubert Mertz te Roermond, als gemachtigd door Maria Ludovica Jeanette de Swart, weduwe van Johannes Godefridus Quisthoudt te Maeseijck, opbrengst f30.380,-.

Theelen, Tielen, etc.

De naam Theelen (Thielen, Tielen, Teelen, Telen) is patroniem van de naam Tilmanus (Tiel, Teel). De naam komt al in het begin van de 18e eeuw voor het Midden-Limburgse Neer waar zij als pachters de hoeve Wijnaardenhof (Wienertehof) bewonen. Vanuit Swalmen verspreidt de familie van o.a. Theele Theelen zich over andere Midden-Limburgse plaatsen. Theel Theelen woonde in Asselt, gemeente Swalmen en ongeveer twee generaties later woonde Johannes Theelen op het grondgebied van Neer, enkele km stroomafwaarts aan de andere kant van de rivier.

De vraag is nu of Johannes Theelen (J. Tielen) een nazaat is van Theel Theelen? Over Theel Theelen uit Asselt zijn verrassenderwijs veel meldingen bewaard gebleven. Hij was pachter van de zeer oude en belangrijke Asseltsehof (in talloze schrijfwijzen). Enkele km noordelijk aan de andere kant van de Maas lag de Wijnaardenhof. Beide hoeven bestaan heden ten dage nog altijd, al dan niet in vervallen staat. Vlakbij lagen stukken land met namen als Boxweerd, Hanssummerweerd,

de Aanwas en Bierweerd.

We lezen een gedetailleerde benoeming:

113075 26 december 1885 Op Maandag den 11. Januari 1886 's middags ten 2 uur, te Neer ter herberge van den heer burgemeester Theelen: A. Gemeente Neer. Eerste koop: Eene vruchtbare en in zeer goeden staat van onderhoud verkeerende bouwhoeve genaamd "Wijnardenhof", bestaande in huis, stalling, schuur, erf, tuin, bouwland, weiland en hooiland, kadaster sectie C nos. 1417, 579, 467, 558, 600, 613, 633, 641, 643, 665, 113080 680, 698, 703, 713, 717, 639, 696, 697, 1132, 1287, 1403, 1418, 1426, 1427, 1435, 1672, 1673, 1674, 1747, 1748, 1754, 1755, groot 23.30.00 hect. Benevens de onverdeelde helft van weiland en wishout "de Maaskop" sectie C nos. 1757 en 1758, groot 2.32 hect. Verhuurd aan den heer P. Beurskens: de gebouwen, tuin, hooi- en weiland tot Paschen en het bouwland tot oogst stoppelbloot 1888. 113085 [op 12 december 1885 wordt nog geschreven ..., in het Zwaarveld, Hanssummerveld, Sleepad en Boxweerd

In 1871: Vervolg van het tienjarig overzicht der waargenomen waterhoogten vinden we die bij PEILRAAI LXXXVII [...]

113090 De zes kribben zijn aangelegd tegenover de grindplaat vóór het huis Wijnaardenhof, in de gemeente Neer.
zie Delpher, mGbmhazS7skC

113095 In 1926 wordt gemeld dat een merktekening op de Wijnaardenhof is aangebracht: NEER-BEESEL
WATERPASSING GEODETISCH BUREAU IR. W. SCHERMERHORN TE DELFT 1926.
Neer 6. R. B. in de boerderij Wijnaardenhof, in 1926 bewoond door J. van Melick, n. gevel, 0,88 m rechts van het linker einde.

113100 Overigens wordt daarna gemeld: Grathem 2. R. B. in de woning van den hoofdonderwijzer bij de school ten z. van den weg v. Roermond n. Weert o. gevel, 0,60 m links van den steenen dag van het raam, rechts van de deur.

113105 Nijverheid en handel op de Maas in de Middeleeuwen.
De nijverheid in de Limburgse streken ten noorden van Luik was in de vroege Middeleeuwen van weinig betekenis in dit overwegend agrarische gebied. Het industriële centrum lag ten zuiden van Luik in plaatsen als Dinant en Huy. Voor de handel was de streek tussen Luik en Nijmegen een doorgangsgebied. De streek zelf had 113110 er weinig direct aandeel in. De landwegen waren zo slecht dat handelaars en reizigers moesten uitwijken naar de waterwegen, de Maas en haar zijrivieren. Tot in de vroegmoderne tijd werden thans niet meer bevaren riviértjes als Roer en Niers voor de scheepvaart gebruikt. Hoofdverkeersader was de rivier de Maas voor de zuid-noord en de oude Romeinse weg van de Atlantische kust naar Keulen voor de west-oostverbinding. 113115 Waarschijnlijk zijn plaatsen als Meeswijk, Wessem, Blerick samen met Venlo en Blitterswijk oude pleisterplaatsen langs de Maas; zij liggen ongeveer dertig kilometer uit elkaar, gelijk aan een dag varen stroomopwaarts. De vondst van een door Tongerse schippers gesticht altaar voor de godin Viradecdis in Vechten (Utrecht) kan een uitvloeisel van de Maashandel zijn. Maastricht vormde een centrum met zijn brug 113120 over de Maas, een munthuis in de zevende en een tolkantoor in de tiende eeuw. De invloed van Maastricht is nawijsbaar in Dorestad. Wat er over de Maas vervoerd werd, is niet bekend. Op het einde van de zesde eeuw bezong de dichter Venantius Fortunatus (c. 535-na 600) de rivieren Moezel, Aisne en Maas. Van de Maas zei hij:
aut Mosa dulce sonans, quo grus ganta anser olorque est,

113125 triplíce merce ferax (alite pisce rate).
(De zacht ruisende Maas, waar kraanvogel, gans, eend en zwaan leven, Draagt drie koopwaren: vogel, vis en vlot).
Uit deze regels heeft men wel willen afleiden, dat de Maas met haar vlotten een van de grote scheepvaartroutes van het Merovingische Gallië was. Het rate (vlot) betekent 113130 hier echter veeleer gebundeld hout, een houtvlot, wat ook beter past bij vogel en vis, en niet een vervoermiddel, een 'vlot' als drager van hypothetische koopwaren. In Venantius' tijd vond er een verschuiving van de handelsroutes plaats. Waar eerst de weg via Rhône en Rijn de hoofdverkeersas was tussen de Middellandse Zee en het Noorden, begon de handel zich nu via de Maas te verplaatsen. Toen en later zullen 113135 over de Maas producten vervoerd zijn van landbouw en veeteelt en van de messingindustrie in de plaatsen ten zuiden van Luik; bovendien in de zevende eeuw slaven uit Engeland, die naar de slavenmarkt in Verdun gingen. Rond 1000 richtte de

Maashandel zich op steden als Keulen, Londen en Goslar. De Maassteden vormden een eigen economisch gebied, geheel los van de Nederlanden. Er was weinig passieve handel; kooplieden van elders kwamen er zelden. De transporten over de Maas in deze tijd omvatten zink, tin, steen, leisteen en kleiwaren. De middeleeuwse betekenis van de rivier de Maas als handelsader is in het verleden overschat. De Maas zou de as zijn geweest voor de eenheid en economische voorsprong van het Maasgebied, waar de steden continuïteit kenden en de Noormannen geen breuk veroorzaakt hadden. De bronnen geven hier geen aanwijzingen voor; zowel de geschreven als de monetaire bronnen zijn te summier, terwijl continuïteit van bewoning in Romeinse nederzettingen langs de Maas tot nu toe slechts is aangetoond voor Maastricht en Huy. Er waren maar twee plaatsen van belang: Verdun en Maastricht. De Maas heeft nooit die rol gespeeld die de Rijn had, want de Maas miste de landweg, die de Rijn over zijn gehele traject begeleidde. Overigens was de rivier tussen Maastricht en de Zuiderzee voor de handel van groter belang, dan het gedeelte van de rivier ten zuiden van de stad. Daar volgde het verkeer veeleer de oude Romeinse wegen.

LIBER SEPTIMUS Ad Gogonem IV
 Nubila quae rapido perflante Aquilone venitis,
 pendula sidereo quae movet axe rota,
 dicite qua vegetet carus mihi Gogo salute,
 quid placidis rebus mente serenus agit:
 si prope fluctivagi remoratur litora Rheni,
 ut salmonis adeps rete trahatur aquis;
 an super uviferi Mosellae obambulat amnem,
 quo levis ardentem temperet aura diem,
 pampinus et fluvius medios ubi mitigat aestus:
 vitibus umbra rigens, fluctibus unda recens;
 aut Mosa dulce sonans, quo grus ganta anser olorque est,
 triplice merce ferax (alite pisce rate)
 an tenet herbosis qua frangitur Axona ripis,
 cuius aluntur aquis pascua prata seges?
 Esera? Sara? Cares? Scaldis? Sate? Somena? Sura?
 seu qui Mettis adit de sale nomen habens?
 aut aestiva magis nemorum saltusque pererrans
 cuspidem, rete feras hinc ligat, inde necat?
 Ardenna an Vosagus cervi caprae helicis uri
 caede sagittifera silva fragore tonat?
 seu validi bufali ferit inter cornua campum,
 nec mortem differt ursus onager aper?
 an sua rura colens exusta novalia sulcat
 et rude cervici taurus aratra gemit?
 sive palatina residet modo laetus in aula,
 cui scola congregiens plaudit amore sequax?
 an cum dulce Lupo pietatis iura retractant
 consilioque pari mitia mella creant,
 quo pascatur inops, viduae solacia praestent,
 parvus tutorem sumat, egenus opem?
 quidquid agunt, pariter felicia vota secudent,
 et valeant Christi regis amore frui.
 vos precor, o venti, qui curritis atque reditis,
 pro Fortunato nuntia ferte suo.

BOOK SEVEN To Gogon IV

Clouds that come with the swift North Wind,
 The starry pendulum that moves the wheel's axis,
 Tell me where my dear Gogon thrives,
 What does he do with peaceful things, serene in mind:
 If he lingers near the banks of the Rhine,
 As salmon fat is dragged in a net by the waters;
 Or does he wander over the river of the rain-bearing Moselle,
 Where a light breeze tempers the burning day,
 Where the vine and the river meander,
 Where the heat is tempered by the heat:

The shade cools the vines, the fresh water by the waves;
 113205 Or the sweet-sounding Maas, where the crane and the goose are,
 Fertile with threefold merchandise (the fish are fed, the fish are fed)
 Or does he hold the grassy banks where the Axona breaks,
 By whose waters the pastures and meadows are nourished by the crops?
 Esera? Sara? Cares? Scaldis? Sate? Somena? Sura?
 113210 Or who visits Mettis, whose name is from salt?
 Or does the summer forest and forest wander more through the woods and forests
 with its peak, bind wild beasts here and there, killing them?
 The Ardennes or Vosagus deer and goats burn with the helix
 the forest thunders with a crash of arrows,
 113215 or does the wild boar bear strike the field between the horns of the strong buffalo,
 nor does the wild boar delay death?
 or does the wild boar bear, cultivating his fields, furrows the burnt fallow fields
 and the rough-necked bull groans with the plow?
 or does the Palatine now reside happily in the court,
 113220 whose school the follower applauds with love, joining him?
 or do they with the sweet Wolf retrace the rights of piety
 and with equal counsel create a gentle honey,
 by which the needy is fed, the widow is consoled,
 the little one takes a guardian, the needy one helps?
 113225 whatever they do, may their happy wishes support them equally
 and may they be able to enjoy the love of Christ the King.
 I pray you, O winds, who run and return,
 bring your message for Fortunatus.

17 augustus 1275 ASSELT - Gegevens inzake de vaststelling van de grensscheiding
 tussen Roermond, Asselt, Swalmen en Beesel enerzijds, en Wessem, Beegden, Haelen,
 113235 Horn, Buggenum en Neer anderzijds, met toestemming van graaf Reinoud [I] van Gelder.

"In nomine domini amen, iudex et scabini de Ruremonde, totaque communitas de Assel,
 de Swalmen et de Beesel ab una parte nec non iudex et scabini de Wessem, de Beegde,
 de Halen, de Horne, de Buggenum et de Nere, ex altera vero parte, universis et
 113240 singulis, ad quos pntes litera pervenient salutem, et cognoscere veritatem: quoniam
 status hominis fragilis est, et humana men labilil, cautum est solertia, quatenus ea
 quae posterius sunt pronuncianda, scripti testimonio roborentur, idesque noverint tam
 praesentes quam futuri, quod nos nostri cum antiquioribus hominibus ambarum terrarum
 praedictarum, generaliter mediantibus, voluntate, iustu et consensus illustris
 113245 principis magnifici et potentis domini, domini Reijnoldi comitis Gelriae et
 Zutphaniae, et nobilis viri domini Wilhelmi de Horne nrorum, dominorum carissimorum,
 officiatorumque eorrundem, praecepti inducti eramus moti et coaiti super unam
 demonstrationem, arconduitionem, palationem et limitationem quae vulgariter dictae
 sunt bewijsinge, beleijdinge, selinge ende neijninge, de limite vel via juxta Mosam
 113250 de Assel, dictam den lijnpade van der Masen, quam limitem seu viam dictam, dominus
 Rutgerus de Assel miles, a nobili viro domino de Horne tenet in feodo, cum omnibus
 jus attinentijs et condependentijs, videlicet omni supremo dominio, cum iudicio terra
 et Mosa in ambobus lateribus, atqua ripis Mosa infra limitem vel viam dictam den
 lijnpad, cum piscatura in Mosa, in ambobus lateribus et ripis, cis at citra Mosam,
 113255 nec non cum agris et accrescentijs in loco dicto den Tolle prout omnia ista jam
 recitata/in simul ab antiquo jacentia sunt et sita inter locum vel terminum, dictum
 der Schalen vel der Lingen, supra Assel, et inter dimidium ampnim in Haenssem,
 inferius infra palos et divisionem infrascriptos, qui limes vel via dicta die
 Lijnpade seu bona feodalia superius tacta, cum omni supremo dominio et iudicis in
 113260 terra et Mosa, cum thelorico, nec non cum piscatura, antiqua consuetudine,
 adventione, palatione et distinctione praedictae limitit seu feodi omnibus suis
 pertinentijs coannexis, sicuti superius partim sunt declarata, et prout inferius
 sufticienter specificabuntur, et ordinatum distinguuntur, cum omni et generali
 concordantia servorum ambarum terrarum praedictarum, eorum, nostrorumque unanimi
 113265 assensu et consensu fuerunt, atque sunt circondicta et pertestificata, nec non per
 eorum, qni nrorum, juramentor, tactis sacrosaratis, demonstratix distincta,
 specificata, perpalata, palem en notoriae divisa et segregata, et dominus Rutgerus
 praedictus, suique parentes et antecessores ejusdem praefatum limitem, seu viam jam
 dictam bena feodalia semper de senio ad senium successive obtinuerunt et possederunt,

- 113270 in vexate ab aliquo, sed pacifice et quiete in omni modo et forma juris, si..ti pns
litera inferius seriatim exprimit, eludicat et testator: primus palus et distinctis
praedicta limitis seu feodi, incipit supra Assel in loco dicto der Scalero vel des
Lingen palat, specificat et distinguit limitem vel viam dictam den Lijnpat seu feodum
113275 terramo, vel tam remote prout unus vir stando cum uno pede in littore/Mosae, et cum
vomere a rijsa posterit super terrano proijcere, et ita condescendo in ambobus
lateribus et ripis praedictae Mosa, usque in dimidium ampnem in Haensem in super est
sciendum, quidquid minus juste et excessive in hac limite seu feodi palis et
113280 distinctionibus praedictis, super terrano et Mosam, cecederit, de homicidis, furto,
aut de quibuscumque excessibus, causis, casibus injustis, malitiosis et fore factis a
supremo dominis ad infinium pertinendo vel attinendo, hoc idem dominus Rutgerus
iudicabit tenquam dominis in palis et distinctionibus praedictae limitis, seu feodi,
coram suis fidelibus vel viris homagialibus domini de Horne, ab yoso ad hoc
specialiter vocandis et rogandis, discutiet et aequabit: quia dudem vidimus idem
113285 dominus Rutgerus inferum Vuthoven, in limite super littus ipse Mosa, patibulum
erigere feut et suspendit a suftocavit ibi furem captum in palis et distinctionibus
praedictae limitis. Ulterius sisuit intranei vel extranei, ad venae, venditoreo,
negotiatores, vel naucleri, unde sun taut quo tendunt, vel unde veniunt in hanc
limitem vel in palos et distinctionis antedicti Mosa, unus ponens cautionem potex
113290 alterius corpus aut bona arrestare, aggravare, calumniari, jus petere et accescere,
alter vero ponens cautionem seu fidejuscionem illico et sine mora, si ipsi plauvrit,
posterit et valebet cum iudicio ab arrestatione se dissolvere iustis causis et
calumnijs subdolis sibi illatis resistere, justa debita et recta persolvere, contra
injustas, iniquas et versutas calumnias dijurare, duobus digitis tactis sacrofanctis
113295 prout juris est insimilibus furi, et consuetum: quoniam/idem dominus Rutgerus in hac
limite ex dominio habet proprios sanctos quos de jue omnibus indigentibus et
postulantibus est porrigendus: etiam vidimus in hac limite stantem argastulum cum
eculio in quo ponebantur, vinculabantur et conservabantur illi, qui cautelam nex
fideijussores non habebant, cum quibus causus, querimonias, excessus et sua forefacta
113300 poterant federare seu artiorare. Praeterea omnia bona qui per hanc limitem vel palos
terminos ante dictos, in vel extra naves veluntur vel moventur per gurgitem Mosa
ascendentia vel descendencia, prout jus et mos est, vel fuit ab antique thelonisantur
et si preveherentur non thelonisando, omnia bona prederentur, et in hac limite
aliquae naves merosae naviarentur, desnerentur, aut aliquae bona egerentur seu si ...
113305 naves implerentur et merarentur vel aliqua bona ingerentur, prius a theloniaris
petendum ut licentiam, dando ei qua drantem de onerando, dictum eijnen Lichtveerlinc,
sed onerando dictum eijnen Ladeveerlinc, sin autem qui faceret illicit de quq...
marc... cecideret in excessum. Insuper si in terminis hujus limitis aliqua bona in
vel extra naves velierentur et per ventum magnum ac impetuosum, aut per auram
113310 turbulentam et intemperatam in fluitibus et undis jactarentur, itaque nautae
tunerent, seu desperarent naufragari, max clamare poterunt et valebunt magnis vocibus
theloniariae, tene quadrantem posundo ipsam super proram navis vel eijsciendo super
terraro, et deonerarem eiscere, na..uare et se defendere in quantum poterunt et
valebunt sine aliquot excess, aut malae/captione, sed tacendo, non clamando et
113315 vacuando, aut per infortunim improvisibiliter submergendo, cadent in excessum quinque
marcarum. Ulterius sciendum est, quod piscatura in Mosa utroque littore et ripa, us
et citra incipit, procedit et terminat in istuis limitis sui feodi palis,
distinctionibus et circonductionibus praedictis, in quo dominus Rutgeus, suique
haeredes, aut istuis limitis seu feodi conservator, aut familiae, vel alius nomine
113320 esrundem, cum omnibus instrumentis lingujs aut ret..., mediantibus quibus piscari
poterit pisces, valebit seu valebunt capere, loco temporibusque requisitis, sui
oportunis, in illis latere et ripa Mosa, versus Assel, vel versus terram de Horne,
super campum, un utroque littore ejusdem Mosa, cum suis rethibus et sagenis, ex vel
eas immitendo, ducendo et extrahendo toties quoties indigunt, et ipsis visum fuerit

113420 en Archeologisch onderzoek Plangebied Hanssum, Neer

Kartering en algemene resultaten

Deelgebied West is in het voorjaar van 2010 belopen waarbij de zichtbaarheid goed tot zeer goed was. Alleen op het perceel met wintertarwe was de zichtbaarheid dusdanig
113425 matig, dat er niet met succes gekarteerd kon worden. Het perceel grasland waarin de overloopgeul ligt is niet gekarteerd wegens de slechte zichtbaarheid, maar vooral omdat het bij de aanleg van deze geul volledig vergraven is. Het hoger gelegen akkerperceel van Deelgebied Zuid is in het najaar van 2010 belopen. De
113430 vondstzichtbaarheid was goed. In totaal zijn 2.143 objecten geraapt, waarvan 40 bij nadere bestudering natuurlijk - niet antropogeen beïnvloed - bleken te zijn. Van de 2.103 objecten die als archeologische artefacten kunnen worden aangeduid zijn slechts 83 exemplaren aangetroffen in Deelgebied Zuid, veruit het grootste deel is derhalve afkomstig van Deelgebied West (zie Afb. 11). De artefacten zijn in Deelgebied West
113435 meer of minder gelijkmatig verspreid over het terrein aangetroffen. In Deelgebied Zuid alleen op het hogere deel van de onderzochte graanakker artefacten aangetroffen. In Deelgebied West loopt in de noordwestelijke deel een grindbaan vrijwel noord - zuid vanaf de noordwest hoek van het plangebied. De gedachte dat dit mogelijk een Romeinse weg zou zijn is al vrij snel ter zijde geschoven. Trekt men de lijn van het zichtbare tracé door vanaf het kruispunt van de Hagendoorn met het Eiland en het Zwaarveld (dit globaal het punt waar deze grindbaan voor het eerst zichtbaar is)
113440 door, dan komt men uit bij de Wijncardenhof. Op de eerste kadastrale minuutplan en op de topografische kaarten (Afbeeldingen 6 en 7) is een landweg waarneembaar die precies dit tracé volgt.

26 mei 1830 SWALMEN - Rapport van het Negende Maascollege inzake waterschade
113445 veroorzaakt door de Maas gedurende de winter 1829-1830.

'Bij eene naauwkeurige bezigtiging langs den geheelen Maasoever in ons distrikt te hebben gedaan, heeft men bevonden als volgt:

[volgen eerst de gemeenten Linne, Herten, Roermond en Maasniel...]

Gemeente Swalmen

113450 Een grooten inbreuk aan een perceel grasgewas, genaamd de Lingen, toebehoorende aan den hoogwelgeboren Heer Marquis van Hoensbroek. Een grooten inbreuk in een perceel grasgewas, genaamd den Tool lang circa 600 ellen, toebehoorende aan 24 particuliere eigenaars, waar van in den afgelopen winter meer dan een bunder is afgebroken en waar de Maas dreigt van achteren in te vallen en gevolglijk alle de in 1816 door het
113455 gouvernement gemaakte waterkeerende werken zal thenemaal vernielen waardoor eenige huizen van het gehucht Asselt in de stroom der Maas zullen gelegd worden en zonder bijstand van lands of provincie wegen niet kan ondernomen worden.

Eindelijk zeer grooten inbreuk onder het gehucht Asselt beginnende tegen over het huis van Lenard Theelen tot tegen over het veer lang circa 1400 ellen toebehoorende
113460 aan 48 particuliere eigenaars waarvan eene menigte niet in staat zijn waterkeerende werken te kunnen aanleggen en alwaar meer dan twee en een half bunder is weggespoeld worden.

Het voornoemd Kollegie zich buiten staat achtende om de hier boven vermelde beschadiging en de kosten der te doene herstellingen en aan te leggen werken te
113465 begrooten en dierhalve verlangen dat eene ambtenaar van den waterstaat mogte worden afgezonden, als hier toe beter geschikt om de waters op de lijdende plaatsen te pijlen en naar mate de diepte, de kosten te kunnen berekenen en naar dien den

voorstel of beraming der middelen te kunnen regelen.'

113470 1 januari 1897 NEER OF "NÈRE."

De winterzon doorboort met matte stralen de morgennevelen. Ieder straaltje kaatst terug in de millioenen druppelen van de berijpte grasspieren der weide.

De boomen betalen hun jaarlijkschen tol aan den wintervorst en van de takken daalt onophoudelijk een regen van verdorde eikenbladeren neer, die met een eigenaardig geritsel op den harden grond vallen.

113475 Na verloop van eenige dagen is het landschap even kaal als 't veld, waarin thans het groen nog slechts weinig afwisseling brengt. Over het water trekt een wit-grijzige nevel, en de vochtige, vinnige koude kleurt neus en ooren bont en blauw.

113480 Het eentonige van het landschap vóór Buggenum verdwijnt, als men het dorp nadert, waarvan de lange rei huizen ons in den wintermorgen als verlaten schijnt. Boven eiken schoorsteen zweeft een blauw, rechtopstijgend rookwolkje, dat bewijst, hoe men daarbinnen de koude wel weet te weren.

113485 Achter Buggenum breidt zich het vergezicht uit. Wij staan op een hooge vlakte, met vele wegen doorsneden, waarvan de meesten naar Neer leiden.

Links zien wij Haelen en Nunhem met hunne kerkjes hun kasteelen tegen de heuvelen leunende.

Groene dennenbosschen brekende rechte lijnen.

113490 Rechts zien wij ver weg het oude kerkje van Asselt, met de huizen van 't dorpje, dat eens zoo welvarend was, toen de scheepvaart op de Maas nog bloeide en Hanssum onder Neer, een groot en bekend veer was.

Voor ons ligt Neer, met de kerk op eene hoogte, die eenvoudige doch evenredige vormen te zien geeft.

113495 De huizen van Neer ligen in de inzinking ontstaan door door het riviértje, waaraan het zijn naam ontleent.

Van welken kant men het dorp ook beziet, overal is het omringd door een hooge vlakte. Ook van de Noordzijde heeft men een fraai vergezicht van het hooger gelegen land op Neer.

113500 Wendt men zich naar de Maas, die aan de zijde van Hanssum en Neer, langs een hoog schoor of steilen oever loopt, dan ziet men het dorp Beesel liggen, dat zijne huizen weerspiegelt in het blauwend vlak der Maas.

113505 Achter tusschen de bosschen door, waar de torens van Swalmen en Reuver hunne stippen verheffen, ontwaart men de witte rookpluim der locomotief en kan men hem in zijn loop over de lijn volgen. Let men goed op, dan zal de stille winterlucht u het gegil der stoomfluit overbrengen, lang nadat men de rookpluim weer heeft zien bewegen.

De zon breekt nu krachtiger door de nevelen heen, waartusschen zij zoolang als een melkwitte schijf een twijfelachtig licht trachtte te zenden.

Al verdrijft zij de koude niet, er komt toch meer bezieling en leven om ons.

113510 Neer ligt vlak voor ons en de watermolens op het riviértje ratelen en klapperen, dat het een lust is.

Zoo'n watermolen heeft iets aantrekkelijks, 't is een aardig stoffeering in het landschap.

113515 De watermolen leverde vroeger aan zijne bezitters heel wat op. De heer des dorps, hier het klooster Keizersbosch, had het monopolie van malen op de riviértjes. Daarom bracht dit voorrecht geld in de kist, terwijl de molenaars voor zich zelf zorgden en niet lui waren met scheppen in de meelzakken. Sommige molenaars hadden echter wijde mouwen, zoo verhaalt de sage, en schepten met hand en mouw tegelijk. Of dit verhaal, dat men in Limburg zoo vaak hoort opdisschen, waar is, zullen wij "God en den mulder laten scheiden."

113520 Het dorp Neer is zeer oud. Het kan zijn naam ontleenen aan zijne ligging. Wij herinneren er hier echter aan, dat in het bochtige diepe riviértje vele draaikolken voorkomen, (in 't Limburgsch neer) en het riviértje ook dien naam draagt. Het vormde in 870 de grens tusschen de boven en beneden Maasgouw.

113525 In de Salische wetten wordt een plaats Nara of Nare vermeld, welke Wendelinus het tegenwoordige Neer noemt. De bekende muntkundige Stiels, pastoor te Neer, (1) verhaalt dan ook in zijn te Neer gouden en zilveren munten uit den tijd der Merovingers werden gevonden en daaronder enkelen te Wijk-bij-Duurstede of te Wijk bij Maastricht en Utrecht waren geslagen. Eene bijzonderheid die bovengemeld vermoeden bevestigd.

113530 De Heer Stiels schreef verder over het dorp, volgende bijzonderheden neer, die wij hier doen volgen:

Alhoewel de heeren van Horne, die in den jare 1450 geworden zijn rijksgraven, hunne bijzondere woonplaats hadden op het slot omtrent Weert en het kasteel van Horne, aan

de Maas, gehouden werd als het opperhoofd van dit landschap, zoo heeft nochtans
113535 altoos Neer uitgeblonken boven andere plaatsen. Zoo door zijne oudheid als door het
getal zijner inwoners, zijne privilegiën en voorrechten, alsook door de
treffelijkheid van zijne kerk, (gewijd aan Sint Marten) in welke als immemoriali niet
113540 alleen een pastoor is gesteld gesteld geweest, maar ook een pastoraat met 4 à 5
benificiën. Mits het onmogelijk is de fundatiën dezer benificiën te ontdekken, en het
zeker is dat anno 1203 de pastoor reeds genoemd werd, persona in Neer, gelijk te zien
is in Miraeus, en bij meer andere, alwaar gezegd wordt dat Imaina gravin van Loon en
abdisse van Munsterbilsen, weduwe van den Hertog Godfried III van Brabant opdraagt
het personaat van Neer aan den Heer Prelaet der Abdij van Averbode enz., zoo kan men
113545 besluiten, dat anno 1000 of 1100 dit pastoraat reeds moet opgericht zijn, en dat
vervolgens deze gemeente alsdan reeds zeer volkrijk moet geweest zijn; ja, wat meer
was, is, Neer was te dien tijde een stad met wallen en poorten, genietende alle
voorrechten, welke steeds burgeren gewoon zijn te hebben. Alhoewel de schrijver hier
niets van meldt, en bij verloop van tijden door oorlogen en andere ongelukkige
omstandigheden, van deze stad geen de minste overblijfselen meer te zien zijn, zoo
113550 heeft men nochtans proeven genoeg, om dit zeer geloofbaar te maken, aan allen, die de
gelegenheid der plaats kennende, daarenboven zullen bemerken, de volgende
proefstukken:
Neer is dan eerst een personaat, en dat reeds lang voor 1200; in onze kerk waren
gefundeerd 5 benificiën, met zulke goede revenuen, dat de benificanten daarvan,
113555 resideerende te Neer, op Zon- en hooge feestdagen het koor frequenteerden gelijk in
kapittel-kerken, met zingen van vespers, metten enz.
Daarenboven, in Neer zijn drie treffelijke broederschappen of schutterijen, welker
oudheid en opkomst het onmogelijk is te bepalen; immers, is het zeker dat deze door
de vorsten van Horn en ook door de navolgende graven zijn verrijkt geworden met
113560 treffelijke privilegiën, met verscheidene landerijen en inkomsten, om op zekere
gestelde dagen, est in festo sancti Sebastiani en andere, op eene eerlijke wijze zich
te komen recreëren, en ook om in tijden van oorlog voor hunne graven te velde
trekken en bij tijden van onvoorziene gelooopen hunne medeburgers te bewaren van
geweld en strooperijen.
113565 Eertijds zijn nog meer broederschappen geweest, als dat van den H. Antonius, van O.
L. Vr., welker inkomsten, na het ophouden dezer congregatie, om wat oorzaak is
onbekend, gekomen zijn aan de armentafel dezer gemeente.
Ook hebben de ambachten der smeden, wevers en schoenmakers hunne broederschappen en
patronen, op welker feestdagen zij bijeenkomen en voor hun eene hoogmis gezongen
113570 wordt.
Ten derde hebben de inwoners, welker huizen binnen de vulders of stadsgrachten staan,
een bijzondere privilegie, dat op den dag hunner begrafenissen, gelijk het in steden
geschiedt, het lijk met kruis en priester aan het sterfhuys moet afgehaald worden.
Maar hetgeen op het klaarste aanwijst, dat Neer hiervoor eene stad was, zijn de
113575 overgebleven stadsgraven, welke in het begin dezer eeuw nog niet geslecht zijnde,
allengskens afgeworpen zijn tot akkerland, doch met zulk voorrecht, dat op die graven
de tiende altoos zal toekomen aan den pastoor, als zijnde novale decimateur, welk
recht hij ook altoos, zonder eenige contestatie genoten heeft. Deze graven (grachten)
beginnen aan de Bergerstraat, loopende op de Zuiderhak vandaar achter de Groote op
113580 den Baent en van den Baent op het huis van schepen Peter Windelmolen, en zoo door het
Pasveld tot op den Keizer, zijnde op sommige plaatsen maar 16 voeten breed, maar op
andere plaatsen veel breeder. Uit oude papieren kan men nog halen de namen der
poorten, als Bergespoort, Veerpoort, enz.
Bij verloop van tijd heeft Neer veel verspeeld; of zulks geschied is door de opkomst
113585 van andere dorpen, als Roggel, Heijthuijzen, enz., welke nog onbekend waren, of wel
door verwoestingen van oorlog of door brand, welke ons dorp verscheiden malen
vernield heeft, is onzeker; immers, dit land heeft ten tijde der beeldstorming, als
grenzende aan de stad Roermond, ook veel geleden, doch nooit meer als in het leven
van den pastoor-deken Leo van der Meer, tusschen de jaren 1630-1650, want na het
113590 plunderen van de stad Thienen, anno 1635 zijn de Hollandsche en andere troepen hier
in het graafschap neergeslagen, alles verbrandende en verwoestende. Daarop is de pest
gevolgd, welke niet alleen een oneindig getal van krijgsvolk, maar ook van 's lands
inwoners weggenomen heeft, zoodat de huizen ledig en de landen onbebouwd hebben
moeten blijven. Maar nooit is onze gemeente droeviger ongeluk overkomen, als in den
113595 jare 1645, wanneer de Hessische troepen, na vele dagen overal den baas gespeeld te
hebben, ten laatste op den 11 Augustus het dorp op 4 hoeken hebben in brand gesteld,
waarschijnlijk omdat men de geëischte brandschatting niet heeft kunnen opbrengen.
Hierdoor is niet alleen het geheele dorp, weinige uitgenomen, maar ook het pastoreele
huis met alle papieren documenten, registers, zoo van kerk als armen, zoo van

- 113600 pastoreele redenen als gemeentezaken in de asch gelegd. De pastoor Leo van der Meer is als toen door de Hessen gevankelijk medegeleid en 8 weken tot Nuijs in hechtenis gehouden.
- 113605 Tot zoover de pastoor Stiels. Zeer opmerkelijk zijn zijne bewijzen, waardoor Neer tot stad verheven werd. Zeer zeker ligt er het bewijs in, dat Neer vroegtijdig een aanzienlijk dorp is geweest. Onzes inziens heeft men het ter beveiliging tegen vijandelijke aanvallen met grachten omringd, wijs men, zoo gemakkelijk aan water kon komen, terwijl men verder eene schans aanlegde, welke overblijfselen nog bestaan. Van eene eigenlijke verheffing tot stad is niets bekend, 't Zou ook mogelijk kunnen
- 113610 zijn, dat Neer in den Gelderschen oorlog in 't begin van 1500 in staat van tegenweer gebracht is. In 1504 toch toen Echt geheel verwoest werd, lag Jacob III van Horne met zijn krijgsvolk in Neer. Die van Roermond overvielen hem daar, namen hem gevangen met "anderen luyden van des Prijschen volcke, die due tertijt die nachtewaecke qualicke hilden" en voerden hem "myt grotter blijtschappe tot Ruremonde in gevange."
- 113615 De schutterijen bestaan nog en zijn in het bezit van fraai zilver, dat op de "port" of het gildehuis bewaard wordt. Een schutterij is nog in het bezit van fraaie steenen drinkkannen. Het dorp Neer is welvarend, alhoewel de tijdsomstandigheden het niet verbeterd hebben.
- 113620 Wanneer men echter tot het verledene terugkeeren en een treffend beeld wilt zien van het nietige van het edelste en waardigste dezer wereld, wandele men den weg in de richting der heide en bezie de eentonige, smakelooze, doch groote en hechte gebouwen, die er overgebleven zijn van het wijd befaamde en eeuwen oude stift Keizersbosch. Vóór 700 jaar reeds eene bezitting der Abdij Averbode bij Sichem, werd hier een klooster gesticht voor vrouwen, na de milde schenkingen van Graaf Engelbert van Horne
- 113625 in 1200. In 1226 werd hier eene kerk gesticht, in 1232 was er een proost, in 1350 was een telg van het machtige geslacht van Horne priorin. In het kerkgebouw, in 1472 vernieuwd, werden de hooge Hornes ter aarde besteld en gedurende ruim vijf eeuwen was Keizersbosch het vereenigingspunt van de vromen en
- 113630 machtigen. In 1786 werd het stift opgetrokken; men vond nog de grondslagen der oude hoeven. Een gedeelte dezer gebouwen bestaat nog. Gedurende de Fransche Republiek vluchtten de nonnen van dit klooster naar de Meijerij en vestigden zich te Deurne, in het verlaten huis van den Predikant. Daarheen voerden zij ook een gedeelte harer meubelen en archieven. Een Cartularium der abdij, in 1885
- 113635 aldaar teruggevonden is door den archivaris in Limburg ten voordeele van zijn depot aangekocht. Een oud gezangboek, waarin de voorschriften, te volgen bij de opname van een religieuze en bij den choordienst, werd door mij te Neer gevonden en ook aan het Rijksarchief te Maastricht geschonken.
- 113640 Keizersbosch met al zijne bezittingen werd den 28 Messidor jaar 6, 16 Juli 1793, (affiche 57) met al zijne op- en dependentiën door de fransche Republikeinen verkocht en aangekocht door Arnold Jan Baptista De Raedt van Roermond voor de som van 145,000 livres, natuurlijk grootendeels in assignaten uit te betalen, die bijna waardeloos waren.
- 113645 De Raedt deed al heel spoedig de kerk afbreken, evenals een gedeelte der 82 jaar vroeger vernieuwde gebouwen. De familie De Raedt verkocht dit landgoed den 8 Augustus 1876, groot 7 hectaren en 84 aren, met stallen, schuren en remisen, bouw- en weiland aan den tegenwoordiger bezitter Alexander Steegh, gehuwd met Margaretha Antoinetta van Hegelsom.
- 113650 Zooals boven vermeld is, bevonden zich in de kerk de grafsteden der meeste graven van Horn. Voor een aantal jaren vond men bij het omgraven van het terrein achter het gebouw, de grafsteden terug. Maar men kon de beenderen der hooge heerschers niet onderscheiden van den minsten kloosterknecht. De huizing bestaat nu uit een tiental kamers met
- 113655 zaal, keukens, kelders, stalling, door zijne uitwendige vormen weinig aan de vroegere grootheid herinnerende. Bij Neer behoort behalve het huis Ghoor, eene versterkte hoeve van Aldenghoor, Kuikhoven, Brumholt, Gerheggen, Waay, Wijngaarden, het gehucht Hanssum, aan de Maas gelegen, waar het veerhuis ligt. Voor een paar honderd jaar is er heel wat ruzie ontstaan over dit veer. In 1700 liet
- 113660 de Bisschop van Luik er tol heffen, dit beviel de Generale Staten niet en zij beletten gewapenderhand de heffing. In 1718 begon het spelletje weer, nu lichtte men den Luikschen ontvanger op en wierp hem te Roermond in den kerker. De Bisschop liet zich niet ontmoedigen en de schippers betaalden er tot 1731, toen de koning van Pruisen den Keizer de opheffing verzocht.
- 113665 Opmerking verdient het, dat de Noordgrens van de gemeente Neer gevormd wordt door het

afwateringskanaal der Zuidwillemsvaart naar de Maas. Het verval van het kanaal in de Maas is groot. Daaraan mag het wel te wijten zijn, dat men de verbinding van Maas en Schelde hier niet tot stand gebracht heeft.

Voor aleer wij deze schets van Neer willen besluiten, moeten wij nog wijzen op het eigenaardige dialect, nog al afwijkende van dat der omringende streek. Men hoort daar verwisselingen van letters, die "kerk" bijna tot "krek", van "verkes" tot ongeveer "vrèkes" maken. Honderde jaren heeft men er aldus gesproken, want aan oude zeden en gewoonten houdt men trouw vast en Neer kenmerkt zich gelukkig, nog steeds door ouderwetsche goede trouw, die u uit alles tegenstraalt.

Bewoningsgeschiedenis

Ten behoeve van het opstellen van de archeologische verwachting wordt veelvuldig gebruik gemaakt van de relatie die bestaat tussen de situering van de archeologische vindplaatsen en het landschap, of zelfs specifieke landschapselementen. Deze relatie (locatiekeuzefactoren) verschilt per archeologische periode en per complextype. Omdat de locatiekeuze sterk gebonden is aan het landschap is Nederland in de Nationale Onderzoeksagenda Archeologie verdeeld in zogenaamde archeoregio's. Hierbij is het plangebied ingedeeld bij het Brabants zandgebied. Het ligt echter aan de uiterste periferie van deze regio, op de grens met de Limburgse zandgronden. Kennis van de bewoningsgeschiedenis van zowel het Brabants zandgebied als het Limburgs zandgebied is derhalve onontbeerlijk om een goed verwachtingsmodel op te stellen en de locatiekeuzefactoren per periode te bepalen.

Het landschap van de Maasterrassen bestaat uit resten van pleistocene en holocene rivierbeddingen die ingesneden zijn in de pleistocene rivierterrassen. Sommige van de oude rivierbeddingen werden ontwaterd door beken die hun oorsprong hebben in de westelijk gelegen dekzandlandschappen, waardoor ze als beekdalen gingen functioneren (bijvoorbeeld de Neerbeek).

Deze afwisseling van verschillende landschapsvormen op korte afstand van elkaar vormde in het Paleolithicum en het Mesolithicum een attractief gebied voor jagers en verzamelaars. De grenszones tussen hoog en laag, nat en droog, boden de meeste kansen op een gevarieerd en betrouwbaar voedselaanbod. Tijdens de 200.000 jaar voorafgaande aan het Neolithicum, werden de bewoningsmogelijkheden bepaald door klimatologische omstandigheden. Tijdens de koudere perioden was deze beperkter dan tijdens de warmere. Na de laatste ijstijd, circa 11.000 jaar geleden, begint een warme periode die leidt tot een steeds rijker en gevarieerder voedselaanbod. Gebieden zoals de Maasterrassen boden door hun afwisseling voldoende mogelijkheden voor permanente bewoning. Vindplaatsen uit het Mesolithicum worden met name teruggevonden op ruggen en terrasranden met een goed drainerende ondergrond van dekzanden in de nabijheid van een waterbron (ven, rivier of afgesneden meander). De iets hogere delen rondom beken, vennen en plassen waren daarom waarschijnlijk de landschappelijk meest gunstige bewoningsplaatsen. Bij de locatiekeuze nabij open water lijkt er een voorkeur te zijn geweest voor de (zuid)oostelijke flank van dekzandruggen waarschijnlijk in verband met de overheersende (noord)westelijke winden. Waarschijnlijk waren er ook in en nabij rivier- en beekdalen nederzettingen die later zijn geërodeerd of afgedekt met sedimenten.⁹

Met de introductie van landbouw op de stroomopwaarts gelegen lössgronden begon de circa 5300 v.C. het Neolithicum. Op de lichte kleigronden van de Maasterrassen begint de landbouw circa 1000 jaar later. De gevolgen voor het landschap waren ingrijpend, vooral door het rooien van bosgebieden om akkers aan te leggen, maar ook door andere activiteiten die tot doel hadden het landschap zo in te richten dat deze beter paste bij de nieuwe sedentaire manier van leven. Landbouw leidde bovendien tot een groei van de bevolking, waardoor de effecten van de overgang van jagen en verzamelen naar landbouw versterkt werden. De nieuwe sedentaire levenswijze stelde andere eisen aan de vestigingsplaatsen, die vaker op of nabij de hogere delen van het landschap en dan met name daar waar de bodem vruchtbaarder was, lagen. Het bemesten van landbouwgrond was echter nog niet bekend, zodat de opbrengst gering was en de akkers regelmatig moesten worden verplaatst om de vruchtbaarheid op peil te houden. Afhankelijk van de natuurlijke bodemvruchtbaarheid kon dit al na enkele jaren gebeuren. De meeste boerderijen kenden vermoedelijk een levensduur van enkele decennia vanwege de vergankelijkheid van het bouw materiaal. Dit bewoningssysteem wordt omschreven met het begrip zwervende ervensysteem. Tijdens de Bronstijd en de IJzertijd liep dit proces

van omvorming van een natuur- naar een cultuurlandschap door. De bewoning zal permanent, maar nog steeds niet plaatsvast zijn geweest.

113735 In de Romeinse Tijd werd de Maasvallei - voor het eerst - opgenomen in een groter geheel. Op beide oevers van de rivier kwam een weg te liggen, die de steden en grotere nederzettingen in de Maasvallei met elkaar, met de militaire forten aan de Limes en met andere delen van het Romeinse Rijk verbond. De militaire bezetting van

113740 de delta van Rijn en Maas aan het begin van onze jaartelling leidde al snel tot een romaniseringsproces bij de lokale bevolking, waarbij een breed scala aan nieuwe producten en technieken werd overgenomen. Een van de belangrijkste veranderingen was de opname in een geldeconomie. De mogelijkheid om voor een ver(der) weg liggende markt te produceren leidde tot een verdere uitbreiding van het landbouwareaal, maar

113745 ook tot productie van grondstoffen en gebruiksgoederen op een schaal die de lokale behoefte ontsteeg. Tegenovergesteld aan deze productie voor afzet elders, was de aanvoer van goederen voor eigen gebruik. Het meest zichtbaar was dit proces wel in het nieuwe bouwen waarbij gebruik werd gemaakt van Romeinse bouwtechnieken en -materialen. In de lössgebieden maar ook langs de Maas verrezen villa's -

113750 landbouwbedrijven - die op zijn minst met een dakdekking uitgevoerd in grofkeramiek waren uitgevoerd. Maar vaak ook andere, luxe, voorzieningen hadden, zoals vloerverwarming en baden. Daarnaast werden ook in de nederzettingen op de gewone boerderijen stenen daken aangetroffen (Helden Schrames).

113755 Uitgaande van het beeld dat Slofstra in 1991 schetste van het nederzettingssysteem in Zuid-Nederland wordt er een scherp contrast geschetst tussen de nederzettingen- en agrarische systemen in de Late IJzertijd en de Romeinse tijd. In de eerste periode is sprake van celtic fields en 'zwervende boerderijen'. De veranderingen zouden volgens Slofstra samenhangen met een agrarische intensivering, die mede veroorzaakt werd door de Romeinse belastingheffing. De 'verwantschappelijke' productiewijze veranderde in

113760 een 'tributaire' productiewijze. De nederzettingshiërarchie heeft small rural settlements aan de basis en kent verder enclosed rural settlements, rurale centra ofwel vici en de proto-urbane centra die in de loop van de Romeinse tijd tot echte steden uitgroeiden. Binnen de groep van de enclosed rural settlements zijn al in de preFlavische periode indicaties te vinden voor eliteresidenties, die in sommige

113765 gevallen uitgroeiden tot echte villa's maar elders vaak niet 'verder' komen dan wat Slofstra als proto-villa's betitelt. Het nederzettingssysteem weerspiegelt als het ware het hiërarchische patronagesysteem. Dit systeem bestond al in de late prehistorie en wordt in de Romeinse tijd van extra treden voorzien, namelijk die van de (Gallo)Romeinse elite en de keizerlijke familie. De bewoners van de

113770 eliteresidenties in Zuid-Nederland vormen de intermediairs met de hoogste niveaus, doordat zij ook als decuriones van de civitates fungeren. De afhankelijke bevolking woont in de huizen en kleine nederzettingen rond de residenties van elites.

113775 De ondergang van het Romeinse Rijk, een proces dat al in de 3de eeuw begint en doorloopt tot in de 5de eeuw, leidde tot een neergang die zich onder andere vertaalde in een krimp van de bevolking en daarmee van het landbouwareaal. Dit proces lijkt in de Maasvallei minder ingrijpend te zijn verlopen dan elders. Het voortbestaan van plaatsnamen uit de Romeinse Tijd (Heel, Blerick, Melick, mogelijk ook Kessel) wijzen op een continuïteit in bewoning. Wel veranderde de bevolkingssamenstelling. Franken, al dan niet als huurlingen die de grens moesten verdedigen, vestigen zich binnen het Rijk, onder andere binnen de verlaten villa-complexen. Het afbrokkelen van het Romeinse gezag leidt tot de opkomst van lokale heersers, veelal afkomstig uit de Frankische elite, wier macht gebaseerd was op eigen grondbezit. Deze politieke autonomie viel samen met een economische autarkie, waarin de handel vrijwel tot

113785 stilstand kwam en er alleen nog voor eigen gebruik werd geproduceerd. Onder de Merovingers (6de-7de eeuw) begint een herstel, niet alleen van een centraal gezag, maar ook en vooral van de economie. Het landbouwareaal wordt weer uitgebreid en nieuwe nederzettingen gesticht. De Maasvallei ligt echter nog in de periferie van het nieuwe koninkrijk, waarvan het centrum rond Reims lag. De machtsbasis van de

113790 Karolingers (7de tot 10de eeuw), die de macht overnemen van de Merovingers, lag noordelijker, tussen Verdun en Herstal, waardoor de Maasvallei meer centraal kwam te liggen. Het Karolingische Rijk viel in de 9de en 10de eeuw uiteen in groot aantal kleinere eenheden. Lokale en regionale heersers verwierven een grote mate van zelfstandigheid.

113795 In de Vroege Middeleeuwen was macht gebaseerd op eigen grondbezit. Dit grondbezit werd geëxploiteerd door middel van het dominiale of hofstelsel, waarbij onvrijen - horigen - het land bewerkten. Het is een systeem gebaseerd op betaling in natura.

- Deels gaan deze domeinen mogelijk terug op oudere nederzettingen, deels zijn zij ontstaan als nieuwe ontginningen. Er vond een verschuiving plaats naar het verbouwen van meer graan, waarvoor het drieslagsysteem werd ontwikkeld. In dit systeem werden twee jaar waarin zomer- en wintertarwe verbouwd werd, afgewisseld met een jaar braak. Door het ontbreken van meststoffen om de vruchtbaarheid van de grond op peil te houden, was dit de enige manier om uitputting van de bodem te voorkomen. Het vereist echter wel extra grond. De toenemende nadruk op de teelt van graan heeft waarschijnlijk geleid tot het ontstaan van de open velden die veel van de dorpen op de Maasoever omringen. Het drieslagstelsel functioneert ook het best bij grote aangesloten complexen. Deels zijn deze velden ontstaan door het aaneengroeien van kleinere individuele kampen, waarschijnlijk al in de 9de of 10de eeuw. Maar niet uitgesloten mag worden dat op de zavelgronden van de Maasterrassen, die door hun bodemstructuur en natuurlijke vruchtbaarheid uitermate geschikt zijn voor akkerbouw, er een continuïteit is vanaf de Romeinse Tijd, toen deze gronden ook al intensief werden benut.
- Bewoning heeft in de Romeinse tijd plaatsgevonden in inheemse nederzettingen, die verschillende mate geromaniseerd waren en in nederzettingen die hun ontstaan ontleenden aan specifieke functies in politieke en/of economische zin. Daarnaast waren er de individuele villa's, zoals die van Maasbracht of Neer. In de Vroege Middeleeuwen verschuift de bewoning, na de aanvankelijke krimp, naar nederzettingen langs de beken, veelal in de vorm van dorpen, en, met name in het dekzandlandschap, naar individuele of collectieve ontginningen. In deze laatste gebieden zal nog langere tijd sprake zijn geweest van boerderijen die in de loop van de tijd verplaatst werden, terwijl deze in de dorpen al plaatsvast waren. In hoeverre binnen de open velden (zoals bijvoorbeeld tussen Neer en Buggenum) nog bewoning in deze periode voorkwam, is onbekend. Hoeves die te midden van hun landerijen lagen zijn in de vroege middeleeuwen nog gangbaar, maar gaande weg concentreert de bewoning zich toch in bewoningskernen, al komen solitaire hoeven ook heden nog voor, zoals bijvoorbeeld de Wijncardenhof laat zien. Deze bestaat deels uit bebouwing die al aanwezig is voor 1800 en deels uit bebouwing die na 1800 is verzezen als vervanging voor de hoeve De Beukel die iets noordelijker in het Zwaarveld lag en door hoogwater rond 1800 zou zijn verwoest. Veel van deze alleenstaande hoeven worden voor het eerst genoemd in de late middeleeuwen en waren veelal eigendom van de adel of van kloosterorden. Hun huidige vorm dateert uit de 17de eeuw en later. Maar uitgaande van de veronderstelling dat deze vruchtbare gronden zeer aantrekkelijk voor de landbouw zijn, mag worden aangenomen dat de concentratie van bewoning buiten de akkerarealen al redelijk vroeg in de middeleeuwen zal zijn begonnen. De neergang van het Romeinse Rijk, het verlaten van de villa's en de krimp van de bevolking, zal maar ten dele hebben geresulteerd in het opgeven van deze gronden. Andere, voor de landbouw minder geschikte gronden, zullen eerder zijn prijsgegeven aan de natuur. Dit lijkt ook te worden bevestigd door de ontginning van nieuwe akkerbouwgebieden in de Late Middeleeuwen en Nieuwe Tijd, die vooral plaatsvinden in de dekzandgebieden ten westen van het terrassenlandschap langs de Maas. Het hierboven geschetste bewoningspatroon ligt ten grondslag aan de huidige inrichting van het landschap, waarin tussen Buggenum en Neer nog steeds sprake is van een vrijwel onbebouwd landschap. De oudste vermeldingen van de nederzettingen stammen uit de 13de en 14de eeuw, maar de nederzettingen zelf lijken ouder te zijn. Buggenum wordt bijvoorbeeld voor het eerst vermeld in 1230 maar de kerk moet al uit het begin van de 11de eeuw stammen. Bovendien is Buggenum (1230: Bugnem) een heemnaam, die veelal uit de Vroege Middeleeuwen stammen.
- Op de terrassen zal akkerbouw dominant zijn geweest, terwijl in de lagere beekdalen en de actieve stroomgordel van de Maas graslanden zullen hebben gelegen. Vermoedelijk zijn op de Maasterrassen al vrij vroeg alle voor de akkerbouw bruikbare gronden in gebruik genomen. Latere uitbreidingen aan bouwland vond vooral plaats op de dekzanden ten westen van de Maasvallei. In grote lijnen ligt daarom vanaf de Late Middeleeuwen de inrichting van het landschap op de Maasterrassen vast. Dit is te zien op het kadastrale minuutplan van 1811-32. Alle percelen binnen Deelgebied West zijn dan in gebruik als bouwland. In Deelgebied Zuid is het hoger gelegen noordelijk deel ook als zodanig in gebruik, terwijl de lager gelegen delen als wei- en hooilanden worden benut.
- Het meest oostelijk deel wordt gevormd door een afgesneden geul van de Maas. Het verlandingsproces van deze arm is goed te volgen op de Topografische kaarten van 1894 en 1938. Op deze kaarten is ook te zien dat gedurende de eeuw die deze kaarten bestrijken het gebruik van het land niet veranderde, bouwland blijft bouwland (wit)

113865 en grasland blijft grasland (groen). Grotere ingrepen vinden pas plaats in de laatste
 113870 kwart van de 20ste eeuw, als in 1967 de Maas wordt rechtgetrokken en er een
 herverkaveling plaatsvindt van het gebied tussen Neer en Buggenum in de jaren
 zeventig. In die jaren wordt ook een deel van het akkerbouw areaal omgezet in
 grasland. Tenslotte is in 1996 een kade en overloopkanaal aangelegd die Neer moeten
 beschermen bij hoogwater.

Verwachtingsmodel

Op basis van de in de bovenstaande stappen verworven informatie over de huidige
 situatie, de aardwetenschappelijke, de historische situatie en bekende archeologische
 113875 waarden kan een gespecificeerde verwachting worden opgesteld. Om tot een juiste keuze
 van de onderzoeksmethode van het inventariserend veldonderzoek te komen zijn, voor
 zover mogelijk, de volgende eigenschappen aangegeven:

- datering; minimaal in hoofdperioden (zoals Paleolithicum, Mesolithicum, et cetera);
- complextype (zoals nederzetting, grafveld, akkerlaag et cetera);
- 113880 • omvang;
- diepteligging (ook zichtbaar/niet-zichtbaar);
- locatie (met eventueel aanduiding in welk deelgebied);
- uiterlijke kenmerken (artefacten en type indicatoren);

113885 Voor alle perioden geldt dat, behalve de vormende processen door de Maas die het
 landschap haar huidige gestalte hebben gegeven, ook de mate waarin erosie als gevolg
 van het afspoelen van grond van de akkers bepalend kan zijn voor het verdwijnen van
 (delen van) het bodemarchief. In welke mate dergelijke erosie heeft plaatsgevonden
 binnen het plangebied is onduidelijk. Pas na het uitvoeren van het booronderzoek is
 113890 hierover meer duidelijkheid en kan deze vraag eventueel worden beantwoord. Voor het
 onderstaande verwachtingsmodel wordt dan ook geen rekening gehouden met de gevolgen
 van erosie als gevolg van afspoeling vanaf akkers.

Specifiek voor het lage deel van Deelgebied Zuid geldt dat bewoning hier
 waarschijnlijk nooit heeft plaatsgevonden. Ook andere activiteiten zullen maar
 beperkt zijn uitgevoerd in dit deel van het plangebied. Wel bestaat er een gerede
 113895 kans op bijzondere datasets uit alle perioden, bijvoorbeeld rituele deposities,
 afvaldumps of aan visserij of scheepvaart gerelateerde zaken. De verwachting voor dit
 gebied is dan ook wat betreft bewoning laag, maar voor bijzondere datasets hoog. Deze
 betreffen veelal echter puntlocaties, die zich met de huidige inventariserende en
 113900 karterende onderzoeksmethoden nauwelijks laten opsporen.

Laat Paleolithicum-Mesolithicum: Gezien de geomorfologie van het plangebied, bestaat
 een kans dat zich in het plangebied mogelijk archeologische waarden kunnen bevinden
 uit de vroege Prehistorie (met name Mesolithicum). Deze waarden zouden kunnen bestaan
 113905 uit kleine nederzettingsterreinen, zogenaamde extractiekampen met een kleine omvang
 (circa 5 tot 10 m²) en basiskampen met een ruimere omvang. Vindplaatsen uit deze
 periode kenmerken zich door een strooiing van vuursteen. Tevens bestaat de
 mogelijkheid dat grondsporen (haardplaatsen) kunnen worden aangetroffen. De waarde
 van vindplaatsen met vuursteen (artefacten) wordt grotendeels bepaald door de
 113910 intactheid ervan. Om zoveel mogelijk informatie uit de vuursteenvindplaats te krijgen
 is het daarom van belang dat de interne structuur van de vindplaats (de verticale en
 horizontale spreiding) zo weinig mogelijk verstoord is. De waarde van de
 vuursteenvindplaats wordt derhalve grotendeels bepaald door de mate van intactheid
 van het bodemprofiel. Slechts geringe bodembewerking kan al hebben geleid tot een
 113915 verstoring van de vindplaats. Van belang is daarom de mate van verstoring van het
 bodemprofiel in beeld te brengen. Indien vindplaatsen aan, dan wel dicht aan het
 oppervlak voorkomen en het gebied is in gebruik als akkerland, zullen deze
 waarschijnlijk sterk verstoord zijn.

Vindplaatsen uit het Paleolithicum kunnen vooral verwacht worden op de terrassen uit
 het Allerød en Late Dryas (zie afbeelding 2). De huidige overstromingsvlakte van de
 113920 Maas is gevormd in de laatste fase van het paleolithicum en later, zodat de kans
 groot is dat eventuele resten verspoeld zullen zijn. Gezien de leeftijd van de
 terrassen zijn hoe dan ook binnen het plangebied alleen resten uit het late
 paleolithicum te verwachten. Vindplaatsen uit het mesolithicum kunnen binnen het
 113925 gehele plangebied voorkomen, met ook hier weer de aantekening dat de kans gering is
 dat binnen de huidige holocene overstromingsvlakte geen verspoeling heeft
 plaatsgevonden. De kans dat eventuele vindplaatsen niet verstoord zullen zijn is
 echter gering, daar binnen het plangebied vooral erosieve processen hebben
 plaatsgevonden. Er is geen dekzand afgezet (daarvoor zijn de terrassen te jong), en
 113930 evenmin heeft er sedimentatie door de rivier plaatsgevonden. Eventuele vindplaatsen

hebben daardoor altijd direct aan het oppervlak gelegen waardoor ze zeer kwetsbaar voor versterking zijn geweest. Daar het plangebied in een zone ligt die voor de landbouw zeer geschikt is, en dan ook sedert lange tijd meer of minder continu als zodanig zullen zijn gebruikt, is de kans zeer gering dat zich binnen het plangebied nog intacte vindplaatsen bevinden.

Gezien de landschappelijke ligging van het plangebied, aan de randen van de terrassen en nabij de rivier, wordt de kans op het aantreffen van vindplaatsen uit het late paleolithicum en het mesolithicum als middelhoog tot hoog ingeschat. De kans op het aantreffen van intacte vindplaatsen wordt echter als laag ingeschat.

In tabel 6 zijn de aangetroffen artefacten geordend naar materiaalcategorie en tijd. Bij deze laatste is de globale datering van het Archeologische Basisregister (ABR) gevolgd. Deze dateringen zijn soms zeer ruim, want gebaseerd op het gegeven dat bepaalde materialen geen periode specifieke vorm of toepassing hebben en dus over

langere tijd kunnen zijn gebruikt. Een mooi voorbeeld in deze is verbrand leem, ook wel bekend onder de - onjuiste - benaming huttenleem. Als bouw materiaal is leem vanaf het Neolithicum tot in het subrecent verleden gebruikt. Brokken verbrand leem kunnen derhalve uit deze gehele tijdsspanne stammen. De context waarin het wordt

aangetroffen is dan ook de enige mogelijkheid om het te kunnen dateren. Voor vuursteen geldt in grote lijnen hetzelfde, echter met dit verschil dat het als gereedschap is gebruikt waardoor er een groot aantal periode specifieke vormen zijn, maar ook veel afval, resultaat van de productie van het gereedschap, dat zich nauwelijks laat dateren. Daarnaast is vuursteen tot in de subrecente tijd gebruikt

(bijvoorbeeld als vuurslag) waarbij ook afval - door gebruik - is ontstaan. De datering in het ABR is daarom Paleolithicum (PALEO) tot heden (NTC), al zal de bulk van het gebruik in het Paleolithicum tot het Neolithicum liggen. Met dit in het achterhoofd dient de datering van het aangetroffen materiaal te worden beschouwd. De gevonden artefacten vallen globaal uiteen in drie perioden en/of drie

materiaalcategorieën, die deels samenvallen. Het materiaal dat buiten deze clusters valt, bestaat veelal uit objecten die zo weinig specifiek zijn dat een nadere determinatie niet mogelijk is. Het grootste deel stamt naar alle waarschijnlijkheid uit de Nieuwe Tijd. IJzer vormt met 54 objecten veruit de grootste groep binnen deze categorie. Veel van de stukken bestaan uit roestklompen met een amorf vorm, waarvan zeker een deel als granaatscherven kunnen worden geclassificeerd. Daarnaast komen

gesmede spijkers voor, die vanaf de Romeinse Tijd zijn gebruikt. De overige materialen buiten de drie hoofdclusters zijn steeds met een of twee fragmenten vertegenwoordigd en omvatten, bot, brons (sterk afgesleten munt), koper, huttenleem en houtskool. De boven aangeduide drietal clusters omvatten vuursteen dat vooral uit de Prehistorie stamt, aardewerk en grofkeramiek uit de Romeinse Tijd en glas,

aardewerk en grofkeramiek uit de Late Middeleeuwen en/of Nieuwe Tijd.

Vuursteen

In totaal vallen 455 fragmenten vuursteen en 6 fragmenten overige steensoorten binnen deze cluster. Daarnaast zijn er nog 2 fragmenten handgevormd aardewerk aangetroffen, maar deze kunnen helaas niet nader gedetermineerd worden. Het vuursteen is door Huub Schmitz van de Heemkundevereniging Roerstreek gedetermineerd.

Veruit het grootste deel van het vuursteen - 335 fragmenten, zie tabel 7 - bestaat uit afval en brokken die nauwelijks nader te determineren zijn. Dit materiaal is daarom alleen zeer ruim te dateren als Paleolithisch tot recent. Het overige

materiaal - 119 ex. - bestaat uit (delen van) gereedschappen en materiaal ontstaan bij het maken of bewerken van gereedschappen. Ook dit materiaal laat zich, op enkele objecten na, niet strakker dateren dan Paleolithisch tot IJzertijd. Slechts vijf objecten kunnen worden gedateerd als mesolithisch tot laat-neolithisch (transversaal spits), midden-neolithisch (fragment spitskling) of laat-neolithisch tot Bronstijd

(geretoucheerde bijlafslag Lousberg vuursteen; geslepen bijlafslagen van Valkenburg, Belgisch-grijs en Rijckholtse vuursteen). Van 162 objecten kon worden vastgesteld van welke type vuursteen ze gemaakt waren. Bepaalde typen vuursteen zijn vooral of uitsluitend in bepaalde periodes van de Prehistorie gebruikt zodat aan de hand daarvan soms een nadere datering mogelijk is. In tabel 8 zijn de objecten waarvan het

type vuursteen kon worden gedetermineerd opgenomen, evenals de globale datering van het gebruik. Vuursteen van Rijckholt en Maasschotter vormt meer dan twee-derde van het materiaal. Deze typen zijn gebruikt vanaf het paleolithicum tot in het neolithicum. Daarbij kan dan wel aangetekend worden dat het vuursteen uit Rijckholt vooral in het neolithicum op grote schaal is gebruikt. Van de overige typen vuursteen

is het grootste deel gebruikt tussen het (laat)-paleolithicum en neolithicum (32 fragmenten: Vetschau, Obourg en Belgisch grijs) en slechts een klein deel uitsluitend

Naspeuringen van Paul Theelen: Constantinus Imperator

in het mesolithicum en/of neolithicum (15 fragmenten: Wommersom kwartsiet, Lousberg, Simpelveld en Valkenburg). Op basis van het type vuursteen is dus ook nauwelijks een differentiatie in de tijd aan te brengen.

114000 Het vuursteen is, op vijf fragmenten na, vrijwel uitsluitend in het Deelgebied West aangetroffen. Er zijn geen duidelijke concentraties zichtbaar binnen het plangebied (zie Afbeelding 12). Wanneer gekeken wordt naar de verspreiding van de vuurstenen artefacten (tabel 7, zonder afslagen, brokken, kernen en afval), lijkt er in het noordelijk deel van Deelgebied West een wat sterkere concentratie van vondsten

114005 zichtbaar te zijn. Maar er tekenen zich geen duidelijke locaties af die zouden kunnen worden geïnterpreteerd als zones waarin bewoning en/of activiteiten hebben plaatsgevonden. Hoe dit materiaal dan wel geïnterpreteerd zou moeten worden is de vraag. Voor de hand ligt om dit te doen vanuit degradatie van sites als gevolg van latere activiteiten, waarbij vooral de landbouw een belangrijke rol zal hebben

114010 gespeeld. Overigens niet alleen door bodembewerking zelf, maar ook door verplaatsing van materiaal door bodemerosie als gevolg van denudatie. Hier tegen pleit dat er geen duidelijke aanwijzingen voor erosie zijn waargenomen in de boorprofielen. Evenmin is er een concentratie van materiaal te zien in het lager gelegen oostelijke deel van Deelgebied West, waar verspoeld materiaal, samen met de bodem, zich juist

114015 had moeten concentreren in het geval dat erosieve processen materiaal zou hebben verplaatst. Een andere verklaring zou kunnen zijn dat maar zeer klein deel van het materiaal aanwezig binnen Deelgebied West is verzameld. Alleen dat gene wat zichtbaar was is meegenomen. Maar het terrein is maar een keer belopen, als dit vaker was

114020 gebeurd zou ongetwijfeld meer materiaal zijn verzameld, zeker als tussen de verschillende verzamelmomenten het terrein opnieuw bewerkt was (en uitgeregend). Een grotere hoeveelheid materiaal had mogelijk wel concentraties kunnen laten zien, maar zeker is dit geenszins. Tenslotte moeten we misschien accepteren dat het gevonden materiaal een weerslag is van enkele duizenden jaren aan vooral kortdurende

114025 activiteiten op een locatie die kennelijk aantrekkelijk genoeg was om regelmatig naar toe terug te keren.

Late Prehistorie en Romeinse Tijd: een hoge trefkans op grond van de bodem en de geomorfologie van het plangebied. Het gebied zal in de Late Prehistorie en in de Romeinse Tijd tot de meest aantrekkelijke voor bewoning hebben behoord. Derhalve

114030 kunnen binnen het gehele plangebied, met uitzondering van het laag gelegen deel van Deelgebied Zuid, sporen van bewoning en activiteiten worden aangetroffen. Het zal hier gaan om nederzettingen in diverse vormen, waarbij voor de midden en laat Romeinse tijd ook gedacht moet worden aan steenbouw, graven en grafvelden, sporen van ambachtelijke activiteiten en sporen gerelateerd aan landinrichting en communicatie.

114035 Ook hier geldt dat deze activiteiten op en in het huidige maaiveld zullen hebben plaatsgevonden en derhalve als gevolg van latere activiteiten verstoord zullen zijn. Echter, een aanzienlijk deel van deze sporen zullen dieper liggen c.q. reiken dan de bouwvoor en daarom nog aanwezig zijn. Te denken valt hier aan graven, (paal)kuilen, funderingen, waterputten, greppels e.d. Daarnaast zal naar verwachting van de

114040 materiële cultuur nog het nodige aanwezig zijn, zij het dat het deels verspreid zal zijn in de bouwvoor. Voor de terrassen (Deelgebied West en het hoge deel van Deelgebied Zuid) is de verwachting voor het aantreffen van vindplaatsen uit de late Prehistorie en Romeinse tijd dan ook hoog. De verwachting dat deze vindplaatsen nog intact zullen zijn wordt

114045 ook hoog ingeschat.

Romeins keramiek en grofkeramiek

Romeins keramiek (Lieke van Diepen)

Tijdens de veldkartering te Neer zijn 55 scherven Romeins aardewerk geborgen. Het best vertegenwoordigd zijn de kruiken/amforen en het ruwwandige aardewerk, respectievelijk met 13 en 16 fragmenten. Dit is niet vreemd, deze categorieën nemen binnen het Romeinse aardewerkspectrum veelal de grootste plaats in. Tabel 9 geeft een overzicht van de aangetroffen aardewerkcategorieën.

Aan het uiterlijk van de scherven was duidelijk te zien dat het om materiaal gaat dat aan de oppervlakte heeft gelegen. De fragmenten zijn relatief klein, verweerd, sterk afgerond en enkele exemplaren tonen vlekken. Bij de terra sigillata en de geverfde waar ontbreekt de deklaag meestal volledig. Dat het om oppervlaktevondsten gaat, is ook af te lezen aan het gemiddelde gewicht per scherf dat slechts 8,9 gram bedraagt. Het vondstmateriaal is overwegend tweede eeuws, voornamelijk de periode 120-200 n.

114060 Chr. is sterk vertegenwoordigd. Alleen de kookpot Niederbieber 89 is een derde eeuwse vondst. Zuiver eerste eeuws materiaal ontbreekt. Vermeldenswaardig is dat de terra sigillata uitsluitend bestaat uit Oost-Gallisch materiaal. Onder het gladwandige

materiaal en de kruiken/amforen bevinden zich vermoedelijk enkele Heerlense producten.

Grofkeramiek is de juiste term voor bouw materiaal gemaakt van klei. Deze term onderscheidt het van het fijnkeramisch materiaal - aardewerk - dat niet alleen van dezelfde grondstof, maar ook volgens hetzelfde procedé wordt gemaakt.

Binnen het plangebied zijn in totaal 689 fragmenten grofkeramiek geraapt. Daarvan zijn 131 fragmenten toe te schrijven aan de Late Middeleeuwen of Nieuwe Tijd en 59 fragmenten niet nader te determineren als Romeins tot Nieuwe Tijd. Het grootste deel stamt dus uit de Romeinse Tijd.

Van het materiaal dat ruim gedateerd is (ROMM-NTB) zal waarschijnlijk ook een aanzienlijk deel Romeins zijn. Het betreft fragmenten zonder diagnostische vlakken maar waarvan het baksel (met name de structuur van de matrix) wijst op een niet machinale productie en dat dus voor het midden van de 19de eeuw moet zijn gemaakt. Het vormen en bakken van grofkeramiek is tot de opkomst van de industriële productie in wezen nauwelijks veranderd, waardoor Romeinse, Middeleeuwse en Vroeg-moderne producten wat baksel betreft vaak op elkaar lijken. Over het algemeen zijn Romeinse baksels wat compacter dan die uit latere perioden, maar regionaal kunnen deze verschillen zeer gering zijn, met name ook wanneer kennelijk dezelfde kleibronnen zijn gebruikt. Het materiaal uit Neer dat ruim gedateerd is, kon niet met zekerheid als Romeins worden gedetermineerd, maar lijkt wel sterk op het materiaal dat wel met zekerheid als Romeins kon worden gedetermineerd.

Ruim de helft van het Romeins grofkeramiek kon worden toegeschreven aan een bepaald type. Dakbedekkingsmateriaal overheerst, met 159 fragmenten van tegulae en 117 fragmenten van imbrices. Verder zijn 4 fragmenten van tubuli gevonden, rechthoekige of vierkante holle buizen die toegepast werden in verwarmingssystemen. Wat ontbreekt zijn lateres, platte, vierkante of rechthoekige stenen die als metselsteen of, in het geval van de grote formaten, als vloerplaten. Deze vloerplaten maken onderdeel uit van een hypocaust verwarming, waarin de warmtebron buiten de eigenlijke ruimte lag en hete lucht onder de vloer en door de wanden - tubuli - circuleerde. Verwarmde ruimtes komen zowel in woon- als badruimtes voor en moeten, gezien het voorkomen van deze typen grofkeramiek op Romeinse sites vrij algemeen zijn geweest.

Het materiaal is, op een fragment na, uitsluitend aangetroffen in Deelgebied West (Afbeelding 15). De verspreiding over het deelgebied is niet gelijkmatig, maar concentreert zich in het noordelijke en in het zuidoostelijke deel van dit gebied. Binnen deze verspreiding zijn twee duidelijke concentraties aan te wijzen, beiden in de zuidoostelijke hoek. Beide sites zijn al bekend in ARCHIS: 17526 en 51303. In het noordelijk deel lijkt er iets meer materiaal in de noordwestelijke hoek aangetroffen te zijn. Dit sluit aan op de bekende vindplaats op de hoek van Hagendoorn en Eiland (AMK-terrein 11196, ARCHIS-nrs 15248 en 15360). Maar er is in dit noordelijk deel ook een concentratie te zien in het middendeel van het terrein. De ligging hiervan komt globaal overeen met de concentratie keramiek in dit deel van het plangebied. Een dergelijk samenvallen van keramiek en grofkeramiek is ook te zien op de twee locaties in de zuidoostelijke hoek van Deelgebied West, maar ontbreekt bij de concentratie in de noordwestelijke hoek. Mogelijk zou het hier daarom kunnen gaan om een nieuwe site.

In Afbeelding 16 wordt de verspreiding van het binnen het plangebied aangetroffen Romeins keramiek en grofkeramiek afgezet tegen de bekende vindplaatsen binnen het ruimere onderzoeksgebied. Hierbij moet worden aangetekend dat veruit de meeste waarnemingen binnen dit onderzoeksgebied betrekking hebben op waarnemingen, meestal veldkarteringen en/of detectorvondsten. Alleen de kleine opgraving aan de Arixweg, de begeleiding van de aanleg van de Maaskaden en overloopgeul18 en een waarneming bij graafwerkzaamheden op het monument, hebben betrekking op - meer of minder - gravend onderzoek. De vondsten van de veldkarteringen zijn aangetroffen op akkers, waarvan echter alleen het centrumcoördinaat is opgenomen in ARCHIS, zodat er geen nauwkeuriger plaatsing mogelijk is. Een aparte categorie vormen de baggervondsten uit de Maas, die weliswaar globaal te plaatsen zijn, maar wel een doorsnede door het landschap geven en bovendien ook nog eens het laagst gelegen deel. Hoe dan ook, duidelijk is wel dat het gebied langs de Maas tussen Buggenum en Neer in de Romeinse Tijd dicht bewoond is geweest.

Vroege Middeleeuwen: voor de Late Oudheid en Vroege Middeleeuwen geldt een middelhoge trefkans op grond van de geomorfologie en bodemsamenstelling van het plangebied en de historische gegevens. Mogelijk aan te treffen vindplaatsen kunnen bestaan uit nederzettingssporen en greppels. Nederzettingen kenmerken zich door een spreiding van

- 114130 aardewerkresten en het voorkomen van grondsporen (paalsporen, afvalkuilen, greppels, waterputten en funderingen). Greppels kunnen wijzen op verkavelingspatronen (erfbegrenzings- en perceelsscheidingen), waterbeheer (afvoergreppels) of ontginnings- en grondverbeteringsactiviteiten. De omvang van vindplaatsen uit de Middeleeuwen varieert sterk en is afhankelijk van de aard van de vindplaats. Hierover kunnen dan ook geen uitspraken worden gedaan. Ook voor vindplaatsen uit deze periode
- 114135 geldt dat deze zich in en/of net onder de huidige bouwvoor zullen bevinden, waarbij met name de dieper reikende sporen nog intact zullen zijn. De verwachting voor het aantreffen van vindplaatsen uit de vroege Middeleeuwen wordt als middelhoog ingeschat. De verwachting dat deze vindplaatsen nog intact zullen zijn wordt als hoog ingeschat.
- 114140 Late Middeleeuwen en Nieuwe tijd: op grond van de historische gegevens geldt voor het plangebied een lage tot middelhoge verwachting voor het aantreffen van archeologische vindplaatsen. De bewoning heeft zich in deze periode al grotendeels geconcentreerd in de bewoningskernen aan de randen van het veld, het aaneengesloten akkerareaal tussen
- 114145 Neer en Buggenum. Alleen in de volle middeleeuwen zal zich mogelijk nog wat meer bewoning binnen het plangebied kunnen hebben bevonden. In de Nieuwe Tijd beperkt de bewoning zich tot enkele solitaire hoeven, waarvan er een zich net ten noordoosten van Deelgebied Zuid bevindt.
- 114150 De omvang van vindplaatsen uit de Middeleeuwen varieert sterk en is afhankelijk van de aard van de vindplaats. Hierover kunnen dan ook geen uitspraken worden gedaan. Ook voor vindplaatsen uit deze periode geldt dat deze zich in en/of net onder de huidige bouwvoor zullen bevinden, waarbij met name de dieper reikende sporen nog intact zullen zijn
- 114155 De verwachting voor het aantreffen van vindplaatsen uit de late Middeleeuwen en Nieuwe Tijd wordt als middelhoog ingeschat. De verwachting dat deze vindplaatsen nog intact zullen zijn wordt als hoog ingeschat.
- Glas, keramiek en grofkeramiek Late Middeleeuwen en Nieuwe Tijd.
- 114160 De derde vondstcategorie wordt gevormd door aardewerk, glas en grofkeramiek uit de Late Middeleeuwen en Nieuwe Tijd. De grootste vondstcategorie wordt gevormd door het aardewerk, waarvan in totaal 755 fragmenten zijn verzameld. Daarvan zijn 609 fragmenten gedetermineerd. Het grofkeramiek is vertegenwoordigd door 131 fragmenten en het glas door 45 fragmenten.
- 114165 Veruit het grootste deel van het geraapte keramiek stamt uit de Late Middeleeuwen en/of de Nieuwe Tijd. Een derde deel bestaat uit materiaal, hoofdzakelijk roodbakend aardewerk, dat vanaf de Late Middeleeuwen tot in het subrecente verleden dateert, bijna een helft bestaat uit materiaal dat uitsluitend in de Nieuwe Tijd dateert. Bij het glas en het grofkeramiek is deze tendens nog veel sterker te zien, met slechts
- 114170 een fragment grofkeramiek dat uitsluitend Middeleeuws is en een aantal fragmenten die Middeleeuws of Nieuwe Tijds kunnen zijn. Deze materiaalcategorieën zijn vrijwel zeker op het land gekomen tijdens het bemesten. Als afval uit woonhuis, stal en/of erf werden zij samen met de mest op de mestvaalt gedeponneerd en vervolgens over de akkers verspreid. Dit verklaart ook de verspreiding van het materiaal binnen het plangebied. Deze is regelmatig, maar wordt dunner naarmate de afstand tot Neer toeneemt. Dit is
- 114175 te verklaren uit het gegeven dat de akkers die het dichtst bij het dorp lagen het meest intensief werden bemest. De dunste verspreiding is zichtbaar op de akker in Deelgebied Zuid. Een mogelijke verklaring hiervoor is dat dit perceel waarschijnlijk afwisselend als akker en grasland in gebruik is geweest.
- 114180 Slechts twee stukken dateren uit de Vroege Middeleeuwen of het begin van de Late Middeleeuwen en twintig stukken uit de Hoge Middeleeuwen. Materiaal uit deze periode kan gerelateerd zijn aan bewoning ter plekke, maar de geringe hoeveelheid die is aangetroffen maakt dit niet waarschijnlijk.
- <https://archisarchief.cultureelerfgoed.nl/Archis2/Archeorapporten/37/AR32653/GAR%201044%20Neer%20-%20Hanssum%20%202040815.pdf>
- 114185 9 september 1899 De St. Lambertskapel te Reuver.
- Tegen het einde der VIIde eeuw stapte de Maastrichtsche bisschop Lambertus, dien de geschiedenis den eernaam apostel van Peel- en Kempenland heeft toegekend, tegenover, en waarschijnlijk onder de bescherming van, het voormalig Romeinsch, destijds
- 114190 Frankisch Castellum (Kessel) aan wal, ten einde de bewoners onzer zandstreek, de laatstovergebleven heidenen van ons gewest, tot het Christendom te bekeeren. Op den rechter Maasoever bevond zich een kleine hoogte, en aldaar, uit rivierkeien opgetrokken, een gebouwtje, herkomstig uit het tijdperk der Romeinsche overheersching. Toen zijn woord eenige vrucht had gedaan, wijdde de H.

- 114195 Evangelieverkondiger dit gebouw tot een bedehuis ten gerieve van zijn nieuwbekeerden. Na verloop van tijd werd het, dewijl het aantal geloovigen steeds groeiende was, vergroot en allengs herschapen in een kerkje, naderhand gesteld onder de aanroeping van den H. Lambertus-zelve.
- 114200 Tot de XIVde eeuw werd het dorp Beesel tot kerspel verheven en bleef de St. Lambertskapel als hulpkerk voor de thans tot Reuver behorende buurtschappen Leeuwen en Offenbeek bestaan. Habets vermeldt sub anno 1400 Bezel en Capella St. Lamberti. 2 April 1661 werden de goederen, van lieverlede aan het eerbiedwaardig heiligdommetje geschonken, overgebracht op de Beeselsche kerk tot onderhoud van den kapelaan, die tevens de St. Lambertskapel bediende.
- 114205 Habets vermeldt sub anno 1669: Onder Bezel ligt tegenover Kessel de kapel van den H. Lambertus, waaraan zielzorg is verbonden. Rector is er Petrus Jacobs. 16 Juli 1689 geeft Karel II, koning van Spanje en hertog van Gelder, aan den toenmaligen kapelaan-rector Joës Beurskens "Octroij om een vrije jaer-ende peerdemerckt" tot onderhoud van de "door ouderdom ende crijgstroubelen ondercommen ende geruineerde" kapel, welke "volgens de gemeijne traditie van alle waerschijnelyckheid ware gebouwd in den tijdt als wanneer deze landen alnoch liejdens waeren, ende nas de bekeeringe in dezelve den eersten Christelijcken ende Catholijken Godtsdienst were begonst."
- 114215 19 Mei 1787 kwam het St. Lambertuskerkje in het bezit van een eigen en onafhankelijk zielzorger. Toen in 1830 de kapel, die reeds zooveel dagen en vlagen getrotseerd had, bouwvallig bleek, verrees er weldra een nieuw tempelgebouw op de plaats, waar zich inmiddels tusschen genoemde gehuchten in, een niet onaanzienlijke kom had gevormd.
- 114220 Op den St. Lambertusheuvel bouwde men in 1845 – Reuver was in 1834 zelfstandig kerspel geworden – van de keien der aloude, een kleinere kapel, die de herinnering aan het roemrijk verleden bij de nakomelingschap levendig hield. Sedert in 1896 het jubilé van 's grooten Lambertus' marteldood was gevierd, werd de toeloop naar die heilige plek zoo groot, dat men besloot, met behoud van het
- 114225 bestaande gebouwtje, een ruimere bidplaats daaraan te verbinden. Deze nieuwe kapel nu volgens teekening van den heer J. Gielen te Kessel gebouwd, zal Zondag 17. dezer, met verlof van Z.D.H. den bisschop van Roermond, worden ingezegend.
- 114230 Bij 't ontgraven van den bodem werden de grondslagen der aloude kapel blootgelegd. Evenals van het gebouw zelf bestond het metselwerk der fundeeringen uit zware keien, met meel en kalkmortel tot een schier niet te klooven geheel samengegoten. Ook vonden wij er een groote menigte brokstukken van Romeinsche dakpannen, tegulae en imbrices, alsmede op verschillende plaatsen beenderen, bijna heel vergaan, doch nog duidelijk te onderkennen als afkomstig van lijken, zeer lang geleden daar begraven.
- 114235 Dit staft de aloude in de oorkonden opgeteekende overlevering, dat in de hooge oudheid daar een Romeinsch gebouw heeft gelegen, en "de Capelle St. Lambert – gelijk een onzer bescheiden getuigt – vorhin geweest is parochiale kerk." Vlak bij den Lambertusheuvel ligt, thans met berkestruiken beplant, het Romeinsche legerkamp, waarvan in de Publications 1864 gewag wordt gemaakt.
- 114240 Alhoewel de daarin gelegen grafheuvels, tumuli, door oudheidkundigen reeds vroeger doorzocht, en een menigte grafurnen daaruit opgedolven werden, mocht het ons dit jaar gelukken, er een zestal, waaronder drie van Romeinsch baksel, met asch en gebeente gevuld, aan het licht te brengen. Hetgeen onmiskenbaar een vrij langdurig verblijf van Romeinen op Reuverschen bodem bewijst.
- 114245 Reuver heeft derhalve het voorrecht, in zijn St. Lambertsheuvel een plekje te bezitten, dat geheiligd werd door den evangelischen arbeid van den grooten Maastrichtenaar, die geheel een volk aan de weldaden van Christendom en beschaving deelachtig maakte.
- 114250 J. VRANCKEN.
- 5 juni 1888 ASSELT EN SWALMEN
- Door het vlakke weiland achter Leeuwen, over den met een dicht kort gras begroeiden weg, leidt onze wandelweg ons naar Asselt, het oude Asselon. Heerlijk is 't buiten.
- 114255 De zoele adem van een zacht windje voert ons de balsemgeuren van berkenloof tegen. De madeliefjes en boterbloemen schitteren als sterretjes in 't groen, en aan ieder blaadje parelt een dauwdrup als een diamant in de morgenzon. Voor ons, in de frissche beemden, grazen talrijke schapen onder de hoede van den blauwgekielden herder en zijn rusteloozen hond. Rechts sluit een berkenbosch, omgeven door slanke peppelen, het vergezicht af. Waar de bodem rijst, liggen de ruime gebouwen van den Zijperhof, de
- 114260

woning van den Burgervader van Swalmen, tegen den zwarten achtergrond. Door het welig geboomte heen, schemert de grijs-roode toren van Swalmen en de oude burcht Hillenrade in zijn boschrijke omgeving; wenden we ons links, dan ontwaren we de schitterende wateren der Maas, en steekt het bescheiden torentje der Kapel van Asselt boven de eiken uit. En boven het geheele kleurige landschap welft zich de helderblauwe, doorzichtige lentelucht, waarin geen ander vlekje te zien is dan de leeuwerik, die zingende opwaarts stijgt. Nooit nog kregen we dan ook zoo'n weldoend gunstigen indruk van 't dorpje, dan thans.

Asselt, waarheen 't pad ons voert, is een klein Maas dorpje. Daarom spreekt de geschiedenis van Asselt ook van een voortdurenden strijd om 't bestaan tegen de golven, van een ononderbroken kamp. Heeft de Maas aan Asselt in vroegere dagen veel zegen gebracht, toen het de stapelplaats voor den Maashandel met de Rhijn-provincie was, dikwijls hebben hare wateren kerkje en woningen met vernieling bedreigd, en menige bange nacht is door de Asselder inwoners doorgebracht, als de hoogopgezette golven met alle kracht de grijze muren van hun kerkje bereikten.

De Maas is hier met hare woelige wateren vrij onbestendig in haar loop geweest. Menigwerf heeft ze haar bed verplaatst; vroeger bespoelde zij den voet van het kerkje. Toen lag de oever der overzijde ter plaatse, waar thans de Asseltsche oever ligt. Een paar diepe slakken, met rietpollen en waterplanten begroeid, duiden thans nog de plaats aan, waar vroeger de schepen met hun last ankerden aan de losplaats. In lateren tijd baande zich de felle stroom bij het kerkje een anderen weg, meer op Buggenum aan en verliet het oude bed. Volgens eene oude kaart, op het raadhuis te Swalmen aanwezig, vormde zich tusschen den ouden en nieuwen arm een groote uiterwaard, de Buggenummer Tolwaard geheeten. Tegenover de verderop gelegen huizen van Asselt, aan 't zoogenaamde Gebrouwhuis, dat we straks zullen passeeren, drong de Maas op de huizen aan, en knaagde met onwederstaanbare, langzaam werkende kracht aan den oever, die de huizen steunde. De grond, over eene breedte van meer dan zestig meter, en drie huizen verdwenen in de wateren der Maas en eerst thans, nu de gemeente tot behoud der andere huizen een kolossale steenen beschoeiing aangelegd heeft, is de grootste kracht der golven gebroken.

Ook de lage weiden en de zware kleilanden, die we straks doortrokken en de zoogenaamde Voelbeemden zijn voor eeuwen uit het wisselend bed der Maas ontstaan. Het kapelletje van Asselt ligt op eene ommuurde hoogte, het is een zeer oud, onderkelderd gebouwtje. Zijne ligging aan de Maas, het materiaal zijner muren, dat uit een mengsel van ruwe veldkeien en Romeinsche pannen bestaat, aaneengegoten met kalk, geven veel grond voor de onderstelling, dat 't van Romeinschen oorsprong is; ook de overlevering zegt, dat het een oud tolkantoor der Romeinen zou zijn; de naam "Tolwaard", die de weide, bij het kerkje gelegen draagt pleit voor die veronderstelling. Later zou het in een kerkje veranderd zijn.

De deur, die kleiner is dan de oorspronkelijke, ligt naar de noordzijde in het midden van den zijgevel.

Het gebouw bestaat uit twee deelen: een vierkant achterstuk, waarvan de oostelijke helft een weinig uitspringt en uit den toren, die van jongeren datum en uit baksteen opgetrokken is. De achterzijde van het gebouwtje draagt de sporen van restauratie. Het kerkje, hoe klein ook, ziet er zindelijk uit. "Klein, maar rein" zou men mogen zeggen. Ééne zaak mogen we niet vergeten.

Het Asseltsche kerkje bezit een kunstschat, welbekend en hooggeschat bij de Limburgsche kunstliefhebbers. 't Is een afbeeldsel van den stervenden Christus aan het kruis, eene schilderij zoo aangrijpend schoon, dat men het onmiddellijk voor 't werk van een meesterhand verklaart. Het lichamelijk lijden van den Godmensch, de ziele smart van den Verlosser, zijn zoo meesterlijk op het schoone gelaat en in de edele vormen van het lichaam weergegeven, dat de aanblik roert en treft. In zijne nederige omgeving en oude lijst spreekt het meesterwerk van den schilder tot het gemoed, en de indruk dien het maakt, prent zich diep in den geest des beschouwers. De schilderij moet, dunkt ons, wel een geschenk zijn van de vroegere heeren van Hillenrade. Hoe zou 't nederige kerkje anders in 't bezit van een dergelijk juweeltje geraakt kunnen zijn.

Aan den voet der grijze muren van het kapelletje vinden de overledenen van het dorpje hunne laatste rustplaats. Vroegtijdig al schijnt die hoog gelegen plek reeds als begraafplaats dienst gedaan te hebben, want in den voormuur van den toren vinden we een hardsteen ingemetseld, waarop in gothieke letters het opschrift gebeiteld staat "Beet russe myt hare kyderen". Naar den vorm van 't schrift te zien, kan de steen wel uit het laatst der 15e eeuw dateeren. Volgens de overlevering zou deze steen daar geplaatst zijn ter herinnering aan een moeder, die met hare kinderen, door een ongelukkig toeval, bij een brand omkwamen. Dat die familie, "Russe of Ruesen" hier inheemsch was, bewijst een ander kruis daar tegenover, met het jaartal 1558, en het

opschrift "Jan Ruesen". De andere steenen kruisjes melden ons, dat daaronder in 1615 Willem Quiten, in 1629 Geurdt Quiten, leden eener Asseltsche familie en in 1616 Geurdt Lomen ten eeuwigen slaap besteld waren.

114330 Van de begraafplaats dalen we weer af tot den zandigen dorpsweg, en gaan we tusschen hagen van bloeienden hagedoorn aan den eenen en langs het hooggelegen bouwland aan de anderen kant, naar de witte huizen aan de Maas om daar een oogenblik te verpoozen. Boven op de hoogte, hoog en droog, maar wel wat luchtig, ligt de rectorswoning, een nieuw gebouw. Bij zoo'n fraai rectoraat behoorde natuurlijk ook een mooier kerkje, 114335 want 't gebouwtje is wel wat klein en oud voor Asselt, en toch zouden we het oude kerkje met zijn stompen toren en zijn ruwe muren in zijne schilderachtige omgeving ongaarne missen. Asselt met een nieuw kerkje zou het eigenaardige Asselt niet meer zijn.

114340 Van uit de ramen der zindelijke gelagkamer bij moeder Theelen hebben we een ruim uitzicht op den omtrek.

Achter de groote uiterwaarden aan de overzijde der Maas liggen in rei de torens van Horn, Buggenum, Haelen, Nunhem en Neer tegen den boschrijken achtergrond. Lang willen we ons niet in 't vergezicht verlustigen, maar gaan door het Gebrouwhuis-Veld, op Genaenhof toe.

114345 Door het korenrijke veld passeeren we links Genaenhof (ouden hof) en rechts Genoenhof (nieuwen hof) en zien voor ons de ruïne, die we zoo vaak van af den spoorweg, die er dicht langs loopt, uit de hoogte opnamen. Dit is de Ouburg, vroeger de zetelplaats der adellijke familie van Swalmen. Wellicht is dit ook 't Stamhuis der 6e abdis van 't adellijk convent te Roermond, Elisabeth de Swalmen, die omstreeks 1293 leefde.

114350 Later behoorde het huis aan de familie Van Oest, en kwam daarna aan de familie Schenck van Nijdeggen en de Hoensbroeck. Het behoorde reeds in 1381 bij Hillenrade. Uit de archiefstukken moeten we wel besluiten, dat de Ouborg een riddermatig huis of kasteel geweest is alhoewel dan ook klein van omvang. Een kleine dikke toren vormt de voorzijde van een vijfhoekige met dikke muren omsloten ruimte, vroeger geheel door de 114355 Swalm omspoeld. De toren van zijn dak beroofd, is door een ingebroken opening toegankelijk en kon vroeger beklommen worden door middel van een steenen wenteltrap, waarvan nog de overblijfselen te zien zijn. Reeds in de 16e eeuw was Ouborg of het huis Rothem, zooals het ook wel genoemd wordt, verwoest. Weinig bescheiden zijn omtrent de verwoesting der sterkte tot ons gekomen. Thans bespoelt de murmelende

114360 Swalm met hare golfjes nog slechts de eene zijde van de fraaie ruïne. Eenige geknotte eiken en kanada's, een bruggetje en fraaien achtergrond stoffeeren het landschapje, waarop door de schilders de ruïne gewoonlijk als middenpunt gekozen wordt. Door de Viaduct, langs de beek op, wend ons pad naar Swalmen en brengt ons op de Markt. De Markt, waaraan 't Raadhuis en de kerk liggen, is niet het aantrekkelijkste deel 114365 van Swalmen. Slechts eene linde heft zijn langen plechtigen stam omhoog op het vierkante plein, waarvan het uitzicht der huizen weinig de welvaart doen zien, die in het dorp heerscht. De linde is vreemdsoortig geschoren en de onderste kroon is tot eene soort vlak gebogen en vergroeid. Als curiositeit werd ons medegedeeld, dat de Fanfare, in den tijd, dat ze onder de thans nog geroemde directie van den Heer Sagers stond, eens een zonderlingen inval gehad heeft. Staande op die kroon gaf ze een concert, dat de executanten, zoowel als het publiek, uitstekend moet bevallen zijn. In vroeger tijd gaf dezelfde Fanfare op den 1en Mei in het prachtige Bosch van Hillenrade een concert; thans echter schijnt dit gebruik te niet gegaan te zijn.

114370 We treden nu door den boog der secretarie heen, om de kerk eens op te nemen. De kerk van Swalmen is een oud gebouw. In 1452 reeds was de kerk bouwvallig; toen al werd aan de gemeente door Hertog Arnold toegestaan, 25 bunder gemeentegrond te verkoopen, om uit de opbrengst de kerk te herbouwen. In 1493 werd de kerk door een Roermondsch burger, Michiel van der Sterren, voor 28 Rhijnsche gulden hersteld. Het Asseltsche kerkje schijnt de moederkerk te zijn van die van Swalmen. In 1293 toch 114375 komt reeds voor Mathias, pastoor van Asselt en Swalmen.

114380 12 juni 1888 De kerk van Swalmen is door het inbreken van Gothieke ramen en bogen vervormd tot eene Gothieke kerk. Door bijbouw is de grondvorm zelfs niet eens meer behouden. Van binnen valt ze niet mede. Erg zindelijk wordt het Godshuis niet onderhouden, althans we gaan over eene vingerdikke laag zand en stof.

114385 De drie altaren zijn in renaissance stijl opgetrokken. Het midden-altaar prijkt met een vrij goede schilderij, het H. Avondmaal voorstellende, en met het wapen van de schenkers van het altaar, der Schenck van Nijdeggen en der Hoensbroeck's. Het zijaltaar, gewijd aan St. George, den patroon der ridders, geeft als altaarstuk

114390 een schilderij te zien, den H. Georgius in kamp met den draak voorstellende. De schilder heeft bepaald nooit de moeite genomen, de vormen van een paard goed te bestudeeren, anders zou hij den H. Georgius, die meer van een gewoon Landsknecht dan

van een fier ridder heeft, niet op een dergelijk ros ten drakenkamp uitgezonden hebben.

114395 Onder den toren hing vroeger een teenen of biezen draak die door de jongelieden van Swalmen evenals dit thans nog te Beesel om de zeven jaren geschiedt, in triomf door het dorp gevoerd werd, en daarna door lanssteken geveld. Die eeuwenoude gewoonte is echter sinds jaren in onbruik geraakt.

114400 Het orgel draagt de wapens van Schenck en Hoensbroeck, evenals het schoone marmeren wijwatervat.

Onder het orgel moet volgens de overlevering een Oostenrijksche generaal begraven zijn, die in een gevecht bij Swalmen gesneuveld is. Steen noch inschrift wijzen zijne grafstede aan. Meer merkwaardigs vinden we niet en door het lage portaaltje komen we weer op het hooge kerkhof.

114405 Met een van Swalmens autoriteiten, die de beleefdheid had ons te vergezellen, klommen we naar de secretarie. Hier werd ons een schoone atlas kaarten uit het einde der vorige eeuw getoond, die al de percelen tot de heerlijkheid Asselt, Swalmen en Hillenrade behorende, bevat. Voorts is hier een galgenketting aanwezig, eenige jaren geleden op Grietjesgericht gevonden.

114410 Aan de grenzen der gemeente, aan den Boschberg, lag in vroeger tijden de gerechtsplaats, thans nog bij 't volk bekend onder den naam van Grietjesgericht. Daar werden de boosdoeners "aan den lijve met het koord of het zwaard tusschen hoofd en hals gericht, tot de dood er op volgde."

114415 Een duidelijk getuigenis, dat er op deze plaats doodvonnissen voltrokken zijn, vonden eenige arbeiders, die voor een vijftal jaren daar bezig waren met het planten van dennen. Bij het graven stieten zij met de schop op een doodshoofd met nekbeen; hieraan was nog de ketting bevestigd, die eens de treurige bestemming gehad heeft om het lijk van den misdadiger na afloop der terechtstelling aan de galg te bevestigen. Het bekkendeel werd door een der arbeiders door een slag met de schop tot stof

114420 geslagen. De ketting werd bewaard. De oude archiefstukken van Swalmen zijn op aanvraag allen naar Maastricht gezonden; slechts enkele gildestukken zijn nog aanwezig.

De schutterijen te Swalmen waren van zeer ouden datum; hunne geschiedenis verloor zich in den nacht der middeleeuwen. Wel is het schoone koningszilver, dat bij 't plechtige vogelschieten en in de processie borst en schouder van den schutterkoning dekte, in de smeltkroes terechtgekomen, en zijn de Schuttenkamp, Schuttenheide en andere goederen thans in vreemde handen overgegaan, maar toch zou men uit den hoogen Schutsboom, die we van verre in 't dorp in de lucht zien rijzen, moeten besluiten dat de ambitie der oude "schutten" nog niet geheel uitgedoofd is. De gildebroeders van

114430 St. Joris van Swalmen waren oudtijds niet alleen vroolijke lieden, maar ook zuinige bestierders van hunne inkomsten.

De gilderekeningen bewijzen toch, dat 't er op hunne vergaderingen lustig toeling. De kruik met 't schuimende gerstenat ging er lustig rond, en de vedel noodigde de jongere broeders met hunne schoonen vroolijk ten dans. En zuinig waren zo bij al die uitspanningen, want ze brouwen zelf hun bier, kochten hiervoor het mout, de hop, gaven den brouwer een vast loon en, accuraat als ze waren, vergoedden ze hem zelfs zijn vuur en licht. Daarenboven beschenken ze hem als hij 's nachts door moest brouwen nog met een fiksche pint schnaps of "waggelwater". Veel bijzonders is er op het kleine raadhuis niet meer te zien; weinig is er van de vroegere heerlijkheid overgebleven. De gemeente bezit zelfs geen wapen, zelfs geen zegelstempel meer.

114440 Een weinig van het raadhuis, meer op Roermond aan, ligt het riviértje, waarnaar het dorp zijn naam draagt. De Swalm is eene heldere, snelstroomende beek, die uit de lage streken achter Wegberg bij het slot Tusschenbroek zijn oorsprong neemt; ze loopt door de poelen en meertjes bij Brempt langs Bruggen door de heide op Swalmen aan, langs de oude Romeinsche begraafplaats en doorstroomt het dorp om een weinig bezuiden Hanssum onder Neer zich in de Maas te storten. De beek doorstroomt eene lengte van 30 kilometer. Te Swalmen vloeit ze onder eene brug door, waarop een standbeeldje staat. Het beeld stelt den H. Joh. Nepomucenus voor, en werd in 1823 geschonken door een Luiker Heer. Deze had hier een handelshuis, waarmede hij zaken deed en waardoor hij

114450 dikwijls te Swalmen moest zijn. Hij schonk het beeld ter gedachtenis aan eene gelukkige redding uit de Maas, waarin hij bij toeval geraakt was. Over de steenen brug der Swalm weet men bij overlevering nog te verhalen, hoe de Franschen ze in 1791, toen de Pruisen hen kort op de hielen zaten, deze afbraken om hen zoo den overtocht nog zooveel mogelijk te beletten.

114455 Een gewonde Franschman moest, toen het fransche leger de brug overgetrokken was, door zijne kwetsuren achterblijven, en verborg zich in een bijenhut kort bij de brug. Toen de Pruisen kwamen, laadde hij zijn geweer, en schoot uit den troep Pruisen er een neder. Hij hield zich aan 't vuren, en door zijne gedekte opstelling wist men in 't

- begin niet van waar de welgemikte schoten vielen; eerst toen de Franschman zeven
114460 Pruisen door zijne schoten neergeveld had, kon men hem na 't herstel der brug bereiken; de dappere François werd daarop door de verwoede Pruisen neergesabeld. Op de brug heeft men een aantrekkelijk gezicht op de Swalm en omliggende gebouwen. Voor ons zien we de Swalm haar schuimend water in een zijtak over een afsluiting neerplassen; langs den hoofdtak ligt onmiddellijk bij ons een bedrijvige
114465 houtzaagmolen, waarvan het vroegere klapperende waterrad vervangen werd door eene dampende stoommachine. Verder door zien we de statige boomen van den Venloschen weg, en daarachter zenden een paar pannenfabrieken dikke rookwolken uit hunne lage zwarte schoorsteenen in de lucht. Bij dit alles hebben we nog het gezicht op een paar tuinen, waarin de appel- en peerebloesem, de boomen met een doorzichtig wit en rose kleed schijnen te bedekken.
114470 De nijverheid heeft in Swalmen door de verhooging der invoerrechten een gevoeligen knak gekregen. Om hiervan een voorbeeld aan te halen behoeven we alleen de fabriek van den heer Königs te citeeren, die naar de inrichting te zien wel de grootste of in ieder geval een der voornaamste stoomhoutzagerijen van Limburg is. Het meeste gezaagd
114475 hout werd vroeger naar de Rhijnstreek verzonden; de industrie had door den grooten afzet eene hooge vlucht genomen. Vele handen vonden in de fabriek werk en brood. Zoodra echter werden in Pruisen de verhoogde invoerrechten niet geheven, van 1 mark per 100 kilo, of de Duitschers kwamen niet meer koopen, en de fabrikanten konden alleen de beste kwaliteit planken slechts met geringe winst blijven uitvoeren. 't Is
114480 dan ook niet te verwonderen dat in Holland honderden zagerijen stil liggen, te meer wijl de Duitschers gezaagd hout bij scheepsladingen in Holland mogen invoeren. Vroeger werden in deze fabriek ook vele landbouwwerktuigen vervaardigd, die meest aan Pruisische landbouwers in de grensdistricten geleverd werden. Toen deze machines
114485 echter met f 1.80 de 100 kilo belast werden, was geen invoer meer mogelijk. De kleinste dorschmachine toch weegt al licht een 700 kilo. Zelfs ging de Deutsche fiscus zoo ver, dat van werktuigen, die reparatie moesten ondergaan, bij terugkomst op nieuw recht werd geheven, wat het lastige gevolg had, dat de Nederlandsche werklieden ze op Duitsch grondgebied moesten gaan herstellen. Om het dezen werklieden
114490 nog lastiger te maken, dwong men hen nog tot een Beroepsbelasting, die ook niet malsch was. Zoo beschermt Duitschland zijne industrie. Door de aanhaling dezer voorbeelden willen wij hierbij niet betoogen, dat deze bescherming een gezonde toestand verwekt en dat de industrie, die aldus met kunst en vliegwerk geholpen wordt, krachtig zal bloeien, maar we meenen toch uit deze vrij sprekende voorbeelden
114495 te moeten besluiten, dat heffing van beschermende rechten als revanche-middel het eenige middel is, om de kleine industrie langs de grenzen te redden. En wat 't fraaiste is van de Duitschers, zij weten precies wat ze niet moeten belasten; datgene, wat ze voor den landbouw noodig hebben en hier halen, is vrij; op veevoeder b.v. wordt geen invoerrecht geheven, wat tengevolge heeft, dat de
114500 Rhijnlanders in en om Roermond al het noodige opkopen tegen hooge prijzen, waardoor hier menigmaal een te kort ontstaat. Op kalk voor den landbouw, die op de goedkoopste wijze langs de Maas tot Asselt komt, en verder per as vervoerd wordt, heft men eveneens geen recht; en dit alles geschiedt met het goede doel, om den landbouw, de groote bron van volkswelvaart, te beschermen en bij te staan in dezen calamiteusen tijd.
114505 Na deze kleine economische uitweiding, waartoe onze opmerkingen ons als 't ware van zelf voerden, willen we nog eenige oogenblikken bij onzen vriendelijken begeleider, den secretaris, verwijlen. Hier hebben we gelegenheid om te zien, hoe heerlijke uitkomsten de degelijke lessen, door den wandelleeraar in de fruitboomteelt gegeven, opleveren. Tal van prachtige ooftboomen in allerlei vorm en verscheidenheid troffen
114510 we aan, maar allen beloofden door de wetenschappelijke behandeling, die ze ondergingen, ook dubbel zoo veel fruit als andere boomen, die men hier en daar aan hun lot overgelaten zag. Hoe jammer is 't, dat die cursussen niet overal met die hooge belangstelling gevolgd worden, die ze werkelijk verdienen.
114515 We bezochten hierna nog de grisaille-glasfabriek, doorwandelden 't dorp, en de schoone laan naar Roermond lag voor ons. Dicht bij den grooten weg naar Roermond ligt de groote hoeve Beckerhof, geheel in grachten of weijers. Door deze afsluiting kon men vroeger, als kriegsgevaar duchtte, vee en have beter in veiligheid brengen, en aan de roofzieke handen der soldaten onttrekken.
114520 Dergelijke verschanste hoeven vond men in den omstreken van Roermond en speciaal in de omstreken van Swalmen meer, zooals b.v. Boschhof [Baxhof] bij Schoolbroek gelegen, de gebrande Weijs onder Roermond, de weijs onder Maasniel, eene hostede aan 't Gebroek enz. In het Schoolbroek, dat oudtijds aan Beesel en Swalmen behoorde, had men vroeger nog een schans, waarin 's nachts 't vee gedreven kon worden. Van 't Schoolbroek deelde men ons ter loops nog de volgende eigenaardigheid mede. Om twisten

- 114525 tusschen de inwoners van Beesel en Swalmen te voorkomen, was bij bezegelde brieven bepaald, dat Swalmen 's morgens tot 12 uur meester was in 't Broek, terwijl Beesel des middags zijn recht van eigendom kon laten gelden.
Aan het einde van Swalmen gekomen, nemen we afscheid van onzen vriendelijken gids, met de belofte van een nader bezoek.
- 114530 Het lieve lentezonnetje was in den tijd onzer wandeling reeds zoo hoog gestegen, dat de schaduw die de fraaie iepenboomen langs de lange laan naar Roermond op den weg werpen, ons zeer welkom was.
De trein snort ons voorbij en roept ons een ode aan Swalmen in de herinnering terug, die een landelijk genie aan zijne medeburgers in 1863 ten beste gaf en waarin hij
- 114535 Swalmen in de volgende gevoelvolle verzen beschrijft, die we hier letterlijk laten volgen.
- Nieuw Loflied van Swalmen.**
- 114540 Heffen wij een loflied aan Van 't schilderachtig Swalmen, Waar Swalm en Maas te zamen vloeit, En beurtelings den grond besproeit, Daar prijkt het dorp Swalmen.
- Dierbaar is voor mij die plaats, Alwaar ik ben geboren, De plek waar eens mijn wieg op stond, Is ook voor mij de schoonste grond, Deez kan mij bekoren.
- 114545 Hier wonen mijne ouders lief, Mijn vrienden en mijn magen, Die in 't prilste mijner jeugd Mij aanwakkeren tot de deugd En staag zorg voor mij dragen.
- Hier ligt de oude dorpschool, Alwaar ik leerde lezen, Schrijven en cijferen op de leij
- 114550 Om nuttig lid der maatschappij Ook later eens te wezen.
- Ginds rijst die hooge grootsche kerk Met haren schoonen toren, Hier leerde ik de christe leer En deed er mijn Communie weleer, Hier ben ik ook herboren.
- 114555 Hier heb ik verkeerd als kind Met mijne speelgenooten, En nieuwe vriendschap naderhand
Ook met de vrienden van mijn land Nauwer aangesloten.
- Nergens kan ik in de buurt Zijn weerga vinden, Met zijn kasteel en kaplanie
- 114560 Zijn raadhuis en pastorie En op de Markt een linde.
- Hier stort de Swalm haren vloed In gindsche Maas ter neder, En spiegelt alles in haar schoot Wat zich op haren weg aanbood, Zwelt en krimpt dan weder.
- 114565 Zij is een zoo nuttig rivier Dat niemand haar kan missen, Zij biedt ons vele diensten aan En maalt voor elk gezin het graan, Schenkt ons daarbij haar visschen.
- Zij schaft ons olie voor de lamp En aan al de omstreken, Ik wacht den tweeden slag maar af, Het is weldaad wat zij ons gaf, En zien den olie leken.
- 114570 Zoo rolt zij hare waters voort! Midden door het dorp henen Hetwelk zij in twee verdeelt
En een schoon brug nog meer vereêld Van Joannes Nepomucenus
- 114575 Langs Swalms snel en heldre stroom Daar zitten wij te drinken, En zingen liedren van ons land Ons instrumenten in de hand, Laten 't Harmonisch klinken.
- Swalmens omstreken zijn ook schoon, Met zijne wandelwegen, Zijn boscaden uren lang, Der Nachtegalen zoet gezang, En heerelijke dreven.
- 114580 Swalmen kan ja ook gerust Met zijne velden prijken, Hier drijft de Maas, hier loopt 't Spoor In heel zijn lengte Swalmen door Natuur en kunst verrijken.
- Daar komt het trotsch gevaarte aan, Alleen door stoom gedreven; Onwillekeurig blijft men staan, En staart het met verwondering aan, En zoo is het al neven.
- 114585 Al haalt gij ook bij de steliën niet, In woning of in kleeren, Zij hebben ook dat voorrecht niet Dat men hier op het dorp geniet, Van vrijer te verkeerem."
- 114590

One If by Land, Two If by Sea.

Traveling to Nicaea for the Council of 325
Mark Wilson

Introduction

"One if by land, and two, if by sea." So goes the line in Henry W. Longfellow's "Paul Revere's Ride." This famous poem recalls an incident in America's foundation story about a Boston patriot who established a secret signal to alert his compatriots to how the British forces would advance to Concord. A candle lit in one lantern meant that enemy troops were using the longer land route; candles in two lanterns meant they were taking the shorter route by water. "If one were to think of a perfect symbol of the American Revolutionary War, perhaps short of the Declaration of Independence itself, it would probably be Paul Revere's lanterns."

While this article will say nothing about lanterns, it will discuss the land and sea routes that early church leaders took to Nicaea, where they drafted the foundational document of Christianity, which is still professed by Christians around the world. Visitors to İznik (ancient Nicaea) today see little more than a sleepy rural town situated among expanses of olive groves on the east end of a scenic lake. It is hard to imagine that in the Roman period Nicaea vied with Nicomedia (modern İzmit) to be the capital and leading city of the province of Bithynia. Today neighboring İzmit is a bustling industrial city situated on the main highway between Istanbul and Ankara. Yet Nicaea was to be the center not only of Bithynia but of the whole Roman Empire for a moment in time in 325 CE. There Constantine convened the first ecumenical council. This article will first address some issues of historical background regarding these cities. Next to be presented is the geographical and hodological situation both of Nicomedia and Nicaea.

Nicaea's four gates and their relationship to Bithynia's road network will be discussed in depth. It will conclude by offering a fresh hypothesis regarding how the emperor, some bishops, and their attendants might have traveled to Nicaea to reach this historic council.

Background of the First Ecumenical Council

For the residents of Nicaea, the year 325 began with political stability restored to the province of Bithynia and to the Roman Empire. From Nicomedia on June 14, 313, Licinius had issued the edict of toleration that allowed Christians to worship without fear of persecution.

However, a civil war broke out for control of the empire between Licinius and his brother-in-law Constantine. After defeating Licinius at the naval battle of the Hellespont in July 324 and the land battle of Chrysopolis in September 324, Constantine, after accepting his rival's surrender in Nicomedia shortly thereafter, became the sole ruler of the Roman Empire. The year 325 also found imperial and ecclesiastical officials preparing to travel to Nicomedia for Constantine's vicennalia. However, the emperor decided to hold a council beforehand to unify the church now torn theologically by the Arian controversy. The logistics of moving hundreds of bishops and their attendants from around the empire was a daunting one. Then, at the last minute, Constantine changed the council's location from Ancyra to Nicaea.

Barnes cites three reasons for the change: (1) bishops from the West could reach Nicaea more easily; (2) the climate was more temperate; and (3) the emperor could attend more easily.

In reality, there were few participants from the West. As Gwynn notes, "The overwhelming majority of those bishops were from the Greek-speaking East." Two presbyters represented the bishop of Rome, and single bishops came from Gaul, Dacia, Dalmatia, Pannonia, and Persia. Therefore, its ecumenical nature was in word only.

Hosius of Cordoba, who probably presided over the council, was already in the East after presiding over the Council of Antioch in 324/325.

Nicomedia and Nicaea: The "First Cities" of Bithynia

From the Hellenistic period onwards, Nicomedia and Nicaea were the two main cities of Bithynia.

After the Romans established the province in 74 BCE, Nicomedia became its first capital. In 29 BCE Augustus authorized an imperial cult temple dedicated to Rome and to himself to be built in Nicomedia, while in Nicaea a sanctuary for Divus Julius and Dea Roma was built for the Roman residents in that city. Sometime after the death of Augustus in 14 CE the provincial assembly (koinon) and the governor moved from Nicaea

to Nicomedia.

The two cities continually vied for prominence, especially in the titles so important to Greek cities. Orations 38 and 39 of Dio Chrysostom, the orator and philosopher from nearby Prusa (Bursa), addressed their ongoing strife in the late 90s CE. He proposed concord (homonoia) between the two cities rather than vying for status as "first" (prote) or "metropolis" of the province.

However, as Bekker-Nielsen laments, "needless to say, both Nicomedians and Nicaeans ignored his advice, and the conflict played on throughout the second century." Two notable Roman historians came from these cities: Arrian (d. ca. 160 CE) from Nicomedia, and Cassius Dio (d. ca. 235) from Nicaea. In 284 Diocletian was proclaimed emperor on a hill outside of Nicomedia, and he rebuilt the city as his new Rome, making Nicomedia the chief capital of his tetrarchy.

A reason for this, according to Doonan, is that it "was particularly well placed to dominate the Roman transport system, set directly on the easternmost extension of the Propontis at the head of the road systems along the north Anatolian rift valley." Nicomedia, "the chief city of Bithynia," was honored again when Constantine built a large and splendid church there from his own funds to give thanks for victory over his enemies (Eusebius, Vit. Const. 3.50.1).

Given the centuries-long rivalry between these major cities, it is difficult to sustain the observation that "Nicomedia's location was vastly superior to that of Nicaea."

Further, it was Nicaea, not Nicomedia, whose location turned out to be superior for the site of the council in 325. Nicaea: The City with Four Gates The geographer Strabo describes Nicaea as a Hellenistic foundation and metropolis of Bithynia. He describes its plan: "The city is sixteen stadia (ca. 2,960 m) in circuit and is quadrangular in shape; it is situated in a plain, and has four gates; and its streets are cut at right angles, so that the four gates can be seen from one stone which is set up in the middle of the gymnasium" (Geogr. 12.4.7).

Through these four original gates, rebuilt or restored multiple times because of earthquakes and the Gothic sacking in 258, visitors to the city arrived, including emperors, senators, and the bishops in 325.

The east and west gates were connected by the cardo maximus (Kılıçaslan Caddesi), running ca. 1,308 m through the city; the north and south gates were connected by the decumanus maximus (Atatürk Caddesi), running ca. 1,473 m. These gates start to appear on Nicaea's coinage in the third century CE. Lichtenberger writes, "Remarkable of the coin depictions are the regular layout of the walls . . . and the emphasis on the single-arched city gates. . . . Their depiction is consistent with the archaeological evidence."

From these gates, as Weissova and Pavúk express, "the roads themselves radiate from Iznik toward all the four cardinal points, presumably likewise since the Hellenistic period. ."

The north gate (modern Istanbul Gate) "is believed to be the most important and therefore the most impressive of Nicaea's four gates."

It was reerected by Vespasian and restored by Hadrian. This was once called the Byzantium/Constantinople Gate. However, this name must be anachronistic because its orientation was initially to Nicomedia. Yet, perhaps because of civic competition,

the Nicaeans refrained from putting their rival's name to a gate, despite its orientation. This gate and the east gate are structurally triple gates. An inscription in the middle east gate (Le?e Kapısı) states that the proconsul Marcus Plancius Varus built it for the emperor Vespasian with the help of the leading citizen C. Cassius Chrestos. After an earthquake heavily damaged Nicaea in 120 CE, Hadrian provided funds to rebuild the city. An inscription to Hadrian in the architrave suggests that the eastern gate was rededicated to the emperor upon his visit in 123 CE. After Nicaea chose the losing side with Pescennius Niger in 193 CE, Nicomedia, which supported Septimius Severus, successfully petitioned to have the title "first of the province" erased from this gate. For the west gate facing the lake and its harbor, only part of the north tower and the base of the south one have survived.

The south gate (modern Yenışehir) was reerected by Claudius II around 268-70 CE. Nicaea's geography, oriented around these gates, contributed to its development "for it was located at intersection point of the roads which provided access to important cities." Where these gates led from this transportation node will be discussed next.

Travel Eastwards

The east gate was a very important junction point "through which the whole traffic of the empire passed, moving from the North to the East and vice versa."

Traffic out of Nicaea's east gate veered south of a ridge upon which sat a monumental sarcophagus today called Berberkaya. It continued eastwards through a plain before veering south again above modern Çiçekli. A milestone dating from Diocletian was found near Karadin/Karatekin. The track then turned southeastwards toward the mutatio at Schinae (south of modern Gaziler). At Mygdum/Midum, northwest of modern Osmaniye, the road entered the valley of the Sangarius River

From Mygdum the road continued east toward Juliopolis (modern Çayırhan) and Ancyra (modern Ankara). This route, which continued to Antioch and Jerusalem, is today called the "Pilgrim's Way."

Milestones began to appear as early as Trajan, and, as Doonan notes, "the 'Pilgrim Road' from Nicomedia to the central Anatolian plateau seems to have received a lot of investment in the early third century, possibly in connection with Caracalla's Parthian campaign of 216-17 CE."

The regions of bishops arriving from the east might include Hosius from Antioch (1), Palestine (19), Phoenicia (10), Coele-Syria (22), Arabia (6), Mesopotamia (4), Persia (1), Cilicia (10), Cappadocia (10), Armenia Minor (4), Armenia Maior (5), and Galatia (5), totaling 97 bishops coming from this direction.

Travel Southwards and Southwestwards

The south gate provided access to two routes south and west of Nicaea. A road running south is not depicted in the Barrington Atlas; however, French shows one and labels it C9. It intersected with two routes that ran east and southeast from Prusa toward the next transportation node at Dorylaeum (modern Eskişehir).

A second route turned westwards after the gate to circle the south side of Lake Ascania. After 5 miles (8 km) the track passed below a rocky promontory today called Karacakaya. Remains of fortification walls dating to the Byzantine period are found around its peak. Because its favorable position overlooking both Nicaea's harbor and the lake, Weissova and Altın propose "the place might have served as a watchtower as well as a lighthouse."

After leaving the lakeshore and crossing the peninsula to Cius, the road turned southwards to Prusa, the third city of Bithynia. As Jones writes, Prusa's situation gave it a good but not preeminent place in the road system of the region. . . .

Prusa's advantage lay in its position on the lines of communication between these two cities [Nicaea and Nicomedia] and those of the northwestern Aegean, since the great natural obstacle of Olympus deflects these routes around its shoulder.

Traffic coming from the great cities of Asia such as Pergamum, Smyrna, and Ephesus also passed through Prusa. Bishops coming from the important sees in western and southwestern Anatolia would have arrived via these roads through Nicaea's south gate.

The regions of the bishops arriving from the south would probably include Asia (7), Lydia (9), Phrygia (8), Pisidia (12), Pamphylia (7), Isauria (18), Caria (5), and Bithynia (8), totaling 74 bishops coming from this direction.

Travel from the North

Ine Jacobs has suggested that delegates "coming from overseas would have disembarked in Nicomedia, and, like Constantine himself, still needed to travel two more days south to reach their final destination."

This observation will receive extensive discussion since, as just discussed, there is little debate regarding how some 167 delegates arrived from the east and south-southwest. The road network between Nicomedia and Nicaea is first described in the third-century CE Itinerarium Antonini, which lists a route mentioning Nicomedia, Libum, and Nicaea (It. Ant. 140-42). The distance given is 44 Roman miles (RM).

The Itinerarium Burdigalense, written by the Bordeaux pilgrim (ca. 333-34) and dating shortly after the council (It. Burd. 573), provides mileage from Nicomedia: "Change at Eribolum—miles x. Halt at Libum—miles xi. Change at Liada—miles xii. City of Nicaea—miles ix."

It gives a total distance of 42 RM. The Tabula Peutingeriana depicts Nicaea as a major traffic junction. The distance between it and the road station at Eribolo is given as 33 RM. Although a road trace continuing to Nicomedia is absent, a distance of 12 RM is shown for a total of 45 RM.

The totals depicted are 44 RM on Antonine, 42 RM by the Bordeaux pilgrim, and 45 RM on Peutinger for a variant of 3 RM. This converts to 62-67 km for the distance between the two cities on the itineraries.

The Peutinger map incorrectly situates Cius inland below Lake Ascania.

It shows another road from Nicaea running along the upper shore of the lake to Pronetios (Prainetos).

Two bridges dated to the Roman period are on this line: Kuru ("Dry") Köprü and Koca ("Large") Köprü.

The latter once spanned the Pharmutios River (modern Karasu).

This seems to be the bridge described by Procopius that had been built in earlier times but swept away by floodwaters (Aedif. 5.3.4-6). This required Justinian to build a new and improved bridge that would withstand future torrents.

Fingarova suggests that this bridge "formed part of an important road that connected Nicomedia to Nicaea."

However, French fails to include these bridges in his discussion of this route.

Foss, citing Procopius, states, "Justinian, some time before 548, abolished the public post between Chalcedon and Dacibyza, west of Nicomedia, ordering messengers instead to proceed directly across the Gulf to Helenopolis and thence straight to Nicaea, a saving of a considerable distance" (Hist. Arc. 30.8-11).

Therefore, these bridges are better related to this updated route along the northern shore of the lake to Helenopolis (modern Hersek), founded by Constantine in 327 to honor his mother, rather than to the original route running to Nicomedia.

A hiking trail called the Tolerance Way purports to be "the trail that we think extended from Izmit (Nicomedia) – the capital and the only metropolis of the period – to Izmit (Nicaea)."

However, its route after Astacus tracks significantly east from the route depicted in the itineraries and in the Barrington Atlas. It begins in modern İzmit near the imperial temple discovered in the Çukurbağ neighborhood and ends at the Hagia Sophia Church in İzmit. After crossing the restored bridge at Başiskele, the route continued on the east side of the Astacus Gulf before bending southwest to pass through Astacus, opposite Nicomedia (Memnon, FGrH 434 F12).

Here the Tolerance Way turns south toward Bahçecik, while the route of the Roman road continued along the southern shore to Eribolon.

Weissova adopts an obscure route between the Tolerance and the Barrington routes, one Von Diest described in 1898 and Şahin tentatively approves.

She curiously disregards the results of Least Cost Path Analysis (LCPA) as well as the route described in the early itineraries.

While noting that French's projected route, originally thought by her to be "most probable," also agrees with LCPA, she nevertheless adopts a route in all her maps that goes through, rather than skirts, the western extension of the Samanlı Mountains.

Volume 2 of her dissertation is copiously illustrated with various versions of this base map. Significantly, no archaeological realia are depicted along her projected route except for the two bridges, discussed earlier, and a milestone marked just north of Nicaea.

As noted, the Peutinger map measures Eribolon's distance as 12 RM from Nicomedia. Cassius Dio situates Eribolon as a port on the south shore of the Astacus Gulf (Epit. Xiph. 78.39.3).

However, neither Barrington nor Pleiades places it on the coast; both place it at modern Yeniköy.

The line of the road from Astacus would suggest a location for Eribolon southeast of the modern port at Golçuk (ancient Dioklides).

This is confirmed by an Ottoman caravanserai, Kazıklı Kervansarayı, which indicates the existence of a commercial track used for centuries. The partially restored caravanserai features a course of Roman ashlar along its foundation, undoubtedly spoliated from nearby Eribolon.

From here the route follows Beyoğlu Caddesi (Street) southwest to follow the lush valley of a small stream before climbing slowly to Libum (modern Sanaiye). The itineraries identify Libum as a mansio (inn) since it is a day's travel from Nicomedia 32 km. Half of that distance is at sea level; however, from Eribolon the track rises over 580 m. to Libum. No remains of the ancient rest stop are found in the village today.

From Libum the road makes a steep climb of over 300 m to a ridge, with the highest point on the route at 885 m. It descends to a stretch of level road at 738 m that

- 114855 extends toward the mutatio (way station) at Liada. North of modern Sariağil a raised roadbed can be seen in the oak forest with curbstones visible in places. Nearby are the remains of a funerary monument that once stood along the road. The route follows the village road through Sariağil, where no remains of ancient Liada are visible. In French's day curbstones, spine, and surface of the ancient road
- 114860 could be seen. From here and then passing Orhaniye, the road descends about 610 m toward the plain of the Pharmutios River. Turning southeastwards, the track then passed the funerary obelisk of Gaius Cassius Philiscus, which rises over 12 m and thus is visible for miles.
- 114865 Whether this monument, standing at 130 m above sea level, was on the road is debated. However, as Bekker-Nielsen observes, if it was, the obelisk "was flanked by life-sized or larger bronze sculptures, whose hands and feet were fixed to metal cramps in the recesses."
- 114870 Its situation along the road would allow travelers to appreciate its bronze statues and read the inscription on the monument. Roads typically entered a city through a necropolis. Peschlow writes about Nicaea, "The largest necropolis was situated to the northwest, around the modern village of Elbeyli."
- 114875 This would align with the projected route from the obelisk to the north gate of Nicaea. With a distance of 26 km, the leg from Libum is somewhat shorter; however, the terrain is more difficult with switchbacks as it climbs and descends toward the shore of Lake Ascania. The distance calculated on Google Earth agrees with the calculation of 58 km found on ORBIS; however, it is 9 km shorter than found on the itineraries.
- 114880 Jacobs suggests this distance, traversed by the emperor from Nicomedia, was "easily covered in two days of travel."
- As just outlined, this road was not so "easily" traveled. The regions of the bishops arriving along this northern route would include Pontus Polemoniacus (3), Paphlagonia (3), and Bithynia (2), totaling 8 bishops traveling through Nicomedia to Nicaea's
- 114885 north gate.
- Travel Westwards Across the Lake
Nicaea was situated at the eastern end of Lake Ascania which stretched 32 km to its western shore.
- 114890 The port on the lake was accessed through the city's west gate. The north mole was situated approximately 370 m north of the gate while the south mole was 300 m to its south.
- 114895 At the tip of the latter, a lighthouse perhaps stood on the circular base. Between these breakwaters, Gündüz and Dumankaya write that "there were no large-scale ships in the lake, so lowpriced wooden docks which could be shaped easily take precedence over concrete docks where heavy cargos could be loaded and unloaded." They propose that these docks were located on an axis straight west of the lake gate. These archaeological finds confirm that Nicaea was an important port city in antiquity.
- 114900 While Nicaea's maritime situation was somewhat inferior to that of Nicomedia (Dio Chrysostom, Or. 38.22), its lacustrine location nevertheless had advantages. Pliny the Younger writes about Boane Lake (modern Sapanca) east of Nicomedia. "Across this lake, marble, agricultural produce, timber and building materials are carried by boat, with little effort and cost, as far as the main road; but from there to the
- 114905 coast by cart, requiring great effort and even greater expense" (Ep. 10.41.2). Bekker-Nielsen extrapolates, "If Pliny's description of the advantages which the lake offers Nicomedia is anything to go by, then lake Ascanius must have offered even greater advantages for Nicaea. No wonder that the city prospered through the Hellenistic and into the first centuries of the Roman era."
- 114910 Thus it is surprising that he also writes, "It is a fair assumption that the lower town of Nicomedia resembled Ostia or Puteoli, as described for us by Juvenal or Petronius, more than it resembled Nicaea."
- Since the chora of Nicaea was more productive than that of Nicomedia, its lake port must have been a bustling one as well.
- 114915 Boat traffic left the lake via a second port situated in a sheltered bay on its southwestern corner (modern Golyaka). A straight road, typical of Roman construction, ran west for almost 9 km from the shore.
- 114920 The road then crossed a low pass (στενός; Cassius Dio, Hist. 76[75].15.3) following the course of a stream (modern Karsak Deresi) that ran from the lake into the sea at

the port of Cius or Prius ad Mare/Prousius (modern Gemlik).

Cius was situated on the eastern end of the Kianos Sinus (Gulf) on the southeastern shore of the Propontis (Sea of Marmara; Strabo, Geogr. 12.4.3). The narrow isthmus separating the lake from the gulf was approximately 18 km across. Roller calls Cius

"an important landing point for the interior." Looking through Nicaean eyes, Wilson writes that "while the landing-places of the north were most convenient for purposes of travel, the easiest way to the sea for heavy goods lay to the west, to Cius."

In addition to the extensive olive production that still characterizes the area, "legumes for the capital were delivered from Nicaea and its surroundings; the port of shipment could have been Cius."

The lake played a role in the defeat of Pescennius Niger's forces in December 193. Septimius Severus mobilized his troops in Nicomedia and sailed from there to Cius to cross the pass and engage Niger's army at the Battle of Nicaea (Herodian, Hist. 3.2.9). The battle was fought even from boats on the lake (Cassius Dio, Hist. 75.6). After the Severan forces rallied, Niger and his remaining troops retreated by sailing to Nicaea, which supported him. After Niger was later beheaded, coinage both from Nicaea and Cius "produced reverses of Mars the pacifier and Peace herself, and Septimius is shown clasping hands with Jupiter."

Over a century later Zozimus (Hist. Nova 2.23-24, 26) describes the massive naval fleets assembled in the Sea of Marmara for the final battles between Constantine and Licinius in 324. Thus, a variety of ships were available in 325 for travel from Nicomedia to Nicaea by sea.

ORBIS calculates that a fast sea journey covering the 143 km between Nicomedia and Cius could be made in just over half a day.

A half-day walk from Cius brought travelers to the lake where an easy transfer by boat across the lake could be arranged. This itinerary contrasts considerably with the two-day low mountainous route between the two cities previously discussed. Given the challenge of taking an imperial contingent overland through such terrain, it is possible, even likely, that Constantine and his retinue traveled by ship to Cius so as to make the easy land and lake crossing to Nicaea. The regions of bishops arriving by sea via Cius might include those from Rome (2), Egypt (13), Thebes (2), Upper Libya (4), Lower Libya (1), Lycia (1), 83 Islands (4), Cyprus (2), Europe (1), Dacia (1), Calabria (2), Moesia (3), Africa (4), Macedonia (2), Dardania (1), Achaia (3), Thessaly (2), Dalmatia (1), Pannonia (1), Gauls (1), Goths (1), and Bosphorus (1), totaling 53 participants.

The Attendees and Their Mode of Transport

The estimated number of attendees is, of course, related to the number of bishops who traveled to the council. The traditional number of 318 is usually reduced to some 250 bishops in attendance (cf. Eusebius, Vit. Const. 3.8). Projecting around 220 bishops, Gwynn estimates that the number of attendees was approximately two thousand persons. This total is derived from Constantine's letter to Chrestus of Syracuse regarding the Council of Arles in 314.

You should secure from the most illustrious Latronianus, corrector of Sicily, a public vehicle, and you should choose two others of the second rank and take them with you. You should bring along three servants who may serve you on the way, and arrive to the above-mentioned place before the appointed day.

Thus five others were authorized to accompany Chrestus to Arles. Such a large entourage would have surely taxed *cursus publicus*, the imperial transportation system. Begun by Augustus as a way to communicate with his governors and legionary commanders—a system initially called *vehiculio*—by the fourth century it had morphed into an elaborate travel network used and abused by imperial and provincial officials.

Regarding the viability of the sea route proposed above, was the *cursus publicus* available for bishops who wished to travel by sea? Whiting thinks not.

The disadvantages of sea travel were the dangers, unpredictability, and dependence on the seasons and weather. There was also the cost of chartering passage to consider. For travelers with permission to use the services of the *cursus publicus*, the permit issued by the state was only valid for travel by land.

However, the geography of the empire suggests otherwise. Island provinces such as Britannia, Crete, and Cyprus required nautical transportation as did the provinces in North Africa. The ports of Brundisium and Dyrrachium, termini of the Via Appia and Via Egnatia respectively, similarly required a nautical leg to connect these major land routes.

Arguing that shipping connections formed part of the system since the time of

Augustus, Anne Kolb observes, "Hinweise auf den Seeverkehr im Rahmen des cursus publicus geben noch weitere spätantike Zeugnisse."

For the Council at Arles bishops were summoned from "a great many different places" to arrive by August 1 (Constantine, Ep. 22). Those coming from Syracuse and Carthage had to travel by sea, so it can be assumed passage was provided for their entourage using a nautical cursus publicus.

Thus, the bishops and their attendants had the option to travel to Nicaea either by land or sea using the cursus publicus.

Nicaea and Constantine's Vicennalia

The council concluded on July 19, and six days later the celebration of Constantine's vicennalia started in order to mark the twentieth year of his rule. His reign had begun on July 25, 306, the day his father Constantius I died in Eboracum (modern York). To celebrate the occasion, the emperor hosted a banquet in the innermost imperial apartments of the palace, at which every bishop was present (Eusebius, Vit. Const. 3.15). Ramskold, citing Jerome (Chron. A326), believes that "the vicennial celebrations commenced at Nicomedia."

Gwynn similarly observes that "the famous banquet may have taken place not in Nicaea but in the imperial palace in nearby Nicomedia, to which the bishops would have travelled en masse."

While Nicomedia was somewhat "nearby" in terms of distance, the transfer of the bishops and their entourages would have been a logistical challenge.

Even if only the bishops traveled there, several hundred persons would be traveling either by land or water. Eusebius uses the same word *basileion* for the imperial palace where the council met as well as the place where the banquet was held, without mentioning any change of venue to Nicomedia (Vit. Const. 10.1; 15.2).

Drake notes that Constantine had previously planned a meeting with the bishops in Nicaea for his vicennalia, "so the shift might not have been as abrupt as it now seems."

Two other factors to be considered is that the council of bishops probably lasted longer than Constantine had anticipated, and then the heat and humidity would have made travel more challenging in late July.

Nicaea was therefore convenient for the emperor and his bodyguard, and remaining there thus ensured "that not one of the bishops was missing from the imperial banquet" (Eusebius, Vit. Const. 15.1).

The palace was thus transformed from holding an ecclesiastical synod to hosting an imperial panegyris.

Eusebius describes how Constantine gave a farewell address to the bishops "when the Council (synodos) was finally about to dissolve" (Vit. Const. 3.21.2).

This address follows the vicennalia banquet in his narrative. Therefore, it seems the emperor expeditiously began the celebration where everyone was gathered rather than requiring an inconvenient transfer to Nicomedia. Following Constantine's address, the bishops were dismissed to pass again through one of Nicaea's four gates to return to their homes by land or by sea. Constantine himself departed with his retinue most probably across Lake Ascania, transiting the isthmus to Cius, and finally sailing back to Nicomedia to resume his residency there.

Conclusion

Local traffic in İznik today detours around the north, east, and south gates; only the dilapidated west gate to the lake remains part of a thoroughfare. Regional traffic bypasses the city altogether. The new toll road from İzmir to İstanbul does pass through Gemlik (Cius) and around the western end of İznik Lake (Ascania).

Ironically this road crosses the Sea of Marmara on the new Ozmangazi Bridge from Hersek/Altınova (Helenopolis) to Gebze (Libyssa) at its narrowest point, once the crossing for the later Pilgrim's Road. The main road to Ankara now runs east from İzmit to Bolu (Claudiopolis) before turning southeast to Turkey's capital city. The main north-south route between İzmit and Eskişehir follows the Sakarya River valley 32 km east of İznik. Therefore, pilgrims to Nicaea today must take secondary roads to visit the city, which was once the crossroads of Christianity geographically but still is its center theologically, as the celebration of the 1,700th anniversary of the council in 2025 attests.

Fontes Nicaenae Synodi aims to offer a complete collection of documents relating to

the Council of Nicaea. These documents have three characteristics in common: 1) they were written in the period from the beginning of the Melitian crisis (304) to the death of Constantine (337); 2) they have a close relationship to the topics discussed at Nicaea, such as the Melitian crisis, the Arian controversy, disciplinary and liturgical issues; and 3) they have been handed down by indirect tradition. These features already reveal the novelty of the work, which, unlike Hans Georg Opitz's foundational work, *Urkunden zur Geschichte des arianischen Streites* (Berlin 1934-1935), is not a collection of documents on the Arian crisis, but on the Nicene Council. The traditional view tended to identify Nicaea with the condemnation of Arianism, with the condemnation of Arianism and with the introduction of the controversial homoousios. This tendency is understandable because most of the documents concern the Arian controversy, and the consequences of this dispute were most relevant in the long run. However, the gradual maturation of studies makes it possible to take a step further by moving from a retrospective and selective look at Nicaea to a comprehensive historical survey of the documents: this is the purpose of *Fontes Nicaenae Synodi*. Consequently, the volume starts with the Melitian crisis (304), which broke out because of Diocletian's persecution. From the point of view of the Alexandrian episcopate, the persistence of this schism created a need to reabsorb centrifugal thrusts, which may help to explain the exacerbated ecclesial climate in which Alexander and Arius clashed. On the other hand, the volume ends with the death of Constantine (337), which marks the end of the first reception of Nicaea. *Fontes Nicaenae Synodi* also suggests a method of study for the documents that concern the Arian crisis. This method draws the consequences of the long and deep path of historical revision that began with the work of Eduard Schwartz and Opitz, and of the current historiographical debate that is increasingly international and emancipated from ideological and apologetic assumptions at least as far as most scholars are concerned. The method consists of freeing the documents from the unnatural context in which they were transmitted polemic, apologetic, narrative to study them iuxta propria principia, placing them back at the precise moment in which they were composed and into their authors' motivations, which may also have been polemical and apologetic, but which, in any case, were their own, not of those who transmitted them. Let us not forget what was said at the beginning: the earliest documents of the Arian crisis – what Samuel Fernández, the editor of this valuable volume, calls “the third level” of primary sources – were transmitted in the indirect tradition by the protagonists of the controversy themselves, in primis Eusebius and Athanasius, and later historians, who represent the other two levels of sources. But the process of re-interpretation to which the documents are subjected because of their inclusion in later sources is not the only problem to be addressed. Often, their chronology is uncertain; in many cases, it can be established with good probability only through mutual comparison, as Fernández explains in the introduction. *Fontes Nicaenae Synodi* is intended to be a working tool for scholars and students of Late Antiquity in the fields of history, theology, philosophy, and philology. For this reason, the editor, while relying on modern editions of the collected documents and resorting only exceptionally to manuscripts, has provided the reader with clear indications to the reference editions. Above all, in the case where a document is transmitted by different sources, the differences in the various textual traditions are pointed out. For example, the letter of Eusebius of Caesarea to his church, written immediately after the Council, is handed down by Athanasius, Socrates, and Theodoret, so the differences between the three textual transmissions of the letter are noted. This is a further value of the volume that deserves to be noted. In conclusion, I think that there is no better way to commemorate the 1700th anniversary of the Council of Nicaea (325-2025) than to put the Council itself back in the center by presenting its documentation, finally collected in one volume. The Canons of the First Ecumenical Council of Nicaea in the Manuscript IOM, RAS Syr.

34

Abstract: The article deals with the manuscript IOM, RAS Syr. 34, one leaf of parchment originating from the collection of Nikolai Likhachev. It contains a Syriac translation of selected documents of the First Ecumenical Council of Nicaea (AD 325): the introduction to the canons, a bilingual Greek-Syriac list of 42 bishops, and the

- 115120 first five canons of the council. Most of the texts are incomplete and damaged. The present article focuses mainly on the study and commented publication of the five Nicaean canons from IOM, RAS Syr. 34. On the basis of comparative textual research the author aims to show the place of the St. Petersburg manuscript in the history of Syriac translations of the canons.
- 115125 Key words: Christian Church, Late Roman Empire, Ecumenical Councils, canon law, Syriac translations from Greek, Syriac manuscripts
- Introduction
1. IOM, RAS Syr. 34: the study of provenance and paleographic description
- 115130 The subject of this paper is a remarkable one-leaf parchment manuscript IOM, RAS Syr. 34, which contains fragmented documents of the First Ecumenical Council of Nicaea (AD 325) (hereafter, Nicaea I): a final portion of the introduction to the canons (f. 1r), the bilingual Greek-Syriac list of 42 bishops (f. 1r), and the first five canons (incomplete and badly damaged) (f. 1v).
- 115135 The manuscript came into the Institute as part of the collection of the historian Nikolai Likhachev (1862–1936). This remarkable private collection was formed in the course of the late 19th and early 20th cc. It included various types of script and writing material, both Eastern and Western, due to the collector's special interest in the history of writing, paleography and codicology. In 1918, the nationalised collection became the basis for the newly-founded Cabinet of Paleography that first
- 115140 was part of the Archeological Institute, and then (since 1923) of the Archeological Museum of the Petrograd University. In 1925 it was renamed the Museum of Paleography and came under the administration of the Academy of Sciences of the USSR.
- 115145 Later on, in 1930, following Likhachev's arrest, this was reorganised as the Museum of the Book, Document and Writing, which was soon afterwards renamed Institute and subsequently, in 1936, ceased its existence as an independent organisation. From 1930 until 1935 the collection was gradually distributed among different institutions in Leningrad, such as the State Hermitage Museum, the Leningrad Branches of the Institute of History and the Institute of Oriental Studies (now IOM) of the Academy of Sciences of the USSR, depending on the language and nature of the material.
- 115150 The scope, scale and significance of the collection could be fully appreciated at the exhibition held in the Hermitage in 2012, which brought together artefacts and manuscripts that once belonged to Likhachev and are now kept in different depositories in St. Petersburg.
- 115155 Among the numerous Oriental materials from the Likhachev Collection, six items were identified as Syriac, in some cases by their script rather than by language. The provenance of the manuscripts can be established, albeit only approximately, from the hand-written notes taken by Yurii Perepelkin of Likhachev's own statements, now in St. Petersburg Branch of the Archives of the Russian Academy of Sciences.
- 115160 Regarding the manuscript later classified as Syr. 34, we know that it was acquired from an antiquarian bookseller in St. Petersburg around 1900 along with two others, the liturgy of John Chrysostom in the form of a paper scroll, and 53 loose leaves of parchment carrying the Homiliae Cathedrales by Severus of Antioch.
- 115165 However, there is another piece of testimony provided by Heinrich Goussen who writes that most probably this is the same leaf of parchment which was offered to the University of Strasbourg by an antiquarian from Frankfurt around 1896/1897. Goussen saw and copied the manuscript himself and he tends to date it to the 7th–8th cc. Thus it well may be that Likhachev purchased the manuscript from an antiquarian bookeller in Frankfurt rather than St. Petersburg.
- 115170 Apart from this information, we are fortunate to have further notes testifying to the time when our manuscript reached St. Petersburg and was first examined there. The manuscript is still kept in its original folder along with two handwritten notes in French dated 14th November 1859. These were made by two librarians of the Imperial Public Library (hereafter – IPL) in St. Petersburg, Eduard de Muralt and Bernhard (Boris) Dorn, who examined and provided an expert opinion on the two manuscripts, the Homiliae Cathedrales (now Syr. 35) and the Nicaean documents (now Syr. 34). Muralt describes the latter as containing the first five canons of the Council of Nicaea of AD 325 issued and subscribed by 318 bishops, of whom 41 (sic! – N.S.) signature
- 115180 survived in Greek writing of approximately the 9th–10th cc. and in Syriac eṣṭrangelo writing. He then lists the names of the bishops in French. In Dorn's note the manuscript is described as being written in the "Nestorian" script and is dated, on the basis of paleography, to the 9th c. In October 1859 Constantine Tischendorf returned to St. Petersburg from his expedition to the Middle East and

- 115185 brought a collection of 109 Greek and Oriental manuscripts, predominately Christian, which was solemnly presented to the Tsar Alexander II, who had sponsored the expedition, and subsequently deposited in the IPL. Among Tischendorf's finds was the other portion of the Homiliae Cathedrales manuscript (23 leaves; now NLR, Syr. new series 10). We can only conjecture that the two manuscripts (IOM, RAS Syr. 34 and
- 115190 Syr. 35) might also have been brought to St. Petersburg by Tischendorf in 1859. However, it is unclear why, having been seen and described by Bernhard Dorn, the librarian at the IPL Manuscripts Department as well as the director of the Asiatic Museum, they were acquired neither by the IPL nor by the Museum. Probably, in 1859, they entered a private collection in Russia, from which they were sold to an
- 115195 antiquarian, either in St. Petersburg, or in Frankfurt, where they were eventually purchased by Likhachev at the turn of the 20th c. The first scholarly description of the manuscript, the study and publication of the bilingual Greek and Syriac list of bishops was undertaken by Vladimir Beneshevich in the 1910s.
- 115200 The researcher highlighted the bilinguality of the list as a feature which made the St. Petersburg manuscript unique, since no other examples were known to him at that time. He thoroughly analysed the Greek script used in the names of the bishops (majuscule form) as well as in the names of the provinces and marginal notes (transitional form with elements of minuscule), and came to the conclusion that the
- 115205 writing can be dated to the 8th(?)–9th cc. Quoting Prof. Pavel Kokovtsoff's opinion, he described the Syriac script as "a Jacobite cursive" of approximately 9th–10th cc. In addition to this, Beneshevich stated that both parts of the list were written simultaneously, although the Greek and parallel Syriac column (the names of the bishops and provinces) could have been written by one scribe and the three columns of
- 115210 Syriac text by another hand. Another significant conclusion drawn by Beneshevich was that the Syriac text of the canons in the St. Petersburg manuscript is virtually the same recension as that in the manuscript Paris syr. 62 in the Bibliothèque Nationale de France. He supposed that this translation of the Greek canons was made around the time of the Fourth
- 115215 Ecumenical Council of Chalcedon, i.e. AD 451 (see the discussion on this text in chapter 2 below). A short description of the IOM, RAS Syr. 34 was included in the "Catalogue of Syriac Manuscripts in Leningrad" by Nina Pigulevskaya. Agreeing with Kokovtsoff's opinion, she defined the script of the manuscript as a
- 115220 clear cursive in its transitional form from *estrangelo* to *serṭo* (the West Syriac writing). She added also that the ductus is similar to that seen in the manuscript containing a work by Sahdona copied in AD 837 (AG 1148) by a monk called Sergius who donated it to the Monastery of Moses on Sinai (NLR Syr. new series 13; Strasbourg MS 4116).
- 115225 This statement is somewhat unclear because the main text of the latter manuscript is written in *estrangelo*. Apparently, Pigulevskaya was referring to the cursive writing used in the colophon, which does make sense, although the two scripts are obviously not identical, as the Sahdona manuscript contains more elements of cursive than IOM, RAS Syr. 34.
- 115230 The dimensions of the IOM, RAS Syr. 34 are 195×293 mm. The upper right corner of f. 1r is damaged, so that the final part of the introduction on the recto as well as the title and the initial part of the canons on the verso have been lost. The text on the hair (recto) side of the parchment is generally better preserved than the text on the flesh side, where it was rubbed or washed off. The text is written with iron gall
- 115235 ink, while the names of provinces in both Greek and Syriac (f. 1r) as well as the titles and numbers of the canons (f. 1v) are in red ink. The recto contains two columns of text; the right-hand column and the text in the lower margin are further divided to include parallel lists of bishops in two languages. The left edge of the right-hand column is more or less observed, in
- 115240 contrast to the right edge which is virtually ignored. Thus it becomes obvious that the Greek names were written prior to the Syriac ones, which were fitted into the space available. The left column contains 42 lines of plain Syriac text of the so-called introduction to the canons. In the left margin, there are a few Greek words corresponding to those given in Syriac transcription in the introduction. Writing
- 115245 area: variable, 272×164 mm maximum; right column: variable, 272×88 mm maximum; left column: 224×64 mm; upper margin – 20 mm; lower margin: filled with names of bishops and, in the bottom right corner, four lines of smaller Syriac text in a vertical direction published by Beneshevich; right margin: between 7 and 16 mm; left margin: up to 25 mm, gap between columns about 10 mm.
- 115250 The verso contains two columns of Syriac text (42 lines in the right column, 41 in

the left column) with Greek glosses in the right margin and in the gap between the columns. The traces of ruling include four pinholes marking the edges of the columns. Writing area: 224×150 mm; right column: 224×64 mm; left column: 224×67 mm; upper margin – up to 23 mm; lower margin – up to 48 mm; right margin – up to 30 mm; left margin – 17 mm; gap between columns 20 mm. Measurements were taken from the pinholes. The writing of the main Syriac text is a transitional form of *estrangelo*

with some elements of *serṭō* (Ⲫ Ⲫ Ⲫ Ⲫ). The Syriac list of bishops is written in a rather cursive script with occasional elements of *estrangelo* (letter Ⲫ Ⲫ Ⲫ). It is, however, unlikely that the two were written by different scribes, as Beneshevich suggested. Such ductus features as the slope of the letters and final strokes,

especially, the final Ⲫ, testify to the fact that both parts were written by the same hand. It is difficult to say whether the Greek text was executed by the same scribe. However, taking into account the high level of translation activity and the widespread use of Greek marginal notes in West-Syrian manuscripts, it would seem reasonable to assume that both texts were written by the same Syriac scribe well versed in the Greek language and calligraphy.

Although a similar transitional form of the script can be found in a number of 9th c. West-Syrian manuscripts (e.g. BL Add. 12159 of AD 867/868 and BL Add. 14623 of AD 823), it is also characteristic of some SyroMelkite manuscripts, presumed to be of the same period (e.g. Syr. Sp. 68, Syr. Sp. 70, 9th c., according to Sebastian Brock).

Therefore in our case the writing per se cannot be decisive in determining whether the manuscript belongs to one tradition or the other. However, the Greek words in the margins form part of the specifically West-Syrian system for the presentation of translated texts (cf. Greek scholia in IOM, RAS Syr. 35, BL Add. 17148 (AD 650–660), BL Add. 17134 (AD 675), BL Add. 12134 (AD 697) and many other West-Syrian manuscripts from the 7th c. onwards).

This latter feature as well as the recension of the text, which is only preserved in West-Syrian manuscripts, may testify to the West-Syrian origin of the St. Petersburg leaf.

2. Documents of Nicaea I in Syriac translation: an overview

Paraphrasing Michel Aubineau, the question of the exact number of bishops who participated in the Council of Nicaea is likely to remain for ever insoluble.

Even the 4th c. writers, who attended the council, do not agree on this matter. The *Vita Constantini*, ascribed, although not without some doubt, to Eusebius, gives the smallest number, to wit “more than two hundred and fifty bishops”.

Theodoret, quoting the words of Eustathius of Antioch, who chaired the council before his deposition and exile, mentions about 270 bishops.

Other sources give a number around or above 300.

These are the letter from Emperor Constantine to the Church of Alexandria (AD 325) quoted by Socrates Scholasticus, Gelasius of Cyzicus and others; *Apologia contra Arianos* (AD 350–351) and *Historia Arianorum ad monachos* (AD 358) by Athanasius; *Altercatio Luciferiani et Orthodoxi* by Jerome, etc.

However, at some point in the 4th c., the precise number of 318 bishops emerged and gained currency, being associated with the number of Abraham’s servants in Gen. 14:14.

Among the earliest sources which give the number 318, scholars mention *De Fide ad Gratianum* by Ambrose, *Epistola ad Afros* by Athanasius, *De synodis* and *Liber contra Constantium imperatorem* by Hilary of Poitiers.

I should add that the tradition does not always specify whether 318 refers to the total number of bishops gathered in Nicaea or to those who signed the canons and other resolutions of the council (some bishops were deposed in the course of the sessions and sent into exile before the end of the council; others refused to put their signatures to the Creed).

In either case, the number 318 became widely reflected in the title of the Nicaean canons in Syriac translations (e.g. BL Add. 14528, BL Add. 14526, BL Add. 14529, and also the 72 pseudo-Nicaean canons associated with Maruta of Maiperqat) as well as in some later Greek versions of the list of bishops.

The written records of Nicaea I have not survived unlike the acts of the Third Ecumenical Council of Ephesus (AD 431) and all subsequent Ecumenical Councils. The main resolutions concerning Church structure and internal discipline, including issues of private life and ordination of priests and bishops, were formulated in the form of 20 canons. Karl Joseph Hefele in his *Conciliengeschichte* made a thorough study of the question of the number of the Nicaean canons. On the one hand, he cites

Theodoret, Gelasius of Cyzicus, Rufinus and other Church historians who spoke of 20 canons, and mentions numerous western (Latin) and eastern (Greek and Slavonic) medieval canonic manuscripts (Syntagmas, Nomocanons and other collections of canon law) containing 20 Nicaean canons. On the other hand, he shows some Arabic versions which preserved up to 84 canons ascribed to the Council of Nicaea. First published in the course of the 16th c. by the Jesuits François Torrès and Alphonse Pisani, then re-published in mid- 17th c. by the Maronite Abraham Ecchelensis, the Latin translation of these was included in all major collections of the proceedings of the Ecumenical Councils

Hefele sums up the conclusions of various scholars that these additional canons were products of later Eastern traditions. Some of them could not have been composed before the Council of Ephesus (431), others not before Chalcedon (461). In 1898, the publication by Oscar Braun made known the corpus of works ascribed to Maruta, Bishop of Maiperqaṭ, on the basis of the East-Syrian manuscript from the former Borgia Museum in Vatican, now Borg. sir. 82. Among a dozen works dealing with the Council of Nicaea, he published a transcription of 73 Syriac "Nicaean" canons. The scholarly publication of these texts was undertaken by Arthur Vööbus. As follows from the title, the canons of the council of 318 [bishops] were translated by Maruta at the request of Mar Ishāq, Bishop-Catholicos of Seleucia-Ctesiphon. In AD 410 Maruta assisted Mar Ishāq in convening the Synod of Seleucia-Ctesiphon. That synod was an important milestone in the formation of the Church structure within the Sasanian Empire. In order to stress its legitimate status and continuity from the Ecumenical Church, the Synod accepted the main resolutions of Nicaea I, including the Creed and the canons.

On the occasion of the synod, Maruta apparently translated from Greek the main documents of the Council of Nicaea, including 20 canons, the Creed, the Sacra, letters of Constantine and Helena and the names of the bishops (220 in number, without the Western bishops) and also composed his own overview of the Canon of Nicaea and various related explanatory pieces, i.e. on monasticism, persecutions, heresies, on terms, ranks and orders, etc. All these texts were included in the edition prepared by Vööbus on the basis of the manuscript from the Monastery of Our Lady of the Seeds in Alqoš (Alqoš 169; later in the Chaldean monastery in Bagdad, No. 509) with variants from Vat. sir. 501, Borg. sir. 82, Mingana Syr. 586, and Mingana Syr. 47 (see details of some of these manuscripts in Table 1 below). Braun considered Maruta to be the author of the 73 canons originally composed in Syriac. Vööbus neither supports nor rejects this attribution due to the lack of evidence, as well as the critical edition and stylistic analysis of the text.

Moreover, he adds that the East-Syrian recension, which associates the canons with Maruta, is not the original one and must have been adopted from the West-Syrian tradition. He also mentions Arabic and Ethiopic versions of these canons. In a number of Syriac manuscripts the authentic Nicaean canons are accompanied by the list of bishops who approved and signed them (the list can be included either before or after the canons). Being originally a collection of signatures in Greek, the list underwent certain transformations within the Greek tradition and was subsequently translated into Latin, Syriac, Coptic, Arabic and Armenian. Among the variety of versions Dmitrii Lebedev distinguished two forms of the list. In "systematic" lists, which include all extant Latin, Syriac, Coptic and Armenian versions, the names are arranged according to provinces. The "non-systematic" lists published by Gelzer, Hilgenfeld and Cuntz from selected Greek and Arabic manuscripts lack the names of the provinces and arrange the bishops' names in a different, somewhat peculiar, way.

All Syriac lists, which can be found in both West-Syrian and East-Syrian manuscripts, are in the "systematic" form and derive from the Greek recension of Theodoros Anagnostes (the list of 112 names, originally included in Socrates Scholasticus's *Historia Ecclesiastica*). Besides anonymous collections of ecclesiastical law, the lists are included in the Chronicle of the 12th -c. Syrian Orthodox patriarch Michael the Great and the Nomocanon of 'Abdišo' bar Brika, the Metropolitan of Nisibis (Church of the East) (13th-14th cc.). According to Vladimir Beneshevich, the version of the list in the manuscript IOM, RAS Syr. 34 corresponds to the West-Syrian recension used by Michael the Great in his Chronicle (VII:2). This perfectly supports our assumption regarding the West-Syrian origin of the St. Petersburg manuscript. Beneshevich also states that the original Greek version of the Syriac list must have been composed after 371 under a certain influence from the Coptic tradition. It also became the source for the Latin translations.

Another curious observation by Beneshevich about the Greek text of the list in IOM, RAS Syr. 34 is that it represents a transcription of the Syriac forms of the names of provinces and bishops rather than being the authentic Greek forms.

However, Hubert Kaufhold demonstrates that this is not particularly correct and the scribe must have had the original list of bishops before his eyes. The fact that the Greek names of the provinces are in the nominative rather than the genitive is not decisive here, as some Greek and Syriac forms in this recension (which can be fully evaluated on the grounds of Mardin Orth. 309) are clearly different (e.g. ΕΔΕΣΗΣ – □□□□).

Beneshevich wrote his work in the first decades of the 20th c. when no other manuscripts containing bilingual lists of bishops were known. Thus the St. Petersburg leaf was considered unique. However, due to new acquisitions made by the Vatican Library and Arthur Vööbus's exploration of Middle Eastern manuscript collections, some other bilingual Greek-Syriac lists have become known, among them the 8th-c. codex Mardin Orth. 309 and Vat. sir. 495, a 20th c. manuscript "copied from an ancient codex".

The Mardin manuscript attracted a lot of attention, particularly, from Hubert Kaufhold who published the lists of bishops of the early Greek councils and synods on its basis.

Alongside the above-mentioned 20 canons and the list of bishops, the Nicaean documents in both West-Syrian and East-Syrian manuscripts, mostly of legislative contents, include the Nicaean Creed, the letter of Constantine of AD 325 calling on the bishops who assembled in Ancyra to move to the new venue in Nicaea, the Sacra, i.e. the decree of Constantine against the Arians; the letter of the bishops to the Church of Alexandria, and an introduction to the canons.

This last work has not yet been fully identified. According to Vladimir Beneshevich, it may be a combination of two different texts: the afterword to the Nicaean Creed included in Gelasius's *Historia Ecclesiastica* (II:27), also known in Latin, Coptic and Armenian translations, and the council's resolution on the celebration of Easter. This text in Syriac translation was thought to be present in full in the manuscript Paris syr. 62 only. However, it can be also identified in the two Mardin manuscripts discovered by Arthur Vööbus, Mardin Orth. 309 and Mardin Orth. 310, as well as the Birmingham manuscript Mingana Syr. 8 that was copied in 1911 from the fragmented Mardin Orth. 310.

3. The place of IOM, RAS Syr. 34 in the textual history of the Syriac canons of Nicaea I

We are indebted to Friedrich Schulthess for the initial identification of different Syriac translations and recensions of the canons of Nicaea I. Through a critical study of eight Syriac manuscripts, he uncovered the fact that the canons were translated twice. One translation (A) is attested by the London codex BL Add. 14528 of the 6th c. The first of its two independent parts that were bound together is an archaic form of Synodicon of the councils from Nicaea to Chalcedon with the exception of the Council of Ephesus (ff. 1-151). This form of canonical collection is known as the "Corpus canonum" and is thought to have been compiled in Antioch shortly before the Council of Constantinople (381). It included the canons of the Greek councils and synods of the 4th c. (Nicaea, Ancyra, Neocaesarea, Gangra, Antioch, Laodiceia and Constantinople itself) with later added canons of the Ecumenical Councils of Ephesus and Chalcedon.

It represents the core and the initial part of subsequent Synodica, i.e. the corpora of ecclesiastical legislation, both West-Syrian (e.g. Paris syr. 62, Damascus 8/11) and East Syrian (e.g. Alqoš 169 and its copies).

The colophon of Add. 14528 informs us that the entire collection of 193 canons of various synods was translated from Greek into Syriac in Mabbug in the year 500/501 (AD 812).

Schulthess described this translation as precise, and Vööbus suggested that it was the later of the two. He states that translation A (hereafter, I use Schulthess's letters indicating the published manuscripts as a designation of translations contained in them) was intended to correct and improve the existing rendering which permitted certain leeway in the interpretation of Greek canon law.

The manuscript BL Add. 14528 is also interesting as it contains a very well preserved Syriac list of the bishops at Nicaea I which became the basis for a number of modern publications (see Table 1 for details).

The beginning of the 6th c. was the time when Philoxenus, a strong advocate of Miaphysitism, was active in Mabbug, where he was a bishop from 485 until his deposition in 519. In all probability, the translation of the canons made in Mabbug

in 501 (as is claimed in the colophon of Add. 14528) was the result of a large-scale translation activity, which consisted primarily in the translation of the Old and New Testament, commissioned by Philoxenus and performed by his horepiskopus Polycarpus. Hubert Kaufhold adds an interesting detail: another Miaphysite leader, Severus, Patriarch of Antioch (512-518), mentions in his letters a collection of canons of the imperial councils which was available to him, although no Greek original for this existed at his time. This may have been the translation produced in Mabbug just a decade before his patriarchate. In this case, why were the canons of the hostile Council of Chalcedon translated and included in all known West-Syrian manuscripts of purely legislative or mixed contents (e.g. BL Add. 14526, BL Add. 14529, BL Add. 12155, Paris syr. 62, Damascus Part. 8/11 etc.)? The answer is probably that they cover and discuss disciplinary rather than doctrinal issues, so their inclusion in the West-Syrian collections would not give rise to any further controversy. By contrast, the canon(s) of Ephesus seems to be a rarer text. Most West-Syrian manuscripts studied by Schulthess and Vööbus include only one canon of Ephesus (namely, canon 7, dealing with the Nicaean Creed) of eight known in the Greek tradition (with the exception of Paris syr. 62 which includes two canons, 8 and 7). They are not included in the East-Syrian Synodicon Borg. sir. 82, although that codex is highly fragmented. The canons of Ephesus are quite different in content as, unlike those of other councils, they have a pronouncedly polemical character. The earliest evidence of another translation (B), which Schulthess characterises as "free", is the manuscript BL Add. 14526 from the 7th c. It was probably written around or soon after 641. Like the previous manuscript, the first part of this composite codex contains the Corpus canonum, including one canon of the Council of Ephesus. Despite the evidence for this translation being more recent than the previous one, Vööbus points out its archaic character and suggests that this might be the first attempt at interpreting the canons. The further development of both translations of the Nicaean canons is most curious. Translation A emerges in East-Syrian manuscripts which contain the works of Maruta of Maiperqat (Borg. sir. 82, Vat. Syr. 501, Mingana Syr. 586, Mingana Syr. 47). This creates a certain difficulty, as the colophons in the manuscripts contradict each other. Was the Nicaean corpus translated by Maruta on the occasion of the Synod of Seleucia-Ctesiphon in 410 (as East-Syrian manuscripts claim) or were the canons of Nicaea translated together with those constituting the Antiochian Corpus canonum around 501 in Mabbug? This question can only be answered on the basis of comparative stylistic analysis of translation A with the texts ascribed to Maruta on the one hand and with the West-Syrian translations from the 6th c. on the other. Interestingly, other examples of translation A can be found in manuscripts with mixed contents of undoubtedly West-Syrian origin: the polemic florilegium BL Add. 14529 (7th-8th cc.) which includes patristic texts against heretics such as Nestorius and Julian of Halicarnassus; and a highly fragmented 8th-9th cc. codex in the Houghton Library of Harvard University that came from the collection of James Rendel Harris, which also contains apocryphal gospels and apocalypses. The comparison of the different patterns of translation A show minor variants (with the exception of the general title of the canons) and testify to roughly the same recension of the text. Translation B, on the contrary, underwent some major alterations in the course of its textual history, probably due to the free character of the original translation, which was considered unsatisfactory at some point. The first recension (C-D) of this translation is attested by West-Syrian manuscripts with various contents, e.g. BL Add. 12155 (C) (8th c.), a very extensive polemic florilegium, and Vat. sir. 127 (D), a collection of canons similar in structure to the earlier manuscript BL Add. 14526. In the course of the exploration of Syriac manuscripts in the Middle East, Arthur Vööbus discovered in the library of the Syrian Orthodox Patriarchate in Damascus an important codex that was a compendium of the ecclesiastical law, the Synodicon, belonging to the West-Syrian tradition. According to Vööbus, the version of the Nicaean canons preserved in this manuscript conforms in general to the C-D recension, although it adds a number of variants not attested by any previously known manuscripts. Vööbus identified another example of the same recension in the manuscript Mardin Orth. 320. Another recension (E), the result of further revision of the C-D text, was identified by Schulthess in the 9th-c. manuscript Paris syr. 62, a WestSyrian collection of

115515 apocryphal, patristic and canonical texts. An interesting feature is that this compendium of undoubtedly West-Syrian origin contains the previously mentioned 73 pseudo-Nicaean canons associated with Maruta of Maiperqaṭ. Apart from the 20 authentic canons of Nicaea I, the manuscript includes the introduction to the canons which also can be found in all other manuscripts attesting to this recension.

115520 Arthur Vööbus and, later, Hubert Kaufhold identified the same revision of the text in two 8th-c. Synodica from the Zaʿfaran Monastery, namely, Mardin Orth. 309 and Mardin Orth. 310. With regard to the latter, Vööbus mentions a number of variants which "throw more light" on the history of this recension.

115525 The copy of Mardin Orth. 310 is a manuscript of 1911 in the Mingana collection at the University of Birmingham, Mingana Syr. 8. Unlike Schulthess, Kaufhold identifies this version as the second translation (or, rather an adaptation of the first translation) of the canons made by Jacob of Edessa at the end of the 7th c.

115530 Within the context of comparative textual study of the translations of the Nicaean canons and, in particular, the recension E just mentioned, the main perspective is the preparation of the critical edition of the 20 Nicaean canons and an introduction to the canons through study and collation of the manuscripts Mardin Orth. 309, Mardin Orth. 310, IOM, RAS Syr. 34, Paris syr. 62 and Mingana Syr. 8. There is still a possibility that at some point the manuscript, presumably from the 9th c., to which our leaf originally belonged to, will be found.

115535 See [\(55\) The Canons of the First Ecumenical Council of Nicaea in the Manuscript IOM, RAS Syr. 34, in Written Monuments of the Orient \(English version\), 1\(3\), 2016. P. 35-63.](#)

115540 Tempus destruendi et tempus aedificandi (Eccl 3:3). The historiography of the Council of Nicaea was dominated for a long time by the retrospective "master narrative" established by Athanasius and developed by the ancient Christian historians and heresiologists. In contrast, during recent centuries it has been shaped by the deconstruction of this narrative in light of critical studies. Williams points to

115545 Newman as the initiator of modern scholarship on Nicaea (1833); however, the critical spirit was not absent from earlier editors and historians, such as Henri de Valois (+1676) and Bernard de Montfaucon (+1741). In any case, as far as the sources are concerned, the works of Schwartz and Opitz undoubtedly marked a milestone (1934). The Urkunden, freed from the polemical or apologetic context in which they were

115550 transmitted, allowed a new understanding of the sources and prompted a necessary process of deconstruction of the master narrative, tempus destruendi. This process has been neither linear nor homogeneous because abandoning the persistent hermeneutical biases imposed by the master narrative is a difficult task.

115555 Moreover, wrong ways of integrating confessional premises into historical studies have hindered this process. However, the works of authors such as Bardy, Simonetti, and Hanson have made enormous steps in rewriting the history of the Council of Nicaea.

Recent studies have shown the extent to which "Arianism" is a polemical construction. This is an achievement that scholarship cannot waive. Yet, at times, the idea of

115560 "construction" has been misunderstood, as if it indicates a narrative that is nothing more than the fruit of polemical imagination and, therefore, an object of pure deconstruction, tempus destruendi. Of course, for example, Alexander transmitted a construction of Arianism; however, the task of scholars should not just be to "deconstruct" ancient "constructions," but also to identify and "reconstruct" the

115565 historical elements that explain the shape of such a construction. What did Alexander see in the clerics whom he criticized that moved him to construct such an "Arianism"? Ancient accounts were not usually created ex nihilo. Therefore, a programmatic distrust of ancient sources can be just as uncritical as an naive trust in them. It is not that academic studies should be less critical; they must be more critical!

115570 Scholars should critically assess their own distrust of sources and their models of understanding. Indeed, it is impossible to grasp the complexity of reality with out such models. For this reason, human knowledge, including scientific works, is a kind of construction. Consequently, scholars must critically reevaluate both ancient models of interpretation and their own.

115575 INTRODUCTION

Something similar could be said about the factors that shape history. According to the "master narrative," the ultimate driving force behind the controversy was the fight of heresy against orthodoxy. According to this view, the Arians alleged many reasons for attacking Athanasius, but the real reason behind all their claims and

115580

actions was their hatred of orthodoxy. Their sole purpose was to introduce impiety into the Church (ἀσέβειαν εἰς τὴν ἐκκλησίαν εἰσαγάγωσι).¹ In contrast, some modern studies have regarded doctrinal causes with suspicion and have disclosed to what extent Christian controversies were shaped not only by theology, but also by politics, power, local identities, and other factors. Again, this is an accomplishment that academic works cannot neglect. However, scientific studies should also critically assess the assumption that theological reasons are always a pretext that hides other unconfessed motivations. In short, critical scholars must be self-critical as well. *Tempus destruendi et tempus aedificandi*.

An open and honest dialog between the scholar's preconceptions and the evidence is crucial. Without this dialog, scholars risk projecting into the ancient world our modern categories, to the point of distrusting systematically the dynamics that are unfamiliar to our current way of thinking. It is not critical to replace ancient beliefs with modern beliefs. A self-critical assessment of our own assumptions allows us to hear the sources and to get in contact with the richness of what is unfamiliar to us.

This dialog is complex because it is not possible to approach historical evidence without a preexisting theoretical model and certain presuppositions.

A model is necessary to grasp reality. However, it implies some risks. A theoretical framework must always be provisional. A fitting model is one that can grasp reality and is helpful for making sense of seemingly unrelated historical data. In the same vein, a suitable working hypothesis is one that solves more problems than it causes. Instead, a theoretical framework could become an obstacle for grasping reality, when it is not open to welcome the anomalies of ancient sources. Models are a working tool and, therefore, they should be tentative and provisional.

Theories must fit reality, and not vice-versa. Scholars who are open to bearing the mismatch between the model and the historical evidence can learn from the sources. Otherwise, scholars risk projecting their presuppositions onto ancient sources. Let me recall a classic example. All the textual evidence – Greek and Latin – supports that Arius, in his letter to Eusebius of Nicomedia, declared that the Son is “fully God” (πλήρης θεός).

However, as the theoretical framework established that Arius denied the Son's divinity, instead of rethinking the framework, the editors amended the text. Of course, it is not easy to deal with these anomalies that witness the unexpected; however, this uncomfortable mismatch puts the scholar on the edge of knowledge.

This example shows, in addition, that conceptual models impact not only doctrinal interpretation of sources, but also the scientific edition of their texts. The philological and hermeneutical stages are not strictly successive; they also influence one another. Even those who work directly with manuscripts are somehow guided by theoretical presuppositions. Again, critical scholars must be self-critics as well.

The 1,700th anniversary of Nicaea offers a precious opportunity, that is, a *καιρός*, to take a step forward and revisit this event. Two main reasons foster this task. First, standard works on Nicaea focus on the so-called Arian controversy rather than the synod itself and pay more attention to its reception than to the event. Second, studies on the synod have not always applied the method that scholars of the 20th century have developed. In addition, thanks to the efforts of the Athanasius Werke, Die griechischen christlichen Schriftsteller, Sources chrétiennes, and other series, almost all the sources appear in a scientific edition. Accordingly, the present book has two main purposes: 1) to focus on the Council of Nicaea itself, rather than its reception, and 2) to apply a *ratio interpretandi* that observes the hierarchy of the sources and, therefore, gives effective priority to contemporary sources over retrospective accounts.

1) The book focuses on Nicaea, and not exclusively on the “Arian” crisis; therefore, it intends to address the various topics that the synod tackled. Accordingly, on the one hand, the book should not begin with the outbreak of the theological crisis – the most significant topic of the synod, but not the only one. On the other hand, it is necessary to trace in the second and third centuries some disciplinary issues addressed by the canons and the letters of Nicaea. Therefore, the book includes a first chapter that deals with the institutional and theological antecedents, including the development of synodal activity before Nicaea, the relationship between the episcopate and the school in Alexandria, the Melitian crisis, the date of Easter, and the Trinitarian discussions that preceded and shaped the debate addressed by the Council of Nicaea. The following chapters present in a chronological way the steps of the events related to the synod, from the outbreak of the “Arian” controversy to the

end of the first phase of the reception of the Nicene synod. As is explained in chapter 5, the death of Constantine is regarded as the end of the first step of the reception of the council.

2) The first comprehensive historical account of Nicaea is found in the historical, apologetic and polemical writings of Athanasius of Alexandria, a participant in the events. He reported the history according to his own perspective as a staunch adversary of Arius and a firm supporter of Nicaea. Although his long career was controversial, his literary activity, travels, political skills and other factors secured his reputation. Less than ten years after his death, Gregory of Nazianzus compared him with Christ (or. 21.29,3).

Thus, from the beginning, Athanasius' historical writings were backed by his personal reputation as a saint. Hence, almost all Christian authors have adopted his narrative. Indeed, Church historians and heresiologists of the 4th and 5th centuries, such as Epiphanius, Gelasius, Rufinus, Socrates, Sozomen, and Theodoret, transmitted Athanasius' black-and-white picture of the controversy. In the West, Rufinus, Sulpicius, and Cassiodorus adopted the same narrative. Only Hilary of Poitiers provided a quite independent perspective, but it had much less influence than that of Athanasius. Therefore, the Athanasian account became the "master narrative."⁵ Only Philostorgius challenged the already official narrative, yet the imperial reaction against his perspective resulted in his work being lost; only some fragments were preserved. Thus, Athanasius became the indisputable hallmark of Nicene orthodoxy and Arius the arch-heretic: "No other heretic has been through so thoroughgoing a process of demonization."⁶ This process has had lasting hermeneutical consequences because it produces strong prejudices in ancient and modern readers of the original sources. Accordingly, ancient Christian writers developed, expanded, supplemented and, at times, disputed this narrative, but always within the framework established by Athanasius. This situation gives rise to a hermeneutic challenge. Roughly speaking, scholars who want to reconstruct the controversy are in a trap. On the one hand, they need Athanasius as a source; on the other, they need to be free from Athanasius' interpretation. Is it possible to escape this trap? Fortunately, there is a way-out: modern scholarship has recognized that ancient sources transmit material that has varying degrees of reliability.

In general terms, it is possible to distinguish three layers or levels in the primary sources: the narratives of the historians, the testimonies of the protagonists, and the documents contemporary to the events. The last category of sources does not rely on the Athanasian account.

1) The narratives are the most immediate level of the historical works that describe the controversies of the fourth century. They are accounts written by Christian authors of the late fourth and early fifth centuries, who did not participate in the events they narrate and who shaped their works within the Athanasian framework. They are mainly Gelasius, Epiphanius, Rufinus, Socrates, Sozomen, Theodoret, Philostorgius, and Sulpicius. These authors produced their histories based on written sources. The problem with these narratives lies in the difficulty of distinguishing between what the ancient historians read in the sources and what they elaborated as authors influenced by the Athanasian account.

2) The second level is that of the testimonies, which are historical accounts of the controversies written some years after the events - with a retrospective viewpoint - by authors who participated in these events. For the period under study (ca. 304-337), these authors are mainly Eusebius and Athanasius.

As they participated in the controversies, they are privileged witnesses. However, the time elapsed between the events and their writings, on the one hand, and their engagement in the controversy, on the other, led them to interpret the events retrospectively and biasedly. Thus, alongside the evidence, their accounts offer a retrospective and one-sided interpretation of the conflicts. Therefore, to assess the historical worth of these testimonies, it is necessary to consider the perspective of each of these authors.

3) The most valuable texts are the documents contemporary to the events, which are transmitted by ancient Christian writers. They are letters, creeds, canons, theological statements, and imperial reports. They have been transmitted as quotations, i.e., they are preserved in other works (*traditio indirecta*). The main authors transmitting documents are Eusebius, Athanasius, Hilary, Epiphanius, and the ancient Church historians. These documents are not free of bias because their authors were engaged in controversies. However, because they are contemporary to the events, they do not convey a retrospective view of the facts, nor are they influenced by Athanasius' account.

These controversial documents have been transmitted by works that are not neutral,

and therefore it is necessary to free them from the polemical or apologetic framework in which they are embedded. This is the task undertaken by Fontes Nicaenae Synodi (FNS), the "partner book" that contains the text and translation of the contemporary documents.

The methodology guiding this research consists of 1) distinguishing the different layers of sources, narratives, testimonies, and documents, 2) giving effective hermeneutical priority to the documents over retrospective testimonies and narratives, 3) freeing the documents from the polemical framework in which they are embedded, and 4) relocating them in their original context.

In this way, they can be interpreted *iuxta propria principia*. Of course, the setting of each document, and especially its chronology, is a debatable matter (Ch. 2.1). These methodological steps belong to traditional historicalphilological analysis of ancient sources. The novelty of this research - if any - is the systematicity with which these steps are applied. This approach implies that, for each period, the first reconstruction must be shaped by the analysis of the contemporary documents; then, this provisional reconstruction is complemented and confronted with ancient Christian historians and modern studies. The exception is chapter 2.3, where the period is reconstructed, as an example, taking into account the retrospective testimonies and narratives (master narrative), and then this reconstruction is confronted with the analysis of the contemporary documents in order to contrast the two narratives.

The "master narrative" describes Nicaea as a struggle between individuals moved by hatred, faith, jealousy and loyalty. The envy of the devil plays a crucial role in the events, and the participants are moved by theological reasons, namely, hatred of orthodoxy or heresy. Modern scholars, however, have shown that, alongside theology (and philosophy), politics also played a significant role in the crisis. The "Arian" crisis, though, was not only an intellectual and political struggle between individuals but also - and largely - a group conflict. The controversy, then, has been analyzed through the lenses of theology, philosophy, and politics, but the approach of the social sciences has been somehow neglected. Indeed, only particular aspects of the crisis have been studied using this perspective.⁷ However, it is not possible to explain a group phenomenon only in terms of theology, philosophy, politics, and individual behavior. Hence, to address the group dimension of the controversies, this research applies - when it is needed - an appropriate social-scientific theory to study the Arian crisis, namely, the social identity theory.

The fragmentary state of the ancient sources and their - at times - frustrating scarcity imply that any reconstruction of the Nicene Council cannot but be hypothetical. As the evidence allows different levels of certainty, the tenor of the phrases intends to point out the degree of certainty for each assertion. Unless otherwise indicated translations are my own. Some elements of chapters 2 and 4 have appeared in previous articles, as stated in the footnotes. However, these materials have been thoroughly reconsidered and reworked.

Eusebius, The Life of Constantine: Mambre

CHAPTER LI: That he ordered a Church to be built at Mambre.

SUCH was the principal sacred edifices erected by the emperor's command. But having heard that the self-same Saviour who ere while had appeared on earth had in ages long since past afforded a manifestation of his Divine presence to holy men of Palestine near the oak of Mambre, he ordered that a house of prayer should be built there also in honor of the God who had thus appeared. Accordingly the imperial commission was transmitted to the provincial governors by letters addressed to them individually, enjoining a speedy completion of the appointed work. He sent moreover to the writer of this history an eloquent admonition, a copy of which I think it well to insert in the present work, in order to convey a just idea of his pious diligence and zeal. To express, then, his displeasure at the evil practices which he had heard were usual in the place just referred to, he addressed me in the following terms.

CHAPTER LII: Constantine's Letter to Eusebius concerning Mambre.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Macarius, and the rest of the bishops in Palestine.

"One benefit, and that of no ordinary importance, has been conferred on us by my truly pious mother-in-law, in that she has made known to us by letter that abandoned

folly of impious men which has hitherto escaped detection by you: so that the criminal conduct thus overlooked may now through our means obtain fitting correction and remedy, necessary though tardy. For surely it is a grave impiety indeed, that holy places should be defiled by the stain of unhallowed impurities. What then is this, dearest brethren, which, though it has eluded your sagacity, she of whom I speak was impelled by a pious sense of duty to disclose?

CHAPTER LIIII: That the Saviour appeared in this Place to Abraham. "SHE assures me, then, that the place which takes its name from the oak of Mambre, where we find that Abraham dwelt, is defiled by certain of the slaves of superstition in every possible way. She declares that idols which should be utterly destroyed have been erected on the site of that tree; that an altar is near the spot; and that impure sacrifices are continually performed. Now since it is evident that these practices are equally inconsistent with the character of our times, and unworthy the sanctity of the place itself, I wish your Gravities to be informed that the illustrious Count Acacius, our friend, has received instructions by letter from me, to the effect that every idol which shall be found in the place above-mentioned shall immediately be consigned to the flames; that the altar be utterly demolished; and that if any one, after this our mandate, shall be guilty of impiety of any kind in this place, he shall be visited with condign punishment. The place itself we have directed to be adorned with an unpolluted structure, I mean a church; in order that it may become a fitting place of assembly for holy men. Meantime, should any breach of these our commands occur, it should be made known to our clemency without the least delay by letters from you, that we may direct the person detected to be dealt with, as a transgressor of the law, in the severest manner. For you are not ignorant that the Supreme God first appeared to Abraham, and conversed with him, in that place. There it was that the observance of the Divine law first began; there first the Saviour himself, with the two angels, vouchsafed to Abraham a manifestation of his presence; there God first appeared to men; there he gave promise to Abraham concerning his future seed, and straightway fulfilled that promise; there he foretold that he should be the father of a multitude of nations. For these reasons, it seems to me right that this place should not only be kept pure through your diligence from all defilement, but restored also to its pristine sanctity; that nothing hereafter may be done there except the performance of fitting service to him who is the Almighty God, and our Saviour, and Lord of all. And this service it is incumbent on you to care for with due attention, if your Gravities be willing (and of this I feel confident) to gratify my wishes, which are especially interested in the worship of God. May he preserve you, beloved brethren!"

Arbo, also Terebinth. **The Oak of Mambre** - (Ramat al-Khalil)
The site of Mamre, known in Arabic as Haram Ramet al-Khalil, lies approximately 3 km north of Hebron on the ancient road linking the main Hebron-Jerusalem and Bethlehem-Ziph routes. The Bible describes Elonei (oaks of) Mamre as Abraham's dwelling place, where he built an altar to God (Gen. 13:18, 18:1, 23:19). Some scholars locate the biblical Elonei Mamre within the town of ancient Hebron (Tell Rumeideh); others identify it with the enclosure of Haram Ramat al-Khalil which was already considered a sacred site in the Second Temple period. Josephus relates that Abraham resided near Hebron, by an oak called ogyges, the oak of Genesis (Antiq. 1, 186). Elsewhere he mentions a terebinth 6 stadia from Hebron that had stood there since creation (War IV, 533); it is not clear whether both references are to the same place. In Antiquities he tells the biblical story, calling the tree an oak: whereas in War of the Jews he is describing a holy place in his own time, calling it a terebinth. Josephus is mistaken about the distance between Elonei Mamre and Hebron, which is not 6 but approximately 18 stadia (3 km). Neither does he mention a structure around the terebinth. Modern excavations have made it clear that the structure was already standing in his time. The book of Jubilees (29:17-19; 37:14-17) refers to Abraham's capital in the Hebron Hills as a tower (migdal). The reference is probably to Abraham's residence at Elonei Mamre. If so, the author, a contemporary of the Second Temple, was describing the enclosure at Elonei Mamre in terms associated with the Temple Mount - migdal or birah - both meaning tower or fortress. Talmudic literature refers to the place as Beth Ilanim or Botnah and it is mentioned as the site of one of the most important fairs in Palestine: "There are three fairs: the fair of Gaza, the fair of Acco, the fair of Botnah, and the least doubtful of them all is the fair of Botnah," meaning that of the three fairs this was the one most definitely associated with idolatry and therefore Jews were forbidden to participate in it (J.T. A.Z. 39c; Gen. Rab. 47:10).

115845 The fair is mentioned in two of Jerome's commentaries (In Hieremiam VI, 18, 6, CCSL 74, 307; In Zachariam III, 4-5. CCSL 76A, 851), where it is said that Hadrian brought the captive Jews to the famous marketplace at Terebinth. There he sold many into slavery. For this reason the Jews in Jerome's time shunned the annual fair. The same story is told in the seventh-century Chronicon Paschale (PG 92, col. 613) with some additions.

115850 The Bordeaux Pilgrim (Itin. Burd. 599, 3-7) states that the emperor Constantine built a basilica there. Eusebius (Vita Constantini III. 51-53, GCS 7, 99-101) and Sozomenus (HE II, 4. GCS 50, 54-56) report the circumstances and the official documentation referring to the building. Both Julius Africanus (Chron. XVIII) and Eusebius (Vita Constantini III, 53, 100; Onom. 6. 12-14; 76. 1-3) mention a pagan altar at the site. The most detailed description of the site is in the work of Sozomenos. He reports that the place situated 15 stadia from Hebron, was the site of the terebinth, where the angels had appeared to Abraham. In summer, he states, a great fair was held there, attracting hordes of people from far away, who came to offer libations and burn incense, but also to trade; among them were pagans, Christians and Jews. The Medeba map seems to differentiate between Botna and Mamre, as the mosaic depicts both a church and a terebinth. During the seventh century CE there was a monastery at the site that continued to exist after the Arab conquest (Adamnanus, De Locis Sanctis II, II. 6, CCSL 175, 211). In Crusader times, the site may have been occupied by the Church of the Trinity.

Eusebius, Onomasticon 6:8-12 (ca. 295 A.D.); Jerome 7:18-24 (ca. 390 A.D.) Arboc. Corrupte in nostris codicibus Arboc scribitur, cum in Hebraeis legatur Arbe, id est quattuor, eo quod ibi tres patriarchae, Abraam, Isaac et Iacob, sepulti sunt, et "Adam Magnus", ut in Iesu libro scriptum est: licet eum quidam conditum in loco Calvariae suspiciuntur. Haec est autem eadem Chebron, olim metropolis Filistinorum et habita-culum gigantum, regnumque postea David, in tribu Iudae civitas sacerdotalis et fugitivorum. Distat ad meridianam plagam ab Aelia milibus circiter viginti duobus.

115870 (Jerome 7:11-18)

Et quercus Abraam, quae et Mambre, usque ad Costantii regis imperium monstrabatur, et mausoleum eius in praesentiarum cernitur, cumque a nostris ibidem ecclesia iam extructa sit, a cunctis in circuitu gentibus terebinthi locus superstitione colitur, eo quod sub ea Abraam angelos quondam hospitio suscepit. Haec ergo primum Arbe, postea a Chebron, uno filiorum Chaleb sortita vocabulum est. Lege Verba dierum.

115880 (Jerome 7:18-24)

Arbo (Gen 23:2). In our codices it is written in a corrupted form, 'Arboc', while the Hebrew text reads 'Arba', that is, 'four', because the three patriarchs, Abraham, Isaac and Jacob are buried there, as well as 'the great Adam', as is written in the Book of Joshua (Jos. 14:15), although some suppose that he is buried on the Calvary. 'That is Hebron', today a large village, in ancient times one of the main cities of the Philistines [Eusebius: 'the aliens', i.e. the Cannanites in general] and a dwelling place of giants, and later royal seat of David. It fell into the lot of the tribe of Judah, and was a priestly city and one of the cities of refuge. It is south of Jerusalem at a distance of about 20 [22] miles.

115885

115890

The oak of Abraham, also called Mambre, could be seen standing until the reign of Constantius, and the tomb of the same is visible to this day and while a church has been erected there by our people, the place of the oak is [greatly] venerated by all the pagan population around, because under it Abraham gave hospitality to the angels. At first the place was called Arbe, and later it was named Hebron after Hebron, one of the sons of Caleb, as we read in the Chronicles. (1 Chron. 2:42).

115895

Sozomenus, Historia Ecclesiastica II, 4

I deem necessary to declare now what was resolved about the oak of Mambre by Emperor Constantine. The place is presently called the Terebinth, and is situated at the distance of fifteen stadia from Hebron, which is to the south... Every year, at summer time, the inhabitants of that place and the Palestinians, the Phoenicians and the Arabs, coming from far away, make a fair there. Many come there for the sake of business, some to sell and some to buy. The feast is celebrated by a very big congregation of Jews, since they boast of Abraham as their forefather, of heathens since angels came there, of Christians since he who should be born from the Virgin for the salvation of humankind appeared there to that pious man. Everyone venerates

115900

115905

115910

this place according to his religion: some praying God the ruler of all, some calling upon the angels and offering libations of wine, burning incense or sacrificing an ox, a pig, a sheep or a cock. Constantine's mother in law (Euthropia), having come there to fulfill a vow, gave notice of all this to the Emperor. So he wrote to the bishops of Palestine reproaching them for having forgot their mission and permitted such a most holy place to be defiled by those libations and sacrifices.

Archaeological discoveries in Deurne and surrounding areas,

particularly the **Helden ornamental disc**

Introduction

Few archaeological discoveries have been made in the Peel region. This was noted in the newspaper immediately after the discovery of the Peel helmet in June 1910, and also later by the director of the Helenaveen Company, who personally acquired many finds related to the Peel helmet and kept them in his villa in Helenaveen. After his death in 1931, these objects disappeared from view.

Further investigation did reveal more: in early 1837, soldiers working near Deurne (Huub Kluijtmans says at St. Jozefparochie, newspapers of the time call it the Kempensche Heide) found many urns and other objects. These excavated objects were immediately gifts and merchandise. Some later ended up in the National Museum of Antiquities in Leiden. In the 1950s and 1960s, amateur archaeologist Leo Kluijtmans made several discoveries in the Peel region, primarily stones used as tools. He also found several arrowheads at the site where the Peel helmet was discovered. These arrowheads emerged in 1963 after a devastating peat fire that lasted several months in 1959. He had already discovered a grinding stone before that. A small bronze ring, which belonged to the man and horse's equipment, also came to light.

Overview of archaeological finds in the Peel region

The author has compiled a list of the objects found below:

February 4, 1837 [1] Several urns or pots of various sizes, all filled with the ashes of burned bodies and small bones.

[2] While in some, pieces of metal and parts of weapons were found.

May 4, 1837 [1] Kempen heathland

[2] First 5, then 50 urns were found.

[3] Not a single penny or coin was unearthed; only a piece of metal, which is believed to be the mouthpiece of a wind instrument.

[4] Excavations are still continuing in some places, but as mentioned, nothing but ash and the aforementioned human bones are found in the urns.

June 3, 1837 [1] Urns or pots of various sizes, all filled with the ashes of burned bodies and small bones.

On April 23, 1839 [1], a number of urns were sent to us, which had recently been discovered in Deurne, in North Brabant; and the number was further increased by the proceeds of a deliberate excavation ordered for that purpose, donated to the Museum by the mayor of that place, Mr. van Riet. [2] [probably NBD 2, vRD 4a, vRD 2, vRD 3, ND 3, GtD 15a, k 1942/6.1, k 1925/1.1, NBD 1, k 1942/6.2, vRD 7, k 1925/1.2, ND 2, k 1942/6.3, ND 13, vRD 4b, vRD 5a, ND 4, GtD 13a, ND 8, k 1932/12.9, ND 10, ND 5, vRD 8, vRD 5b, ND 11, k 1942/6.4, GtD 14b]

[3] The urns appear not to date from the Roman period, but from many hundreds of years earlier.

March 18, 1840 [1] From Mr. S. H. van der Noordaa, in Dordrecht, two tuff mortars with pestles, excavated in the vicinity of Deurne in North Brabant;

[2] These objects were NOT found in the data of the more than 40,000 objects online.

June 29, 1840 [1] Municipality of Deurne Liessel.

There are no longer any mortuary urns available in Deurne. The Mayor would try to obtain more by excavation, which he would gladly release if successful. -

The District Commissioner / DD.

Wesselman.

[2] Below is the part of the answer that concerns Deurne and Liessel, but refers to Meijel. [3] 15 photos can be found on the Rijksmuseum website, such as this detail.

Naspeuringen van Paul Theelen: Constantinus Imperator

October 1, 1840 [1] The North Brabant Society already possesses urns from three pagan cemeteries, namely: those found in Deurne in 1837, in Genderen in 1839, and in Gemonde in 1849.

January 26, 1841 [1] From Mr. P. O. P. Guyot, in Nijmegen, a very important collection of bronze and other objects excavated near Deurne, in the province of North Brabant, most of which were assembled by Captain Baron van Voorst and given to Mr. Guyot. [2] The Museum has now been given possession of the most important and rarest pieces that came to light during the discovery in Deurne, and which, through various means, have finally been brought together again to form a whole that [...]

January 12, 1842 [1] From Mr. P. C. G. GUYOT, of Nijmegen, a number of ten urns, pots, and bowls, found in Deurne in North Brabant; [2] From Mr. S. H. van der Noordaa, of Dordrecht, three more small objects in urns found in Deurne.

January 20, 1843 [1] From Mr. S. H. VAN DER NOORDAA, we received another tuff mortar, found in the vicinity of Deurne.

January 1, 1844 [1] A remarkable piece was found in 1844 in a swamp in the Peel, not far from the hamlet of Maris, and is now in the Leiden Museum (Cat. ML, as well as Stark, vol. 1876 pp. 7-56; P 1881, 272-274; further HKN) It is a gilt silver medallion (fig. 149), over 21 cm in diameter, which depicts in fairly high relief a depiction of a man strangling a lion in the center, surrounded by animal fights, including two animals disputing a ox's head. Four holes have been drilled in the edge with chiseled frames, perhaps to affix the medallion to a shield; the nails with round heads are still visible in two of the holes. Based on the style of the figures, the piece is considered to be of Eastern European origin.

[2] Dr. H.C. Gallois pointed out to us that there are two discs in the Cabinet des Médailles in Paris, one of which is only fragmentarily preserved, that bear a strong resemblance to the example discussed here.

[3] See also 1922: Iranians and Greeks in South Russia

[4] The description of GL672 in the inventory book reads:

Silver (gilt). Round disc or shield, chased and engraved, in particularly high-profile work, depicting in the center a wrestler kneeling with his arms around the neck of a lion he has overpowered. Around it are two lions pouncing on a ram and two panthers approaching each other, with a cow's head between them. The entire image is surrounded by four borders or bands, two in the form of twisted cord, the third a wavy one, and the fourth or outermost one again of twisted cord. On the outer edge are four openings at equal distances, with the knobs in two of these openings, with which the disc was attached to some other object.

March 31, 1864 [1] Some Roman objects from the estate of the late Mr. S. H. VAN DER NOORDAA were also acquired, originating from former inhabitants of our country:

[2] a very beautifully polished flint axe, 12 dm long;

[3] a roughly worked trachyte ball, 4 dm in diameter;

[4] a baked earthenware urn, filled with burnt human bones, 19 dm high;

[5] another urn, 18 dm high, containing fragments of a bronze hair needle found inside;

[6, 7, 8] three more urns containing burnt bones and

[9] remains of bronze rings, etc. The urns, 10, 15.5, and 16 inches high; [10] two bowls, 9 and 7 dm.;

[11] four pots of various shapes, 6.5 to 9.5 dm. high;

[12] a cup-shaped vessel, 5.5 dm. high, and some fragments of pots.

[13] All these objects, with the possible exception of the WIGGE, were excavated in 1837 from the old cemetery in Deurne, North Brabant;

[14] a pair of trachyte stone mortars with pestles from the vicinity of Deurne and belonging to the estate of the late Mr. S. H. VAN DER NOORDAA, already mentioned several times; [15] They now form a considerable whole, together with the pieces

found at the same location, donated to the Museum in 1840 and 1841 by the late Mr. P. O. G. GUYOT.

March 10, 1890 [1] as well as the umbo or shield plate, embossed in silver and high relief (Bas Empire, = the period of the soldier emperors appointed by the army and often quickly dethroned or murdered).

[2] Both the Stone and Bronze Ages are amply represented, while the collection of

Germanic pottery, including many urns containing the ashes of our Germanic ancestors, may be considered among the richest. The Roman glassware and pottery, urns, etc., are also included.

April 14, 1929 [1] A very beautiful and remarkable piece is the gilded silver Roman helmet, found near Deurne in the Peel region. [2] Attention is also drawn to the large silver ornaments, which were sewn onto leather and formed part of a Roman horse harness. These pieces were fished out of the Rhine in this country.

August 25, 1937 [1] During reclamation work carried out under the supervision of the Dutch Heath Society on the territory of the vast Peel municipality of Deurne, a skeleton was recently discovered.

April 2, 2013 The following concerns the so-called "Ornamental Disc of Heroes," which can be found under inventory number GL 672 in the National Museum of Antiquities in Leiden. It is dated after 100 BC, material silver, diameter 21 cm, found in Helden. [1] Further description: This unique disc originates from Thrace (modern Bulgaria and Romania) and was used as jewelry. The disc is made of silver and then gilded.

[2] The following description from 1840 is NOT of the Helden ornamental disc:

I have heard that a farmer in Deurne Liessel is said to be in possession of an old Roman sword and a gold shield, which were supposedly dug up in the Peel. I have serious doubts, as I had never heard anything about it. I have also been assured by research that no one knows anything about it. This has probably been confused with what happened in the neighboring municipality of Meyel.

In 1807, a gold shield was found there.

A few years ago, while I was in Meyel, I went to the house of the then mayor Goossens to see this curiosity. He showed me a shield that had been found in the Peel in 1807, about five feet below the surface of the ground in the Peel during a peat excavation.

It was made of gold, or at least heavily gilded, embossed with hydroglyphs and other figures of lions, tigers, etc., and had the shape of a crescent, closely resembling a gorget such as the captains of the infantry wore on their chests not so long ago.

[3] In the chapter "THE SARMATIANS" of the book "Iranians and Greeks in South Russia" from 1922, we find several similar discs on PLATE XXVII. Surprisingly, the decorative disk of Helden is also included there with the description SILVER PLAQUE FROM RAERMOND (HOLLAND). Rijks Museum, Leiden. For a copy of the entire book, see: 1922: Iranians and Greeks in South Russia by M. Rostovtzeff.

p. 138 ff.: Finally, the same style and the same main ideas appear in certain finds from Germanic countries. I am thinking of the phalarae from Raermond in Holland (pl. XXVII, 3), with a frieze of animals and a figure of Hercules strangling a lion which presents the same peculiarities - beardlessness, local costume - as the Hercules or Panagürishte; and of the famous cauldron from Gundestrup. I agree with Salomon Reinach and Drexel in attributing these monuments to a peculiar branch of art which they call Irano-Celtic: [...]

[4] The decorative disc comes from the Guillon collection and was apparently also mentioned in 1876 by B. Stark.

[5] After years of correspondence, with only one subject: haggling, the object was purchased in 1890 by the National Museum of Antiquities for the then exorbitant price of 1550 guilders.

[6] A similar version of the disc in the shape of a crescent (lunula) also appears in the aforementioned book as figure 20.

April 2, 2013 The Peel helmet, also in the Museum of Antiquities, has the following description: This gilded silver cavalry helmet, a true masterpiece, was found in 1910 while cutting peat in a former swamp in the Peel region. It is, in fact, only the exterior of the helmet, which was originally constructed from an iron cap with a leather covering. The helmet was completely disassembled after its discovery and has therefore been thoroughly restored. The right cheek flap, which was lost, has been replaced. The parade helmet likely belonged to a high-ranking officer. According to an inscription on the helmet, he was part of the sixth cavalry unit, Stablesia, a unit also known from ancient literature. A second inscription gives the name of the maker and the original weight of the silver plates. Remains of clothing and

equipment, as well as several coins, were found near the helmet. These indicate that the equipment likely ended up in the peat around 319 AD. We do not know exactly how the items ended up in the bog. Perhaps the owner drowned, or it was an offering to the gods. Inventory number k 1911/4.1-5, dated 319-323, location Deurne, dimensions height 28.5 cm, 359.9 grams

[1] It should be noted that the sixth division of the cavalry unit on the helmet is not found in ancient literature, but the first and second are.

[2] An important aspect is the following:

Such delicate objects could not have survived the ravages of time without the best protection against the elements, robbers, etc. If you "hide" them, you have a specific purpose for them. A Roman killed in a swamp is extremely unlikely. After all, if a prominent Roman officer had been killed, the relatives and soldiers would have searched for the missing person. They knew that the missing person had valuable items that they would want returned. They would not have simply found and taken away the body, naked. A robbery by others is also impossible, because then all valuables would have been taken, which is also the goal of robbers, isn't it? It's a shame I can't verify the story about the burned hooves, because I don't know whose, where, or when. Because that would point to a horse, but why weren't any bones of the horse found?

The conclusions can only be these:

A very high-ranking Roman official, apparently in the vicinity, felt it necessary to hide or conceal his entire military uniform as a gift to the gods. Around 320, Christianization also began here; perhaps that was the reason for renouncing the old (pagan) war implements and exchanging them for a Christian life and appropriate clothing. Or perhaps the officer retired and couldn't pass on the clothes that belonged to his rank to an equally high-ranking successor?

Or is the person deceased, and are the relatives unwilling, unable, or permitted to wear the artifacts themselves?

My suspicion is that the person was indeed very prominent. This suggests he was likely stationed in Trier, as that was the center of government at the time. But it's clear that many settlements, both military and civilian, were already located along the Meuse at the time. I estimate the distance to be a maximum of 20 km. There weren't many other safe hiding places nearby, as we can assume there was no real habitation within a radius of 5 or 10 km from the site, not even later.

What can we conclude from this? The complete equipment (of officer, horse, and very likely also servant) was deliberately buried in a very desolate area. They likely knew that the peat plants would continue to grow over it and that the ground disturbance would disappear within a very short time. They may also have thought that the objects were protected from weathering there, which has proven to be only partially true. If the objects were temporarily buried, the owner would not have had the opportunity to excavate them.

April 2, 2013 The description of the Stevensweert kantharos, located in the Valkhof Museum in Nijmegen: Stevensweert, late 1st century BC - mid-1st century AD, silver, partly gilded, h. 10.5 cm

Kantharos is the Greek name for a chalice-shaped drinking vessel with two large handles. The latter are missing from this silver example, which was found in 1943 or shortly before during gravel extraction along the Meuse River, north of Stevensweert. The lavish decoration on this vessel is entirely dedicated to the god of wine, Bacchus, who is often depicted holding a kantharos.

The foot and rim of the vessel are decorated with stylized floral and leaf motifs. The decoration between them is divided into two zones and extruded from the inside into the silver, to such an extent that the leaves of the ivy and vine tendrils at the bottom sometimes almost seem to detach from the wall. Both plants are dedicated to Bacchus and recur in numerous depictions of the god.

In the zone above, we see the heads of mythological figures, interspersed with various objects. Of the original six heads, two have been lost. The entire frieze depicts the world of the wine god, but various ideas have developed regarding the precise identification of the heads.

The characteristic head of the forest god Pan is unmistakable on one side of the cup, next to that of a bearded man wearing a headscarf, most likely Bacchus himself. The missing head on the right must have been that of Hercules, accompanied by his club, bow, and quiver. Pan and Hercules are often seen in the company of Bacchus, as are the two Bacchantes (female followers of Bacchus) on the other side, each with a wreath of ivy leaves around their heads. The head between them is missing, except for

- 116175 a few remnants of a wild mane of hair, presumably that of a satyr, also a faithful companion of the wine god.
Between the heads, we see various musical instruments, representing the festive frenzy to which everyone is surrendering, and decorated sticks and tree branches that the depicted figures often hold in other scenes.
- 116180 The cup was probably made in the eastern Mediterranean. A Roman owner took it north, where, now deprived of its ears, it ended up in the Meuse River. A turbulent history followed its discovery: in the 1950s, the "Stevensweert Kantharos" was at the center of a sensational lawsuit between buyer and seller. Since 1961, the cup has been a museum piece of exceptional quality and significance in Nijmegen.
- 116185 Many parallels can be drawn between the discovery of the Peel helmet and the (re)discovery of the kantharos.
Initially, the discovery was always about the money for the find. Later, it turned out that the object was much more valuable, and the original finders/owners protested, feeling wronged. This applied to the people of Smolen, but also to the owners of the kantharos.
- 116190 Both (helmet and drinking cup) are likely considerably older (one or two centuries) than the other objects related to a man and horse. They were therefore well cared for during their lifetime and passed on or sold. The latter is the case with the kantharos, as a name has been crossed out. Both also have a weight indication (of the silver), which indicates that the object was already recognized as extremely valuable at the time.
Evelein and Brom, along with their researchers, made (scientific) claims that later proved untenable. For example, the abbreviation of the name on the helmet was changed, but is the latter interpretation the correct one? A supposed poem on the kantharos later became a Greek weight indication.
Both beautifully crafted silver objects are extremely rare.
Perhaps less so at the time, as the necessary specimens were likely melted down. The acquisition by museums, especially the eagerness with which they were acquired, is also remarkable. But after that, curiosity faded. One explanation must be that the scientific officials were not the discoverers, so they could not really take credit for themselves.

Documents and newspaper articles relating to the ornamental disc, etc.

- 116210 April 5, 1803 TO THE CIVIEL Bailiff: [...] Jan Willem van de Mortel, for Deurne; Carel Frederik Wesselman Jr., for Mierlo; [...]
- circa 1805: Tranchot map of the Peel region
[Thanks to Huub Kluijtmans! The map includes some modern roads and canals.]
- 116215 August 25, 1807 On the Burial of the Dead by the Ancients.

September 12, 1813 Municipalities of Deurne and Liessel.
1st Lot. Art. 25. The 1/4 of the following tithes, 1st. large Klamp tithe of Peelklamp, 1st, 2nd, and 3rd parts, 2nd large Klap tithe of Middelklamp, 1st, 2nd, and 3rd parts, 3rd large Kamp tithe of Heijklamp, 1st, 2nd, and 3rd parts, and 4th Klamp tithe of Dongen, originate from the Teutonic Order; (half of these tithes belong to various private individuals) a 1/4 to the Latin school of Gemert and a 1/4 to the government. The 1/4 belonging to the domains is estimated at a revenue of 924 francs 78 c. and a capital of 23,119 francs 50 c.
- 116225 2nd Lot. Art. 26. Half of the Klamptiend from the Moesdijk, originating as above, (half of this tithe belongs to Mr. Berenstein, in Vugt), the share belonging to the government; is estimated at a revenue of 267 francs 90 cents on a capital of 6697 francs 50 cents.
- 116230 3rd Lot. Art. 27. The Klamp tithe of Lijssel and 1/4 of the tithes of the hamlet of den Grooten Bottel and Valkenakker, originating from the Teutonic Order, (the 3/4 of the tithes of the hamlet of den Grooten Bottel and Valkenakker belong to the amortization fund; the share belonging to the domain is estimated at a revenue of 377 francs 96 cents and a capital of 9449 francs 0 cents.)
- 116235 February 4, 1837 Deurne, February 3, 1837.
To the Editors of the Noord-Brabander.
For eight days now, the municipality of Deurne has provided proof that this region also contains treasures in terms of antiquity and history, which can easily be compared to other parts of our country. The attention of our Dutch scholars is
- 116240

therefore drawn to the following: which may provide them with the opportunity will be established, not only to expand their collections of antiquities with important articles, but also to contribute significantly to history.

Begun by the official corps of Regt. Huss. No. 6 and continued by private individuals hoping to find treasures, work is underway here to unearth a camp or army, or even a cemetery; likely originating from a tribe driven out of the Ardennes by the Romans and hidden here, behind the marshlands of the Peel. Several urns or pots of various sizes, all filled with the ashes of burned bodies and small bones, have already been excavated; while in some, fragments of metal and parts of weapons have been found.

These pots are covered by mounds of varying height, which, like the pots themselves, have certainly increased in size and height in proportion to the prestige and rank afforded by the person buried there. The pot is almost like a globe, slightly inclined towards the top. The lower end tapers ovally, while the upper end has a slanting rim, which will have approximately the same circumference as the pot itself.

The lid, which is very small in proportion to the pot, closes well and appears to be tightly covered. The largest pots will have a diameter of 3 palms, while the smallest will barely reach 1 to 1.5, and the mounds will also vary by almost a yard, as some are nearly 2 feet high, while others are more than five feet high. The pots are made of potting clay (which is also found here) and demonstrate that they had already advanced the art of turning to a considerable extent.

P.
[elsewhere:] - The attention of our national scholars and antiquarians is called to this discovery, which may be useful for adding to their collections or for elucidating history.

May 4, 1837 NETHERLANDS.

- In the latest issue of the Nederlandsch Magazijn (Dutch Magazine), one finds an article about the recently unearthed urns in North Brabant. It mainly concerns the recent publication of several of our daily newspapers reporting the excavation of antiquities in the municipality of Deurne, province of North Brabant. The editors of the aforementioned magazine have now received some details regarding the excavation, primarily as follows: A captain in the Hussar Regiment No. 6. On an earlier occasion, having discovered that some mounds on the Kempen heathland, upon excavation, turned out to be burial mounds and contained urns or ash jars, the idea arose that some similar mounds, present on the heath near Deurne, his current cantonment, might have served similar purposes and contained antiquities. With the permission of the mayor there, after excavation work was carried out, five urns or ash jars were found, which increased with subsequent excavations and now number more than fifty. It is unfortunate that the farmers, hearing of this, also began digging on their own side,

hoping to find treasures, smashing or damaging the urns they unearthed. Great was the disappointment of these people when they found nothing but ash and a few half-decayed, apparently human bones, such as skulls, ribs, thighbones, etc. Not a single penny or coin was unearthed; only a small piece of metal, which one assumes to be the mouthpiece of a wind instrument. The urns found are of various sizes, but all of more or less the same shape, and some have lids. The heathland in which the urns were found is about four acres in size; the mounds are fairly regular, but the entire area appears to have served as a burial ground, as urns have also been found outside the mounds and at some distance from them. The urns are usually covered with a layer of charcoal; after all, as soon as one finds this, one is certain to be near an urn.

Some are so high that the fibrous roots of common heather can be found above the ash; others have been found deeper, but at uneven depths. The material from which these pots or urns are composed is smooth, solid, and dark brown in color; no glaze is visible on them, nor any inscription or inscription. If they were made in Deurne, where two potteries are still found, then one must admit that this art has made no progress there in 10 or 15 centuries; for these urns are worked more precisely and smoothly and with more care than is currently the case. Excavations are still continuing in some places, but, as mentioned, nothing is found in the urns except ash and the aforementioned human bones.

June 3, 1837 HAARLEM, February 30

A report has been received from the municipality of Deurne (North Brabant) concerning the discovery of a camp or cemetery near that location. It is believed to originate from an ancient tribe, driven from the Ardennes by the Romans, who sought refuge there, behind the marshlands of the Peel. The first discovery of this military or burial ground was made by officers of the Hussar Regiment No. 6, stationed in the area, and since then, excavations have continued by private individuals in the hope

of finding treasure. Among the finds thus far are several urns or pots of various sizes, all filled with the ashes of cremated bodies and small bones; in some of these pots, it is reported, pieces of metal and fragments of weapons have been found. The
116310
aforementioned pots are covered by mounds of varying height, which, like the pots themselves, have likely increased in size and height according to the appearance and rank of the person buried there. The pots are made of clay and are well-turned; the largest have a diameter of 3, the smallest just over 1 palm. Some mounds are almost 2 feet high, others more than 5 feet.

116315
October 3, 1837 PUBLIC AUCTION at the Country Estate STIL GENOEGEN, on the Hoorn, near the city of Delft.
It is planned to publicly sell at the aforementioned location on Monday, October 9, 1837, and the following days, daily from 10:00 a.m. until 2:00 p.m.: A neat and clean
116320
FURNITURE, consisting of some gold and silverware, such as: gold rings, silver spoons and forks, a tea caddy, presentation tins, a gorget, a silver-hilted sword, and more; [...]

116325
June 24, 1838 Obituary of Maximilien Jacques de Man, director of the archives of war and the topographical bureau

April 23, 1839 MUSEUM OF ANTIQUITIES IN LEIJDEN
[...] The collection of Germanic and Nordic antiquities has once again increased in wealth and diversity, especially in the past year.
116330
By favorable arrangement with the Department of Internal Affairs, a number of urns were sent to us, which had recently been discovered in Deurne, North Brabant; and the number was further increased by the proceeds of a specially ordered excavation, donated to the Museum by the mayor of that town, Mr. van Riet.

116335
September 19, 1839 – Mr. C. R. HERMANS, has in the Provinciaal Dagblad of this region published the following report regarding the discovery of corpse urns in St. Michielgestel. "For some time now, I have been aware that corpse urns had been dug up from time to time in Gemonde, municipality of St. Michiel-Gestel. On the 10th of this
116340
month, I went to personally verify the truth. I found a field on the Dommel River, higher than the adjacent lands, about 14 loops in size, called the Dommelakker (Dommel Field), belonging to the owner of the large Wielsche Hoeve farm. Near this field lies a "Heilig Weiike" (Holy Meadow), bordered on two sides by the Dommel River and on the third by a deep, unfathomable wheel. Before the sale on April 7, 1803, this farm and its estate belonged to the estate of the Lord of St. Michiel-Gestel.
116345
Gemonde itself is now a parish, but not a municipality, and partly belongs to the municipalities of St. Michiel-Gestel, Boxtel, and Schijndel. The old church of Gemonde, which was replaced by a new one in 1824, bore all the evidence of ancient foundation; it has even been said that it was once a Roman fortress. All these circumstances lead us to suspect that Gemonde was a sacred place for the preaching of
116350
Christianity, and that this Dommelakker and this holy meadow referred to the religious institutions of our fathers during the pagan era; this is further confirmed by the so-called St. Martin's tax, formerly paid by the residents of this farm, and by the tax measure (a remnant of a funeral meal of the pagans). The farmers told me that around Candlemas Day of this year, they had dug out a pot containing bones, ash, and sand; but that it, being very brittle, shattered, so they buried it again. I was
116355
further informed that five more similar urns had been dug up a few years ago. I would have loved to have them work to retrieve the remaining urns, which are undoubtedly still in the ground, but this was impossible because this Dommelakker has been cultivated since time immemorial, and as a result, it has been piled up with topsoil
116360
to a height of about three feet. Since the farmers are unable to clear the field of sand, I have agreed that any urns found will be given to me for a reasonable fee. In the papers and documents belonging to the farm, I found nothing that sheds further light on the former use of the Dommelakker and the holy meadow, but one piece concerning the St. Martin's tax and the tax meal, which we mentioned above, is so
116365
important for the history of pagan theology that we believe we are rendering a real service to all antiquarians by including it in its entirety in our Historical Miscellany on North Brabant. All our scholars who have written about indigenous antiquities note that no province is so rich in ancient remains or traces of prehistory as North Brabant, and then accuse us of shamefully neglecting them. May we
116370
soon be able to refute this accusation! I therefore dare invite every resident of North Brabant to share with me any details that strike them as odd, or anything of significance they find. I especially invite the Mayors and Secretaries of the

municipalities, to whom I will gratefully return any just reward given to the owners or discoverers of coins, funeral urns, stone battle axes, etc., etc. while I offer double the true value for every Roman silver or gold coin found in North Brabant."

September 24, 1839 Burial Urns, a minor human doctor, philanthropist, rector, and the Holy Week in Gemonde.

It was the first days of September. – I wanted to breathe the fresh air; I went out and, without knowing where to, I carelessly followed the bends of the Dommel: very surprised when I saw myself far from the city and in the vicinity of the parish of Gemonde (not the municipality, clumsy reader:). The harvest activities made the Dommel field lively and they drew my attention. – Suddenly I saw the parishioners saying goodbye to their duties and surrounding a person unknown to me, but whom I took for a townsman by his dress. Curiosity made me approach the spot– The unknown The gentleman stood with his back to me; I was not allowed to look at his face: he was engaged in lively conversation. The farmers stood gaping and astonished, listening to him. – I listened with rapt attention, and I could hear the following words:

The Unknown. For some time now, I have learned that in Gemonde, in the municipality of St. Michiels-Gestel, people had been excavating urns from time to time. Today I come to convince myself of the truth in person:

This is an important discovery for archaeology and antiquarian booksellers, and it is my sacred duty to make it known; science is advancing, and I, I strive for immortality; I want to make the discovery of mortuary urns known everywhere: I know how to put my ideas on paper well and easily in Latin and Dutch.
A farmer. Was that gentleman?

Another. He speaks Latin just like the townspeople in Gestel.

A third. Sir, you mustn't take it amiss, but a farmer can't speak Latin in our country.

The unknown. My good friends, I don't speak Latin, but I only mentioned the word Latin. – I wanted to ask you if you have unearthed mortuary urns here?

The farmer. No, sir, they aren't here in the town. The Unknown. Gemonde is not a municipality, my dear friend; it's a parish and partly belongs to the municipalities of St. Michiels-Gestel, Bostel, and Schijndel. – But understand me, Burial urns are vases, in other words, a kind of pot in which our ancestors, centuries ago, preserved the ashes and also the bones of their relatives or friends after death – haven't you found such burial pots here?

The Farmer. No, sir, they bury the dead here in pebbles in the churchyard.

The Unknown. My dear friend, you don't understand me. Have you also found one or more pots with spades here in the country?

The Farmer. I don't know.

Another. Perhaps that gentleman of that pot from Peer, which we broke at his hillsides during the holy week, pricks it.

A third. When he still wanted compensation for the pot and the soup and the bones that were in it, the Unknown Man, who, in his satisfaction at having succeeded in his field discovery, seems not to have understood the last words properly. Were there any bones in that urn, vase, or pot?

De Boer. Yes, sir, but it's been finished a long time ago–Peer wanted to have a report drawn up then; then they finished the law! Could they do anything for us now?

De Unknown. It would certainly have been prudent to have such a remarkable excavation confirmed by a report; then we could have known a few things for sure about it.

De Boer. Sir, it's certainly an avocado or one of the gentlemen from Den Bosch; but it's all finished and out of the world.

De Unknown. That grieves me... (thinking) Meanwhile, we try to hear what that urn was like. – Dear friend, what did that Burial Urn look like?

De Boer. As long as you don't report it, sir.

The Unknown. Well, no—you did nothing reprehensible–You were not familiar with scientific antiquity, and therefore one cannot blame you for not having spared the important relic of the past centuries. But, tell me, I pray you, what was that broken pot like?

De Boer. Why do you say sowed! ... It was a pot with two ears–sun-brown pot, yellow

inside, exactly a p... pot...

116440 The Unknown in ecstasy, without paying attention to the Boer's words. Two ears! That's Roman! No more doubt! Oh, holy zeal! – Thank my inclination for the study, which constitutes my greatest happiness on earth! Two ears! Yes! That is Roman! – When you again find corpse urns or stone battle axes, come to me! (More and more enraptured.) To you be prosperity, fortune! To me immortality! immortality! For
116445 Heaven's sake, bring me the remains of antiquity you might find! Save them from destruction! Oh! I pray you, let nothing be lost! No longer in control of himself, he stepped back a few paces, full of rapture and gestures, and, like someone well-versed in the rules of outward eloquence, adopted the tone of the pulpit speech: "All our scholars," he says solemnly, "who have written about indigenous antiquities
116450 note that no province is so rich in ancient remains or traces of prehistory as North Brabant, and then accuse us of shamefully neglecting them. May we soon disprove this accusation! I dare, therefore, invite every resident of North Brabant to send me any details that strike them as strange, or anything of any significance that may be found. I especially invite the Mayors and Secretaries of the municipalities to do so,
116455 to whom I gratefully offer every reasonable reward to the owners or finders of coins. "I will return any given urns, stone battle axes, etc., etc., while for every Roman, silver, or gold penny found in North Brabant, I offer double its true value."

116460 And suddenly: now I'm throwing my discovery into our historical miscellany on North Brabant and into all the annals of science. – And, they held him back, they asked him where the pots were supposed to be taken for so much money... but he hurried on: only the words "I, litterarum humaniorum doctor, philosophiae magister et rector" reached my ears.

116465 The rapid pace of the exuberant antiquarian prevented me from engaging in conversation: I wanted to point out to him that, in his ecstasy, he had mistaken Peer's broken pot for a Roman mortuary urn and the bones of his soup for the bones of our ancestors.

116470 The farmers were stunned—and I laughed. I returned to town and repeatedly heard the words "mortuary urns" and "stone battle axes" echoing in the air.

A few days after this incident, I read in the Provincial Dagblad of September 17th that C. R. HERMANS (?) had discovered the excavation of mortuary urns in Gemonde. B. M.

116475 September 26, 1839 I read in the Provincial Dagblad of North Brabant, of the 17th of this month, No. 75, an article about mortuary urns discovered at St. Michiels Gestel. The announcement of this discovery and the specific designation of the location may have been useful and deserved to be briefly noted in such notebooks as those intended
116480 to collect all the circumstances and details that can contribute to the knowledge of our region. However, the discovery does not seem to me so important, and certainly not so new, that it could provoke a cry of joy from the antiquarian and antiquity lover that would resound throughout the entire Province. If this were the first
116485 discovery of such a nature in the designated location, I would applaud the author's enthusiasm, and I would find it very appropriate that the public's attention be drawn to this event, in order to stimulate research. However, I must point out to the author that the fuss he is making about his discovery exposes him to the suspicion that he is not entirely familiar with the condition of our land and the excavations
116490 carried out therein, especially when I hear him say that the details he observed lead him to suspect that Gemonde was a holy place before the preaching of Christianity, etc. Indeed, it is already more than enough known, and it is found here and there in various writings, that St. Michiels Gestel and surrounding lands apparently served as a residence or settlement for the Romans; thus, it is not a mere conjecture born from the author's observations, but a matter of common knowledge. There are ample
116495 indications that the old church of Gemonde existed long before Christianity, and there are too many remains to doubt that point.

But besides the fact that the discovery doesn't seem so significant to me that it should be declared a miracle by an expert, the excavation has, in my opinion, not been sufficiently proven or clarified by the author's investigations. I find nothing
116500 to guarantee that mortuary urns were actually found there: the only thing the author tells us is that the farmers found a single pot containing bones, ash, and sand, and that five more such urns have been excavated in the past few years. Such urns. Which urns? The author doesn't tell us, and according to what we've been told, the find could just as easily have been a forgotten hare's nest as a Roman mortuary urn. What

116505 was most important to know here—namely, the shape of the pot, the manner of its
closure, the color of the earth or other composition, the depth at which the pot was
found, etc.—seems not to have been investigated by the author, and he immediately
assumes, based on this, that they were urns, because he states that five similar urns
116510 have been found, and also that these urns are mortuary urns, as appears from the
article's title. From what the author tells us, it has not been proven at all to me
that these pots are urns, nor that they are mortuary urns. I accept this all the less
readily because the farmers' statement that they found bones, ash, and sand in them
seems highly suspicious to me, firstly because ash and sand or earth are not
116515 immediately distinguishable, especially by untrained farmers who certainly examined
the object with little care and attention; And secondly, because the discovery of
bones in a mortuary urn is unusual, at least all the circumstances relating to the
pole and the bones would have to be meticulously documented to have any value in the
eyes of science; for it is known that the urns used to store the ashes of cremated
corpses, the actual mortuary urns, which must be distinguished from the urns or
116520 rather vases used to decorate burial vaults, were usually conical at the top and had
only a narrow opening, so that it would not have been possible to place bones in
them. The storage of bones in a pot may certainly have occurred, but there is more to
it than what the author has learned to believe it to be true.

116525 that the pot with bones is a Roman urn, and indeed a mortuary urn. — When one
observes facts to include them as contributions to history, and wishes the
description to serve to save those facts from oblivion and pass them on to posterity,
then one should first and foremost be clear and detailed in one's account. Failing
that, it is better to remain silent until further research, further experience, and
116530 further clarification, and not to present oneself to the public with unfinished work;
But secondly, one must proceed cautiously and judiciously in deducing these facts, so
as not to allow daring assertions and conjectures to gain ground and introduce
misunderstandings into historical works. It is in the nature of things that antiquity
gradually adds weight to the judgments of writers, and that over time, their
116535 deductions are accepted as truths, and often, for lack of anything better, must be
accepted as such.

The author of the aforementioned article, please accept these observations; in my
opinion, it contains nothing remarkable regarding the excavation described, at least
nothing sufficiently clarified to be useful for our history. The conclusions are too
116540 daring not to be dangerous and therefore detrimental to the purity and sincerity that
should characterize all history. I feel compelled to make these observations all the
sooner, as it appears from the article that the author, whom I do not have the honor
of knowing—for that matter, it is not given to every scholar to have a European name—
is also working on a historical miscellany on North Brabant, and it seems to me of
116545 the utmost importance that he refrain from presenting facts and conclusions so
hastily in that work.

A second piece of advice I offer the author is this: that his writings should not
appear to serve his own ambition rather than as a monument to history. The elaborate
description of his observation (which actually boils down to nothing more than the
116550 report that some farmers told him they had found a pot containing bones, ash, and
sand on the Dommelakker, next to the Holy Meadow in Gemonde) and the proclamation of
his fervent zeal for antiquity in our province, such that he calls upon all North
Brabant residents to search, dig, and excavate with the promise of rewarding the
fruits of their research, thus placing his money at a premium and displaying
116555 selflessness and sacrifice, are very well-suited to lead readers to believe that the
author supposedly performed a significant service through his observation and the
communication thereof, and played a leading role in the development of the history of
our province.

116560 v. v. v.

March 14, 1840 MUSEUM OF ANTIQUITIES IN LEIJDEN. [...] From Mr. S. H. van der
Noordaa, of Dordrecht, two tuff mortars with pestles, excavated near Deurne in North
Brabant; these are the only objects of this kind in the Museum's possession, and
116565 which, as far as we know, have not yet been found elsewhere. The proximity of the
extensive burial grounds there, discovered in the heathland a few years ago, lends
considerable credibility to the suspicion that both these mortars and the urns, which
are found in such large numbers in that area, belong to the same people, and thus
provide a crucial contribution to the knowledge of the domestic life of the ancient
116570 Germanic peoples, of whose household goods, except in Northern Europe, relatively

little remains.

April 17, 1840 [Special Correspondence]

No. 2 's-Hertogenbosch April 17, 1840

Department of Arts and Sciences

Special Correspondence

I have been given some questions which UWEG may be able to answer, and for which I have the honor to enlist its good offices. These questions are as follows:

Municipality of Asten

1. On the borders of this municipality, towards the village of Meyel, lies a Willebrordswell; how did this well get its name?

2. Was the well built with baked or live stone?

3. Is there a chapel dedicated to Saint Willebrord located nearby?

4. What miraculous or healing powers are attributed to the water from this well, and to which ailments is this water used?

Municipality of Bakel

1. According to Verhees's map, the Kampsche stream originates at the Enschyde or bad well; why is this well so named?

2. Was the well built with baked or live stone?

3. What strange power is attributed to the water of this bad well?

Municipality of Aarle-Rixtel

1. On Verhees's map, a ?? well appears, not far from the small river.

Aan Den Heere District Commissioner of the 3rd District, 1st Section.

Bakelsche Aa, is this a brick well or merely a spring?

2. What folklore is circulating that might reveal the origin of this name?

3. Is any strange power attributed to the water of this wolf well?

4. Who currently owns the Guldenhuis (Golden House), and why is the building called that? Is it, or was it formerly, a castle?

5. Are there still popular traditions concerning the Templars and the Knights of Maltha, who lived in Rixtel?

Municipality of Helmond

Within that municipality, there is a carillon, and for the history of bell foundries and music, it is considered important to know:

1. When was it first erected?

2. Who built it, and at whose expense did this happen? 3. How many bells does it consist of?

4. Which parts of the hour are announced by the chimes, besides the clockwork?

5. Is it also played, and if so, on which days of the week?

6. Who pays the chimes, and how much is their salary?

7. Does the chimes have any artistic value, or is they in a dilapidated state?

Municipality of Deurne and Liessel

According to reports, a farmer there named Mortel owns a Roman sword and a gold shield, which were allegedly excavated in the Peel region.

1. Is this actually the case, and if so, when and where did he find the sword and shield?

2. Would there be an opportunity to purchase them for the collection of antiques and curiosities of the Provincial Society of Arts and Sciences?

3. If so, at what price?

4. If the owner is unable to agree to the sale, would he be willing to hand over these objects, against proof, for assessment and signature?

5. Is there an opportunity to purchase any of the recently discovered mortuary urns or other curiosities excavated there?

6. What is the name of the place where these urns were excavated?

Relying on the goodwill of UWEG, I would be pleased to see these questions resolved as precisely as possible.

UWEG, please accept the assurance and my highest consideration and distinction.

BV?denteegen [?]

May 12, 1840 [letter to the Mayor of Deurne]

Mayor of Deurne Liessel Helmond, May 12, 1840

The Governor of this province (probably requested to do so by the board of the Society for the Promotion of Sciences and Arts in North Brabant) has given me a large number of questions to answer regarding antiquities in my District.

116640 These questions, insofar as they concern the municipality of Deurne Liessel, are as follows:

According to a reported report, a farmer named Mortel allegedly possesses a Roman sword and a gold shield, which were allegedly excavated in the Peel.

116645 1. Is this really the case? And if so, when and where were the sword and shield found?

2. Would it be possible to purchase it for the collection of antiques and rarities of the provincial society of arts and water boards?

3. If so, at what price?

116650 4. If the owner is unable to decide to sell, would they be willing to hand over the objects for appraisal and signature, against proof?

5. Is it possible to purchase any of the recently discovered mortuary urns or other curiosities excavated there?

6. What is the name of the place where these urns were excavated?

A somewhat prompt answer to these questions would be appreciated.

116655 D. Distr.

June 29, 1840. Registration of the land registry; some are scattered in many books at home, forgotten little notes, confusion; this could be prevented if the law of the parcel-by-parcel register were cited in the conveyance. -

June 29, 1840 Provincial Board RANB 17 inv. no. 12419 no. 1
Missive of April 17, 111, no. 8. / Reply to the letter from
Department of Arts and Sciences / April 17, 111, no. 8.

116665 Helmond, June 29, 1840.

[To the Governor]

In the aforementioned letter, UWEG [=You] has given me some questions to answer regarding ancient monuments that are said to be located in some municipalities of my district. I could have answered some of these questions immediately, [but] to obtain
116670 information, I took advantage of my travels, as when the council members are in session, I believed I could be better informed. I will observe the order as it appears in your letter.

Municipality of Asten

116675 [1] Some council members had heard of the St. Willebrordsput, but no one could tell me where it might have been. It is certain that it no longer exists within living memory. It is located just on or near the boundary between Deurne, Liessel, and Meyel.

116680 There is a stone post still known by the name of Wilbertsput. If a well existed near that post, it must have been in the municipality of Meyel. Nothing else was known about it.

To His Eminence the State Councillor Governor of the Province of North Brabant

116685 [2] People have heard of a St. Willebrord well, and this name is still very well known here, but no one knows of a well there. There is a stone post bearing the name of Wilbertsput, just on or near the boundary between Deurne and Meyel. If there was a well, it must have been in the Meyel municipality. Nothing else was known about it. -

Municipality of Bakel.

116690 [1] The name "boorput" was not unknown to most members of the council, but they were unable to pinpoint the exact location. An old man of about eighty had heard from his ancestors that the "boorte put" (bad well) was a small depression, pond, or hole in the upper part of the Peel, about the size of two Dutch rods, located in the upper part of the Peel towards Venrooy, behind an area known as "de Putten" (the wells). In his youth, shepherds were accustomed to watering their sheep there during severe
116695 droughts. In this region of the Meyery, the term "putten" (wells) often refers to depressions or holes in the heathland or heathland, without referring to brick wells. It is almost certain that no brick well has ever existed in the Peel.

116700 [2] Some members of the council had heard of the "boorte put," but no one knew where it was located. A member remembered that a small pond, depression, or hollow in the heath, about the size of two Dutch rods, located in the Peel behind the so-called wells, bears the name of a well or bad well. It is therefore certain that no brick well has existed there, and probably never has, to human memory.

Municipality of Aarle-Rixtel.

- 116705 [1] Wolfspuit is a hamlet or rather small hamlet below Aarle, located on the borders of Bakel, next to the Schipstal estate. According to an old tradition, a wolf is said to have once jumped into the well here and killed it, from which its name derives. The owner of the Guldenhuis is Albert Bots of Helmond. The walls, higher than those
- 116710 of an ordinary house, seem to indicate that in earlier years it must have been a kind of small castle. Near the demolished church of Rixtel stands a farm, which originated in the Knights Templar and was subsequently owned by the Knights of Maltha until the revolution of 1795. No knight of this family ever lived in Rixtel. This farm was sold to a farmer by the estate board in 1818.
- 116715 [2] Wolfspuit is a hamlet located below Aarle, on the borders of Bakel. It consists of four houses. According to tradition, a wolf was supposedly captured in a well here, from which its name derives. -
- 116720 Guldenhuis belongs to Albertus Bots; a cotton mill he established there is now in disrepair. The house, although known as Rixtel Castle, is somewhat higher than an ordinary house and formerly served as a residence for the Lords of Rixtel, once a very important lordship. The Knights of Malta only know that they legally owned a farm here, which later became part of the estate and was sold to a farmer in 1808.

Municipality of Helmond.

- 116725 There was a miserable carillon of eleven bells in Helmond, which was recently replaced by another. The bells of the previous carillon were acquired in exchange by bell founder Fritsen in Aarle. I have not been able to discover when the previous carillon was installed, but it must have been very old. The bells bore no markings whatsoever, neither of their maker nor of the year in which they were cast.

- 116730 Municipality of Deurne Liessel. I very much doubt the report that a farmer in Deurne-Liessel was in possession of an old Roman sword and a gold shield, which had supposedly been dug up in the Peel, as I had never heard anything about it. Research also assured me that no one knows anything about it. This was probably confused with what happened in the neighboring municipality of Meyel. In 1807, a gold shield was found there. A few years ago, while in Meyel, I went to the house of the then mayor, Goossens, to see this curiosity. He showed me a shield which had been found in the Peel in the year 1807, about five feet below the surface of the ground in the Peel during a peat excavation. It was made of gold or at least heavily gilded work, and on it were hammered hydroglyphs and other figures of lions, tigers, etc., and had the shape of a half-moon, very similar to to a gorget like the kind worn by infantry captains not so long ago on their breasts. Mr. van Keverberg, then deputy prefect in Cleef, had taken this piece with him to Paris and, according to the Mayor, offered a lot of money for it after his return, but they could not agree on the price. -
- 116740 There are no longer any burial urns available in Deurne. The Mayor would try to find some by digging, which he would gladly relinquish if successful. -
- 116745 The District Commissioner / DD. Wesselman.

- 116750 October 1, 1840 [...] Thus, the North Brabant Society already possesses urns from three pagan cemeteries: those found in Deurne in 1837, in Genderen in 1839, and in Gemonde in 1849. [...]

January 26, 1841 MUSEUM OF ANTIQUITIES IN LEYDEN.

- 116755 [...] In the department of Germanic and Nordic antiquities, belonging to Major General Rottiers, to whose zeal and care the Museum owes its possession of so many Greek works of art, a bronze statuette of a god, found near Aachen. A most important collection of bronzes and other objects, belonging to Mr. P. O. P. Guyot, in Nijmegen, was discovered near Deurne, in the province of North Brabant,
- 116760 most of which had been assembled by Captain Baron van Voorst and bequeathed to Mr. Guyot. This significant acquisition, combined with the urns and other objects we mentioned in our previous reports (Staats-Courant 1838 and 1839), now provides the Museum with the most important and rare pieces unearthed during the discovery in Deurne. These, finally reunited through various means, form a whole that can make an
- 116765 unexpected and significant contribution to the knowledge of one of the ancient tribes that formerly inhabited our country. In the Konst- en Letterbode 1838, May, pages 379-395, most of the objects were described by the Curator, Dr. Janssen. [...] The important archaeological discoveries made near Nijmegen during the practical

- 116770 exercises of the corps of miners and sappers will soon also provide a new treasure trove for the Museum's department of ROMAN antiquities. [...]
- 116775 January 12, 1842 [...] From Mr. P. C. G. GUYOT, of Nijmegen, another set of ten urns, pots, and bowls, found in Deurne in North Brabant; along with seven others, probably originating from the area around the Hunnebedden in Drenthe.
- 116780 From Mr. S. H. van der Noordaa, of Dordrecht, another set of three small objects in urns found in Deurne. [...]
- 116785 February 25, 1842 M. P. O. P. Guyot in Nymègue, a very remarkable collection of bronzes and other objects found near Deurne in Septentrional Brabant, which, for the purpose of collecting, was assembled by Mr. Captain Baron Van Vorst, who left them to Mr. Guyot. This important acquisition joint with urns and other objects was completed in 1838 and 1839, with the Museum and possession of the principals and the additional rare results of the fouille près de Deurne. After all, the preparations for
- 116790 maintenant reunions form an ensemble that lasts a long time over the connaissance of the old people that they used to live in. La part de ces objets sont décrits par M. le conservator Janssen dans le Kunst en Letterbode de 1838, pages 370—395.
- 116795 January 20, 1843 From Mr S. H. VAN DER NOORDAA we again received a tuff mortar, found in the vicinity of Deurne.
- 116800 January 1, 1844 A remarkable piece was found in 1844 in a swamp in the Peel region, not far from the hamlet of Maris, and is now in the Leiden Museum (Cat. ML, as well as Stark, vol. 1876, pp. 7-56; P 1881, 272-274; also HKN). It is a medallion (fig. 149) of gilded silver, over 21 cm in diameter, which depicts in fairly high relief a depiction of a man strangling a lion in the center, surrounded by animal fights, including two animals disputing a ox's head. Four holes have been drilled in the edge with chiseled frames, perhaps to attach the medallion to a shield; two of the holes still contain the nails with round heads. Based on the style of the figures, the piece is considered to be of Eastern European origin.
- 116805 [Related note] Dr. H.C. Gallois pointed out to us that in the Cabinet des Médailles in Paris there are two disks, one of which is only fragmentarily preserved, that bear a strong resemblance to the specimen discussed here. He also referred us to an essay by Fr. Drexel in the Jahrbuch des Kaiserlich deutschen Archäologischen Instituts, XXX (1915), p. 1 ff., according to whom these disks were made at the beginning of the first century B.C. in the vicinity of the Black Sea, and to the view of M. Rostovtzeff in his book Iranians and Greeks (Oxford, 1922), p. 138 ff.
- 116810 The latter, who sees Hercules in the human figure on the Leiden piece, believes that the discs originated between the third and first century BC in southern Russia, as the work of Sarmatian artists. The three discs are depicted by Rostov-on-Trent, the Leiden one, and only the well-preserved Parisian one, also by Drexel.
- 116815 See also <http://archivesetmanuscrits.bnf.fr/ead.html?id=FRBNFEAD000091538?>
- 116820 April 9, 1847 From Lieutenant Colonel Jhr. VAN DER BRUGGHE VAN CROY, a bronze so-called framea, provided with a handle, and the fragment of a second similar one, both found not far from Croy Castle, in a meadow along the back road to Helmond.
- 116825 January 1, 1850 [...] Numerous objects from the Stone, Bronze, and Iron periods have been unearthed from his [=Limburg] soil in earlier and later periods. The scientific investigations to track them down first date from around 1825. These were initiated by Mr. CHARLES GUILLON, a notary in Roermond. A very wealthy man, he amassed a large collection of antiquities of all kinds and from various periods, which was regularly supplemented until his death on November 10, 1873. Later, it was dispersed through sale, but most of the objects from the prehistoric period have fortunately found a home in the Rijksmuseum in Leiden. [...]
- 116830 December 5, 1856 On Monday, December 15, 1856, and the five following days, in the morning and afternoon, the bookseller G. THEOD. BOM, in Amsterdam, at ODEON for Public Sale: the excellent CABINET OF MEMORIAL AND TOKENS, HONOUR AND CHARACTER MARKS, MEETING COINS, GUILD, SHUTTERS, RELIGIOUS, FREEMASONIC, PRIZE AND FIRE ENGINE TOKENS, EMERGENCY COINS AND COINS, COIN, MEDAL AND HEROMICAL BOOKS, BEQUESTED BY THE LATE MR. S. H. VAN DER NOORDAA, Member of various Domestic and Foreign Literary,

- 116835 Historical and Archaeological Societies in Dordrecht. VIEWING DAYS: FRIDAY and SATURDAY, 12 and 13 December. The CATALOGUE can be obtained, postage paid, upon request for 20 cents from G. THEOD. BOM, Kalverstraat, E 10. (19573)
- 116840 April 20, 1863 The following is reported from Stadskanaal to Veend[amsche]. Ct.: During the excavation of the peat by G. Schuur here, located in the mouth of Boerveen, a silver spoon was recently found under a 9-foot layer of peat. At the end, it is marked on both sides with the number 33, around which a flower is carved. It is not unlikely that the number indicates the year of its creation, for while silver tableware may not have been used, or only very rarely, by our ancestors at that time,
- 116845 the Romans, who also visited these regions, not only made extensive use of this precious metal but also achieved considerable success in the art of chiseling. This discovery, we believe, provides yet another of the numerous pieces of evidence that the soil here was, if not inhabited, at least visited in ancient times.
- 116850 April 22, 1863 N.B. We report this information as we find it, but note that if this spoon is not a stemmed or wine spoon "trulla," but a "cochlear," it cannot possibly date from the year 33, thus the time of Emperor Tiberius.
- 116855 March 31, 1864 Several acquisitions were made for the Dutch Antiquities Department. Along with the aforementioned Roman objects from the estate of the late Mr. S.H. VAN DER NOORDAA, some items were also acquired from former inhabitants of our country: a very beautifully polished flint axe, 12 dm long; a roughly worked trachyte ball, 4 dm in diameter; a baked earthenware urn filled with burnt human bones, 19 dm high; another urn, 18 dm. high, containing the fragments of a bronze HAIR NEEDLE found
- 116860 inside; another three URNS containing burnt bones and remnants of bronze RINGS, etc.; the urns measuring 10, 15.5, and 16 inches high; two CUBS, 9 and 7 dm; four POTS of various shapes, 6.5 to 9.5 dm high; a beaker-shaped VESSEL, 5.5 dm high, and some fragments of pots. All these objects, with the possible exception of the WIGGE, were excavated in 1837 at the old cemetery in Deurne, North Brabant; they now form a
- 116865 substantial whole, along with the pieces found at the same site, donated to the Museum in 1840 and 1841 by the late Mr. P. O. G. GUYOT. [...]
- 116870 Some MEDIEVAL AND LATER OBJECTS, originating from the excavations for the Nijmegen army barracks, a pair of trachyte stone MORTARS with PESTLES from the vicinity of Deurne and belonging to the already mentioned estate of the late Mr. S. H. VAN DER NOORDAA; [...]
- November 28, 1874 ANTIQUITIES.
- 116875 The important collections of antiquities, works of art, books, and archives, bequeathed by Mr. G. Ch. H. GUILLON, living Notary in Roermond, will be preserved at the request of Mr. C. Guillon, Attorney there, in the presence of Notary MAX. CORNELIS, residing in Roermond, at the deceased's house, on the following days, each journey beginning at 9:00 a.m., the following items will be sold publicly:
- 116880 The Gothic cabinets and other art objects on Monday, November 30th.
The paintings and engravings on the following December 1st and 2nd.
The Archives on December 9th and subsequent days.
The prehistoric, Roman, Germanic, and Frankish antiquities on January 11, 1875, and subsequent days.
The intaglios (intails), Roman coins and medals, as well as the Medieval coins and other tokens, on January 18, 1875, and subsequent days.
- 116885 All collections, with the exception of the library, will be sold for cash plus a ten percent surcharge for expenses. Three months' credit will be granted to cover the purchase price of the books.
Gentlemen enthusiasts will be given the opportunity to view the collection on the day before the prospective sales, from 9 a.m. to 5 p.m.
- 116890 The combined catalogs are available from the publisher of this newspaper for 60 cents. In addition, for requests outside Roermond, the postage is as follows: 22 cents to the Netherlands and Belgium, 55 cents to Germany, and 56 cents to France. Postage stamps are accepted to cover the purchase price and postage.
- 116895 January 30, 1875 - In the municipality of Obbicht, it is reported that some pots were recently discovered during the extraction of gravel, which were found to be Roman burial urns. However, due to fragility, they have partially disintegrated. The most important of the finds must be a large glass urn, made of bluish glass, filled with several bones. Along with these objects, a piece of a lock was found, as well as some
- 116900 copper objects, such as a large pin, two finely crafted handles, like those found on

Naspeuringen van Paul Theelen: Constantinus Imperator

chests, two rings with octagonal wires, and a hollow plate depicting a lion's head with a copper ring in its mouth.

March 1, 1890 Antiquities.

The famous MUSÉE GUILLON, collected over more than half a century by the accomplished antiquarian CHARLES GUILLON, Notary in Roermond, will be publicly SOLD on Tuesday, March 11-15, 2018, in Amsterdam by G. THEOD. BOM & ZOON, Spuistraat 135.

The collection includes Roman, Germanic, Celtic, and medieval antiquities excavated primarily in Limburg, Roman and Gelderland coins and medals, Limburg coin stamps, Japanese lacquered and old oak furniture, porcelain, paintings, valuables, etc. Catalog 0 25.

March 8, 1890. The catalog of works of art, bequeathed by the late notary Guillon here, lists no fewer than a thousand Roman, Germanic, Celtic, Frankish, and medieval antiquities excavated in Limburg, from the Stone and Bronze Ages, mortuary urns, Roman glassware and pottery, over 70 pieces of the beautiful red pottery from Samos, a single silver-engraved shield plate, probably from the latter period of the Roman Empire, and over 80 carved stones or cameos. 1,400 antique gold, silver, and bronze coins, some medieval Gelderland and Limburg coins, coin dies and seals, as well as a small collection of silver chased coins, old furniture, etc.

The carefully edited catalog clearly proves that there is much of interest here for our antiquarians and archaeologists.

March 10, 1890 Two very important auctions will be held in the coming days by the auctioneers G. Theod. Bom & Zoon, in Amsterdam.

The first, containing the collection of antiquities and coins bequeathed by the late Mr. Charles Guillon, notary in Roermond, is of particular interest to students of the history of our country. Never before has such a collection of 1,000 Roman, Germanic, Celtic, Frankish, and medieval antiquities excavated in Limburg been auctioned. It offers us a glimpse into the customs and traditions of those times. Both the Stone and Bronze Ages are well represented, while the collection of Germanic pottery, including many urns containing the ashes of our Germanic ancestors, is considered one of the richest. The Roman glassware and pottery, urns, etc., including the beautiful red pottery from Samos, are also noteworthy, as is the umbo, or shield plate, embossed in silver and high relief, a masterpiece of embossed work from the Bas Empire period. This collection also includes over 80 mostly ancient carved stone objects or cameos, ancient gold, silver, and bronze coins, some medieval Gelderland and Limburg coins, etc., etc.

The second, more limited collection contains a collection of antiquities, silver embossed work, antique furniture, historical and Amsterdam rarities, and valuables, porcelain and Delftware, horns and shells, paintings, stereoscopes, glass stereoscope slides, etc.

All items can be viewed in the firm's salesroom, Spuistraat 135, Saturday, Sunday, and Monday, March 8-10, from 10 a.m. to 3 p.m.

March 10, 1890 Tuesday morning, Ten o'clock: SALE at G. THEOD. BOM & ZOON, Spuistraat 135, next to Die Port van Cleve.

Guillon Collection: Stone and Bronze Age Antiquities, Germanic urns, No. 1-813.

At Six o'clock in the evening: Ancient Roman Coins, starting with No. 1.

The Sellers will be greatly obliged to return the Guillon Catalog.

March 14, 1890 The collection of Limburg antiquities, held at G. Theod. The collection of items currently being sold by Bom & Zoon, located on Spuistraat here and originating from Mr. Ch. Guillon of Roermond, appears to have attracted widespread attention.

Fortunately, the majority of these items remain in our country and were purchased primarily for the National Museum of Antiquities in Leiden and the Maastricht Museum of Antiquities. The remainder went to private individuals, while a few very fine pieces were purchased for English clients. No. 79, a stone axe, fetched 14 guilders; No. 38, a similar 11.50 guilders; No. 160, stone arrowheads, 15 guilders; No. 167, a stone poniard, 26 guilders; No. 199, a bronze razor, 10 guilders; No. 200, a sword blade, 28 guilders; No. 300, a Germanic cup, 12 guilders; Nos. 314 and 315, two bronze statuettes, 39 guilders; No. 321: Two copper ornaments of a tripod, 14 guilders; No. 329: A similar incense box with spoon, 13 guilders; No. 336: A plaque with Jupiter and Hebe, 48 guilders; No. 410: A Roman flask, 35 guilders; No. 411: A similar smaller one, 20 guilders; No. 427: A Samian earthenware vase, 32 guilders.

The auction continues.

May 7, 1893: Exhibition in Eindhoven.

Prosperous Eindhoven has long boasted an excellent workforce. In stark contrast to other towns in North Brabant and Limburg, they understand that industry must go hand in hand with art, and thus a broad range of workers emerged who can compete with the best in the country. Goldsmiths and silversmiths, sculptors, painters, architects, masons, and carpenters, who produce excellent work in the full sense of the word, are not uncommon here.

A few years ago, an association called "De Bouwkundige vakken" (The Architectural Trades) was founded in Eindhoven by some patrons, the name of which sufficiently indicates its purpose. It was through the good work of this association that the exhibition came about, of which every Eindhoven resident is now undeniably proud. The products of art and craft, brought together here, prove that the Eindhoven workers have not been overstated above. Of course, among the exhibits, there is also some unattractive work that could have been spared, but much, very much, can safely withstand the test of the most stringent criticism. To broaden interest in this undertaking, the association "De Bouwkundige vakken" (The Architectural Trades) conceived the excellent idea of combining it with an exhibition of old art, to which a historical and topographical exhibition concerning Kempenland and Peelland was eventually added. Mr. Aug. Sassen, archivist of Helmond, was charged with assembling this collection, and it cannot be denied that if the exhibition attracts wider attention, it will be largely due to his efforts. This historical and topographical section did not overshadow the exhibition itself, but gave it a unique charm that will undoubtedly greatly benefit the undertaking. When one examines the catalogue of the collection assembled by Sassen, one may undoubtedly be surprised that so much remarkable information has been collected from such a small and previously insignificant region as Peel and Kempenland, especially if it is true, as is assured, that so much had to remain in the portfolio due to lack of space.

A wealth of historical and topographical paintings, prints and drawings, coins, medals, seals, weapons, and antiquities evokes the history of these regions in pleasant forms. A detailed and important essay could be compiled for a specialist journal of this department; in a daily newspaper such as this, a brief summary of the most important items will naturally have to suffice.

First, our attention is drawn to the horns and a portion of the skull of an extinct bovine animal of extraordinary size, excavated a few years ago in Stiphout. When we fill in the missing points of the horns in our minds, we can imagine the head of this giant of the animal kingdom, which centuries ago inhabited the Peelland forest.

His bellowing resounded. A single horn from a smaller or younger specimen of this animal was excavated from the Peel region near Deurne and is exhibited here. From the Germanic cemeteries discovered in 1840 by Mr. P. N. Panken near Westerhoven and surrounding areas, he preserved the most remarkable urn and exhibited it here. The Celts are represented by three flint chisels, one of which (cat. no. 6) is distinguished by its large size, while another from the more recent period (cat. no. 4) is distinguished by its exquisite workmanship. The memory of the Roman armies, which remained here for so long, is revived by several collections of Roman coins excavated in those regions, of which that of Mr. Alph. Schellens deserves attention for its meticulously preserved specimens and historical arrangement. A Roman crucifix of great antiquity speaks of the early Christian era. It was excavated in 1847 during the demolition of the church in Aarle and was likely buried with the body of a priest more than six centuries ago. Among the ecclesiastical antiquities, also worthy of our attention are a pair of beautiful 15th-century statues from the church in Liessel, and two alabaster reliefs of excellent Italian workmanship. These were cemented into a floor in Stiphout, flat side up, and discovered there by chance in 1887. Among the antiquities of later times, we may mention a complete pharmacy from Bergeyk, some of the furnishings of the De Zwaan hotel in Oorschot, and two magnificent state costumes recently discovered in a cupboard at Croy Castle, all dating from the previous century. Also worthy of mention are the precious gifts given in 1796 by the representatives of Batavian Brabant and the municipality of Oorschot to Arn. van Heumen, first of Leuven, all accompanied by the corresponding charters, commemorative poems, and anthems.

Among the seals and medals, there is much of note. Particularly noteworthy is the gold medal commemorating the 50th wedding anniversary of Joha Josselin and Gerard de Jong, Lord of Beek en Donk, 1764. One by Mr. Aug. Sassen's copy of a huge mantelpiece painting from 1688 in Helmond Castle will undoubtedly arouse considerable interest among heralds.

Among the seals and medals, there is much of note. Particularly noteworthy is the gold medal commemorating the 50th wedding anniversary of Joha Josselin and Gerard de Jong, Lord of Beek en Donk, 1764. One by Mr. Aug. Sassen's copy of a huge mantelpiece painting from 1688 in Helmond Castle will undoubtedly arouse considerable interest among heralds.

Naspeuringen van Paul Theelen: Constantinus Imperator

The section of historical and topographical paintings and prints contains over 100 works, most of which are the property of Mr. Aug. Sassen.

117035 Among the works submitted by others, particular attention should be paid to a superb drawing of Gemert Castle from 1675, owned by Jonkheer Mr. Victor en Stuers. Some 40 portraits of famous individuals, clergymen, and officials with some connection to this region, including large-scale paintings, excellent copper engravings, and 18th-century silhouettes, add new appeal to this section. Among the
117040 other items on display, worthy of consideration are a gigantic charter from 1508 concerning the boundary between Oorschot and neighboring municipalities, which extends from the attic to the floor in the very lofty exhibition hall. A multitude of posters from the previous century, old pamphlets, and bibliographical rarities, all applicable to this region and largely the property of Mr. Aug. Sassen, are also on
117045 display. At the far end of the hall, one beholds a gigantic trophy, composed of a large number of banners, drums, and countless silver roosters and royal shields, all the property of the numerous Peel and Kempenland shooting guilds, which, in their tenacious existence here, still exist in such large numbers to this day. Such a significant collection of these remarkable monuments to one of the most significant
117050 aspects of former national life has probably never been seen in our country. All in all, the historical and topographical section of the Eindhoven exhibition can be praised as very remarkable.

December 1, 1894 Sale of Weapons and Works of Art in Cologne.

117055 [...] 2nd. Art collections of the late Honourable Gestr. Mr. C. Guillon, attorney at law in Roermond, [...] Sale December 12-18, 1894. Price of the illustrated catalogue: 3 Marks. J. M. Heberle (H. Lempertz's Sons), Cologne.

117060 February 16, 1895 Antiquities. — Mr. G. M. Kam, of Nijmegen, donated, by deed dated February 4, 1905, his highly important collection of antiquities to the State of the Netherlands, but in such a way that this donation would only be taken possession of by the Government after his death. This collection consists mainly of: some prehistoric vessels, stone and bronze chisels, weapons,
117065 Roman burial urns, legion stones, jugs, vases, lamps, terra nigra and terra sigillata, so-called Belgian wares, plates, vases, bowls, etc.; bronze vases, mirrors, statues, fibulas, etc.;

Roman glassware, carved stones, pastes, beads, Roman and Frankish weapons, some Frankish vessels, and Roman coins, gold, silver, and bronze, from the Republic and
117070 Imperial periods;

a silver medallion of Constantine the Great.

The Roman collection is largely from the Augustan period. Furthermore, a number of medieval antiquities, such as vases, tiles, etc. The Roman and prehistoric
117075 antiquities, in particular, were largely found in Nijmegen and the surrounding area.

February 21, 1896 Helmond, February 19. It is reported that two Roman graves have been discovered on the Eerenbeemt estate in Meyel, belonging to Mr. P. C. van den Eerenbeemt in Rome. Mr. Schulte, an antiquarian here, has requested permission to conduct the excavations so that the urns found there can be compared with others from
117080 elsewhere.

January 26, 1897 — On Thursday morning, during excavation work on a plot of land owned by Mr. Powis de Tenbossche in Eelen, a substantial quantity of Roman pots and weapons, as well as 17 skulls, were discovered. A large, complete body was also
117085 unearthed, lying with its head facing north, a lance to its right side. Mr. Jos. Gielen, an antiquarian in Measeyck [Maaseik], is already working on a detailed description of the objects and the site, which, according to the aforementioned gentleman, is a Roman cemetery.

117090 March 27, 1914 Ancient finds, silent witnesses.

There is more in the ground than you think, but the real art is to find it. Being a "treasure hunter" or "rod walker" doesn't mean anything. With those old finds, chance or lucky chance must serve you, otherwise, it's all over.

ut that there are still numerous "silent witnesses" from times long past buried in
117095 the ground, especially in our drier regions, is certainly not certain, because every now and then you read in the newspapers that this and that has been found here and there. The last remarkable discoveries were made in Cuyk-aan-d-Maas in North Brabant—old pots and pans, weapons, and coins—and in Jemmingen, just across the Groningen

border, where the Dutch and the Spanish fought in 1538—six men and six horses in one hole, and they still had their spurs on! But I won't tell you about such finds; it's too gruesome.

Here, however, is what I've unearthed from my recent notes; I'll leave out the dates; it happened in the last two or at most three years.

At Valthe in Drenthe, near Valthermond, where the old Roman bridge was once discovered in the peat, an urn of unusual dimensions was excavated, and bones in ashes were found inside.

In the Aamsveen, which belongs partly to the Netherlands and partly to Germany and from which peat was already being cut in 1325, land was to be reclaimed. The Dutch Heath Society alerted the board of the Twente Antiquity Chamber, and urns, stone spurs, and axes were found, proving that an ancient historical site had been discovered. This was all the more evident when the foundations of a castle were later discovered in the so-called Hölterhof.

In the Peel region of North Brabant-Limburg, near Helenaveen, a peat worker initially found four coins, along with pieces of leather that must have belonged to military equipment, a helmet, and a kind of hook or pin for attaching clothing. Some distance away, 38 ancient coins were later found bearing the inscription "Constantinus" and the image of a reigning monarch. In the same North Brabant region, numerous antiquities were discovered in the heathland, specifically in Oorschot, Best, Veldhoven, and Hoogeloon. These were mostly old weapons, axes, arrows and arrowheads, stone saws and chisels, which the Celts, Menapii, and Taxandri, who once lived there, must have used.

Excavations of the mounds in Friesland also frequently yield various finds: bronze rings, picks and axes, primitive agricultural implements, shovels, and chisels have all been found there many times; most recently, for example. Near Ferwerd.

Finds in Drenthe are very numerous. In the same year, the following were found: In the Wolfsbergen near Emmen, a bowl-shaped urn of reddish-brown earth, within which another urn of dark brown earth with a curved rim was found, as well as two stone hammers, a bronze knife, and some bones.

Behind the Emmerdennen, a bowl-shaped brown urn with bones was found. At Wachtum in the municipality of Dalen, a bronze chisel with an eye was found about half a meter deep in the ground. In the Gravenveld near Weerdinge, municipality of Emmen, a chisel of gray flint was found, and at the former Roswinkeler Schans, in the iron ore (primeval), a stone hammer, dark gray and roughly worked, over a decimeter long, was found. In the peat bog at Klijdijk near Odoorn, a fragment of a stone hammer was found. In the Schipmeer near Norg, an iron axe was found. In Oud-Orvelte in the Stobbenveen two metal sheets and an old jug (a "bearded man's jug"), and a grinding stone in the peat bog at Zuidwolde near Hoogeveen, while wooden roads or peat bridges were discovered in three places, such as those at Valthermond, which we discussed above. Information about this can be found in the "Nieuwe Drentsche Volksalmanak"

(New Drenthe Folk Almanac). The bridges were discovered:
10. At Buinerveen, municipality of Borger, half an hour from Ruinen station.
20. In the municipality of Emmen along the road from Nieuw-Dordrecht to Klazinaveen-Noord.

30. In the municipality of Emmen, also at Klazinaveen-Noord, at Lock 2 on the Scholtenskanaal and near the Dedemvaart tram from Coevorden to Ter Apel.

These bridges are usually made of pine wood resting on birch girders and must date back to Roman times. I could still tell you about the excavations at the so-called Hunenschans on the Uddelermeer lake on the Eluwe, where Professor Holwerda from Leiden was busy working, about various foreign locations—of which Hallstadt in Upper Austria is the most important—where antiquities were found, about "silent witnesses" such as the dolmens and the pile dwellings (Switzerland), about discoveries of hunting tools and old fishing gear, combs, rings, textiles, and hollowed-out tree trunks, which served as ships, but I'll save that for later.

? W. ?. d. V.

February 1, 1921. The receiving of securities and valuables. —

The Arnhem court on Friday — the Tel.[egraaf] reports — the case against 57-year-old appraiser J. H. Peperkamp from Nijmegen, who in 1917, 1918, and 1919 made a habit of deliberately buying, exchanging, pawning, and concealing objects obtained through crime in the Netherlands. In Nijmegen and elsewhere, he had purchased, exchanged, or partially accepted as gifts, a large number of securities and negotiable instruments, and concealed them for profit. P. accepted the securities obtained through crime from the Belgian, H. Wijnen, loaned them to a banker in his own name, retained part of the money thus received, and also cashed in some coupons for his own benefit.

- 117165 The same thing had happened in Amsterdam and Rotterdam: in the latter city, the appellant bought Antwerp lottery tickets, as well as bottles and miniatures worth thousands, from someone calling himself Van Dijsseldank, knowing that everything was the proceeds of crime.
- 117170 Peperkamp confessed; He initially objected to such transactions with Wijnen, then relented and received a 10% commission, but later retained the entire proceeds. The president pointed out that Bekl., who was wealthy and trusted in the city where he lived, had proven to be practically "the biggest snitch in the Netherlands," as they say in the animal world. For years, he acted as an accomplice to thieves and burglars.
- 117175 The securities sold, as evidenced by the testimony, were stolen during the burglary committed in Ilpendam in 1917, the well-known burglary of the Amsterdam publishing firm P. N. van Kampen, and several thefts in Rotterdam. The miniatures and bottles originated from Nyenrode Castle, where, at the end of 1917, a mechanic installing the central heating system had stolen the valuables, including, among other things, the
- 117180 silver cross with precious stones received by Admiral Tromp from Charles II, an object of historical significance. Through the mediation of Peperkamp and other intermediaries, the antiquities eventually ended up with the Frederik Muller company, which was ordered to return them to the original owner, the castle resident Michiel Onnes van Nyenrode, for the price it had paid. The Muller company then quoted a very
- 117185 high sum, which it received. A year later, when it came to light that the company had declared a fictitious and far too high amount, it refunded the overpayment made by the castle lord.
- 117190 The deputy public prosecutor, Mr. Visscher, called Peperkamp the biggest receiver of stolen goods the Netherlands has seen in recent years; During a house search, securities from six thefts were found. The defendant also had a hand in numerous smuggling cases, in which he worked behind the scenes, but remained unscathed. The ease with which stolen goods could be delivered to Peperkamp in Nijmegen led many young men down the wrong path. All this marks him as a dangerous criminal, citing all
- 117195 his mitigating circumstances. The speaker finally requested a five-year prison sentence.
- Mr. van Ditzhuizen, the defense attorney, emphasized that Peperkamp was a victim of normal circumstances. The arbitrary actions of the N.O.T. and other officials caused him considerable harm, and thus he lapsed into indifference, which drove him to
- 117200 commit criminal acts, of which, however, scoundrels like Van Dijsseldonck and Wijnen can be considered the perpetrators, who by their actions incited the receiving of stolen goods. He wishes to compensate P. as much as possible for the damage caused by his actions; in this context, too, the pleader appealed to the court's clemency.
- 117205 Verdict February 8.
- April 14, 1929 Hellas and Rome.
Exhibition at the Rijksmuseum in Amsterdam
- [...] A very beautiful and remarkable piece is the gilded silver Roman helmet, found near Deurne in the Peel region. Attention is also drawn to the large silver
- 117210 decorations, which, sewn onto leather, formed part of a Roman horse harness. These pieces were fished out of the Rhine in this country.
- June 11, 1932 HISTORY OF ASSELT
- [...] When the Trappist Fathers of Achel Abbey recently began an investigation into the possessions lost to their monastery during the French Revolution, hoping to
- 117215 reconstruct the old altar in its original form, they were referred from Deurne to Asselt. They no longer found the altar in question there, but they did find remnants of it in the museum, which they recognized from old photographs. The description they gave and had of it matched the old altar in every detail in Asselt. They found the painting that had belonged to it as an altarpiece, now framed as a valuable object.
- 117220 Although the Fathers submitted the necessary convincing evidence and were eager to have it back in their possession, they had to yield to the Asselt argument that their rights to this piece, which had long since expired, could be upheld. During the negotiations, it further emerged that the possibility cannot be ruled out that the
- 117225 Asseltsche Christus (Christ) is a work by the renowned Titian (1477-1576). Titian maintained friendly relations with the Trappist order at the time, and Achel Kluis claims, based on accounts, that the painting in question was a work by the Italian master.
- 117230 August 25, 1937 MYSTERIOUS DISCOVERY IN THE PEEL.

A folk fantasy from ancient times revived.

During reclamation work, which is being carried out under the direction of the Dutch Heath Society on the territory of the vast Peel municipality of Deurne, a skeleton was recently discovered, reports the Provincial Council of 's-Hertogenbosch. The human skeleton must have been present at the site for a very long time; it was buried deep beneath the layers of sand. A more or less sensational incident was the discovery of a weathered knife near the skeleton.

It goes without saying that this mysterious discovery has provided ample fodder for popular imaginations, reviving the many mysterious stories that weave together the history of the once so desolate Peel region.

How long has the skeleton now been found resting in the Peel soil? 50, 100, 200, 300 years, or even longer? Is this a glimpse of an unsolved tragedy from times long past? A victim of a robbery long, long ago, when Peel was still inaccessible and almost impenetrable? Or the decayed remains of a stray lone individual "who had lost his way in the wilderness and whose only remnant, besides his bones, was the knife he carried, has withstood the ravages of time?"

It will all remain an open question, just as so many other mysteries remain, now being dredged up again, as undecayed remnants of Peel's romanticism. Tales of the "black waters" from the old Peel region are once again being told. Eerie events from the distant past. They were passed around by word of mouth in the days when the Peel was a complete wilderness, when there were no roads, no newspapers were printed, no farms were to be seen for miles around, and when, lacking all modern comforts, people would spend their evenings by the fireside, chatting and chatting. The "black waters" are the dark Peel fen pools, where, for some reason, the bells from the church towers were... sunk away. Dark, unknown strangers had been seen carrying away the bells. They were mistaken for accomplices of the devil, or even Satan himself. With a dull crash, the bells had crashed into the swamps; the water there remained black ever since and never froze. On Christmas Eve, they were still heard tolling, but woe betide anyone who followed their sounds and tried to find them; they lost their way, drowning in the black waters... One of the "black waters" lay at the present-day Peelvlak IJsselstein.

January 28, 1944 THE PEEL A BORDER

Letters about the Peel

Dear Friend

It is not so very long ago, as I sit here and write to you, that the driver, who regularly drove between Deurne and Venray, would adjust the axle of his cart in the middle of the inhospitable Peel plain near the Kraayenhut. At that time, there was only a loose, deeply rutted dirt road between the two villages, and there, at den Grootenberg, changed the track gauge – the Limburg

The Dutch track is still considerably wider today than the Brabant one—and so the freight driver couldn't continue his journey until he had adjusted the axle position of his heavy cart to the wagon track. This was possible with his vehicle; it was designed for it. Most ordinary carts and wagons, however, did not have adjustable axles and therefore could not be used for traffic between the aforementioned places.

Doesn't this remarkable fact clearly demonstrate that the Peel was a border, a separation between two countries or regions? Many a wide river wasn't such a tight barrier between two areas as this inaccessible region, this "marshy place" and this "strangely abandoned area," as it is called in old documents, until recently—what does half a century mean in the vast gray space of the past? —there were therefore very few connections between the Brabant and Limburg Peel regions, and the inhabitants of Venray, Horst, and Sevenum only rarely came into contact with those of Bakel, Deurne, and Liessel. On either side of the Peel, the people developed entirely separately and, in terms of government, adopted completely opposite orientations: while the villages of the Brabant Peel region migrated to Helmond and 's-Hertogenbosch, the Limburg Peel villages moved to Venlo, Boxmeer, Cuijk, and Roermond.

The Peel was a natural border. With its bogs and "vlazen," forests, and heathland, it was a virtually insurmountable obstacle, separating even regions and tribes. It seems that in the Middle Ages, it was therefore not deemed necessary to draw a clear boundary line through this swamp: this was only done later, when it was realized that this region was not as worthless as previously thought, because it turned out to contain a large quantity of peat. For a long time, the raised bog ridge of the Peel formed the border between the Peelland district of the Meierij of 's-Hertogenbosch and the Overkwartier of Gelderland. During the Guelderian Wars, which took place in the first quarter of the sixteenth century, bands of Gelderland repeatedly invaded

the Duchy of Brabant through the Peel. In 1511 and 1512, the villages of Deurne, Bakel, and Asten were largely reduced to ashes by the Gelderlanders from Venlo. To secure the border, a blockhouse was built near Liessel, where it is still called "het Sloop" (the Ditch), between 1516 and 1527. Due to the presence of a relatively wide sandy ridge, the weak point in this separation lay there, near Meyel, as one can also read in Ouwerling's great historical work. For a century and a half after the Peace of Münster, signed in 1648, the national border ran through the Peel region. During the existence of the Dutch Republic, this high peatland separated the province or Generality Land of North Brabant from Spanish and Austrian Gelderland, and later from Prussian Gelderland. Brabant Catholics used this border to secure their church treasures. Priests and monks fled across it to escape the "edicts" of the High and Mighty States General. As early as 1649, the Deurne pastor, Mr. Gerard Jacobs, built a small church for his parishioners just across the border near the Grootenberg. For quite some time, he served the faithful of Deurne, Bakel, Liessel, and Vlierden from there. We also see the sisters of the noble abbey of Binderen, near Helmond, finding refuge in the Peel region and thus the border, and those of "Mariaschoot" from Ommel traveling with her miraculous statue to Neer in the county of Hoorn. Naturally, disputes about this border arose frequently. It was difficult to determine precisely where in that wide region the line separating Brabant from Gelderland should run. The Brabant side consistently invoked the deeds of acquisition of the common lands of Deurne from 1326 and 1467. The Peace of Münster also failed to produce a precise demarcation, although a meeting on this matter had already been held two years earlier between the villages of Peelland and those of the Overkwartier. When this matter was brought before the Council of "paalsteden" by the fiscal of Brabant in the presence of the fiscal of Venray, it later turned out that the latter again disagreed with the drawn line. We read in Ouwerling's "History of the villages and lordships of crossing over to include Deurne, Liessel, and Vlierden in Venray" that they even went so far as to "clandestinely" remove the boundary markers at night and at odd hours and hang them on chains under their tower, where they were kept for years as commemorative tokens. On November 20, 1716, the Treaty of Venlo between the States-General of the United Netherlands and the King of Prussia established a proper border settlement, but before the demarcation was completed, new difficulties arose: Deurne submitted the loss of eight hundred hectares of good peatland distressed the residents of that domain, and it thus happened that, at night, as Van Heurn recounts in his work on the Meijerij of 's-Hertogenbosch, residents of that domain set fire to seven hundred and eight hundred carts of peat, which, according to the new border, had fallen within the territory of Venray. After the collapse of the Republic, the border between the French department of the Nedermaas and the Batavian Republic ran through the Peel. Then history repeated itself, in a somewhat reverse direction: monks from Limburg now sought refuge across the Peel to Brabant territory. Thus, the last prioress of the Norbertine monastery Keizersbosch, near Neer, found refuge in Deurne. Only when the Netherlands were incorporated into the French Empire in 1810 did the Peel cease to be a national border for good. Later, after the founding of the Kingdom of the Netherlands, it separated the province of North Brabant from that of Limburg, which, when it joined the German Confederation following the Belgian uprising, was called the Duchy of Limburg.

After the railway line between Eindhoven and Venlo had already established a permanent connection between the villages on either side of the Peel Marsh in the 1860s, the first paved road was built across the Peel between Deurne and Venray shortly before the outbreak of the First World War. Around the year 1880, a road was already built from Deurne to the Limburg border at Meyel [Meijel]. After the war, the Peel was also breached in the direction of the Land van Cuyk: a gravel road now connects Deurne with Boxmeer. Unemployed people from Helmond built a wide, earthen track between Helenaveen and Sevenum about ten years ago. Thus, this dividing wall was gradually demolished, and this dense borderland was opened up for the common good. The Peel region still constitutes a border—this elevated peat and horticultural land now forms a significant watershed, demarcating two entirely different regions with their own, entirely distinct ethnic groups—but it is no longer a dividing tree or a burdensome obstacle. This previously under-regarded border region, even as a progressive development area, makes a valuable contribution to cooperation and prosperity within the area in which our people live. And isn't that something—and with this I would like to conclude—about which we should truly rejoice?

DEURNE, Louwmaand 1944.
W. A. M. VAN HEUGTEN.

February 18, 1944 Remarkable showpiece

Dear Friend,

117365 You ask me about a remarkable showpiece that should be on display in Deurne and is
little known, even in the circles of those who are particularly interested in the
beauty of our region. I understand what you mean: it's the cast of the Roman helmet,
which is on display in the mayor's office of Deurne's town hall. It is certainly a
117370 remarkable showpiece, even if it's only a substitute for the real thing. In few
antiquity rooms, indeed in few museums, do you find such a rare object in this
country. What does it actually mean and how did it come to be?

On a June day in 1910, peat worker G. Smolenaars from Meyel was working in the Peel
region between the so-called Hermanshuizen and Helenaveen, on the left side of the
road (coming from Liessel). He was working in the gray peat. Suddenly, he came across
117375 something hard, but this time not driftwood. Was it a crushed pot? He dug it out,
took it to a ditch, and after rinsing it off, he saw that it had to be an old helmet.
Nearby, in a small hole like a bird's nest, he found several coins and other small
metal objects, as well as the remains of shoes and a saddlecloth. He carried it home
and hid it as something precious in his box bed.

117380 That a treasure had been unearthed in the Peel region soon spread far beyond the
region. Many traveled to Meyel to see the find; the simple man, who now possessed an
immense fortune in the eyes of many, and to whom Mayor Truyen van Meyel is said to
have said, "I am rich, but you are much richer!", showed his unusual find to the
117385 numerous visitors. Soon, buyers also showed up. Fortunately, however, the National
Museum of Antiquities in Lelden was alerted in time. They sent an expert who
appraised the find and offered a certain sum for it. Smolenaars agreed with him, and
thus the danger of this rare find falling into the wrong hands was averted. However,
this matter wasn't yet settled. The peat worker could only be considered half-owner
of the treasure. Determining who the other half actually belonged to wasn't so easy.

117390 The finder was busy cutting peat for the firm Steegh and Esser, specifically in the
gray peat bog, which had been leased by the municipality of Deurne as the owner of
the peatlands to the firm of Terwindt and Arnzt. An unusual and therefore difficult
problem to solve! After seeking legal advice, the municipality of Deurne considered
itself the owner of the second half and decided on November 18, 1910, to donate it to
117395 the scientific institution for the offered price of one thousand guilders.
The National Museum of Antiquities had the dented armor, which was immediately
assumed to have belonged to a Roman officer, restored. This difficult task was
successfully carried out by the goldsmith L. Verkuil, who worked in the workshop of
Van Rossum du Chattel in Leiden. "Once restored," Dr. M. A. Evelein later wrote in an

117400 illustrated magazine article, "it became clear what a magnificent piece the museum
had acquired, which, compared to similar helmets abroad, may even be called unique."
However, the helmet is not complete: only the gilded silver outer covering remained;
The iron inner cap rusted away completely. The helmet cap consists of two separate,
117405 identical parts, each divided into three interconnected pieces and held together by a
comb. The equipment also included a neck protector, a nose guard, and two cheek
plates. One of these last pieces was never recovered.

Very little has been preserved of the weaponry of the Roman legions, which occupied
our country and a large part of our continent for centuries. As far as is known, only
seven helmets have been found, which must have originated from the Romans; the one
117410 from De Peel is the most valuable. One came to light near Kerch on the well-known
strait between the Sea of Azov and the Black Sea; two were excavated at Pfersee near
Augsburg and one at Worms in Germany; in Hungary, one was found in the Danube near
Budapest; and in Denmark, one was discovered in peat near Thorsbjerg. Remarkably,
according to Dr. Evelein, show considerable similarity in construction and

117415 workmanship. This scholar believes they could well have been made in the same
workshop in Constantinople. The helmet is skillfully crafted and demonstrates the
skill of the Roman craftsmen. The overall effect, however, supports the assumption
that the wearer must have been a centurion. Is his name carved into it? As we can
read in Dr. Evelein's article, Prof. O. Bonn of Berlin saw, in the inscription on the
117420 neck guard, a weight indication with the name of the verifier Titus Valonius Ursus.
The word "Stablesia VI" on the helmet rim must indicate a division of the equestrian
corps of the Equites Stablesiani, known primarily from the later period of the Roman
Empire.

So, what is the significant value of this discovery in the Peel region for historical
117425 science? That lies beyond the helmet itself. Coins were also found. These all
appeared to date from the time of Emperor Constantine; It was even possible to
determine where they were minted. They offer a solid starting point for comparative
study. It is reasonable to assume that the centurion only carried money, which was

current in those years. Thus, not only can the Peel helmet be roughly dated, but comparison also allows us to estimate the period from which the Roman helmets found elsewhere originate. This discovery is significant, moreover, because it proves that the cavalry corps of the "Equites Stablesiani" must also have resided in the Low Countries and that the gray peat in our region had not yet formed in the third century AD.

Naturally, many mysteries remain surrounding the death of the Roman centurion in the Peel swamp. Where did he come from and where did he ride to? Why was neither sword, dagger, lance, nor shield found with him? Did the dagger or short sword, which must have been stuck in the short scabbard, which was preserved in the mortise, like the iron inner cap of the helmet, completely decay, or was it lost, stolen, or perhaps found earlier? In this context, a note from the first half of the last century, which I found in the Deurne municipal archives, is interesting: in it, the district commissioner of Helmond asks the mayor of Deurne and Liessel whether it is true that a farmer near Deurne had found a golden sword. Despite all its acumen, modern science will probably never be able to provide a conclusive answer to all these questions. We know that a drama must have taken place here in that distant, dark time; nothing more.

The Peel helmet only returned to our region in 1934, albeit in the form of a few casts. Besides being on display in Deurne town hall, one can be seen in the Helmond municipal museum. The remainder of the rare and remarkable find – as outlined above, however, is no less important for our History – will probably still be preserved in Leiden.
Deurne, February 1944.
W. A. M. VAN HEUGTEN.

January 1, 1988 CAVALRY EQUIPMENT OF THE ROMAN ARMY IN THE FIRST CENTURY A.D.
by M.C. Bishop

PANEGYRICUS CONSTANTINO AUGUSTO

D I C T U S.

I. Facerem, sacratissime imperator, quod paulo ante mihi plerique suaserunt ut, quoniam maiestas tua hunc mediocritati meae diem in ista ciuitate celeberrimum ad dicendum dedisset, de eo ipso ducerem sermonis exordium, nisi me ab hoc duplex ratio reuocaret considerantem neque mediae aetatis hominem ostentare debere subitam dicendi facultatem neque ad aures tanti numinis quicquam nisi diu scriptum et saepe tractatum afferri oportere. [nam qui aput imperatorem populi Romani dicit ex tempore, quantum sit non sentit imperium.] huc accedit quod iam satis multi sunt qui me putant nimium multa dicturum, idque, ut arbitror, non ex ingenio meo, quod mediocre est, sed ex laudum uestrarum copia metiuntur. quorum ego expectationem inuitus licet fallam breuitate dicendi. reuera enim cogitaueram plura quae dicerem, sed malo orationem meam esse mancam quam respui. itaque primum illud compendium faciam quod, cum omnes uos, inuictissimi principes, quorum concors est et socia maiestas, debita ueneratione suspiciam, hunc tamen quantulumcumque tuo modo, Constantine, numini dicabo sermonem. ut enim ipsos immortales deos, quamquam uniuersos animo colamus, interdum tamen in suo quemque templo ac seda ueneramur: ita mihi fas esse duco omnium principum pietate meminisse, laudibus celebrare praesentem. II. A primo igitur incipiam originis tuae numine, quod plerique adhuc fortasse nesciunt, sed qui te, amant plurimum sciunt. ab illo enim diuo Claudio manat in te auita cognatio qui Romani imperii solutam et perditam disciplinam primus reformauit immanesque. Gothorum copias Ponti faucibus et Histri ore proruptas terra marique deleuit, utinam diutumior recreator hominum quam maturior deorum comes. quamuis igitur ille felicissimus dies proxima religione celebratus imperii tui natalis habeatur, quoniam te isto habitu primus ornauit, iam tamen ab illo generis auctore in te imperii fortuna descendit. quin immo ipsum patrem tuum uetus illa imperatoriae domus praerogatiua prouexit, ut iam summo gradu et supra humanarum rerum fata consisteres, post duos familiae tuae principes tertius imperator. inter omnes, inquam, participes maiestatis tuae hoc habes, Constantine, praecipuum quod imperator ortu es, tantaque est nobilitas originis tuae ut nihil tibi addident honoris imperium nec possit fortuna numini tuo imputare quod tuum est, omisso ambitu et suffragatione. III. Non fortuita hominum consensio, non repetinus aliquis fauoris uentus te principem fecit: imperium nascendo meruisti. quod quidem mihi deorum immortalium munus et primum uidetur et sa maximum, in lucem statim uenire felicem et ea quae alii uix totius uitae laboribus consequuntur iam domi parta suscipere. quamuis enim magna

- 117495 sit et admiranda felicitas quae stipendiis in ordine emeritis et militiae gradibus
emensis ad fastigium istud maiestatis ascendit et solis uirtutis nixa radicibus ad
tantum potentiae robur inualuit (quod quidem etiam tu, quantum per aetatem licuit,
consecutus es et, quamuis te super omnes acquirendae gloriae moras fauor fortunae
posuisset, crescere militando noluisti et adeundis belli periculis ac manu cum
117500 hostibus etiam singulari certamine conserenda notiozem te gentibus reddidisti, cum
non posses esse nobilior), magnum, inquam, etsi est ab se profectum ad maxima
peruenire: longe tamen aliud est niti per ardua et iuga montium petere e plano aliud
jpsa ortus sui sublimitate fultum uerticem tenere fortunae et quae summa sunt non
sperare, sed habere.
- 117505 IV. Sacrum istud palatium non candidatus imperii, sed designatus intrasti,
confestimque te illi paterni lares successorem uidere legitimum. neque enim erat
dubium quin ei competeret hereditas quem primum imperatori filium fata tribuissent.
te enim tantus ille et imperator in terris et in caelo deus in primo aetatis suae
flore generauit adhuc toto corpore uigens, illa praeditus alacritate ac fortitudine
117510 quam bella plurima praecipueque campi uidere Uindonii. inde est quod tanta ex illo in
te formae similitudo transiuit ut signante natura uultibus tuis impressa uideatur.
idem enim est quem rursus in te colimus aspectus, eadem in fronte grauitas, eadem in
oculis et in ore tranquillitas. sic est index modestiae rubor, sic testis iustitiae
sermo. accipe, imperator, non ancipitem nostrorum sensuum confessionem: dolet quod
117515 Constantius excessit a nobis, sed, dum te cernimus, illum excessisse non credimus.
quamquam quid ego illum excessisse dico, cuius immortalia facta uiuunt et in ore
omnium hominum oculisque uersantur?
- V. Quis enim non dico reminiscitur, sed quis non adhuc quodam modo uidet quantis ille
rebus auxerit ornaritque rem publicam? qui adscitus imperio primo aduentu suo
117520 innumerabili hostium classe feruentem exclusit oceanum et exercitum illum qui
Bononiensis oppidi litus insederat terra pariter ac mari saepsit, cum reciprocos
aestus illius elementi iactis inter undas uallis diremisset, ut, quorum portas
fluctus alluerat, ei quo mare tangerent perdidissent. qui eodem exercitu uirtute
capto, clementia conseruato, dum aedificandis classibus Britanniae recipratio
117525 comparatur, terram Batauiam sub ipso quondam alumno suo a diuersis Francorum gentibus
occupatam omni hoste purgauit nec contentus uicisse ipsas in Romanas transtulit
nationes ut non solum arma, sed etiam feritatem ponere cogerentur. nam quid ego de
receptione Britanniae loquar? ad quam ita quieto mari nauigauit ut oceanus ille tanto
uectore stupefactus caruisse suis motibus uideretur, ita peruectus ut non comitata
117530 illum sit, sed praestolata uictoria.
- VI. Quid de misericordia dicam qua uictis temperauit? quid de iustitia qua spoliatis
amissa restituit? quid de prouidentia qua sociis sibi iunctis se eiusmodi in iudicio
dedit ut seruitutem passos iuuaret recepta libertas, culpaе conscios ad poenitentiam
reuocaret impunitas? quid loquar rursus intimas Franciaе nationes iam non ab his
117535 locis quae olim Romani inuaserant, sed a propriis ex origine sui sedibus atque ab
ultimis barbariae litoribus auulsas, ut in desertis Galliae regionibus collocatae et
pacem Romani imperii cultu iuuarent et arma dilectu? quid commemorem Lingonicam
uictoriam etiam imperatoris ipsius uulnere gloriosam? quid Uindonnissae campos hostium
strage completos et adhuc ossibus opertos? quid immanem ex diuersis Germanorum
117540 populis multitudinem, quam duratus gelu Rhenus illexerat ut insulam, quam diuortio
sui idem amnis amplectitur, pedestri agmine ausa transmittere repente laxato flumine
clauderetur et so dimissis statim obsessa nauigiis ita se dedere cogeretur ut, quod
difficilius est, sorte communi elegeret et ex aequo quos captiuitati traderet,
relatura cum reliquiis suis infamiam prodicionis suorum.
- 117545 VII. Dies me ante deficiet quam oratio, si omnia patris tui facta uel hac breuitate
percurram. cuius etiam suprema illa expeditio non Britannica trophaea, ut uulgo
creditum est, expetiuit, sed dis iam nocantibus ad intimum terrarum limen accessit.
neque enim ille tot tantisque rebus gestis non dico Caledonum, Pictorum aliorumque
siluas et paludes, sed nec Hibemiam proximam nec Thylen ultimam nec ipsas si quae
117550 sunt Fortunatorum insulas dignabatur acquirere, sed, quod eloqui nemini uoluit,
iturus ad deos genitorem illum deorum ignea caelis astra refoquentem prospexit
oceanum, ut fruiturus exinde luce perpetua iam uideret illic diem paene continuum.
uere enim profecto illi superum templa patuerunt receptusque est consessu caelitem,
Ioue ipso dexteram porrigente. quin immo statim sententiam rogatus cui imperium
117555 decerneret, dixit, ut decebat, Gonstantium Pium: manifeste enim sententia patris
electus es, imperator. quod quidem ita nos dicere cum ueritas iubet, tum pietati
tuae, ut uideo gratissimum est. sed cur tantummodo priuatis tuis affectibus
blandiamur, cum omnium deorum fuerit illa sententia, et quidem iam pridem auctoritate
perscripta, quamuis tunc pleno sit firmata consilio? iam tunc enim caelestibus
117560 suffragis ad salutem rei publicae uocabaris, cum ad tempus ipsum quo pater in

Britanniam transfretabat classi iam uela facienti repentinus tuus aduentus illuxit, ut non aduectus cursu publico, sed diuino quodam aduolasse curriculo uidereris. VIII. Non enim ulla Persarum Cydonumue tela tam certis iactibus destinata fixerunt quam tempestius patri tuo terras relicturo comes affuisti omnesque illius curas quas
117565 praesaga et tacita mente uoluebat praesentiae tuae securitate laxasti. di boni, quanta Constantium Pium etiam in excessu suo felicitate donastis! imperator transitum facturum in caelum uidit quem relinquebat heredem. ilico enim atque ille terris fuerat exemptus, uniuersus in te consensit exercitus, te omnium mentes oculique signarunt et, quamquam tu ad seniores principes de summa rei publicae quid fieri
117570 placeret rettulisses, praeuenerunt studio quod illi mox iudicio probauerunt. purpuram statim tibi, cum primus copiam tui fecit egressus, milites utilitati publicae magis quam tuis affectibus seruientes iniecere lacrimanti. neque enim fas erat diutius fleri principem consecratum. diceris etiam, imperator inuicte, ardorem illum te deposcentis exercitus fugere conatus equum calcaribus incitasse. quod quidem, ut
117575 uerum audias, adulescentiae errore faciebas. quis enim te Cyllarus aut Arion posset eripere quem sequebatur imperium? illa, inquam, illa maiestas, quippe Iouis oblata nutu nec Iridi deum nuntiae, sed pinnis commissa Victoriae, tam facile te comitata est quam cito ad terras caelo missa perueniunt. sic modestiam tuam atque pietatem et differendi imperii conatus ostendit et rei publicae felicitas uicit.

IX. O fortunata et nunc omnibus beatior terris Britannia, quae Constantinum Caesarem prima uidisti! merito te omnibus caeli ac soli bonis natura donauit, in qua nec rigor est nimius hiemis nec ardor aestatis, in qua segetum tanta fecunditas ut muneribus utrisque sufficiat et Cereris et Liberi, in qua nemora sine inmanibus bestiis, terra sine serpentibus noxiis; contra pecorum mitium innumerabilis multitudo lacte distenta
117585 et onusta uelleribus, certe quidem, quapropter ibi uita diligitur, longissimae dies et nullae sine aliqua luce noctes, dum illa litorum extrema planities non attollit umbras noctisque metam caeli et siderum transit aspectus, ut sol ipse qui nobis uidetur occidere ibi appareat praeterire. di boni, quid hoc est quod semper ex aliquo supremo fine mundi noua deum numina uniuerso orbi colenda descendunt? sic Mercurius a
117590 Nilo cuius fluminis origo nescitur, sic Liber ab Indis prope consciis solis orientis deos se gentibus ostendere praesentes. sacratiora sunt profecto mediterraneis loca uicina caelo et inde propius a dis mittitur imperator ubi terra finitur.

X. Imperatoris igitur filius et tanti imperatoris et ipse tam feliciter adeptus imperium quomodo rem publicam uindicare coepisti? ignobilem, credo, aliquam barbarorum manum, quae repentino impetu et improuiso latrocinio ortus tui auspicia temptasset, affecisti poena temeritatis. reges ipsos Franciae, qui per absentiam patris tui pacem uiolauerant, non dubitasti ultimis punire cruciatibus, nihil ueritus gentis illius odia perpetua et inexpiabiles iras. cur enim ullam reputet iustae seueritatis offensam imperator qui quod fecit tueri potest? tuta clementia est quae
117600 parcat inimicis et sibi magis prospicit quam ignoscit. te uero, Constantine, quantumlibet oderint hostes, dum perhorrescant. haec est enim uera uirtus ut non ament et quiescant. cautior licet sit qui deuinctos habet uenia perduelles, fortior tamen est qui calcitrat iratos. renouasti, imperator, ueterem illam Romani imperii fiduciam quae de captis hostium ducibus uiudictam morte sumebat. tunc enim captiui reges cum a portis usque ad forum triumphantium currus honestassent, simulatque in Capitolium currum flectere coeperat imperator, abrepti in carcerem necabantur. unus Perses ipso Paulo qui dedentem se acceperat deprecante legem illius seueritatis euasit. ceteri omnes in uinculis luce priuati aliis regibus dedere documentum ut
117605 mallent amicitiam colere Romanam quam exasperare tristitiam. adeo et hoc boni confert poena hostibus irrogata ut non solum inimici ferocire non audeant, sed etiam amici impensius reuereantur.

XI. Lide igitur est, imperator, pax ista qua fruimur. neque enim iam Rheni gurgitibus, sed nominis tui terrore munimur. quamlibet ille aut arescat aestu aut resistat gelu, neutro hostis audebit uti uado. nihil enim tam insuperabili uallo natura praecludit quod non penetret audacia, cui aliqua conandi spes relinquatur. ille est inexpugnabilis murus quem extruit fama uirtutis. sciunt posse se Franci transire Rhenum, quos ad necem suam libenter admittas, sed nec uictoriam possunt sperare nec ueniam. quid ipsos maneat, ex regum suorum
117615 cruciatibus metiuntur ideoque tantum abest ut amsis illius transitum moliantur, magis ut coepto ponte desperent. ubi nunc est illa ferocia? ubi semper infida mobilitas? iam ne procul quidem Rhenum audetis accolere et uix securi flumina interiora potatis. contra hinc per interualla disposita magis omant limitem castella quam protegent. arat illam terribilem aliquando ripam inermis agricola, et toto nostri greges bicorni amne mersantur. haec est tua, Constantine, de Ascarici Regisique supplicio cotidiana atque aeterna uictoria omnibus quondam secundis proeliis anteposenda. semel acie
117625 uincitur, sine fine est documento. cladem suam, quamuis multi pereant, uulgus

ignorat: compendium est deuincendorum hostium duces sustulisse.

XII. Ut tamen omnibus modis barbarorum immanitas frangeretur nec sola hostes regum suorum supplicia maererent, etiam immissa Bructeris uastatione fecisti, imperator inuicte. in quo prima consilii tui fuit ratio quod exercitu repente traiecto inopinantes adortus es, non quo aperto Marte diffideres ut qui palam congregi maluisses, sed ut illa natio perfugiis siluamm et paludum bellum solita frustrari fugae tempus amitteret. caesi igitur innumerabiles, capti plurimi; quicquid fuit pecoris, raptum aut trucidatum est; uici omnes igne consumpti; puberes qui in manus uenerunt, quorum nec perfidia erat apta militiae nec ferocia seruituti, ad poenas spectaculo dati saeuientes bestias multitudine sua fatigarunt. hoc est, imperator, fretum esse uirtute sua atque fortuna, hoc est non pacem emere parcendo, sed uictoriam quaerere prouocando.

XIII. Insuper etiam Agrippinensi ponte faciundo reliquiis afflictae gentis insultas, ne umquam metus ponat, semper horreat, semper supplices manus tendat, cum tamen hoc tu magis ad gloriam imperii tui et ornatum limitis facias quam ad facultatem, quotiens uelis, in hosticum traueseundi, quippe cum totus armatis nauibus Rhenus instructus sit et ripis omnibus usque ad oceanum dispositus miles immineat. sed pulcrum tibi uidetur (et reuera pulcherrimum est) ut Rhenus ille non solum superioribus locis, ubi aut latitudine uadosus aut uicinia fontis exiguus, sed etiam ibi nouo ponte calcetur ubi totus est, ubi iam plurimos hausit amnes quos hic noster indigena fluuius et barbarus Nicer et Moenus inuexit, ubi iam immani meatu ferox et alluei unius impatiens in duo cornua gestit excedere. seruit profecto, Gonstantine maxime, ipsa rerum natura numini tuo, cum in illa gurgitum altitudine tantarum molium fundamenta iaciuntur fidam et stabilem firmitatem habitura. iunxerit licet quondam Hellesponti angustias classe conexa Persarum rex potentissimus: temporarius ille transitus fuit. simili nauium continuatione Baianumsinum strauerit ab Augusto tertius Caesar: delicata fuit illa uectatio principis otiosi.

hoc opus et difficile factu et usu futurum est sempitemum. certe quidem iam tibi in exordio sui hostium mouit obsequia, qui pacem supplices petierunt, nobilissimos obsides obtulerunt. ex quo nemo dubitat quid perfecto ponte facturi sint qui iam seruiunt inchoato.

XIV. Talibus te pro utilitate ac dignitate publica rebus intentum auerterunt in se noui motus eius hominis quem successibus tuis maxime fauere decuisset. de quo ego quemadmodum dicam adhuc ferme dubito et de nutu numinis tui expecto consilium. quamlibet enim merito pietatis tuae questibus acuatur, debet tamen sibi uox priuata moderari, praesertim cum eum qui tibi ex tantis beneficiis tuis et tanto necessitudinum fonte ingratus extiterit adhuc contemplatu tui cogamur quamuis irati reuereri. quid faciam igitur ut tam profunda uulnera suspensa manu tractem? usurpabo nimirum illa communias omnium facinorum patrocinia, quae tamen plerumque etiam a sapientibus assenmtur, neminem hominem peccare nisi fato et ipsa scelera mortalium actus esse fortunae, contra autem deorum munera esse uirtutes. gratulare, Constantine, naturae ac moribus tuis quod te talem Constantius Pius genuerit, talem siderum decreta formarint ut crudelis esse non possis. illum autem [non] credo, cum uenturus in lucem optionem uitae qua uteretur acciperet, sortem incurrisse fugiendam quae multis hominibus iniustum et postremo ipsi uoluntarium ferret exitium. ut enim alia mittam, hoc ipsum nonne fati necessitas tulit ut ille pietati tuae hanc referret uicem, quem tu ab urbe pulsum, ab Italia fugatum, ab Illyrico repudiatum tuis prouinciis, tuis copiis, tuo palatio recepisti?

XV. Quid, oro, sibi uoluit? quid optauit? uel quid amplius adipisceretur his quae a te fuerat consecutus? cui tu summa et diuersissima bona, priuatum otium et regias opes, dederas, cui digredienti aulicos mulos et raedas, cui impensius etiam quam tibi occurrere obsequia nostra mandaueras, cuius omnibus iussis sic statueras oboedire ut penes te habitus, penes illum potestas esset imperii. quisnam ille tantus fuit non ardor potentiae (quid enim te imperante non posset?), sed error iam desipientis aetatis, ut tot natas annos grauissimas curas et bellum ciuile susciperet? nullis, ut res est, fortunae muneribus explerent quorum cupiditates ratio non terminat, atque ita eos felicitas ingrata subterfluit ut semper pleni sperum, uacui commodorum, praesentibus careant dum futura prospectant. at enim diuinum illum uirum qui primus imperium et participauit et posuit consilii et facti sui non poenitet nec amisisse se putat quod sponte transcripsit, felix beatusque uere quem uestra tantorum principum colunt obsequia priuatum. sed et ille multiuigo fultus imperio et uestro laetus tegitur umbraculo, quos scit ex sua stirpe creuisse, et glorias uestras iuste sibi uindicat. hunc ergo illum, qui ab ipso fuerat frater adscitus, puduit imitari. huic illum in Capitolini Iouis templo iurasse poenituit. non miror quod etiam genero peierauit.

XVI. Haec est fides, haec religio Palatini sacrarii deuota penetralibus, ut lente et

cunctanter, iam scilicet cum illis belli consiliis, itinere confecto, consumptis
117695 purpuratus et bis depositum tertio usurparet imperium, litteras ad sollicitandos
exercitus mitteret, fidem militum praemiorum ostentatione turbare temptaret; secure
scilicet usurus exercitu quem uenales manus habere docuisset. quo quidem illius
errore declaratum est, imperator, quantus te militum tuorum amor complecteretur, qui
te omnibus donis quae ille promiserat, omnibus honorum oblationibus praetulerunt.
117700 rara illa uirtus continentiae uix a paucis sapientiae praeceptoribus, si tamen
aliquando, seruata propter te, Constantine, omnibus hominibus est facta communis, nec
solum his quos ratio litterariae uitae ac quies mitigauit, sed etiam ille militarium
ardor animorum respectu tui lucra contempsit. fuerint aliqui exercitus alacritate ac
uiribus tuis similes: tibi uni contigit habere exercitum sapientem. multi olim prau
117705 duces, certasse armis impares, largitione certarunt: sed breuis eorum fuit et caduca
popularitas, quos facile uicit quisquis aemulatus est. hic firmus, hic aeternus est
rei publicae custos quem ipsum per se milites amant, cui non eblandita nec uendita
seruit adulatio, sed simplex et sincera deuotio. dona tua, Constantine, manifeste
sunt grata militibus, sed hoc gratiora quod tua sunt. quaecumque porrigis, manu tua
117710 fiunt acceptiora. quam nemo tecum potest hac ambitione contendere! insuperabile genus
est largitionis, cum ipse militi praemium est imperator. itaque tribuis tu quidem
exercitibus tuis etiam plura quam cupiunt, sed tuum te magis nomen, tua de memoria
patris auctoritas, tua aetatis gratia, tua denique ista uenerabilis forma commendat.
XVII. Pulcrum enim, di boni, et caeleste miraculum imperator adulescens, in quo illa
117715 quae iam summa est fortitudo adhuc tamen crescit, in quo hic fulgor oculorum, haec
ueneranda pariter et grata maiestas praestringit simul et inuitat aspectus. talem
Macetum illum regem, talem Thessalum uirum mente concipio, quorum summa uirtus
pulcritudini coniuncta celebratur. non frustra enim doctissimi uiri dieunt naturam
ipsam magnis mentibus domicilia corporum digna metari et ex uultu hominis ac decore
117720 membrorum colligi posse, quantus illos caelestis spiritus intrarit habitator. itaque
te cum ingredientem milites uident, admirantur et diligunt, sequuntur oculis, animo
tenent, deo se obsequi putant, cuius tam pulcra forma est quam ceirta diuinitas.
XVIII. Statim igitur ut foedum illud facinus audierant, ultro a te proficiscendi
signum petiuerunt; cum uiatica dares, id ipsum sibi moram facere plusque iam se quam
117725 sufficeret ex largitionibus tuis habere dixerunt. inde arreptis armis portas
petiuerunt, tot dierum iter a Rheno usque ad Ararim sine ulla requie peregerunt
indefessis corporibus. animis flagrantibus, crescente in dies ardore uindictae quanto
propius accederent. tum quidem tua, imperator, cura, qua refouendis eorum uiribus a
Cabillonensi portu nauigia prouideras, festinantibus paene non placuit. segnis ille
117730 et cunctabundus amnis numquam fuisse tardior uidebatur: carinis tacite labentibus et
ripis lente recedentibus stare se, non ire clamabant. tum uero usum pedum manibus
aggressi incubuere remigiis et naturam fluminis urgendo uicerunt et tandem eluctati
Araris moras uix ipso Rhodano fuere contenti: parum illis uidebatur concitus ruere,
minus solito Arelate properare. quid multa? confitendum est tibi, imperator: cum hoc
117735 tuo uigore corporis, hoc mentis ardore laborasti interdum ut quem ducebas sequereris
exercitum. tanto enim omnes impetu ferebantur ut, cum illum Arelate deserto
comperissent abisse Massiliam, confestim nauibus euolarent effasque cursu non iam
Rhodani curricula, sed ipsa quodammodo uentorum flabra praeuerterent. tantus illos
incenderat amor numinis tui ut, quamuis scirent oppugnandam esse munitissimam
117740 ciuitatem, sufficere sibi crederent peruenire.
XIX. Massilia enim, ut audio, in profundum mare prominens et munitissimo accincta
portu, in quem angusto aditu mediterraneus refluit sinus, solis mille quingentis
passibus terrae cohaeret, qua firmissimus et turribus frequens murus opponitur.
quippe olim Graecos Italosque illuc conuenas, cum artibus ingenioque pollerent, etiam
117745 ipse docuit locus omnia quae bello usui forent largius in eam partem quae adiri
posset impendere, cum natura in ceteris sum ptum operis remisisset. itaque illam tum
gravi fato Caesari portas pro duce seniore claudentem terra marique admotis machinis,
aggeribus extructis, naualibus proeliis saepius oppugnatam quam territam uix obsessio
diuturna patefecit, cum tamen Graeculi magistratus et ipsum Gaesarem et mox duces eius
117750 et copias non tam uiribus suis quam moenibus reppulissent. at enim nunc primo tuo,
imperator, aduentu primoque impetu exercitus tui nihil eiusdem Massiliae altitudo
murorum, nihil creberrimae turres, nihil loci natura remorata est quominus et portum
caperes et urbem continuo, si uelles. quippe tanta fiducia murum omnem milites
inuaserant ut statim sine dubio ascensuri fuissent, nisi in parandis quas admouerant
117755 scalis coniecturam oculorum sublimitas fefellisset. sed sic quoque multi scalarum
breuitate decepti, quod supererat ascensui, extentis corporibus aequabant et
succedentium humeris subleuati iam interualla pinnarum uncis manibus inuasent. adeo
nihil periculi in uindictae executione metuebant ut sibi non murum scandere, sed ex

aequo congregari uiderentur.

XX. Sed singularem tuam, Constantine, pietatem et sua semper officia etiam inter arma seruantem! signum receptui dedisti et uictoriam distulisti ut omnibus tibi liceret ignoscere neu quid atrocius faceret milos iratus quam clementiae tuae natura pateretur. in quo licet optimi imperatoris sollicitudine caueris ut inducti in fraudem milites poenitendi tempus acciperent atque ultro ueniam precarentur, nos tamen qui mitissimos tuos sensus intuemur (nihil est enim tam perspicuum quam in pectore tuo bonitas) illi te intellegimus pepercisse quem, si prima copiam habuisset irruptio, eripere ferro nemo potuisset. ita, quod ad pietatem bmm pertinet, imperator, et illum et omnes quos receperat reseruasti. sibi imputet quisquis uti noluit beneficio tuo nec se dignum uita iudicauit, cum per te liceret ut uiueret : tu, quod sufficit conscientiae tuae, etiam non merentibus pepercisti. sed, ignosce dicto, non omnia potes: di te uindicant et inuitum.

XXI. Quod quidem nobis semper optandum est ut prosperos habeas etiam ultra tua uotia. successus, qui omnem spem in gremio maiestatis tuae ponimus et tuam ubique praesentiam, quasi dari possit, expetimus. ecce enim, dum a limite paulisper abscesseras, quibus se terroribus barbarorum perfidia iactauerat scilicet, dum sibi illa proponunt: quando perueniet? quando uincet? quando fessum reducet exercitum? cum repente audito reditu tuo uelut attoniti conciderunt, ne tuum pro re publica uotum amplius quam unius noctis cura tetigisset. postridie enim quam accepto illo nuntio geminatum itineris laborem suscepas, omnes fluctus resedis, omnem quam reliqueras tranquillitatem redisse didicisti, ipsa noc sic ordinante fortuna ut te ibi rerum tuarum felicitas admoneret dis immortalibus ferre quae uotaueras, ubi deflexisses ad templum toto orbe pulcherrimum, immo ad praesentem, ut uidisti, deum. uidisti enim, credo, Constantine, Apollinem tuum comitante Uictoria coronas tibi laureas offerentem, quae tricenum singulae ferunt omen annorum. hic est enim humanarum numerus aetatum, quae tibi utique debentur ultra Pyliam senectutem. et immo quid dico 'credo'? uidisti teque in illius specie recognouisti, cui totius mundi regna deberi uatum carmina diuina cecinerunt. quod ego nunc demum arbitror contigisse, cum tu sis, ut ille, iuuenis et laetus et salutaris et pulcherrimus, imperator. merito igitur augustissima illa delubra tantis donariis. honestasti ut iam uetera non quaerant. iam omnia te uocare ad se templa uidentat praecipueque Apollo noster, cuius feruentibus aquis periuria puniuntur, quae te maxime oportet odisse.

XXII. Di immortales, quando illum dabitis diem, quo praesentissimus hic deus omni pace composita illos quoque Apollinis lucos et sacras sedes et anhelata fontium ora circumeat? quorum scaturigines leni tepore nebulosae arridere, Gonstantine, oculis tuis et osculis sese inserere uelle uidentur. miraberis profecto illam quoque numinis tui sedem et calentes aquas sine ullo soli ardentis indicio, quarum nulla tristitia est saporis aut halitus, sed. talis haustu et odore sinceritas qualis fontium frigidorum. dabis et illic munera, constitues priuilegia, ipsam denique patriam meam ipsius loci ueneratione restitues. cuius ciuitatis antiqua nobilitas et quondam fraterno populi Romani nomine gloriata opem tuae maiestatis expectat, ut illic quoque loca publica et templa pulcherrima tua liberalitate reparentur, sicuti uideo hanc fortunatissimam ciuitatem, cuius natalis dies tua pietate celebratur, ita cunctis moenibus resurgentem ut se quodammodo gaudeat olim corruisse, auctior tuis facta beneficiis. uideo circum maximum aemulum, credo, Romano, uideo basilicas et forum, opera regia, sedemque iustitiae in tantam altitudinem suscitari ut se sideribus et caelo contigua et uicina promittant. quae certe omnia sunt praesentis munera. quaecumque enim loca frequentissime tuum numen illustrat, in his omnia et hominibus et moenibus ex muneribus tuis augentur, nec magis Ioui et Iunoni recubantibus novos flores terra summisit quam circa tua, Constantine, uestigia urbes et templa consurgunt. ideoque hoc notis meis sufficit ut patriam meam uideas ducente pietate, quia statim erit restituta, si uideris. sed enim ista felicitas uiderit an adhuc meae debeatur aetati.

XXIII. Litteris quoniam ad summam uotorum meorum tua dignatione perueni, ut hanc meam qualemcumque uocem diuersis fori et palatii officiis exercitam tuis auribus consecrarem, maximas numini tuo gratias ago tibi, quod superest, commendo liberos meos praecipueque illum iam summa fisci patrocina tractantem, in quem me totum transtulit pietas, cuius felix seruitus, si quando respexeris, maxime tuae conueniet aetati. ceterum quod de omnibus liberis dixi, lata est, imperator, ambitio. praeter illos enim quinque quos genui etiam illos quasi meos numero quos prouexi ad tutelam fori, ad officia palatii. multi quippe ex me riui non ignobiles fluunt, multi sectatores mei etiam prouincias tuas administrant. quorum successibus laetor omniumque honorem pro meo duco et. si forte hodie infra expectationem mei dixero, in illis me confido placuisse. si tamen hoc quoque mihi tuum numen indulserit ut ex hac oratione non eloquentiae, quod nimium est, sed quantulaecumque prudentiae et denotae

117825 tibi mentis testimonium referam: cedant priuatorum studiorum ignobiles curae,
perpetua mihi erit materia dicendi, qui me probauerit, imperator.

117830

PANEGYRIC TO CONSTANTINE AUGUSTUS
D I C T U S.

117835 I. I would do, most sacred emperor, what many have advised me a little while ago,
that since your majesty had given me this most famous day in this city to speak, I
should begin my speech on that very subject, if a double reason were to dissuade me
from this, considering that neither a man of middle age should display a sudden
faculty of speech, nor should anything be brought to the ears of so great a divinity
except what has been written and often discussed at length. [For he who speaks of the
117840 emperor of the Roman people from time, does not feel the extent of his empire.] To
this is added that there are already quite a few who think that I will say too much,
and that, as I think, they measure this not by my talent, which is mediocre, but by
the abundance of your praises. Although I may unintentionally disappoint their
expectations by the brevity of my speech. For I had truly thought of more things to
117845 say, but I would rather my speech be incomplete than rejected. Therefore, I will
first make that summary which, when I regard all of you, most invincible princes,
whose majesty is concordant and allied, with due veneration, I will nevertheless
address this discourse, however small in your own way, Constantine, to the deity. For
as we worship the immortal gods themselves, although we worship them all in our
117850 minds, yet sometimes we venerate each in his own temple and shrine: thus I consider
it right for me to remember with piety all the princes, and to celebrate with praises
the present one.

II. I will therefore begin with the first of your divinity's origins, which perhaps
many still do not know, but those who love you know very well. For from that divine
117855 Claudius flows your ancestral kinship who was the first to reform the loose and lost
discipline of the Roman empire and who was monstrous. He destroyed the forces of the
Goths, who burst forth from the jaws of Pontus and the mouth of the Historians, by
land and sea, would that the restorer of men had been more long-lived than the
companion of the gods who had matured. Therefore, although that most happy day,
117860 celebrated in the nearest religion, is considered the birthday of your empire, since
it was the first to adorn you with this habit, yet from that originator of the race
the fortune of empire has descended upon you. Nay, indeed, that ancient prerogative
of the imperial house has advanced your father himself, so that you now stand in the
highest rank and above the destinies of human affairs, the third emperor after the
117865 two princes of your family. Among all, I say, participants in your majesty, you have
this most important thing, Constantine, that you are emperor by birth, and such is
the nobility of your origin that the empire of honor does not add to you, nor can
fortune impute to your divinity what is yours, leaving aside your environment and
suffrage.

117870 III. It was not the accidental consent of men, nor any wind of favor that made you a
prince: you deserved the empire by birth. Which indeed seems to me to be both the
first and the greatest gift of the immortal gods, to come into the light of day happy
and to undertake those things which others scarcely attain by the labors of a whole
life, having already won at home. For although great and admirable is the happiness
117875 which, having earned the ranks in the order and risen to that pinnacle of majesty,
and having grown strong at the roots of virtue alone, has attained to such a strength
of power (which indeed you also have achieved, as far as your age permitted, and,
although the favor of fortune had placed you above all delays in acquiring glory, you
did not wish to grow by fighting and by approaching the dangers of war and by
117880 engaging in single combat with the enemy you have made yourself more known to the
nations, since you could not be more noble), great, I say, even if it is a progress
of its own, to reach the greatest heights: yet it is far one thing to strive to seek
from the plain over steep and mountain peaks, and quite another to hold the summit of
fortune supported by the very sublimity of its origin, and not to hope for, but to
117885 have what are the highest.

IV. You entered that sacred palace not as a candidate for the empire, but as one
designated, and immediately saw yourself as the legitimate successor to that paternal
home. For there was no doubt that the inheritance was due to him whom the fates had
first bestowed on the emperor. For that great emperor on earth and in heaven, the god
117890 begot you in the prime of his life, still vigorous in his whole body, endowed with

that eagerness and fortitude which many wars, especially the plains of Vindonium, have seen. Hence it is that such a likeness of form has passed from him in you that we see it imprinted on your countenances, with nature indicating it. For it is the same whom we again worship in you, the same gravity on the forehead, the same calmness in the eyes and mouth. Thus is blushing an index of modesty, so is speech a witness of justice. Accept, emperor, the unhesitating confession of our senses: it grieves us that Constantius has departed from us, but while we behold you, we do not believe that he has departed. Although what do I say that he has departed, whose immortal deeds live on and are discussed in the mouths and eyes of all men?

V. For who does not remember, but who does not still in some way see with how many things he has increased and adorned the republic? He who, having assumed command, at his first arrival shut out the raging ocean with an innumerable fleet of enemies, and fenced off the army which had settled on the shore of the town of Bologna by land as well as by sea, having scattered the reciprocal tides of that element by throwing valleys between the waves, so that the gates whose waves had washed over would be destroyed wherever they touched the sea. Having seized upon virtue, having preserved clemency, while the recovery of Britain was being prepared by building fleets, he cleared the land of Batavia, occupied by his former pupil by various Frankish nations, of every enemy. And not content with having conquered, he transferred these nations to the Romans, so that they were forced to lay down not only arms but also savagery. For what shall I say of the recovery of Britain? To which he sailed on such a calm sea that that ocean, astonished by so great a carrier, seemed to have lost its motions, so carried away that victory did not accompany him, but awaited him.

VI. What shall I say of the mercy with which he tempered the conquered? what of the justice with which he restored what was lost to the despoiled? what of the providence with which he gave himself in judgment to his allies, so that freedom recovered might help those who had suffered servitude, and impunity might call those who were conscious of guilt to repentance? Why should I speak again of the inner nations of France, now no longer from these places which the Romans had once invaded, but from their own original homes and from the furthest shores of barbarity, so that, placed in the desert regions of Gaul, they might both help the peace of the Roman empire by their culture and by the levy of arms? Why should I mention the victory of Lingonica, glorious even for wounding the emperor himself? Why should I mention the fields of Windonissa, filled with the slaughter of the enemy and still covered with bones? Why should the immense multitude of the various Germanic peoples, whom the Rhine, hardened by ice, had enticed to cross the island which the same river embraces at its fork, by a foot-force, suddenly be blocked by the loosened river, and so, having let go of the ships, besieged immediately, and forced to surrender in such a way that, what is more difficult, they would choose by common lot and by equal right whom they would hand over to captivity, sharing with their remains the infamy of their own betrayal.

VII. The day will fail me before I can speak if I go through all the deeds of your father, even in this brevity. His supreme expedition did not seek British trophies, as is commonly believed, but, while the gods were already harming him, he approached the innermost threshold of the earth. For he did not deign, after so many and great deeds, to acquire, I do not say Caledonia, the forests and marshes of the Picts and others, but neither the nearest Hibemia nor the last Thyla nor the islands of the Fortunates themselves, if there are any, but, as he did not want to tell anyone, about going to the gods, he saw that father of the gods, the fiery stars shining in the heavens, looking out over the ocean, so that from then on he could enjoy perpetual light and see there an almost continuous day. For truly, the temples of the gods were opened to him and he was received by the assembly of the heavenly beings, with Jupiter himself extending his right hand. Nay, indeed, when asked at once to whom he should give his command, he said, as was fitting, Constantius Pius: for you were clearly chosen, emperor, by the will of your father. which indeed we say so when the truth commands us, then to your piety, as I see is most pleasing. But why are we flattered only by your private affections, when that opinion was of all the gods, and indeed long ago written down by authority, although then it was confirmed by full counsel? For even then you were called by heavenly suffrages to the salvation of the republic, when at the very time when your father was crossing to Britain with the fleet already setting sail, your sudden arrival shone forth, so that you seemed to have flown not by a public course, but by a certain divine course.

VIII. For no Persian or Cydonumian weapons aimed at such certain throws were fixed as you were present as a timely companion to your father when he was about to leave the land, and you relieved all his cares which he desired with a premonition and a silent

mind by the security of your presence. Good gods, how much happiness you bestowed on Constantius Pius even in his passing! The emperor, about to make his passage to heaven, saw whom he was leaving as his heir. For as soon as he had been released from the land, the whole army agreed on you, the minds and eyes of all were fixed on you, and although you had reported to the senior princes what they wished to do about the highest state, they anticipated with zeal what they soon approved by judgment. Immediately, when you were the first to make your presence felt, the soldiers who served the public interest rather than your own feelings, bestowed the purple on you, who was weeping. For it was not right for a consecrated prince to weep any longer. You will also be said, invincible emperor, that you stirred up that ardor of the army that was begging you with your spurs. Which indeed, if you hear the truth, you did through the error of youth. For who could Cyllar or Arion rescue you from whom the empire was following? That, I say, that majesty, since offered by a nod to Jupiter, not to Iris, the messenger of the gods, but entrusted to Victory with wings, accompanied you as easily as things sent from heaven reach the earth quickly. Thus your modesty and piety and the effort to postpone the empire showed and the happiness of the republic won.

IX. O fortunate and now happier than all lands Britain, which first saw Constantine Caesar! deservedly nature has endowed you with all the good things of heaven and earth, in which there is neither excessive rigor of winter nor excessive heat of summer, in which the crops are so fruitful that they suffice for the gifts of both Ceres and Liber, in which woods are free from monstrous beasts, the land is free from noxious serpents; against the gentleness of cattle an innumerable multitude of milk-drenched and laden with fleeces, certainly indeed, which life is loved there, the days are very long and there are no nights without some light, while that extreme plain of the shores does not raise shadows and the sight of the sky and stars passes the end of the night, so that the sun itself, which seems to us to be setting, appears to be passing by there. Good gods, what is this that always from some highest end of the world new deities of gods descend to be worshipped throughout the whole world? Thus Mercury from the Nile, the origin of which river is unknown, thus Liber from the Indians, showing himself to the nations, gods who are almost conscious of the rising sun. Surely the places near the sky are more sacred than the inland ones, and from there the emperor is sent closer to the gods where the earth ends.

X. So, son of an emperor and yourself so happily acquiring the empire, how did you begin to claim the republic? I believe that some ignoble band of barbarians, who had tried the auspices of your birth with a sudden attack and unexpected robbery, you inflicted the punishment of your rashness. The very kings of France, who had violated the peace by the absence of your father, you did not hesitate to punish with the ultimate tortures, fearing nothing of the perpetual hatred and inextinguishable anger of that nation. For why should an emperor, who can protect what he has done, consider any offense of just severity? Safe is clemency which spares enemies and looks after itself more than it forgives. But you, Constantine, no matter how much your enemies hate you, as long as they are terrified. For this is true virtue, that they do not love and remain silent. Although he is more cautious who pardons the defeated, he is still stronger who tramples on the angry. You have renewed, emperor, that ancient confidence of the Roman empire which assumed death for captured enemy leaders. For then, when the captive kings were marching from the gates to the forum in triumph, and as soon as the emperor had begun to turn his chariot into the Capitol, they were taken away and put to death. One Persian, who had received him surrendering, escaped the law of that severity by the plea of Paulus himself. The rest, all in chains, deprived of light, gave other kings a lesson that they would rather cultivate Roman friendship than aggravate their sorrow. So much so that this punishment inflicted on enemies confers good, that not only do enemies not dare to be ferocious, but even friends are more deeply revered.

XI. Therefore, emperor, this peace which we enjoy is a lie. For we are no longer protected by the whirlpools of the Rhine, but by the terror of your name. Whether it dries up with heat or resists frost, neither enemy will dare to use the ford. For nature prevents nothing from being penetrated by such an insurmountable wall that audacity, to which some hope of attempting is left, cannot penetrate. That is an impregnable wall which the fame of virtue has built. The French know that they can cross the Rhine, whom you willingly admit to their death, but they can neither hope for victory nor pardon. What remains for them, they measure by the tortures of their kings, and therefore it is so far from them that they attempt to cross that embankment, rather than despairing of having begun the bridge. Where is that ferocity now? Where is that ever treacherous mobility? Now you dare not even approach the Rhine far away and you can hardly safely water the inner rivers. On the other hand,

the castles arranged at intervals rather love the boundary than they protect it. Sometimes the helpless farmer plows that terrible bank, and our entire flocks are drowned in the two-lane river. This is yours, Constantine, from the punishment of Ascaricus and Regais, a daily and eternal victory to be preferred to all previously successful battles. Once defeated in battle, it is an endless document. The common people do not know their own defeat, although many perish: it is a summary that the leaders of the defeated enemies have taken away.

XII. So that the barbarians' cruelty might be broken in every way and that the enemies of their kings alone should mourn the punishments, you have also done this, unconquered emperor, by the devastation unleashed by Bructeri. In which the first reason of your plan was that you suddenly crossed the army and attacked them unexpectedly, not because you were distrustful of open war, as you would have preferred to meet them openly, but so that that nation would lose time in flight, being frustrated by the usual wars of refuge in forests and marshes. Innumerable people were therefore killed, many were taken prisoner; whatever cattle there were was carried off or slaughtered; all the conquered were consumed by fire; the adults who came into their hands, whose treachery was not suited to the military nor their ferocity to serve, were given to the spectacle of punishment and exhausted the wild beasts with their multitude. This is, O emperor, to rely on one's own virtue and fortune, that is, not to buy peace by sparing, but to seek victory by provoking.

XIII. Moreover, by building the bridge of Agrippina, you insult the remnants of the afflicted nation, lest they ever fear, always shudder, always stretch out their supplicant hands, when yet you do this more for the glory of your empire and the adornment of your frontier than for the opportunity, whenever you wish, to cross over to the enemy, since the whole Rhine is equipped with armed ships and soldiers are stationed on all the banks as far as the ocean. But it seems beautiful to you (and it is truly most beautiful) that that Rhine should be crossed by a new bridge not only in its upper reaches, where it is either shallow in width or small near its source, but also where it is in its entirety, where it has already absorbed many rivers, which our native and barbarian Nicer and Moenus have invaded, where it has already been driven into two horns by its immense course and impatient of a single flood. Certainly, most Constantine, the very nature of things has served your divinity, since in that gurgling height the foundations of such mills are laid that will have a reliable and stable firmness. Although the most powerful king of the Persians once joined the narrows of the Hellespont with a connected fleet: that crossing was a temporary one. By a similar connection of ships, Caesar the Third built the Bay of Baeanus from Augustus: that was a delicate task for the idle prince.

This work will be both difficult to do and very long in practice. Certainly, at the beginning, the service of your enemies moved you, who supplicated for peace and offered the most noble hostages. Since then, no one doubts what those who are already serving the bridge that has been begun will do.

XIV. While you were intent on such matters for the benefit and dignity of the public, the new movements of that man whom it would have been fitting to favor your successes most turned you away. As I shall say, I still doubt and await the advice of your divinity. For however much he may be rightly sharpened by the complaints of your piety, he must nevertheless moderate his voice, especially since he who has been ungrateful to you for so many of your benefits and so great a source of necessities is still compelled by the contemplation of you, although we are angry and reverent. What shall I do, then, to treat such deep wounds with a suspended hand? I will certainly assume those common patronages of all crimes, which, however, are often assent even by wise men, that no man sins except by fate, and that the very crimes of mortals are acts of fortune, while virtues are gifts of the gods. I congratulate you, Constantine, on your nature and character, that Constantius Pius has begotten you, and that the decrees of the stars have formed you so that you cannot be cruel. But [I] do not believe that he, when he was about to come into the world and was about to accept the choice of life he would use, had incurred a fate to be avoided, which would bring an unjust and ultimately voluntary destruction to many men. For to send others, did not the necessity of fate bring about this very thing that he should return to your piety this time, whom you, having been driven from the city, put to flight from Italy, and repudiated from Illyricum, received into your provinces, your forces, and your palace?

XV. What, I pray you, did he want for himself? What did he desire? Or what more could he gain from what he had obtained from you? To whom you had given the greatest and most diverse goods, private leisure and royal wealth, to whom you had given court mules and chariots when he departed, to whom you had commanded our services to be met even more earnestly than to you, to whom you had so determined to obey all his

commands that the power of the empire would be in his possession, as if he were in your possession. Who was he, not so eager for power (for what could he not do when you were ruling?), but the error of an already foolish age, that he should undertake the most serious cares and a civil war after so many years? As it is, no one is satisfied with the gifts of fortune, whose desires are not limited by reason, and so ungrateful happiness slips under them that, always full of hopes, empty of conveniences, they lack present things while they look forward to the future. But for that divine man who was the first to share in the empire and to establish it according to his own plan and deed does not regret it, nor does he think that he has lost what he has voluntarily transcribed, truly happy and blessed, whom your many princes worship and have deprived of their homage. But even he, supported by many yokes, is joyfully sheltered by the empire and your little shadow, whom he knows to have grown from his stock, and justly claims your glories for himself. Therefore, this man, who had been adopted by him as a brother, was ashamed to imitate him. He regretted that he had sworn to him in the temple of Jupiter on the Capitoline. I do not wonder that he also betrayed his son-in-law.

XVI. This is the faith, this religion of the Palatine shrine, devoted to the inner sanctum, so that slowly and hesitantly, now that those war plans, the journey completed, the forces of the mansions consumed so that no one could catch up with the army, he would suddenly consider within the walls, wearing the purple, and twice deposed, a third time, would usurp the empire, would send letters to solicit the army, would try to disturb the faith of the soldiers by the display of rewards; surely, he would take advantage of the army which he had taught to have venal hands. By which error of his was made manifest, emperor, how much love your soldiers would embrace you, who preferred you to all the gifts he had promised, to all the offerings of honors. That rare virtue of continence was scarcely possessed by a few teachers of wisdom, if at all, preserved for the sake of, say, Constantine, it became common to all men, and not only to those whom reason for a literary life and tranquility had tempered, but also that military ardor of the mind despised in respect to your gains. There were some armies similar to yours in their enthusiasm and strength: you alone happened to have a wise army. Many bad generals of old, unequal in arms, competed with generosity: but their popularity was short and fleeting, whom anyone who emulated easily conquered. This firm, this eternal is the guardian of the republic whom the soldiers love for themselves, whom flattery did not flatter or sell, but simple and sincere devotion served. Your gifts, Constantine, are clearly grateful to the soldiers, but all the more grateful because they are yours. Whatever you extend, becomes more acceptable with your hand. No one can compete with you in this ambition! It is an insurmountable kind of generosity, the emperor himself is the reward of the soldier. Therefore, indeed, you grant your armies even more than they desire, but your name, your authority from the memory of your father, your grace of age, and finally your venerable form commend you more.

XVII. For, good gods, the young emperor is a beautiful and heavenly miracle, in whom that strength which is already supreme is still growing, in whom this brilliance of the eyes, this equally venerable and pleasing majesty simultaneously fascinates and invites the gaze. I conceive in my mind such a king Macetus, such a Thessalian man, whose supreme virtue is celebrated combined with beauty. For it is not in vain that the most learned men say that nature itself can be measured by great minds and that the dwellings worthy of bodies can be gathered from the face of a man and the beauty of his limbs, how much of a heavenly spirit inhabits them. Therefore, when the soldiers see you entering, they admire and love you, they follow you with their eyes, they hold you in their hearts, they think that they are obeying a god, whose form is as beautiful as his divinity is certain.

XVIII. As soon, then, as they heard of that foul deed, they voluntarily asked you for a sign to set out; since you were giving them a journey, they said that they would delay it themselves, and that they had more than enough of your bounty. Then, seizing their arms, they went to the gates, and without any rest they completed the journey of so many days from the Rhine to Arari, with their bodies unwearied. Their spirits were burning, and the closer they drew nearer they drew, the more ardor they felt for the vindicated. Then indeed, your care, O emperor, by which you had provided ships for their forces to resupply from the port of Cabillon, was almost not pleasing to those in haste. That sluggish and hesitant river seemed never to have been slower: as the banks silently slid and the banks slowly receded, they cried out that they were standing still, not going. Then, however, they attacked the use of their feet and hands, and they leaned on the oars and overcame the nature of the river by urging it, and at last, having escaped the delays of Arari, they were scarcely content with the Rhone itself: it seemed to them that they were rushing at a gallop, much less that

118155 they were hurrying to Arelate. What is much? I must confess to you, emperor: with
 this vigor of your body, this ardor of mind, you sometimes labored to follow the army
 you were leading. For all were carried away with such impetuosity that, when they
 118160 discovered that he had left Marseilles in the desert of Arelate, they immediately
 took to their ships and with a rapid course, no longer the courses of the Rhone, but
 in a way the very gusts of the winds themselves, pre-empted them. Such was the love
 of your divinity that, although they knew that a most fortified city was to be
 attacked, they believed that it was sufficient for them to arrive.
 XIX. For Marseilles, as I hear, jutting out into the deep sea and surrounded by a
 most fortified harbor, into which the inland gulf flows back by a narrow approach, is
 118165 joined by only fifteen hundred paces of land, against which is opposed a very strong
 wall, densely studded with towers. For in times past, when the Greeks and Italians,
 who were strong in arts and ingenuity, were accustomed there, the place itself also
 taught them to spend more liberally all that was useful in war in that part which
 could be approached, while nature had otherwise remitted the cost of the work.
 118170 Therefore, a long siege revealed that Caesar, who was then closing the gates of the
 city on behalf of his senior leader, was often attacked by land and sea, with engines
 brought in, ramparts built, and naval battles, and was hardly more frequently
 attacked than terrified, although the Greek magistrates had repelled Caesar himself
 and soon his generals and forces not so much with their own strength as with their
 118175 walls. But now, O emperor, at your first arrival and the first attack of your army,
 nothing, not the height of the walls of the same Massilia, not the densest towers,
 not the nature of the place, prevented you from capturing both the harbor and the
 city at once, if you wished. Indeed, with such confidence the soldiers had stormed
 the entire wall that they would have immediately climbed it without a doubt, had not
 118180 the height of the ladders they had brought up deceived their guesses. But even so,
 many, deceived by the shortness of the ladders, stretched out their bodies, and,
 having lifted the shoulders of those who succeeded them, were already storming the
 gaps in the ramparts with their hands. They feared so little danger in the execution
 of the sentence that they seemed to be meeting each other on equal terms, not scaling
 118185 the wall.
 XX. But your singular piety, Constantine, and your ever-observant duties even under
 arms! You gave the signal for retreat and postponed victory so that you might be
 permitted to forgive all, lest Milos, in his anger, should do anything more atrocious
 than the nature of your clemency would suffer. In which, although you took care with
 118190 the solicitude of an excellent emperor that the soldiers led into fraud should take
 time to repent and voluntarily beg for forgiveness, yet we who behold your most
 gentle feelings (for nothing is so clear as the goodness in your breast) understand
 that you spared him whom, if the first burst had had the strength, no one could have
 rescued with the sword. Thus, as pertains to your piety, you reserved both him and
 118195 all those whom you had received. Let him impute to himself who did not wish to use
 your benefit nor judged himself worthy of life, when through you it was permitted to
 live: you, what is sufficient for your conscience, have spared even those who do not
 deserve it. But, forgive me, you cannot do everything: the gods avenge you even the
 unwilling.
 118200 XXI. Which indeed we must always hope that you may prosper even beyond your desires.
 success, which we place our hope in the bosom of your majesty and seek your presence
 everywhere, as if it could be given. For behold, while you had departed from the
 frontier for a short time, with what terrors the perfidy of the barbarians had
 boasted, namely, while they were asking themselves: when will he arrive? when will he
 118205 conquer? when will he bring back his weary army? when suddenly, having heard of your
 return, they fell down as if astonished, lest your vow for the republic should have
 touched the care of more than one night. For the day after you had received that news
 and undertaken the double labor of the journey, you learned that all the waves had
 subsided, and all the tranquility you had left had returned, the very night having so
 118210 arranged fortune that the happiness of your affairs there reminded you to offer to
 the immortal gods what you had vowed, where you had turned to the most beautiful
 temple in the whole world, nay, to the present god, as you saw him. For you saw, I
 believe, Constantine, Apollo, accompanied by your Victory, offering you laurel
 wreaths, each of which bears the omen of thirty years. For this is the number of
 118215 human ages, which are certainly due to you beyond Pylian old age. And indeed, what do
 I say 'I believe'? You have seen and recognized yourself in the form of him to whom
 the divine songs of the prophets sang that the kingdoms of the whole world were due.
 Which I now finally believe has happened, since you are, like him, young and happy
 and salutary and most beautiful, an emperor. Therefore, you have deservedly honored
 118220 those most august temples with such great gifts that they no longer seek the old

ones. Now all the temples see that you are calling to them, especially our Apollo, whose boiling waters punish perjury, which you must hate most of all.

XXII. Immortal gods, when will you grant that day on which this most present god, composed in all peace, will also go around those groves and sacred seats of Apollo and the mouths of the sighing springs? whose springs, smiling with gentle misty warmth, seem, Constantine, to want to insert themselves into your eyes and kisses. You will certainly marvel at that seat of your divinity and the warm waters without any sign of burning sun, of which there is no sadness in the taste or breath, but, such sincerity in the sip and smell as that of cold springs. You will also give gifts there, establish privileges, finally restore my homeland itself to the veneration of the place itself. The ancient nobility of which city, once boasting of the fraternal name of the Roman people, awaits the help of your majesty, so that there too public places and temples may be repaired by your beautiful generosity, just as I see this most fortunate city, whose birthday is celebrated by your piety, so rising from all its walls that it somehow rejoices that it once fell, increased by the benefits you have bestowed. I see around my greatest rival, I believe, Roman, I see basilicas and the forum, royal works, and the seat of justice raised to such a height that they promise themselves to be contiguous and close to the stars and the sky. All of which are certainly gifts of the present. For whatever places your divinity most frequently illuminates, in these all things, both men and walls, are increased by your gifts, and the earth has not given new flowers to Jupiter and Juno while they are reclining, as around you, Constantine, cities and temples have risen. Therefore, this is sufficient for my acquaintances, that you see my country with your piety guiding you, because it will be restored immediately if you see it. But for that happiness will see whether it is still due to my age.

XXIII. Literally, since I have reached the sum of my vows by your deign to consecrate to your ears this voice of mine, whatever it may be, exercised in the various offices of the forum and palace, I give the greatest thanks to your divinity and, what remains, I commend to you my children, especially him who is now handling the highest patronage of the treasury, to whom piety has transferred me entirely, whose happy service, if you ever look back, will be most suitable to your age. However, what I have said about all my children, is broad, emperor, ambition. For besides those five whom I have begotten, there are also those who are like mine in number whom I have promoted to the protection of the court, to the offices of the palace. Indeed, many rivers flow from me, not ignoble, many of my followers also administer your provinces. I rejoice in their successes and I lead them all to honor for my sake. If perhaps today I have spoken below my expectations, I trust that I have been pleased with them. If, however, your divinity has also granted me this, that from this speech I may report not a testimony of eloquence, which is too much, but of the little prudence and mind that you have shown: let the ignoble cares of private studies give way, and I will have perpetual material for speech, whoever approves me, emperor.

Papini and the Devil, red binding

GHOSTS IN THE PEEL

Rumors circulated last week that the Limburg Peel region, particularly around Helenaveen, is haunted. There were reports of eerie noises and stones, rotten apples, and even tomatoes flying around for no apparent reason. I rushed to the threatened location and found that the locals had adopted the usual attitude of somewhat fearful disbelief regarding these phenomena. However, there is one man who persists in an unwavering belief: the Peel region isn't just haunted; the devil is raging "to the point that it's no longer beautiful." That man is Mr. Leo Kluijtmans. He lives on "Hoeve het Volkmeer" (Farm of the Volkmeer), on Grashoek, an inhospitable place that must indeed be a paradise in the eyes of ghosts with a sense of natural beauty. Mr. Kluijtmans is an antiquarian and 56 years old. He has six children, aged four to eighteen, and his fruit-growing business, which he primarily manages with his staff, is estimated to be worth around €200,000. He's not wealthy, but he manages to get by enough to have enough time for his hobby of archaeology. When I enter his living room, I see a book lying on a trestle table: "Papini. The Devil." Upon closer inspection, this turns out to be not entirely without meaning. Mr. Kluijtmans had been a farmer since he was twelve. He could do so because he "didn't have to fight the battle of life." After all, his father, a peat digger by trade, had worked his way up to become manager of the best farm in the region. And his research began when, as a boy, he discovered some shards in the sand during some leveling work for the construction of a temporary church. He went to ask the teacher about it. And he said: "Those are the remains of urns." Later, Mr. Kluijtmans also found whole urns. A little bit of ancient history. In 1910, the remains of a Roman officer were found near Helenaveen. A golden helmet—which can still be seen in a museum somewhere—a silver spur, a wine barrel holding two to three liters, a horseshoe, and some baskets of leather. Mr. Kluijtmans had long been thinking about solving that case. However, he had to wait years. In 1959, a fire broke out at the aforementioned location—which he knew from his father—that lasted for weeks. This opened up the area, which had previously been virtually inaccessible to humans. But it wasn't until 1960 that Mr. Kluijtmans dared to enter. One Sunday after Mass, however, he took the plunge and made a surprising discovery: he found a curious moonstone. At the very spot where the Roman's helmet had also been found. From that moment on, Mr. Kluijtmans was certain: this moonstone had murdered the Roman. And that Roman hadn't been a warrior, but a preacher of the faith, a martyr. "How do you know that?" "That," Mr. Kluijtmans replied. "lies in the magical plane." The magical plane. Mr. Kluijtmans shows me a kind of survey form from the "Central Committee for Research into Dutch Folklore of the Royal Netherlands Academy of Arts and Sciences, Department of Folklore." Do you know stories about (I'll just give a small sample from the extensive anthology): "A Voice from the Water," "Changing Children," "Changing Witches," "Spinning Gnome Woman," "White Ladies," "Huns," "False Surveyors," "Derk with the Bear," "Heemanneke Ossaert," "Illness as a Cloud," "Ghost Funeral," "Sacred Bullets," "People Who Can Make Peat March," "Shepherds Who Can Turn Their Sheep into Haystacks or Something Like That," "Music in the Air," "People Who Were Pulled Off the Road?" Mr. Kluijtmans knows all about that last phenomenon. He's experienced it himself. How? The Mr. Kluijtmans must have been in his early twenties when he cycled home from lessons one Sunday afternoon. Lessons, because at the time he played the accordion in an amateur jazz band. At a crossroads, he was stopped by an intelligible force. He felt as if he had to fight against a force that ordered him to turn back. Back to the Roman, however. Mr. Kluijtmans not only knows that he must have been a martyr and preacher of the faith. He even knows his name. How? "One night," says Mr. Kluijtmans, "I woke up at 12:30, feeling short of breath. I thought: there's someone in the room. When I opened my eyes, I saw nothing. When I closed them, I did see him. I asked: 'What's your name?' And then a beautiful, clear, distinct voice sounded, saying: 'Basilius.' I nudged my wife and said: 'Woman, I know his name.'" My wife then replied, still sleepily, "Tell me tomorrow morning." Mr. Kluijtmans has seen the devil. How? "One Sunday in September, I was doing research in the Peel. There had just been a murder there. I was passing a stretch of water, and there, standing a short distance apart, were three fishermen, fishing rods in hand. I cycled past, and one turned his head and looked at me, sending a shiver down my spine. About ten meters away stood the second; he turned completely, and his eyes looked like fireballs. The third had a reddish complexion. That was around 11:30

118330 in the afternoon. At 5:30, I passed that spot again, and the fishermen were still
there. Then the middle one pulled his rod out of the water and, his head carved from
granite, came at me without blinking. I'm not easily frightened, so I looked at him
coldly. He said nothing, and I said nothing. His eyes bulged from their sockets. When
118335 he came within a meter of me, I hesitated. He wanted to destroy me. At the same
moment, it was as if he were seized by a higher power, and he fell back into a
helpless smallness, into nothingness. At that moment, too, I saw a glimpse of divine
beauty on his face: there was something delicate there, something very subtle.
When Mr. Kluijtmans heard about those ghostly rumors in the Peel region, he knew
immediately that they were true. There are stories about dogs chasing cyclists.
118340 That's true. "The devil likes to manifest himself in a dog!"
Mr. Kluijtmans' grandmother was a clairvoyant. "This traditional story—which must
have taken place around 1860—is known from her. She was a farmer's maid. And one day,
at eleven o'clock in the evening, she went to fetch water from the well. She had just
taken the bucket off the hook and put it down when she thought: what do I see there?
118345 It was a funeral procession in the moonlight. Her hair rose up under her cap. She saw
a woman, tying her apron at the back, running after the procession.
Days later, there really was a funeral procession in the village. And the grandmother
remembered that she had been that running woman-in-apron. The "Folklore Department"
calls it: "Ghost funerals, funeral procession."
118350 I drive with Mr. Kluijtmans to the place where he found that famous moonstone.
"I have one condition," he says beforehand, "if you find anything, it's mine."
It costs me no effort to make that promise. Even less to keep it. Because, upon
closer inspection, I find, in the designated spot in the Absolutely nothing. It's a
patch of freshly plowed earth.
118355 When we return to his house, Mr. Kluijtmans shows me a few more archaeological finds,
which, to my taste, are quite remarkable, and which he has stored in a small
suitcase. A remarkable arrowhead and a strange stone knife. He talks about them with
infectious enthusiasm. Meanwhile, Papini and the Devil are still bound in red on the
cupboard. Ghosts in the Peel.
118360 Whatever the case, Mr. Kluitmans simply continues, as he has been accustomed to doing
since he was twelve. Incidentally, he tells me, not without justified pride, that he
has a permit from the bishop to dig in the area on Sundays. The only restriction
imposed on him is that he must make "reasonable use" of it.
HERMAN HOFHUIZEN

Naspeuringen van Paul Theelen: Constantinus Imperator

Comes limitis Aegypti

31 units or detachments of units are listed as being under the command of the Count of the Egyptian border:

Legio quinta Macadonica

Legio tertiadecima gemina

Equites stablesiani

Equites Saraceni Thamudeni

Legio tertia Diocletiana

Legio secunda Traiana

Ala Theodosiana nuper constituta (ie. recently constituted)

Ala Arcadiana nuper constituta (ie. recently constituted)

Ala secunda Armeniorum

Ala tertia Arabum

Ala octava Vandilorum

Ala septima Sarmatarum

Ala prima Aegyptiorum

Ala veterana Gallorum

Ala prima Herculia

Ala quinta Raetorum

Ala prima Tingitana

Ala Apriana

Ala secunda Assyriorum

Ala quinta Praelectorum

Cohors tertia Galatarum

Cohors secunda Astarum

Ala secunda Ulpia Afrorum

Ala secunda Aegyptiorum

Cohors prima sagittariorum

Cohors prima Augusta Pannoniorum

Cohors prima Epireorum

Cohors quarta Iuthungorum

Cohors secunda Ituraeorum

Cohors secunda Thracum

Cohors quarta Numidarum

Comes Britanniarum

3 infantry units are listed as being under the command of the Count of Britain, drawn from those under the overall command of the Magister Peditum:

Victores iuniores Britannici

Primani iuniores

Secundani iuniores

along with 6 cavalry units, said to be drawn from those under the overall command of the magister Equitum:

Equites catafractarii iuniores

Equites scutarii Aureliaci

Equites Honoriani seniores (ie. a vexillationes comitatenses unit)

Equites stablesiani

Equites Syri

Equites Taifali

Comes litoris Saxonici per Britanniam

9 commanders and tribunes along with their units are listed as being under the command of the Count of the Saxon Shore of Britain:

Praepositus numeri Fortensium

Praepositus militum Tungrecanorum

Praepositus numeri Turnacensium

Praepositus equitum Dalmatarum Branodunensium

Praepositus equitum stablesianorum Gariannonensium

Tribunus cohortis primae Baetasiorum

Praefectus legionis secundae Augustae

Praepositus numeri Abulcorum

Praepositus numeri exploratorum (ie. scouts?)

[...] while the men under the praepositus Equitum stablesianorum Gariannonensium would appear to be the Equites stablesiani listed under the Comes Britanniarum.

Dux Pannoniae primae et Norici ripensis

- 118565 26 tribunes and prefects with their associated units are listed as being under the command of the Duke of first Pannonia and riverine Noricum (ie western Hungary and Danubian Austria):
- Cuneus equitum Dalmatarum (no officer given)
 - Cuneus equitum stablesianorum (no officer given)
- 118570 Equites promoti (no officer given, split over 4 separate locations)
- Equites sagittarii (no officer given, split over 4 separate locations)
 - Equites Dalmatae (no officer given, split over 5 separate locations)
 - Equites Mauri (no officer given)
 - Tribunus gentis Marcomannorum (no officer given)
- 118575 Praefectus legionis decimae geminae (2 prefects at separate locations)
- Praefectus legionis quartaedecimaegeminae militum liburnariorum (ie. naval units; 2 prefects at separate locations)
 - Praefectus classis Histricae (ie. naval unit)
 - Tribunus cohortis (5 tribunes at separate locations)
- 118580 Praefectus legionis secundae Italicae (3 prefects at separate locations)
- Praefectus legionis primae Noricorum (2 prefects at separate locations)
 - Praefectus classis (ie. naval unit, 2 prefects at separate locations)
- Dux Raetiae
- 118585 21 tribunes and prefects along with their units are listed as being under the command of the Duke of Raetiae (ie. Switzerland):
- Equites stablesiani seniores (no officer given)
 - Equites stablesiani iuniores (no officer given, recorded at two separate locations)
- 118590 Praefectus legionis tertiae Italicae (5 prefects at separate locations)
- Praefectus militum Ursariensium
 - Praefectus alae primae Flaviae Raetorum
 - Tribunus cohortis novae Batavorum
 - Tribunus cohortis tertiae Brittorum
- 118595 Praefectus alae secundae Valeriae singularis
- Tribunus cohortis sextae Valeriae Raetorum
 - Tribunus cohortis primae Herculeae Raetorum,
 - Tribunus cohortis quintae Valeriae Frygum
 - Tribunus cohortis tertiae Herculeae Pannoniorum
- 118600 Tribunus gentis per Raetias deputatae
- Praefectus numeri barbaricariorum
 - Praefectus alae secundae Valeriae Sequanorum
 - Tribunus cohortis Herculeae Pannoniorum
- 118605 **Further information on Constantine and military units/Verdere informatie over Constantijn en de leger-onderdelen**
 Samenvatting van de eenheden met de naam "stablesiani"

- Dux Raetiae
 - Equites stablesiani seniores
 - Equites stablesiani iuniores
- 118630 Enige opmerkingen m.b.t. de Stablesiani/Some remarks on the Stablesiani

- About half the cavalry consisted of heavy cavalry (including the stablesiani). They were armed with spear or lance and sword and armored in mail. Some had bows, but they were meant for supporting the charge instead of independent skirmishing.

- The majority of Roman cavalry regiments in the comitatus remained of the traditional semi-armoured type, similar in equipment and tactical role to the alae of the Principate and suitable for mêlée combat. These regiments carry a variety of titles: comites, equites scutarii, equites stablesiani or equites promoti. Again, these titles are probably purely traditional, and do not indicate different unit types or functions.

- There are two Equites stablesiani units listed under the Magister Equitum, both listed as being stationed in Africa: the Equites stablesiani Italiciani and the Equites stablesiani seniores. This British Equites stablesiani unit is just possibly one of these two, but it is much more likely to be the men under the command of the Praepositus equitum stablesianorum Gariannonensium listed under the Comes litoris Saxonici per Britanniam and drafted into the field army of the Comes Britanniarum in the same way as the Equites catafractarii iuniores.

- Wij vinden dus de benaming van de volgende legeronderdelen terug:

Equites stablesiani

Equites stablesiani Africani

Equites stablesiani Italiciani

Equites stablesiani seniores

Equites stablesiani iuniores

Equites secundi stablesiani

Equites tertii stablesiani

Praepositus equitum stablesianorum Gariannonensium

Cuneus equitum stablesianorum

- De cavalerie-onderdelen met de naam stablesiani erin hebben over het gehele Romeinse Rijk gediend. Het waren eenheden die te paard zwaar bewapend optraden.

- Evelein schrijft erover:

alleen aan de rechterkant, ter hoogte van het middenstuk b, wordt zij onderbroken door een ingekraste inscriptie, STABLESIA o VI o, waarover straks.

[...] Als tweede inscriptie op onze helm zagen wij rechts op den helmrand die van Stablesia VI. Zij duidt een afdeeling aan der equites Stablesiani, een ruitercorps, dat zooals uit de Notitia Dignitatum blijkt, tijdens het latere romeinse keizerrijk uit twee inscripties, te Brescia en Sitifi (Africa) gevonden, waarvan op de eerste sprake is van een vexillatio van dit corps.

Is, zooals Prof. Bohn mij doet opmerken, naar analogie hiervan, alsmede door het feit, dat het woord vexillatio reeds op het einde der 3de eeuw een ruiter-afdeeling beteekent, onze inscriptie aldus aan te vullen: (Vexillatio) Stablesi(na) VI, des te meer zijn wij daartoe geneigd, waar in de door ons ook genoemde Not. Dign. dit ruitercorps vermeld wordt onder de vexillationes comitatenses van Africa en Brittanië. Zoo behoorde dus de drager van onze helm tot de 6de afdeeling der equites Stablesiani en draagt onze helm iets bij tot de geschiedenis van dit corps, dat thans blijkt zich ook in onze streken eenmaal te hebben opgehouden.

Comitatenses and limitanei (284-395 AD)

A distinction between frontier guard troops and more mobile reserve forces had emerged with the use of certain troops to permanently man frontiers such as Hadrian's Wall in Britannia in the 2nd century AD, and may have extended as far back as the late Republic's use of "provincial" and "emergency" legions. By the late Empire the competing demands of manned frontiers and strategic reserve forces had led to a division of the military into four types of troops. Border fortifications were manned by a "settled and hereditary" militia (Latin: limitanei or riparienses) that were "tied to their posts". In the rear lay more mobile troops in field armies known as the comitatenses, which were held in strategic reserve. Somewhere between the two were more local provincial reserves known as cunei (cavalry) and auxilia (by this time, referring to infantry alone) that may have evolved from earlier auxiliary cavalry units. From the time of the emperor Constantine I there were also two small central reserves (Latin: scholae) held to the strategic rear even of the comitatenses, one each in the presence of the emperors of West and East respectively. Created and expanded from the core troops of the Emperor's personal bodyguards, the central field armies by 295 AD seem to have been too large to be accounted for as simple bodyguard forces, but were still too small to be able to campaign independently of legionary or vexillation support.

Of the four troop types, the limitanei (border guards) are generally considered to

have been of the lowest quality, consisting largely of peasant-soldiers that were both "grossly inferior" to the earlier legions and inferior also to their counterparts in the mobile field armies.

While the limitanei were supposed to deal with policing actions and low-intensity incursions, the duty of responding to more serious incidents fell upon the provincial troops. The countering of the very largest scale incursions on a strategic scale was the task of the comitatenses or mobile field troops, possibly accompanied by the emperor's scholae. Both border and field armies consisted of a mix of infantry and cavalry units[although the weight of cavalry was, according to some authorities, greater in the mobile field armies. Overall, approximately one quarter of the army consisted of cavalry troops but their importance is uncertain. Older works such as the Eleventh Edition of the Encyclopædia Britannica (1911) state that the Roman military of the late Empire was "marked by that predominance of the horseman which characterised the earlier centuries of the Middle Ages," but many more recent authors believe that the infantry remained predominant.

There is some dispute about whether this new military structure was put into place under the Emperor Diocletian or Constantine since both reorganised the Roman Army in the late 3rd and early 4th centuries to some degree. Both Diocletian and even his predecessor of thirty years Gallienus may already have controlled mobile strategic reserves to assist the empire's border forces; either Diocletian or Constantine expanded this nascent force into permanent field armies.

Recruitment from amongst Roman citizens had become greatly curtailed as a consequence of a declining population, "cripplingly numerous" categories of those exempted from military service and the spread of Christianity with its pacifist message. Together, these factors culminated in "the withdrawal of the urban class from all forms of military activity." In their place, much of Rome's military were now recruited from non-Italian peoples living within the empire's borders. Many of these people were barbarians or semi-barbarians recently settled from lands beyond the empire, including several colonies of Carpi, Bastarnae and Sarmatians.

Although units described as legiones existed as late as the 5th century in both the border and field armies, the legionary system was very different from that of the principate and early empire. Since the term legion continued to be used, it is unclear exactly when the structure and role of the legions changed. In the third or 4th century, however, the legions' role as elite heavy infantry was substantially reduced and may have evaporated entirely. Instead, those "legions" that remained were no longer drawn exclusively (and perhaps hardly at all) from Roman citizens. Either Diocletian or Constantine reorganised the legions into smaller infantry units who, according to some sources, were more lightly armoured than their forebears. Their lighter armament may have been either because they "would not consent to wear the same weight of body armour as the legionaries of old" or, as in at least one documented instance, because they were prohibited from wearing heavy armour by their general in order to increase their mobility. 4th-century legions were at times only one sixth the size of early imperial legions, and they were armed with some combination of spears, bows, slings, darts and swords, reflecting a greater contemporary emphasis on ranged fighting. The auxilia and numeri had also largely disappeared. Constantine further increased the proportion of German troops in the regular army; their cultural impact was so great that even legionaries began wearing German dress. At the start of Diocletian's reign, the Roman army numbered about 390,000 men, but by the end of his reign he successfully increased the number to 581,000 men.

The army under Diocletian and Constantine

The Eastern Empire dates from the creation of the Tetrarchy ("Quadrumvirate") by the Emperor Diocletian in 293. His plans for succession did not outlive his lifetime, but his reorganization of the army did by centuries. Rather than maintain the traditional infantry-heavy legions, Diocletian reformed it into limitanei ("border") and comitatenses ("field") units. There was an expansion of the importance of the cavalry, though the infantry still remained the major component of the Roman armies, in contrast to common belief. For example, in 478, an Eastern field army consisted of 8,000 cavalry and 30,000 infantry and it can be calculated that in 357 Emperor Julian had 10,000 infantry and 3,000 cavalry at Strasbourg. But the importance of cavalry for the commanding officers, though not the numbers, did increase, and by the time of Justinian, the numbers had increased, too.

The limitanei and ripenses were to occupy the limes, the Roman border fortifications. The field units, by contrast, were to stay well behind the border and move quickly where they were needed, whether for offensive or defensive roles, as well as forming

an army against usurpers. The field units were held to high standards and took precedence over Limitanei in pay and provisions.

Cavalry formed about one-third of the units, but as a result of smaller units, about one-quarter of the Roman armies consisted of cavalry. About half the cavalry consisted of heavy cavalry (including the stabilesiani). They were armed with spear or lance and sword and armored in mail. Some had bows, but they were meant for supporting the charge instead of independent skirmishing. In the field armies there was a component of some 15% of cataphractarii or clibanarii, heavily armoured cavalry who used shock tactics. The light cavalry (including the scutarii and promoti) featured high amongst the limitanei, being very useful troops on patrol. They included horse archers (Equites Sagittarii). The infantry of the comitatenses was organized in regiments (variously named legiones, auxilia or just numeri) of about 500-1,200 men. They were still the heavy infantry of old, with a spear or sword, shield, body armour and a helmet. But now each regiment was supported by a detachment of light infantry skirmishers. If needed, the infantry could take off (some of) their armour to act in a more flexible way as Modares did (according to Zosimus) during the Gothic War of the 370s. The regiments were commanded by a tribunus ("tribune") and brigaded in pairs (cavalry units did, too) under a comes. These brigades probably were tactical and strategic units only, as no traces survive of brigade staff corps. On the other hand, little is known of the limitanei. The old legions, cohorts and cavalry alae survived there, and newer units were created (the new legions, or auxilia and vexillationes, amongst the cavalry. The limitanei infantry may have been lighter-equipped than the comitatenses infantry, but there is no evidence whatsoever. They were paid less than the field troops and recruited locally. Consequently, they were of inferior quality. However, they were in the line of fire. They countered most incursions and raids. Thus, it can be assumed they did have superior field experience (except in periods of long campaigning for the comitatenses), though that experience did not extend to large battles and sieges.

The Scholae Palatinae units, which were more properly known as the Schola Protectores Domestici and the "Protective Association of the Royal Escort" (also called the Obsequium), were the personal guard of the Emperor, and were created to replace the Praetorian Guard disbanded by Constantine I.

The legions in the third and fourth century were not the legions of the Republic or earlier Roman empire, that they consisted largely or solely of equites troops, [citation needed] and that they tended to be far short of the Augustinian legion component of 5,000 men. [uit http://en.wikipedia.org/wiki/Byzantine_army]

Constantine I

After defeating Maxentius in 312, Constantine disbanded the Praetorian Guard, ending the latter's 300-year existence. Although the instant reason was the Guard's support for his rival Maxentius, a force based in Rome had also become obsolete since emperors now rarely resided there. The imperial escort role of the Guard's cavalry, the equites singulares Augusti, was now fulfilled by the scholae. These elite cavalry regiments existed by the time of Constantine and may have been founded by Diocletian. Constantine expanded his comitatus into a major and permanent force. This was achieved by the addition of units withdrawn from the frontier provinces and by creating new units: more cavalry vexillationes and new-style infantry units called auxilia. The expanded comitatus was now placed under the command of two new officers, a magister peditum to command the infantry and magister equitum for cavalry. Comitatus troops were now formally denoted comitatenses to distinguish them from the frontier forces (limitanei). The size of the Constantinian comitatus is uncertain. But Constantine mobilised 98,000 troops for his war against Maxentius, according to Zosimus. It is likely that most of these were retained for his comitatus. This represented about a quarter of the total regular forces, if one accepts that the Constantinian army numbered around 400,000. The rationale for such a large comitatus has been debated among scholars. A traditional view sees the comitatus as a strategic reserve which could be deployed against major barbarian invasions that succeeded in penetrating deep into the empire or as the core of large expeditionary forces sent across the borders. But more recent scholarship has viewed its primary function as insurance against potential usurpers.

Constantine I completed the separation of military commands from the administrative structure. The vicarii and praefecti praetorio lost their field commands and became purely administrative officials. However, they retained a central role in military affairs, as they remained responsible for military recruitment, pay and, above all, supply. It is unclear whether the duces on the border now reported direct to the emperor, or to one of the two magistri of the comitatus.

In addition, Constantine appears to have reorganised the border forces along the Danube, replacing the old-style alae and cohortes with new units of cunei (cavalry) and auxilia (infantry) respectively. It is unclear how the new-style units differed from the old-style ones, but those stationed on the border (as opposed to those in the comitatus) may have been smaller, perhaps half the size. In sectors other than the Danube, old-style auxiliary regiments survived.

The 5th-century historian Zosimus strongly criticised the establishment of the large comitatus, accusing Constantine of wrecking his predecessor Diocletian's work of strengthening the border defences: "By the foresight of Diocletian, the frontiers of the Roman empire were everywhere studded with cities and forts and towers... and the whole army was stationed along them, so it was impossible for the barbarians to break through... But Constantine ruined this defensive system by withdrawing the majority of the troops from the frontiers and stationing them in cities which did not require protection." Zosimus' critique is probably excessive, both because the comitatus already existed in Diocletian's time and because some new regiments were raised by Constantine for his expanded comitatus, as well as incorporating existing units. Nevertheless, the majority of his comitatus was drawn from existing frontier units. This drawdown of large numbers of the best units inevitably increased the risk of successful large-scale barbarian breaches of the frontier defences.

Gallia Belgica

During the 1st century AD (estimated date 90 AD), the provinces of Gaul were restructured. Emperor Domitian reorganized the provinces in order to separate the militarized zones of the Rhine from the civilian populations of the region. The northeastern part of Gallia Belgica was split off and renamed Germania Inferior, later to be reorganized and renamed as Germania Secunda. This included the eastern part of modern Belgium, the southernmost part of the modern Netherlands, and a part of modern Germany. The eastern part was split off to become Germania Superior (parts of western Germany and eastern France) and the southern border of Gallia Belgica was extended to the south. The newer Gallia Belgica included the cities of Camaracum (Cambrai), Nemetacum (Arras), Samarobriua (Amiens), Durocorter (Reims), Diuidorum (Metz) and Augusta Treverorum (Trier).

Emperor Diocletian restructured the provinces around 300, and split Belgica into two provinces: Belgica Prima and Belgica Secunda. Belgica Prima had Treveri (Trier) as its main city, and consisted of the eastern part. The border between Belgica Prima and Belgica Secunda was approximately along the River Maas.

Plaques

The Antonine Plague of 165 to 180 AD, also known as the Plague of Galen (from the name of the Greek physician living in the Roman Empire who described it), was an ancient pandemic brought back to the Roman Empire by troops returning from campaigns in the Near East. Scholars have suspected it to have been either smallpox or measles, but the true cause remains undetermined. The epidemic may have claimed the life of a Roman emperor, Lucius Verus, who died in 169 and was the co-regent of Marcus Aurelius Antoninus, whose family name, Antoninus, has become associated with the epidemic. The disease broke out again nine years later, according to the Roman historian Dio Cassius (155-235), causing up to 2000 deaths a day in Rome, one quarter of those who were affected, giving the disease a mortality rate of about 25%. The total deaths have been estimated at five million, and the disease killed as much as one-third of the population in some areas and devastated the Roman army.

Ancient sources agree that the epidemic appeared first during the Roman siege of Seleucia in the winter of 165-166. Ammianus Marcellinus reports that the plague spread to Gaul and to the legions along the Rhine. Eutropius asserts that a large population died throughout the Empire.

Rafe de Crespigny speculates that the plague may have also broken out in Eastern Han China before 166, given notices of plagues in Chinese records. The plague affected Roman culture and literature, and may have severely affected Indo-Roman trade relations in the Indian Ocean.

The Plague of Cyprian is the name given to a pandemic that afflicted the Roman Empire from about 249 to 262. The plague is thought to have caused widespread manpower shortages for food production and the Roman army, severely weakening the empire during the Crisis of the Third Century. Its modern name commemorates St. Cyprian, bishop of Carthage, an early Christian writer who witnessed and described the plague.

- 118895 The agent of the plague is highly speculative due to sparse sourcing, but suspects include smallpox, pandemic influenza and viral hemorrhagic fever (filoviruses) like the Ebola virus.
- 118900 In 250 to 262, at the height of the outbreak, 5000 people a day were said to be dying in Rome. Cyprian's biographer, Pontius of Carthage, wrote of the plague at Carthage: "Afterwards there broke out a dreadful plague, and excessive destruction of a hateful disease invaded every house in succession of the trembling populace, carrying off day by day with abrupt attack numberless people, every one from his own house. All were shuddering, fleeing, shunning the contagion, impiously exposing their own friends, as if with the exclusion of the person who was sure to die of the plague, one could exclude death itself also. There lay about the meanwhile, over the whole city, no longer bodies, but the carcasses of many, and, by the contemplation of a lot which in their turn would be theirs, demanded the pity of the passers-by for themselves. No one regarded anything besides his cruel gains. No one trembled at the remembrance of a similar event. No one did to another what he himself wished to experience".
- 118910 In Carthage the "Decian persecution", unleashed at the onset of the plague, perhaps inadvertently led to the criminalization of Christian oath refusal. Fifty years later, North African convert to Christianity Arnobius defended his new religion from pagan allegations:
- 118915 "that a plague was brought upon the earth after the Christian religion came into the world, and after it revealed the mysteries of hidden truth? But pestilences, say my opponents, and droughts, wars, famines, locusts, mice, and hailstones, and other hurtful things, by which the property of men is assailed, the gods bring upon us, incensed as they are by your wrong-doings and by your transgressions".
- 118920 Cyprian drew moralizing analogies in his sermons to the Christian community and drew a word picture of the plague's symptoms in his essay *De mortalitate* ("On the Plague"):
- 118925 "This trial, that now the bowels, relaxed into a constant flux, discharge the bodily strength; that a fire originated in the marrow ferments into wounds of the fauces; that the intestines are shaken with a continual vomiting; that the eyes are on fire with the injected blood; that in some cases the feet or some parts of the limbs are taken off by the contagion of diseased putrefaction; that from the weakness arising by the maiming and loss of the body, either the gait is enfeebled, or the hearing is obstructed, or the sight darkened; - is profitable as a proof of faith. What a grandeur of spirit it is to struggle with all the powers of an unshaken mind against so many onsets of devastation and death! what sublimity, to stand erect amid the desolation of the human race, and not to lie prostrate with those who have no hope in God; but rather to rejoice, and to embrace the benefit of the occasion; that in thus bravely showing forth our faith, and by suffering endured, going forward to Christ by the narrow way that Christ trod, we may receive the reward of His life and faith according to His own judgment!"
- 118930 Accounts of the plague date from about 249 to 262. There was a latter incident from 270 involving the death of Claudius II Gothicus, though it's unknown if this was the same plague or a different outbreak. The *Historia Augusta* says that "in the consulship of Antiochianus and Orfitus the favour of heaven furthered Claudius' success. For a great multitude, the survivors of the barbarian tribes, who had gathered in Haemimontum were so stricken with famine and pestilence that Claudius now scorned to conquer them further... during this same period the Scythians attempted to plunder in Crete and Cyprus as well, but everywhere their armies were likewise stricken with pestilence and so were defeated.
- 118945 The population of Britain may have decreased by between 1.5 and 3 million after the Roman period, perhaps caused by environmental changes (the Late Antique Little Ice Age) and, subsequently, by plague and smallpox (around 600, the smallpox spread from India into Europe). It is known that the Plague of Justinian entered the
- 118950 Mediterranean world in the 6th century and first arrived in the British Isles in 544 or 545, when it reached Ireland. It is estimated that the Plague of Justinian killed as many as 100 million people across the world. As a result, Europe's population fell by around 50% between 550 and 700. The later medieval Welsh *Lludd and Llefelys* mentions a series of three plagues affecting the British of London.
- 118955 Claudius Gothicus (Latin: Marcus Aurelius Valerius Claudius Augustus; May 10, 214–January 270), also known as Claudius II, was Roman emperor from 268 to 270. During his reign he fought successfully against the Alemanni and decisively defeated the Goths at the Battle of Naissus. He died after succumbing to "pestilence", possibly
- 118960 the Plague of Cyprian that had ravaged the provinces of the Empire.

Measles: Estimates based on modern molecular biology place the emergence of measles as a human disease sometime after 500 (the former speculation that the Antonine Plague of 165-180 was caused by measles is now discounted).

https://en.wikipedia.org/wiki/List_of_epidemics

References to the unique periodic fevers of malaria are found throughout recorded history. Hippocrates described periodic fevers, labelling them tertian, quartan, subtertian and quotidian. The Roman Columella associated the disease with insects from swamps. Malaria may have contributed to the decline of the Roman Empire, and was so pervasive in Rome that it was known as the "Roman fever". Several regions in ancient Rome were considered at-risk for the disease because of the favourable conditions present for malaria vectors. This included areas such as southern Italy, the island of Sardinia, the Pontine Marshes, the lower regions of coastal Etruria and the city of Rome along the Tiber. The presence of stagnant water in these places was preferred by mosquitoes for breeding grounds. Irrigated gardens, swamp-like grounds, runoff from agriculture, and drainage problems from road construction led to the increase of standing water.

THE POLITICS OF MEMORY AND VISUAL POLITICS:

THE POLITICS OF MEMORY

COMPARING THE SELF-REPRESENTATIONS OF CONSTANTINE AND AUGUSTUS

Mariana Bodnaruk

Augustus primus primus est huius auctor imperii,
et in eius nomen omnes velut quadam adoptione
aut iure hereditario succedimus.

The first Augustus was the first founder of
this empire, and to his name we all succeed,
either by some form of adoption or by
hereditary claim.

(Scriptores Historiae Augustae, Alexander Severus 10.4)

I begin with political history. To understand what happened after the Battle of Milvian Bridge on 28 October 312 AD and how the new political order of the empire was constituted I start with the question: What does Constantinian art say about imperial politics in the aftermath of the year 312 CE? This article addresses this question at the intersection of art, politics, and ideology, comparing Constantine's visual self-representation with that of the first emperor, Augustus. The visual image Constantine created incorporated a variegated mixture of messages that echoed contemporary trends in the equally complex eulogistic writing.

It all began with the Constantinian Arch in Rome. Constantine had just overcome the army of the usurper Maxentius and captured Rome. Maxentius died disgracefully and his head was paraded in triumphal procession exhibited to the populace of Rome, his military forces - the equites singulares and Praetorian Guard - were dissolved, and his memory was obliterated. In the exultation of victory, the time was ripe for Constantinian revenge, yet the Roman senators, the very aristocrats who had supported Maxentius, retained their offices. Like young Octavian, who chose to exercise the politics of clementia towards supporters of Mark Antony after his Actian victory, Constantine sought to maintain good relations with the most influential members among the senatorial aristocrats. At that time he appeared to be a glorious winner over the common enemy and as such received the triumph traditionally granted by the senate. What is more, around 315 AD the emperor also received a commemorative monument from the senate, the triumphal Arch; Constantine's defeat of his enemy was therefore put in the context of previous famous imperial victories.

Having liberated Rome from the rule of a tyrant, in terms reminiscent of the claims of Augustus expressed in the Res Gestae three and a half centuries earlier, Constantine evoked his ideological "father", the founder of the empire Octavian, the future Augustus, had received a triumphal arch from the senate in the Roman Forum about 29 BCE, after the naval victory over Mark Antony and Cleopatra. The Roman revolution of Augustus was paralleled in the Roman revolution of Constantine: An empire at peace with itself was founded on the forgetting of civil conflict. Constantine reigned longer than any of the emperors had since the forty-five years of

Augustus, who had created the imperial system three centuries earlier. For twenty-three of the thirty years of his reign, Constantine ruled as a Christian, the first ever to sit in Augustus' place. Resembling the first Roman emperor, Constantine launched an enormous urban building program and spread imperial images all over the empire.

Evoking a comparative perspective, Constantinian art can be assessed on a large scale in its relation to earlier imperial imagery, apart from specifically Christian affiliations. However, approaching Constantinian visual politics, the samples of approximately fifty surviving sculptural portraits of Constantine pose limitations when contrasted to the samples of two hundred and twelve preserved portraits of Augustus.

Eusebius and the Theology of Augustus

Focusing on the structural correspondence between the realm of the divine and the empire, the domain of politics – following the original Schmittian construct of political theology – Erik Peterson has dealt with an ancient version of political theology that consisted of an ideological correlation of political structure and religious belief system: One God and one emperor on earth. In the Christian version after the conversion of Constantine, this construct served the same purpose as previous polytheist theories on kingship had; it legitimated a monarchical government by authorizing the belief that a single divine power is the ultimate source of political rule. It demonstrated a particular affinity for theologies that emphasized the subordinate character of the Logos (Word) to God the Father.

With Melito of Sardis and Origen, a link between the establishment of the Augustan Pax Romana and the birth of Christ became a topos. With Eusebius, who historicized and politicized Origen's ideas, one encounters firstly a typological parallel connecting Augustus with Constantine (not really conveyable by quotation), the moment of imperial foundation with its ultimate accomplishment through which both Augustus and Christ were finally manifested in the person of the first Christian emperor, Constantine. For Eusebius, in principle, monotheism – the metaphysical corollary of the Roman Empire – began with Augustus, but had become reality in the present under Constantine. When Constantine defeated Licinius, Augustan political order was reestablished and at the same time the divine monarchy was secured. Eusebius asserts that Augustus inaugurated monotheism by triumphing over the polyarchy, the cause of endless wars, and Constantine only fulfilled what Augustus had begun. The political idea that the Roman Empire did not lose its metaphysical character when it shifted from polytheism to monotheism, because monotheism already potentially existed with Augustus, was linked with the rhetorical-political idea that Augustus was aforeshadowing of Constantine.

Peterson has emphasized the "exegetical tact" – a "striking lack" of which he found in Eusebius – that kept all other ecclesiastical writers from binding the empire so closely to God's intentions that it would appear to be less an instrument and more the object of divine blessing for its own sake. At stake in this open political struggle was that, if monotheism, the concept of the divine monarchy in the sense in which Eusebius had formulated it, was theologically untenable, then so too was the continuity of the Roman Empire, and Constantine could no longer be recognized as the fulfiller of what had begun in principle with Augustus, and so the unity of the empire itself was threatened.

Actium and the Milvian Bridge as Sites of Civil War

Constantine's commemoration of the victory over his political rival referred to the first and paradigmatic one in the imperial context, evoking the Augustan victory over Mark Antony that constituted a precedent for Constantine. Like Maxentius, Mark Antony suffered sanctions against his memory soon after his suicide in Egypt; before victorious Octavian returned to Rome, the senate had ordered the erasure of Antony's name along with the names of all his ancestors. This severe action did not meet with Octavian's approval, however. Exercising clementia Caesaris, both Octavian and Constantine forgave political opponents their previous loyalties to the losing side. By the very proclamation of clemency and amnesty they strove to forget, officially and institutionally, that there were two parties and the winners themselves solicited the forgetting by making equal both those who were on their side and those – no longer dangerous – who were not.

Ordered by the senate, born of a negative sentiment of repentance after Maxentius' defeat, the Arch of Constantine did not glorify a splendid foreign victory, but a civil war between Roman armies, radically different from most, if not all, of its precursors. Hence, the only related monument was Octavian's commemorative series of

Actian arches, and, in particular, the Arch in the Forum Romanum that mirrored the Augustan politics of memory and forgetting. One of the monuments honoring Actium, which Octavian dedicated to Neptune and Mars in Nikopolis with a celebratory inscription and ornamentation in the form of spoils of war – the prows and warship rams of Antony's fleet – was erected in 29 BCE near the very site of the battle. Another one was the Actian arch in the Roman Forum recorded on the coin reverses of 29–27 BCE.

What unites early Augustan and Constantinian monuments is the idea of inception; through momentous victories both cemented, first and foremost, their positions as rulers, and, at the same time, the conquest was presented to the populace of Rome as one over a despot (Antony), a foreign queen (Cleopatra), and a tyrant (Maxentius). This version of negation also concerns the positive content of memory in relation to a military victory. In other words, the triumphant one hesitates between not – or never – evoking an enemy who must be forgotten and exploiting a procedure for commemorating his own military achievement. Yet he could emphasize the negation as such. Negation resulted in an official decree of forgetting; the case of Mark Antony after his defeat in 31 BCE was the first example of the "sanctions against memory," thus, as with the striking resurrection of the practice in the early fourth century, Maxentius became one of the first victims of the *damnatio memoriae* decree.

To Remember and Forget in Rome: A Founding Forgetting

A panegyrist praises Constantine by referring to Virgil's Fourth Eclogue, implicitly evoking the Pax Augusta. The laudatory inscription on the Arch of Constantine thanks the emperor for having saved the state from a tyrant and his faction in a way that linked a number of Augustus' accomplishments: ending civil wars, restoring peace, and returning power to the senate and the Roman people. The Constantinian inscription – reminiscent of Augustus' *Res Gestae* – claims to have taken revenge over the tyrant, stopped the *factio*, and saved the city. Alluding to the founder of the Augustan Peace, the inscription characterizes Constantine's accomplishments by calling him liberator urbis and fundator quietis. It is not surprising that the Christian Lactantius eulogized Constantine for his unification of the empire, the "illegitimate" division of which during the period of tetrarchy is considered to be against God's will.

It was only later that Eusebius fully adopted the traditional language of the panegyrists and the ideas that stemmed from the rhetoric. Symptomatically – appearing as a "curious accident" entirely in a Sherlock Holmesian sense of the term – there is but a single explicit literary parallel to the growing resemblance of Constantine to Augustus over time, which, on the contrary, is wholly visible in representational art.

In turn, Maxentius' massive architectural program aiming to restore Rome to her former glory as the capital of the empire was appropriated by Constantine, who in fact did not launch an architectural *damnatio memoriae*, destruction of the buildings of his ill-fated predecessor. After Augustus' demise, the buildings of the first emperor became emblematic of the Golden Age he had inaugurated, and restoring or rebuilding one of them constituted a visible act of alignment with his memory: Maxentius thus deliberately publicized his affiliation to the "founder of the city," Augustus, the new Romulus-Quirinus. The resonant message of Maxentius' building campaign – that Rome had been saved and reborn – was ideologically significant enough to ensure Constantine's unreserved expropriation of it. A quick walk through Maxentian Rome would have included his major building projects (appropriated by Constantine together with the disfigured and re-carved portraits of his defeated enemy) – the basilica, the circus complex on the Via Appia, the imperial baths on the Quirinal. In effect, in an intricate play of metaphors, Constantine, the expander of the city, reappeared as a new Augustus, the *pater urbis* of Rome.

The Revenue of Remembering: The Evocative Power of spolia

Once again, forgetting was the foundation of the Pax Constantiniana; traces of the internal war were quickly erased and replaced metaphorically. While the re-use of sculpture and architectural elements formerly belonging to the defeated rival was triumphant in character (as such related to the spoils of victory and thus reminders of the conflict), the treatment of spolia in the Constantinian politics of memory appears revivalist. Whether in opposition or affinity, Constantine bound himself with the symbolic capital of its owners through spolia. It was not by chance that in a series of alignments and juxtapositions he associated himself with the victorious emperors of the second century – expanders of the empire – appropriating Trajanic, Hadrianic, and Aurelianic reliefs. Moreover, the civil war panels of the

Constantinian monument – the only representation of internal stasis in imperial art – included representations of great victories over barbarians, and metaphorically equated abominable domestic conflict with the prestigious foreign campaigns of the Roman army in a single narrative.

Jaś Elsner has suggested a structural parallel between the aesthetics of spoliation, e.g., Constantine's Arch, and the cult of Christian relics exemplified in his Constantinopolitan mausoleum. The mausoleum rotunda bears a semblance to mausoleums of the age of the tetrarchy, themselves referring to an Augustan precedent. Although, Eusebius explains, Constantine had consecrated the building to the Saviour's apostles, he himself intended to be buried there, to place his tomb in the midst of the "cenothaphs" of the twelve apostles so that his soul would benefit from the prayers that would be addressed to them.

Thus, the late antique practice of using spolia structurally paralleled (if it was not genealogically related to) the use of polytheist trophies and, later, Christian relics like those kept in the celebrated statue and its pedestal in the Forum Constantini, the monument that later acquired symbolic status far above that of any other non-Christian monument in Constantinople. One of the famous spolia the Palladion, an ancient guardian statue of the armed Pallas Athena, associated first with Troy and its fortunes and later with Rome and its destiny, is reported to have stood under the porphyry column Constantine brought from Rome. Similarly, the largest collection of heroic statuary appropriated for Constantinople, around three dozen in all, placed in the Baths of Zeuxippos, were linked to the Trojan epic. The vision of Roman origins articulated by Virgil in the Augustan age still retained its currency in the Constantinian era.

If, looking for the possible location of his new city, as is clear from fifth-century commentaries on the foundation written by Zosimos and Sozomen, Constantine had chosen Ilion, there could be little doubt that the empire would have eventually reenacted its primary Augustan model. The first Roman emperor was known for his foundation of a new Ilium city on the alleged site of Troy. Constantine's foundation thereafter, itself an appeal to Augustus, would have been grounded in the reality of its mythical origin.

An Embarrassing Triumph: Augustus and Constantine as triumphatores

From the day of Constantine's entry into Rome in triumph on 29 October 312 CE, one parallel with Augustan times seems indisputable. His battle resembled the Battle of Actium in 31 BCE in two fundamental respects. As Timothy Barnes has phrased it, first, both battles started with an awareness of a foregone result, for Constantine could have been defeated by Maxentius no more than Octavian could have been crushed by Mark Antony, and, second, both conflicts provided a foundation myth for the victor to transform the Roman state and its ideology. Both succeeded in a discursive alteration of their internal enemy into a foreign one. Augustus himself and the Augustan poets intentionally portrayed the campaign of Actium as a war waged by a united Italy against an Egyptian queen and her Oriental allies together with the Roman renegade, Mark Antony, reinforcing it with cultural opposition by presenting the conflict between Octavian and his adversaries as a match between "our Roman Jupiter" and "barking Anubis."

Constantine denied that his defeated rival was the son of the legitimate tetrarch Maximian and forced Maximian's widow to confess in public that she had conceived Maxentius in adultery with a Syrian. Remarkably similar to Augustus' transformation of Mark Antony into the ideological figure of an eastern tyrant, Constantine, in the guise of a legitimate defender of the Roman people, presented Maxentius as a tyrannus.

When Constantine entered Rome, his arrival was conducted and perceived as a triumph, even if in the form of urban adventus. Roman emperors never celebrated triumphs over foes in a civil war; in August 29 BCE Octavian held triumphs on three successive days which officially commemorated his victories over the Dalmatae, the defeat of Cleopatra, and the conquest of Egypt. Although Roman forces marched into the city in times of civil war, they had never been forced to besiege the sacred Urbs Roma. His seizure of Rome was simultaneous with the construction of the enemy within the imaginary discourse. The degree to which art and ceremonies were used by both sides to foster this discourse in the popular imagination is striking.

Octavian's naval victory was commemorated by founding the city of Nikopolis in Epiros, beautified with a triumphal arch. Similarly, in 324 CE, Constantine founded Constantinople in commemoration of his victory over Licinius. The great Constantinian project of founding the city, viewed from the perspective of a visual strategy that developed over three decades, paralleled the Augustan exploitation of imagery.

- 119225 Along with a collection of statuary, Constantine brought a bronze statue of the Ass and Keeper from Nikopolis to Constantinople, a monument of Octavian's victory at Actium.
- 119230 Like Augustus, Constantine was repudiating a system of power-sharing in favor of the more traditional apparatus of the Principate, a mode of rule defined by Augustus himself. One of the monuments Constantine imported from Rome was an imperial portrait of Emperor Augustus himself, which would have invited advantageous comparison. The statue of Augustus would even have pushed the equation back in time to imply similarity not only between Constantine and Augustus as rulers, but also between the Principate and the Constantinian Empire.
- 119235 **Circus and Palace**
- As much as the triumph staged political harmony by eliminating conflict, the ritual of circus games enacted social consent. Meeting eye-to-eye with the populus Romanus at the circus, Augustus firmly recognized it as an emperor's duty to attend the games and when unable to be present he sent his apologies (*petitia venia*) to avoid offence. Like Caesar, he used to watch games from the pulvinar, in a way constructing the shrine as an imperial box that allowed for his divine recognition. In Constantinople it was the *kathisma* where the emperor appeared in his full splendor before the public at the races, a box reminiscent of the pulvinar, the couch of the gods at the Circus Maximus at Rome.
- 119240 The circuses' *spina* was frequently adorned with obelisks, and if one can believe Pliny the Elder, the earliest obelisk had been installed on the *euripus* of the Circus Maximus on Augustus' orders after the annexation of Egypt following his victory at Actium. Constantine enlarged the circus eastwards and his son bestowed an obelisk on it to match that of Augustus, still standing in Constantius' times. Although it is possible that Constantine had already planned to remove the Theban (Lateran) obelisk before 324 CE, the obelisk would have been the most appropriate gift on the occasion of his twentieth anniversary visit to Rome in 326 CE. The obelisk would have been seen by the senatorial establishment as a pagan monument in the balance to the imperially-funded church-building program. It would therefore have been an offering to the capital from the newly re-conquered East, for the unique single obelisk (a major cult-object, previously the focus of its own small temple) could stand for the empire's unity under a single ruler. According to Ammianus, Augustus, who beautified Rome with other obelisks, left it untouched for religious reasons.
- 119250 Yet Constantine, as Ammianus continues shifting his focus from Augustus, "rightly thought that he was committing no sacrilege if he took this marvel from one temple and consecrated it at Rome, that is to say, in the temple of the whole world." As Ammianus points out, it was a solar symbol, and inscriptions confirm that Augustus dedicated his obelisks in the Circus Maximus and the Campus Martius to Sol. Egyptian obelisks with a pyramidal tip covered in gold glorified the sun, as the likeness of Apollo-Helios extolled Constantine on top of the porphyry column, another immense task of transportation from Egypt to Constantinople that he had embarked upon.
- 119255 Intending to move the obelisk which Augustus had not moved, planning to place it in proximity to the existing Augustan obelisk of the Circus Maximus in Rome, Constantine launched a project that surpassed the height of the monolith Augustus had acquired, aggrandizing his sole rule enunciated after civil wars. Although he never acquired a genuine Egyptian obelisk, Constantine adorned the central barrier of Constantinople's hippodrome with one built of masonry.
- 119260 The *Chronicon Paschale*, the *Chronicle of Malalas*, and the *Parastaseis Syntomoi Chronikai* describe the ceremonial procession at the hippodrome on the occasion of the *encaenia* of Constantinople on 11 May 330 CE. Recalling the *pompa circensis* of Caesar and early Augustan Rome, Constantine's gilded statue with the *Tyche* of his new city in its right hand and, probably, the radiate crown, was transported on a wagon from the starting gates of the hippodrome to a point opposite the imperial box. After that, Constantine appeared wearing a diadem and presided over chariot races. Augustus did not dare to follow Caesar's precedent of displaying his own statue in a chariot in the procession of deities, but his keen interest in the *pompa* is demonstrated by Suetonius. The parading statue of the departing Constantine suggests that he was claiming to be a *presens deus*, the concept behind the ruler cult in the Greek East that had been articulated in Rome by Augustus' time. The panegyrist of 310 AD refers to Constantine as the *praesentissimus hic deus*, this most manifest god.
- 119265 The spatial context of the hippodrome in Constantinople, remarkably similar to every one in all the tetrarchic capitals, included an adjacent palace directly connected to the imperial box by a stairway, evidently in direct imitation of the *Domus Augustana*/Circus Maximus complex in Rome. Malalas reports that Constantine completed
- 119270
- 119275
- 119280
- 119285
- 119290

the Severan hippodrome and built a kathisma like that in Rome for the emperor to watch races, and also built a large palace, closely patterned on that in Rome, near hippodrome, with a staircase leading from the palace to the kathisma. The author emphasizes that Constantine followed the pattern of Rome twice, once in the construction of the kathisma and once in linking it with the palace.

Consecratio

The ritual of consecratio, the funeral ceremony and apotheosis of deceased emperors from Augustus in 14 AD to Constantine in 337 AD – the most problematic for Christian ideology – was a re-enactment of the elevation of the departed to heaven and his divinization. As rare examples of well attested imperial funerals, the consecrations of Augustus and Constantine are remarkably parallel, for the latter partially followed a model provided by the former.

Both emperors died outside of their residential capitals. After the death of Constantine the ceremonial began with a military procession that carried the mortal remains to Constantinople, where the body, crowned and in imperial robes, was displayed in the palace. As in the case of Augustus in 14 CE, the official deification of Constantine, the last emperor for whom consecration coins were struck, came immediately after the funeral, but the ceremonial was transformed for the burial. Imperial funerals traditionally included ritualized deification of the emperor by staging a pompa funebris, which, for Augustus, was said to have included almost the whole population of Rome. Eusebius portrays scenes of lamentation evoking the iconography of the apotheosis, noting that the people and senate of Rome dedicated an image to Constantine with him seated above the heavenly vault, and describing a coin type chosen by Constantius II. It had a veiled effigy of the dead emperor on the obverse and him driving a quadriga up to heaven, from which the hand of God emerges, on the reverse. Gilbert Dagron has stressed that Christianization allowed the Classical image of the imperial consecratio to be re-employed.

Augustus' funeral was designed by the emperor himself, who left instructions for the senate to follow. Similarly, Constantine initiated the building of his own mausoleum. The mausoleum-rotunda, as Cyril Mango has discovered, resembled tetrarchic imperial mausolea. It has been also assumed that the sarcophagus in which the remains of Constantine's mother, Helena, were placed had been confiscated from the mausoleum of Maxentius, for whom it was originally made.

Constantine was buried in a holy place of apostles, inaugurated the cult of relics initiated by the Roman Arch with its abundant spolia. The circular mausoleum of Augustus on the Campus Martius, the ultimate prototype for later imperial mausolea, was one component of a tripatriate complex that also consisted of the Ara Pacis and Horologium, which also used Augustus' commemorative scheme and references to the Actian victory. Just as Augustus inaugurated the empire with his victory in civil war, so too did Constantine, who began the empire anew, establishing a new residential capital, palace, and burial place. The Constantinian mausoleum paralleled the message of the Augustan one as a dynastic monument, but also as a foundation of a new imperial line that had succeeded the original line of Augustus.

Sculpture: Memory in Marble and Bronze

The Constantinian reorganization of imperial portraiture was instituted in consequence of the civil war against Maxentius and affiliated with an Augustan figure. Although it lost continuity with the tetrarchic representation, Constantine's representation became a battleground for the different politics of memory.

Iconography confirms that the emperor was aware of the advantages of representing himself in Rome in the fashion of a princeps, a soldier, but a civilian at the same time, and images of Augustus served as a model for Constantinian portraits.

At least one marble head has been securely identified as a portrait of Augustus re-utilized to represent Constantine. The iconography of this colossal head from Bolsena suggests a date for the re-carving due to its similarity with the emperor's figure in reliefs on the Constantinian Arch. As soon as his quinquennialia of 311 AD a new portrait type was defined for Constantine. David Wright has outlined the basic iconography of the Constantinian portrait: A youthful face with a broad forehead and prominent cheekbones that give the upper part of his face a rectangular character. This is complemented by strongly modeled facial muscles flanking the nose, mouth, and chin, and by a jaw-bone that expands outward slightly at the back of the jaw, giving a clear-cut articulation between jaw and neck. The image, in form and certainly in meaning, was modeled on the tall, lean-faced, and youthful-looking portraits of Augustus.

More than a dozen surviving versions of this basic type that follows Augustus'

iconography embody diversity in the new clean-shaven image. One example is a colossal marble statue of Constantine that once occupied the west apse of the Basilica of Maxentius on the Forum Romanum, the other is a large marble head displayed in the Palazzo Mattei in Rome. After Licinius' defeat in 324 AD and the seizure of the East, Constantine adopted the diadem and the heavenly-gazing Alexandrian type of representation, although the physiognomy retained an idealized youthful face with an aura of majesty developed on the basis of the Augustan model. It only changed into a heavier and old-age style of portraiture around 333 CE.

Coinage as a Medium of Commemoration

After a short period of conventional tetrarchic iconography on his first goldcoins, coin portraits of Constantine struck as early as 306-307 AD with the title "Caesar" abandoned the military image and defined a new one of a beardless young caesar, appropriate for Constantine's political expectations of accession after 306 CE. Rare gold and almost equally rare silver coins of high artistic quality from Trier suggest different stylistic developments. The type established at the Trier mint during the first months of Constantine's reign were perpetuated - with some interruptions late in 307 AD when he assumed the title Augustus - for nearly three decades with only slight modifications.

With Maxentius' defeat in 312 CE, the mints in Rome and Ostia, along with Ticinum (Pavia), began to strike coins for Constantine. Maxentius at the mint of Ostia and Constantine at Ticinum had equally experimented with thin-faced frontal heads resembling the lean-faced Augustan style. The type was modified to introduce more facial subtleties and became the standard Augustan portrait of Constantine. One can assess Augustan iconography on the famous medallion of 313 AD that featured Constantine in a double profile portrait with Sol and on frontal coin portraits of 316 CE.

After his final victory over Licinius, Constantine remained represented as a young ruler. About 324 AD he adopted the diadem of Alexander and his heaven-gazing pose with strong evocations of divine kingship for special issues of coins. The Constantinian portrait remained the heroic Augustan type that had been standardized a dozen years earlier; similar coins were struck in 324-325 AD at Thessalonica, Sirmium, and Ticinum. However, from circa 326 AD a new type was launched into circulation that eventually prevailed in the 330s CE. This type absorbed a placid Augustan tranquility yet kept the diadem. That Augustus was a model for Constantine (Fig. 1) is made explicit by a series of silver medallions minted late in Constantine's reign (336-337 CE) carrying the legend "AVGVSTVS" and "CAESAR" in direct imitation of Augustan coins produced three hundred years earlier.

Conclusion

The ideological discourse of the Constantinian empire was construed in remarkable resemblance to the Augustan one. Both the polytheist and Christian narratives placed the reign of Constantine in a typological relationship with that of the founder of the empire. Constantine appeared to re-enact the actions of his ultimate predecessor by putting an end to civil discontent and inaugurating peace anew, completing the work initiated by Augustus. The impulse toward typological thought and the desire to use this mode of interpretation that arose in the fourth century AD led Constantinian writers to see events that showed the way to the Augustan foundation of the empire as those that prefigured or foreshadowed political events in the time of Constantine. While the Christian texts are preoccupied with reconciling the Roman emperorship and salvation history, making Constantine the first Christian emperor and the liberating agent of divine providence through a typological link with Augustus, under whose reign Christ deliberately chose to be born, the polytheist panegyrics figurally interpret Constantinian rule as a return or indeed renewal of the Golden Age, referring to Virgil's Fourth Eclogue.

The visual narratives addressed the typological functions of the emperor insofar as Constantine was portrayed as a new Augustus, as a founder of a city and dynasty, and ultimately, as an architect of a new empire. Constantine's visual politics thus stood in striking parallel to the program of Augustan classicizing iconography, imagining a Constantinian likeness typologically. Constantine thus adopted a youthful and handsome clean-shaven portrait image from an Augustan model. The cohesion and integrity of the empires of Augustus and Constantine were therefore preceded by devastating internal strife which they subdued. All this suggests a parallel: whereas Octavian had established order and unity by putting an end to the dying republic, the Pax Constantiniana was constituted due to the final disintegration of a quarrelsome tetrarchic arrangement. In this respect, Augustus became the primary model for the

iconography in for the Constantinian image that was worked out after his victory at the Milvian Bridge in 312 CE. Although after the decisive defeat of the last
 119425 Constantinian rival, Licinius, in 324 CE, the typological focus shifted to Alexander the Great, it did not replace the Augustan iconography, now imbued with the divine attributes of Hellenistic kingship. The media of sculpture and coinage clearly show an increasing tendency to introduce elements from the royal iconography into the primary Augustan visual scheme first adopted by Constantine.
 119430 Within the typological scheme inherent in both polytheist and Christian textual narratives, Augustus functioned as a forerunner of Constantine, while, at the same time, the latter is iconographically represented in visual narratives closely modeled on Augustan sculpted and coin portraiture that similarly celebrated the all-mighty triumphant emperor of the unified state. Every beholder of Constantinian imagery was
 119435 thus exposed to the power of this bewildering ideological combination of intricately connected imperial image-making, Augustan visual allusion, and historical reference to contemporary Roman political concerns.

10 april 1204 **Précis de l'histoire du moyen âge**

§ II. QUATRIEME CROISADE.

Empire franc de Constantinople.

Jean de Brienne était roi nominal de Jérusalem lorsque l'Occident prépara un nouveau secours pour la Palestine. En 1197, une quatrième croisade avait été publiée par de
 119450 pape Innocent III. Les rois ne répondirent pas à cet appel, mais les princes secondaires s'armèrent: les croisés virent à leur tête Baudouin IX, comte de Flandre; Dandolo, doge de Venise; Boniface II, marquis de Montferrat. Le résultat de cette croisade fut la destruction de l'empire grec.

Les empereurs de Byzance, après avoir si souvent imploré le secours des Occidentaux
 119455 contre les mahométans, avaient employé ensuite tous leurs efforts pour entraver le mouvement des croisades. D'une part, ils craignaient que les richesses de Byzance ne tentassent les guerriers de l'Occident, et c'est pourquoi ils s'efforçaient de leur nuire; d'un autre côté, ils voulaient enlever aux croisés le fruit de leurs combats. Cependant des révolutions continuelles troublaient le palais de Byzance; le crime
 119460 était devenu le marchepied du trône. En 1180 Andronicus, après avoir assassiné Alexis II, se fit nommer empereur; cinq ans après, il fut renversé lui-même par Isaac l'Ange; enfin ce dernier, en 1195, est également dépouillé de la pourpre par son frère Alexis III et jeté en prison, après avoir eu les yeux crevés. Alexis l'Ange, fils d'Isaac, se rend en Europe afin de rétablir son père sur le trône par
 119465 l'intervention des Occidentaux.

Ceux qui avaient promis de tenter une quatrième expédition en faveur de la terre sainte étaient alors réunis à Venise, mais dépourvus de moyens de transport. La république met ses vaisseaux à leur disposition, à condition qu'ils l'aideront
 119470 d'abord à reprendre Zara, en Dalmatie, tombée au pouvoir du roi de Hongrie. Cette expédition terminée, les Francs par enthousiasme, et les Vénitiens par intérêt, cèdent aux instances d'Alexis, qui les conjure de tourner leurs forces contre l'usurpateur du trône de Byzance. Le désir de punir un peuple sans foi et le vague espoir d'arborer leurs bannières dans la ville de Constantin, l'emportèrent sur toute autre considération, même sur les exhortations du pape, désireux seulement de
 119475 délivrer Jérusalem (1202). La flotte cingle vers Constantinople, force l'usurpateur à s'enfuir et les habitants à se rendre. Isaac l'Ange ayant été rétabli, les croisés revinrent dans leur camp, situé au delà du port. De là ils admiraient la beauté de la Propontide et pouvaient embrasser l'étendue de Constantinople: cette immense capitale apparaissait sur le rivage avec ses hautes murailles, les dômes élancés de ses
 119480 palais, ses trois cent quatre-vingt-six tours, églises et couvents. C'était vraiment la cité souveraine, car elle surpassait toutes les villes de l'Occident en magnificence, présentaient la tradition graduelle du goût sévère des anciens aux combinaisons plus variées et plus brillantes du genre oriental. L'église de Sainte-Sophie, cathédrale du rit grec, surpassait tous ces édifices par la magnificence de
 119485 son architecture et la somptuosité de ses ornements (2). Les places publiques étaient décorées des monuments de l'empire de Rome et de l'ancienne Grèce. Sur la place de Constantin, on admirait la statue en bronze de Junon et celle de Paris offrant à Vénus le prix de la beauté; sur celle du mont Taurus une statue équestre représentant

suivant les uns Josué, suivant d'autres Bellérophon et Pégase. Dans l'hippodrome, on
119490 remarquait une colossale statue d'Hercule, attribuée à Lysippe; une des colonnes du
cirque supportait un autre chef-d'œuvre de l'art antique: c'était l'image d'une jeune
femme, les cheveux tressés sur le front et noués par derrière; elle portait à la main
droite un cavalier dont elle tenait le cheval par un pied; le cavalier couvert d'une
cuirasse, le cheval hennissant, semblaient écouter la trompette guerrière et ne
119495 respirer que les combats.
L'inexécution des promesses faites aux Latins par Isaac l'Ange et l'usurpation de
Dumas Murtzuphle, déterminèrent la reprise des hostilités. Après un siège de trois
mois, Constantinople fut prise d'assaut et livrée au pillage (10 avril 1204). Dans
leur aveugle fureur, dans leur ignorance, les rudes Occidentaux brisèrent même ces
119500 bronzes que l'art antique avait fait vivre.
Tous les croisés, dit Michaud, se laissèrent entraîner à la soi du butin, et les
chefs, comme les soldats, exercèrent, sans ménagement et sans scrupules, le droit que
leur donnait la victoire de dépouiller les vaincus. Les chefs rétablirent enfin
l'ordre dans la cité de Constantin, en proclamant empereur Baudouin, comte de Hainaut
119505 et de Flandre: suivant l'ancienne coutume des Francs, il fut élevé sur un bouclier et
porté en triomphe dans Sainte-Sophie. L'empire fut ensuite partagé entre les Francs
et les Vénitiens. Les premiers obtinrent la Bithynie, la Roumanie ou la Thrace,
Thessalonique, toute la Grèce, depuis les Thermopyles jusqu'au cap Sunium, et les
plus grandes îles de l'Archipel. Le lot des Vénitiens se composait ds Cyclades et des
119510 Sporades dan l'Archipel, des îles et de la cote orientale du golfe Adriatique, des
cotes de la Propontide et de celles du Pont-Euxin, des rives de l'Hèbre et du Vardas,
des villes de Cypsède, de Didymatique, d'Andrinople, des contrées maritimes de la
Thessalie, etc. "Mais des circonstances qu'on n'avait point prévues, la diversité des
intérêts, les rivalités de l'ambition, toutes les chances de la fortune et de la
119515 guerre, apportèrent bientôt, suivant la remarque d'un historien, des changements à
cette division du territoire. On entreprendrait en vain de suivre les conquérants
dans les provinces tombées en leur pouvoir; il serait plus facile de marquer le cours
d'un torrent débordé et de retracer le chemin des tempêtes, que de fixer l'état des
possessions incertaines et passagères des vainqueurs de Byzance (1)". Ce fut
119520 d'ailleurs une triste domination que celle des empereurs latins. Sans être aussi
méprisables par leur caractère personnel que les anciens souverains de Byzance, ils
restèrent au-dessous de leurs prédécesseurs par leur faiblesse politique.
Ils devaient lutter à la fois contre des vassaux aussi puissant qu'eux-mêmes; contre
les Bulgares, qui avaient recouvré leur indépendance peu de temps avant la prise de
119525 Constantinople; enfin contre les Grecs qui supportaient impatiemment la domination
étrangère et qui appelaient de leur vœux le jour de leur délivrance.
Quelques lambeaux de l'empire étaient restés à des princes byzantins. Théodore
Lascaris, gendre de l'empereur Alexis III, se rendit successivement maître de la
Bithynie, de la Lydie, d'une partie des cotes de l'Archipel et de la Phrygie; sa
119530 capitale était Nicée où il se fit couronner empereur en 1204. David Comnène, petit-
fils de l'empereur Andronic, s'empara de la cote de la mer Noire, depuis Sinope
jusqu'au delà de Trébizonde dont il fit sa capitale; cet État subsista jusqu'en 1461.
Enfin Michel l'Ange Comnène se créa une principauté également considérable: elle
s'étendait depuis Durazzo jusqu'au golfe de Lépante, et comprenait l'Épire,
119535 l'Acarnanie, l'Étolie et une partie de la Thessalie.
Le règne de Baudouin Ier fut court: tombé en 1206 au pouvoir des Bulgares, on ne le
vit jamais reparaître, soit qu'il eut été massacré, soit qu'il languit dans les fers
jusqu'à la fin de ses jours. La couronne impériale avait été remise à son frère
Henri: Celui-ci repoussa les Bulgares, mais il ne put s'opposer aux progrès de
119540 Lascaris. Ayant été empoisonné en 1216, les barons lui donnèrent pour successeur son
beau-frère, Pierre comte d'Auxerre, de la maison de Courtenai. Il ne vit pas
Constantinople: en traversant les montagne[s] de l'Albanie il tomba au pouvoir de
Théodore Comnène, successeur de Michel, dont il venait d'assiéger la capitale
(Durazzo); et il fit assassiné dans sa prison (1219). Son fils, Robert de Courtenai,
119545 lui succède. Ce règne est marqué par de nouveaux désastres; chaque jour le territoire
latin est resserré par les princes grecs régnant à Nicée, à Trébizonde et en Épire.
Robert ne laissa qu'un fils âgé de neuf ans. Or, les barons, ayant besoin d'un chef,
résolurent de décerner à Jean de Brienne, pour toute sa vie, le titre d'empereur, qui
retournerait à sa mort au jeune Baudouin. Les Latins firent alors un prodige: une
119550 armée de cent mille hommes, Bulgares et Grecs de la Thrace, s'était présentée devant
Constantinople; avec cent soixante chevaliers portant bannière, et quelques sergents,
Jean de Brienne dispersa les barbares, tandis que la flotte vénitienne s'emparait de
leurs vaisseaux. A la mort de Jean de Brienne (1237), Baudouin se trouvait en Europe
pour solliciter l'assistance des Occidentaux; dans leur triste position, les baron de

- 119555 Constantinople étaient obligés d'aliéner les plus précieux trésors de l'empire; Baudouin lui-même engagea le comté de Namur pour 50000 livres parisis, au roi de Franc (Louis IX). Les faibles secours arrivés de l'Occident ne purent sauver cet empire, qui fut enfin réduit à sa seule capitale.
- 119560 Michel Paléologue, élu empereur de Nicée en 1258, résolut de chasser les Latins. Telle était leur détresse, qu'ils ôtaient de plomb qui couvrait les églises pour en faire de la monnaie et qu'ils démolissaient les palais pour se procurer du bois. Après s'être emparé de tous les châteaux qui environnaient Constantinople, Michel Paléologue entra dans la capitale le 25 juillet 1261. Les Grecs effacèrent alors des fastes publics le règne éphémère des empereurs latins, dont le dernier venait de se réfugier dans l'île de Négrepont. L'empire grec restauré par les Paléologues ne put toutefois se relever du coup fatal qui lui avait été porté. Quelques provinces bornées en Asie par le Méandre et le Sangarus, en Europe par le mont Hémus et la chaîne du mont Oeta: tel était le patrimoine amoindri des héritiers de la puissance romaine. La plupart des îles de l'Archipel, et les provinces de la Grèce proprement dite au midi de la Thessalie, restèrent au pouvoir des Latins. Quant à la richesse et à la force morale de l'empire, elles passèrent entre les mains des républiques maritimes d'Italie. Venise, Gênes et Pise reconnaissaient à peine, dans Constantinople, le pouvoir de l'empereur.
- 119575 (1) On a évalué cette population à un million d'habitants.
(2) "Que de trésors de tous genres en marbres, en porphyre, en granit, dans l'intérieur, qui avait deux cent quarante pieds de longueur sur deux cent treize de largeur! Quelle splendeur dans les colonnes, les plus belles de tous les temples célébrés du paganisme! quel art dans les mosaïques qui ornaient les murs et même les voûtes! La coupole, éclairée par vingt-quatre fenêtres, s'élève sur quatre piliers semblables à des tours, à une hauteur de cent quatre-vingts pieds; les lignes ondoyantes du pavé de marbre représentaient les quatre fleuves du paradis, qui, comme des ruisseaux, apportant le bénédiction et la fertilité à toutes les contrées du monde, paraissaient rouler leurs eaux vers les quatre portes ouvertes". HURTER, Hist. du pape Innocent III et de ses contemporains, liv. VII.
- 119580 (1) Nous devons pourtant indiquer les principales seigneuries féodales érigées dans l'empire grec. - Le marquis Boniface de Montferra reçut en partage l'île de Candie et tout ce qui appartenait à l'empire au delà du Bosphore. Plus tard, il échangea ses domaines contre le district de Salonique, qui lui fut accordé à titre de royaume; et en 1205 il vendit ses droits sur Candie aux Vénitiens, qui, deux ans après, prirent possession de cette île. Le principauté d'Achaïe et de Morée échut à Guillaume de Champlite qui la laisse en mourant à Geoffroy de Villehardouin, historien de la quatrième croisade. Athènes fut érigé en duché en faveur d'Othon de la Roche, dont la petite fille le transmet à la maison de Brienne. - De leur côté. les Vénitiens, pour rendre plus facile la conquête des îles qui leur étaient tombées en partage, offrirent à leurs concitoyens l'investiture de celles qu'ils pourraient conquérir.
- 119595 C'est ainsi que les familles les plus puissantes de Venise se répandirent dans l'Archipel. Les Sanuto s'emparèrent de Naxos et des îles voisines, et en furent investis sous le titre de ducs de Naxos. Les Carceri de Vérone s'approprièrent Négrepont (l'Eubée des anciens), et leur exemple fut suivi par plusieurs autres nobles. Voy. KOCH, 4e période.
- 119600 (1) Voici, en suivant l'ordre chronologique, la liste de ces empereurs francs ou latins:
MAISON DE FLANDRE. 1. 1204-1206, Baudouin Ier,
2. 1206-1216, Henri, son frère,
MAISON DE COURTENAY. 3. 1216-1219, Pierre, comte d'Auxerre,
4. 1219-1228, Robert, son fils,
MAISON DE BRIENNE. 5. 1228-1237, Jean de Brienne, empereur viager,
119605 MAISON DE COURTENAY. 6. 1237-1261, Baudouin II.

Geoffroy de Villehardouin

- Jusqu'au XIV^e siècle, existe à Troyes, la rue de la Grande Masquerie (boucherie). Au siècle suivant, en raison d'une auberge qui s'y tient, elle prend le nom de rue de la Pie. Le Conseil municipal du 23 août 1890, lui attribue le nom de Geoffroy de Villehardouin. Geoffroy seigneur de Villehardouin, célèbre chroniqueur, naît à 30 km de Troyes, vers 1150.
- Vassaux du comte de Champagne, les Villehardouin ont suffisamment d'influence pour qu'en 1185, Geoffroy devienne maréchal, fonction enviée. Il devient le conseiller de la comtesse Marie, fille de Louis VII et d'Aliénor d'Aquitaine, veuve d'Henri 1er le Libéral. La charge de maréchal impose à son titulaire qu'il accompagne son suzerain dans ses déplacements, à plus forte raison lorsqu'il s'agit d'une expédition lointaine en Terre sainte. Thibault III, jeune homme de 18 ans, est le puissant comte de Champagne au moment où le pape Innocent III, organise une 4^{ème} croisade, pour reprendre Jérusalem aux musulmans.
- 119620 Villehardouin, dans La conquête de Constantinople, nous dit que le 28 novembre 1199, au tournoi d'Ecry-sur-Aisne, le prêtre Foulques de Neuilly, mandaté par le pape, appelle les chevaliers à se croiser. Thibault III, Villehardouin, l'évêque de Troyes Garnier de Traînel, prennent la croix. Le pape est partisan d'un transport maritime

- 119625 de l'armée jusqu'en Égypte d'où elle marchera vers la Palestine. Le rôle du maréchal de Champagne commence à se préciser. Ayant l'entière confiance de son suzerain, il est chargé de négocier à Venise le passage des croisés. Il y part en février 1201, et se montre bon ambassadeur. Les Vénitiens acceptent son marché, ils construiront des navires capables d'embarquer 4.500 chevaux, autant de chevaliers, 9.000 écuyers et
- 119630 20.000 hommes d'armes. Les vivres seront assurés pour 9 mois. 50 galères vénitiennes escorteront le convoi.
- Le coût total de l'opération est fixé à 85.000 marcs d'argent dont 25.000 payables immédiatement à titre d'arrhes. De retour à Troyes, au début du mois de mai 1201, Villehardouin trouve le comte Thibault malade. Il meurt le 24 mai. Notre chroniqueur choisit son ami Boniface de Montferrat comme chef de la croisade.
- 119635 En mai 1202, les croisés partent pour Venise. N'ayant pas suffisamment d'argent pour régler le solde du transport, ils acceptent d'aider les Vénitiens à prendre la ville de Zara, en novembre, après 5 jours de siège.
- Fin juin 1203, la flotte, impressionnante armada de nefes, de galères, arrive en vue de Constantinople, la plus riche cité de la chrétienté.
- 119640 40.000 hommes assiègent la ville qui tombe le 17 juillet. Mais l'empereur de Constantinople ne tient pas ses engagements et les croisés font un nouveau siège de la ville du 9 au 13 avril 1204. La vieille cité est saccagée. Massacres (n'épargnant ni les femmes ni les enfants), incendies, pillages font de Constantinople un enfer.
- 119645 Les statues sont fondues pour récupérer le bronze, les pièces d'orfèvrerie écrasées à coup de masse pour en récupérer les pierres précieuses, l'or et l'argent sont transformés en monnaie. Villehardouin avoue lui-même: "Le gain fait fut si grand que nul ne vous en saurait dire le compte, d'or et d'argent, de vaisselle et de pierres précieuses, de satin et de drap de soie et de robes de vair et de gris et d'hermine et de tous les biens précieux qui jamais furent trouvés sur terre".
- 119650 On n'épargne ni les sanctuaires, ni les églises et les religieux font main basse sur les précieux reliquaires renfermant les fragments du bois de la vraie Croix ou le fer de la sainte Lance pour les expédier en Occident (une partie peut être admirée dans le trésor de notre cathédrale).
- 119655 Le 16 mai 1204, Baudoin de Flandre est couronné empereur, et les barons se taillent des fiefs en s'emparant des possessions byzantines de Grèce.
- Boniface de Montferrat devient roi de Thessalie et confie le fief de Messinople, en Thrace occidentale, à son ami et protégé Geoffroy de Villehardouin qui a été nommé maréchal de Romanie et prince d'Achaïe, dès l'automne 1204.
- 119660 C'est là qu'il compose sa Chronique de la conquête de Constantinople, la 1ère écrite en prose. Cet ouvrage important offre un mélange de naïveté et de grandeur qui procède de l'émotion d'une âme forte à la vue des grands faits dont elle est le témoin.
- Geoffroy se fixe à Kalamai où il édifie un château franc en 1208. Le 1er août il participe à la bataille de Philippopoli contre les troupes du roi bulgare Boril. Il harangue les croisés avant le combat alors que des flottements se font sentir dans leurs rangs et évite la catastrophe.
- 119665 Geoffroy de Villehardouin décède à Messinople en 1218.
- 119670 Quoique éloigné Troyes, il ne l'oublia jamais. Il dota l'abbaye de Foicy et celle de Notre-Dame-aux-Nonnains, où ses sœurs et ses filles étaient religieuses.

Constantinopel en Constantijn, de Kruistochten

- Capitulum XX. De Constantinopolitana urbe. [p. 750]
- 119675 INDEX GENERALIS QUO NOMINA, QUAE AD RES, LOCOS ET HOMINES PERTINENT, COMPREHENDUNTUR en Bibliothèque de l'École des chartres
- Histoire de [person] Jean de Brienne, roy de Jérusalem et empereur de Constantinople [1727] en Maandelyksche berichten uit de andere waerelt; of de spreekende dooden.
- 119680 BRIENNE (Jean de) Vassal des Comtes de Champagne
4. Fils d'Erard II & d'Agnes de Montbeliard,
4. Est fort negligé par son Pere,
7. Il se dérobe & se retire à Clairvaux,
10. Rencontre Simon de Broyes Seigneur de Château Villain,
- 119685 11. qui l'enlève,
- ibid. Il reçoit l'Ordere de Chevalerie & entre dans le monde
17. Son air, sa taille,
18. Il brille dans les Tournois,
20. Son arrivée à Rome,
- 119690 42. Son retour à Paris, & ensuite à Rome,

46. Il va seul joindre l'Armée des Croisez,
62. & se distingue aux deux sieges & à la prise de Constantinople,
74. Digression, scavoit si Jean de Brienne étoit aux deux sieges de Constantinople,
75. jusq. 90. Il apprend la mort de Gautier de Brienne,
- 119695 96. regrette sa perte, arrive en Italie, y trouve un changement total & repasse en France,
98. On députe l'Eveque d'Acre pour demander en mariage Jean de Brienne pour la Reine de Jerusalem,
106. Il se rend à la Cour,
- 119700 110. accepte l'offre,
111. Le contract est signé,
- ibid. Il va à Rome,
112. emprunte 40000. livres sur sa Comté de Brienne,
114. Le Roi Auguste lui donne pareille somme & 300. hommes d'armes,
- 119705 ibid. Il arrive à Constantinople,
115. Prend la route pour aller à Acre, où il est reçu par le Patriarche,
116. & conduit à la Cathedrale pour accomplir son mariage avec la Reine,
117. Jean de Brienne, avec sa nouvelle Epouse va à Tyr, ils sont couronnez
117. 118. Dans quel état se trouveroit alors le Roïaume de Jerusalem,
- 119710 118. & suiv. Corradin attaque Acres, mais inutilement,
130. 131. Jean de Brienne met le siege devant la forteresse de Jusse, d'où il emporte un grand butin,
133. Les Sarrasins lui demandent une trêve,
- ibid. Pendant la paix il regle son état,
- 119715 134. Il reçoit & suit les conseils de Gautier de Montbeliard,
135. Il perd sa femme,
147. demande Isabelle fille de Lieveon en mariage, & l'épouse à Acres,
153. Il sollicite du secours de la Chretienté contre Corradin,
156. Seigneurs & Princes qui arrivent à Acres,
- 119720 156. Avec ce renfort il se met en marche pour aller assieger de Sultan à Damas,
167. Il abandonne cette entreprise,
170. tuë de sa main deux Emirs,
172. La mesintelligence se met dans son Armée
173. Il songe au siege de Damiette,
- 119725 183. y arrive,
188. Les ordres qu'il donne pour faire réussir son entreprise,
191. Il attaque la Tour du Nil,
192. l'emporte,
204. Les Allemans le quittent, il lui arrive un nouveau secours avec le Cardinal
- 119730 Pelage,
206. Chagrin que lui causent les caprices de ce Prelat,
212. Il veut forcer la levée que Meledin avoit fait construire,
225. Le Sultan fuit, il court sur les Sarrasins,
229. investit Damiette,
- 119735 231. Corradin vient au secours avec une puissante armée,
232. Action generale du jour des Rameaux,
237. Autres attaques des Sarasins,
241. Actions très valeureuses du Roi,
250. Prise de Damiette,
- 119740 261. Il se rend maître de Tunis,
268. Le Legat luit fait donation de la Ville de Damiette,
274. Il s'en retourne dans la Palestine,
277. Corradin assiege le Fort des Pelerins,
282. Honorius confirme les droits du Roi Jean sur la succession du Royaume d'Armenie,
- 119745 292. Il se rend au Camp devant Damiette,
294. est forcé par le Legat d'aller contre Meledin,
299. Sa Flotte est battuë & il se retire contre Damiette,
303. terrible situation de son armée par l'inondation du Nil,
307. Il est forcé de rendre Damiette & Tunis, de servir d'otage avec le Legat,
- 119750 313. Le Roy revient à Acre,
317. Il demande à l'Empereur sa fille en mariage
319. va pour cette affaire en Italie,
330. vient en Sicile,
331. puis à Rome,
- 119755 332. Il s'accorde avec l'Empereur sur le mariage de sa fille Isabelle,
336. Il vient en France, voit mourir Philippe Auguste,

339. Il va prendre le Bourdon de Pelerin à Tours,
 343. Il va en Galice, palle par la Castille,
 345. On lui accorde en mariage Berangere,
 119760 346. Il revient à Paris,
 ibid. Il passe en Angleterre,
 347. En Allemagne, de-la en Italie,
 348. Il voit marier & couronner sa fille à Rome,
 351. L'Empereur toujours perfide lui demande un désistement du Royaume de Jerusalem,
 119765 352. De Brienne dépouillé, se sauve avec Gautier son neveu,
 353. Le Pape le nomme son Vicaire ou Lieutenant General dans l'Etat Ecclesiastique,
 356. Heureux succès du voyage du Roy Jean dans les Cours de l'Europe,
 361. Armée de 60000. hommes se trouvent à Brindes,
 362. Le Pape le nomme Generalissime de ses troupes,
 119770 386. Il le met à la tête d'une armée,
 ibid. Les Grands du Royaume d'Orient, envoient des Ambassadeurs au Pape pour demander
 le Roy Jean pour Empereur,
 412. Le Pape lui dépêche un Courrier, il arrive à Rome,
 413. On regle son Traité avec les Ambassadeurs,
 119775 ibid. Il passe en France, revient à Rome, va à Venise, s'embarque pour
 Constantinople, y arrive heureusement, & est couronné avec Berangere sa femme, à
 Sainte Sophie,
 427. Il est deux ans dans Constantinople sans rien faire,
 422. [432?] Recommence la guerre, s'empare du Fort de Ceramide, & se rend maître de
 119780 Riga,
 433. Crainte de l'Empereur, il s'adresse au Pape pour avoir du secours,
 437. Il fait reparer avec soin Constantinople,
 440. Asen & Vatace mettent une armée sur pied,
 441. Ils attaquent Constantinople,
 119785 443. L'Empereur sort de la Ville, met en desordre l'armée ennemie,
 450. L'Infanterie de son mouvement va dans le Port & dissipe la Flotte,
 452. L'année suivante la Ville se trouve encore assiegée,
 456. Le siege est levé,
 457. De Brienne envoie Baudoin son gendre en Italie & en France,
 119790 458. Il travaille à diviser Asen & Vatace,
 464. Il y reüssit,
 466. Il meurt,
 467. Ses vertus,
 475. Ses femmes,
 119795 489. Ses enfans,

II – LE PILLAGE DE CONSTANTINOPE PAR LES CROISÉS DE 1204.

- Si l'on n'écoutait que les lamentations de Nicétas sur la seconde prise de
 Constantinople, la ville impériale, théâtre d'abominations sans égales, aurait vu
 119800 périr, en 1204, sous les coups de Barbares ignorants, aussi bien tous les chefs-
 d'œuvre de l'art antique qui s'y trouvaient rassemblés que les plus précieux et les
 plus vénérables des objets consacrés par les souvenirs du christianisme.
 Heureusement, sur tous ces faits, il faut se garder de prendre à la lettre tant le
 récit de Nicétas, déplorant la destruction de monuments qui existent encore
 119805 aujourd'hui, que les assertions de Nicolas d'Otrante, se plaignant de la disparition
 des reliquaires de la Passion qui, en réalité, ne quittèrent le palais du Bucoléon
 que pour passer, trente ans plus tard, dans le trésor de la Sainte-Chapelle. Mais,
 tout en faisant la part des exagérations des vaincus, il est impossible de nier qu'à
 la suite du dernier assaut donné à Byzance par les Latins, et malgré l'accueil si
 119810 humble qu'ils reçurent des Grecs, et surtout du clergé, des scènes horribles de
 meurtre et de pillage se succédèrent dans la malheureuse ville. Seulement, il faut
 distinguer deux périodes différentes dans l'histoire de ces faits regrettables: la
 première, courte et violente, dura du 14 au 16 avril 1204; c'est pendant ces trois
 jours qu'eurent lieu les profanations dont les Grecs se plaignirent si justement au
 119815 pape dans un curieux mémoire qui nous a été conservé, et dont trois lettres
 d'Innocent III sont l'écho indigné. C'est à peine si la garde mise par les chefs de
 l'armée dans les palais impériaux put préserver les chapelles de ces palais de la
 rapacité des soldats; aucun sanctuaire ne paraît avoir été épargné, et Sainte-Sophie
 dut à ses trésors merveilleux et à l'immense renom dont ils jouissaient de se voir le
 119820 théâtre d'excès plus odieux que partout ailleurs. Aux profanations des églises
 vinrent s'ajouter celles des tombes impériales, dont Nicétas ne craint pas d'accuser
 Thomas Morosini, patriarche latin élu, mais qui durent être stériles, Alexis III

s'étant chargé, sept ans plus tôt, de les dépouiller de tous les bijoux qu'elles contenaient.

119825 Dans les premiers moments, la rage des conquérants paraît avoir été extrême. «Quant
li Latin, dit Ernoul, orent prise Constantinoble, il avoient l'escu Damedieu embracé,
et, tantost come il furent dedens, il le geterent jus, et embracerent l'escu au
diable; il corurent sus a sainte Iglise premierement, et briserent les abbaïes et les
119830 roberent.» Les châsses des saints, dont beaucoup étaient en cuivre émaillé, et par
conséquent sans valeur pour les pillards, furent brisées. On arrachait les pierreries
et les camées qui en faisaient l'ornement, et l'on en jetait au loin les reliques. Un
nombre infini de ces reliures de métal si somptueuses qui recouvraient les livres de
chœur eurent un sort pareil; les images des saints furent foulées aux pieds ou
119835 lancées à la mer. Au bout de quelques jours, les Latins paraissent avoir eu honte de
ces scandales et même redouté la colère divine. Le conseil des chefs se réunit, et
l'on prit des mesures sévères pour arrêter tous ces excès. Les évêques de l'armée
fulminèrent l'excommunication contre tous ceux qui se rendraient coupables de
nouveaux sacrilèges, et aussi contre ceux qui ne viendraient pas mettre, en des lieux
désignés à cet effet, le butin déjà recueilli. Quelques jours plus tard, d'ailleurs,
119840 l'élection et le couronnement de Baudouin Ier (16 mai) vinrent substituer un pouvoir
régulier à l'anarchie; les différents corps de l'armée furent cantonnés dans les
divers quartiers de la ville, et un ordre au moins apparent vint succéder aux scènes
de violence des premiers jours. Mais là commence, surtout en ce qui concerne les
trésors des églises et des reliques, la seconde période du pillage, celle de la
119845 spoliation régulière et méthodique; cette période paraît avoir duré plusieurs mois,
plusieurs années, je dirai même presque autant que l'empire latin d'Orient.
Il n'est pas impossible d'entrer dans quelques détails sur la nature des objets
sacrés plus particulièrement recherchés par les Latins; il semble que ces objets
peuvent se diviser en deux classes: les reliques et les ornements ecclésiastiques;
119850 mais, pour les uns comme pour les autres, les croisés ne paraissent point avoir agi à
l'aventure.

Parmi les reliques, ce sont les fragments du bois de la Vraie Croix, depuis longtemps
objet d'une vénération spéciale en France, qui semblent avoir excité le plus vivement
leur convoitise. Constantinople avait sur ce point de quoi les satisfaire; sans
119855 parler des reliques insignes, des $\tau\iota\mu\iota\alpha\ \epsilon\upsilon\lambda\alpha$, grand était le nombre de ces
phylactères, de ces encolpia, destinés à être portés au cou, et dont l'usage, parmi
les familles riches, était déjà général du temps de saint Jean Chrysostome; tous
contenaient, avec d'autres reliques, une parcelle plus ou moins importante du bois de
la Vraie Croix. Les palais des familles princières, les couvents, renfermaient
119860 d'autres croix plus grandes; les «couronnes de lumière» des églises en portaient
souvent de suspendues au-dessus des autels. Au retour des croisés, les sanctuaires de
l'Europe en reçurent un grand nombre, presque toujours gratifiées, soit par ceux qui
les rapportaient, soit par ceux qui les recevaient en dépôt, de quelque origine plus
ambitieuse qu'authentique. Presque toutes étaient censées avoir appartenu à
119865 Constantin, à sainte Hélène ou tout au moins à Manuel Comnène.

Après la Vraie Croix, c'étaient les reliques de l'Enfance et de la Passion du Christ,
celles de la Vierge, des Apôtres, de saint Jean le Précurseur, du protomartyr saint
Étienne, de saint Laurent, de saint Georges et de saint Nicolas que les Latins
recherchaient avec le plus d'avidité. Une idée dont ils paraissent aussi avoir été
119870 pénétrés et qui leur avait été sans doute suggérée dès avant leur départ, c'est
l'intérêt que pouvaient avoir certaines grandes églises de l'Europe à posséder des
reliques considérables et authentiques des saints orientaux sous le vocable desquels
elles avaient été dédiées; c'est ainsi que les cathédrales de Châlons-sur-Marne et de
Langres, qui reçurent chacune, pendant le temps des croisades, trois envois
119875 successifs des restes de saint Étienne et de saint Mammès, leurs patrons respectifs,
furent redevables à la prise de Constantinople des plus considérables de ces envois.
Quant aux objets destinés au service du culte et à l'ornementation des églises, il
suffit de parcourir les listes des présents adressés à cette époque de Constantinople
en Occident pour être étonné de la quantité considérable de vases sacrés en or et en
119880 argent, d'encensoirs, de croix processionnelles, de parements d'autels et de
vêtements ecclésiastiques, même de tapis et de tissus neufs d'or, d'argent et de
soie, qui prirent le chemin de l'Italie, de la France et de l'Allemagne. Les
dyptiques, les tables d'ivoire qui devaient servir à enrichir les couvertures des
manuscrits de l'Occident, figurent aussi en grand nombre parmi les objets recueillis
119885 par les croisés. Enfin, ce ne dut pas être sans penser de loin à l'ornementation des
châsses encore barbares de leurs saints que les clercs de l'armée latine firent si
ample provision de ces anneaux, de ces pierres antiques, dont ils remplirent, à leur
retour, les trésors de leurs cathédrales, et que, sans le vouloir, ils ont ainsi

sauvés d'une destruction presque certaine.

119890 Que devint tout ce butin religieux? Une partie considérable dut en être détournée, ainsi que nous le verrons plus loin; mais le reste, à la suite des mesures prises, vers Pâques, par les chefs de l'armée, fut-il, avec les autres dépouilles de la ville, rapporté aux lieux désignés à cet effet—trois églises, suivant Villehardouin, un monastère, selon Clari—et mis en commun sous la garde de dix chevaliers et de dix Vénitiens? Il n'y a guère lieu d'en douter en ce qui concerne les ornements d'église et les vases sacrés. Pour les reliques, il est certain qu'un grand nombre fut rapporté, mais il y a lieu de penser qu'elles furent dès l'origine séparées du reste du butin, car on voit qu'à l'exemple des croisés de 1097, ceux de 1204 confièrent au doyen des évêques, à Garnier de Trainel, évêque de Troyes, la charge qu'avait remplie 119900 à Jérusalem Arnould de Rohas, celle de procurator sanctarum reliquiarum, et que ce fut dans la maison habitée par Garnier que tous ces objets sacrés trouvèrent un asile.

Un premier partage du butin fut fait entre le 22 avril et le 9 mai. Il est à croire que les Vénitiens se remboursèrent de leur double créance contre les croisés et 119905 contre les Comnènes, et qu'une fois les sommes prélevées, il fut fait, comme le dit Sanudo, deux parts égales, l'une pour les Latins et l'autre pour Venise, parts dont un quart retourna, après le couronnement de Baudouin Ier, au trésor impérial: suivant Villehardouin, les trois huitièmes des croisés montèrent à la somme de 400.000 marcs (20.800.000 francs). Mais le maréchal de Champagne ne parle pas d'un second partage 119910 raconté en détail par Robert de Clari. Suivant Robert, ces deux premières répartitions n'auraient porté que sur le gros argent, la monnaie et la vaisselle massive; quant aux bijoux, aux tissus d'or et de soie, ils auraient été, vers le mois d'août, furtivement enlevés par les chevaliers restés dans la ville pendant la campagne de Baudouin Ier contre Boniface de Monferrat, et divisés entre ces traîtres 119915 pour lesquels Clari ne trouve pas d'injures assez fortes. C'est donc entre les mains de ces chevaliers félons, et probablement sur l'ordre et au profit du doge, qui commandait dans la ville en l'absence de l'empereur, que tombèrent tous les trésors enlevés aux églises, et rien ne nous indique de quelle manière Vénitiens et Francs se les partagèrent entre eux.

119920 Quant aux reliques, il semble bien que les évêques latins, l'empereur et les Vénitiens en aient eu chacun une part. — Garnier de Trainel, qui disposa pendant près d'une année des reliques mises en commun, en envoya de très précieuses à Troyes par Jean L'Anglois, son chapelain; c'est de lui que l'archevêque de Sens reçut le chef de saint Victor. Nivelon de Cherisy, évêque de Soissons, enrichit de reliques Soissons, 119925 la célèbre abbaye de Notre-Dame, et un grand nombre de sanctuaires des contrées voisines. Conrad de Halberstadt ne paraît pas avoir été moins bien partagé que Nivelon, si l'on en juge par la valeur des objets rapportés par lui, dont la plupart existent encore aujourd'hui au trésor de la cathédrale d'Halberstadt. — Le premier empereur latin de Constantinople adressa de son côté en Europe quantité d'objets 119930 précieux, et Baudouin Ier obéit en cela aux conseils d'une politique éclairée. Devenu le chef d'un État aussi mal affermi, il avait besoin d'autres sympathies et d'autres alliances que celles dont avait pu se contenter le comte de Flandre, et devait oublier le temps où, soutien de Philippe de Souabe et vassal turbulent du roi de France, il avait eu à se plaindre des deux personnages les plus influents de

119935 l'époque, Innocent III et Philippe Auguste; aussi est-ce précisément à eux les premiers qu'il notifie son avènement, joignant aux lettres qu'il leur adresse des présents considérables. Barozzi, maître du Temple en Lombardie, est chargé par lui de porter au pape un véritable trésor, dans lequel figure une statue d'or et une d'argent avec un rubis acheté 1000 marcs, et de nombreuses croix. Philippe Auguste 119940 reçoit, outre des reliques de son patron et une croix admirable, deux vêtements impériaux et un rubis d'une grosseur extraordinaire. Après la défaite d'Andrinople, le successeur de Baudouin Ier, Henri Ier, continua les envois commencés par son père, dans l'espoir que ces libéralités lui concilieraient les sympathies de l'Occident. Les princes laïques ou ecclésiastiques qui avaient pris la croix, mais qui ne

119945 s'étaient pas encore acquittés de leur vœu, furent naturellement l'objet des premières libéralités de l'empereur. C'est ainsi que le duc d'Autriche reçut un fragment de la vraie croix. La Belgique et le Nord de la France, d'où il avait lieu d'espérer les secours les plus efficaces, reçurent de nombreuses marques de sa munificence: Clairvaux, où se trouvaient les tombes de sa maison, Namur, où régnait 119950 son frère, Bruges, Courtrai, Liessies conservèrent longtemps ou conservent encore les richesses qu'il leur envoya. Après Henri Ier, il faut descendre jusqu'aux années lamentables de Baudouin II pour voir reparaître en Occident de nouvelles reliques byzantines; malheureusement, alors, il ne s'agit plus de dons gracieux, mais de vulgaires engagements. Après avoir vendu, pour soutenir son armée, jusqu'au plomb des

- 119955 toits de son palais, l'empereur se voit réduit à abandonner en nantissement aux Vénitiens les joyaux religieux de la couronne impériale. C'est en 1239 que saint Louis rachète le plus précieux de tous, la Couronne d'épines; puis, en 1241, la Grande Croix, la Lance et l'Éponge, jusqu'à ce que, en 1247, Baudouin II vienne solennellement confirmer le transfert, dans la Sainte-Chapelle de Paris, des grandes
- 119960 reliques impériales du Bucoléon. —Quant aux Vénitiens, familiers de longue date avec le martyrologe byzantin, ils n'éprouvaient pas, comme les Latins, de difficulté à déchiffrer les inscriptions des reliquaires, et leur choix dut être promptement et bien fait. On voit par les récits des pèlerins qui, dans les siècles postérieurs, s'embarquèrent à Venise pour se rendre en Palestine, que cette cité était devenue,
- 119965 depuis 1204, comme une ville sainte, tant était grand le nombre des objets sacrés qu'elle offrait à la vénération des fidèles. Ce que, d'ailleurs, même après l'incendie du trésor de Saint-Marc en 1231, la basilique ducale contient encore de reliques de premier ordre et de spécimens sans prix de l'orfèvrerie byzantine peut donner une idée de ce que ce sanctuaire reçut de Constantinople après la quatrième
- 119970 croisade.
- Mais en dehors du butin mis en commun, qui fut l'objet d'un partage régulier, le récit du pillage a déjà montré qu'il y eut un immense butin détourné par les vainqueurs indisciplinés. Hugues de Saint-Paul fit bien pendre, l'écu au col, des chevaliers coupables de n'avoir pas rapporté leur butin particulier à la masse
- 119975 commune; mais en fait de reliques, on croyait faire une bonne œuvre en volant les Grecs. Martin de Pairis se laissait traiter par son biographe de prædo sanctus; il dut donc y avoir sur ce point une certaine tolérance, qui d'ailleurs devint légale le 22 avril 1205, terme assigné à l'obligation du rapport des objets trouvés. Or, quelques semaines plus tard (juin), abordaient de toutes parts, de Syrie aussi bien
- 119980 que des divers pays de l'Occident, une foule de gens qu'avait attirés la nouvelle inattendue de la prise de Constantinople, et qui venaient demander leur part des dépouilles de la ville impériale. Deux ans après (sept. 1207) est signalée l'arrivée des renforts amenés jusqu'à Bari par Nivelon de Cherisy; ce furent de nouvelles convoitises à satisfaire; enfin, pendant tout le règne de Henri, il paraît y avoir eu entre l'Occident et Constantinople un mouvement non interrompu de gens d'armes qui venaient chercher aventure en Roumanie et ne s'en retournaient jamais les mains vides. Nous voyons ainsi Dalmase de Sercey et Ponce de Bussière passer un hiver entier à combiner le vol du chef de saint Clément. Comment d'ailleurs expliquer autrement que par des soustractions frauduleuses le fait que de petits chevaliers portant à peine
- 119985 bannière, comme Henri d'Ulmen, aient pu obtenir des trésors tels (à parler seulement de leur valeur intrinsèque) que ceux dont ce seigneur des environs de Trèves a enrichi toute la Basse-Lorraine?
- D'après M. le comte Riant, Des dépouilles religieuses enlevées à Constantinople au
- 119990 XIII^e siècle, dans les Mémoires de la Société des antiquaires de France, 4^e série, t. VI (1875).

The Sack of 1204, what happened?

By Mark Bonocore

- 120000
- I've recently been reading a book by John J. Robinson called "Dungeon, Fire, and Sword - a history of the Crusades". Robinson is clearly no friend of the Roman Catholic Church, and I will even go so far as to say that he is anti-Catholic in his
- 120005 point of view, but he does give an interesting account of the Crusader's sack on Constantinople in 1204. I thought I'd share this with you, so that we might explore the history. This is why I'm using "anti-Catholic Robinson" as the source. While I am certainly not defending the atrocities committed, I think many will find it enlightening that the sack of Constantinople was not a "diabolical plan" sponsored by
- 120010 the papacy. It was a very sad story all around.
- The Crusades began in the 1090's - that is, 40 years after the Orthodox desecrated the Latin Eucharist and holy books (because they were in Latin rather than Greek). The Byzantine patriarch attacked the Latin churches in Constantinople itself - Latin-speaking churches which existed since the time of Constantine; and he declared that
- 120015 their Eucharist was invalid because the Romans use unleaven (rather than leaven) bread - something that the Western Church (along with the Armenian Church) has always done since the time of the Apostles (Jesus Himself used unleaven bread at the Last Supper, since it was a Passover feast and there would not have been any leaven bread in Jerusalem at the time). But, the Eastern Patriarch Cerularius tried to force the
- 120020 Byzantine rite on the Romans living in the Eastern Empire. So, he took armed soldiers

into the Latin churches in Constantinople, and had them open the Tabernacles and throw the consecrated Eucharist in the streets. This is discussed by both Kallistos Ware and by Meyendorff in their books. This is the origin of Rome (a church which continued to permit and encourage Byzantine worship in its own city) serving Cerularius with a bull of excommunication in 1054. Cerularius did this because the Franks who were vassals of the Roman Empire were gaining political power in the Balkans and so the Emperor and Patriarch wanted to brand them as heretics and thus reject their authority in the Balkans.

Around 1201, Count Tibald of Champagne approached Pope Innocent III with the idea of a new crusade to the Holy Land. Innocent agreed to the proposal, especially since Tibald was not a king or emperor, and wouldn't try to usurp authority and use the crusade for his own purposes, as the kings of the 3rd Crusade had done.

In the following year, the Crusade leaders met to plan strategy. It was agreed that the point of attack would be Egypt, which Richard the Lionheart himself had called the "soft underbelly of Islam". The leaders therefore began negotiations with Venice - the only naval force in the world at the time who could transport a Christian army to that location.

The Grand Council of Venice agreed to provide transport for 4500 knights, 9000 squires and sergeants, 20000 foot soldiers, and 20000 horses. They would also provide enough food for 1 year, and supply 50 war galleys manned with Venetian troops to fight alongside the Crusaders in the Nile delta.

In payment, the Venetians would receive 85000 silver marks, plus 50% of all loot collected from the Muslims.

The plan was for the Crusading armies to assemble at Venice by June of 1202. But, with the deal newly struck, Count Tibald died, and the Crusaders elected Boniface of Monferrat as their new leader. The choice of Boniface had to do with his being the uncle of Princess Maria of Jerusalem; thinking that this would assure good relations with the barons of the Holy Land.

But, as fate would have it, Boniface spent that winter in Germany with Philip of Swabia - the same prince from whom Pope Innocent had recently denied the imperial crown. Philip's wife, however, was the Byzantine princess Irene Angelina: the daughter of Byzantine emperor Isaac Angelus, who had recently been deposed and blinded and was languishing in a dungeon in Constantinople.

Irene was concerned about her father, and even more about her younger brother Alexius. He had not been imprisoned, but was living under house arrest with their uncle Alexius III, who had seized the throne for himself. Irene asked Boniface to find out what he could about her brother while in the East.

But, ... as fate would have it again, Irene's brother Alexius arrived at Philip's court before the end of the winter. He had escaped to Sicily with the help of some friends, and was then taken safely to his sister in Germany. The young heir to the Byzantine throne thereafter decided to join the Crusade, seeing Boniface of Monferrat as an ally who might help him regain his kingdom.

But, meanwhile, the Venetians were up to intrigue of their own. They by no means wanted a crusading army attacking Egypt, which would cut off their lucrative trading centers there. So, while still negotiating with the French crusaders, Venetian envoys were in Cairo making even more favorable concessions. In an agreement signed in April of 1202 - only 2 months before the launch of the Crusade - the Venetians promised Sultan al-Adil that the crusaders would never reach Egypt.

By June, the Crusade was assembled, but not their money. For the next three months they camped on an island in the Venetian lagoon, hard pressed by their Venetian hosts, who refused to budge until they were paid the remaining 35000 marks owed them. Meanwhile, the crusade leaders negotiated with the elderly Doge of Venice, Enrico Dandolo, who was especially interested in the relationship of Boniface Monferrat and young Prince Alexius. Dandolo had always hated the Greeks - not only because they were Venice's commercial rivals, but because as a youth he had suffered a face wound in the streets of Constantinople that had almost totally blinded him. The usurper Alexius III had taken a hard line with Venetian traders, who depended upon the Greek trading stations to get furs from Russia and silks from China, so the Doge was very "sympathetic" to his young Byzantine guest.

In September, the Doge revealed the first part of his plan. The Venetians had lost the fortified city of Zara (on the Dalmatian coast) to the king of Hungary. Venice wanted it back. The crusaders objected bitterly to attacking fellow Christians, but had little choice if they wanted to continue eating. So, in November of 1202, they sacked Zara and retook it for the Venetians after much fierce fighting. (So, note that this first battle of the 4th Crusade was against Western Christians, not Eastern ones).

Upon hearing this in Rome, Innocent III excommunicated the Crusaders, but lifted the excommunication once he learned that they were pressed into it by the Venetians. The Crusade wintered in Zara, and during that time Doge Dondolo, Prince Alexius, and Boniface of Monferrat formed a plan. If the Crusade would go to Constantinople and help Alexius regain the throne, the young prince would assure the success of the Egyptian invasion. He would pay the Crusaders' debt to Venice, as well as fortify the Crusading army with 10000 Byzantine soldiers; and once the war was over, he would maintain 500 mounted men in the Holy Land to help the Christians hold Egypt. And, most important of all, he would guarantee that the Greek Church would recognize the primacy of Rome. It seemed like a very good deal... Especially to the Venetians, who had their own ideas.

The Crusade left Zara in April of 1203, arriving before the walls of Constantinople two months later. After a few skirmishes, the Venetians managed to break the chain that barred the harbor and surround the city with their navy.

Surprised by the Venetians' strategy, the usurper Alexius III fled the city; and the officers of the court quickly took the sightless Isaac from the dungeon, bathed and dressed him in imperial purple, and sent word to the crusaders that the rightful emperor had been restored to his throne. But, the crusaders' contract was with his son, Alexius; and it was soon negotiated that the youth would reign as co-emperor with his father; and so he was crowned Alexius IV in Hagia Sophia on August 1, and the gates of Constantinople were opened to the victorious crusaders.

But, now that it was time for Alexius VI to keep his promises, he found that this was impossible to do. Not only did the Greek patriarchs refuse to recognize the authority of Rome, but Alexius III had raped the imperial treasury of most of its money. Paying the crusaders' debt and financing their Egyptian expedition was now out of the question (or at least that's what the imperial court claimed). To raise some of the capital, Emperor Alexius sent parties of soldiers to seize gold and silver objects from the churches - something the Crusaders would later imitate.

This attempt to raise the money continued throughout the rest of the year, while the Westerners wandered through the streets of the capital drinking, whoring, and brawling. A band of "impatient" French soldiers set fire to a mosque used by local Muslims, and the fire spread, destroying an entire section of the city.

In January of 1204, 5 months after the crusaders were admitted to the city, the son-in-law of the usurper Alexius III, Alexius Marzuphlus - apparently trying to make a play for the crown himself - organized a riot against the unwanted Westerners. A few weeks later, an embassy of the Crusaders was attacked by the crowd as they left the imperial palace. Soon after, a mob of Byzantine citizens flooded into Hagia Sophia and declared that Alexius IV was deposed, nominating a nobleman named Nicholas Canabus in his place. But, Marzuphlus, the usurper's son-in-law, had no intention of letting someone else reap the rewards of the uprising he started. With a band of armed soldiers, he stormed the imperial palace, and both Canabus and Emperor Alexius IV were dragged off into prison - the young Alexius being immediately executed; strangled to death with a bowstring! ... As meanwhile, his blind father, Emperor Isaac, was savagely beaten; dying a few days later.

With the deaths of their imperial candidates, the crusaders camped outside the city now knew they had no other choice but to storm the walls of Constantinople. The attack began on April 6 1204, and lasted just six days, with final victory coming about through a strangely-built Venetian siege machine and a mysterious fire, which many believe was started by Venetian agents inside the city.

With victory in sight, the Crusaders took council to choose their own Catholic emperor to rule when the city was theirs. The Venetians had only one condition. If the new emperor was to be a Frankish crusader, the new Roman patriarch must be a Venetian. With this agreed, they divided up the spoils. The imperial palace, along with 25% of the city and Byzantine lands would go to the new emperor. The other 75% would be divided between the Crusaders and the Venetians equally. There was no mention of any expedition to Egypt.

All seemed in reasonably good order that night when the Venetian Doge and the crusading nobles gathered in the imperial palace. Then the Doge made his announcement - his final act of vengeance on the Greeks for the blinding facial wound he had received as a youth. As a reward for all their suffering and hardships, the army would have three days to plunder the city! This they did with wanton abandon - killing, desecrating, raping, burning, destroying.

After the 3-day debauchery, the army was brought to a reasonable state of control, although many resisted the order that their plunder should be delivered to three collection points throughout the city. A French count hanged one of his own knights for hoarding some loot; and Greek citizens were routinely tortured for hiding

treasure.

The first payment made from the plunder was the money owed to the Venetians: the Crusader's debt, which Emperor Alexius had promised to pay. These rest was divided equally with the Venetians, a sum of 400000 marks, which one chronicler noted was seven times the annual royal revenue of the entire kingdom of England. Next came the division of the land. With the whole empire to hand out, there was more than enough. Commander Boniface of Monferrat (the patron of the late Alexius) received broad territories, including the island of Crete, which the Venetians were more than happy to buy from him with part of their treasure. Then, on May 16, 1204, in the restored cathedral of Hagia Sophia, the imperial crown of Constantinople was placed on the head of Count Baldwin of Flanders. This was the beginning of the Latin Empire of Constantinople. The Egyptian Crusade was a dim, distant memory, and the entire crusading army found itself excommunicated by Pope Innocent III ... an excommunication which he was eventually persuaded to revoke.

The **Varangian Guard** was only used in battle during critical moments, or where the battle was most fierce. Contemporary Byzantine chroniclers note with a mix of terror and fascination that the "Scandinavians were frightening both in appearance and in equipment, they attacked with reckless rage and neither cared about losing blood nor their wounds". The description probably refers to berserkers, since this state of trance is said to have given them superhuman strength and no sense of pain from their wounds. When the Byzantine Emperor died, the Varangians had the unique right of running to the imperial treasury and taking as much gold and as many gems as they could carry, a procedure known in Old Norse as *polutasvarf* ("palace pillaging"). This privilege enabled many Varangians to return home as wealthy men, which encouraged even more Scandinavians to enlist in the Guard in *Miklagarðr* (Swedish: *Miklagård*= 'The Great City', i.e. Constantinople)

Sack of Constantinople, 1204

Isaakios II Angelos (1185-1195) belonged in the family of Angeloi, which descended from Philadelphia of Minor Asia. Isaakios was crowned emperor in 1185 but he proved incompetent, lavish and corrupted. He imposed taxes in the popular classes, favored the aristocracy and was indifferent for the proper organization of his empire. He spent most of his time hunting. Nevertheless, his brave general Alexius Vranas defeated the Normands who devastated Macedonia, on 7th November 1185. In 1187, during his administration the Third Crusade took place, against Arabs, headed by Saladin, who had conquered Jerusalem on 3rd October 1187. Saladin proved generous and did not harm the Christian populations. The Crusade was headed by Frederic Barbarossa of Germany, Philip II of France and Richard Lionheart of England. Richard invaded Cyprus in 1191 and later the crusaders occupied Palestine and massacred the whole population. In March, 1195 Isaac II Angelos conducted an expedition against the Bulgars, in Thrace. But he was arrested and blinded by his brother Alexius III Angelos, who became emperor of the Greek Empire, in April 1195. Isaac and his son Alexius were thrown in jail. Pope Innocent III, (1198-1216) despite manifold problems in the West, was the first pope since Urban II to be both anxious and able to consider the Crusade a major papal concern. In 1198 he broached the subject of a new expedition through legates and encyclical letters. In 1199 a tax was levied on all clerical incomes - later to become a precedent for systematic papal income taxes - and Fulk of Neuilly, a popular orator, was commissioned to preach. At a tournament held by Thibaut III of Champagne, several prominent French nobles took the cross, and others joined later. Among them was Geoffrey of Villehardouin, who was to write one of the principal accounts of the Crusade. Contact was made with the aging and blind but ambitious Doge Enrico Dandolo of Venice to provide transport. The republic of Venice had acquired considerable trading privileges within the Byzantine Empire, and the growing number of Venetian merchants had long incurred the hostility of the Greeks. The Crusade was supposed to be directed against Egypt. An agreement was made providing for payments to the Venetians for transportation of 30.000 men and 4500 horses and an equal division of conquests.

Alexius, son of Isaac, managed to escape during a campaign against the insurgent Emmanuel Camitzes, and sailed to Ancona. From there he rode to Germany, to his sister Irene who was wife of King Philip of Germany. Promising funds, supplies, and troops to conquer Egypt, the maintenance of 500 Western knights in the Holy Land, and submission of the Byzantine church to Rome, Alexius convinced Philip, Crusade leader Boniface of Montferrat, and their Venetian allies to divert the Fourth Crusade to Constantinople in order to reinstate Alexius and his father as co-emperors. The

crusader army that arrived at Venice in the summer of 1202 was somewhat smaller than had been anticipated, since some of the crusaders were travelling directly from France. Even so, there were not sufficient funds to pay the Venetians. Accordingly, the crusaders accepted the suggestion that in lieu of payment they assist the Venetians in the capture of the Hungarian city of Zara. This was done despite the opposition of many crusaders both to the diversion of the enterprise and to the attack on a Christian city. Innocent was informed of the plan, but his veto was disregarded. Here is how Geoffrey de Villehardouin (1160-1213) describes the departure from Venice in his Memoirs or Chronicle of The Fourth Crusade and The Conquest of Constantinople:

Then were the ships and transports apportioned by the barons. Ah, God what fine war-horses were put therein. And when the ships were fulfilled with arms and provisions, and knights and sergeants, the shields were ranged round the bulwarks and castles of the ships, and the banners displayed, many and fair. And be it known to you that the vessels carried more than three hundred petraries and mangonels, and all such engines as are needed for the taking of cities, in great plenty. Never did finer fleet sail from any port. And this was in the octave of the Feast of St. Remigius (October) in the year of the Incarnation of Jesus Christ twelve hundred and two. Thus did they sail from the port of Venice, as you have been told. On the Eve of St. Martin (10th November) they came before Zara in Sclavonia, and beheld the city enclosed by high walls and high towers; and vainly would you have sought for a fairer city, or one of greater strength, or richer. And when the pilgrims saw it, they marvelled greatly, and said one to another, "How could such a city be taken by force, save by the help of God himself?" The first ships that came before the city cast anchor, and waited for the others; and in the morning the day was very fine and very clear, and all the galleys came up with the transports, and the other ships which were behind; and they took the port by force, and broke the chain that defended it and was very strong and well-wrought; and they landed in such sort that the port was between them and the town. Then might you have seen many a knight and many a sergeant swarming out of the ships, and taking from the transports many a good war-horse, and many a rich tent and many a pavilion. Thus did the host encamp. And Zara was besieged on St. Martin's Day (11th November 1202).

Zara surrendered to the mercy of the Doge, on condition only that all lives should be spared. The Venetians took the part of the city towards the port, where were the ships, and the Franks took the other part. A month later came envoys from Germany, sent by King Philip and the heir of Constantinople, Alexius who was brother of Philip's wife, Irene. According to the Chronicle of The Fourth Crusade: The knights and the Doge of Venice assembled in a palace where the Doge was lodged. And the envoys addressed them and said: "Lords, King Philip sends us to you, as does also the brother of the king's wife, the son of the emperor of Constantinople. "Lords," says the king, "I will send you the brother of my wife; and I commit him into the hands of God - may He keep him from death! - and into your hands. And because you have fared forth for God, and for right, and for justice, therefore you are bound, in so far as you are able, to restore to their own inheritance those who have been unrighteously despoiled. And my wife's brother will make with you the best terms ever offered to any people, and give you the most puissant help for the recovery of the land overseas. And first, if God grant that you restore him to his inheritance, he will place the whole empire of Romania (Eastern Empire) in obedience to Rome, from which it has long been separated. Further, he knows that you have spent of your substance, and that you are poor, and he will give you 200,000 marks of silver, and food for all those of the host, both small and great. And he, of his own person, will go with you into the land of Babylon, or, if you hold that that will be better, send thither 10,000 men, at his own charges. And this service he will perform for one year. And all the days of his life he will maintain, at his own charges, five hundred knights in the land overseas to guard that land. Lords, we have full power," said the envoys, "to conclude this agreement, if you are willing to conclude it on your parts. And be it known to you, that so favourable an agreement has never before been offered to any one; and that he that would refuse it can have but small desire of glory and conquest." The barons and the Doge said they would talk this over; and a parliament was called for the morrow. When all were assembled, the matter was laid before them.

The knights had dispute about the outcome of the campaign. One party did not like to attack a Christian city and wanted to sail immediately to Syria, and the other party insisted to sail to Constantinople to gain all those who had promised the thoughtless young prince. Innocent was aware of a plan to divert the Crusade to Constantinople in order to give the throne to Alexius. Accordingly, Innocent ordered Boniface of

120285 Montferrat to publish immediately his original letter excommunicating the Venetians, which he had refused to do, and forbade any attack on Constantinople. But the papal letter arrived after the fleets had left Zara.

On 7th April 1203, the crusaders destroyed the city and sailed to Dyrachion, port of the Greek Empire. The city surrendered and swore submission to the heir of throne.

120290 The fleet departed and came to the island of Corfu. The inhabitants did not recognize Alexius as legal heir and kept the gates of the city closed. The crusaders pillaged the area around the city which was well fortified and burnt most of the villages and fields of the island. They departed from the port of Corfu on 24 May 1203 and reached the island Andros, in Aegean Sea. The knights again pillaged the island and destroyed

120295 most of the villages. Later the huge fleet entered the passage of Ellispontus or Dardanelles, and reached to a city called Abydos. The Latins stayed there a week, stole corn from the land, and sailed to the monastery of St Stephen, on 23rd June 1203. Geoffrey de Villehardouin describes the scene in his Chronicle.

There had those on board the ships and galleys and transports full sight of

120300 Constantinople; and they took port and anchored their vessels. Now you may know that those who had never before seen Constantinople looked upon it very earnestly, for they never thought there could be in all the world so rich a city; and they marked the high walls and strong towers that enclosed it round about, and the rich palaces, and mighty churches of which there were so many that no one would have believed it

120305 who had not seen it with his eyes - and the height and the length of that city which above all others was sovereign. And be it known to you, that no man there was of such hardihood but his flesh trembled: and it was no wonder, for never was so great an enterprise undertaken by any people since the creation of the world.

On 24 June 1203, the crusaders landed at Chalcedon. Chalcedon is a place in the

120310 Asiatic side of Bosphorus. There was a palace of the Emperor Alexius. The counts and barons landed and lodged themselves in the palace. Emperor Alexius saw this provocation and sent 500 men to face the Latins. But the fight lasted a while and the Greeks retreated leaving their horses and tents. Alexius III Angelos proved

120315 incompetent and less worthy than his predecessor. The corruption of his court was enormous and the moral of the army low. When the leader of the army is coward then the army is ineffective. His admiral Michael Strufnos was so wicked that he sold the gear of his fleet and increased so his personal fortune. The Greek fleet was in miserable condition. The situation of the empire couldn't be worst. The two emperors, Isaac and Alexius III Angelos, managed in some years to destroy the work of the

120320 Comnenus' dynasty. Two personalities who brightened the dark years of Angelos' dynasty were the brothers Michael and Nicetas Choniates. Nicetas' history is the main source of the events which took place during the 4th crusade.

July 2 1203, the Emperor Alexius sent an envoy, under Nicholas Roux with letters to the counts and to the barons. The envoy was received in a palace of Scutari

120325 (Chrysopolis), where the crusaders were holding a council. Nicholas Roux, a Franc who lived for years in the Greek capital, read the letters: Lords, the Emperor Alexius would have you know that he is well aware that you are the best people uncrowned, and come from the best land on earth. And he marvels much why, and for what purpose, you have come into his land and kingdom. For you are Christians, and he

120330 is a Christian, and well he knows that you are on your way to deliver the Holy Land overseas and the Holy Cross, and the Sepulchre. If you are poor and in want, he will right willingly give you of his food and substance, provided you depart out of his land. Neither would he otherwise wish to do you any hurt, though he has full power therein, seeing that if you were twenty times as numerous as you are, you would not

120335 be able to get away without utter discomfiture if so be that he wished to harm you. The Latins answered that he should deliver the power to his nephew, Isaac's son who was the legal successor of the throne.

On 3rd July, the Doge of Venice and the Marquis of Montferrat entered into one

120340 galley, took with them Alexius, the son of the Emperor Isaac and sailed close to the walls of Constantinople to show the young prince to the Greeks. There was no sympathy for the prince and the Latins returned back and decided to attack Constantinople. First they attacked the port. Their leaders were: Baldwin of Flanders, his brother Henry, Matthew of Wallincourt, Baldwin of Beauvoir, Peter of Amiens, Count Louis of Blois and Chartres, Matthew of Montmorency, Robert of Ronsoi, Otho of la Roche,

120345 Richard of Dampierre, and Marquis of Montferrat. They easily seized the port, because the Greeks under their ruler Alexius, again retreated; The united European forces (Germans, Italians, Belgians and French) who fought bravely, managed to capture the tower of Galatas; where they broke the chain that closed the Golden Horn (Chresus Keras), and came closer to the sea walls of Constantinople. Theodoros Lascaris, who

120350 later would become the emperor of the empire of Nicaea, tried without success to

drive back the enemy.

So was the tower of Galata and the port of Constantinople taken. The French advanced to the land walls, while the Venetians reached by sea to the palace of Blachernae.

The two allied armies stayed close one to another. The Greeks under Theodoros Lascaris ceased not to attack them, but without achieving a final blow to the besiegers. During a fight, Constantine Lascaris, brother of Theodoros was taken prisoner. A knight whose name was William of Gi was killed. On 17th July 1203 everything was ready for the assault. The Marquis Boniface of Montferrat guarded the camp towards the fields, with the division of the Burgundians and the division of the

men of Champagne. Count Baldwin of Flanders and his brother Henry, Count Louis of Blois and Chartres and Count Hugh of St. Paul went to the assault. The Italians under the semi blind Doge attacked to the sea walls and after fierce fighting they captured twenty-five towers. They set fire, that spread so quickly destroying houses and churches of a large part of the Polis. Again the coward Emperor Alexius III came out

of the Adrianople Gate with huge forces, but despite the urging of Theodoros Lascaris, he dared not to attack. That night the Emperor Alexius of Constantinople took of his treasure as much as he could carry, and abandoned his city, his people and his family. Emperor Isaac and his wife Margarita of Hungary were liberated, while Alexius' wife, Eufrosine was arrested. Isaakios sent envoys to the Latins to announce the news of his return to the throne. They demanded of the emperor to ratify the treaty made by his son; and on 1st August 1203 Alexius IV was crowned co-emperor. Here is how Geoffrey de Villehardouin describes the entry of the Franks in the city:

Now you must know that many of those in the host went to see Konstantinoupolis, and the rich palaces and great churches, of which there were many, and all the great wealth of the city-for never was there city that possessed so much. Of relics it does not behove me to speak, for at that day there were as many there as in all the rest of the world. Thus did the Greeks and French live in good fellowship in all things, both as regards trafficking and other matters. By common consent of Franks and Greeks it was settled that the new emperor should be crowned on the feast of our Lord St. Peter (1st August 1203). So was it settled, and so it was done. He was crowned full worthily and with honour according to the use for Greek emperors at that time. Afterwards he began to pay the moneys due to the host; and such moneys were divided among the host, and each repaid what had been advanced in Venice for his passage. Alexios IV confiscated the lands of Eufrosine, emptied the public treasury, imposed taxes and gathered 100000 marcs to give to the Latins. This was only one half of the promised sum. This attitude increased more the hatred of Greeks for Latins. A hatred that would last for centuries, during the middle ages. Among the Crusaders was dispute about the course of the campaign. Should they continue to the Holy Lands or should they stay to take all the money promised by young Alexios? The Venetians

insisted to take all the sum that Alexius had promised, and so the young emperor left his capital, escorted by Frankish knights, for the provinces in a desperate attempt to find the promised money. While the Emperor Alexius was away, a conflict arose between the Greeks and the Latins. The Latins again set fire to the city, a fire which destroyed a large part of the capital near the church of St. Sophia. It lasted two days and two nights, nor could it be put out by the hand of man. And the front of the fire, as it went flaming, was well over half a league broad. What was the damage then done, what the possessions and riches swallowed up, could no man tell - nor what the number of men and women and children who perished - for many were burned. All the Latins, to whatever land they might belong, who were lodged in Constantinople, dared no longer to remain therein; but they took their wives and their children, and such of their possessions as they could save from the fire, and entered into boats and vessels, and passed over the port and came to the camp of the pilgrims. Nor were they few in number, for there were of them some fifteen thousand, small and great; and afterwards it proved to be of advantage to the pilgrims that these should have crossed over to them.

The Emperor Alexius remained for a long time in Thrace and returned to Constantinople in 11 November 1203. Nevertheless he did not manage to gather enough money to satisfy the greed of the Franks. The crusaders had an embassy sent to the emperor, to his palace of Blachernae, lead by Conon de Bethune and Geoffry of Villehardouin. They dismounted at the gate and entered the palace, and found the Emperor Alexius and the Emperor Isaac seated on two thrones, side by side. And near them was seated the empress, who was the wife of the father, and stepmother of the son, and sister to the King of Hungary - a lady both fair and good. And there were with them a great company of people of note and rank, so that well did the court seem the court of a rich and mighty prince. By desire of the other envoys Conon of Bethune, who was very wise and eloquent of speech, acted as spokesman: "Sire, we have come to thee on the part of

the barons of the host and of the Doge of Venice. They would put thee in mind of the great service they have done to thee - a service known to the people and manifest to all men. Thou hast sworn, thou and thy father, to fulfill the promised covenants, and they have your charters in hand. But you have not fulfilled those covenants well, as you should have done. Many times have they called upon you to do so, and now again we call upon you, in the presence of all your barons, to fulfill the covenants that are between you and them. Should you do so, it shall be well. If not, be it known to you that from this day forth they will not hold you as lord or friend, but will endeavour to obtain their due by all the means in their Power. And of this they now give you warning, seeing that they would not injure you, nor any one, without first defiance given; for never have they acted treacherously, nor in their land is it customary to do so. You have heard what we have said. It is for you to take counsel thereon according to your pleasure." Much were the Greeks amazed and greatly outraged by this open defiance; and they said that never had any one been so hardy as to dare defy the Emperor of Constantinople in his own hall. Very evil were the looks now cast on the envoys by the Emperor Alexius and by all the Greeks, who aforetime were wont to regard them very favourably. Great was the tumult there within, and the envoys turned about and came to the gate and mounted their horses. When they got outside the gate, there was not one of them but felt glad at heart; nor is that to be marvelled at, for they had escaped from very great peril, and it held to very little that they were not all killed or taken. So they returned to the camp, and told the barons how they had fared.

So there was war between the Greeks and the Franks, on November 1203. The Greeks under the command of Alexius Ducas Murtzuphlus tried to burn the European fleet, using fireships, but without success. The Venetians were masters in the seamanship and seized the fireships, using hooks. Only one merchant ship from Pisa was burnt. In these difficult events the young emperor proved incompetent like his uncle. Three men had the courage to face the barbarians: Alexius Ducas Murtzuphlus, Constantine Lascaris and his brother Theodorus Lascaris. The Greek people were furious with the inefficiency of the young emperor and a revolution broke in 25th January 1204. Alexius IV was thrown in jail and on 5 February 1204, Alexius V Ducas Murtzuphlus was crowned emperor of the Eastern Empire. Alexius IV was strangled in his jail on 8 February 1204 and Isaac died in prison a few days later. So ended the worst dynasty that ruled the Empire and disorganized the state to such extent that after 2 months this state was to meet its destiny and fall to the crusaders. A fall that would prepare the ground for the Turks to come and destroy definitely the Greek medieval state.

The Franks rode to the north and attacked to a city of Euxenus Pontus, named Philea. They pillaged and destroyed the rich city and when they returned back, the emperor assaulted them. But again the crusaders defeated the Greek imperial army and not only the emperor Alexius V was almost taken captive, but the holy icon of the Virgin Mary that was made by Apostle Lucas was stolen by the Latins. This icon was very important for the Orthodoxy and the Greeks grieved for the loss of it.

Well had these prepared all their engines, and mounted their petrarries, and mangonels on the ships and on the transports, and got ready all such engines of war as are needful for the taking of a city, and raised ladders from the yards and masts of the vessels, so high that they were a marvel to behold. And when the Greeks saw this, they began, on their side, to strengthen the defences of the city which was enclosed with high walls and high towers. Nor was any tower so high that they did not raise thereon two or three stages of wood to heighten it still more. Never was city so well fortified. Thus did the Greeks and the Franks bestir themselves on the one side and the other during the greater part of Lent. Then those of the host spoke together, and took counsel what they should do. Much was advanced this way and that, but in the end, they devised that if God granted them entry into the city by force, all the booty taken was to be brought together, and fittingly distributed; and further, if the city fell into their power, six men should be taken from among the Franks, and six from among the Venetians, and these twelve should swear, on holy relics, to elect as emperor the man who, as they deemed, would rule with most profit to the land. And whosoever was thus elected emperor, would have one quarter of whatever was captured, whether within the city or without, and moreover would possess the palace of Bucoleon and that of Blachernae; and the remaining three parts would be divided into two, and one of the halves awarded to the Venetians and the other to those of the host. And there should be taken twelve of the wisest and most experienced men among the host of the pilgrims, and twelve among the Venetians, and those twenty-four would divide fiefs and honours, and appoint the service to be done therefor to the emperor. This covenant was made sure and sworn to on the one side and the other by the Franks and

the Venetians; with provision that at the end of March, a year thence, any who so desired might depart hence and go their way, but that those who remained in the land would be held to the service of the emperor in such manner as might be ordained. Thus was the covenant devised and made sure; and such as should not observe it were excommunicated by the clergy.

So the Latins decided to divide the Eastern Empire. The men who had sworn before the Holy Cross to go and liberate Jerusalem from muslimans, had preferred to act like common thieves and attack to a Christian city with only one purpose.

The sack.

The Europeans attacked the sea walls on 8th April 1204. The ships drew near to the city, and a fierce battle began in more than a hundred places. The crusaders were repulsed in that assault, and those who had landed from the galleys were driven back. After the defeat, the Doge of Venice and the other barons were assembled in a church on the other side of the straits and discussed. The Venetians insisted that they should repeat the attacks to the same place, but this time the ships should be bound together in order to reach the high towers. The preparations lasted some days and the final assault was repeated on 13th April 1204. The Greeks defended the towers with success, but suddenly the wind changed and blew from the north. Two ships that were bound together, the Pilgrim and the Paradise, approached so near to a tower, that the ladder of the first vessel joined on to the tower. Immediately a Venetian, and two French knights, whose name was Andrew of Durboise and John Choisy, entered into the tower. This was the beginning of the end. The tower was taken and many other crusaders raised their ladders and conquered many other towers. In vain the emperor Alexius Murzuphlus tried to encourage his soldiers to counterattack. They fled and Alexius ran to the castle of Bucoleon. He took with him Eufrosine and her daughter Eudokia and left the Byzantine capital through the Golden Gate. The Latins set again fire to the city.

And the city began to take fire, and to burn very direfully; and it burned all that night and all the next day, till vesper-time. And this was the third fire there had been in Constantinople since the Franks arrived in the land; and more houses had been burned in the city than there are houses in any three of the greatest cities in the kingdom of France.

When Alexius V left the City, Constantine Lascaris one of the city's leading defenders, was proclaimed emperor in the Cathedral of St. Sophia. He tried with his brother Theodoros Lascaris to drive the Varagkoi (Vikings mercenaries) against the invaders, but again the attempt had no result and the two brothers fled the city. In Nicaea, Theodoros Lascaris would later create a new Byzantine state, the Empire of Nicaea. One of his successors Michael VIII Paleologus in 1261, would liberate the Greek capital.

The richest city of the world was at the mercy of the Europeans. The barbarians did horrible things that are beyond imagination. They tortured and massacred a large part of the population, destroyed churches, palaces, monasteries and even sculptures made by Phidias and Praxiteles, stole thousands of priceless icons, relics and other things, raped young girls and boys. Not to mention the countless manuscripts of ancient Greek philology which were burnt by the ignorant and illiterate Franks. So much was the hatred of the Europeans for the Greek Empire! Nicetas Choniates or Acominatus describes in his chronicle the detestable actions of the barbarians. Nicetas experienced the looting of Constantinople and with the help of a Venetian merchant, he managed to escape with his family, to Nicaea, capital of a new Greek state, where he wrote the 21-volume "History of the Times," a record of the rise and fall of the 12th- and 13th-century Byzantine dynasties, beginning with the Greek emperor John Comnenus (1118-1143) and concluding with the intrusion of the first Latin Eastern emperor, Baldwin I of Flanders (1204-1205). Geoffrey de Villehardouin gives his point of view:

The Marquis Boniface of Montferrat rode all along the shore to the palace of Bucoleon, and when he arrived there it surrendered, on condition that the lives of all therein should be spared. At Bucoleon were found the larger number of the great ladies who had fled to the castle, for there were found the sister [Agnes, sister of Philip Augustus, married successively to Alexius II., to Andronicus, and to Theodore Branas] of the King of France, who had been empress, and the sister [Margaret, sister of Emeric, King of Hungary, married to the Emperor Isaac, and afterwards to the Marquis of Montferrat] of the King of Hungary, who had also been empress, and other ladies very many. Of the treasure that was found in that palace I cannot well speak, for there was so much that it was beyond end or counting. At the same time that this

120550 palace was surrendered to the Marquis Boniface of Montferrat, did the palace of Blachernae surrender to Henry, the brother of Count Baldwin of Flanders, on condition that no hurt should be done to the bodies of those who were therein. There too was found much treasure, not less than in the palace of Bucoleon. Each garrisoned with his own people the castle that had been surrendered to him, and set a guard over the treasure. And the other people, spread abroad throughout the city, also gained much

120555 booty. The booty gained was so great that none could tell you the end of it: gold and silver, and vessels and precious stones, and samite, and cloth of silk, and robes vair and grey, and ermine, and every choicest thing found upon the earth. And well does Geoffry of Villehardouin the Marshal of Champagne, bear witness, that never, since the world was created, had so much booty been won in any city. Every one took

120560 quarters where he pleased and of lodgings there was no stint. So the host of the pilgrims and of the Venetians found quarters, and greatly did they rejoice and give thanks because of the victory God had vouchsafed to them - for those who before had been poor were now in wealth and luxury.

120565 For four days the great City was subjected by the rank and file to pillage and massacre. When order had been restored, the crusaders and the Venetians proceeded to implement their agreement; Baldwin of Flanders was crowned emperor in the church of St. Sophia and the Venetian Thomas Morosini was chosen patriarch. But the lands parcelled out among the leaders did not include all the former Byzantine possessions.

120570 The imperial government continued in Nicaea, and an offshoot Empire of Trebizond, at the eastern end of the Black Sea, lasted until 1461. There was also established a Byzantine Despotate of Epirus, and the Bulgarians under Skylogiannis or Ioannitzes remained hostile. The rift between the Eastern and Western churches widened, and Greek popular resistance to any schemes of reunion with the empire intensified. The

120575 Byzantine Empire, for centuries a bulwark against invasion from the East, was damaged beyond repair. The Greeks never forgave the Europeans for the destruction of their state. A destruction that would bring the final end of the Greek Empire with the invasion of the Turks. An invasion that had as result the slavery of the Greeks for 5 centuries and the irrevocable loss of ancient Greek lands.

120580 Marquis Boniface of Montferrat married the empress who had been the wife of the Emperor Isaac, and was sister to the King of Hungary. He asked from Baldwin the city of Thessalonica, the capital of the province of Macedonia, which was granted to him. Alexius Murzuphlus who had taken with him the empress, wife of the Emperor Alexius III, and his daughter Eudokia, reached Messinopolis, a city of Thrace. There, the

120585 former emperor received him and told him that he should be as welcome as if he were his own son, and that he would give him his daughter to wife, and make of him his son. But when he found the chance he blinded him. Later Alexius V Murzuphlus was arrested by the Latins who murdered him by casting him from the top of a column in Constantinople. This was the end for the man who tried without success to fight the

120590 Frankish invaders. Alexius III Angelos was also arrested by the crusaders. On 1205, Baldwin and later Boniface were killed by the king of Bulgars, Ioannitzes. The Empire of Nicaea which faced three enemies: the Latins, the Bulgarians, and the Seljuk sultanate, proved worthy of the Byzantine traditions of fighting on many fronts at once and of skillful diplomacy. Theodore Lascaris and his son-in-law John III

120595 Vatatzes built up at Nicaea a microcosm of the Byzantine Empire and church in exile. The Latins were thus never able to gain a permanent foothold in Anatolia.

CONSTANTINE XI PALAEOLOGUS (1449-1453)

FALL OF CONSTANTINOPLE "Ealo h Polis"

120600 Constantine XI Palaeologos (1404-1453), also called Dragases, last Byzantine emperor, was born in 1404 in Mistra, was the son of Emperor Manuel II. He was trained as a soldier, and in 1430 liberated the peninsula of Morea in Greece, which had been under the Frankish principality of Achaia, a state established by the Crusaders.

120605 In 1442 Turks under Murad, sieged Constantinople which was defended by emperor John VIII Palaeologos, while Constantine fought Turks in island of Limnos. There he lost his wife Katherine. Constantine XI was actually married twice and Katherine was his second wife.

In 1444 Constantine with his brother Thomas Palaeologos and a small army liberated Roumeli and Thessalia. The Greek populations loved and admired their leader. They

120610 called him "Drakos". Those were the last victories of Byzantium. His friend was George Plithon or Gemistos a philosopher who created school of Philosophy in Athens. He was teaching Greek Philosophy in Mystras. He advised Constantine to take the property from church and rich men and to give it to the poor farmers. When John VIII travelled in Florence, he escorted him together with other

- 120615 Byzantine intellectuals. There Europeans argued with the Greeks about religion and Plithon told them:
Why are you arguing to unify the two churches? In the future there will be only one religion, and this is the union of Christianity and the ideas of ancient Greeks.
- 120620 In 1446, the Turkish ruler Murad II reconquered and devastated these lands. The Turks had begun their invasions of the Balkans nearly a century before, and now began to close in on Constantinople.
Constantine was crowned emperor on Jan. 6, 1449, succeeding his brother, John VIII. The last Christian Greek Emperor entered, two months later, on March 12, the isolated Imperial capital. A little less than three years later, on Dec. 12, 1452, the union
- 120625 of the Roman Catholic and Greek Orthodox churches was proclaimed in Constantinople in the presence of the papal legate and the Patriarch Gregory. Constantine had been a strong advocate of this union, but the people were generally opposed to it, and riots ensued. The popular insistence on Byzantine religious autonomy furthered the estrangement between eastern and western Roman Christendom and weakened Byzantine
- 120630 resistance to the Turks. Catholics never sent army or navy as they were committed to their agreement. They preferred the most glorious Christian city to be destroyed and pillaged from the Muslims.
In 1452 the sultan demolished the old church of Archaggelos Michael and constructed at the narrowest point of the Bosphorus strait, a huge complex of strong
- 120635 fortifications, Rumeli Hisar, whose task was to shut completely, by its artillery, the route of western and Byzantine vessels to and from the Black Sea (Euxeinos Pontus). Indeed, on 26 November 1452, according to the Venetian doctor Nicolao Barbaro, a Venetian vessel under the command of Antonio Ritzo attempted to pass without paying the required tolls. It was sank by the new fortress's guns, its crew
- 120640 of thirty men was taken prisoners in Adrianople (Eridne). The officers and sailors were brought in front of Mehmed, who ordered their immediate impalement.
The Turkish sultan, Mehmed II, advanced on Constantinople in the beginning of 1453. Troops came from every region of the Empire, including thousands of irregulars, from many nationalities, who were attracted by the prospect of looting. The regular troops
- 120645 were well equipped and well trained. The elite corps of the Janissaries composed of abducted Christian children, forcibly converted to Islam, and subsequently trained as professional soldiers, constituted the spear-head of the Ottoman army. The besieging army included a number of artillery pieces, which were made with the help of a Hungarian named Ourvanos. The hugest canons faced the Military Gate of St Romanus, and were expected to cause heavy damage to the 1000 year old walls in that area. The
- 120650 army, accompanied by crowds of fanatic Dervishes, started moving slowly towards Constantinople. A few towns, still in Greek hands, near the capital were soon occupied by the Sultan's army. Of those towns Selyvria resisted longer. His army included 200000 soldiers (29.000 of them were Europeans).
- 120655 Constantinople was defended only by 10.000 soldiers (3.000 of them were Europeans mostly Italians). Among the Europeans, who had come to help, was the brave Giovanni Giustiniani. He was from Genoa where he had recruited 400 men and another 300 on the island of Chios. Others were the cardinal Isidoros, who was of Greek origin, the latin bishop of Chios, Leonardos, the Venetian captains Kokkos, Trevizas, Aloisio, Contarini and a lot more people. Also, the help provided by the German engineer
- 120660 Johannes Grant was of great importance. Grant managed to destroy all the tunnels that the Sultan had attempted to build in order to enter the city. So the greatest Christian city was defended only by some Greeks and some Italians. No other European leader accepted the emperor's appeal for help.
- 120665 The defenders lacked in training and armament but were possessed by fighting spirit. Indeed, most of them were killed fighting. The civilian population supported the emperor overwhelmingly. The people, men and women, participated in the repairs of the walls and in the deepening of the moat, volunteers manned observation posts, food supplies were collected, gold and silver objects, held in the churches, were melted
- 120670 to make coins in order to pay the foreign soldiers. With the exception of about 700 Italian residents of the city, who fled on board seven ships, on the night of February 26, no one else imitated them. The rest of the population, Greeks and foreigners, fought until the end. On April 2, 1453 the city's harbor, the Golden Horn, was shut by a huge chain, and ten galleys were put behind to protect it.
- 120675 During the first week of April, the Ottoman troops began taking their assigned positions in front of the city walls. The Sultan had his tent installed north of the Gate of St Romanus, near the river Lycus. He ordered the big canon to be installed in the same area. To protect the troops, a protective trench was opened in front of the Ottoman units, the soil from it was accumulated on the city side and on top of it was
- 120680 erected a palisade. On the 12th arrived from Gallipoli the Ottoman fleet. Composed of

approximately 200 ships of various sizes and displacements, it sealed the byzantine capital from the sea. Mehmed's admiral was the Bulgarian renegade Suleiman Baltoghlu. On his side the emperor distributed his troops as best as he could. It was impossible, with the available garrison, to cover the entire walled circumference of the capital, about fourteen miles long. However, it was clear to all that the main attack would be delivered by the enemy along the land-walls, about four miles long. With the exception of the Blachernae section of the walls, at the north-eastern end of the land side, the city was protected, on the land side, by a triple wall, with a deep moat in front of it. On the sea side, including the Golden Horn port area, the city was protected by a single wall.

Given the availability of troops and the critical sections of the walls, Giustiniani, with most of his men, as well as Constantine Palaeologus and his best troops, took position in the St Romanus's Gate sector, where heavy damage was expected to be inflicted by the canon and the main Ottoman assault to be launched. The Venetian Bailo (the Head of the Venetian Community at Constantinople) Girolamo Minotto and his countrymen were charged with the defence of the region of Blachernae, where the Imperial Palace was located. Minotto and his men faced the European troops of Karadja Pasha. Across the Golden Horn, to the left of Pera, ready to intervene, stood the troops of Zaganos Pasha. Along the southern section of the land-walls the defenders faced the Anatolian troops under the command of Ishak Pasha. The Grand Duke Luke Notaras and Alexios Disipatos with a reserve unit took position near the walls, at the Petra neighborhood, in the north-eastern section of the city. Another reserve unit of 700 men under the command of Theofilos Palaeologus, Demetrius Cantakouzenos and Nicephorus Palaeologus was stationed near the church of the Holy Apostles, at the center of the city. Most units were positioned on and behind the land-walls. The sea-walls were thinly manned. To protect the entrance to the port, the Venetian commander of the small fleet of the defenders, Alviso Diedo, ordered ten ships to take position behind the chain.

According to Islamic tradition the Sultan, before the beginning of hostilities, demanded the surrender of the city, promising to spare the lives of its inhabitants and respect their property. In a proud and dignified reply Constantine XI rejected Mehmed's demand.

Almost immediately the Ottoman guns began firing. The continuous bombardment soon brought down a section of the walls near the Gate of Charisius, north of the Emperor's position. When night fell, everyone, who was available, rushed to repair the damage. Meanwhile Ottoman troops were trying to fill the fosse, particularly in areas in front of the weak sections of the walls which were now constantly bombarded. Other units began attempts to mine weak sections of the wall. On the port area a first attempt by the Ottoman fleet to test the defenders' reaction failed.

Until the end of the siege the Ottoman guns did not stop pounding the walls. Heavy damage was inflicted. The defenders did their best to limit it. They hanged bales of wool, sheets of leather. Nothing could help. The section of the walls in the Lycus valley, near the Emperor's position, was heavily damaged. The fosse in front of it was almost filled by the besiegers. Behind it, the defenders erected a stockade. Night after night men and women came from the city to repair the damaged sections. The first assault was launched during the night of April 18. Thousands of men attacked the stockade and attempted to burn it down. Emperor and his Greek comrades fought valiantly. Well armed, protected by armor, fighting in a restricted area, they succeeded after four hours of bloody struggle to repulse the enemy.

On Friday, 20 April, in the morning, appeared in the sea of Marmara, near Constantinople, five large vessels loaded with provisions for the city. Four were Genoese and one, a big transport, was Greek. The Greek captain's name was Flantanellas. Baltoghlu dispatched immediately his fleet to attack and capture the ships. The operation seemed easy and soon the ships were surrounded by the smaller Ottoman vessels. Everyone in the city, who was not busy with the defence, rushed to the sea-walls to watch the spectacle. The Sultan on horseback, his officers and a multitude of soldiers, rushed to the shore to watch the battle. Excited and unable to restrain himself, screaming orders at Baltoghlu, the young Sultan rode into the shallow water. Fighting, the big ships continued pushing the smaller ones, and helped by the wind they were now close to the south-eastern corner of the city. Then the wind dropped and the current began pushing them towards the coast on which stood the Sultan and his troops. Fighting continued, with the Christian sailors hurling on the enemy crews stones, javelins and all sorts of projectiles, including Greek Fire. Eventually the four vessels came so close to each other that they became bound together, forming a floating castle. Around sunset the wind rose and the big ships, pushing their way through the mass, and the wrecks, of the enemy vessels, hailed by

thousands of people who were standing on the walls, entered the Golden Horn. Next morning Baltoghlu was dismissed by the Sultan, who was so furious that he ordered the beheading of his admiral. The unlucky admiral was replaced by a favorite of Mehmed, Hamza Bey.

This event convinced the Sultan and his commanders that the city had to be more tightly besieged and that the naval arm of the besieged had to be neutralized. Mehmed's ingenious plan, formulated before the events of April 20, consisted in bringing part of his fleet into the Golden Horn. Indeed, thousands of laborers had been building, for some time, a road overland from the Bosphorus, alongside the walls of Pera, to a place called Valley of the Springs, on the shore of the Golden Horn, above Pera. On April 22 to the horror of the besieged a long procession of ships, sitting on wooden platforms were pulled by teams of oxen and men, over the road, into the port area. About seventy boats entered the Golden Horn. The leaders of the defence held immediately an emergency meeting. Various plans were discussed and it was finally decided to attempt to burn the enemy boats, which were in the Golden Horn. After a succession of postponements the attempt was carried out during the night of April 28. Betrayed by Italians from Pera, it failed miserably. Hit by Ottoman guns the Christian ships suffered heavy damage. About forty sailors captured by the enemy were tortured to death.

Despite this failure the situation in the Golden Horn became, more or less, stable. Superior naval training, and better naval construction, eventually prevented Hamza's ships from inflicting serious damage on the allied units. However, the Sultan's idea was a military success. Indeed, in 1204 the Crusaders had assaulted the city from the sea-walls and the Greeks had not forgotten it. They feared a repetition of that assault.

On the land side the bombardment continued, more walls collapsed, and when night fell everyone rushed to close the gap, reinforce the stockades, build here and there. Moreover, food was wanting and the authorities did their best to distribute it equally. Worse, help was not coming. Everyone was watching and waiting for the sails of the Western ships to appear coming out of the Dardanelles. In early May a fast boat "Byzantine dromon" was sent out, to seek the allied fleet in the Aegean and tell its commanders to hurry.

During the night of May 7 a new assault was launched against the damaged section, where Giustiniani stood. It failed again and then in the night of May 12 another came and failed. It was launched at the junction of the Blachernae wall and of the old Theodosian one. During that time mining and counter-mining continued. Sometimes fighting went on underground. Sometimes the tunnels collapsed and suffocated the miners. The German engineer Grant with barrels filled with water all around the walls, managed to discover the underground tunnels.

On May 23 the dromon that had been sent out to locate the Christian fleet returned to the city. Its crew brought bad news. Nothing was in sight. The defenders were alone, no help was coming. The men of the crew, obeying their duty, decided to return to the doomed city. Realizing that everything was lost Constantine's chief advisors begged him to leave the city. He could still get out and seek help. His father Manuel II had done the same in 1399, at the time of the blockade of the city by Sultan Bayazid. The Emperor refused to discuss the issue. He had already decided to stay in his capital, fight for it and perish.

Meanwhile, rumors were circulating in the Ottoman camp about the Venetians finally mobilizing their fleet, or about the Hungarians preparing to cross the Danube. The siege was going on without end in sight. The Sultan's Vizier Halil Chandarli, who was also informer of the emperor, had strong reservations about the siege from the beginning. He was worried about western intervention and he looked upon the whole operation with anxiety. During a meeting of the Sultan's advisors, held on May 25, the Vizir told Mehmed to raise the siege. Pursuing it might bring unknown consequences to Ottoman interests. The Sultan, also depressed because of the prolongation of the operation, finally decided to launch a grand scale final assault on the city. He was supported by younger commanders like Zaganos Pasha, a Christian converted to Islam. Halil was overruled and all present decided to continue the siege.

While the artillery continued pounding the walls without interruption, preparations for the big assault, which was to take place on Tuesday 29 May, were accelerated. Material was thrown into the fosse which faced the collapsed ramparts, scaling-ladders were distributed. The Magistrates of Pera were warned not to give any assistance to the besieged. The Sultan swore to distribute fairly the treasures found in the city. According to tradition the troops were free to loot and sack the city for three days. He assured his troops that success was imminent, the defenders were

exhausted, some sections of the walls had collapsed. It would be a general assault, throughout the line of the land-walls, as well as in the port area. Then the troops were ordered to rest and recover their strength.

In the city everyone realized that the great moment had come. During Monday, May 28, some last repairs were done on the walls and the stockades, in the collapsed sections, were reinforced. In the city, while the bells of the churches rang mournfully, citizens and soldiers joined a long procession behind the holy relics brought out of the churches. Singing hymns in Greek, Italian or Catalan, Orthodox and Catholic, men, women, children, soldiers, civilians, clergy, monks and nuns, knowing that they were going to die shortly, made peace with themselves, with God and with eternity.

When the procession ended the Emperor met with his commanders and the notables of the city. In a philosophical speech he told his subjects that the end of their time had come. In essence he told them that Man had to be ready to face death when he had to fight for his faith, for his country, for his family or for his sovereign. All four reasons were now present. Furthermore, his subjects, who were the descendants of Greeks, had to emulate their great ancestors. They had to fight and sacrifice themselves without fear. They had lived in a great city and they were now going to die defending it. As for himself, he was going to die fighting for his faith, for his city and for his people. He also thanked the Italian soldiers, who had not abandoned the great city in its final moments. He still believed that the garrison could repulse the enemy. They all had to be brave, proud warriors and do their duty. He thanked all present for their contribution to the defence of the city and asked them to forgive him, if he had ever treated them without kindness. Constantine asked Guistiniani to take his beloved Anna Notara to his ship, so that she would not fall in the hands of the enemy. Everyone knew the fate of those who would be alive when Turks entered in the city.

Meanwhile the great church of Saint Sophia was crowded. Thousands of people were moving towards the church. Inside, Orthodox and Catholic priests were holding mass (THE LAST CHRISTIAN SERVICE AFTER 1000 YEARS). People were singing hymns, others were openly crying, others were asking each other for forgiveness. Those who were not serving on the ramparts also went to the church, among them was seen, for a brief moment, the Emperor. People confessed and took communion. Then those who were going to fight rode or walked back to the ramparts. They prayed and chanted for the last time the "Akathistos Hymn" in front of the holy icon of "Odigitria", an icon of Virgin Mary, made by Apostle Loukas. The next day most of them would be dead. From the great church the Emperor rode to the Palace at Blachernae. There he asked his household to forgive him. He bade the emotionally shattered men and women farewell, left his Palace and rode away, into the night, for a last inspection of the defence positions. Then he took his battle position.

The assault began after midnight, into the 29th of May 1453. Wave after wave the attackers charged. Battle cries, accompanied by the sound of drums, trumpets and fifes, filled the air. The bells of the city churches began ringing frantically. Orders, screams and the sound of trumpets shattered the night. First came the irregulars, an unreliable, multinational crowd of Christians and Muslims, who were attracted by the opportunity of enriching themselves by looting the glorious city, the great capital of the East Roman Empire. They attacked throughout the line of fortifications and they were massacred by the tough professionals, who were fighting under the orders of Giustiniani. The battle lasted two hours and the irregulars withdrew in disorder, leaving behind an unknown number of dead and wounded.

Next came the Anatolian troops of Ishak Pasha. They tried to storm the stockades. They fought tenaciously, even desperately trying to break through the compact ranks of the defenders. The narrow area in which fighting went on helped the defenders. They could hack left and right with their maces and swords and shoot missiles onto the mass of attackers without having to aim. A group of attackers crashed through a gap and for a moment it seemed that they could enter the city. They were assaulted by the Emperor and his men and were soon slain. This second attack also failed.

But now came the Janissaries (what an irony that they were born Greek Orthodox), disciplined, professional, ruthless warriors, superbly trained, ready to die for their master, the Sultan. They assaulted the now exhausted defenders, they were pushing their way over bodies of dead and dying Muslim and Christian soldiers. With tremendous effort the Greek and Italian fighters were hitting back and continued repulsing the enemy. Then a group of enemy soldiers unexpectedly entered the city from a small sally-port called Kerkoporta, on the wall of Blachernae, where this wall joined the triple wall. Fighting broke near the small gate with the defenders trying to eliminate the intruders.

It was almost day now, the first light, before sunrise, when a shot fired from a calverin hit Giustiniani. The shot pierced his breastplate and he fell on the ground. Shaken by his wound and physically exhausted, his fighting spirit collapsed. Despite the pleas of the Emperor, who was fighting nearby, not to leave his post, the Genoese commander ordered his men to take him out of the battle-field. A Gate in the inner wall was opened for the group of Genoese soldiers, who were carrying their wounded commander, to come into the city. The soldiers who were fighting near the area saw the Gate open, their comrades carrying their leader crossing into the city, and they thought that the defence line had been broken. They all rushed through the Gate leaving the Emperor and the Greek fighters alone between the two walls. This sudden movement did not escape the attention of the Ottoman commanders. Frantic orders were issued to the troops to concentrate their attack on the weakened position. Thousands rushed to the area. The stockade was broken. The Greeks were now squeezed by crowds of Janissaries between the stockade and the wall. More Janissaries came in and many reached the inner wall.

Meanwhile more were pouring in through the Kerkopoporta, where the defenders had not been able to eliminate the first intruders. Soon the first enemy flags were seen on the walls. The Emperor and his commanders were trying frantically to rally their troops and push back the enemy. It was too late. Waves of Janissaries, followed by other regular units of the Ottoman army, were crashing through the open Gates, mixed with fleeing and slaughtered Christian soldiers. Then the Emperor, realizing that everything was lost, removed his Imperial insignia, and followed by his cousin Theophilus Palaeologus, the lord Branas, the Castilian Don Francisco of Toledo, Katakouzinos, Mathaios Sgouromalis and John Dalmatus, all seven holding their swords, charged into the sea of the enemy soldiers, hitting left and right in a final act of defiance. They were never seen again.

Now, thousands of Ottoman soldiers were pouring into the city. One after the other the city Gates were opened. The Ottoman flags began appearing on the walls, on the towers, on the Palace at Blachernae. Civilians in panic were rushing to the churches. Others locked themselves in their homes, some continued fighting in the streets, crowds of Greeks and foreigners were rushing towards the port area. The allied ships were still there and began collecting refugees. The Cretan soldiers and sailors, manning three towers near the entrance of the Golden Horn, were still fighting and had no intention of surrendering. At the end, the Ottoman commanders had to agree to a truce and let them sail away, carrying their arms.

Bands of Ottoman soldiers began now looting. Doors were broken, private homes were looted, their tenants were massacred. Shops in the city markets were looted. Monasteries and Convents were broken in. Their tenants were killed, nuns were raped, many, to avoid dishonor, killed themselves. Killing, raping, looting, burning, enslaving, went on and on according to tradition. The troops had to satisfy themselves. The great doors of Saint Sophia were forced open, and crowds of angry soldiers came in and fell upon the unfortunate worshippers. Pillaging and killing in the holy place went on for hours. Similar was the fate of worshippers in most churches in the city. Everything that could be taken from the splendid buildings was taken by the new masters of the Imperial capital. Icons were destroyed, precious manuscripts were lost forever. Thousands of civilians were enslaved, soldiers fought over young boys and young women. Death and enslavement did not distinguish among social classes. Nobles and peasants were treated with equal ruthlessness.

According to Historian Frantzis the invaders broke the heads of those women who resisted, on the floor of the churches and they raped them dead. The famous icon of Apostle Loukas was totally destroyed. The sultan asked for the young sons of Duke Loukas Notaras. Their father refused and Mehmed was ready to take their heads. Notaras asked him to kill him after his sons so that he was sure that they were dead and not disgraced from the pervert sultan. And this is what happened.

In some distant neighborhoods, especially near the sea walls in the sea of Marmora, such as Psamathia, but also in the Golden Horn at Phanar and Petrion, where local fishermen opened the Gates, while the enemy soldiers were pouring into the city from the land Gates, local magistrates negotiated successfully their surrender to Hamza Bey's officers. Their act saved the lives of their fellow citizens. Furthermore their churches were not desecrated. Meanwhile, the crews of the Ottoman fleet abandoned their ships to rush into the city. They were worried that the land army was going to take everything. The collapse of discipline gave the Christian ships time to sail out of the Golden Horn. Venetian, Genoese and Greek ships, loaded with refugees, some of them having reached the ships swimming from the city, sailed away to freedom. On one of the Genoese vessels was Giustiniani. He was taken from the boat at Chios where he died, from his wound, a few days later.

120945 By the evening of the first day of looting there was left nothing else to steal. The Sultan, with his top commanders and his guard of Janissaries, came into the city in the afternoon of the first day of occupation. Constantinople was finally his and he intended to make it the capital of his mighty Empire. He toured the ruined city. He visited Saint Sophia which he ordered to be turned into a mosque. He also ordered an end to the killing. What he saw was desolation, destruction, death in the streets, ruins, desecrated churches. It was too much. It is said that, as he rode through the streets of the former capital of the Christian Greek Empire, the city of Constantine, moved to tears he murmured: "What a city we have given over to plunder and destruction".

120950

120955 The sultan show in front of many houses the symbol of half moon. He asked why was this symbol everywhere, and they told him that this symbol was dated from the time of 340 b.c. when Philipos Macedonian did not manage to take Byzantium. Ancient Byzantines has since that victory, preserved this symbol. Sultan liked it and added to it a star. So was formed the Turkish flag which terrorized for many centuries the Christian states.

120960 So a civilization of 1100 years old was lost in some days. The barbarians didn't respect anything holy icons, books, paintings, mosaics. They demolished and vandalized churches, ancient monuments, palaces dated from 4th century. Nevertheless the ideas did not vanished. Turks didn't manage to vanish the Hellenic spirit. Many Greeks like Byssarion, Dimitrios Kavakis, Georgios Xaritonimos, Ieronimos of Sparta fled to Europe where they spread the ideas of Socrates, Platon, Aristotelis, Aeschylus, Archimidis, Homer, Euripides, Solon.

120965 Turks must be grateful to the "civilized" Europeans for helping them taking and still keeping this City.

THE RELICS OF THE HOLY SUFFERING.

120975 March 22, 1899 God's goodness has wanted to preserve for us, as a memorial of the bitter suffering of the Savior, numerous relics: cross-wood, crown of thorns, column of scourging, etc.

To a certain extent, that wood of shame and those instruments of torture have shared in the glorification that was bestowed upon the scourged and crucified Jesus: for centuries they have been venerated by millions as the most precious treasures and handed down with the most sacred care. Some further details about these remarkable relics will be heard with interest, especially in these days.

120980 It took three centuries before the most important relic, the cross-wood, came into the possession of the faithful. All that had served to execute the three death sentences had been buried near Mount Calvary; and in order to make it impossible for Christians even to visit these holy places, a temple had been built over them in honour of Venus. The desire for possession of the sacred ground and the relics hidden therein remained, however, alive; and as soon as the period of persecution was ended, the Emperor Constantine, who had learned the power of the cross in his victory over Maxentius, had the temple demolished and the relics exhumed.

120985 Pious tradition relates to us the circumstances of this finding of the cross. Helena, the mother of Constantine, is said to have received from God himself, in a dream vision, the command to seek the relics. The task was certainly difficult, but the pious empress spared nothing, spared neither effort nor expense, and even came to Jerusalem to conduct the investigations in person. She saw her efforts rewarded. The cave of the Holy Sepulchre was found, and a little to the east of it the three crosses, nails and inscription. The latter lay loose, so that there was no sure sign to distinguish the cross of the murderers from that of the Savior. However, they firmly trusted that God would help them in this also; and on the advice of Macarius, the bishop of Jerusalem, the crosses were brought to a terminally ill woman in the city. In the presence of the empress and a large crowd of people, she was allowed to touch the crosses. She reached out her hands to two in vain, but when she touched the third, a miracle of God suddenly restored her to health.

120990 Where would the precious relic be preserved from now on, was now the question. Jerusalem could certainly lay claim to that honor, but the emperor, and the whole West, were also eager for that treasure, and so we see that it was immediately divided. A part of it was sent to Constantine; the largest, however, remained provisionally in Jerusalem, where it was preserved, set in silver, in the Basilica, which was erected by Macarius above the Holy Sepulchre.

120995

121000

121005

121010 When the cross was begun to be divided still further, cannot be determined precisely.

Probably, however, one could not have resisted for long the desire of so many to possess a portion, however small, of the holy wood. The ecclesiastical writers of the end of the 4th century at least already tell us how in their time those particles, set in gold casings or capsules, were worn by men and women as precious things around neck and breast; how fortunate the Christian communities considered themselves when they had such a relief in their midst, and how they then often bore witness to their pious reverence by building a separate chapel or church. Up to our time, this division into ever smaller particles has continued, so that now most churches possess such a relic. Quite large pieces are in the possession of the church of the Holy Cross of Jerusalem in Rome, the Notre Dame of Paris and the Notre-Dame of Bruges. In the great number of these relics unbelievers have found a reason to suspect their authenticity. Already Erasmus mocked the inexhaustibility of the relics, which made one suppose a cross as large as a warship. Completely wrongly, however. Most particles are no larger than 1 to 2 cubic millimeters, and now an accurate calculation has shown that the many thousands of pieces together would only form a piece of wood of 9 or 10 million cubic mm. The cross now had a length of about 3 or 4 m (it must have stood at least 3/4 m in the ground); the crossbeam will have been about 2 m, and if one now calculates the width at 12 and the thickness at 8 cm, then the cross would certainly have had a content of 50 to 60 million cubic m. Even if three quarters had escaped attention in calculating the particles, the large number would not have presented the slightest difficulty.

Near the cross were also found the nails that had pierced Jesus' hands and feet. These nails were said to have been sent to the emperor, who had one put in the bridle of his horse, and one in his helmet, to fight in war always under God's protection. A third nail is said to have been thrown into the Adriatic Sea by Helena (or perhaps only immersed in it), to calm a violent storm. So tells us a reliable tradition, but what happened to it after that, we cannot find out. Probably, however, they did not stay long in Constantinople, but were soon taken to the West. There the so-called nail of the Iron Crown of Italy has acquired its greatest fame. This crown, with which the emperors were crowned in the Middle Ages, which Napoleon also put on his head in 1805, when he had himself crowned as King of Italy, is still kept at Monza near Milan. The actual golden crown, which consists of six pieces, is held together by a strip of iron, and according to the age-old, very credible tradition, the iron of one of the nails is said to have been forged for that purpose. Another nail is preserved in the Basilica of the Holy Cross of Jerusalem in Rome. This one is 12 cm long and 8.5 mm thick at the wide end. (With the point it would have a length of about 16 cm) It is square and the head, which is riveted around it, has a somewhat hat-shaped shape. The nail preserved in Trier has much in common with that of Rome. Many other cities boast of having nails, and because of the large number one would almost conclude that there is a certain pious deception. Yet this is absolutely not necessary. How can this be explained? We know that small parts of nails, even a little filing, were already considered a treasure. Such particles or filings were then sometimes placed in imitation nails, as in a reliquary: and such an imitation nail, which then contained at least a part of a real nail, was also considered a treasure and venerated. The same church of the Holy Cross in Rome possesses another remarkable relic, namely an important part of the inscription on the cross. It is a small plank full of worm-marks, of oak or poplar wood. It is 235 mm long and 130 wide. The parts of the Latin and Greek inscription are clearly visible, while from above, where the plank is broken off, some hooks and lines can be seen, which resemble the lower parts of Hebrew letters. The middle one the Greek word Nazareneus, the lower one the Latin Nazareneus Re. (The x of rex = king has been omitted.) The letters are little hollowed out in the plank; they are red on a white background, and as they have a size of 28 to 30 mm, they must have been clearly legible to the witnesses of the crucifixion. It is peculiar that the letters, according to the Eastern writing method, are placed from right to left, so that, as in mirror writing, they appear reversed. Calculated from this fragment, the entire inscription must have had the size of 65 by 20 cm.

March 11, 1913 Sacred memories.

— Now that in this early Easter month it is already approaching the feast days, a list seems appropriate, where the faithful Catholics keep their sacred memories of Jesus and his death on the cross. Christ's skirt was offered as a gift by Charlemagne to the monastery of Argenteuil, near Paris.

The "seamless garment" was donated by Saint Helena to the church in Trier. and other gases, and thus, depending on the intensity of the contact with the shroud,

could, as it were, evoke a negative image of the body.

Dr. Vignon was able to prove this hypothesis plausible by means of an experiment. Not with a corpse (this experiment is still awaiting execution) but by placing the hand moistened with ammonia on a cloth treated with aloe. The result was the same as with the Shroud of Turin.

Thirty years ago, Dr. Vignon pointed out that a chemical impression that at first sight seems insignificant can produce a good photographic image, especially with objects with a strong relief. Vignon has now again called upon the art of photography to establish all kinds of peculiarities on the Shroud: clots of blood, streams of blood-water, traces of the flogging, the crown of thorns and human secretions. No modern method of research has been neglected by Dr. Vignon. We hope to be able to report further details about the result of Dr. Vignon's research soon.

August 17, 1933 Theft of relics

PARIS, August 17 (Reuter). The 1400 year old embalmed foot of Saint Victor, dating from the 5th century AD, was stolen from the church of Saint Nicholas du Chardonnet, as well as a copy of the crown of thorns, which contained 8 small relics, each of which was said to contain a piece of the real crown of thorns of Christ. The crown of thorns was made of gilded copper, in which the foot of Saint Victor. The thieves probably mistook this copper for gold.

January 31, 1936 THE HOLY SHROUD OF CHRIST

Remarkable results of a scientific investigation.

The Passion of the Savior.

In the cathedral of Turin the Holy Shroud is kept, in which the most holy body of Christ was wrapped after the descent from the cross. For years, scientists have investigated the authenticity of this precious relic. The result of these investigations has now been summarized in a book by the Czech physician Dr. R. V. Hynek, which has also been published in German these days, and which bears the title: "The Martyrdom of Christ in the Light of Modern Science. The Discovery of the True Image." After long and scientific investigations, using all the resources of modern technology, such as chemistry, photography, physiology, ultra-violet and infrared rays, it has been concluded that the relic preserved in Turin is really the Holy Shroud, in which the body of Christ was wrapped for about 36 to 42 hours. The main proof lies in the fact that the images in the shroud are absolutely negative, that is to say, as from a photographic plate, on whose sensitive layer the projected image is captured. It could be clearly established that these prints could not have been applied later. Dr. Hynek has investigated this problem extensively and has specifically investigated how it was possible that an impression of the corpse could have been created. He comes to the following conclusions: According to the Bible story, the shroud was sprinkled with aloe and myrrh, which were changed by chemical action into an insoluble dye of aloetin, which soaked the linen. Sweat, blood, uric acid, everything containing urine salts, which are formed during the decomposition of the corpse, are changed by chemical action into ammonium carbonate and ammonia, which then chemically binds the substance of the aloe. The dye was therefore preserved on the linen, not on the body, which formed a kind of sensitive chemical layer on the shroud.

From an in-depth examination of the imprints in the shroud, the author attempts to reconstruct a complete picture of the suffering of Christ. The blood traces of the crown of thorns indicate an arterial hemorrhage, without these tissues being torn too much. On the body were clearly visible the traces of numerous wounds of about 3 cm in length, which were visible two by two, 80 in total, which corresponds to the 40 lashes that were customary among the Romans. From the impressions of the wounds that occurred at the crossing, the conclusion can be drawn that the nails were not driven through the middle of the hand, but through the carpal; while the arms were already stretched out, the feet were nailed completely in the middle of the instep. From the investigation it has further been established, the cause of death by which Christ died: Death occurred by suffocation, as a result of tetanic cramps, under very great pain and with full consciousness; it has been anatomically proven that with prolonged extension of the arms, especially when they are nailed to a cross, an obstruction of breathing is caused by the unusual effort of the diaphragm, which finally leads to suffocation, suffocation, cyanosis, which causes a blue color. It is very remarkable how these medical investigations completely agree with the Bible story.

January 28, 1937 The true image of Christ discovered

Under this title, the firm J. Romen & Zonen in Roermond has published the Dutch translation of a book in which the Czech physician W. Hynek, by way of positive experimental science, tries to provide proof that the Holy Shroud of Turin, an antique linen cloth 4.36 m long and 1.10 m wide, shows us the true, original image of the dead body of Christ. This relic would really be the burial linen in which the blessed body of the Redeemer was wrapped after the descent from the cross, to be laid in the grave.

The author of the corner relies in his argument on the photographs taken by Guiseppe Enrie of the shroud and its parts, when it was exhibited in the year 1931.

Dr. Hynek studied the impressions that are visible on the sharp photographs of the Shroud of Turin, mainly from the standpoint of anatomical and medical science, in which the photographic recordings formed an inviolable basis. In fact, he followed in the footsteps of Paul Vignon, who in 1902 already defended the authenticity of the Holy Shroud of Turin in his work "Le saint Linceuil de Turin". Vignon also built his argumentation with evidence of a positive scientific nature. The argumentation of Hynek's new book is not much more than a repetition and supplement of the argument that was already provided 35 years ago by Vignon and his associates. Hynek, like his predecessor, takes the position that the imprints of the body of Christ on the shroud of Turin, both of the front and of the back of Christ's figure, were not caused by blood and sweat, which adhered to the linen as dyes, but that the aloe, one of the components of the perfume that was sprinkled in the shroud at the funeral, was converted by the alkaline efflux of the body into an insoluble dye: aloetin. By chemical action an imprint of the Body of Christ was thus created, a double imprint of the front and back. The body was first placed on the shroud and then the remaining part of the very long cloth was folded over the head. The remarkable thing is that the impressions in the grave linen are pure negatives; this must be attributed to the chemical process that took place in the shroud covered with perfume. Exceptions are, however, the bloodstains of the nail wounds in the hands and feet and the large bloodstain of the heart wound, caused by the spear. These stains are simply positive impressions. In Hynek's work, which was written from the first to the last page with ardor and enthusiasm and with a warm love for the Holy Wounds of the Redeemer, it is not only proven beyond doubt that the Shroud of Turin is genuine, that is, that the dead body of Christ was wrapped in this linen cloth, but from the photographs made by Enrie of the Shroud, Hynek also reads off what the facial features of the Lord were, how the Redeemer was scourged, in what way he was crowned with thorns, how he was nailed to the cross and how the heart wound was inflicted by the spear. Hynek even claims that now the problem of the exact and immediate cause of death of the crucified Jesus has been solved and that the mystery of the water that flowed with the blood from the heart wound of the Redeemer has lost all its mystery. The phenomena that occur in the stigmatized person of Konnersreuth are incidentally compared with the impressions of the Shroud of Turin for confirmation. And with all this exact scientific argument a sensitive lyricism is mixed, which involuntarily carries the reader along to the conviction that speaks from every page of the book: that the authenticity of the Holy Shroud of Turin has now finally been sufficiently, indeed evidently, proven. In the chapter "Possible Objections" the author even goes so far as to attribute a lack of humility and meekness to those who do not give in to his argumentation.

In the face of this work by Hynek, an admonition to caution is perhaps appropriate, now that it has been published in Dutch and is going to stir up emotion among deeply religious readers in our country, as it has already done beyond our language borders. The question of the authenticity or otherwise of the famous relic, which is preserved in Turin and is the property of the royal house of Italy, is treated very one-sidedly in this book. Evidence obtained by way of positive experimental science should at least be supplemented with historical data and with statements from Christian antiquity. The data from the gospels should also be given their due. Now Hynek has not entirely overlooked these sides of the question of the authenticity of the shroud of Turin, but he has not shed sufficient light on them at all.

What can be read in the Gospel of John about the burial linen of the body of Lazarus (11, 44) and of the body of Jesus (19, 40; 20, 6-7) will always remain a very serious argument against the authenticity of the shroud of Turin. Christian antiquity then teaches us that in the first centuries no original image of the Redeemer was known at all. Hynek finds this centuries-long silence about the Shroud of the Lord astonishing. Perhaps it is even dangerous for his position. The history of the relic itself is not all that rosy either: the author could tell us much more about it than he actually does. Let his argumentation, based on accurate photographic images and on data from modern positive science, be as strong, at least apparently - we admit - it

still remains daring to defend the authenticity of this relic in such a triumphant and almost challenging way. The matter is too delicate for that. And after the publication of this article we are still as far as we were in 1902, when with the same argumentation and with the same fervor the authenticity of the Holy Shroud of Turin was defended by Paul Vignon, while Ulysse Chevalier then appeared in the arena with his work "Etude critique sur l'origine du S. Suaire", to combat authenticity. Both writers then found a broad following for their opinion. On the side of the opponents of authenticity, among others, the Bollandists positioned themselves. The state of the problem has not actually changed at present. That is why we consider caution to be appropriate here. One should not be carried away by the noble intentions and enthusiasm of Dr. Hynek. The German edition of Hynek's book was edited by P. Gächter S.J. as follows in the "Zeitschrift für katholische Theologie": "This study has been circulated with quite a lot of fuss, entirely in accordance with the high enthusiasm that dominates it. It is a pity, however, that this storm of enthusiasm here and there leads the author away from the paths of extractive scientific proof... The explanations that are given of the photographic data are not convincing. The sober criticism still stands, as before, on the position that Ulysse Chevalier indicated: we are still dealing here, according to the statement of a document from the year 1389, with an artificially painted cloth. And we still attach significance to the decision of the Congregation of Indulgences of 18 Nov. 1670, according to which, in the case of public veneration of the Holy Shroud, the permitted indulgence could not be earned by those who unconditionally venerated the relic as the true grave cloth of Christ". This assessment by P. Gächter S.J. is very sharp and severely negative. We have mentioned it here to show that Hynek's book entitled "The true image of Christ discovered" should be read soberly and calmly. If one takes up the book in this mood, it will still remain interesting and captivating. It certainly gives us a clearer insight into the problem of Jesus' suffering and into the passion story of the Gospels.

W. VAN DE RIET.

January 11, 1939 THE CROWN OF THORNS RELIQUIY OF PARIS.
For the first time in 700 years, the Reliquie will leave the city. This year it is seven hundred years ago that the magnificent reliquary of the crown of thorns was received in Paris. In 1239 this reliquary, which had been given as a gift by the King of Jerusalem John of Brienne to the French King, St. Louis, was brought to the Sainte Chapelle. Later this relic was transferred to Notre Dame in Paris, where it now rests in a single crystal shrine. In solemn procession the precious relic will be brought back to Sens and Villeneuve by Cardinal Verdier himself with great pomp, where Louis first received the relic. These ceremonies will take place in Jui next and especially in Sens great festivities will be organized. After the ceremonies the relic will be brought back to Paris. This is the first time in seven centuries that the relic has left the French capital.

April 6, 1939 AMSTERDAM.
Precious relic of Crown of Thorns and Holy Cross.
Transferred from Constantinople to Amsterdam.
Centuries-old possession of the Testa family. A well-known Catholic Amsterdammer, Mr. K. V. Testa, recently came into possession of a very precious relic, consisting of a thorn from the Crown of Thorns and a fragment of the Holy Cross, set in a precious gilded silver reliquary, which has been part of his family's possession for many centuries, but which was kept in Constantinople until recently. Mr. Testa wanted to make the relic, which was brought to Amsterdam by the "Hertog Hendrik" after a training voyage that this ship undertook in the Mediterranean in 1935, available to one of the Amsterdam churches, which will receive it on loan. To this end, Mr. Testa has recently placed the relic in the hands of His Eminence Mgr. J. P. Huibers, Bishop of Haarlem, who will establish the authenticity of the precious relic, after which the relic will be given on loan to one of Amsterdam's churches. It has not yet been determined which church will be considered for this and Mr. Testa, whom we asked about this, did not want to comment on this either. For centuries, the double relic of the Holy Thorn and the Holy Cross has been part of the family property of the Testa family, which originates from Genoa and in the past occupied an important place at the court of the Turkish Porte. The relic came into the possession of the Testa family as early as 1660. This was during a great fire that ravaged Constantinople in that year and in which very many

121275 buildings and also all the churches except one were destroyed by the fire. During
this fire, one of the members of the Testa family, Frans Testa, saved the relic at
the risk of his life from the St. Franciscus Church in Constantinople, where it was
kept. In addition to the reliquary, Frans Testa also managed to save a ciborium with
121280 Holy Hosts from the flames. The ciborium was returned to the clergy after the fire,
but the reliquary remained in the possession of the rescuer, who did not want to
return it. This led to a conflict with the clergy of the church to which the relic
originally belonged and with the head of the Brotherhood of St. Anne, which was
connected to the St. Francis Church. Finally, the judgment of Rome was invoked in
this conflict. The case was dealt with by the Congregation of the Propaganda Fide,
121285 which after an extensive investigation concluded that the relic would remain the
property of Frans Testa, who had saved the reliquary from the flames at the risk of
his life. This officially recognized the ownership of the precious relics of the
Testa family. The first owner of the relic died in 1709. After his death, it passed
to his son Caspar, who in turn left it to his son, who was also called Frans. In 1784
121290 the authenticity of the relics, which had already been officially confirmed earlier,
was again established by the Papal legate in Constantinople, Mgr. François Antoine
Frachia. After the death of Francis Testa the relics were inherited by his son
Charles, who in 1803 had the authenticity of the relic once again established by an
official ecclesiastical authority, namely the Archbishop of Constantinople, Mgr. Jean
121295 Baptist de Fonton. In later years the reliquary came into the possession of one of
his descendants, who settled in Montpellier, in the South of France. The reliquary
remained there after his death, in 1876, where it was kept by the widow of this
Antoin, who only later gave it to the eldest nephew of her deceased husband, Charles
Testa, in Constantinople, the father of the present owner of the relic. Karel Testa
121300 kept the relic until his death in 1911, after which it was loaned to the Minorite
monastery in Constantinople, which had been its rightful owner before 1660. The relic
was kept there until 1935. In the last year, however, Mr. K. Testa in Amsterdam, who
had inherited the relic from his father, decided to have the precious relic brought
to Amsterdam. To this end, he contacted the Dutch naval chaplain, Father I. A. P.
121305 Albada Jelgersma, who would be taking part in a training voyage of Hr. Ms. "Hertog
Hendrik" in the Mediterranean that year. He asked him to collect the relic in
Constantinople and bring it to Amsterdam on board the "Hertog Hendrik". In advance,
contact had been made with the Minorite monastery in Constantinople, where at that
time a Dutch priest, Father V. Bruine O.F.M., was staying, who prepared the transfer
121310 of the relic. Although the Minorite monastery would have liked to keep the relic, it
nevertheless fully recognized the rights that the Amsterdam owner claimed to it. The
transfer of the relic took place with some ceremony at the beginning of February
1935. A Holy Mass was celebrated in the Minorite church on Sunday morning, which was
attended by the Catholic members of the crew of the "Hertog Hendrik". After this
121315 ceremony, the reliquary was transferred to Father Jelgersma. In the meantime, the
authenticity of the relics had once again been officially recognized by the delegate
of His Holiness the Pope in Constantinople, Mgr. Rotta. The documents relating to
this were provided with the signature and seal of the papal delegate, enclosed in the
lid of the reliquary, which was then also sealed. The reliquary itself was also
121320 packed with all precautions and provided with the seal of the apostolic vicariate at
Constantinople.

It was stipulated that this seal could only be broken in the presence of the bishop
of the diocese where the owner of the relic resides or by the dean of his place of
residence, when he was officially authorized to do so by the bishop. Thus the return
121325 journey to the homeland was begun. During this journey, however, the naval chaplain
was struck by illness, so that he was forced to seek medical treatment in Catania (in
Sicily). He was therefore unable to continue the journey to England. The commander of
the "Hertog Hendrik", captain at sea C. E. L. Helfrich, was however prepared to take
care of the relic and to deliver it personally to the owner. In this way the
121330 reliquary came into the possession of Mr. K. V. Testa in Amsterdam, who kept it
sealed in his home for several years. Recently, however, Mr. Testa decided to lend
the relics to one of the Amsterdam churches, where they could be openly venerated. In
connection with this, Mr. Testa turned to His Eminence Mgr. J. P. Huibers, who
recently received the sealed package containing the reliquary.

121335 Soon the lid of the shrine, which is made of beautifully worked gilded silver, will
be opened by a goldsmith, after which the bishop will check the official documents
enclosed in this lid, which relate to the authenticity of the relics. At the same
time, the glass enclosing the relics, which appeared to be cracked when the package
was opened, will be replaced by a new one under supervision. Only then will a
121340 decision be made about which church in Amsterdam the relics will be given on loan to.

Mr. Testa has contacted one of the pastors in the capital. If we are well informed, the precious relic will soon be given on loan to one of the parish churches on the edge of the city. The decision about this has yet to be made. It had been hoped that the relic would be given the destination that the owner had intended on Good Friday. The repairs that still need to be made to the pedestal will, however, take so much time – everything is being done under the personal supervision of Mgr. Huibers – that it will probably be after Easter.

August 10, 2017 Double relic of the Holy Cross and the Crown of Thorns of Christ In the right side wall of the Agnes Church, right next to the baptismal chapel, there is a niche in which a reliquary with a double relic is placed. The reliquary contains a Holy Thorn from the Crown of Thorns of Christ and a splinter of the Holy Cross. In 1660, this shrine with relics was saved by Frans Testa from the burning St. Francis Church in Constantinople. Since then, the relic has been in the possession of the Testa family. In the 19th century, the shrine ended up in Montpellier (Southern France), but in 1911 it was transferred back to Istanbul. In 1935 the reliquary was transferred to Amsterdam, the then place of residence of the Testa family. Since then this shrine with double relic has been in our church. Today, on the feast of the Exaltation of the Cross, we carried it around in procession and everyone could personally venerate the relic.

June 17, 1939 THE CROWN OF THORNS OF PARIS.

Great ceremonies in France on July 2nd

With great solemnity the day will be commemorated in France on July 2nd, on which seven hundred years ago the precious relic of the Holy Crown of Thorns was received by the French King, St. Louis, in Villeneuve.

On the occasion of this commemoration we will give some details about the remarkable history of this Holy Relic. In the centre of Paris is the magnificent building of the "Sainte Chapelle" with its famous stained glass windows, and the guide who will show you around will tell you that this chapel was built to house the precious relic of the Holy Crown of Thorns. For quite some time, however, the relic was no longer in this chapel, but in the treasury of the nearby "Notre Dame" of Paris.

The Crown of Thorns of Paris, which lacks several thorns that were donated to other churches in the Middle Ages, has a diameter of 21 centimetres. The crown was wider than the head of Christ, because people wanted to press the thorns into the flesh. The thorns come from a thorn tree, called the "Zizyphus spina Christi" that comes from Syria and is common in the Jordan Valley. The tree can grow to a height of 5 to 6 metres and has strong and sharp thorns that can cause terrible wounds. The question naturally arises: how did the crowning with thorns take place? Probably not according to a predetermined plan. Probably the soldiers, as usual, made a fire from the branches of the thorn tree, and then wove a crown from a few remaining branches. This crown was probably taken by a soldier and handed over to one of Jesus' disciples. A few centuries of silence about the crown with thorns now follow, and it is not until the year 409 that the crown is mentioned by Paulinus of Nola. It was originally kept in Jerusalem, and probably transferred to the basilica of Mount Zion in Byzantium in the year 1063. Emperor Alexis Comnenius I speaks about it in a letter to Robert, Duke of Flanders, in the year 1100.

From the fourteenth century a testimony has come down to us of the Belgian Jean de Mandeville, who declared that he had seen with his own eyes the Crown of Thorns of Paris (consisting of the branches, of which most of the thorns had been broken off) and the thorns of this crown, which were in Constantinople, and according to him were intended to be distributed to "grand seigneurs" (great lords). In the year 1238 Baldwin II, Emperor of Constantinople, had come to France to ask for support for the strengthening of his power. In doing so he gave the Thorns to St. Louis, King of France.

However, he did not have this crown of thorns with him, and when some Dominicans set out to fetch the Crown of Thorns in Constantinople, they discovered that the crown had been pawned to the Venetians by high officials of the Emperor, who was in dire financial straits.

They returned to France and obtained permission from the king to repay the pledge to the Venetians, after which they could take the Crown of Thorns, which was already in the treasuries of San Marco in Venice.

And when the French king heard that the precious relic was on its way to his country, the king and his court went to meet the bearers. He met them in Villeneuve in the diocese of Troyes and received the relic there. On 11 August 1239, the king arrived with the relic in Sens and eight days later reached Paris. In order to preserve the

Naspeuringen van Paul Theelen: Constantinus Imperator

precious relic, St. Louis had the "Sainte Chapelle" built, where the Crown of Thorns was preserved until the French Revolution. In 1791, the relic was transferred to Saint Denis, in 1799 it was confiscated and finally transferred to the National Library.

On 26 October 1804, the relic was handed over again to the Archbishop of Paris, who had it brought to Notre Dame in August 1806, where it is preserved to this day. The arrival of the Crown of Thorns in Paris, seven centuries ago, will be commemorated on 2 July in Villeneuve. The commemoration ceremonies will be attended by Cardinal Verdier, Archbishop of Paris, Cardinal Oerlier, Archbishop of Lyon and Cardinal Villeneuve, Archbishop of Quebec. Also present will be the Papal Nuncio, Mgr. Valerio de Valeri, and more than twenty Archbishops and Bishops will be present. The official commemoration is placed under the high patronage of the French President, Albert Lebrun.

March 22, 1940 The Passion Relics

The closer we come to the great days before Easter, the more we look up to the objects that remind us of the suffering Christ.

The most precious Relics, which also enjoys the greatest veneration in the Church, is the Holy Cross. It was found in Jerusalem between 320 and 345. According to the Holy Bishop Cyril of Jerusalem, it was already divided into numerous particles in 347.

Whether all the blessed cross particles are genuine, is however doubtful. In no case is the large number of Particles a proof against their authenticity. It has been calculated that the cubic content of all the cross particles together amounts to approximately 9 to 10 million cubic millimeters, while a cross of 3 to 4 meters high has a volume of 57 million cubic mm.

According to tradition, the inscription on the cross and the nails were also found at the same time as the Holy Cross. The inscription is now preserved and venerated in the basilica of Santa Croce in Rome. Its great age is proven by the fact that it was originally placed above the triumphal arch of the basilica, which was decorated with mosaics by Emperor Valentinian (423-445). The inscription itself was only added at a later time.

No fewer than 30 nails are venerated as relics.

Queen Theolinda is said to have had one placed in the famous "iron crown" that is preserved in Monza.

The crown of thorns is said to have been brought to Constantinople at the end of the 6th century. King Louis the Saint of France came into possession of the crown of thorns and brought it to Paris. Some thorns were broken off and distributed as relics. Whether these thorns, which are venerated in various places, are genuine, is however a great question, since it has been concluded that they are made of different types of wood and it is not known what type was used by the dead soldiers.

A much discussed relic is the grave cloth or linen cloth in which the Holy Body was wrapped when it was laid in the grave. There are more than 40 relics of this name, of which of course only one can be genuine. The grave cloth, which is preserved in Turin and belongs to the crown treasures of the Italian Royal House, made and still makes the greatest claim to authenticity.

A relic that is more famous than the grave cloth is the cloth of St. Veronica, which is certainly not genuine, but is only an old highly venerated image of the Holy Face of Christ. The column of scourging is already mentioned in the reports of the oldest pilgrims to Jerusalem. Part of it is preserved in the Chapel that belongs to the Church of the Sepulchre, another part in Rome.

In Rome there is also the so-called "Holy Stairs", which has 28 steps and is said to have been brought to Jerusalem in the 9th century or according to others already by St. Helena and on which the Savior is said to have descended to the place of punishment after the scourging. However, there is no historical proof of this, although the fact that the stairs are made of Tyrian marble leaves open the possibility that they were once in a palace in Jerusalem. The Holy Stairs are climbed on one's knees, as is well known.

The question of the authenticity or falsity of all these relics has nothing to do with the principles of faith. Yet there are memorable memories connected to these objects, and they are sanctified by the veneration that has been shown there by the faithful for centuries.

August 21, 2024 DEAR PAUL

THE DOUBLE RELIC IS STILL IN THE AGNES CHURCH

THANKS FOR THIS INTERESTING INFORMATION

IT IS A DOUBLE RELIC: A PART OF THE HOLY CROSS AND A NEEDLE OF THE CROWN OF THORNS

The Testa Relics

Dear family members and friends,

In 1660, our ancestor François Draco Testa risked his own life to save a reliquary containing a thorn from the Crown of Thorns of Jesus Christ, as well as a wooden fragment of the Holy Cross from his parish church in Constantinople, which was on fire.

The Pope decided - in gratitude for this heroic act - that these relics would come into the possession of the Testa family. Over the centuries, Testa family members have ensured that these church treasures could be venerated by believers and shown to interested parties.

In 1935, the then owner Karl Victor Testa - with the help of the Minister of Defence L.N. Deckers and the naval vessel Hr. Ms. Duke Hendrik - transfer these relics from Constantinople to Amsterdam. And then he loaned them to his parish church, St. Agnes Church.

In 1968, his widow Elisabeth Testa-Baroness van Wijnbergen transferred ownership of the reliquary to Jonkheer André Testa. Due to his advanced age, he will now transfer the relics in turn to his niece Noepy Beckers-Testa.

This ceremony will take place on Sunday 30 March 2025 in the Jubilee Year of the Catholic Church and also the year of the celebration of the 750th anniversary of the city of Amsterdam.

On this occasion, we would like to invite you to a solemn and sung Holy Mass in the Basilica of St. Nicholas at Prins Hendrikkade 73 in Amsterdam.

Immediately after that, Noepy will in turn loan these church treasures to the Diocese of Haarlem-Amsterdam and store them in the St. Nicholas Church, one of the oldest churches in Amsterdam.

The reliquary will then be permanently on display in the Basilica for churchgoers. Approximately 200,000 (international) visitors visit the church each year, where relics of St. Nicholas can also be seen.

The Holy Mass begins at 10 o'clock sharp with a procession in which the reliquary containing the relics is carried into the church under the guidance of the Bishop of Haarlem-Amsterdam, Mgr. Jan Hendriks, Pastor of St. Nicholas Basilica Eric Fennis, Pastor of St. Agnes Church Martin Kromann Knudsen, acolytes, altar boys, members of the Holy Military Constantinian Order of St. George, the Order of the Holy Sepulchre of Jerusalem and the Sovereign Military Hospitaller Order of Malta.

For a look inside the church: www.nicolaas-parochie.nl/digitale-tour/
The choir Capella Nicolai and the organist of the Basilica will enhance the Eucharistic celebration: <https://muziekindenicolaas.nl/koren/>

Afterwards we cordially invite you to a short reception in the former "waiting room 1st class" of the Central Station. The distance from the Basilica is 82 meters. Home - Restaurant 1st class and for Location & Contact - Restaurant 1st class
(no public transport card required for admission)

We would like to offer you the beautiful memorial book about these impressive church treasures, illustrated with images of many historical documents, prints and maps: "The Testa Relics - From Constantinople to Amsterdam". Compiled by our esteemed family historian Mehmet Tütüncü. See the cover below.
This book will then be available in bookstores.

It is recommended - if coming from outside Amsterdam - to travel to Central Station by train or metro.

Also on behalf of Bishop of Haarlem-Amsterdam, Mgr. Jan Hendriks and Pastor and Dean of Amsterdam, Eric Fennis, we as Testa descendants would greatly appreciate it if you would honor us with your visit.

1740 Naspeuringen van Paul Theelen: Constantinus Imperator

Please let us know if you plan to be present and if "accompanied" by whom. RSVP:
ptesta0808@gmail.com

Due to the great interest (approx. 300 guests) we request that you bring this invitation as an admission ticket and show it to the inspectors at the entrance. The celebration will be broadcast live on NPO 2 and therefore Pastor Fennis requests that you take your place no later than 09:45 and preferably earlier.

With kind regards from us,
André Testa, Patrick Testa, Noepy Beckers-Testa

The reliquarium of Constantine

The following information and questions are connected with the reliquarium (or reliquary) of Constantine the Great and a second item, a vase, with the remains of his mother Helena.

In a French article of 1873 (by H. d'Arbois de Jubainville) a report is described about a Greek orthodox bishop who visits the monastery of Clairvaux (Champagne) in 1744. See <https://www.delpher.nl/nl/boeken1/gview?identificer=6WxfAAAAcAAJ>. The name of the bishop is given as Nicodeme (Nicolas at his birth):

Le mercredi cinquième jour du mois d'août 1744, un évêque grec d'Arcadie (marquis dans l'île de Crète ou de Candie, moine de saint Basile, qui a reçu le nom de Nicodème en religion, et celui de Nicolas au baptême, banny par les Turcs hérétiques pour la foy et la cause de Notre-Seigneur Jésus-Christ) considéra nos différentes reliques et reliquaires.

Then follows a description of the reliquary, in sufficient detail to recognise it if it should exist nowadays. A detail is that (some?) text (names) is in the Illyric alphabet [Glascolitic]. The name of the monastery on the West of Crete is (Moni) Arkadi or Arkadiu and is in these days also mentioned as devoted to Constantine:

« ΑΡΚΑΔΙ(ΟΝ) ΚΕΚΛΗΜΑΙ / ΝΑΟΝ ΗΛ ΕΧΩ / ΚΟΝΣΤΑΝΤΙΝΟΥ ΑΝΑΚΤΟΣ / ΙΣΑΠΟΣΤΟΥΛΟΥ »
« L'église porte le nom d'Arkadi et elle est consacrée à Saint Constantin »

In literature, some facts of before 1866 – when there is a bitter fight with the Turks – on the monastery are given. There should be 1000 very old manuscripts (and other old items?) (writes Franz Wilhelm Sieber). Probably these items are lost or transferred to safe places in Western Europe, for example to Venice. When exactly is unknown, but before August 1744.

We also do not know when the remains of Constantine and Helena were transferred from Constantinople to Candia/Crete. It is possible that this happened during the Fourth Crusade in circa 1204, but every other period is possible too. It seems to me that the remains has been in the monastery for centuries. Date: avant 1206. Apporté à cette date, par dom Hugues de Saint-Ghislain, ancien trésorier du palais de Constantinople; c'était un don de l'empereur Henri Ier de Flandres. [See also Ghislain]

In any case, when Constantine dies in 337 his remains were transferred to Constantinople, to the predecessor of the Church of the Holy Apostles. The remains of his mother Helena were undoubtedly reburied with those of her son. In the Vatican Museum we can see two porphyry coffins, one belonged to a daughter of Constantine, and one to Helena. But the war-like images on this coffin belonged to a warrior, not to a mother. Combined with this knowledge we can suppose that Constantine's body was in the porphyry coffin, probably with the body of his beloved mother. When centuries later the situation in the town became bad, the remains of Constantine were put in a reliquary box and those of Helena in a vase. So they could be shipped to a safer place, and Crete was a good destination, known to the Christians of the Eastern Roman Empire.

Why the banned bishop just visits the monastery of Clairvaux, can be explained because the surrounding churches of the monastery had been filled with many religious items from Constantinople. These were probably given to the churches in Champagne by Jean de Brienne, king of Jerusalem and emperor of Constantinople.

I want to find further indications that the human remains of Constantine the Great and his mother were indeed present in Moni Arkadi, and then search backwards from 1744.

The first question is: can we find that bishop (or abbot) mentioned somewhere in the Archivio di Stato di Venezia?

Second: can we trace back the "contents" of Moni Arkadi? Is more known than Sieber mentions?

Third: can be determined when and which art objects were transferred from Constantinople to Crete, and in particular to Moni Arkadi?

Fourth: we know that the (new) monastery building was rebuilt in 1587 by Klimis Hortatsis. Are further details known about the interior of the church and the other buildings? About the church we find: *C'est une basilique à deux nefs, dont la nef septentrionale est consacrée à la Transfiguration du Christ et la nef méridionale à Saint Constantin et Sainte Hélène*. This suggests that the reliquaries were present in 1587.

Fifth: Dès le XVIe siècle, le monastère fut un lieu de science et d'art, possédant une école et une bibliothèque riche de nombreux livres anciens. Maybe the reliquaries are mentioned somewhere, together with the old books.

Sixth, shifting to Constantinople: can we find indications in the Turkish archives of

movements of religious items from that capital to Crete or elsewhere in Western Europe? Fact is that many objects - now in museums - have their origin in Constantinopel.

Enclosed as Appendices: texts relating to the questions

Appendix 1a

March 10, 1873 Review of Learned Societies of France and Abroad p. 372 - ARCHAEOLOGY SECTION. MEETING OF MARCH 10, 1873.

Mr. d'Arbois de Jubainville, a non-resident member, submitted copies of four documents relating to the treasury of Clairvaux Abbey, namely the inventory of the sacristy of Clairvaux in 1405, another from 1504, the 1743 appraisal of the jewels in the abbey's treasury, and the 1744 description of two Byzantine reliquaries from the same treasury, written, at the dictation of a Greek bishop, by Claude Guyton, a monk of Clairvaux. This communication was forwarded to Mr. de Montaiglon.

p. -381- Mr. de Montaiglon verbally proposed the printing, in the Revue des Sociétés savantes, of four documents relating to the Clairvaux treasure, copies of which had been sent by Mr. d'Arbois de Jubainville. These interesting documents should be preceded by the explanatory note provided by our colleague.

p. -490- CLAIRVAUX TREASURE. Communication from Mr. d'Arbois de Jubainville. A recent and unexpected event has brought to light in the Aube archives numerous and important documents whose existence was previously unknown. One of the most intriguing parts of these documents concerns the treasury of Clairvaux Abbey. It had probably already disappeared by the time Mr. Guignard, archivist of the Aube department, was writing his memoir on the relics of Saint Bernard and Saint Malachy. We have gathered here four documents:

1. The inventory of the sacristy of Clairvaux in 1405 (document A). Our copy was made from the original, which came from the Harmand collection, now in the archives of the Aube department.

2. The inventory of the sacristy of Clairvaux in 1504 (document B). Our copy was made from an 18th-century copy, also from the 18th century, which was in the possession of Mr. Guignard, who cites it in several passages of his memoir.

3. The appraisal of the jewels in the Clairvaux treasury in 1743 (document C).

4. The description of two Byzantine reliquaries from the same treasury, written in 1744 from the dictation of a Greek bishop by Claude Guyton, a monk of Clairvaux (document D). The last two documents were in their original form in the Harmand collection. Our copies of these two documents, like that of the first, are therefore made from the originals. We have added cross-references to these four documents, either in footnotes or parentheses. This kind of concordance was established using an inventory drawn up by Claude Guyton in 1741. This inventory, preserved in its original form in the Harmand collection, often takes the form of a dissertation and is, in our opinion, too long to be published. As for the description of the Byzantine reliquaries, we have inserted-after the copy of each inscription given by a Cistercian monk under the dictation of the Greek bishop-a transcription in cursive Greek characters.

p. -490- CLAIRVAUX TREASURE.

Communication from Mr. d'Arbois de Jubainville.

A recent and unexpected event has brought to light in the Aube archives numerous and important documents whose existence was previously unknown. One of the most intriguing parts of these documents concerns the treasury of Clairvaux Abbey. It had probably already disappeared by the time Mr. Guignard, archivist of the Aube department, was writing his memoir on the relics of Saint Bernard and Saint Malachy.

We have gathered here four documents:

1. The inventory of the sacristy of Clairvaux in 1405 (document A). Our copy was made from the original, which came from the Harmand collection, now in the archives of the Aube department.

2. The inventory of the sacristy of Clairvaux in 1504 (document B). Our copy was made from an 18th-century copy, also from the 18th century, which was in the possession of Mr. Guignard, who cites it in several passages of his memoir.

3. The appraisal of the jewels in the Clairvaux treasury in 1743 (document C).

4. The description of two Byzantine reliquaries from the same treasury, written in 1744 from the dictation of a Greek bishop by Claude Guyton, a monk of Clairvaux (document D).

The last two documents were in their original form in the Harmand collection. Our copies of these two documents, like that of the first, are therefore made from the originals.

Naspeuringen van Paul Theelen: Constantinus Imperator

H. D'ARBOIS DE JUBAINVILLE.

Non-resident member of the Committee.

1845 and 1846. A new edition of this memoir appeared in 1855 in M. Migne's *Patrologia Latina*, vol. CLXXXV, col. 1661-1798.

[-492-][A 2] Vas sancte Helene, opere greco compositum (piece B, no. 4).

[-498-][B 4] Quarto loco est vas argentum, quod proude fecit sancta Helena, de predicto thesauro sumptum et a domino Henrico imperatore per eundem Hugonem Claramvallem missum, opere Greco mirabiliter et multum artificiose compositum, in cujus parte anteriori, sub esmaldis de auro mirabiliter fabrefactis, honorifice condita est portio Dominice crucis, in cruce ex auro mirabiliter fabrefacta, in qua sunt quatuor lapides praxini et duo alii lapides in sex angulis sex esmaldis miro opere decorati. In eadem parte anteriori continentur reliquie plures, scilicet de ferro lancee Domini, de spinis corone Domini, et alie reliquie sub similibus esmaldis in cellulis collocatae; in parte vero posteriori ejusdem vasis continentur reliquie sancti Georgii et aliorum plurimorum sanctorum, in cellulis argenteis; et omnes reliquie, que in hoc continental vase, litteris greekis exprimuntur. Sunt autem omnes reliquie, que in hoc continental vase, quadraginta quator. Continentur etiam in hoc vase reliquie sancti Minas, archiepiscopi et martyris 1.

1 This shrine, known in the 18th century as the Oratory of Constantine, was kept in the fourth cabinet. (See Exhibit C, No. 14.)

p. -503- PIECE C. 1743.

In the year one thousand seven hundred and forty-three, on Monday the twenty-sixth of August, Mr. Jean-Baptiste Denis Lempereur, jeweler, and Mr. Marin, jeweler-goldsmith, both residing in Paris, being in the Abbey of Clairvaux out of devotion to Saint Bernard, its first abbot, to celebrate his feast day which falls on the twentieth of the said month, they were asked to go to the reliquary treasury of the said church of Clairvaux to give their opinion [-504-] on the names, qualities, and prices of the precious stones that adorn it, and the following is recorded by copy. [...]

[-505-] 14. In the reliquary of Constantine, the first Christian emperor, there is nothing rich in precious stones or pearls, though they are all fine. The whole may be worth one hundred and fifty pounds. The filigram enclosing the cross is gold (A 2, B 4, D 2). 150 pounds

[-506-] Signed: F. CLAUDE GUYTON, monk of Clairvaux.

ITEM D. 1744.

On Wednesday, the fifth day of August 1744, a Greek bishop of Arcadia (a marquis on the island of Crete or Candia, a monk of Saint Basil, who received the name Nicodemus in religion, and that of Nicholas at baptism, banished by the heretical Turks for the faith and cause of Our Lord Jesus Christ) examined our various relics and reliquaries. Here is how he explained the fourth table².

1. All the figures are of Greek origin. In the upper right square of the table is a cross, with two figures standing on either side; an angel on each side above the crossbeam. Above Christ's head is written in Greek: scabrosis (sic for stavrosis, i.e., σταυρωσις), meaning crucifixion. Above this is IHS XPS; beside the angel on the right is Michael, beside the angel on the left is Gabriel. In the opposite square is a cross, a Christ figure, two weeping figures, a third holding Jesus Christ by the middle of his body to take him down from the cross, his right arm detached; on the other side, a figure is bent low, with his head near the feet of Our Lord, holding a handkerchief; a ladder resting by its upper end on the cross, with a man on it detaching Jesus Christ's left arm from the cross. Above, on the right, is an angel: O Archimichael; On the other side, an angel: O Gabriel; above the head of the crucifix: hiapocaphilossis (sic for hi apocathilosis³, that is, ἡ ἀποκαθήλωσις), id est incrucifixio (sic for excrucifixio or refixio): vir timoratus [-507-] Joseph de ligno deponit intemeratum corpus tuum 1; above this inscription, IHS. XPS.

At the bottom of the table and squared to the right is a woman of her height, wearing a closed crown on her head, behind it the crown of glory, on one side of her head sancta (that is, ἁγία), on the other side Helena (that is, Ἑλένη). In the opposite square is a man of his height, dressed in long robes, wearing a closed crown on his head, behind which is the crown of glory, on his left arm like a maniple, on either side of his head: O agios Constantinus megas (ὁ ἅγιος Κωνσταντίνος μέγας), id est o

(sic) sanctus Constantinus magnus. The rest is distinguishable and legible without being Greek.

2. The same Greek bishop who saw the reliquary of Constantine the Great ². One notices there, on one face at the top and between the two door panels, the bust-length figure of Constantine the Great, who has a closed crown on his head; in his right hand he holds a long cross; On one side of the head are effigies (i.e., εἰκόν), on the other Constant (Κωνσταντ). On the first part of the right-hand panel, Jesus Christ is detached and taken down from the cross, and one reads in Greek: hiapocaphilosis (ἡ ἀποκαθήλωσις), id est vir timoratus Joseph, etc., ut supra. On the second, below, is the Transfiguration of Our Lord; one reads: metamorphosis tou Xpou (μεταμόρφωσις του Χριστου). On the third, below, is the Dormition and Assumption of the Blessed Virgin; we read hichimissis tis panogies (ἡ κοίμησις της παναγίας), id est assumptio de Sanctissima ³. On the first part of the other leaf is the ascension of Our Lord; we read: hianalipsis (ἡ ἀνάληψις), id est ascencio. On the second, above, is the apparition to the doubting apostle; one reads: ipsilaphissis (ἡ ψηλάφησις), id est apparatio sancto Thome ⁴. On the third, above, is the resurrection of Our Lord; one reads: hianastasis (ἡ ἀνάστασις), id est resurrectio. Inside the said reliquary, at the top of the right-hand door, is St. Michael (ὁ Μιχαήλ). Above, one reads: O Evangelismos (ὁ εὐαγγελισμός), id est annuntiatio. Below are illyric characters. Below, genicis (γένεσις), id is nativitas Xpisti. At the top and to the right of the bottom of the reliquary, we read: O phios prodromos (ὁ ἅγιος πρόδρομος) ⁵, id est divus Johannes Baptista (or rather sanctus praecursor); and opposite, in the said bottom of the reliquary, we read: mitir theou (μήτηρ θεοῦ), id est mater Dei. The two flaps, which are below in the interior of said reliquary, are full of [-508-] enamel figures with characters that are said to be illyric. At the top of the other upper door, one reads: hypapanti (ἡ ἀπάντησις), seu occursus Simeonis ad Xpistum ¹. Below this are Illyric characters, according to the said Greek bishop. Below that, one reads yvapticis (ἡ βάπτισις), id est baptismus Xpisti. In the middle of the two inner doors, above the crucifix, one reads stabrousis (σταῦρωσις), id est crucifixio. The rest, which is below the inner doors, is not easy to read, because the pieces, for the most part, are placed indirectly in view.

For certified copy: H D'ARBOIS DE JUBAINVILLE,
Non-resident Member of the Committee.

2 Side D. Item A, No. 8; Item B, No. 8; pi

Item C no. 9. This reliquary came from the monk Artand, who received it from Louis, Count of Blois, according to the 1741 inventory.
3 Ph for th as below.

1 This phrase, borrowed from the breviary, is a commentary by the monk of Clairvaux, and not a legend inscribed on the monument.

2 Item A, no. 2; item B, no. 4; item C, no. 1.

3 The literal meaning is dormitio.

4 The literal meaning is tactus. It is the verb ψηλαφῶ that is used by Saint Luke, XXIV; cf. John, XX, 27.

5 Ph here represents the aspiration sound of the Greek γάμμα.

1 Saint Luke, II, V. 25 ff.

Appendix 1b INTERPRETATION OF THE KNOWN RELIQUARY OF CONSTANTINE
(Treasury, no. 60). Note by Dom Guyton.

September 11, 2017 Result: The Clairvaux Treasury from the 12th to the 18th Century:
1. The same Greek bishop (cf. Appendix XII) who saw the reliquary of Constantine the Great.

On one side (front, exterior doors), at the top and between the two door panels, is the bust-length figure of Constantine the Great, wearing a closed crown; in his right hand he holds a long cross; on one side of his head are the inscriptions "Effigies" (i.e., ΕΙΚΩΝ), and on the other, "Constantine" (ΚΩΝΣΤΑΝΤ). On the first part of the right-hand panel, Jesus Christ is taken down from the cross, and the Greek text reads: Hiapocaphilosis (Η ΑΠΟΚΑΘΗΛΩΣΙΣ), id est vir timoratus Joseph, etc., ut supra; on the second part, below, is the Dormition and Assumption of the Blessed Virgin, and the text reads: Hichimissis tis panogies (Η ΚΟΙΜΗΣΙΣ ΤΗΣ ΠΑΝΑΓΙΑΣ), id est assumptio de Sanctissima. On the first part of the other panel is the Ascension of Our Lord;

the text reads: Hianalipsis (H ANAAHPIC), id est ascencio; On the second, it is the apparition to the doubting apostle, we read: Ipsilaphissis (H ΨΗΛΑΦHCIC), id est apparitio sancto Thome (or rather tactus). On the third, above, is the resurrection of Our Lord, we read: Hianastassis (H ANAETACIC), id est resurrectio. Inside the said reliquary, at the top of the right-hand door, O Michael (MIXAHA). Below, we read: O Evangelismos (O EY'APTEΛIΣMOΣ), id est annuntiatio. Below that are illyric characters. Below, Genicis (Γ'ENECIC), id is nativitas Xpisti. At the top and to the right of the bottom of the reliquary, we read: O phios prodromos (O ΘΕΙΟΣ ΠΡΟΔΡΟΜΟΣ), id est divus Johannes Baptista (or rather divus praecursor); and opposite, in the said bottom of the reliquary, we read: Mitir Theou (MHTHP ΘEOY), id est Mater Dei. The two battans, which are below in the interior of said reliquary, are full of enamel figures with characters that are said to be illyric. At the top of the other upper door panel, one reads: Hypapanti (H APANTHCIC), seu occursus Simeonis ad Xpistum. Below this are Illyric characters, according to the said Greek bishop. Below that, one reads Yvapticis (H BAPTICIC), id est baptismus Xpisti. In the middle of the two inner doors, above the crucifix, one reads Stabrousis (ΣΤΑΥΡΩICIC), id est crucifixio. The rest, which is below the inner doors, is not easy to read, because the pieces, for the most part, are placed indirectly in view, (Aube Archives, copy. This piece was previously printed by M. d'Arbois de Jubainville in the Revue des Sociétés savantes des départements, 5th Series, vol. V, p. 507.)

2. Sheet for the other exterior and rear face of the reliquary of Emperor Constantine. In the middle of the two doors at the top, a figure of a prince; around it is written: O Constantios (O ΚΩΝCΤΑΝΤΙΟC). On the first door on the right, there is a Descent from the Cross, known in Greek as: Apocloelosis (ΑΠΟΚΑΘΗΛΩCIC, the act of unnailing); below, a Transfiguration expressed by the letters IC XC H METAMOPNCIC; below, the Deposition of Our Lord into the Sepulchre expressed by the letters IC XC H KOIMECIC, Jesus Christ lying down, the Virgin Mary surrounded by thirteen apostles, angels, and an apostle holding a censer. At the top of the other door is the Ascension, expressed by the words H ANELEPIC; below it is depicted St. Thomas touching the side of the North with the inscription H ΨΗΛΑΦHCIC, id est tactio; then below that, the Resurrection, expressed by the words H ANACTACIC, id est resurrectio. (We left it at this point on May 20, 1742.)

The images of the Coronation, which have been described, follow (Trésor, no. 60, p. 41). Above the first figure, to the right outside the door of the first gate of the said reliquary, is written Nicephoros (NIKEΦOPOC); below this figure is another with the inscription, above, Agios Theodotos (AGIOC ΘEOΔOTOC). On the other door leaf, to the left outside, above the large figure near the opening, is written Menas (MHNAC); below it, another figure with the inscription Polieuctes (ΠΟΛΙΕΥΚΤΗC). Inside the door leaf, to the right, is written above a figure Agios Eustakios (AGIOC EYCTAXIOC); and on the figure below, Agios Alexandros (AGIOC ALEEEANΔPOC). Inside the door leaf on the left: a figure with the inscription Hiagapea (H AΓAΠIA). Four small figures follow on the small inner door, to the right and above. The first at the top is titled Agios Babulas (AGIOC BABYΛAC); below Agios Heliodoros (AGIOC HAIOΔΩPOC); below repeat of the previous one; below E agia Barbara (H AΓIA BAPBAPA). Opposite these four figures, on the small interior door to the left and above, are four figures. Above the first Agios Dionusios (AGIOC ΔIONYCIOC); above the second Agios Anthimos (AGIOC ANΘIMOC); above the third Agios Abdenomakos; above the fourth Agios Gregorotheolo[go]s (AGIOC ΓPHPOΠIOC ΘEOΛOΓOC). On the small door, inside the second right-hand leaf below, is, above the first figure, Agios Leontios (AGIOC AEONTIOC); above the second, Agios Akimaunos; above the third, Agios Pantalemon (ΠΑΝΤΑΛΕΗΜΩΝ); and above the fourth, Agios Kuros (AGIOC KYPOC).

On the small door, inside the second left-hand leaf, and below, are four figures: on the first is written Agios Athanasios (AGIOC ATHANACIOC); on the second, Agios Autonomos (AGIOC AYTONOMOC); on the third, Agios Longinos (AGIOC ΛOΓΓINOC); and on the fourth, Agia Aglae (H AΓIA AΓΛAIA). Next and opposite, on the same leaf inside, on the first Agios Demetrios (AGIOC ΔHMHTPIOC); below Agios Mercurios (AGIOC MEPKYPIOC).

Small bottom cap. Above the first figure Agios Iô (AGIOC IQANNHC) sanctus Johannes; above the second Agios Eugenios (AGIOC EYFENIOC); above the third Agios Eustrathios (AGIOC EYCTPAΘIOC); above the fourth Agios Orestes (AGIOC OPECTHC).

The first coin on the back panel, which is the largest, bears the inscription: Tou agiou Gregoriou Nusses... (TOY AΓIOY ΓPHPOΠIOY NYCCHC)... (Treasury, no. 60, p. 43.)

Note in Dom Guyton's handwriting. Regarding the reliquary known as that of Saint Helena, also called that of Constantine, or the portable altar of Constantine the

Great, we should recall that Nicephorus (Book VII, Chapter 6) and Sozomen (Book I, Chapter 8), in their Ecclesiastical History, attest that the great Emperor Constantine never undertook a military expedition without having a portable altar on which to celebrate the divine sacrifice for himself and his people: in quo Deum landare, orareque, ac mysteriis participare possent.

The monks of the abbey of Saint Sauveur, outside the city of Liège, have two portable altars. One of porphyry, only a foot or so long and half a foot wide, decorated with a gilded bronze border on which we read these words: Anno Dominice Incarnationis M.L.XI, indict. XIV, IV idus augusti, dedicatum est hoc altare in honore Domini nostri J.-C. et sancte Crucis et B. M. semper virginis et S. Johannis Bapt. and Omn. Apostolor., et martyrum Laurentii, Pancratii, Georgii et XI mil. Virgin. and Omn. SS. cooperante Lamberto II hujus loci abbate. Memoria dni Hillini, prepositi, et majorum ejus. Around this altar the twelve apostles are represented in ivory.

The other altar is made of a green stone only two inches long and three inches wide. The rest is covered with a bronze plate, on which is engraved this inscription: Anno ab Incarnatione Domini M.C.XXX.VII, indict. V, consecratum est hoc altare in honore S. et I. Trinitatis et sce Crucis et sancte Marie Virginis et sci Laurentii, mart., et Omn. SS. a domino Rodulpho, episcopo Leodiensium, XV kal. marcii. Hic datur ipse Jesus animarum potus et esus Hec tibi sit cara, cui caro fit, crucis ara.

This altar is adorned with several precious stones. At the four corners are depicted the four Evangelists; and above it is an ivory crucifix, attached to the cross with four nails.

In the city of Paderborn, in the cathedral church, there is an ancient portable altar, on which Mass was said for sick canons. It is a silver chest filled with holy relics, in the center of which is a precious stone. It is taken to the canons when they are ill, and they themselves bring it back to the church when they are cured. [On portable altars (altaria gestatoria, viatica, itineraria, portatilia), see the special treatise by Gattico, De altari portatili. – Catalani, Commentar. in Pontific. Roman., Part II, Title V, de altar. portatil. consecratione. Philip, Count of Flanders, gave two portable altars to Clairvaux (Appendix XIX).] Among the objects from the treasury of Saint-Urbain of Troyes deposited in the collegiate church of Saint-Etienne in 1277 was a portable altar (Archiv. Aube, Saint-Urbain, cart. 1).

Appendix 1c

2. Reliquary of Saint Helena/Oratory of Constantine

Relics: Forty-four relics, including fragments of the spearhead ("half a nail, from which the spearhead was nailed"), thorns from the Crown of Thorns, and wood from the True Cross. The relics of saints are identified by inscriptions and bust or full-length portraits of the corresponding saints.

Reliquary: "Vase of Saint Helena," "Shield or Oratory of Constantine."

Date: before 1206. Brought there at that time by Dom Hugues de Saint-Ghislain, former treasurer of the palace from Constantinople; it was a gift from Emperor Henry I of Flander

Dimensions: H.=1 foot (0.32 m); W.=9 inches (0.24 m); Thickness = 2 inches, 9 lines (0.07 m)

Attestations: mentioned in the inventories of 1405, 1504, 1640, 1741, 1771 and in documents from 1517, 1743, and 1744.

CHRONOLOGICAL TABLE OF TEXTS AND DOCUMENTS PUBLISHED IN VOLUMES 123 TO 147 OF THE LIBRARY OF THE SCHOOL OF CHARTES

Appendix 2

May 1, 2017 Story of Μονή Αρκαδίου/Moní Arkadhíou

« ΑΡΚΑΔΙ(ΟΝ) ΚΕΚΛΗΜΑΙ / ΝΑΟΝ ΗΛ ΕΧΩ / ΚΟΝΣΤΑΝΤΙΝΟΥ ΑΝΑΚΤΟΣ / ΙΣΑΠΟΣΤΟΥΛΟΥ »
 "The church is named after Arkadi and is dedicated to Saint Constantine."

The Arkadi Monastery (Greek: Μονή Αρκαδίου/Moní Arkadhíou) is an Orthodox monastery located on a fertile plateau 23 km southeast of Rethymnon, on the island of Crete (Greece).

- 121950 The current church dates from the 16th century and shows the influence of the Renaissance, as the island was under Venetian rule at that time. This influence is visible in the architecture, which blends Romanesque and Baroque elements. This two-aisled church was destroyed by the Turks in 1866 and has since been rebuilt. From the 16th century onwards, the monastery was a center of learning and art, boasting a
- 121955 school and a library rich in ancient books. Surrounded by thick, high walls and situated on a difficult-to-access plateau, the monastery was a veritable fortress. Arkadi was an active center and one of the strongholds of resistance against the Ottoman occupation, which contributed to its renown. During the Cretan Revolt of 1866, 943 Greeks found refuge there: resistance fighters, and a majority of women and
- 121960 children. After three days of fighting, and on the orders of the monastery's abbot, Gabriel, the Cretans detonated the gunpowder barrels, preferring to sacrifice themselves rather than surrender. All but about a hundred died in the assault. Some 1,500 Turks and Egyptians also perished in the battle. The monastery is now a national shrine in honor of the Cretan resistance. November 8th is now a day of commemorative celebrations in Arkadi and Rethymno. The explosion did not end the Cretan uprising, but it did draw Europe's attention to this people fighting for their independence.
- 121965 The Arkadi Monastery is located in the Rethymno prefecture, about 25 km southeast of Rethymno. The monastery occupies a roughly rectangular plateau, approximately 6.5 km on each side, situated on the northwest slope of Mount Psiloritis, at an altitude of about 500 meters. The Arkadi region is fertile, with numerous vineyards, olive groves, and forests of pine, oak, and cypress trees. The plateau on which Arkadi sits is surrounded by hills that overlook it. The western edge of the plateau ends abruptly, giving way to a gorge. These gorges begin at a place called Tabakaria
- 121970 (tanneries) and end in the Stavromenos region on the coast, east of Rethymnon. The Arkadi Gorge boasts a rich diversity of endemic wild plants and flowers. The area where the monastery is located has been inhabited since antiquity. The presence of Mount Psiloritis, a sacred mountain chosen, according to legend, as the site where Zeus was raised, encouraged human settlement. Thus, five km to the
- 121975 northeast, the city of Eleftherna reached its peak during the time of Homer and the Classical and Roman periods, but its influence was felt throughout the Early Christian and Byzantine eras.
- 121980 The nearest village to the monastery is Amnatos, about three km to the north. The villages surrounding Arkadi are rich in Byzantine remains, attesting to the region's prosperity. Thus, the Moni Arseniou monastery, a few kilometers north of Arkadi, is also among the great monasteries of Crete.
- 121985 The monastery is shaped like an almost rectangular parallelogram, covering a total area of 5,200 square meters. The enclosure resembles a fortress, extending 78.50 meters to the north, 73.50 meters to the south, 71.80 meters to the east, and 67
- 121990 meters to the west.
- 121995 The exact date of the monastery's founding is not known with certainty. According to tradition, the monastery's foundations were laid either by the Byzantine emperor Heraclius or by the emperor Arcadius as early as the 5th century. According to this second version, the monastery takes its name from the emperor. The presence of numerous monasteries in Crete bearing the name of the monk who founded the building is very common. This hypothesis, therefore, now prevails: that a monk named Arkadios founded the building.
- 122000 According to Joseph Pitton de Tournefort, the monastery is built on the site of an ancient city, Arcadia, whose legend was believed that after its destruction, all the springs and fountains in the surrounding area would not flow again until after the founding of a new city. However, as early as 1837, Robert Pashley demonstrated the impossibility of the monastery having been built on the ruins of any city. This is the version that prevails today.
- 122005 The oldest evidence of the monastery's existence dates back to the 14th century. In 1951, Professor K.D. Kalokyris published a 14th-century inscription that supports the hypothesis that a monastery dedicated to Saint Constantine existed at that time. This inscription reads:
"The church is called Arkadi and is dedicated to Saint Constantine."
- 122010 It must have been located on the pediment of a church older than the one we see today, or perhaps above the monastery's entrance gate.
- 122015 It is a two-aisled basilica, the northern aisle dedicated to the Transfiguration of Christ and the southern aisle to Saint Constantine and Saint Helena. It stands in the center and slightly south of the monastery. According to the inscription engraved on the bell tower's facade, the church was founded in 1587 by Klimis Hortatsis. The

building's architecture is marked by a strong Renaissance influence, which is explained by the fact that the church's foundation dates back to the time when Crete was a colony of the Republic of Venice.

In the lower part of the church's facade, built of regular square blocks of masonry, the main element consists of four pairs of columns with Corinthian capitals. Although their capitals show classical influence, the columns themselves, set on high bases, are Gothic in origin. Between each pair of columns is a semicircular arch. The two arches at the ends of the façade each contain a door and a circular opening, adorned with palmettes around the perimeter. The central arch of the façade contains only a decorative portico.

In the upper part of the façade, above the columns, a series of moldings and elliptical openings, also decorated with palmettes, can be seen. At the center of this upper section stands the bell tower, and at each end are Gothic-inspired obelisks. Comparisons of the monastery's façade with the works of the Italian architects Sebastiano Serlio and Andrea Palladio suggest that the church's architect was likely inspired by them.

In 1645, the church was first damaged by looters who destroyed the altar. When the monastery was captured by the Turks in 1866, it was burned, and the altar and icons were completely destroyed. Only a cross, two wooden angels, and a fragment of the Resurrection of Christ were saved from the flames. The church's apses were also destroyed.

The current iconostasis, made of cypress wood, was erected in 1902. From 1924 to 1927, at the initiative of Metropolitan Timotheos Veneris, consolidation and restoration work was undertaken on the apses and the bell tower. The interior flagstones were then replaced in 1933.

Towards the end of the 16th century, a period of intense cultural and artistic creation on the island, the monastery underwent restorations and transformations. The owners were Klimis and Vissarion Hortatsis, likely from the Hortatsis family of Rethymnon, whose name is associated with the Cretan Renaissance, including Georgios Hortatsis, author of Erophile. The abbot of the monastery at that time was Klimis Hortatsis. In 1573, he transformed the monastery into a cenobitic monastery. Thus, the building's facade would date from 1586. The two-aisled church, as it can be seen today, dates from this period. An inscription at the base of the bell tower dates it back to 1587, when Klimis Hortatsis was the abbot of the monastery. This inscription reads:

"ΑΦ ΚΑΜΧΤΖ ΠΖ"

or: "15 Klimis Hortatsis 87".

The construction of this church is said to have lasted twenty-five years, and it can therefore be assumed that the foundation stone was laid in 1562. Abbot Klimis Hortatsis, who initiated this work, probably died shortly after its completion and does not appear to have lived until the inauguration of the new church. Research has uncovered a letter from the Patriarch of Alexandria, Meletios Pigas, stating that the inauguration ceremony was to be entrusted to Klimis' successor, Abbot Mitrofanis Tsyrigos. While the letter is undated, it can be placed between 1590, the year Meletios Pigas was ordained patriarch, and 1596, when Abbot Nicephorus succeeded Tsyrigos.

During the tenure of the first three abbots, and until the beginning of the 17th century, Arkadi Monastery experienced significant growth, both economically and culturally. The monastery became a major center for copying manuscripts, most of which were produced by the Archbishop of Niccolò.

These manuscripts were lost during the building's destruction by the Ottomans in 1866, but some are now in libraries abroad. The monastery was expanded with the construction of stables in 1610 and the refectory in 1670.

In 1645, the Ottoman conquest of the island began. By the spring of 1648, they had taken control of most of the island, with the exception of Candia (Heraklion), Gramvousa, Spinalonga, and Souda, which remained under Venetian rule.

After the capture of Rethymno in 1648, the Ottomans gradually occupied the hinterland and looted the monastery. The monks and Abbot Simeon Halkiopoulos then sought refuge at the Vrontisi Monastery. They were allowed to return after swearing allegiance to Hussein Pasha. The latter also granted them the right to ring the bell. Arkadi Monastery then became the Çanlı Manastir (Monastery where the bell is rung in Turkish). A firman authorized destroyed monasteries to be rebuilt according to their original plans, without additions or changes. Arkadi took advantage of this firman but seems to have overstepped its bounds by adding new buildings.

During the Ottoman period, the monastery continued to prosper, as evidenced by the

writings of Joseph Pitton de Tournefort. According to the traveler, the monastery was the most beautiful and wealthiest in Crete. He counted 100 monks living in the monastery and another 200 living in the surrounding countryside. The monastery's territory extended north to the Cretan Sea, west to Rethymno, and south to the summit of Mount Ida. These lands allowed the monastery to live off the land. Thus, Tournefort speaks of "400 measures of oil" produced each year, a figure that could be double if the monastery didn't let its fruit go to waste due to a lack of manpower. Tournefort also praises the monastery's cellar, which contains at least 200 barrels, the best of which bear the name of the abbot who blesses them each year with a prayer specifically prepared for this purpose. The wine made at Arkadi is apparently renowned. This wine, called Malvasia, named after a village near Heraklion, and for which Crete was famous during the Venetian era, also came from the monastery's vineyards. Franz Wilhelm Sieber, during his visit to the monastery, also mentions the abbot's cellar and the production of wine from excellent grapes grown at high altitude, but specifies that Malvasia production was no longer in use. Instead, the monastery was then producing corn.

At the beginning of the 19th century, the monastery seems to have experienced a decline. Sieber, who stopped there nearly a century after Tournefort and Pococke, did not offer such a glowing description as his predecessors. According to the German, the monastery housed only eight priests and twelve monks. Fieldwork continued to be carried out regularly, but the monastery was said to be in debt. He mentions the abbot who, to settle his debts, often had to travel to Rethymnon. Sieber describes the building's library, boasting over 1,000 volumes, including religious texts as well as works by Pindar, Petrarch, Virgil, Dante, Homer, Strabo, Thucydides, and Diodorus. But the traveler emphasizes the sorry state of these books, judging that he had "never seen such damaged books," and he is unable to distinguish the works of Aristophanes from those of Euripides.

In 1822, a group of Turkish soldiers led by a man named Getimalis seized and looted Arkadi. The inhabitants of Amari managed to devise a plan to retake the monastery and exterminated Getimalis and his men.

Another version recounts that a man named Anthony Melidonos, a Sphakiote living in Asia Minor, returned to the island at the head of Greek volunteers from Asia Minor to support the Cretan effort during the Greek War of Independence. With a force of 700 men, he set out to cross the island from west to east. Learning of the monastery's looting, he went there. He arrived at night and, climbing onto the rooftops, poured flammable materials into the building and set it ablaze. He then attacked Getimalis, who was drinking, grabbed him, and threw him to the ground outside the room. He was about to kill him when Getimalis swore he was ready to convert to Christianity. The baptism took place immediately, and the new convert was released.

Although this event must have dealt a blow to the monastery's development, Turkish and Greek documents mention the monastery's ability to provide food for the local inhabitants and to shelter fugitives pursued by the Turkish authorities. The monastery offered classes to the local Christian population. From 1833 to 1840, it was able to contribute 700 Turkish piastres to the region's schools. Although Crete rose up against the Ottoman occupiers during the Greek War of Independence, the London Protocol of 1830 did not allow the island to become part of the new Greek state.

On March 30, 1856, the Treaty of Paris compelled the Sultan to implement the Hatti-Houmayoun, that is, civil and religious equality between Christians and Muslims. The Ottoman authorities in Crete, however, were reluctant. Faced with the large number of Muslim conversions (mostly former Christians who had converted to Islam and were therefore considered relapsed), the Empire attempted to curtail freedom of conscience. The imposition of new taxes and a curfew further fueled discontent. In April 1858, 5,000 Cretans gathered in Butsounaria. Finally, an imperial decree of July 7, 1858, guaranteed them privileges in religious, judicial, and fiscal matters. The 1866 revolt seized upon the opening created by the Hatti-Houmayoun.

A second cause of the 1866 uprising was Ismail Pasha's intervention in an internal dispute concerning the organization of Cretan monasteries. Since 1862, various laymen had been advocating that the monasteries' assets be placed under the control of the council of elders, with the aim of establishing schools, but they met with opposition from the bishops. Ismail Pasha intervened in this internal Christian dispute by appointing those responsible for debating the issue, annulling the election of "undesirable" members, and arresting and imprisoning the members of the committee tasked with traveling to Constantinople to discuss the matter with the Patriarch.

This intervention provoked violent reactions among the Christian population of Crete. In the spring of 1866, meetings were held in various villages. On May 14, an assembly was held at the Aghia Kyriaki Monastery in Boutounaria, near Chania, and drafted a petition which it sent to the Sultan as well as to the consuls of the major powers present in Chania. During the first gatherings of revolutionary committees in the spring of 1866, representatives were elected by province. The representative for the Rethymno region was the abbot of Arkadi, Gabriel Marinakis.

Upon hearing of these appointments, Ismail Pasha sent a message to the abbot through the Bishop of Rethymno, Kallinikos Nikoletakis. The letter demanded that the abbot dissolve the Arkadi revolutionary assembly or face the destruction of the monastery by Ottoman troops. In July 1866, Ismail sent his army to capture the insurgents, but the committee members fled before the Ottomans arrived. The Turks left after

destroying the icons and sacred objects found in the monastery.

In September, Ismail Pasha sent the abbot a new threat of destroying the monastery if the congregation did not surrender. The decision was made to establish a defense system for the monastery. On September 24, Panos Koronaos arrived in Crete and landed in Bali. He went to Arkadi, where he was appointed commander-in-chief of the revolt for the Rethymnon region. A career soldier, Koronaos believed the monastery was not meant to be a stronghold. However, the abbot and the monks held the opposite view. Koronaos eventually yielded to the abbot's opinion. Nevertheless, Koronaos

advised destroying the stable so that the building could not be used by the Turks, a request that was also ignored. After appointing a certain Ioannis Dimakopoulos as commander of the monastery's garrison, Koronaos departed. Upon his departure, many local inhabitants, particularly women and children, sought refuge at the monastery, some bringing their valuables with them in the hope of protecting them from the Turks. Thus, by November 7, 1866, the monastery sheltered 964 people: 325 men, 259 of whom were armed, and the remainder women and children.

Appendix 3 Nicholas Mesarites, Ekphrasis on the Church of the Holy Apostles THE MAUSOLEUM OF CONSTANTINE AND THE TOMBS OF THE EMPERORS

XXXIX. But let us, if you please, go off to this church which lies toward the east, so that we may look at the things in it, in order to admire and describe them - this church whose founder our discourse has already declared to be Constantius.

2. This whole church is domical and circular, and because of the rather extensive area of the plan, I suppose, it is divided up on all sides by numerous stoae angles, for it was built for the reception of his father's body and of his own and of the bodies of those who should rule after them.

3. To the east, then, and in first place the body of Constantine, who first ruled the Christian Empire, is laid to rest within this purple-hued sarcophagus as though on some purple-blooming royal couch - he who was, after the twelve disciples, the thirteenth herald of the orthodox faith, and likewise the founder of this imperial city.

4. The sarcophagus has a four-sided shape, somewhat oblong but not with equal sides. The tradition is that Helen, his mother and his fellow-worker for the orthodox faith, is buried with her son.

5. The tomb toward the south is that of the famous Constantius, the founder of the Church. This too is of porphyry color but not in all respects similar to the tomb of his father, just as he who lies within it was not in all ways similar to his father, but was inferior to his father, and followed behind him, in piety and in mental endowment.

6. The tomb toward the north and opposite this, and similar to those which have been mentioned, holds the body of Theodosius the Great like an inexhaustible treasure of noble deeds.

7. The one toward the east, closest to this one, is that of Pulcheria. She is the honored and celebrated founder of the monastery of the Hodegon; see how she, a virgin herself, holds in her hands the likeness of the all holy Virgin.

8. This tomb holds the dust of him who was an emperor among wise men and a wise man among emperors [=Leo VI, "the Wise", 886-912]. This is the tomb of the Empress Theophano [d. 893], the worthy and venerable, whose memory is everlasting, whose husband was the Wise Emperor, the truly wise Empress, who lived a praiseworthy life; "for the first wisdom is a praiseworthy life" as the holy writings say.

9. This is the tomb of Constantine, the first emperor born in the purple, whose name is great in righteous judgment...

10. This is the tomb of Basil [I, 867-86] the Macedonian, who by most divine providence was raised from a lowly walk of life to the eminence of the imperial

position - he who, they say, removed a quantity of the decoration from the church of the heralds of God and transferred it to the sacred house which he himself built in the name of the chief marshal of the powers on high, the church whose title is the Nea.

11. This is the tomb of [Nikephoros](#) [I, 63-9] Phokas a most brave and warlike and prudent man, who lost his life by treachery. The tomb in the inner part of the Church contains Constantine [VIII, 1025-8], born to the purple, the brother of the great emperor who is known as [Basil II](#), 976-1025] the Bulgar-slayer.

12. This is the Constantine who built this Church in the form in which it is now to be seen, as various people have told.

THE MAUSOLEUM OF JUSTINIAN AND THE TOMBS OF THE EMPERORS

XL. Let us go on a little, if it seems good to you, o spectator, to another building, which is called a [heroon](#), and is named by some a place of mourning because there are buried in it the emperors, who are, one might say, heroes.

2. You see another building with five stoas like that pool at the [Sheep Gate of Solomon](#); for here too there lies a great multitude of those who have lost their vigor because of the weakness to which every man is subject through sin.

3. But these men too will spring up at the coming of the angel, when he sounds the trumpet to all the world at the second coming of the Lord, and they will stand before the impartial judge of all, the Savior Christ.

4. This tomb at the east is that of [Justinian](#) [I, 527-65], whose name is great and celebrated for just judgment and observance of the law, who is the founder of the great shrine of the Wisdom of the Word of God. His name will be celebrated from generation to generation as the doer of the most mighty deeds, as the supreme ruler, who cast down great princes who had subjected the whole world to the power of their might.

5. The tomb close to this and toward the north is that of [Justin](#) [II, 565-78], the grandson of Justinian, a man celebrated for his justice and greatly renowned for his piety, who also built what was lacking in the great shrine of the Wisdom of the Word of God, and completed it and resettled the dome, which had fallen, and skilfully raised it.

6. The tomb toward the south is that of his consort Sophia, a devout and seemly woman, really wise and truly fearing the Lord; for the beginning and end of wisdom is the fear of the Lord, as the holy writing says."

7. This is the tomb of [Heraclius](#) [610-41] whose fame is wide and resounding in Persia and the lands about it. He performed many labors, surpassing, as one might say, those labors of Heracles; and before performing these he put off his imperial robe and as he set out on his campaign, put on black-hued boots, and then returned when he had turned them red, dyeing them in the blood of the barbarians.

8. This green sarcophagus is that of [Theophilus](#) [829-42], who belched forth the venom of impiety against the holy images and poured it over those who venerated them.

9. Whether, indeed, as the story is, he was saved by the remarkable assistance and zeal of the orthodox Theodora, his wife, through the restoration and veneration once more, at her behest, of the holy and divine images, I myself cannot say certainly; but let him speak who was tattooed by him - and is known to this day as the [Graptos](#) - on account of his veneration of the august images - he who is himself inscribed in the Book of Life.

10. This tomb of Sardinian stone belongs to [Theodora](#) [wife of Justinian I] the prudent empress, whose work this celebrated and admired church of the heralds of God is. And concerning the others, why should we care, since their memories are buried with them in their tombs?

The "Cross of Constantine", which, like and at the same time

as the previous one, ended up in the treasury of St. Peter's Church in Rome, is placed in a triptych, which measures 10 by 7.5 cm when the doors are closed. For this description, the data are also taken from those of Dr. Hoogewerff and from Flament's

122280 above-mentioned article, in which a (deviating) drawing of it from the H. S. van Gulpen is shown on plate III.
The cross is placed against a flat background; this almost equal-armed cross probably consists of particles of the Holy Cross; it is surrounded by a "border in cassette enamel; with a pattern of red, white and blue". In each corner of the arms there is a large pearl; outside the end of the arms a disk of enamel: "white letters on blue, within a red border". The inscriptions read:

OPA TI / KAI NO / N ΘAY /
MA - KAI Z / ENHN/ XAPI / N- XPYC / ON ME/ NEZω -
XPIC / TON EN / ΔECKO / πEI.

122290 Above the upper inscription are two pearls and a light purple agate. On the lower left, on the flat background, the figure 1) of the emperor is placed in relief and next to it, like poles, (O K) ωNCT / ANT.
On the door on the right, in relief, the golden figures of Mary, $\overline{MP} \overline{\Theta Y}$; next to it that of O ΠANTEΛEHΩN; below that of O TIMΩN. On the wing on the left, according to the notes of Dr. Hoogewerff, there are the raised figures of O ΔEMHTRHOC and below O MATΘAIOC; next to it above $\overline{IC}$ and $\overline{XC}$, and below O BAPNABAC. The left door cannot be opened completely, because the awkwardly placed cloud of the modern pedestal is in the way. When the doors are closed, the upper and lower edges of pearls with a purple agate in the middle, a purple agate on the left and right remain visible; the outside of the doors is decorated with stones, namely: a green one on the top left, a purple-red one in the middle and a purple one below; on the right: two purple ones, and a green one below; in the heart a pale purple stone. Some of the pearls have been renewed.

122305 The busy back of the cabinet, provided with scale and leaf ornamentation, is of chased gold and contains an equal-armed cross in the middle and six medallions within a pearl border; four of them are next to the arms and two in the upper corners; the latter bear the monograms $\overline{IC}$ and $\overline{XC}$. The other four are covered by a rosette, according to fig. 531, the bottom one by a seal.

122310 According to van Gulpen's drawing, (the back of) the jewel contained the following inscriptions, which were also noted down by Dr. Hoogewerff:

O KAI / TETET / KEN EK
ΠΠOΘ / YMOY / KAPI / AC IωAN / NHC Λ / YTPω / CIN
AITω / N CΦA / AMAT / ωN.

122315 We now know the maker from the inscription, because the inscription means that a certain Joannes, in order to obtain forgiveness of his sins, cheerfully made (this cross). This inscription cannot be seen in the fig. with Lipinsky's article and the author only mentions the previous one. He ends his article with: "We are inclined to assume the fifth or sixth century as the date. And presumably the shrine belonged to Justinian and not to Constantine, whose taste was less refined".

X. The cross of Constantine in the treasury of St. Peter in Rome.

122325 In the church treasury of the Chapter of St. Peter in Rome there is a very precious relic of the Holy Cross, although of small dimensions in the form of a pectoral cross, but of a barbaric splendor and excessive wealth. This cross is said to be the pectoral cross of Emperor Constantine.

122330 It found its first describer in Dr. BOCK, who published a work of large dimensions in 1864: "Die kleinodiën des hl. röm. Reichs Deutscher Nation". Bock assumed that this cross was used at the liturgical coronation of the German emperors in the Middle Ages. This remains an assumption, which however became a reason for Bock to describe the cross of Constantine in detail on fol. 115-117. Figure 28 of Table XX in the work in question gives a coloured drawing of the relic. On fol. 116 an uncoloured image of the back is included.

122335 In 1893 the pectoral cross of Constantine was described by DE WAAL in his article "Die antiken Reliquiare der Peterskirche". A photographic image of the piece is given in Table XVIII. 167) The visit of the Russian Grand Duke Sergius had given rise to the creation of that study. In 1894 DE WAAL published a dissertation on the same subject, in which the cross of Constantine was treated in the same way. 168)

122340 Better informed about the possibility that this jewel had been used at the imperial coronations in Rome, Dr. BOCK described in 1896 the cross of Constantine again in "Die Byzantinischen Zellschmelze der Sammlung Svenigorodskoi". 169)

122345 A final describer found this cross in ANGELO LEPINSKY, who in July 1933 in the "Illustratione Vaticana", an article wrote: "Old goldsmithing in the church treasury of St. Peter". The Dutch edition 170) gave the text of this article with some

improvements, for the iconographic description of less importance. 171)
Three very good photo reproductions illustrate the article by Lepinsky.

When in 1913 the great Staurotheca was photographed for the Dutch Historical
Institute in Rome with special permission of the Pope, three photographs were also
taken of the smaller cross, which we reproduce here as fig. 16, 17 and 18.
In May 1936 we were able to admire this pectoral cross from close by. The reliquary,
also called "encolpium Constantini magni", consists of two parts: the actual pectoral
cross, and the cabinet in which the cross is kept suspended as a relic. This cabinet
can be opened as a triptych with two hinged doors. It is made entirely of gold,
according to Bock and Lepinsky. De Waal wrongly thought it was made of gilded silver.
When closed, the small shrine measures 12 cm high and 8 cm wide. The edge at the top
and bottom is set with a row of pearls and pearls, placed on the wing doors, form a
third row. Each row consists of ten pearls with a large gemstone at the corners and
in the middle. The pearls are of unequal size and irregular shape. On the doors at
the height of the hinges, another gemstone is placed in the four corners. The front
shows thirteen gemstones and thirty pearls in its entirety. The pearls are attached
by means of a gold thread. Two of them, in the bottom row, are split. The four
surfaces of the doors are bare, but bear the traces of a lost decoration. Probably
gold plates with relief decorations were attached to it, as we will see on the
inside.

On top of the edge is a wide gold ring with a large opening, so that the box could be
worn around the neck with a chain or cord passed through it. This need not be
surprising, since it is known with what stiff splendor of robes and jewelry the
Basileus used to be hung. Lepinsky says that a large ruby was set on the gold pendant
in 1929, as can be seen in his photo. 172) The photo with the article by De Waal from
1893 also showed a stone, of a different shape, most resembling a gemstone placed in
a gold setting. 173) This ornament is no longer there. According to the photo from
1913, the gemstone had already disappeared by then. 174) The drawing by Dr. Bock in
1864 showed nothing at that location. We must therefore assume that between the years
1864 (actually 1862, since Bock had the drawings made in that year for his work
published in 1864) and 1893 a stone was placed on the support ring that had
disappeared in 1913 and was replaced in 1933 by another stone, which according to
Lepinsky was placed there in 1929, but had disappeared again in 1936!

In 1864 the pearls were still intact according to the drawing by Dr. Bock, and there
is no mention of damaged pearls in his description either. The photo by De Waal 175)
shows that in the lowest row of pearls the seventh (counted from left to right,
calling left what is left to the observer) is split (1893). The same can be seen in
the photo of 1913, 176) while in the photo of 1933, by Lepinsky, 177) the third pearl
is also split. Lepinsky 178) generally notes that the pearls are in poor condition,
and believes that there used to be more rows of pearls. We could also see the poor
condition of the pearls. In the bottom row, the middle pearls on the left and the
second pearl on the right are split.

In the previous century, the box was placed on a silver cloud decorated with two
floating angels, a similar inappropriate decoration, as people thought they had to
apply to the large Byzantine double cross. 179) Dr. Bock (1864) says nothing about a
pedestal. In 1893, however, it was there, since the photo by De Waal 180) shows the
pins with which it can be fixed to the silver cloud.

On the back of the cabinet the gold is worked out in relief in such a way that one is
justified in assuming that the undecorated sections of the fronts could certainly not
have been without their decoration originally. The back is scaled in its entirety.
181) In the middle a cross, richly worked out. The other decorations are: four
medallions with a flower pattern at the ends of the cross arms. The medallion at the
bottom is not visible in fig. 17 because of a seal hanging on a cord. 182) When
taking the photo for Lepinsky's article the seal was lifted, so that a similar
medallion is visible there. At the bottom there are two more garlands, while in the
upper corners two more medallions have been applied. The latter bear the letters $\overline{IC}$
and $\overline{XC}$ respectively, the well-known hierogram letters for IHCOXPICTOC, Jesus Christ
s. 183)

This magnificent piece only shows itself in its full richness when the two wing doors
are opened and the actual pectoral cross becomes visible.

The side doors are covered on the inside with gold plates, each decorated with four
very artfully crafted saint figures in standing position in relief. On the left door
we see at the top right the image of Christ in long robe with the closed book in his
left hand. To the left of the nimbus, in which there is a cross, are the letters IC.
On the right, of course, there was XP, the abbreviation for Jesus Christ, which we

constantly encounter in Byzantine art and also saw on the back of this "encolpium". However, the letters XP have disappeared due to the application of a precious stone in that place on the outside. According to Dr. Bock, this was already the case in 1864. The photo by De Waal (fig. 18) shows that by then, in 1893, that stone had disappeared. In 1913, see fig. 17, that stone was put back in its place or replaced by another, as we also found.

Next to the Savior we see a saintly figure, pointing with his left hand in the direction of Christ. The inscription on either side of the nimbus is: O ΔΗΜΗ//ΤΡΗΟC. O the abbreviation of ο αὐτοῦ is written together. This is also always the case with the other figures. Also the last two letters are written together: C Dr. Bock incorrectly read ΔΗΜΗΤΡΙΟC.

Under the figure of Christ is a statue with folded hands and the inscription O ΒΑΡΝΑ//ΒΑC. Next to it an apostle figure with a book in his left hand and the inscription O ΜΑΤ//ΘΑΙΟC. Dr. Bock could, due to a bending of the edge here, only decipher O ... ΘΑΙΟC. However, the name is now clearly legible in its entirety. On the right door we see at the top left as a pendant to Christ, the figure of the Mother of God. Of the usual inscription M-P ΘΥ only ΘΥ can be seen. The first part has disappeared due to the setting of a stone on the outside, exactly as we saw on the left door with the letters XP. Next to the Mother of God stands with a raised hand O ΠΑΝΤΕ//ΛΕΗΜΩΝ. Below the figure of Mary we see a saint with the inscription: O ΤΙΜΟΘΕC and to the right of that an eighth saint representing O ΤΙΜΩΝ. Dr. Bock mistakenly gives ΤΙΜΟΝ.

The images are all eight with a regular round nimbus, a double drawn circle, only the nimbus of Christ is provided with a cross. The figures of Christ and the Mother of God are depicted standing on a square pedestal. The other six do not have that. In the cabinet the actual pectoral cross hangs, loose, on the gold ring. The cord with seal on the back prevents it from being taken out. A large square gemstone is set on the ring. The back against which the cross hangs is divided into four planes by the cross. In the lower left corner we see a gold plate applied in this plane, on which in relief in the same style as the eight other figures on the wing doors, but somewhat smaller, a crowned saint figure, with the inscription O ΚΩΝCΤΑΝΤ. Dr. Bock read ΚΟΝCΤΑΝΤ here.

These four corner planes initially presented us with a problem as a result of inaccurate descriptions by the various authors. The image of Constantine raises the suspicion that the three other corners also had their plates with images. The photo of De Waal (fig. 19) clearly showed the figure decoration of the back in the boxes above and next to Constantine, while the fourth box showed a blank plate. The photo of 1913 (fig. 18), on the other hand, showed three blank plates in addition to the corner of Constantine. The solution turned out to be very simple. These corner-filling plates can be rotated, so that the photo of De Waal was taken with two of the four corner panels in the open position.

The Holy Cross wood is closed in a golden cross and covered with rock crystal. The horizontal bar is in one piece. The upper part of the vertical bar is very rotten. This golden cross is - according to Dr. Bock much later - enclosed by a second cross, on which a chain decoration in white enamel is applied, which extends drop-shaped at the corners of the four bars, also in white enamel. At the ends of the beams are medallions with text in Greek letters. Between the beams of the cross and on either side of the support ring are 6 large pearls attached by means of gold wire. The whole is surrounded by a gold rim. In 1893, see fig. 19, one of the large pearls was missing, namely the one between the left arm and the upper arm of the cross. This has now (1936) been replaced.

The medallions are in blue transparent enamel, while the letters are in white, opaque with red punctuation. The text is in Greek capitals, on each medallion four lines, except on the right one, which only has three lines.

ΟΡΑΤΙ

Χριστον εν δε σκόπει.

The meaning is:

"Behold, what a new wonderful work,
what a rare grace,
outside you see gold,
but inside Christ."

Since the pectoral cross could actually be worn, Dr. Bock assumes that these medallions will also bear an inscription on the back. Because of the sealing, he had not been able to check this in 1862. Later he learned that the inscription on the back was in one of the works of Cardinal Mai. Since he does not mention it, we must assume that he did not find it with Mai himself. De Waal does not say a word about the back, nor does Lepinsky.

Only the inner gold cross is known by Dr. Bock a great age. The tradition that this encolpium was worn by Constantine the Great could only concern this cross. The jewel as a whole is of a more recent date. De Waal dates it from the IXth to the XIth century. Dr. Bock in this well the most competent, places the production at the end of the eleventh or beginning of the twelfth century.

In his work on enamelling among the Byzantines he dates it even further to the beginning of the twelfth century. 184)

According to Dr. Bock, the second line has a metrical irregularity, while the first is a regular Alexandrian. That is why he calls the verses of "little correct form" and considers the cross much younger than the fourth century. His special knowledge of the Byzantine enamelling enables him to assume the beginning of the twelfth century, which dating we will adhere to.

We have already referred to the fact that Dr. Bock was mistaken when he thought that the encolpium of Constantine had possibly served in the coronation of the German emperors in the Middle Ages in Rome. In Maastricht, Dr. Bock learned from the pastor of Our Lady [O.L. Vrouw] that this precious piece came from Maastricht. 185) When he describes this encolpium again in 1896, he explicitly states this. The Waal knows nothing of the origin. Lepinsky, however, does, as we have already mentioned above. The documents from the previous century prove the correctness of the claim of the pastor of O. L. Vrouw against [to] Dr. Bock.

In the document, 186) in which Gregory XVI donated the double cross to St. Peter on January 18, 1838, there is explicit mention of two crosses "binas cruces". He describes the small as

"alteram prout in traditis Nobis Literarum monumentis dicitur, a Constantino Magno in proeliis obeundis gestari solitam".

In the official act of receipt 187) signed by Gregory XVI on 30 July 1838 it is called:

"item minorem particulam ligni Sanctissimae Crucis minori pariter cruci isertam..."
"... Minorem vero Crucem existimatam semper fuisse eam, quam Imperator Constantinus Magnus in proeliis super pectus gestabat."

In the official document of transfer, which was drawn up in Maastricht on 27 May 1837 188) and signed by Lysens, Van der Vrecken, and the two witnesses Ackx and Deppen, chaplains of St. Matthias and St. Servaas, the smaller cross is mentioned not spoken. Also in the piece 189) of "hac Maii" 1837 the smaller cross is not spoken about.

And it is precisely these two pieces that Van der Vrecken presented to the Pope as proof that he had received the crosses from Lysens to give to the Pope. From this we can strictly conclude that Lysens nowhere testifies to having given this small cross to Van der Vrecken.

Van der Vrecken writes on 14 July 1838 190) that he handed over the cross to Gregory XVI on 9 July 1837. Here again, only the large double cross is mentioned. The plural form is somewhat misleading, because it distinguishes 1° the considerable part of the cross wood of O. L. Jesus Christ and 2° the golden cross in which it is set. 191) Also in the piece of "hac Maii" 1837 this is described in this way. 192) Finally, we have the piece of April 1, 1837, in which Van der Vrecken declares to have received the large cross of Lysens "in depositum". Here too nothing is said about the small cross. So there is no mention of the so-called cross of Constantine in any of the documents exchanged between Lysens and Van der Vrecken.

Van der Vrecken did hand this cross to the Pope. Where did this cross come from?

The communication in the papal act of receipt (appendix 9)

"Ex tradito porro Nobis Instrumento authentico a praedicto Paulo van der Vrecken S. Sedis Notario confecto constat praedictas cruces S. huic Sedi dono in perpetuum dari a R. D. R. Lysens.." is therefore an untruth concerning the small cross. There is no

evidence that Van der Vrecken received this cross from Lysens. One would even be inclined to say that he did not receive from Lysens. Why would Lysens, who did not hesitate to give up the large double cross and had this act recorded by witnesses, conceal the fact that he had also given away the smaller cross? There are three answers to this:

- Either Lysens knew nothing about the small cross and is completely innocent of the disappearance of this piece from Maastricht;
- or: Lysens had nothing to do with this cross of Constantijn, because it had not belonged to O. L. Vrouwekapittel.

After all, Lysens gave away the large double cross because he believed that as a former canon [oud-kanunnik] he was entitled to dispose of this property of the former chapter of O. L. Vrouw. One could conclude from this that this cross was the property of another church in Maastricht;

- or: the smaller cross was considered to be of much less importance in comparison with the large cross. And this seems to us the most probable. In the relic lists it is always in second place. When we compare the literature we see that much more is written about the large cross than about the small one, although most authors do mention the smaller one. Dr. Hoogewerff is even surprised that the smaller cross attracts so little attention, while in his opinion it is more valuable in every respect. As far as the material and art historical value is concerned certainly, while the tradition that it belonged to Constantine the Great increases its value, but as a relic of the Holy Cross wood it is far behind the double cross of Romanos with the small particles.

XI. The cross of Constantine in Maastricht.

When in 1861 the deed of 1 April 1837 of Van der Vrecken, 193) and the deed of receipt of Gregory XVI 194) were found at the rectory of St. Matthias and handed over to chaplain Russel of Our Lady, one reads from these documents that Lysens had given the large Byzantine cross and the so-called cross of Constantine to Van der Vrecken and that he had handed them over to the Pope on behalf of the former canon [thus: oud-kanunnik]. As a result, they requested the Pope in 1861 to be allowed to receive these two relics, which had belonged to Our Lady. 195) In fact, this request was premature as far as the small cross was concerned, since it is clear from the documents that Van der Vrecken had given up a so-called cross of Constantine, but not that this cross had belonged to Our Lady's Church.

Moreover, it was obvious that the church council of Our Lady did not doubt that the small cross was also theirs.

According to the story of Van Gulpen 196), the so-called cross of Constantine had disappeared at the same time as the large double cross. No wonder that Van Heylerhoff 197) and Al. Schaepkens 198) wrote about the disappeared crosses in 1847 and 1853 respectively, identifying the donated cross of Constantine, as the church council of Our Lady 199) and Russel 200) later did, with the cross that used to be present in Our Lady's church treasure.

Yet there is some reason for doubt. Flament does not assume that the cross in Rome is the same one that used to be in Our Lady's church. We must therefore go into this matter in more detail.

We have a total of four Relic Lists of the old chapter [kapittel], but none of these are complete, as we do have an official and complete Relic List of St. Servaas in the "Catalogus Reliquiarum Sacrarum S. Servatii... Renovatus sub finem Anni 1677". 201) The Relic Lists of Our Lady's Church all have a more uncertain character.

We have:

I. "Ritus servandus in ostensione SS. Reliquiarum in Camera earundem insignis Ecclesiae Beatae Mariae Virginis Trajectensis".

This piece was published by Bock and Willemsen. 202) The relics are listed according to the four cabinets in which they are displayed. Often it is not stated whether the Relic is in a holder. Cabinet no. 4 contains the Holy Cross wood donated by Philippus secundus:

"In 4to Armario

"Notabilis pars Lignee sanctae Crucis Salvatoris nostri nobis transmissae a Philippo 2do Constantinopolitani et Grecorum Imperatore".

There is no mention of a pectoral cross of Constantine. We only know this "ritus servandus" from a 17th century copy. 203) Since we also see several pieces not mentioned here, which we do find in the other relic lists, this inventory of the cabinets must be considered incomplete.

II. Bock and Willemsen also publish another list of relics, 204) namely
 "Specificatio SS. Reliquiarum Collegialis ecclesiae B. M. V. quae abhinc viginti
 annis propter temporis calamitatem in obscuris latuerunt, et nunc, religionis aurora
 ritulante, ecclesiae Parochiali S. Nicolai traditae sunt. May 1, 1817".

Here twenty-nine no's are listed in total. However, the Relic Treasure had already
 been disintegrated. Two days in advance (April 28) the canons asked for information
 about the two Byzantine crosses that had disappeared. 205)

To these well-known lists we have added two that have not yet been published, namely
 "Specificatio SS. Reliquiarum Collegialis ecclesiae B. M. V. quae abhinc viginti
 annis propter temporis calamitatem in obscuris latuerunt, et nunc, religionis aurora
 ritulante, ecclesiae Parochiali S. Nicolai traditae sunt. 1 May 1817".

Here a total of twenty-nine no's are listed. However, the Relic Treasure was already
 dismantled at that time. Two days beforehand (28 April) the canons asked for
 information about the two Byzantine crosses that had disappeared. 205)

To these well-known lists we have added two that have not yet been published, namely
III. "Emuneratio praecipuarium Reliquiarum hujus Ecclesiae", which can be found in
 the "Stipale Privilegiorum" of 1767. 206) Here only 21 no's are listed, according to
 the inscription only the most important ones. We find as no. 2:

"2. S. Crucis minor pars ab Imperatore Constantino gestari solita, gemmis pretiosis
 adornata et capsula argentea deaurata inclusa".

IV. Finally, we have a list of ornaments and relics of the O. L. Vrouwekerk,
 which was drawn up in 1580, when these were hidden for safety in the house of the
 provost Arnold de Meroda. 207) Among the relics is mentioned "Pars crucis Sanctae
 parva tabulis argenteis deauratis inserta". This of course refers to the same cross
 that is mentioned in III of Constantine. In both III and IV it is in second place,
 directly behind the large Byzantine double cross.

As fig. 8 (p. ...) we have given a fragment of the 16th century copper engraving, a
 relic plate of Our Lady.

In the lower right corner we see an image of the cross with the caption:

"Een + D Den Keyser Consta op syn Borst placht t Drage' als he sTrijde tegenden
 heydenen."

To these direct data from the archives of the old collegiate church we can add
 Gretserus (1616), Miraeus (1622), d'Outreman (1648) and Rayssius (1628), who, where
 they discuss the large double cross, also speak of the pectoral cross of Emperor
 Constantine. 208)

Their data can be traced back to what Gretserus tells. Gretserus has also paid
 considerable attention to the small cross. We will quote Gretserus extensively when
 we discuss how this cross came to Maastricht.

The pectoral cross of Constantine was used during the ceremonies of Holy Week. After
 the Holy Service, the officiant, carrying this cross, and the deacon and subdeacon,
 each carrying a crystal reliquary containing a Holy Thorn, 209) went to the baptismal
 chapel, where the three relics were immersed in the newly consecrated water.

The former canon Van Gulpen also drew this cross after its disappearance during the
 French Revolution in the often mentioned "Liber continens statuta". A photo
 reproduction of this drawing is given as fig. 20. Unfortunately, the drawing by Van
 Gulpen is not accompanied by a description. When we now compare the drawing by Van
 Gulpen with the cross in Rome, several differences immediately catch the eye. First
 of all, the cabinet by Van Gulpen is crowned by a segment-shaped tympanum, while in
 Rome the shrine is simply flat on top with a ring on it. On the side doors an oval is
 also drawn where the statues of saints can be seen in Rome. The captions, however,
 are literally the same, without a single deviation. Even the circumscriptions O and
 C° have been copied. The precious stones and the double row of pearls are not
 indicated, nor are the pearls on the cross itself. The drop-shaped extensions of
 white enamel are, with the difference that in Van Gulpen's case they are also drawn
 in the corners between the arms, where the cross in Rome has pearls. The medallions
 show a different text, while the relief of Constantine is completely missing.

The text reads:

'OKAI
 TETEY
 KENCK

ΠΡΟΘ	ΙωΑΝ
ΥΜΟΥ	ΝΗCΑ
ΚΑΡΔΙ	ΥΤΡω

CIN

ΑΙΤΩ

ΝCΦΑ

ΛΜΑΤ

ΩΝ

In plain Greek letters:

ο και τετευκεν εκ προθυμον καρδιας
Ιωαννης λητρωσιν αιτων σφαλματων.

The translation of this is:

*"Which (this) has made, with a ready heart, Joannes, requesting
forgiveness of his sins".*

The drawing by Van Gulpen was taken over by Martinus van Heylerhoff in his manuscript, and Arnaud Schaepkens 210) also writing about this cross in 1846 had nothing else in mind than this drawing. His description is taken entirely from this drawing. He says that the triptych is crowned by a "tympanum", and that there is no decoration with drop-shaped pearls to be seen on the cross itself. The side doors each have four oval stones set in gold, where the names of saints standing next to each other.

Before asking the question whether the differences in the drawing in the "liber continens statuta" are of much importance, one could ask: Was there another cross of Constantine in Maastricht? After all, it is certain that the cross was brought from Maastricht by Van der Vrecken. The answer to this question is affirmative. Before the French Revolution, a so-called cross of Constantine also appeared in the treasure of St. Servaas. In the already mentioned "Catalogus Reliquiarum" of St. Servatius from 1677 211) we find as no: "118. Asservatur praeterea in hoc Sacratio caput integrum S. Servatii, huius ecclesiae ac totius civitatis Patroni (qui de cognatione fuit Christi Domini secundum carnem) ultimi Tungrensis ac primi Traiectensis episcopi, in statua argentea deaurata, geminis ornata et parvula cruce aurea, quae internal habet de Ligno crucis Dominicae et diversorum Sanctorum sacris Reliquiis, external vero habet quatuor magnus uniones cum multis lapillis pretiosis; hanc Imperator Constantinus gestavit dum contra infideles progredereetur". 212)

The bust of St. Servatius seems to have been decorated with a small cross, which probably hung around the neck of the bust.

In 1672, the "Sacer Thesaurus Servatianus expositus per Litanias.." etc. by Andreas Bowens was printed in Liège. This cross is also mentioned here on page 50. 213) "Per Crucem et Passionem tuam. De Cruce Christi partes insignes. Item crucicula, quam Constantinus Imperator ex collo suspensam ferre solebat, quando cum paganis praeliabatur. Item crux ex puro et puto auro cum Cricifixo eburneo..." 214)

These are the only data we have about a so-called cross of Constantine in the St. Servatius church. There is therefore reason to investigate whether the cross of Rome is indeed that of Our Lady, since otherwise St. Servaas could claim ownership. However, are the deviations from Van Gulpen's drawing of much importance? Van Gulpen drew from memory in 1817 when the precious pieces had already disappeared and he had not seen them for twenty years. As for the large staurotheca, we see him placing the medallions on the wrong side. It can come as no surprise that his drawing of the encolpium Constantini Magni is also inaccurate. It is understandable that he places oval figures where there are relief statues, since he would not have dared to draw those figures. That Arn. Schaepkens mistook these for stones, each bearing a saint's name, is very strange. Worse still, there is nothing to be seen of the relief statue of Constantine in Van Gulpen's drawing. The failure to indicate the two rows of pearls can be explained. Even someone who has only just seen the relic will not be able to answer when asked whether these two rows of pearls are on or above and below the doors. The fact that these pearls are on the outside of the cabinet suggests that they are not visible when the doors are open. Finally, Van Gulpen places a segment-shaped head on the cabinet. Fortunately, we still have the image on the copper plate, which allows us to correct Van Gulpen almost completely. We see here - see fig. 8 - that the cabinet is flat with a support ring, through which even a ribbon has been drawn. 215) Despite the small dimensions, the eight statues of saints are clearly visible. Pearls have been applied along the four sides, although this is not entirely correct either, but it does compensate for the lack of pearls in Van Gulpen's work. The cross is very faithfully reproduced in its actual form as it can be seen in the box on the engraving. The fact that the representation of Constantine and the medallions are missing here is due to the smallness of the image.

If we add to this that the literary sources explicitly speak of a cross hanging in a

gilded silver box, then the identification of the cross in Rome as that of O. L. Vrouwekerk does not require any new evidence.

How, however, to reconcile the different texts?

122745 The cross of St. Servaas is not considered. According to the description, it had no medallions and was not in a box or capsule. Before 1672, nothing was ever heard of it. A pectoral cross of Constantine - genuine or not - would certainly have occupied a more prominent place in the treasure of St. Servaas than was the case, now that it served as an ornament on the bust of St. Servaas. It would certainly have attracted the attention of writers as it did in Our Lady's Church, and it would have been the center of a special devotion.

122750 It would certainly have attracted the attention of writers and have as was the case in O. L. Vrouwekerk, and it would have been the centre of a special devotion.

122755 However, it is so little regarded that in the great official "Catalogus Reliquiarum" it was not even indicated as a separate number, but placed on an equal footing with the precious stones that adorn the bust of St. Servaas.

We are undoubtedly dealing here with an ordinary cross, such as are so many in the treasuries of churches, originating from prelates, or votive offerings, sometimes also found in graves. 216) In the "Catalogus Reliquiarum" of 1677 of St. Servaas we find, besides the cross with the ivory Christ on no. 17, several other crosses; 217)

15. In monili argenteo rotundo. ... est crux argentea. ...

16. Sunt deinde tres tafellae nigrae. ... continentes tres cruces de Ligno S. Crucis.

84. Duae cruces in auratae habent de cruce Domini.

122765 Nos. 78 and 80 also mention crosses. 218)

In addition to the ones discussed here, the Church of Our Lady had several others. The list of 1580 mentions two gold and one silver cross. 219)

122770 The pectoral cross of Constantine in the treasury of St. Servaas fell from the sky so suddenly that we can hardly believe it. We must seek the explanation in the often-mentioned jealousy of the chapters, which led to a certain parallelism. Even in the construction history of both churches these elements of not wanting to be inferior to each other can be detected.

122775 The canons of St. Servatius displayed their relics from the dwarf gallery of the chancel, those of Our Lady had a separate gate broken in order to be able to do it in the same way and place. We have already mentioned the fierce battle for the display of the relics. 220) Joint city processions were almost impossible as a result of the disagreement about priority. As a result of this jealousy, this parallelism can also be observed in the relic treasures. We have already seen that the large Byzantine double cross was copied by St. Servatius. In addition to the two Byzantine objects discussed here, the church of Our Lady possessed a third, a capsula with Madonna, which tradition has it was painted by St. Luke. No. 15 of the Catalogue of 1677 from St. Servatius states that the crux argentea, which was found in the grave of St. Servatius, was made by St. Luke himself. This is completely consistent with the fact that St. Servaas also had to have a pectoral cross from Constantine. The Byzantine objects that Our Lady acquired from the second crusade, while we hear of no acquisitions in St. Servaas, have aroused the jealousy of this chapter in a special way.

122790 There are two possible explanations for the different text 221) of the medallions in Rome and on the Van Gulpen drawing: either Van Gulpen filled in a text that he got from an incorrect literary source on the drawing, or the cross has a back where the medallions give a different text. The latter is undoubtedly the case. In Maastricht, the side would have hung in front, on which the text reads:

Ο ΚΑΙ ΤΕΤΕΥΚΕΝ ΕΚ 222)

122795 while in Rome the other side is now visible, where one reads:

ΟΡΑ ΤΙ ΚΑΙΝΟΝ ΘΑΥΜΑ 223)

Dr. Bock wrote already in 1864 that the cross probably also has a back, where the medallions show a different text. He later learned that this text had been published by Cardinal Mai in one of his works. 224) The fact that Dr. Bock does not publish that text from Mai is probably because he could not discover it there.

122800 We have not succeeded in doing so either. In the chapter bibliography 225) we mentioned the only book by Mai in which that text could reasonably be found, namely a part of his "Scriptorum Veterum Collectio", in which inscriptions of the most diverse nature are collected. 226) In this part we found the text of the large double cross taken from Apianus and Gretserus. 227) Mai wrote this part in 1831 and it was not until 1837 that the two crosses arrived in Rome.

122805 Dr. Bock's statement about the text on the back is based on a mere conjecture. When

he has the opportunity to confirm this rumour, in 1872 228) and in 1896 229) he no longer speaks at all about the back of the cross. De Waal and Lepinsky also described the pectoral cross as if it had no back. A cord holds the cross at the back and is sealed there. This seal can be seen in our fig. 17, as well as in fig. 18 the cord itself on the inside diagonally above the lower medallion. The seal is of Cardinal Merry del Val.

In 1913 Dr. Hoogewerff, then secretary of the Dutch Historical Institute in Rome, made notes on the occasion that the two Maastricht crosses could be photographed. We have explained above under what circumstances this happened. 230) In the personal notes of Dr. Hoogewerff, of which Dr. Kalf kindly granted us access, both inscriptions are given. We would have the solution of the case here, if it had not become apparent to us that Dr. Hoogewerff had only seen one inscription. On that occasion, a total of seven photographs were taken, all seven of which we had a look at. 231) No photograph was taken of the back. This would certainly have been the case, if the possibility had existed. Just as for Dr. Bock in 1862, the seal was not broken in 1913. When Dr. Hoogewerff now gives a text of the back, he did not have this from his own observations. The fact that he accompanies the text of the inscription with a metrical translation in Latin strengthens the suspicion that this was not recorded from the jewel itself, but was drawn from a literary source. This source must have been directly or indirectly the ms. [manuscript?] Van Gulpen in Maastricht. Now, do the verses themselves not answer the question whether they can stand on one and the same cross?

Since we are no longer dealing with classical verse here, it will be difficult to draw a conclusion from the rhythm. As for the form of the letters, we dare not draw a certain conclusion either, since we have to compare the original with the drawing. In both cases, the round sigma C and the W are not capitalized, but the other letters cannot be compared.

The content of the verses offers more certainty:

"See what a wonderful thing, what a rare grace, of gold from outside, but within you see Christ. Which has been made, with humble mind, John, praying for forgiveness of his sins".

As for the meaning, the verses fit together well, ... is relatively easier to explain than demonstratively. Although the latter is not impossible, one would expect it to be, while also as a stop word instead of or also indicates something that continues. The Greek inscriptions on crosses that we know usually first give a praise of the Holy Cross Wood and in the second part the information about who had it made. This is the case with the patriarchal double cross of Maastricht, which in four verses has the profound thought about the Holy Cross Wood, instrument of Christ's death bringing life for us, and in the last four verses names John as the one who decorated it with gold and precious stones.

The same dual character has the inscription of the Byzantine double cross of Monte Cassino, which reads according to D. Mauro Inguanez' translation:

"The wood, which conquered the death, which was caused by the wood" and then: "Romanos has worthily decorated with gold, because this gold is an ornament of Christ himself". 232)

The cross of Limburg on the Lahn also in the same way. 233) First:

"God stretched out his hands on the wood, pouring out the powers of life through it". Then follows the statement that Constantinos and Romanos, the emperors, decorated it beautifully.

These parallels, although they are ordinary crosses and not pectoral crosses - we are not aware of a second Byzantine pectoral cross from that time - give us the conviction that we can consider this writing as a whole.

Added to the data of the describers, we assume that the cross in Rome is one and the same as that of the Church of Our Lady in Maastricht.

XII. The oldest history of the pectoral cross.

Tradition has it that our cross was the pectoral cross of Emperor Constantine the Great. Dr. Kalf in the eleventh annual report of the National Commission for Monument Care 234) doubts this and claims that it is certainly not older than the sixth century. In the Provisional List of Dutch Monuments of History and Art, 235) it is therefore noted as being from the 6th-7th century. Angelo Lepinsky 236) assumes the fifth or sixth century, 237) and believes that it did not belong to Constantine, whose taste was less refined, but to Justinian (527-565). There is, however, a great difference in style between the encolpium Constantini magni and, for example, the cross of Justin (518-527), the predecessor of Justinian. This cross, which also

belongs to the church treasure of St. Peter in Rome, is of a more elegant form and shows, especially in its medallions and floral figures, a more even workmanship, from which the skill of the classics is still evident. 238)

De Waal 239) however, following Dr. Bock 240) reckons it to the 11th to 12th century and we consider the dating of Dr. Bock in his *Byzantinischen Zellschmelzen*, 241) where he places this piece in the beginning of the 12th century on the basis of his knowledge of enamel. The possibility that the cross was worn by Constantine is not ruled out by this, as we shall see. The cross names a certain Joannes as its maker, without further indication of who this Joannes is. Mart. van Heylerhoff 242) and Flament 243) see this Joannes as the maker of the jewel, the goldsmith. We know of no examples of the aurifaber in Byzantine art putting his name on his work in such a conspicuous manner. This seems unlikely, especially on a small pectoral cross like ours. On the other hand, there are several crosses on which emperors, Romanos 244) or Konstantinos 245) or a high-ranking person like Basilius de c, that is the chairman of the senate 246) are mentioned as those who decorated the Holy Cross wood. Why not assume here as the most obvious thing, that Joannes was one of the emperors of that name. This was probably considered impossible because no emperor of that name appears among the first successors of Constantine. Since the encolpium as a whole is dated much later, this John will be: either John I Timisces (969-976), the successor of Nicephorus Phocas, or John II Comnenos, the successor of Alexios Comnenos. We consider this John, who reigned from 1118-1143, to be the one who had this encolpium made. In Byzantium, relics were a matter of state, which primarily concerned the emperor. There are many imperial decrees concerning relics to prove this. We saw Emperor Romanos I open the imperial treasuries and give away a large piece of the Holy Cross wood to the monks of the monastery of Xeropotamu. 247) Alexios even arbitrarily disposed of the relics that were kept in the churches of Constantinople. 248) The dating of our cross by Dr. Bock in the first half of the twelfth century - which dating was done completely independently of the inscription with the name Joannes, since Dr. Bock did not know it - points with a fair degree of certainty to Johannes II as the maker of the cross.

In the description of the pectoral cross we have already mentioned 249) on which Dr. Bock bases his dating, mainly the enamel cloisonné. This agrees with the general view that the use of enamel only occurs sporadically in the 6th century, but only becomes general in the 9th century. 250)

Dr. Bock's dating is partial. She does not rule out that parts of this jewel are of older date and this seems very likely to us. The first impression is that this cross was only hung in the golden shrine afterwards. Initially with the intention to take it out of the gold case when it had to be worn, later - as is evident from the carrying ring on the case itself - it was worn in its entirety. This corresponds to the rigidity of the ceremonial and the stiff pomp at the Byzantine court, which increased as the power of the basileus decreased and his territory shrank.

If we see Emperor John II decorating the cross at the beginning of the twelfth century, as is evident from the enamel inscriptions, then the question remains as to what this decoration consisted of. We assume that he had special reasons to hang this cross in such a box that was extremely valuable even for Byzantium. And then the tradition that we are dealing here with.

Incidentally, we do not have to regard it as something special that in those days the real pectoral cross of Constantine was still preserved. Niketas testifies that in the days of Andronikos Comnenos the crown of Constantine was still preserved. It hung above the altar in the Aya Sophia. It so happens that the Greek sources mention the pectoral cross of Constantine precisely in connection with Emperor John II. In a treaty of John II, concluded in the year 1138 with the emir of Schaizar, the emir returns a cross decorated with precious stones, which had been taken from Romanos Diogenes when he had been defeated in the battle of Mantzikert (1071) and had fallen into captivity. 251)

The hypothesis becomes very tempting here: Byzantium of course still possessed a pectoral cross of Emperor Constantine. The emperors used to wear this pectoral cross when they went up against the pagans. Romanos Diogenes falls into captivity in the defeat of Mantzikert in 1071, where he is forced to enter into an extremely humiliating peace, which is to last fifty years. In 1138 another emperor stands against the Muslims and he receives the imperial pectoral cross back in negotiations. Will he not have the jewel, which had been in the hands of the Turks for so long, embellished and decorated?!

This supposed course of events overcomes the difficulty of the different dating of the cited art historians. Even Lepinsky's objection that Constantine's taste was not so refined disappears.

- 122940 But despite all probability, this hypothesis will only gain a firm basis if the description of the cross from 1138 would correspond with the Maastricht pectoral cross of Constantine. And precisely this correspondence will remain unprovable because we also assume that John II immediately had the necessary embellishments applied, which will certainly make the cross unrecognizable.
- 122945 What reports do we now have concerning that peace treaty of the year 1138? Nicetas relates as follows: 252)
20. Having thus taken from the besieged splendid gifts, both those of wood, more precious than all (kinds of wood), as well as horses with strong necks and of good breed, and silken woven cloths interwoven with gold, and a table worth seeing, but before all this *having taken in his hands a cross, a brilliant object and regaling the sight, with a luminous stone inserted, on which the knust naturally revealed an inscription relating to the triumphant beauty of the divine image and the artless delicacy of the eyes, he raised the siege*, taking the road to Antioch.
- 122950 This description of the cross then surrendered supports our hypothesis to a very small extent. The luminous stone may perhaps still be understood as the rock crystal cross that covers the cross wood, but it is more likely that an extra-large and brilliant gemstone is meant here. The fact that there was already an inscription on it does not correspond with our starting point, that the inscription of our cross dates from the time of John II himself. The above description can hardly be understood otherwise than that a figurative representation appears on it.
- 122955 In a second writer, John Kinnamos, we read about the same event: 253)
7. Because (the emperor) noticed that the attacks were always in vain, he entered into a peace treaty, after having received the embassy; great treasures were now brought to him, *a cross was also brought, an extraordinary treasure and a worthy gift for emperors*.
- 122965 10. *There was a luminous stone of considerable size; because it had been cut according to the shape of the cross, it had lost a little of its natural surface during the cutting*. The envoy told the emperor that Constantine had had it made and that it had somehow fallen into the hands of the Saracens. After receiving these
- 122970 (treasures), ... etc.
- Although Kinnamos mentions Constantine, and it could all fit together quite nicely, we can hardly draw the positive conclusion that the cross of Mantzikert and of 1138 is the same one that Emperor John had decorated to obtain forgiveness for his sins, and that came to Maastricht during the plundering of Constantinople. On the other
- 122975 hand, there is no reason to reject the tradition that this would be the pectoral cross of Constantine as completely impossible.
- The priest from Maastricht, who brought this jewel to Maastricht as pious booty, together with the large double cross of Emperor Romanos, did indeed make a good grab and showed expertise. No wonder! After all, he had been in Byzantium for quite some
- 122980 time, as Reinerus Monachus tells us! The question of how the cross came to Maastricht must be examined in more detail.
- The treasury of the Basilica of Our Lady still possesses a precious silver cabinet with Madonna, executed in enamel, also of Byzantine origin. 254) Tradition has it
- 122985 that this gem came to Maastricht at the same time as the two art treasures discussed here. Reinerus Monachus' reliable statement teaches us that this happened in the days of the fourth crusade. 255)
- Among the numerous clerics who responded to the invitation of Baldwin of Constantinople and were enriched by him, is the unnamed Maastricht priest who came to
- 122990 Maastricht in 1206 with the large cross and donated it "*cum aliis pretiosis reliquiis*" to the Church of Our Lady. Reinerus also tells us that this cleric had already been in Constantinople for seven years and had been looking for a favourable opportunity for a long time. He was not among the swarm of priests who arrived later, and this explains why he managed to get hold of the most precious pieces.
- 122995 Earlier 256) we have already become acquainted with a cleric who, in the same way, only intent on pious booty, managed to get hold of quite a few relics during the plundering of Constantinople, namely Martinus Lintzius, the abbot of Pairis, about whose adventures Guntherus Monachus informs us extensively. 257) Guntherus also relates that Philip of Swabia received a large number of relics as a gift from
- 123000 Martinus Lintzius. Gretserus deduced from this that Philip, distributing his treasures, gave Maastricht the three precious Byzantine pieces. Guntherus here calls the gift to Philip a "*laudabilem partem*", but since he immediately afterwards describes a "*tabula*" of inestimable value, we are more inclined to assume that Philip received only this "*tabula*", for which he in turn confirmed the abbey of Pairis in
- 123005 possession of the other relics. If on that occasion a large piece such as the

Byzantine double cross had been forgiven, this would certainly have been mentioned by Guntherus. Gretserus, who had only seen the image of the so-called cross of Constantine on the Relic Plate, 258) sees this cross in the "tabula", which Philips received as a gift and which Guntherus describes in detail. 259)

123010 Now that we, in contrast to Gretserus, have an accurate description and image at our disposal, the major differences are immediately apparent. The "tabula" of the abbot of Pairis, to name just one thing, is not a cross and does not contain a cross either.

123015 So, as far as the small cross is concerned, there is not the slightest connection between the valuables of the Pairis Abbey and the Byzantine objects from the church treasure of Our Lady. A priest from Maastricht brought these rare pieces to his home town and placed the church of Our Lady in the ranks of Western European churches, where priceless treasures would have been safely preserved for centuries, saved from the advancing Turks.

123020 The advancing French Republicans caused the precious pieces to travel through Europe again six centuries later and find a new place of preservation in Rome.

July 9, 1962 **Spring of Christian art**

123025 MAASTRICHT, July 9 - In the context of the Maastricht Heiligdomsvaart, Cardinal Alfrink opened an exhibition of early Christian and early medieval art in the Bonnefantenmuseum on Saturday evening. Numerically, the exhibition is not very extensive, according to Cardinal Alfrink, but this does not detract from its value, because the works exhibited here give a good picture of the natural relationship between faith and culture.

123030 The chairman of the working committee, Father Clodoald van Meijel O.F.M. welcomed the cardinal and all other ecclesiastical and secular authorities and spoke words of thanks to the many domestic and foreign museums that donated works for this exhibition. According to him, the willingness of the Vatican Museums to lend twelve precious works of art to Maastricht deserves special mention. Among these works of

123035 art is one of the two treasures that ended up in Rome from Maastricht, namely the Byzantine double cross and the pectoral cross of Constantine the Great. Almost 125 years ago, one of the last canons of the chapter of the Church of Our Lady, the then pastor of the St. Mathijs parish M. R. Lijsens, transferred both treasures to Pope Gregory XVI through the mediation of the diplomat Paul van der Vrecken. This transfer

123040 was accompanied by a little too much goodwill. Amid great hilarity among those present, Father Clodoald noted that the current residents of Maastricht cannot share the position of Canon Lijsens. Father Clodoald had to complete the necessary formalities in Rome before he could receive the cross of Constantine. An extensive committee of prelates was involved and a notarial deed of 27 folios. The sealed treasure - insured for half a million guilders - had to be opened by order of Rome in the presence of the bishop of Roermond. He authorized the dean of Maastricht, Mgr. P. J. M. Jenneskens, to do so. A notarial deed of the receipt of the cross has been drawn up, which has now been sent to Rome.

123050 The exhibition features valuable works of art from the pagan prehistory, from the early Christian period, the Frankish, Merovingian and Carolingian eras, as well as from the early Middle Ages. Prof. J. J. M. Timmers, director of the Bonnefantenmuseum, therefore gave this exhibition, which will remain open until 30 September, the title "Spring of Christian Art". The designer has paid special attention to the period between the year 384, when St. Servatius, the first bishop of Maastricht, died and the year 1200, when the most precious reliquary of Maastricht, the emergency chest, was made.

Eindhoven, August 20, 2018

Dear Madam, Sir,

123060 In 1913, a certain Dr. Hoogewerff, the secretary of the Dutch Historical Institute in Rome, made notes on the occasion that the two Maastricht crosses could be photographed.

123065 These two Byzantine crosses were donated to the Vatican from Maastricht in 1837. One of them (a small cross that was kept in a golden box) most likely belonged to Constantine the Great and was therefore much older. They were photographed in 1913 when Hoogewerff was present. Better photos are not known, although I have written to the various Vatican museums and libraries about this, but at the moment it is not clear where the box with the cross is located and whether there are modern photos of it.

123070 Is there a report or something like that at your institute of this meeting in the Vatican?

Naspeuringen van Paul Theelen: Constantinus Imperator

Dear Mr. Theelen,

We have forwarded your request to Dr. Arno Witte, Head of Art History. Perhaps he can help you further after his return from vacation (27 August).

Kind regards,

Agnieszka Irena Konkol

Secretary Office

Royal Netherlands Institute Rome

Royal Netherlands Institute in Rome

Reale Istituto Neerlandese di Roma

Via Omero 10-12, 00197 Rome

Tel. (0039)063269621 www.knir.it

Dear Mr. Theelen,

I received your email forwarded from our secretariat, of course with the question whether I could answer it. As for the archive material of our institute, most of it (but especially the institutional matters) ended up in the National Archives because the then NIR was part of the Ministry of Education, Culture and Science and/or

Foreign Affairs. What is in it about Hoogewerff mainly concerns his directorship. As far as I know, hardly anything of Hoogewerff was left behind in Rome, but I can check that the day after tomorrow when I am back in the office. In any case, the chance that we have that material seems quite small, I fear.

You will hear from me whether we have anything in Rome!

Kind regards,

Arnold Witte

Royal Netherlands Institute in Rome

Dr. Arnold Witte

Head of Art History

E a.witte@knir.it

M (+39) 334-3304153

W <http://knir.academia.edu/ArnoldWitte>

August 23, 2018 Dear Paul Theelen,

now back at my desk in the Roman I checked here how things are with the archive documents of Hoogewerff and where they ended up. As I already wrote, the administrative archive is mainly in the National Archives but as I suspected, a part also ended up at the RKD (Rijksbureau Kunsthistorische Documentatie) in The Hague, a personal archive. I quote from an internal document about the KNIR archive:

"During the processing of the NIR archive in 2000-2001, several other collections or work archives were also arranged. The estate of the former director G.J. Hoogewerff was transferred to the Netherlands Institute for Art History in The Hague". This archive is also listed on the RKD website: see

<https://rkd.nl/nl/explore/collections/record?filters%5Bidentificatie.verantw.afdeling%5D%5B0%5D=Archivalia+%26+Excerpten&filters%5Binhoudelijke.beschr.trefw.period%5D%5B0%5D=20ste+eeuw%2C+eerste+helft&filters%5Binhoudelijke.beschr.trefw.pers%5D%5B0%5D=Hoogewerff%2C+Godefridus+Johannes&query=&start=0>

I hope that more material can be found there, including Hoogewerff's notes. In any case, there is an inventory that gives some idea of what is in it. As for research into those crosses, I think they are indeed in the library, where many diplomatic gifts to the popes ended up - and they were usually not inventoried, and so they are untraceable. I would contact them, hoping they have some idea. As for further research into them, that seems very interesting to me, but unfortunately I don't have any spare quarters, and I know from experience that this takes days of work, in the form of talking to all kinds of people who might know something. And I can do that, but then you will receive an invoice from our director...

Kind regards

Arnold Witte

Eindhoven, August 22, 2018

Dear Mr. Witte,

Many thanks for your answer regarding my question about your institute. I don't expect you to be able to find anything substantial, but perhaps you have contacts here and there, which I can never have. So this is what it is about: in 1837, Canon van der Vrecken of the Church of Our Lady in Maastricht completely legally donated two Byzantine crosses to the Pope (personally, I think). They were then donated to the Vatican Institute and are also recorded as such, because they have been published

regularly, the most important study being the dissertation by Charles Thewissen from 1939. It contains a wealth of information about the works of art in the treasury of that church and of the competing St. Servaas Church. It is now mainly about a small cross (about 8x6 cm I estimate) that was kept in a golden box. This small cross - of which a few black and white photos exist - is said to have been the pectoral cross of Constantine the Great, in the sense that the wooden splinter of the Holy Cross that his mother had dug up in Jerusalem around 328 was contained in a holder in the shape of a cross, which was later given an extra covering, the cross that we can still see in the photos. There are no photos from 1939 because they were apparently not allowed to be taken, and photos from 1913 had to be used. Images of the back of the cross are not known at all, because the seal (of a bell jar?) was not allowed to be broken. Dr. Hoogewerff from your institute seems to have been there in 1913.

I contacted the Vatican Museum, but they do not know the two crosses and is referred to two other institutions, which have not (yet) responded substantively. Apparently these crosses (together or separately) have been swallowed up in the abundance of works of art in the Vatican. The day before yesterday, Monday, I received a response from Inventario Generale, which does not know it and refers to Biblioteca Apostolica Vaticana and the treasury of St. Peter's, see below.

In the past, several attempts have been made to get the crosses back, but the Vatican has refused to give them up again.

Could you - in a few lost quarters of an hour - do some research into the crosses, in particular that of Constantine the Great?

Picture of the "Encolpium Constantini Magni" available?

Eindhoven, 19 August 2018

Dear madam, sir,

Since 1837 (otherwise said since 1795, the French invasion in the Netherlands) the Vatican possesses the Encolpium Constantini Magni. It came from the Treasury of the Onze-Lieve-Vrouwekerk in Maastricht. In a small golden box a small cross is contained, of which it is said that it belonged to Constantine the Great.

I am gathering (on paper or as a computer file of course) all items that belonged to Constantine, and it came as a surprise that this cross existed at our days, and that it was part of a church treasury in my country.

It has been described by different persons, as Beck and Willemsen and in 1939 appeared a thesis on both Byzantine crosses in your possession. The title of the thesis is TWO BYZANTINE HOLY CROSS RELICS. The author M.A.F.Ch. Thewissen had studied the crosses but did not make photographs himself, and he used older pictures of Lepinsky and De Waal. The author claims that there does not exist a picture of the back of the cross, but the front can be seen in his book as picture 18, in black-and-white and very grainy, because it was made in 1913. Do you have high-resolution photographs of the Encolpium Constantini Magni? If so, I would like to receive a digital file. When used in an article I of course shall mention the source of the picture.

Dear Mr. Theelen, thank you for your kind message. Unfortunately, the artifact you are interested in is not part of the Vatican Museums' collections.

However, since other Vatican institutions possess collections of art and archaeology, it might be possible that the Encolpion is among the Vatican Library collections (bav@vatlib.it or in the Treasury of the St. Peter's Basilica (amministrazione@capitolosp.va). I wish you all the best for your research and remain Yours very truly Alessandra Uncini Registrar of Collections, Vatican Museums ig.musei@scv.va

July 23, 1917 The remarkable church in Asselt (Limburg)

I. THE MAAS.

The Limburgers are largely inhabitants of the Maas Valley.

The Maas has a long south-northern course in the southern province. But people are mistaken in thinking that it also wanted to follow the right direction in specific details. Alternately turning towards the foothills of the marl hills near Maastricht and washing their feet, then again choosing open spaces and flowing in large arcs through the lowlands, originally with a speed as if in a hurry to reach the sea - further north, undermining the high banks or leveling out hollows and gullies, while at Arcen, Well, Bergen, and higher up, it has always maintained a dynamic flow against the sand dunes and heathlands. In summer, waterless and lazy, in winter,

abundantly watery and wild. For Limburg, the river has always been of the utmost importance, even in the past.

Carried by its waters, the Romans reached the Maasgouw region and established fortifications here, as well as along the Rhine. Maastricht (Trajectum ad Mosam), Kessel (Castellum), Blerick (Blariacum), Geysteren (Castrum), and Cuijck (Ceuchum) still recall their stay. They brought Roman customs, habits, tools, and luxury items here, while it is reasonable to suspect that they taught the native population to make necessary and useful items such as bricks, pans, pots, and metal objects. The inhabitants certainly also saw the distant, quivering glow of the new Light that emerged from Rome's Catacombs, shone in the palaces of the Caesars, and could no longer be extinguished or killed by torture and the killing of the porters in the Arena and the Colosseum.

Along the Maas also worked the preachers of the faith: Saint Lambert, Saint Servatius, Saint Boniface, the noble trio of Saint Odilienberg, Saints Otger, Wiro, and Plechelmus, zealous servants of that same Light that illuminated the world and had found its way both in the fishing villages by the sea on the chalk cliffs of Britain, and in the dark forests of the Ardennes and the glorious regions of Gaul and Iberia.

But besides happiness and salvation, the Maas also brought destruction. Not only when heavy rains filled the upper valleys, and the water, compressed between the rocky, high banks of the Waterland, rushed unchecked, destroying huts and farms that had appeared on the plain, felling forests and replacing mud with sand, but the Maas also brought the dragon ships of the Norsemen, the savage robbers, to Elsloo, thus bringing the tyrants to the peaceful land.

These too disappeared, and when Peter of Amiens had inflamed the people with holy fervor for the Crusade, the knights of the Maas castles, the shield-bearers from the Weert region, the lords and serfs of the castles marched under the banner of the cross and greeted the river's source land as the gathering place for the holy war. Yet the people of Limburg loved and still love the Maas. They grew up with it, after having spent their childhood playing on its banks. He knows her as the untamed giantess, who does well in good humor and takes pleasure in the well-being of her people—who, however, has become ferocious, abuses her power, howling and bizarrely weary, spreading destruction through nasty, swelling, rolling waves. Is it any wonder that she has earned a place in the spoken language?

That something lost is said to be "thrown into the Maas"? That something with doubtful results "hasn't yet crossed the Maas," that for a long-term affair "a lot of water will still flow through the Maas," and that someone who has a lot of money is as rich as "the Maas" deep? Many places, certainly to distinguish them from namesakes elsewhere, derive their names from the flood, such as Maas-tricht, Maas-bracht, Maas-niel, Maas-hees, Maas-wilre. From all this, one sees that it is completely intertwined with the internal and external life of Limburg, and that a jubilant tone arose from the land of "do and do" upon hearing the news that the river would finally be canalized and improved. It was only right; it had taken half a century of praying and pleading, and a Limburg minister, a Regout, had to be appointed to put an end to this urgent problem. Praise be to him!

II. THE ROMAN TOLLHOUSE. It lies hidden against the shore, almost forgotten, "The old tollhouse, on the riverbank."

Near Roermond, from Ool to the city, and from there via Buggenum to Asselt, the river formed many graceful, wide bends, which, however, posed significant obstacles to navigation. Sometimes it wasn't satisfied with a single course, and its capricious nature suddenly led it back inland, as happened near Asselt, where it moved a hundred meters westward, leaving behind marshland and clearing and crumbling meadows.

The Romans, who came to these lands in the Imperial At that time, they were good military experts. They needed a road ahead that wouldn't be so easily blocked and that could be used to their advantage. They built fortifications along the Maas to protect against attacks by the natives and as resting places for arriving and departing soldiers. They laid out their major highways from castle to castle.

At Asselt, three-quarters of an hour north of Roermond, west of Swalmen, precisely where the river makes a large elbow and runs, as it were, directly onto the high bank, they built a tollhouse on an artificial hill, made of heavy chunks of granite and ironstone, cast together, between which old smooth tiles and round red flagstones were placed like millstones to decorate the facade.

No ship came downstream or went higher without the watchmen noticing it. The tax collector blew his horn, and the ship sailed low to the bank to pay the toll.

123270 Many a denarius was levied there as imperial dues, and given its favorable location, it is not surprising that later lords continued the practice of the cunning Romans and claimed the right to levy tolls as their own. This right is also recorded as such in the feudal records of later times, albeit under different names.

123275 In Swalmen, near Asselt, many bronze ornaments, spearheads, and urns of Roman origin have been found. In the ground of the old tollhouse, a bronze spearhead and a medieval knife with an ivory handle, such as used to be handed over to the buyer by the seller before the tax collector as proof of a completed sale, were found. From the Roman building materials found and available, and from the location, combined with the traditions passed down by writings and popular speech, one may firmly assume

123280 that the small building, built deep down on an artificial mound, was the Roman tollhouse.

III. FROM TOLLHOUSE TO CHURCH.

123285 "Then a barge glides into the reeds of the walled house,
"Three priests alight and direct their steps,
"To the old Roman site and plant the cross here."

Roman power shrank considerably during the third and fourth centuries due to barbarian attacks. It almost disappeared entirely in the middle of the fifth century. The Franks made wide inroads and also lived in Limburg and Kempenland. In 357, they

123290 conquered Maastricht, which was recaptured under Julian the Apostate. Christianity was introduced by Clovi after the Battle of Zulpich or Tolbiac near Düren in 496. But better times had already dawned for Christianity earlier, in 324, with the conversion of Emperor Constantine the Great. The system of persecution had disappeared. As long as the Franks were still pagan, there was no spread of the Christian Church in

123295 Limburg. After Chlodwig (495), complete conversion occurred. The founders were Saints Lambert, Willebrord, Miro, Otger, and Plechhelmus. Christian churches arose on the foundations of Roman houses and temples. In Horn, a votive stone to Mars was found in the foundations, in Wijde, a similar one to Mars, in Kessel, under the main altar, to Hercules, in Asselt, Roman tiles in the walls, etc.

123300 When the evangelists arrived in Asselt, they found the Roman tollhouse there. They used the detached house, situated on a hill, to establish a shrine and plant the cross. The continued existence of Asselt as a church and parish, essentially separate from Swalmen, speaks for its prestige. Asselt also stands as the ecclesia matrix, as the mother church of the Swalmen church.

123305 Baptismal and death registers, ministry, and income have always been separate. Due to the limited site and the small size of the old tollhouse, the first church building was also small, single-nave with a brick tower added on the east side, after the former had disappeared into the river during high tide. The church's material remained the old, rough, unpreserved stone that had served in the initial

123310 construction.

Near the church, the first settlement on the high bank had gradually grown into a not insignificant hamlet. This was due to its favorable location in the large bend, the deep channel, right along the Asselt bank, where heavily laden ships could safely

123315 anchor. The products of Wallonia—coal, slate, stone, and marl—were unloaded there and then transported by road to Gulikerland. The large houses, whose windows and doors are made of bluestone, still clearly show that a lot of money was earned here in the past. Moreover, the land behind the houses, towards Aldenborg and Swalmen, is fertile and has also helped to make Asselt prosperous. However, the church always remained the gathering place for the population, which consisted of farmers, merchants, and

123320 skippers.

IV. BRIEF HISTORY OF THE CHURCH.

"The pain of war is causing the village great suffering."
"The Church, however, offers comfort for the worries of this world."

123325 While the entire world now contemplates death and destruction, it's a soothing impression to see the landscape surrounding the gray church so calmly peaceful and tranquil. The predominant color is green, but each part is colored in a different shade. The freshly mown floodplains are bright yellow-green, the wishwood is silver-gray interspersed with green, and the woods and clumps of trees in the background glow dark green against the light blue sky.

123330 The small pond before us, at the foot of the church wall, is a remnant of the old Maas arm and boasts a raised fringe of irises, while its dark surface is speckled with white lilies and large leaves. Hay carts come and go, and flocks of starlings roam the air, their busy twittering sounds. The sun bathes the small church in full

123335 light. It seems to be situated on a bastion, and with its strong walls, it feared no

attacks from the Maas. The steps, overshadowed by the foliage of a pollarded linden, lead us to the church level, which has been converted into a cemetery. Wild roses grow over and along the graves, while bluebells and wild field flowers strive to maintain their place alongside the lilies and roses planted by reverent hands. Here, for centuries, the village dead were laid to rest. In the shadow of the hallowed walls, they had to rest where they had so often found peace and solace in their lives, near the Maas River, which had given them the example of an ending and return to the infinite beginning, and whose waves and radiance had become dear to them. The church stands in the middle of the walled cemetery. A stone in the church's front wall, dating from the 15th century and written in Gothic letters, tells us that "Beel Ruese myt hore Kinderen" (Bear Ruese, my children, hear them) are buried there, who, according to tradition, perished simultaneously in a fire. A cross from 1558 invokes a prayer for "Jan Ruesse," probably a relative of the previous one. It is also noteworthy that from 1608 to 1609, Godefridus Ruijtsen was in charge of pastoral care in Asselt. Another gravestone mentions that Derk Aquarius died on January 4, 1679, and his wife, Agnes Beek, on February 24, 1673. The Aquarius family, formerly known as the van der Maesen family, is well-known throughout the country. Therefore, it would be desirable if the family ensured that this stone was re-placed in such a way as to preserve it from destruction, just like the nearby stone of a member of the Vogels family. A grave cross belonging to alderman Quiten is still present. A new small grave monument, simple in style and fitting in its simplicity, commemorating the late, worthy mayor Hendriex van Sijperhof, stands to the right of the entrance. The sun still sends down glow and sparkling rays of warmth through the pure air. The door in the tower, giving access to the church, stands wide open! The brick tower is not high and, in its modesty and proportion, forms a single entity with the small church, which itself strives to be simple with Asselt and its residents. The tower, as we have already mentioned in passing, originally stood on the other side, but was undermined by the never-ceasing floodwaters and finally swallowed by the water on a stormy winter night. Afterwards, it was raised in a safer location on the east side, and the part of the church that had crumbled along with the tower was rebuilt in brick. The altar was then placed beneath the tower, with the entrance on the north side. With two other altars, a few pews, and a wooden upper choir, the building was overcrowded and far too small for the population, which had grown by half in two centuries. Yet, its original purpose as a secular building was still evident from its location at the foot of the Maas River, where the houses were meters higher on the elevated bank. It was also evident from the simple, straight shape without ornamentation, the large, flat eastern facade, and the building materials, a mix of round and flat Roman tiles and flagstones. The masonry is rustic, cast from ironstone, granite, and sandstone, brought from more southern regions rather than locally sourced. Through additions and extensions, efforts were later made to give the whole structure the appearance of a parish church, a title they were so proud of. Asselt and Swalmen were two parishes, but Asselt was the mother church, whose history, however little recorded, was lost in the distant past. Swalmen, the residence of the gracious lord, with its castles of Hillenrade and Aldenborg, repeatedly disputed Asselt's right to reside there, claiming that the rectory was dependent on or subordinate to that of Swalmen. Lawsuits were filed, evidence was presented, and Asselt retained its independence to this day. In these legal documents, one learns about the tragic times and circumstances, how the church had fallen into disrepair in 1555, how it lay abandoned in 1570 after the attack by the Prince of Orange on Roermond, and how both the villages were half burned and completely pillaged. The ancient baptismal font on four pillars was broken; only the base was later recovered and has now been returned to its original purpose. Afterward, the fate of the small church, with its main altar and the side altars of Saint Catherine and Saint Agnes, became a concern. The court documents and church inspections offer a glimpse into history. In 1618, Theodora Maesen, aged 53, testified in an interrogation that Mass was said on Sundays and feast days, that sermons were preached, and that the parish priest had the right to assemble. A church inspection from February 11, 1669, states: that the main altar was used, that the Blessed Sacrament was kept on the side facing the Gospel in a well-locked wall cabinet, that the sanctuary lamp was lit with 25 cans of oil per year; That D. Joannes van Haeff was pastor of Swalmen and also of Asselt, that there was no parsonage. There were 254 communicants at the time and no dissidents. The baptismal font was located at the end of the choir, but was later moved to the back of the church. The baptismal register begins in 1617, that of marriages in 1621. The church council and alms masters were founded by Agnes van Asselt. On the Epistle side of the Gospel stands the altar of St. Agnes, founded by

Agnes van Asselt, and on the Epistle side stands the altar of St. Catherine. There was a brotherhood of Our Lady, endowed by Joannes Quiten. The cemetery is walled. The school is in the village of Swalmen. In the 1703 church inspection, the number of communicants had grown to 300. The two side altars were served by the vice-pastor, who also provided the foundation's income. He was required to teach the Catechism on Sundays and feast days. The sacristan was Petrus Rusch, appointed by the Marquis Schenck of Hillenrade.

In the booklet "Contributions to the history of Asselt and Swalmen" by A. Heffens, one can find more details of our time. The church was maintained as well as possible, but the ravages of time made their power increasingly felt.

"The tooth of time, never resting, continues to gnaw."

"He demolishes the wall, the arch, the wooden roof vault."

"Thus the church stood before us; what good is bitter lamentation?"

"Here is the man's word: go now and help yourself."

V. THE RESTORED CHURCH.

"His work will soon be completed; who will not praise it now?"

"And praise it as a good, a most Christian work?"

For the current circumstances, the church of Asselt had become far too small. Traces of decay were visible everywhere. This was because the limited resources only allowed for patchwork. Both reasons demanded swift action. The rector had been complaining of his plight long enough. During a visit by the Dutch Lion Society to Asselt and Hillenrade, led by the Provincial Society of Limburg, all fifty attendees, including Dr. Cuypers and many experts, loudly expressed their support for the urgent need for restoration, a sentiment later echoed by the newspapers. This visit was fruitful, as Dr. Cuypers took the initiative and convinced the government of the building's high value from an art-historical perspective. It was declared a monument, and the work was successfully completed, as we shall see.

To clearly show how it was arranged in the past and how it is now, we place the old floor plan alongside the current one below.

It is now a small cruciform church. It is perfectly constructed in the same form, the same material, and the same simplicity, enlarged and improved. The main features now include the tower, vestibule, nave, transept, choir, chapel, and sacristy. The two side towers lead via spiral staircases to the oxal and the children's upper choir. The whole has become a peaceful, charming, and attractive little church!

As can be seen from the aforementioned layout, the space has been maximized; it is liturgically arranged as purely as circumstances permitted and offers more than twice as much space as before. First, a word about the vaults. The stellar vaults are early Gothic, smaller and larger in proportion to the space; on the higher choir stands the high altar, made of reddish-brown veined marble, with the cross and the alpha and omega in the center in white and gold. The communion rail in Savonniere stone, made by Karel Lückner of Roermond, depicting the Savior's words, "Come to Me, all who are burdened and heavy laden, and I will lighten your load," has made me so highly esteem his work that I recommend seeing it and judging for yourself whether it pleases the eye and speaks to the spirit. The first station is also carved in Savonniere and lightly tinted. A few years ago, I saw the same stations on the exterior of the church as a bas-relief in the now Evangelical church in Treysa, Hesse. They are also found in other Hessian churches. The stained-glass windows by the Lord of Hillenrade, Herman Jozeph Rijksgraaf Wolff Metternich, and his wife Amelia Schall Riauco

The paintings donated by the Saxon Imperial Counts' family are not overloaded and are very meaningfully composed. In the window above the high altar, Christ is depicted teaching, accompanied by the four oldest Church Fathers and the four Evangelists; in the right and left windows of the nave are the twelve apostles; on the right in the hall are Saints Lambert and Boniface, and on the left are Saints Servatius and Willebrord. Thus, the history of the development of the Church in general, and that of the Netherlands and Limburg in particular, is depicted.

To the right of the choir lies a small hall, accessible from outside, the children's chapel. Mindful of the Savior's words, "Let the little ones come to me," their place is close to the altar, from where they can closely observe the sacred acts. The decoration of the three walls was undertaken by a top-notch artist, Miss Willebeeck Le Maire. The outlines of the depictions are incised into the edgestone; the statues themselves are tinted primarily in the blue gamma. The work is made in much the same way as one sees it on Egyptian monuments, carved into the flat wall on monoliths, rock tombs, and friezes. Most of the figures are also depicted from the side and repeated with some distinct movement. The main figure is turned more towards the

viewer. This creates a concentration of attention on the main figure and a soothing calm in the other.

Anyone who would expect such a depiction to leave the viewer cold through its mechanism is mistaken. It speaks to you as a revelation of captivating charm, of a convincing effect on the mind.

The Christ Child preaches to a double crowd of children. One must observe the reverence expressed by the gaze upon the little teacher, see the maternal pride of the Virgin Mary, and consider the trust of Saint Joseph, to sense the power of the depiction in that simplicity of line. The execution has reconciled me to the method and brought me closer to Toorop's ideal art, with which it shares similarities.

The figure of the little one, stretching out his hands and arms in amazement towards the Christ Child, is delightful, as are those of the Virgin Mary and Saint Francis. The artist has achieved the intended goal: she speaks a comprehensible and endearing language to the minds of the little ones.

We could say even more about the interior design. Also about the beautiful painting, said to be by Frans Wouwen, depicting the Savior on the cross.

He still extends his arms as if to draw everyone to himself. Also about the small church, now so magnificently restored, but which still lacks so many important items: baptismal font, organ, glass, and furniture. Rector Conraedts and his successor have undertaken many undertakings, supported by many, but the costs are considerable. The work has been recognized as a work of general Christian historical and archaeological value. Future generations will be grateful for the preservation of this monument.

Is it too much to say then if we once again warmly commend this unique monument of early Christian art to everyone's support? On August 5th and 6th, there will be a celebration in Asselt for the solemn inauguration. Authorities, music and art associations will join forces with the rector of Asselt and the residents to record this day as a remarkable one in the annals of Limburg's regional history. May the end crown the work with God's blessing.

A. F. VAN BEURDEN. Roermond.

July 1, 1926, before 1848? Scent bottle from Heel

Rector R. Driessen of Heel donated a well-preserved "balsamarium," or scent bottle, which was found there in a Roman crematorium.

ACQUISITIONS FOR THE MUSEUM.

The Gallo-Germanic urn, which was found at the Chapel in 't Zand in Roermond and donated to our Museum by Mr. H. Rayman (see Maasg. 1827 [1927?], p. 10), has taken its place in the Museum after first being restored at the National Museum of Antiquities in Leiden.

Mr. Frits Smeets of Echt, who has made a careful study of the sites of ancient pottery in Echt and the surrounding area, donated a collection of fragments to our Museum, primarily of Gallo-Germanic pottery. This donation is greatly appreciated because it is important for the study of prehistoric settlements in Central Limburg.

PRAISE FOR HELP.
The old church in Asselt, which our Society visited in the autumn, is threatened. We therefore strongly recommend reading the enclosed circular and hope that the request for a small contribution will not go unanswered.
The Editor.

June 11, 1932 HISTORY OF ASSELT

[...] When the Trappist Fathers of Achel Abbey recently began an investigation into the possessions lost to their monastery during the French Revolution, hoping to reconstruct the old altar in its original form, they were referred from Deurne to Asselt. They no longer found the altar in question there, but they did find remnants of it in the museum, which they recognized from old photographs. The description they gave and had of it matched the old altar in Asselt in every detail. They found the painting that had belonged to it as a retable, now framed as a valuable piece.

Although the monks submitted the necessary convincing evidence and were eager to have it back in their possession, they had to yield to the Asselt argument that they could uphold their rights to this piece, which had long since expired. During the negotiations, it further emerged that the possibility cannot be ruled out that the Asseltsche Christus depicts a work by the renowned Titian (1477-1576). Titian maintained friendly relations with the Trappist order at the time, and Achel Vluis claims, based on accounts, that the painting in question was a work by the Italian master.

- 123535 August 14, 1936: Archaeological discoveries in Swalmen (L.)
In recent weeks, archaeological investigations have been conducted in Swalmen (L.) on the Wijlerheide, by the National Museum of Antiquities in Leiden, under the direction of curator Dr. F. C. Bursch.
- 123540 Last winter, several urns were discovered here during excavation work; the aim of the investigation was to determine the layout and size of the urn field. This investigation again unearthed several urns, which, together with the previously discovered specimens, provided a clear picture of the diversity in form and decoration. All the urns found are beautifully decorated, either with deeply incised geometric ornaments or simply with vertical finger impressions.
- 123545 The form and decoration point to an early stage of the urn culture, consistent with, for example, the urn types found a few years ago in Vlodrop.
Of great importance was the discovery of numerous burial mounds in the same area, eight of which were examined this year.
- 123550 These date from a much earlier period and belong to the so-called Beaker culture. Aside from a few pottery finds, this is the southernmost point in the Netherlands where this culture has been found to date.
The mounds served as burial monuments for one or (rarely) more deceased, who were buried in the center, and they always contain traces of a decayed burial structure.
- 123555 In most cases, this burial structure was dome-shaped, usually built of wood, although in one case it was particularly beautiful and clearly visible, made of sods.
In one case, the wooden dome was located twice, concentrically in the mound. Another mound showed a ring of alternating double and single posts around the burial pit.
In the grave, which was sometimes not dug into the solid ground, several clear depictions of the interred bodies were found, lying on their sides in a crouched
- 123560 position, with their knees drawn up, and always oriented towards the east. Twice, two bodies, lying on top of each other, could be clearly identified in this way.
Later, in one of the mounds, after the original wooden burial structure had collapsed due to rot, a body was found lying stretched out in a fire-carved tree trunk.
- 123565 The finds here were very rich. A total of 11 pieces of pottery were recovered, including four from one grave and four from the two double graves, respectively. 3 and 2. All the beakers had a curved S-shaped profile and were richly decorated with other rectilinear ornaments.
- See also http://www.loegiesen.nl/toponiemen/Dionysiuskerk_Asselt.htm
- 123570 In 1916, the Roermond surveyor and amateur historian A.F. van Beurden drew a sketch of the Asselt finds. He indicated three sarcophagi at the location where he located the lost tower. Former rector Conraedts also mentions some of the church burials in his 1917 article. In 1924, in one of the articles that would later attract the
- 123575 attention of archaeologist Holwerda, Van Beurden wrote: "Where the choir now stands above the crypt, thus on the former site of the drowned tower, there were six trench graves or sarcophagi, raised half a meter above the bank. According to folklore, anything outside these graves was unconsecrated; in a trench grave, a knife with an ivory handle (hilt?) was found, as was given by the seller to the buyer in the presence of the aldermen upon closing the sale. The burial site, formerly beneath the
- 123580 first tower, is described as the Van Asselt family grave."

April 15, 1640 **We believe we are doing the Archaeologists a favor**

by transcribing here the note that van den Berche placed below the first two drawings. "I pulled - he says - these two antique stones out of the originals which are masoned in the wall of the parish church of Horne, capital of the county, appenage of the county of Looz, on April 9, first of the Easter holidays 1640, and the pastor of the place told me at the time that he had several medals of the Roman emperors found at the said Horn." van den Berch then describes several Roman antiquities and medals found at Heel, a village located a league from Horn. He adds: "The most admirable is from the same place, that the village of Heel is called after Helena (1); what is known by tradition and is all the more credible since a statue of very fine white marble was found in the ground that was dug up, and is still, this April 15, 1640, lying on the real road, but very broken, because one can see the thighs from above to the ankles of the same piece of the height of six feet and a half; which is of a lady, to be veiled by her body like the Roman ladies; and they hold for certain that the rest of the statue is still in the ground."

January 1, 1789 **The lives of illustrious Greeks and Romans, compared by PLUTARCH**

THE LIFE OF ALEXANDER [and of Caesar]

Having given this charge to convey to PARMENIO, he placed the helmet on his head; as if he had already put on his other weapons in the tent, consisting (1/†) in a closing skirt of Sicilian make surrounded by a belt, and over a doubled linen coat of arms, from the booty obtained in the Battle of Issus. His helmet was of iron, made by THEOPHILUS (m/\$), who had worked it so beautifully that it glittered as if it had been pure silver. Attached to this helmet was a ring collar, also made of iron, but here and there set with stones. His sword was of unparalleled temper and exceptional lightness. It was given to him by the King of the Citians (n/**). He wore this because he was generally accustomed to use a sword in battle. The sling on which this sword hung was more beautiful in work than his other armor, being the work of HELICON the Ancient, and a tribute to the Citizenship of the Rhodians, from which ALEXANDER had received him as a gift. Here too he was always accustomed to use himself in battles. Furthermore, as long as he was still busy arranging the Phalanx, or correcting something or other, or giving orders, or riding through the ranks for inspection, he used another horse, so that he could use the Bucephalus, who was already turning a year old, wanted to save. Then as soon as they were not ready to go to work, this horse was fetched; which no sooner had he climbed than he gave the signal to attack.

(†) The accuracy of our author is extraordinary here, as he not only describes the weapons that ALEXANDER wore on this day, one by one, but also carefully lists their craftsmen. This remarkable blow, namely, destroyed the Persian Monarchy. Furthermore, DACIER has very well noted: >> that PLUTARCHUS here too followed the manner of HOMERUS.

(\$) We have heard of this artist elsewhere, as well as of HELICON, who is subsequently mentioned.

(**) Inhabitants of Citium, a town on the Island of Cyprus.

How, said he, will any man take the trouble in his own person to furnish his horse, or to repair his lance, or helmet, who is loath to lay his hands upon his own dear body?" "Don't you know, Did he say that the main point of victory for your people is that you do not do the same that they do who are conquered by you? Furthermore, for this reason, he devoted himself much more to all kinds of activities, such as battles and hunting, for which he feared no fatigues or dangers. It was also from here that a certain Spartan Representative, who was present when he felled a great Lion, shouted to him: "Truly, ALEXANDER, you fought very bravely with that Lion for the Kingship!" From this hunt CRATERUS made a dedication in the Temple at Delphi, consisting of copper images of the Lion, of the Dogs, of the King who fights with the Lion, and of himself who comes to the rescue.

Part of it was made by LYSIPPUS (k), another part by LEOCHARES.

(k) This gift of CRATERUS, consecrated in the Temple at Delphi, is mentioned among the works of LYSIPPUS by PLINY H. N. XXXIV, 7. The same PLINY speaks of LEOCHARES, L. XXXIV, 8. and XXXVI, 5.

January 1, 1809 **Plutarch's Lives, translated by J. and W. Langhorne**

As soon as he had returned Parmenio this answer, he put on his helmet; for in other points he had come ready-armed out of his tent. He had a short coat of the Sicilian fashion girt close about him, and over that abreast-plate of linen strongly quilted, which was found among the spoils at the battle of Issus. His helmet, the

workmanship of Theophilus, was of iron, but so well polished that it shone like the brightest silver. To this was fitted a gorget of the same metal, set with precious stones. His sword, the weapon which he generally used in battle, was a present from the king of the Citeans, and could not be excelled for lightness or for temper. But the belt, which he wore in all his engagements, was more superb than the rest of his armour. It was given him by the Rhodians, as a mark of their respect, and old Helicon 99 had exerted all his art upon it. In drawing up his army and giving orders, as well as in exercising and reviewing it, he spared Bucephalus on account of his age, and rode another horse; but he constantly charged upon him; and he had no sooner mounted him, than the signal was always given.

99 In this description of Alexander's armour, and the mention of the workmen by whom it had been made, as well as in the principle of his preceding reply to Parmenio, and the eagle introduced below, Dacier traces the imitator of Homer. Helicon and his father Acesus were eminent in the art of embroidery, as we learn from Athenaeus, xi. 9., who preserves an inscription to that purport copies from the temple of Apollo at Delphi.

After this, he constantly took the exercise of war or hunting, and exposed himself to danger and fatigue with less precaution than ever: so that a Lacedaemonian ambassador, who attended him one day when he killed a fierce lion, said: "Alexander, you have disputed the prize of royalty gloriously with the lion." Craterus got this hunting-piece represented in bronze, and consecrated it in the temple at Delphi. There were the lion, the dogs, the king fighting with the lion, and Craterus advancing to the king's assistance. Some of these statues were the workmanship of Lysippus, and others of Leochares.

January 1, 1807 **"Ring Collar"**

According to a description from 1840, a kind of ring collar was found in Meijel in 1807:

I very much doubted the report that a farmer in Deurne Liessel was in possession of a Roman sword and a golden shield that was dug into the Peel, because I had never heard anything about it. Research has also shown me that no one knows anything about it, probably people have confused this with what took place in the neighboring municipality of Meijel. In the year 1807 a gold shield was found there. Having been in Meyel for a number of years, I went to the house of the then mayor Goossens to see this curiosity. He showed me a shield which had been found in the peel in the year 1807 about five feet below the surface of the ground in the peel on the occasion of a peat digging, it was made of gold or at least heavily gilded hammered work, on it were hieroglyphs and other figures of lions, tigers etc driven, and had the shape of a crescent moon, much resembling a ring collar

This description indicates a phalera, and has a stunning similarity to The phalara from Starobêlsk, as shown in Figure 20 of Iranians and Greeks in South Russia.

~~Naar het berigt~~ Ik heb het berigt dat een landbouwer te Deurne Liessel in het bezit zoude zijn van een ~~oud~~ romeinsch zwaard en een goud schild welk in den peel zoude zijn uitgegraven, zeer betwijfeld, wijl ik er nooit iets van vernomen had. ook is mij bij onderzoek ~~verzekerd~~ gebleken dat er niemand iets van weet. waarschijnlijk heeft men dit verward met ?? het geen in de naburige gemeente Meyel heeft plaats gehad. ~~In het jaar 1807~~ men heeft ~~men~~ aldaar een goud schild gevonden. voor eenige jaren te Meyel zijnde heb ik mij naar het huis van den toenmaligen burgemeester Goossens begeven om deze merkwaardigheid te zien. hij vertoonde mij een schild welk in den peel in het jaar 1807 omtrent vijf voeten onder ~~het onder~~ de oppervlakte van den grond ~~in den peel~~ bij gelegenheid eener turfgraving gevonden was, hetzelve was van goud of althans zwaar verguld ~~gedreven werk~~, op hetzelve waren hyroglyphen en andere figuren van leeuwen, tijgers &c gedreven, en had de vorm van een halve maan, veel gelekende naar een ringkraag zoo als de kapiteins der infanterie ~~voor~~ ? nog niet zeer lang geleden op de borst droegen.

May 9, 1817 **In an old booklet, which was published in Venlo in 1821**

by Widow H. Bontamps under the title of Short geographical sketch of the province of Limburg for youth, page 35-36 the following footnote:

"When on May 9, 1817, a resident of this city (Venlo), to erect a new factory building, had the ground excavated behind his house (N° 693 in the Vleeschstraat), they found a depth of 7 to 8 feet, on a stoneslab, surrounded by clay, lying on a layer of pebbles. Its length was 6 and a half, its width 4 feet. The egg-shaped carved depth was 6 feet long and 3 and a half wide, provided with a very fitting

lid. This lid is a table hewn from hard limestone, 4 inches thick, very smooth on the inside and on the edge. The tuff stone, which makes up the sarcophagus (stone coffin), cannot be found in the entire area, but the blue limestone is brought here by barges from the area around Namur. The sarcophagus stood in a direction from east to west, there was another tin urn, where it was widest 11 inches in height and 15 in diameter. Its shape is very simple, the opening is 6 inches wide, and is closed by a lid. In the sarcophagus were found some pieces of white thin glass, probably from a tear glass, some earth and remains of burnt bones, among which pieces of the skull and bones were clearly visible. Also in the urn, there was something resembling burnt bones; but in much smaller chunks. The Sarcophagus was without inscription. However, around the urn one sees Runic writing, which is not deeply and irregularly printed in the tin, and for this reason, as well as because of the dents in the urn, is illegible. In the vicinity of the grave site, another flint of 12 to 15 inches in length and 6 inches in thickness was found."

The question is whether anything more is known in Venlo about that find and where the objects are currently located.

November 26, 1819 **ECHTERNACH, near TRIER, November 10.**

In the vicinity of Alttrier, 2 1/2 hours southwest of Echternach, in a high-lying village, through which the road to Luxembourg leads, many Roman antiquities have recently been excavated, which are very remarkable for history and archaeology. Among other things, a silver hand of a Roman coat of arms was found; two Roman signet rings of gold with red stones, on one of which the goddess *Diana* was found, and on the other a sphinx; several broad silver rings, on which the niches of the Empresses *Faustina*, *Lucilla* and *Didia Clara* are engraved; many Roman hairpins, ash urns and grave lamps. A great quantity of gold, silver and copper coins, among which a Nero, two Commodi, a Constantinus M. and a Constans of gold; an exceptionally rare Pescennius Riger, a Marciana, a Mathedia, several Faustinas, Julia Mameas and others, of fine silver. Among the urns were found two of *terra sigillata*, the most beautiful that have ever been seen, on which more than 50 figures are depicted. Furthermore, two Roman hand mills of stone were excavated, a sacrificial bull with sacrificial instruments hung around it, two Mercuries of rons, a he-goat, a goat and two Priapes of copper, a surgical instrument, 60 household gods of stone of various colours; some stones with Roman Emperors on horseback; some statues of gods and goddesses, among which two of white marble, representing the goddess *Nehalennia*, with a dog on her lap.

From the multitude of objects found, it appears that this region was of importance. The Romans had a colony here, which is believed to have been located on the road from Trier to *Durecorturum* (Rheims).

1 January 1828 **NEERHAREN. A beautiful Roman silver jug was found in Neerharen** in 1828, during the construction of the canal from Maastricht to Bois-le-Duc [*Zuidwillemsvaart, Maastricht 's-Hertogenbosch*]. This vase, which lay near the current point, three metres below the ground, at a height of 0.322 and is decorated with chiseling and circles on the neck and foot. The bottom of the vase, also chiseled, bore an inscription. This beautiful object has been part of the Leiden Museum since 1831 (1).

(1) C. Leemans, Roman objects in Maastricht, p. 69.

18 June 1830 - **Two day laborers from Baarlo, Limburg, busy digging up clay,** found, while digging, an earthenware vase filled with antique gold and silver medals, worth 300 fl.; they are all the size of a 25 cent coin.

22 June 1830 **To the editors of the Éclaireur politique.**

Baarlo, June 19, 1830.

Gentlemen,

In your issue of yesterday, you reported on the find that was made here, a few days ago, while digging up clay. - It is true, gentlemen, that an urn filled with various coins, both silver and gold, was found there, but of a greater value than the 300 florins mentioned in your newspaper.

I know that the owner, Mathieu Holtakkers, sold them in the first days to one person for 1600 fl., and since then to others for 3000 fl. - It seems that the urn is never empty, since he still sells them every day, and one even pays 4 fl. for a silver coin and 20 fl. for a gold coin the size of a Napoleon.

Most of the coins that make up this collection are different from each other and date from the time of Nero, Vespasian, Trajan, Faustina Augusta, Diva Augusta,

Antonina and other Roman emperors.
A subscriber.

- 123785 September 1, 1830 **BAARLO** In 1830, in the month of September, a certain Holtakkers, called den Bisschop, found in the municipality of Baarlo opposite the church, on the side of Blerick (the old Blariacum), an urn, containing several hundred Roman coins from different consulates in gold and silver, a collection which was dispersed in the surrounding area, but the greater part of which was purchased
- 123790 by Mr. Louis Wolters, banker in Venlo.
- January 1, 1833 **In Leende, in 1833, on the occasion of peat digging,** a blacksmith discovered, at a depth of almost twelve Rhineland feet, three Roman tokens of yellow copper, of the first size, excellently preserved, bearing the busts
- 123795 and names of AUGUSTUS CLAUDIUS and NERO.
Bl. 17. Magusamus or Macusanus. The Dommel flows past here.
- January 1, 1835 **MONTFORT. Stone and bronze weapons have been found** in this village on several occasions. One of these objects is in the 's-Hertogenbosch museum. It is a quarter-axe, found in 1835, in a peat bog, 8 to 10 feet below the ground. (1) Mr. Guillon, notary in Roermond, gave the Royal Museum of Brussels four stone axes or wedges, three of which were made of flint and one of basalt, found in 1836 and 1837 in the peat bogs of the commune of Montfort. (2)
- 123800 May 4, 1837 **NETHERLANDS. - In the most recently published issue** of the Nederlandsch Magazijn you will find an article about the recently excavated urns in North Brabant [Noord Brabant]. This mainly means that reports have recently been found in several of our newspapers regarding the excavation of antiquities in the municipality of Deurne, province of North Brabant, and now the Editorial Staff of
- 123810 the above-mentioned warehouse has received some details regarding that excavation, mainly as follows: A Ritmeester [captain] at the regiment of hussars n°. 6, having noticed on an earlier occasion that some mounds on the Kempen heath, when excavated, turned out to be burial mounds and contained urns or ash jars, I came up with the idea that some such mounds, which were found on the heath near Deurne, its current
- 123815 cantonment, were present, may have served such purposes and contained antiquities. With the permission of the mayor there, five urns or ash jars were found, which increased with subsequent excavations and now already exceed the number of fifty. It is a pity that the husbandmen, hearing of this, also began to dig on their side, in the hope of finding treasure; smashed or damaged the urns they dug up; great was the disappointment of these people when they found in it nothing but ashes and some half-decayed apparent human bones, such as skulls, ribs, thigh bones, etc. Not one token or coin has been recovered; only a piece of metal, which one thinks should be taken for a mouthpiece of a wind instrument. The urns found are of different sizes, but all of virtually the same shape, some with lids. The heathland in which the urns were
- 123820 found is approximately four hectares in size, the mounds are fairly regular, but the entire area appears to have served as a cemetery, because urns have also been found outside the mounds and at some distance from them. The urns are usually covered with a layer of charcoal. After all, as soon as one finds it, one is certainly close to an urn. Some are so high that one finds the fibrous roots of the common heather at the top of the ash; others have been found deeper, but at uneven depths. The substance from which these pots or urns are composed is smooth, solid, and of a dark brown color; no vitrification is visible on it, nor any inscription or inscription. If these were made in Deurne, where two potteries are now found, then one must admit that this art has not made any progress there in 10 or 15 centuries; These urns are
- 123825 purer and smoother and treated with more care than is currently the case. The excavations are continuing in some places, but in the urns, as mentioned, nothing but ashes and the above-mentioned human bones are found.
- February 25, 1842 **Mr. P. O. P. Guyot in Nijmegen of a very remarkable collection** of bronzes and other objects found near Deurne in North Brabant, most of which had been collected by Captain Baron van Vorst, who handed them over to Mr. Guyot. This important acquisition, together with the urns and other objects reported in 1838 and 1839, puts the Museum in possession of the principal and rarest results of the excavation near Deurne. All these scattered discoveries, now brought together, form a
- 123840 whole which may shed great light on the knowledge of the ancient peoples who once inhabited our country. Most of these objects are described by Mr. Janssen, the curator, in the Kunst en Letterbode of 1838, pages 370-395.
- 123845

January 3, 1844 * **BOXMEER, December 31 Recently in this community,**

on the occasion of a useful excavation or excavation of a piece of pasture belonging to Mr Hengst, several remarkable Roman antiquities have been found, consisting of urns, grave lamps and other pottery of various sizes and whitish in colour, as well as some copper coins with the images and names of Roman emperors. The land on which the excavation took place is situated at a natural height, so that it is never watered by the waters of the flooding Maas, while the surrounding lands are flooded almost annually; perhaps it is due to this characteristic that the Romans chose that place for a cemetery; that this was indeed the case is clearly demonstrated by what has been found.

In the past, little or nothing was heard in these regions about the discovery of Roman antiquities and it is due to the ignorance in this regard and to the greed of the workers that one unfortunately has to regret the shattering of some objects that are so valuable to enthusiasts. Now, however, the work is being continued attentively under the owner's supervision and it is hoped that, with the help of experts, a more detailed report of what has been found will be given later.

1848 **ANTIQUE COLLECTIONS IN ROERMOND, VENLO AND MAASTRICHT IN 1848**

BY JOS. HABETS ROERMOND, J. J. ROMEN AND ZONEN.

In 1848 the late Mr. Janssen, curator, took over at the Royal Museum of Antiquities in Leiden, on behalf of the government, an art tour through Limburg. The purpose of this visit was to give a report on the condition of the archaeological monuments of this region and to investigate the direction of the old Roman highways that crossed this province. Mr. Janssen visited Tongeren, Maastricht, Roermond and Venlo. He carried out excavations in Melenburg near Buggenum and undertook a trip in the vicinity of Arcen to a few earthenware fortifications that seemed to have served to protect the Fossa Eugeniana and found in the vicinity, in Zand near Pont, on Prussian territory, the Roman road from Coriovallum to Xanten (Castra Vetera) and a number of Roman antiquities.

From his report we take what he has recorded regarding the collection from the pre-Christian period of the late Mr. Charles Guillon in Roermond, as well as some details about Roman objects that were at the town hall in Venlo and Maastricht at the time. See here what he has done regarding the antiquities of the late Mr. Guillon.

"In Roermond there is one of the richest collections of Dutch antiquities, namely that of Mr. Ch. Guillon, secretary of the Chamber of Commerce there. As a private collection of national antiquities, it is inferior only in Roman antiquities to that of Mr. P. C. G. Guyot in Nijmegen, but it far surpasses it in Gallo-Germanic remains, especially in carving objects made of stone (1=1). Moreover, it has the peculiarity that it was collected by the owner himself and his brother, and that, with the exception of tokens and some objects found in Xanten, everything was found in the Duchy of Limburg, and that the places where it was discovered were are known accurately. Anyone who wishes to know the character of the antiquities to be found in Limburg in general will find satisfaction in this collection, especially under the guidance of the knowledgeable owner.

"For a long time, Mr. Guillon had intended to publish the most important part of his collection, and also to publish a general overview of it, but this was something he was prevented from doing by his many practical activities. Much has already been drawn up and depicted by him, and during my presence there he renewed his intention to continue the scientific work that had already begun as soon as possible.

Accordingly, it would first appear in the light: a treatise on the investigations he made in Gallo-Germanic graves in various places in Limburg, and then a treatise on his cutting tools made of stone. All drawings and a large part of the text have already been completed on both subjects.

"To give some idea of the nature, size and importance of this collection, the following overview, based on autopsy, will serve; however, only the most important information is indicated with the greatest brevity.

A. CELTIC AND GALLO-GERMANIC OBJECTS.

I. Of stone: 1° A number of wedges and some hammers, perhaps 50 pieces, mostly made of flint and of well-known shapes. Very rare, perhaps entirely unique, are two wedges of Jasper, one of which has a very narrow drilled hole on the side of 2 stripes in diameter, the other also shows traces of such a hole, but the drilling of which has failed. These holes were apparently intended to allow a strap to be inserted through which these objects could be hung. They are therefore so important,

because from those narrow holes it must be concluded that a metal awl was drilled and it therefore appears that such wedges, which originate from the time of the earliest civilization of a people, were processed or used when the use of metal for technical instruments was already in vogue (1=2). Among these wedges there are four more that deserve comment because of their rarer shape.

2° A number of arrowheads, approximately 40 pieces, made of flint, including at least 11 or 12 distinctive shapes. Until now, not more, perhaps not even as many forms of flint arrowheads have been known, and the variety of the arrowheads mentioned is all the more important when one considers that they all come from a single part of our homeland, the Duchy of Limburg.

3° Flint blades 20 pieces of different shapes and sizes, as well as small as yet unknown objects made of flint, some similar to those depicted by me on the map of the Uddelermeer, etc., to my treatise On the oldest Dutch fortifications in the Contributions of Mr. Nijhoff IV p. 71.

II. Made of bronze. 1° Celts, frames or catejen, 5 pieces, of known shapes. 2° one pear-shaped dagger. 3° one arrowhead, in shape completely similar to one of the flints mentioned above. If this arrowhead is not Roman, but, as it seems to me, probably Celtic or Gallo-Germanic, it proves once again that the forms of tools used in the Stone Period were kept track of later in the Bronze Period (1=3).

III. Made of iron. 1° A flat bowl of 0.085 cubits in diameter and 0.04 cubits high. As far as I know, similar iron bowls have not yet been found elsewhere with Germanic objects. 2° A cone-shaped bell, provided with an eye at the top, high 0.1 inch; as well as some individual clappers made of similar bells. These objects found near or in Germanic urns are also extremely rare, if not unique. 3° Three arrowheads, one of which, with a hollow stem and provided with barbs, long 0.11 or 0.12 cubits, which may be mistaken for the Germanic framea by the owner. 4° Seven blades of three distinct shapes. 5° Two buckles of distinct shapes (1=4).

IV. Of baked earth: A very large number of urns and other vases and dishes, of various shapes, sizes, workmanship and decoration, some of which are rare.

B. ROMAN OBJECTS.

An important part of this has already been mentioned in our report on Melenburg (2=5). In addition, however, 150 jars, urns, dishes, lamps, etc., including some made of terra sigillata; a large bronze bowl (patera) and a hexagonal bottle of light green glass (3=6), not to mention many other small objects.

"The Roman objects found at corals of pâte of different colors and shapes; round belt decorations of white, yellow and blue pâte (formerly considered to be stem beans) (2=8). These Xanten objects are still increasing, because the owner has a regular purchaser in Xanten, so he cannot miss an important object newly found there. This is all the more important because the well-known Xanten antiquity friend, the notary Houben, has ceased to increase his collection through purchases in recent years, so that much is now preserved for science that would otherwise be scattered or hidden from many antiquarians.

"For the medal collection, which contains 2000 pieces of Roman coins, with the exception of the medieval and later ones, because time did not permit me to do so, I was only able to use a part, which included some rare pieces such as: the as quadrans, triens, some consular and one, I believe, unpublished by Postumus".

This report by Mr. Janssen shows the condition in which this remarkable collection of antiquities was during his visit to Roermond in 1848. Since that time, the late Mr. Guillon has spared no effort and no sacrifices to increase his favorite collections and by to enrich new purchases, so that it can be assumed without

exaggeration that the number of objects more than doubled until his death, which occurred on November 10, 1873. The value of what was acquired later is also much greater than what was seen by Mr. Janssen. His library, his collection of archives, manuscripts, maps, drawings, etchings, paintings and objects of art and taste were auctioned and distributed in December 1874. However, this is not the case with his collection of coins, medals, stamps, carved stones, as well as with the above-mentioned collection of archaeological objects from the prehistoric, Germanic, Classical and Frankish times. These have remained in the possession of Mr. Clement Guillon, lawyer in Roermond. It would be desirable that the government or one of our Limburg cities purchased this collection; they could well serve as the basis for a municipal Museum.

Mr. Janssen reports the following on relatively few Roman tiles with legion marks that he saw in Venlo: "On the trip to Venlo I heard from a fellow traveler that there was a collection of Roman antiquities at the town hall, deposited by a certain Mr. Justen, wine merchant in Brussels. When I inquired about this at the town hall

123980 from the employees present there, Mr Canoy replied that the collection had been sold
by the owner for some time to the Provincial Society of Sciences in 's
Hertogenbosch, with the exception of a few tiles, which were considered too
123985 insignificant, and which were now produced at my request. These were by no means
unimportant, and the only regret was that no one knew where they had been found. I
guessed that they descended from proximity to Venlo, where many Roman tiles (with
legion marks) are found; finally because some stamps of these stones do not
correspond to stamps found in Nijmegen, many of which, perhaps thousands, I have
examined. The stamps of the Venlo-tiles contained the names of army divisions:
123990 (L)IMIN (legio 1 Minerva), (L)VR (legio 5 rapax), LEGVIVIC (legio 6 victrix), LXV
(legio 15), LEGXXX, LEGXXXVV (legio 30 Ulpia Victrix); also EXCGERINF (exercitus
Germaniae inferioris) and RHENANA, with the latter name it should be noted that the
word TRANS was probably written on an associated tile, so that that stone comes from
the legio transrhenana, of which, among other things, tiles were found in Dormagen
are, according to STEINER Cod. Inscr. Rom. Rhen. No 699 or 697. Below this was a
123995 worn inscription, probably from the VIth legion, but with one name unknown to me.
Furthermore, there were three very rare ones, in that on the surface of the stone
where the inscription was located, there were three convex, button-shaped eminences,
which probably served to prevent the stamp from being damaged when laying another
tile, they had this form:
124000 0.25.

Another tile was therefore remarkable in that the stamp had been pressed on it
twice, crosswise, as follows:
Of the factory stamps I found only one that was somewhat legible, namely: OF. M
124005 (officina Marcelli or something like that.)"
So much for Mr. Janssen's notes. There would be confusion in science if the
locations of antiquities were not stated accurately and truthfully. Roman legion
tiles are the sure sign of the presence of Roman army units and permanent military
stations.
124010 It would therefore be of the utmost importance if one could find out where the
aforementioned legion marks were found. With this aim in mind, we contacted Mr
Gallot, then secretary of the city of Venlo, who, with a date of April 16, 1877,
very willingly informed us of the following: "Mr A. Justen, on his departure from
here to Brussels, (around the year 1843) requested to be allowed to temporarily
124015 place his collection of stuffed birds and antiques at the town hall, which he was
granted. Some time later he sold his antiquities to the provincial museum in 's
Hertogenbosch; a few Roman tiles remained, and these are the ones that Mr. Janssen
van Leiden saw here on site. Mr. Justen sold his collection of stuffed birds to his
native city of Venlo, and they were placed with the remaining Roman tiles in a room
124020 of the building of the Higher Civic School in that city, where they are still
located today. If I remember correctly, the tiles in question would have been found
in the vicinity of Venlo, namely in Baarlo, Grubbenvorst or elsewhere."
This does not resolve the doubt about the origin of the Venlo tiles. For science
they still remain what in the field of heraldry is called objects of inquiry.
124025 In Maastricht, Mr. Janssen visited the Roman objects that were found in the
Stokstraat in 1840 and described by Dr Leemans in his work entitled Oudheden van
Maastricht (1=9). He found it wrapped in paper, stored in a cupboard at the town
hall. He regretted that these objects were not accessible to the public and spoke to
Mayor Nierstrass about the desirability of displaying these items openly and having
124030 a lectern made for this purpose, which the Lord Mayor declared himself willing to
do.
After elaborating on other antiquities of the city of Maastricht, the reporter
continues: "Among the antiquities from pre-Christian times, present in Maastricht,
but left unmentioned by those who have written about Maastricht antiquities, are
124035 some objects that are in the collection of *Société des amis des arts et des sciences*
are preserved. These are two Roman lamps, one scent flask, one bronze mantle hook
(fibula), two bone hair needles and one (non-Roman) wedge of flint, the latter
damaged and coming from a cultivated area near the St. Pietersberg (2=10); also a
coffin of red sandstone, square in shape and Roman in origin, according to me.
124040 This is remarkable because of four round, niche-shaped arches, carved from the
inside into the walls, probably in imitation of the niches of the Columbaria, in
which the urns containing the bones and ashes of the dead were usually placed. The
place where this coffin was found was not known, but at my request they would
investigate it (1=11).
124045 I found another hitherto unknown and very likely Roman monument in the cave of the

Church of Our Lady, a cave that, judging by the shape of the columns, dates from the 11th century. It was a gray sandstone, elongated square in shape and very well carved into the shape of an altar, the height of ? inch. However, there was no trace of inscription to be discovered, and it seemed to me that there had never been an inscription on it, and was therefore probably transferred as merchandise, to be provided with an inscription later, when someone needed an altar or tombstone. There are more examples of this from Roman times. This altar lay in a deserted corner, against the wall, but deserved a better place, where it was protected from loss or mutilation."

After this remark, Mr. Janssen proceeds to discuss two examples of negligence that were committed around the time of his trip to Maastricht. He gives an incorrect representation of the well-known sale of the Romanesque relic cabinets of the St. Servatius Church, which sale the writer puts at the expense of the church council of Our Lady, and furthermore he initiates a campaign against tasteless and inartificial repairs in the same Our Lady Church. "A few years ago," he says, "the council of this church approved the beautiful Romanesque columns of the choir (which I believe are made of sandstone and remains from the 11th century), whose beautiful sculpture is no less fascinating than that of the portal of St. Servaas Church, to have it painted in the manner of red-colored marble! Similar mutilations will be difficult to prevent if ecclesiastical councils or administrations continue to exhibit a complete lack of taste and artistry. But it would be desirable that in colleges of this nature there was at least always a member who had some knowledge of or respect for ancient art, so that, if there was a danger that artistic remains were overused or otherwise damaged or removed, the competent authorities would immediately be notified in order to prevent the danger. Perhaps a disposition of the Ministers of Worship could have a favorable influence on this. Whatever this may be, I felt obliged to respectfully propose to your Excellency the means indicated for the future prevention of similar crimes."

From Maastricht, Mr. Janssen left for Tongeren to use some classical antiquities present in and near that city. We will not follow the traveler on this journey, because objects of that nature, found outside our duchy, do not immediately fall within our purview.

Notes

(1=1) Mr. Janssen calls the products from the Stone Age "Gallo-Germanic remains." Since 1848, however, science has advanced rapidly and there is no longer any mention of Gallo-Germanic objects from the Stone Age.

(1=2) The Catalog d'antiquités of the Guillon collection, published in 1874, does not agree with Mr. Janssen. At No 79 the maker says: "Hache toute polie, oblongue, belle, perforée d'un petit trou, peut-être naturel, provenant de Thorn." In the flint there are indeed several small pockets or veins, filled with lime dust, which, dissolved by the rainwater, form small holes. The worker of the stone may therefore have taken advantage of the natural state of his material, but such holes may also have been created, wholly or partly, by drilling. On the mechanical drilling of flint with flint cf. Dr WINKLER, Man for history, p. 233.

(1=3) See Catalog des antiquités, No 198, where this arrowhead appears as found in Putbroek near Echt, in the vicinity of Roermond. Cf. about such arrowheads and about a pear-shaped bronze lance Dr WINKLER p. 417.

(1=4) The Catalog seems to have classified these Germanic objects from the Iron Age among the antiquities of a later date. After all, at the end of the section Poterie germaine p. 21 one finds it reads: "L'age de fer, pour ce qui regarde le Limbourg avant la conquête de Romains, n'a guère de représentants qui puissent se produire." The iron bowls, mentioned above, probably find their place under No 838, der "objets en fer douteux quant à l'époque". It was found in Heibloom near Roggel. I have not seen any iron bells or clappers in the Catalogue.

(2=5) We hope to discuss these objects at the same time as the assignment ravages carried out by the late Mr. Janssen in Melenborg.

(3=6) Catalog No 411 found in the Graatheide near Sittard.

(1=7) Maybe No 414, but the Catalog notes this as coming from Heyen in Limburg

(2=8) Catalog Nos 421, 422, 423 and 424.

(1=9) Leiden 1843, with atlas.

(2=10) These objects are located at the town hall at the same time as those from Stokstraat. We hope that as soon as a permanent location is found to store our growing collections, these antiquities can also be transferred to our provincial museum.

(1=11) The sandstone coffin mentioned here comes from Schinveld. It is mentioned in the Bulletin de l'academie royale de Bruxelles, tome V, No 4 and in the Publ. etc. du Limbourg, II p. 232. The late Mr. Cudell wrote about this chest and about a few other stone chests found at Limbricht, a treatise which has not been printed. See Publ. etc. du Limb. VIII p. 302. The Schinveldse chest was built in 1869 by Jhr. Victor de Stuers and writer, found in Maastricht next to the gate of the royal atheneum, under a pile of paving stones. She was taken to the Museum of our Society, where she is now safe.

December 14, 1849 - **In the municipality of Haelen, near Roermond,** there is a place called Melenborg (perhaps a corruption of Menenborg, a castle of the Menapiers), lying along the old Maas, and on the other side adjoining the old Roman road that ran from Tongeren to Nijmegen. This place, probably once a fortified Roman camp, has repeatedly attracted the attention of antiquities enthusiasts. Last November, Dr. Jansen, curator at the museum in Leiden, carried out excavations on a fairly large scale, where they found: a denarius of Antoninus Pius, several copper writing pens, pieces of earthenware with the name of the manufacturer, and other rarities. Dr Jansen's research into the local conditions has led him to determine the direction of the old Roman road and its branches at Melenborg. Last Monday, a farmer unearthed an idol of Anubis, an Egyptian deity, in the same place, in which Mercury was worshiped in the form of a dog; its veneration was introduced into Rome in the time of the Emperors, as was that of Isis and Senapis. This statue (currently the property of Mr. Slangen, private receiver in Haelen), is chiseled from whitish, fairly hard stone, and has 60 Dutch inches in height and 15 inches in diameter; it lay 80 to 90 inches deep in the ground. It is remarkable that the height of Melenborg is safe from the highest Maas water, and that the objects found, such as nails, bones, lime, freshly plastered walls, etc., were all covered with a layer of sandy earth of a Dutch cubits and more thickness, which suggests that built-up land is gradually becoming higher.

January 1, 1850 [...] **Numerous objects from the stone, bronze and iron periods** have emerged from his [=Limburg] soil in the past and later. The scientific investigations to discover this date back to around 1825. These were initiated by Mr CHARLES GUILLON, notary in Roermond. A very well-to-do man, he built up a large collection of antiquities, of all kinds and from different eras, which continued until his death on November 10, 1873 was regularly supplemented. Later it was dispersed through sale, but fortunately most objects from prehistoric times have found a home in the Rijksmuseum in Leiden. [...]

April 11, 1850 [...] **From the excavations and research under the supervision** of Dr. JANSSEN, on behalf of the Government, in Melenberg, under the municipality of Halen and Beugenem, in Limburg:
Some BUILDING FRAGMENTS of cut stone, tiles of various shapes and HEAT TUBES of baked earth, fragments of BOWLS, POTS, JARS and VASES of baked earth, with and without manufacturer's marks; under those marks CAJUS F, BASSUS F OR MASCULI (or MASCUI) etc.; fragments of glass BOWLS and BOTTLES; bronze and iron TYPES and HAIR NEEDLES, BUCKLES, MANTEL HOOKS, DRILLS, fragments of SWORDS, RINGS, HOOKS, etc., silver coin (denarius) of ANTONINUS PIUS and a bronze of the 2nd gr. by FAUSTINA THE YOUNGER. [...]

April 11, 1850 MUSEUM OF ANTIQUITIES.
The uncertainty as to whether or not a considerable series of monuments, sent here in the latter part of the past year, should or could be regarded as a gift to the Museum, and the desire to obtain a report on the increases and changes which the collection had undergone, to make it as complete as possible, were the main reasons that caused a delay in drawing up and communicating our following report. Anyone who has taken note, even superficially and from the reports of newspapers and magazines, of the important discoveries through which the field of archeology has expanded so considerably in recent years, and who considers how indispensable the fruits of these discoveries are to filling in the numerous gaps in the history of civilization and art, but also in the collections in which the building materials of that history are preserved, - we will regret that the needs of the National Museum increasingly exceed the support funds that can be made available, exceed; that this unfavorable circumstance causes a standstill and a decline due to that standstill, the adverse consequences of which will no longer be able to be compensated later, even if the future is favorable and there is more room for resources. We had to make this remark in order to appreciate even more the acquisitions that we have once again been able to thank during the past year, both to the extraordinary compensation from the government and to the patriotic and selfless cooperation of several supporters of science. The normal social security funds do not tolerate purchases at all, and are not even sufficient to provide for the essential needs for exhibition and the intact preservation of objects; and it is therefore only from the two sources just mentioned that we were able to draw the means to preserve for the National Museum objects whose loss or distribution abroad would perhaps have been regretted by science, and through which we had the opportunity to to make the

collection excel above many foreign institutions of this nature, to achieve significant increases. [...]
AEGYPTIAN ANTIQUITIES.

[...] Twenty-one Coins in small bronze, including 8 of LICINIUS, 8 of CONSTANTINUS DEN GROOTE, 2 of CONSTANTINUS DEN YOUNGER and one of JULIUS CRISPUS.

March 16, 1851 **Etruscan, Greek and Roman antiquities.**

The collection of Roman objects was increased by the proceeds of the research and excavations under the supervision of the curator Dr. Janssen, undertaken on behalf of the country at Ravensbosch in the municipality of Hulsberg and Houthem (Duchy of Limburg). Among those objects, which were mostly hidden under or near the foundations or ruins of a Roman temple and other buildings, along the Roman road through the region of Maastricht op Kanten enclosed between the Rhine and the Maas, we mention fragments of sharply worked hand mills of Andernach tuff; the bronze fitting or decoration of a vase or some other piece of household furniture, in the form of a human mask; iron knives, a dagger or knife; and other less important pieces in iron or bronze; pans of water pipes, and many fragments of coarse and fine, white, yellow, red and black earthenware, such as large vessels, jugs with two handles, pots, urns, dishes, tubs, bowls, cups, etc.

June 15, 1853 **BEEGDEN. Between Horn and Beegden, not far from the old Roman**

road that joined Nijmegen to Tongeren, there is a deserted, sandy hill, surrounded by small eminences. On June 15, 1853, a worker digging in the earth in this place, to extract gravel, found at a depth of thirteen feet, a red earthenware vase in the shape of a saucer. The worker in his simplicity, took this pot and prepared food for the young chicks in his farmyard. Three days later Mr. Teelen [Theelen?] of Horn having learned of this singular discovery, bought the vase and recommenced the excavation. After digging the earth for three days, a sarcophagus in sandstone was found at the same depth, having a length of 4 feet and a width and height of about a foot and a half. It was covered with a flat lid but broken in several places. Inside the sarcophagus were found ashes, some pieces of bone, some pieces of iron, among which were arrowheads, a small well-preserved gold ball and a finger-length stone resembling a statuette. The inside of the coffin was square, the bottom flat and blackened by damp ashes; on one side was managed a height in the shape of a cushion. Around this stone coffin were arranged 32 terracotta vases of different shapes and colors and superimposed symmetrically one on the other. These were the vases that the Romans used in funeral ceremonies, jugs for libations, vases for sacrifices and for food, urns to receive the burnt dust of the deceased. These urns, six in number, contained ashes, the other vases were empty. We especially notice a red earthenware bowl decorated with a crocodile and nine peacocks.

1 January 1856 **KESSENICH (Belgium). It is in the commune of Kessenich**

that we must look for the location of the station of Catualium, mentioned in the Peutinger tables. This village is very well known in the diplomas of the Middle Ages; it enjoyed the rights of currency, free market and tonlieu on the Maas. In 964 it was called Casallum, in 997 Caselli, in 1096 Gesselin and in 1155 Cassenic. It is this last name that prevailed. Kessenich has the ruins of a beautiful castle, which was formerly on the banks of the Maas, but which, because of the diversions of this river, has moved away from it. Between the castle of Kessenich and the Roman road that runs along the left bank of the Maas, a copper coin with the image of the emperor Marcus Aurelius and a silver coin of Julian the Apostate were found in a peat bog called het Vijgelbroeck around 1856.

1 January 1858 **ECHT. While levelling the cemetery of Echt in 1858**

a sandstone sarcophagus was unearthed near the church tower, containing, among other objects, a gold coin with the image of a Roman emperor.

November 3, 1859 **GEOLOGY, INDUSTRY AND COSTUMERY, ELUCIDATED BY AN ANTIQUITIES DISCOVERY AT MAINZ.**

On the 3rd of November, 1859, Prof. Nöggerath in Bonn, at the meeting of the Lower Rhine Society for Natural Medicine and Medicine, made a statement about the occurrence in the year 1857 in Mainz, on the Thiermarkt, in a peat layer, at the depth of p. m. 30 feet, excavated Roman antiquities. He stated that the discovery was also important from a geological point of view, while the director of the Association for the Study of Rheinischer Geschichte und Alterthümer, Dr. Jos. Wittmann, had shown that in the first centuries of our era an arm of the Rhine

flowed through the city of Mainz, in whose swamp the above-mentioned peat layer had formed.

124250 Dr. Wittmann briefly reported on this discovery in his important treatises entitled: Chronik der niedrigsten Wasserstände des Rheines vom Jahre 70 nach Christus bis 1858, and Nachrichten über die im Jahre 1857-1858 im Rheinbette von der Schweiz bis nach Holland zu Tage kommen Alterthümer und Merkwürdigkeiten etc., included in Th. II Part 1-2 of the Zeitschrift des Vereins z. E. rhein. History and Altenthümer zu Mainz. The same scholar had provided Prof. Nöggerath with an extensive manuscript on this subject for use, from which the most important information was communicated by Nöggerath at the aforementioned meeting. We take over what has come to the attention of the public from that announcement (Dr. Wittmann himself will soon reveal his handwriting) because Dr. Wittmann and Lindenschmit told us this summer during a
124255
124260 visit to the Mainzer Museum brought the same reports verbally and gave specimens of some of the remains found as a gift. In the above-mentioned peat layer, a lot of leatherwork had been found, most probably from a Roman shoemaker's shop, almost a cart full of mostly used shoes and sandals, although very fragmentary, but among which fourteen different types could still be recognized. This invaluable find for
124265 the knowledge of Roman industry and costume will soon be published by Lindenschmit, elucidated with plates. We therefore only point out here that the stamp of the manufacturer or shoemaker has been stamped on some fragments of the leather, as I could still read the names very clearly: L. VALE (i.e. Lucii VALERII) C. VENED (i.e. Caji VENEDI) and MONA.

124270 Furthermore, several remains of Roman clothing were found, made of very fine wool and excellent fabric, as well as various small Roman objects and coins. The leather and woolen goods had been relatively well preserved, but the wool had taken on a dark color. The coins were minted no later than 137AD, from which it can be
124275 concluded with probability that all these objects ended up in the swamp around that time. The common peat plants could be used well from the peat; in particular: birch bark, hazelnuts, water lentils (Lemna major), and of the moss species: Hypnum splendens (Hedwig), Hypnum tamariscinum (Hedw.), Hypnum latescens (Hedw.), Hypnum triquetrum (Linn.), Anomodon curtispiculum (Hookeri et Taylori), Byrumbinum (Schreberi), Mnium roseum (Hedw.), Mnium undulatum (Hedw.). Well-preserved grape
124280 vines were also found, evidence of the early wine culture on the Rhine. These are now the oldest grape vines known from the Rhine region; finally: feathers of fowl and pigeons.

From some specimen of this find, which was given as a gift by the reporter in Mainz from Dr. Wittmann and Lindenschmit, he donated the moss species to the State
124285 Herbarium, the feathers to the State Museum of Natural History, and the leatherwork to the Museum of Antiquities in Leiden. The leather, which had hardened and shriveled due to excessive drying, has been restored to its original softness by the care of an experienced Leiden tanner, Mr. Visser.

124290 September 15, 1860 **Highly remarkable Roman remains FOUND IN DANISH PEAT Bogs.**
"You have longed to hear from time to time about the discoveries in the peat bogs at Sönder-Brarup, which I have already mentioned several times before. During the months of July and August, several important objects were found there; but the most
124295 important find is a round bronze plate, the size of a table plate, with a wide edge, decorated by raised sculptures in gold and silver; the sculptures alternately depict birds and dolphins and some Roman warriors in a resting position, with helmets on the head, holding a lance in one hand, while the other hand rests on a shield. Within that edge are several medusa heads, with helmets on the head, all surrounding one medusa head in the middle of Roman origin; but it is most noteworthy that in
124300 some places of that plate small silver plates have been attached, which are decorated with animal images of the most monstrous shape, of the same kind as are found on the gold bracteates struck in Scandinavia, and on two silver cups found at Himlingøri, in Zealand. It is evident that strangers have added these ornaments of their own making to this plate, which was formerly adorned only with Roman art.

124305 Remains of three surcoats, made of rings, have also been found; two being rings of bronze, the third of iron. Subsequently, the following were found en masse: navels of shields, points of lances, arrows and remains of broadswords, all made of iron, as well as remains of sword scabbards. Everything points to a fierce battle. Furthermore, a complete bridle of a riding horse and a snaffle (bridon) were found,
124310 with buckles, rings and jewelry made of bronze; the long leathern wraths were completely preserved. Two silver coins of Commodus and Nero. The (wooden) handles of the lances and throwing bolts are mostly broken, but they were fortunate to find two that were completely preserved; one of 9 feet (Danish) length, the other a little

longer. A stem of 2 feet 6 dm belonged to a javelin. The shields are made of wood and have an edge, only the middle part is made of bronze. But one shield is of maple wood, with an oak edge, which is attached to it with small pieces of bronze, in the shape of an S. This is the first time that shields made of different wood have been found. A leather sandal and some pieces of linen with edges were also found. There is one hollow under the glass beads, and this must therefore have been made with a glass blowing pipe; the other beads are closed. Not a day passes that one does not find pottery of various shapes, but usually broken. In the meantime, six pots have been found that were complete. Four pieces of gold have been found, in the shape of rings, which were used as currency (ring money). It still remains a mystery how all these objects ended up in the peatlands, formerly lakes. Some shields and lance handles have also been found under a thick layer of beams and undergrowth (the same as previously in Eunen). These are the discoveries of 1860; I have already told you about that of last year*). Two or three years ago I have communicated to you our archaeological investigations. In the absence of an overview of this in French, a Swiss man who spent the winter of 1859 here has published geological-archaeological studies in which he gives an account of everything that has been discovered in our country, of our system, etc. 2)."

Taarbaek, near Copenhagen,
August 22, 1860.

Dr. BURMAN BECKER.

(Excerpt from a letter to Mr. EYCK VAN ZUILICHEM).

1) We also hope to be able to take a place in this soon.

2) This is Prof. Morlot in Lausanne, the editor of whose important work we have already mentioned in No. 20, dated May 21, of this weekly magazine, and about which the Revue archéologique of the 1st Aug. has begun to give a very encouraging report. We will return to this subject as soon as possible, space permitting. Ed.

January 1, 1861 **The above opinion of Mr. Soret is confirmed by a coin**

find made recently near Bitburg, Trier district. A farmer found a small, genuine Roman jug covered with a slate stone in his field, which contained 402 small ores, beginning with Maximinus Daza and ending with Constantinus II. My esteemed friend, Professor Namur, acquired the find for the local cabinet; he has described it in more detail and the relevant article will appear in the next issue of the Revue de la numismatique belge. I was allowed to inspect the coin find; it contained many rarities, for example the inscription of Constantine the Great: Soli invicto comiti and the emperor facing left with helmet, armor and lance; then several coins with the mint place MSL, which Sabatier also gives and which I interpret as Moneta Sacra Londinensis; the inscriptions claritas reipublice in various varieties were also not uncommon with Crispus and Constantinus II. I believe, however, that the find goes back far beyond the year 326; Constantine II was only 10 years old in that year, but he had already won numerous victories with his stepbrother Crispus, who died in that year. Constantine only wears the laurel crown on his very youthful, almost childlike head in two examples; both coins were struck in his birthplace of Arles; he probably received the right to wear the laurel wreath during Crispus's lifetime. However, the youngest coin in this find certainly does not go back to the year 337, the year in which Constantine the Great died and Constantine II gave up the nickname junior. [...]

March 31, 1864 **Several acquisitions were made for the FATHERLANDS antiquities.**

Together with the above-mentioned Roman objects from the estate of the late Mr. S. H. VAN DER NOORDAA, some were also taken over from the former inhabitants of our Fatherland: a very beautifully polished flint AXE, 12 dm [inch} long; a roughly worked BAL of trachyte, 4 dm in section; an URNE of baked earth, filled with burnt human bones, high 19 dm; another URNE, 18 dm high, with the fragments of a bronze HAIR NEEDLE found in it; another three URNS with burnt bones and remains of bronze RINGS, etc.; the urns of 10, 15.5 and 16 inches height; two BOWLS, 9 and 7 dm; 4 POTS of different shapes, 6.5 to 9.5 dm high; a cup-shaped BARREL, 5.5 dm high, and some fragments of pots. All these objects, with the possible exception of the WEDGE, were excavated in 1837 from the old cemetery in Deurne in Noord Brabant. Together with the pieces found at the same location and donated to the Museum in 1840 and 1841 by the late Mr. P. O. G. GUYOT, they now form a considerable whole. [...]

Some MEDIEVAL AND LATER OBJECTS, originating from the excavations for the camp in Nijmegen, a few trachyte MORTARS with PESTLES from the area around Deurne and belonging to the estate of the late Mr. S. H. VAN DER NOORDAA, which has already been mentioned several times; [...]

1 January 1865 **Antique stones in Horn**

HORNE-HEEL. In a manuscript in the library of the University of Liege, numbered 188 and written around the middle of the 17th century by Canon Henri van den Berch, King of Arms of the country of Liege, we find a curious note on antiques that existed in Hornes and Heel, and which today are for the most part in the office of Mr. Guillon. On page 14 of this manuscript we find three drawings of antique stones. The first "which had, says van den Berch, a foot and three quarters, a half-pound less, in height, and a foot and four inches in length" has the following inscription:

MARTI
HALAMARE
SACRVM
T. DOMIT. VINDEX
O. LEG. XX. V. V
V. S. L. M.

This inscription was published, with slight differences, by Knippenbergh, Heylen, Schayes, Wolters, etc. Mr. Guillon, the notary, reads it as follows:

MARTI
HALAMARDO
SACRUM
T(itus) LEG(ionis) XX V(aleriae) V(ictricis)
V(ota) S(olvit) L(ubens) M(erito).

The second stone, whose length was "two feet, three quarters and a half pounds and the width three quarters of a foot in a pound" does not have an inscription, but it shows a vase, above which is a kind of stretched chain.

The third, whose dimensions van den Berch does not indicate, has the inscription:

MERCWRI
INGENVS
YFHIFI.

We believe we are doing the Archaeologists a favor by transcribing here the note that van den Berche placed below the first two drawings. "I pulled - he says - these two antique stones out of the originals which are masoned in the wall of the parish church of Horne, capital of the county, appenage of the county of Looz, on April 9, first of the Easter holidays 1640, and the pastor of the place told me at the time that he had several medals of the Roman emperors found at the said Horn." van den Berch then describes several Roman antiquities and medals found at Heel, a village located a league from Horn. He adds: "The most admirable is from the same place, that the village of Heel is called after Helena (1); what is known by tradition and is all the more credible since a statue of very fine white marble was found in the ground that was dug up, and is still, this April 15, 1640, lying on the real road, but very broken, because one can see the thighs from above to the ankles of the same piece of the height of six feet and a half; which is of a lady, to be veiled by her body like the Roman ladies; and they hold for certain that the rest of the statue is still in the ground. In another place he says that the priest had promised him a coin on which was written the word HEEL.

(1) The vicus Helena or Hedena does not appear to be the village of Heel as van den Berch might have us believe. Father Wastelain, places this vicus in Hesdin.

October 25, 1865 * **Maastricht, October 22. For some time now, excavations** have been continued under the municipality of Houthem (1 hour from here), to locate the remains of a Roman villa that once existed there. They have succeeded to such an extent that the division and layout of the building can be followed regularly. Many old roof tiles can be found; this day the cellar was discovered and they flatter themselves that they will also find the bathing facilities. A coin of Emperor Constantine, found on this site, sufficiently proves that this villa already existed during his reign.

December 31, 1865 **In addition, we find some details not mentioned elsewhere**

in the book North Brabant Antiquities [facsimile of 2012]: With about thirty enthusiasts from his company he went to the heath in Deurne and soon became convinced that those eminences were burial mounds. These are unequal in height, some being only 60 inches [duim], and others 7.60 cubits [elsewhere 1.6 cubits is mentioned] high on a greater or smaller circumference according to the height. About a hundred urns will have been found, ranging from large tea cups to 100 pound heavy. [...]

In the spring of 1840 I was with the late Dr. Niermeijer, later a professor in Leiden, visited this heath and found the hills still as they were when the treasure hunting stopped! [...]

In the Rijksmuseum in Leiden, thirteen urns and side pots, by Jhr. Mr. H. de Grez in 's Hertogenbosch, four urns and side pots (1) and two urns and a side pot preserved in the cabinet of the North Brabant Society.

(1) While printing this message, I was obliged to present Mr. de Grez with those well-preserved urns as a gift to our cabinet.

January 27, 1870 **In the Courrier de la Meuse is informed that when the old church in Kessel was demolished, a slightly damaged altar of Roman origin was found under the main altar. This altar is square, high 90 and wide 55 cm, made of tuff stone, has a pedestal and a frieze, and is decorated with three bas-reliefs. The altar appears to have been dedicated to Minerva, Juno and Hercules. At least on the plane on the left one thinks one recognizes the image of Minerva; however, the head is missing, as are the statues of the two other bas-reliefs. A woman is depicted on the right side, next to a peacock; this should represent Juno. The front is decorated with a figure, which is very damaged. Because of the large shapes of the statue and the lion's skin, people thought they saw Hercules in it. – The back of the outer wears neither jewelry nor adornment. – Although one may accept the mention of this find with some reservations, it is remarkable enough to draw attention to it. The Courrier de la Maas points out on this occasion that, when old churches are demolished, and especially under the main altars, remains from the pagan period, such as statues, votive stones and altars, are often discovered, and indeed that such antiquities are often found in the walls of churches are cemented, as in the St. Servaes Church in Maastricht – and who does not think of the votive stone of Dodewaard?**

February 13, 1870 **A few weeks ago the newspapers delivered a short report about archaeological discoveries in the vicinity of a village Heulen and near the hamlet of Aalbeek in the Duchy of Limburg. Heulen probably meant Herlen or Heerlen, and the same was meant by the excavation of the foundations of a Roman house near Aalbeek, where, under the leadership of the diligent and learned chairman of the Limburg historical and archaeological society, Mr. J. Habets, the foundations of a Roman villa were brought to light in the Ravensbosch in the Land-vsn-Valkenburg, between Houthem and Schimmert. The building was destroyed by fire, was 32 m long and 14 wide; two coins were found in it, dating from the early Roman Empire. In a cellar a beautiful iron shovel with a long handle was found, 90 cm long in total. Some bases of bowls or dishes of fine red earthenware bore the stamped factory mark OF. CARAN. Among the other objects, a large bowl or basin in a grey soft stone, very cleanly chiselled, of round shape, 10 cm high and 27 in diameter, should be mentioned. The excavations, although on Dutch soil, were carried out on behalf of the Belgian government; the description of the results they yielded will probably be published in the Bulletins des Commissions royales d'art et d'archéologie. A few years ago, in 1850, excavations had already been undertaken on behalf of the Dutch government by the late curator Dr. Janssen in the same Ravensbosch, which had also led to some not unimportant discoveries. However, the further continuation of the investigations was postponed and did not take place later, because they were undertaken by the councillor Sehuermans in Liège on behalf of the Belgian government and crowned with very remarkable results. They had led to the discovery of a Belgian-Roman villa in the so-called Rondenbosch, and were depicted and described by Mr. J. Habets, in a treatise: *Exploration d'une villa Belgo-Romaine au Rondenbosch au Houthem-saint-Gerlach*, printed in the Vth volume of the *Publications de la Société historique et archéologique dans le Duché de Limbourg*. (Leidsche Ct.)**

February 19, 1870 **Roman altar with restored display in Kessel**
 [...] from the mayor of Kessel in Limburg, reports on a Roman altar with restored display in the church of the same name.
 DISCOVERY OF A ROMAN ALTAR in Kessel near Roermond.
 Non sibi res se submittere rebus. TACITUS.
 While demolishing the parish church of Kessel in December 1869 to build a new one in its place, an old pagan altar was discovered under the main altar of the choir. [...]

January 1, 1871 **DISCOVERY OF A ROMAN ALTAR in Kessel near Roermond.**
 [p. 189–199]
 Non sibi res sed se submittere rebus. TACITUS.

When the parish church of Kessel was being demolished around December 1869 to build a new one in its place, an old pagan altar was discovered under the main altar of the choir.

The church of Kessel dedicated to the mystery of the Nativity of the Blessed Virgin was a Gothic construction made of tuff stones from the surroundings of Maastricht; the location of the village on the banks of the Maas undoubtedly greatly facilitated the transport of these materials. It dated from the year 1460 (1). However, the foundations raised in rough stones seemed to indicate constructions that had preceded the Gothic church.

Unfortunately, at the time of our visit to Kessel, everything had been demolished and removed; it was therefore impossible for us to have any certain clue as to the form of these primitive substructures. Only we were able to observe in the large blocks taken out of the earth, fragments of Roman tiles which blocked the openings left by the irregularity of the stones of the opus incertum.

The Roman altar itself had been transported to the garden of the rectory and bore numerous marks of this poorly executed move. Before describing this curious monument let us say a word about pagan altars in general.

The altars of paganism (ara, altare) adopted different forms: there were square ones, long square ones, others round, some with several angles. They were made of stone, marble or more rarely bronze. In the temple of Babylon there was an altar, of which Herodotus speaks, made of gold on which only milk animals were sacrificed. According to Pausanias there were also altars of wood and others built of bricks or tuff.

There was no fixed measure for the height of the altars. There are some that do not even reach the knee, others go up to the waist of the people who sacrifice. There are, however, some much higher, especially among the round ones, so that one sometimes has difficulty in distinguishing them from a simple column.

These differences in elevation were observed according to Vitruvius in sacrifices: the highest altars were for Jupiter and the celestial gods, and the lowest for Vesta, the Earth and the Sea. But this distinction was not in general use.

On solemn days, these altars were decorated with garlands, giving to each god the leaves and branches of the favorite tree that was consecrated to him. At the altar of Jupiter beech leaves were used, at that of Apollo the laurel, at that of Minerva the olive tree, at the altar of Venus the myrtle, at that of Hercules the poplar, at that of Bacchus the ivy, at that of Pan pine leaves. These garlands of leaves were called *verbenae*; they are generally distinguished on the altars that adorn medals, coins and ancient marbles. Virgil calls these crowns, necklaces, in the following verse: *Saepe deum nexis ornatae torquibus arae*. Similarly, temples and victims for sacrifice were decorated with flowers and branches.

It was before the altars that treaties and oaths were made, to make them more inviolable. The altars were touched while swearing, says Cicero, to make the oaths more solemn. It was before the altars that weddings were celebrated and the closest friendships were formed. Examples of this are frequent in authors. Finally, altars have been places of asyle in paganism as in Christianity.

They were generally placed in temples, in front of the statues of the divinities in whose honor they were erected. This was done, says Vitruvius, so that those who prayed and sacrificed should always have the divinities before their eyes. The altars were in the middle of the temple, or against the walls.

There were also altars outside the temples. In Rome there were many in the streets and in the public squares. It was in a public square in Athens that St. Paul encountered the altar dedicated to the unknown God (1). Altars were also erected in the *lucus* or sacred woods in front of the statue of the divinity to which the wood was dedicated, near the door of the temples and in the *impluvium* or inner courtyard of private houses. It was on the altars of this last class that the family sacrificed to the Penates.

The top of the altars was regularly provided with a cavity for lighting the fire, or for placing the fruits the offerings or the victims. In the altars for sacrifices and libations we also notice an orifice for the discharge of liquids. Several like that of Kessel were decorated with sculptures representing the gods in whose honor, or in whose temples they were erected.

The ara of Kessel is a monument mutilated towards the top and whose cavity has disappeared. But judging by its restricted proportions and the lack of an orifice for the discharge of liquids it seems to us to have served to receive offerings of fruits, or to burn incense; the table is too small to make the slightest bloody immolation there.

The altar in question forms a square column 0.90 high and 0.55 m wide. It was built in white and fine sandstone and is decorated with a base, a shaft and three bas-

- 124580 reliefs. The monument was erected with the intention of making three powerful
Olympian divinities propitiated: Minerva, Juno and Hercules.
The artistic execution of the altar is so neat that we have no hesitation in placing
its making towards the High Empire, in the first or second century of the Christian
era. This beautiful execution as well as the exotic stoneware from which it was made
124585 suggest that it was not sculpted in the country. Perhaps it came from the south, by
the Maas or the consular road from Paris to Tongeren and Nijmegen. The sculptures
that decorate it are divided in the following order.
In the frame of the left face is represented Minerva, armed with a lance whose top
end is no longer visible; with her left hand she rests her shield on a column. The
124590 goddess is adorned with a long dress down to her feet and covered with a cloak. The
drapery is very neat; unfortunately the head is missing from this statue as from the
two others that decorate the altar.
Our bas-relief represents the goddess emerging fully armed from the sick brain of
Jupiter:
- 124595 *De capitis fertur sine matre paterni*
Vertice cum polype prosiliisse suo. Ovid. Fast. 3, 841.
She owes to this extraordinary origin to have been honored both as a goddess of war
and wisdom. Caesar and Tacitus placed Pallas or Minerva among the divinities
worshiped by the Gauls and the Germans (See fig. 2 litt. A.)
- 124600 On the second side is represented the queen of Olympus, Juno. She is a matron who has
[?] majesty. She holds in her right hand a full *patera* for sacrificing on an altar
nearby, where an offering is burning. The symbolic bird of Juno, the peacock, is next
to her head. Her costume, although trailing and ample, is more modest than that of
the virginal Minerva.
- 124605 Juno was the sister and wife of Jupiter, as she herself states in this verse of
Virgil:
Ast ego, quae divum incedo regina, Jovisque
Et soror et conjux. Aeneid. I, 50.
She was also the mother of Mars and Vulcan. She is represented as the queen of
124610 heaven, with a scepter in her hand. Her cult was widespread in Gaul (See fig. 2.
litt. B.)
The most mutilated figure is that of Hercules, which adorns the front face. The son
of Jupiter and Alcmene is recognizable only by the beautiful and strong size of his
naked limbs and by the skin of the Nemean lion that he holds in his left arm. It is
124615 known that this skin made Hercules invulnerable. The author of the altar of Kessel
represented in his work the rest of the god after the fight.
The Germans boasted, says Tacitus (1), that Hercules came to their country in the
time of their fathers. They sang his praises as they went into battle, as the most
valiant warrior who had ever been on earth. To Mars and Hercules they sacrificed
124620 chosen animals in preference (1). (See fig. 2 lit. C.)
The fourth face of the altar is without ornaments and without inscriptions; it was
probably intended to be placed against the walls of the temple or against any wall.
The idea of the person who erected this monument is rather bizarre. We see the
jealous Juno next to Minerva, her rival at the banquet in Paris, with Hercules to
124625 whom the same Juno had sworn immortal hatred. Did the author of the monument perhaps
want to please both sides by placing opposing divinities on the same altar? In any
case, he wanted to honor the principle of physical strength; which makes us believe
that the dedicator was a legionary.
However, it is not rare to find the figure of these divinities represented side by
124630 side on the same monument and their names formulated in the same dedication.
Without leaving the charming banks of the Rhine and the Maas, we cite in support of
our thesis the following altars and votive stones. At Voorburg in Holland a
dedication was found to Juno the queen, to Minerva and to the Genius of the place; at
Kleve one to Jupiter, Juno and Minerva; near Cologne to Juno, Hercules and Silvanus;
124635 at Andernach, to Juno, Mars and Hercules, at Kreutznach to Jupiter, Juno, Mercury,
Hercules and Minerva, and another to Hercules, Juno and Fortune; at Mainz one to Juno
the queen, Fortune and Minerva. (2). We even see on one of these dedications
represented at the same time the three divinities of Kessel; it is the first of
Kreutznach, near Bonn.
- 124640 In the substructures of a Roman fortress located near the same city, a Roman altar
was discovered in 1863, 0.34 m high and 0.15 m, whose four faces were decorated in
the following manner: first face, Juno standing, holding the scepter in her left hand
and a *patera* in her right, at her feet the peacock. Second face, Minerva turned
124645 slightly to the side was decorated with a helmet and a long, trailing tunic, in her
left hand she held the lance and in her right the shield. Third face, Mercury adorned

with the *chlamis*, (the petasus was no longer recognizable), held the *caduceus* on his left arm and in his right hand the purse. Fourth face, Hercules looking to the left held in his right hand the club whose big end rested on the ground in front of his right foot, with his left he supported the lion's remains (1). As we can see, there is no lack of examples and analogies to prove that the united cult of Juno, Minerva and Hercules was quite fashionable in our countries.

Another observation that we have to make on the altar of Kessel concerns the place of the find.

In Germany, France and Belgium we frequently find hidden, either under the foundations, or in the wall, or in the church itself, especially under the altars, mutilated statues, *arae*, *cippus*, votive stones or other objects of the pagan cult of our fathers. The same phenomenon can be seen in our surroundings.

This is how the torso of a god Mars was discovered about ten years ago under the foundations of the old church of St. Martin in Wyck, and three votive stones in the walls of that of Horne near Roermond. A fragment of a pagan bas-relief can still be seen today in the eastern façade of the church of St. Servatius in Maastricht, and in Guichoven, in the tower, a head of a divinity.

In the high altar of the church of Goyer (Jeuck) near St. Truiden, there used to be four inscriptions on marble stone relating to *ex votos* in honour of Hercules (1).

Finally, in Nieuwkerk near Venlo, a discovery similar to that of Kessel took place in 1865. An old Roman altar was found walled up in the main altar of the church containing two superimposed inscriptions, one pagan, the other Christian (2).

Here is what we think of this phenomenon.

Our fathers in the faith will have preserved these objects in their churches even after the old cult was abolished; if they hid them under the altar, it was to mark the triumph of Christianity over paganism; if they left them before the eyes of the faithful, they took care to mutilate the paintings and statues so that no one, deceived by appearances, would pay religious homage to a profane object.

The village of Kessel located on the course of the Maas and the military road from Tongeren to Nijmegen, was obviously known and inhabited by the Romans; its name indicates a Latin origin. We even suppose that it was one of the many fortified crossings of the Maas of which the historians of antiquity speak.

Kessel, although located in an entirely flat region free of hills, itself forms an eminence which is sheltered from the floods of the Maas. Next to the church is the ancient castle of that name placed on a kind of conical mountain having a height of about thirty meters; it is a mound of earth which has all the appearances of being artificial. One finds there by digging the ground walls in the form of terraces of four to five feet in height and whose sole purpose is to support the light and friable earth of which the cone is composed.

The castle itself is a precious example of military fortification of the Middle Ages. As it originally existed it was round; it would still be so if one removed two wings or square towers, located to the east and which have all the character of a less ancient architecture.

Kessel was in the Middle Ages an important lordship comprising eighteen villages and extending between the country of Cuyk, the Maas the country of Horne and the great marsh of Peel. The lords bore the title of count. The first Count of Kessel mentioned in history is Henry, who, with the Archbishop of Cologne, the Duke of Limburg, Henry Count of Zutphen and other lords, allied against Emperor Henry V in 1114, and who was crushed by the horses of his own troop in the battle of Andernach. We note that the chief towns of duchies, counts or lordships often succeeded military establishments of the High and Late Empire.

In the village of Kessel, Roman antiquities have been encountered on several occasions. We have reported these discoveries elsewhere (1). Let us add here that Roman medals are frequently found in a square field surrounded by pits, called De Keeskamer, and that poteries in a kind of tumulus called the Konynsbergh (2).

Several modern authors believe that Ptolemy and Ammianus Marcellinus mentioned Kessel in their books.

Indeed, the geographer Ptolemy, who flourished in Alexandria around the second century of the Christian era, after having spoken of the Morini and the Ambiani of Belgium, mentions the Menapii and their city, *castellum*, which he places near the Maas. If this passage actually applies to Kessel, the word *polis* (city) used by the author must be understood in a fairly broad sense, because the castle of Kessel could only have been surrounded in Roman times by a few rare houses (1). The ancient remains there are too few to think of the location of a real city. The current center of the commune which surrounds the church and the castle, has only 370 inhabitants.

Let us move on to the second mention. The Roman historian, Ammianus Marcellinus,

recounts, during the reign of Julian the apostate, around the year 357, the memorable siege of a stronghold situated on the banks of the Maas, and which several modern historians, such as Knippenbergh, Slichtenhorst, d'Anville, Wolters, etc. believe to be the town of Kessel on the Maas. But we think that they are wrong and that they have been misled by the word Castellum which is found in some inaccurate editions of Ammianus and which can be taken equally as a proper name and as a generic name. From the author's text it is clear that these are two fortresses and that the route followed by General Severus was not that of Kessel, but that of Juliers and Tongeren towards Reims. Now on this route we encounter the double fortress of Maastricht, built on the two ends of the bridge over the Maas. It was a strategically important point, where the hitherto somewhat obscure account of Ammien MerceLLin (2) is verified to the letter. Moreover, we will speak more at length about this siege in our notes on the discoveries of antiquities made at Maastricht.

If therefore the testimony of ancient authors concerning Kessel remains doubtful, if its ancient castle no longer presents any Roman character, the antiquities discovered there, and especially the altar that we have just described, sufficiently attribute to it an existence sixteen centuries old. Our ara is a monumental souvenir that makes us rightly suppose that this village had its pagan temple before having its Catholic church, its altar to Juno, Minerva and Hercules before having its altar to the true God of heaven. One may have succeeded the other on the same corner of land.

It would therefore be very regrettable if the altar of Kessel, carefully preserved by our ancestors, were to be lost in a private collection or in a museum. These monuments have no real value except on the very spot where they were originally erected. Remove them from there and you will have only an object of archaeological curiosity.

We therefore express the wish that Mr. Cuypers, the skilled architect of the new church of Kessel, will have this curious memory of paganism framed in the exterior wall of the church, in a buttress for example, and add a commemorative inscription, recalling the place and date of the find. This is the custom adopted for these sorts of things in France, by the Imperial Commission of Monuments.

1 January 1871 **Discoveries of antiquities in the Duchy of Limburg**

HERTEN. This village formed in 963 a possession of the Duchess Gerberge, wife of Louis d'outre-mer, King of France and was called Hertra. It was given by her, with the royal palace of Meerssen, to the abbey of St-Dénis in Reims. In the hamlet of Meerhem, dependent on this village, not far from the Maas, there is a large tower, which in the Middle Ages was part of the residence of the lords of Meerhem, and which currently exists in a state of ruin. It was in the remains of this monument of ancient architecture that Mr. Wolters believed he had found the vestiges of a Roman establishment. "This tower," he said, "of square shape, was 14 meters 50 centimeters high; the thickness of the walls, measured on fragments that remain, was 3 meters 65 centimeters. We no longer have exact data on the height of this construction, the upper parts having been in a state of ruin for more than a century.

The stone of which the masonry of this tower is composed is a rubble of all sorts of dimensions, interspersed with horizontal chains of a more or less dressed stone and which seems of an ochre nature; because by pulverizing it and soaking it in water, its lye provides a dark, warm color drawing on brown ochre. The mortar seems to have been a type of concrete; it is interspersed with small pebbles or gravel.

A short distance from this ruin, in a communal meadow, is a tumulus rising 7 meters 50 centimeters above the uniform level of the surrounding land; it describes [...]

April 14, 1872 [...] **During the course of this century, various**

sarcophagi made of sandstone have been unearthed in our diocese; thus in 1817 two at

- 124780 Limbricht, later one at Schinveld, in 1853 another still between Horn and Beegden, not far from the old Roman road. "One of the coffins at Limbricht is not described. The other was closed by a large stone lid and contained, besides some bones, a cinerary urn, a metal lachrymatory, a lamp and an ornament in silver cloth. The coffin was surrounded by small glass vials, tied in pairs with copper or iron wire.
- 124785 All this find was transported to Cologne, where it is now on display in the Wallraf Museum. The sarcophagus at Schinveld was surrounded by Roman pottery. That at Beegden, having a length of four feet, a width and a height of about a foot and a half, was covered with a flat lid, but broken in several places. [...]
- 124790 October 16, 1872 **Urns, between Merselo and Overloon**
Venray, October 14. Recently some gentlemen went to the heath between this place and the villages of Merselo and Overloon, with the aim of conducting scientific excavations. This first experiment was crowned with a favorable result, as four urns had already been found in a short time. This heath (the cemetery of the Marezaten?)
- 124795 can, when examined by experts, be an important contribution to the history of Limburg's earliest inhabitants.
- April 3, 1875 **The Medusa head of Blariacum.**
That is the title of a speech by Mr. GAEDCHENS, professor in Jena, on December 9,
- 124800 held recently in Bonn on the occasion of the birthday of the founder of art history, Winckelmann, which was published as a brochure by the Association of Friends of Antiquity in Rhineland. The extensiveness of that scientific argument prevents us from including it in its entirety and we only provide, by way of extract, the
- 124805 description of the remarkable piece itself, of which Mr J.G. Lienders is the fortunate owner here and for whom important sums have already been offered. ... While important discoveries of ancient objects have been made several times in various places in the municipality of Maasbree, including in September 1830 in Baarlo, opposite the church, where an urn was found containing hundreds of gold and silver coins, most of which were in the hands of Mr. L. Wolters, banker in Venlo,
- 124810 some through the intervention of the Rev. Mr Fransen, in Ittervoort, entered the Belgian state collection - the soil of Blerick was considered barren in this respect for a long time, until in 1864 a bronze statue of Ceres came to light, which is now the property of Mr Fransen. Hubert du Guasco in Valkenburg, stood out because of her excellent work, but especially because of her white and blue enamel on the surface
- 124815 and on the corn ornament on the head. Of more importance, however, was the discovery towards the end of the year 1872, at the deepening of a small stream near Blerick. A worker found, at a depth of 9-10 feet, among other objects, the above-mentioned shield, which, except for some minor deteriorations at the extreme edge, is extremely well preserved. It has a diameter of 26 cm and is made of bronze, covered on the
- 124820 outside and inside in the fire with a strong layer of gold, which has remained completely pure and spotless. A rich image decoration, entirely executed in hammered work, covers the plain. A dense wreath of oak leaves runs along the edge, which sheds very small acorns on both sides. In the bow that ties the wreath together at the bottom, one will recognize a poppy head at first glance. Continuing chains of small
- 124825 round grooves, similar to a string of pearls, wind through the wreath as further adornment.
In the center of the shield surface is a round expansion, 7 cm high and 0.11 wide, on which the very excellent and carefully decorated head of the Gorgon, 0.8 wide, is high and relief. The eyes are wide open, the apples are deeply extracted, but they
- 124830 show no trace of being filled with silver or precious stones. The nostrils stand out sharply from the cheek, the corners of the mouth are very deep, no less the side of the lower lip under the nose. From the rich hair two wings emerge from the forehead, under which the heads of two snakes can be seen, whose bodies run invisibly under the hair on either side and wind themselves in a loose snare under the chin. A third
- 124835 snake's head can be seen just in the middle of the Gorgo's forehead, the scaly body dwelling for a moment on a bald spot on the skull, before soon disappearing completely. The artist only needed the head to create an ornament in connection with the two other dragon heads, which is similar to the teeth of a wide open lion's mouth, which surrounds the head of Heracles. The Gorgone is surrounded by an oak
- 124840 wreath, which is very similar to the one described earlier. Neither the bow at the bottom nor the poppy head at the top are missing, only there was no room at the front of the expansion for the small acorns, they are small and relief and hang down along the sides, alternating with tiny twigs on which three tender blossom buds grow. On the shield surface itself, the expansion is surrounded by a very fine, flat
- 124845 decoration, which is formed by semi-ovoid, crenellated ornaments, from which three

small twigs, each with three buds, emerge between each.

The writer then enters into comparisons with such well-known objects and points out all deviations with great accuracy and expertise. He believes that the original purpose of this precious piece was not to serve as a weapon, but to all appearances, especially because of the one treatment, it was made into a piece of jewelry or a medallion.

Simultaneously with this shield, seven other bronze objects were excavated at the same location, on which traces of earlier gilding are still visible. They are ornaments of horse harness in four different types.

June 25, 1875 **No. VII. ON AN ALTAR FOUND AT HORN (LIMBOURG)**

(LETTER FROM MR. ROBERT MOWAT, COMMUNICATED BY MR. DE LONGPÉRIER.)

We know that the work required for the construction of an observatory at the summit of the Puy-de-Dôme has brought to light the foundations of a vast building which, in all likelihood, must be the great temple of Mercury Arverne. Gregory of Tours (Histor. Francor. I, 30) has left us a curious description of it. By a singular fate, five altars, dedicated to this same Arverne god, have been found on the Germanic borders, far from the place of his central worship. One of them, carefully studied by Mr. Robert Mowat, revealed to him in an unexpected way details on the colossal statue executed for the temple of the Arverni by the artist whose name Pliny the Elder has transmitted to us, Zenodorus. This altar, discovered in the old demolished church of Horn, currently preserved in Roermond, at Mr. Guillon's, has a quadrangular shape. It is decorated with sculptures. It bears an inscription, hitherto poorly read, and which Mr. Robert Mowat, according to a carefully executed tracing, restores in the following manner:

MERCVRIO
ARVERNO
D. IRMIDIUS
AR. PO. E. V.

That is to say: Mercurio Arverno Decimus Irmidius aram posuit ex voto. The type of the letters seems to belong to the middle of the 2nd century of our era. The interest of the monument does not reside entirely in the inscription. The bas-reliefs require description. There are three of them. On one we see a rooster perched on top of a winged caduceus, at the foot of which is placed a purse. On another side of the altar there are two panels; at the upper corners of the first panel hangs a garland; lower down we find an object similar to a purse. The second panel, doubtless reserved for other attributes, contains nothing, as if the sculptor's work had remained unfinished. Immediately above the inscription, on the main side, there is a very damaged bas-relief. What remains of it is however sufficiently characterized for us to distinguish with certainty a figure facing forward, seated and half-naked; his *chlamys*, fixed on the left shoulder, is held by the forearm and falls in draperies on the thigh; in his left hand he holds a caduceus leaning on the defect of the shoulder; between the legs and the seat is a quadruped lying down and turned to the right, in which it is impossible not to recognize a goat. This composition is framed between two pilasters which support a triangular pediment. The figure is thus housed in a kind of niche with a pointed roof or sacellum, which simulates the sanctuary where the god was worshiped.

Mr. Mowat points out that to his knowledge this is the only example of a bas-relief representing Mercury seated; the other lapidary monuments always show him standing. There is therefore in the choice of this exceptional pose an obvious intention, which Mr. Mowat interprets in the following manner. The use of the ethnic epithet shows that the act of piety accomplished by the consecrator is mixed with the memory of the cult celebrated at the chief town of the Arverni. The sculptor executed the bas-relief on the special instructions of Irmidius or of a person who had seen the colossal statue of Mercury, and these instructions were reminiscences of what was remarkable about the statue. The attitude given to the god on the bas-relief is precisely that of this famous statue.

Pliny immortalized this masterpiece in these terms:

"The size of all statues of this kind has been surpassed in our time by the Mercury that Zenodorus made for the Gallic city of the Arverni, at the annual price of 400,000 sesterces for the labor for ten years. Having sufficiently made his talent known there, he was summoned by Nero to Rome, where he executed the colossus intended to represent this prince. While he was working on the statue of the Arverni, he copied for Vibius Avitus, governor of the province, two cups carved by Galamis, which Germanicus Caesar, who loved them very much, had given to his tutor Cassius Silanus, uncle of Avitus." Where had the sculptor borrowed the type of the Arverni Mercury to

import it into Gaul? The bas-relief of Horn offers a striking analogy with the reverse of some coins struck in Corinth and Patras under Antoninus, Marcus Aurelius, Verus, Commodus and Elagabalus. We see Mercury seated, wearing the *petasus*, the *chlamys* thrown over his left shoulder, the *caduceus* in his left hand, his right arm extended above a ram who turns his head towards him. This monetary type, apart from some accessories which change, appears to Mr. Mowat to be commemorative of a statuary group described by Pausanias in these terms:

"On the road which leads directly from Corinth to Lechaemum, we notice a seated Hermes, of bronze, at the side of which is placed a ram, because it is believed that Hermes is the god who watches particularly over the herds and makes them multiply, as the saying goes by Homer in the *Iliad*."

Now, if it is legitimate to suppose that Zenodorus' talent could only have been formed in the incomparable school of Greece, and that the artist who reproduced with such perfection the cups chiseled by Calamis had to study on site the works of the great masters before being called to Rome by Nero, we readily imagine that he could have admired in Corinth the Hermes with the ram, noticed a century later by Pausanias.

In any case, the type from which he was inspired for the statue commissioned by the Arverni is essentially Greek. In this regard, the testimony of numismatic monuments seems decisive. Greek coinage simultaneously admitted the type of Mercury standing and the type of Mercury seated, while giving preference to the latter. Roman coinage only admitted the type of Mercury seated. It seems, moreover, that the cult of this god had fallen into a sort of oblivion during the High Empire; his image was absent from Roman coinage from the time of the Republic until the time when Marcus Aurelius, who professed a particular devotion to him, restored him to honour.

January 30, 1875 - **In the municipality of Obbicht, it is reported** that during the extraction of gravel, several pots were discovered these days, which were found to be Roman funerary urns. However, due to brittleness they have partially fallen apart. The most important part of the find must be a large glass urn, made of bluish glass, filled with some bones. In addition to these objects, a piece of a lock was found, as well as some copper objects, such as a large pin, two neatly crafted handles, as one sees on chests, two rings, the wire of which is octagonal, and a hollow plate, representing a lion's head, with a copper ring in the mouth.

Slittard, 28 Jan. [1875] In de naburige gemeente Obbicht zijn dezer dagen bij het uithalen van kiezel eenige potten te voorschijn gekomen, die bevonden werden Romeinsche graf-urnen te zijn. Door broosheid zijn ze echter gedeeltelijk uit elkander gevallen. Het belangrijkste van de vondst moet zijn een groot glazen urn, van blaauwachtig glas, gevuld met eenige beenderen. Naast die voorwerpen werden gevonden een stuk van een slot, alsmede eenige koperen voorwerpen, zoo als: een groote speld, twee keurig bewerkte handvatten, gelijk men die aan kisten ziet, twee ringen, waarvan de draad achtkantig is, en een holle plaat, voorstellende een leeuwenhoofd, met een koperen ringetje in den muil.

1 januari 1880 **Les trésors de monnaies romaines**
737. A Weeze (cercle de Gueldre, Geldern), en 1880, vase en terre rouge avec 5.200 petits bronzes. Sur 1.198 examinés, il y avait: 1 Gallien, 1 Consécration de Claude, 1 Licinius père, 1 Licinius fils, 113 Constantin, 294 Constantin II César, 36 Constance II César, 30 Constans César, 5 Delmatius, 46 Theodora, 52 Hélène, 262 Roma, 224 Constantinopolis, 1 Populus romanus, 26 barbares. Les ateliers étaient représentés ainsi: Trêves, 668; Lyon, 173; Arles, 78; Rome, 16; Aquilée, 1; Siscia, 8; Constantinopolis, 2; Carthage, 1; Thessalonique, 1; Héraclée, 6; indistincts, 215. L'enfouissement a eu lieu vers 337.

August 19, 1880 **Venlo seems to be the place where the Maas** gives back her swallowed treasures as if by preference. So we bought in 1858 an exceptionally heavy and long sword with an artfully worked handle, between Blerick and Venlo collected from the Maas with the fishing net. In a few years, Venlo did not less than five gothic gold agrafs [*agrafen*], set with diamonds, sapphires and rubines found in the Maas. They were sold to various goldsmiths, from whose hands they came into the possession of the late Mr. Hugo Garthe, art collector in Cologne. These valuables, publicly auctioned in May 1877, fetched astonishing prices. - Nowadays one can still see a valuable object at the home of Mr. Lienders, goldsmith in Venlo, probably washed out by the Maas into an adjacent ditch. It is one gilt plate with Medusa head and further ornaments, exceptionally high in copper driven.

According to a brochure by R. Gaedechens, professor in Jena, this would be the case piece of art, from the first century of our era, as a beautiful or parade shield have served.

May 29, 1883 **In the Publications de la Société d'archéologie dans le duché de Limbourg**, Tome XVIII, is appointed by Mr. Jos. Habets talked about the search for hidden treasures under Blerick "in which even officers from Venloo are said to have taken part."

The captain J.A. Ort, now at the Kon. Mil. Academy active, now tells in a small book, published in Roermond under the title: "Places in Blerick where prehistoric Germanic and Roman objects have been found," what is true about that search for hidden treasures and who took part in it. From his letter it appears that not officers but Mr. Franssen, pastor in Ittervoort, who had searched in vain for the Roman settlement in Blerick, told the farmers that a treasure was hidden on the Römerheide there in a beautiful red earthen pot with a lid. People started looking and digging for it and the pastor hoped to find that settlement without any expense or effort. That is why he had given the peasants the description of a Roman pot of terra sigillata! Mr. Ort further states that the pastor had damaged funerary urns broken and that, although he was a correspondent for the former board of government advisors for memorials of national history and art, he sold the proceeds of his excavations to the museum in Brussels.

April 4, 1885 [...] **You have heard of the found objects and excavations** on or near Venlo's territory by Mr. Hub. Michels, the superior Rudolph, the lieutenant Ort (now captain) and the foreman Frans Deserièrre of Dr. Boetzkes (on Wambach) and of the Medusa shield owned by the family Lienders. So far, these gentlemen have usually been, so to speak "practical" practitioners, the memory naturally comes to mind our fellow townsman, Mr. Martin Jansen, who unfortunately passed away so early had so much knowledge in the field of archeology and worked as a "theoretical" fellow worker the way of research could have delivered so much. [...]

September 26, 1885 **In 1872 a bronze shield was excavated in Blerick and four** objects that resembled small horseshoes. The shield, a Medusa head, came into the hands of the late Mr. A. Lienders, goldsmith here. From the September issue of the Bulletin mensuel de numismatique et d'archéologie, by Raym. Serrure, we learn that this shield has left the country. We can confirm that the shield has actually been in the hands for about a year of Mr. Frans Merkins in Cologne, a lover of antiquities, who will keep it in his museum for the rest of his life.

May 1, 1886 **Merovingian coins, Avranches, Ambazac, Arras, "Juliniacum", Chemillé, Maastricht, etc.**
BY R. SERRURE.

Paris, 1886, in 8°, 15 pages, 1 plate engraved by L. Dardel bears 11 coins. (Extract from the Revue française de numismatique, 1886).

The few thirds of a sou described by M. Serrure have the merit of being relatively little known; they are all remarkable.

The author especially wanted to provide useful materials to the one who will have the genius to raise the entire monument of Merovingian numismatics.

Any Merovingian coin, says the author, presents three different points for study: the interpretation of the place name, the localization of the type, and finally the examination of the man's name.

It is in accordance with this method that the various coins whose names appear in the title of the article are reviewed; we will limit ourselves to speaking of the thirds of a sou of Arras and Maastricht which are of particular interest to Belgian numismatists.

The triens of Arras was found in Malmédy (Prussia) and is part of the State collections in Brussels.

On the obverse the legend + ATRAVETES is written around a bust turned to the left. Reverse: A//CHE + MVNDO. In the middle of a crown of pearls, a large A surmounted by the cross which cuts the legend and placed above a sort of flower. A variety of this coin was acquired at the sale of the Gariel collection by Mr. d'Amécourt.

ATRAVETES is indeed the Civitas Atrebatensis that the Notice des Provinces calls Atravatum, Atrevatum, Atrobatum, Atravatum, Attrabatum etc. and from where Charles the Bald dates a diploma, January 23, 843, actum Atravato monasterio S. Vedasti. The mint was obviously called ALGHEMVNDVS.

The type of the reverse of these coins is interesting, notes the author, because we find the initial A on the meshes of Arras (1) just as the flower is found both on the Gallic coins of the Nervio-Atrebatian region and on the Douaisian municipal deniers of the Middle Ages.

M. Serrure then draws attention to the triens of Maastricht that we published in the Belgian Review of Numesmatique 1885, p. 70. The author repeats, what we had pointed out, that the coinage of the mint Thrasemundus constitutes an almost servile imitation of the bust of the city of Rome: VRBS ROMA, engraved on certain small bronzes of Constantin the Great.

We can conclude that this coin is one of the oldest Merovingian coins struck in Maastricht.

The Hague Museum has a third of a sou signed by the same minter, but the type of this coin shows that the artistic qualities of the coin were already in decline when it was issued.

Another triens from Maastricht bears on the obverse: TRIECVO FIT.

Bust turned to the right; hair held back by a pearl headband extending behind the head.

R. + GODOFRIDVS MO. Latin cross flanked by two globules and raised on a vault; the cross is separated from the legend by a grenetis. This triens was part of the Garthe collection; van der Chijs had not mentioned it, but the Viscount of Amécourt in his Essay on Merovingian Numismatics Compared to the Geography of Gregory of Tours, p. 164, did not neglect to mention the Godofridus coin. The author then describes a triens with the legend + TRIECTO FIT.

Bust to the right. The head encircled by a pearl diadem seems devoid of hair; the cheek is marked by a strong projection. Reverse: MACEFINVS M.

Raised cross on a step under which are arranged five globules.

This raised cross that is frequently found on Merovingian coins is, as Mr. Baron de Chestret very judiciously notes, the origin of the perron raised in several localities in the country of Liège (1). This triens was also part of the Garthe collection. Van der Ghijs gave five varieties of this coin. A similar triens found near Utrecht is reported and drawn in a very rare small booklet that we possess. H.

Reland, the author, addresses a letter to the Count of Kniphuizen dated Utrecht, April 20, 1713, in which he speaks of the mint MADELINVS but wrongly assumes that the coin was struck in Utrecht because it was found near this city and that the name of the mint Madelinus is also found on the coins of Duurstede. This triens of Maastricht then belonged to Doctor van Engelen of Utrecht.

Finally, Mr. Serrure describes a triens found in Huy. Legend: TRIECTO FIT.

The letters C T are linked. In the field a bust turned to the right. R./RIMOALDVS MONE; the letters N E are linked and the legend must be read externally. In the field a cross, with double crosspieces, one of which is potentated. This is a notable variety of the triens reproduced by van der Ghijs under No. 14 of plate VII.

M. Serrure promises us a numismatic monograph of the Civitas Trajectensis, under the first two races. His essay proves how much this complete study will be full of attraction; this is why we hope that he will soon put his projet to execution.

G. CUMONT,

Secretary of the Belgian Royal Numismatic Society.

(1) The author says that these Arras meshes are from the 16th century. This error is probably the result of a typographical error.

(1) See Bulletin of the Liège Archaeological Society, 1885.

May 15, 1886 **Over a stipulated Arabic text from Merum.**

In a report from August 1, 1810 to the Grand Duke of Montalivet, Minister of the Commonwealth of Nations in Paris by the subprefect, A. Liger from Roermond, we read the following: (1)

"There are a quarter of a league from Roermond very close to the Maas, in the commune of Herten, hamlet of Merum, the remains of a tower of the highest antiquity where the pagan priests made sacrifices to their divinities from time to time. This tower was built on a small eminence ten paces from the Maas, but as over time, the rivers have often changed their height?? this one is now more than 700 paces away from it. This mass of stones is 60 feet long, by 50 wide; the thickness of the walls is 14 feet, it is empty in the middle, without stairs. The pagan priests used a ladder to climb it, which they burned each time after their sacrifice, so that no profane would approach the sacred ashes; at 10 paces from the wall there was found, about 50 years ago, a mound, where formerly the people placed themselves each according to their rank, to be present at this ceremony, because the right to climb onto the pyre, where the sacrifices of idols were ordinarily made, was reserved only for the sacrificing

Priests. It is claimed that, a few years ago, iron bars were found there all rusty, and if this is so, they were doubtless pieces of the grill, on which they placed their offering. The ashes of this holocaust were carefully collected by the Priests and distributed to the people in the form of an amulet, to which many virtues were attributed. It is estimated that this tower may have been nearly 40 feet high, or it was finished with a platform. At a distance of 30 feet high, we find holes 2 feet wide, which cross this tower on all its faces. It is presumed that beams had been placed there, which due to their age no longer exist. The different kinds of stones, of which this tower is composed, are unequivocal signs, that it must have been built at a very distant time. These stones, which were used are for the most part large pebbles, interspersed with a few layers of tuff, as well as a kind of stone of a blackish and heavy color, which it is supposed that the ancients made themselves. This stone closely resembles vitrified coals, having the same nipples. The method of making it seems to be lost today. (1) There are still 2 or 3 other species, whose names are unknown.

"The medals bearing the effigy of the Roman emperors, which were found at the foot of the wall, attest that this tower was built by their cohorts. Among other things, a very rare stone was found, whose angles are broken, which has lost some of its polish, but whose engraving has been very well preserved. Its size can be equal to that of the fingernail. The connoisseurs of fine stone engraving in Antwerp and Amsterdam attest that it is superiorly engraved, those in Amsterdam have even subjected it to the test of fire. It is a hard and precious stone, which cuts glass, like diamonds, but which does not have its water. They unanimously assured that the manner of engraving on hard stone today does not approach that of the past. Not knowing the oriental languages, we do not know whether the engraving is in Hebrew or Chaldean characters, or whether they are Egyptian hieroglyphs. However, we have seen in a small book, which is found in the cabinet of curiosities of the Jesuits in Cologne and which treats of ancient medals, the same imprint with the words Divo Esculapio. Everyone who has studied mythology knows that this God was dedicated to medicine. His cult was in vogue 400 years before the birth of Jesus Christ; thus it is conjectured that this tower could well have been dedicated to the God of Medicine. All the excavations and searches that were made, a few years ago on the side of the East where the ancients usually began their monuments, have been fruitless. "It was however on this side that they hid some coins to indicate to posterity the date of their enterprises, as well as the reign of their leaders. The present state of this tower offers nothing remarkable to the eyes of a curious person, except that a mine or deformed mass of stones. However, one can still discover on its summit with the aid of a telescope 50 towers of towns or villages, despite the fact that about 40 years ago one twentieth of its height was removed. The workers who worked to demolish this part unanimously agree that cement is harder to detach than stone. It is presumed that only an 8th part of its whole remains, its name today is Borgh or castle, although it could never have served as a place of defense.

This communication was provided to the sub-prefect of the department of Lower Maas by Mr. Petit from Roermond, owner of the above-mentioned old tower. To what extent all the scholarly fuss that embellishes this report applies here, I leave it to the reader to judge. I only add that this scholarship dates from a time when every citizen recognized the right and freedom to judge all things, even those of which he had only a small understanding. I will therefore pass over Mr. Petit's scientific observations in silence and confine myself to a word about the seal itself and about the ancient deposit of Merum, next to which it is said to have been found. The tower of Merum, which Petit describes as a pagan place of sacrifice and in which Mr Wolters also recognizes a Roman monument, is certainly not of Roman [Catholic?] origin, at least in the form it is in today. One finds pieces of *tegulae* and *imbrices* built here and there between the joints of the stones, but such remains from the Roman era were also found in the tower of the Romanesque church of Herten, which was demolished in 1880, and in a number of constructions from the Middle Ages, still present in our province. Our ancestors, feeling a lack of building materials, often resorted to the ruined Roman foundations in the area, which they plundered for the benefit of their new constructions. Such constructions therefore indicate the presence of Roman constructions in the area, but less so their presence on site itself. The old castle of Merum is certainly a medieval tower, belonging to the house of the families of Merum, Cuyck [Cuyk] and Heinsberg [Germany], who were lords of Merum and Dalenbroeck. The neighboring hill, which was labeled with the grand name of Drususberg by the classically thinking Mr Petit and which has now been excavated, also bore no

particular traces of Roman origin. Bones of cattle and medieval pottery shards were found there, which we saw and examined.

The view of Mr. Petit, followed by Wolters in his booklet entitled: Notice sur quelques débris de constructions romaines à Herten, may have influenced Mr. and not to look for the Roman poststation Mederiacum in Melick. But he remains indebted for certain proof of his feelings. We think it will be difficult to find a Roman highway from Thudder [Tüddern?] to Merum.

In our days of general writing about antiquities, there is a real mania to place roads and ramparts, just like that, in books and on maps, without first providing the slightest proof of the origins of these roads and ramparts from Roman or later Frankish period. Our hirers from the Rhine Province are very strong in that area; to follow them one must truly have a faith that moves mountains.

In the report of August 1 sent to the Montalivet in 1819 [or 1810?], there were impressions of the above-mentioned seal stone, which Mr Petit considered extremely remarkable, and two of which are still in the State Archives in Maastricht. We had one of these prints examined through our faithful friend G. Leemans, director of the National Museum of Archeology in Leiden. Professor De Goeje, our learned orientalist, explained the inscription in pure Arabic and read: Bismallah, that is in the name of Allah! This stone is also not Roman, but more likely midcentury. How it arrived at Merum, from Spain, from Palestine or from the East, is a mystery. Jos. HABETS.

(1) The minute of this letter is in the State Archives in Maastricht.

(1) The black bricks indicated here are simply cutting stones from quarries in the Liège region.

October 15, 1892 **Roman Antiquities in Venlo.**

By H. Michels.

In many places in and around Venlo and Tegelen, objects of Germanic, Roman and Frankish origin have been found during excavations.

In the year 1817, in the Vleeschstraat, at a depth of 7 or 8 feet, underground, a stone tomb was found, surrounded by clay, lying on a layer of pebbles; the length was 6½, the width 4 feet. The egg-shaped carved depth was 6 feet long and 3½ wide, with a very fitting lid. This lid was a table hewn from hard limestone, 4 inches thick, ground very smooth on the inside and on the edge. The sarcophagus (stone coffin) was made of tuff.

This sarcophagus stood in a direction from the East to the West. Close to the east side was another metal urn that, at its widest, was 11 inches high and 15 in diameter. The shape was very simple, the opening 6 inches wide, and was closed by a lid.

In the sarcophagus were found some pieces of white thin glass, probably from a so-called tear glass, some earth and remains of burnt bones, among which pieces of the skull and bones were clearly visible. Also in the urn was something resembling burnt bones, but in much smaller pieces.

The sarcophagus was without inscription. However, around the urn one saw Runic writing, which was not deeply and irregularly printed in the metal, and for this reason, as well as because of the dents in the urn, is illegible. In the vicinity of the grave site another flint of 12 to 15 inches in length and 6 inches in thickness was found.

Frankish jars have been found on the Groenmarkt, corner of Peperstraat, on the Lomstraat, outside the Geldersche or St. Helenapoort and in the sandy road to Genooy, behind St. Urbanus.

Outside the Cologne [Keulsepoort] or Sint Laurentius Gate there is a valley that extends from the German border to the former building farm "het Rozenhuisje" in a westerly direction to the Maas. The building farm "de Lindeboom" and the two water mills "de Bovenste Houtmolen" and the "Onderste Houtmolen" are located in this valley, after which it loses itself in the plain. The Cedron stream originates about 100 meters below "de Lindenboom"; it takes its course through the ponds of the two mills and further through the plain to the city, through which it passes and after which it pours into the Maas.

In the last century, the Bovenste Houtmolen was inhabited by a Holthuysen family, descendants of which still live in Venlo. On August 16, 1758, Gerardus Holthuysen, miller of the Bovenste Houtmolen, was buried in the cemetery of the St. Martinus Church. In 1760 it was still occupied by this family. One evening in the year 1760, the servant went to the attic with a lantern to get straw, and fell with it, so that the straw caught fire. Instead of putting out this fire with one hand, he went downstairs to fetch water; When we returned, it was too late, the attic was already

in full flame and everything, the mill with its house, barn and stable, burned to the ground.

This mill and yard then belonged to the Highly Born Mr. F. G. Ruys, lord of the seignury of Blerick and Ordinary of the Sovereign Court by Her High Powered Lords of the States General of the United Netherlands, and to his two daughters Catharina and Clara Ruys, who inherited her five years later (the mill was no longer built) to Michael Michels and his wife Gertrudis Muggen, February 7, 1765; she rebuilt that same year. The grandson of these couples sold the mill again in 1848.

The Onderste Houtmolen [=Lower Wood Mill] appears to have been built on the foundations of an ancient Roman or Frankish castle, at least judging from the foundations, and later destroyed by fire. There also seems to have been a mill here at the time of the Franks, a few steps from the house, judging by the fragments of millstones, which were found here with a large number of Frankish shards and pots mixed with wood ash. The present building was built in the year 1626. (1) The Onderste Houtmolen is now owned by WelEd. gentlemen Eugenius Gollaes, in Venlo, and Julius Freiherr Von Francken in Pont.

The valley described here with farms and mills, with ponds, streams, gardens, meadows, orchards and wildernesses, planted with centuries-old oaks, pines and other trees, surrounded by mountains and hills, is the most beautiful and, so to speak, "romantic" place in the whole of Venlo.

Various Germanic, Roman and Frankish antiquities have been found in and around this valley and there are still works from them. At the beginning of this valley, on the south side, there is a high earthen wall called "De Landweer", showing part of the trenches of a Roman camp, which seems to have been located here. For several years, Mr H. Justen van Venlo managed to discover a Roman cemetery here. On the northwest side of this camp there is a Germanic cemetery called Siberie; twenty-eight large and small burial mounds are still very clearly visible. I have dug up urns from some of these hills. Only from one was I able to bring out the urn in its entirety, the others were all broken by the roots of the trees that once stood here.

From the above-mentioned camp a broad Roman road runs through the middle of the mentioned cemetery, first in a northern direction to the end of the cemetery, and then in an eastern direction to just below the origin of the Cedron stream, straight through the aforementioned valley, where in the middle of a swampy area there is a dike has been constructed to continue the said road; This dike bears the name of Count Hendrik's dike.

The legend says: a Count Hendrik had crossed here with his army and had the war chest hidden in this dike. In the past, a light would have burned in this place every evening.

Furthermore, this road runs along a dug-out mountain in the direction of Straelen, where it loses itself in the plain.

(1) At the beginning of the 17th century, perhaps immediately after its reconstruction in 1626, the Onderste Houtmolen was inhabited by the miller Nicolaas Stoffels, from Broekhuizen, after whom this mill was also called the Stoffelsmolen. He was married to Maria Janssen from Venlo, who remarried after the death of her husband to the "magister" Hendrik Sieberz. From the first marriage there were 2 sons and a daughter, of which the eldest Godefridus became a priest; he was S. Theol. doctor, at the Sticht van den H. Severinus and fits of the church of St. Paul in Cologne, where he died in 1675; his mother followed him to Cologne and died there a few years earlier. He adopted the name of Molanus in memory of his father's profession, which was followed by all his family.

After the death of this Nicolaas Stoffels, who had no son who could succeed him in the trade, because the youngest son was a monk in the St. Nicholas Monastery in Dick, the Stoffels family, now called Molanus, left this mill and was taken over by a niece of his wife, Gertrudis Janssen, daughter of Albertus Janssen; she was married to Leonardus Engelen, and the mill now received the nickname of Engelenmolen, by which it is still generally known today. This family has continued to inhabit it to this day, with only an interruption of ten years, from 1856 to 1866.

At the beginning of this century there were only two male descendants of the family, of which the eldest continued to inhabit the Onderste-Houtmolen or Engelenmolen. His marriage to Maria Dorothea Franssen, van Steyl, municipality of Tegelen, produced two daughters; the youngest died in infancy; the eldest, Maria Engelen, married Petrus Hubertus Michels. Children from this marriage still live in this mill.

November 15, 1892 **Roman Antiquities in Venlo.**

Naspeuringen van Paul Theelen: Constantinus Imperator

- 125310 by H. Michels.
III.
§ III. Germanic objects.
1. Germanic urn, opening 0.18, height 0.18, found in Siberia, near 't Jammerdal, municipality of Venlo, in 1879.
- 125315 2. Germanic urn, opening 0.08, height 0.08, found in the Hunnenberg in Nijmegen.
3. Germanic jug, opening 0.13, height 0.07, found in the Hunnenberg in Nijmegen.
4. Germanic pot, opening 0.09, height 0.09, found in the Hunnenberg in Nijmegen.
- § IV. Roman objects.
- 125320 1. A cup, height 0.07, opening 0.05, found in Andernach on the Rhine. 2. Fragm. amphora, height 0.12, found at Kelheim on the Danube.
3. Ointment jar, found at Nijmegen.
4. Patella in white earth, found at Nijmegen.
5. Ointment jar in white earth, found at Nijmegen.
- 125325 6. Jar (quick), found in white earth at Montfort, height 0.13.
7. Jar in white earth, with an ear, height 0.12, found at Montfort.
8. Two small crucibles, found in the Maas at Blerick.
9. Two small jars in white earth, with an ear, height 0.19, found in Neuss, in 1876.
10. A small jar with an ear, in white earth, height 0.12, found at the St.
- 125330 Severinuspoort in Cologne, in 1874.
11. A small jar with an ear, in white earth, height 0.12, with round thick belly, without foot and long neck, height 0.18, found in Cologne.
12. A small jar with an ear, in white earth, height 0.27, found in Nijmegen.
13. A small jar with an ear, in white earth, height 0.20, found in Nijmegen.
- 125335 14. A small jar with an ear, in white earth, height 0.19, found in Nijmegen.
15. Two small jars with an ear, in white earth, height 0.11, found in Nijmegen. 16. Two small jars with a handle, in white earth, height 0.10, found in Nijmegen.
17. A small jar with two handles (amphora), in white earth, height 0.17, found in Nijmegen.
- 125340 18. A small jar with a handle and a spout, in white earth, height 0.18, found in Nijmegen.
19. Vase in black dough with angular belly, height 0.17, opening 0.12, found in Nijmegen.
20. A small vase with depressed walls in light brown earth, height 0.10, opening
- 125345 0.06, found in Nijmegen.
21. A purse-shaped bottle (gutta), height 0.18, found in Crefelt.
22. Terra Samica.
a. A patella, saucer, width 0.09.
b. A patella, width 0.16. with the mark SEVERUS de grafecto BVGO.
- 125350 c. A patella, width 0.17, mark illegible.
d. Small bowl, width 0.12, height 0.07, all found in Nijmegen.
23. Large milk jug with spout, in ordinary earth, width 0.26, height 0.07, found in Nijmegen.
24. A lamp in red earth, found in Gennep on the Maas.
- 125355 25. A lamp in black earth, found in Crefeld.
26. Two lamps in ordinary earth, found in Nijmegen.
27. A lamp in black earth, found in Kesseleyck.
28. A patella or small bowl, width 0.23, height 0.05, found in Kesseleyck.
- 125360 29. A salt cellar of white earth, height 0.04, width 0.07, found in Venlo. 30. Vase in ordinary earth, height 0.18, opening 0.25, found in the previously described pottery in Venlo, in 1879.
31. Vase in ordinary earth, with flat edge, height 0.18, opening with the edge measured 0.16, found in the pottery in Venlo, in 1879.
- 125365 32. Vase in ordinary earth, height 0.19, width 0.14, found in the pottery in Venlo, in 1879.
33. Vase in ordinary earth, height 0.16, width 0.12, with curved edge, found as furrows.
34. Vase in ordinary earth, decorated with small and large circles, height 0.15, width 0.09, found as furrows.
- 125370 35. Vase in ordinary earth, decorated with double row of circles, height 0.14, width 0.08, found as furrows. 36. Vase in ordinary earth, decorated with a double row of diamonds, high 0.14, wide 0.08, found as furrows.
37. Lid with flat knob, in ordinary earth, wide 0.13 found as furrows.
- 125375 38. Two fibulas, in copper, one with decorations, found in Nijmegen.
39. Needle in copper, found in Crefeld.

40. Writing styluses and other objects in copper, found in Nijmegen.
41. Two copper coins of Emperor Constantine, found on the Lichtenberg near Kaldenkirchen, in 1889).
42. A silver coin of Domitian, found in Baarlo, in 1840.
43. Roman spindle whorls and corals, found in Nijmegen.
44. A coral of red earth, found at the ruins of the old Carthage in Africa.

§ V. Frankish objects.

1. A large number of pearls, found in Nijmegen.
2. An urn in red-greyish earth, height 0.07, opening 0.08, found in Andernach aan den Rijn.
3. Two spherical urns or pots, black-grey, height 0.10 opening 0.08, found just behind the Onderste Houtmolen in Venlo, in 1873.
4. A spherical urn or pot, black-grey, height 0.13, opening 0.09, found as furrows.
5. A spherical urn or pot with spout, black-grey, height 0.15, opening 0.14, found as furrows.
6. A beautiful jug in grey earth, with an ear, height 0.25, opening 0.10, found as furrows.

§ VI. Medieval objects.

1. A large number of jugs, jars and pots, some of which are very beautiful in shape, from the 9th to the 16th century, in nature and just plain stoneware.
2. A number of old earthen pipes, including one with the coat of arms of Venlo and its motto: "Festina lente caute fac omnia mente" around it.

December 2, 1905 — **A lost art treasure recovered.**

— At the end of the year 1872, a worker in Blerick near Venlo found a Roman bronze shield with some horse harness while deepening a stream. These goods came into the possession of Mr Lienders in Venlo. Prof. Gaedechens from Jena gave a lecture about that shield in Bonn on the feast of Winckelmann's birthday on December 9. 1874, and since then "das Medusenhaupt von Blariacum" has acquired a very general reputation in the world of art connoisseurs and art lovers. The present Blerick was without doubt the Blariacum from Roman times, which appears on Peutinger's map. The shield, gilded bronze was probably a showpiece weapon. The name shield is also probably not entirely correct in that it is more a so-called umbo, the decoration of a shield on the outer side, than a shield itself. This umbo (navel) now has a diameter of 26 cm. A circle of oak leaves runs around it, within which there is again a similar wreath, which encloses the Medusa or Gorgo's head. This was from ancient times the most famous sign for averting hostile forces and as such was of course very peculiar. Our fellow countryman, Prof. Six wrote a commendable monograph about the Gorgo, his dissertation. Originally this Gorgo head had a hideous appearance; they gave her tusks and a stuck out tongue. Blerick's Gorgo is one in the style of later Greek art. Her character is expressed in human forms. She has a great reputation in art history. It probably dates from the first century AD. Not long after, the work of art crossed borders. We heard that our Queen Sophie tried to keep it for our country at the time, but in vain. The chance of ever getting it back became smaller and smaller, especially because the prices for such things are becoming higher and higher.

It appeared at the Dusseldorfer exhibition and now it has appeared once at an auction in Cologne. It has now been purchased there by Mr G.M. Kam, in Nijmegen, — the same who gave his highly important museum as a gift to the State, to be accepted after his death. The piece is now returning to our country and, humanly speaking, will never leave again. This work of art, found on Dutch soil, does not go to the prairies of North America or the unknown country house of a so-called art-loving Englishman. At the same time as the umbo, Mr. Kam also acquired the horse harness found there. He knows too well what such "Gesamtfunde" mean. I will say nothing more about the merits of Mr. Kam. This writes Mr. A.E.J. Holwerda, professor-director of the National Museum of Antiquities in Leiden, in the "N.R.Ct."

April 30, 1910 **Limburg Sagas and Legends.**

SCHATBERG, KRONENBERG, DE MEIR AND SCHENKENBURG UNDER SEVENUM.

A truly old-fashioned, prosperous farming village, where the farmers have still retained their old customs, where people still spin in the winter, where the housewives still take their yarn to the weaver, where the men still prefer Manchester to new-fangled cloth for the spacious clothes and the weddings are still celebrated with old songs and dinner parties without a brasserie... that is Sevenum,

in the middle of Limburg, located next to the Peel. There you can still see houses and stables, large and spacious, lying on their own property in the orchard and the tinware, copperware, the old grandfather clock, the folding table, and the large oak chests are in the front house. And at exactly twelve o'clock in the afternoon, the simple lunch is steaming on the table, while in the following summer everything goes "ungeren" or naps.

But the farmer is not that stupid unless he has faithfully followed and kept up with the progress of agriculture, dairy production and chicken breeding; he is well informed about the use of artificial fertilizers and the cooperative. That is why we can speak of Sevenum, just like of Horst and Maasbree, as a prosperous municipality. But the old colloquialism, the dialect, the old songs, the singing ways of the faithful king's son, of the young man who seemed neither susceptible to sweetness nor love and yet finally succumbed, the old local legends, they still live on.

Where the ground is generally so flat, a hill quickly becomes a mountain and that is why one of the strangely colored, white-yellow sand dunes on the Peel is called the Schatberg. It is higher than the surrounding ones. On the left lie deep swamps, swamps along the edges of which pine forests grow abundantly.

On the right, the seemingly endless piece of Peel to be developed, which has already been plowed and will soon be brought into cultivation. Here and there in the Peel, far away from us, between a group of trees like a miniature oasis in the brown-black plain, an old dilapidated sheepfold, dating from the time when sheep farming was still profitable.

Further on the horizon, forests, towers, factory chimneys, a derrick, which announce the slowly coming conversion of the Peel into inhabited and profitable territory. We are sitting on the Schatberg, and we are thinking that if a farmer sees us now, he will mutter to himself: "They will search, but they will not find anything". Because a lot has been sought in this Schatberg, Treasure Mountain, as evidenced by the grooves in the flanks and the holes in the top.

An officer of high rank is buried here, he has his golden sword next to him and a treasure that he had to keep. He died here, it is not known how, but was buried nearby by his followers. However, these too followed him in death. And so he lies here waiting. One person tells you that it was a Roman, another that it was a Spaniard, but everyone has dug in the Treasure Mountain at some point and both old and young have climbed the wonder hill. However, the treasure has not yet been found any more than the "Crown" in the hamlet of Kronenberg, which you can see a little further to the right of Horst, where traces of old fastenings, wall work, broken crockery and pottery were found. Whatever the case, the common opinion among the people is that strange things happened on the Schatberg and Kronenberg, which still await explanation.

In ancient times, an old pastor lived on the "Meir", a square piece of land surrounded by ramparts and canals, where fragments of walls can still be found. He came to the village every now and then and had an old gray, a wonderful beast. In the evening his owner mounted the saddle and said: "To the Lake in one go." The Gray rose and ran through the air into the lake. Why, who knows?

The old Schenkenweg, near the village, now disappeared, is also seen as a ghost place. The Schenken van Nijdeggen have a history interwoven with many changes. Their Schenckenburg castle sometimes saw strange things. The last of the Schencken, who carried a knife and a sword, was heavily drinking and every day passed the chapel of St. Anthony, founded by his ancestors. Each time he passed by mockingly, until one morning after a revel, he was found dead in the chapel. In his last hour he still visited Saint Anthony. When the castle was still in existence, the drawbridge had to be raised every evening at nine o'clock. If anyone forgot, a large black dog came to lie on the bridge and repelled everyone with a fiery claw and eyes. Because the 'headless horse' was also around, the castle was demolished, but the meadow that was created for it is still spoiled and only thistles and thorns grow there.

B.

Roman coin hoards and the Germanic invasions in Gaul

38. Near Bristol, bronzes from Gallienus to Constantine II. (John Evans, Num. Chron., 1883, p. 118).
39. At Bishop's Wood, two vases with 17,530 small bronzes from Diocletian to Constantius II (Bagnall-Oakeley, Num. Chron., 1896, p. 209).
40. At Salisbury, small bronzes of Licinius at Constantius II (C. Roach Smith, Num. Chron., 1869, p. 47).
44. At East Harptree, near Bristol, Constantine the Great to Gratian (John Evans, Num. Chron., 1888, p. 22).
- [BOOK II INVENTORY OF MONETARY HOOKUPS, p. 107 in green]
7. At Famars (municipality of Valenciennes), in 1824, a considerable find was made, composed as follows: 1° silver denarii predating Septimius Severus and others from the time of Diocletian and Constantine, contained in five copper vessels holding together approximately 18,200 coins; 2° Antoniniani and denarii later than Septimius Severus (Balbino, Pupianus, Gordian III, Philip I and II, Otacilia Severa, Trajan Decius, Herennia Etruscilla, Hostilian, Trebonianus Gallus, Volusianus, Carinus) were contained in four earthenware vases together containing 9,515 coins. The find thus comprised approximately 28,000 coins, probably buried between 306 and 308 AD. (Journal des Débats, October 2 and 12, 1824, January 15 and 18, 1825; Lettres du Baron Marchant sur la Num. et l'histoire, 2nd ed., 1851, p. 411 et seq.; Mém. de la Société des Antiques de France, vol. VII, 1826, p. lxxxiv; Mommsen-Blacas de Witte, H.M.R., vol. III, p. 130. — See also H. Feneulle, Analyse des monnaies d'argent romaines trouvées à Famars in the Mém. de la Société d'émulation de Cambrai, 1825, vol. X, p. 282.)
30. In the Boves forest (municipality of Sains, arrondissement) (from Amiens), 20 to 25 small bronze coins from Constans and Valens. (Bulletin of the Society of Antiquities of Picardy, vol. VII, 1859-1861, p. 243.)
31. At Glisy (municipality of Boves, district of Amiens), a brass basin containing a large number of Roman coins was found. (Catalogue of the Picardy Museum, 1876, p. 83, no. 575.)
39. Near Falvy (municipality of Nesle, district of Péronne), in a plot of land located in the commune of Ennemain, on April 23, 1868, two vases containing 6,000 coins, medium and small bronze, from Probus to Constantine, were discovered. Many of these coins had been minted at the Trier mint. (Alfred Danicourt, Note to the Secretary of the Picardy Antiquaries Society on a find of Roman coins made at Falvy, near Péronne, Péronne, 1872; Yearbook of the Société d'Antiquaires, 1868, vol. III, p. 405.)
40. At Fricourt (municipality of Albert, district of Péronne), in 1874, several thousand coins belonging to the same period as those of find no. 43. (O. Gaudechon, op. cit., p. 7.)
47. Near the hamlet of Agnicourt (municipality of Méru, district of Beauvais), in 1746, an earthenware vase containing a large number of Roman bronze coins. (Graves, Archaeological Notice, p. 134.)
52. Near Compiègne, at Mont-Chipray or Chyprès (between Vivier-Corax and Croix-Saint-Ouen), in 1824, a vase containing 590 coins was found. In 1825, an amphora with 5,200 bronze coins was discovered (one group of coins from this find included coins of Nerva, Constantine, Fausta, Crispus, Constantine II, and Constans). In 1826, a vase containing 2,235 bronze coins was found. In 1813, at the Old Mint Crossroads, 366 silver coins were collected. (Graves, Notice pp. 167, 169; E. Woillez, Répert. col. 127 and 128.)
- I have been unable to gather information on the exact composition of these finds, the first of which is believed to have been acquired by the Library (there is no record of this acquisition in the registers of the Cabinet de France). I also do not know the composition of the following three finds: (53, 54, 55)

Naspeuringen van Paul Theelen: Constantinus Imperator

57. At Choisy-au-Hac, in the Compiègne forest, in 1818, a bronze vase with a handle. This vase, which is kept at the Musée de Saint-Germain-en-Laye, contained approximately 3,000 bronze coins, most of them of Constantine. (S. Reinach, Catalogue (summary) of the Saint-Germain Museum, 2nd ed., p. 188.)

125575 62. At Grandrû (municipality of Noyon, district of Compiègne), at a place called Le Cadeau, in 1846, a gray earthenware vase containing nearly 9,000 small bronzes from the time of Constantine the Great and his sons was discovered; many pieces bore the inscriptions Urbs Roma and Constantinopolis. Tiles, pottery, and various other fragments were also found in the surrounding area. (Bulletin of the Archaeological Commission of the Diocese of Beauvais, 1847, vol. II, p. 66; Graves, Notice p. 162; cf. E. Woillez, Repertory, col. 144.)

125580 72. At Lappion (municipality of Sissonne, district of Laon), in 1820, an earthenware vase containing 8,000 small bronzes and some billon coins dating from the time of Gallienus to the time of Constantine (?) (Louis-Lucas, Notice on some discoveries, etc. Reims, 1843, p. 14.)

125585 79. On the land of Quicy (municipality of Guny, municipality of Coucy, district of Laon), at Mont-Notre-Dame, pottery fragments, a millstone, and a red earthenware vase containing 700 coins, large, medium, and small bronzes of Probus, Diocletian, Maximian Herculus, Constantius Chlorus, and Galerius Maximian. (Bulletin of the Historical and Archaeological Society of Soissons, 1849, vol. III, pp. 162 and 189).

125590 81. Near Frontigny (municipality of La Malmaison, municipality of Neufchâtel, district of Laon), in 1897, a grayish earthenware vase with 1,500 to 2,000 coins from the 4th century (Constantine and contemporary emperors). The find was dispersed; Thirty-five pieces were acquired by the Reims Museum. (Bulletin of the French Society of Antiquities, 1897, p. 331.)

125595 82. Near Clermont (municipality of Rozoy-sur-Serre, district of Laon), an earthenware vase containing 11,000 well-preserved Roman coins. (Bulletin of the French Historical Society, 1849, p. 141.)

125600 86. Between Villemontoire (municipality of Oulchy, district of Soissons) and Taux, an earthenware vase, covered with a red tile, containing 2,300 coins of Diocletian, Maximian Herculus, Severus, Constantius Chlorus, Constantine, Galerius, and Maximinus Daza. These coins were all follis. (Bulletin of the Historical and Archaeological Society of Soissons, 1845, vol. II, pp. 38 and 166.)

125605 91. Between Crécy-sur-Serre and Vervins, a large number of bronze coins of Licinius, Constantine I and II, and Crispus were found. (Memoirs of the Society of Antiquities of France, 1823, vol. IV, p. 49.)

125610 111. At Soulosse (municipality of Coussey, district of Neufchâteau), in a garden where a 4th-century ivory statuette and a silver medallion of Constantine the Great were also found, 2,000 bronze coins of Constantius Chlorus, Constantine, and his sons were collected. (Bulletin of the Society of Antiquities of France, 1881, p. 150.)

125615 117. At Marac (municipality of Langres), in 1835, a chest containing 1,500 small bronzes from the beginning of the 4th century. (Luquet, in the Écho de la Haut-Marne, November 1, 1835; Antiquities of Langres, p. 285.)

125620 134. At Merfy (municipality of Burgundy, district of Reims), in 1813, under a stone, 400 bronzes of Diocletian, Maximian Herculus, Constantius Chlorus, Constantine, Galerius, Maximian, Severus II, and Maximinus Daza. (Annuaire de la Marne, 1824, p. 271; Société d'Agriculture, Commerce, Sciences et Arts de la Marne, 1859, p. 150.)

125625 137. At Tours-sur-Marne (municipality of Ay, arrondissement of Reims), in 1833, numerous coins of Gallienus, Telricus, and Constantine, and two silver rings, were found covered by a tile. The coins were heavily oxidized and clumped together as if they had been placed in rolls. (Archaeological Congress of France, 22nd century, at Châlons-sur-Marne, in 1855, p. 53; Society of Agriculture, Commerce, Sciences and Arts of the Marne, 1859, p. 160.)

125630 138. At Trépail (municipality of Verzy, district of Reims), in 1874, 300 bronze coins

Naspeuringen van Paul Theelen: Constantinus Imperator

of Gallienus, Maximian, Constantius Chlorus, and Constantine were discovered. (Archaeological Congress of France, 13th century, 1875, p. 154.)

- 125635 141. At Damery (municipality and district of Épernay), in 1830, ruins were discovered which were considered to be those of the ancient Bibe. In one of the substructures, coin molds and vases containing numerous coins were found. In one of the vases, there were 2,000 coins, including 1,500 of Postumus; the others belonged to the emperors since Gordian III. Another vase contained 4,000 small bronzes of Constantius and
- 125640 Constantius, including 3,900 with the reverse of the phoenix {Fel. temp. reparatio.} (Revue num., 1837, p. 172; 1839, p. 465; 1843, p. 364; Louis-Lucas, op. laud., p. 19; F. Lenormant, La Monnaie dans l'Antiquité, t. III, p. 207.)
- 125645 152. In Saint-Mard-sur-le-Mont (commune of Dommartin-sur-Yèvre, district of Sainte-Menehould), in 1867, 6,000 poorly preserved small bronzes of Gallienus, Tetricus and Constantine. (Archaeological Congress of France, 13th century, 1875, p. 153.)
- 125650 162. In a garden in the village of Chervey, near Bar-sur-Seine, on December 15, 1842, a red earthenware vase containing approximately 8,000 small bronze coins was discovered. Two thousand of the examined coins dated from the reigns of Gallienus, Postumus, Victorinus, Tetricus, Claudius II, Aurelian, Severina, Tacitus, Probus, Carus, Carinus, Numerian, Magnia Urbica, Nigrinian, Diocletian, Maximian Herculus, Carausius, Allectus, Constantius Chlorus, and Galerius Maximian. The coins of Probus represented a quarter of this collection. A short distance from Chervey runs a road
- 125655 known as the Roman Road. (Archaeological Congress of France, Troyes, 1853, pp. 51 and 55; Memoirs of the Society of Agriculture, Sciences, Arts and Belles-Lettres of the Aube, 1842-1843, vol. XI, p. 95.)
- 125660 166. In the ruins of Membrey (municipality of Dampierre-sur-Salon, district of Gray), near Tantique Segobodium (Seveux), between 1838 and 1841, a vase containing 280 coins of Trebonianus Gallus, Postumus, Claudius II, Tetricus, Aurelian, Probus, Galerius Maximian, and Constantine the Great was found. (Matty de Latour, Roman Ruins of
- 125665 Membrey, Angers, 1847, p. 25; extract from the Memoirs of the Society of Agriculture, Sciences and Arts of Angers, vol. VI.)
- 125670 178. At Bredannaz (municipality of Doussard, municipality of Faverges), near Annecy, approximately 3,000 small bronze coins from the reigns of Licinius to Constantius II. (Soret, Memoirs of the Geneva Historical Society, vol. I, p. 241.)
- 125675 194. At Saint-Vincent-de-Mercuze (municipality of Touvet, district of Grenoble), on February 25, 1870, just a few kilometers from the road still called the Chemin-de-l'Empereur at Mas-de-la-Branche, a red earthenware vase containing a silver bracelet, 54 silver and billon coins, 123 medium bronze coins and 117 small bronze coins from Caracalla to Constantine (65 p.). (G. Vallier, in the Bulletin of the Statistical Society of Isère, 1878, p. 336.)
- 125680 195. At Saint-Vincent-de-Mercuze, at a place called La Bellangère, at the end of January 1899, on a plateau where foundations and fragments of tiles were found, a red earthenware vase was discovered that had been covered with a sheet of lead. This vase contained approximately 1,550 coins distributed as follows: 2 Valerian; 350
- 125685 Gallienus; 10 Salonina; 6 Postumus; 2 Victorinus; 170 Claudius II; 7 Quintillus; 80 Aurelian; 4 Severina; 15 Tacitus; 1 Florian; 80 Probus; 5 Carus; 3 Numerian; 10 Carinus; 1 Magnia Urbica; 90 Diocletian (plus 120 follis), 160 Maximian Herculus and Maximian Galerius (plus 200 follis); 1 Allectus; 5 Constantius II and 20 frustes. (H. Muller, Bulletin of the Dauphiné Society of Ethnology and Anthropology, vol. VI, 1899, pp. 78-80; the same author analyzes the previous find, pp. 80-81.)
- 125690 210. At Saint-Chef (municipality of Bourgoin), in April 1760, bronze paterae and basins, with 40 coins from the reigns of Augustus to Constantine. (Caylus, Recueil d'Antiques, vol. V, p. 289, and pl. CIV; H. Thédénat and A. Héron de Villefosse, Les trésors de vaisselle d'argent trouvés en Gaule 1885, p. 45.)
- 125695 215. Near Saint-Paul-lez-Romans (municipality of Romans, district of Valence), a few kilometers from Saint-Nazaire, on the right bank of the Isère River, around 1835, 600 small bronze coins of Diocletian, Maximian, Constantius Chlorus, and Galerius were found. (Rev. archéologique, 1860, p. 406, note 3.)

Naspeuringen van Paul Theelen: Constantinus Imperator

125700 229. Near Tourves (municipality of Brignoles), in 1366, according to Nostradamus, an enormous quantity of coins was discovered: Terrant evomentem pecuniam argenteam viginti mulorum onus. (Baron August/Gustave von?) de Bonstetten, op. laud., p. 37.

Photo of the Roman bridge near Tourves

125705 239. On Mont-Barbe, where the church and castle of Chatellenot are located (municipality of Pouilly), in 1806, three-thirds of a gold sol of Magnentius and Constantius and eighteen pounds of mark weight of Tetricus's coins were found. (Girault, op. laud., p. 17.)

125710 245. One hundred paces from the village of Sommeville, near Monéteau (municipality of Auxerre West), in 1820, three earthenware vases containing a large number of coins from the 3rd and 4th centuries, and in particular from Diocletian, were found. (M. Quantin, op. laud., col. 19.)

125715 250. At Appoigny (municipality of Auxerre), at the place called Les Ruelles, around 1847, an earthenware vase containing approximately 5,000 coins of Maximinus Thrax (only 1), Valerian, Gallienus, Salonina, Saloninus, Postumus, Victorinus, Tetricus, Claudius II, Quintillus, Aurelian, Severina, Tacitus, Florian, Probus, Carus, Numerian, Carinus, Magnia Urbica, Diocletian, Maximian Herculus, Constantius Chlorus, and Galerius Maximian. (Abbé Duru, in the Memoirs of the Society of Historical and Natural Sciences of the Yonne, 1847, vol. I, p. 221 and vol. II, pp. 57 and 221, 9 plates; cf. Yearbook of the Yonne), vol. I, 1837, p. 299).

125725 254. At Bussy-en-Othe (municipality of Brienon, district of Joigny), a vase filled with coins of Constantine, Constantius, Magnentius, etc. (M. Quantin, op. cit., col. 136.)

125730 256. At Mézilles (municipality of Saint-Fargeau, district of Joigny), in an ironworks, a cache of 200 small bronze coins of Probus (one coin), Licinius, Constantine I and II, and Crispus. (Information provided by M. H. de Flamare.)

125735 258. At Saint-Romain-le-Preux (municipality of Saint-Julien-du-Sault, district of Joigny), a vase containing bronze coins of Constantine, Constantius, etc. (M. Quantin, op. laud. col. 169.)

260. At Molinons (municipality of Villeneuve-l'Archevêque, district of Sens), at the place called Pont-de-Pierre, near the Roman road, a large pot filled with coins of Gallienus, Tetricus, Constantine, etc. (M. Quantin, op. laud. col. 227.)

125740 263. A fairly large number of finds have been briefly reported. I will cite these as appearing to be the most clearly defined: Esnon, around 1650 and 1730 (Roman coins of the 2nd and 3rd centuries); Charbuy, in 1665 (middle 3rd century); Avallon, 1709 (3rd century); Champeaux, 1723 (small 3rd century coin). Vermanton, Lucy-sur-Cure, 1725 (small br. from the 3rd century); Bouy-le-Vieux-en-Othe (small br. from the 3rd century); Vaux, 1730 (Roman bronze m.); Auxerre, 1734 (pet. br. from the 3rd century); Beaumont, 1750 (pet. br.); Thunder, 1757 (pet. br.); Avallon, 1765 (m. of Antoninus and Hadrian); Villeneuve-l'Archevêque, 1816 (pet. br. from the 3rd century); Champlost, 1819 (pet. br. from the 3rd and 4th centuries); Sommeville, 1829 (small br. of the 3rd and 4th c.); Pourrain, 1849 (small br. of the 3rd c.); Heurtebise near Vandeurs, 1850 (small br. of the 3rd c.); Saint-Julien-du-Sault, 1850 (small br. of the 3rd c.). (Abbé Duru, Memoirs to serve as a general work on the finds of medicine in the Yonne region, in the Memoirs of the Society of Sciences of the Yonne, 1852, vol. V, pp. 486-488.)

125755 266. In this same locality of Chantenay (municipality of Saint-Pierre-le-Moulier, district of Nevers), around 1863, a hoard was found, considered to be a military chest, containing more than 80 kilograms of small bronze coins of (California, Severina, Probus, Carus, Carinus, Maximian, Hercules, and Constantine (this list is obviously incomplete)). According to M. F. Pérot, this find (the "two military chests") consisted of more than 100 kilograms of small bronze coins from Claudius II to Constantine.

267. In 1878, another find of Two vases containing 1,764 bronze coins distributed as

follows: 1 Valerian; over 700 Gallienus; Salonina; 8 Postumus; Victorinus; Tetricus, father and son; over 700 Claudius II, including only one specimen with the head facing left; Quintillus; Aurelian; 1 Carus; 1 Diocletian; 1 Maximian Herculus; 1 Constantius Chlorus. (Proceedings of the Numismatic Society, 1877, 2nd series, vol. I, p. 69; *ibid.*, 1878, pp. 241-243; Catalogue of the Moulins Museum, 1885, p. 134, nos. 508 and 511.)

270. Previously, around 1770, a hollowed-out stone containing a large quantity of Domitian coins had been discovered near the Saint-Saturnin farm. Antoninus, Faustina, Commodus, Julia Domna, Alexander Severus, Maximinus, Gordian III, Philip, Gallienus, Saloninus, Postumus, Diocletian, Maximian, and Constantine. (P. Gillet, *Annuaire du départ de la Nièvre pour l'an XI*, an X, pp. 63 and 64; O. de Soultrait, *Répert.*, col. 148.)

278. At the hamlet of Spouse (municipality of Ougny, municipality of Châtillon-en-Bazois, district of Château-Chinon), in September 1898, four to five kilograms of medium and small bronze coins of Gallienus, Claudius II, Constantius Chlorus, and Diocletian were found. In the field opposite the one where this discovery was made, foundations had apparently been found previously. (Information communicated by M. H. de Flamare.)

283. In Marré-le-Bas (or Marré-les-Bois?), a hamlet in the commune of Cervon (commune of Corbigny), a bronze vase was found containing approximately 3,000 pieces by Gallienus, Salonina, Postumus, Victorinus, Tetricus, Claude II and Constantine. (*Revue num.* 1838, p. 298; cf. Baudiau, *Le Morvan* vol. II, p. 153.)

288. In Lancié, 2 kilometers from Romanèche (district of Mâcon), in 1880, earthen urn containing approximately 1,806 pieces distributed as follows: 2 Gallien; 9 Claudius II; 1 quintil; 236 Aurélien; 5 Séverine; 87 Tacitus; 13 Florian; 438 Probus; 31 Carus; 35 Numerian; 47 Carinus; 384 Diocletian; 430 Maximian Herculus; 1 Carausius; 1 Allectus; 43 Constantius Chlorus; 43 Galerius Maximian. Buried around 298. (Emile Lépaulle, Note on the Lyon mint at the time of Diocletian's reform, Concerning a find made at Lancié in 1880. Lyon, A. L. Perrin, 1883, quarto, pp. 5 and 6.)

292. Near Autun, in 1889, a discovery of gold coins was made. In particular, two gold medallions, mint condition, of Gallienus and Constantine were noted. (*Yearbook of the Numismatic Society*, 1890, p. 251.)

302. Near Lagnieu (district of Belley), in 1807, approximately 300 bronze coins of Diocletian, Constantius Chlorus, Galerius Maximian, Severus, Maximinus Daza, and Constantine. (A. Sirand, 5th archaeological dig, in *Journal d'Agriculture de l'Ain*, 1843, p. 138.)

303. At Ambérieu-en-Bugey (district of Belley), in 1845, coins from Probus to Diocletian, Maximian, and Constantius Chlorus. (Sirand, *Journal d'Agriculture de l'Ain*, 1847, p. 116.)

304. At Groslée (municipality of Lhuis, district of Belley), a find of similar composition. (*Journal of Agriculture of the Ain*, 1847, p. 116.)

310. Near the Château de Montréal, not far from Brion (municipality of Nantua), in November 1853, woodcutters found, under an oak tree, in a single cavity, nearly 10,000 medium and small bronze coins of Diocletian, Maximian Herculus, Constantius Chlorus, Constantine, and Crispus. The find was dispersed. (A. Sirand, 14th archaeological survey, in the *Journal of Agriculture of the Ain*, 1854, p. 141.)

314. At Lyon, a find of 12,000 small bronze coins. Of the 1,200 that could be examined, there were a few pieces from the reign of Claudius II, but the majority belonged to the reigns between Maximinus Daza and Constantius II. (*Numismatic Chronicle*, vol. XI, proceedings, p. 13; Mommsen-Blacas-de Witte, *H.M.R.*, vol. III, p. 135.)

328. In Paris, in 1807, during the excavation of the Tourcq Canal basin at La Villette, an earthenware vessel containing approximately 2,500 bronze coins (follis) of Diocletian, Maximian Herculus, Constantius Chlorus, Galerius Maximian, Severus, Maximinus Daza, Maxentius, and Constantine the Great was discovered. (Grivaud de La

Naspeuringen van Paul Theelen: Constantinus Imperator

- 125830 Vincelle, Recueil de monuments antiques, vol. II, pp. 257 and 270. This author (p. 275) places the burial around 310.
- 125835 344. In the commune of Larchant (municipality of La Chapelle-la-Reine, arrondissement of Fontainebleau), in 1879, 208 medium and small bronze coins were found, distributed as follows: 5 Licinius the Elder, 2 Licinius the Younger, 100 Constantine, 3 Helena, 2 Fausta, 16 Crispus, 6 Urbs Roma, 16 Constantinopolis, 35 Constantine II, 4 Constans, 19 Constantius II. (Communication from Mr. E. Thoison; Revue num. 1899, p. 388.)
- 125840 354. At Derchigny-Graincourt (municipality of Offranville), in 1853, on the roadside, an earthenware vase containing 800 bronze coins of various sizes, of Diocletian, Maximian Herculus, Constantius Chlorus, Galerius Maximian, Licinius, Maximinus Daza, and Constantine the Great. (Abbé Cochet, Répert. col. 69.)
- 125845 393. At Neuville-du-Bosc (municipality of Brionne, district of Bernay), near the Bosc farm, around 1802, 1,600 to 1,700 medium and small bronze coins of Probus, Maximian, and Constantine. (Information provided by Mr. L. Coutil.)
- 125850 402. In January 1897, at the hamlet of Surcy (municipality of Mézières, district of Les Andelys), 300 to 400 small bronze coins were found, most of which Mr. L. Coutil communicated to me. The composition of this small hoard is as follows: 1 Tetricus; 4 crudely made Telricus; one small bronze, a deformation of the Urbs Roma type, Constantine II, Constans I, Magnentius, Valentinian I and Valentinian II, Valens, Gratian, Theodosius, Arcadius (numerous examples, two with LCVP), Honorius (numerous examples), Magnus Maximus, Eugenius (392-394; only one example). (Bulletin of the French Society of Antiquities, 1897, p. 368.)
- 125855 403. At the Sarrazine marsh between Surcy and Mézières, in 1865, a black earthenware vase containing approximately ten kilograms of large, medium, and small bronze coins was found. It contained coins of Nero, Nerva, Trajan, Lucius Verus (a large gilded bronze), Commodus, Valerian, Gallienus, Postumus, Claudius Gothicus, Aurelian, Probus, Carinus, Diocletian, Maximian, Severus, and Constantine. (Bulletin of the French Society of Antiquities, 1897, p. 369.)
- 125860 406. During the construction of the Poses lock (Pont-de-l'Arche, Louviers district), in 1851, a pot containing 1,200 bronze coins was found amidst a pile of stones. Among those examined were coins of Philip, Aurelian, Probus, Diocletian, Maximian, and Constantius. (Archaeological Congress of France, Nantes, 1856, p. 261.)
- 125865 415. At Moulton (Bourguébus commune, Caen district), in September 1846, a gray earthenware vase containing approximately 6,000 bronze coins was found. Of the 2,000 coins examined, some were identified from the following reigns: Valerian, Gallienus, Salonina, Postumus, Victorinus, Tetricus (father and son), Claudius II, Quintillus, Aurelian, Severina, Tacitus, Probus, Garus, Carinus, Numerian, Diocletian, Maximian-Herculus, and Constantius Chlorus. The most numerous coins were those of Gallienus, Aurelian, Probus, Claudius II, Tetricus, and Diocletian. (Bulletin monumental, 1846, vol. XII, p. 632.)
- 125875 424. At Helleville (municipality of Les Pieux, district of Cherbourg), in 1780, 8 aurei and 6 gold medallions of the Constantinian dynasty were found. These pieces, which entered the Cabinet of France, were stolen in 1831. There were 4 medallions of Constantine, 1 of Constantine II, and 1 of Constantius II. (Revue num., 1858, p. 279.)
- 125880 428. At Sainte-Mère-Église (district of Valognes), in a field called Le Hutrel, in 1853, approximately 4,500 small bronze coins were found: Maximinus Daza, Maxentius, Licinius, 900 Constantine the Great, 35 Crispus, and 42 Constantine II. Of the 1,200 coins that could be examined, there were also 1 Gallienus, 1 Victorinus, 1 Aurelian, 2 Probus, 2 Constantius Chlorus, and 1 Galerius Maximian. This hoard was said to have been buried between 317 and 323, since it contained coins of Crispus and Constantine II, and no coins of Constantius II. (Revue num., 1854, p. 81; de Pontaumont, Hist. de ancienne élection de Carentan, 1866, p. 85.)
- 125885 436. In the vicinity of Montfort-sur-Meu, around 1873, 2,000 or 3,000 bronze coins (follis and small bronze) from the reigns of Diocletian to Constantine the Great were
- 125890
- 125895

Naspeuringen van Paul Theelen: Constantinus Imperator

found. (Fornier, Catalogue of coins found at Plourhan, 1881, p. 1. Extract from the Memoirs of the Society of Emulation of Côtes-du-Nord, 1881.)

125900 444. In the territory of the commune of Yffiniac (same canton), in 1855, a vase containing 800 small bronze coins of Constantine, Constantius, Valentinian, etc. (Preserved at the Saint-Brieuc Museum?) (J. Gaultier du Mottay, op. cit. p. 176.)

125905 447. At the Fosse Bily farm (commune of Quessoy, commune of Moncontour, arrondissement of Saint-Brieuc), on 15 Germinal, Year XII, a vase containing coins of Probus, Diocletian, Maximian Herculus, Constantius Chlorus, and Constantine the Great. (Celtic Academy, vol. V, 1810, p. 167; J. Gaultier du Mottay, op. cit., p. 201.)

125910 460. In the village of Chemin-Chaussée (municipality of La Bouillie, municipality of Matignon), crossed by the Roman road from Carhaix to Alet, several hundred small bronze coins of Tetricus and previous emperors were found in 1820. Also found there were "?? number of quinarii." (J. Gaultier du Mottay, op. cit., p. 436.)

125915 463. At Pont-Abbé (district of Quimper), an earthenware vase was found containing several hundred billon coins and small bronze coins of Balbinus, Valerian, Gallienus, Salonina, Postumus, Victorinus, Tetricus, Claudius II, Quintillus, Severina, Carus, Licinius, and Crispus. (Note by P. du Chatellier, in the Revue archéologique 1889, vol. II, p. 193.)

125920 470. At Mérouville (municipality of Janville), around 1857, a pot was found divided internally by thin sheets of bronze into several compartments containing two types of coins. On one side, billon coins of Gallienus and Postumus; and on the other side, bronze coins from Augustus to Constantine; 1,260 pieces in all. Tiles and various fragments were also collected. (Bulletin of the French Antiquities Society, 1857, p. 149.)

125930 480. At Bonneval (Châteaudun district), 1,000 to 1,200 coins of Septimius Severus, Claudius II, Tacitus, Probus, Diocletian, Maximian, and Constantine. (Memoirs of the French Antiquities Society, vol. IX, 1832, pp. xlv and xci.)

125935 486. At Ouzouer-des-Champs (Lorris commune, Montargis district), in 1853, an earthenware vase containing about fifty coins of Diocletian, Maximian Herculus, Constantius Chlorus, and Constantine the Great. (Bulletin of the Archaeological Society of Orléans, 1848-1853, vol. I, p. 348.)

125940 504. At Genillé (municipality of Montrésor, district of Loches), two vases, one bronze and the other earthenware, containing medium and small bronze coins dating from the reign of Philip the Elder to Constantine the Great. (Bulletin of the Archaeological Society of Touraine, 1868-1870, vol. I, p. 232.)

505. Under a rock shelter, inhabited in prehistoric times, not far from the Roman road at Manthelan (municipality of Ligueil, district of Loches), small bronze coins from Constantinople depicting a she-wolf. (Information provided by Captain Bonnery.)

125945 531. In Angers, at the crossroads between the Joubert and Pierre-Lise districts and the Trudelle house, in 1842, a red earthenware vase containing approximately 300 bronze coins of Diocletian, Maximian, Constantius Chlorus, Severus, Maximinus Daza, Maxentius, and Constantine was found. (See Godard-Faultrier, Monuments antiques de Anjou, 1864, p. 12.)

125950 534. In Lezon (municipality of Saint-Just-sur-Dive, district of Saumur), along with various other antiquities, a copper dish containing 80 bronze coins was found (now in the Saumur Museum). (A. Courty, in the Memoirs of the Society of Agriculture, Sciences and Arts of Angers 1834-1837, vol. II, p. 347. — According to information provided by Mr. Lemarinier, the dish supposedly contained 80 bronze coins from the reigns of Augustus to Constantine. However, I am not certain that this was a genuine hoard. See p. 62.)

125960 539. At Saint-Martin (municipality of Beaupréau, district of Cholet), in 1826, a vase filled with coins was found, and in 1851, at a place called La Métairie des Pierres Blanches, several hundred coins of Diocletian, Maximian, Constantius Chlorus,

Naspeuringen van Paul Theelen: Constantinus Imperator

Licinius, Maxentius, and Constantine were discovered. (See Godard-Faultrier, *op. laud.*, p. 173.)

125965 580. At Olonne (municipality of Les Sables d'Olonne), in 1856, a find of bronze coins from the time of Constantine was made. There were many small bronze coins from Rome and Constantinople, most of which were of very crude workmanship. A few coins bore the monogram of Christ. (B. Fillon, *Poitou et Vendée*, art. Le Veillon; p. 10, note, and *Annuaire de la Société d'émulation de la Vendée*, 1856, vol. III, p. 213.)

125970 581. A find of Roman coins was reported at Château-d'Olonne (municipality of Les Sables d'Olonne). There were about a hundred Tetrici coins, along with some Constantine and Constans coins. (Review of the Western Provinces, 1854-1855, vol. II, p. 328.)

125975 587. At Kersahut, near Le Gavre (municipality of Blain, district of Saint-Nazaire), an earthenware vase containing a large number of coins of Diocletian, Maximian, Constantius Chlorus, and Severus was found. (*Archaeological Review*, 1851, vol. VIII, p. 336. j)

125980 589. At Chanteloup (municipality of Moncoutant, district of Parthenay), a vase containing 2,400 coins of the emperors, listed below: Valerian, Gallienus, Salonina, Saloninus, Postumus, Quintillus, Claudius II, Aurelian (177), Severina, Tacitus, Florian, Pro? (394), Carus, Numerian, Carinus, Magnia Urbica, Diocletian (468, including 216 follis), Maximian Herculus (323, including 223 follis), Constantius Chlorus (284, including 236 follis), Galerius Maximian (204, including 173 follis), Severus, Maximinus Daza, Constantine (69 follis). The Deux-Sèvres Statistical Society possesses numerous coins from this find.

125990 591. At a place called Campian (Margaux commune, Bordeaux district), a cache of 345 coins was discovered, contained in earthenware vases placed near funerary urns. Among these coins were 55 from Diocletian, 35 from Maximian, 70 from Constantine, 17 from Severus, 11 from Maximinus Daza, and 1 from Maxentius, all in good condition. (*Yearbook of the Society of Num.* 1887, vol. XI, p. 322.)

125995 592. At Margaux (municipality of Castelnau-de-Médoc, district of Bordeaux), an earthenware vase containing 800 to 900 bronze coins (follis) was found, dating from the reign of Diocletian to Constantine the Great. There were coins with the conjoined heads of Severus II and Maximinus Daza. (*Bulletin of the Archaeological Society of Southern France*, 1884, p. 17). This find may be the same as the previous one.)

126000 597. At Lussac (district of Libourne), at a place called Le Roi, in January 1844, a vase containing 204 bronze coins of Constantius Chlorus, Licinius (father and son), Constantine, Crispus, Constantine II, Constantius II, Fausta, and Helena was found. (F. Jouannet, in the *Proceedings of the Bordeaux Academy*, 1847, vol. IX, p. 213.)

126010 620. At Blagnac (a commune near Toulouse), two vases containing coins of Claudius II and Constantine were found. (*Memoirs of the Toulouse Academy*, 1867, 6th series, vol. V, p. 458.)

623. At Saint-Cisy, in 1892 and 1899, two hoards of 3,600 coins, dating from Hadrian to Constantine, were discovered. (Information provided by Mr. L. Joulin.)

126015 633. At Velp, near Arensheim, not far from Arnhem (Guelders), around 1715, a hoard consisting of a gold chain and bracelets, gold medallions decorated with circles, and gold coins minted under the sons of Constantine, Honorius, Galla Placidia, Gratian, Valentinian, Valens, Arcadius, John, and other emperors and empresses of that period. (*Numerical Review*, 1883, p. 81 et seq.).

126020 641. At Saint-Léger, in September 1850, 45 medium and small bronze coins of Licinius and Constantine. (*Belgian numismatic review*, 1851, p. 87.)

126025 646. At Pottes (district of Tournai), in 1802, a vase containing numerous Roman coins. (J. de Bast, *Second Supplement to the Collection*, 1813.)

670. At Harlebeck, 4 km from Kortrijk, in 1499, a glass vase containing Roman coins. (J. de Bast, *Collection*, 1808, p. 167.)

Naspeuringen van Paul Theelen: Constantinus Imperator

126030 676. In the same locality [Meerlebeke], in November 1797, an earthenware vase containing 98 coins of Victorinus, Quintillus, Claudius II, Aurelian, Tetricus, Tacitus, Probus, and Julian the Apostate, including 2 silver coins of Constantine the Great. (J. de Bast, *Recueil*, 1808, pp. 99-105.)

126035 680. At Saint-Denis-Westrem, near Ghent, in 1787, approximately twenty gold coins of Constantine the Great, Valentinian, Valens, Theodosius, and Honorius. (J. de Bast, *Recueil*, 1808, p. 109.)

126040 686. At Heerlen, between Maastricht and Aachen, 28 small bronze coins of Valentinian II (5), Theodosius (15), Magnus Maximus, Arcadius, Honorius, and Constantine III. (*Revue de numism. belge*, 1846, p. 194.)

126045 691. At Noville-lez-Bastogne, a vase containing 600 Roman coins (period unknown). (*Westd. Zeitsch. f. Gesch. u. Kunst*, vol. XV, 1896, p. 396.)

126045 708. At Ville-en-Waret, a hoard composed of coins, the most recent of which are twenty coins of Constantine I.

126050 710. At Furfooz, a small cache of 8 gold coins. The Namur Museum holds 3 of them, which are from Constantine III, John, and Valentinian III (425-433). (*Annales... Namur...*, vol. III, p. 233; vol. V, p. 36.)

126055 720. At Dalheim, on April 17, 1842, three urns were discovered containing approximately 30,000 coins, medium and small bronzes. Of the 22,427 coins examined, 14,507 of which were described by M. Senckler, there were some dating from the reign of Diocletian to that of Constantine I; Some billon coins dated to the reigns of Licinius and Maximinus. Since Licinius the Younger and Crispus are not represented in this hoard, it is certain that the burial took place shortly before 317, and probably around 313. (Senckler, in the *Publications Luxembourg*, vol. III, pp. 60-83; B. de Köhne, *Zeitschrift für Münzkunde*, vol. II, p. 254; *Jahrbücher de Bonn*, vol. I, p. 127 and vol. XI, p. 55.)

126060 See also: THE ROMAN CAMP OF DALHEIM.

126065 722. At Ermsdorf-sur-l'Ernz (lez-Medernach), in May 1880, an earthenware vase with 10,000 small bronzes, of which 5,500 were studied and belonged to the reigns between Quintillus and Constantius II. There was a denarius of Alexander Severus. Classified by mint, 4,239 pieces were distributed as follows: Trier, 2,693; Lyon, 160; Arles, 9; "Constantina", 119; London, 41; Siscia, 23; Rome, 10; Tarragona, 2; Antioch, 1; Carthage, 1; Thessaloniki, 8. The burial took place after 342. (Van Werveke, *Publications Luxembourg*, vol. XXXV, p. 440; *Annuaire Société franç. de Numism.*, 1882, vol. VI, p. 270; F. Hettner, *Wd. Zeitsch. f. Gesch. u. K.*, vol. VII, 1888, p. 117.)

126075 724. In the same locality [Ettelbruck], at the place called Op Lopert, not far from the first find, on October 9, 1889, a hoard of 1,982 coins (representing 812 varieties) of Gallienus (very numerous), Salonina, Postumus (1), Victorinus (6), Marinus (1), Tetricus the Elder (8) and Son (6), Claudius II (very numerous), Quintillus, Aurelian, Severina, Tacitus, Florian, Probus, Carus, Numerian, Magnia Urbica, Diocletian, Maximian Herculus, Constantius Chlorus, Galerius Maximian. (N. van Werveke, in the *International Numismatic Congress*, 1891, p. 656, and in the *Luxembourg Publications*, 1895, vol. XLII, pp. 303-384; *Revue num.*, 1896, p. 111.)

126080 737. At Weeze (Guelre circle, Geldern), in 1880, a red earthenware vase with 5,200 small bronzes. Of the 1,198 examined, there were: 1 Gallienus, 1 Consecration of Claudius, 1 Licinius the Elder, 1 Licinius the Younger, 113 Constantine, 294 Constantine II Caesar, 136 Constantius II Caesar, 30 Constans Caesar, 5 Delmatius, 46 Theodora, 52 Helena, 262 Roma, 224 Constantinopolis, 1 Populus Romanus, 26 barbarians. The workshops were represented as follows: Trier, 668; Lyon, 173; Arles, 78; Rome, 16; Aquileia, 1; Siscia, 8; Constantinople, 2; Carthage, 1; Thessalonica, 1; Heraclea, 6; indistinct, 215. The burial took place around 337. (*Jahrb. de Bonn*, LXXIV, p. 196; Dr. Steiner, *Wd. Korrespondenzbl.*, vol. I, p. 225; F. Hettner, *Westd. Z.*, vol. VII, 1888, pp. 124-129.)

126090 746. In Cologne, on the Marienplatz, on March 29 and April 1, 1895, several amphorae filled with Roman coins, perhaps 150,000 or 200,000 pieces, were discovered. Among the few thousand that could be examined, follis of Maxentius and Constantine, small

1810 Naspeuringen van Paul Theelen: Constantinus Imperator

- 126095 bronzes of Helena, Licinius the Elder and Son, Constantine I and II, Urbs Roma, Constantinopolis, Fausta, Crispus, and Constantius II were identified. (C. Stedfeldt, in *Korrespondenzblatt der Wd. Z.*, vol. XIV, 1895, cols. 184-189.)
- 126100 747. In Cologne, on Stephanstrasse, in 1896, a vase containing 1,400 bronze pieces, including 1,040 of Magnentius, 320 of Decentius, 1 of Constantine the Great, and 14 of Constantius II, most of them of the large size. (C. Stedfeldt, *Korrbl.*, vol. XV, 1896, cols. 126-128.)
- 126105 757. In Eller (Kochem circle), in April 1856, an earthenware vase containing 957 small bronzes of Constantine and his sons (except Constans) as Caesars, of Licinius, Fausta, and Helena, and also three silver spoons. The burial must have taken place between 323 and 327. (*Jahrb. de Bonn*, vol. XXV, p. 202; *Jahresbericht d. Gesellschaft für nützl. Forsch. in Trier* 1856, p. 21, and 1858, p. 79; F. Hettner, *Westd. Z.*, vol. VII, 1888, p. 153.)
- 126110 759. At Dhron (Bernkastel district), on September 26, 1885, fragments of a bronze vessel with several hundred small bronzes, including some consecration coins of Claudius II and from the end of the 3rd century; numerous coins of Constantine I and Constantine II Caesar, Licinius the Younger, Crispus, Constantius II, Fausla, Helena, Roma, and Constantinopolis. The burial took place before December 333, the date on which Constans was created Caesar. (O. von Nell, *Westd. Korrbl.* vol. IV, no. 147; F. Hettner, *Westd. Z.*, vol. VII, 1888, pp. 118-123.)
- 126120 764. Between Erdorf (Bitburg district) and Badem, in the Nüsselberg, in 1859, a red earthenware vase containing 403 coins of Maximinus Daza, Licinius the Elder, Constantine, Crispus, and Constantine II Caesar. This hoard must have been buried between 317 and 323, as it does not contain any coins of Constantius II Caesar. (*Namur, Revue numism. belge* 1859, p. 469; F. Hettner, *Westd. Z.*, vol. VII, p. 154.)
- 126125 766. At Ittel (territory of Trier), in 1847, in a hollowed-out stone, coins of Constantine, Licinius, Crispus, Constantine II, Helena, and Constans, buried around 350. (F. Hettner, *Westd. Z.*, vol. VII, p. 154.)
- 126130 767. At Euren (near Trier), in 1859, in the ruins of a Roman dwelling, a small vase containing 1 denarius of Geta and 114 small bronze coins, including 1 of Constantine, 1 of Constantinopolis, 1 of Urbs Roma, 3 of Constantius II, 2 of Constans, 1 of Valens, 5 of Gratian, 1 of Magnus Maximus, and 5 of Arcadius. Burial after 393. (*Jahresbericht Trier*, 1859-1860, p. 49; F. Hettner, *Westd. Z.*, vol. VII, p. 154.)
- 126135 768. In Trier, a hoard containing gold and silver coins from the time of Constantine and several medallions of the emperors Constantius II and Constans was found in 1635. (Chiflet, *Anastasis Childerici regis*, 1655, p. 285; cf. F. Hettner, *Westd. Z.*, vol. VII, p. 155.)
- 126140 770. In Trier, on Fützenstrasse, in July 1886, small bronzes were found with the fragments of a wooden casket. Out of 513 pieces acquired by the City Museum, there are coins of Claudius II, Tetricus father, Constantine, Helen, Roma, Constantinopolis, Constantine II, Constantius, Constantius II, Julian, Valentinian II, Theodosius, Magnus Maximus, Flavius Victor, Eugene, Arcadius and Honorius. (F. Hettner, *West. Z.*, t. VI, p. 150.)
- 126145 771. In the same city, in Feldstrasse, in 1885, 240 small bronzes of Tetricus, Roma, Constantinopolis, Valens, Valentinian II, Theodosius I, Flavius Victor, Arcadius and Honorius were found. (F. Hettner, in the *Westd. Z.*, vol. VI, p. 153.)
- 126150 772. At Trier, in Nicholasstrasse, amidst foundations, about 50 medium-sized bronze coins from the reigns of Diocletian to Constantine, buried around 308. (*Korrespbl.* 1887, p. 120; *Westd. Z.*, vol. VII, p. 155.)
- 126155 775. At Ollmuth (territory of Trier), on January 23, 1888, a vase containing a large number of small bronze coins, 155 of which were from the reigns of Constantine, Constantine II Caesar, Constantius II, Constans, Delmatius, Helena, Theodosius, Roma, and Constantinopoli. The burial took place around 337. (F. Hettner, *Westd. Z.*, vol. VII, 1888, p. 123.)
- 126160

Naspeuringen van Paul Theelen: Constantinus Imperator

776. At Baldringen, near Niederzerf (Hochwald, Trier district), a vase with 119 bronze coins, including 36 of Magnentius, 5 of Decentius, and 78 of

Constantius II. (D. Lehner, *Korrbl.*, vol. XIV, 1895, col. 235-237.)

777. At Heddert, near Zerf (territory of Trier), in 1862, 547 medium bronze coins of Diocletian (101); Maximian (134); Constantius Chlorus (131); Galerius Maximian (66); Severus (8); Maximinus Daza (9); and Constantine (108). Burial around 307 or 308. (Annual Report in Trier 1863-1864, pp. 47-53; F. Hettner, *Westd. Z.*, vol. VII, p. 156.)

779. At Soest (Saarburg district), near Niedersöst, in 1845, a vase containing "2 pounds" of well-preserved small bronzes of Licinius, Constantine, and his sons, buried around 330. (*Jahrb. of Bonn*, vol. VII, p. 157; F. Hettner, *Westd. Z.*, vol. VII, p. 155.)

785. At Emmersweiler (Saarbrücken district), near Forbach, in July 1886, two earthenware vases containing 2,000 medium-sized bronzes of the emperors Diocletian and Maximian and of the Caesars Constantius and Galerius. (F. Hettner, *Westd. Z.*, vol. VI, pp. 131-149.)

786. At Grumbach (St. Wendel district), in the Hammelskopf forest, in May 1851, a vase containing 1,430 small bronze coins, consecration coins of Claudius II and Licinius to Constantius Caesar (1 coin). (F. Hettner, *Westd. Z.*, vol. VII, 1888, p. 157, citing Schröter, *Mitteil. des Saarbr. Vereins*, vol. III, 1859, p. 75, and *Jahrb. de Bonn*, vol. XVII, p. 227.)

787. At Kirchenbollenbach (St. Wendel district), in 1878, a vase with several hundred small bronzes of Licinius, Constantine I and II, Crispus, Constantius II, Fausta, Helena, Constantinople, and Rome. (F. Hettner, *Westd. Z.*, vol. VII, p. 157, citing Van Vleuten, *Jahrbücher de Bonn*, vol. LXX, p. 14, and the *Saar- und Moselzeitung*, 1878, no. 67.)

789. At Kirn (Creuznach district), 1,200 small bronze coins from Licinius the Elder to Constantius II. The most numerous were those of Constantine (219 pieces), Urbs Roma and Constantinople (595), Constantine II (201), and Constantius II (127). (*Jahrbücher de Bonn*, vol. XVII, p. 226.)

790. In the Moselle region, in 1811, an earthenware vase containing 2,000 bronze coins of Probus, Diocletian, Maximian, and Constantius Chlorus. (E. Ritterling, in the *Annalen des Vereins für Nassauische Altertumskunde u. G.*, vol. XXVIII, 1896, pp. 188 and 189.)

796. At Daspich (near Diedenhofen=Thionville), in October 1842, in the substructures, and under a pile of rubble, 111 small bronzes were found, including 2 Claudius Gothicus, 1 Tetricus, 2 Maximian-Hercules, 3 Constantius, 2 Constantine, 4 Valens, 1 Arcadius, and 3 Honorius. The rest has not been studied. (*Memoirs of the Academy of Metz*, 1843-1844, p. 275; cf. *Bulletin of the Society of the History of France*, 1845, p. 1896.) 135.)

800. At Ehl (Helvetum), in March 1865, fragments of a chest and a hoard of 7,000 small bronze coins of Claudius II, Allectus, Constantine, Helena, Theodora, Delmatius, Constans I, Constantine II (more than 1,000 pieces), and Valens were found. (*Bulletin Société Conservation des Monum. Alsace 1864-1865*, vol. VII, pp. 80 and 87.)

801. At Niederingelheim (Bingen district), in April 1844, an earthenware vase containing 3,000 Roman coins was found. (*Trier. Zeitung*, 1844, no. 102, and *Num. Zeitung de Leitzmann*, 1844, p. 102.) 80.)

805. At Imsbach, in the spring of 1846, a large find of bronze coins, especially those of Diocletian, Maximian, Constantius Chlorus, Severus, and Constantine, buried around 305. (F. Hettner, *Westd. Z.*, vol. VII, 1888, p. 161, citing *Jahresb.* 1847, p. 3.)

806. At Dürkheim, in 1880, approximately 2,000 small bronze coins from the time of

Naspeuringen van Paul Theelen: Constantinus Imperator

Constantine. (Commentary from Professor Harster to F. Hettner, Westd. Z., vol. VII, 1888, p. 162.)

- 126230 807. At Rheinzabern?, in 1858, approximately 1,000 Roman coins were found in the bed of the Otterbach stream, along with the legionary eagle now in the Speyer Museum. (F. Hettner, *ibid.*, p. 162.)
- 126235 808. At Rheinzabern, in 1852, in a stone tomb, next to a skeleton, a terracotta vase was found containing a leather purse closed with an iron buckle. This purse contained approximately 700 small bronze coins, including one of Claudius II and others of Constantine, Constantine II, Constantius II, Constans, Helena, Roma, and Constantinople. (Workshops of Trier, Aquileia, Constantinopolis, Thessaloniki, Carthage, Siscia.) (F. Hettner, Westd. Z., vol. VII, 1888, pp. 137-146.)
- 126240 823. At Horkheim (Neckar region), in the 18th century, with earthenware vases, 100 silver coins, and 200 bronze coins, from Augustus to Constantius (I or II?). There may have been two finds. (Dr. W. Nestlé, *op. laud.*, p. 14.)
- 126245 830. Four kilometers from Geneva, on the left bank of the lake, in 1837, a vase with 800 small bronze coins of Diocletian, Maximian, and Constantius Chlorus. (H. Meyer, Ueber die römischen Münzen, die in der Schweiz gefunden werden, in the Zeitschrift für die Alterthumswissenschaft, Darmstadt, 1840, vol. VII, col. 622.)
- 126250 834. At Altenryff, near Fribourg (municipality of Fribourg), around 1780, a vase containing coins from Constantine to Julian. (H. Meyer, *loc. cit.*, Z. f. Alt., 1840, vol. VII, col. 622.)
- 126255 837. At Niederweil (municipality of Aargau), approximately 500 bronze coins from Gallienus to Constantius II were found in a bronze vase that also contained 5 silver coins from the Julia family, Vespasian, Tijani, and Alexander Severus and Trebonianus Gallus. (H. Meyer, cited by Leitzmann, Num. Zeitung, 1850, p. 63, and by Mommsen-Blacas-de Witte, H. M. R., vol. III, p. 136, note 10.)
- 126260 839. At Wettingen (municipality of Aargau), in 1633, a vase with coins (silver?) from Hadrian to Constantine II. (H. Meyer, *Ibid.*, col. 621; Keller, in the Mittheil. des ant. Gesellsch. in Zurich, vol. XV, pp. 133-135, pl. xiii and xiv; H. Thédenat and A. Héron de Villefosse, Les trésors de vaisselle d'argent trouvés en Gaule, 1885, p. 33.)
- 126265 842. Near Glattbrugg, not far from Kloten (municipality of Zurich), in 1753, an earthenware vase containing 300 coins (silver?) from the reigns of Augustus to Constantine. (H. Meyer, *Ibid.*, col. 621.)
- 126270 844. In Schwerzenbach (municipality of Zurich), in August 1895, an earthenware pot containing 96 coins was found, the majority of which were Alexandrian "potins" (Aurelian, Probus, Diocletian, Maximian). The Roman coins were distributed among Augustus, Philip, Gallienus, Claudius II, Aurelian, Probus, Diocletian, Maximian I, Valeria, Constantine, Maxentius, Licinius the Elder, Constantius, Urbs Roma,
- 126275 Magnentius, and Valens. Buried between 364 and 378. (E.-A. Stückerberg, in the Swiss Numismatic Review, 1895, p. 274.)
- 126280 849. In the Theodulus Pass, at the Matterjoch, which leads from the Zermatt Valley to the Tournanche Valley, on the 24th In August 1895, 54 coins of Aurelian, Probus, Constantius II, Constantius Gallus, Magnentius, and Decentius were found. (Num. Chron., 1897, p. 127.)
- 126285 853. Near Pfyn (municipality of Thurgau), around 1892, approximately 400 coins, including 200 bronze coins, were examined, dating from the reigns of Augustus to Constantine III. There were also some independent Greek coins and Egyptian potin. (E. A. Stückerberg, Revue suisse de numism. 1895, pp. 273-274.)
- 126290 854. "At the site of Epannum (municipality of Valais), destroyed in 562 by a landslide," a vase containing more than 800 bronze coins from the time of Diocletian was found in 1837, Maximian and Constantius Chlorus. (H. Meyer, *op. laud.*, Z. f. Alt., 1840, vol. VII, col. 622.)

855. Near Chur (municipality of Graubünden), in 1806, a vase containing 200 coins of Diocletian, Maximian, and Constantius Chlorus. (H. Meyer, op. laud., col. 622. This author cites several other hoards of Roman coins discovered in various locations in Switzerland, but the composition of these finds is unknown.)

857. "Near Outrivière," in 1863, an earthenware vase containing approximately 8,148 coins. Of the 552 examined by M. Brouillon, there were coins of Gallienus, Salonina, Victorinus, Tetricus, Claudius II, Aurelian, Probus, Diocletian, Severus, Constantine, and Constantine II. (Memoirs of the Society of Agriculture, Commerce and Arts of the Marne, 2nd series, vol. 1, part 2, 1898-1899, p. 79.)

867. In the commune of Donges (commune and district of Saint-Nazaire), near the Château d'Er, in 1871, coins of Gallienus, Postumus, Victorinus, and Claudius II were found. There were also reportedly a coin of Caesar and one of Constantine among them. (Bulletin of the Archaeological Society of Nantes, vol. XXI, 1882, p. 151.)

Roman Culture and the Roman Curriculum

If Rome inherited the civilization of Greece, it was not because the Roman mind was constituted like the Hellenic, but rather from the force of those circumstances which established her power throughout the Mediterranean coasts. For among the Romans there was little evidence of a natural versatility of interest, little power to elevate facts into ideals, or to construct new worlds of imagination, little disposition even to wander into untrodden paths of thought. They looked often to the practical side of life and seldom to the theoretical; their prose was the expression of legal formulae or the practical eloquence of the forum, their very poetry, until the period of so many translations from the Greek, no more than a form of worship.

In the field of drama, the Romans had a native form of comedy, but were indebted to the Greeks for the beginnings of tragedy. The original types of Roman comedy included the Fescenninae practised at rustic festivals and harvestings, the Saturae performed by rural clowns with music, dancing or gesticulation, and the Mimi or mountebank representations, scurrilous yet sententious, which held a subordinate place in literature from the period of the fall of the Republic to the final stage of imperial culture. Types of comic characters were developed in the Atellanae, plays of a burlesque sort, often performed as afterpieces. There was no material for the education of the young in the indigenous Roman comedy, which was not only licentious in the extreme, but written always in an undignified plebeian strain.

Roman comedy of the more pretentious kind was an imitation of Greek originals and applied itself to Greek subjects. From Livius Andronicus to Terence, it appears to have gained in refinement of expression rather than originality of idea. The plays of Terence were favored by literary students of the empire, and in general the palliata or comedies from the Greek were studied in academic circles to the exclusion of the coarser but more national togata which dealt with Roman situations and characters of a more realistic, but a baser type.

Tragedy was not indigenous to Rome, but an exotic flower of Greece. At best the tragic poets were few and their genius of a secondary character. Seneca, for example, was read rather than acted; but his tragedies furnished a part of the subject-matter of literary studies under the later empire.

Epic poetry began to be used in the Roman schools under the Republic, with the Latinized version of the "Odyssey" by Andronicus. Naevius followed with a poem on the Punic war, and Ennius with an epic version of the Roman Annals. Even Cicero and Octavianus attempted the epic, while the imperial period produced Lucan's "Pharsalia", together with a host of courtly and antiquarian epics which tended to express ingenuity and scholarship rather than patriotism or feeling. Epics of the heroic rather than the historical type were usually written on Greek subjects which necessitated pedantry, imitativeness and a labored recourse to foreign mythology.

These limitations were surmounted with great success by Vergil, whose "neid" became the standard text of grammarians, its sonorous lines being recited everywhere in the schools. In the meantime numerous Christian epics were written; but, naturally enough, they found no place in the schools as centres of pagan learning.

Certain poems, however, of a purely didactic though seldom of a religious character, were written expressly for the use of students. Some of the poems of Ausonius, such as those on the calendar, belong evidently to this class, while there were also treatises in verse upon letters, prosody, rhetoric and other subjects which might be schematized and committed to memory. Such verses were written by the grammarians of

the later empire exactly in the spirit and mode which was afterwards to become common among the more enterprising mediaeval schoolmasters.

The so-called *Disticha Catonis*, probably written previous to the period of the official adoption of the Christian religion, comprised a collection of moral sayings arranged in couplets for the use of schools and actually retained their vogue to the end of the middle ages. But it is probable that greater attention was bestowed upon the form of poetry than its content. Scholars were practised in the use of various metres, and in the composition of imaginary epistles both in verse and prose. Towards the close of the empire considerable attention began to be paid to fables, riddles, acrostics and similar trifles; and hexameters began to be embellished with rhyme. While lyric poetry was less congenial to the Roman disposition than narrative, it is clear that epigrams became extremely fashionable, while elegies were written and studied in schools as exercises in style. The mastery over poetic form appears to have increased in proportion to the diminution of inspiration and power.

Prose occupied a subordinate place in the curriculum of Roman education, as it had done with the Greeks. It had a rhetorical character, partly owing to the practical use that was attached to the command of prose; and partly, perhaps, from the influence of Cicero, who first made it worthy of study in the schools. Prose was employed in history, but as long as this study flourished more in the interests of rhetoric than fact, history meant little for education, although the annalists preserved many facts and traditions that were more often embodied or summarized from their several predecessors than dictated by their own experience or observation. Antiquarian learning was not without its devotees, and Ausonius depicts for us the type of a research student who knew more about recondite studies than the history and literature of Latium. The most learned of the Romans was M. Varro, the greater part of whose work has perished. From the period of Varro, which was also that of Cicero, an academic and erudite class was rapidly developed which took possession of the schools at the same time that it sacrificed the ancient connection of theory with the practical affairs of life. Learning became the monopoly of the grammatici, who gave themselves largely to etymology, grammar and the making of dictionaries. The textbooks of Latin grammar by Donatus in the fourth century, and Priscian early in the sixth, retained their celebrity throughout the middle ages. The grammatici were critics as well as grammarians, so that as Suetonius says their business was the emendation of texts, the discrimination of meanings, and the compilation of critical notes. They did little, however, beyond the imitation of the Greeks. Each new work on grammar embodied copious extracts from its predecessors, usually without acknowledgment, until there finally arose an incredible confusion of authorities. Meanwhile the grammatici taught not only etymology and grammar but also mythology in their schools. The mythology was borrowed from Greece; but the etymology might have either a Greek or a Latin basis according to the grammatical school to which the teacher happened to adhere. Oratory, more than any other study, occupied the attention of the talented Roman youth. In politics, jurisprudence or war, oratorical skill was equally indispensable. A manual of oratory is ascribed to the elder Cato. In the words of Livy, some were carried forward to the highest offices by jurisprudence, others by eloquence, others by military glory. Oratory then was recognized in the Republic and earlier Empire as a high road to advancement and fame. Cicero regretted that whereas for the Greeks it had been an end in itself, for the Romans it was but a means to success at the bar. The youths trained in oratorical schools would begin to speak in the forum at eighteen or nineteen years of age, at times making their debut in a funeral oration. From the time of the elder Cato it became customary for speakers to write down and publish their orations which had previously been delivered without notes. The speeches of Cicero, Quintilian and others were taken down by clerks, probably in shorthand, and published with or without the consent of the author, sometimes in garbled versions. Under these conditions the study of rhetoric in Rome was anything but the perfunctory occupation that it seems to be at the present time.

It was a practical and profitable thing, frowned upon by the old-fashioned Censors (who decreed the expulsion of the rhetors from Rome in 92 B.C.), but welcomed by the ambitious youth. One reads that only four years after the decree above cited a freedman of Pompey, one Vultacilius Plotus, skilled in Latin rhetoric, had opened a school in the city. There were also numerous teachers of Greek and Asiatic oratory in Rome during and subsequent to the age of Cicero. Under the Empire oratory became less genuine and more servile. Forced to renounce serious topics, the schools became the centre of a host of fictions. The ancients had been orators, the moderns were but rhetoricians; at least, such was the judgment of Tacitus. The Empire was never so sure of maintaining a check upon freedom of speech as after it had begun to pay the

126425 salaries of eminent professors of rhetoric, the first being Quintilian himself in the
 reign of Vespasian. Gaul and Africa in the third century became important centres of
 rhetorical study, Gaul being signalized by the skill of her professors in the
 manipulation of forms of style; Africa by the energy of her rhetors, including
 Tertullian, Arnobius, Cyprian and Augustine, in the defence of Christianity.

126430 When a pupil had completed his task under the grammaticus he went naturally to the
 school of the rhetor, where his work began with demonstrations, and proceeded to
 declamations, deliberations and controversies. Controversies included case law, the
 subdivision of the subject, and the appeal to mitigating circumstances. But the cases
 cited in the schools were strangely unreal. Pliny, Petronius, Tacitus and others
 126435 ridicule the questions that were accustomed to be raised and disputed, dealing with
 tyrants, or pirates, or the sacrifice of maidens. Contemporary politics were
 practically tabooed. It was the opinion of Petronius that such instruction made
 youths into fools. Little realism was attached even to historical debates about Sulla
 and Hannibal; none at all to declamations on subjects taken from Vergil, Ovid, or
 126440 Homer. But the same stereotyped empty fictions continued to be treated in the time of
 Ausonius, the same in the days of Augustine, the same even as late as the sixth
 century. The subjects appointed for prose composition were no more vital than topics
 of debate. In particular, among the favorite exercises of the schools was the
 composition of fictitious letters; for example, an advanced pupil would be called
 126445 upon to write a letter from Cicero to Caesar, or from Seneca to the Apostle Paul.
 Fairy tales, romances and love stories were licentious and unsuitable for declamation
 in the schools, but as they had been suggested even in Homer, and by the time of Ovid
 had come to furnish a part of the staple material of literature, they were actually
 employed in education to an extent difficult to determine, but certainly appreciable.

126450 The romances were at first of the nature of Greek translations, and were generally
 called "Milesia". The Metamorphoses of Apuleius were to become the prototype of a
 certain kind of mediaeval romance. It was alleged that the schools of the later
 empire were addicted more to fiction of this kind than to the books of Plato. At
 least it appears to have been the policy of the emperors to encourage the study of
 126455 trifles in order to divert attention and criticism from the field of politics.
 While the bent of the Roman mind was distinctly more practical than theoretical, and
 accordingly not so much addicted to philosophy as law, it could not escape from the
 influence of Greek speculation upon the constitution of the universe and the nature
 and destiny of man. It was unfortunate that the contact of Rome with Greece was
 126460 altogether subsequent to the fiery creative epoch of Greek thought. It was but an
 afterglow of Greek philosophy that warmed the stubborn intellects of the Romans to
 attempt ambitious flights. Epicureanism, Stoicism, the Peripatetic philosophy, the
 New Academy, Neo-Platonism, and a degenerate form of the Pythagorean philosophy
 became domiciled in Rome, but were looked upon with suspicion and regarded as
 126465 exercises rather than paths to objective truth. The bare shoulder and cloak of the
 professional philosopher were often the marks of a mere charlatan.
 Philosophers were actually banished from Rome by Vespasian and Domitian, but at other
 times they conducted their informal schools without molestation, and even with honor,
 so that one philosopher, Marcus Aurelius, came to occupy the throne. In the earlier
 126470 imperial period Epicureanism, in the later Stoicism, was the most popular form of
 philosophical creed. The study of philosophy revived in the fourth, fifth and sixth
 centuries because of the fact that the pagans were driven to its tenets in order to
 maintain themselves against the Christian propaganda. A last desperate attempt to
 preserve the ancient philosophy was made not without success in the sixth century by
 126475 Boethius. His partial translation of Aristotle into Latin and his book on the
 "Consolations of Philosophy" were studied in the early mediaeval schools. The opinion
 of Gellius as to professional philosophical teachers was that they would run and sit
 at the gates of wealthy youths and persuade them to waste the whole night in drinking
 wine, ostensibly as a vehicle, no doubt, for discussions and dialectic. The opinion
 126480 of the average Roman was certainly that philosophy was irreligious, a waste of time,
 and a veil for mercenary motives.
 Totally different was the Roman estimation of Law. From the earliest times the Romans
 had a natural genius for law and order, a shrewd practical intelligence, and a
 disposition to dispute any conceivable infringement on their individual or collective
 126485 rights. It is declared among the Roman traditions that there were schools for reading
 and writing in the forum from the earliest days of the Republic; and whether this be
 an exaggeration or not, the origin of the custom of teaching the laws of the twelve
 tables to the children is lost in the same obscurity with the origin of these
 elementary schools. Collections of the sources of law were made as early as 204 B. C.,
 126490 and by degrees the habit of collecting decisions in typical cases developed a new

field for study alongside the examination of the laws themselves. For law the Romans were by no means primarily indebted to Greece, and it has been remarked that the more national a Roman poet may be, the more prominent the position the law holds in his writings. The schools of oratory were obliged to devote considerable attention to the study of jurisprudence, but the relative emphasis upon good oratory or good law appears to have varied according to the legal knowledge or conscientiousness of the teacher. A consulting lawyer learned his business by accompanying a distinguished jurisconsult and listening to his opinions. Cicero's opinion of the jurisprudence of his day is sometimes respectful but here and there contemptuous. It was not under the Republic, however, but under the later empire that Roman law attained its majority and became the chosen field of the ablest and most honorable minds. Gaius became the first professor of civil law, and began to write his "Institutions" by way of an introduction to the subject. His most notable successor was Ulpian. The codification of the laws ensured their place once for all as a subject of study in the universities of the later Imperial period. Masters of law and students of law are mentioned in inscriptions, the latter with frequency. For the purposes of this introduction, other subjects of study in the Roman schools require no more than a cursory reference. Arithmetic was taught in the schools, as is indicated by Horace, but we know little of what was done in the subject in his day, although there are some indications that the decimal system of notation may have been known much earlier than has been supposed. No advance was made upon the knowledge formerly possessed by the Greeks in arithmetic and geometry, which suffered in the estimation of scholars by their supposed alliance with astrology. The Romans were by no means the equals of the Alexandrian Greeks in mathematical attainments. Neither did they study natural history at first hand, but only from Greek texts, which were gradually corrupted and confused by the introduction of superstitious auguries and credulous allegories and fables. The study of agriculture flourished among the Romans, but in a private and individual way, and by means of books rather than schools. Medicine was a purely Greek art, although under the later Empire the Arabic physicians had already begun to dispute the palm with the Greeks; this art also depended upon books and individual instruction but not schools. The same general status is characteristic of architecture and military science. Geography, music and astronomy were actually taught in school, but only in the first of these subjects did the Romans show any originality or tendency to add to the store of human knowledge. The measurement of land, however, was so important from a legal and military point of view that special schools of surveying were established under the Empire, the first impulse having been given by Caesar, who summoned Greek teachers in this field from Alexandria to Rome.

A ROMAN HELMET FROM THE PEEL.

ANTIQUES COMMUNICATIONS FROM THE ROYAL MUSEUM OF ANTIQUITIES IN LEIDEN V
ISSUED ON BEHALF OF THE MINISTRY OF HOME AFFAIRS
EVERYTHING WILL COME FINE
'S-GRAVENHAGE [The Hague]
MARTINUS NIJHOFF 1911

[Introduction]

In the summer of 1910 [find on June 15, 1910], the museum came into possession of a Roman helmet that had been found in the Peel, {Helenaveen} Deurne. It is made of gilded silver with an original iron inner cap, which, except for a few iron particles, has completely rusted away, so that it is only the gilded silver outer covering of the helmet that has been preserved. Very dented and partially fallen apart, it was restored by the goldsmith L. Verkuil, who worked in the studio of Mr. Rossum du Chattel in Leiden [winter 1910-1911]. The construction of the helmet was completely self-explanatory, so that there cannot be the slightest doubt about this. Once restored, it became clear what a beautiful piece the museum had acquired, which, compared to similar helmets abroad, can even be called unique.

With our helmet, 37 bronze coins from Constantine, a bronze fibula, a ditto spur and bell, a piece of a leather dagger scabbard with a matching silver fitting, three leather shoes, large pieces of leather, probably remains of a scaffold were also

found in the peat, and a few strips of woollen cloth, which belonged to the warrior's clothing. The coins automatically date the helmet and other finds to the 4th century AD, which is all the more important because it also gives the parallels of our helmet abroad a more certain dating. An accurate description of our helmet (I) will therefore be followed by a comparison with other examples (II) a brief description of the incidental finds (III) will serve as a conclusion.

[description] I.

Our helmet has a fairly complicated composition, which can be described as follows (see Fig. 61 and 62): the helmet hood consists of 2 separate symmetrical halves, each of which consists of three interconnected pieces, all of the same plate thickness of 0.06 mm. Both halves are held together along the head length by a comb. The helmet hood thus formed is bordered from below by a broad edge, which is accurately cut at the front above each of the two eyebrows. A loose nose protector has been fitted between these arches. The width of the helmet rim is 200 mm, the height of the helmet, including the helmet crest, is 177 mm, while the nose protector from the nose saddle is 65 mm is long.

The helmet also includes (see Fig. 63, 1-3) a neck protector, two cheek flaps, of which one remains, finally two narrow strips with a rivet in the middle, and a row of holes on both width and one of the longitudinal sides. However, their correct destination cannot be indicated with certainty (see page 138), but the similarity in decorative technique with that of the other helmet parts leaves no doubt as to whether they belonged to the helmet. The neck protector is equipped with two small silver buckles, whose hinge pieces are not riveted to the top of the neck flap, but are inserted through a slot and folded up and down at the back. These buckles show that the neck protector is attached to the helmet rim by leather straps. The cheek flaps also have to go through, as we will see later may have been connected to the rim of the helmet by means of some kind of leather intermediate piece. If we compare image 63.2, then, as is the case with similar cheek flaps on a Budapest helmet (see Fig. 64.7), the straight side a ran along the helmet rim, while the side b ended at the eye. So it is the left cheek flap that has been preserved to us. Its dimensions are: a=180 mm, b=105 mm, c=50 mm.

The sizes of the neck protector and narrow straps are as follows:
a=152 mm, b=30 mm, c=182 mm; a=193 mm, b=188 mm.

All parts of the entire helmet have the same type of decoration of buttons and relief ornaments, which, however, we will describe later, in order to first examine the construction of the helmet in further detail.

We saw how the two halves of the helmet hood each consisted of three separate pieces, which for convenience we would like to call a, b, c. Both side pieces a and c are riveted to b by means of 5 silver cone-shaped rivets, in such a way that the center piece b is 9 mm lies over each of the other two. Seen from the inside, these pieces each appear to have been edged or edged inwards, while the rivets do not appear to have been riveted through that edge, but on the sides thereof and have been treated in the normal manner with the riveter.

The more or less rounded helmet crest, of the same plate thickness as the other parts of the helmet hood, runs narrow and flat towards both ends, so that its width, from edge to edge, in the middle is 29 mm is against 16 mm at both ends and likewise the height successively 17 mm and 8 mm amounts to. At both ends there are thick silver closing pieces of 9 mm each with two rivets. length to give the comb the necessary strength.

The crest constructed in this way connects the two hood halves described above in such a way that both halves are each riveted to the edge of the crest by 8 rivets. To this end, the same rivets that connect the above-mentioned silver finials to the crest serve the same rivets at both ends. Likewise, the two middle nails are the same nails, which connect the side pieces a and c to b. Viewed from the inside, the hood halves thus attached to the crest appear not to lie over each other, nor to fit closely together: they only extend slightly below the edge of the crest, so that there is an open space between them, which, just like the crest, which is wider in the middle than at both ends, i.e. 15 mm at 4 mm.

The 39 mm wide helmet brim, which is not soldered, but whose ends between the eyebrows are 23 mm overlap each other is 12 mm pushed into the helmet hood and riveted by rivets. These are placed at those points where the loose parts of the helmet hood are riveted together, i.e. these are the same rivets that connect the above-mentioned pieces a and c to b, and those that attach the silver closing pieces

to the crest and to both halves of the hood.

Only two rivets are included, namely: one in the middle of each of the center pieces b of both shade halves. The rivets, just as we saw in those of the loose parts of

both hood halves, are riveted along the edge, which also occurs at the helmet edge. The nose flap, whose shape is shown in Fig. 61 clearly visible. It is of the same plate thickness as the other helmet parts and slopes slightly on either side to match the shape of the nose.

It is attached to the helmet rim with 5 rivets, two on each of the eyebrows, which fit neatly on the arc-shaped cutouts of the helmet rim, one in the middle on the nose saddle, which also gives more strength to the overlap of both ends of the helmet rim. The peak of the nose flap, which is retracted just below the silver cap of the helmet rim, falls almost along the line of the above-mentioned overlap. In addition to

serving as an ornament on the nose flap, it also served to cover the parting of the flap. The rivets that attach the nose flap to the helmet rim are, like the others discussed so far, more or less cone-shaped, but treated in a slightly different way, more folded than riveted. The same is the case with the three located at the tip of the nose, to which method of processing we will come back later.

Until now we have left one detail of the helmet rim out of discussion, to which we will only now discuss, because it discusses the inner lining of the entire helmet. Along the entire lower edge, also along the arcuate cutouts, which are covered by the eyebrows of the nasal valve, holes have been punched at small distances from each other for the passage of rivets. Of these, two remain on the left and an equal number on the back. They are of the normal blade like the first one we discussed, but differ in that they have a square copper plate behind the blade, which could not have served any other purpose than to prevent the penetration of a leather inner covering.

In addition to this leather covering, we initially mentioned an iron inner hood. Although nothing remains of it other than a few iron particles on the gilded silver outer cap, this further speaks for the great elasticity of the helmet as it lies before us. The helmet rim in particular, which should provide the necessary strength to the whole, is so weak that a single leather inner covering would not be sufficient. This iron inner hood, about whose presence there can be no doubt, appears to you only to have been attached with the same nails with which the leather inner covering was attached to the helmet rim. They are namely the only ones on the helmet that are long enough to qualify for this. None of the other rivets, either those that connect the loose helmet parts together or those that, as we will see later, serve as decoration, leave any room that they could have served to attach any inner lining. If the rivets on the helmet rim appear to have been the only means of attachment that connected the inner cap to the gilt silver outer covering, then the other two pieces must have fit closely together to give the whole the necessary unity.

Like the helmet hood, the cheek flaps and neck protector also appear to have had an iron inner lining; at least at the latter, traces of iron particles were still found. In addition to iron, they were certainly also covered with leather on the inside. For the cheek flaps, this is proven by the two rivets that are still present in the edge. They have the same square plates as those on the helmet rim. A leather interior lining must also have had the nose protector. The rivets, which we saw so strangely turned above, served to secure him. The reason why they were not simply riveted and provided with plates like those on the rim of the helmet may be that when folded the nails were less sharp and therefore made wearing them on the nose more pleasant.

We briefly indicated at the beginning how the cheek flaps and neck protector were attached to the helmet rim. We saw how the buckles on the neck protector indicated that it was connected to the helmet rim with straps. A slot above each of the buckles (see Fig. 63.4) also shows that the straps did not immediately run over the neck protector from the helmet rim, but were passed through those slots at the back, only to then be attached to the buckles.

The connection of the cheek flaps to the helmet rim must also have been made of leather. This is also indicated by a piece of leather, which is present on one of the rivets on top of the helmet rim. If we assume that this attachment consisted of wide intermediate pieces, then our narrow strips (see page 133) may have been attached to this, in such a way that their sloping side was aligned with that of the neck protector.

In connection with the attachment of the cheek flaps, we must point out three holes in the middle of the helmet rim, just above the row of holes through which the rivets were riveted (see Fig. 63.5). Lying close to each other, they form a triangle and could be reminiscent of a hinge attachment, as can be seen in the Peterburg helmet (see Fig. 64.2). However, where the cheek flaps are connected to the helmet rim by leather, this is closed outside. Besides, they are only located on the left side of

the helmet, so that is why they have no connection whatsoever with the cheek flaps. They probably served to allow rivets to pass through, which attached a plate with a ring to the rim of the helmet, from which the helmet could be hung. The fact that our helmet could be hung is not special. With some bronze helmets the ring is still present on the neck protector for this purpose. 1) Since the neck protector is attached to the helmet hood on these helmets, it was the appropriate place for this. However, where our neck protector hangs loosely on the helmet, the placement of the ring in question was impractical, so the middle of the helmet rim may have been chosen for this purpose.

Having discussed the construction of the helmet in all its components, we now want to proceed to a description of the decoration, which we already mentioned in a few words on page 133. It consists of a relief decoration of pressed flowers or crosses and ditto pearl edges, which appear on all pieces of which the helmet is composed,

1) Cf. among others Lindenschmit, *Die Altertümer unserer heidnische Vorzeit*, Bd. V., p. 116, 118, Pl. 22, p. 189, Fig. 2. Remains of this can also be found on a bronze helmet in the Leiden Museum (Dutch Cat. E III, b, 141).

while, except for the helmet rim and nose flap, all parts are also decorated with ball-shaped buttons, which, seen from the inside, are simply riveted. In addition to this similarity in the method of processing, however, there are different decorative motifs, so that we must describe each helmet part separately.

We start with the three pieces that make up the two halves of the hood, pieces a b c. Along their edges runs a row of flowers or crosses, enclosed by pearl edges, the latter being interrupted at each of the four corners by a circle in relief, with a pearl as the center. The same applies to a second inner bead edge, which is parallel to the outer one runs along the edge, and is separated from it by a fairly deep gully. The inner compartment is decorated with an anchor figure, also made of pearls, which are pressed high to increase the relief of the anchor figure. The anchor figure is exactly in the middle and is decorated with 6 buttons, as far as the anchor figure of pieces a and c is concerned, with 11 buttons that of the center piece b. The latter also has two pearl edges in its inner compartment, parallel to the stem and continuing over the arms of the anchor figure to the inner edge.

The helmet crest has a decoration of double pearl edges along both edges and on the middle, along the length of the skull. Between these last double pearl edges is a shallow groove, in which a row of 13 buttons further decorate the crest.

The helmet rim is decorated with two parallel convex relief bands, between which the same edge decoration as the outer edges of pieces a, b, c. It runs, just as we saw the holes for the rivets, along the entire helmet rim, including behind the nose protector; only on the right side, at the height of the center piece b, is it interrupted by an incised inscription, STABLESIA o VI o, about which later. Fig. 62 clearly shows, where we see that the ornament is not broken off at random, but finds its specific closure at the relevant points.

The nose guard has a decoration of pearl edges along its edges and in the middle, while two circles in relief, with pearls as the center, are applied to the tip.

The same edge decoration appears on the neck protector as on pieces a, b, c, while the inner decoration consists of 3 buttons, pearl edges and pointed circles, for which we refer to Fig. 63.1 refer. Furthermore, a Latin inscription, in cursive script, is scratched into the inner compartment, which we will discuss separately with the inscription of the helmet rim shortly.

The cheek flap also has the same edge decoration as pieces a, b, c. An ornament of pearl edges fills the inner compartment, in the shape of two adjacent leaves, both tops of which end in a pointed circle as described above. Such a circle is located at the point where both leaves meet. Furthermore, 5 buttons serve as decoration, see Fig. 63.2.

Finally, if we look at the loose strips, we also find here a combination of pearl edges and pointed circles, for which decoration we can also refer to their image 63.3.

As we have already noted, inscriptions have been made on the neck protector and helmet rim, which we would now like to examine in more detail, first of all on the neck protector, of which we provide a separate photo under Fig. 63.6. She is, after Prof. O. Bohn, from Berlin, was kind enough to inform me, to read as follows: ? TIT VA_ON VRS LIbRI - £ and as regards the last part should be written thus: libram (LIbR) unam (I) unciam (-) semiunciam (£), i.e. 1 Pound, 1 uncia, ½ uncia. So we find a weight statement here, which is in grams, appears to correspond to the current

weight of the helmet (including a 2nd cheek flap). We compare: the following calculations:

1 Pound=327.45 g	Helmet hood=282.50 g
1 Uncia=27.288 g	Neck protector=32.50 g
$\frac{1}{2}$ " =13,644 g	2 Cheek valves
	(2 x 17.10)=34.20 g
	2 Narrow straps=10.70 g
368,382 g	359.90 g

then we see how both results match each other. After all, complete agreement can never be achieved with such reductions, as it is certain that the Roman weights vary greatly (cf. C. I. L. XIII, 3, 10030, 26, 29, 37 and 42). While our helmet and associated pieces were only the covering on the original iron hood, the weight in question therefore indicates only that of the gilded silver covering of the helmet, as can be judged from many other finds, only objects made of precious metal weight specifications were provided.

What is the first part of the inscription? TIT VA_ON VRS

As regards the first sign, it is indecipherable, which unfortunately means that the interpretation of this inscription part cannot be determined with certainty. In general, the inscriptions on helmets indicate the name of the wearer and the centuria in which he served 1), but in connection with the weight statement it seems to us that for our helmet

1) So 2 bronze helmets in the Leidsch Museum, Netherlands. Cat. E III, b, 141 and 142. See Lindenschmit Altert. V, p. 186, et seq., where several are mentioned. Professor Bohn sent me by analogy, except for a second lecture with the name of the bearer only: (M?) Tit(ii) Val(1)on(is) Urs(i), the following indicating the division in which he served, in this case the turma or the decuria, since as we will see later, this is an equestrian helmet: (ex turma? decuria?) Tit(i), Val(1)on(ii) Urs(i).

such an interpretation is less likely. Where we seeing that the weight was that of the cover is difficult in the foregoing? TIT VA_ON VRS conceal the name of the bearer. After all, he could never determine the weight of the cover without removing the cover from the iron inner hood, which was an impossibility, as we saw above how the cover and iron inner hood were riveted together by a dense row of nails. It is also impossible to assume that he would have heard the weight of the manufacturer. We must therefore conclude that the weight is indicated on the helmet at the factory itself. If one wants to maintain the above-mentioned general interpretation, the name of the wearer would only have been applied to the neck flap later, which in the meantime excludes the writing itself, which appears to be from the same hand. However, since we will later see that our helmet must have been manufactured in one of the imperial weapons factories of the Roman Empire, it seems most likely to us that our helmet mentions the person who was responsible for weighing and verifying the helmets. It is by no means unlikely that the State had verifiers in its factories to authenticate these helmets made of precious metal, as the finds show that an ex auctoritate of the magistrate was also stamped on weights (cf. C. I. L. XIII, 3 10030, 10). So we would like to read in our inscription the verifier Tit(us) Valon(ius) Urs(us) and may - just as on the above-mentioned bronze helmets the word centuria had its special abbreviation signs 10 - the illegible first sign be an abbreviation for an examinavit or something similar.

As a second inscription on our helmet we saw that of Stablesia VI on the right of the helmet rim. It designates a division of the equites Stablesiani, an equestrian corps, which, as appears from the Notitia Dignitatum, 2), during the later Roman Empire in

[See [Naspeuringen van Paul Theelen: De Notitia Dignitatum](#)]

1) See C. I. L. XIII, 3, 10027, 214 et seq.

2) See Ed. Seeck, Index s.v. Stablesiani.

was spread out in several provinces. Furthermore, it is known to us from two inscriptions, found in Brescia 1) and Sitifi (Africa) 2), the first of which mentions a vexillatio of this corps.

Is, as Prof. Bohn reminds me, by analogy with this, as well as by the fact that the word vexillatio already at the end of the 3rd century meant an equestrian division 3), to supplement our inscription thus: (Vexillatio) Stablesi(na) VI. We are all the more inclined to do so, as in the Notitium Dignitatum this equestrian corps is mentioned among the vexillation comitatenses of Africa and Britain. 4)

So the wearer of our helmet belonged to the 6th division of the equites Stablesiani and our helmet contributes something to the history of this corps, which now appears to have once been in our region.

[comparison] II.

A series of helmets can be compared with our helmet, whose close relationship in construction and decorative techniques is worth examining in more detail here. These are a helmet from Kertsch (Southern Russia) and present in the Ermitage in St. Petersburg, two helmets from Pfersee near Augsburg, one of which is kept in Augsburg itself, the other in Nuremberg in the Germanic National Museum, furthermore a helmet was found in Worms and one in the Danube near Budapest, which are successively housed there in the Paulus Museum and the Budapester National Museum.

All made of iron, they have, like ours, a gilt-silver or single silver covering with the same relief decoration of crosses, pointed circles, pearl edges and the like. Our helmet comes the most in terms of shape and parts of the helmet hood

1) C.I.L.V, 4376.

2) C.I.L.VIII, 8490.

3) See Marquardt, Röm. Staatsverwaltung II², 467.

4) Not. Dign. Occ. VI, 64, 82, VII, 180, 182, 203.

corresponds to that of St. Petersburg (see Fig. 64,2), a brief description of which can be found in Reinach, Ant. du Bosphore Cimmérien (p. 77/78 no. 5 and 6), who states that he has taken it unchanged from the great work Ant. du Bosph. Cimm. preserved in the imperial museum of the Ermitage. According to this description, the helmet hood covered with gilt silver consists of 2 x 3 separate pieces and a wide bottom edge, while a helmet crest with brackets runs along the length of the head. Just like with our helmet, the loose pieces of the helmet hood are also connected by nails. The description does not state how the helmet hood and helmet crest are attached to each other.

We are better informed in this respect by the helmets of Augsburg (Fig. 64.6) and Worms (Fig. 64.5), of which we find a detailed description in Lindenschmit in his Altertümer Bd. V, p. 222-226, while Worms' helmet is also discussed by Reinecke in the Korrespondenz-blatt der Westd. Zeitschr. XXV, p. 65. These helmets consist of two hood halves and a crest, to which the hood halves are each connected by nails. Seen from the inside, the hood halves do not overlap, nor do they touch each other, but leave a space open, exactly in the same way as with our helmet. Lindenschmit further says of the nails on Augsburg's helmet that they were not riveted, but turned over. So we see the same treatment here as was the case with our helmet with the nails on the nose protector.

The cover is also made of gilded silver and, like ours, forms a separate outer covering. It is connected to the inner cap with the same nails with which both halves were attached to the comb, while, according to Lindenschmit, some adhesive may have provided further strength, a comment that may also apply to our helmet.

Worms' helmet also has a gold-plated covering, which, however, is only clearly visible in a few places, mainly on the neck protector, to which part of the helmet we will come back later.

The Budapester helmet (see Fig. 64.7), published by Hampel in Arch. Ertésítő 1900, p. 361 and in the Zeitschrift für Hist. Waffenkunde, Bd. II, Volume 6, p. 192, has a gilt-silver covering attached to the iron, which, in addition to relief decoration, is richly decorated with glass paste. The not high helmet crest, on the other hand, is covered with a separate silver covering, which was attached to it with nails. The helmet hood is bordered at the bottom by a broad rim, which, like ours, is accurately cut above the eyebrows, and therefore also had a nose protector, although this has not been preserved. The situation is better with the Nuremberg helmet, of which a piece of its nose protector was found. As Fig. 64.3 shows, this fragment agrees completely with ours. Incidentally, this helmet (Fig. 64.4) is of a similar construction to that of Augsburg, except that its silver covering is not gilded (See Lindenschmit and Hampel).

So far we have only compared the hood of the different helmets. We also find that the other helmet parts, in particular the cheek flaps and neck protector, are very similar to those of our helmet. Our peculiarly shaped cheek flaps can be found, to a

greater or lesser extent, in the Budapest helmet, in the helmets of Pfersee (see the Nuremberg piece, Fig. 64.3) and in that of St. Petersburg, the latter connected to the helmet rim by hinges were, as can still clearly be seen on the helmet rim (see Fig. 64.1 and 2). A completely different type of cheek flaps, namely of a long oval shape, the helmet of Worms, which has a neck protector of almost exactly the same construction as that on our helmet. Fig. 64.5 shows us how it was attached to the rim of the helmet by means of leather straps, which were inserted through two slits. The only difference with our helmet is that no buckles were used to attach the straps to the neck protector, but only nails, which are still visible in the photo.

Lindenschmit suspects that Augsburg's helmet also had a similar loose neck protector. The remains of a fitting on the back of the helmet would indicate this, i.e. could have served to attach a loose neck protector. This assumption is not impossible, as we have already seen so many important points of similarity between the Augsburg helmet and ours.

As for the decorations of the helmets, we have already noted that they all have the same type of relief decorations of pressed crosses, pearl edges, pointed circles and the like. This mainly decorates the edges of the various parts of the helmet, as is also the case with our helmet. How these decorations, despite differences in details, still have one and the same character, can be seen in Fig. 64.8, where sub 1 depicts the decorative motif of our helmet, sub 2 that of the Augsburg helmet, sub 3 of that in Nuremberg, sub 4, 5 and 6 successively that of the helmets of Worms, Kertsch and Budapest. Added as no. 7 is the decoration of a helmet from Thorsbjerg 1), whose construction is indeed a completely different one, but precisely because of its decoration technique by Lindenschmit e. a. was used to date our helmets.

For the dating of our helmet types are mainly based on the technique and method of decoration that recurs in various finds in Northern and Eastern Germany and in the Danube countries. This includes the aforementioned helmet of Thorsbjerg, whose hood is formed by gilt-silver bands running crosswise over each other, which have a decoration as shown in sub 7, and of technology like that on our helmets. Based on other discoveries, this helmet was dated to the 4th or 5th century AD. 2).

1) Engelhardt: Thorsbjerg Mosefund, p. 23, Pl. 5.

2) Sophus Müller: Nordische Altertumskunde, Bd. II, p. 147.

Our helmets are generally regarded as late Roman work from the time shortly before the start of the great migrations. The coins found near our helmet are all the more important for their chronology. Where the find in the Peel is not a grave find, but the wearer of the helmet had an accident here in one way or another, the coins form the current money that he had "in his pocket", and are therefore a certain means of dating our helmet. All from Constantine, they therefore place our helmet in the 4th century, around which time the helmets we compared and the finds further mentioned above can also be grouped.

It is difficult to determine how our helmets relate to each other in time order. The typology can certainly not be used for this purpose, as has been the case. After all, although very different in shape, we saw such a great similarity in construction between our helmet and those of Pfersee and Worms that, despite their different shapes, they must almost have come from the same factory.

We can answer the question of which factory that must have been inasmuch as our type of helmets were manufactured in one of the imperial weapons factories of the Roman Empire, such as there were in Constantinople and Antioch.

For a long time now, people have associated with our helmets is a place in the Codex Theodosianus (X, 22, 1), where there is mention of metal workers in the government's armament factories, specially charged with covering helmets with silver and gilding them (tegere argento et deaurare). They are called barbaricarii 1), a name that indicates how these workers were of foreign origin.

[Imppp. Valentinianus, Valens et Gratianus aaa. Tatiano comiti sacrarum largitionum. Cum senae per tricenos dies ex aere tam aput Antiochiam quam aput Constantinopolim a singulis barbaricariis cassides, sed et bucculae tegerentur, octo vero aput Antiochiam cassidas totidemque bucculas per dies triginta et tegerent argento et deaurarent, aput Constantinopolim autem tres solas, statuimus, ut Constantinopoli quoque non octonas singuli cassidas per tricenos dies, sed senas sic pari numero buccularum auro argentoque condecorent. Dat. V id. mart. Antiochiae Gratiano a. III et Equitio cons. (374 mart. 11)]

While the decorative technique of our helmets is therefore automatically characterized as non-Roman, the type of our helmets is also in accordance with this.

1) See also Not. Dign. Or. XI, 45, and further Seeck, Pauly-Wissowa Real-Encycl.

s. v. barbaricarii.

The movable cheek flaps in common with Roman helmets, non-Roman is the nose protector and eyebrows in the helmet rim, which are reminiscent of Greek, especially Corinthian helmets, while the loose neck protector also seems to indicate foreign influences that had to enter the Roman arms factories with the barbaricarii themselves.

[incidental finds] III.

Among the incidental finds, the 37 bronze coins are the most important. Although most of them are badly worn and partly chipped, they are all characterized, either by their obverse or by their reverse, as coins of Constantine. As far as her exergues can be read, at least 1 copy was minted in Siscia (off. B), 3 in Rome (off. P and T) and 9 in Trier (off. S), while the others were struck by a completely identical coinage of obverse or reverse can be ranked below those of Rome and Trier. These last two coin types are, as far as can be determined, each represented in one type, the description of which follows here with that of Siscia, with reference to J. Maurice, Numismatique Constantinienne, Tom. i, p. 208 ff., p. 423 ff. and Num. Chron. 1900, p. 322.

Siscia:

Vz. IMP CONSTANTINVS P F AVG

Draped bust of Constantine facing right, with laurel wreath around the head.

Rev. IOVI CONSERVATORI

Jupiter leaning on a sceptre, which he holds with his raised right hand. A falling garment over the shoulder, otherwise naked. Turning to the left, he carries a Victoria on a globe in his left hand. On the left at his feet an eagle with a wreath in its beak.

Ex. 'SIS'

Rome:

Vz. IMP CONSTANTINVS P F GDPR

Bust of Constantine draped and armored. A laurel wreath around the head.

Rev. SOLI INVICTO COMMITI

Sol completely naked, with a halo around her head. Turns to the left with left arm raised. A cloth hangs over his right arm, and he holds a globe in his hand.

Ex. RP or RT

Trier:

Vz. IMP CONSTANTINVS MAX AVG

Armored bust of Constantine with helmet and laurel wreath.

Rev. VICTORIAE LAETAE PRINC PERP

Two Victorias, between which an altar, with a star on the front. On the altar they hold a shield, on which the left Victoria writes with a stylus: VOT PR

Ex. STR

an image of some specimens on Pl. 65. Under No. 1 shows the coin of Siscia, under 2 one of those minted in Rome, under 3 and 4 the best obverse and reverse of the Trier specimens. The same plate also shows images of other finds in silver or bronze. The bell, spur and fibula are made of bronze. The last one is of the so-called longbow type and matches the coins in dating. The images of these objects speak enough for themselves that they require further description. The same applies to the silver fittings that served to decorate the leather sheath belonging to the finds. The fitting has 8 holes, so it must be sewn to the leather. The sheath is cut from one piece and sewn together.

Of the other leather discoveries, little more can be said about the large pieces, just as we cannot about the loose strips of woollen cloth. We probably have the remains of a scrap piece among the large pieces of leather. Below that is: a square piece of leather with a border in which holes have been drilled, so that a second piece appears to have been sewn to it. A hole has been cut in the middle, through which the strap of the stirrup or the abdominal strap could have been pulled.

What is more important is what leather shoes were found. It is a left-hand copy (Fig. 65a), with the remains of the corresponding right shoe, a right outer shoe (b) and a right inner shoe (c), which do not fit together, therefore belonging to two separate copies.

The one mentioned under a is the most important due to its relative integrity. It consists of an outer and inner shoe, with an extra insole and apparently two outer soles, which are successively sewn to the inner and outer shoe with a narrow leather thread. The shoe, 26 cm long with a maximum width of 11 cm, it is cut from one piece of leather, according to a pattern, as Fig. 66.1 shows where the shoe is shown folded out when viewed from the outsole. If the pattern is turned outwards to close, the points of connection run along the edge of the heel (a) and the Achilles tendon (b), from the front along the toes (c) and over the toe of the foot (d). There the leather is always attached to each other, and, just like with the soles, sewn with a leather thread. The instep has a series of incisions in the middle, as well as on the left and right, while its edge is cut in a serrated shape. There is also an eyelet (e) in the leather in the middle of the instep, which was apparently related to the lacing of the shoe. (Cf. Jacobi, Saalburg, Taf. 80.7). The heel piece also has a serrated edge, which also has a pressed decoration, for which we refer to Fig. 65a and 66, 1.

The right outer shoe, which we mentioned under b, also has a finely serrated edge and a decoration at the instep, which is shown in Fig. 66, 2. Of a length of 27 cm, and 9 cm at its widest, it is also cut from one piece of leather. The same applies to the inner shoe, referred to under c, which has a size of 27.50 by 8.50 cm. We find their unfolded patterns in Fig. 66, 2-3. It shows how they correspond with each other in the front part, but are cut differently at the heel. The heel pattern of the inner shoe, as we can see, corresponds to that of the shoe described under a. We find the same thing with a shoe in Fig. 66, 4, which is also very similar to our first: it is a shoe from the Thorsbjerg Moor (Engelhardt, op. cit. p. 18, Pl. 3).

Leiden. Dr. M.A. EVELEIN.

Letter of A. Bos to J.H. Holwerda
Helenaveen December 9, 1911.
The Honorable Gentleman
Dr. J.H. Holwerda Leiden

Sir,

I hereby have the honor to inform you the following in response to what I read in your work "Netherlands' Earliest History in Pictures" page 29 regarding the find in the Peel under the municipality of Deurne.

What I read your description it gives me the impression that you were not properly informed about some things and that not everything that was found was provided.

The day after the discovery was made, I went to the spot and looked at everything, and I also collected all the leather, which had been lost due to ignorance of the finders was torn to pieces.

The objects were found in the upper layers of the black peat, almost at the transition from the gray peat. The thickness of the black peat present was too great for the people who died there to have been on horseback. Horses cannot ride over such layers of peat.

Among the leather were the remains of two beautifully crafted shoes, a third shoe very simply made was found about 15 m from the first site with the money and the leather probably from a leather bag. From this I thought I could deduce that the suspected nobleman was accompanied by an inferior, and that two people had thus died. I collected all the leather separately, like the shoes, the bag, etc that had been torn from the helmet, etc. The woven fabric had already pulled apart too much to be able to make much of it, it most looked as if they had been bands, wider and narrower.

It could be determined that the armament probably consisted of a spear or lance, a bow and a sword. The remains of this had to be partially dug out of the dug peat, so that they were cut into pieces when digging the peat.

1° Pieces of round cut wood ± 3 c/m Ø, some were flat and showed grooves as if they had been covered with metal, probably the metal point or point.

2° Pieces of flat wood, beautifully decorated in the middle with metal remains as if a steel spring had been through the wood, everything pointed to the wood of an arch.

3° A block of wax with grooves, to smooth the bowstring.

4° A piece of peat ± 30 cm long in which the imprint of a sword blade was $\pm 2\frac{1}{2}$ cm wide. The metal was completely consumed and was only present as a dark blue-gray powder. I wrapped all these objects individually and returned them to the finder, asking him to later hand everything over to the buyer or to a museum where the objects would

127090 probably go.
However, the property was later much tampered with, the man went to the fairs with it, and when I saw it again later, it had suffered a lot.
However, the little interest that there was at first for this find in general, and the dispute among those entitled to it, was the reason why I further kept myself out
127095 of it, but now that I read your description, I now found reason to share the above with you.
In the illustration in your piece I am missing a large piece on which there were signs or letters, I thought this was very important, is this not in your possession? Later, a third party brought me a pin, which was still in a piece of leather, an arm
127100 had broken off, and a stone was included, which had two flat sides and must have served as a confirmation, as everything came together from one place, and was brought to me.
Here in the Peel, rarely anything was found in the peat, in the past a few leather headgear, a pair of large horns and something similar have emerged, but everything
127105 else has been lost.
If you would like any further information about any further information, I will be happy to provide it to you as far as possible.
Yours faithfully
A. Bos.
127110
Leo Kluijtmans reports in his book WHITE MAGIC (1970) some interesting facts:
One year later, when the last bench [peat] was excavated, they found a nice small wine keg, with a few liters of content, the rest of the totally clouded wine was still there.
127115 The keg was subsequently lost. The vessel was held together by toes straps, and had a silver tap, too bad it has been lost.
A silver cup has also been found, provided of a hook to hang it on the rig.
It must still be present somewhere privately in a hunting lodge in Loosdrecht, which belonged to [family of] the then management of the NV Maatschappij Helenaveen.
127120

Roman remains in Danish peat bogs

August 22, 1860: HIGHLY REMARKABLE ROMAN REMAINS FOUND IN DANISH PEA BOWLS.

[p. 297, ALGEMEENE KONST- EN LETTERBODE.]

"You have been asking to hear from time to time about the discoveries in the peat bogs at Sönder-Brarup, which I have mentioned several times before. Several important objects were found there in July and August; but the most important find is a round bronze plaque, the size of a dinner plate, with a wide rim, decorated with raised gold and silver sculptures. The sculptures depict alternately birds and dolphins, and some Roman warriors in a resting position, with helmets on their heads, holding a lance in one hand, while the other hand rests on a shield. Within this rim, one sees several Medusa heads, with helmets on their heads, all surrounding a single Medusa head in the center. All this points to a Roman origin; but it is noteworthy that in some places on that plaque small silver plates adorned with monstrous animal figures, similar to those found on gold bractes struck in Scandinavia and on two silver cups found in Himlingöri, Zealand. It is evident that foreigners added these ornaments of their own making to this plaque, which had previously been adorned solely with Roman art. Remains of three coats of armor made of rings were also found; on two, the rings are bronze, on the third, iron. Subsequently, a mass of shield navels, spear points, arrows, and the remains of broadswords were found, all of iron, as well as the remains of sword scabbards. Everything points to a fierce battle. Furthermore, a complete riding horse bridle and a snaffle (bridon) were found, with buckles, rings, and ornaments of bronze; the long leather bridles were completely preserved. Two silver coins of Commodus and Nero. The (wooden) shafts of the lances The javelins and spears are mostly broken, but we were fortunate enough to find two that were completely preserved: one 9 feet (Danish) long, the other a little longer. A shaft of 2 feet 6 inches belonged to a javelin. The shields are made of wood and have a rim; only the middle section is bronze. However, one shield is made of maple, with an oak rim attached to it with small pieces of bronze, shaped like an S. This is the first time that shields made of different woods have been found. A leather sandal and several pieces of linen with rims were also found. Among the glass beads, one is hollow, and this must therefore have been made with a glass-blowing pipe; the other beads are hollow. Not a day goes by without finding pottery of various shapes, usually broken; meanwhile, six pots have been found that were intact. Four pieces of gold, shaped like rings, were found. currency was used (ring money). It remains a mystery how all these objects ended up in the peatlands, formerly lakes. Some shields and lance shafts have also been found under a thick layer of beams and brushwood (the same as previously in Funen). These are the discoveries of 1860; I have already reported those of last year to you. 1).

For two or three years now, I have been sharing our archaeological explorations with you. In the absence of a French summary of these, a Swiss who spent the winter of 1859 here published geological-archaeological studies in which he reports on everything discovered in our country, on our system, etc. 2).

Taarbaek, near Copenhagen,

22 August 1860. DR. BURMAN BECKER. (Excerpt from a letter to MR. EYCK VAN ZUILICHEM).

1) We hope to be able to include this soon. Ed.

2) This is Professor Morlot of Lausanne, the publisher of whose important work we already mentioned in No. 20, dated May 21, of this weekly, and about which the Revue archéologique of August 1 has begun to give a very favorable report. We will return to this subject as soon as possible, space permitting.

<http://en.natmus.dk/>

November 10, 1860 HIGHLY REMARKABLE ROMAN REMAINS FOUND IN DANISH PEATHERS. 1) [p. 360]

In recent years, during the excavation of the numerous peat bogs, which were undoubtedly lakes or marshes in the past, mainly in southern Jutland, and also in some burial places and sand dunes, in more than 60 locations, remains of Roman origin have been found, such as coins from the imperial period, pots, vases, cups, decorations with Roman inscriptions, and works of Roman art.

The factories usually bear the hallmarks of originating from the first four centuries AD.

Especially remarkable is the multitude of weapons (several hundred) found in the peat

bogs at five or six locations, namely: iron arrowheads and lanceheads, copper shield fittings, mixed with buckles, combs, dice, hammers, etc. All these weapons are very well-made, even beautifully crafted, but bear many signs of having been damaged and bent in battle. - The large peat bog of Allesö, on the island of Funen, not far from Odensee, is especially rich in such objects, and more are still found there annually. - During the last two years, a large number have also been found in a bog or swamp

near Brarup, in southern Jutland.

Among the objects unearthed there is a piece of a shield with the words AEL: AELIANVS, in pointed letters 2); A fragment of a Roman helmet with engraved brass ornaments; a whole multitude of round wooden shields, about 3 feet in diameter, with brass centers; also wooden bows, and a multitude of staves for arrows and lances, but without the points, which are presumed to have sunk and will be found at the bottom of the peat, as are the swords, for which the remains of the scabbards and their fittings have been found, but not the swords themselves. 3) Furthermore, brass fittings from belts or slings, horse harnesses, and pieces of a tunic consisting of rings. 4) All of this bears evidence of having been damaged by use and in combat. A silver head ornament was also found, broken by three saber slashes. It is impossible to list everything; but among the most remarkable objects certainly belongs a bronze plaque with gold and silver ornaments and nine engraved female heads on it. as well as coins of Trajan, Hadrian, and Commodus.

The most remarkable thing of all is a large quantity of clothing, folded or packed together; underneath, trousers with stockings attached, in one piece (I have no information about the material of these garments). Similar objects are still found in other bogs in Jutland, and also on the Danish islands, though in much smaller numbers.

The property of high bogs for preserving objects that would otherwise be subject to decay is well known; therefore, one is not surprised that these remains have been preserved, but rather how such a large number could have gathered in that bog (ancient swamp or lake), and in so many places. It has been thought that entire war bands would have fallen through the ice on a winter expedition and been suffocated, but it is difficult to imagine that this would have happened in so many places. One would also have had to find a multitude of human and horse skeletons, which is by no means the case, but is limited to a very few.

Another suggestion is that these objects must have been hidden by some tribe in the Brarup swamp; this seems to be indicated by the collected articles of clothing and stacked shields, as well as the wooden hooks found, which seem intended to hold objects that would otherwise have floated on the water.

However uncertain the manner in which these objects came together may be, the more certain is the period from which they originate, and the influence that Roman civilization must have exerted on the customs and practices of the Norse peoples. Nordic antiquarians assume that three periods occurred in Northern Europe during which weapons and tools were made of stone, bronze, and iron. The last and most recent period there would have begun roughly with the influence of Roman rule, and one of the effects of that influence was probably that the use of mixed copper (bronze) was gradually lost and that objects that were not preferred to be made of iron were made of yellow copper.

Since it is known that the Romans themselves never crossed the River Elbe during their campaigns, one must conclude from all the artifacts found that the ancient Jutes or Danes, through war or trade, came into contact with the Romans more than previously thought and must have shared in their civilization. I have taken these reports from some letters from my cousin J. G. Burman Becker in Copenhagen, who has a great predilection for the antiquities of his remarkable fatherland and, among other things, also owns a large collection of sketches, mostly drawn by himself, of old churches, etc., including, according to his letter, some 120 old baptismal fonts, which, along with many other curiosities and ornaments, are located in or near many village churches.

Maartensdijk,
Jan. 1860. EYCK VAN ZUYLICHEM.

The above communication, in connection with the earlier one (in No. 37), regarding Roman remains in Danish peat bogs, is all the more important to us because it provides new evidence for the feeling we already expressed last year: that in assessing the beautifully worked metals, especially bronze, implements, and tools, found among ancient remains in Northern Europe and elsewhere outside Italy, too little attention has been paid to ancient Italian factories. We, at least, are convinced that these bronze and iron remains, especially weapons, originate from

127255 ancient Italian factories and were brought there in high antiquity as well as in the
later Roman Imperial period, primarily through barter. It strikes us as somewhat odd
that Nordic antiquarians, who published so many important works on the antiquities of
their country, have not yet published a work (at least as far as we know) depicting
and describing these Roman remains from the peat bogs. Even the most recent author on
127260 the Danish peat bogs, although comparing the remains found there with those found in
pile dwellings in Switzerland (Morlot, Etudes géologico-archéologiques en Danemark et
en Suisse), has not mentioned any Roman remains found in the Danish peat bogs,
although he does so on p. 291 writes: "The Danish antique mills are rich in antiques
of all kinds and ages, as are the museums in the past. M. Steenstrup estimates that
127265 there is no such thing as a vertical pillar of a meter square at the base, placed or
otherwise, in the same country's antique mills, where one finds less of an antique
object." We hope to be able to devote more space to this important topic soon.

ANTITIES IN DANISH PEATS. 1)
127280 The following, taken from a special letter written by a very authoritative hand, may
perhaps, even after the information on this subject in the Bode of November 10th,
page 360, not be considered unworthy of publication in the same weekly. We are making
it available to the editors for this purpose. "Nothing, however, was as important to
me as the rich yield of the excavations near South-Brarup. These are not just a few
127285 objects, but an entire war booty buried in the peat. The coins found there point to
the time when this occurred; the most recent were Commodus's. There is much Roman
artefact among them, much of it also of barbarian origin or associated with barbarian
work. The most remarkable thing is that wood, leather, and woven fabrics have been
preserved, but everything made of iron has been lost. We found a magnificent bronze
127290 horse harness, with the straps and everything else, except the iron bits, preserved
in its entirety: bows, even remnants of the cords, and 60 arrows, but whose iron
points had decayed. This would be even more regrettable if two other discoveries in
the peat hadn't come to our aid, belonging to the same period and yielding relatively
well-preserved iron objects. Among the most important curiosities, I bring... I found
127295 a silver mask that served as a helmet visor; bronze breastplates decorated with
silver and gold ornaments; trousers, a cloak, and a coat of mail, the latter of which
was hidden in a jar. Later, fragments of a highly elaborately crafted coat of mail
were also found; they are partly iron, partly brass; the iron here, for one reason or
another, is of a higher quality and better preserved than elsewhere. The purely Roman
127300 objects are often provided with barbaric additions, such as, for example, a
breastplate with barbaric ornaments of thinly beaten gold. They are busy arranging
and displaying everything in Flensburg properly, and identifying the most important
objects. A great deal is among them that had previously only been found severely
damaged or in unrecognizable remains; in addition to the horse harness and clothing,
127305 we also include, for example, wooden shields. "In the past, ancient objects were
found in greater numbers here in Denmark than in most other countries, and also iron
objects from the 8th-10th century, which had a great resemblance to Frankish and
Burgundian objects; now we have objects from the 2nd and 3rd century in abundance,
and consequently two endpoints; only the definition of the intermediate point and the
127310 transitions between the two are still unclear and uncertain to us.
L.

1) Comp. No. 45.
127315 April 3, 1861 REPORTS FROM MR. CONFERENZ-RATH THOMSEN,
IN COPENHAGEN, ON THE LATEST DISCOVERIES OF ANTIQUITIES IN DENMARK. 1).
I have noticed that antiquarians in France, and partly also in England and other
countries, know very little about the new discoveries made in the North, which
nevertheless expand and further confirm our knowledge of antiquity. For example, I
127320 have not yet found anything in foreign works about the large find at Allersö on
Fünen.
For ten years already, during peat cutting in a bog near this village, iron weapons,

particularly lances and javelin points of very fine workmanship, were found annually. It was also noticed that the wood in the peat had been preserved to some extent; it still had its original shape, but had softened like a sponge; the water could be squeezed out, and if it was left to dry without preparation, it shrank. As attention was now focused on that location, remarkable items emerged, such as: a silver fitting from the scabbard of a sword, on which an inscription had been scratched. belonging to the oldest type of runic script 2), ivory knobs of... and swords, and these made us eager to examine the site closely. In 1857, we had a very dry summer; a distinguished and experienced official of our museum, the Kammerrath and archivist Herbst, was sent there. He set up his residence in a tent on this bog and, for three weeks, had investigations carried out in various directions, which yielded us brilliant results. They consisted of more than 500 objects, which, together with those obtained earlier, complement an important but previously little-known or overlooked section of our museum 1). It is this section that shows us what was in use immediately after the Bronze Age and what it supplanted, approximately at the time of Christ and shortly thereafter. Among the most remarkable pieces are: exquisitely crafted iron spearheads with inlaid silver ornaments, entirely of the same kind as on the Bronze Age artifacts, namely, double circles with a dot in the center; a bronze griffin's head, presumably an ornament on a helmet; long, exquisitely crafted, double-edged swords; several swords shaped like swords; scabbard fittings of silver bronze, ivory, and bone; twenty bone combs (each warrior must have carried his own comb); the tools of a field smith: anvil, tongs, hammer, and file, but these (the latter) only with proper marks, as modern ones usually are; other tools such as bore, ... sickles, and wedges (celts), all of iron; unfortunately, we did not find the wooden handles of the latter; riding implements, traces of a peculiar kind, fragments of wooden shields, and many shield bosses (umbones) of iron, along with fittings from the crossbar that was attached over the stirrup and served as a handle; even remnants of A boat has been found. The remarkable thing about this find is also a long bow and a number of arrows, entirely similar to those of the Tartar peoples. 1) Some of these arrows have iron points, others bone points; iron must have been too valuable at the time to be shot. At least half of the arrows have bone points, and these are far larger and stronger than those of the savages, and generally triangular or quadrangular. Another curiosity consists of glass and other pebbles, which served as board games, and bone dice, two of which have the usual shape. 2) Two others, however, are entirely similar to those we obtained from India for the Ethnographic Museum; these are small, elongated, square rods. These latter dice have not two, but only one point or eye at each end. I find another similarity to Indian objects in the shafts of the lances; some of these are 8 to 9 ell long; these wooden handles are sometimes hammered into one side, towards the point, with small silver nails, usually several of them, with rounded heads. In the Indies, there is an old custom that when an enemy is killed with a lance, a silver nail is hammered into it, and when several nails are seen, it is considered a badge of honor for the holder. We and the Ethnographic Museum have examples of these customs. The same pear-shaped decoration seen on objects from Suder Brarup can also be found on some belt coverings. Many pieces also bear a strong resemblance to the one of Suder Brarup, but none with the later, Allemannish, Burgundian, and Merovingian artifacts, which correspond to the artifacts of our younger Iron Age.

In general, the aforementioned artifacts are much more noble and finely crafted than the later ones. If there is something barbaric here and there, it is an appendage or addition to the original. There is no trace of serpent- or dragon-shaped ornaments. In one respect, this find is very similar to the two Schleswig artifacts, namely that the artifacts bear the hallmarks of a fierce battle, as they have been hewn, pierced by arrowheads, bent by enemy hands, and rendered useless. The wood here, as at Suder Brarup, was also preserved, and after many trials and effort, we have succeeded in making it strong again and, I hope, durable. But in one respect, this find differs significantly from the Brarupschen finds: the iron, which had completely decayed there, has been preserved. Only the tank shirts, which had been coated with a kind of varnish, were preserved. It was clearly visible that it had been present, but even thick axes could only be seen, not recorded, because the iron had completely decayed, while we were able to preserve the (wooden) handles.

The Ny Dam find is entirely different; there, the iron has been preserved; among them, 30 swords were found, elaborately crafted spear and javelin points, etc., the swords often made of elaborately damascened work. Generally, there is no great diversity in the forms of this and the other two finds, but the objects in these are not quite as tasteful. The youngest of the coins found here is of Emperor Macrinus, from the year 217 AD. Since these three major finds clarified our view of this type

of object and the period from which they originate, we noticed that, without knowing it, we had previously made several similar small finds; that we had found rings, pieces of chains, belonging to the same period. Bronze riding implements found on Zeeland are entirely identical to the Suder-Brarupsche; even on Schonen and in Norway, objects have been discovered that correspond exactly with those of the three major finds. These three finds demonstrate that in the 1st and 2nd centuries AD, connections with the south existed, which had certainly been broken off for a long time previously, and now fill a gap in our knowledge of Nordic antiquities, because we lacked the link between the Bronze Age and the objects from the 6th and 7th centuries (which we can trace back to the 11th century); here it is, and indeed very complete." "I've gone through all our previous inventories and records. Over the years, some remarkable and valuable finds have been made in this country, but rarely more than 20 in total. Of 500 or more pieces lost in battle, skirmish, or as spoils of war in our former seas, now peat bogs, I can find no earlier examples than those mentioned above. It's only in recent times that we've seen such extensive finds. The Norderdorf find was significant, and the Vienna treasures from the Hallstadt burial sites are also substantial, and now the seas in Switzerland – nothing like this was previously known in our country." "Worsaae sent an artist to Flensburg to draw approximately 300 objects, mostly of natural size, for our Museum's archives; that's how important he considered the finds from Brarup and Ny Dam. The actual discoverer, to whom we owe this treasure, is the Inspector of the Collection of Dutch Antiquities in Flensburg, Mr. Engelhard, and he will publish a work on both finds. However, since these mines of discovery are not yet considered exhausted, since highly important objects were found last year and there is every reason to receive many more this year, the publication will not be rushed; but preparations are being made and gathering for a large-scale publication. Among all these finds are some purely Roman objects, mixed with objects from semi-barbarian peoples. I have no doubt that a large portion is indigenous, since we now have at least 20 completely different and far-flung finds. distant locations, only with objects or small finds of the same kind. The quantity of objects is also so great that one is convinced that it must be indigenous, and especially the weapons in general and the tools, for example, those of the blacksmith, demonstrate this. But when I read the Roman inscription AEL. AELIANVS on one shield boss (umbo), which differs slightly from the others, I know that it originally belonged to a Roman. 1), and when I see this lock of the temple of the maker...RICVS, I suspect the smith was a Goth, not from 500 AD, but already from 200 to 300 AD. 2) The finds of captured and exchanged pieces are certainly traceable; naturally, this also includes ivory objects. 1) Private letter from Mr. Thomsen, Copenhagen, dated April 3, 1861. ED.

2) According to a copy of that inscription, kindly sent to us by Dr. Burman Becker from Copenhagen, we would rather attribute it to the North Etruscan. ED.

127430 1) This refers to the Royal Museum of Antiquities, not that of the Royal Society of Norwegian Antiquities. ED.

1) Mr. Burman Becker has also kindly sent us copies of this. ED.

2) That is, the square, Roman. ED.

127435 1) Mr. Burman Becker has also provided us with a copy of this. ED.

2) Allow us to note that ...RICVS, as the last part of a defective name, does not necessarily suggest a Gothic name ending; it could be a Roman manufacturer's name. e.g., [AP]RICVS, or similar. EDITOR

November 3, 1859 GEOLOGY, INDUSTRY AND COSTUME, CLEARED BY AN ANTIQUE DISCOVERY IN MAINZ.

127440 On November 3, 1859, Professor Nöggerath gave a presentation in Bonn, at the meeting of the Lower Rhine Society for Natural and Medical Sciences, on the Roman antiquities excavated in 1857 in Mainz, on the Thiermarkt, in a peat layer at a depth of approximately 30 feet. He declared that this discovery was also important from a geological point of view, while the director of the Association for the Research of Rhine History and Ancient History, Dr. Jos. Wittmann, had demonstrated that in the first centuries AD, a branch of the Rhine flowed through the city of Mainz, in whose swamp the above-mentioned peat layer had formed. Dr. Wittmann briefly reported on this discovery in his important treatises entitled: Chronik der niedrigsten Wasserstände des Rheines vom Jahre 70 nach Christus bis 1858, and Nachrichten über die im Jahre 1857-1858 im Rheinbette von der Schweiz bis nach Holland zu Tage kommen Alterthümer und Merkwürdigkeiten etc., included in Th. II Part 1-2 of the Zeitschrift des Vereins z. E. rhein. History and Altenthümer zu Mainz. The same scholar had provided Prof. Nöggerath with an extensive manuscript on this subject for use, from which the most important information was communicated by Nöggerath at the

127455 aforementioned meeting. Some of those We adopt the information that has come to the

public's attention (Dr. Wittmann himself will soon publish his manuscript), all the more readily because Dr. Wittmann and Lindenschmit, during a visit to the Mainz Museum this summer, shared the same reports verbally with us and presented us with specimens of some of the remains they found. In the aforementioned peat layer, a great deal of leatherwork had been found, most likely originating from a Roman shoemaker's shop—nearly a wagonful of mostly used shoes and sandals, albeit very fragmentary, among which fourteen distinct types could still be recognized. This priceless find for knowledge of Roman industry and costume, illustrated with plates, will soon be published by Lindenschmit. We will therefore only mention here that the manufacturer's or shoemaker's stamp has been stamped on some of the leather fragments, as I could still clearly read the names: L. VALE (i.e. Lucii VALErii) C. VENED (i.e. Caji VENEDi) and MONA.

Furthermore, several remains of Roman clothing made of very fine wool and of excellent weave were found, along with various small Roman objects and coins. The leather and wool goods were relatively well preserved, but the wool had taken on a dark color. The coins were dated no later than 137 AD, from which one can probably conclude that all these objects ended up in the swamp around that time. Common peat plants were easily identified from the peat; in particular, the following were recognized: birch bark, hazelnuts, water lentils (*Lemna major*), and of the moss species: *Hypnum splendens* (Hedwig), *Hypnum tameriscinum* (Hedw.), *Hypnum latescens* (Hedw.), *Hypnum triquetrum* (Linn.), and *Anomodon. curtipendulum* (Hookeri and Taylori), *Byrumbium* (Schreberi), *Mnium roseum* (Hedw.), *Mnium undulatum* (Hedw.). Well-preserved grapevines were also found, evidence of early viticulture on the Rhine; these are now the oldest grapevines known from the Rhine region; finally: feathers of fowl and pigeons.

From some specimens of this discovery, received by the reporter in Mainz as a gift from Dr. Wittmann and Lindenschmit, he has donated the moss species to the National Herbarium, the feathers to the National Museum of Natural History, and the leatherwork to the Museum of Antiquities in Leiden. The leatherwork, The stone, which had hardened and shrivelled due to severe drying, has been carefully restored to its original softness by an experienced Leiden tanner, Mr. Visser.

November 23, 2025 **The Thorsberg moor**

(German: Thorsberger Moor, Danish: Thorsberg Mose or Thorsbjerg Mose, South Jutlandic: Tosbarch, Tåsbjerre "Thor's hill") near Süderbrarup in Anglia, Schleswig-Holstein, Germany, is a peat bog in which the Angles deposited votive offerings for approximately four centuries. It is the location of important Roman Iron Age finds, including early Elder Futhark runic inscriptions such as the Thorsberg chape, a Roman helmet, a shield buckle, and an early example of socks (attached to trousers). The finds are of similar importance as the contemporaneous finds from Illerup and Vimose in Denmark.

Excavation

The moor was excavated in 1858–1861 by a teacher from Flensburg, Helvig Conrad Engelhardt. The objects recovered by Engelhardt are on exhibit in the state museum of archaeology at Gottorf Castle; another 500 finds are on exhibit in the National Museum of Denmark in Copenhagen.

Discoveries

The deposits were made from approximately 100 BC to 500 AD and are clearly votive in nature. However, it is doubtful that they were dedicated specifically to Thor. The placename may reflect worship of Thor there by Danes during the Viking Age rather than by Angles during the Roman Iron Age. And as Engelhardt noted, although the 'Thor's hammer' symbol occurs on several finds from the site, it is a motif that can be found in many non-Germanic contexts, even on Native American artefacts. They include early examples of clothing, both Germanic and Roman, in particular the footed trousers, which are commonly dated to the 4th century but which now appear to be no later than 300 AD; objects of Roman workmanship including two phaleræ, military decorations in the form of richly decorated gold discs 13.2 cm (5.2 in) in diameter made in the 3rd century in the workshop of Saciro, thought to have been near Cologne, which have the image of a seated man with a spear, possibly a representation of Mars; and objects of Germanic workmanship, notably the Thorsberg chape, a piece of a scabbard bearing one of the earliest inscriptions in runes.

127525 Some of the Germanic fibulæ and shield bosses of ultimately Roman origin appear to be from Germanic tribes in Greater Germania, who were in closer contact with the Romans than the Angles. After approximately 200 AD, the deposition of weapons increased, possibly as a result of conflict between tribes such as the Marcomannic war (166 to 180 AD). Many of the objects deposited, especially the weapons, have been made useless by breaking, bending, etc. It was common practice among Celtic peoples to ritually "kill" such weapons.

127530 In addition to the weapons and other man-made objects, the deposits in the bog include isolated bones. Just outside the moor is an Iron Age tumulus with a stone circle.

EEN ROMEINSCHE HELM UIT DE PEEL.

[Inleiding]

In den zomer van 1910 kwam het museum in 't bezit van een Romeinschen helm, die in de Peel onder Deurne gevonden was. Hij is van verguld zilver met oorspronkelijk ijzeren binnenkap, die op enkele ijzerdeeltjes na, geheel is weggeroest, zoodat het alleen de verguld zilveren buitenbekleding van den helm is, die ons bewaard is gebleven. Zeer gedeukt en gedeeltelijk uit elkaar gevallen, werd hij gerestaureerd door den goudsmid L. Verkuil, werkzaam aan het atelier van den heer v. Rossum du Chattel te Leiden. De opbouw van den helm wees zich geheel van zelf uit, zoodat hierover niet de minste twijfel kan bestaan. Eenmaal gerestaureerd, bleek welk een schitterend stuk het museum rijker was geworden, dat, in vergelijk met dergelijke helmen in het buitenland, zelfs een unicum mag worden genoemd.

Met onzen helm werden verder in het veen gevonden 37 bronzen munten van Constantijn, een bronzen fibula, een dito spoor en klokje, een stuk van een leeren dolkscheede met bijbehorend zilveren beslagstuk, een drietal leeren schoenen, groote stukken leer, waarschijnlijk resten van een schabrak, en enkele reepjes wollen stof, die tot de kleding van den krijgsman hebben behoord. Met de munten zijn de helm en

133

verdere bijvondsten vanzelf gedateerd op de 4de eeuw na Chr. geb., wat des te belangrijker is, omdat daarmee ook de parallellen van onzen helm in het buitenland een zekerder dateering verkrijgen. Op een nauwkeurige beschrijving van onzen helm (I) zullen wij dus een vergelijking met andere exemplaren laten volgen (II); een korte beschrijving der bijvondsten (III) zal dienen tot besluit.

[beschrijving]

I.

Onze helm is van een tamelijk ingewikkelde samenstelling, die zich in hoofdtrekken aldus laat beschrijven (zie Afb. 61 en 62): de helmkap bestaat uit 2 losse symmetrische helften, die elk voor zich weer bestaan uit drie onderling verbonden stukken, allen van een zelfde plaatdikte van 0,06 m.m. Beide helften worden over de koplengte te zamen gehouden door een kam. De aldus gevormde helmkap wordt van onderen afgezet door een breeden rand, die aan de voorzijde boven elk der beide wenkbrauwen boogvormig is uitgesneden. Tusschen deze bogen in is een losse neusbeschermer aangebracht. De wijdte van den helmrand bedraagt 200 m.m., de hoogte van den helm, met inbegrip van helmkam, 177 m.m., terwijl de neusbeschermer van af den neuszadel 65 m.m. lang is.

Tot den helm behooren verder (zie Afb. 63, 1-3) een nekbeschermer, twee wangkleppen, waarvan nog één over is, eindelijk twee smalle reepjes met een klinknageltje in het midden, en een rij van gaatjes aan de beide breedte- en aan één der lengtezijden. Hun juiste bestemming is echter niet met zekerheid aan te geven (zie blz. 138), doch de overeenstemming in versieringstechniek met die der overige helmdeelen laat geen twijfel, of zij hebben tot den helm behoord. De nekbeschermer is met twee kleine zilveren gespen voorzien, wier scharnierstukken niet boven op de nekklep zijn vastgeklonken, doch door een gleuf gestoken,

127655 aan den achterkant naar boven en beneden omgeslagen zijn.

Uit deze gespen blijkt dat de nekbeschermer door leeren riempjes aan den helmrand bevestigd werd. Ook de wangkleppen

127660 134

moeten, zooals we straks zullen zien, wel door middel van een of ander leeren tusschenstuk aan den helmrand verbonden zijn geweest. Vergelijken wij haar afbeelding 63,2, dan liep, evenals dat bij gelijksoortige wangkleppen aan een Budapester helm (zie Afb. 64,7) het geval is, haar rechte zijde *a* langs den helmrand, terwijl de zijde *b* bij het oog uitkwam. Het is dus de linker wangklep, die ons bewaard is gebleven. Haar afmetingen zijn: *a* = 180 m.m., *b* = 105 m.m., *c* = 50 m.m.

127665 De maten van den nekbeschermer en smalle bandjes zijn als volgt:
127670 *a* = 152 m.m., *b* = 30 m.m., *c* = 182 m.m.; *a* = 193 m.m.,
b = 188 m.m.

Alle deelen van den helen helm hebben dezelfde soort versiering van knopjes en reliefornameenten, welke wij echter later zullen beschrijven, om eerst de constructie van den helm verder in
127675 detail te bezien.

Wij zagen hoe de beide helften van de helmkap elk bestonden uit drie losse stukken, welke wij gemakshalve willen noemen *a*, *b*, *c*. Door middel van 5 zilveren kegelvormige klinknageltjes zijn de beide zijstukken *a* en *c* aan *b* geklonken,
127680 en wel zóó dat het middelstuk *b* 9 m.m. over elk der beide andere heen ligt. Van binnen gezien blijken deze stukken ieder voor zich naar binnen even te zijn omgelegd of omgezoomd, terwijl de klinknageltjes niet door die omzooming heen, doch daar bezijden blijken geklonken te zijn en wel op de gewone
127685 wijze met den klinkhamer te zijn behandeld.

De min of meer geronde helmkam, van dezelfde plaatdikte als de overige deelen van de helmkap, loopt naar beide uiteinden smal en plat toe, zoodat zijn breedte, van rand tot rand, op het midden 29 m.m. is tegen 16 m.m. aan de
127690 beide uiteinden en evenzoo de hoogte successievelijk 17 m.m. en 8 m.m. bedraagt. Op de beide uiteinden zijn elk met twee klinknageltjes dikke zilveren sluitstukjes van 9 m.m. lengte aangebracht om den kam de noodige stevigheid te geven.
De aldus geconstrueerde helmkam verbindt de beide boven-
127695

135

beschreven kaphelften in dier voege, dat beide helften elk voor zich door 8 klinknageltjes aan den rand van den helmkam geklonken zijn. daartoe doen voor de beide uiterste dienst
127700 dezelfde klinknageltjes, die de bovengenoemde zilveren sluitstukjes aan den helmkam verbinden. Evenzoo zijn de beide middelste dezelfde nageltjes, die de zijstukken *a* en *c* met *b* verbinden. De aldus aan den helmkam bevestigde kaphelften blijken van binnen gezien niet over elkaar heen te liggen, noch
127705 nauw aan elkaar aan te sluiten: zij komen slechts even onder den rand van den helmkam uit, zoodat tusschen beide een open ruimte is, die, evenals de helmkam, op het midden breder is dan aan de beide uiteinden, n.l. 15 m.m. bij 4 m.m.

De 39 m.m. breede helmrand, die niet gesoldeerd is, doch

127710 wiens uiteinden tusschen de wenkbrauwen 23 m.m. over elkaar
heengrijpen, is 12 m.m. in de helmkap ingeschoven en vastgeklon-
ken door klinknageltjes. Deze zijn aangebracht op die punten,
waar de losse deelen van de helmkap aan elkaar zijn geklonken,
127715 m. a. w. het zijn dezelfde klinknageltjes, die de meer genoemde
stukken a en c met b verbinden, en die, welke de zilveren sluit-
stukjes op den helmkam en aan beide kaphelften vasthechten.
Slechts twee klinknageltjes komen hierbij, n.l. één op het
midden van elk der middenstukken b van beide kaphelften. De
127720 klinknageltjes zijn, evenals wij bij die der losse deelen der
beide kaphelften zagen, langs de omzooming geklonken, die
zich namelijk ook bij den helmrand voordoet.

Op de zoo in den helmkap bevestigde helmrand is de neus-
klep geklonken, wier vorm Afb. 61 duidelijk te zien geeft. Zij
is van dezelfde plaatdikte als de overige helmdeelen en loopt
127725 naar den vorm van den neus aan weerszijden een weinig af.
Met 5 klinknageltjes is zij op den helmrand bevestigd, twee
op elk der wenkbrauwen, die zuiver passen op de boogvormige
uitsnijdingen van den helmrand, één in het midden op den
neuszadel, waardoor tevens meer stevigheid is gegeven aan
127730 den overslag der beide uiteinden van den helmrand. De piek
van de neusklep, die even onder het zilveren sluitstukje van

136

den helmrand ingeschoven is, valt vrij wel langs de lijn van
127735 den bovengenoemden overslag. Behalve als ornament aan de
neusklep, diende zij dus tevens om de scheiding van den over-
slag te bedekken. De klinknageltjes, die de neusklep op den
helmrand vasthechten, zijn evenals de overige tot nu toe be-
sprokene, meer of minder kegelvormig, doch op een eenigszins
127740 andere manier behandeld, meer omgeslagen dan geklonken. Het-
zelfde is het geval met de drie, die zich aan de neuspunt
bevinden, op welke wijze van bewerking wij nog straks terug-
komen.

Tot nu toe lieten wij van den helmrand nog één bijzonder-
127745 heid buiten bespreking, waartoe wij eerst thans overgaan, omdat
daarmede de binnenbekleding van den geheelen helm ter
sprake komt. Langs den geheelen onderrand, ook langs de
boogvormige uitsnijdingen, die door de wenkbrauwen der neus-
klep bedekt worden, zijn op kleinen afstand van elkaar gaatjes
127750 geslagen tot het doorhalen van klinknageltjes. Daarvan zijn
nog twee aan den linkerkant en evenveel aan den achterkant
over. Ze zijn van het gewone klingsel als de eerste door ons
besprokene, verschillen echter hierin, dat zij achter het klingsel
een vierkant koperen plaatje hebben, wat voor niets anders kan
127755 gediend hebben dan om het doortrekken van een leeren binnen-
bekleding te voorkomen.

Behalve deze leeren bekleding spraken wij in den beginne
reeds van een ijzeren binnenkap. Hoewel niets meer daar van
overig is dan enkele ijzerdeeltjes aan de verguld zilveren buiten-
127760 kap, spreekt daar verder voor de groote elasticiteit van den
helm, zoo als hij voor ons ligt. Vooral de helmrand, die aan
het geheel de noodige stevigheid zou moeten geven, is zóó
zwak, dat een enkele leeren binnenbekleding niet toereikend
zou zijn. Deze ijzeren binnenkap, over wier aanwezigheid geen

127765 twijfel kan bestaan, blijkt uitsluitend met dezelfde nageltjes te zijn bevestigd, waarmee de leeren binnenkleeding aan den helmrand vast zat. Ze zijn n.l. de eenige aan den helm, die lang genoeg zijn om daarvoor in aanmerking te komen. Geen

127770 137
der overige klinknageltjes, zoowel zij, die de losse helmdeelen aan elkaar verbinden, als zij, die, zooals we straks zullen zien, ter versiering dienen, laten eenige speling over, dat zij tot bevestiging van welke binnenbekleeding ook kunnen hebben gediend. Blijken dus de klinknageltjes aan den helmrand het eenige middel van bevestiging te zijn geweest, dat de binnenkap met de verguld zilveren buitenbekleeding verbond, dan moeten voor de overige beide stukken nauw in elkaar hebben gepast om het geheel de noodige eenheid te geven.

127780 Evenals de helmkap, blijken ook de wangkleppen en nekbeschermer een ijzeren binnenbekleeding te hebben gehad; aan den laatsten althans werden nog sporen van ijzerdeeltjes aangetroffen. Behalve met ijzer zijn zij van binnen zeker ook met leer bekleed geweest. Voor de wangkleppen bewijzen dit de
127785 twee klinknageltjes, die nog in den rand aanwezig zijn. Zij hebben dezelfde vierkante plaatjes als die aan den helmrand. Een leeren binnenbekleeding moet van zelf ook de neusbeschermer hebben gehad. Tot zijne bevestiging dienden de klinknageltjes, die wij boven zoo eigenaardig zagen omgeslagen. De reden,
127790 waarom zij niet gewoon geklonken en met plaatjes als die bij den helmrand voorzien zijn geweest, mag daarin worden gezocht, dat omgeslagen de nageltjes minder scherp waren en daardoor het dragen op den neus veraangenaamden.

Hoe wangkleppen en nekbeschermer aan den helmrand
127795 bevestigd waren, duiden wij in den beginne reeds kort aan. Wij zagen hoe de gespen op den nekbeschermer er op wezen, dat hij met riempjes aan den helmrand verbonden is geweest. Uit een gleufje boven elk der gespen (zie Afb. 63,4) blijkt verder, dat de riempjes van af den helmrand niet dadelijk over den
127800 nekbeschermer heenliepen, doch aan den *achterkant* door die gleufjes werden heengehaald, om eerst dan aan de gespen te worden vastgemaakt.

Ook de verbinding van de wangkleppen aan den helmrand moet eene van leer zijn geweest. Daarop wijst nog een stukje
127805 leer, dat aan een der klinknageltjes boven op den helmrand

138
aanwezig is. Nemen wij aan, dat die bevestiging uit breede tusschenstukken bevond, dan zijn hierop wellicht onze smalle
127810 reepjes (zie blz. 133) bevestigd geweest, en wel in dier voege, dat hun schuine zijde aansloot aan die van den nekbeschermer.

In verband met de bevestiging der wangkleppen moeten wij nog wijzen op drie gaatjes in het midden van den helmrand, vlak boven de rij der gaatjes, waardoor de klinknageltjes
127815 geklonken waren (zie Afb. 63,5). Dicht bij elkaar liggend, vormen zij een driehoek en zouden aan een scharnierbevestiging kunnen doen denken, zooals aan den Peterburgschen helm te zien is (zie Afb. 64,2). Waar echter de wangkleppen door leder aan den helmrand verbonden zijn, is dit buiten gesloten. Trouwens zij bevinden

127820 zich alléén aan den linkerkant van den helm, zoodat ook daarom reeds zij met de wangkleppen in geenerlei verband kunnen staan. Vermoedelijk hebben zij gediend tot het doorlaten van klinknageltjes, die op den helmrand een plaatje met ring bevestigden, waaraan de helm kon worden opgehangen.

127825 Dat onze helm kon worden opgehangen is niet bijzonders. Bij sommige bronzen helmen is daarvoor op den nekbeschermer de ring nog aanwezig. 1) Daar bij deze helmen de nekbeschermer vast aan de helmkap zit, was hij daarvoor de aangewezen plaats. Waar onze nekbeschermer echter los aan

127830 den helm hangt, was hier de plaatsing van bedoelden ring onpractisch, zoodat men daartoe het midden van den helmrand gekozen mag hebben.

127835 Hebben wij hiermee de constructie van den helm in al zijn onderdeelen besproken, thans willen wij overgaan tot een beschrijving der versiering, waarvan wij op blz. 133 reeds met een paar woorden melding maakten. Zij bestaat uit een reliefversiering van geperste bloempjes of kruisjes en dito parelrandjes, die op alle stukken, waaruit de helm is saamgesteld, voorkomen,

127840 1) Vgl. o.a. Lindenschmit, Die Altertümer unserer heidnische Vorzeit, Bd. V., p. 116, 118, Pl. 22, p. 189, Afb. 2. Ook op een bronzen helm in het Leidsch museum (Ned. Cat. E III, b, 141) zijn daarvan nog resten aan te wijzen.

127845 139

terwijl op den helmrand en neusklep na, ook alle deelen bovendien met kogelvormige knopjes zijn versierd, die van binnen gezien, gewoon geklonken zijn. Naast deze overeenkomst in de wijze van bewerking staan echter verschillende versieringsmotieven, 127850 zoodat wij hiervoor de helmdeelen elk afzonderlijk moeten beschrijven.

Beginnen wij met de drie stukken, waaruit de beide kap-helften bestaan, de *stukken a b c*. Langs hun randen loopt een rij bloempjes of kruisjes, ingesloten door parelrandjes, 127855 welke laatste op elk der vier hoeken worden onderbroken door een cirkeltje in relief, met pareltje als middelpunt. Hetzelfde geldt van een tweede binnen-parelrandje, dat evenwijdig aan de buitenrand loopt, en door een tamelijk diep geultje van dezen gescheiden wordt. Het binnenvak wordt versierd door 127860 een ankerfiguur, eveneens van pareltjes, die hoog zijn opgeperst om het relief van het ankerfiguur te verhoogen. Het ankerfiguur ligt zuiver in het midden en is versierd met 6 knopjes, voorzoover het ankerfiguur der stukken *a* en *c* betreft, met 11 knopjes dat van het middenstuk *b*. Dit laatste heeft in zijn 127865 binnenvak bovendien nog twee parelrandjes, evenwijdig aan den steel en verder doorlopende over de armen van het ankerfiguur tot aan den binnenrand.

De *helmkam* heeft een versiering van dubbele parelrandjes langs zijn beide randen, en op het midden, in de lengte van 127870 den schedel. Tusschen deze laatste dubbele parelrandjes is een ondiep geultje, waarin een rij van 13 knopjes den helmkam verder versieren.

De *helmrand* is versierd met twee evenwijdig loopende bolle reliefbandjes, waartusschen een zelfde randversiering als de 127875 buitenranden der stukken *a, b, c*. Zij loopt, evenals wij van

de gaatjes voor de klinknageltjes zagen (zie blz. 136), den geheelen helmrand, ook dus achter den neusbeschermer, langs; alleen aan de rechterkant, ter hoogte van het middenstuk b, wordt zij onderbroken door een ingekraste inscriptie, STABLESIA o VI o, waarover straks. Hoe deze onder-

140

breking van het randornament reeds bij het maken van den helm is aangebracht, om hetzij dadelijk, hetzij later een inscriptie te kunnen inlasschen, geeft Afb. 62 duidelijk weer, waar wij zien dat het ornament niet willekeurig afgebroken is, doch op de desbetreffende punten zijn bepaalde afsluiting vindt.

De *neusbeschermer* heeft langs zijn randen en op het midden een versiering van parelrandjes, terwijl aan de punt twee cirkeltjes in relief, met pareltjes als middelpunt, zijn aangebracht.

Op den *nekbeschermer* komt weer dezelfde randversiering voor als op de stukken a, b, c, terwijl de binnenversiering bestaat uit 3 knopjes, parelrandjes en puntcirkels, waarvoor wij naar Afb. 63,1 verwijzen. Verder is in het binnenvak een latijnsche inscriptie, in cursief schrift, ingekrast, die wij met de inscriptie van den helmrand aanstonds afzonderlijk zullen bespreken.

De *wangklep* heeft eveneens eenzelfde randversiering als de stukken a, b, c. Het binnenvak vult zulk een ornament van parelrandjes, in den vorm van twee naast elkaar liggende bladeren, wier beide toppen eindigen in een puntcirkeltje als boven omschreven. Een dergelijk cirkeltje bevindt zich op het punt, waar beide bladeren bij elkaar komen. Verder dienen nog tot versiering 5 knopjes, waarvoor men Afb. 63,2 vergelijke.

Bezien wij ten slotte de *losse reepjes*, dan vinden wij ook hier een combinatie van parelrandjes en puntcirkels, voor welke versiering wij eveneens naar hun afbeelding 63,3 kunnen verwijzen.

Zooals wij reeds opmerkten, zijn op nekbeschermer en helmrand inscripties aangebracht, die wij thans nader willen bezien, en wel het eerst die van den nekbeschermer, waarvan wij een afzonderlijke photo geven onder Afb. 63,6. Zij is, naar Prof. O. Bohn, uit Berlijn, zoo welwillend was mij mee te deelen, als volgt te lezen: ? TIT VA_ON VRS LIbRI - £ en wat het laatste gedeelte betreft aldus uit te schrijven: *libram* (LIbR) *unam* (I)

141

unciam (-) *semiunciam* (£), d.i. 1 Pond, 1 uncia, ½ uncia. Wij vinden hier dus een gewichtsopgave vermeld, die, in grammen herleid, blijkt overeen te komen met het tegenwoordig gewicht van den helm (een 2de wangklep meegerekend). Vergelijken wij n.l. de volgende berekeningen:

1 Pond = 327.45 gr.	Helmkap = 282.50 gr.
1 Uncia = 27.288 "	Nekbeschermer = 32.50 "
½ " = 13.644 "	2 Wangkleppen
	(2 x 17.10) = 34,20 "
	2 Smalle bandjes = 10.70 "

 368.382 gr.

 359.90 gr.

127935 dan zien wij, hoe beide uitkomsten met elkaar kloppen. Een
volkomen overeenstemming immers valt bij dergelijke herlei-
dingen nooit te bereiken, daar het vast staat dat de Romeinsche
gewichten zeer varieeren (vgl. C. I. L. XIII, 3, 10030, 26, 29,
37 en 42). Waar nu onze helm en bijbehorende stukken
alleen de overtrek op de oorspronkelijk ijzeren kap zijn ge-
127940 weest, geeft dus het gewicht in kwestie slechts dat van den
verguld zilveren overtrek van den helm aan, zooals ook
naar vele andere vondsten te oordeelen, slechts voorwerpen van
edel metaal met gewichtsopgaven werden voorzien.

Wat het eerste gedeelte der inscriptie ? TIT VA_ON VRS
127945 betreft, het eerste teeken is niet te ontcijferen, waardoor
jammer genoeg de interpretatie van dit inscriptiegedeelte niet
met zekerheid is vast te stellen. Geven in 't algemeen de
inscripties op helmen den naam aan van den drager met
vermelding van de centuria, waarin hij diende 1), toch lijkt
127950 ons, in verband met de gewichtsopgave, voor onzen helm

1) Zoo 2 bronzen helmen in het Leidsch Museum, Ned. Cat. E III, b, 141 en
142. Zie Lindenschmit Altert. V, p. 186, e.v., waar meerdere worden genoemd. Naar
127955 analogie hiervan zond mij prof. Bohn, behalve een tweede lezing met den naam
van den drager alléén: (M?) Tit(ii) Val(l)on(is) Urs(i), de volgende met vermelding
van de afdeeling, waarin hij diende, in dit geval van de turma of de decuria,
daar zooals wij straks zullen zien, het hier een ruitershelm geldt: (ex turma? decuria?)
Tit(i), Val(l)on(ii) Urs(i).

127960 142
een dergelijke interpretatie minder waarschijnlijk. Waar
wij n.l. zagen, dat het gewicht gold dat van den overtrek,
kan moeilijk in het voorafgaande ? TIT VA_ON VRS
de naam van den drager schuilen. Het gewicht immers van
127965 den overtrek kon deze nooit vaststellen, zonder den overtrek
van de ijzeren binnenkap af te nemen, wat intusschen een
onmogelijkheid was, waar wij boven gezien hebben hoe overtrek
en ijzeren binnenkap door een dichte rij van nageltjes aan
elkaar geklonken waren. Dat hij het gewicht van den fabrikant
127970 zou hebben gehoord is evenmin aan te nemen. Wij moeten er
dus wel toe besluiten dat het gewicht in de fabriek zelve op
den helm is aangegeven. Wil men nu de bovenbedoelde
algemeene interpretatie vasthouden, dan zou dus de naam
van den drager eerst later op de nekklep zijn aangebracht,
127975 wat intusschen het schrift zelf, dat van eenzelfde hand blijkt
te zijn, uitsluit. Waar we echter later zullen zien dat onze
helm in een der rijkswapenfabrieken van het Romeinsche rijk
vervaardigd moet zijn, lijkt ons het meest aannemelijk dat wij
op onzen helm den persoon vermeld vinden, die belast was met
127980 de helmen te wegen en te verifieeren. Dat toch de Staat in
zijn fabrieken verificateurs had om deze helmen van edel
metaal te waarmerken, is geenszins onwaarschijnlijk, waar
blijkens de vondsten ook op gewichten een ex auctoritate
van den magistraat gestempeld werd (vgl. C. I. L. XIII, 3
127985 10030, 10). Zoo zouden wij dan in onze inscriptie willen lezen
den verificateur Tit(us) Valon(ius) Urs(us) en mag - evenals
op de bovengenoemde bronzen helmen het woord centuria zijn

bijzondere afkortingsteekens had 10 - het onleesbare eerste teeken een afkorting voor een *examinavit* of iets dergelijks zijn.

127990 Als tweede inscriptie op onzen helm zagen wij rechts op den helmrand die van Stablesia VI. Zij duidt een afdeeling aan der equites Stablesiani, een ruitercorps, dat zooals uit de Notitia Dignitatum blijkt, 2), tijdens het latere romeinsche keizerrijk in

127995 1) Zie C. I. L. XIII, 3, 10027, 214 e.v.

2) Zie Ed. Seeck, Index s.v. Stablesiani.

143

128000 verscheidene provincie's verspreid lag. Verder is het ons bekend uit twee inscripties, te Brescia 1) en Sitifi (Africa) 2) gevonden, waarvan op de eerste sprake is van een *vexillatio* van dit corps.

128005 Is, zooals Prof. Bohn mij doet opmerken, naar analogie hiervan, alsmede door het feit, dat het woord *vexillatio* reeds op het einde der 3de eeuw een ruiter-afdeeling beteekent 3), onze inscriptie aldus aan te vullen: (*Vexillatio*) Stablesi(na) VI, des te meer zijn wij daartoe geneigd, waar in de door ons ook genoemde Not. Dign. dit ruitercorps vermeld wordt onder de *vexillationes comitatenses* van Africa en Brittanië. 4)

128010 Zoo behoorde dus de drager van onzen helm tot de 6de afdeeling der equites Stablesiani en draagt onze helm iets bij tot de geschiedenis van dit corps, dat thans blijkt zich ook in onze streken eenmaal te hebben opgehouden.

[vergelijking]

128015 II.

128020 Met onzen helm laat zich een rij van helmen vergelijken, wier nauwe verwantschap in constructie en versieringstechniek de moeite waard is hier nader te bezien. Het zijn een helm uit Kertsch (Z.-Rusland) afkomstig, en aanwezig in de Ermitage te St. Petersburg, twee helmen van Pfersee bij Augsburg, waarvan de een te Augsburg zelf, de andere te Neurenberg in het Germaansche Nationaal-museum bewaard wordt, verder een helm te Worms en een in den Donau bij Budapest gevonden, 128025 welke successievelijk daar ter plaatse in het Paulus-museum en het Budapester National-museum zijn ondergebracht.

128030 Allen van ijzer, hebben zij, evenals de onze, een verguld-zilveren of enkel zilveren overtrek met een zelfde reliefversiering van kruisjes, puntcirkeltjes, parelrandjes en dgl. In vorm en onderdeelen van de helmkap komt onze helm het meest

1) C. I. L. V, 4376.

2) C. I. L. VIII, 8490.

3) Zie Marquardt, Röm. Staatsverwaltung II², 467.

128035 4) Not. Dign. Occ. VI, 64, 82, VII, 180, 182, 203.

144

128040 overeen met dien van St. Petersburg (zie Afb. 64,2), waarvan een korte beschrijving te vinden is bij Reinach, Ant. du Bosphore Cimmérien (p. 77/78 n°. 5 en 6), die verklaart haar onveranderd te hebben overgenomen uit het groote werk Ant. du Bosph. Cimm. conservées au musée impérial de l'Ermitage. Volgens deze beschrijving bestaat de met verguld zilver overtrokken helmkap uit 2 x 3 losse stukken en een breeden onderrand,

128045 terwijl over de koplengte een met beugeltjes voorziene helmkam loopt. Evenals bij onzen helm zijn ook hier de losse stukken der helmkap door nageltjes aan elkaar verbonden. Hoe intuschen de helmkap en helmkam aan elkaar zijn vastgehecht, vermeldt de beschrijving niet.

128050 Beter zijn wij in dit opzicht ingelicht bij de helmen van Augsburg (Afb. 64,6) en Worms (Afb. 64,5), waarvan wij een uitvoerige beschrijving vinden bij Lindenschmit in zijn *Altertümer* Bd. V, p. 222-226, terwijl de helm van Worms bovendien besproken wordt door Reinecke in het *Korrespondenzblatt der Westd. Zeitschr.* XXV, p. 65 e. v. Deze helmen bestaan uit twee kaphelften en een kam, waaraan de kaphelften elk voor zich door nageltjes verbonden zijn. Van binnen gezien liggen de kaphelften niet over elkaar, noch raken zij elkander, doch laten een ruimte open, precies op dezelfde wijze dus als bij

128060 onzen helm. Van de nageltjes aan den helm van Augsburg zegt Lindenschmit verder, dat zij niet zijn geklonken, doch zijn omgeslagen. Wij zien hier dus dezelfde bewerking als bij onzen helm met de nageltjes aan den neusbeschermer het geval was. Ook de overtrek is een van verguld zilver, en vormt, evenals

128065 bij den onze, een afzonderlijke buitenbekleding. Hij is met dezelfde nageltjes aan de binnenkap verbonden, waarmee haar beide helften aan den kam werden vastgehecht, terwijl, naar Lindenschmit vermoedt, voor het overige een of ander plakmiddel de verdere stevigheid mag gegeven hebben, een opmerking, die misschien ook op onzen helm toepasselijk kan zijn.

128070 De helm van Worms heeft eveneens een vergulden overtrek, die echter slechts op enkele plaatsen nog duidelijk zichtbaar

145

128075 is, voornamelijk op den nekbeschermer, op welk stuk van den helm wij straks terugkomen.

De Budapester helm (zie Afb. 64,7), uitgegeven door Hampel in *Arch. Ertésítő* 1900, p. 361 e. v. en in het *Zeitschrift für Hist. Waffenkunde*, Bd. II, Heft 6, p. 192 e. v., heeft een op het ijzer vast zittende verguld-zilveren overtrek, die behalve met reliefversiering, met glaspasten rijkelijk is versierd. Die niet hooge helmkam is daarentegen met een afzonderlijken zilveren overtrek bedekt, die men met nageltjes daaraan bevestigde. Van onder is de helmkap afgezet door een

128085 breeden rand, die, evenals de onze, boven de wenkbrauwen boogvormig is uitgesneden, en dus ook een neusbeschermer heeft gehad, al is die niet bewaard gebleven. Beter is het hierin gesteld met den Neurenberger helm, waarvan nog een stuk van zijn neusbeschermer gevonden werd. Zooals Afb. 64,3.

128090 te zien geeft, stemt dit fragment volkomen met den onze overeen. Overigens is deze helm (Afb. 64,4) van een zelfde constructie als die van Augsburg, behalve dat zijn zilveren overtrek niet verguld is (Zie Lindenschmit en Hampel, l.l.).

Vergeleken wij tot nog toe slechts de kap der verschillende

128095 helmen, ook in de overige helmstukken, met name de wangkleppen en nekbeschermer, vinden wij groote overeenkomst met die van onzen helm. Onze eigenaardig gevormde wangkleppen vinden wij in meer of mindere afwijking terug bij den Budapester helm, bij de helmen van Pfersee (zie het Neurenberger stuk, Afb.

64,3) en bij dien van St. Petersburg, welke laatste met schar-
nieren aan den helmrand verbonden waren, zooals aan den
helmrand nog duidelijk is te zien (zie Afb. 64,1 en 2). Een
geheel ander soort wangkleppen, n.l. van langen ovalen vorm,
heeft de helm van Worms, die daartegen een nekbeschermer
bezit van bijna geheel dezelfde constructie als die aan onzen
helm. Afb. 64,5 doet ons zien, hoe hij door middel van leeren
riempjes, die door twee gleufjes werden gestoken, aan den helmrand
werd vastgemaakt. Het eenige verschil met onzen helm is, dat tot
bevestiging der riempjes op den nekbeschermer zelfs geen gespen

10

146

dienden, doch enkel nageltjes, die op de photo nog even zichtbaar
zijn. Een dergelijke losse nekbeschermer heeft, naar Lindenschmit
vermoedt, ook de helm van Augsburg gehad. daarop zouden de
resten van een beslag aan de achterzijde van den helm wijzen,
dat z. i. tot bevestiging van een lossen nekbeschermer kan
hebben gediend. Onmogelijk is deze veronderstelling niet, waar
wij tusschen den Augsburgschen helm en den onze reeds zoo-
veel gewichtige punten van overeenkomst hebben gezien.

Wat de versieringen der helmen betreft, wij merkten reeds
op, dat op allen dezelfde soort reliefversieringen voorkomt van
geperste kruisjes, parelrandjes, puntcirkeltje en dergelijke. Daar-
mede zijn voornamelijk de randen der verschillende helmdeelen
versierd, zooals ook bij onzen helm het geval is. Hoe deze
versieringen bij verschil in details, toch een en hetzelfde karakter
dragen, kan men zien op Afb. 64,8, waar sub 1 is afgebeeld het
versieringsmotief van onzen helm, sub 2 dat van den Augs-
burgschen helm, sub 3 van dien te Neurenberg, sub 4, 5 en 6
successivelijk dat van de helmen van Worms, Kertsch en Buda-
pest. Als no. 7 is daaraan toegevoegd de versiering van een
helm uit Thorsbjerg 1), wiens constructie wel is waar een
geheel andere is, doch juist om zijn versieringstechniek door
Lindenschmit e. a. is aangevoerd om onze helmen te kunnen
dateeren.

Voor de dateering n.l. van onze helmtypen is men voor-
namelijk uitgegaan van de techniek en wijze van versiering,
die op verschillende vondsten in N. en O.-Duitschland, als in
de Donaulanden terugkeert. Daartoe behoort o.a. de genoemde
helm van Thorsbjerg, wiens kap gevormd wordt door kruis-
gewijze over elkaar loopende verguld-zilveren banden, die een
versiering hebben als sub 7 afgebeeld, en van techniek
als die op onze helmen. Op grond van andere bijvondsten werd
deze helm gedateerd op 4e of 5e eeuw na Chr. 2) en worden

1) Engelhardt: Thorsbjerg Mosefund, p. 23, Pl. 5.

2) Sophus Müller: Nordische Altertumskunde, Bd. II, p. 147.

147

in het algemeen onze helmen beschouwd als laat-Romeinsch
werk uit den tijd kort voor het begin der groote volksverhui-
zingen. Des te belangrijker is voor hun chronologie de munten,
die bij onzen helm gevonden zijn. Waar de vondst in de Peel
geen grafvondst is, doch de drager van den helm op een of
andere wijze hier is verongelukt, vormen de munten het gang-

bare geld, dat hij "op zak" had, en zijn dus een zeker dateerings-
middel voor onzen helm. Allen van Constantijn, plaatsen zij ons
dus onzen helm in de 4e eeuw, om welken tijd dus ook de
door ons vergeleken helmen en verder boven aangeduide vond-
sten te groepeeren zijn.

Hoe onze helmen onderling in tijdsorde tot elkaar staan is
moeilijk vast te stellen. Allermint is daartoe de typologie aan
te wenden, zooals wel is geschied. Immers hoe zeer ook ver-
schillende in vorm, zagen wij tusschen onzen helm en die van
Pfersee en Worms een zoo groote overeenstemming in con-
structie, dat zij, in weerwil van hun afwijkende vormen, haast
uit eenzelfde fabriek moeten zijn voortgekomen.

De vraag, welke fabriek dat moet geweest zijn, kunnen wij
in zóóverre beantwoorden, dat onze soort helmen vervaardigd
zijn in een der rijkswapenfabrieken van het Romeinsche
keizerrijk, zooals er waren in Constantinopel en Antiochië.
Reeds lang heeft men n.l. met onze helmen in verband ge-
bracht een plaats in den Codex Theodosianus (X, 22, 1)  waar
sprake is van metaalarbeiders in 's rijks wapenfabrieken, speciaal
belast met helmen te overtrekken met zilver en te vergulden
(tegere argento et deaurare). Barbaricarri 1) worden zij genoemd,
een benaming, die er op wijst hoe deze arbeiders van vreemde
herkomst waren.

Wordt hiermede de versieringstechniek onzer helmen van zelf
als een niet-Romeinsche gekenmerkt, ook het type onzer hel-
men is daarmee in overeenstemming. Hebben zij ook al hun

1) Zie ook Not. Dign. Or. XI, 45, en verder Seeck, Pauly-Wissowa Real-Encycl.
s. v. barbaricarii.

148

beweegbare wangkleppen met Romeinsche helmen gemeen,
onromeinsch is de neusbeschermer en wenkbrauwen in den
helmrand, welke aan Grieksche, met name Korinthische helmen
herinneren, terwijl ook de losse nekbeschermer op vreemde
invloeden schijnt te wijzen, welke met de barbaricarii van zelf
de Romeinsche wapenfabrieken moesten binnenkomen.

[bijvondsten]

III.

Onder de bijvondsten zijn de 37 bronzen munten het belang-
rijkste. Hoewel het meerendeel sterk is afgesleten en gedeeltelijk
afgeknapt, kenmerken zij zich, hetzij door haar voor- hetzij door
haar keerzijde, allen als munten van Constantijn. Voor zover haar
exergues te lezen zijn, is zeker 1 exemplaar geslagen te
Siscia (off. B), 3 te Rome (off. P en T) en 9 te Trier (off. S),
terwijl de overige door een volkomen zelfden muntslag van voor-
zijde of keerzijde onder die van Rome en Trier te rangschikken
zijn. Deze beide laatste muntsoorten zijn, voor zoover is na te
gaan, elk in één type vertegenwoordigd, waarvan wij met
dat van Siscia de beschrijving hier laten volgen, om overigens
te verwijzen naar J. Maurice, Numismatique Constatinienne,
Tom. i, p. 208 e.v., p. 423 e.v. en Num. Chron. 1900, p. 322.

Siscia:

Vz. IMP CONSTANTINUS P F AVG

Gedrapeerd borstbeeld van Constantijn naar rechts, met lauwerkrans om het hoofd.

128215 Kz. IOVI CONSERVATORI

Jupiter steunend op een scepter, dien hij vasthoudt met de opgeheven rechter hand. Over den schouder een afvallend kleed, overigens naakt. Zich wendend naar links, draagt hij in de linkerhand eene Victoria op een globe. Links aan zijn voeten een adelaar met krans in den bek. rechts in het veld B.

Ex. 'SIS'

149

128225 Rome:

Vz. IMP CONSTATINUS P F AVG

Borstbeeld van Constantijn n.r. gedrapeerd en geharnast. Om het hoofd een lauwerkrans.

Kz. SOLI INVICTO COMITI

128230 Sol geheel naakt, met stralenkrans om het hoofd. Wendt zich naar links met opgeheven linkerarm. Over den rechter arm hangt een kleed, op de hand houdt hij een globe.

Ex. RP of RT

128235 Trier:

Vz. IMP CONSTANTINUS MAX AVG

Geharnast borstbeeld van Constantijn n.r., met helm en lauwerkrans.

128240 Kz. VICTORIAE LAETAE PRINC PERP

Twee Victoria's, tusschen welke een altaar, met ster aan de voorzijde. Op het altaar houden zij een schild vast, waarop de linksche Victoria met een stylus schrijft: VOT PR

128245 Ex. STR

Van enkele exemplaren geven wij een afbeelding op Pl. 65 Onder No. 1 is de munt van Siscia afgebeeld, onder 2 een van die te Rome geslagen, onder 3 en 4 de beste voor- en
128250 keerzijde der Triersche exemplaren. Dezelfde plaat geeft verder de afbeeldingen der overige bijvondsten in zilver of brons. Van brons zijn het klokje, de spoor en fibula. De laatste is van het z.gen. handboogtype en komt in dateering met de munten overeen. De afbeeldingen dezer voorwerpen spreken
128255 overigens genoeg voor zich zelf, om ze nog nader te behoeven te beschrijven. Het zelfde geldt van het zilveren beslag, dat tot versiering diende van de tot de vondsten behorende leeren scheede. Het beslag is met 8 gaatjes voorzien, waardoor het op het leer moet zijn vastgenaaid. De scheede is uit één stuk
128260 gesneden en aan elkaar genaaid.

150

Van de overige leervondsten laat zich omtrent de groote stukken weinig naders zeggen, evenmin als wij dat kunnen
128265 van de losse reepjes wollen stof. Vermoedelijk hebben wij bij de groote stukken leer de resten van een schabrak. Daar-

onder is n.l. een vierkant stuk leer met een omzooming, waarin gaatjes zijn geboord, zoodat een tweede stuk daaraan schijnt vastgenaaid te zijn geweest. In het midden is een gat gesneden, waardoor de riem van den stijgbeugel of de buik-riem getrokken kan zijn.

Belangrijker is wat aan leeren schoenen werd gevonden. Het zijn een linker-exemplaar (Afb. 65a), waarbij de resten van den bijbehorenden rechterschoen, verder een rechter buiten (b) en een rechter binnen-schoen (c), die niet in elkaar passen, dus tot twee afzonderlijke exemplaren hebben behoord.

De sub a genoemde is door zijn betrekkelijke gaafheid het belangrijkste. Hij bestaat uit een buiten- en binnen-schoen, met een extra binnenzool en blijkbaar twee buitenzolen, die succes- sive-lijk aan den binnen- en buiten-schoen met een smallen leeren draad zijn vastgenaaid. De schoen, 26 c.M. lang bij een grootste breedte van 11 c.M., is uit één stuk leer gesneden, naar een patroon, zooals Afb. 66,1 te zien geeft, waar de schoen, van de buitenzool gezien, uitgeslagen is afgebeeld. Slaat men het patroon naar buiten om dicht, dan loopen dus de punten van aansluiting langs den rand van den hiel (a) en de Achilles-pees (b), van voren langs langs de teenen (c) en over den neus van den voet (d). Dáár is het leder dus telkens aan elkaar ge- hecht, en wel, evenals bij de zolen, met een leeren draad ge- naaid. De wreef heeft op het midden, als mede links en rechts een reeks van insnijdingen, terwijl haar rand gekarteld is uit- gesneden. Op het midden van de wreef is bovendien een oogje (e) in het leer aanwezig, dat blijkbaar verband hield met het vastrijgen van den schoen. (Vgl. Jacobi, Saalburg, Taf. 80,7). Een gekartelden rand heeft ook het hielstuk, dat verder een ingeperste versiering heeft, waarvoor wij naar Afb. 65a en 66, 1 verwijzen.

151

Ook de rechter buitenschoen, dien wij sub b noemden, heeft aan de wreef een fijn gekartelden rand en een versiering, die Afb. 66, 2 te zien geeft. Van een lengte van 27 c.M., en 9 c.M. op zijn breedst, is ook hij uit één stuk leer gesneden. Het- zelfde geldt van den binnenschoen, sub c genoemd, die een maat heeft van 27.50 bij 8.50 c.M. Hun uitgeslagen patronen vinden wij op Afb. 66, 2-3. Daarop is te zien, hoe zij in het voorstuk met elkaar overeenstemmen, aan den hiel daarentegen anders zijn gesneden. Het hielpatroon van den binnenschoen komt, zooals we zien, overeen met dat van den onder sub a beschreven schoen. Hetzelfde vinden wij terug bij een schoen op Afb. 66, 4, die ook overigens in veel op onze eerste gelijkst: het is een schoen uit het Thorsbjerg-er Moor (Engelhardt, op. cit. p. 18, Pl. 3), waaruit wij ons herinneren dat ook de helm afkomstig was, dien wij met den onzen vergeleken.

Leiden.

Dr. M. A. EVELEIN.

[overgenomen door Paul Theelen te Eindhoven, 27-30 oktober 2010, onder het motto: **"Wij honden vangen de hazen, zei het keukenrekeltje."** Foto's toegevoegd op 1 december 2010. In het origineel werden de afbeeldingen separaat opgenomen. Versie 15 december 2010.]

Septimius Odaenathus

(Palmyrene: ['Dynt (Odainat)]; Arabic: أَدِينَة [Uḏaina]; circa 220–267), was the founder king (Mlk) of the Palmyrene Kingdom who ruled from Palmyra, Syria. He lifted the status of his city from that of a regional center subordinate to Rome to the supreme power in the east. Odaenathus was born into an aristocratic Palmyrene family that had received Roman citizenship in the 190s under the Severan dynasty. He was the son of Hairan, the descendant of Nasor. The circumstances surrounding his rise are ambiguous; he became the lord (ras) of the city, a position created for him, as early as the 240s and by 258, he was styled a consularis, indicating a high status in the Roman Empire.

The defeat and captivity of Emperor Valerian at the hands of the Sassanian emperor Shapur I in 260 left the eastern Roman provinces largely at the mercy of the Persians. Odaenathus remained on the side of Rome; assuming the title of king, he led the Palmyrene army, fell upon the Persians before they could cross the Euphrates to the eastern bank, and inflicted upon them a considerable defeat. He took the side of Emperor Gallienus, the son and successor of Valerian, who was facing the attempted usurpation of Fulvius Macrianus. The rebel declared his sons emperors, leaving one in Syria and taking the other with him to Europe. Odaenathus attacked the remaining usurper and quelled the rebellion. He was rewarded with many exceptional titles by the Emperor, who formalized his self-established position in the East. In reality, the Emperor may have done little but accept the declared nominal loyalty of Odaenathus.

In a series of rapid and successful campaigns starting in 262, Odaenathus crossed the Euphrates and recovered Carrhae and Nisibis. He then took the offensive into the heartland of Persia, and arrived at the walls of its capital, Ctesiphon. The city withstood the short siege but Odaenathus reclaimed the entirety of the Roman lands occupied by the Persians since the beginning of their invasions in 252. Odaenathus celebrated his victories and declared himself "King of Kings", crowning his son Herodianus as co-king. By 263, Odaenathus was in effective control of the Levant, Roman Mesopotamia and Anatolia's eastern region.

Odaenathus observed all due formalities towards the Emperor, but in practice ruled as an independent monarch. In 266, he launched a second invasion of Persia but had to abandon the campaign and head north to Bithynia to repel the attacks of Germanic raiders besieging the city of Heraclea Pontica. He was assassinated in 267 during or immediately after the Anatolian campaign, together with Herodianus. The identities of the perpetrator or the instigator are unknown and many stories, accusations and speculations exist in ancient sources. He was succeeded by his son Vaballathus under the regency of his widow Zenobia, who used the power established by Odaenathus to forge the Palmyrene Empire in 270.

Name, family and appearance

"Odaenathus" is the Latin transliteration of the king's name; he was born Septimius Odainat in c. 220. His name is written in Palmyrene as Sptmyws 'Dynt. "Sptmyws" (Septimius), which means "born in September", was Odaenathus' family gentilicium (Roman surname), adopted as an expression of loyalty to the Roman Severan dynasty and the emperor Septimius Severus who had granted the family Roman citizenship in the late second century. 'Dynt (Odainat) is the Palmyrene diminutive for ear, related to Uḏaina in Arabic and 'Ōden in Aramaic. Odaenathus' genealogy is known from a stone block in Palmyra with a sepulchral inscription that mentions the building of a tomb and records the genealogy of the builder: Odaenathus, son of Hairan, son of Wahb Allat, son of Nasor. In Rabbinic sources, Odaenathus is named "Papa ben Nasor" (Papa son of Nasor); the meaning of the name "Papa" and how Odaenathus earned it is unclear.

The King appears to be of mixed Arab and Aramean descent: his name, the name of his father, Hairan, and that of his grandfather, Wahb-Allat, are Arabic; while Nasor, his great-grandfather, has an Aramaic name. Nasor might not have been the great-grandfather of Odaenathus, but a more distant ancestor; the archaeologist Frank Edward Brown considered Nasor to be Odaenathus' great-great or great-great-great grandfather. This has led some scholars, such as Lisbeth Soss Fried and Javier Teixidor, to consider the origin of the family to be Aramean. Byzantine historians of the sixth century, such as Procopius, referred to him as "king of the Saracens", meaning of the Arabs. The origin of Odaenathus' name does not indicate that he identified as an Arab, or that his rule had an Arab character. In practice, the

citizenry of Palmyra were the result of Arab and Aramaean tribes merging into a unity with a corresponding consciousness; they thought and acted as Palmyrenes. The fifth-century historian Zosimus asserted that Odaenathus descended from "illustrious forebears", but the position of the family in Palmyra is debated; it was probably part of the wealthy mercantile class. Alternatively, the family may have belonged to the tribal leadership which amassed a fortune as landowners and patrons of the Palmyrene caravans. The historians Franz Altheim and Ruth Stiehl suggested that Odaenathus was part of a new elite of Bedouins driven from their home east of the Euphrates by the aggressive Sassanian dynasty after 220. However, it is certain that Odaenathus came from a family which had belonged to the upper class of the city for several generations; in Dura-Europos, a relief dated to 159/158 (470 SE [Seleucid year]) was commissioned by Hairan son of Maliko son of Nasor. This Hairan might have been the head of the Palmyrene trade colony in Dura-Europos and probably belonged to the same family as Odaenathus. According to Brown, it is plausible, based on the occurrence of the name Nasor in both Dura-Europos and Palmyra (where it was a rare name), that Odaenathus and Hairan son of Maliko belonged to the same family.

No definite images of Odaenathus have been discovered, hence, there is no information about his appearance; all sculptures identified as Odaenathus lack any inscriptions to confirm whom they represent. Two sculpted heads from Palmyra, one preserved in the Ny Carlsberg Glyptotek museum and the other in the Archaeological Museum in Istanbul, were identified by the archaeologist Harald Ingholt as representing Odaenathus based on their monumentality and regal style. The academic consensus does not support Ingholt's view, and the heads he ascribed to the king can be dated to the end of the second century. More likely, two marble heads, one depicting a man wearing a royal tiara, the crown of Palmyra, and the other depicting a man in a royal Hellenistic diadem, are depictions of the king. In addition, a Palmyrene clay tessera, depicting a bearded man wearing a diadem, could be a portrait of the king.

Odaenathus I

Traditional scholarship, based on the sepulchral inscription from Odaenathus' tomb, believed the builder to be an ancestor of the king and he was given the designation "Odaenathus I". The name of King Odaenathus' father is Hairan as attested in many inscriptions. In an inscription dated to 251, the name of the ras (lord) of Palmyra, Hairan, son of Odaenathus, is written, and he was thought to be the son of Odaenathus I. Prior to the 1980s, the earliest known inscription attesting King Odaenathus was dated to 257, leading traditional scholarship to believe that Hairan, ras of Palmyra, was the father of the king and that Odaenathus I was his grandfather. However, an inscription published in 1985 by the archaeologist Michael Gawlikowski and dated to 252 mentions King Odaenathus as a ras and records the same genealogy found in the sepulchral inscription, confirming the name of King Odaenathus' grandfather as Wahb Allat; thus, he cannot be a son of Hairan son of Odaenathus (I). Therefore, it is certain that King Odaenathus was the builder of the tomb, ruling out the existence of "Odaenathus I". The ras Hairan mentioned in the 251 inscription is identical with Odaenathus' elder son and co-ruler, Prince Hairan I.

Rise

Palmyra was an autonomous city within the Roman Empire, subordinate to Rome and part of the province of Syria Phoenice. Odaenathus descended from an aristocratic family, albeit not a royal one as the city was ruled by a council and had no tradition of hereditary monarchy. For most of its existence, the Palmyrene army was decentralized under the command of several generals, but the rise of the Sasanian Empire in 224, and its incursions, which affected Palmyrene trade, combined with the weakness of the Roman Empire, probably prompted the Palmyrene council to elect a lord for the city in order for him to lead a strengthened army.

Ras of Palmyra

The Roman emperor, Gordian III, died in 244 during a campaign against Persia and this might have been the event which led to the election of a lord for Palmyra to defend it: Odaenathus, whose elevation, according to the historian Udo Hartmann, can be explained by Odaenathus probably being a successful military or caravan commander, and his descent from one of the most influential families in the city. Odaenathus' title as lord was ras in Palmyrene and exarchos in Greek as revealed by bilingual inscriptions from Palmyra. The ras title enabled the bearer to effectively deal with the Sassanid threat, in that it probably vested in him supreme civil and military authority; an undated inscription refers to Odaenathus

as a ras and records the gift of a throne to him by a Palmyrene citizen named "Ogeilu son of Maqqai Haddudan Hadda", which confirms the supreme character of Odaenathus' title. The office was created for Odaenathus, and was not a usual title in the Roman Empire, and not a part of Palmyrene government traditions.

Hairan I was apparently elevated to co-lordship by his father, as an inscription from 251 testifies. As early as the 240s, Odaenathus bolstered the Palmyrene army, recruiting desert nomads and increasing the number of the Palmyrene heavy cavalry (clibanarii). In 252, the Persian emperor, Shapur I, started a full-scale invasion of the Roman provinces in the east. During the second campaign of the invasion, Shapur I conquered Antioch on the Orontes, the traditional capital of Syria, and headed south, where his advance was checked in 253 by a noble from Emesa, Uranius Antoninus. The events of 253 were mentioned in the works of the sixth-century historian John Malalas who also mentioned a leader by the name "Enathus" inflicting a defeat upon the retreating Shapur I near the Euphrates.

Reign

Faced with Shapur I's third campaign, the Roman emperor Valerian marched against the Persian monarch but was defeated near Edessa in late spring 260 and taken prisoner. The Persian emperor then ravaged Cappadocia and Cilicia, and claimed to have captured Antioch on the Orontes. Taking advantage of the situation, Fulvius Macrianus, the commander of the imperial treasury, declared his sons Quietus and Macrianus Minor as joint emperors in August 260, in opposition to Valerian's son Gallienus. Fulvius Macrianus took Antioch on the Orontes as his center and organized the resistance against Shapur I; he dispatched Balista, his praetorian prefect, to Anatolia. Shapur I was defeated in the region of Sebaste at Pompeiopolis, prompting the Persians to evacuate Cilicia while Balista returned to Antioch on the Orontes. Balista's victory was only partial: Shapur I withdrew east of Cilicia, which Persian units continued to occupy. A Persian force took advantage of Balista's return to Syria and headed further west into Anatolia. According to the Augustan History, Odaenathus was declared king of Palmyra as soon as the news of the Roman defeat at Edessa reached the city. It is not known if Odaenathus contacted Fulvius Macrianus and there is no evidence that he took orders from him.

Persian war of 260 and pacifying Syria

Odaenathus assembled the Palmyrene army and Syrian peasants, then marched north to meet the Persian emperor, who was returning to Persia. The Palmyrene monarch fell upon the retreating Persian army between Samosata and Zeugma, west of the Euphrates, in late summer 260. He defeated the Persians, expelling Shapur I from the province of Syria. In early 261, Fulvius Macrianus headed to Europe accompanied by Macrianus Minor, leaving Quietus and Balista in Emesa. Odaenathus' whereabouts during this episode are not clear; he could have distributed the army in garrisons along the frontier or might have brought it back to his capital. The Palmyrene monarch seems to have waited until the situation clarified, declaring loyalty to neither Fulvius Macrianus nor Gallienus. In the spring of 261, Fulvius Macrianus arrived in the Balkans but was defeated and killed along with Macrianus Minor; Odaenathus, when it became clear that Gallienus would eventually win, sided with the Emperor and marched on Emesa, where Quietus and Balista were staying. The Emesans killed Quietus as Odaenathus approached the city, while Balista was captured and executed by the King in autumn 261.

Ruler of the East

The elimination of the usurpers left Odaenathus as the most powerful leader in the Roman East. He was granted many titles by the Emperor but those honors are debated among scholars:

Dux Romanorum (commander of the Romans) was probably given to Odaenathus to recognize his position as the commander in chief of the forces in the east against the Persians; it was inherited by Odaenathus' son and successor Vaballathus. Corrector totius orientis (righter of the entire East): it is generally accepted by modern scholars that he bore this title. A corrector had overall command of Roman armies and authority over provincial governors in his designated region. There are no known attestations of the title during Odaenathus' lifetime. Evidence for the King bearing the title consists of two inscriptions in Palmyrene: one posthumous dedication describing him as MTQNN' of the East (derived from the Aramaic root TQN, meaning to set in order); and the other describing his heir Vaballathus with the same title, albeit using the word PNRTT' instead of MTQNN'.

However, the sort of authority accorded by this position is widely debated. The problem arises from the word MTQNN'; its exact meaning is unclear. The word is translated into Latin as corrector, but "restitutor" is another possible translation; the latter title was an honorary one meant to praise the bearer for driving enemies out of Roman territories. However, the inscription of Vaballathus is clearer, as the word PNRTT' is not a Palmyrene word but a direct Palmyrene translation of the Greek term Epanorthotes, which is usually an equivalent to a corrector.

According to the historian David Potter, Vaballathus inherited his father's exact titles. Hartmann points out that there have been cases where a Greek word was translated directly to Palmyrene and a Palmyrene equivalent was also used to mean the same thing. The dedication to Odaenathus would be the use of a Palmyrene equivalent, while the inscription of Vaballathus would be the direct translation. It cannot be certain that Odaenathus was a corrector.

Imperator totius orientis (commander-in-chief of the entire East): only the Augustan History claims that Odaenathus was given this title; the same source also claims that he was made an Augustus, or co-emperor, following his defeat of the Persians. Both claims are dismissed by scholars. Odaenathus seems to have been acclaimed as emperor by his troops, which was a salutation usually reserved for the Roman emperor; this acclamation might explain the erroneous reports of the Augustan History.

Regardless of his titles, Odaenathus controlled the Roman East with the approval of Gallienus, who could do little but formalize Odaenathus' self-achieved status and settle for his formal loyalty. Odaenathus' authority extended from the Pontic coast in the north to Palestine in the south. This area included the Roman provinces of Syria, Phoenice, Palaestina, Arabia, Anatolia's eastern regions and, following the campaign of 262, Osroene and Mesopotamia.

First Persian campaign 262

Perhaps driven by a desire to take revenge for the destruction of Palmyrene trade centers and to discourage Shapur I from initiating future attacks, Odaenathus launched an offensive against the Persians. The suppression of Fulvius Macrianus' rebellion probably prompted Gallienus to entrust the Palmyrene monarch with the war in Persia and Roman soldiers were in the ranks of Odaenathus' army for this campaign. In the spring of 262, the King marched north into the occupied Roman province of Mesopotamia, driving out the Persian garrisons and recapturing Edessa and Carrhae.

The first onslaught was aimed at Nisibis, which Odaenathus regained but sacked, since the inhabitants had been sympathetic towards the Persian occupation. A little later he destroyed the Jewish city of Nehardea, 45 kilometres west of the Persian capital Ctesiphon, as he considered the Jews of Mesopotamia to be loyal to Shapur I. By late 262 or early 263, Odaenathus stood outside the walls of the Persian capital. The exact route taken by Odaenathus from Palmyra to Ctesiphon remains uncertain; it was probably similar to the route Emperor Julian took in 363 during his campaign against Persia. If he did use this route, Odaenathus would have crossed the Euphrates at Zeugma then moved east to Edessa followed by Carrhae then Nisibis. Here, he would have descended south along the Khabur River to the Euphrates valley and then marched along the river's left bank to Nehardea. He then penetrated the Sassanian province of Asōristān and marched along the royal canal Naarmalcha towards the Tigris, where the Persian capital stood.

Once at Ctesiphon, Odaenathus immediately began a siege of the well-fortified winter residence of the Persian kings; severe damage was inflicted upon the surrounding areas during several battles with Persian troops. The city held out and the logistical problems of fighting in enemy territory probably prompted the Palmyrenes to lift the siege. Odaenathus headed north along the Euphrates carrying with him numerous prisoners and much booty. The invasion resulted in the full restoration of the Roman lands which had been occupied by Shapur I since the beginning of his invasions in 252: Osroene and Mesopotamia. However, Dura-Europos and other Palmyrene posts south of Circesium, such as Anah, were not rebuilt. Odaenathus sent the captives to Rome, and by the end of 263 Gallienus added Persicus maximus ("the great victor in Persia") to Odaenathus' titles and held a triumph in Rome.

King of Kings of the East

In 263, after his return, Odaenathus assumed the title of King of Kings of the East (Mlk Mlk dy Mdnh), and crowned his son Herodianus (Hairan I) as co-King of Kings. A statue was erected and dedicated for Herodianus to celebrate his coronation by Septimius Worod, the duumviri (magistrate) of Palmyra, and Julius Aurelius, the Queen's procurator (treasurer). The dedication, in Greek, is undated, but Septimius

Worod was a duumviri between 263 and 264. Hence, the coronation took place circa 263. Contemporary evidence for Odaenathus bearing the title of King of Kings is lacking; all firmly dated inscriptions attesting Odaenathus with the title were commissioned after his death, including one that is dated to 271. However, Herodianus died with his father, and since he is directly attested as "King of Kings" during his father's lifetime, it is unimaginable that Odaenathus was simply a king while his son was the King of Kings. An undated inscription, written in Greek and difficult to decipher, found on a stone reused in the Palmyrene Camp of Diocletian, addresses Odaenathus as King of Kings (Rex regum) and was probably set during his reign. According to the dedication, Herodianus was crowned near the Orontes, which indicates a ceremony taking place in Antioch on the Orontes, the metropolis of Syria. The title was a symbol of legitimacy in the East, dating back to the Assyrians, then the Achaemenids, who used it to symbolize their supremacy over all other rulers; it was later adopted by the Parthian monarchs to legitimize their conquests. The first Sassanian monarch, Ardashir I, adopted the title following his victory over the Parthians. Odaenathus' son was crowned with a diadem and a tiara; the choice of Antioch on the Orontes was probably meant to demonstrate that the Palmyrene monarchs were now the successors of the Seleucid and Iranian rulers who had controlled Syria and Mesopotamia in the past.

Assassination

Odaenathus was assassinated, together with Herodianus, in late 267. The date is debated and some scholars propose 266 or 268, but Vaballathus dated the first year of his reign between August 267 and August 268, making late 267 the most probable date. The assassination took place in either Anatolia or Syria. There is no consensus on the manner, perpetrator or the motive behind the act. According to Syncellus, Odaenathus was assassinated near Heraclea Pontica by an assassin also named Odaenathus who was killed by the King's bodyguard. Zosimus states that Odaenathus was killed by conspirators near Emesa at a friend's birthday party without naming the killer. The twelfth-century historian Zonaras attributed the crime to a nephew of Odaenathus but did not give a name. The Anonymus post Dionem also does not name the assassin. The Augustan History claims that a cousin of the King named Maeonius killed him. Theories of instigators and motives
Roman conspiracy: The seventh-century historian John of Antioch accused Gallienus of being behind the assassination. A passage in the work of the Anonymus post Dionem speaks of a certain "Rufinus" who orchestrated the assassination on his own initiative, then explained his actions to the Emperor who condoned them. This account has Rufinus ordering the murder of an older Odaenathus out of fear that he would rebel, and has the younger Odaenathus complaining to the Emperor. Since the older Odaenathus (Odaenathus I) has proven to be a fictional character, the story is ignored by most scholars. However, the younger Odaenathus could be an oblique reference to Vaballathus and Rufinus could be identified with Cocceius Rufinus, the Roman governor of Arabia in 261–262. The evidence for such a Roman conspiracy is weak.

The children of Odaenathus and Zenobia were:

Vaballathus: he is attested on several coins, inscriptions, and in the ancient literature.
Hairan II: his image appears on a seal impression along with his older brother Vaballathus; his identity is much debated. Potter suggested that he is the same as Herodianus, who was crowned in 263, and that the Hairan I mentioned in 251 died before the birth of Hairan II. Andrade suggested the opposite, maintaining that Hairan I, Herodianus and Hairan II are the same.
Herennianus and Timolaus: the two were mentioned in the Augustan History and are not attested in any other source; Herennianus might be a conflation of Hairan and Herodianus while Timolaus is most probably a fabrication, although the historian Dietmar Kienast suggests that he might be Vaballathus.
Possible descendants of Odaenathus living in later centuries are reported: Lucia Septimia Patabiniana Balbilla Tyria Nepotilla Odaenathiana is known through a dedication dating to the late third or early fourth century inscribed on a tombstone erected by a wet nurse to her "sweetest and most loving mistress". The tombstone was found in Rome at the San Callisto in Trastevere. Another possible relative is Eusebius who is mentioned by the fourth century rhetorician Libanius in 391 as a son of one Odaenathus, who was in turn a descendant of the King; the father of Eusebius is mentioned as fighting against the Persians (most probably in the ranks of Emperor

Julian's army). In 393, Libanius mentioned that Eusebius promised him a speech written by Longinus for the King. In the fifth century, the philosopher "Syrian Odaenathus" lived in Athens and was a student of Plutarch of Athens; he might have been a distant descendant of the King.

Burial and succession

Mummification was practiced in Palmyra alongside inhumation and it is a possibility that Zenobia had her husband mummified. The stone block bearing Odaenathus' sepulchral inscription was in the Temple of Bel in the nineteenth century, and it was originally the architrave of the tomb. It had been moved to the temple at some point and so the location of the tomb to which the block belonged is not known. The tomb was probably built early in Odaenathus' career and before his marriage to Zenobia and it is plausible that another, more elaborate, tomb was built after Odaenathus became King of Kings.

Roman law forbade the burial of individuals within a city. This rule was strictly observed in the west, but it was applied more leniently in the eastern parts of the empire. A burial within a city was one of the highest honors an individual other than the Emperor and his family could receive in the Roman Empire. A notable person may be buried in this manner for different reasons, such as his leadership or monetary donations. It meant that the deceased was not sent beyond the walls for fear of miasma (pollution), and that he would be part of the city's future civic life. At the western end of the Great Colonnade at Palmyra, a shrine designated "Funerary Temple no. 86" (also known as the House Tomb) is located. Inside its chamber, steps lead down to a vault crypt which is now lost. This mausoleum might have belonged to the royal family, being the only tomb inside the city's walls. Odaenathus' royal power in itself was sufficient to earn him a burial within the city walls.

The Augustan History claims that Maeonius was proclaimed emperor for a brief period before being killed by soldiers. However, no inscriptions or other evidence exist for Maeonius' reign, the very existence of which is doubtful. The disappearance of Septimius Severus in 267 could be related to the internal coup; he could have been executed by Zenobia if he was involved; or killed by the conspirators if he was loyal to the King. Odaenathus was succeeded by his son, the ten-year-old Vaballathus, under the regency of Zenobia; Hairan II probably died soon after his father, as only Vaballathus succeeded to the throne.

Legacy and reception

Odaenathus was the founder of the Palmyrene royal dynasty. He left Palmyra the premier power in the East, and his actions laid the foundation of Palmyrene strength which culminated in the establishment of the Palmyrene Empire in 270. Hero cults were not common in Palmyra, but the unprecedented position and achievements of Odaenathus might have given rise to such a practice: a mosaic panel excavated in Palmyra depicts a man in Palmyrene military outfit riding a horse and shooting. According to Gianluca Serra, the conservation zoologist based in Palmyra at the time of the panel's discovery, the tigers are *Panthera tigris virgata*, once common in the region of Hyrcania in Iran. Gawlikowski proposed that it is Odaenathus depicted as the archer and the Persians as the tigers in the mosaic; the title of *mrn* (lord) appears on the panel, an honor carried only by Odaenathus and Hairan I. The panel indicates that Odaenathus was probably treated as a divine figure, and may have been worshipped in Palmyra.

Odaenathus' memory as an able king, and loyal Roman, was used by the emperors Claudius II and Aurelian to tarnish Zenobia's reputation by portraying themselves as Odaenathus' avengers against his wife, the usurper who gained the throne through plotting. The King was praised by Libanius; and the fourth-century writer of the Augustan History, while placing Odaenathus among the Thirty Tyrants (probably because he assumed the title of king, in the view of the eighteenth-century historian Edward Gibbon), speaks highly of his role in the Persian War and credits him with saving the empire: "Had not Odaenathus, prince of the Palmyrenes, seized the imperial power after the capture of Valerian when the strength of the Roman state was exhausted, all would have been lost in the East". On the other hand, Odaenathus is viewed negatively in Rabbinic sources. His sack of Nehardea mortified the Jews, and he was cursed by both the Babylonian Jews and the Jews of Palestine. In the Christian version of the Apocalypse of Elijah, probably written in Egypt following the capture of Valerian, Odaenathus is called the king who will rise from the "city of the sun" and will eventually be killed by the Persians; this prophecy is a response to Odaenathus' persecution of the Jews and his destruction of Nahardea. The Jewish Apocalypse of

Elijah identifies Odaenathus as the Antichrist.

Modern scepticism

The successes of Odaenathus are treated sceptically by a number of modern scholars. According to the Augustan History, Odaenathus "captured the king's treasures and he captured, too, what the Parthian monarchs hold dearer than treasures, namely his concubines. For this reason Shapur [I] was now in greater dread of the Roman generals, and out of fear of Ballista and Odaenathus he withdrew more speedily to his kingdom". Sceptical scholars, such as Martin Sprengling, considered such accounts of ancient Roman historians "poor, scanty and confused". However, the coronation dedication of Herodianus' statue, which stood on the Monumental Arch of Palmyra, records his defeat of the Persians, for which he was crowned, thus providing Palmyrene evidence that explicitly mentions the war against Persia; the victory attested is probably related to the first Persian campaign and not the battle of 260. The historian Andreas Alföldi concluded that Odaenathus started his wars with Persia by attacking the retreating Persian army at Edessa in 260. Such an attack is rejected by sceptical scholars; Sprengling noted that no evidence exists for such an engagement. The Iranologist Walter Bruno Henning considered the accounts of Odaenathus' attack in 260 greatly exaggerated. Shapur I mentions that he made the Roman prisoners build him the Band-e Kaisar near Susiana, and built a city for those prisoners, which evolved into the current Gundeshapur; Henning cited those arguments as evidence for Shapur I's success in bringing his army and prisoners back home and Roman exaggeration regarding Odaenathus' successes. Sprengling suggested that Shapur I did not have enough troops to garrison the Roman cities he occupied, and he was old and focused on religion and building; hence, Odaenathus merely retook abandoned cities and marched on Ctesiphon to heal Rome's pride, while being careful not to disturb the Persians and their emperor. Other scholars, such as Jacob Neusner, noted that while the accounts of the 260 engagement might be an exaggeration, Odaenathus did become a real threat to Persia when he regained the cities formerly taken by Shapur I and besieged Ctesiphon. The historian Louis Feldman rejected Henning's proposals; and the historian Trevor Bryce concluded that whatever the nature of Odaenathus' campaigns, they led to the restoration of all Roman territories occupied by Shapur I – Rome was free of Persian threats for several years after Odaenathus' wars.

Shapur II (Middle Persian: 𐭮𐭲𐭮𐭲𐭮𐭲Šābuhr, 309–379)

also known as Shapur the Great, was the tenth King of Kings (Shahanshah) of the Sasanian Empire. He took the title at birth and held it until his death at age 70, making him the longest-reigning monarch in Iranian history. He was the son of Hormizd II (r. 302–309).

His reign saw the military resurgence of the country and the expansion of its territory, which marked the start of the first Sasanian golden era. Thus, along with Shapur I, Kavad I and Khosrow I, he is regarded as one of the most illustrious Sasanian kings. His three direct successors, on the other hand, were less successful. At the age of 16, he launched enormously successful military campaigns against Arab insurrections and tribes.

Shapur II pursued a harsh religious policy. Under his reign, the collection of the Avesta, the sacred texts of Zoroastrianism, was completed, heresy and apostasy were punished, and Christians were persecuted. The latter was a reaction against the Christianization of the Roman Empire by Constantine the Great. Shapur II, like Shapur I, was amicable towards Jews, who lived in relative freedom and gained many advantages in his period (see also: Rava). At the time of Shapur's death, the Sasanian Empire was stronger than ever, with its enemies to the east pacified and Armenia under Sasanian control.

Etymology

Shapur was a popular name in Sasanian Iran, being used by three Sasanian monarchs and other notables of the Sasanian era. Derived from Old Iranian *xšayaθiya.puθra 'son of a king', it must initially have been a title, which became – at least in the late 2nd century AD – a personal name. It appears in the list of Arsacid kings in some Arabic-Persian sources; however, this is anachronistic. Shapur is rendered variously in other languages: Greek Sapur, Sabour and Sapuris; Latin Sapoires and Sapor; Arabic Sābur and Šābur; New Persian Šāpur, Šāhpur, Šāhfur.

Accession

When Hormizd II died in 309, he was succeeded by his son Adur Narseh, who, after a

brief reign which lasted few months, was killed by some of the nobles of the empire. They then blinded Hormizd's second son, and imprisoned the third (Hormizd, who afterwards escaped to the Roman Empire). The throne was reserved for another one of Hormizd II's children, Shapur II; some sources say that Shapur was born forty days after his father's death while others say that he was infant at the time. A legend exists that Shapur was crowned while still unborn, with the crown being placed upon his pregnant mother's womb. This story was known to Western historians such as Agathias (6th century), who writes that the magi had prophesied that the child would be a boy. Modern historians C. E. Bosworth and Alireza Shapour Shahbazi consider this story to be fictional. The sex of the infant could not have been known before Shapur's birth, writes Bosworth. The crowning of the infant Shapur after the elimination of his older brothers was a means for the nobility and priesthood to gain greater control of the empire. They maintained their control until 325, when Shapur reached maturity at the age of sixteen.

War with the Arabs (325)

During the childhood of Shapur II, Arab nomads raided the Sasanian homeland of Pars, particularly the district of Ardashir-Khwarrah and the shore of the Persian Gulf. At the age of 16, Shapur II led an expedition against the Arabs; primarily campaigning against the Iyad tribe in Asoristan and thereafter he crossed the Persian Gulf, reaching al-Khatt, modern Qatif, or present eastern Saudi Arabia. He then attacked the Banu Tamim in the Hajar Mountains. Shapur II reportedly killed a large number of the Arab population and destroyed their water supply by filling their wells with sand. [

After having dealt with the Arabs of eastern Arabia, he continued his expedition into western Arabia and Syria, where he attacked several cities – he even went as far as Medina. Supposedly because of his cruel way of dealing with the Arabs, piercing the shoulders of captives, he was called Dhu'l-Aktaf ("the man with the shoulders") by them. [a] However, Theodor Nöldeke considered this a later folkloric explanation of an honorary epithet meaning "the man with the broad shoulders", i.e., capable of bearing the weight of kingship. Not only did Shapur II pacify the Arabs of the Persian Gulf, but he also pushed many Arab tribes further deep into the Arabian Peninsula. Furthermore, he also deported some Arab tribes by force; the Taghlib to Bahrain and al-Khatt; the Banu Abdul Qays and Banu Tamim to Hajar; the Banu Bakr to Kirman, and the Banu Hanzalah to a place near Hormizd-Ardashir. Shapur II, in order to prevent the Arabs from making more raids into his country, ordered the construction of a wall near al-Hira, which became known as war-i tāzigān ("wall of the Arabs").

The Zoroastrian scripture Bundahishn also mentions the Arabian campaign of Shapur II: During the rulership of Shapur (II), the son of Hormizd, the Arabs came; they took Khorig Rudbar; for many years with contempt (they) rushed until Shapur came to rulership; he destroyed the Arabs and took the land and destroyed many Arab rulers and pulled out many number of shoulders.

With Eastern Arabia more firmly under Sasanian control, and with the establishment of Sasanian garrison troops, the way for Zoroastrianism was opened. Pre-Islamic Arabian poets often makes mention of Zoroastrian practices, which they must have made contact with either in Asoristan or Eastern Arabia. The Lakhmid ruler Imru' al-Qays ibn 'Amr, who was originally a vassal of the Sasanians, may have suffered from Shapur II's raids in Peninsula. He seemingly swore fealty to the Romans, possibly after the incident.

In the accounts of the historians regarding Shapur's campaign against the Arab lands, as well as his mistreatment of the Arabs, the burning of cities, and the flooding of water sources, there are undoubtedly significant exaggerations. These embellishments stem from Persian sources that have been greatly overstated. However, the Roman historians' narratives about this event do not support this claim.

War with the Romans

Ever since the "humiliating" Peace of Nisibis concluded between Shapur's grandfather Narseh and the Roman emperor Diocletian in 298, the borders between the two empires had changed largely in favor of the Romans, who in the treaty received a handful of provinces in Mesopotamia, changing the border from the Euphrates to the Tigris, close to the Sasanian capital of Ctesiphon. The Romans also received control over the kingdoms of Iberia and Armenia, and gained control over parts of upper Media in Iran proper. Shapur's primary objective was thus to nullify the treaty, which he spent much of his reign trying to accomplish.

Another cause for Shapur's wars against the Romans was their attempts to meddle in

the domestic affairs of the Sasanian Empire and hurt Shapur's kingship by supporting his brother Hormisd, who had been well received at the Roman court by Constantine the Great and made a cavalry commander. Shapur had made fruitless attempts to satisfy his brother, even having his wife sent to him, who had originally helped him escape imprisonment. However, Hormisd had already become an avid philhellene during his stay with the Romans, with whom he felt at home. Another reason was Constantine's declaration of Christianity as the official religion of the Roman Empire in 337. He had also declared himself the defender of all the Christians in the world, including those living in the Sasanian realm.

The Stevensweert Kantharos

Acknowledgements

The file below discusses the details of the discovery of the Peel helmet. The author suspects that the Peel helmet is part of a complete outfit worn by a Roman cavalry officer, as the clothing and weapons of a person, as well as the harness of a horse, were found. Remains of a person or a horse were not found. From this, we can only conclude that the officer himself, or his relatives, hid all the objects in the peat during his lifetime. Hiding them in such a way that the few passersby who were there probably didn't immediately see them. People were likely aware at the time that peat grows and that the objects would eventually be buried under an increasingly large layer of peat.

The author was surprised by the enormous value of silver objects, especially those worked by a silversmith. Few people could make such a finely hammered helmet, making the helmet particularly valuable. The helmet was likely a silver object passed down and used by several people due to its value, especially since the average lifespan of a Roman at the time was not very long.

Very few such objects have been found in the region of Germania Inferior. Many have undoubtedly been destroyed by the ravages of time, and the precious metals have been melted down.

A few months after the discovery of the helmet and the other objects, the portion of the objects mentioned in the newspapers was acquired by the National Museum of Antiquities in Leiden. The officials responsible never visited the site themselves or spoke in detail with anyone other than the finder. Therefore, much circumstantial evidence has been lost. Nevertheless, we find various details in the newspapers and magazines. There was also some correspondence to the museum regarding the discovery. The most interesting of these is the letter that Adrianus Bos, director of the N.V. Maatschappij Helenaveen, sent to the museum a year and a half after the discovery. In it, he provides a precise description of the finds, presumably from the first few days. It's striking that the museum officials don't respond with anything like: "Very interesting, do you know where these objects are now?" They let things take their course: after the acquisition, actual interest seems to have disappeared, undoubtedly because it wasn't their own excavation.

A scientific study is written that clearly explains the helmet's construction, but the additional finds are described briefly.

If silver was so precious, and given that few people owned a horse, it's tempting to investigate what other valuable objects have been unearthed in the wider area surrounding the site.

It was already known that virtually no ancient objects had been found in the Peel peat bogs. In the peat bogs in the north of the country and also in the adjacent bogs in Germany, ancient objects have indeed been found since around 1800, even a kilometers-long wooden bridge over the peat, but this dates back to before Roman times. Also found are so-called bog bodies, the remains of a whale, and a horse. Proof that a body can be preserved if buried immediately after death in suitable, oxygen-free soil.

Another valuable object immediately comes to mind: the so-called "Stevensweert kantharos"; perhaps the only other Roman silver object in the Netherlands that can rival the Peel helmet.

All Dutch jurists are familiar with the term "Stevensweert kantharos" as an example of "error"; much can be found on this elsewhere. Before the true value of this drinking cup was known, other obscure events occurred, which the author has examined with a critical eye.

When the scientific community saw the drinking cup around 1950, they investigated where and when it was found. The so-called finder, Borgers, pointed to three

- different years for the discovery: 1939, 1942, or 1943, and three different locations in Stevensweert. In the absence of better information, the drinking cup was then named the Stevensweert kantharos, although it is by no means certain that Stevensweert was the actual discovery site.
- In the author's opinion, this is highly implausible, because if we delve into newspaper accounts of how gravel was extracted in the Maas around 1940, we quickly conclude that the sieving and sorting process, which had reduced the size of the stones, would have left the drinking cup in a battered condition. It may have disintegrated into its component parts much earlier and never been visible as a whole again. Moreover, no mention has been made by a...
- A crew member of Bongers' dredger also claimed to have seen the object. It should also be noted that an inspector from Rijkswaterstaat (the Directorate-General for Public Works and Water Management) was on board, and he would certainly have reported such a find.
- In 2006, Mrs. Witteveen of the Valkhof Museum wrote a booklet about the drinking cup. In it, she mentions the contradictions and uncertainties, but cannot offer any other version than that given by Bongers.
- Could there be a connection between the Stevensweert kantharos and the discovery of a complete officer's outfit?
- From information provided by a servant at A. Bos's in Helenaveen, we know that there was a secret hiding place in his home, where he kept parts of the finds he had acquired. She didn't see everything in detail, but mainly spoke about leather pieces, which he indeed collected shortly after the discovery, because local treasure hunters showed no interest in them. Elsewhere, it is also mentioned that a wine barrel with a tap and a beautifully decorated drinking cup, with a hook for hanging on the horse's harness, had been found and were in the possession of A. Bos. These objects were also part of a Roman soldier's equipment and were carried by the soldier on his journey. If we consider the missing silver handles of the drinking cup to be a hook, then the search for them is indeed worthwhile.
- It is written that the drinking cup ended up in the possession of an important person from the Helenaveen Company in Loosdrecht at a hunting lodge. Research into this has not yielded any clear indication, but we will return to this in more detail below. Incidentally, the wine barrel with the silver tap was apparently lost earlier.
- ### The Legacy of Adrianus Bos
- Director Bos likely became seriously ill at the end of 1930, at least to the point that he could not perform his daily duties. He died, rather unexpectedly, in March 1931. He had already purchased a large plot of land on Belgenhoek in the province of Limburg (directly south of the A67 highway), where he hoped to later build his own house. See also <http://www.belgenhoek.nl/> and <http://www.belgenhoek.nl/page2.html>. Several brothers, distant relatives through the Gilse van der Pals branch, now own this 19-hectare nature reserve.
- For when A. Bos died, only his sister-in-law, Bos-van Gilse-van der Pals, was still alive. According to tradition, she emptied the house and burned a great deal of paperwork in the process. She would have been assisted in this work by her daughter Annie, her husband, and her unmarried son, Cor.
- Photos of the interior of Mrs. Bos-van Gilse-van der Pals's home in The Hague show no Roman artifacts, which is not surprising. Nevertheless, we can assume that the entire interior of the GENA villa in Helenaveen ended up with A. Bos's sister-in-law and/or nephew and niece (with their husband).
- Son Cor, in turn, came to live in the house in The Hague when his mother died in 1936. Nephew Cor Bos had been appointed a member of the company's supervisory board very soon after his uncle's death.
- Daughter Annie was thus married to Rutger W.C. Baron van Boetzelaer, and was therefore entitled to the title of Baroness. The marriage was not a happy one; the baron was said to be more interested in the money than in Annie Bos herself.
- Soon after her mother's death in 1936, Annie Bos divorced the baron. He remarried in 1938, to a man named Jordens, and later Annie married a man named Groote; she lived in Hilversum for a long time under the name J. Groote-Bos. Meanwhile, she had become a major shareholder in the Helenaveen Company and remained so for the rest of her life, owning more than half the shares.
- The inheritance was thus released during Annie Bos's marriage to R.W.C. van Boetzelaer, who later lived in Laren. It's tempting to think that most of A. Bos's belongings ended up in the Baron and Baroness's house, including the Roman objects from the secret cupboard. If the drinking cup was there, it clearly came from the

finds around the Peel helmet, and for that reason alone is extremely valuable. On the other hand, these objects actually belong in a museum, not in a private collection, the existence of which was practically unknown.

The servant who also lived in the Gena villa deregistered from the municipality of Deurne at the end of July 1931 and moved to Wassenaar. There, she worked as a servant for a while, but later returned to Helenaveen. An illegitimate son was also born there, with the word "illegitimate" later crossed out.

The objects are therefore most likely to have ended up in three places: with her sister-in-law Cornelia E.A. Bos-van Gilse van der Pals, her son Cor Bos, and her daughter Johanna van Boetzelaer-Bos and her husband Rutger W.C. van Boetzelaer. The mother was likely less interested in Roman antiquities, the two men may well have been interested. Later, Boetzelaer's son-in-law became assistant curator of the Gooisch Museum and was therefore certainly interested in art objects. After his divorce from Johanna (=Annie) Bos, around 1937, the objects may also have ended up in a fourth place. When his sister-in-law died in 1936, his son Cor moved to her home in The Hague, and in 1938, when Boetzelaer remarried, we again have three possible locations.

At the same time, Dr. F.C. Bursch, an employee of the National Museum of Antiquities in Leiden, was assistant to director Holwerda.

The museum's arrogance is again evident in a piece about excavations near Vlodrop. That article, dated October 28, 1933, ends as follows:

A few years ago, at my repeated request, Dr. Holwerda from Leiden sent his assistant, Mr. Bursch, with some diggers to excavate a section of the Knippeheide, where the undersigned had previously unearthed numerous urns, and where Mr. Bursch now also found 18 urns, plus a fragment of a sword at a Germanic cult site, and where I later discovered more sites, it was said that this exploitation would be revisited. This entire event was reported in the Publications year. 1932, with the following few words, "A remarkable urn field was excavated there (i.e., Vlodrop), on a site for which permission had been obtained (i.e., from the owner in Belgium) through the kindness of Messrs. van Cruchten and Linssen of Roermond."

(Not a word was said about the fact that this remarkable field was discovered by the undersigned after much searching, and that the digging only took place after my repeated correspondence with the Museum of Antiquities.)

Summing all this up, it seems somewhat strange, even painful, to learn in retrospect that an authorized person once said: "There is nothing to learn in the area around Flanders." The reader can sense for themselves how blatantly untrue this is. GERH. KR.[ekelberg]

Fourteen days after the start of the war, this Bursch was appointed head of a committee for archaeological soil research. Germanic culture is immediately mentioned, and they want to create an inventory per municipality of finds held by private individuals. Furthermore:

If, moreover, these are unique finds of truly national significance, we will naturally make an effort to find a place for these objects in the National Museum of Antiquities in Leiden, possibly through exchange with other museum pieces, but the main reason we are interested is to have a complete overview of the archaeological wealth that Dutch soil has yielded and will continue to yield.

Although it had nothing to do with this case, the Leiden museum had brought in curator Bursch as a collaborator for the German cause. In February 1941, he was already placed on the "university blacklist" and after the war, he was suspended as a professor. He had been appointed professor at the University of Amsterdam and had conducted excavations in Ukraine, among other places, in 1943. The heirs of Adrianus Bos must have been aware of the above information about reporting antique objects for inventory. This was likely the reason for "disposing" of the objects. They should have known, they were practically certain, that the objects came from the equipment found in 1910 in Helenaveen and thus belonged to the unique finds of truly national significance.

Ancient objects were occasionally found in the major rivers, and apparently the owner of the drinking cup, probably R.W.C. van Boetzelaer, wanted to make it appear as if the cup had also been found in the Maas, during gravel extraction, for example, in Stevensweert. However, this overlooked a careful study of the gravel extraction process: so much force was released during dredging and sorting by size in rotating drums that a delicate object like the kantharos could never have emerged undamaged. The author believes he can conclude that the owner somehow came into contact with Jaak Bongers, who, after many years, was supposed to present the drinking cup as a

find from the Maas. This, of course, came at a hefty price and was subject to strict confidentiality. This also saved the family's honor, in the sense that Boetzelaer and Bos's names would never appear in the news as the "receiver" of the drinking cup. The sequel to this alleged discovery of the kantharos—namely, the complex process of transferring the cup within a family and, in particular, the years of legal proceedings concerning its ownership—could never have been imagined by Bos's heir and the new owner, Bongers. For them, the value had been undeniable from the very beginning.

In summary:

- The so-called Peel helmet was only part of an officer's outfit worn by a cavalry officer in the Roman army at the beginning of the fourth century.

- After a brief investigation following the discovery, its great value was recognized and it was purchased with financial leverage from the National Museum of Antiquities in Leiden. Evelein wrote a scientific report about the helmet and the finds present, which was published six months after the museum acquired it. It immediately became one of the museum's highlights.

- That considerably more finds were made than those that ended up in the museum after a few months is certain. The museum is acquiring several more objects, as director Bos of the Helenaveen Company explicitly mentions in a long letter. The very first written report from Reverend de Jong, two days after the initial discovery, also provides a description that does not correspond to the objects now in the museum. Apparently, the officials were powerless and uninterested in seriously searching for, for example, the missing cheek plate. They did try to do so through the mayor of Deurne, but such a cautious and half-hearted approach was unsuccessful.

When director Bos died in 1931, his possessions went to his surviving sister-in-law and/or her children. When the sister-in-law herself died in 1936, those possessions finally ended up in the hands of her bachelor son and/or her daughter and her husband.

The latter divorced very quickly. The son moved into his mother's house. The Roman artifacts could very well have ended up with Boetzelaer's now ex-son-in-law.

In any case, immediately after the start of the occupation, pressure arose to register, record, and photograph antiquities. Masterpieces should actually be in a museum. The National Museum of Antiquities in Leiden is specifically mentioned here; it is the most suitable location for this. Not everyone was pleased with Leiden's meddling. Perhaps that's why the owner of the Stevensweert kantharos—at the time just a beautifully carved silver drinking cup—wanted to get rid of it.

How was that supposed to happen? They were likely inspired by similar events in the recent past. They probably persuaded the so-called finder, Bongers, to pretend—for a fee—that he was the finder on a dredger near Stevensweert. Stevensweert had previously been in the news as a discovery site for fossils, human remains, pottery, and weapons.

A more benign explanation might be that the owner of the drinking cup feared it could be confiscated by the occupying forces and wanted to prevent this by giving it to someone unsuspected. The fact that he didn't ask for the cup back after the war contradicts this.

It is by no means certain that the Maas River flowed where Stevensweert is now located in the fourth century. Further east lies the Oude Maas.

- Despite the many uncertainties and the entire aftermath of the legal ownership dispute, Bongers' story was accepted, and much later, the Kam Museum in Nijmegen could claim ownership of the "from Stevensweert" kantharos.

- Both objects are made of gilded silver, finely decorated. A material comparison might perhaps provide more clarity about any possible "relationship." The kantharos has already undergone such an investigation.

Incidentally, the external characteristics can also be compared easily.

Is the Stevensweert kantharos part of an officer's equipment?

This question probably seems silly, but the author has reason to believe it might be. The kantharos was not found in Stevensweert at all, because there are sufficient indications that the alleged finder repeatedly lied about the exact location and even the year of discovery. The possible reason for this remains unclear. The author believes the drinking cup was handed over to the supposed finder, with the request to reveal its existence sometime in the future, along with a fictitious location and year of discovery.

However, the supposed finder couldn't consistently maintain this story, perhaps because the entire matter hadn't been thoroughly discussed. Furthermore, they forgot—

- 129115 or perhaps the event itself was the reason for this cover-up—that the numerous floods of the Maas River would have severely damaged the cup. In January and February 1926, all of Western Europe was gripped by high river waters. Stevensweert was also a victim: it is reported that the Maas River there had become between 4 and 5 km wide!
- 129120 Under these circumstances, a delicate structure like the drinking cup would have at least shattered and likely been carried out to sea, causing the the kantharos had been permanently lost.
No, if the drinking cup had been neatly stored in the peat, it would have been found after many centuries in practically undamaged condition.
- 129125 Location of the Stevensweert kantharos
To get straight to the point: There are many doubts about the location and circumstances of the kantharos. A.M. Gerhartl-Witteveen writes in her 2006 publication: p. 48 [...] manufacture and life cycle of the cup.
Regarding the latter, it is striking that no damage was found on either the inner or
- 129130 outer cup that could have been the result of movement in flowing water, which would inevitably have caused dents and scratches from bumping against gravel and the like. Therefore, in our opinion, it is unlikely that the finder, J. Bongers, found the kantharos among stones along the Maas River, as he later claimed. His brother-in-law's story, that Bongers found the kantharos on the dredger in a few lumps of clay,
- 129135 is more plausible because the clay layer in which the kantharos lay on the riverbed protected it for centuries, until the dredger disturbed the peace. [p. 19] And the year 1939 was recorded by Bongers in 1966, when the kantharos had temporarily returned to Stevensweert on the occasion of the 700th anniversary of the Stevensweert parish. Bongers also said at the time that he had not found the cup on the dredger,
- 129140 but had seen it lying on a strip of gravel along the Maas while hunting. On a map, he had indicated a location on the western bank of the river, opposite Stevensweert, thus on Belgian territory!
Bongers died in 1969 and took the truth with him to his grave.
- 129145 October 16, 1951 [...] The kantharos in question was found in 1942, during the occupation, in Stevensweert, approximately eighteen kilometers from Roermond, in the deep gravel banks of the Maas River. The finder saw nothing unusual in the clay-covered and gray rusty object. He gave it to a private antiquities enthusiast, who kept it unnoticed, thus safely, without exactly suspecting what it was. In 1949, he had the material from which the cup was made
- 129150 expertly examined.
October 24, 1952 The cup was found in 1942 by J. Bongers, a resident of Stevensweert, on a pile of gravel located on a site on the Koeweide in Stevensweert. It consisted of two interlocking pieces completely covered in clay. This
- 129155 had attached itself to the outer wall like a shell. Here and there, this shell had crumbled, revealing the shiny underside. He took the cup home, cleaned it, and placed it on a dresser in the living room.
The so-called finder, Jaak Bongers, mentions no fewer than three different locations. A map indicates one on the Dutch bank, directly opposite the spot where the Belgian-
- 129160 Dutch border runs perpendicular to the Maas River, near border marker 126. This border marker, incidentally, had long since disappeared. The second is somewhere on the Belgian bank. The third is on the Koeweide, which at the time was located further north on the northern (western) bank towards Maasbracht.
In coordinates: [5.8570 and 51.1440], unknown, [5.8740 and 51.1490].
- 129165 Perhaps the Koeweide shown here on the map is not the one meant, as there is also supposedly a Stevensweert koeweide or Stevenweertsche koeweide, but that doesn't significantly change the situation. On May 14, 1966, the director of the Rijksmuseum Kam, under the watchful eye of Mayor J. Kelleners, had a conversation with the alleged finder. No official report was likely made of this conversation, but it did
- 129170 not clarify the circumstances, location, or time of the discovery.
Therefore, the Valkhof Museum is sticking to the dredger version. In this regard, we encounter an oddity: assuming that multiple people worked on a dredger, they could have corroborated Bongers' story in retrospect, but this was apparently never asked.
- 129175 The alleged finder: Bongers
It has already been mentioned that the alleged finder offered several versions of the discovery. If we study the dredging industry, it's almost certainly not much gravel was collected in Stevensweert in 1939, probably only from the second half of 1941 onwards. The crew consisted mainly of Sliedrecht residents, supplemented by local
- 129180 staff who worked there as deckhands, barge skippers, and barge hands. If Bongers had

- found the drinking cup during those activities and cleaned it immediately, others would undoubtedly have seen it. He wouldn't have put a cleaned cup in his jacket either; it's an object to show off. If others were involved in some way, they would undoubtedly have come forward in the 1950s when there was so much commotion about the one then called the Stevensweert kantharos! Colleagues or former colleagues would have approached Bongers, and probably the press as well, during that period to explain their work and to acknowledge Bongers's role. None of this happened. The dredger uses buckets of sand and gravel to extract sand and gravel from the ground. These buckets have a volume of up to half a cubic meter. The load is then discharged into a series of drums and sieves, separating the gravel into four different types. The sand is also collected, and the water is returned to the river. The mass of the gravel in the rotating mill must have been many hundreds of kilograms. A delicate, silver object is crushed in it. The pieces would certainly separate, and it would be unlikely that a drinking cup could be removed in one piece. If the drinking cup, containing clay and sand, ended up in the mills and sieves, it could never have emerged unscathed. The drinking cup likely wouldn't have passed through the sieves in its entirety, as the largest sieve has 10 cm holes, but the loose fragments would have been scattered among the sorted boulders. Moreover, there was constant monitoring by a Rijkswaterstaat inspector, as we read in the newspaper of April 21, 1933:
- In the spaces below deck, on either side of the channel for the bucket chain, there are spacious accommodations for the engineer, mill master, and deck crew, and for the Rijkswaterstaat inspector, who must always be on board to monitor the quantity of sediment collected.
- The above and the at least three different versions Bongers has given can only lead to one conclusion: the drinking cup was NOT found in the Maas. It is also very remarkable that he gave the cup to a brother-in-law without compensation and didn't intervene during the commotion. He is the best person to provide the precise explanation, but he explicitly declined to do so. During a sort of interrogation in 1966, he offered a different version than before. The year of discovery was given as 1939, 1942, or 1943. Unless you note the date somewhere, you know whether it was before or after the start of the German invasion. Elsewhere, it is reported that the pebbles in the gravel extraction areas were so densely packed that the drinking cup would have been completely crushed.
- The reason for his lies and silence can only be that he was somehow bribed to make a false statement about the cup's discovery and thus publicize it.
- The predecessor of the Valkhof Museum
- The G.M. Kam Museum in Nijmegen was not very successful in acquiring masterpieces. Several masterpieces were acquired after the Second World War on highly questionable grounds:
- In early April 1956, there was much discussion about the exact location of the Trajan statue. A year later, the museum still had the statue in its possession. Dredgers in Xanten allegedly embezzled the Head of Trajan, then smuggled it to Nijmegen and sold it to an antique dealer. The Phrygian Ganymede (puer pileatus) was also purchased on questionable grounds.
- Archaeological research during the occupation
- On July 31, 1940, the following announcement appeared in the newspapers: July 31, 1940, PUBLIC COOPERATION REQUESTED. By order of the Secretary-General, Acting Head of the Department of Education, Arts and Sciences, dated May 24th, 1940, A committee for archaeological soil research in the Netherlands was established, while simultaneously a national bureau for archaeological soil research was established. Dr. F. C. Bursch, curator at the National Museum of Antiquities in Leiden, was appointed director. Prof. Dr. N. J. Krom, professor at Leiden University, is chairing the aforementioned committee.
- In the presence of Dr. W. D. van Wijngaarden, director of the Museum of Antiquities and member of the committee, we recently had a meeting with these gentlemen, during which they further explained the purpose and working methods of the committee and the bureau. According to Dr. Bursch, the simultaneously promulgated law is primarily intended to prohibit unauthorized persons from conducting excavations and has roughly the same scope as the law on monument preservation. Objects found in Dutch soil are just as important for the study of the earliest history of our country as archival documents from more recent times and are therefore entitled to the same treatment.

The committee's first task was to determine which institutions in our country are authorized to conduct scientific soil research, and then to achieve coordination in this area. While regional and local museums have also worked in this direction to date, this has been without coherence.

Currently, the following are authorized:

The National Museum in Leiden and the Biological-Archaeological Institute in Groningen will serve the entire country, and the National Museum G. M. Kam in Nijmegen will serve the surrounding area, at least as long as this museum remains under the direction of Dr. J. H. Holwerda, the former director of the Leiden museum. All local museums and provincial societies will have to apply for recognition to conduct excavations, which recognition will only be granted after the National Commission has issued its recommendation.

The National Bureau is currently compiling a list of all sites in the Netherlands that are of archaeological importance, so that timely measures can be taken if the cultivation of these lands threatens to destroy the archival documents hidden within. This list will make it possible to protect such sites in the future. If this proves impossible, the Bureau will endeavor to carefully preserve the remains found during excavation for posterity. Furthermore, the intention is to inventory any earlier finds that may be in local museums or have been reported in recent decades, so that the office can always determine the location of a particular archaeological find.

Furthermore, typical, old names of plots often indicate that relics from the past can be found there, so it is recommended to compile a list of these as well. Finally, in almost every location, there are some objects in private possession, such as stone axes, arrowheads, etc., which should also be recorded in drawings and photographs.

This extensive inventory, according to Dr. Bursch, cannot be accomplished without the cooperation of the general public. We need our volunteers spread throughout the country, who inform us of the existence of the aforementioned sites and inform us of the archaeological finds located in their vicinity. Ideally, we would have such a staff member in every municipality; it's quite possible that the discovery of the thousandth Germanic urn will then be reported to us, but after all, that too can provide clues about the spread of Germanic culture, etc.

Soon, the cooperation of all the mayors in the Netherlands will be requested for this purpose.

But that's not all we need, although they can be of great assistance to us. What we need are staff from the people themselves, who will regularly keep us informed when something special in the field of antiquity occurs in their municipality. Please understand me well: it is by no means our intention to acquire any finds for our museum; on the contrary, the distribution of material among the existing antiquity rooms, regional and local museums can only increase their attractiveness [improved!], and nor do we want the rightful owners to relinquish their possessions to us.

Naturally, we would prefer to see these objects placed in a museum, as there we have the greatest guarantees that they will be expertly preserved. However, this acquisition will only be possible with the full consent of the owner and for a reasonable fee.

Furthermore, if the finds are unique and of truly national significance, we will naturally make every effort to find a home for them in the National Museum of Antiquities in Leiden, possibly through exchange with other museum pieces. However, our main goal is to have a complete overview of the archaeological findings that the Dutch soil has yielded and will continue to yield.

The intention is that reports of finds in the three northern provinces should be addressed to Prof. Dr. A. E. van Giffen in Groningen, and for the rest of the country to Dr. F. C. Bursch, Director of the National Bureau for Archaeological Soil Research, Rapenburg 28, Leiden. This letter places great pressure on those who possess archaeological finds, especially unique finds of truly national significance. The Stevensweert kantharos is certainly one of them!

How does the drinking cup fit into the overall find?

The helmet was so valuable that its loss would be a huge setback for the owner. Hiding the decorative helmet with other objects is intentional. The value of the kantharos—given the amount of silver—was much higher. So, from the perspective of the person who hid all the objects in the peat, the loss is indeed greater, but they could easily bear it. Anyone else would do everything they could to recover such an object if it were accidentally lost.

You could draw a comparison with a grave that is filled next to the body with items related to the deceased, and food for the deceased.

Or in the afterlife. You do this in the hope that the grave won't be plundered. You then try to take measures against that.

With such thoughts, the kantharos would indeed be part of the Man and Horse equipment that ended up in the peat near Helenaveen.

Kluijtmans writes: A silver cup has also been found, fitted with a hook to hang it on the harness.

The kantharos clearly matches the description of the first words; the hook could be one of the handles. These have not been recovered, even though scholars believe they certainly belonged to the cup. Kluijtmans seems to suggest that the drinking cup, like the beautiful small wine vessel he mentioned, holding a few liters, was found in 1911.

All in all, sufficient reason to suspect that director Bos of the N.V. Maatschappij (Dutch Society) had these objects in his possession in 1911. At the conference of June 23, 1910, the stakeholders reached a very clear agreement regarding the undescribed and yet-to-be-discovered objects.

Adrianus Bos was the designated person to acquire these objects. The Helenaveen Society kept meticulous records, but director Bos personally purchased the objects and thus kept them off the company's books.

These objects were therefore stored in the director's residence, but in such a way that only a few people saw them, and then only the director himself.

I also compiled an inventory of people who may have seen the Roman objects during the director's lifetime. This primarily concerns servants, of course. Jootje, or Johanna, van de Bovenkamp came from Helenaveen and was a servant in Bos's later years (from around 1925). Kluijtmans relates that the director at one point showed her the contents of the cupboard. She was particularly struck by the large leather objects. She probably didn't have the opportunity to examine everything properly, let alone write it all down, even if she were interested.

Others who may have seen the find were the company's directors, and had done so for almost 25 years. These individuals were generally very successful social figures, such as the director of the State Railways. They came to Helenaveen at least once a year for a meeting, which was usually held elsewhere. On July 1, 1910, such a meeting was held at the director's villa, more than two weeks after the discovery. However, the minutes of the meeting make no mention of it, even though the discovery had already been clearly reported in the newspapers and had occurred only about 2 km away.

Doubts about the origin of the kantharos

Rijksmuseum Kam has doubted the story of the alleged finder, Bongers, from the very beginning. This has already been mentioned several times above. This concerns the war years and those up to approximately 1950. The legal aftermath provides even more information.

For example, we read in [1998] *The Secret of the Smith* by Mr. W.M.J. Bekkers: [...]

Not only are there different theories about the origin and age of the Kantharos.

This also applies to the year, the place, and the circumstances under which the cup was found. Legal literature and case law mention

1942 and 1943, while Swinkels assumes 1939. He knows that at the request of Drs. A.V.M. Hubrecht, director of the (then still) Rijksmuseum Kam from 1964 to 1978, the mayor and pastor of Stevensweert spoke with the finder of the Kantharos, J.

Bongers of Echt, in November 1966. Bongers then stated that he had found the Kantharos in January or February 1939 while hunting. On a map,

he indicated where he had found the cup. This was supposedly on Belgian territory, on the west side of the Maas River. According to Swinkels, Bongers had previously reported other locations. Regarding this conversation with Hubrecht on November 14, 1966, the mayor wrote, among other things: "... I don't believe Mr. Bongers, or rather, he's lying. He has already reported three different locations for the Kantharos.

Which one is correct? I don't know" (7).

7. Hubrecht did not publish the location Bongers reported in 1966, but he did report the year 1939 as the date of the discovery (A.V.M. Hubrecht, *De Kantharos van Stevensweert*, in *Numaga* 13 (1966) 243-251, with a photo of Mr. Bongers on p. 250).

- 129380 Museum Kam and its successor, Museum Het Valkhof, also questioned the provenance of the drinking cup, but just like the legal aspects, the museum was interested in possession, not the provenance. Nevertheless, we find various comments on this in the museum's publications.
- 129385 [2006] If Bongers did indeed pick up the kantharos from the dredger in 1943, he then took it home. According to the dredging permit, archaeological finds had to be reported and handed over to the government. It is therefore obvious that Bongers quickly attempted to monetize his find.
- 129390 [elsewhere 2006] In preparing this article, we studied the kantharos intensively several times, paying particular attention to indications of the manufacture and life cycle of the cup.
- 129395 Regarding the latter, it is striking that no damage was found on either the inner or outer cup that could have been the result of movement in flowing water, which would inevitably have caused dents and scratches from bumping against gravel and the like. Therefore, in our opinion, it is unlikely that the finder, J. Bongers, found the kantharos among stones along the Maas, as he later claimed. His brother-in-law's story, that Bongers found the kantharos on the dredger in some lumps of clay, is more plausible because the clay layer in which the kantharos lay on the riverbed protected it for centuries, until the dredger disturbed the peace (see p. 18).
- 129400 [1972] The discovery went virtually unnoticed at the time: J. Bongers found the cup—in two pieces—among the stones along the Maas River, washed off the clay, and took it home.
- Documents about the Bongers family and the dredging company
December 19, 1934 SAD ACCIDENT ON THE Maas RIVER IN STEVENSWEERT
Four people fell into the water. One of them drowned.
- 129405 A sad accident occurred on Tuesday morning around ten o'clock on the Maas River near the municipality of Stevensweert.
- The Van Hasselt company from Nijmegen has been operating a dredging business there for several years. On Sunday, a tugboat arrived to tow away the dredger, which was undergoing repairs.
- 129410 This was scheduled for Tuesday, and around ten o'clock, four of the boat's occupants had boarded a rowboat and sailed from the dredger to the shore to cast off the mooring line. They slid along the cable. They may have been standing on one side of the boat at some point, causing it to take on water and capsize, causing all four to fall into the water.
- 129415 The tugboat, which was moored near the dredger, quickly sailed to the scene of the accident, halfway along the shore, and managed to rescue two of them; the third had managed to reach the shore by swimming. The fourth tragically drowned, despite further attempts to save him. His body has not yet been found.
- 129420 The victim is married and 37 years old, named H. Peperkamp from Doornenburg, in the municipality of Bemmelen, Gelderland.
- August 4, 1945 The Gravel Dredgers
DE VRIJE STEM, the organ of the G.O.I.W., contains a thorough article about the wartime collaboration of the Gravel Dredgers for the construction of the Atlantic Wall.
- 129425 We have included some figures from this article to clarify the matter for our readers.
- 129430 The Paes Company in Nijmegen produced 209,349 tons in 1939 ... 537,960 tons in the eight months of 1944.
- The Van Hasselt Company in Lent produced 270,634 tons in 1939 and 915,212 tons in 1943. The N.V. Grint Mij in Arnhem increased from 184,291 tons in 1939 to 483,938 tons in 1943. For the N.V. van Roosmalen Transp. and Handelsmij in Maastricht, these figures were: 108,905 tons and 210,851 tons.
- 129435 The Hovestad en Dekker company in Roermond began operations during the war years and produced 211,421 tons by 1943.
- The Ballastmij de Merwede in Rotterdam produced 225,526 tons in 1940 and 235,205 tons in 1943.
- 129440 Official complaints about all these companies have been filed with the Military Commissioner.
- And now the Vrije Stem continues:
- All gravel produced in the Netherlands was resold by the N.V. gravel sales office in Nijmegen. The director of this company was Mr. Zuidema. This office provided gravel

- 129445 distribution services during this period and, among other things, sent a letter to the affiliated producers urging them to increase production. We requested the closure of this sales office and the seizure of its records. This was done.
- 129450 The German company "Niba" increased its production from 350,685 tons in 1938 to 1,522,949 tons in 1943. However, this company has two Dutch directors, Messrs. Müller and van Sprang. This, too, is tolerable even with a large dose of forbearance. However, the fact that Mr. Müller was appointed a member of the tribunal in Nijmegen strikes us as "somewhat strange."
- 129455 The fact that Mr. Wagemaker, as Director of the Gravel Sales Office, felt compelled to assist the German Wehrmacht may be due to his very "businesslike" views. However, the fact that he was appointed manager of the National Socialist assets strikes us as "somewhat strange."
- 129460 And Mr. van Roosmalen, who had approximately doubled his production, was charged with raising the ships sunk by the Germans in the port of Maasbracht. To great dismay of the hundreds of skippers.
- 129465 June 16, 1964. Construction awarded [...]
Van Hasselt Gendt (Gelderland) 5, 5, 2, and 1 cent.
The registrations of {...} and the Niba were not accepted.
- 129470 April 3, 2013. Jacobus Antonius Bongers was married to Hubertina Cornelia van der Riet (hamlet Diepstraat?). The couple lived in Echt at Maasbrachterweg 100.
- 129475 A few days before February 1, 1937, Theodorus Lucienne was born. This Theo has passed away.
A few days before March 8, 1943, Helena Henrica Johanna was born.
- 129480 Another son (aged 77 or 78). A son and a daughter are said to now live in South Africa. Jan Bongers is said to live in Roermond. Information obtained from a cousin of Jaak Bongers from Stevensweert, Bernard Bongers. Jaak Bongers was called a fantasist in the family.
- 129485 April 3, 2013 The dredger Jaak Bongers worked on was no longer owned by Dekker, but by the Van Hasselt company from Nijmegen (or Lent or Gendt). This Van Hasselt company had purchased the dredger from Dekker. It was probably a simple dredger, with a stationary sieve or sieves.
- 129490 The arguments above have been presented that cast doubt on whether the kantharos was actually found in the municipality of Stevensweert. These arguments are repeated below.
- 129495 - It is by no means certain that the Maas River flowed where Stevensweert is now located in the fourth century. The Oude Maas River lies further east.
- The numerous floods of the Maas River would have severely damaged the cup. In January and February 1926, all of Western Europe was gripped by high river waters. Stevensweert was also a victim: it is reported that the Maas River there had become between 4 and 5 km wide! Under these circumstances, a delicate structure like the drinking cup would have at least shattered and likely been carried to sea, resulting in the kantharos's permanent loss.
- 129500 - There are three variations on the circumstances, the location, and the year of discovery:
And the year 1939 was recorded by Bongers in 1966, when the kantharos had temporarily returned to Stevensweert on the occasion of the 700th anniversary of the Stevensweert parish. Bongers also stated at the time that he had not found the cup on the dredger, but had seen it lying on a strip of gravel along the Maas while hunting. On a map, he had indicated a location on the western bank of the river, opposite Stevensweert, thus on Belgian territory!
- 129505 The kantharos in question was found in 1942, during the occupation, in Stevensweert, approximately eighteen kilometers from Roermond in the deep gravel banks of the Maas. The finder didn't see anything unusual in the clay-covered, gray, rusty object. He gave it to a private antiquities enthusiast, who kept it unnoticed, thus safely, without suspecting precisely what it was. In 1949, he had the material from which the cup was made expertly examined.
- 129510

The cup was found in 1942 by J. Bongers, a resident of Stevensweert, on a pile of gravel located on a plot of land on the Koeweide in Stevensweert. It consisted of two interlocking pieces completely covered in clay. This had adhered to the outer wall like a shell. Here and there, this shell had crumbled, revealing the shiny base.

129515 He took the cup home, cleaned it, and placed it on a dresser in the living room.

The so-called finder, Jaak Bongers, mentions no fewer than three different locations. A map shows one on the Dutch bank, directly opposite the spot where the Belgian-Dutch border runs perpendicular to the Maas River, near border marker 126. The second is somewhere on the Belgian bank. The third is on the Koeweide, which at the time was located further north on the northern (western) bank towards Maasbracht.

129520 In coordinates: [5.8570 and 51.1440], unknown, [5.8740 and 51.1490]. Perhaps the Koeweide on the map isn't the one meant, as there also supposedly exists a Stevensweerder koeweide or Stevenweertsche koeweide, but that doesn't fundamentally change the situation.

129525 - Brom believes he can deduce the year 1942 from a conversation he had with Bongers in April 1950, in which Bongers suggested that the cup had been on his cupboard for some time before he showed it to Schoonenberg. [...]

129530 - On May 14, 1966, the director of the Rijksmuseum Kam, under the watchful eye of Mayor J. Kelleners, had a conversation with the alleged finder. Probably no official report was made of this conversation. But it did not clarify the circumstances, place, and time of the discovery.

There are various theories about the origin and age of the Kantharos. This also applies to the year, location, and circumstances under which the cup was found. Legal literature and case law mention 1942 and 1943, while Swinkels assumes 1939. He knows that at the request of Drs. A.V.M. Hubrecht, director of the (then) Rijksmuseum Kam from 1964 to 1978, the mayor and pastor of Stevensweert spoke with the finder of the Kantharos, J. Bongers of Echt, in November 1966. Bongers then stated that he had found the Kantharos in January or February 1939 while hunting. On a map, he indicated where he had found the cup. This was supposedly on Belgian territory, on the west side of the Maas River. According to Swinkels, Bongers had previously mentioned other locations. Regarding this conversation with Hubrecht on November 14, 1966, the mayor wrote, among other things: "... I don't believe Mr. Bongers, or rather, he's lying. He has already listed three different locations for the Kantharos."

129545 Which one is correct? I don't know."

- October 31, 1941 [...] In Linne and also in Roermond, gravel can be found under a layer of clay and sand of several meters, sometimes to a depth of 15 to 16 meters. Occasionally, prehistoric finds are found in these gravel layers, including mammoth teeth and deer antlers, etc., which are of scientific value. Besides Roermond, a private company has also started gravel mining in Stevensweert. All these activities provide work for many people. - August 28, 1951. My brother-in-law, Mr. J. Bongers (...), first showed me the aforementioned cup in the autumn of nineteen hundred and forty-three. My brother-in-law, Mr. Bongers, was working at the time on the dredger "De Dekker," which dredged gravel in the floodplains of the Maas River called "De Sleyen," near Stevensweert.

129555 When showing me the cup, my brother-in-law told me that a few days previously, when the dredger was set to a digging depth of sixteen meters below the waterline, he had collected the object in two separate pieces from the discharge chute of the mill, into which the buckets pour their contents. Afterward, Bongers had cleaned both parts of the clay and silt at home, and it turned out that [...]

129560 - If we study the dredging industry, then almost certainly not much gravel was collected in Stevensweert in 1939, probably only from the second half of 1941 onwards. The crew consisted mainly of Sliedrecht residents, supplemented by local staff who worked there as deckhands, barge skippers, and barge hands. If Bongers had found the drinking cup during those activities and cleaned it immediately, others would undoubtedly have seen it. He wouldn't have put a cleaned cup in his jacket either; it's an object to show off. If others were involved in some way, they would undoubtedly have come forward in the 1950s when there was such a fuss about the cup, then called the kantharos of Stevensweert! Colleagues or former colleagues would have approached Bongers, and probably the press as well, during that period to explain their work and acknowledge Bongers's role. None of this happened. The dredger extracts sand and gravel from the ground using buckets. These buckets have a volume of up to half a cubic meter. The load is then discharged into a series of drums and sieves, separating the gravel into four grades. The sand is also collected, and the water is returned to the river.

129575 The gravel mass in the rotating mill must be several hundred kilograms. A delicate,

silver object is crushed in it. The fragments will certainly separate, and it's unlikely that a drinking cup could be removed in one piece. If the drinking cup containing clay and sand had ended up in the mills and sieves, it could not have emerged unscathed.

The drinking cup likely wouldn't have passed through the sieves in its entirety, as the largest sieve has 10 cm holes, but the loose fragments would have been scattered among the sorted boulders. Moreover, there was constant monitoring by a Rijkswaterstaat inspector, as we read in the newspaper of April 21, 1933:

In the spaces below deck, on either side of the bucket chain channel, there are spacious accommodations for the engineer, mill master, and deck crew, and for the Rijkswaterstaat inspector, who must always be on board to monitor the quantity of sediment collected.

- Elsewhere, it is reported that the pebbles in the gravel extraction areas were so tightly packed that the drinking cup would have been completely crushed.

- Museum Kam and its successor, Museum Het Valkhof, also doubted the origin of the drinking cup, but, just like the legal aspects, possession was important to the museum, not the provenance.

Yet, we find various comments on this in the museum's publications.

[2006] If Bongers did indeed pick up the kantharos from the dredger in 1943, he subsequently took it home and did not declare it.

According to the dredging permit, archaeological finds had to be reported and handed over to the government. It is therefore also obvious that Bongers quickly attempted to monetize his find.

[elsewhere 2006] In preparing this article, we studied the kantharos intensively several times, paying particular attention to indications of the cup's manufacture and life cycle.

Regarding the latter, it is striking that no damage was found on either the inner or outer cup that could have resulted from movement in running water, which would inevitably have caused dents and scratches from bumping against gravel and the like. Therefore, in our opinion, it is unlikely that the finder, J. Bongers, found the kantharos among stones along the Maas River, as he later claimed. His brother-in-law's story, that Bongers found the kantharos on the dredger in some clods of clay, is more plausible because the clay layer in which the kantharos lay on the riverbed protected it for centuries, until the dredger disturbed the peace (see p. 18).

[1972] The discovery went virtually unnoticed at the time: J. Bongers found the cup - in two pieces-among the stones along the Maas River, the clay was washed off, and it was taken home.

- Acquisition by Museum Kam

The G.M. Kam Museum in Nijmegen has not been very successful in acquiring masterpieces. Several masterpieces were acquired after the Second World War on highly questionable grounds:

In early April 1956, there was much commotion about the exact location of the statue of Trajan. A year later, the museum still had the statue in its possession. Dredgers in Xanten allegedly embezzled the Head of Trajan, then smuggled it to Nijmegen and sold it to an antique dealer.

The Phrygian Ganymede (puer pileatus) was also acquired on questionable grounds.

- Not only have no co-workers on the dredger come forward to say that Bongers found the object, but there are also no known testimonies from family members who can testify about the kantharos at the Bongers household.

- Neither Jaak Bongers nor any family members or the like have ever been heard about the object. At least, the author has been unable to find anything on the subject.

A nephew calls Jaak Bongers a fantasist in 2013, at least that's how he was described in the family.

- The kantharos is so fragile that only a few people should handle it. Surely the condition of the drinking cup couldn't have deteriorated so much in 60 years that it came from a dredger or something similar and is now untouchable.

Descriptions of different kinds of objects stored in Delos

akinake; iron akinake; gilded akinake; [=short Persian sword]

akroterion;

CONSTANTIJN, ZIJN STAMLAND EN VOORGESLACHT.
129905 Constantijn treedt in de historie op als de *eerste middeleeuwer*, en wel niet als
West-Europees, Germaans of Romaans middeleeuwer, maar als *byzantijn*; en als zodanig

is hij het voorbeeld van alle latere, Oost-Romeinse keizers. Met het Christusteken op zijn vaandel, en de imperatorenkrans om zijn kruin is hij de eerste drager van een nieuwe mengbeschaving die toen juist in Oost-Europa groeide uit heidens-Romeinse en christelijk-Hellenistische elementen. Ook zijn vreemde, tegenstrijdige aard, onstuimig dapper, maar toch sluw, wreed en huichelachtig vroom, wijst daarop.

Deze eerste byzantijn was dan ook alleen naar de naam Romein, maar grotendeels van Grieks-Illyrische bloede.

Constantijn werd in 274 geboren te Naissus, hoofdplaats der Illyrische landstreek Dardanië, en heel zijn voorgeslacht van vaderszijde was uit de Balkan geboortig. Dit is hierom van gewicht, daar Illyricum (=het Balkanschiereiland) allengs de leidende provincie van het rijk was geworden, en sinds Decius bijna alle vorsten kwamen uit dit gewest.

De Illyrische keizers hebben Rome dan ook telkens gered van zijn twee dreigendste gevaren: invallen der *barbaren* van buiten en *inwendige verdeeldheid*. Deze laatste werd veroorzaakt door:

I. De *denationalisatie* der provinciën;

II. De stijgende vreemde invloed ook in het leger.

De provinciën, ontevreden over de centraliserende belastingpolitiek der keizers, neigden allang tot afval van Rome. Vandaar het telkens optreden van plaatselijke *usurpatoren* (bijvoorbeeld de 30 tirannen). Dit kwam doordat het uitgestrekte wereldrijk géén etnografische eenheid vormde en zelfs geen tweeheid, hoewel ruwweg te verdelen in een Latijnse Westelijke en een vergriekste Oostelijke helft. Want zijn bewoners waren wel naar de taal geromaniseerd of gehelleniseerd, maar niet in ras en landaard, zodat zij zich allereerst burgers voelden van eigen stad en streek, en pas daarna van de Romeinse staat, die hen danig uitzoog. Bovendien werd in vele grensgewesten, ontvolkt door herhaalde oorlogen, *het vreemde element versterkt*, doordat men Germanen of Sarmaten voor akkerbouw daarheen verplante als *horige boeren* (coloni), die evenwel hun barbaars karakter vaak behielden.

Ook het leger werd allang niet meer gerekruteerd uit Italianen, maar merendeels uit Latijnse provincialen (Galliërs, Spanjaarden en Illyriërs), zodat door deze kern de nationale commandotaal behouden bleef. Doch daarnaast traden weldra Germanen, Sarmaten, Syriërs en andere Semieten in de rangen van officieren en minderen, zodat zelfs velen hunner het brachten tot *soldatenkeizers*, zoals Sept. Severus, Caracalla, Elegabalus, Alexander, Severus, Philippus Arabs (Semieten) en Maximinus Thrax (een halve Goot).

Nochtans vormden tot ca. 325 de Latijnse provincialen de meerderheid, en onder deze vooral de Illyriërs, zodat deze van 250–300 bij de keizerkeuze de doorslag gaven.

Waarom juist uit Illyrië? Het was al vroeger, door landbouwkolonies van veteranen (onder Augustus door Tiberius) gelatiniseerd. Allengs had zich in deze agrarische provincie naast de kleinere boerenstand ook wel grootgrondbezit gevormd, maar dit had het kleinbezit *niet*, zoals in Italië, verdrongen, zodat hier, ook door het ontbreken van een grote stad als uitzuigend centrum, de welvaart behouden bleef.

1). Overenting van de Latijnse cultuur op deze weinig begaafde barbaarse stammen als Illyriërs, Moesiërs, Dardaniërs en Thraciërs, had alleen gevolgen naar de taal

2). Maar militair bleek het zo ontstane mengvolk van Romeinen en Balkanbewoners des te meer aangelegd, doordat de gevaarlijke nabijheid van Marcomannen, Quaden, Goten en Daciërs hen dwong tot voortdurende weerbaarheid, ja tot uitzetting naar het Oosten, om zich tegen hun herhaalde aanvallen te beveiligen 2).

Hun land leverde dan ook heel wat soldaten en officieren, daar vooral zoons van Illyrische grootgrondbezitters door een zekere standstraditie als tribunen in het Romeinse leger dienden.

Geen wonder dat juist uit dit antieke "Junker"-land vanaf het midden der 3e eeuw na Christus veel krachtige soldatenkeizers kwamen, nu eens uit de grootgrondbezitters, dan weer uit de kleine boeren (Aurelianus) of zelfs uit de vrijgelatenen (Diocletianus). En al deze heersers hielden krachtdadig de strijd tegen Europese en Aziatische vijanden vol. Zo dreef bijvoorbeeld Claudius II (waaroever straks meer) de Goten terug over de Donau; zo wist zijn tweede opvolger Aurelianus het rebelse rijk van koningin Zenobia (Palmyra) te heroveren (273).

Op de tijd van Constantijns geboorte nu (274) was zijn vader Constantius Chlorus ongeveer 25 jaar oud. Hij dankte zijn Romeinse familienaam aan zijn moeder Claudia, dochter van Crispus, de oudste broeder van keizer Claudius Constans de Gotenverdelger. Zijn Griekse bijnaam Chloros (de Bleke) wijst echter op Oostelijke afkomst, en inderdaad was zijn vader Eutropius een rijk Dardanis edelman uit de soldatesken stam der Moesiërs, die toen vermoedelijk vergriekst waren. Hijzelf (Constantius Chlorus) werd echter ten volle als Romein beschouwd, en diende

waarschijnlijk al vijf jaar tevoren, onder het bestuur van zijn oudoom Claudius (268–270), in het Romeinse leger.

129975 In 270 stierf deze vorst vlak na zijn zege op de Gotische barbaren aan dezelfde pestepidemie, die deze hadden meegebracht. Er is geen reden om aan te nemen dat hij, zoals alleen Zonaras (XII, 26) beweert, op zijn sterfbed Aurelianus als de waardigste opvolger heeft aangewezen, daar deze geen bijzondere gunsteling was van hem, maar wel van diens voorganger Valerianus (zie Hist. Aug. Flav. Vop. c. XII Aurelian).

129980 Bovendien had de overledene nog een voortreffelijke broeder, Quintillus, die dan ook terstond door de senaat tot heerser werd verheven. Doch deze was bij de soldaten gehaat wegens zijn streng handhaven der krijgstucht, zodat hij reeds na 17 of 20 dagen hetzij door eigen hand of door zijn muitende troepen te Aquileia stierf 3). Intussen was zijn mededinger Aurelianus, heel populair bij het leger, al tot keizer gekozen (270–275) en de senaat was genoodzaakt hem te erkennen.

Toch bleef ook tijdens deze nieuwe heerser Constantius Chlorus onder de wapenen, vermoedelijk als eenvoudig tribuun. Als zodanig heeft hij Aurelianus gevolgd op diens veldtocht naar het Oosten (V. Panegy. Constantio Caesari, V.).

129990 Daarbij trok Aurelianus allereerst de Bosporus over om het opgestane Bithynië (o.a. Thyana) te heroveren, en landde zo bij het plaatsje Drepanum 4) aan de golf van Nicomedia. Mogelijk heeft zijn leger daar overnacht, en de jonge adellijke officier toen kennis gemaakt met Helena, de dochter van een herbergier aldaar 5). Vermoedelijk leefde hij eerst in concubinaat met haar 6), en nam haar overal mee, ook op Aurelianus' expeditie tegen Zenobia, de koningin van Palmyra en tegen het opstandige Egypte, waar een usurpator Firmus werd verslagen en afgestraft (273).

129995 Op 's keizers terugreis over Klein-Azië en de Balkan naar Rome (273–274) werd Constantius, vermoedelijk op eigen wens, gedetacheerd bij de Donaulegioenen, in de garnizoensplaats Naïssus, waarbij ook de landerijen van zijn vader lagen. Hier baarde Helena hem een zoontje, Constantijn (274). Doch hoewel eerst zijn minnares, werd zij weldra (na deze geboorte?) zijn wettige vrouw 5), waarna de vader ook haar kind als het zijne erkende. Dat zij, een vrouw van mindere stand, en nog wel uit de verachte kaste der herbergiers, dit gedaan kreeg van die adellijke tribuun, bewijst wel haar buitengewone bekoring en wilskracht. Overigens gaf dit huwelijk geen aanstoot in deze avontuurlijke tijd der soldatenkeizers, toen de laagst geboren en de kroon konden krijgen, en rassen- en klassenmenging overal aan de gang was.

130000 In de verwarring na Aurelianus' gewelddadige dood bleek Constantius, hoewel een uitstekend militair, te bescheiden, en vermoedelijk ook niet rijk genoeg, om zich op de voorgrond te dringen en het keizerlijk purper te bemachtigen. Daarom werd hij ongevaarlijk gevonden, en wist zich ook in de gunst der volgende vorsten, zoals Tacitus, Probus en Carus, te handhaven.

130010 Toch is er even, tijdens keizer Carus, toen Constantius praeses (militair landvoogd) van Dalmatië was, kans geweest op zijn verheffing tot keizer. Vóór Carus' veldtocht tegen de Perzen overwoog deze namelijk, uit schaamte over het wangedrag van zijn zoon Carinus te Rome, om Constantius, als de waardigste tot zijn troonopvolger te bestemmen. (Flav. Vopisque, Carus, XVII. Hist. Aug.) Maar door zijn plotselinge dood (zie verderop) bleef dit plan onuitgevoerd. In zijn plaats greep Diocles het volgend jaar naar het purper, en Constantius was plooibaar genoeg, om na diens overwinning op Carinus naar de nieuwe keizer over te lopen.

130020 VAN MILITAIRE DICTATUUR TOT OOSTERSE DESPOTIE.

Diocletianus was een Illyriër, evenals zijn voorgangers. Maar terwijl zij alleen militairen waren, die het rijk tegen barbaren en usurpatoren beschermden, was hij bovendien ook een kundig staatsman. Pas *hij* is erin geslaagd, de voorlopige, onvaste militaire dictatuur te wettigen tot een *volstrekke monarchie*, en zo de staatseenheid innerlijk te verstevigen.

130025 Diocles, zoals hij aanvankelijk heette, werd geboren in een Dalmatisch stadje, mogelijk Dioclea genaamd, als zoon van een arme klerk, die waarschijnlijk vrijgeboren burger, en geen vrijgelatene was 8). Hij trad in legerdienst, doorliep alle rangen, bracht het zo tot proconsul van Moesië, ja krom zelfs op tot consul. In 283

130030 vergezelde hij, als "comes domesticorum" (hofmaarschalk) keizer Carus op diens expeditie tegen de Perzen.

Deze trok, in strijd met een oud orakel, de Eufraat over, nam vele steden van de vijand in, o.a. de hoofdplaats Ktesiphon, maar stierf toen plotseling, volgens zijn soldaten door de bliksem getroffen tot straf voor zijn ongehoorzaamheid aan de goden. 130035 Doch mogelijk hebben zijn eigen hovelingen hem vermoord en toen zijn tent in brand gestoken. (Hist. Aug. Carus, VIII). Tot zijn opvolger koos men zijn zoon *Numerianus*, die, hoewel meer begaafd als dichter en redenaar, en zwak van gestel, toch het leger was gevolgd, en deze werd door de bijgelovige soldaten gedwongen terug te keren. Doch

de tijd was niet gunstig voor hoogbegaafde geesten, en zo werd zijn rang hem ten
130040 verderve. Zijn schoonvader, **Arrius Aper**, de gardeprefect, hield hem dagen lang
verborgen, binnen de draagbare tent, zogenaamd om zijn zieke ogen te sparen voor de
felle zon. Doch eindelijk verried de reuk van ontbinding zijn dood, de soldaten die
hem droegen trokken de gordijnen open, en vonden zijn lijk. Zijn schoonvader, die
gehoopt had, hem het troonrecht te ontroven, werd als de dader verdacht, en geboeid.
130045 In de eerste vergadering der soldaten koos men **Diocles** tot keizer, en deze
latiniseerde nu zijn naam tot Diocletianus. Al dadelijk wreekte hij de dood van
Numerianus door in bijzijn van allen Arrius Aper eigenhandig te doorsteken, onder de
uitroep: Deze is de moordenaar! (284). Zo vervulde hij zelf de voorspelling van een
130050 Gallische druïde, namelijk dat hij keizer zou worden, als hij een everzwijn (aper)
zou doden. Na tevergeefs in vele wouden evers te hebben gejaagd, had hij nu zijn
juiste wild gevonden, en versloeg het. (Hist. Aug. Numerian. XIX.) Deze manslag op
grond van een voorspelling tekent de grondtrek van Diocletianus' karakter: zijn
fatalistisch bijgeloof. Daardoor hechte hij geweldig aan offerwichelarij, omnia en
orakels, wat hem later zelfs verleidde tot zijn twee grootste politieke fouten: zijn
130055 *christenvervolging* en zijn *troonsafstand*. Doch in het begin van zijn regering schonk
dit noodlotsfanatisme hem een sterk zelfvertrouwen, waardoor hij de aarzelingen van
zijn sluw, omzichtig, al te beheerst karakter kon overwinnen.
Zijn enige wettige en gevaarlijke mededinger Carinus viel hem aan in Moesië en
leverde hem de slag bij de Margus of Morawa. Maar toen hij op het punt stond te
130060 overwinnen, werd hij, wegens zijn uitspattingen toch al gehaat, door een zijner
tribunen, wiens vrouw hij had onteerd, vermoord. Toen liepen zijn troepen over tot
Diocletianus, en weldra erkenden alle stadhouders en ambtenaren van het rijk –
waaronder ook Constantius Chlorus, toen proconsul van Pannonië en later caesar – de
nieuwe keizer. Deze behandelde zijn vroegere vijanden zeer genadig; niemand ontnam
130065 hij bezit of waardigheden, zodat hij zich aller achting verwierf en twintig jaar
vrijwel ongestoord door binnenlandse opstand kon regeren.
Maar plotseling verraste hem een gevaarlijke opstand in Gallië, die der Bagaudae 9)
(286). Dit was een rassen- en klassenconflict tussen Keltische boeren en hun
130070 onderdrukkers, de gelatiniseerde edelen en Romeinse kolonisten, die vanuit hun steden
en kastelen hen als horigen en slaven exploiteerden. Totaal verarmd door de vele
burgeroorlogen en barbareninvallen, weigerden zij tenslotte de pacht te betalen,
trokken in benden van bedelaars naar de steden, waar zij, samen met het lagere volk
tegen de overheid in oproer kwamen. Zo hadden deze proletarische vrijbuiters zich
weldra genesteld in het sterke Augustodunum, waar zij Aelianus (Helianus) en Amandus
130075 tot "keizers" kozen en velden en dorpen in de omtrek plunderden en verwoestten. Het
was, behalve een "**Jacquerie**" tevens de laatste poging der Galliërs om, na
Vercingetorix, Posthumus en **Tetricus**, hun nationale zelfstandigheid te herstellen.
Doch Diocles vond raad. Hij benoemde zijn oude strijdmakker Maximianus, een ruwe,
130080 boerse, ongeletterde Illyriër, maar een goed soldaat, tot mede-augustus, en imperator
van het Westen, en stuurde hem naar de opstandige provincie (1 april 286). Weldra
wist deze, gesteund door Gallische edelen en Romeinse kolonisten, de beweging te
onderdrukken. De toestand werd nu nog erger dan voorheen door de wreedheden en
afpersingen die de overwinnaar het ongelukkige land oplegde (286).
Nauwelijks was echter Gallië heroverd, of Brittannië viel af van het rijk. Daar had
130085 de pasbenoemde Romeinse vlootvoogd Carausius, een kundig zeeman van de Menapische 10)
(Noord-Brabantse) kust, die kort tevoren had uitgeblonken in de strijd tegen de
Bagauden, zich opgeworpen tot usurpator. Uit de buit van opgevangen Germaanse
(=Saksische) piratenschepen, had hij kapitaal verzameld dat hij niet teruggaf aan de
Romeinse schatkist, maar gebruikte om het bezettingsleger van zijn eiland om te kopen
130090 tot zijn dienst (287). Ook de inheemse bevolking vond hij daar tot steun gereed.
Brittannië, waar ondanks de vele vestingen en heerwegen, Romeinse kolonisten, was
nooit duurzaam gelatiniseerd (zoals Gallië) zowel door verre afstand en klimaat als
door de nationaal-religieuze tegenwerking der druïden.
Bovendien trof Carausius, als Germaan, bondgenoten in de Franken en Allemannen aan de
130095 Rijn. Terwijl deze Gallië in het Oosten binnenvielen, teisterde hij met zijn
kapervloten de Noordkust. Toen bleek voor het eerst het belang van Brittannië's
insulaire ligging. Door een flinke vloot verdedigd was het vrijwel onneembaar.
Maximianus kon het dan ook niet heroveren, sloot vrede en erkende zelfs, tot zijn
smaad, ook namens zijn ambtgenoot de barbaar Carausius, tot zelfstandig keizer van
130100 Brittannië (290) waarbij deze zelfs Boulogne (Gessioracum of Bononia) als steunpunt
op het vasteland behield.
Niet zonder noodzaak had de opperkeizer daarin toegestemd. Want terzelfder tijd als
in Brittannië braken opstanden uit in Afrika van de z.g. vijf volkeren
(Quinquegentanae. Aur. Vict. 39, 21) en in Egypte van de usurpator Achilleus. terwijl

- 130105 in het Oosten de Perzen de Eufraat overschreden. De moeilijke verdediging dezer randgewesten en de onzekerheid der *opvolging* (want hij had geen zoon) brachten Diocletianus nu tot een nieuwe rijksindeling. Hij reisde in 291 van het Oosten naar Milaan ontbood daar zijn medekeizer Maximianus Herculus, en breidde het reeds bestaande tweekeizerschap uit tot een viervoudig systeem of
- 130110 *tetrachord* (1 maart 292). Onder beide augusti zetelend in Nicomedia (hijzelf) en Milaan (Maximianus Herculus) kwamen nu twee *caesares*, een ter bewaking van de Rijn grens, Julius Constantius Chlorus, met standplaats Trier, een ander, Maximianus Galerius, een vroegere herdersjongen uit Dacië voor dit Donaugebied. Na de dood of althans het aftreden der augusti zouden zij worden opgevolgd door de aanvankelijke
- 130115 *caesares*. Om een kunstmatige band van piëteit tussen beiden te knopen, moesten de *caesares* hun vroegere vrouwen verstoten en hertrouwen met de dochters der augusti. Zo huwde Galerius met Diocletianus enige dochter Valeria, die zijn voorzoontje Candidianus van een vroegere vrouw als haar eigen kind adopteerde. Constantius Chlorus werd gekoppeld aan Theodora, eigenlijk geen dochter maar een aangenomen
- 130120 stiefdochter van Maximianus Herculus. Om deze aanzienlijke vrouw te kunnen trouwen, moest hij zich laten scheiden van de laaggeboren Helena, de moeder van Constantijn, en, plooibaar als hij was, gehoorzaamde hij hierin, ter wille van zijn carrière, de opperkeizer.
- Met deze keuze trof Diocletianus een zeer welwillend, maar ook bekwaam ambtenaar, die
- 130125 stellig in afkomst, beschaving en zelfs in anciënniteit van rang de overige drie vorsten overtrof. Want toen Constantius tot caesar werd benoemd, had hij, al een bijna twintigjarigen dienst in het Romeinse rijk en leger achter de rug. Toen hij nu, zeven jaar later, ter beloning voor zijn overgang in de dienst van de
- 130130 nieuwe keizer Caesar van het Noord-Westen was geworden, kreeg hij direct de vererende, zelfs voor Maximianus te moeilijke taak, om het opgestane Brittannië te herwinnen. Eerst ontnam hij Carausius diens marinebasis op het vasteland Boulogne (Gessoriacum). Daarna heroverde hij alle landen rond de Rijnmond, o.a. het Bataveneiland, op de Franken (294), om van daaruit, ook aan de Noordzeekant, het
- 130135 Britteneiland te bestoken. Onderwijl werd echter Carausius verraderlijk vermoord door diens vertrouweling en hoofdofficier Allectus, die zich meester maakte van het gezag, maar niet zo populair was bij leger en volk aldaar. Thans aarzelde Constantius niet langer; hij liet zijn admiraal Asclepiodotus veilig van de Rijnmond naar Zuid Engeland zeilen, en daar landen. Spoedig werd Allectus verslagen en sneuvelde, waarna het eiland zich opnieuw aan Rome onderwierp (296).
- 130140 Thans restte Constantius nog af te rekenen met de Germaanse plunderaars van over de Rijn. Reeds Maximianus had omstreeks 287 Franken, Bourgondiërs, Alemannen en Heruli getuchtigd, maar opnieuw vielen in 298 de Alemannen Gallië binnen. De caesar versloeg ze bij Langres, waar de meesten hunner sneuvelde, tot grote vreugde der Gallische bevolking, die de vernielzieke barbaren haatte. Daarna sleepte de overwinnaar zijn
- 130145 Germaanse gevangenen met vrouwen en kinderen mee naar Noord-Gallië, om daar de ontvolkte velden, leeg sinds de verwoesting van de Bagaudenstrijd als *coloni* opnieuw te bouwen. Dit was politiek een gevaarlijke fout, daar door de herhaalde invallen de barbaren van buiten met die van binnen in verstandhouding bleven, zodat Gallië dreigde *Germaans* te worden, wat na een eeuw dan ook gebeurde. Humaan was deze
- 130150 maatregel in alle geval, want naar toenmalig kriegsrecht had Constantius de gevangenen ook kunnen doden. Eenzelfde humaniteit vertoonde Constantius ook in zijn latere houding tegenover de Christenen. Deze verdraagzaamheid kwam meer overeen met zijn karakter dan met zijn religieuze verering van de Zonnegod *Mithras*, die hij diende evenals wijlen Aurelianus.
- 130155 Doch nauwelijks waren op Brittannië de Romeinse adelaars herplant, of de opperkeizer trok in eigen persoon zijn troepen in Klein-Azië samen voor een veldtocht tegen het reeds tien jaar geleden opgestane Egypte (296). Op deze expeditie vergezelde hem o.a. Constantius' oudste zoon *Constantijn*, toen 22 jaar, en reeds vanaf zijn vroegste jeugd (mogelijk al sinds 285) als page in dienst
- 130160 van de opperkeizer, die hem hield als gijzelaar voor de trouw van zijn vader. (Euseb. Vit. Const. I 19 sqq.) Dit langdurig verblijf in hoofse kring werd voor Constantijn een kostelijke politieke leerschool, daar hij aanvankelijk het volle vertrouwen genoot van zijn oudere vorst, die hem inwijdde in menige "zaken van staat en oorlog". Bovendien leerde hij op de
- 130165 vele reizen van Diocletianus de toestanden in het grote rijk uit eigen aanschouwing kennen, zodat uit hem een bekwaam staatsman groeide, die later het werk van zijn leermeester kon voortzetten. Maar tevens verrijkte een expeditie als deze zijn militaire routine en gehardheid, en vormde in hem de toekomstige veldheer. Van jongs af muntte hij uit in schrandere
- 130170 en moed. Ook zijn statige gestalte had iets imponerends, althans Eusebius die

destijds hem aan de rechterhand des keizers door Palestina zag trekken getuigt ervan. Zo stond het leger van Diocletianus, na een lange tocht over land, thans eindelijk aan de rand van de afvallige provincie.

De oorzaak van deze Egyptische opstand was dezelfde als die van de rebellie die eertijds Aurelianus hier onderdrukte (273), namelijk felle ontevredenheid over de Romeinse vreemdelingentirannie, en hun ondragelijk zware belastingdruk.

Egypte, eeuwenlang uitgezogen als particulier kroondomein van de Romeinse keizers, voor wie het kosteloos koren moest leveren aan de wereldstad, was dientengevolge ontzettend verarmd, hongersnoden onder de fellah's, de slaafse landbevolking, die vaak gebrek moest lijden ter wille van de overvloed van Rome, leidde op de duur tot vorming van wanhopige roversbenden, zoals de z.g. Bucoli, die zich aan de Nijlmond nestelden, en kapers vaak de korenuitvoer beletten. Hoewel vroegere keizers hen hadden verslagen, was hun roofstaat heimelijk blijven voortbestaan, en steunden thans ongetwijfeld – hoewel de bronnen daar niets van melden – de Alexandrijn Achilleus in zijn nationale opstand.

Maar ook in Alexandrië zelf en de andere grote steden kon hij rekenen op de steun van de ganse massa. Beide delen van de bevolking: de vergriekste hogere standen en het nog koptisch sprekende lagere volk, stonden, hoewel vaak vijandig onderling, toch als Oosterlingen, in nationaal-Egyptische haat, tegenover de geldgierige Westerse overweldigers en hun brutaal imperialisme.

Reeds toen klonk – evenals eeuwen later onder Byzantium, en in moderne tijd onder Engels protectoraat – de leuze: Egypte voor de Egyptenaren!

Maar natuurlijk wou de keizer daar niets van weten.

Hij trok binnen met zijn legers langs de woestijn van Idumaea, tot waar de eerste pyramiden-spitsen hun mateloos lange driehoekige schaduwen wierpen over het roodgloeiende zand. Daarna het verrassend contrast van het overal groene vruchtbare Nijldal met zijn blonde velden van koren en mais, waar men vele rivieren en moerassen moest doorwaden, be-oeverd door wuivende palmen. Maar eindelijk, na drie dagreizen, de blinkend witte tinnen, en platte, zonbekaatste daken van de opstandige stad, die gelegen op een landtong in zee, zich onneembaar waande.

Geweldige voedselvoorraden waren hier opgespaard: hooggewelfde waterleidingen verbonden het met het vasteland en stelden het in staat een lang beleg uit te houden. De keizer was genoodzaakt het niet alleen te land, maar ook van de zeezijde in te sluiten door in allerijl uitgeruste oorlogsschepen. Daardoor kon, toen de voorraden raakten uitgeput, geen koren meer worden aangevoerd naar de hongerige overbevolkte stad. En ook de watertoevoer sneed de keizer af door de aquaducten te verwoesten, zodat de stedelingen, rond omringd door het water van de oceaan, van dorst versmachtten. Eindelijk, na 8 maanden gaf de stad zich over.

De overwinnaar, door ongeduld verbitterd, gaf zijn soldaten het bevel, zolang te moorden, tot het bloed aan de knieën van zijn paard zou reiken. Onmiddellijk stormden de manschappen door de geopende poort naar binnen, doodslaand wie zij tegenkwamen. Maar nauwelijks was de keizer zelf de stad binnengereden, of zijn paard gleed uit over de lijken, en waadde met zijn knieën in het bloed. Terstond werd, naar het eenmaal gegeven woord, het moorden gestaakt. Alleen Achilleus, gevangen voor de keizer gebracht, werd het purper afgerukt, en hij en heel zijn dapper garnizoen verloren hun hoofden op het schavot. Wel mochten de soldaten naar hartenlust plunderen in de huizen der rijken; maar de burgers, aan een algemene slachting ontsnapt, richtten tot dank, voor het weldadige keizerpaard later een ijzeren standbeeld op.

Daarna trok Diocletianus naar het Zuiden, veroverde Koptos en Bousiris, en verwoestte ze geheel. Nu werd het hele land ingelijfd als gewone provincie bij het Romeinse rijk (dus niet meer als particulier kroondomein) en in 3 districten verdeeld.

Intussen had de keizer, op zijn tocht naar Egypte, Max. Galerius met slechts enkele divisies achtergelaten in Syrië, om de Eufraat-grens te beveiligen tegen de Perzen.

Met dit volk, en zijn koning **Narses**, was namelijk al sinds 286 een oorlog uitgebroken, wegens het feit dat de Romeinen hun vazal Tiridates, de verdreven Prins van Armenië, dat de Perzen hadden overweldigd, op de troon hadden hersteld. Doch Tiridates' heerschappij was echter van korte duur, want tien jaar later heroverden zijn vijanden zijn land. Thans besloot Galerius, gesteund door de verdreven koning en diens leger, de veel grotere troepenmacht der Perzen aan te vallen in de zandige woestijn van **Carrhae**, waar reeds vroeger Crassus was verslagen. Ook Galerius boette zijn vermetelheid met een nederlaag, maar ontkwam, evenals zijn Armeense bondgenoot, nog levend uit de strijd.

Toen nu de opperkeizer weer terugkwam uit Egypte, en zijn generaal zich met dit Jobsbericht weer bij hem wou voegen, weigerdede keizer hem eerst te woord te staan, en liet de trotse man, gepurperd, enige mijlen achter zijn rijtuig lopen. (Eutrop.

IX. 24). Vermoedelijk was Constantijn, die als adjudant-officier de keizer overal vergezelde, van dit toneel getuige, en dit verklaart de latere haat van Galerius tegen hem.

130240 Nochtans was zijn ongenade niet duurzaam, want hij kreeg de kans zijn fout te herstellen. Nieuwe troepen van veteranen en rekruten waren weldra in Illyrië gelicht 11), en naar Klein-Azië overgestoken, en daarmee kon Galerius zijn zwakke legermacht, vooral uit Oosterlingen bestaande, ten zeerste versterken, en dwars door Armenië heen een tweede veldtocht tegen de Perzen ondernemen (297). Hij versloeg ze bij een
130245 nachtelijke overval. Hun koning Narses vluchtte, gewond. Al zijn haremvrouwen, zijn zusters en kinderen, benevens een overrijke buit vielen de Romeinen in handen. 's Konings bloedverwanten behandelde Galerius, hoe ruw ook van aard, met ridderlijke zachtheid, maar hield ze als gijzelaars gevangen. Weldra kwam nu de vrede tot stand, waarbij de [Araxes](#) of Aboras (tegenwoordig Aras) werd tot grensrivier in het
130250 Noordoosten, terwijl 5 provinciën ten Oosten van de Tigris aan de Romeinen werden afgestaan. Verder werd, ten Westen van de Araxes, de Romeinse vazalstaat Armenië, met [Tiridates](#) tot koning, hersteld.

Vermoedelijk zijn kort na deze vrede de familieleden van koning Narses weer in vrijheid naar hun land teruggestuurd, en hebben zij *niet*, zoals Eusebius fabelt (Eus. 130255 Hieron. Chronicon) de zegepraal van Diocletianus te Rome opgeluisterd. Want tussen de Perzen en Romeinen kwam voortaan een uitstekende verstandhouding, die nog veertig jaar, bijna tot de dood van Constantijn, zou duren.

Na zo het rijk tot rust en al zijn vijanden tot onderwerping te hebben gebracht, keerde de keizer terug, en vestigde zijn residentie te Nicomedia (Grieks Nikomedeia), 130260 tegenover Byzantium aan de Propontis gelegen.

Rome was daartoe onbruikbaar. Immers, alle toekomstige invloed van de pretorianen aldaar en van de senaat, die Diocletianus nooit meer raadpleegde, moest worden uitgeschakeld. Want Diocletianus wenste zijn militaire dictatuur te verheffen tot een blijvende alleenheerschappij. En dit kon hij, beter dan in Rome, in het vanouds 130265 despotisch geregeerde Oosten bewerken. Hier, in zijn nieuwe residentie, bouwde hij een heerlijk paleis (villa publica), en voerde er een ingewikkeld hofceremonieel in, ontleend aan het voorbeeld der Perzische koningen, wier gebruiken hij, dank zij Galerius' veldtocht, van nabij had leren kennen.

Van de hemelse oorsprong van zijn geslacht overtuigd, noemde hij zich "Jovius", en liet zich, minder uit hovaardij dan uit mensenkennis jegens zijn vooral Oosterse 130270 onderdanen, die dit gewoon waren van hun vorsten, *aanbidden als een godheid*. Voor de toenmalige Romeinen was dit iets ongehoords. Want, al bracht men sinds Augustus offers aan de genii (beschermgeesten) der levende keizers, pas na hun dood werden zij doorgaans als goden vereerd. Zij zagen daarom in Diocletianus' daad de

130275 hoogmoedswaanzin van een parvenu, vergeleken hem bij Caligula en Domitianus. Toch moesten zij erkennen, dat hij zich niet despotisch 12), maar vaderlijk gedroeg. Het was dan ook een zeer verstandige politiek die hij, de gewezen soldatenkeizer beging, om de luister van zijn hof te verhogen, en zijn onderdanen eerbied voor zijn persoon in te prenten. Voortaan, ook onder zijn opvolgers, was de keizer veilig voor
130280 vijandige aanslagen. Een uitgebreid personeel van soldaten en eunuchen bewaakte zijn paleis, waar hij troonde in een uitgelezen kleet van louter gouddraad, met sandalen, zwaar wegende van edelstenen, als een heilig idool, ontoegankelijk voor het profane volk. (Aur. Vict. Epit. 39.)

Wegens de enorme kosten van hofhouding, ambtsreizen en legeruitgaven moest evenwel de 130285 belastingdruk aanmerkelijk worden verzwaaard. Daar echter het volk door de vele burgeroorlogen en militaire afpersingen ten zeerste was verarmd, en fiscus-ontduiking steeds meer voorkwam, was een strenger, doelmatiger controle van de inning der belastingen nodig. Hiervoor moest het rijk worden gereorganiseerd tot een grote, autocratische ambtenarenstaat (ongeveer als het Russische tsarenrijk). Daartoe diende
130290 allereerst het *tetrachord* [=tetrarchie] of de verdeling in vieren onder 2 augusti en 2 caesares.

Elk dezer vier keizers werd bijgestaan door een *praefectus praetoris* of *eerste minister*, die evenmin als zij zelf aan een bepaalde landstreek was gebonden, maar telkens rondreisde, ter inspectie.

130295 Deze werd echter voortaan alleen belast met *burgerlijke bestuurszaken*, zodat we reeds onder *Diocletianus* (en niet pas onder Constantijn 13) een *scheiding* krijgen tussen *civiel* en *militair beheer*, *althans bij dit éne ambt, en niet bij de lagere rangen*. Mogelijk dat de moord op zijn voorganger Numerianus door zo'n prefect (toen nog tevens generaal) de nieuwe keizer er toe bracht, dit ambt te besnoeien.

130300 Een verdere verdeling, die zich tijdens de hele vierde eeuw, dus ook onder Constantijn, handhaafde (behoudens kleine wijzigingen) was de splitsing in 12 *diocesen* (later 13), namelijk:

I. Oriens (het Oosten), duz. Libië, Egypte, Syrië en Mesopotamië, waarvan later Egypte en Libië, als een afzonderlijke diocees werd afgesplitst;
 130305 II. Pontus. III. Asia. IV. Thracië.

V. Moesië (met Macedonië en Griekenland), dat tijdens Constantijn de juistere naam kreeg van Macedonia.
 VI. Pannonië of Illyricum. VII. Brittannië.

VIII. Gallië (duz. het tegenwoordige Noord-Frankrijk, België en de Rijnstrekten).
 130310 IX. Vienna. duz. Zuid-Frankrijk.
 X. Italië. XI. Spanje. XII. Afrika 14).

Aan het hoofd van elke diocees of provinciegroep stond een plaatsvervanger der prefecten of *vicarius praefectorum praetorio* (of kortweg: *vicarius*) als burgerlijk en militair landvoogd, die weer de militair-civiele gouverneurs of *proconsules* der
 130315 grotere provinciën en de *praesides* der kleinere provinciën onder zich had.

De steden verloren veel van hun vroeger zelfbestuur, en kwamen onder strenger centrale controle. Al behielden zij nog hun plaatselijke senaat, gekozen uit de erfelijke stand der *decurionen* of aanzienlijke (vgl. de regenten in onze latere republieken), toch werden ze voortaan geregeerd door de militair-civiele
 130320 stadsgouverneurs of *praefecti urbium*.

De oude republikeinse ambten der stad Rome, toch al weinig belangrijk, werden nu deels afgeschaft; deels verlaagd tot erebaantjes, door de keizer vergeven, zoals het consulaat en het lidmaatschap van de senaat (niet te verwarren met de erfelijke
 130325 stand der senatoren of *perfectissimi*).

Zo werden alle ambtenaren, van hoog tot laag, middellijk of onmiddellijk benoemd door de opperkeizer die, als aardse Jupiter, alleen aan zijn hemelse collega verantwoording schuldig was voor het wel en wee van zijn onderdanen.

HEIDENKEIZER EN CHRISTENDOM.

130330 Typerend voor Diocletianus, maar geheel in zijn stelsel passend, is zijn voorliefde voor de oud-Romeinse *staatsgodsdienst*, en zijn totaal passeren van de godsdienst van het leger: de Mithrasdienst, die aan monotheïsme grensde. Slechts een van zijn mederegenten, de caesar Constantius Chlorus, was deze laatste leer toegedaan; de twee overigen volgden blindelings hun opperkeizer in diens religieuze voorkeur. Zo
 130335 vereerde de augustus Maximianus in 't bijzonder Hercules, en noemde zichzelf daarom Herculus, evenals Diocletianus naar diens Jupiter-dienst Jovius heette. Maar vooral Galerius, evenals Maximianus van Illyrische boer tot soldatenkeizer opgewerkt, overtrof zijn schoonvader Diocles haast in ijver voor het oude heidendom en stijfde hem daarin door zijn steeds toenemende invloed.

130340 Met zorg zagen beiden de verbreiding van nieuwe niet-nationale godsdiensten aan. De manicheërs, een voor die tijd gevaarlijke sekte, die openlijk het Kwaad als scheppend wereldbeginsel eerden, en daardoor een omwenteling dreigden te brengen ook in maatschappelijke begrippen, werden bij keizerlijk edict (296) op de brandstapel gebracht. Nog bleven de Christenen gespaard, mogelijk door voorspraak van Valera en
 130345 haar moeder *Prisca*, die er velen duldden in haar gevolg aan het hof in Nicomedia, waar zij, evenals Galerius, met de keizer samenwoonden. Maar voor hoe lang? Aan het hof kregen heidense priesters, demonenbezweerders, astrologen en vooral vogelwichelaars steeds meer macht.

Uit de ingewanden van duiven poogde de bijgelovige keizer de verborgen
 130350 toekomstgeheimen van de tijd, vogelsnel en door geen mensenbrein vast te houden, te doorvorsen.

Ook zijn schoonzoon Galerius, niet intellectueel, van boerse oorsprong, maar een uitstekend militair en tevens een forse indrukwekkende verschijning, volgde de keizer in zijn godenverering, en werd hoe langer hoe meer een persoon van gezag aan het hof.
 130355 Naar hem luisterde de oude, afgeleefde heerser allengs, veel meer dan naar zijn eigen vrouw *Prisca* en zijn dochter *Valeria*, die hoe langer hoe meer haar christelijke sympathieën moesten verbergen.

Deze conservatieve raadsman nu was het vooral die als vertegenwoordiger der militairen, meest Mithras-dienaren, de keizer dreef tot christenvervolging.

130360 Toch overdrijft *Lactantius* duidelijk waar hij Galerius voorstelt als een bullebak van een ijservreter, die met zijn donderende basstem de oude keizer zo tiranniseerde, dat hij hem zowel tot christenvervolging als tot troonsafstand zou hebben gedwongen. Want elders beweert hij (*Lactantius*), dat Galerius zich juist liet leiden door zijn hevig heidense moeder Romula, uit Dacië geboortig en door zijn trouwe vriend en
 130365 wapenbroeder Licinius, de latere vijand van Constantijn. Bovendien noemt onze zegsman zelf nog andere raadslieden, die de opperkeizer dreven tot dit besluit.

Immers, niet alleen bij de militairen (zoals Galerius), niet alleen bij het lagere volk, maar ook bij de *intellectuelen*, zoals de meeste ambtenaren, juristen en retoren

was het Christendom gehaat. En velen van hen hoorden tot de naaste vertrouwelingen van de keizer.

Grote invloed ging bijvoorbeeld uit van zekeren *Hierocles* 17) ex-vicarius van het Oosten, en toen ten tijde praeses van Bithynië, die Diocletianus voortdurend tegen de Christenen poogde op te stoken. Vermoedelijk was hij tevens de auteur van een thans verloren Grieks werk "Aan de Christenen", waartegen later Lactantius in zijn *Divinae Institutiones* (V, 2) polemiseert. In dit werk viel de heidense schrijver de bijbel aan als een boek vol tegenstrijdigheden en noemde Jezus' leerlingen ruw, cultuurloos en daardoor onbetrouwbaar. De wonderen van Jezus stelde hij verre beneden de toverkunsten van de heidense heiland Apollonius van Thyana, en weigerde hem, zelfs op grond van die weinige wonderen als een God te beschouwen, zoals de Christenen deden.

Toch was zijn toon niet agressief, maar blijkens de ondertitel *φιλαληθεῖς* de waarheidslievende die zijn boeken voerden 18), wilde hij zijn tegenstanders overtuigen door objectieve waarheid.

Vanwaar echter die algemene vijandschap tegen het Christendom, zowel bij overheid als volk?

Het merendeels heidense volk haatte ze allereerst om hun openlijke minachting voor alle andere godsdiensten. Maar ook omdat vooral *Semieten* (Joden, Syriërs, Afrikanen) aanvankelijk de dragers en verbreiders waren. Telkens en telkens klonk dan ook in de eerste en tweede eeuw als luide eis tot vervolging "Christiani ad leones", even razend onredelijk als moderne pogroms in Oost-Europa en antisemitische hetzes in 't Westen. Nog Domitianus had de Christenen vervolgd als een Joodse sekte. Doch tijdens de Syrische en Afrikaanse keizers in het begin der derde eeuw kwam hierin verandering. Allengs vormden geboren Romeinen en Grieken het merendeel der Christenen, zodat zij nog wel impopulair, maar niet zo sterk gehaat werden als vroeger.

Dit kwam door hun onvermoeibare inwendige zending, hun exploiteren van elke marteldood tot proseliëtmakerij, en vooral: hun uitstekende organisatie, waartegen het in talloze sekten versnipperde heidendom niet op kon.

Juist hun organisatie maakte hen in de ogen der wereldlijke overheid staatsgevaarlijk. De weigering der Christenen om op de keizerlijke altaren te offeren, was dan ook meer een voorwendsel dan de eigenlijke oorzaak geweest van vroeger vervolgingen. Neen, de oorzaak waarom de keizers hen vreesden was hun hecht aaneengesloten, over heel het rijk vertakte kerk-verband, waardoor zij macht hadden over duizenden en als 't ware een *Staat in de Staat* vormden.

Dit was voor hen even onduldbaar als bijvoorbeeld later de geprivilegieerde macht der Hugenoten voor Richelieu.

Slechts een geringe verzwakking van het centrale absolutistische gezag, slechts een sterker verbreiding van het Christendom zou nodig zijn om van de bisschoppen *plaatselijke vorstjes* te maken. De verdere geschiedenis, het ontstaan der wereldlijke macht van paus en prelaten, heeft dit bewezen.

Galerius' enige, herhaalde raad aan zijn schoonvader moest dus wezen: Druk het Christendom met alle kracht de kop in, voor het te laat is.

Ook de keizer werd de nieuwe religie hoe langer hoe slechter gezind, maar terwijl Galerius als houwdegen er dadelijk op los wou slaan was hijzelf als ervaren staatsman voorzichtiger. Immers aan 't hof of in 't leger waren nog vele Christenen. Die moest men eerst verwijderen, om op beide machten volkomen te kunnen vertrouwen.

Een voorwendsel om het paleis te ontkerstenen was spoedig gevonden. De mislukking van een offerwichelarij werd toegeschreven aan Christelijke hovelingen, die het kruis hadden geslagen en zo de goden vertoornd. Dat dit slechts een voorwendsel was van Diocletianus en niet de ware oorzaak (zoals bijvoorbeeld O. Seeck aanneemt), volgt uit het feit, dat hij al 15 jaar lang bij alle mogelijke gelegenheden Christelijke hovelingen had toegelaten, en hij dus al veel eerder over hun kruis slaan geklaagd kon hebben. Nu greep hij slechts naar een welkome kans om de christelijke invloed in zijn paleis te vernietigen. Hij stelde namelijk het offeren verplichtend voor alle hovelingen, ook voor zijn eigen Christenlijk-gezinde vrouw Prisca. De meesten gingen hierop - althans uiterlijk - tot het heidendom over, doch enkelen, Christen gebleven, bleven ondanks de bedreigingen van de keizer, nog in het paleis geduld.

Daarna werden - onder voorwendsel, dat de heidense oud Romeinse ritus voor de veldslag noodzakelijk was - alle Christenen uit het leger gestoten. Dit was nodig om de trouw van de troepen, in geval van troebelen te verzekeren.

Maar Galerius, de fanatische heiden, was daarmee niet tevreden. Hij drong aan op volstrekte, strenge vervolging over alle standen van het rijk. Lang bood de voorzichtige grijsaard hem weerstand en wees er op, "hoe verderfelijke het zou zijn, de hele aarde te verontrusten en het bloed van velen te vergieten" 19).

Toch stemde hij erin toe, een geheime raad van juristen en militairen bijeen te

- 130435 roepen, om erover te beraadslagen. Hier vond Galerius de meeste bijval. Nog wilde de keizer, voor alle zekerheid, in zijn heidens bijgeloof het orakel van Apollo raadplegen. Pas toen deze "als vijand van de goddelijke religie" 19), antwoordde, begon de vervolging, die de keizer aanvankelijk *niet bloedig* bedoelde, maar toch weldra door noodlottige samenloop van omstandigheden, in de grootste gruwelen
- 130440 ontaardde.
De eerste vervolgingsdaad was: het doen ontruimen van een kerk, waar alle heilige schriften, die men er vond, werden verbrand. Daarna werd het gebouw tot de bodem toe gesloopt. Dit gebeurde op de dies Terminalis, de dag aan de god der grenzen geheiligd. De bijgelovige keizer wou daarmee een grens of einde maken aan het
- 130445 Christendom (23 februari 303).
De volgende dag werd het eigenlijke vernederings-edict openlijk aangeplakt. Hierbij werden godsdienstige samenkomsten aan Christenen verboden, bevel gegeven hun kerken te slopen of te sluiten, hun heilige schriften te doen uitleveren en verbranden, terwijl hun de toegang tot ereambten en staatsbetrekkingen werd geweigerd. Verder
- 130450 mocht geen Christelijke slaaf rechtsgeldig vrijgelaten worden, en werd voor procederende partijen bij de rechtbank het offeren verplichtend gesteld, waardoor geen enkele Christen ooit als aanklager kon optreden, terwijl ook tegen geprivilegieerde Christenen (uit de hogere standen) foltering geoorloofd werd. Toen een Christen dit plakkaat honend had afgerukt, werd hij gearresteerd en stierf
- 130455 als eerste martelaar. Natuurlijk steeg, nu er eenmaal bloed gevloeid was, van weerszijden de verbittering.
Daarna brak tot tweemaal toe een brand uit in de vleugel van het paleis, waar de keizer woonde. Galerius gaf daaraan – en waarschijnlijk met recht – de schuld aan wraakzuchtige Christenen. Enige hof-beambten (Petrus Dorotheus en Gorgonius), hiervan verdacht, werden gemarteld en omgebracht.
- 130460 Ja, de keizer, hevig vertoornd omdat men hem in zijn eigen huis levend had willen verbranden, beging nu de onbillijkheid, de schuld van weinige, op alle Christenen in Nicomedia te schuiven. Deze werden als brandstichters voor het gerecht gesleept, gefolterd en ter dood gebracht. Het aantal martelaars, die vielen voor hun geloof,
- 130465 was ontzettend. Natuurlijk maakte de gewijde sage zich later daarvan meester, zodat in de heiligenverhalen ons de namen van *Adrianus* en *Genesius* worden overgeleverd. Adrianus was rechter in Nicomedia en werd door het standvastig gedrag der Christenen, die voor het tribunaal weigerden met het verplichte offer hun geloof te verloochenen, tot hun godsdienst bekeerd en daarna zelf terechtgesteld. Genesius was hoftoneel-
- 130470 speler des keizers, die de opdracht had, de dood van Adrianus, tot smaad van de Christenen, tragikomisch uit te beelden op de planken. Maar hij had zich door zijn rol zo ingeleefd in het waarachtige karakter van de martelaar, dat hij werd ontroerd en opeens "getroffen door de goddelijke genade". Zo beleed hij dan in de laatste akte van het gelegenheidsspel, heldhaftig, voor keizer en hof, zijn nieuw geloof en vond
- 130475 in de vuurdood zijn martelaarsglorie. Deze legenden hoe treffend ook getuigend van de helse sfeer van bloed en vlammen die toen het Oosten doorlaaide, zullen wel niet waar zijn gebeurd. Want anders had de Christelijke apologeet Lactantius die zo op de hoogte blijkt van de toenmalige toestanden in Nicomedia en geneigd is tot anekdotes en melodramatische overdrijving de namen van zulke vermaarde martelaars wel gegeven.
- 130480 Na dit strenge strafgericht in de hofstad, vernam de keizer tijdingen van een opstand in Syrië, waar een usurpator Eugenius zich opwierp. Waarschijnlijk was dit het werk van afgedankte, gebroodroofde Christensoldaten. Althans Diocletianus hield het er voor, en na onderdrukking van de opstand besloot hij tot verscherping van de vervolging over het hele rijk.
- 130485 Hij gaf zijn mede-augustus, zijn 2 caesars en zijn proconsuls bevel, om alle Christenen – vanaf de bisschoppen tot aan het minste gemeentelid – gevangen te nemen en door alle denkbare martelingen ze te dwingen om zich te bekeren tot het heidendom. Doch de praktisch uitvoering van dit decreet ("rescript") was overal verschillend.
- 130490 De Westerse augustus, Maxiamianus, een persoonlijke vijand van Galerius, wiens raad men, inzake de vervolging, niet had gevraagd, viel (meer uit gevoel van beledigd-zijn dan uit medelijden) de Christenen zo min mogelijk lastig, en stelde zich tevreden hun kerken te sluiten en hun heilige schriften op te eisen. Hetzelfde deed zijn caesar, de verdraagzame Constantius Chlorus.
- 130495 Maar in 't Oosten en in Afrika, waar fanatiek-heidense proconsuls heersten, werden talloze nieuwe middelen uitgevonden om de ongelukkigen te folteren. Gloeiende roosters, openlijke schoffering van maagden, afsnijding van de borsten bij vrouwen, geen gruwel was hun te laag tegen deze gehate sekte.
De gevangenen raakten overvuld, zodat van de nieuw-aangebrachte Christenen de mannen als dwangarbeiders in de bergwerken moesten worden gezonden, en de vrouwen als
- 130500 blanke slavinnen verkocht aan bordeelhouders. En intussen werden zij telkens voor de

rechtbank gemarteld. Zo bijvoorbeeld bisschop Donatus van Carthago, die de gehele vervolgingstijd in de kerker zat en intussen achtmaal op de pijnbank werd gespannen. Maar die vervolging was meteen een zuivering in de gelederen der gelovigen. De niet-overtuigden en onverschilligen vielen bij grote scharen af (lapsi) tot het heidendom, of leverden uit vrees hun heilige schriften uit (traditores). De overigen vormden een vurige, godgewijde schare, die de dood getroost, gaarne stierven met de naam van Christus op hun lippen.

Als een vreselijke pest-epidemie woedde de heidense onverdraagzaamheid, zijn laatste krachten zamelend, tegen de nieuwe godsdienst. Galerius, de conservatief, had dus zijn zin gekregen. Ook zijn invloed op de afgeleefden, door bijgeloof verbijsterde opperkeizer, werd steeds groter.

Deze was danig geschokt door de gebeurtenissen der laatste jaren. Zelfs hovelingen, die hij vroeger het meest vertrouwde, had hij, uit vrees voor de Christenen vermoord; hun hele sekte met alle aanhangers gevangen gezet en doen martelen. En nog hielp het niets; de arglistige Christengod bleef zijn belijders steunen in hun koppig verzet tegen de keizer en de goden van de staat.

Als ijverig vorser der toekomst, zowel uit vogeltekenen als gesternten, en gekweld door kwade voorgevoelens, meende hij dan ook, dat dit alles weinig goeds voorspelde, noch voor de verdere regering van hemzelf, de aardse Jupiter, noch voor zijn ambtgenoot daarboven in de Olympische hemel.

Bovendien snakte hij ernaar, de geweldige bloedschuld, die hij op zijn geweten had geladen, met de last van het gezag en de verantwoording voor verdere vervolging van zich af te werpen.

Dit laatste was juist ook de wens van zijn schoonzoon Galerius, die, zelf eierzuchtig reikhalzend naar de troon, alles deed om de grijsaard te stijven in diens plan om na de viering van zijn Vicennaliën af te treden. Bij dit twintigjarig regeringsjubileum, in 303 te Rome gevierd, waarbij ook Maximianus Herculus was verschenen, werd ook deze door de opperkeizer (maar op raad van Galerius) tot de plechtige eed gedwongen tegelijk afstand te zullen doen. Hijzelf, Galerius, zou opperkeizer worden;

Constantius Chlorus zijn mede-augustus. Tot aanstaande caesares wist hij twee creaturen van hemzelf, Severus voor het Westen en Maximinus Daja voor het Oosten, benoemd te krijgen. Dit met duidelijk voorbijgaan van de jonge, eierzuchtige Constantijn, die toen eerste luitenant 20) was in 't keizers lijfwacht, en er stellig op gerekend had, eens Caesar te worden. Maar Galerius had hem in ongenade doen vallen bij de keizer, daar hij het nodeloos moorden tegen de Christenen had durven afkeuren. Ook vreesde hij hem waarschijnlijk als toekomstig mededinger. Hij zond hem althans opzettelijk met te weinig troepen op gevaarlijke expeditie tegen de Daciërs, in de hoop hem te doen sneuvelen. Maar Constantijn overwon en bleef in leven.

Intussen had Diocletianus, na de terugkeer van zijn reis naar Rome, door de vermoeienissen ziek geworden, in Nicomedia openlijk afstand gedaan van de troon; Maximianus Herculus eveneens tegen wil en dank te Milaan. Zo was dus Galerius de nieuwe heer der aarde. Hij riep zijn officier Constantijn naar de hofstad en eiste diens eed van trouw. Deze kwam en voldeed daaraan. Maar aan 't paleis hield de argwanende Galerius hem vrijwel in gijzeling, mogelijk om een pand van trouw te hebben van zijn vader, zijn pas benoemde mede-augustus Constantius. Toen die evenwel zijn zoon naar het Westen riep, en de opperkeizer hem nog niet los wou laten, besloot Constantijn te ontsnappen.

In vroegste dageraad, toen hof en heerser nog sliepen, reisde hij, na de koetsierpostmeester te hebben omgekocht, in diens uniform vermomd, weg met de wagen van de keizerlijke posterij. Om alle vervolging te ontkomen, liet hij bij elk nieuw station, waar de paarden werden afgespannen en voor verse verwisseld, de pasgebruikte doden 21). Zo bereikte hij de Bosporus en vandaar naar de overkant gevaren, na een lange, avontuurlijke tocht door Thracië, Illyrië, Germanië en Gallië, bij Boulogne het zeestrand. Toen stak hij over naar Engeland, waar zijn vader vertoefde, bij wie hij veilig was voor de aanslagen van Galerius.

DE OPKOMST VAN CONSTANTIJN.

Met Constantijn treedt, na Julius Caesar, de grootste veldheerstaatsman in de Romeinse geschiedenis. Tevergeefs heeft Eusebius hem tot een oog-verdraaiende kwezel willen maken; tevergeefs heeft de Grieks-Katholieke kerk zijn keizershoofd met een totaal overbodige heiligen-krans pogen op te sieren. Hij was geen heilige en zelfs geen vrome, hij was eenvoudig een groot, amoreel staatsman, die door al zijn eigenschappen, zowel zijn z.g. "deugden" als zijn "gebreken" was voorbeschikt om in zijn tijd te heersen.

Reeds zijn uiterlijk had hij voor. Wij kunnen er slechts naar raden, daar op munten zijn kop is geïdealiseerd en het enige z.g. standbeeld van Constantijn, afkomstig van

diens triomfboog in Rome (waar het bovenop stond) eigenlijk niet naar hem, maar naar Trajanus is gebeeldhouwd (het stond op diens triomfboog), en pas later, zo goed en zo kwaad als het ging, naar Constantijn is... *bijgewerkt!!!* Laat ons dus, noodgedwongen, afgaan op beschrijvingen.

Welgebouwd en breedgeschouderd, met het van zijn vader geërfde stoere Illyrische type, droeg hij op de gespierde nek een kop, die met zijn vlamme en toch onbeweeglijke ogen, en regelmatige trekken tegelijk innemend en ontzagwekkend werkte. Onvermoeibaar op lange marsen, onstuimig en steeds vooraan in de aanval, tot in 't roekeloze toe, was hij tevens een berekenend strateeg. Bemind bij zijn manschappen, wende hij ze toch aan zo strenge tucht, dat ze nooit zonder zijn toestemming durfden te plunderen of zelfs gevangenen te beroven. Van jongs af aan gewend aan bloedvergieten, minachtte hij medelijden als een zwakheid en was nodeloos wreed. Vroeg getrouwd, bleef hij vrij van ontucht.

Als staatsman verstond hij uitstekend de kunst tot veinzen, wat zowel zijn veelvuldige woordbreuk als zijn latere uiterlijke Christengezindheid begrijpelijk maakt. Maar deze trek tot huichelarij wist hij te bedekken met een minzame glimlach van zijn gelaat, dat hij gladgeschoren droeg om te lijken op Mithras-Helios-Apollo, zijn lievelingsgod.

Maar vooral was hij geducht door zijn demonische kracht van sympathie-uitstraling en wilsoplegging over miljoenen, waardoor alles neder boog voor zijn niets-ontziende eerezucht, evenals later Napoleon.

Geen wonder dan ook dat hij haast onmiddellijk bij zijn aankomst in Brittannië zijns vaders leger voor zich wist in te nemen.

Hij kwam nog juist op tijd. De oude Constantius Chlorus, nog steeds, ondanks zijn benoeming tot augustus, wegens oorlog in Engeland vertoevend, voelde zijn einde naderen en had daarom zijn zoon tot zich geroepen. Zijn kinderen uit het tweede huwelijk waren nog minderjarig en in Constantijn zag hij de enige, die zijn werk kon voortzetten als hij stierf. Maar toch was de oude nog krachtig genoeg om samen met zijn zoon een zegevierende veldtocht tegen de Picten en Scoten in 't Noorden te houden. Na deze laatste krachtsinspanning stierf hij te Eboracum (York) (306).

Dit stelde zijn half-barbaarse legioenen geweldig teleur. Men had gehoopt, na het augustus-woorden van Constantius, naar het rijke Zuiden te trekken, waar buit en fortuin te behalen viel, en nu was hij dood! Maar het kon nog steeds, als zijn buitengesloten zoon hun aanvoerder werd. Wat kon hun het verbod van de afgedankte Diocles eigenlijk schelen! Geen wonder dus, dat zij op aanstichten van de Alemanse officier Ercus, Constantijn, bij diens uitrit uit het dodenhuis, het keizerlijk purper over de schouders wierpen. Wenend, terwijl hij zijn paard de sporen gaf, zou deze zich hieraan hebben gepoogd te onttrekken. 22) Het roerde hem, dat deze ruwe, ruiggebaarde veteranen, hun trouw aan zijn pas gestorven vader nu overbrachten op hem, de nauwelijks gekende zoon, maar hij vond het waarschijnlijk piëteitloos tegenover zijn vader, nu, zo gauw al, het purper te aanvaarden. Of waren het vreugdetranen over de snelle bevrediging van zijn eerezucht, die hij nu nog onder valse bescheidenheid verborg? Hoe het ook zij, hij overwon zijn aarzeling spoedig en zond aan Galerius boden, om diens erkenning te krijgen.

Nog in 't zelfde jaar stak hij over zee en dreef de Franken, die met verbreking van de vrede Gallië waren binnengevallen, over de Rijn terug, waarna hij tot straf hun land, vooral dat van de Bructeren, plunderde en verwoestte. Al het vee werd geroofd, de dorpen in brand gestoken, zodat maar weinig vluchtelingen (met vrouwen en kinderen?) in de ruige vrijplaats der wouden konden ontkomen. Twee Germanen-koningen, Ascaricus en Regaisus, met hun meeste weerbare mannen werden gevangen genomen en tot viering van zijn eerste triomf, liet de keizer deze blonde barbaren voor de beren werpen in zijn arena te Trier. Zo groot was het aantal dier halfnaakte van vrees opeengedrongen ongelukkigen, dat zij de wilde beesten afmatten door hun massa vlees 23).

Ondanks deze wreedheid, zelfs in strijd met het toenmalig krijgsgebruik, gevangen vorsten te sparen, prijst de veile, Gallische lofredenaar de graag-gevreide keizer, dat hij met deze bloeddaad voorbeeldige schrik verspreidde onder de vijanden van het rijk. Wie waren hier de eigenlijke "barbaren", Romeinen of Germanen? 24).

Intussen had Galerius, die zelf te weinig troepen had, om Constantijn daarginds helemaal in 't Noorden te bestrijden, *noodgedwongen in diens usurpatie berust*, maar erkende hem niet als augustus, doch als *caesar*. Hij stond dus onder Severus, die nu van caesar keizer van het Westen zou worden. Maar daar deze nog steeds ongevaarlijk in 't Oosten verbleef, nam Constantijn met die benoeming genoegen.

Een logisch gevolg van deze later gewettigde usurpatie was, dat de eveneens buitengesloten zoon van de ex-keizer Maximilianus, in Rome ook het purper bemachtigde. Maar deze, Maxentius, *kreeg nooit daarvoor de wettige erkenning van*

Galerius, zodat hij, in tegenstelling met Constantijn, van 't begin tot het einde bleef: de "tyrannus" of usurpator.

130635 Wat voor man was Maxentius? Zijn uiterlijk werd – maar door zijn vijanden – bespot als verachtelijk klein, en met slappe kromme beentjes 25). Over zijn karakter zijn alle zegslieden het vrijwel eens. Onevenwichtig zoon van een door-en-door-barbaarse Illyrische vader, en een waarschijnlijk hoogbeschaafde, Syrische moeder, Eutropia, had hij van de eerste zijn hoogmoed, wreedheid, bijgeloof en grove genotzucht, van de
130640 tweede zijn arglistig intrigerende eerezucht geërfd. Uit antipathie tegen zijn vader leefde [hij] lui en losbandig op zijn landgoed, 6 mijlen buiten Rome. Maar Constantijns verheffing wekte zijn nijd, en spoorde hem aan diens voorbeeld te volgen. Wellicht waande hij het keizerschap een makkelijk middel tot nog buitensporiger uitspattingen dan hij gewoon was. Lafheid weerhield hem evenwel,
130645 zichzelf nu reeds openlijk als heerser op te werpen. Liever bleef hij eerst nog veiligheidshalve *achter de schermen* intrigeren. Want hij was geen willoos creatuur der pretorianen, zoals O. Seeck ten onrechte beweert (vgl. Zosimus, II, 9). Zijn passiviteit bij zijn verheffing was maar schijn. Hij keek eenvoudig de kat uit de boom. Door kosteloze koren-uitdeling won hij alvast aanhangers onder het volk;
130650 door geldelijke omkopingen onder de *pretorianen*. Nu waren beide partijen, lijfwacht en burgerij, al van te voren uiterst ontevreden, dat Rome geen keizerstad meer was; de lijfwacht omdat zijn vroegere rol van paleisrevolutie en nieuwe keizers te maken was uitgespeeld; terwijl het neringdoende volk sinds de verdwijning van het hof niet veel meer verdiende en de senaat van
130655 politieke invloed bleef uitgesloten. 26) Met recht weet men dan ook de algehele achteruitgang van Rome aan de verplaatsing der regering naar de provinciën 26). Toen dan ook, ten teken van Constantijns erkenning door Galerius diens nieuwe caesars-standbeeld in Rome werd tentoongesteld, raakten volk en soldaten in oproer. Men wenste een eigen keizer in Rome. Onder leiding van de
130660 tribunen Marcellus en Marcellinus en de aediel Lucianus, allen handlangers van de nog onzichtbare Maxentius, werd de gehate quaestor Abellius, 26) die hun plannen poogde te verijdelen, vermoord als aanhanger van Galerius. Daarna begaf zich 'n troep pretorianen naar het landgoed van Maxentius en bood hem, juist wat hij gewent had, het *keizerlijk purper* aan. In Rome gehuldigd, ontving hij weldra de
130665 bijvalsbetuigingen van heel Italië, waar men overal ontstemd was over de verregaande bevoorrechtiging der provinciën en terugkeer van de vroegste keizertijd wenste. Maar in deze nieuwe usurpatie kon Galerius niet berusten. Hij stuurde zijn mede-augustus Severus (wettige opvolger van Constantius Chlorus) naar Italië, om de opstandige hoofdstad weer te onderwerpen. Nu was Maxentius in nood. In doodsangst
130670 voor een moorddadige nederlaag, riep hij de hulp in van zijn vader, die nog altijd wrokte over zijn troonsafstand op een landgoed in Lucanië. De oude Maximianus stemde toe zijn zoon te helpen, maar alleen op voorwaarde dat hijzelf weer augustus zou worden. Daarop haalde hij de oude purpermantel, hoewel ietwat mottig geworden, weer uit zijn klerenkast, en begaf zich zo uitgedost naar zijn angstige zoon in Rome, die
130675 alles goedvond. Maar zijn ingrijpen had een onverwacht gevolg. Severus' troepen bestonden grotendeels uit de z.g. Moorse (Mauretaanse) regimenten, die eens onder Maximianus hadden meegevochten in diens Afrikaanse oorlog. Toen zij nu hoorden, dat het niet alleen tegen Maxentius ging, maar ook tegen zijn vader, hun oude keizer en veldheer, wie zij
130680 eens trouw hadden gezworen, weigerden zij tegen hem te vechten en liepen (bovendien door beloften van beloning gelokt) vlak voor de muren van de hoofdstad, die zij moesten belegeren, tot hem over. IJlings moest Severus vluchtten naar Ravenna. Hier wist Maxentius, die opzag tegen een lange belegering, hem vanachter de wallen te voorschijn te lokken, onder voorwendsel van persoonlijke onderhandelingen. Maar
130685 eenmaal in zijn legerkamp, nam hij hem gevangen en hoewel de oude Maximianus hem lijfsbehoud had beloofd, werd na diens vertrek naar Gallië de ongelukkige bedrogen Severus door de onbetrouwbare Maxentius verraderlijk vermoord. Om zijn dood te wreken voerde de vertoornde Galerius zelf een nieuw leger tegen de usurpator aan. Maar ook hierin drongen handlangers van Maxentius door, die rijkelijk
130690 goud rondstrooiden onder de soldaten, zodat ook deze troepen, omgekocht, grotendeels tot hem overliepen. Plunderend uit wraak, trok Galerius met de rest terug. Intussen was de verstandhouding tussen vader en zoon hoe langer hoe slechter geworden. Nu het gevaar voorbij was had Maxentius zijn vader, die hem feitelijk had gered, niet meer nodig. Ondankbaar en piëteitsloos genoeg, poogde hij zich van diens
130695 lastige mede-regering en vaderlijk toezicht te ontdoen. Maar ook de vader deed hetzelfde tegenover zijn zoon. In 't leger, weer gedund tot louter pretorianen – de Moorse regimenten moesten juist in Afrika een opstand bedwingen – verklaarde hij Maxentius ongeschikt voor het opperbevel. Zelfs zou hij

hem, volgens een ander zegsman, het purper van de schouders hebben gepoogd te scheuren. Hieruit bleek zonneklaar zijn eigen streven naar de volstrekke macht. 130700 Natuurlijk beantwoorden de soldaten, door Maxentius' geschenken aan hem verplicht, de oude met een gehuil van honend protest. Toen redde deze zich eruit door te beweren, dat hij eenvoudig uit vaderliefde *de gevoelens van het leger jegens zijn zoon had willen peilen* 27). Toch vond hij het maar veiliger zich uit de voeten te maken, naar 130705 Gallië. Hier wilde hij, teleurgesteld in zijn eierzucht, bij Constantijn proberen, wat hem bij zijn zoon was mislukt. Als lokaas moest daartoe dienen zijn jongste dochter Fausta. 28) (De oudste, eigenlijk zijn stiefdochter, was al veel vroeger uitgehuwd, aan Constantius Chlorus).

Met dit huwelijk en de Augustus-titel poogde Maximianus Constantijn te winnen voor 130710 zijn plan, hem tot opperkeizer te maken. Maar na de trouwdag, toen de buit eenmaal binnen was, stak zijn schoonzoon geen hand voor hem uit.

Omstreeks die tijd belegde Galerius, ten einde raad na zijn mislukte expeditie tegen 130715 Maxentius, een congres te *Carnuntum*, waarbij behalve Diocletianus, ook Maximianus Herculus was genodigd. Toen deze beide oude wapenbroeders elkaar hier wederzagen, voelden zij maar al te duidelijk hoeveel de jaren hen hadden verwijderd. Welk een contrast tussen de gelaten kluizenaar van *Salona*, die een kalme eenzaamheid had verkozen boven de wereldheerschappij en de onrustige, nog steeds eierzuchtige ex-keizer van het Westen! Tevergeefs poogden dan ook en Galerius en Maximianus hun 130720 vroegere opperheer te overreden weer ten trone te stijgen en door zijn gezag aan de verwarring een einde te maken. "Als jullie in Salona m'n groente zagen, die ik met eigen handen heb opgekweekt, dan zou je dadelijk oordelen, dat ik dit nooit moest proberen," was zijn antwoord 29). Ja, zelfs wisten hij en de belanghebbende Galerius de ex-keizer van het Westen te bewegen, het geusurpeerde purper weer neer te leggen. Hun beider tijd was immers voorbij. In plaats van de (door Maxentius) vermoorde 130725 Severus, wist Galerius tot nieuwe augustus van het Westen een oude strijdmakker van hem benoemd te krijgen: *Licinius*, die zich vroeger met hem samen op een veldtocht in Dacië onderscheiden had.

Diocles keerde naar zijn moestuinen in Dalmatië terug, maar zijn ex-collega begaf zich naar Gallië. Nog steeds verbitterd over zijn machtsverlies, voelde hij weldra 130730 spijt over zijn belofte en besloot hier tot een *staatsgreep*.

Van de afwezigheid van zijn schoonzoon, die juist in het Noorden opnieuw tegen de Franken en Alemannen vocht, maakte hij misbruik, door kroonschat en krijgskas te bemachtigen en zich in het sterke Arelatum (Arles) te nestelen. Maar Constantijn kwam 130735 ijlings terug om zijn plan te verijdelen. Hij vluchtte naar Massilia. Zijn geworven huursoldaten leverden hem echter aan de belegeraar uit. Nadat deze, op de smeekbeden van zijn vrouw, Maximianus' leven had gespaard en hem vrijliet, poogde de vergrijsde intrigant zijn schoonzoon in diens slaapkamer te vermoorden. Maar zijn dochter Fausta wist het geheim van die aanslag hem uit te horen en verried dit aan haar man, wiens leven zij liever redde dan dat van haar vader nog langer te ontzien. Men legde een 130740 gebrekkig en onbruikbaar eunuch in plaats van Constantijn in het echtelijk bed en schoonzoon en dochter, achter een gordijn verscholen, waren getuigen hoe de oude Maximianus, 's nachts de kamer binnengeslopen, zijn gewaande vijand eigenhandig doordolkte. (Lact. de mort, c. XXX).

Op heterdaad betrapt, werd de oude veroordeeld tot een dood naar eigen keuze. Hij 130745 liet zich worgen. (Volgens anderen werd hij door Constantijn gehangen).

Daardoor waren er maar twee mededingers in het Westen overgebleven: Constantijn en Maxentius. Want Licinius, hoewel de wettig-benoemde augustus van het Westen, vond het voorlopig veiliger (bij gebrek aan troepen?) in het Oosten te blijven, aan het hof 130750 van Galerius, en gedroeg zich alsof hij die eens zou opvolgen.

Dit zou spoedig gebeuren. Galerius lag op sterven aan een ongeneselijke kwaal, waarschijnlijk laatste stadium syfilis 30). Zijn Christelijk-gezinde vrouw Valeria weet deze ziekte natuurlijk aan Gods wrekende hand en overreedde hem nu eindelijk de Christenvervolging te staken.

Galerius, hoewel hij heiden bleef, wilde zich toch met de blijkbaar vertoornde 130755 Christen-god verzoenen en stemde toe, temeer omdat het doel van de vervolging, massabekeerlingen der "ongelovigen" tot het heidendom, toch was mislukt. Zo vaardigde hij het tolerantie-edict van 311 uit, dat eer machteloze wrok dan verzoening ademt en vooral merkwaardig is, door zijn bijgelovig verzoek aan de Christenen, hun zo machtige God voor zijn genezing te bidden. Maar tevergeefs, hij stierf nog in 't 130760 zelfde jaar en werd opgevolgd door Licinius als opperkeizer, die evenals Constantijn, het edict mede had ondertekend.

Alleen Maxentius, de niet-erkende usurpator van Italië en Maximinus Daja, de vroegere caesar van het Oosten, die ter wille van Licinius was gepasseerd, deden daaraan niet mee. Maxentius, die nog wel eerst om Galerius te plagen de Christenen had gespaard,

- 130765 werd na diens verdraagzaamheids-edict plotseling Christenvervolger, waardoor hij domweg Constantijn in de kaart speelde.
- Maximinus Daja, die door Licinius van de opvolging over het Oosten was beroofd, verklaarde hem de oorlog. Maar de ander, hoewel hij sterker stond, voelde zich nog niet voor de strijd gereed en wist door persoonlijke onderhandelingen, op een schip
- 130770 in de Hellespont, Daja tot voorlopige verzoening te bewegen. Licinius werd bevestigd in zijn bezit van het Balkan-schiereiland; Maximinus Daja, behield, voortaan ook augustus betiteld, het verdere Oosten met de hoofdstad Nicomedia, dus verreweg het belangrijkste deel.
- Deze Maximinus Daja wordt ons voorgesteld (door Lactantius en Aurelius Victor) als
- 130775 een half-barbaarse jongeman van boerse afkomst, die zich door zijn ruwe vastberadenheid en overtuigd heidendom hoog had weten op te werken in de gunst van Galerius. Voor deze had hij althans niet ondergedaan in onmenselijke Christenmartelingen en ook na diens tolerantie-edict (311) zette hij ze heimelijk en wederrechtelijk voort. Volgens Lactantius was dit te wijten aan zijn ingeboren
- 130780 boosheid, maar de heiden Aurelius Victor vergoelijkt zijn misdaden als meestal bedreven in dronkenschap. Dan kreeg hij vlagen van de wreedste bloeddorstigheid en de laagste lusten; bracht onschuldigen van beide seksen om ze geld af te persen op de pijnbank en liet schone vrouwen en knapen uit de omtrek roven tot buitensporige uitspattingen. Doch zelf bewust van zijn verslaafdheid aan de drank, had hij zijn
- 130785 dienaars in gemoede verzocht, nooit zijn bevelen uit te voeren, voor hij weer nuchter was. Want dan kreeg hij meestal wroeging, zo hij wandaden had gepleegd. Hij leed dus blijkbaar periodiek aan die caesaren-waanzin van beurtelings bruut *genieten* en *vernietigen*, een ziekte, die zovele half-beschaafde heersers van de voor hen te hoge troon heeft neergestort.
- 130790 Na de dood van zijn voorganger Galerius was zijn eerste daad zich meester te maken van het keizerlijk paleis in Nicomedia. Hij had namelijk zijn trouwlustige ogen geslagen op Valeria, de keizerin-weduwe. Was het alleen om haar persoonlijke bekoring, zoals Lactantius wil? Mij dunk, er was nog een andere, politieke reden daarvoor. Immers aan haar gunstig-gezinde invloed dankten de Christenen het
- 130795 verdraagzaamheids-edict van de stervende Galerius. Thans, na zijn dood, dreigde het gezag van die sekte, die Maximinus Daja meer dan iets anders haatte, hand over hand toe te nemen, wijl beide vorstinnen zich steeds meer met Christelijk gevolg omringden. Het was dus uit *zelfverdediging*, dat hij – met zachtheid of anders met geweld – haar moest pogen over te halen tot een huwelijk met hem, de fanatieke
- 130800 heiden, om daarmee openlijk haar overgang te tonen. Daartoe bood hij haar zelfs aan, zijn eigen vrouw te verstoten. Maar zij weigerde met grote waardigheid, "wijl de doden-as van haar gestorven man nog lauw was". (Lact. de mort., c. 39). Toen nam de tiran andere maatregelen. Liefdeswraak, zoals Lactantius wil, kan het niet of niet alleen zijn geweest, maar hij wilde in haar vooral de beschermster der Christenen
- 130805 treffen. Ware zij waarlijk goedheidens geweest, dan zou hij met haar vervolging 'nodeloze wreedheid hebben begaan, nog wel jegens de dochter van zijn oude weldoener en geloofsgenoot Diocletianus en dus tegen Daja's eigen belang. Nu viel zijn wraakoefening samen met en was waarschijnlijk *gelijksoortig* aan zijn *hernieuwde vervolging* tegen de Christenen 31).
- 130810 Hij onteigende Valeria's paleis en verdere bezittingen en deed haar eunuchen en slaven voor haar ogen martelen. Twee van haar getrouwde vriendinnen – waarschijnlijk Christinnen, die haar stijsden in haar verzet – liet hij (volgens Lactantius) door een omgekochte Jood van overspel betichten en leverde ze aan beulshanden over. Valeria zelve werd met haar moeder Prisca verbannen naar een oase in de Syrische
- 130815 woestijn. Van hieruit schreven zij wanhopige brieven naar haar man en vader Diocletianus, om haar beide door zijn bemiddeling te verlossen. De oude man zond tal van smeekbrieven hiertoe aan Maximinus Daja, maar kreeg geen antwoord. Daarop zond hij een zijner bloedverwanten als bode, maar zonder uitwerking.
- Men kan begrijpen, hoe dit alles: de mishandeling van zijn eigen vrouw en dochter, de
- 130820 usurpaties van Constantijn en Maxentius, de beulsdood van zijn vroegere wapenbroeder Maximianus Herculus, de eenzame ex-keizer verbitterde en zijn droom van een blijde rustige oude dag in teruggetrokkenheid verstoorde.
- Intussen had Maxentius zijn positie in Rome danig verzwakt, zowel door zijn sinds 311 plotseling begonnen vervolging der Christenen (waarover vroeger), als door zijn
- 130825 groeiende *impopulariteit* bij *senaat* en *volk*.
- Toen dit regeringscollege, over zijn autocratisch optreden ontevredenheid uitte, begon hij gerechtelijke moorden tegen senatoren, waardoor hij meteen hun goederen confisqueren kon. Zelfs durfde hij zijn tirannenlusten onbeschaamd uit te leven door dochters en vrouwen tot uit de hoogste kringen te schaken en te misbruiken. (Zonaras
- 130830 meldt zelfs dienaangaande een *Lucretia*-verhaal).

- Ook maakten zijn quaestoren zich schuldig aan afpersingen bij het belasting-heffen. Tenslotte zag ook het lagere volk zich mishandeld door zijn soldaten. Dit gebeurde bijvoorbeeld tijdens de verbranding van de tempel van Fortuna. Een grote menigte snelde toe om het vuur te blussen, maar een soldaat braakte verwensingen uit tegen de
- 130835 godin en werd door het woedende volk gelyncht. (Zos. II, 13). Uit wraak richtten nu de pretorianen een bloedige slachting aan onder de menigte, die pas na grote moeite door Maxentius kon worden gestuit.
- Slechts een gewest deed een poging, zich van zijn drukkende tirannie te bevrijden, namelijk Afrika. Hier werd de stadhouder Alexander, een Pannonier (Aur. Vit.) of een
- 130840 Phrygier (Zosimus) ondanks zijn ouderdom en zijn militaire ongeschiktheid door de troepen met het purper bekleed. Daarop deed Maxentius terstond een tuchtigingsleger onder leiding van Rufius Volusianus inschepen naar Carthago. Deze bedwong de opstand spoedig, nam de usurpator gevangen en liet hem wurgen. Daarop gedroegen de overwinnaars zich hier als in een veroverd land. Nadat denunciatoren alle rijken
- 130845 hadden verraden, die met Alexander in betrekking hadden, gestaan, plunderden de soldaten hun huizen en vermoordden henzelf, waarna hun geld ten behoeve van Maximinus werd verbeurd verklaard. Gehele wijken van de stad werden verwoest. Ook omliggende steden deelden dit lot, zoals bijvoorbeeld Cirta, dat later onder Constantijn zelfs nieuw moest worden opgebouwd en toen verdoopt in "Constantina" (tgw. Constantine).
- 130850 Over de behaalde buit hield Maxentius in Rome triomf, waarbij hij de oude vijandschap tegen het vroeger Punische Carthago poogde na te apen.
- Zo zien we dan in zijn hele gebied: Italië en Afrika zijn heerschappij ontaard in een *militaire terreur*, waarbij de burgerbevolking, geen ogenblik meer zeker van bezit of leven, reikhalzend uitzag naar verlossing.
- 130855 Doch behalve met zijn eigen onderdanen, raakte Maxentius ook met omwonende vorsten op slechte voet. Licinius had hem nooit erkend en zijn zwager Constantijn, die na 310 nog wel een verbond met hem had willen sluiten, was als "moordenaar van zijn vader" ontwaardigd door hem afgestoten. (Hoewel hijzelf zijn eigen vader vroeger niet veel beter had behandeld). Natuurlijk zocht en vond Constantijn toen toenadering tot
- 130860 Licinius, een ervaren militair als hij, wiens steun hem in geval van oorlog te pas kon komen. Als bezegeling van het weldra gesloten verbond, had weldra de verloving plaats tussen zijn halfzuster Constantia en de veertig jaar oudere Licinius. Deze voelde zich toen ook van zijn kant gerustgesteld, te meer daar zijn beide tegenstanders Maxentius, die hem Illyrië dreigde te ontrukken, en Maximinus Daja, zijn oude vijand, in 't Oosten zich reeds met elkaar verbonden hadden.
- 130865 Zo was dan de oorlog tussen Constantijn en Maxentius en Licinius en Maximinus Daja anderzijds onvermijdelijk. Toch brak de eerste veel eerder uit, wegens de steeds hatelijker verhouding tussen de tiran van Italië en zijn zwager. Tot voorbereiding werven beiden nieuwe huursoldaten. Constantijn in Gallië, Germania inferior en
- 130870 Brittannië; Maxentius in Italië en Afrika. Weliswaar beschikte de laatste over veel meer troepen, maar hij was volstrekt geen militair, laat staan een strateeg, zoals Constantijn. Hij dacht zelfs over een aanvalsplan, 32) door Rhaetië en Helvetië heen tot midden in Gallië en trok daartoe zijn troepen in de Povlakte samen. Maar de eigenlijke toegangspoorten tot Italië, de Alpenpassen in 't Westen, verzuimde hij
- 130875 tijdig te bezetten, zodat ze later openstonden voor Constantijn.
- Intussen had Constantijn, wiens komst toch al vurig verbeid werd door het onderdrukte Italië, dat naar verlossing snakte, zich bij Christenen en verdraagzame heidenen *sympathiek* weten te maken door zich op te werpen als verdediger van Galerius' tolerantie-edict tegenover de Christenvervolger Maxentius. Hoewel zelf nog geen
- 130880 Christen, werd hij daarmee de beschermer van het Christendom. Ten bewijze daarvan liet hij het teken (XP), het z.g. labarum, de Griekse beginletters van Christos, op de schilden der vaandels hechten.
- Ondanks Eusebius' anekdote, dat de keizer in een visioen een vlammeend kruis aan de hemel zou hebben gezien met het onderschrift: *Toi nika* (Overwin hierdoor), ziet men
- 130885 in deze daad *volstrekt geen bekering* van zo'n bloedig heiden tot een godsdienst van weerloosheid en naastenliefde.
- Wat dan wel zijn motieven waren?
- In de eerste plaats zijn *bijgeloof* en echt-heidense symbolenaanbidding. Hij vereenzelvigde eenvoudig met Christus zijn tot dusver uitsluitend vereerde Zonnegod.
- 130890 (Mithras-Helios-Apollo). Immers, diens heilig teken, de svastika (eigenlijk een afbeelding van het "zonnerad") kwam vrijwel overeen met het labarum, zodat dit veldteken ook voor de zo talrijke Mithras-dienaren geen bezwaar kon zijn. Een ander, eveneens bijgelovig motief was: de toorn van de Christengod, aan wie men de verwarring en rampen toeschreef, die het rijk de laatste tijd teisterden, hierdoor te
- 130895 *verzoenen*.
- Bovendien (en dit gaf waarschijnlijk voor Constantijn de doorslag) was het een

geniale politieke zet, om daarmee de nog kleine maar vast aaneengesloten sekte der Christenen als dankbare onderdanen op zijn hand te krijgen. Hij voelde intuïtief, dat men Christenen, met hun gedweeë moraal van onderwerping aan elke Overheid, die hen ontzag in hun godsdienst, gemakkelijker zou kunnen beheersen dan de meer eigengereide, vrijheidslievende heidenen.

Maar het is best mogelijk, dat hijzelf het sprookje van het kruisvisioen in de wereld heeft gezonden om zijn hoofd te omvlechten met een profetisch aureool in de verbeelding van goedgezovige bisschoppen en vromen. Hoe heerlijk lachte hun het denkbeeld aan, dat er eindelijk, net als in 't Oude Testament, een strijder Gods was opgestaan, die de Christenvervolgende tirannen uit de weg zou ruimen en het koninkrijk der hemelen reeds op aarde zou verbreiden! In elk geval liet Constantijn zich deze rol gaarne welgevallen en bewees daarmee zijn zo afstotende huichelarij, een familietrek, die we telkens weervinden in zijn dynastie, maar het sterkst bij zijn latere zoon Constantius.

Maar het was voor hem geen tijd voor religieus gemijmer. Hij moest onmiddellijk zijn maatregelen nemen tot de strijd. Met achterlating van enige regimenten aan de zo (tegen Germanen) beveiligde Rijngrans (Pan. IX, 2), besloot hij, ondanks het afraden van zijn officieren, de veel machtiger vijand *onverwachts* te overvallen. Snel verplaatste hij daartoe zijn troepenmacht naar de voet van de Frans-Italiaanse Alpen, die hij (als Hannibal voor hem en Napoleon na hem) overtrok langs de immer onbewaakte pas van *Mont-Cenis*. (zie boven). Op de helling vermeesterde hij, bij 't omlaag gaan, na kort beleg het stadje Susa (Segusia), dat evenwel genadig voor plundering werd gespaard. (Pan. X, 21). Doch eenmaal afgedaald in de vlakte van Turijn (Taurini) wachtte hem hier het vijandelijke Italiaans-Afrikaanse leger, dat met de pretorianen tot kern, uit 18000 man ruiters in de voorhoede en 170.000 man voetvolk in de achterhoede bestond, dus ongeveer een *dubbele* overmacht. (Zos. II). Tegenover hun echt-Romeinse adelaars verhieven zich de labarum-dragende troepen van Constantijn, merendeels bestaand uit Britse en Germaanse barbaren, onstuimig hunkerend om tegen het gehate Rome te vechten. Met het teken des kruises op hun schilden leken zij de legioenen van de nieuwe tijd, aanstormende op de laatste verdedigers van het heidendom. Maar tevens vertegenwoordigden zij de strijd der opwaarts-strevende provinciën tegen de laatste poging van Italië, door middel van Maximinus' usurpatie, zijn vroegere overmacht te herstellen.

Het eerst vielen Constantijns ruiters (of was het zijn voetvolk?), met ijzerbeslagen knotsen in de vuist, die van de vijand aan, die met man en paard in staal gepantserd (clibanari) haast onverwondbaar leken. Maar door de verrassende slagen van die moorddadige wapens getroffen, tuimelden er velen uit hun zadels en werden vertrapt onder de hoeven der paarden. Na een vreselijke slachting overwonnen de aanvallers. (Paneg. X, 24).

Onmiddellijk opende Milaan, de Cisalpijnse hoofdstad, zijn poorten voor de overwinnaar, die zijn intocht deed onder het gejubel van overheid en volk. Meisjes en vrouwen durfden zich weer op de straten te vertonen, zonder vrees door Maxentius' satellieten geschaakt en onteerd te worden. (Pan. IX, 7). Maar de bijval der bevrijde burgers kon de veldheer niet te lang ophouden. Hij rukte spoedig verder en bezette eerst de *voornaamste vestingen in de Povlakte*, zowel om tot operatie-basis voor de verovering van Midden- en Zuid-Italië te gebruiken als om zich niet de eventuele terugtocht te laten afsnijden. (Vergelijk Napoleons verovering van de vestingvierhoek: Mantua-Peschiera-Verona-Legnago op zijn Italiaanse veldtocht van 1797, al ging het toen tegen Oostenrijk). Zo vielen achtereenvolgens Modena (Mutina), Aquileia en na lange belegering ook Verona in zijn handen. Het garnizoen, dat zich dapper verdedigd had, werd, na overgave, gespaard. Ook Maxentius' andere troepen vochten uitstekend. Maar zij misten alle strategische leiding.

Immers, de dwingeland zelf, bleef uit lafheid in Rome, in plaats van aan 't hoofd van zijn leger op te trekken. Doch daar werd de stemming der half-uitgehongerde bevolking hem steeds ongunstiger, zodat zij haast oversloeg tot oproer. Om ze tot bedaren te brengen, liet hij de ingewanden van offerdieren raadplegen en de Sibyllijnse boeken lezen, ter vorsing van de toekomst. 33) Toen hem dubbelzinnig werd voorspeld, dat degene, die werkte aan de ondergang van het rijk, een jammerlijke dood zou sterven, legde hij dat, in bijgelovige hoop, ten zijnen gunste uit tegen Constantijn 33).

Zo vatte hij dan eindelijk moed, toen zijn vijand reeds tot vlak bij Rome was voortgerukt; en hoewel hij pas, door bange dromen en vrees voor aanslagen gekweld, met vrouw en kind uit zijn paleis naar een geheime woning was gevlucht, trad hij nu "uit zijn schandelijke schuilhoek te voorschijn." (Pan. IX, 16) Eindelijk, na zoveel jaren van laksheid en niets doen, stelde hij zich, in het uiterste gevaar aan het hoofd van zijn trouwe pretorianen. Doch in plaats van binnen Rome te blijven en vanuit de hooggelegen heuvelstad uitvallen te doen naar de belegeraars, waagde hij

opeens al zijn troepen buiten.

Maar hoe stelde deze "slaaf in purper" zijn slagorde op? Overlangs aan de noordoever van de Tiber, zodat hij tussen de vijand voor hem, en de rivier in zijn rug was ingeklemd. Slechts een smalle brug, de pons Mulvia, bleef hem over in geval van terugtocht. Zo moest al de eerste massale aanval van Constantijn, met zijn woeste, in beestenhuizen gehulde barbaren en provincialen, noodlottig werken. Wat niet doorstoken, neergehouwen of doodgeslagen werd, en niet over de nauwe brug kon vluchten, verdronk in het snelstromende water. De usurpator zelf, om een smadelijke dood in gevangenschap te ontgaan, stortte zich, staalgepantserd, met paard en al in de Tiber. Door zijn zwaarte zonk hij terzelfder plaats op de bodem: "het water weigerde zich te bezoedelen met zijn lijk", zodat dit spoedig kon worden opgevist. Zijn hoofd werd op een speer over de muren gehesen, en de Romeinen getoond, om hen te overtuigen van zijn dood. Pas toen dorsten de verlorene burgers zich over te geven aan uitbundige vreugde, en haalden Constantijn, onder feestelijk gejubel, in triomf binnen de stad. Hier, in 't paleis, roeide de keizer het huisgezin van de "tiran", dus zijn ongelukkige weduwe en zoontje Romulus, benevens al zijn aanhangers uit. Daartoe hoorden ook de *pretorianen*, die zijn verheffing hadden veroorzaakt, en zo werd deze garde voor eeuwig afgeschaft.

De senaat, door Maxentius onderdrukt, werd evenwel hersteld, en de families der senatoren waarvan velen vroeger zich uit vrees bij de usurpator hadden aangesloten, liet de keizer wijselijk in leven. Valse aanklagers of *delatoren* die ook de verste relaties van Maxentius poogden te belasteren, werden echter volgens edict van 18 Januari 313 (Cod. Th. 10, 10, 1) met de doodstraf bedreigd. Dit betekende dus: *algemene amnestie*. Zo verwierf Constantijn zich populariteit bij volk en senatoren. In de eerste roes van bevrijdingsvreugde begon het stadsbestuur dan ook een triomfboog op te richten voor Constantijn. Maar toendese feestelijke opwinding voorbij was, bleek men zich Constantijn als verlosser te hebben geïdealiseerd.

De keizer had intussen, ter bestrijding van de oorlogskosten, een algemene *schatting* (census) uitgeschreven voor de hoofdstad (1 december 312). Toen vele aanzienlijken te hoog daarin waren aangeslagen, vermeerderde hij in plaats daarvan de belastingdruk op de lagere burgers. Slechts diegenen onder hen, die konden bewijzen, dat die extra belasting voor hen te zwaar was, hoefden niet meer te betalen dan zij volgens de eerste census op zich genomen hadden (Cod. Th. 13, 10, 1.).

Bovendien kreeg de nieuw-benoemde senaat slechts een eervolle *schijn* van gezag. Ook de zetel der regering werd niet naar Rome verplaatst. Integendeel, zo gauw hij kon, nog eer zelfs de begonnen triomfboog was voltooid 34), reisde de keizer naar Milaan, en betrok daar voorlopig het oude paleis van Maximianus, zonder evenwel een vaste residentie te kiezen, (eind januari 313).

Bovendien had hij hier een samenkomst met Licinius afgesproken. Deze, hoewel Constantijns bondgenoot, had hem niet geholpen in de strijd met Maxentius, waarschijnlijk daar hij hoopte, dat beide tegenstanders, zijn mededingers, elkaar zouden verzwakken, zo niet vernietigen. Hierin was hij bedrogen door Constantijns onverwachte overwinningen. Hij zag nu, dat hij de machtigen collega in 't Westen te vriend moest houden, vooral voor zijn dreigende oorlog in het Oosten met Maximinus Daja. Geen wonder dus, dat Constantijn de ruwe, ongeletterde, aan godsdienst-zaken volslagen vreemde Licinius gemakkelijk kon overhalen, om Galerius' tolerantie-edict van 311 uit te breiden in gunstige zin voor de christenen.

Dit edict had namelijk het bezwaar dat het slechts *dulding* van de christenen bedoelde, maar geen staatsrechtelijke gelijkstelling. (Dus bijvoorbeeld geen toegang tot staatsbetrekkingen die Diocletianus hen had ontnomen). Verder was een brandende vraag onaangeroerd gebleven, namelijk de al of niet teruggave van de geseculariseerde kerkelijke goederen. Dit was natuurlijk de wens van de geestelijkheid; maar vele stukken grond waar vroegere kerkgebouwen stonden of hadden gestaan waren door proconsuls of prefecten hetzij verkocht, hetzij aan gunstelingen weggeschonken. De kwestie werd nu als volgt opgelost:

- 1) Niemand mocht bemoeilijkt worden in zijn godsdienst;
- 2) Aanhangers van alle religies hadden toegang tot staatsbetrekkingen en dezelfde burgerlijke rechten;
- 3) Vroeger kerkelijk goed kregen de christenen terug;
- 4) De gedupeerde nieuwe heidense eigenaars ervan konden door bemiddeling van de stadhouders schadeloosstelling ervoor ontvangen van de staat.

Deze besluiten voegden de keizers samen tot het verkeerdelijk zo geheten "edict" van Milaan, wjl het geen edict is, doch slechts een *rescript*, d.w.z. een rondzendbrief aan stadhouders en prefecten, doch die (evenals een edict) openlijk moest worden aangeplakt. Door dit laatste wordt de vergissing van Eusebius verklaard, die op grond van de openbaarheid het houdt voor een edict, hoewel uit de vorm zelf, waarin hij het

overlevert blijkt dat het een rescript is. (Euseb. Hist. Eccles. X, 5; ook in iets
131030 andere bewoording bij Lactantius. De Mort. XXXXVIII; zie verder noot 35).
Een tweede doel van hun samenkomst was het plechtig huwelijk tussen de 60-jarigen
Licinius en het nauwelijks 16-jarige stiefzusje van Constantijn, Constantia, een
huwelijk zonder liefde, louter om redenen van staat. Op dit bruiloftsfeest nodigden
131035 beide keizers ook de oude, nog altijd levende Diocles. Ongetwijfeld dreigde hem daar
de dood. Maar hij doorzag de valstrik der beide zo menslievende christenvrienden, en
verontschuldigde zich wegens zijn vergevorderde leeftijd (68 j.) Daarop toonden
Constantijn en Licinius hun ware aard, en zonden de rampzalige grijsaard dreigbrieven
dat hij het vroeger had gehouden met Maxentius, en nu nog steeds met Maximinus. Had
131040 Diocletianus maar op deze laatste, de kwelduivel van zijn vrouw en dochter kunnen
vertrouwen! Maar hij bevond zich, behalve door zijn naaste omgeving, door allen die
aan hem hun verheffing dankten, zoals Licinius, verraden en verlaten.
Levensmoede, en vrezend, anders in handen van zijn vijanden te vallen, nam hij gif
in, (Epitome de Caesaribus, 39) of liet zich doodhongereren (Lact., de Mort LII) 36).
Na de samenkomst te Milaan vergezelde Constantijn de pasgetrouwen vermoedelijk een
131045 eindweegs naar het Oosten, althans de 16e februari vinden we hem te *Sirmium* in Neder-
Pannonië. Hier kondigde hij, terwijl zijn zuster en zwager verder reisden, een
keizerlijk besluit af, (Cod. Theod. 7, 21, 1) en gaf zodoende te kennen, dat hij deze
Westelijke Illyrische provinciën (Noricum, Opper- en Neder-Pannonië en Dalmatië)
131050 *rekende tot zijn rijk*. Dit kon hij doen, omdat te Milaan *geén bepaalde grens was*
vastgesteld tussen het gebied van de Oosterse en Westerse keizer, evenmin als eenmaal
tussen Diocletianus en Max. Herculus. Doch met evenveel recht kon Licinius West-
Illyrië als *zijn* gebied beschouwen, en zo werd deze ongeregelde toestand de oorzaak
van een weldra volgende twist tussen de twee. Maar thans was Licinius juist gewikkeld
in een strijd met Maximinus Daja, en kon geen aandacht wijden aan West-Illyrië (=de
131055 diocees "Pannonia").
Vanuit Sirmium trok Constantijn over Noord-Italië weer terug naar Gallië, waar hij
begin Augustus 313 Trier bereikte. De inwoners van die streek stonden verbaasd over
de geweldige snelheid, waarmee hij in nog geen jaar Italië had veroverd, zodat hij nu
weer in hun midden trad, om hen tegen de Germanen te beschermen. Deze, de Franken,
131060 waren namelijk Neder-Germanië binnengevallen, en weldra had de keizer ze verslagen en
teruggedreven. (eind oktober 313) (Paneg. IX, 21).
Intussen werd in het verre Oosten, reeds een paar maanden na Maxentius' val zijn
voormalige bondgenoot Maximinus Daja met hetzelfde lot bedreigd. Om dit te voorkomen,
trad hij aanvallend op, stak de Bosporus over, nam Byzantium, maar leed de nederlaag
131065 tegen Licinius bij Adrianopel (30 april 313), na een mislukte poging diens leger om
te kopen, en verraad van zijn eigen troepen. Naar Klein-Azië overgestoken, trok hij
zich terug achter het Taurische hooggebergte, hopende in Egypte nieuwe soldaten te
kunnen werven. Maar onderweg stierf hij in Tarsus, hetzij door zelfmoord, hetzij door
een toevallige dood, die hem vrijwaarde voor het vonnis dat hem dreigde. Op zijn
131070 sterfbed zou hij, onder vreselijke pijnen, Christus om vergiffenis hebben gesmeekt
(Lact. de Mort. en Euseb. Vita Const.).
Zo scheen het aan de Christenen van die tijd, zoals Lactantius, dat hun God een
streng gericht had gehouden over alle vervolgers van zijn kerk. Galerius, de
eigenlijke aanstichter, was weggerukt door een afschuwelijke kwaal; Diocles,
131075 Maxentius en mogelijk ook Maximinus Daja door zelfmoord. En zelfs bezocht de
wrekende, al te wrede God de zonden der vervolgers (volgens Lactantius) in hun
onschuldige vrouwen en kinderen.
Want Licinius, als Daja's opvolger gehuldigd in Nicomedia, toonde al dadelijk een
even onmenselijkheid als deze, door diens beide minderjarige kinderen, alsook
131080 Candidianus, een nu 20-jarige voorzoon van wijlen zijn weldoener Galerius,
meedogenloos te vermoorden. 37) Bovendien tekende hij ook het doodvonnis der
verbannen vorstinnen Valeria en Prisca, 38) die nauwelijks verademend na de dood van
hun vervolger Maximinus Daja, pijnlijk werden verrast door het gerucht hiervan. Zij
besloten uit Syrië te vluchten, in eenvoudige kleren, als vrouwen uit het volk
131085 vermomd, en zwierven zo door de provinciën. Maar herkend bij Thessalonika werden zij
voor de medelijdende ogen der machteloze menigte onthoofd. (313)

NAAR DE ALLEENHEERSCHAPPIJ.

Vol bezorgdheid zag Constantijn, die zelf streefde naar de alleenheerschappij, die
131090 snelle machtsaanwas van zijn medekeizer aan. Hij was in de oorlog met Maximinus Daja
onzijdig gebleven, evenals Licinius indertijd in zijn oorlog met Maxentius, en had
(evenals deze toen) gehoopt, dat beide zijn mededingers elkander zouden verzwakken,
waarna hijzelf door gewapende bemiddeling zijn voordeel zou kunnen vinden. Maar nu
kwam Licinius versterkt uit de strijd te voorschijn als zijn gelijke, als keizer over

- 131095 het hele Oosten.
Bovendien kon hij Licinius' gruwelen, hoewel zelf niet minder wreed, waarschijnlijk niet alle goedkeuren. Geheel nutteloos waren de volstrekt onschuldige en onschadelijke Prisca en Valeria vermoord. Daardoor maakte Licinius het nieuwe bewind bij de bevolking impopulair. De christenen, nauwelijks ontwaakt uit de roes van blijdschap om de val van hun vijand Daja, vreesden, bij die nieuwe bloedige terreur, spoedig voor hun eigen veiligheid.
- 131100 Ook de onzekere grens tussen de gebieden der beide keizers bracht de verwijdering teweeg. 39) Want L. meende, evengoed als Constantijn, aanspraak op West-Illyrië te kunnen maken, en beschuldigde zijn collega, hem deze provinciën te hebben onttrooggeld (Zos. lib. II, 18).
- 131105 Een aanleiding tot de strijd, die beide eierzuchtige veldheren, evenzeer wensten, deed zich weldra voor.
Licinius poogde misbruik te maken van Constantijns verblijf in het verre *Trier* (herfst 313 tot herfst 314) door in Italië tegen hem te intrigeren. Hij stuurde namelijk zijn vertrouweling Senicio naar het Westen, om diens broeder Bassianus, getrouwd met Anastasia, een zuster van Constantijn tegen hem op te stoken. Deze was door Constantijn tot caesar en bestuurder van Italië benoemd, maar met veel te weinig macht naar zijn zin. Gretig aanvaardde hij dan ook het heimelijk voorstel van zijn broer Senicio, en begon zich verraderlijk tegen Constantijn te wapenen.
- 131115 Maar deze ontdekte de doortrapte intrige, liet Bassianus doden, en eiste uitlevering van de gevluchten Senicio. Licinius weigerde en liet zelfs in het onzekere grensgebied Pannonië, in de stad Emona, niet ver van Venetië, de beelden van zijn mede-augustus afbreken, ten teken dat hij dit land als het zijne beschouwde. (Anon. Vales. cap. V).
- 131120 De Westerse keizer besloot nu hardhandig en doortastend op te treden. Vanuit het Noorden (hij vertoefde namelijk te *Trier*) rukte hij binnen het Donaugebied (Neder-Pannonie) en versloeg, aldaar, met slechts 20.000 man voetvolk en ruitery, het bijna tweemaal zo sterke leger van zijn vijand bij Cibalae (Vinkovcze). Daarna bezette hij de naburige vesting Sirmium (Mitrovitza), waar hem de vrouw, het pasgeboren zoontje en de schatkist van de gevluchten Licinius in handen vielen. Voorts joeg hij hem na in de vlakte van Thracië, waar hij hem, na onderhandelingen geweigerd te hebben, Licinius had zijnerzijds intussen Valens zijn grenscommandant tot augustus 40) benoemd, zonder Constantijn erin te kennen. Toen hij dan ook nogmaals afgevaardigden tot de overwinnaar zond, eiste deze allereerst dat Valens van zijn rang werd beroofd,
- 131130 en Senicio werd uitgeleverd. Om zichzelf te redden, stemde Licinius daarin toe, liet zijn generaal Valens doden, 41) en leverde Senicio uit als "aanstichter van alle kwaad," 42) waarna met deze hetzelfde gebeurde. — Bovendien moest Licinius heel zijn Europees gebied, behalve Thracië aan zijn zwager afstaan, (vrede van oktober 314). Dat Constantijn hem toen niet dadelijk al in de eerste oorlog vernietigde, waartoe
- 131135 hij stellig in staat was geweest, had de overwonnelling waarschijnlijk te danken aan de voorspraak van zijn vrouw Constantia.
Daarna raakten de keizers ogenschijnlijk verzoend; voor het volgend jaar lieten ze zich zelfs beide tot consuls benoemen. Daarna verhieven ze, na gemeenschappelijk overleg, 17 maart 317, hun zonen tot caesars. 42a). Zo werden in het Westen Crispus, gewettigde bastaard van Constantijn, hem geboren uit de bijzit Minervina, en diens halfbroer Constantinus, zoon van Fausta, en maar pasgeboren, — tot die rang verhoogd; en in het Oosten Licinius de jongere (Licinianus), nauwelijks 20 maanden oud. Officieel bleven beide keizers gelijk in aanzien, maar de macht van het Westerse rijk overwoog verre dat van het Oosten. Licinius zon verbitterd achter het masker van verzoening op wraak, en Constantijns machtshonger was nog lang niet gestild. Het was duidelijk dat het Romeinse rijk hen beide niet tegelijk als heersers kon dulden. Noodlottig voor hemzelf speelde de Oosterse keizer die van het Westen in de kaart. Hoewel het in zijn voordeel was geweest, de stadig aangroeiende christenen, vooral talrijk in zijn nu overgebleven Oosterse provinciën, ging hij uit wrok tegen zijn
- 131150 mededinger over tot vervolging.
Zijn eerste en ergste grief gold de priesters, die vanaf de kansel Constantijn verre boven hem verheerlijkten als de ware strijder Gods. Wel baden zij ook voor hem in hun kerken, maar hij voelde dat dit officieel gebed niet van harte ging, en overschatte in zijn wantrouwige verbeelding hun geheime afkeer. Verder raakte ook hij, net als vroegere keizers, bevreesd voor hun half politieke organisatie, die hij aanzag als een element van onrust in zijn rijk. Toch had hij, met wat juistere kijk op hun geloofsleer van eerbied aan de overheid, zich wel van hun steun en trouw kunnen verzekeren. In plaats daarvan prikkelde hij tactloos hun haat.
- 131155 Allereerst verbood hij de bisschoppen elkaar te bezoeken, en kerkvergaderingen te houden. Deze concilies waren namelijk reeds lang ontaard tot gevaarlijke ovens van
- 131160

onderlinge twist, ja van ontevreden gestook tegen het gezag van heidense keizers. Zijn verdere maatregelen herinneren aan Diocletianus. Zo stelde hij, om beter op het leger te kunnen rekenen, het offeren daarvoor *verplicht* 43). Wie hier niet aan voldeden, dus allereerst de christenen werden er uit gestoten. Ook uit zijn eigen hofstoet verdreef hij alle christenen 44), verbande ze naar woeste, onherbergzame streken, of verlaagde ze tot de slavenstand, om anderen te dienen, terwijl hij hun goederen tot zich trok. Doch deze laatste, inhalige daad bracht hem dubbel voordeel. Want hierdoor beperkte hij meteen het aantal hovelingen en eunuchen, naar zijn zeggen "de muizen en kakkerlakken van zijn paleis" 45).

Maar ook tegenover andere rijke onderdanen gedroeg hij zich uiterst hebzuchtig en wreed. Velen veroordeelde hij zonder schuld, alleen om willekeurig hun goederen te confisqueren 46). Zelfs wie lang overleden waren, bracht hij voor dat doel op de lijst der gevonnisten, en ontnam dan hun erfgenamen hun wettig bezit. Aan de vrouwen van zijn verbannen en totaal geruïneerde slachtoffers vierde hij zijn lage driften bot, of leverde ze daartoe over aan zijn slaven.

Toch plaagde deze oude wellusteling de christenen met het hypocriete bevel, dat mannen, en vrouwen, zogenaamd voor de zedelijkheid, afzonderlijk godsdienstoefeningen moesten houden. Vrouwen mochten slechts bij haar eigen seksegenoten biechten en catechismus leren. Bisschoppen die daaraan weerstand boden werden gedood, of als dwangarbeiders in de bergwerken gestuurd, en hun kerken gesloopt of gesloten 47). Ja, hij liet zelfs weer de kruisdood, die Constantijn om christelijk gevoel te sparen had afgeschaft, bij voorkeur gebruiken tegen zijn slachtoffers. Zo bleek hij een herleefde Galerius, en ontpopte zich hoe langer hoe meer als een onverdraagzaam bijgelovige heiden, 48) die zich omgaf met Egyptische waarzeggers en vogelzieners, en zelfs weer ingewandoffers raadpleegde.

Daarom daalde hij dan ook in achtving bij de verlichte, van bijgeloof verlorne heidenen, zoals literatoren, sofisten, juristen, ja bij alle intellectuelen, en hij haatte ze wederkerig. Deze militaire woesteling noemde uit totale onkunde inzake letteren en wetenschap deze een "openbare pest", 45) vooral het bedrijf van rechters en advocaten. Hij vond ze niets dan nutteloze praatjesmakers, waar hij wel een beetje gelijk aan had in deze tijd van lege retoriek en woordenzwimel. Overigens achtte hij alle geordende rechtstoestanden in zijn rijk overbodig, daar toch alles moest buigen voor zijn willekeur, waarmee hij naar believen zijn onderdanen van vrouwen of vermogens beroofde.

Een goed gevolg had zijn schraapzucht; hij was een zuinig financier, en verspilde niet nodeloos de middelen van de schatkist. Ook waren door de vele confiscaties ten koste van rijke stadsbewoners hoge belastingen niet nodig, zodat de armeren het goed onder hem hadden. Vooral bevoorrechte hij zijn vroegere standgenoten, de landjonkers en boeren, zowel uit saamhorigheidsgevoel, als omdat hij begreep dat van goede landbouw en veeteelt de welvaart van zijn gewesten afhing.

Doch op de christelijke meerderheid van deze Oosterse bevolking kon hij *niet* vertrouwen. Ook zijn leger, al bestond het thans geheel uit heidenen, was niet meer zo weerbaar als vroeger, daar het beste deel, de Illyrische legioenen, indertijd met de diocesen Pannonia (=Illyricum) en Moesia indertijd door Constantijn was ingepalmd (314). Dit bleek dan ook in de komende oorlog met Constantijn.

Deze aasde al lang op een gelegenheid daartoe, en vond haar eindelijk bij een voorgewende inval der Goten in Thracië, die, wanneer wij Jornandes XXI mogen geloven, 49) door Constantijn was gekocht en betaald als een handig komediespel. Hij trok Thracië, Licinius' gebied, nu binnen, versloeg de Goten zogenaamd, maar liet de buitgemaakte "gevangenen" heimelijk werven voor zijn leger. Toen Licinius zich terecht over schending van zijn territorium beklagde, brak de oorlog uit (zomer 324).

Deze tweede, trouweloze oorlog tegen zijn medekeizer, had nog meer dan al zijn vorige veldtochten, uiterlijk het aanzien van een godsdienstoorlog, ja een kruistocht. Als altijd in de aanval, trok hij met zijn pas versterkt leger van 100.000 man, onder de vanen van het Christusteken, tegen zijn collega op. Deze, onvoorbereid, concentreerde snel zijn nog veel talrijker troepen in Thracië, vuurde ze aan door hun voorvaderlijke adelaars en godenbeelden en gunstige orakelspreuken, en poogde zijn vijand de overtocht over de Ebrus (Maritza) te beletten. Dit scheen te lukken, want

een tijdlang lagen beide legers werkeloos langs de oevers tegenover elkaar. Daarop verzoon Constantijn een krijgslist. Hij leidde Licinius' aandacht af, door bij een zeer nauw gedeelte van de rivier, gevelde boomstammen bijeen te brengen, om hem te doen wanen dat hij daar een brug wou bouwen. Natuurlijk deed zijn tegenstander aan de overkant hetzelfde. Maar plotseling, op een heel andere plek, waar de rivier

doorwaadbaar was, sprong hij te paard door het water met een twaalfstal ruiters, stortte zich bij verrassing op de vijand, die daar toevallig ongedekt was, en richtte

onder diens voetvolk een grote slachting aan. Intussen had zijn overige ruitserij en infanterie zijn onstuimig voorbeeld gevolgd, en stormde ook, dwars door de stroom, naar de anderen oever. Zo ontspon zich de slag in de vlakte van *Adrianopel*, waar Constantijn, met de schrik als bondgenoot overwon, (3 juli) 50) en weldra 34.000 doden, merendeels van de vijand, het veld bedekten. Toen snelde hij Licinius achterna, die naar Byzantium vluchtte, en sloeg zelf het beleg voor de stad. Daartoe liet hij ook zijn vloot van 200 oorlogsschepen vanaf de Piraeus naar het Noorden steunen. Bevelhebber was zijn oudste zoon, de kroonprins *Crispus*.

Gaan we even zijn verleden na. Zijn geboortjaar is onzeker, maar vermoedelijk 306 (volgens Seeck: 307) 49). Constantijn had hem verwekt bij een concubine Minervina, daar in zo'n zwervend soldatenleven onwettige omgang met vrouwen uit de legertrouwen, marktentsters of slavinnen, regel was.

Deze bastaard nu was later geëcht, en van jongs af gedruild in het vak van zijn vader, de militaire dienst. In 317, 1 maart werd hij tot caesar benoemd, tegelijk met zijn halfbroer Constantinus (toen pas geboren) en Licinianus, het zoontje van Licinius en Constantia, die nauwelijks 20 maanden was. Mogelijk vanaf dit jaar of nog eerder (op zijn vroegst 314) kreeg hij tot leermeester de christen-redenaar Lactantius, die toen juist naar het Westen, vermoedelijk naar het culturele centrum Trier in Gallië was gereisd, daar ook de keizer hier 314 (januari-oktober) en 316 (januari-februari) vertoefde. Maar deze geestesontwikkeling was maar bijzaak vergeleken bij de militaire leerschool die hij moest doorlopen. Reeds in 320, op zijn veertiende jaar overwon hij op een veldtocht Franken en Alemannen. We lezen een hooggestemde lofspraak over zijn militaire talenten in een feestrede van 321, 1 maart ter ere van de *quinquennaliën* (vijfdejaarsbegin) van de zgn. "regeringen" der twee Westelijke caesars. 50a). Bij die gelegenheid was de prins, na zijn prestaties aan de Rijn, naar het paleis van zijn vader te Sirmium (Pannonië) ontboden, en toonde toen al, bij zijn mars daarheen, dezelfde onvermoeibare snelheid en gehardheid als zijn vader. In dit jaar benoemde Constantijn hem tevens, evenals zijn broer Constantinus Jr. tot *consul*, en huwde

Crispus uit aan een zekere Helena, bij wie deze al in het volgende jaar (322, 30 oktober) een kind kreeg. 50b). Doch het consulaat der beide prinsen werd in Licinius' rijkdeel niet erkend, evenmin als de Westerse consulaten der volgende jaren. Dit bewijst de stijgende vijandschap der beide opperheersers, en meteen de onmogelijkheid dat Crispus' vrouw Helena een dochter van Licinius zou zijn geweest 51).

Na te land tegen de barbaren zijn militaire bekwaamheid te hebben getoond, moest Crispus weldra, in de 2e oorlog tegen Licinius ook ter zee, als admiraal, zijn talent bewijzen.

Toevallig was de zuidwestenwind hem gunstig, zodat hij tegen de stroom in, die in de Hellespont van het N.O. naar het Z.W. loopt, de nauwe trechter van die zeestraat kon binnenzeilen. Aan de mond daarvan, voor de ingang van de Propontis, wachtte hem de veel talrijker zeemacht van de vijand, ongeveer 350 galeien, merendeels bemand met Griekse Klein-Aziaten, Phoeniciërs en Egyptenaren, onder bevel van Amandus of Abantos, waarschijnlijk noch een Griek noch een Romein. Al deze inderhaast gepreste Oosterlingen vochten niet voor hun eigen zaak, en waren, van nature toch al onkrijgshaftig, niet opgewassen tegen Crispus' vloot, bemand met Illyriërs, Grieken en Spanjaarden. Deze had trouwens nog een ander voordeel. Dit bleek bij zijn plotselinge aanval, toen hij met zijn kleine snelle schepen zich stortte temidden van de zware, lomp gebouwde galeien van de vijand, (vergelijk de Engels Hollandse vloot tegen de Spaanse in 1588). Door hun lastige beweegbaarheid konden zij in die nauwe ruimte niet snel genoeg manoeuvreren maar drongen dicht opeen en verbrijzelden elkaar door de druk, zodat Crispus er heel wat kon doen enteren, de bemanning vernietigen, en er andere in de grond deed boren. Toen de nacht het gevecht beëindigde, kon Abantus, die de veel kleinere vloot van zijn tegenstander eerst had veracht, nauwelijks het treurig overschot van zijn scheepsmacht in de Klein-Aziatische haven van Ajax, terwijl Crispus de zeilen deed strijken voor Eleous (in Thracië).

De tweede dag stak een sterke noordenwind op, waardoor Abantus uit zijn haven naar het Z.O. kon zeilen, de vijand tegemoet, die daardoor werd stilgelegd. Hij aarzelde echter om snel door te varen, en liet zo het juiste ogenblik tot de aanval ongebruikt voorbijgaan. Zodra beide vloten elkaar waren genaderd, keerde de wind geheel om tot zuidwest, dreef Abantus terug, en gaf Crispus kans tot een nieuwe aanval, waarbij hij heel wat schepen van de ander in de grond deed zinken. Bovendien wierp een sterk opstekende storm als bondgenoot de meeste overige schepen van A. te pletter tegen de rotsen van Klein-Azië.

Slechts 4 van de 350 schepen wist hij met zich te redden in overhaaste vlucht naar Chalcedon.

Intussen werd Licinius' positie in het belegerde Byzantium hoe langer hoe gevaarlijker. Constantijn had rondom de muren van de stad hier en daar wallen laten

bouwen van dezelfde hoogte waarop hij houten torens oprichtte die met hun slingertuig en geschut de soldaten daarbinnen bestookten. Op sommige plaatsen had hij de bouw van deze wallen achterwege gelaten, en bebeukte daar met stormrammen de stenen muren van de stad. Langer verdediging was onmogelijk, vooral nu zij ook van de zeezijde zou worden omsingeld. Daarom besloot Licinius met de krijgskas te vluchten naar Chalcedon in Klein-Azië, waar hij nieuwe troepen hoopte te lichten. Want slechts een klein gedeelte van zijn macht had hij in overtocht over de Propontis in veiligheid gebracht. Zijn onderbevelhebber Martinianus verklaarde hij tot Caesar en zond hem in 't Z.W. naar Lampsacus aan de rechteroever van de Hellespont, terwijl hijzelf de Bosporus-oever poogde te bewaken. Maar hij kon Constantijn niet beletten, 2 mijlen ten Z. van Chalcedon met een grote overmacht te landen, en werd zo beslissend en moorddadig verslagen, dat er van zijn 70.000 man troepen maar 30.000 overbleven. 52)

Nu bleek het hoe onvoorzichtig hij had gehandeld, zijn leger in tweeën te verdelen, want hijzelf was al verslagen toen Martinianus vanuit Lampsacus hem te hulp kwam, die eveneens tegen C. de nederlaag leed. Hierna gaf het hopeloos ingesloten en uitgehongerde Byzantium zich over, en ook Chalcedon opende voor de keizer zijn poorten.

Op de hielen gevolgd door Constantijn vluchtte Licinius met vrouw en kind en zijn sterk gedund leger naar de hofstad Nicomedia. Hier liet hij, na een kort beleg, om onderhandelingen verzoeken door zijn vrouw Constantia. Deze kreeg van haar halfbroeder Constantijn de verzekering onder ede, dat het leven van haar man gespaard zou blijven en haar zoontje het Caesar-ambt zou behouden, waarna de oude overwonneling te voorschijn trad en het keizerlijk purper aan de voeten van de overwinnaar legde (najaar 324).

Martinianus werd gevankelijk naar Cappadocië gevoerd; Licinius met vrouw en kind naar Thessalonika gezonden, om daar als particulier in veiligheid te leven. Maar het volgend jaar werd hij bij verrassing opgelicht uit huis, en eer zijn vrouw nog voor hem kon bemiddelen, met schending van de eed geworgd. (Zos. II, 28). Tot motivering van die daad diende de bewering, dat Constantijns oud-strijders de dood van hun voormalige, nog steeds gevaarlijke vijand eisten, en dat deze, doortrapt als hij was, met zijn eigen afgedankte soldaten, ja zelfs met Goten van over de Donau samenspande, om weer keizer te worden. De waarheid was, dat Constantijn zo'n usurpatie van het purper, als eens zijn schoonvader de ex-keizer Maximianus had geprobeerd, toch maar liever een tweede maal wou voorkomen. Voor dit doel kon geen eedbreuk hem deren. Dit was nu na Maxentius en Bassianus, al de derde zwager, die deze brave christenbeschermer doodde. Wanneer zouden zijn eigen, nog nadere bloedverwanten aan de beurt komen voor de beul?

CRISPUS EN FAUSTA.

Om dezelfde tijd bleek ook een verwijdering te zijn ontstaan tussen de keizer en zijn oudste zoon Crispus. Deze was toen namelijk niet herbenoemd voor het bestuur van Gallië, maar werd, hoewel hij caesar bleef, vrijwel gevankelijk gehouden aan het hof van zijn vader.

Dit trof des te pijnlijker, daar Crispus al voor de oorlog met Licinius, in het begin van 324 tot het ereambt van consul was verkozen. Wat was de oorzaak van zijn ongenade?

Allereerst werd zijn vader *jaloers* op de geweldige volksgunst die veeleer zijn achttienjarige zoon, jong en innemend, dan hemzelf, de vijftigjarige keizer, te beurt viel na hun beider overwinning op Licinius. Ook bij de soldaten was de prins, die reeds als kind onder hen verkeerd had, uiterst populair. Wellicht liet hij zich daar te veel op voorstaan, wat het wantrouwen wekte van Constantijn.

Bovendien bestaat er in alle absolutistische staten een natuurlijke tegenstelling tussen de vorst en de troonopvolger, die vaak anders dan zijn vader zou willen regeren, volgens de ideeën-stroom van een jonger geslacht, en daarom door hem gevreesd wordt als een gevaarlijke mededinger.

Tenslotte heeft Crispus mogelijk, tot grotere argwaan van zijn vader de meinedige vermoordding van Licinius afgekeurd, en ook het feit dat diens zoontje Licinianus, in strijd met het verdrag van 324, als caesar bleef afgezet, en werd vervangen door *Constantius*, de tweede zoon van Constantijn (8 november 324) 53a).

Doch de feitelijke bewerkster van zijn ongenade was zijn stiefmoeder Fausta. Was inderdaad, zoals Zosimus en Zonaras 53b) beweren, wraak wegens een teleurgestelde passie haar drijfveer, en speelde zij tegenover Crispus, hoewel hij getrouwd was, de rol van een Phaedra?

Of was het eerezucht om haar eigen drie kinderen het troonrecht te verzekeren ten koste van haar stiefzoon, die hun daartoe in de weg stond?

Beide eigenschappen, zowel tomeloze *losbandigheid* als *eerezucht*, waren overerfelijk in

het geslacht der Herculiërs, waaruit zij stamde. Haar vader Maximianus misbruikte zelfs de lichamen van gijzelaarsters, die wegens schulden in de kerker waren geworpen, en voor haar broer Maxentius, was tijdens tirannie, geen enkele Romeinse dame van aanzien veilig. Daarnaast hadden beiden een brandende, maar bruto-onhandige eierzucht. De oude Maximianus Herculeus had slechts op bevel van Diocletianus het purper neergelegd, maar riep zich daarna nog tweemaal tot imperator uit, telkens zonder succes.

Diezelfde oven van eierzucht en verboden passies smeulde nu ook in zijn dochter Fausta. Mogelijk waren er, bij haar gestook tegen Crispus, beide driften in het spel. Niet dat zij geen liefde voelde voor haar wettige man, Constantijn, want zij had hem eens, nu veertien jaar geleden, het leven gered, met opoffering van haar eigen vader.

Maar hij was zoveel ouder dan zij, en nu leek zijn knappe, kranige zoon Crispus, zoals hij, achttienjarig overwinnaar, terugkwam uit de oorlog, precies het verjongde evenbeeld van zijn vader. En zij was nauwelijks dertig, en voelde zich vaak, om zaken van staat, door haar man verwaarloosd. Geen wonder dan ook, dat zij met haar hittig temperament weldra in hevige hartstocht jegens haar jonge stiefzoon ontlaaide.

Maar aanvankelijk poogde zij die verboden drang angstvallig te verbergen, zo mogelijk te smoren. Geen beter middel daartoe, dan door eierzuchtige moederzorg voor haar eigen zonen zichzelf een haat tegen Crispus te suggereren.

Eerst lukte het haar, hem bij de keizer in vage verdenking te brengen van staatsgevaarlijk, zonder hem nog van een bepaalde daad te betichten.

Weldra kwamen ook *kerkelijke* twisten de tweedracht tussen vader en zoon verergeren. Voor de synode van Nicaea begon, was de keizer, door toedoen van zijn hofprediker Hosius, meteen een gunsteling van Fausta, al gewonnen voor de orthodoxe partij. En de keizerin wedijverde natuurlijk in fel Katholieke gezindheid met haar man. Een christelijk zondebesef om haar eigen verholten, maarnog niet gesmoorde hartstocht dreef haar tot steeds strenger devotie. Maar geen trouwe kerkgang, geen zelfkastijding tijdens de grote vasten voor Pasen – toen bij Christenen vaak gebruikelijk – kon de duivel in haar doden.

Intussen stelde Crispus, als jong officier, waarschijnlijk weinig belang in theologische debatten, en verachtte al dat opzichtig vroom gedoe van keizer en hof.

53c)

Toen dan ook na afloop van de synode (begin augustus 325) Constantijn op raad van Hosius Arius met nog 3 anderen verbande, en de overige Arianen vervolgde, keurde Crispus deze onverdraagzame politiek vermoedelijk af.

Ook aan 's keizers hof te Nicomedia, alsook onder de officieren en beampten moet dit ontevredenheid hebben verwekt, en velen wachtten slechts op een gunstige kans om hun heimelijke Ariaanse 53c) of zelfs heidense gezindheid openlijk te tonen.

De heidenen uit deze oppositiepartij hoorden grotendeels tot de voormalige militairen en ambtenaren van Licinius die veelal tot de dienst van Constantijn waren overgegaan; de Ariaanse-gezinde christenen waren niet zozeer aanhangers van Arius, als wel van de klerikale tirannie der homo-ousianen.

Om wie schaarden zich nu al deze ontevreden elementen?

Niet om een der stiefbroers van Constantijn, want die waren daartoe te onbeduidend. Ook niet rondom Licinius' weduwe Constantia, want hoewel zij Ariaansegezind was 54c) en Constantijn de meinedige vermoordding van haar man kon wijten, toch was zij te zachtmoedig om aan wraak te denken. Ook wist zij, dat haar broer ondanks alles haar persoonlijk liefhad en vereerde, en haar zelfs had uitgenodigd, bij hem aan het hof te komen, wat zij mogelijk voor de toekomst van haar zoon had aangenomen. Bovendien was zij met de veertig jaar oudere Licinius, aan wie zij om staatsredenen was uitgehuwelijkt, nooit gelukkig getrouwd geweest, en dit deed haar waarschijnlijk berusten in zijn gewelddadige dood. Ook de wederrechtelijke achterafstelling van haar zoontje Licinianus, voor wie zij oktober 324 nog wel het caesaraat had bedongen, verdroeg zij geduldig, vertroosting vindend in haar geloof, en onbewust van wat haar jongen weldra boven het hoofd hing.

Tot wie moesten zich de ontevreden dan wenden om steun?

Waarschijnlijk tot Crispus, die mogelijk in godsdienstzaken neutraal was, maar die zijn gedwongen werkeloosheid en de schandelijke bewaking aan het hof van zijn vader kwalijk kon verdragen. Mogelijk zullen Arianen en heidenen hem compromitterende brieven om hulp en voorspraak hebben geschreven. Of mogelijk heeft een samenzwering van beide partijen hem en de jeugdige Licinianus onvoorzichtig tot imperator willen uitroepen.

Maar ongetwijfeld was de houding van Crispus jegens zijn vader loyaal, daar deze zelf, veel later, de onschuld van zijn zoon openlijk erkende.

Doch in deze tijd van gespannen kerktwist viel het Fausta licht, haar stiefzoon bij de toch al zo wantrouwige keizer te betichten *alsof hij ketters gezind was, en met*

- 131425 *behulp dier ontevredenenen streefde naar de troon.* Ook wees zij hem op de toekomstige dreiging van Licinianus, die mogelijk eens de dood van zijn vader zou wreken. Blindelings geloofde de keizer haar, die hem eens het leven had gered, zonder naar de vermaningen van zijn moeder Helena te luisteren, die pleitte voor haar kleinzoon wat zij kon.
- 131430 Zijn eerste daad was, de 17e september 325 een edict uit te vaardigen tegen deze vermeende samenzwering van zijn zoon. (Cod. Th. IX, 1,4). Zonder de naam van Crispus hier in te noemen, moedigt hij hierin elk van zijn rechters, edelen en hovelingen aan, om ronduit aan de keizer te zeggen, wat ze mochten weten over hem, "die tot dusverre met geveinsde eerlijkheid hem had bedrogen." En natuurlijk ontbrak het niet
- 131435 aan delatoren, die hoopten in de gunst van de keizer te komen door zijn zoon nog erger dan ooit bij hem te belasteren. Maar zijn vader aarzelde nog steeds, op deze vage, meest onbewijsbare beschuldigingen in te gaan. Voorlopig beperkte hij zich ertoe, het grootste deel van de troepen die onder hem en Crispus tegen Licinius hadden gevochten, en bij wie de prins heel
- 131440 populair was, voorzichtigheidshalve te *ontslaan*. 55) Om ze echter tevens aan zich te verplichten, overstrooide hij ze met rijke geschenken bij hun heengaan (lente 326). Het was juist het twintigste regeringsjaar van de keizer, en nadat hij aan het begin daarvan zijn jubileum te Nicomedia had gevierd (25 juli 325) zou hij aan het eind van dit jaar (dus in 326) zijn Vicennaliën te Rome, de oude hoofdstad, herhalen.
- 131445 Voor dit doel trok de keizer met heel zijn hof in de lente van 326 (begin maart) op reis over land van Byzantium naar Italië. In die stoet van hoogwaardigheidsbekleders en lakeien werden zowel Crispus als Licinianus gevankelijk meegevoerd onder steeds strenger bewaking. Maar onderweg kreeg Fausta, die haar man overal volgde, plotseling medelijden voor
- 131450 haar onschuldig gekwelden stiefzoon, en hierdoor ontwaakte opnieuw haar oude passie. Eerst bepraatte zij Constantijn, zijn zoon meer vrijheid van beweging te laten, daar zij thans niet meer voor hem vreesde, en zodoende werd hij niet meer zo streng bewaakt. Daarna wist zij haar stiefzoon toch binnen haar tent te lokken, en smeekte hem bij 'n geheim, hartstochtelijk onderhoud, om met haar samen te ontvluchten, en
- 131455 eenmaal in volle vrijheid, de heerschappij over het rijk met haar samen te delen. Hij weigerde verschrikt dit schandelijk aanbod, en wekte zo haar toorn. Terwijl zij nog twistten, kwam ineens Constantijn hun samenzijn overvallen, en vroeg met felle argwaan naar de oorzaak. Uit wraak nu betichtte Fausta, als een andere Phaedra, thans haar stiefzoon bij de keizer van een poging tot overspel en ontvoering, en
- 131460 samenspanning tegen zijn gezag. Vergeefs bepleitte Crispus zijn onschuld; vergeefs getuigde de elfjarige Licinianus in zijn voordeel. De keizer geloofde de vrouw die hij liefhad meer dan ieder ander, liet hen beiden, geboeid, binnen zijn tent verbergen, en besloot hen te doden, zonder rechterlijk verhoor.
- 131465 Toen de duisternis die dag beëindigde, beval de keizer, in het diepst van de nacht, een zijner vertrouwdeste officieren, om Crispus en Licinianus buiten het legerkamp te brengen, en hen heimelijk, in de nabije bergen van Istrië, te vergiftigen. Zo gebeurde het: in de buurt van Pola stierven beide ongelukkige prinses, in de bloei van hun jaren.
- 131470 De volgende morgen reisde het hele hof weer verder, de Oostelijke Alpenrand die Italië omringt, over naar Aquileia, en eerst langzaam kwamen de hovelingen iets te weten van Crispus' dood. 56) De keizer verried echter zichzelf door in Aquileia, waar hij lange tijd vertoefde, nog vervuld van toorn om het vermeende bedrog van zijn zoon, enige strenge wetten uit
- 131475 te vaardigen *tegen ontucht*, en al wat daarmee samenhang. Zij dienden meteen als aanvulling van de reeds bestaande Lex Julia de stupro, maar werden niet als deze, door rechtvaardigheid ingegeven, maar door een wrede onverbiddelijke wrok. Allereerst publiceerde hij 1 april 326 een slechts fragmentair bewaarde wet tegen de
- 131480 ontvoering van meisjes en vrouwen. 57) Zo dit tegen haar zin gebeurde, dan werd alleen de schaker gestraft door hem gesmolten lood in de keel te gieten. Had zij het echter goed gevonden, dan werd de schaker toch even streng gestraft, maar het meisje beroofd van haar erfrecht. Medeplichtigen deelden in de straf van de schaker, indien echter de ouders tot de
- 131485 schaking hadden toegestemd, dan werden zij verbannen. (Cod. Th. IX, 24, 1). Drie dagen later werd het vervolg van deze wet verkondigd, waarbij minderjarige meisjes werden beschermd tegen seksueel misbruik van de zijde van hun voogden. (Cod. Th. IX, 8, 1). Vermoedelijk om dezelfde tijd kondigde hij een andere wet af, om kuise vrouwen te
- 131490 beschermen tegen valse beschuldigingen. Geen enkele man mocht een hem vreemde vrouw

aanklagen wegens overspel, alleen haar mannelijke bloedverwanten (volle broers, halfbroers of volle neven) en haar eigen echtgenoot had daartoe het recht. Dit is duidelijk ingegeven door het geval van Crispus, wiens tegenaanklacht tegen Fausta de keizer niet geloofde, daar zij geen mannelijke bloedverwanten bezat die haar konden beschuldigen en ook haar eigen man haar voor onschuldig hield. (Cod. Th. IX, 7,2). Kort daarna volgden nog twee andere edicten, een van 29 mei 326, tegen vrijgeboren vrouwen die zich aan hun slaven vergooien, en met de doodstraf worden bedreigd, 58) en een ander edict dat getrouwde mannen verbood om concubines bij zich aan huis te hebben, ("penes se habere") wat evenwel het concubinaat nog niet ophief (14 juni 326) 59).

Na een lang verblijf in Noord-Italië reisde de keizer in de zomer van dit jaar naar Rome, waar hij 18 juli zijn intocht deed, omjubeld door volk en senatoren, en weldra het hoge paleis van Nero betrok.

Maar al waande hij zich voortaan veilig voor Crispus, die hem nooit iets had misdaan, hij was het niet voor zijn eigen geweten, dat hem steeds feller folterde. En daarbij bleef het niet. Hoewel Constantijn zijn trawanten het strengste stilzwijgen had bevolen, en het gerucht had laten verspreiden, dat Crispus en Licinianus aan een plotselinge ziekte waren gestorven, het geheim lekte uit aan het hof. Maar deze praatjes om hem heen deerden de keizer niet. Hardnekkig verborg hij voor zijn omgeving, welke wroeging hem doorwondde, en toonde haar steeds het eendere, strakke, strenge gelaat.

Alleen zijn moeder Helena, aan wie hij steeds zijn vonnis over Crispus had verzwegen, en die nu alles wist, vermocht zijn ziel te openen. Liefde en meelij voor haar kleinzoon, wiens onschuld zij al vroeger had bepleit, gaf haar de moed tot open taal.

Maar in die liefde mengde zich haar oude wrok tegen de trotse vorstendochter Fausta, die jarenlang haar, de moeder van de keizer, om haarlage afkomst had vernederd, en ternauwernood aan het paleis geduld. Daartegen verzette zich haar zelfbesef: zij wilde haar invloed op haar zoon, haar onttroggeld door Fausta, herwinnen, en voor twee zulke eierzuchtige vrouwen als zij beiden was tegelijk geen plaats aan dit hof. Zo wees zij Constantijn op Fausta's eigen eierzucht, en hartstochtelijke, ja hysterische aard, en verzekerde hem dat zij Crispus belasterd had. Wellicht had zij er zelve naar gestreefd, om met behulp van haar stiefzoon, de keizer van de troon te stoten, en zelve te heersen. Zo spookte thans, behalve wroeging ook nog angst voor eigen eer en veiligheid door het argwanend brein van de monarch.

Maar nog altijd aarzelde hij, zijn vrouw voor een bedriegster te houden zonder nader bewijs.

Totdat op zekere dag Fausta werd betrapt in de armen van een verachtelijke renbode des keizers. 60) Dit overtuigend staaltje van haar ontuchtige natuur bracht de bedrogene tot een beslissing. Hij veroordeelde haar, de moeder van zijn drie overgebleven zonen, en eens de redster van zijn eigen leven, ter dood. Hij gelastte zijn eunuchen, haar onder te dompelen in een kokend bad, waar zij stierf door verstikking 61).

Dit gebeurde in het diepste geheim, in de stilste vertrekken van het paleis te Rome, vermoedelijk in de zomer van hetzelfde jaar, waarin hij Crispus liet vermoorden. 62) Doch deze nieuwe gruweldaad, de dood van Fausta, die hij als een verkapte heiden had geofferd om de schim van Crispus te verzoenen, stilde niet de wroeging die hem bleef martelen als de moordenaar van zijn eigen zoon. Er restte hem niets dan in een roes van nieuwe, rusteloze daden de kwelling van zijn kwaad geweten te smoren. Zo moest hij dan weg uit Rome, weg uit het oude paleis van Nero, waar de wanden hem fluisterden van zijn eigen even wrede daden, weg en weer terug naar het Oosten.

DE LAATSTE REGERINGSJAREN VAN CONSTANTIJN.

Constantijn had, na al het reizen en trekken, een nieuwe en vaste hoofdstad nodig. In Rome kon de Aziatische praal van zijn hof niet aarden. De westelijke rijkshelft was ook lang niet zo waardevol als de Oostelijke: zo moest hij dus evenals Diocletianus daar resideren.

Maar niet in Nicomedia, de zetel van de vroegere christenvervolger, waar alles, evenals in Rome, nog te veel aan het heidendom herinnerde.

Zo besloot hij dan eerst een stad te stichten tussen Alexandria Troas en het oude Ilion, aan de Aegaeische zee 63). Volgens een oud orakel zouden de Romeinen namelijk, immers na de val van Troje hier vandaan gekomen, eens hier wederkeren. De christelijke hofpartij was wel tegen deze heidense traditie, maar Constantijn ging zelf ter plaatse, en begon alvast muren te bouwen, die in de vijfde eeuw nog vanuit zee te zien waren 63). 's Nachts aanschouwde hij echter, zoals wel meer, de God der Christenen, die hem beval dit bouwwerk te staken en een andere plaats te kiezen 64). Hij gehoorzaamde, en koos nu Byzantium, dat hem in de laatste oorlog met Licinius een

sterke, strategische stelling was gebleken.

Het lag op een landtong tussen de Propontis (Zee van Marmara) en de Keras (of Gouden Hoorn), een smalle zeeboezem in de vorm van een riviermond, zodat het van de landzijde makkelijk te verdedigen was. Ook van de zeezijde was het onneembaar daar de twee natuurlijke toegangskanalen tot de Propontis namelijk Hellespont en Bosporus voor oorlogsschepen gesloten konden worden. Vanuit dit onaantastbaar steunpunt kon hij voortaan de Balkan beter tegen Gotische en Sarmatische barbaren in het Noorden Klein-Azië, Syrië en Egypte tegen de Perzen aan de Oostgrens bewaken.

Bovendien lag het gunstig voor de voedselvoorziening, daar al het graan van de Zwarte zee daarlangs werd verscheept, terwijl Egypte niet verre was. Ook door hun milde klimaat lokten de oevers van de Bosporus, welig beplant met wijnstok en olijventuinen de keizer tot een duurzaam verblijf.

Tenslotte was er nog een bijgelovige reden: het terrein omvatte zeven heuvelen, net als dat van Rome.

De geschiedenis heeft de keuze dezer nieuwe hoofdstad erkend als geniaal. Meer dan duizend jaren zou Constantinopel de aanvallen van Goten, Arabieren en Bulgaren, zelfs een eeuw van nauwe omsingeling door de Turken met succes trotseren; en daarna zouden deze laatsten, eenmaal meester van dit steunpunt, niet meer uit Europa te verjagen zijn.

In het voorjaar van 328 begon Constantijn met de uitvoering van dit plan. 66) Westelijk van het oude Byzantium, op de tweede heuvel, legde hij als centrum van de nieuwe stad een ruime, ronde marktplaats aan, het latere forum Constantini. Hier omheen verrees een zuilengang, die aan de uiteinden van het plein werd onderbroken door twee statige marmeren 65) bogen tegenover elkaar. De Oostelijke boog werd gebouwd op de plaats van een vroegere stadspoort, die voor dit doel natuurlijk gesloopt was. Weldra echter konden de marmergroevender naburige landen en de kunst der beschikbare beeldhouwers en architecten hem niet genoeg materiaal verschaffen om zijn stad te versieren. Daarom ging hij over tot plundering van tempels en openbare pleinen van bijna alle steden 67).

Van heinde en ver sleepte men bronzen en marmeren godenbeelden aan, niet zoals de christen Eusebius meende 68), uit haat tegen het oude heidendom, maar uit bewondering voor de hoge kunst die het eens had voortgebracht. Midden op het forum, dat zijn naam kreeg, stelde hij, op een steile zuil van purpersteen, een geweldig Apollo-beeld, met een stralenkrans om het hoofd, dat hij uit Phrygië had laten roven 69). Het aangezicht hiervan deed hij, met vandaalse wansmaak, veranderen naar zijn eigen brede, dikhalzige kop zodat lateren dit hielden voor een statue van Constantijn 70). Aan de voet van dit beeld plaatste hij het Palladium of houten Pallas-beeld, dat hij heimelijk had laten roven uit Rome, om de nieuwe stad oninneembaar te maken naar hij waande.

Aan de noord- en zuidkant van dit plein, zijwaarts van de zuilengangen, dus tegen de hellingen van deze heuvel, bouwde hij twee zogenaamde tempels, waartoe men van de omringende stad langs een trap kon stijgen. In de ene hiervan plaatste hij een beeld van Rhea Kubele, de moeder der goden, geroofd van de berg Dindumos bij Kuzikos, waar de Argonauten het eens zouden hebben opgericht. 71) Dit gestolen beeld bedierf hij opzettelijk tot hevige ergernis der heidenen, 71) door de twee leeuwen aan weerszij, die zij vasthield weg te nemen, en ook de houding der handen zo te veranderen dat zij biddend werden samengevouwen. Zo verchristelijkte hij de hele gestalte tot een vrouw die bad voor het heil van de stad, die zij overschouwde, ja mogelijk tot een beeld van de "godbarende" Maria (Maria Theotokos).

In de andere zogenaamde tempel plaatste hij het beeld van de gelucksgodin van Rome, Tuche of Fortuna genaamd. Dit was niet zozeer een sluwe concessie aan zijn nieuwe, heidense medeburgers als wel een teken van zijn eigen ondelgbaar bijgeloof. Verder bouwde hij, aan de voet van de eerste heuvel, een groot complex van paleizen, bijna zo groot als die te Rome. Het lag Oostelijk van het forum Constantini, en was ermee verbonden door een brede keizerslaan (Via Regia) met twee flinke zuilengangen, overal versierd met beelden en marmerwerken.

Vlak voor het paleis, als aanvangsplaats van de Via Regia strekte zich een breed plein uit, het Augustaeum, zo geheten naar zijn moeder, de Augusta Helena, wier beeld hier middenin, op een purperen voetstuk prijkte. 69) Naast de grote, koperen poort van de keizerswoning (Chalke) verrees een senaatsgebouw, dat de Curia te Rome evenaarde.

Een geheime wenteltrap leidde, vanuit het paleis, tot de keizerlijke tribune der aangrenzende renbaan. Dit circus of Hippodroom, mogelijk al voor hem aangelegd, voltooide hij in alle pracht. Als versiering diende hiertoe een zogenaamde tempel van Castor en Pollux zijwaarts van een der zuilengangen opgericht. Elders in deze renbaan plaatste hij, op een gouden drievoet, een beeld van Apollo beide uit de Delphische

tempel weggehaald 71). Vlak bij de ingang stond, al vroeger, 'n openbaar badhuis, gewijd aan Zeuxippos (bijnaam van Zeus), maar thans liet Constantijn dit voltooiën en

verfraaien met zuilen en bronzen beelden en mozaïekwerk van veelkleurig marmer. Toen de voornaamste gebouwen er eenmaal stonden liet hij heerlijke villa's verrijzen, verspreid door heel het bouwterrein, en nodigde vele senatorenfamilies uit Rome en decurionen uit de provincie, om daarheen te verhuizen 72). Ook talloze mindere burgers uit de nabije steden van Klein-Azië en Griekenland trokken er in groten getale binnen, aangelokt door de vele voorrechten die de nieuwe keizerstad zou krijgen.

Het geheel werd afgesloten door een lange, hoge muur in het Westen, die 15 stadiën of drie km langer was dan de vroegere stadsmuur van het oude Byzantium 73).

Eindelijk, in 330 was de bouw gereed van het Nieuwe Rome (Nova Roma), zoals de keizer het noemde, of Constantijnsstad (Konstantinou polis), zoals zijn vleiers het herdoopten. De 9de mei van dit jaar werd het inwijdings- of geboortefeest gevierd 74).

De dag begon met harddraverijen in de renbaan. Terwijl keizer en volk daar verzameld zaten, werd, in plechtige processie een vergulde houten zuil, waarin het beeld van Constantijn was gesneden met de Tuche van de stad in de hand, daar binnengedragen te midden van afdelingen soldaten in gala-uniformen, die allen lange witte waskaarsen droegen, dof brandend in de felle dag. Voor de keizerlijke tribune hielden zij halt, en hier sprak de stichter plechtig de geheime naam uit van de stad, verpersoonlijkt in het beeld van de Geluksgodin, en noemde haar Authousa, de Bloeiende 74).

Het was dus een "onbloedig" wijdingsfeest, 74) d.w.z. zonder offerdieren, en zelfs ietwat christelijk vermomd, maar daarom toch nog heidens in kern en wezen.

En Constantijn gebod dat dit geboortefeest "naar zijn eigen goddelijk voorbeeld" elk jaar, tot in de verste toekomst, herhaald moest worden. En als dan het beeld van Constantijn en Tuche in processie het circus werd binnengedragen, tot voor de zetel van de vorst die dan regeerde, dan moest deze opstaan, en vol eerbied de beeltenis kussen van stichter en stad.

Zo bleef hij dan voortaan, behalve nog enkele reizen in de omtrek, hier wonen met heel zijn hof. De stad Constantinopel werd van het presidium van Europa (de oevers van de Bosporus) afgenomen, en kreeg een eigen praefectus praetorio en andere hoge ambtenaren, net als Rome. 74)

Ook ontving het dezelfde voorrechten, bijvoorbeeld kosteloze brooduitdelingen, sinds 18 mei 332. 75) Het [graan](#) der verschillende provinciën, eerst aan Rome geschonken (annona), werd voortaan over beide steden gelijk verdeeld, zodat Rome voortaan het graan van Afrika en Sicilië, Constantinopel van Egypte, Pontus en andere Oostelijke landen kreeg.

Bij dit privilege kwam dan nog de geldelijke steun die onvermogen bekeerlingen van kerken en overheid konden krijgen.

Dit alles lokte nog meer bewoners dan vroeger in de stad. Vooral armen en bedelaars verdrongen zich binnen haar poorten, aangetrokken door de "gulheid en meewarigheid van haar burgers," zoals Sozomenus (II, 3) beweert. Maar hij voegt erbij: "zozeer lokte zij allen tot het christendom, dat de meeste Joden, en bijna alle heidenen die daar kwamen wonen, tenslotte werden gewonnen voor dit geloof." Met andere woorden: men oefende door liefdadigheid, ja door dwang enige pressie op hen uit, want heidentempels werden hier niet geduld. Zo kreeg Constantinopel de uiterlijke stempel van een christelijke stad, "nooit door afgodshuizen of altaren of heidense offers bezoedeld", behalve dan door de tempel van Tuche.

Toch bleef er een geweldig verschil bestaan tussen rijk en arm. Tussen de weelderige senatorenkastelen lagen, dicht opeengepropt de krotten van het stedelijk proletariaat. Voor deze laatsten was er weldra geen plaats genoeg meer op het terrein binnen de stadsmuur, zodat men paalwoningen moest bouwen in zee. Ook bleken de staatspaleizen van Constantijn zo haastig in elkaar geflanst dat sommigen binnen een eeuw weer verzakten tot ruïnes 76).

Natuurlijk vereisten en de stichting van deze wereldstad en de nimmer eindende bouwlust van de keizer miljoenen aan geld. Daarbij kwam nog het onderhoud van zijn hof en gevolgd met al hun kostbare pronk, en de ongehoorde verkwisting, waarmee hij de middelen van de staat aan onwaardige gunstelingen versmeet. Zoals vroeger – onder Diocletianus – Nicomedia, zo werd nu voortaan Constantinopel de grote bloedzuigster van de sappen en krachten der provinciën: haar cijns van geld en naturaliën. Zo werd de stichting van deze stad, hoewel een teken van korte herleving van de Romeinse staat, tevens een der oorzaken van haar naderende ondergang.

Maar ook van buiten dreigde gevaar, al was het voorlopig nog weinig.

Tegenover de *noordelijke barbaren* voerde de keizer namelijk in het laatst van zijn leven een uiterst onvoorzichtige politiek 77).

Diocletianus had wijselijk de legioenen als bewakers in de grensgewesten gelegerd, maar Constantijn verplaatste ze in de steden.

De motieven hiervan zijn duidelijk. De stadsbevolkingen vooral van Rome, Milaan, Alexandrië en Antiochië waren wegens de hoge belastingen steeds tot oproer geneigd, en moesten streng in bedwang gehouden worden. Verder wou de gewezen soldatenkeizer en wereldveroveraar zijn persoonlijke gunst bij de troepen behouden door ze, na lange jaren van oorlog en ontbering, rust en weelde te gunnen. Bovendien waren er duizenden barbaren reeds in het leger opgenomen, en deze waren niet beter voor de Romeins-Hellenistische cultuur en zeden te winnen, dan door ze te legeren in de voornaamste centra van het rijk.

Toch bleef dit een fout, want daardoor leverde hij de steden over aan de moedwil en losbandigheid der soldaten, die door theaterbezoek en andere ontspanning werden verwekelijkt, terwijl hij de grens van bewakers beroofde. Zodoende opende hij de poort voor de barbaren in het Noorden, om het Romeinse rijk binnen te vallen, wat onder hem nog niet vaak, maar later herhaaldelijk gebeurde 77).

Ook bestreed hij ze aan het eind van zijn regering niet zelf meer, zoals in het begin. Wel had hij, na een overwinning 79) van zijn generaals op de Goten (327), in 328 nog een stenen brug over de Donau laten bouwen, voor het geval dat een nieuwe strafexpeditie tegen de Goten nodig werd. Maar toen een hunner stammen, de Taifalen 78), met 500 ruiters einde 331 een inval deden in Thracië, en vlak tot voor de buitengracht van zijn hoofdstad plunderden, trok de keizer ze niet tegemoet, maar stak zelfs over naar Klein-Azië, 80) wat veel leek op een vlucht. De verdere oorlog – droeg hij op aan zijn vijftienjarige, oudste zoon Constantinus, die de vijanden verdreef en ze versloeg in het gebied der Sarmaten (januari 332).

Deze nederlaag der Germanen verzwakte ten eerste hun prestige bij de Sarmatische (Slavische) stammen, in wier midden zij, minder talrijk, als overheersende krijgsmanskaste leefden. Twee jaar later (334) stonden dan ook de onderdrukten op, en verdreven een der Gotische stammen de Limiganten (later Argaraganten genoemd) naar Romeinse grondgebied 81). Een voorspel van de naderende volksverhuizing.

Om zijn dynastie te verstevigen, had de keizer, reeds dadelijk na zijn bemachtiging van het hele rijk, zijn broers en verdere verwanten, aan het hof geroepen, en met de hoogste ambten bekleed. Zo benoemde hij van zijn halfbroers de jongste, *Dalmatius*, de vader van *Dalmatius* en *Hanniballianus*, tot *censor*, en de oudste, Julius Constantius (vader van Gallus en Julianus) tot *praefectus praetorio* van het Oosten 82) (einde 324). Deze laatste bleef dit tot einde 329, en werd toen vervangen door een nieuwe gunsteling, *Flavius Ablabius*, die voor die tijd nog geen jaar lang *praefectus praetorio* van Italië was geweest. Deze Ablabius was blijkens zijn gens-naam Flavius een vermoedelijk ver familielid van de keizer, wat ook nog bewezen wordt door de aanspraak "parens carissime", waar mee de keizer zich in een der wetten tot hem wendt 83).

Deze invloedrijke gunsteling, fel christelijk, stijfde de keizer in zijn klerikale, anti-heidense politiek, en was mede schuldig aan de rechterlijke moord op Sopator, een heidens sofist, die tijdelijk aan het paleis was toegelaten 84) (330). Toch had hij, wegens zijn geweldige invloed op Constantijn, vele benijders aan het hof, waar hij vaak vertoefde, zodat hij de dood van Constantijn niet lang overleefde. Doch intussen had de keizer, eind 333, ook zijn derde overgebleven zoon, Constans, tot caesar benoemd 85), nadat Constantinus II dit al in 317, en Constantius in 324 was geworden.

Spoedig kwam hiervoor ook de beurt aan Dalmatius Jr.

In het jaar 333 woedde er namelijk een hevige pest 85) in Syrië en Cilicië en vermoedelijk ook op het eiland Kupros (Cyprus), zodat er geen mensen genoeg overbleven om de oogst binnen te halen. Toch moest er voor de voeding van de keizerstad evenveel koren als andere jaren worden geleverd, en werd het weinige graan hier weggeroofd. Daardoor ontstond er 'n geweldige hongersnood 85) en duurte: de prijs van een schepel koren steeg tot 400 zilverstukken. 86) Toen braken er in de dorpen van Syrië overal oproeren uit. De bewoners overvielen zelfs vele graanpakhuizen en plunderden deze leeg. Wel hadden de soldaten spoedig de orde hersteld, maar er kwam geen verbetering in het lot der boeren. Alleen de christenen in de steden kregen het goed: zo schonk de keizer aan de kerk van Antiochië 36000 schepel koren om te verdelen onder haar armen en geestelijken 86). Natuurlijk vermeerde dit de ontevredenheid onder de heidenen, waartoe de meeste plattelanders behoorden, – temeer daar Constantijn kort te voren vele van hun tempels had verwoest of van beelden beroofd (331).

Bovendien teisterde in hetzelfde jaar een geweldige aardbeving het naburige Cyprus, waar de stad Salamis tot puin ineenstortte en haast helemaal werd vernietigd 86). Al deze rampen schreef men toe aan de toorn der goden over de aanslagen van hun vijand

- 131755 Constantijn.
Van deze ontstemming maakte nu zekere Kalokairos, opzichter van de keizerlijke kamelenkudde op Kupros, en waarschijnlijk van dit eiland geboortig, gebruik, om hier een opstand te verwekken, en zichzelf tot imperator uit te roepen. Maar Dalmatius Jr. landde weldra in naam des keizers met een legertje op het eiland, nam de vermetele
- 131760 usurpator gevangen, en liet hem in Tarsos, op de markt, levend verbranden als een misdadiger (334) 87).
Als beloning daarvoor werd Dalmatius Jr., die reeds tevoren consul was geweest (333), het volgend jaar tot caesar benoemd, 88) (335) en als veldheer voorlopig, wegens een dreigende oorlog met Perzië, in Mesopotamië gedetacheerd 89).
- 131765 Tezelfder tijd kreeg zijn broeder Hanniballianus de rang van *rex* of *nobilissimus* van Cappadocië 89) en Pontus, 88) en werd naar de hoofdstad Caesarea van de eerste provincie gestuurd (335).
Dit ging tevens gepaard met een verdeling van het overige rijksgebied onder de drie zonen van Constantijn. Constantinus II, de oudste kreeg Brittannië, Gallië en Spanje,
- 131770 Constans de jongste, Italië en Afrika en vermoedelijk ook Illyricum (de Balkan behalve Thracië), terwijl Constantius het hele Oosten kreeg, behalve de bezitting van Dalmatius. Van Dalmatius is het niet zeker, of hij Thracië ontving dan wel Mesopotamië maar hij was in elk geval Caesar en aan de zonen van Constantijn gelijk gesteld. Daarentegen werd Hanniballianus toekomstig vazal van Constantius.
- 131775 Wel bleef Constantijn nog opperkeizer en controleerde zijn zonen en neven scherp door middel van de praefecti praetorio die hij hen als raadslieden meegaf, maar het bewijst dat hij zijn einde voelde naderen. Twee jaar later, toen juist de Perzenkoning hem de vriendschap had opgezegd, en hij een oorlog tegen dit rijk voorbereidde, stierf hij te Ancyro, een voorstad van Nicomedia, na kort te voren tot
- 131780 Ariaans christen te zijn gedoopt 90).
Zijn lijk werd naar Constantinopel vervoerd, en van alle kanten snelden zijn zoons, neven en broeders toe. Daarop verhief zich, onder aanmoediging van Constantius, de middelste der zonen, een oproer onder de soldaten, waarbij o.a. de gehate praefectus praetorio van het Oosten, Ablabius, 91) en alle broers en neven van Constantijn
- 131785 werden vermoord, behalve de twee zonen van Constantius, Gallus en Julianus. De eerste spaarde men omdat hij hevig ziek was, de tweede, de latere heidenkeizer, om zijn jeugd 90).
Later motiveerde men dit bloedbad met de bewering, dat het gebeurde op last van de overledene. Constantijn zou namelijk zelf, in een testament dat hij voor zijn dood de
- 131790 bisschop Eusebius van Nicomedia gaf, de vrees hebben geuit, dat zijn broers hem hadden vergiftigd, en daarom zijn zonen hebben opgeroepen om zijn dood te wreken 92). Hoe dit ook zij, daardoor wordt de woede der soldaten tegen de vermeende moordenaars van hun geliefde keizer verklaarbaar. Toch was deze bewering mogelijk slechts een verzinsel van Constantius, om hen op te hitsen.
- 131795 Zo gedroegen zich de christenen vlak na de dood van de groten Constantijn. De heidense senaat echter eerden dit ogenblik waardiger, door de verzaker van hun geloof een apotheose toe te kennen 93).
- DE ECONOMISCHE TOESTAND VAN HET RIJK.
- 131800 Constantijn, prachtlievend en verkwistend van aard, verkeerde in doorlopende geldnood. Daarom beperkte zich zijn economische politiek tot een enkel punt: de strenge, zorgvuldig gecontroleerde inning der belastingen. Het belang van hemzelf en zijn ambtenaren ging hem boven de welvaart zijner onderdanen. Naast de belastingen en schattingen had de keizerlijke schatkist nog andere ongeregelde inkomsten door de
- 131805 hoge boeten die op overtreding van vele wetten stonden. Het woord "fiscus" keert dan ook in bijna al zijn edicten terug.
Hoe was echter de toestand voor Constantijn, en hoe werd hij veranderd?
Zonderen we enkele ongeregelde belastingen uit, (zoals vermogens- en vrijlatingsbelasting) waaraan ook de burgers van de stad Rome van oudsher onderhevig
- 131810 waren, dan rustte alleen op de anderen, dus Italianen en provincialen, **belastingplicht**.
Deze bestond, voor Diocletianus' regering, in de volgende tributen:
I. Een jaarlijkse korenlevering, aan alle landbezitters opgelegd voor de jaarlijkse broodverzorging van de hoofdstad (*annona urbis*), die naar het doel waarvoor zij
- 131815 diende, ook *annona* heette.
II. Een extra-belasting in tijd van duurte en gebrek, alleen op speciale aanwijzing des keizers ingevoerd, en daarom *indictio* geheten.
III. Ongeregelde schattingen en requisities in elk gewest waar soldaten gelegerd waren, en die allerlei naturaliën, bijv. brood, vlees, wijn, olie naast lastdieren en
- 131820 materiaal voor het leger betroffen.

De eerste belasting, de annona, maakte reeds Diocletianus van een grondbelasting, ook tot een hoofdelijke belasting (capitum), d.w.z., de nieuwe schatting was niet alleen afhankelijk van het landbezit, maar ook van het aantal bewoners, mensen en stukken vee. Daar echter het kleingrondbezit en de hoeven der pachters in verhouding dichter bevolkt waren dan de grote landgoederen, werden vooral de kleine boeren door deze regeling het zwaarst getroffen.

De tweede belasting, de indictio, werd al spoedig tot een geregelde schatting, die onder Diocletianus om de 5 jaar werd geheven.

Al deze tributen, annonae en indicties, wogen ondragelijk zwaar op de provincialen, en lieten hun door de voortdurende herhaling nauwelijks kans tot verademing. Bovendien traden de belastinggaarders (susceptores) en ambtenaren tegen belastingweigeraars (exactores) veel strenger op tegen armere burgers dan tegen rijke en aanzienlijke. De eerste werden zelfs wanneer zij niets bezaten, gegeseld en gefolterd; de laatsten die bij wanbetaling zich door slaven konden laten verdedigen, durfde men vaak niet aan. Daardoor hadden zij dan ook de meeste achterstallige schulden aan de schatkist, en niet de armeren.

Maar Constantijn, die dit drukkende fiscale systeem van Diocletianus grotendeels overnam, verzwaarde het nog meer. 95) De indicties hield hij vanaf 313 voortaan om een termijn van 15 jaren, in plaats van om de vijf, maar deze belasting werd nu natuurlijk drie maal zo hoog, wat de keizer weer hielp aan geweldige sommen contant geld. En hiermee nog niet tevreden, voerde hij een oude, in onbruik geraakte belasting in van Septimius Severus 94) in op alle *handeldrijvenden* in zijn rijk (314).

Deze z.g. "collatio lustralis" of vijf jaarlijkse bijdrage was een schatting in goud en zilver, vandaar bij de Grieken *chrysarguron* geheten. 96) Hij moest bij alle troonsbestijgingen en lustra (of vijf jaarlijkse jubileën) zowel van de augustus als van de latere caesaren worden opgebracht. Zo herhaalde hij zich in 315, 317 320, 322, 324, 325, 327, 329, 330 enz., dus gemiddeld om de twee jaar.

Deze schatting hief hij, zoals de naam reeds uitdrukt, vooral om de dure feesten bij al die jubilea, en ook de vijf jaarlijkse geschenken aan het leger te kunnen bekostigen, zonder zich te bekommeren om de draagkracht van zijn onderdanen. Maar hij verdelgde daardoor *handel* en *industrie*, de voedingswortel van de welvaart zijner steden, zoals zijn voorganger al door annonae en indicties het boerenbedrijf, de welvaart van het platteland had geruïneerd.

Want alle neringdoenden, van de rijkste groothandelaars tot de armste handwerkers, marskramers en karreventers, waren aan deze *collatio lustralis* onderworpen. Ja, zelfs de ongelukkige sletten die haar lichamen te koop moesten bieden bleven niet gespaard, maar moesten van hun vernederende winst nog wat afstaan aan de keizer 97).

Telkens als er een jaar naderde, waarin men de schatting storten moest klonken overal in de steden zuchten en jammerklachten. Zij, die niet konden betalen uit overgrote armoe, werden gegeseld, en met de allerwreedste folteringën gekweld. Moeders werden gedwongen hun zonen te verkopen, vaders hun dochters te prostitueren, om maar goud en zilver te vinden voor de meedogenloze belastinggaarders 97). Zelfs de rijkere werden nu veel strenger dan vroeger gedwongen. Hun slaven en huisraad werd in beslag genomen, en als ze binnen twee maanden hun schuld niet hadden afgelost, werd hun bezit ten bate van de fiscus verkocht 98).

En bij al deze *directe* belastingen kwamen nog de *indirecte* die vooral de aanzienlijke troffen, dus zowel de *perfectissimi* of leden van de senatorenadel als de *decurionen* of leden van de vroedschappen der provinciesteden, en de daaruit ontstane regentenadel. Deze werden namelijk al van oudsher met *munera* of kostbare ambten geplaagd, bijvoorbeeld met het ambt van pretor of quaestor, een eer die hun geweldige sommen kostte.

Daar de *perfectissimi* te weinig in aantal waren, en er velen van hen tot de keizerlijke ambtenaren of gunstelingen hoorden en daardoor vrijdom van *munera* genoten, viel deze plicht vooral op de *decurionen*.

Om nu zichzelf of hun gezinnen niet te ruïneren, zochten de hiertoe gedoemden zich door allerlei middelen aan het *decurionaat* te onttrekken. Zo trouwden zij bijvoorbeeld met hun slavinnen, om uit hun stand gestoten te worden, gingen over tot de christelijke geestelijkheid, verhuisden naar minder hoog aangeslagen steden of naar het platteland. Maar de sluwe wetgeving van Constantijn verijdelde al deze pogingen. Verhuizing naar een andere stad bezorgde een *decurio* dubbele plicht tot *munera*, zowel in de plaats waar hij vandaan kwam als in zijn nieuwe vestigingsoord. Trouwen met slavinnen werd ten strengste strafbaar gesteld, de hieruit geboren kinderen als onecht beschouwd en zelfs daarom op de wreedste wijze vervolgd en mishandeld. Priester worden werd alleen maar aan niet-*decurionen*, dus aan armeren toegestaan. Al deze ontvluchtingsmiddelen onthieven dus niemand van het *decurionaat*.

Zelfs werd dit, op 's keizers bevel tot een *erfelijke stand*, en daardoor de decurionen blijvend belastbaar. 99)

Dit verduidelijkt ons de bijnaam *latro* of struikrover die Constantijn in zijn
 131890 middelste periode kreeg. Maar de stichting van Constantinopel verzwaarde de belastingdruk nog meer, en ging tegelijk met zulk een geweldige verkwisting gepaard, dat men hem toen "pupillus" (onmondige) noemde, of "rijp voor curatele" 100). En daar Constantijns opvolgers zijn zware belastingdruk niet verlichtten (behalve, heel even, de heiden Julianus) putte dit wrede afpersings-stelsel de krachten van het
 131895 volk volslagen uit. Men verwenste voortaan de staat met zijn fiscale tirannie, en dit werd een der oorzaken van zijn latere ondergang. Volgen we thans evenwel 's keizers politiek jegens de verschillende maatschappelijke beroepen.

Twee hiervan, de korenschippers en de bakkers, waren reeds van ouds, ten bate van de
 131900 fiscus, met passende *munera* belast. De eerste moesten (buiten hun eigen particulieren handel) de korenschattingen of *annonae* in hun schepen kosteloos naar Rome, en later naar de nieuwe hoofdstad vervoeren 101). De bakkers moesten gratis dit keizerlijk graan in hun ovens bakken voor de broodverzorging van hof, leger en hoofdsteden. Al sinds lang waren deze beroepen tot gilden verenigd en wegens hun kosteloze
 131905 diensten aan de staat, vrijgesteld van *alle andere munera*, welk privilege telkens werd bestendig (o.a. 18 september 326) 102).

Doch thans maakte Constantijn het zowel voor de korenschippers als de bakkers vrijwel onmogelijk, uit hun beroepen te deserteren door deze, *evenals de decurionenstand, erfelijk te verklaren* 103).

131910 Zo beveelt hij in 314, 19 maart, dat korenschippers die van oorsprong bakkers (*pistores* of *levamentarii*) 104) waren, toch eveneens tot het beroep hunner ouders zullen worden.

Ook een wet uit het volgend jaar 105), verklaart nadrukkelijk dat men alleen door erfrecht tot het gilde der bakkers kan behoren. Wil men uit dit gilde ontslagen
 131915 worden, dan moet men met dit erfrecht de *hele erfenis* van zijn ouders weigeren, en aan een *bloedverwant* of aan het gilde afstaan. Natuurlijk zullen de meesten zich wel bedacht hebben, eer ze zich aldus uit dit gilde los kochten.

Ook de korenschippers moesten dit blijven van vader op zoon, en wanneer een hunner mogelijk geestelijke werd en zo listig vrijdom van *munera* had verworven, werd hij
 131920 toch niet uit het gilde der *naricularii* (korenschippers) bevrijd 106). Er restte hun echter een middel, hieruit los te komen, namelijk door hun schepen en andere bezittingen aan anderen te verkopen. Dit stond de keizer hun toe, maar op voorwaarde dat dan de nieuwe eigenaars werden gedwongen zich aan de verplichtingen van het
 131925 schippersgilde te onderwerpen 107) (28 oktober 326).

Zolang er nog twee vorsten regeerden over het Romeinse rijk, wedijverde Licinius in het Oosten met Constantijn, om het zo nuttige korenschippersberoep in stand te
 131930 houden. Zo had hij leden uit de senatorenstand gedwongen, schepen uit te rusten voor graanvervoer, en zodoende deze verlaagd tot de stand der korenschippers. Doch deze dwang leek Constantijn niet tactisch genoeg, en toen hij dan ook het Oostelijke rijk had veroverd en de wetten van de tiran vernietigde, liet hij het aan de senaat over te bepalen, welke personen het waardigst waren om weer tot hun geboortestand terug te
 131935 keren (15 juli 325) 108).

Een algemeen streven beheerste dus Constantijn bij zijn regeling der maatschappelijke rangen: *ieder in de stand van zijn ouders te laten blijven*.

131935 Senatoren mochten niet dalen in rang. Decurionen werd het onmogelijk gemaakt op te klimmen tot een keizerlijk ambt, bijvoorbeeld het *presidaat*, tenzij ze eerst *alle gemeentelijke rangen* in hun vaderstad op de rij af hadden doorlopen 109).

En niet alleen de senatoren, de decurionen, de korenschippers en bakkers werden tot *erfelijke beroepen*, maar ook bijvoorbeeld *Muntmeesters* 110). Deze was het eeuwig
 131940 verboden om *perfectissimus* of *judex* te worden 110).

Zo krijgen we dus onder Constantijn de beginnende verstarring der hele maatschappij in *erfelijke kasten*, die de middeleeuwen zo typeert.

Al deze wetten en instellingen waren uitsluitend voor het betere fiscale overzicht. Over 't verdere economische leven heeft Constantijn, meer militair dan juridisch
 131945 aangelegd, heel wat minder wetten afgekondigd dan bijvoorbeeld Diocletianus, de regelaar van *maximumprijzen* en juiste naleving van koopcontracten.

Voor de gewone neringdoende beroepen interesseerde hij zich dus maar weinig. Slechts een soort hiervan moedigde hij, bij uitzonderlijke privilegieën, ten zeerste aan, namelijk alle *intellectuele* en *artistieke* bedrijven.

131950 Reeds in 321 of 324 111) verklaarde hij, mogelijk door toedoen der *clerici* die vaak deze vakken erbij beoefenden, alle geneeskundigen, *grammatici*, retoren en leraars in de letteren *vrij van munera*.

Dit was wel niet nieuw, want hij herstelde daarmee een oude wet van Antonius Pius, 112) die ook Diocletianus 112) had in stand gehouden, maar nochtans in de tijd der vervolgingen en dynastieke oorlogen weer was vergeten. Toch vormde hij door dit besluit een gunstige tegenstelling met Licinius, de hater van het intellect, en kon zodoende zelfs doorgaan voor een beschermer der beschaving. In 333 gaf hij, behalve dit privilege, de medici en literatoren ook nog vrijdom van militaire dienstplicht 113).

Mede in verband met de vele basilieken die hij overal liet stichten, moedigde hij ook het *bouwbedrijf* ten zeerste aan. Nu was er groot tekort aan architecten. Daarom beval hij Felix, de proconsul van Afrika, om allen die op twee en twintigjarige leeftijd weigeren zich aan de "artes liberales" te wijden, door munera-vrijdom en extra-toelagen, ook voor hun ouders, aan te sporen tot dit vak (334) 114).

In 337 breidde hij deze munera-vrijdom uit tot alle architecten, artsen, veeartsen, schilders, beeldhouwers, marmerbewerkers, houtbewerkers, goud-, zilver-, koper- en ijzersmeden, loodgieters, glasblazers, ivoorbewerkers, pottenbakkers en talloze andere beroepen. 115)

Hij verleent hun dit privilege "opdat hun rust vergund zij, hun kunst naar wens te leren en er meer bedreven in te worden en er hun *zonen* in te onderwijzen". Dus ook hier het streven deze beroepen erfelijk te maken.

Doch daar zij wegens hun armoede toch niet in aanmerking kwamen voor de openbare staatsbedieningen, of munera, betekende dit privilege heel weinig, temeer omdat zij onderhevig bleven aan de *directe* belasting: de *collatio lustralis*.

Van christelijke invloeden die tot zachtere behandeling zouden leiden merken we dus niets bij Constantijns economische politiek.

Evenmin is dit het geval bij zijn houding jegens de laagste klassen der bevolking, de slaven en vrijgelatenen. Van verzachting der slavernij, zoals vaak beweerd wordt, was geen sprake, hoogstens van sporadische grillen van vorstelijke mildheid jegens die ongelukkige kaste.

Zo prees hij in een zijner wetten, vermoedelijk onder geestelijke invloed, de vrijlating van slaven, vooral op zondag, als een welgevallig werk. (Zie hoofdstuk CHRISTENKEIZER EN HEIDENDOM). Maar in een ander edict verklaart hij dat een vrijgelatene die uit ondank zijn patroon beledigt, met al zijn nakomelingen weer

wordt verlaagd tot de slavenstand 116).

Elders verbiedt hij onder schoonschijnende leuzen, dat bij erfenissen een gezin van slaven of coloni wordt verdeeld over verschillende erfgenamen 117). "Want wie kan kinderen van ouders, zusters van broeders, ouders van mannen scheiden!"

Toch was dit meer uit nuttigheidsoverwegingen, omdat hij de *coloni* vast wou binden aan de akkers waar zij werkten.

Vandaar dat hij dan ook veel strenger optrad dan Diocletianus voor hem, tegen voortvluchtige slaven en coloni. Zij die er op betrapt werden naar het barbarenland te vluchten, werd hun been geamputeerd, of ze werden gedood of anderszins gestraft 118).

Wie echter een voortvluchtige slaaf of colonus in zijn huis of op zijn land ontving buiten weten van diens heer, moest hem met nog een ander lijfeigene of met 20 solidi 119) teruggeven aan zijn heer. Als hij hem echter voor de tweede of derde keer ontvangt moest hij behalve de slaaf nog 2 of 3 anderen of de voorgeschreven waarden restitueren.

Dit *binden van de lijfeigenen aan hun akkers, een gebod zo typisch voor de verdere middeleeuwen*, geschiedde weer om *fiscale redenen*. Want zo bleef het slavenbezit bij elk landgoed vrijwel stabiel, en hoefden de officiële lijsten hiervan niet telkens te worden veranderd.

Daarom bepaalde hij ook op dat coloni alleen mochten worden verkocht binnen de provincie waar zij woonden (27 februari 328) 119).

Ook trad hij hierom op tegen het misbruik van vele slavenbezitters die ter ontduiking van de capitatio (of hoofdelijke belasting) hun slaven bij vreemden uit besteedden als zogenaamde *vrije loonarbeiders*. De betreffende slaven konden, zo zij logen vrij te zijn, op de pijnbank worden gedwongen tot bekentenis, en vervielen natuurlijk aan de schatkist 120).

In 't algemeen is dan ook het aantal slaven in Constantijn niet verminderd, daar vele armen uit de onmogelijkheid anders aan de belastingen te voldoen, *hun kinderen als lijfeigenen moesten verkopen*. Dit wordt behalve door Zosimus 121) nog bevestigd door een wet van de keizer zelf, 122) die in dit geval de ongelukkige ouders toestaat hun kinderen terug te kopen, zo ze weer meer geld bezitten. Die mogelijkheid zal zich wel zelden hebben voorgedaan.

Strengere wetten vaardigde de keizer uit tegen de *vermenging der standen*. Deze was, zoals we zagen, juist in de tijd der soldatenkeizers algemeen, zodat Constantijn zelf was geboren uit een herbergierdochter. Eerst verbood hij nu decurionen en

perfectissimi te trouwen met slaven of slavinnen "daar hieruit slaven worden geboren" (123). Daarna breidde hij dit verbod ook uit tot omgang van bovengenoemde aanzienlijken met *alle* personen van lage stand, zoals vrijgelatenen, actrices, waardinnen, herbergierdochters, koppelaardochters, koopvrouwen enz. 124).

Wanneer ze de hieruit ontstane natuurlijke kinderen voor wettig verklaarden, werden ze gebrandmerkt en verloren hun Romeinse burgerschap. Erfenissen aan deze natuurlijke kinderen waren ongeldig en moesten aan wettige nakomelingen worden teruggegeven. Doch allerwreedst vervolgde hij de onschuldige bastaarden. Deze vervielen namelijk aan de schatkist en werden tot dwangarbeid veroordeeld.

Zo zien we dus dat Constantijn de welvaart van zijn rijk, en de vrije ontwikkeling der maatschappij geheel ten offer bracht aan zijn fiscale belangen.

CHRISTENKEIZER EN HEIDENDOM.

Zoals we zagen in hoofdstuk IV [DE OPKOMST VAN CONSTANTIJN] hadden bijgeloof en politiek Constantijn er toe gebracht om Christus met de tot dusver vereerde Zonnegod (Mithras) te vereenzelvigen, en zodoende beiden, Christenen en Mithrasdienaren, onder zijn labarum te verenigen (312).

Nu kwamen beide religies in veel overeen. Ook de Mithrasdienst, (gepleegd in onderaardse holen of Mithrae) had slechts één god, en huldigde een veel strenger zedenleer dan het overige heidendom. Doch toen de keizer eenmaal Christelijke bisschoppen in zijn omgeving had toegelaten (al in 312), die hem inlichtten omtrent het wezen van hun leer, verdrong hun invloed allengs meer en meer die der Mithraspriesters.

Vanaf 312 werd hij dus in stijgende mate Christelijk maar bleef daarnaast het Mithraïsme, de godsdienst van het leger, ontzien; ja mogelijk beleed hij een tijdlang beide religies tegelijk. Dit blijkt, behalve uit de keuze van het labarum, nog uit een tweede, meesterlijke bemiddelingspoging tussen Christenen en Zonnedienaren, namelijk de invoering van de *zondag* 125) (5 maart 321). In plaats van vele heidense feestdagen werden nu 52 officiële rustdagen ingesteld. Deze dag, hoewel meteen als Christelijke Sabbat bedoeld, noemt hij nog niet, zoals latere keizers "dag des heren" (dies dominicus), maar dies Solis, de dag der Zon. Zo kon hij zowel Christus als Mithras, de god van de vrede als de god van het leger, ieder het zijne geven, en leefde hij in vriendschap met alle goden en onderdanen.

Als voorbeeld van de zalvende, bijna zegenende toon van Constantijns godsdienstige edicten citeer ik dit edict:

"Alle rechters en stadsbewoners en alle diensten en bedrijven moeten rusten op de *eerbiedwaardige dag* van de Zon. Zij, die echter op het land geplaatst zijn mogen de akkerbouw bedienen, daar het vaak gebeurt dat op geen andere dag geschikter het graan aan de vore, de wijnstok aan de greppel kan worden toevertrouwd, opdat niet de gunstige kans, vergund door de hemelse voorzienigheid te niet ga" 125).

Doch als correctie op deze wet werd er weldra (3 juli 321) aan toegevoegd, dat het de keizer welgevallig was op de dag wijgeloften te vervullen, of slaven vrij te laten. Dus de rustdag was meteen bedoeld voor Christelijke en Mitharistische eredienst 126).

Tegenover de overige, polytheïstische heidense religies, zoals de dienst van Jupiter en de andere Olympische goden, stond hij echter van begin af aan heel anders dan tegenover de monotheïstische Mithrasdienst. Met de term "heidenen" bedoelen we dan voortaan, sprekend over Constantijn, korthedshalve: de grote massa der veelgodendienaren.

Deze beschouwde hij allengs op dezelfde wijze als zijn nieuwe geloofsgenoten dit deden.

Nu hadden de eerste Christenen uit het oude Jodendom dezelfde *onverdraagzaamheid jegens andersdenkenden* ingedronken, die eigenlijk alle Oosterse vormen van monotheïsme (ook het Mazdaïsme en de Islam) kenmerkt. Waaruit kwam dit voort? De Christenen zagen, evenals vroeger de Joden, in de heidense polytheïsten geen beklagenswaardige lijdens aan bijgeloof, maar misdadige *duivel-aanbidders*. Zij geloofden namelijk zelf, evenals de heidenen, aan het bestaan van *demonen*. Het Nieuwe Testament is van dit bijgeloof doordrenkt: Christus bant de duivelen door zijn woord. De Christenen zagen nu in alle heidense goden demonen 127) of gevallen engelen, dus dienende geesten van Lucifer of Satan.

Deze hadden namelijk, in mensengedaante die zij naar believen konden aannemen, een tijdlang op aarde geleefd, zodat nog hun graven werden vertoond, zoals van Zeus op Kreta 127). Na hun dood evenwel hadden deze wezens de overlevenden op duivelse wijze verleid, hen als goden te vereren, terwijl in waarheid hun zielen slechts bleven bestaan als boze geesten.

Hun demonisch karakter bleek volgens de Christenen allereerst uit hun onzedelijk karakter, en zeker viel het gemakkelijk alle schanddaden der Olympische goden op te

- 132085 sommen.
Bovendien konden zij zielen en lichamen van mensen binnensluipen. In 't laatste geval verwekten zij slechts stoffelijke kwalen, maar zo zij de zielen overmanden, afgoderijen en ketterijen. 128) Maar voor de naam van Christus en het teken des kruises, zouden de duivelen vluchten. Christenpriesters dienden daarom tevens als
- 132090 duivelbanners en medicijnmannen, en zouden ziekten kunnen genezen evenals Christus zelf.
Natuurlijk waren, naar hun zeggen, ook de Christenvervolgingen gebeurd onder inblazing der *demonen*. 129) Alleen door het labarum, het Christus-monogram, op zijn vaandels had hun beschermer Constantijn die vijanden Gods overwonnen. Geen wonder dus
- 132095 dat deze keizer hoe meer hij onder invloed der clerici kwam, die polytheïsten leerde verfoeien als duivel-dienaren.
Toch was zijn aanvankelijke houding tegenover deze heidenen er een van onzekerheid en politieke voorzichtigheid. Wel was hij persoonlijk meer de Christenen toegedaan, maar hij mocht als "pontifex maximus" of heidens opperpriester (een der oude bevoegdheden
- 132100 van de keizers) de paganistische meerderheid van leger en volk nog niet ontstemmen. Zo onderwierp hij zich voorlopig, wanneer het niet anders kon, aan allerlei heidense gebruiken. Na zijn eerste zegevierende binnenkomst in Rome (29 oktober 312) brengt hij bijvoorbeeld als pontifex maximus het verplichte dankoffer der "suove-aurilia", en als zodanig staat hij dan ook afgebeeld op de triomfboog, spoedig daarna voor hem
- 132105 opgericht (313, 314 of uiterlijk 315).
Maar ook toen al toonde hij duidelijk zijn afkeer van deze zinloze ceremoniën en poogde er zich, zo mogelijk, aan te onttrekken. Zo vierde hij bijvoorbeeld *niet* de "ludi saecularii" of het plechtige eeuwfeest ter ere van de stichting der stad Rome, (313, 21 april), dat zich elke 110 jaar of Etruskische eeuw herhaalde 130) en het
- 132110 laatst in 203 door Septimius Severus met weidse praal de volke was vertoond 131). Als verontschuldiging voor zijn ontwijken van deze heidense plechtigheden diende hem een belangrijke samenkomst met Licinius die hij eind januari 313 in Milaan moest treffen. Maar door dit haastig vertrek uit Rome, na een nauwelijks drie-maandelijks verblijf bespaarde hij zich niet alleen het verwijt van afgoderij, maar tevens de
- 132115 geweldige kosten aan dit openbare feest verbonden. Ook na zijn oponthoud te Milaan keerde hij dus niet naar Rome terug, maar reisde verder, eerst naar Illyrië, toen naar Gallië, onder voorwendsel van een nieuwe oorlog tegen de Franken.
Maar een oud orakel bedreigde Rome met de ondergang zo deze eeuwspelen werden overgeslagen. In dit verwaarlozen van oude tradities zagen bijgelovige heidenen van
- 132120 toen en later dan ook verraad jegens het vaderland, zodat ongeveer 430 Zosimus aan Constantijn de toenmalige rampen van het rijk verweet.
Doch in de beginne uitte Constantijn zijn haat tegen de *oude, officiële godsdienst* van Rome slechts negatief nooit openlijk. Overeenkomstig het rescript van Milaan, dat
- 132125 beide religies gelijkstelde, voerde hij een schijnbaar onpartijdige, *verzoenende* politiek, en wachtte er zich voorlopig wel voor om de polytheïstische meerderheid in dit Westelijk rijksgedebied door al te vijandige wetten tegen zich in te nemen.
Toch had de Christelijke leer zijn voorkeur, en poogde hij al dadelijk, *heidense propaganda te beletten*. In twee opeenvolgende wetten van 319 132) verbood hij
- 132130 namelijk haruspices of vogelwichelaars, en weldra ook andere heidenpriesters, om, op *straffe van verbranding, particuliere huizen te bezoeken*. Zij konden, zegt hij, "hun bijgeloof naar eigen ritus dienen binnen openbare tempels."
"Gaaf naar uw heilighdommen," roept hij hun toe, "wij verhinderen u niet, in 't vrije licht, een lang verjaard gebruik in stand te houden."
- 132135 Hierin toont hij dus een zekere verdraagzaamheid, maar tevens een nauwelijks door spot bedekte vrees.
Toch bleef Constantijn, een *bijgelovig* vertrouwen hechten aan diezelfde haruspices of vogelwichelaars, die juist omdat ze "duivelse" geesten dienden, van deze de toekomst vernamen. Dit bleek bijvoorbeeld toen het Colosseum of amfitheater der Flaviërs, van wie hij en zijn geslacht beweerden af te stammen in Rome door de bliksem werd
- 132140 getroffen. Constantijn, juist vertoevend in Illyrië (*Sardica*) zag hierin een gevaarlijke omen, en liet terstond de haruspices raadplegen. Tevens bepaalde hij in een edict van 17 december 320 of 321 133), dat voortaan deze vogelwichelaars nauwkeurig moesten worden geraadpleegd zo het paleis of andere publieke gebouwen te Rome door de vlammen des hemels werden aangeraakt, doch dat zij (de vogelwichelaars)
- 132145 zich van *offers* binnen particuliere huizen moesten onthouden. Dit laatste was een herhaling van een reeds vroegere wet.
In dit bijgeloof aan *heidense waarzeggerij* en *orakels* stond Constantijn volstrekt niet alleen. Hij deelde het met zijn meeste, zelfs Christelijke tijdgenoten, bijvoorbeeld met Lactantius. Volgens deze apologet zouden de Sibyllijnse boeken niet
- 132150 alleen de komst van Christus, 134) maar zelfs van Nero, 135) de voorloper van de

"antichrist" hebben voorspeld. Bovendien zouden deze Sibyllen 136) evenals Apollo van Colophon 137) in een van zijn orakels reeds het monotheïsme hebben verkondigd, krachtens hun profetische begaafdheid. Wel konden de Christenen moeilijk verklaren hoe het kwam dat de demonen de toekomst, ja Gods geheimste raadsbesluiten kenden. Zij reddten zich hieruit door te beweren dat de duivelen zelf, als gevallen engelen, een zeker goddelijk element in zich over hadden, en daardoor – maar slechts gedeeltelijk – wisten wat er gebeuren zou 138).

Verwant aan zijn wetten tegen heidenpriesters, maar veel strenger van toon, is zijn edict tegen toverij (321 of 324, 23 mei) 139). Alle beoefenaars van zwarte kunst, die hetzij kuise zielen hierdoor tot wellust verleiden, of tegen het heil der mensen samenspannen of regenwolken, hagel of onweer verwekken om de oogst op de akkers te vernielen, worden met hevige straffen bedreigd. Deze wet verklaart ook Constantijns later gedrag tegen de tovenaars en weermaker Sopater 140). Ook hierin toont hij zich de eerste typische middeleeuwer, want deze wet, eenmaal ingeworteld als gewoonte, gaf het aanzijn tot de latere, zo afschuwelijke heksenprocessen.

Daar heidenpriesters vaak tevens als wonderdoeners optraden, trof deze wet ook hen. Toch bleef hij in de beginne vrij verdraagzaam jegens de polytheïsten, tot hij omstreeks 323, wegens zijn steeds ergere wanverhouding met de heiden Licinius veranderde van politiek. Dit bleek aan het eind van dit jaar, toen in het rijkdeel van zijn collega, ter ere van diens 15-jarig jubileum, Katholieken en zelfs hun priesters, als van ouds waren gedwongen om aan de keizer te offeren. Constantijn verbood dit nu ten strengste, op straffe van openbare geseling, en wierp zich zodoende meteen op tot beschermer der Christenen ook in het rijkdeel van zijn mededinger. Om deze tijd verandert hij dus duidelijk zijn houding jegens de polytheïsten: hij wordt hun *openlijk vijandig* 141).

Na Constantijns overwinning op Licinius werden, evenals na Maxentius' val, al diens wetten en beschikkingen ongeldig verklaard. Allereerst deed de keizer natuurlijk zijn vervolgingsmaatregelen tegen de Christenen teniet 142) (324, 16 december). Dit geschiedde door een plakkaat aan alle bewoners der Oostelijke provinciën, o.a. aan Palestina; dat wel het allerzwaarst had geleden. De voornaamste bepalingen hiervan waren: (z. Euseb. Vit. Const. II, 24-42):

a) De verbannen Christenen werden teruggeroepen.
b) Wie van zijn vermogen om godsdienstige redenen was beroofd, kreeg dit terug.
c) Geestelijken die opzettelijk tot munera werden verplicht, kregen vrijstelling daarvan.

d) Wie tot dwangarbeid in de bergwerken of tot de slavenstand was veroordeeld, of tot smadelijke vrouwenarbeid (spinnen en weven) werd daarvan verlost.

e) Wie om zijn geloof uit het leger was gestoten, mocht in dezelfde rang die hij vroeger bekleedde, daarin terug, of, desgewenst, eervol ontslagen worden.

f) De goederen van hen, die om hun geloof waren omgebracht, kwamen aan hun bloedverwanten, of, zo deze niet meer leefden, aan de Kerk.

g) Zo de fiscus echter deze verbeurd verklaarde goederen aan particulieren hadden geschonken of verkocht, moesten deze aan de vroegere, wettige eigenaars worden teruggegeven. De latere bezitters kregen *geen schadeloosstelling* hiervoor, maar mochten alles, wat zij door vruchtgebruik uit deze bezittingen genoten hadden behouden, zo zij in een nederig rekwest aan de keizer hem vergiffenis smeekten voor hun "hebzucht". Deze bepaling betrof ook en vooral de gesecculariseerde goederen van de Kerk.

We zien dus duidelijk een groot verschil tussen dit edict, en het vroegere rescript van Milaan, dat ook aan de Christenen en hun Kerk de geroofde goederen teruggaf, maar tegen schadeloosstelling van staatswege aan de latere eigenaars. Bovendien zond Constantijn een bevelschrift aan alle metropolieten (opperste kerkvorsten) en stadhouders der betreffende provinciën om de verwoeste kerken weer op te bouwen, zo, dat de nieuwe minstens even hoog of hoger waren dan de vroegere. De kosten moesten deels uit de keizerlijke schatkist, deels door "vrijwillige" bijdragen der bewoners worden bestreden, wat de belastingdruk natuurlijk zeer verzwaarde. (Euseb. Vit. Const. II, 46).

Er is dus bij de keizer een groei van christelijke gezindheid en haat tegen de heidenen te bespeuren. En geen wonder. Hij had nu geen rekening meer te houden met een heidens collega, en had bovendien zijn residentie verlegd naar het Oosten, waar veel meer Christenen waren dan in het Westen. Daarom trad hij thans veel feller op tegen de polytheïsten dan voor die tijd.

Ongeveer tegelijk met zijn privileges aan de Christenen verbood hij zijn nog *heidense beambten aan de goden te offeren*. Wel is de tekst van deze wet niet bewaard, en ook het bericht hierover bij Eusebius (Eus. Vit. Const. II, 44, 47) vaak betwijfeld (o.a. door Burckhardt), maar hij moet hebben bestaan, daar in 341 de

latere keizer Constantius zich uitdrukkelijk beroept op zulk een edict van zijn vader. (Ik citeer:)

"Weg met het bijgeloof, laat de waanzin der offers worden afgeschaft. Want wie nog tegen de wet van onze goddelijke vorst en vader en het bevel van onze goedertierenheid het waagt om te offeren, zal door een passend en onmiddellijk vonnis worden getroffen." (Cod. Th. XVI, 10, 2).

Constantijn ontsloeg dus wel niet heidense beambten uit zijn dienst, maar hij belette hun godsdienst oefeningen. Tevens dwong bij hen op zachte, niet gewelddadige wijze om Christenen te worden. Velen gehoorzaamden, om in de gunst van de keizer te blijven en de kansen voor hun carrière niet te versmijten. En al bleven er verstokte heidenen in zijn dienst, – voor alle ambten die open kwamen, benoemde de keizer meestal Christenen, om zo het getal van zijn aanhangers te vermeerderen.

Terzelfder tijd (1 oktober 325) verbood Constantijn, stellig op wens van zijn nieuwe geloofsgenoten, de bloedige gladiatorenspelen, waar het lagere, heidense volk, vooral in Rome nog altijd op verzot was. Deze wet werd echter vaak ontdoken, zodat het nog bijna een eeuw zou duren, eer het laatste zwaardgevecht zou worden gestaakt door de zelfopoffering van de monnik [Telemachos](#) (403).

Zo zien we dus dat Constantijn, in het begin van zijn openlijk Christengezinde politiek, dus van de val van Licinius tot de bouw van Constantinopel, nog gematigd optreedt tegen de heidenen (323–328).

Zelfs is er omstreeks 328, evenals tegenover de Arianen, een zekere toenadering tot de heidenen bij hem te bespeuren.

Volgens de heiden Zosimus 143) (II, 29) zou wroeging om zijn moord op Crispus, en weldra op Fausta daarvan oorzaak zijn, en dit is best mogelijk.

Na zo grote wandaden voelde hij zich als door furiën vervolgd, en zocht naar een middel die kwelling weg te nemen. Moest hij alles biechten tot de Christelijke bisschop Hosius? Dit dorst hij niet, want de meeste Christenen wisten nog niets van zijn moord op Crispus en hij was bang, zijn populariteit bij hen te verspelen zo dit bekend werd. Daarom zocht hij, in zijn groeiende bijgelovige angst voor de wraakdemonen, eerst toevlucht bij de priesters van Mithras, de zonnegod, die immers de naam hadden, geesten te kunnen bezweren en bannen. Maar deze verklaarden zich machteloos hem rein te wassen van schuld aan zoveel moorden en meineden.

Thans besloot hij een befaamd neo-platonisch sofist en tovenaars, Sopater en leerling van Jamblichos, te raadplegen en ontbood hem in zijn nieuwe paleis te Constantinopel (330).

Weldra raakte deze door de macht van zijn dialectiek zozeer in de gunst van de keizer, dat hij rechts van hem aan tafel mocht zitten 144).

Dit verdroot de christelijke partij ten hove, vooral daar de heidense sofisten omstreeks die tijd volk en keizer door openbare debatten voor het Helleense heidendom poogden te herwinnen. Wel lukte hun dit niet, daar gemengde vergaderingen van heidense en christelijke sprekers dra verboden werden. 145) – maar het gevaar voor een plotselinge heiden-gezindheid van Constantijn beangstigde de christenpriesters ten zeerste.

Bovendien wekte de keizerlijke gunst die Sopater genoot, de nijd der hovelingen op, vooral van de christelijke praefectus praetorio Ablabius, die zijn groeiende invloed op Constantijn vreesde te verliezen. Deze wist, zo vertelt Eunapius, zijn gebieder wijs te maken, dat Sopater, de sluwe tovenaars de winden had vastgebonden, waardoor de korenschepen uit Egypte de keizerstad niet konden bereiken. En Constantijn geloofde die laster, 146) en zag in Sopater een die werkte aan 't verderf van zijn rijk. En daar hij hem toch niet van zijn wroeging over de moord op Crispus had kunnen verlossen, besloot hij de man te doden. Daardoor gaf hij meteen de christenpriesters hun zin, die in alle beoefening van magische kunsten verdoemelijke omgang met de duivel zagen, en toonde hij openlijk dat hij niet meer heidens gezind was 147).

Om dezelfde tijd als Sopater (of mogelijk even voor de inwijding van Constantinopel) viel nog een ander heiden als martelaar, namelijk *Kanonaris* 148).

Deze wijsgeer sprak het volk herhaaldelijk toe vanaf zijn redenaarsgestoelte op het forum Constantini. Vooral onder de oud-Byzantijnen vond hij bijval, in 't bijzonder bij de z.g. Gazaërs, afstammelingen van kolonisten uit Gaza, die Septimius Severus een eeuw geleden, na de uitmoording van Byzantium, hier had overgeplant. Deze laatsten, hevig heidens, hadden indertijd Licinius gesteund in zijn strijd tegen Constantijn, en Byzantium met taaie kracht verdedigd. Thans waren zij wel de nieuwe keizer onderworpen en hadden zelfs hun wapenen als metaal voor zijn standbeeld moeten uitleveren, maar bleven hem heimelijk vijandig. Dit bleek nu bij het optreden van *Kanonaris*.

Toen echter Constantijn zichzelf op het forum vertoonde en de welgezinden onder het volk hem toejuichten, riep de heidense redenaar vanuit zijn verhevenheid hem toe:

"Wil niet wijzer zijn dan uw voorvaderen, gij die uw voorvaderen hebt vernietigd." Daarop vermaande de keizer de man zijn heidense propaganda te staken, waarop deze

132285 luidkeels antwoordde: dat hij voor zijn voorvaderen wou sterven.

Toen liet Constantijn hem, tot schrik der nog heidense Gazaërs, onthoofden.

Ook de heidenen hebben dus hun martelaren. Na eerst bloedig te zijn vervolgd, namen nu de Christenen, tegen de leer van het evangelie, wraak op wie niet geloofden als zij.

132290 Voortaan trad de keizer steeds feller op tegen de polytheïsten. Na het reeds vroegere offerverbod (324) stelde hij thans (omstreeks 330) waarzeggerij en het vragen van orakels strafbaar.

Toch bleven er velen volharden in het oude geloof. Om nu de kerstening van zijn rijk te versnellen, nam hij eindelijk zijn toevlucht tot geweld.

132295 Zo besloot hij op drijven van zijn vroegere schoonmoeder Eutropia, de moeder van Fausta, een Syrische van geboorte, om een afgodenaltaar nabij de heiligen eik van Mamre in Palestina te verwoesten, 149) Bij deze boom zou namelijk God zich aan Abraham hebben geopenbaard, 150) en daarom het Constantijn er thans een basiliek bouwen.

132300 Sedert ging de keizer steeds heviger voort met vervolging der heidenen. Eerst liet hij, kort voor de inwijding zijner stad, deels uit plunderzucht, deels uit geldnood, een ware *veldtocht houden tegen alle godenbeelden*. 151) Daartoe trokken zijn vertrouwde hovelingen van stad tot stad, van tempel tot tempel, en gelastten dan telkens de dodelijk beangste priester, om uit het allerheiligste zijn god te halen.

132305 Met de worgstrik werden ze naderbij gesleept, deze "goden der verjaarde fabels", om indien ze uit brons of marmer bestonden, te worden opgestuurd naar Constantinopel, ter versiering van paleis of circus of senaatsgebouw of een der grootse openbare pleinen. 152) Zo evenwel de buitenkant met goud was bedekt, dan werd deze er afgeslagen, en alleen het ivoren of benen steunskelet van de eens zo hoog vereerde

132310 godheid. Het goud werd echter zorgvuldig verzameld, en omgesmolten in de keizerlijke smeltkroes tot klinkende munt, ten bate van zijn schatkist.

De enige rest van het beeld bleef over, wat waardeloze rommel.

132315 Zo trof Constantijn hiermee een dubbel doel: verrijking en machtsversterking van zichzelf, en ontmoediging van de heidenen. Want velen hunner gingen na deze hevige beeldenstorm zelf twifelen aan de waarde van hun godsdienst en gaven zich – volgens Eusebius – aan het Christendom gewonnen.

132320 Hierdoor durfde de keizer eindelijk in 331, in een edict de *sloping van de meest geëerde of beruchte heidentempels* te gelasten 153). Dit deed hij, zowel uit gebrek aan bouw materiaal voor nieuw te stichten kerken, als uit fanatieke godsdienstijver. Hij nu, en alle Christenen haatten vooral de dienst van Aphrodite, slecht befaamd – ook bij de heidenen – om de teugelloze ontucht in haar afgodshuizen gepleegd. Zo werd allereerst de tempel van *Aphaka* 154) van de Syrische Astaroth op de top van de Libanon, waar ontmante priesters ter ere der godin, tegennatuurlijke smerigheden bedreven, – op 's keizers bevel door soldaten tegen de grond gesmeten. Een ander dergelijk "bedehuis" in Phoenicië, te Heliopolis, waar de priesteressen aan alle vrome bezoekers zich prostitueerden, werd eveneens verwoest. In Egypte verbood hij ten strengste de eredienst der Nijlgodin door ontmante priesters en gelastte deze eunuchen zich nergens meer te vertonen.

132330 Daar een wijs wetgever moet waken voor zekere zedelijke normen zijn deze daden van de keizer ook uit naam van menselijkheid en beschaving, volkomen te billijken.

132335 Hatelijk onverdraagzaam was evenwel de verwoesting van de Asklepios-tempel te Aigai 155), een soort antiek Lourdes, waar duizenden vrome heidenen voor genezing kwamen van hun kwalen. Dit gebeurde vooral op drijven der toenmalige Christenpriesters, die immers meteen als duivelsbanners en medicijnmannen dienst deden, en de concurrentie van hun heidense collega's wilden fnuiken. Op een wenk van de keizer lag het huis van de "zielen-verleider" tegen de grond.

132340 Door deze krachtige maatregelen tegen de godsdienst der Hellenen zou hij velen hunner, volgens Eusebius, van hun waan hebben genezen en tot het Christendom hebben gebracht. Bij sommigen mag dat waar zijn, maar bij anderen riep de keizer juist door zijn fanatisme, een reactie teweeg, zoals bijvoorbeeld bleek bij de opstand van Calocerus in 333 op Cyprus, die deels door heidense ontevredenheid werd begunstigd, zo niet veroorzaakt.

132345 En tegenover al deze vernietiging van het oude stelde hij de opbouw van het nieuwe geloof. Dit toonde hij allereerst door talloze kerken te stichten, vaak op de puinhopen van verwoeste tempels, en met stenen en marmeren zuilen van hen afkomstig. Zo liet hij er een bouwen in Heliopolis in plaats van het pas gesloopte heiligdom van Aphrodite. Zelfs een bisschop kreeg hier zijn zetel, bijgestaan door priesters en diakenen. En opdat "vele lieden Gods leer zouden nader komen, verschaft de keizer

ook hier rijke gaven tot ondersteuning der armen, om zo tot snelle kerstening aan te drijven," zegt de vrome Eusebius 156). Hij stichtte dus in elk zo'n kerk een welvoorziene kas voor bekeerlingen om door geld de omwonenden om te kopen tot het Christendom. Dat de heidense priesters tegen zulke middelen niets vermochten, laat zich begrijpen.

Maar niet alleen bekeringsijver, maar ook verering van heiligen en martelaars leidde hem bij zijn kerkenbouw. Kort tevoren had hij ter ere van de martelaar Lucianus, die te Drepanum tijdens de vervolgingen stierf, boven diens graf een kostbare kerk gesticht en de stad met nog vele prachtige bouwwerken verrijkt (327). Uit liefde voor zijn moeder, die Lucianus bijzonder vereerde, en vermoedelijk zelve in Drepanum was geboren, noemde hij het voortaan Helenastad of Helenopolis.

Zij was het ook, die in haar stadig stijgende vroomheid, bijgestaan door de Constantinopelse presbyter Eustathius 157), hem ried een basiliek te bouwen op het graf van Jezus. Zo gaf de keizer daartoe bevel aan Macarius, de bisschop van Jeruzalem en aan Dracilianus, de vicarius orientis 158).

Men zocht vergeefs naar de grafplaats, sloopte daarvoor een Venustempel die daar later zou zijn opgericht, en zo meende men eindelijk de grot van Jezus' herrijzing, diep onder de grond, opgegraven te hebben. Spoedig verrees daar een hoge basiliek van buiten met pronk van goud versierd, en met binnenwanden uit veelkleurig marmer.

Kort na de synode van Tyrus werd deze kerk door Macarius ingewijd, in bijzijn van de meeste bisschoppen van het Oosten (17 september 335) 159).

Op het bericht hiervan trok Constantijns moeder, zo oud als zij was op reis, om nog in 't laatste van haar leven een bedevaart te ondernemen naar het heilige graf.

Onderweg schonk zij grote sommen gelds aan de christelijke gemeenten der steden die zij passeerde, aan ieder die zich persoonlijk tot haar wendde, en verder aan garnizoenen die daar waren gelegerd 160). Bovendien stelde zij geld en kleding beschikbaar voor de armen en bevrijdde talloze gevangenen die – mogelijk wegens belastingschulden – in de bergwerken moesten versmachten. Zo poogde Constantijn, door wat aalmoezen van zijn moeder, zijn Oostelijke onderdanen enigszins te verzoenen met zijn fiscale afpersingssysteem. Het geld hem toegevloeid door de vlijt van miljoenen werkers verkwistte hij nu aan een handvol luie bedelaars en parasieten. Tevens was deze reis bedoeld als geldelijke propaganda voor het Christendom.

Toen Helena in Jeruzalem kwam organiseerde zij, voor de dienst van de Heilige-Graf-Kerk een bijzondere *nonnenorde*, die der "Hestiades", kennelijk naar het voorbeeld der Romeinse Vestalinnen 161).

Omstreeks dezelfde tijd zond haar zoon aan Antonius de Egyptische kluizenaar, eervolle brieven 162) zodat ook het *monnikenwezen* door Constantijn en zijn familie is aangemoedigd.

Ook in de relikwieën-verering gingen zij hun onderdanen voor. Op Golgotha liet zij opgravingen doen, en werkelijk kwamen daar, volgens de sage 163), drie kruisen te voorschijn. Ook vond men een losliggend plankje met het drietalig opschrift "I.N.R.I." daarin op Pilatus' bevel gegrift. Maar men wist niet tot welk van de kruisen dit behoorde, en dus ook niet wat het ware kruis van Christus was geweest. Door de genezende kracht die er evenwel van uitging, waardoor een zieke vrouw gezond werd, ontdekte echter bisschop Macarius het ware kruis. Dit niet-historische verhaaltje bewijst welk een wondermacht de toenmalige Christenen, in hun bijgeloof, toekenden aan alle relikwieën.

Verder verrijkte Helena de stad Jeruzalem met vele gebouwen en liet ook kerken stichten op de Olijfberg en in een grot te Bethlehem, waar Jezus zou geboren zijn. Daarna stierf ze, op haar tachtigste jaar, en haar overschot werd naar Constantinopel vervoerd en met militaire eer ter aarde besteld (336).

Kort daarop bouwde Constantijn in zijn eigen stad nog kerken boven de graven van enkele martelaren, en ook in Antiochië en Nicomedia. In de laatste jaren voor zijn dood kunnen we dus in stadig strengere kerksheld bij hem constateren, en tevens stijgende vijandschap tegen het heidendom.

Ook bleek dit uit zijn gewoonte om redevoeringen en preken te houden zowel voor zijn hofkring als ook in 't openbaar voor het volk van Constantinopel. Soms sprak hij meteen om zijn paleisgenoten wenken te geven, wie in ongenade waren gevallen; maar zijn hoofddoel was de propaganda van het *monotheïsme tegenover de heidenen*. Een zo'n redevoering heeft Eusebius voor ons bewaard, namelijk: "Rede aan de vergadering der heiligen". Er is geen reden om aan de globale echtheid ervan te twijfelen, maar wel aan de zuiverheid van tekst, die mogelijk hier en daar door de Griekse vertaler(s) is veranderd en aangevuld, oorspronkelijk is het nergens, maar het bevat vele reminiscenties uit het werk van Lactantius, zowel uit zijn "Divinae Institutiones" 164) als uit zijn "De mortibus persecutorum." Maar met een zekere welsprekendheid

- 132415 worden christelijke dogma's erin verdedigd en heidens bijgeloof weerlegd. Zo trad dus Constantijn, ondanks zijn bloedig, allesbehalve christelijk leven, ook op als *apologeet*, zij het dan ook als een al te slaafs navolger van de kerkvader Lactantius.
- 132420 Het blijvend resultaat van 's keizers kampioenschap voor het christendom tegen de heidenen kunnen we samenvattend noemen: *de verwereldlijking der Kerk*. De oerkerk der apostelen hield zich streng aan Jezus' woorden: mijn koninkrijk is niet van deze wereld. Thans evenwel waren de christelijke gemeenten van kleine jammerlijke half-geheime begrafenisfondsen 165) geworden tot een geweldige wijdvertakte openbare organisatie. Haar grondbezit vroeger slechts uit enkele
- 132425 begraafplaatsen bestaande was uitgebreid evenredig met de stijgende rijkdom van haar gelovigen. Zij was tot een zeer wereldlijke, maatschappelijke *macht* geworden, en Constantijn had deze in dienst gesteld van de staat. Ook haar verhouding daartoe was geheel veranderd. Had zij vroeger de vergoding der vorsten bestreden, thans werkte zij mee aan een niet mindere cultus van de keizer, door hem te vereren als
- 132430 alleenheerser bij de genade Gods. Bovendien was ook haar eerst zo eenvoudige *ritus* geheel veranderd, had zich aangepast aan de praalzucht van het heidendom, met haar verwikkelde ceremoniën. Door de heiligen-verering was het oeroude polytheïsme der pas gekerstende Grieken en Romeinen opnieuw in haar herleefd.
- 132435 In vele opzichten was dus door toedoen van Constantijn de nieuwe Katholieke Kerk geworden een mengproduct tussen het pompeuze paganisme en het sobere oerchristendom der Joodse vissers en apostelen.
- CONSTANTIJN ALS KERKVORST.
- 132440 Sinds zijn overgang tot het Christendom (312) matigde de keizer, als pontifex maximus of heidens opperpriester, zich ook het hoogste gezag aan in kerkelijke zaken van zijn nieuwe geloofsgenoten. Juist daarom noemde hij de bisschoppen zijn "broeders" en zichzelf "algemeen bisschop" van het rijk 166).
- 132445 Van begin af aan poogde hij dan ook, de Kerk, zijn persoonlijk domein, naar buiten onaantastbaar te maken, en de innerlijke eenheid harer belijders te handhaven, hetzij door zachtheid hetzij door dwang. Nu waren er, nog tijdens de vervolgingen, onder de Christenen in Afrika en Mauretanië twisten uitgebroken. Daar wilde men namelijk zekere Donatus (*niet* Lactantius' vriend) en de zijnen allen weren uit de Kerk, die onder de dwang van de laatste vervolging
- 132450 hun geloof hadden verloochend of christelijke boeken ter verbranding aan de heidense overheid hadden uitgeleverd. Daartegenover stonden andere Katholieke geestelijken (vooral die buiten Afrika) die de berouwvolle "traditores" (overleveraars) hun zonden wilden vergeven, daar er veel te veel van hen waren, en er niet zozeer op het gehalte als wel op het aantal van gelovige zieltjes gelet moest worden.
- 132455 Bovendien verschilden de Donatisten nog van de andere Katholieken ook in leer. Zij betwijfelden namelijk de waarde der sacramenten en stelden deze afhankelijk van de waardigheid der deelnemers. In strengheid van eisen kwamen ze dus veelal met de latere protestanten overeen. Tussen beide partijen spande het hevig. Toen dan ook zekere Caecilianus tot bisschop
- 132460 van Carthago werd gewijd door een geestelijke (Felix), die de Donatisten beschouwden als een traditor (de Katholieken ontkenden dit), barstte de ontevredenheid los. Een Numidisch concilie, merendeels Donatisten, verklaarde zijn keuze voor onwettig. Doch nu greep Constantijn in. Tegen mei 313 roept hij, hoewel juist door Gallië reizend naar Trier, een concilie bijeen te Rome. Weldra verscheen Caecilius hier met
- 132465 10 Afrikaanse bisschoppen waarbij zich weldra de bisschoppen van Autum, Arles (Arelate) en Keulen voegden. Onder leiding van de Romeinse bisschop Miltiades vergaderden zij in het Lateraans paleis van keizerin Fausta, die, christelijk gezind als haar man, in zijn plaats hun daartoe gastvrijheid verleende. Maar zij richtten niets uit, en ook een volgend concilie te Arles waar de keizer
- 132470 evenmin aanwezig was, (1 augustus 314) leidde tot geen verzoening tussen Donatisten en Caecilianen. Integendeel juist door de uitspraak dat Felix geen traditor was, en Caecilius' bisschopskeuze dus wettig werd erkend, vlamden de twisten in Afrika weer op. Eindelijk, na dit vergeefse concilie te Arles, beslechtte Constantijn in augustus 315
- 132475 (toen hij juist weer in Italië was na een lang verblijf in Gallië en Illyrië) de kerkelijke strijd te Milaan. Op raad van de Afrikaanse proconsul Anulinus en 's keizers eigen hofprediker, de zeer orthodoxe Hosius, bleef hierbij Caecilianus' benoeming gehandhaafd, doch de Donatisten werden als ruziezoekers en ketters buiten de Kerk geworpen. (Augustinus, Epist. 43, 7, 20).
- 132480 Hij beschouwde hen namelijk als scheurmakers, die het eenheidsfront der Christenen

tegenover hun heidense vijanden verbraken. En daar hij slechts een eensgezinde, Katholieke of algemene Kerk als een bruikbare steun beschouwde van zijn gezag, stelde hij ketters gelijk met verraders. Hierin gedraagt Constantijn, met zijn streven naar caesaropapisme, zich net eender als later Karel V tegenover de Protestanten 167).

132485 Toen hij dan de Donatisten eenmaal had veroordeeld, kregen de orthodoxen het ene privilege na het andere (Alles volgens mij: 21-31 oktober 315).

132490 Allereerst werd aan Caecilianus en de zijnen, mogelijk tot vergoeding voor wat zij hadden verduurd van de Donatisten, die o.a. vele van hun kerken hadden in brand gestoken, *een grote som geld uitgekeerd en het recht op onbeperkte ondersteuning van staatswege*. Dit was het eerste historische voorbeeld van bezoldiging der geestelijken door keizer of staat, wel niet van geregelde salariëring, maar voorlopig in de vorm van *schenkingen*, en hiermee ging Constantijn ook voort in zijn verdere regering (Eus. Hist. eccl. X, 6).

132495 Ten tweede werden alle Katholieke priesters vrij verklaard van *munera* 168) of verplichte staatsbedieningen, d.w.z. zij hoefden in hun vaderstad niet meer dure en tijdrovende ambten te bekleden, "opdat zij niet door de heiligschennende nijd van sommigen van hun eredienst werden afgehouden." (Cod. Theod. XVI, 2, 1 en 2). In een extra-schrijven, uitsluitend in zijn brief aan Anulinus, voegt de keizer er aan toe, vooral daar in Afrika voor de uitvoering van dit edict te waken, daar voor die tijd de ketters de Katholieke priesters opzettelijk met lastige benoemingen hadden geplaagd (Cod. Th. XVI, 2, 1) wat nu niet meer mocht (Zie ook Eus. Hist. eccl. X, 7). Enige jaren later (5 juli 321) vergunde hij de Kerk zelfs het erfrecht, zodat zij zich geweldig kon 4) verrijken door testamentaire beschikkingen van particulieren (Cod. Th. XVI. 2, 4).

132505 Doch daarna ontstond er in vele steden zo'n geweldige toeloop van decurionen (rijke aanzienlijke) tot de geestelijke stand, louter om de hoge kerkelijke traktementen en de vrijdom van munera, dat de keizer er tegen optrad. In een edict van 18 juli 320 *verbiedt* hij decurionen of hun zoons, om priester te worden, zo zij rijk en ontwikkeld genoeg zijn, om openbare ambten te bekleden. (Cod. Th. XVI, 2, 3).

132510 Ja, hoe langer hoe meer bemoeide Constantijn zich, ter wille van de schatkist, met de benoeming der geestelijken. Tenslotte staat hij 1 juni 326 het priesterambt slechts toe, aan diegenen, die bij hun stadgenoten geen familie hebben, en dus zonder politieke invloed zijn, en bovendien te weinig bezitten voor een stadsambt. "Want de rijken betaamt het, de noodzakelijke lasten van de wereldlijke staat te ondergaan, maar de armen om door de rijkdommen der Kerk ondersteund te worden." (Cod. Th. XVI, 2, 6).

132520 Zo wist de keizer dus te beletten dat al te rijke heren tot de clerus overgingen, daar dit dubbel schadelijk was voor zijn schatkist. Want ten eerste profiteerden zij dan mee van de staatsbezoldigingen aan de geestelijkheid, en ontliepen zij, door vrijdom van munera, dan de verplichting der decurionen tot aansprakelijkheid voor de belastingen van hun stad.

In wereldlijke zaken besliste Constantijn dus uit eigen oordeel, hoe hij ook in dogmatische kwesties de raad der geestelijken, vooral van zijn hofbisschop Hosius volgde.

132525 Toch vermeerderde hun invloed ook in 't openbare leven sterk, doordat hij in 318, 321 of 323 de bisschoppen de *bevoegdheid* tot *rechtspraak* verleende, zo een der partijen bij een proces dit verlangde 169). Dit deed hij om twee redenen. Vooreerst wou hij vooral zijn geloofsgenoten en aanhangers als ambtenaren gebruiken, en tevens wou hij voortaan controle uitoefenen op de vroeger almachtige rechters, wier felle heidense partijdigheid bij de laatste christenvervolging was gebleken.

132530 Door de tegenstand der gestudeerde beroepsjuristen tegen Kerkelijke concurrenten werd echter deze wet eerst niet behoorlijk uitgevoerd. Zo moest Constantijn zijn eigen besluit in 333 in een rescript aan Ablabius toen praefectus praetorio van het Oosten herhalen 170).

132535 Deze wet is vooral belangrijk, daar hierdoor de latere geestelijke rechtbanken der Middeleeuwen zijn ontstaan, met al hun verdoemelijke nasleep van gewetensdwang en inquisitie.

Terzelfder tijd als tegenover de ketters stelde Constantijn zich ook tegenover de Joden schrap.

132540 Ook hierin volgde Constantijn een nieuwe koers. Of liever, hij herstelde het oude, haast vergeten antisemitisme der Flavische keizers, wier familienaam "Flavius" hij, mogelijk met die bijbedoeling, aannam. Want na de Flaviërs Vespasianus en Titus, de verdelgers van de Joodse staat, en Domitianus die hen ook in ballingschap vervolgde als volk, hadden de Joden – behoudens een onderdrukte opstand tijdens Hadrianus –

132545 rust en voorspoed gekend, zelfs hadden vele keizers hen beschermd en begunstigd boven de Christenen doordat alleen de Joden werden vrijgesteld van het offer aan de

keizerlijke Genius.

Nu echter een Christenvorst op de troon kwam, hield dit alles op. Alleen de Christenen werden bevoorrecht, en voor de Joden begon een duizendjarige tijd van opsluiting binnen hun Getto's.

In 315, 18 oktober, vaardigde Constantijn dan te Milaan 171), waar hij juist de Donatistische strijd had beslecht, ook een edict uit tegen de belijders van de Talmoed, die blijkbaar kort geleden Katholiek geworden stamgenoten hadden gekweld.

"De Joden en hun oversten en rabbijnen willen wij inprenten, dat zo na dit edict een hunner een ander die hun verderfelijke sekte is ontvlucht en tot de dienst van God is overgegaan, met stenen of ander soort van razernij durft lastig vallen, (welk feit wij juist vernamen dat gebeurd is), hij meteen aan de vlammen wordt prijs gegeven en met al zijn medeplichtigen verbrand." (Cod. Theod. XVI, 8, 1=Just. 1, 9, 3).

Uit deze woorden blijkt dus duidelijk 's keizers kerkelijk getinte Jodenhaat. Dit bewees hij ook bij de keuze van een officiële, tevens christelijke rustdag, die op een anderen dag moest vallen dan de Joodse sabbat, en eveneens op het concilie van Nicaea, bij het bepalen van het Paasfeest, waarvan de datum opzettelijk niet op het Joodse Pascha, maar op de dag van Jezus' opstanding werd vastgesteld. Blijkbaar wilde de keizer de toekomst van het Christendom streng van het Jodendom, waaruit het ontstaan was, scheiden.

Overigens is Constantijns politiek tegenover deze godsdienst aan allerlei vorstelijke grillen en zwenkingen onderhevig.

Zo beveelt hij in 321 aan de decurionen van Keulen, om alle rijke Joden aldaar – op een stuk of drie na – beschikbaar te stellen voor de stadsambten of munera, waardoor zij financieel zwaar getroffen werden. (Cod. Th. XVI, 8, 3). Doch in 330 zondert hij hiervan de Joodse rabbijnen en oversten der synagogen uit, zodat zij *dezelfde vrijdom van munera kregen als de Katholieke geestelijken*.

Dit is daarom merkwaardig, omdat zij hierdoor bevoorrecht werden boven de ketters, d.w.z. de Arianen, wier priesters en gemeenten van alle kerkelijke privileges werden uitgesloten. (1 september 326, zie Cod. Th. XVI, 5, 1).

Nochtans ging Constantijn natuurlijk niet over tot wettelijke gelijkstelling van Joden en Katholieken. Door een edict van 21 oktober 335 verbood hij zelfs Joden om Christenslaven te houden of te besnijden, en gelastte hen, deze onmiddellijk in vrijheid te stellen. (Cod. XVI, 9, 1).

Deze Jodenwet werd 3 jaar later door zijn zoon en opvolger Constantius tevens uitgebreid tot ketters, heidenen of andere niet-Katholieken, wie allen het recht ontzegd werd om Katholieke slaven te bezitten. (Cod. Justin. 1, 10, 2), zo werd dit edict de oorzaak:

1e) Van de vermindering van het aantal slaven, daar velen uitsluitend verlokt door de belofte van vrijheid zich orthodox lieten dopen.

2e) Van de economische verzwakking, ja ondergang van alle niet-Katholieken, die sinds die tijd zo goed als geen slaven meer konden houden.

3e) Van het ontstaan van een overgrote Katholieke meerderheid onder de vrije bevolking, waarbij de andersdenkenden in het niet verzonken.

Volgen we, na deze uitweiding, thans opnieuw Constantijns inwendige kerkelijke politiek, en wel sinds zijn bemachtiging van de alleenheerschappij (324).

Reeds tijdens Licinius teisterden ernstige dogmatische twisten heel het Oosten, en zijn opvolger haastte zich die te beslechten.

Het geschil liep over de leer der *drie-eenheid*.

Dit systeem van God, Christus en de Logos (Heilige Geest of het Woord), hoewel oorspronkelijk *niet* aanwezig in het Christendom, was, eenmaal willekeurig "hineininterpretiert" in het Johannes-evangelie (1 en 5), als vroom bedrog door de Afrikaanse bisschop Theophilus in zwang gebracht. (Eind 2e eeuw). Weldra hadden de gelovigen over het hele rijk het aanvaard, onder de leuze "credimus quia absurdum".

Daarmee was het Christendom, door Origenes en Tertullianus nog streng monotheïstisch opgevat, feitelijk ontaard tot een driegodendom.

Openlijk tritheïstisch waren de Sabellianen, doch de anderen bemantelden dit onder een compromis met het monotheïsme, het beroemde "drie maal een is een". Doch onder deze evenwel ontstond meningsverschil over de verhouding tussen God de Vader en God de Zoon.

In de rest van het rijk maakte men zich hierom niet druk. Maar wel in Egypte, het traditionele land van priesterregering, en vooral in Alexandrië, een stad waar de hellenistische wuftheid der overheersers (Grieken en Romeinen) nooit de sombere, dwepende ernst der ingeborenen had kunnen doden. En zoals hier van ouds al kerkelijke woelingen waren geweest, (zoals onder Decius en Diocletianus), zo kwam het ook thans tot een uitbarsting.

De bisschop van deze stad, Alexander, raakte namelijk in twist met zijn presbyter

Areios.

De laatste onderscheidde Christus' hemelse natuur, hoe goddelijk ook van die van God, daar hij tevens als mens een afzonderlijk leven op aarde had geleid. ("Heterousion"). Zijn chef evenwel zag Christus niet gelijksoortig, maar volstrekt *gelijk* aan die van God, terwijl tevens, onscheidbaar van zijn goddelijke natuur, zijn menselijkheid op aarde had geleefd. God was dus in Jezus tegelijk God gebleven en toch mens geworden. ("Homo-ousion").

Beide partijen raakten in hun blind, dogmatisch bijgeloof ten felste opgezweept, en zo sommeerde Alexander zijn presbyter Areios of Arius zich aan zijn uitspraak te onderwerpen. Deze weigerde, werd uit de Kerk gestoten, maar zette in dezelfde stad zijn preken voort. Daar kreeg hij weldra vele aanhangers, vooral onder de ketterse sekte der *Melitianen* 172), die, al tijdens de laatste vervolging ontstaan, zich nu grotendeels bij hem aansloot. Zo werd eerst Alexandrië, weldra alle steden en dorpen van Egypte, later zelfs Libië en Thebais erbij, in twee partijen gesplitst. (Euseb. III, 4). Spoedig verspreidde deze razernij zich ook over de aangrenzende provinciën door propagandabrieven en boden van beide kampioenen. Zo hoog liep de twist, dat Ariaanse (?) fanatici zelfs de beelden des keizers beschimpten, en dat zelfs in het theater der heidenen de christelijke leer van God werd gesmaad en bespot.

Het aanzien van de Kerk, en van het keizerlijk gezag liep dus gevaar. Constantijn, die dit alles hoorde en begreep, wilde terstond de twist beëindigen. Hij stuurde eerst een "godvrezend man", zijn gunsteling Hosius als vredestitcher naar Alexandrië, met een brief zowel aan Alexander als aan Arius.

De keizer uit daarin zijn mening, dat men "zulke futiele kwesties niet had moeten opwerpen," maar vermaande tevens Arius, zich te buigen naar de wil van zijn meerdere. Hieruit blijkt, dat het dogma Constantijn zelf onverschillig liet, maar dat *het behoud van de hiërarchie en de eenheid der Kerk hemhoofdzaak was*. Doch geen van beiden was tot verzoening gezind, daar er tussen hun aanhangers al wederzijds bloed was gevloeid.

Toen besloot de keizer, net als vroeger in het Westen bij de Donatistische twisten, (311-315) ook thans een synode bijeen te roepen. Eerst bepaalde hij tot plaats van samenkomst *Ankyra*, maar spoedig verlegde hij het naar Nicaea in Bithynië, zijn zomerresidentie, om ook zelf daar aanwezig te kunnen zijn.

Op dit concilie kon dan tevens de strijd over de bepaling van het *Paasfeest* worden beslecht.

Deze z.g. "Paasstrijd" is al zeer oud, en dateert al van ongeveer 190 na Chr. De Jodenchristenen, vooral in Syrië, Palestina en Klein-Azië bleven namelijk vasthouden aan het aloude Pascha, het feest dat Mozes had bevolen te vieren op de 14e Nisan, de eerste maand van het jaar (Exod. 12, 6; Levit. 23, 5). De Israëlieten rekenden echter zowel toen als nog steeds, (net als de Mohammedanen) met *maanjaren*, zodat dit feest, altijd vallende op volle maan, toch volgens Romeinse en Grieks-Macedonische tijdrekening telkens op een andere dag van het jaar gedateerd werd. Toen de latere Joden in de Romeinse tijd daarnaast moesten rekening houden met het Westerse jaar van 365 dagen, en dus de Joden-christenen ook, kwam er helemal verwarring. En zo waren er enkele Christenen, zoals Anatolius 173), die eindelijk naar een vaste regel zochten voor het bepalen van het Pascha, meteen voor hen van belang om de herdenkingsdag van Jezus Opstanding vast te stellen. En aangezien de Alexandrijnse Joden het Pascha hadden bepaald *op de eerste volle maan na dag-en-nachts-evening*, en Christus zou herrezen zijn op de dag volgende op de eerste sabbatdag na Pascha bepaalde Anatolius het christelijke paasfeest op: *de eerste Zondag na de eerste volle maan volgende op dag-en-nachts-evening*, (hoewel de term "zondag" nog niet als zodanig bestond).

In Constantijns tijd heerste dit gebruik reeds in het hele Westen, benevens in Griekenland, Asia, Pontus en Egypte.

Doch de bewoners van Palestina, Syrië, Phoenicië, Cilicië en Cappadocië, merendeels Jodenchristenen of gedoopte Joden, *vierden het feest van Jezus' herrijzenis op dezelfde dag als hun aloude, geliefde Pascha*. Dit veroorzaakte nu veel strijd in de grensdistricten der beide gebieden daar sommigen nog bezig waren met vasten en zelfkastijding, terwijl anderen reeds het Paasfeest vierden. Constantijn nu zag het grote belang in van *eenheid van ritus* voor de ganse Chr. Kerk, en stelde dus te Nicaea ook het paasprobleem aan de orde.

Intussen naderde de dag van samenkomst te Nicaea, de metropool van Bithynië, waarheen alle bisschoppen ter wereld waren uitgenodigd. Voor hun reis mochten zij de paarden en wagens der keizerlijke post gebruiken, en waar die niet voldoende bleken, werden van staatswege andere voertuigen verstrekt. (Eus. Vit. Const.)

Doch de twee kampioenen Arius en Alexander waren al eerder op pad getrokken om aanhangers te winnen, Arius naar Syrië, Alexander, die slimmer was, naar Nicaea zelf.

Daar wist hij, al voor het concilie begon, Hosius, de almachtige hofprediker, voor
132680 zichzelf en zijn leer te winnen. (Philostorgius, Vit. Const.)
Arius had veel minder geluk. Mogelijk op zijn verzoek werd, kort voor de samenkomst
in Nicaea, een niet-officiële voor-synode gehouden te Antiocheia, van merendeels
Oosterse bisschoppen. Doch daar werd zijn leer van het hetero-usion verworpen, en hem
132685 zelf en twee anderen (o.a. de geschiedschrijver Eusebius van Caesarea) een termijn
gegeven tot het volgende concilie (Nicaea) om zijn stellingen te herroepen.
Eindelijk, 20 mei 325 kwamen in de grote troonzaal van het keizerlijk zomerpaleis te
Nicaea over de 300 bisschoppen bijeen, voornamelijk uit het Oosten des rijks, maar
ook uit de omringende barbarenlanden, zoals Perzen en Skythen (=Goten). Uit het
132690 Westen waren echter weinig deelnemers aanwezig: zo had o.a. paus Sylvester, de
bisschop van Rome, zich laten verontschuldigen wegens zijn ouderdom, en was hij hier
slechts door afgezanten (o.a. Hosius) vertegenwoordigd. Tevens lag hierin een protest
tegen het feit, dat Constantijn de hoofdstad des rijks opzettelijk had gepasseerd bij
de keuze van een synodestad.
Zo, toen nu allen zwijgend samen zaten in de troonzaal, in hun bonte, wisselende
132695 kledij van Westerlingen in pallium, Oosterlingen in lange tabbaard, en barbaren in
berenmutsen en wijde, uitheemse hosen, – kondigde een stoet van statig schrijdende
hovelingen de komst van de keizer aan. Eindelijk wenkte de opperkamerheer, dat hij
naderde. 174) Bij zijn binnentreden rezen allen van hun zetel, en zo kwam hij het
midden van de vergadering "als een engel Gods, stralend in de vlamengloed van het
132700 purper en getooid met de helle flonkering van goud en kostbare juwelen". De geweldige
majesteit van zijn lange, forse heldengestalte overmande alle aanwezigen:
niets dan milde genade meenden zij te lezen op het gelaat van die keizer, wie zij en
hun kerk zoveel te danken hadden. Ten laatste liet hij zich neer op een kleine,
klinkklaar-gouden zetel midden in de zaal, en hield met rustige, sonore stem de
132705 openingsrede. Hij sprak in 't Latijn, een ander vertolkte zijn woorden in het Grieks.
De korte zin daarvan was: Weest eensgezind in uw leer, staakt uw twisten en neemt
mijn bemiddeling aan!
Daarna gaf hij de voorzitter der vergadering, Hosius, het woord. Toen hief zich
weldra een koor van beschuldigingen en tegenbeschuldigingen tussen homo-ousianen en
132710 hun tegenstanders. Zij hadden elkaar trouwens al eerder door geheime brieven en
pamfletten bij de keizer aangeklaagd en belasterd, 175) maar deze deed alsof hij
nergens van wist. Nu wierp hij slechts af en toe, in het Grieks, een paar kalme,
sarcastische woorden er tussen door, en deed zo het onstuimig krakeel bedaren. Meteen
overtuigde hij zich, dat de meerderheid der vergadering, zoals Hosius hem had
132715 voorspeld, bestond uit aanhangers van het homo-ousion. Alle Westerse en de meeste
Oosterse bisschoppen hoorden daartoe, slechts weinigen neigden tot Arius.
Op een volgende vergadering ging het nog feller toe. Tevergeefs deed de
minderheidspartij pogingen tot verzoening. Een brief die een hunner, bisschop
Eusebius van *Nicomedia* voorlas als zijn geloofsbelijdenis, waarin hij streefde naar
132720 bemiddeling tussen homo-ousion en hetero-usion, werd niet ten einde toe aangehoord,
maar zijn tegenstanders rukten het hem, in bijzijn van de keizer, uit handen.
Doch de beslissing kwam niet van zijde der geestelijken, maar van de wereldlijke
opperheer. Deze was echter allang tegen de Arianen opgehitst door zijn hofprediker
Hosius, de bisschop van Cordoba. Thans gebod Constantijn, als echt soldaat
132725 ongeduldig over het eindeloze theologische geharrewar, Arius en de zijnen toe te
geven. Allen, 180) behalve Arius, Eusebius van Nicomedia en nog vier anderen, bogen
voor dit vorstelijk bevel 176) en zo werd door de wil van de keizer de homo-ousiaanse
of Katholieke (algemene) leer, thans precies geformuleerd in het "Symbolum Nicaenum"
als de enig ware opgelegd aan alle Christenen in het rijk.
132730 Arius zelf die niet ter synode was verschenen werd met al zijn aanhangers door de
kerkelijke ban (anathema) getroffen, en voortaan uit Alexandrië geweerd. Maar de
keizer strafte hem nog extra door verbanning en weldra deelden ook Eusebius en de
vier andere "weerspannigen", smadelijk gebrandmerkt als "Porfierianen" 177), zijn
lot. Bovendien werden al hun boeken in 't openbaar verbrand. Deze kleinzielige,
132735 haarkloverige dogmentwist verraadt dus al de innerlijke tweespalt van de Kerk, alsook
de bekrompen vervolgzucht van haar z.g. rechtgelovige meerderheid jegens elke
minderheid, zoals ook in de latere Middeleeuwen bleek. Wel heette het officieel, dat
de Kerk de ketters niet vervolgde, en dit was aanvankelijk ook waar, maar zij stookte
telkens de orthodoxe wereldlijke overheid daartoe op, zowel toen als later.
132740 Ook de Paasstrijd werd beslecht naar de wens van de overweldigende meerderheid en van
de keizer zelf. In een rede vol heftige Jodenhaat bezwoer hij de vergadering, om alle
gewoonten die hen verbonden met het volk "dat Christus had vermoord", te verbreken.
178) Zo werd dan voortaan het Paasfeest gedateerd naar het voorschrift van Anatolius.
(zie hierboven)

- 132745 Het hoofddoel, de eenheid van de Kerk scheen dus nu bereikt. Behoudens enkele oudere ketterse sekten, bijvoorbeeld de Novatianen, 179) die ondanks uitnodiging tot de synode, waaraan zij ook hadden deelgenomen, niet tot de Kerk wilden terugkeren, was de overweldigende meerderheid der Christenen orthodox gebleven.
- 132750 Met geschenken en vermaningen tot eendracht overladen zond Constantijn de bisschoppen huiswaarts.
- 132755 Nog twee jaar lang bleef de keizer homo-ousiaans gezind. In 326, 1 september kondigde hij bijvoorbeeld nog, vermoedelijk te Rome, een strenge wet af, waarbij ketterse en schismatische (=Ariaanse) geestelijken alle privilegiën o.a. vrijdom van munera, verloren, en juist bij voorkeur hiermee gekweld moesten worden 181). Ook gold de restitutie der vroeger geconfisqueerde kerkelijke goederen, die nog niet overal was volbracht, niet ten opzichte van hen. Hun bedehuizen moesten onverwijld aan de orthodoxe Kerk worden gegeven, hun overige vergaderplaatsen vervielen aan de schatkist, terwijl verdere samenkomsten van heterodoxen verboden werden 182). Ook hun boeken moesten worden opgespoord en verbrand, wat het vorig jaar al over Arius' geschriften was bepaald. Alleen jegens de Novatianen, wier bisschop Acesius op de synode te Nicaea de kerkvrede had verworven, werd deze ketterwet weldra in zoverre verzacht, dat zij hun kerken en koimeteria behielden 183) (25 september 326). Toch werden ze volstrekt niet met de Katholieken gelijk gesteld.
- 132765 Doch spoedig kwam er een ommekeer in 's keizers dogmatische voorkeur. Mogelijk uit berouw over de moord op Crispus, en afkeer van de schijnvrome orthodoxe bedriegster Fausta, die hij pas haar wel verdiende straf had gegeven, wendde hij zich af van zijn hofbisschop Hosius en de homo-ousianen en werd de Arianen, zelfs de heidenen weer beter gezind.
- 132770 Bovendien kwam er nog een oorzaak bij. In 327 (of niet lang daarna) lag zijn zuster Constantia, die de wrede vermoordding van haar zoontje niet lang kon overleven, te Thessalonika (?) op sterven 184). Kort voor zij ziek werd, kwam zij onder de invloed van een heimelijk Ariaans presbyter, die haar ervan overtuigde, dat Arius en de zijnen onrechtvaardig waren behandeld. Op haar sterfbed, waarbij Constantijn kwam toegesnel, bezwoer zij nu haar broeder, de onschuldig verbannen terug te roepen.
- 132775 Dit gebeurde. In november van hetzelfde jaar ontbood hij Arius ten hove, en beloofde hem eerherstel, mits hij het Symbolum Nicaenum door een verklaring onderschreef. Dit deed Arius, maar in zulke dubbelzinnige termen, dat zij zowel homo-ousiaans als Ariaans konden worden uitgelegd. (november 327) 185)
- 132780 Zo werd hij weer in eer hersteld en weldra keerden ook de andere ballingen, waaronder Eusebius van Nicomedia, na brieven van berouw te hebben geschreven, op 's keizers bevel terug. Maar toen Arius weer naar Alexandrië vertrok (zomer 328) en daar weer presbyter wou worden, weigerde Athanasius, sinds de dood van Alexander (28 juni 328) daar bisschop, hem de toegang tot de Kerk 186).
- 132785 Deze Athanasius, vroeger diaken van de vorige bisschop, was een heerszuchtig, dweepziek, echt-middeleeuws prelaat, en reeds vervuld van het latere pausen-ideaal om de Kerk boven de Staat in macht te verheffen. Hij zond de keizer een hooghartige brief, dat hij een afvallige, die eenmaal door het anathema was getroffen, niet meer in de Kerk kon opnemen. Daarna gebod Constantijn hem, ook op raad van Eusebius, zijn nieuwe gunsteling, om Arius onmiddellijk toe te laten en te rehabiliteren, op straffe van afzetting en verbanning. 186)
- 132790 Athanasius echter stoorde er zich niet aan, en de keizer afkerig van verdere twisten, gaf voorlopig toe. Arius echter maakte zowel te Alexandrië persoonlijk, als elders door zijn aanhangers, ijverig propaganda tegen zijn vijand.
- 132795 In Antiochië had hij het succes, dat de homo-ousiaanse bisschop hiervan, Eustathius, door een Ariaanse meerderheid in zijn gemeente werd ten val gebracht (329) 187) en verbannen. Een synode in die stad bijeengeroepen benoemde zekere Eulalius in zijn plaats, en daarna handhaafden de Arianen zich tot het eind der 4e eeuw op deze belangrijke zetel.
- 132800 Intussen intrigeerden Eusebius en de zijnen hevig bij de keizer tegen de Alexandrijnse bisschop. Eerst betichtten zij hem er van, dat hij van de Egyptenaren linnen gewaden als belasting eiste. 188) Toen deze aanklacht door Alexandrijnse presbyters, toen toevallig te Nicomedia vertoevend, was weerlegd, beschuldigden de Arianen hun vijand van politieke samenspanning tegen het keizerlijk gezag. Daarop ontbood Constantijn (331) Athanasius persoonlijk naar Psamathia, 189) een voorstad van Nicomedia, overtuigde zich van zijn onschuld, en zond hem eervol naar zijn bisdom terug.
- 132805 Toen meenden zijn vijanden eindelijk het juiste wapen tegen hem gevonden te hebben. Zij klaagden hem bij de keizer aan van moord op Arsenius, de bisschop der Melitiaanse sekte, die immers nauw met de Arianen was bevriend. Hij zou namelijk de afgehouden hand van zijn slachtoffer hebben misbruikt, om er zwarte kunst mee te plegen. 190)
- 132810

Daar zowel heidenen als Christenen in die tijd, dus ook Constantijn, waren overtuigd van 't bestaan van toverij, en in 't bijzonder de Christenen dit verfoeiden als een misdadige samenwerking met satan en zijn demonen, was dit een zware beschuldiging. Om deze en andere aantijgingen werd Athanasius nu gedaagd voor een nieuwe synode, die de keizer samenriep te Tyrus 191) (335). Zijn vijanden toonden zelfs, naar zij beweerden, het corpus delicti, de afgehouden hand van Arsenius aan de vergaderde geestelijken en de keizerlijke president Dionysius. Maar hij vernietigde volgens de orthodoxen deze aanklacht totaal, door de levende Arsenius, die de Arianen al die tijd verborgen hadden gehouden, opeens in de zaal te brengen. Daarentegen zou Athanasius volgens een Ariaans historieschrijver, 192) om zijn vijanden te beschamen, een slet hebben gehuurd die omgekeerd Eusebius van Nicomedia had moeten belasteren als haar verleider. Deze toeleg lukte echter niet, want de vrouw in kwestie weigerde zulk een achtenswaardig man van dergelijke schandelijkheden te betichten. 192) Het gevolg was dat met vrijwel algemene stemmen Athanasius als ruziestoker van zijn zetel werd vervallen verklaard.

Daarna begaven alle leden der synode zich naar Jeruzalem, waar juist de kerk van het heilige kruis op last van de keizer gebouwd, zou worden ingewijd. 193) Hier namen Eusebius en de andere bisschoppen plechtig Arius, als een berouwvolle, weder op in de kerkelijke gemeenschap, zodat hij zegevierend uit de strijd trad.

Maar Athanasius berustte niet in zijn vonnis, maar haastte zich naar Constantinopel, om bij de keizer in hoger beroep te gaan. Juist toen hij aankwam, reed Constantijn te paard uit zijn paleis. Smekend hief de trotse verستoteling zijn handen tot hem op om een ogenblik gehoor, maar de keizer herkende hem niet en wilde toen men hem vertelde wie het was, eerst niets van hem weten. Maar Athanasius hield aan, kreeg audiëntie, en de keizer beloofde hem onmiddellijk alle synodeleden van Tyrus in Constantinopel bijeen te roepen, om in zijn bijzijn opnieuw hun oordeel uit te spreken. De gedaagde bisschoppen vreesden evenwel een nieuwe Nicaea, en *waagden thans voor het eerst om 's keizers bevelen te trotseren*. In plaats van zelf te komen zonden zij zes partijleiders, waaronder Eusebius van Nicomedia naar de hoofdstad. Deze wisten opnieuw de keizer tegen hun vijand op te stoken.

Thans betichtten zij Athanasius, dat hij zou hebben gedreigd, *de jaarlijkse graanverscheppingen van Alexandrië naar Constantinopel te beletten*. 194) Dit gaf de doorslag. Eindelijk verbande de keizer de orthodoxe bisschop naar Trier, evenwel op voorwaarde, dat voorlopig niemand anders de stoel in Alexandrië zou bezetten, zodat eerherstel voor de balling niet bleef uitgesloten 195).

Doch nu probeerde Arius de opengevallen zetel te bemachtigen. Reeds had hij de keizer hiertoe haast overreed, toen hij plotseling midden op een plein te Constantinopel ineenstortte en stierf. 195) De orthodoxen spraken natuurlijk van een oordeel Gods, maar Arius' vrienden fluisterden van vergiftiging door zijn vijanden. De keizer echter raakte steeds meer onder Ariaanse invloed, vooral onder die van Eusebius van Nicomedia. Tegen het voorjaar van 337 voelde hij zich plotseling ziek en gebruikte ter genezing de baden in zijn hoofdstad. 196) Toen dit niet hielp, stak hij over de Bosporus naar Helenopolis, waar hij de martelaarskerk van Lucianus bezocht, die zijn moeder Helena daar eens had laten bouwen. Hier smeekte hij geknield om vergiffenis van zijn vroegere zonden, en kreeg voor het eerst, van de bedienende priester, de plechtige handoplegging.

Daar hij nu zijn einde voelde naderen, begaf hij zich naar zijn paleis te Achuroon (Acyro), een voorstad van Nicomedia en riep daar de naburige bisschoppen van die streek bijeen 196). Na een korte toespraak verzocht hij eindelijk Eusebius van Nicomedia hem "het bad der wedergeboorte" te geven.

Naar gewoonte van die dagen had hij namelijk de doop tot aan zijn doopdag uitgesteld, om daardoor vrijheid in zijn handelingen te houden, 197) waar dan ook menige roof- en bloeddaad van getuigde.

Tal van vijanden, ja vrienden en familieleden, ja zelfs zijn eigen zoon en vrouw had hij vermoord, en al hun verwijtende schimmen verschenen hem nu in folterende visioenen.

Thans hoopte hij, in bijgelovige angst, al deze vroegere zonden die hem brandden tot binnen zijn gebeente, door wat wijwater van zich af te wassen. Toen deze plechtigheid was volbracht, liet hij zich hullen in een purperen praalgewaad, en nederleggen op het keizerlijk pronkbed. Hierna sprak hij nog een dankgebed, en stierf toen spoedig, op de middag van het Pinksterfeest.

Daar hij overleed in 't Ariaanse dogma, veroorzaakte zijn dood de grootste tweespalt tussen de beide partijen van de Kerk, die hij tevergeefs had pogen te verzoenen.

- 132875 1) Pas sedert ook in de Balkan een grote stad was gesticht, Constantinopel (330) ging ook de welvaart van dit rijksdeel verloren.
2) Alleen het Westen van Illyricum (Noricum, Pannonië en Dalmatië) was verlatijnst; de rest

niet. De expansiekracht der gelatiniseerde Illyriërs bleek nog bij hun late afstammelingen, de Walachen, die ca. 1000 over de Donau drongen, en zich nestelden in het tegenwoordige Roemenië. (De Roemenen stammen dus niet van geromaniseerde Daciërs).

Van de overige Illyriërs hebben alleen de stammen tussen Skodra (=Skoetari) en Apollonia in door alle eeuwen heen zowel hun oorspronkelijke taal als hun woonplaats behouden (Albanezen). Hun rasverwanten in Moesië echter waren al in de late keizertijd vergriekst.

3) De oorsprong van keizer Claudius en zijn beide broeders Quintilius en Crispus ligt in het duister. De meeste tijdgenoten hielden althans Claudius voor een natuurlijke zoon van keizer Gordianus III uit diens jeugdperiode, "toen hij door een rijpe vrouw seksueel werd ingewijd." (Epit. de Caesaribus, 34). Doch om zijn schandelijke of minder eervolle geboorte te verbergen nam Claudius zelf de naam Flavius aan en beweerde af te stammen van het huis van Vespasianus. Latere leden van zijn familie, zoals Constantius en Constantijn volgden hem hierin na, zodat hun lofredenaars hen met deze vleinaam betitelen. – Seeck betwijfelt echter, zonder nader bewijs, Constantinus' verwantschap met Claudius.

4) Drepanum was de geboorteplaats van Constantijns moeder Helena, en heette later, haar ter ere, Helenopolis. (Hieronym. Euseb. Chronicon).

7) Dat zij later Constantius' wettige vrouw was, volgt o.a. uit de eis die Diocletianus aan deze stelde, om zich van haar te laten scheiden. (Zie ook Eutropius Aurel Victor de Caes, Epit. de Caes, etc.)

8) Zie Euseb. Hieron. Chronicon. Vleierij van Constantijn en de volgende christenkeizers bracht latere historici (Aur. Victor enz.) ertoe, hun heidense voorganger Diocletianus te verlagen tot een vrijgelatene of de zoon van een vrijgelatene van zekere senator Anulinus. Maar als dat zo was, dan zou, de gensnaam die Diod. voor de zijne plaatste, dus "Valerius" ontleend moeten zijn aan een Romeins patroon van dit geslacht. En nu is er geen enkele toenmalige Anulinus afkomstig uit de gens Valeria, maar wel uit de gens Annia, zoals bijv. de praefecti urbis van 306 en 312. Diocles was dus geen vrijgelatene, en mocht dus willekeurig de naam Valerius voor de zijne plaatsen, zelfs al stamde hij niet af uit deze gens, wat ook mogelijk blijft. Trouwens juist zijn christelijke vijand Eusebius noemt hem "zoon van een klerk". Eutropius geeft beide lezingen zonder bepaalde voorkeur (Eutr. IX, 19).

10) Volgens andere bronnen was hij een Bataaf, Aur. Victor 39, 20: "Menapiae civis" (Eumenius, Eutropius). De gelijkenis in klank en accent van "Menapiae" en "Bataviae" maakt waarschijnlijk dat een dezer teksten corrupt moet zijn.

12) De latere verering van Constantijn en opvolgers door hun hovelingen deed maar weinig onder voor die van Diocletianus.

13) Zie bewijs Lact. De Mort. 7, Euseb. de Mart. Pol. 13. Zosimus II, 32 schrijft echter aan Constantijn deze vernieuwing toe, en Burckhardt en Seeck volgen hem hierin.

15) De leer der Manicheeërs, was evenals die der vroegere gnostieken een z.g. syncretisch geloof, d.w.z. samengesmolten uit het christendom en tal van andere godsdiensten, o.a. het Perzische Mazdaïsme of de leer van Zarathoestra. De Manicheeërs eerden als stichter van hun godsdienst zekere Manes, die omstreeks 272 in Perzië op vorstelijk bevel de marteldood onderging. Niet lang daarna verspreidde zijn leer zich in 't Romeinse rijk en vond van heidenen en ook van christenen hevige bestrijding, bijvoorbeeld van Augustinus die eerst een tijdlang tot die "ketterse" sekte had behoord.

26) Bovendien was men algemeen verbitterd doordat Galerius Rome, vroeger belastingvrij, onlangs dit voorrecht had ontnomen en met grote strengheid de gelden liet innen door de gehate quaestor Abellius.

28) Wel was Constantijn al vroeger, vanaf het einde zijner knapentijd ("ab ipso fine pueritia") wettig getrouwd geweest (Paneg. VI, c.4). Maar deze onbekende vrouw schonk hem geen kinderen, en ontviel hem blijkbaar door dood of scheiding. Zijn zoon Crispus had hij bij een bijzit Minervina verwekt (Zie blz. 21 van dit boek en verder bij Seeck, Untergang II Anhang p. 508).

30) Lactantius spreekt van zweren (ulcera); Aur. Victor zegt (Epitome c. 40) "consumptis genitalibus deficit", wat mijn onderstelling wettigt.

31) Bekend is bijvoorbeeld het martelaarschap van Barbara, dat op rekening komt van Daja's landvoogd Martinianus (later overgegaan in dienst van Licinius).

34) Pas later (313-315) is deze voltooid. De bas-relief-beelden op de vier beiderzijdse friezen boven de zijpoorten, verheerlijken zijn laatste veldtocht, tegen Maxentius. Twee opschriften aan beide kanten boven de hoofdboort getuigen nog van zijn zegepraal "over de tiran en zijn ganse aanhang". De uitdrukking "instinctu divinitatis", een bemiddeling tussen heidens en christelijk monotheïsme, bewijst Constantijns voorzichtig omsluisde christengezindheid.

Een vroegere mening, dat onder het woord "divinitatis" een andere, volstrekt heidense tekst, ook van 11 letters, zou doorschemeren, namelijk "IOVISOPTMAX" (Jovis Optimi Maximi) werd weerlegd door de Rossi, na onderzoek van gipsafgietsels in 1863 op last van Napoleon III gemaakt. De sage van de doop van Constantijn door paus Sylvester, die het eerst voorkomt bij Zonaras, ga ik met begrijpelijk stilzwijgen voorbij.

35) Het verschil tussen de teksten bij Eus. en Lact. komt hierop neer:

I. Die bij Eusebius zijn door beide keizers (en wellicht oorspronkelijk ook, officieel door Max. Daja, vlgs. Seeck) aan alle stadhouders en prefecten gericht, althans er wordt geen enkele nader genoemd; die bij Lact. alleen door Licinius aan de stadhouder van het pas veroverde Bithynië (na de 2e oorlog met Daja).

II. Lact. verschilt van Eusebius door het ontbreken van de inleiding (die tolerantie en staatsbescherming voor alle godsdiensten waarborgt), en verder in enkele details waardoor Licinius (en dus indirect Constantijn) voor een christen zou kunnen doorgaan. Zo geeft

Naspeuringen van Paul Theelen: Constantinus Imperator

bijvoorbeeld Eusebius: hopoos ho ti pote esti theistetos kai ouraniou pragmatos hemin.... eumenes einai sunethei (lett: opdat wat er is aan godheid en hemelse substantie ons gunstig zou kunnen zijn).

132955 Lactantius: quo quidem divinitas in sede coelesti nobis. – propitia possit existere. (Genadig zou kunnen optreden).

De laatste lezing is duidelijk christelijk-anthropomorf; de eerste, een vage middenvorm tussen christelijk en neo-platonisch heidens. Waarschijnlijk geeft dus Eusebius, anders 'n aartsvervalser, in dit geval de letterlijk, uit 't Latijn vertaalde tekst: Lact. een voor zijn 132960 doel verdraaide om Licinius, en dus zeker Constantijn, als verklaarde Christenen voor te stellen. (Zie verder Josef Wittig, Rom. Quart. schr. Suppl. XIX, die echter niet tot deze conclusie durft over te gaan).

36) Ook Lactantius' geschrift waarschijnlijk in het voorjaar van 314 gepubliceerd, onder de verse indruk der vervolgingen en de overwinningen van Constantijn en Licinius, vermeldt de 132965 dood van Diocletianus voor die van Maximinus Daja en voor de vermoord van zijn Prisca en Valeria, dus in 313. Hoe is echter daarmee het jaartal 316, bij Eusebius Chronicon, en in het Chronicon Paschale te rijmen? Waarschijnlijk heeft Constantijn D.'s zelfmoord opzettelijk geheim gehouden, om zodoende het volle odium te laten vallen op Licinius die juist in hetzelfde jaar de beide ex-keizerinnen Prisca en Valeria liet doden. Pas na de gelukkige 132970 oorlog tegen Licinius had Constantijn geen bezwaar meer, het bekend te maken, en gunde zelfs de overleden heidenkeizer de eer van een apotheose door de senaat (316).

37) Candidianus, Galerius' voorzoon bij een bijvrouw, was namelijk verloofd met Daja's 7-jarig dochtertje, en mocht dus niet blijven leven om haar dood te wreken.

38) De beide ex-keizerinnen, hoewel voor de vervolging christelijk gezind, moeten zich later 132975 van die leer hebben afgewend, en dat verklaart het weinige medelijden van Lactantius voor hun ellendig lot.

39) Pas bij de definitieve verdeling van de Staat in het Oost- en West-Romeinse Rijk (395) werden nauwkeurig de grenzen tussen beide delen bepaald.

40) De schrijvers noemen hem weliswaar caesar, maar volgens munten was hij augustus.

41) Volgens Anon. Vales. werd Valens eenvoudig van zijn rang beroofd; Zosimus (II. 20) drukt 132980 zich dubbelzinnig uit en geeft te raden, dat hij ook werd ter dood gebracht; Aur. Vict Epit. schrijft zijn dood toe aan Licinius.

42) Hoewel geen enkel document iets vertelt van de uitlevering van Senicio, meen ik toch dat Zosimus, die Valens "de aanstichter van alle kwaad" laat noemen, daarmee bedoelt: Senicio.

48) Volgens Socr. I, 4 verbood hij bovendien de bisschoppen, met heidenen om te gaan om 132985 christelijke propaganda te beletten.

49) Daar hij door Constantijn als zijn zoon werd erkend, is hij waarschijnlijk geboren in een tijd, dat Constantijn rijk en machtig genoeg was, om zich die weelde te kunnen veroorloven, d.w.z. na 305, toen hij zijn vader in Brittannië trof, en weldra troonopvolger werd. Als 132990 vroegste geboortear kan dus gelden: 306. Eerder kan moeilijk, want dan zou Minervina hem met of zonder kind vergezeld, of hem anders, lang daarna, alleen en onbeschermd, gevolgd moeten hebben, wat geen van tweeën waarschijnlijk is. Ook later dan 306 kan niet, daar Crispus al in 322 zijn eerste kind kreeg bij zijn wettige vrouw Helena, en wel niet voor zijn vijftiende jaar getrouwd zal zijn geweest, (z. Cod. Th.)

Seeck beweert wel, dat keizerszonen gewoonlijk werden uitgehuwelijkt "ab ipso fine pueritiae" 132995 en verstaat daaronder vanaf hun 14de jaar, maar dat is onjuist, daar de pueritia gerekend werd te duren tot het 17de jaar.

52) Zosimus aan wie dit alles is ontleend, geeft als getallen op: 130.000, waarvan er 30.000 overbleven maar hij vergeet dat Licinius ongeveer de helft van zijn leger met Martinianus naar 133000 Lampsacus had gezonden.

53a) Terzelfder tijd – 8 november 324 – werd zijn jongere stiefbroer Constantius, toen nog geen zeven jaar, tot Caesar benoemd. Maar het is hoogst onwaarschijnlijk dat deze toen al met het bestuur van Gallië werd belast, zoals Gibbon op grond van Julian. Orat. I. aanneemt 53c). Het is opmerkelijk dat vooral Arianen en heidenen (Philostorgius en Zosimus) de nagedachtenis 133005 van Crispus verheerlijken, en niet de Katholieken.

56) Dat zijn dood aan verdenking van ontucht moet worden toegeschreven blijkt:

I) Uit de overeenstemming van 4 getuigen van verschillend geloof, namelijk Zosimus (heidens, ca. 475) lib. II, 29; Philostorgius (Ariaan, ca. 400) lib. II, 4; de Artemii Passio 43.

(orthodox) en Zonaras (orthodox), terwijl het zich, met enige goede wil, ook laat lezen uit 133010 het anonyme Epitome de Caesaribus: ("Fausta conpuge, ut putant, suggerente") en het Chronicon Paschale.

II) Uit 5 fragmenten van edicten tegen ontucht die Constantijn alle om dezelfde tijd heeft uitgevaardigd, (zie volgende blz. in de tekst).

III) Eutropius, Eusebius-Hieronymus (Chronicon) Aurelius, Victor en Sidonius Appollinaris 133015 vermelden wel alleen dat Constantijn eerst Crispus en daarna Fausta doodde, maar deze getuigenissen sluiten verdenking van overspel niet uit. Evenmin het stilzwijgen van Anonymus Valesius, pars I hierover. Wat Licinianus betreft, twee getuigen Eutropius en Eusebius-Hieronymus (Chronicon) verklaren dat hij tegelijk met Crispus werd gedood, zodat ik de bewering van Seeck dat hij nog tot 336 verder leefde in twijfel trek. Temeer, omdat de 133020 bewijsplaatsen waarop hij steunt (Cod. Th. IV, 6, 1 en 2) verkeerd zijn uitgelegd. Allereerst is hier niet sprake van Licinianus, maar van "filius Liciniani", de zoon van zekere Licinianus, en bovendien verbiedt het veelvuldig voorkomen van de namen Licinius en Licinianus door het hele rijk twee zogenoemde personen te vereenzelvigen.

57) Wel draagt de tekst gewoonlijk het opschrift "de raptu virginum ac viduarum", maar een der 133025 varianten heeft "de raptu virginum ac feminarum" wat meer toepasselijk lijkt.

Naspeuringen van Paul Theelen: Constantinus Imperator

Een nog vroeger edict van Constantijn, van 3 februari 326 te Heraclea, door Seeck, ook met het geval Crispus in verband gebracht, kan en wegens plaats en tijd van datering, en wegens de inhoud, niets daarmee te maken hebben. Immers het verklaart dat waardinnen wel, maar slavinnen in een herberg niet strafbaar zijn wegens overspel, en het mist de strenge, zedemeesterende toon der overige edicten. (Cod. Th. IX, 7, 1). Seecks onderstelling dat al deze edicten fragmenten zouden zijn van een enkel edict lijkt mij onbewijsbaar. Ook verwerp ik zijn bewering dat Crispus inderdaad schuldig was aan overspel, wat door alle bronnen wordt tegengesproken.

59) Cod. Justin. V, 26. Door dit laatste edict wilde hij tonen, hoe het hem berouwde bij een concubine Crispus te hebben verwekt.

60) Philostorgius II, 4 noemt hem "cursor" of prodromos, dat hier waarschijnlijk niet wagenmenner, maar renbode betekent. Wel is hij de enige zegsman van dit verhaal, maar de bijzonderheden stemmen geheel overeen met het karakter van Fausta.

62) Hieron. noemt in het Chronicon het jaar 328, maar zijn tijdrekening is vaak in de war; Zosimus verklaart dat het te Rome gebeurde, dus in de zomer van 326, de laatste keer dat Constantijn daar, na Crispus' dood vertoefde. Ook de Chronica Gallica A. DXI (M. G. H. Chronic. Minora I) verklaren dat Fausta in hetzelfde jaar als Crispus en Licinius Jr. werd gedood. Ondanks de vele fouten in de tijdrekening blijft dit document toch waardevol, daar er andere thans verlorene bronnen in zijn verwerkt.

65) Het marmer haalde men uit het eilandje Proeconnesus in de Propontis. (Zosim. ibid.)

74) Chronicon Paschale, waaraan ook de verdere bijzonderheden van het inwijdingsfeest zijn ontleend.

78) Id. II, 31. Deze Taifalen traden ook later op, na de slag bij Adrianopel (378) toen zij met andere Germaanse en Sarmatische stammen de Donau overtrokken en samen met de Goten Thracië plunderden.

80) Hier had hij namelijk in Psamathia, vlak bij Nicomedia, Athanasius van Alexandrië een onderhoud toegezegd (Ath. apol. c. Ar. 61, 62). Kentekenend voor Constantijn is wel in deze jaren dat hij dus kerkelijke zaken boven militaire stelde.

81) Deze plaats in het Chron. Hieron. heeft Gibbon verkeerd geïnterpreteerd. Hij stelt het namelijk voor, alsof het onderworpen volk Limigantes heette. De tekst is: "Sarmatae Limigantes, dominos suos, ui nunc Argaragantes vocantur, facta manu in Romanus solum expulerunt."

82) Na de overwinning op Licinius werden namelijk al diens beschikkingen vernietigd, en ook vele nieuwe ambtenaren in het Oosten aangesteld. (Cod. XV, 14, 1).

92) Philostorgius II, 16. Maar mogelijk vertelt hij dit verhaal alleen, om zijn Ariaanse geloofsgenoot keizer Constantius schoon te wassen van schuld.

108) Cod. Th. XV, 14, 4. Ten onrechte noemt Seeck dit een tegenmaatregel tegen een besluit van Maxentius, en stelt deze wet zonder bewijs in 312 of eerder.

118) Dit was dus de gemiddelde prijs van een slaaf. Zie Cod. Just. VI, 1, 3 en 4.

122) Cod. Just. 17 augustus 329. Het doet denken aan moderne Chinese toestanden bij de laatste hongersnood aldaar, toen ook vrouwen en kinderen te koop werden aangeboden.

124) Cod. Just. V, 27 en Cod. Th. IV, 6, 2 en 3. De naam Licinianus in deze laatste wet hoeft niet vereenzelvigd te worden met de vermoorde ex-keizer Licinius zoals Seeck meent. De wet hoeft dus niet tegen de jonge Licinianus te zijn gericht. (Zie vorig hoofdstuk).

126) Cod. Theod. II, 8, 1. Kort daarna keert hij zich ook tegen een ander heidens misbruik, het groeiende aantal feestdagen, die vaak willekeurig door hogere ambtenaren binnen hun gebied waren ingesteld. Hij verbiedt hun dit nadrukkelijk, en verklaart het bepalen van feestdagen tot een uitsluitend keizerlijk voorrecht.

127) Zie Lact. Div. Inst. I, 11-14. De theorie die Lactantius hier aanhangt, evenals zijn meeste Christelijke tijdgenoten, is afkomstig van zekere Euhemerus van Messene of Cyrene, een wijsgeer die omstreeks 300 voor Chr. aan het hof van Cassander van Macedonië leefde. Deze verkondigde namelijk dat het veelgodendom zijn oorsprong vond in het vereren van beroemde mannen na hun dood. Het ontging de christelijke apologeten, dat dit Euhemerisme sterke argumenten opleverde ook tegen hun eigen godsdienst.

130) Dit bewijst tevens dat het Liviaanse stichtingsjaar 754 voor Chr. niet in orde is. In waarheid wist men toen niet precies, evenmin als nu wanneer Rome was gegrondvest.

143) Ook bij Sozomenus verteld, doch in twijfel getrokken. (Sozom. I, 5.) Foutief is echter de uiteindelijke bekering tot het Christendom die Zosimus hieraan vast koppelt, daar de wetten bewijzen dat Constantijn al eerder onder Christelijke invloed stond.

145) Dit is de waarschijnlijke verklaring van het wonderverhaal waarbij bisschop Alexander van Constantinopel een heidense debater "in naam van Christus" met stomheid zou hebben geslagen. (Sozom. I, 18).

146) Dit belachelijk bijgeloof was algemeen verbreid onder alle vierde-eeuwers, heidenen en christenen, dus Constantijn kan dit best voor waarheid hebben gehouden. Kort na Julianus' dood liet bijvoorbeeld keizer Valetianus (een christen), diens oud-leraar Maximus, de neoplatonische theurg [??], nog als tovenaars ombrengen.

155) Eus. Vit. Const. III, 57. Burckhardt's mening dat de god Asklepios zich ook met de politieke vragen had bezig gehouden en bijvoorbeeld de opstand van Calocerus zou hebben gesteund is onjuist, daar 1e de tempel in 331 werd verwoest, en Calocerus pas in 333 uitbrak en 2e. de Asklepiostempel geen orakels gaf.

162) Hieron. Chron. Al in 320 had de keizer trouwens, om de Christenen ter wille te zijn, de oud-Romeinse wet tegen ongetrouwden en kinderlozen opgeheven (Cod. Th. VIII, 16, 1.)

166) Wel was Constantijn nog ongedoopt, maar als volgeling van de christelijke godsdienstoefeningen of catechumeen werd hij door de Christenen algemeen als geloofsgenoot

- 133100 beschouwd.
167) Toch heeft Constantijns voortrekkerij de orthodoxen de Donatisten niet tot de Kerk teruggebracht, maar hen juist voorgoed van haar vervreemd. Hun sekte bleef dan ook, ondanks de verdrukking, voortbestaan en kort na het concilie van Nicaea (325), in 330, had zij alweer zoveel aanhangers gekregen dat Constantijn, zogenaamd ter bescherming der Katholieken, nieuwe maatregelen tegen ze nam. (Cod. Th. XVI. 2, 7 en Optat. Milevitanus I). Onder zijn opvolgers werden de Donatisten nog erger dan tevoren verdrukt. Toch bleven zij nog drie eeuwen als zelfstandige sekte bestaan, zodat zij tijdens de volksverhuizing de Vandalen als bevrijders begroetten.
- 133105 168) Over de vrijdom van munera, de orthodoxe geestelijken verleend, bestaan 3 documenten:
a) Cod. Th. XVI, 2, 1, gedateerd PRID. KAL. NOV. CONSTANTINO A. III ET LICINIO III C. CONSS., d.w.z. 313 oktober 31. Maar in een der hss. staat CONSTANTINO A. IIII, wat wijst op het jaartal 315.
b) Cod. Th. XVI, 2,2, gedateerd XII KAL. NOV. CONSTANTINO A. V. ET LICINIO CAESARE CONSS., d.w.z. 319, 21 oktober. Daar echter in het vorig document (Cod. Th. XVI, 2, 1) duidelijk wordt verwezen naar een vroegere wet van dezelfde inhoud, moet document b) zijn uitgevaardigd voor document a), dus vermoedelijk 21 oktober 315 of 313.
c) EUSEBIUS, Hist. eccl. X, 7 dat overeenkomt in inhoud en deels woordelijk overeenstemt met document b).
- 133110 Mijn theorie is nu, dat al deze 3 documenten zijn van hetzelfde jaar, en wel niet van oktober 313, (want toen zat Constantijn in Trier en had het veel te druk met Germanen), maar van oktober 315. Immers toen was de keizer juist in Milaan, waar hij het Donatistenconflict ten gunste van Caecilianus had beslecht. Bovendien wordt in document a) van de Donatisten reeds gesproken als van "haeretici", d.w.z. ketters. Indien deze wet van 31 oktober 313 was, zoals Seeck aanneemt, dan zou het toch zeer onredelijk en voorbarig zijn van Constantijn zich toen al tegen de Donatisten uit te spreken, terwijl nog geen enkel concilie hen positief had veroordeeld, (ook dat te Rome niet van mei 313). Er blijft dus alleen over: het jaartal 315 voor alle drie documenten, en wel document b) en c) 21 oktober 315 en document a) 31 oktober 315.
- 133120 Van omstreeks dezelfde tijd moet ook de brief van staatsbezoldiging aan Caecilianus zijn (Eus. hist. eccl. X, 6), bedoeld als beloning voor de kwelling die deze geestelijke van de ketters te verduren had, en waarin over de Donatisten als een onbeduidend troepje wordt gesproken, dus blijkbaar na hun nederlaag.
- 133125 171) In de tekst staat "Murgillo", mogelijk een verschrijving voor "Mediolano" daar Constantijn daar toen juist vertoefde.
- 133130 172) Zo genoemd naar Melitius, bisschop van Alexandrië, tijdens de vervolging van Diocletianus afgezet en vervangen door Petrus wegens het feit dat hij aan de heidense goden had geofferd (Socrates, I, 6).
173) Anatolius, Alexandrijn van afkomst, en in 279 na Chr. bisschop van Laodice was een geleerd veelzijdig man (Euseb. Hist. Eccl. VII, 32, 6 sqq.). (Euseb.-Hieronimus, Chronicon)
- 133140 177) Porphyrius, neoplatonisch wijsgeer van 232-304, die o.a. tegen de Christenen schreef. Niet te verwarren met de dichter Publilius Optatianus Porphyrius, heidens tijdgenoot van Constantijn.
179) Novatus leerde tijdens keizer Decius, dat zij die na de doop nog gezondigd hadden, van de heilige sacramenten moesten worden uitgesloten.
- 133145 180) Tot hen die slaafs hun eigen mening verloochenden, hoorde o.a. ook de geschiedschrijver Eusebius van Caesarea.
184) Sozomenus II, 27. Constantia stierf waarschijnlijk in 327, daar de keizer tussen 326-329 alleen in dat jaar te Thessalonika, haar woonplaats vertoefde (februari 327, zie Cod. Th. XI, 3, 2).
- 133150 185) Socrates I, 25. Arius kan niet in 326 door de keizer teruggeroepen zijn, zoals Seeck beweert, daar hij hoogstens een jaar daarna moet zijn gereisd naar Alexandrië waar Athanasius toen bisschop was, wat dus pas na 28 juni 328 kan zijn geweest. Bovendien kreeg Arius eerherstel bisschop van Constantia's saven, dus vermoedelijk in 327.
- 133155 192) Philostorg. II (ap. Phot.) zowel de Ariaanse als de orthodoxe lezing van wat op de synode voorviel is onzeker. Alleen het resultaat, de afzetting van Athanasius, door beiden vermeld, is betrouwbaar.
197) Zonden na de doop begaan, golden voor onvergefelijk.

CONSTANTINE, HIS FAMILY AND ANCESTORY.

Constantine appears in history as the first medieval man, and not as a Western European, Germanic or Roman medieval man, but as a Byzantine; and as such he is the example of all later, Eastern Roman emperors.

With the sign of Christ on his banner, and the imperial wreath around his crown, he is the first bearer of a new mixed civilization that was growing in Eastern Europe at that time from pagan-Roman and Christian-Hellenistic elements. His strange, contradictory nature, impetuously brave, but still cunning, cruel and hypocritically pious, also points to this.

This first Byzantine was therefore only Roman in name, but largely of Greek-Illyrian blood. Constantine was born in 274 in Naissus, the capital of the Illyrian region of Dardania, and all his paternal ancestors were natives of the Balkans. This is important because Illyricum (= the Balkan peninsula) had gradually become the leading province of the empire, and since Decius almost all princes came from this region. The Illyrian emperors have also repeatedly saved Rome from its two most threatening dangers: invasions of barbarians from outside and internal division. The latter was caused by:

I. The denationalization of the provinces;
II. The increasing foreign influence also in the army.

The provinces, dissatisfied with the centralizing tax policy of the emperors, had long been inclined to abandon Rome. Hence the constant appearance of local usurpers (for example the 30 tyrants). This was because the vast world empire did not form an ethnographic unity and not even a duality, although it could be roughly divided into a Latin Western and a Hellenized Eastern half. For its inhabitants were indeed Romanized or Hellenized in language, but not in race and nationality, so that they first felt themselves citizens of their own city and region, and only then of the Roman state, which sucked them dry. Moreover, in many border regions, depopulated by repeated wars, the foreign element was strengthened, because Germans or Sarmatians were transplanted there for agriculture as serf farmers (coloni), who nevertheless often retained their barbaric character.

The army had also long since ceased to be recruited from Italians, but mainly from Latin provincials (Gauls, Spaniards and Illyrians), so that the national command language was preserved by this core. But in addition, Germans, Sarmatians, Syrians and other Semites soon entered the ranks of officers and inferiors, so that many of them even rose to become soldier-emperors, such as Sept. Severus, Caracalla, Elegabalus, Alexander, Severus, Philippus Arabs (Semites) and Maximinus Thrax (a half Goth).

Nevertheless, until about 325 the Latin provincials formed the majority, and among these especially the Illyrians, so that from 250-300 they were decisive in the choice of emperor.

Why precisely from Illyria? It had already been Latinized earlier, by agricultural colonies of veterans (under Augustus by Tiberius). Gradually, in this agricultural province, in addition to the smaller peasantry, large landed estates had also formed, but this had not displaced small-scale property, as in Italy, so that here, also due to the absence of a large city as an exploitative center, prosperity was maintained.

1). The grafting of Latin culture on these untalented barbarian tribes such as the Illyrians, Moesians, Dardanians and Thracians, only had consequences for the language 2). But militarily the resulting mixed people of Romans and Balkan inhabitants proved to be all the more apt, because the dangerous proximity of Marcomanni, Quadi, Goths and Dacians forced them to be constantly resistant, even to expulsion to the East, in order to protect themselves against their repeated attacks 2).

Their country also provided quite a few soldiers and officers, since especially sons of Illyrian large landowners served as tribunes in the Roman army through a certain class tradition.

No wonder that from this ancient "Junker" country many powerful soldier-emperors emerged from the middle of the 3rd century AD, sometimes from the large landowners, sometimes from the small farmers (Aurelian) or even from the freedmen (Diocletian). And all these rulers vigorously continued the fight against European and Asian enemies. For example, Claudius II (more about him later) drove the Goths back across the Danube; his second successor Aurelian was able to reconquer the rebellious empire of Queen Zenobia (Palmyra) (273).

At the time of Constantine's birth (274) his father Constantius Chlorus was about 25 years old. He owed his Roman family name to his mother Claudia, daughter of Crispus, the eldest brother of Emperor Claudius Constans the Destroyer of Goths. His Greek nickname Chloros (the Pale) however points to Eastern origin, and indeed his father Eutropius was a rich Dardanian nobleman from the soldierly tribe of the Moesians, who were then probably Hellenized. He himself (Constantius Chlorus) was, however, fully regarded as a Roman, and had probably served in the Roman army five years earlier, under the rule of his great-uncle Claudius (268-270).

In 270 this prince died, shortly after his victory over the Gothic barbarians, of the same plague epidemic which they had brought with them. There is no reason to assume that, as Zonaras alone (XII, 26) claims, he designated Aurelian on his deathbed as the most worthy successor, since the latter was not a special favourite of his, but of his predecessor Valerian (see Hist. Aug. Flav. Vop. c. XII Aurelian).

Moreover, the deceased had an excellent brother, Quintillus, who was immediately elevated to ruler by the Senate. But he was hated by the soldiers because of his strict enforcement of military discipline, so that he died after only 17 or 20 days either by his own hand or by his mutinous troops at Aquileia 3).

In the meantime his rival Aurelian, very popular with the army, had already been elected emperor (270-275) and the senate was forced to recognize him.

Nevertheless, even during this new ruler Constantius Chlorus remained under arms, probably as a simple tribune. As such he followed Aurelian on his campaign to the East (V. Panegy. Constantio Caesari, V.).

In doing so, Aurelian first crossed the Bosphorus to reconquer the revived Bithynia (including Thyana), and landed at the town of Drepanum 4) on the Gulf of Nicomedia. Possibly his army had spent the night there, and the young noble officer then made the acquaintance of Helena, the daughter of an innkeeper there 5). He probably first lived in concubinage with her 6), and took her everywhere with him, also on Aurelian's expedition against Zenobia, the queen of Palmyra, and against rebellious Egypt, where a usurper Firmus was defeated and punished (273).

On the emperor's return journey via Asia Minor and the Balkans to Rome (273-274), Constantius was, probably at his own request, seconded to the Danube legions, in the garrison town of Naïssus, where his father's lands also lay. Here Helena bore him a son, Constantine (274). But although at first his mistress, she soon (after this birth?) became his lawful wife 5), after which the father also acknowledged her child as his. That she, a woman of lower rank, and from the despised caste of innkeepers, got this done by that noble tribune, proves her extraordinary charm and willpower. Incidentally, this marriage gave no offence in this adventurous time of the soldier emperors, when the lowest born could obtain the crown, and racial and class mixing was going on everywhere.

In the confusion after Aurelian's violent death, Constantius, although an excellent soldier, proved to be too modest, and probably not rich enough, to push himself to the fore and obtain the imperial purple. Therefore he was considered harmless, and also managed to maintain himself in the favour of the following princes, such as Tacitus, Probus and Carus.

Nevertheless, during Emperor Carus, when Constantius was praeses (military governor) of Dalmatia, there was a chance of his elevation to emperor. For before Carus' campaign against the Persians, he considered, out of shame at the misconduct of his son Carinus at Rome, to appoint Constantius as the most worthy successor to the throne. (Flav. Vopisque, Carus, XVII. Hist. Aug.) But because of his sudden death (see further) this plan remained unexecuted. In his place Diocles took up the purple the following year, and Constantius was flexible enough to defect to the new emperor after his victory over Carinus.

FROM MILITARY DICTATORSHIP TO EASTERN DESPOTY.

Diocletian was an Illyrian, as were his predecessors. But while they were only military men who protected the empire against barbarians and usurpers, he was also a skilled statesman. Only he succeeded in legitimizing the provisional, unstable military dictatorship into an absolute monarchy, and thus in internally strengthening the unity of the state.

Diocles, as he was initially called, was born in a Dalmatian town, possibly called Dioclea, as the son of a poor clerk, who was probably a free-born citizen, and not a freedman 8). He entered military service, went through all the ranks, became proconsul of Moesia, and even rose to consul. In 283 he accompanied, as "comes domesticorum" (court marshal), Emperor Carus on his expedition against the Persians. This man, in defiance of an old oracle, crossed the Euphrates, captured many cities of the enemy, among others the chief city of Ctesiphon, but then died suddenly, according to his soldiers struck by lightning as punishment for his disobedience to the gods.

But possibly his own courtiers murdered him and then set fire to his tent. (Hist. Aug. Carus, VIII). As his successor they chose his son Numerianus, who, although more gifted as a poet and orator, and weak of constitution, had nevertheless followed the army, and he was forced by the superstitious soldiers to return. But the time was not favorable for highly gifted minds, and so his rank became his ruin. His father-in-law, Arrius Aper, the prefect of the guard, kept him hidden for days, within the portable tent, supposedly to spare his sick eyes from the fierce sun. But at last the smell of putrefaction betrayed his death, the soldiers who carried him tore open the curtains, and found his body. His father-in-law, who had hoped to deprive him of the right to the throne, was suspected as the perpetrator, and bound.

In the first assembly of the soldiers Diocles was elected emperor, and he now latinized his name to Diocletian. He immediately avenged the death of Numerian by stabbing Arrius Aper with his own hand in the presence of all, while crying: This is the murderer! (284). In this way he himself fulfilled the prophecy of a Gallic druid, namely, that he would become emperor, if he would kill a boar (ape). After having hunted boars in many forests in vain, he had now found his right game, and killed it. (Hist. Aug. Numerian. XIX.) This manslaughter on the basis of a prophecy characterizes the fundamental trait of Diocletian's character: his fatalistic superstition. Because of this he attached himself strongly to divination, omnia, and oracles, which later even led him to his two greatest political mistakes: his persecution of Christians and his abdication. But at the beginning of his reign this fanaticism of fate gave him a strong self-confidence, by which he was able to overcome the hesitations of his shrewd, cautious, too controlled character.

His only legitimate and dangerous rival, Carinus, attacked him in Moesia and delivered him the battle at the Margus of Morawa. But when he was on the point of victory, he was already hated for his excesses, and was murdered by one of his tribunes, whose wife he had dishonored. Then his troops went over to Diocletian, and soon all the governors and officials of the empire—among them Constantius Chlorus, then proconsul of Pannonia and later Caesar—acknowledged the new emperor. He treated his former enemies very graciously; he took no possessions or dignities from anyone, so that he gained the respect of all and was able to rule for twenty years almost undisturbed by internal revolt.

But suddenly a dangerous revolt in Gaul surprised him, that of the Bagaudae 9) (286). This was a racial and class conflict between Celtic peasants and their oppressors, the Latinized nobles and Roman colonists, who exploited them as serfs and slaves from their cities and castles. Totally impoverished by the many civil wars and barbarian invasions, they finally refused to pay the rent, marched in bands of beggars to the cities, where they, together with the lower people, rose up against the government. These proletarian freebooters soon established themselves in the strong Augustodunum, where they elected Aelianus (Helianus) and Amandus as "emperors" and plundered and destroyed fields and villages in the vicinity. It was, besides a "Jacquerie" also the last attempt of the Gauls, after Vercingetorix, Posthumus and Tetricus, to restore their national independence.

But Diocles found advice. He appointed his old comrade Maximianus, a rough, boorish, illiterate Illyrian, but a good soldier, as co-Augustus and emperor of the West, and sent him to the rebellious province (1 April 286). He soon succeeded, supported by Gallic nobles and Roman colonists, in suppressing the movement. The situation now became even worse than before due to the cruelties and extortion and which the victor imposed on the unhappy country (286).

However, hardly had Gaul been reconquered when Britain fell away from the empire. There, the newly appointed Roman fleet commander Carausius, a skilled sailor from the Menapian 10) (North Brabant) coast, who had recently excelled in the battle against the Bagauds, had set himself up as usurper. From the booty of captured Germanic (=Saxon) pirate ships, he had collected capital that he did not return to the Roman treasury, but used to bribe the occupying army of his island to his service (287). He also found the native population there ready to support him.

Britain, where, despite the many fortresses and highways, Roman colonists, had never

- 133370 been permanently Latinized (like Gaul) both because of the great distance and climate and because of the national-religious opposition of the Druids. Moreover, Carausius, as a German, found allies in the Franks and Allemanni on the Rhine. While they invaded Gaul in the East, he ravaged the North Coast with his privateer fleets. Then the importance of Britain's insular position became apparent for the first time.
- 133375 Defended by a large fleet, it was virtually impregnable. Maximianus could therefore not reconquer it, made peace and even, to his disgrace, also recognized Carausius on behalf of his colleague the barbarian, as independent emperor of Britain (290), whereby he even retained Boulogne (Gessioracum or Bononia) as a base on the mainland.
- 133380 The supreme emperor had not agreed to this without necessity. For at the same time as in Britain, revolts broke out in Africa of the so-called five peoples (Quinquegentanae. Aur. Vict. 39, 21) and in Egypt of the usurper Achilleus. while in the East the Persians crossed the Euphrates. The difficult defence of these border regions and the uncertainty of the succession (because he had no son) now led Diocletian to a new division of the empire. In 291 he travelled from the East to Milan, summoned his co-emperor Maximianus Herculus, and expanded the already existing two-emperorship to a fourfold system or tetrachord (1 March 292). Under both augusti seated in Nicomedia (himself) and Milan (Maximianus Herculus) there came two caesares, one to guard the Rhine frontier, Julius
- 133390 Constantius Chlorus, with station in Trier, another, Maximianus Galerius, a former shepherd boy from Dacia for this Danube region. After the death or at least the abdication of the augusti they would be succeeded by the initial caesares. In order to establish an artificial bond of piety between the two, the Caesars had to repudiate their former wives and remarry the daughters of the Augusti. Thus Galerius married Diocletian's only daughter Valeria, who adopted his eldest son Candidianus from a former wife as her own child. Constantius Chlorus was coupled with Theodora, not really a daughter but an adopted stepdaughter of Maximianus Herculus. In order to marry this distinguished woman, he had to divorce the low-born Helena, Constantine's mother, and, flexible as he was, he obeyed the supreme emperor in this,
- 133400 for the sake of his career. With this choice Diocletian found a very benevolent, but also capable official, who certainly surpassed the other three princes in descent, culture and even in seniority of rank. For when Constantius was appointed Caesar, he had already served almost twenty years in the Roman empire and army. When, seven years later, he had become
- 133405 Caesar of the North-West as a reward for his transfer to the service of the new emperor, he was immediately given the honourable task, too difficult even for Maximian, of regaining the resurrected Britain. First he took from Carausius his naval base on the mainland of Boulogne (Gessioracum). Then he reconquered all the lands around the Rhine estuary, including the Batavian Island, from the Franks (294), in order to harass the Britons' Island from there, also on the North Sea side. In the meantime, however, Carausius was treacherously murdered by his confidant and chief officer Allectus, who seized power, but was not so popular with the army and people there. Constantius now hesitated no longer; he had his admiral Asclepiodotus sail safely from the Rhine estuary to southern England, and land there. Soon Allectus was
- 133415 defeated and killed, after which the island once again submitted to Rome (296). Now it remained for Constantius to deal with the Germanic plunderers from across the Rhine. Maximian had already chastised the Franks, Burgundians, Alemanni and Heruli around 287, but again in 298 the Alemanni invaded Gaul. Caesar defeated them at Langres, where most of them were killed, to the great joy of the Gallic population, who hated the destructive barbarians. Then the victor dragged his Germanic prisoners with women and children to northern Gaul, to use the depopulated fields, empty since the destruction of the Bagauden War as a coloni to rebuild. This was a politically dangerous mistake, because the repeated invasions kept the barbarians from outside on an understanding with those from within, so that Gaul threatened to become Germanic, which happened after a century. This measure was humane in any case, because
- 133425 according to the military law of that time, Constantius could also have killed the prisoners. Constantius also showed the same humanity in his later attitude towards the Christians. This tolerance was more in keeping with his character than with his religious veneration of the sun god Mithras, whom he served like the late Aurelian. But hardly had the Roman eagles been replanted in Britain, when the supreme emperor personally gathered his troops in Asia Minor for a campaign against Egypt, which had already risen ten years earlier (296). On this expedition he was accompanied by Constantius' eldest son Constantine, then 22 years old, and from his earliest youth (possibly since 285) as a page in the service of the supreme emperor, who held him as
- 133435 a hostage for his father's loyalty. (Euseb. Vit. Const. I 19 sqq.)

This long stay in courtly circle became a valuable political training for Constantine, as he initially enjoyed the full confidence of his elder prince, who initiated him into many "matters of state and war". Moreover, on the many journeys of Diocletian he learned from his own observation the conditions in the great empire, so that he grew into a capable statesman, who could later continue the work of his mentor.

But at the same time an expedition like this enriched his military routine and hardiness, and formed in him the future general. From an early age he excelled in shrewdness and courage. His stately figure also had something imposing, at least Eusebius, who at that time saw him marching through Palestine at the right hand of the emperor, testifies to it.

Thus the army of Diocletian, after a long journey over land, now finally stood on the edge of the apostate province.

The cause of this Egyptian uprising was the same as that of the rebellion that Aurelian had previously suppressed here (273), namely fierce dissatisfaction with the Roman tyranny of foreigners, and their unbearably heavy tax burden. Egypt, exploited for centuries as a private crown domain of the Roman emperors, for whom it had to supply grain free of charge to the world city, was consequently terribly

impoverished, famines among the fellahs, the servile rural population, who often had to suffer for the sake of the abundance of Rome, eventually led to the formation of desperate bands of robbers, such as the so-called Bucoli, who nestled at the mouth of the Nile, and privateers often prevented the export of grain. Although earlier emperors had defeated them, their robber state had secretly continued to exist, and now undoubtedly supported – although the sources do not mention this – the

Alexandrian Achilleus in his national uprising.

But also in Alexandria itself and the other large cities he could count on the support of the entire masses. Both parts of the population: the Hellenized upper classes and the still Coptic-speaking lower people, although often hostile to each other, nevertheless stood as Orientals, in national-Egyptian hatred, against the greedy Western invaders and their brutal imperialism.

Already then – as centuries later under Byzantium, and in modern times under the English protectorate – the slogan sounded: Egypt for the Egyptians!

But of course the emperor wanted nothing to do with it.

He marched in with his armies along the desert of Idumaea, to where the first pyramid spires cast their immensely long triangular shadows over the red-hot sand. Then the surprising contrast of the everywhere green fertile Nile Valley with its blond fields of corn and maize, where one had to wade through many rivers and marshes, banked by waving palms. But finally, after three days' journey, the gleaming white battlements and flat, sun-drenched roofs of the rebellious city, which, situated on a headland in the sea, believed itself impregnable.

Huge food supplies had been stored here: high-vaulted aqueducts connected it to the mainland and enabled it to withstand a long siege. The emperor was forced to surround it not only on land, but also from the sea by hastily equipped warships. As a result, when the supplies were exhausted, no more grain could be brought to the hungry, overcrowded city. And the emperor also cut off the water supply by destroying the aqueducts, so that the townspeople, surrounded by the waters of the ocean, were dying of thirst. Finally, after 8 months, the city surrendered.

The victor, embittered by impatience, ordered his soldiers to murder until the blood reached the knees of his horse. Immediately the men rushed in through the open gate, killing everyone they met.

But hardly had the emperor himself entered the city, when a horse slipped over the corpses, and waded with its knees in the blood. Immediately, according to the word once given, the murder was stopped. Only Achilles, brought prisoner before the emperor, had his purple torn off, and he and his entire brave garrison lost their heads on the scaffold. The soldiers were allowed to plunder to their heart's content in the houses of the rich; but the citizens, who escaped a general slaughter, later erected an iron statue in gratitude for the benevolent emperor's horse.

Then Diocletian marched south, conquered Koptos and Bousiris, and destroyed them completely. Now the entire country was incorporated as an ordinary province into the Roman empire (so no longer as a private crown domain) and divided into 3 districts. In the meantime, the emperor, on his march to Egypt, had left Max. Galerius with only a few divisions in Syria, to secure the Euphrates border against the Persians. With this people, and their king Narses, a war had already broken out since 286, because the Romans had restored their vassal Tiridates, the expelled Prince of Armenia, which the Persians had overrun, to the throne. But Tiridates' reign was short-lived, for ten years later his enemies reconquered his country. Now Galerius, supported by the

expelled king and his army, decided to attack the much larger Persian army in the sandy desert of Carrhae, where Crassus had already been defeated. Galerius also paid for his presumption with a defeat, but, like his Armenian ally, escaped from the battle alive.

When now the supreme emperor returned from Egypt, and his general wanted to join him again with this message of Job, the emperor refused to speak to him at first, and made the proud man, purple-clad, walk several miles behind his carriage. (Eutrop. IX. 24). It is probable that Constantine, who accompanied the emperor everywhere as an adjutant officer, witnessed this scene, and this explains the later hatred of Galerius against him.

However, his disfavour was not lasting, for he had the opportunity to correct his mistake. New troops of veterans and recruits had soon been raised in Illyria 11), and had crossed over to Asia Minor, and with these Galerius was able to greatly strengthen his weak army, consisting mainly of Orientals, and to undertake a second campaign against the Persians right through Armenia (297). He defeated them in a night raid. Their king Narses fled, wounded. All the women of his harem, his sisters and children, as well as a very rich booty, fell into the hands of the Romans. The king's relatives, however rough in nature, Galerius treated with knightly gentleness, but kept them as hostages. Soon peace was established, whereby the Araxes or Aboras (now Aras) became a border river in the northeast, while 5 provinces east of the Tigris were ceded to the Romans. Furthermore, west of the Araxes, the Roman vassal state of Armenia, with Tiridates as king, was restored.

Presumably, shortly after this peace, the relatives of King Narses were sent back to their country in freedom, and did not, as Eusebius fables (Eus. Hieron. Chronicon), grace the triumph of Diocletian in Rome. For an excellent understanding developed between the Persians and the Romans, which would last for another forty years, almost until the death of Constantine.

After having thus brought the empire to rest and all his enemies to submission, the emperor returned and established his residence at Nicomedia (Greek Nikomedeia), situated opposite Byzantium on the Propontis.

Rome was unusable for that purpose. For all future influence of the praetorians there and of the senate, which Diocletian never consulted again, had to be eliminated. For Diocletian wished to elevate his military dictatorship to a permanent autocracy. And he could accomplish this better than in Rome, in the East, which had been ruled despotically since ancient times. Here, in his new residence, he built a magnificent palace (villa publica), and introduced a complicated court ceremonial, borrowed from the example of the Persian kings, whose customs he had become intimately acquainted with thanks to Galerius' campaign. Convinced of the heavenly origin of his family, he called himself "Jovius", and, less out of pride than out of knowledge of people, had himself worshipped as a deity towards his mainly Eastern subjects, who were accustomed to this from their princes. For the Romans of that time this was something unheard of. For, although sacrifices had been made to the genii (guardian spirits) of the living emperors since Augustus, it was only after their death that they were generally worshipped as gods. They therefore saw in Diocletian's act the hubris of a parvenu, compared to Caligula and Domitian. Yet they had to admit that he did not behave despotically 12), but fatherly. It was therefore a very wise policy that he, the former soldier emperor committed, to increase the splendor of his court, and to instill in his subjects a respect for his person. Henceforth, even under his successors, the emperor was safe from hostile attacks. A large staff of soldiers and eunuchs guarded his palace, where he sat enthroned in a choice robe of pure gold thread, with sandals, heavy with precious stones, like a sacred idol, inaccessible to the profane people. (Aur. Vict. Epit. 39.)

Because of the enormous costs of court, official travels, and military expenditure, the tax burden had to be considerably increased. However, since the people had been greatly impoverished by the many civil wars and military extortions, and tax evasion was becoming increasingly common, a stricter, more effective control of the collection of taxes was necessary. For this purpose, the empire had to be reorganized into a large, autocratic civil service state (approximately like the Russian Tsarist Empire). To this end, the tetrachord [=tetrarchy] or the division into four under 2 Augusti and 2 Caesars served first.

Each of these four emperors was assisted by a praefectus praetoris or prime minister, who, like them, was not bound to a specific region, but travelled around for inspection purposes.

However, from then on he was only charged with civil administrative affairs, so that already under Diocletian (and not only under Constantine 13) we get a separation between civil and military administration, at least in this one office, and not in

the lower ranks.

It is possible that the murder of his predecessor Numerian by such a prefect (then still a general) caused the new emperor to curtail this office. A further division, which maintained itself throughout the fourth century, including under Constantine (except for minor changes), was the division into 12 dioceses (later 13), namely: I. Oriens (the East), i.e. Libya, Egypt, Syria and Mesopotamia, from which Egypt and Libya were later split off as a separate diocese;

II. Pontus. III. Asia. IV. Thrace.

V. Moesia (with Macedonia and Greece), which under Constantine was more correctly called Macedonia.

VI. Pannonia or Illyricum. VII. Britain.

VIII. Gaul (i.e. present-day northern France, Belgium and the Rhine regions).

IX. Vienna. i.e. southern France.

X. Italy. XI. Spain. XII. Africa 14).

At the head of each diocese or group of provinces stood a deputy prefect or vicarius praefectorum praetorio (or simply: vicarius) as civil and military governor, who in turn had the military-civil governors or proconsules of the larger provinces and the praesides of the smaller provinces under him.

The cities lost much of their former self-government, and came under stricter central control. Although they still retained their local senate, elected from the hereditary class of decurions or notables (cf. the regents in our later republics), they were henceforth governed by the military-civil city governors or praefecti urbium.

The old republican offices of the city of Rome, already of little importance, were now partly abolished; partly reduced to honorary positions, granted by the emperor, such as the consulship and membership of the senate (not to be confused with the hereditary status of senators or perfectissimi).

Thus all officials, from high to low, were appointed indirectly or directly by the supreme emperor who, as an earthly Jupiter, was only responsible to his heavenly colleague for the well-being of his subjects.

PAGAN EMPEROR AND CHRISTIANITY.

Typical of Diocletian, but entirely in keeping with his system, is his predilection for the old Roman state religion, and his complete disregard for the religion of the army: the worship of Mithras, which bordered on monotheism. Only one of his co-regents, the Caesar Constantius Chlorus, was committed to this latter doctrine; the other two blindly followed their supreme emperor in his religious preference. Thus the Augustus Maximianus particularly revered Hercules, and therefore called himself Herculus, just as Diocletianus was called Jovius after his Jupiter service.

But especially Galerius, like Maximianus raised from Illyrian farmer to soldier emperor, almost surpassed his father-in-law Diocles in zeal for the old paganism and strengthened him in this by his ever-increasing influence.

Both watched with concern the spread of new non-national religions. The Manicheans, a dangerous sect for that time, who openly honored Evil as the creative world principle, and thereby threatened to bring about a revolution in social concepts as well, were burned at the stake by imperial edict (296). The Christians were still spared, possibly through the intercession of Valera and her mother Prisca, who tolerated many of them in her entourage at the court in Nicomedia, where they, like Galerius, lived together with the emperor. But for how long?

At the court, pagan priests, demon exorcists, astrologers and especially diviners gained increasing power.

From the entrails of doves, the superstitious emperor attempted to fathom the hidden future secrets of time, as fast as a bird and uncapturable by any human brain.

His son-in-law Galerius, not an intellectual, of rustic origin, but an excellent soldier and also a strong, impressive figure, followed the emperor in his worship of the gods, and became more and more a person of authority at court. The old, decrepit ruler gradually listened to him, much more than to his own wife Prisca and his daughter Valeria, who had to hide her Christian sympathies more and more.

Now it was this conservative counselor who, as a representative of the military, mostly servants of Mithras, drove the emperor to persecute Christians.

Yet Lactantius clearly exaggerates when he presents Galerius as a bully of an iron-eater, who with his thundering bass voice tyrannized the old emperor so much that he would have forced him both to persecute Christians and to abdicate.

For elsewhere he (Lactantius) asserts that Galerius was guided by his fiercely pagan mother Romula, born in Dacia, and by his faithful friend and brother-in-arms Licinius, the later enemy of Constantine. Moreover, our informant himself mentions other advisers who drove the supreme emperor to this decision.

For, not only among the military (such as Galerius), not only among the common people, but also among the intellectuals, such as most officials, jurists and rhetoricians, Christianity was hated. And many of them belonged to the closest confidants of the emperor.

For example, great influence was exerted by a certain Hierocles 17) ex-vicarius of the East, and then at the time president of Bithynia, who continually tried to incite Diocletian against the Christians. Presumably he was also the author of a now lost Greek work "To the Christians", against which Lactantius later polemized in his *Divinae Institutiones* (V, 2). In this work the pagan writer attacked the Bible as a book full of contradictions and called Jesus' disciples crude, uncultured and therefore unreliable. He placed the miracles of Jesus far below the magic arts of the pagan savior Apollonius of Thyana, and refused to regard him as a God, even on the basis of those few miracles, as the Christians did.

Yet his tone was not aggressive, but as is evident from the subtitle φιλαλληδεις the truth-loving who carried his books 18), he wanted to convince his opponents with objective truth.

But where does this general hostility towards Christianity come from, both among the government and the people?

The mostly pagan people hated them first of all because of their open contempt for all other religions. But also because it was mainly Semites (Jews, Syrians, Africans) who were initially the bearers and propagators. Time and again in the first and second centuries a loud demand for persecution sounded "Christiani ad leones", just as wildly unreasonable as modern pogroms in Eastern Europe and anti-Semitic witch hunts in the West. Domitian had also persecuted Christians as a Jewish sect. But during the Syrian and African emperors at the beginning of the third century this changed. Gradually, native Romans and Greeks formed the majority of Christians, so that they were still unpopular, but not as strongly hated as before. This was due to their tireless internal mission, their exploitation of every martyrdom as a proselytizer and above all: their excellent organization, against which paganism, fragmented into countless sects, could not compete.

It was precisely their organization that made them dangerous to the state in the eyes of the secular authorities. The refusal of the Christians to sacrifice on the imperial altars had therefore been more a pretext than the actual cause of earlier persecutions. No, the reason why the emperors feared them was their tightly knit church association, branched out over the entire empire, through which they had power over thousands and formed, as it were, a state within the state.

This was as intolerable to them as, for example, the privileged power of the Huguenots was later for Richelieu.

Only a slight weakening of the central absolutist authority, only a greater spread of Christianity would be necessary to turn the bishops into local princes. Further history, the emergence of the secular power of the pope and prelates, has proven this. Galerius' only, repeated advice to his father-in-law must therefore be: Suppress Christianity with all your might, before it is too late.

The emperor also became increasingly ill-disposed towards the new religion, but while Galerius, as a swashbuckler, wanted to strike at it immediately, he himself, as an experienced statesman, was more cautious. After all, there were still many Christians at court or in the army. They had to be removed first, in order to be able to trust both powers completely.

A pretext for dechristianizing the palace was soon found. The failure of a sacrificial divination was attributed to Christian courtiers, who had crossed themselves and thus angered the gods. That this was only a pretext of Diocletian and not the real cause (as O. Seeck, for example, assumes), follows from the fact that he had admitted Christian courtiers on all possible occasions for 15 years, and that he could therefore have complained about their crossing themselves much earlier. Now he seized only a welcome opportunity to destroy the Christian influence in his palace. Namely, he made sacrifices obligatory for all courtiers, including his own Christian-minded wife Prisca. Most of them then converted to paganism - at least outwardly - but a few, who remained Christians, remained tolerated in the palace despite the emperor's threats.

Then - on the pretext that the pagan old Roman rite was necessary for the battle - all Christians were expelled from the army. This was necessary to ensure the loyalty of the troops in case of trouble.

But Galerius, the fanatic pagan, was not satisfied with this. He urged absolute, strict persecution across all classes of the empire. The cautious old man resisted him for a long time and pointed out "how pernicious it would be to disturb the whole world and shed the blood of many" 19).

133700 Nevertheless, he agreed to convene a secret council of jurists and military men to
deliberate on the matter. Here Galerius found the greatest support. Still, the
emperor wanted to consult the oracle of Apollo in his pagan superstition, just to be
on the safe side. Only when he replied "as an enemy of the divine religion" 19), did
the persecution begin, which the emperor initially did not intend to be bloody, but
133705 which soon degenerated into the greatest horrors due to a fatal coincidence.
The first act of persecution was: the evacuation of a church, where all the holy
scriptures that were found there were burned. Then the building was demolished to the
ground. This happened on the dies Terminalis, the day sanctified to the god of
boundaries. The superstitious emperor wanted to put a limit or end to Christianity
133710 with this (23 February 303).
The next day the actual edict of humiliation was openly posted. Hereby religious
gatherings were forbidden to Christians, orders were given to demolish or close their
churches, to have their holy scriptures handed over and burned, and they were denied
access to honorary offices and state positions. Furthermore, no Christian slave could
133715 be legally freed, and sacrifice was made obligatory for litigants in court, so that
no Christian could ever act as an accuser, while torture was also permitted against
privileged Christians (from the higher classes).
When a Christian had torn off this placard in mockery, he was arrested and died as
the first martyr. Of course, now that blood had been shed, bitterness increased on
133720 both sides.
Afterwards, a fire broke out twice in the wing of the palace where the emperor lived.
Galerius blamed this – and probably rightly – on vengeful Christians. Some court
officials (Petrus Dorotheus and Gorgonius), suspected of this, were tortured and
killed. Yes, the emperor, deeply angry because they had wanted to burn him alive in
133725 his own house, now committed the injustice, the guilt of a few, to blame all the
Christians in Nicomedia. They were dragged before the court as arsonists, tortured
and put to death. The number of martyrs who fell for their faith was enormous. Of
course, the sacred legend later took possession of it, so that in the saints' stories
the names of Adrian and Genesius are handed down to us. Adrian was a judge in
133730 Nicomedia and was converted to their religion by the steadfast behavior of the
Christians, who refused to renounce their faith with the obligatory sacrifice before
the tribunal, and was then executed himself. Genesius was the court actor of the
emperor, who had the task of portraying the death of Adrian tragically on stage,
to the disgrace of the Christians. But through his role he had so empathized with the
133735 true character of the martyr that he was moved and suddenly "struck by divine grace".
Thus, in the last act of the play of opportunity, he heroically confessed his new
faith before emperor and court, and found his martyrdom in death by fire. These
legends, however strikingly testifying to the hellish atmosphere of blood and flames
that then blazed through the East, will probably not have happened. For otherwise the
133740 Christian apologist Lactantius, who appears to be so well informed about the
conditions in Nicomedia at that time and is prone to anecdotes and melodramatic
exaggeration, would have given the names of such famous martyrs.
After this severe punishment in the court city, the emperor heard news of a revolt in
Syria, where a usurper Eugenius threw himself up. This was probably the work of
133745 discharged, bread-robbed Christian soldiers. At least Diocletian believed it to be
so, and after suppressing the revolt he decided to intensify the persecution
throughout the empire. He ordered his co-Augustus, his two Caesars and his proconsuls
to arrest all Christians – from the bishops down to the lowest parishioner – and to
force them to convert to paganism by every conceivable torture.
133750 But the practical execution of this decree ("rescript") varied everywhere.
The Western Augustus, Maximianus, a personal enemy of Galerius, whose advice had not
been sought in the matter of the persecution, (more out of a sense of being offended
than of pity) troubled the Christians as little as possible, and contented himself
with closing their churches and demanding their holy scriptures. His Caesar, the
133755 tolerant Constantius Chlorus, did the same.
But in the East and in Africa, where fanatically pagan proconsuls ruled, countless
new means were invented to torture the unfortunate. Red-hot grills, open desecration
of virgins, cutting off the breasts of women, no horror was too low for them against
this hated sect.
133760 The prisons became overcrowded, so that of the newly introduced Christians the men
had to be sent as forced laborers in the mines, and the women sold as white slaves to
brothel keepers. And in the meantime they were tortured repeatedly in court. For
example, Bishop Donatus of Carthage, who spent the entire persecution in prison and
was meanwhile put to the rack eight times.
133765 But that persecution was at the same time a purification in the ranks of the

faithful. The unconvinced and indifferent fell away (lapsi) to paganism in large numbers, or handed over their holy scriptures out of fear (traditores). The rest formed a fervent, God-consecrated crowd, who, comforting death, gladly died with the name of Christ on their lips. Like a terrible plague epidemic, pagan intolerance raged, gathering its last strength, against the new religion. Galerius, the conservative, had thus got his way. His influence on the decrepit, superstition-bewildered supreme emperor also grew ever greater.

He had been deeply shocked by the events of the last few years. Even courtiers, whom he had previously trusted most, he had murdered, out of fear for the Christians; their entire sect with all its adherents had been imprisoned and tortured. And still it was of no avail; the cunning Christian god continued to support his followers in their stubborn resistance to the emperor and the gods of the state.

As an industrious investigator of the future, both from bird signs and constellations, and tormented by evil premonitions, he therefore believed that all this did not bode well, neither for the further reign of himself, the earthly Jupiter, nor for his colleague up there in the Olympian heaven. Moreover, he longed to throw off the enormous blood-guilt that he had loaded on his conscience, with the burden of authority and the responsibility for further persecution.

This last was precisely the wish of his son-in-law Galerius, who, himself ambitiously longing for the throne, did everything to support the old man in his plan to abdicate after the celebration of his Vicennalia. On this twentieth jubilee of reign, in 303 at Rome, where Maximianus Herculus had also appeared, he too was forced by the supreme emperor (but on the advice of Galerius) to take the solemn oath to abdicate at the same time. He himself, Galerius, would become supreme emperor; Constantius Chlorus his co-Augustus. As future caesars he managed to get two creatures of his own, Severus for the West and Maximinus Daza for the East, appointed. This with clear disregard for the young, ambitious Constantine, who was then first lieutenant 20) in the emperor's bodyguard, and had certainly counted on becoming Caesar one day. But Galerius had made him fall into disgrace with the emperor, because he had dared to disapprove of the needless murders against the Christians.

He probably also feared him as a future rival. At least he deliberately sent him with too few troops on a dangerous expedition against the Dacians, in the hope of having him killed. But Constantine prevailed and remained alive.

In the meantime Diocletian, after returning from his journey to Rome, had fallen ill from fatigue, and had publicly abdicated the throne in Nicomedia; Maximianus Herculus also against his will in Milan. Thus Galerius was the new lord of the earth. He summoned his officer Constantine to the court and demanded his oath of allegiance. He came and fulfilled it. But at the palace the suspicious Galerius held him virtually hostage, possibly in order to have a pledge of loyalty from his father, his newly appointed co-Augustus Constantius. When he nevertheless summoned his son to the West, and the supreme emperor still did not want to let him go, Constantine decided to escape.

At the earliest dawn, when court and ruler were still asleep, he travelled, after having bribed the coachman-postmaster, disguised in his uniform, in the carriage of the imperial postal service. In order to escape all persecution, at each new station, where the horses were unharnessed and exchanged for fresh ones, he had the newly used ones killed. 21) Thus he reached the Bosphorus and from there sailed to the other side, after a long and adventurous journey through Thrace, Illyria, Germania and Gaul, to the seashore at Boulogne. Then he crossed over to England, where his father was staying, with whom he was safe from the attacks of Galerius.

THE RISE OF CONSTANTINE.

With Constantine, after Julius Caesar, the greatest general-statesman in Roman history enters the scene. In vain did Eusebius try to make him into an eye-twisting bigot; in vain did the Greek-Catholic church try to adorn his emperor's head with a totally superfluous wreath of saints. He was no saint and not even a pious one, he was simply a great, amoral statesman, who by all his qualities, both his so-called "virtues" and his "flaws" was predestined to rule in his time.

He had already his appearance. We can only guess, since his head is idealized on coins and the only so-called statue of Constantine, originating from his triumphal arch in Rome (where it stood on top) was not actually sculpted after him, but after Trajan (it stood on his triumphal arch), and only later, as best as it could, was updated after Constantine!!! So let us, out of necessity, rely on descriptions. Well-built and broad-shouldered, with the sturdy Illyrian type inherited from his father, he carried on his muscular neck a head that, with its flaming yet motionless eyes and regular features, was at once endearing and awe-inspiring.

Tireless on long marches, impetuous and always at the forefront of the attack, even to the point of recklessness, he was also a calculating strategist. Beloved by his men, he nevertheless accustomed them to such strict discipline that they never dared to plunder or even rob prisoners without his permission. Accustomed from an early age to bloodshed, he despised pity as a weakness and was needlessly cruel. Married early, he remained free from debauchery.

As a statesman he understood the art of dissimulation excellently, which makes both his frequent breach of faith and his later outward Christian disposition understandable. But he knew how to cover this tendency to hypocrisy with a gracious smile of his face, which he wore clean-shaven to resemble Mithras-Helios-Apollo, his favorite god.

But above all he was feared by his demonic power of sympathy-radiation and will-imposition over millions, whereby everything bowed down to his ruthless ambition, just as Napoleon later did.

No wonder then that almost immediately upon his arrival in Britain he managed to take his father's army for himself. He arrived just in time. The old Constantius Chlorus, still, despite his appointment as Augustus, in England because of war, felt his end approaching and had therefore called his son to him. His children from the second marriage were still minors and in Constantine he saw the only one who could continue his work when he died. But still the old man was still strong enough to hold a victorious campaign against the Picts and Scots in the North together with his son. After this last effort he died at Eboracum (York) (306). This greatly disappointed his half-barbarian legions. They had hoped, after Constantius became Augustus, to march to the rich South, where booty and fortune could be gained, and now he was dead! But it was still possible, if his excluded son became their leader. What did they care about the ban of the dismissed Diocles! Nowonder then that, at the instigation of the Alemannic officer Ercus, they threw the imperial purple over Constantine's shoulders when he left the mortuary. Weeping as he spurred his horse, the latter would have tried to escape this. 22) It moved him that these rough, rough-bearded veterans now transferred their loyalty to his recently deceased father to him, the barely known son, but he probably thought it was unrespectful towards his father to accept the purple so soon. Or were they tears of joy over the rapid satisfaction of his ambition, which he still concealed under false modesty? Whatever the case, he soon overcame his hesitation and sent messengers to Galerius to obtain his recognition. In the same year he crossed the sea and drove the Franks, who had invaded Gaul by breaking the peace, back across the Rhine, after which he plundered and devastated their country, especially that of the Bructeri, as punishment. All the cattle were plundered, the villages set on fire, so that only a few refugees (with women and children?) could escape into the rough refuge of the forests. Two Germanic kings, Ascaricus and Regaisus, with most of their able-bodied men were captured and, in celebration of his first triumph, the emperor had these blond barbarians thrown to the bears in his arena at Trier. So great was the number of these half-naked wretches, huddled together with fear, that they exhausted the wild beasts with their mass of flesh 23).

Despite this cruelty, even contrary to the then military custom of sparing captured princes, the fearful Gallic eulogist praises the gladly flattered emperor, that with this bloody deed he had done exemplary fear spread among the enemies of the empire. Who were the real "barbarians" here, Romans or Germans? 24).

In the meantime, Galerius, who himself had too few troops to fight Constantine there in the very North, had of necessity acquiesced in his usurpation, but did not recognize him as Augustus, but as Caesar. He was therefore under Severus, who would now become emperor of the West from Caesar. But since he was still harmlessly in the East, Constantine accepted that appointment.

A logical consequence of this later legitimate usurpation was that the also excluded son of the ex-emperor Maximilianus also obtained the purple in Rome. But this one, Maxentius, never received the legitimate recognition of Galerius for it, so that, unlike Constantine, he remained from the beginning to the end: the "tyrannus" or usurper.

What kind of man was Maxentius? His appearance was – but by his enemies – ridiculed as contemptibly small, and with weak, crooked legs 25). About his character all informants are almost in agreement. Unbalanced son of a thoroughly barbaric Illyrian father, and a probably highly cultured Syrian mother, Eutropia, he had inherited from the first his pride, cruelty, superstition and gross pleasure-seeking, from the second his cunningly intriguing ambition. Out of antipathy to his father [he] lived lazily and dissolutely on his estate, 6 miles outside Rome. But Constantine's elevation aroused his envy, and spurred him on to follow his example. Perhaps he

thought the emperorship an easy means to even more extravagant excesses than he was accustomed to. Cowardice, however, prevented him from setting himself up as ruler openly at this stage. For the time being he preferred to continue to intrigue behind the scenes, for safety's sake. For he was not a will-less creature of the praetorians, as O. Seeck wrongly claims (cf. Zosimus, II, 9). His passivity at his elevation was only apparent. He simply waited to see what would happen. By distributing grain free of charge he already won followers among the people; by financial bribes among the praetorians.

Now both parties, bodyguard and citizenry, were already extremely dissatisfied in advance that Rome was no longer an imperial city; the bodyguard because its former role of palace revolution and creating new emperors had been played out; while the trading people did not earn much since the disappearance of the court and the senate remained excluded from political influence. 26)

One rightly attributes the general decline of Rome to the transfer of the government to the provinces 26). When, as a sign of Constantine's recognition by Galerius, his new Caesar statue was exhibited in Rome, the people and soldiers rioted. They wanted their own emperor in Rome. Under the leadership of the tribunes Marcellus and Marcellinus and the aedile Lucianus, all henchmen of the still invisible Maxentius, the hated quaestor Abellius, 26) who tried to thwart their plans, was murdered as a supporter of Galerius. Then a troop of praetorians went to the estate of Maxentius and offered him, exactly what he had wanted, the imperial purple. Honored in Rome, he soon received the support of all Italy, where people everywhere were upset about the far-reaching privileges of the provinces and wanted a return to the earliest imperial period.

But Galerius could not acquiesce in this new usurpation. He sent his fellow Augustus Severus (legitimate successor of Constantius Chlorus) to Italy, to subdue the rebellious capital again. Now Maxentius was in need. In mortal fear of a murderous defeat, he called upon the help of his father, who was still grieving over his abdication on an estate in Lucania. The old Maximianus agreed to help his son, but only on condition that he himself would become Augustus again. Thereupon he took the old purple cloak, although somewhat moth-eaten, out of his wardrobe again, and thus dressed went to his anxious son in Rome, who approved of everything.

But his intervention had an unexpected result. Severus' troops consisted largely of the so-called Moorish (Mauretanian) regiments, who had once fought under Maximianus in his African war. When they now heard that it was not only against Maxentius, but also against his father, their old emperor and general, to whom they had once sworn loyalty, they refused to fight him and (moreover, lured by promises of reward) deserted to him just before the walls of the capital, which they were to besiege. Severus had to flee hastily to Ravenna. Here Maxentius, who dreaded a long siege, managed to lure him out from behind the walls, under the pretext of personal negotiations. But once in his camp, he captured him, and although the old Maximian had promised him his life, after the latter's departure for Gaul the unfortunate Severus was deceived by the untrustworthy Maxentius treacherously murdered. To avenge his death, the angry Galerius himself led a new army against the usurper. But here too, Maxentius's henchmen penetrated, who scattered gold lavishly among the soldiers, so that these troops, too, having been bribed, largely defected to him. Looting in revenge, Galerius withdrew with the rest.

Meanwhile, the relationship between father and son had become increasingly worse. Now that the danger was over, Maxentius no longer needed his father, who had actually saved him. Ungrateful and piety enough, he tried to rid himself of his troublesome co-ruler and paternal supervision.

But the father also did the same to his son. In the army, again thinned down to mere praetorians – the Moorish regiments had to suppress a revolt in Africa – he declared Maxentius unfit for supreme command. According to another informant, he even attempted to tear the purple from his shoulders. This made his own striving for absolute power crystal clear.

Of course, the soldiers, obliged to him by Maxentius' gifts, responded to the old man with a howl of mocking protest. Then he saved himself by claiming that he had simply wanted to gauge the feelings of the army towards his son out of fatherly love 27). Yet he thought it safer to flee to Gaul. Here, disappointed in his ambition, he wanted to try with Constantine what he had failed with his son. His youngest daughter Fausta was to serve as bait for this. 28) (The eldest, actually his stepdaughter, had been married off much earlier, to Constantius Chlorus).

With this marriage and the title of Augustus, Maximianus attempted to win Constantine over to his plan to make him supreme emperor. But after the wedding day, when the booty was finally in, his son-in-law did not lift a hand for him. About this time

- 133965 Galerius, desperate after his failed expedition against Maxentius, called a congress at Carnuntum, to which besides Diocletian, Maximianus Herculus was also invited. When these two old comrades-in-arms met again, they felt only too clearly how much the years had separated them. What a contrast between the resigned hermit of Salona, who had chosen a quiet solitude above world domination, and the restless, still ambitious ex-emperor of the West! In vain did Galerius and Maximianus attempt to
- 133970 persuade their former overlord to ascend the throne again and put an end to the confusion by his authority. "If you saw my vegetables in Salona, which I have grown with my own hands, you would immediately judge that I should never attempt this," was his answer 29). Yes, he and the interested Galerius even managed to persuade the ex-emperor of the West to put down the usurped purple again.
- 133975 After all, their time was over. Instead of Severus, who had been murdered (by Maxentius), Galerius managed to get an old comrade appointed to the new August of the West: Licinius, who had distinguished himself with him on a campaign in Dacia. Diocles returned to his vegetable gardens in Dalmatia, but his ex-colleague went to Gaul. Still bitter about his loss of power, he soon felt regret about his promise and
- 133980 decided to carry out a coup d'état here. He took advantage of the absence of his son-in-law, who was fighting the Franks and Alemanni again in the North, by seizing the crown treasury and war chest and settling in the strong Arelatum (Arles). But Constantine returned quickly to thwart his plan. He fled to Massilia. His recruited mercenaries, however, delivered him to the
- 133985 besieger. After the latter, at the entreaties of his wife, had spared Maximianus' life and released him, the gray-haired schemer attempted to murder his son-in-law in his bedroom. But his daughter Fausta managed to get the secret of the plot out of him and betrayed it to her husband, whose life she preferred to save rather than spare her father's any longer. A crippled and useless eunuch was placed in the marital bed
- 133990 instead of Constantine, and his son-in-law and daughter, hidden behind a curtain, witnessed how the old Maximianus, having crept into the room at night, stabbed his supposed enemy with his own hands. (Lact. de mort, c. XXX). Caught red-handed, the old man was sentenced to a death of his own choosing. He had himself strangled. (According to others, he was hanged by Constantine.)
- 133995 This left only two rivals in the West: Constantine and Maxentius. For Licinius, though the lawfully appointed Augustus of the West, found it safer for the time being (for want of troops?) to remain in the East, at the court of Galerius, and behaved as if he would succeed him one day.
- 134000 This was soon to happen. Galerius was dying of an incurable disease, probably in the last stage of syphilis 30). His Christian-minded wife Valeria naturally attributed this disease to God's avenging hand and persuaded him to finally stop the persecution of Christians.
- 134005 Galerius, although he remained a pagan, still wanted to reconcile himself with the apparently angry Christian god and agreed, especially because the aim of the persecution, mass conversion of the "unbelievers" to paganism, had failed. So he issued the edict of tolerance of 311, which breathes impotent resentment rather than reconciliation and is especially remarkable because of its superstitious request to the Christians to pray to their so powerful God for his healing. But in vain, he died in the same year and was succeeded by Licinius as supreme emperor, who, like
- 134010 Constantine, had also signed the edict. Only Maxentius, the unrecognized usurper of Italy, and Maximinus Daja, the former Caesar of the East, who had been passed over for the sake of Licinius, did not participate. Maxentius, who had initially spared the Christians in order to annoy Galerius, suddenly became a persecutor of Christians after his edict of tolerance, thereby simply playing into Constantine's hands.
- 134015 Maximinus Daja, who had been deprived of the succession of the East by Licinius, declared war on him. But the other, although stronger, did not yet feel ready for battle and managed to persuade Daja to a provisional reconciliation through personal negotiations on a ship in the Hellespont. Licinius was confirmed in his possession of the Balkan peninsula; Maximinus Daja, now also called Augustus, retained the rest of
- 134020 the East with its capital Nicomedia, thus by far the most important part. This Maximinus Daja is presented to us (by Lactantius and Aurelius Victor) as a half-barbaric young man of rustic origin, who by his rough determination and convinced paganism had managed to work his way high into the favour of Galerius. He had at least not been inferior to him in inhuman Christian tortures, and even after the
- 134025 latter's edict of toleration (311) he continued them secretly and unlawfully. According to Lactantius this was due to his innate wickedness, but the pagan Aurelius Victor excuses his crimes as mostly committed in drunkenness. Then he would have fits of the cruellest bloodthirstiness and the lowest lusts; he would put innocent people of both sexes to the torture rack in order to extort money from them, and had

- 134030 beautiful women and boys from the neighbourhood robbed to extravagant excesses. But being conscious of his addiction to drink, he had sincerely requested his servants never to carry out his orders until he was sober again. For then he usually felt remorse, if he had committed misdeeds. He apparently suffered periodically from that
- 134035 Caesarian madness of alternately brutal enjoyment and destruction, a disease that has brought down so many half-civilized rulers from the throne that was too high for them.
- After the death of his predecessor Galerius, his first act was to seize the imperial palace in Nicomedia. For he had cast his lustful eyes on Valeria, the empress dowager. Was it only for her personal charm, as Lactantius wants? I think there was
- 134040 another, political reason for it. After all, it was to her favorable influence that the Christians owed the edict of tolerance of the dying Galerius. Now, after his death, the authority of that sect, which Maximinus Daja hated more than anything else, threatened to increase rapidly, as both princesses increasingly surrounded themselves with Christian followers. It was therefore in self-defense that he had to try – with gentleness or otherwise with violence – to persuade her to marry him, the
- 134045 fanatical pagan, in order to openly show her transition. To this end he even offered her to repudiate his own wife. But she refused with great dignity, "because the ashes of her dead husband were still lukewarm". (Lact. de mort., c. 39). Then the tyrant took other measures. It could not or not only have been revenge for love, as
- 134050 Lactantius wants, but he wanted to strike in her above all the protector of Christians. Had she truly been a good pagan, then he would have committed unnecessary cruelty with her persecution, against the daughter of his old benefactor and fellow believer Diocletian and therefore against Daja's own interest. Now his act of revenge coincided with and was probably similar to his renewed persecution against the
- 134055 Christians 31). He expropriated Valeria's palace and other possessions and had her eunuchs and slaves tortured before her eyes. Two of her married friends – probably Christians, who had supported her in her resistance – he had (according to Lactantius) accused of adultery by a bribed Jew and delivered them to the hands of the executioner. Valeria herself was banished with her mother Prisca to an oasis in
- 134060 the Syrian desert. From there they wrote desperate letters to her husband and father Diocletian, to free them both through his mediation. The old man sent numerous letters of entreaty to Maximinus Daja, but received no answer. He then sent one of his relatives as a messenger, but without effect.
- One can understand how all this: the ill-treatment of his own wife and daughter, the
- 134065 usurpations of Constantine and Maxentius, the executioner's death of his former brother-in-arms Maximianus Herculus, embittered the lonely ex-emperor and disturbed his dream of a happy, quiet old age in seclusion.
- In the meantime, Maxentius had considerably weakened his position in Rome, both by
- 134070 his persecution of Christians, which had suddenly begun in 311 (about which earlier), and by his growing unpopularity with the Senate and the people.
- When this government college expressed dissatisfaction with his autocratic conduct, he began judicial murders against senators, which enabled him to immediately
- 134075 confiscate their property. He even dared to shamelessly indulge his tyrannical lusts by abducting and abusing daughters and wives from the highest circles. (Zonaras even mentions a Lucretia story about this).
- His quaestors were also guilty of extortion in the levying of taxes.
- Finally, the lower classes also saw themselves mistreated by his soldiers. This
- 134080 happened, for example, during the burning of the temple of Fortuna. A large crowd rushed to extinguish the fire, but a soldier shouted curses against the goddess and was lynched by the angry people. (Zos. II, 13). In revenge, the praetorians now committed a bloody massacre among the crowd, which was only stopped after great difficulty by Maxentius.
- Only one province made an attempt to free itself from his oppressive tyranny, namely
- 134085 Africa. Here the governor Alexander, a Pannonian (Aur. Vit.) or a Phrygian (Zosimus), was clothed with the purple by the troops despite his age and his military incapacity. Maxentius then immediately sent a chastening army under the command of Rufius Volusianus to Carthage. He soon suppressed the uprising, captured the usurper and had him strangled. The victors then behaved here as if in a conquered country.
- After denunciators had betrayed all the rich who had been in contact with Alexander,
- 134090 the soldiers plundered their houses and murdered them, after which their money was confiscated in favor of Maximinus. Entire districts of the city were destroyed. Surrounding cities also shared this fate, such as Cirta, which later had to be rebuilt under Constantine and was then baptized "Constantina" (tgw. Constantine).
- Maxentius triumphed over the booty he had won in Rome, in which he tried to imitate
- 134095 the old enmity against the former Punic Carthage.

Thus we see in his entire territory: Italy and Africa his rule degenerated into a military terror, in which the civilian population, no longer certain of possessions or life, eagerly looked forward to deliverance.

But besides with his own subjects, Maxentius also got on bad terms with the surrounding princes. Licinius had never recognized him and his brother-in-law Constantine, who had wanted to conclude an alliance with him after 310, was indignantly rejected by him as "the murderer of his father". (Although he himself had not treated his own father much better in the past). Of course Constantine then sought and found rapprochement with Licinius, an experienced military man like him, whose support could come in handy in the event of war. As a seal of the alliance that was soon concluded, the engagement soon took place between his half-sister Constantia and Licinius, forty years older. He then also felt reassured on his side, especially since his two opponents Maxentius, who threatened to wrest Illyria from him, and Maximinus Daja, his old enemy, had already allied themselves with each other in the East.

Thus the war between Constantine and Maxentius and Licinius and Maximinus Daja on the other hand was inevitable. Yet the former broke out much earlier, because of the increasingly hateful relationship between the tyrant of Italy and his brother-in-law. In preparation, both recruited new mercenaries. Constantine in Gaul, Germania inferior and Britain; Maxentius in Italy and Africa. Although the latter had many more troops at his disposal, he was absolutely no soldier, let alone a strategist, like Constantine. He even thought of a plan of attack, 32) through Rhaetia and Helvetia to the middle of Gaul and for that purpose gathered his troops in the Po Valley. But he neglected to occupy the real gateways to Italy, the Alpine passes in the West, in time, so that they were later open to Constantine.

In the meantime, Constantine, whose arrival was already eagerly awaited by oppressed Italy, which yearned for deliverance, had managed to make himself sympathetic to Christians and tolerant pagans by presenting himself as a defender of Galerius' edict of tolerance against the persecutor of Christians Maxentius us. Although not yet a Christian himself, he thereby became the protector of Christianity. As proof of this, he had the sign (XP), the so-called labarum, the Greek initials of Christos, attached to the shields of the banners.

Despite Eusebius' anecdote that the emperor had seen a flaming cross in the sky in a vision with the inscription: Toi nika (Overcome by this), one sees in this act absolutely no conversion of such a bloody pagan to a religion of defenselessness and charity.

What then were his motives?

In the first place, his superstition and truly pagan symbol worship. He simply identified with Christ his hitherto exclusively worshipped Sun God.

(Mithras-Helios-Apollo). After all, his holy sign, the svastika (actually an image of the "sun wheel"), was almost identical to the labarum, so that this field sign could not be an objection for the so numerous Mithras servants. Another, equally superstitious motive was: to appease the wrath of the Christian god, to whom the confusion and disasters that had recently plagued the empire were attributed.

Moreover (and this was probably the decisive factor for Constantine) it was a brilliant political move to win over the still small but firmly united sect of Christians as grateful subjects. He felt intuitively that Christians, with their docile morality of submission to any authority that respected them in their religion, would be easier to control than the more self-willed, freedom-loving pagans. But it is quite possible that he himself sent the fairy tale of the vision of the cross into the world in order to entwine his head with a prophetic halo in the imagination of credulous bishops and pious people. How delightfully they laughed at the idea that at last, just as in the Old Testament, a warrior of God had arisen, who would eliminate the tyrants persecuting Christians and would spread the kingdom of heaven already on earth! In any case, Constantine gladly accepted this role and thereby proved his so repulsive hypocrisy, a family trait that we find again and again in his dynasty, but most strongly in his later son Constantius. But it was no time for religious musing for him. He had to take immediate measures for the battle. Leaving behind a few regiments at the Rhine border, which was so secured (against Germans) (Pan. IX, 2),

he decided, despite the advice of his officers, to surprise the much more powerful enemy. To this end he quickly moved his troops to the foot of the French-Italian Alps, which he crossed (like Hannibal before him and Napoleon after him) via the ever unguarded pass of Mont-Cenis. (see above). On the slope he captured, after a short siege, the town of Susa (Segusia) on his way down, which was mercifully spared from plundering. (Pan. X, 21). But once he had descended into the plain of Turin (Taurini), the enemy Italian-African army awaited him here, which, with the

Praetorians as its core, consisted of 18,000 cavalry in the vanguard and 170,000 infantry in the rear, thus approximately double the force. (Zos. II). Against their true Roman eagles rose the labarum-bearing troops of Constantine, consisting mostly of British and Germanic barbarians, impetuously eager to fight against the hated Rome. With the sign of the cross on their shields they seemed the legions of the new age, charging upon the last defenders of paganism. But they also represented the struggle of the upward-striving provinces against the last attempt of Italy, by means of Maximinus' usurpation, to restore its former superiority.

First Constantine's horsemen (or was it his foot-soldiers?), with iron-shod clubs in their fists, charged those of the enemy, who, with man and horse armored in steel (clibanari), seemed almost invulnerable. But struck by the surprising blows of those murderous weapons, many tumbled from their saddles and were trampled under the hooves of the horses. After a terrible slaughter the assailants were victorious. (Paneg. X, 24).

Immediately Milan, the Cisalpine capital, opened its gates to the conqueror, who made his entry amid the jubilation of government and people. Girls and women dared to show themselves on the streets again, without fear of being abducted and dishonored by Maxentius' satellites. (Pan. IX, 7). But the support of the liberated citizens could not detain the general for too long. He soon advanced and first occupied the principal fortresses in the Po Valley, both to use them as bases for the conquest of Central and Southern Italy and not to be cut off from a possible retreat. (Compare Napoleon's conquest of the fortress quadrangle: Mantua-Peschiera-Verona-Legnago on his Italian campaign of 1797, although it was against Austria at that time). Thus successively Modena (Mutina), Aquileia and after a long siege also Verona in his hands. The garrison, which had defended itself bravely, was spared after surrendering. Maxentius' other troops also fought excellently. But they lacked all strategic leadership.

For the tyrant himself, out of cowardice, remained in Rome, instead of advancing at the head of his army. But there the mood of the half-starved population became increasingly unfavorable to him, so that they almost broke into revolt. In order to calm them, he had the entrails of sacrificial animals consulted and the Sibylline books read, in order to investigate the future. 33) When it was predicted to him in an ambiguous way that he who worked on the downfall of the empire would die a miserable death, he interpreted this, in superstitious hope, in his favor to Constantine 33).

Thus he finally took courage, when his enemy had already advanced close to Rome; and although he had just fled, tormented by fearful dreams and fear of attacks, with his wife and child from his palace to a secret dwelling, he now "emerged from his shameful hiding-place." (Pan. IX, 16) At last, after so many years of inaction and inaction, he placed himself, in the utmost danger, at the head of his faithful praetorians. But instead of remaining within Rome and making sorties from the high-lying hill-town against the besiegers, he suddenly ventured all his troops outside. But how did this "slave in purple" draw up his battle line? Along the northern bank of the Tiber, so that he was wedged between the enemy in front of him and the river at his back. Only a narrow bridge, the Pont Mulvia, remained to him in case of retreat. Thus the first massive attack of Constantine, with his wild barbarians and provincials, clad in beast skins, was bound to prove disastrous. Whatever was not pierced, cut down or killed, and could not flee over the narrow bridge, drowned in the swiftly flowing water. The usurper himself, to avoid a shameful death in captivity, threw himself, steel-armoured, horse and all, into the Tiber. Because of his weight he sank to the bottom in the same place: "the water refused to defile itself with his corpse", so that it could be fished up quickly.

His head was hoisted over the walls on a spear, and shown to the Romans, to convince them of his death. Only then did the liberated citizens dare to give themselves over to exuberant joy, and brought Constantine, amidst festive jubilation, in triumph into the city. Here, in the palace, the emperor exterminated the family of the "tyrant", that is, his unfortunate widow and little son Romulus, as well as all his followers. Among these were also the praetorians, who had caused his elevation, and so this guard was abolished forever.

The senate, suppressed by Maxentius, was nevertheless restored, and the families of the senators, many of whom had previously joined the usurper out of fear, were wisely allowed to live by the emperor. False accusers or delators who attempted to slander even the most distant relations of Maxentius, were, however, threatened with the death penalty according to the edict of 18 January 313 (Cod. Th. 10, 10, 1). This therefore meant:

general amnesty. In this way Constantine acquired popularity with the people and

senators.

In the first flush of liberation joy, the city government began to erect a triumphal arch for Constantine. But when this festive excitement was over, it turned out that people had idealized Constantine as a savior.

In the meantime, the emperor had issued a general census for the capital to cover the war expenses (1 December 312). When many nobles had been overtaxed, he instead increased the tax burden on the lower citizens. Only those among them who could prove that the extra tax was too heavy for them did not have to pay more than they had taken on according to the first census (Cod. Th. 13, 10, 1.).

Moreover, the newly appointed senate was given only an honourable appearance of authority. The seat of government was not moved to Rome either. On the contrary, as soon as he could, even before the triumphal arch that had been started was completed 34), the emperor travelled to Milan, and temporarily occupied the old palace of Maximianus there, without however choosing a permanent residence, (end of January 313).

Moreover, he had arranged a meeting with Licinius there. This, though Constantine's ally, had not helped him in the struggle with Maxentius, probably because he hoped that both opponents, his rivals, would weaken, if not destroy, each other. In this he had been deceived by Constantine's unexpected victories. He now saw that he had to keep his powerful colleague in the West on friendly terms, especially for his threatened war in the East with Maximinus Daja. No wonder then that Constantine could easily persuade the rough, uneducated Licinius, completely stranger to religious matters, to join Galerius to extend the tolerance edict of 311 in a favourable way for the Christians.

This edict had the drawback that it only meant toleration of the Christians, but not constitutional equality. (So for example no access to state positions that Diocletian had taken away from them). Furthermore, a burning question had remained untouched, namely the return or not of the secularised church property. This was of course the wish of the clergy; but many pieces of land where former church buildings stood or had stood had been either sold or given away to favourites by proconsuls or prefects. The issue was now resolved as follows:

- 1) No one was to be hindered in his religion;
- 2) Followers of all religions had access to state positions and the same civil rights;
- 3) The Christians received former church property back;
- 4) The affected new pagan owners of it could receive compensation for it from the state through the mediation of the governors.

These decrees the emperors combined into the erroneously called "edict" of Milan, because it is not an edict, but only a rescript, i.e. a circular letter to governors and prefects, but which (like an edict) had to be posted publicly. This latter explains the mistake of Eusebius, who on the grounds of its publicity considers it to be an edict, although the form itself in which he transmits it shows that it is a rescript. (Euseb. Hist. Eccles. X, 5; also in slightly different wording in Lactantius. De Mort. XXXVIII; see further note 35).

A second purpose of their meeting was the solemn marriage between the 60-year-old Licinius and the barely 16-year-old stepsister of Constantine, Constantia, a marriage without love, purely for reasons of state. At this wedding feast both emperors also invited the old, still living Diocles. Undoubtedly, death threatened him there. But he saw through the trap of the two so philanthropic Christian friends, and excused himself because of his advanced age (68 years). Then Constantine and Licinius showed their true nature, and sent the wretched old man threatening letters that he had formerly kept company with Maxentius, and now still with Maximinus. If only Diocletian could have trusted the latter, the tormentor of his wife and daughter! But he found himself betrayed and abandoned, not only by his immediate circle, but also by all those who owed their elevation to him, such as Licinius.

Tired of life, and fearing otherwise to fall into the hands of his enemies, he took poison, (Epitome de Caesaribus, 39) or let himself be starved to death (Lact., de Mort LII) 36). After the meeting in Milan, Constantine probably accompanied the newlyweds for a while to the East; at least on 16 February we find him at Sirmium in Lower Pannonia. Here, while his sister and brother-in-law were travelling on, he announced an imperial decree (Cod. Theod. 7, 21, 1) and thus indicated that he considered these Western Illyrian provinces (Noricum, Upper and Lower Pannonia and Dalmatia) to be part of his empire. He could do this because no definite border had been established in Milan between the territory of the Eastern and Western emperors, any more than it had once been between Diocletian and Max. Herculus. But Licinius could just as well consider Western Illyria as his territory, and so this irregular

situation soon became the cause of a dispute between the two. But now Licinius was engaged in a struggle with Maximinus Daja, and could not pay attention to Western Illyria (= the diocese "Pannonia").

From Sirmium Constantine marched back via Northern Italy to Gaul, where he reached Trier at the beginning of August 313. The inhabitants of that region were astonished at the tremendous speed with which he had conquered Italy in less than a year, so that he now entered their midst again, to protect them against the Germans. These, the Franks, had invaded Lower Germany, and the emperor had soon defeated them and driven them back. (end of October 313) (Paneg. IX, 21).

Meanwhile, in the far East, already a few months after Maxentius' fall, his former ally Maximus Daja was threatened with the same fate. To prevent this, he took an offensive course, crossed the Bosphorus, took Byzantium, but suffered defeat at Adrianople by Licinius (30 April 313), after a failed attempt to bribe his army, and treachery by his own troops. Having crossed over to Asia Minor, he withdrew behind the Tauric mountains, hoping to recruit new soldiers in Egypt. But on the way he died at Tarsus, either by suicide or by an accidental death, which spared him from the sentence that threatened him. On his deathbed, in terrible pain, he is said to have implored Christ for forgiveness (Lact. de Mort. and Euseb. Vita Const.).

Thus it seemed to the Christians of that time, like Lactantius, that their God had held a strict judgment and over all the persecutors of his church. Galerius, the real instigator, had been taken away by a horrible disease; Diocles, Maxentius, and possibly also Maximinus Daja by suicide. And even the avenging, all too cruel God visited the sins of the persecutors (according to Lactantius) in their innocent wives and children. For Licinius, inaugurated as Daja's successor in Nicomedia, immediately showed an inhumanity equal to this, by mercilessly murdering his two minor children, as well as Candidianus, a now 20-year-old foreson of his late benefactor Galerius.

37) Moreover, he also signed the death warrant of the banished princesses Valeria and Prisca, 38) who, hardly breathing a sigh of relief after the death of their persecutor Maximinus Daja, were painfully surprised by the rumour of this. They decided to flee from Syria, in simple clothes, disguised as women of the people, and thus wandered through the provinces. But being recognized at Thessalonica, they were beheaded before the compassionate eyes of the powerless crowd. (313)

TOWARDS SOLE POWER.

Constantine, who himself strove for sole power, watched with concern the rapid growth of power of his co-emperor. He had remained neutral in the war with Maximinus Daja, as Licinius had at the time in his war with Maxentius, and had hoped (as did he at the time) that both his rivals would weaken each other, after which he himself could find his advantage through armed mediation. But now Licinius emerged from the battle strengthened as his equal, as emperor over the entire East.

Moreover, he probably could not approve of all Licinius' atrocities, although no less cruel himself. The completely innocent and harmless Prisca and Valeria had been murdered for no reason at all. As a result, Licinius made the new regime unpopular with the population. The Christians, barely awake from the frenzy of joy at the fall of their enemy Daja, soon feared for their own safety in the face of this new bloody terror. The uncertain border between the territories of the two emperors also caused the estrangement. 39) For L. believed, just as Constantine, that he could lay claim to Western Illyria, and accused his colleague of having wrested these provinces from him (Zos. lib. II, 18).

A cause for the fight, which both ambitious generals equally desired, soon presented itself.

Licinius attempted to take advantage of Constantine's stay in distant Trier (autumn 313 to autumn 314) by intriguing against him in Italy. He sent his confidant Senicio to the West, to incite his brother Bassianus, married to Anastasia, a sister of Constantine, against him. Constantine had appointed her as caesar and governor of Italy, but with far too little power for his liking. He eagerly accepted the secret proposal of his brother Senicio, and began to arm himself treacherously against Constantine.

But the latter discovered the cunning intrigue, had Bassianus killed, and demanded the extradition of the fugitive Senicio. Licinius refused and even had the statues of his fellow Augustus torn down in the uncertain border area of Pannonia, in the city of Emona, not far from Venice, as a sign that he considered this country as his own. (Anon. Vales. cap. V).

The Western emperor now decided to act harshly and decisively. From the North (he was staying at Trier) he advanced into the Danubearea (Lower Pannonia) and there, with only 20,000 infantry and cavalry, defeated the almost twice as strong army of his

134360 enemy at Cibalae (Vinkovcze). Then he occupied the neighbouring fortress of Sirmium (Mitrovitza), where the wife, the newborn son and the treasury of the fugitive Licinius fell into his hands. He then pursued him into the plain of Thrace, where, after having refused negotiations, Licinius had meanwhile appointed Valens his frontier commander until August 40), without informing Constantine. When he therefore
134365 sent delegates once more to the victor, the latter first demanded that Valens be deprived of his rank, and Senicio be extradited. In order to save himself, Licinius agreed to this, had his general Valens killed, 41) and extradited Senicio as "the instigator of all evil," 42) after which the same thing happened to him. – Moreover, Licinius had to cede all his European territory, except Thrace, to his brother-in-law, (peace of October 314). That Constantine did not destroy him immediately in the
134370 first war, which he certainly would have been capable of, probably owed his victory to the intercession of his wife Constantia.

After that the emperors apparently became reconciled; for the following year they even had themselves appointed consuls. Then, after mutual consultation, on 17 March 317, they elevated their sons to caesars. 42a). Thus in the West Crispus, legitimate bastard of Constantine, born to him from the concubine Minervina, and his half-brother Constantinus, son of Fausta, and only newborn, – were elevated to that rank; and in the East Licinius the younger (Licinianus), barely 20 months old.

134375 Officially both emperors remained equal in prestige, but the power of the Western empire far outweighed that of the East. Licinius, bitter behind the mask of reconciliation, was seeking revenge, and Constantine's lust for power was far from satisfied. It was clear that the Roman Empire could not tolerate both of them as rulers at the same time.

The Eastern emperor played into the hands of the Western emperor, which was fatal for him. Although it had been to his advantage, the steadily growing Christians, especially numerous in his now remaining Eastern provinces, he persecuted his rival
134385 out of spite.

His first and worst grievance was with the priests, who from the pulpit glorified Constantine far above him as the true warrior of God. They also prayed for him in their churches, but he felt that this official prayer was not heartfelt, and overestimated in his suspicious imagination their secret aversion. Furthermore, he too, like earlier emperors, became afraid of their semi-political organization, which he regarded as an element of unrest in his empire. Yet, with a somewhat more correct view of their doctrine of reverence for the government, he could have assured himself
134390 of their support and loyalty. Instead, he tactlessly incited their hatred.

First of all, he forbade the bishops to visit each other and to hold church councils. These councils had long since degenerated into dangerous furnaces of mutual strife, indeed of discontented stirring against the authority of pagan emperors.

His further measures are reminiscent of Diocletian. For example, in order to be able
134400 to rely better on the army, he made sacrifices for it compulsory 43). Those who did not comply with this, that is, first of all the Christians, were expelled. He also expelled all Christians from his own court 44), banished them to wild, inhospitable regions, or reduced them to the status of slaves, to serve others, while he took their goods to himself. But this last, greedy act brought him double advantage.

134405 For by this he at the same time limited the number of courtiers and eunuchs, according to him "the mice and cockroaches of his palace" 45).

But he also behaved extremely greedy and cruelly towards other rich subjects. He condemned many without guilt, only to arbitrarily confiscate their goods 46). Even those who had been dead for a long time, he included on the list of the sentenced for that purpose, and then deprived their heirs of their lawful possessions. He indulged his base passions with the wives of his banished and totally ruined victims, or handed them over to his slaves for that purpose. Yet this old voluptuary plagued the Christians with the hypocritical command that men and women, supposedly for the sake of morality, should hold religious services separately. Women were only allowed to
134415 confess and learn catechism with their own sex. Bishops who resisted this were killed, or sent as forced laborers in the mines, and their churches demolished or closed 47). Yes, he even had the death by crucifixion, which Constantine had abolished to spare Christian feeling, used again as a preference against his victims.

Thus he appeared to be a revived Galerius, and revealed himself more and more as an intolerant superstitious pagan, 48) who surrounded himself with Egyptian soothsayers and seers of birds, and even consulted entrails sacrifices again.

For this reason he also fell in esteem among the enlightened pagans, freed from superstition, such as men of letters, sophists, jurists, yes, among all intellectuals, and he hated them in return. This military savage, out of total
134420 ignorance of literature and science, called it a "public plague", 45) especially the

business of judges and lawyers. He considered them nothing but useless talkers, which he was somewhat right about in this time of empty rhetoric and wordiness. Moreover, he considered all orderly legal conditions in his empire superfluous, since everything had to bow to his arbitrariness, with which he robbed his subjects of women or fortunes at will.

His greed had a good result; he was a frugal financier, and did not waste the resources of the treasury unnecessarily. Also, due to the many confiscations at the expense of rich city dwellers, high taxes were not necessary, so that the poorer people did well under him. He especially privileged his former classmates, the country squires and farmers, both out of a sense of solidarity and because he understood that the prosperity of his provinces depended on good agriculture and cattle breeding. But he could not trust the Christian majority of this Eastern population. His army, although it now consisted entirely of pagans, was no longer as resilient as it had been before, since the best part, the Illyrian legions, had been captured by Constantine at the time, together with the dioceses of Pannonia (=Illyricum) and Moesia (314). This also became apparent in the coming war with Constantine.

Constantine had long been looking for an opportunity to do so, and finally found it in a pretended invasion of Thrace by the Goths, which, if we may believe Jornandes XXI, 49) had been bought and paid for by Constantine as a clever comedy. He now entered Thrace, Licinius' territory, and supposedly defeated the Goths, but secretly had the captured "prisoners" recruited for his army. When Licinius rightly complained about the violation of his territory, war broke out (summer 324). This second, treacherous war against his co-emperor, had even more than all his previous campaigns, the appearance of a religious war, indeed a crusade. Always on the offensive, he marched against his colleague with his newly reinforced army of 100,000 men, under the banners of the sign of Christ. The latter, unprepared, quickly concentrated his much more numerous troops in Thrace, and encouraged them by their ancestral nobility and images of gods and favorable oracles, and attempted to prevent his enemy from crossing the Ebrus (Maritza). This seemed to succeed, for for a time both armies lay idle along the banks opposite each other. Then Constantine devised a stratagem. He diverted Licinius' attention by collecting felled tree trunks at a very narrow part of the river, in order to make him think that he wanted to build a bridge there. Of course his opponent on the other side did the same. But suddenly, at a completely different place, where the river was fordable, he sprang through the water on horseback with a dozen horsemen, rushed by surprise upon the enemy, who happened to be exposed there, and inflicted a great slaughter among his foot soldiers. Meanwhile his rest of the cavalry and infantry had followed his impetuous example, and also rushed across the stream to the other bank. Thus the battle developed in the plain of Adrianople, where Constantine, with terror as his ally, won (July 3) 50) and soon 34,000 dead, mostly of the enemy, covered the field. Then he rushed after Licinius, who fled to Byzantium, and himself laid siege to the city.

For this purpose he also had his fleet of 200 warships sail from the Piraeus to the North. Commander was his eldest son, the crown prince Crispus.

Let us briefly examine his past. His year of birth is uncertain, but probably 306 (according to Seeck: 307) 49). Constantine had fathered him with a concubine Minervina, since in such a wandering soldier's life illicit intercourse with women from the army, sutlers or slaves, was the rule. This bastard was now later married, and from an early age drilled in his father's trade, military service. In 317, on 1 March, he was appointed Caesar, together with his half-brother Constantinus (then newly born) and Licinianus, the son of Licinius and Constantia, who was barely 20 months old. Possibly from this year or even earlier (at the earliest 314) he received as his tutor the Christian orator Lactantius, who had then just travelled to the West, probably to the cultural centre of Trier in Gaul, since the emperor also stayed there in 314 (January-October) and 316 (January-February). But this intellectual development was only incidental compared to the military training he had to go through. Already in 320, at the age of fourteen, he defeated the Franks and Alemanni on a campaign. We read a high-sounding eulogy of his military talents in a festive speech of 321, 1 March in honour of the quinquennalia (beginning of the fifth year) of the so-called "reigns" of the two Western Caesars. 50a). On that occasion, after his exploits on the Rhine, the prince had been summoned to his father's palace at Sirmium (Pannonia), and already then, on his march there, he showed the same indefatigable speed and hardiness as his father. In this year Constantine also appointed him, like his brother Constantinus Jr., as consul, and married Crispus to a

certain Helena, by whom she had a child the following year (322, 30 October). 50b). However, the consulship of the two princes was not recognised in Licinius' part of the empire, nor were the Western consulships of the following years. This proves the increasing enmity of the two supreme rulers, and at the same time the impossibility that Crispus' wife Helena could have been a daughter of Licinius 51).

After having shown his military prowess on land against the barbarians, Crispus soon had to prove his talent at sea, as admiral, in the second war against Licinius. By chance the south-west wind was favourable to him, so that he could sail against the current, which runs in the Hellespont from NE to SW, into the narrow funnel of that strait. At its mouth, before the entrance to the Propontis, the much more numerous naval force of the enemy awaited him, about 350 galleys, mostly manned by Greeks from Asia Minor, Phoenicians and Egyptians, under the command of Amandus or Abantos, probably neither a Greek nor a Roman. All these hastily pressed Orientals fought not for their own cause, and, being naturally unwarlike, were no match for Crispus' fleet, manned with Illyrians, Greeks, and Spaniards. The latter had, however, another advantage. This was shown by his sudden attack, when he plunged with his small, swift ships into the midst of the heavy, clumsily built galleys of the enemy, (compare the English-Dutch fleet against the Spanish in 1588). Their awkward mobility prevented them from manoeuvring quickly enough in that narrow space, but they pressed close together and crushed each other under the pressure, so that Crispus was able to board quite a few, destroy their crews, and sink others. When night ended the fight, Abantos, who had at first despised the much smaller fleet of his opponent, was scarcely able to bring the sorry remnant of his naval force into the Asia Minor port of Ajax, while Crispus lowered the sails for Eleous (in Thrace). On the second day a strong north wind arose, which enabled Abantos to sail from his harbour to the SE, to meet the enemy, who was thus stopped. However, he hesitated to sail quickly, and thus let the right moment for the attack pass unutilized. As soon as both fleets had approached each other, the wind turned completely to southwest, drove Abantos back, and gave Crispus the opportunity for a new attack, in which he sank many of the other's ships into the ground. Moreover, a strong storm that arose as an ally threw most of A's remaining ships to pieces against the rocks of Asia Minor.

Only 4 of the 350 ships he managed to save with him in a hasty flight to Chalcedon. In the meantime, Licinius' position in the besieged Byzantium became more and more dangerous. Constantine had built ramparts here and there around the walls of the city, of the same height, on which he erected wooden towers, which with their slings and artillery harassed the soldiers within. In some places he had neglected the construction of these ramparts, and there battered the stone walls of the city with battering rams. Longer defence was impossible, especially now that it was to be surrounded from the sea. Therefore Licinius resolved to flee with the war-chest to Chalcedon in Asia Minor, where he hoped to raise fresh troops. For he had brought only a small part of his force to safety in crossing the Propontis. His second in command, Martinian, he declared Caesar, and sent him to Lampsacus on the right bank of the Hellespont in the SW, while he himself attempted to guard the bank of the Bosphorus. But he could not prevent Constantine from landing 2 miles south of Chalcedon with a great superior force, and was so decisively and murderously defeated that of his 70,000 troops only 30,000 remained. 52)

Now it became apparent how imprudent he had acted in dividing his army in two, for he himself had already been defeated when Martinianus came to his aid from Lampsacus, who had also suffered defeat against C. After this, the hopelessly besieged and starving Byzantium surrendered, and Chalcedon also opened its gates to the emperor. Closely followed by Constantine, Licinius fled with his wife and child and his much-depleted army to the court city of Nicomedia. Here, after a short siege, he had his wife Constantia request negotiations. She received from her half-brother Constantine the assurance under oath that her husband's life would be spared and her son would retain the office of Caesar, whereupon the old conqueror came forward and laid the imperial purple at the feet of the conqueror (autumn 324). Martinianus was taken prisoner to Cappadocia; Licinius with wife and child was sent to Thessalonica, to live there in safety as a private individual. But the following year he was unexpectedly deceived from his home, and before his wife could intercede for him, he was strangled in violation of the oath. (Zos. II, 28). The motivation for this act was the allegation that Constantine's old soldiers demanded the death of their former, still dangerous enemy, and that he, cunning as he was, had conspired with his own discharged soldiers, and even with Goths from across the Danube, to become emperor again. The truth was that Constantine would rather prevent such a usurpation of the purple, as his father-in-law the ex-emperor Maximianus had once attempted, a

second time. For this purpose no breach of oath could harm him.

This was now after Maxentius and Bassianus, already the third brother-in-law, who killed this good Christian protector. When would his own, even closer blood relatives come to the executioner's turn?

CRISPUS AND FAUSTA.

At the same time, a rift also appeared to have developed between the emperor and his eldest son Crispus. The latter had not been reappointed to the government of Gaul at that time, but, although he remained Caesar, was held virtually captive at his father's court.

This was all the more painful, since Crispus had already been elected to the honorary office of consul before the war with Licinius, at the beginning of 324.

What was the cause of his disfavour?

First of all, his father became jealous of the great popular favour that was accorded to his eighteen-year-old son, young and charming, rather than to himself, the fifty-year-old emperor, after their mutual victory over Licinius. The prince, who had been among them since he was a child, was also extremely popular with the soldiers.

Perhaps he prided himself too much on this, which aroused Constantine's distrust. Moreover, in all absolutist states there is a natural opposition between the prince and the heir to the throne, who often would like to rule differently from his father, according to the ideas of a younger generation, and is therefore feared by him as a dangerous rival.

Finally, Crispus may have disapproved, to the greater suspicion of his father, of the perjured murder of Licinius, and also of the fact that his son Licinianus, in violation of the treaty of 324, remained deposed as Caesar, and was replaced by Constantius, the second son of Constantine (8 November 324) 53a).

But the real author of his disgrace was his stepmother Fausta.

Was indeed, as Zosimus and Zonaras 53b) assert, revenge for a disappointed passion her motive, and did she play the part of a Phaedra towards Crispus, although he was married?

Or was it ambition to secure the right to the throne for her own three children at the expense of her stepson, who stood in their way?

Both qualities, both unbridled debauchery and ambition, were hereditary in the family of the Hercules from which she descended. Her father Maximianus even abused the bodies of hostages who had been thrown into prison for debt, and from her brother Maxentius, during tyranny, no Roman lady of standing was safe. In addition, both had a burning, but brutally clumsy ambition. The old Maximianus Herculeus had only laid down the purple at the command of Diocletianus, but then proclaimed himself emperor twice more, each time without success.

That same furnace of ambition and forbidden passions now smouldered in his daughter Fausta. Possibly, in her incitement against Crispus, both passions were at play. Not that she did not feel love for her lawful husband, Constantine, for she had once, fourteen years ago, saved his life, at the sacrifice of her own father.

But he was so much older than she, and now his handsome, brave son Crispus, as he returned from the war, an eighteen-year-old victor, seemed exactly the rejuvenated image of his father. And she was barely thirty, and often felt neglected by her husband for matters of state. No wonder then that with her fiery temperament she soon flared up in fierce passion for her young stepson.

But at first she anxiously tried to conceal this forbidden urge, if possible to smother it. There was no better way to do this than to suggest to herself a hatred of Crispus by ambitious motherly care for her own sons.

At first she succeeded in bringing him under vague suspicion to the emperor as a danger to state, without yet accusing him of a specific act. Soon, ecclesiastical disputes also came to aggravate the discord between father and son. Before the Synod of Nicaea began, the emperor, through the efforts of his court preacher Hosius, had immediately become a favorite of Fausta, and had already been won over to the orthodox party. And the empress naturally competed with her husband in fierce

Catholic sentiment. A Christian sense of sin because of her own concealed but not yet quenched passion drove her to ever stricter devotion. But no faithful churchgoing, no self-mortification during the great Lent before Easter – then often customary among Christians – could kill the devil in her.

Meanwhile, Crispus, as a young officer, probably had little interest in theological debates, and despised all that ostentatiously pious fuss of emperor and court. 53c)

When, after the end of the synod (beginning of August 325), Constantine, on the advice of Hosius, banished Arius and three others, and persecuted the remaining Arians, Crispus probably disapproved of this intolerant policy.

This must also have caused dissatisfaction at the emperor's court in Nicomedia, as well as among the officers and officials, and many only waited for a favourable opportunity to openly display their secret Arian 53c) or even pagan disposition. The pagans from this opposition party belonged largely to the former military and civil servants of Licinius who had mostly gone over to Constantine's service; the Arian-minded christians were not so much followers of Arius, as of the clerical tyranny of the homo-ousians.

Who now gathered around all these dissatisfied elements? Not around one of Constantine's stepbrothers, for they were too insignificant for that. Nor around Licinius' widow Constantia, for although she was Arian-minded 54c) and could blame Constantine for the perjured murder of her husband, she was still too meek to think of revenge. She also knew that her brother, despite everything, loved and honored her personally, and had even invited her to come to his court, which she had possibly accepted for the future of her son. Moreover, she had never been happily married to Licinius, forty years her senior, to whom she had been married for reasons of state, and this probably made her resign herself to his violent death. She also patiently endured the unlawful deprivation of her son Licinianus, for whom she had still negotiated the Caesarate in October 324, finding solace in her faith and unaware of what was soon to come for her boy.

To whom should the dissatisfied turn for support? Probably to Crispus, who may have been neutral in religious matters, but who could ill tolerate his enforced unemployment and the shameful surveillance at his father's court. Arians and pagans may have written him compromising letters for help and advocacy. Or perhaps a conspiracy of both parties imprudently wanted to proclaim him and the young Licinianus as emperor.

But undoubtedly Crispus' attitude towards his father was loyal, since the latter himself, much later, openly acknowledged his son's innocence. But in this time of tense church disputes it was easy for Fausta to accuse her stepson to the already so suspicious emperor as if he were heretical-minded and with the help of those malcontents was striving for the throne. She also pointed out to him the future threat of Licinianus, who might one day avenge his father's death.

The emperor blindly believed her, who had once saved his life, without listening to the admonitions of his mother Helena, who pleaded for her grandson what she could. His first act was to issue an edict on the 17th of September 325 against this alleged conspiracy of his son. (Cod. Th. IX, 1,4). Without mentioning the name of Crispus here, he encourages each of his judges, nobles and courtiers to tell the emperor openly what they might know about him, "who had hitherto deceived him with feigned honesty." And of course there was no lack of delators, who hoped to gain the emperor's favor by slandering his son to him even worse than ever.

But his father still hesitated to respond to these vague, most unprovable accusations. For the time being he limited himself to dismissing, as a precaution, the greater part of the troops who had fought under him and Crispus against Licinius, and with whom the prince was very popular. 55) But in order to oblige them at the same time, he showered them with rich gifts at their departure (spring 326). It was precisely the twentieth year of the emperor's reign, and after celebrating his jubilee at Nicomedia at the beginning of it (25 July 325), he was to repeat his Vicennalia at Rome, the old capital, at the end of this year (i.e. in 326).

For this purpose the emperor and his entire court set out on a journey overland from Byzantium to Italy in the spring of 326 (beginning of March). In this procession of dignitaries and lackeys both Crispus and Licinianus were led away captive under ever stricter guard.

But on the way Fausta, who followed her husband everywhere, suddenly felt pity for her innocently tormented stepson, and this reawakened her old passion. First she persuaded Constantine to allow his son more freedom of movement, since she no longer feared him, and so he was no longer so strictly guarded. Then she managed to lure her stepson into her tent, and in a secret, passionate conversation begged him to flee with her, and once in full freedom, to share the rule of the empire with her.

He refused this shameful offer in terror, and thus aroused her wrath. While they were still quarrelling, Constantine suddenly came upon their meeting, and asked with fierce suspicion the cause. In revenge, Fausta, like another Phaedra, now accused her stepson to the emperor of an attempt at adultery and abduction, and of plotting against his authority.

In vain did Crispus plead his innocence; in vain did the eleven-year-old Licinianus testify in his favor. The emperor believed the woman he loved more than any other, had them both, bound, hidden in his tent, and resolved to kill them, without a judicial hearing.

134690 When the darkness of that day ended, the emperor, in the depths of the night, one of his most trusted officers, to lead Crispus and Licinianus out of the camp, and secretly, in the nearby mountains of Istria, to poison them. And so it happened: near Pola both unfortunate princes died, in the prime of their years.

134695 The next morning the whole court journeyed on again, over the eastern edge of the Alps that surrounds Italy, to Aquileia, and it was only slowly that the courtiers learned something of Crispus' death. 56)

134700 The emperor, however, betrayed himself by issuing some strict laws against fornication and everything connected with it in Aquileia, where he had been staying for a long time, still filled with anger at the supposed deceit of his son.

134705 They served at once as a supplement to the already existing Lex Julia de stupro, but were not, like this, inspired by justice, but by a cruel, implacable spite. First, on 1 April 326, he published a law against the abduction of girls and women, which has only been preserved in fragments. 57)

134710 If this happened against her will, only the abductor was punished by pouring molten lead down his throat. However, if she had approved, the abductor was punished just as severely, but the girl was deprived of her inheritance rights. Accomplices shared in the punishment of the abductor, but if the parents had consented to the abduction, they were banished. (Cod. Th. IX, 24, 1).

134715 Three days later, the continuation of this law was proclaimed, in which underage girls were protected from sexual abuse by their guardians. (Cod. Th. IX, 8, 1). Presumably at the same time, he proclaimed another law to protect chaste women from false accusations. No man was allowed to accuse a woman who was not his wife of adultery, only her male relatives (full brothers, half-brothers or first cousins) and her own husband had the right to do so. This is clearly inspired by the case of Crispus, whose counter-accusation against Fausta was not believed by the emperor, since she had no male relatives who could accuse her and her own husband also considered her innocent. (Cod. Th. IX, 7,2).

134720 Shortly afterwards followed two other edicts, one of 29 May 326, against free-born women who throw themselves away to their slaves, and were threatened with the death penalty, 58) and another edict that forbade married men to have concubines in their homes, ("penes se habere"), which, however, did not abolish concubinage (14 June 326) 59).

134725 After a long stay in Northern Italy, the emperor traveled to Rome in the summer of this year, where he made his entry on July 18, cheered by the people and senators, and soon moved into the high palace of Nero.

134730 But although he now believed himself safe from Crispus, who had never done him any wrong, he was not safe from his own conscience, which tortured him more and more fiercely. And it did not stop there. Although Constantine had ordered his henchmen to maintain the strictest silence, and had let the rumour spread that Crispus and Licinianus had died of a sudden illness, the secret leaked out to the court. But this gossip around him did not bother the emperor. He stubbornly concealed from those around him the remorse that wounded him, and always showed them the same, stern, stern face.

134735 Only his mother Helena, from whom he had always concealed his sentence on Crispus, and who now knew everything, was able to open his soul. Love and pity for her grandson, whose innocence she had previously pleaded, gave her the courage to speak openly.

134740 But in that love mixed her old resentment against the proud prince's daughter Fausta, who for years had humiliated her, the emperor's mother, because of her low birth, and barely tolerated her at the palace. Her self-awareness rebelled against this: she wanted to regain her influence over her son, extorted from her by Fausta, and for two such ambitious women as she both were at the same time no place at this court. Thus she pointed out to Constantine Fausta's own ambition, and passionate, even hysterical nature, and assured him that she had slandered Crispus. Perhaps she herself had striven to dethrone the emperor with the help of her stepson, and to rule herself. Thus now, besides remorse, fear for her own honor and safety haunted the suspicious mind of the monarch. But he still hesitated to consider his wife an impostor without further proof.

134750 Until one day Fausta was caught in the arms of a contemptible messenger of the emperor. 60) This convincing example of her lecherous nature brought the deceived woman to a decision. He sentenced her, the mother of his three remaining sons, and once the savior of his own life, to death. He ordered his eunuchs to immerse her in a boiling bath, where she died of suffocation. 61)

134755 This was done in the deepest secrecy, in the quietest rooms of the palace at Rome, probably in the summer of the same year in which he had seen Crispus had murdered.

62)

But this new atrocity, the death of Fausta, whom he had sacrificed as a disguised pagan to atone for the shadow of Crispus, did not still the remorse that continued to torture him as the murderer of his own son. There was nothing left for him but to stifle the torment of his evil conscience in a frenzy of new, restless deeds. So he had to leave Rome, leave the old palace of Nero, where the walls whispered to him of his own equally cruel deeds, leave and return to the East.

THE LAST YEARS OF CONSTANTINE'S REIGN.

Constantine, after all his travelling and wandering, needed a new and permanent capital. The Asian splendour of his court could not take root in Rome. The western half of the empire was also not nearly as valuable as the eastern one: so he had to reside there, just like Diocletian.

But not in Nicomedia, the seat of the former persecutor of Christians, where everything, just like in Rome, was still too reminiscent of paganism.

So he decided to first found a city between Alexandria Troas and the old Ilion, on the Aegean Sea 63). According to an old oracle, the Romans, who had come from here after the fall of Troy, would return here one day. The Christian court party was against this pagan tradition, but Constantine himself went there and started building walls, which could still be seen from the sea in the fifth century 63). At night, however, he beheld, as he often did, the God of the Christians, who commanded him to abandon this building and choose another place 64).

He obeyed, and now chose Byzantium, which had proved to him a strong, strategic position in the last war with Licinius.

It lay on a headland between the Propontis (Sea of Marmara) and the Keras (or Golden Horn), a narrow inlet in the form of a river mouth, so that it was easy to defend from the land side. It was also impregnable from the sea side, since the two natural access channels to the Propontis, namely the Hellespont and the Bosphorus, could be closed to warships. From this unassailable stronghold he could henceforth better guard the Balkans against Gothic and Sarmatian barbarians in the North, Asia Minor, Syria and Egypt against the Persians on the eastern border.

Moreover, it was favourably situated for the food supply, since all the grain from the Black Sea was shipped along it, while Egypt was not far away. Also by their mild climate the banks of the Bosphorus, luxuriantly planted with vines and olive groves, attracted the emperor to a permanent residence.

Finally, there was another superstitious reason: the terrain included seven hills, just like that of Rome.

History has recognized the choice of this new capital as ingenious. For more than a thousand years Constantinople would successfully defy the attacks of the Goths, Arabs and Bulgarians, even a century of close encirclement by the Turks; and after that the latter, once master of this stronghold, would no longer be driven out of Europe.

In the spring of 328 Constantine began to execute this plan. 66)

West of the old Byzantium, on the second hill, he laid out a spacious, round market place as the center of the new city, the later Forum Constantini. Around this a colonnade rose, which was interrupted at the ends of the square by two stately marble 65) arches opposite each other. The eastern arch was built on the site of an earlier city gate, which had of course been demolished for this purpose. Soon, however, the marble quarries of the neighbouring countries and the art of the available sculptors and architects could not provide him with enough material to adorn his city.

Therefore he proceeded to plunder the temples and public squares of almost all the cities 67).

From far and wide bronze and marble statues of gods were dragged in, not as the Christian Eusebius believed 68), out of hatred for the old paganism, but out of admiration for the high art that it had once produced. In the middle of the forum, which received his name, he placed, on a steep column of purple stone, a huge statue of Apollo, with a halo around its head, which he had had stolen from Phrygia 69). The face of this he had changed, with vandalic bad taste, into his own broad, thick-necked head, so that later it was taken for a statue of Constantine 70).

At the foot of this statue he placed the Palladium or wooden statue of Pallas, which he had secretly stolen from Rome, in order to make the new city impregnable, as he thought.

On the north and south sides of this square, sideways from the colonnades, that is, against the slopes of this hill, he built two so-called temples, to which one could ascend from the surrounding city by a staircase. In one of these he placed a statue of Rhea Kubele, the mother of the gods, stolen from the mountain Dindymos near Kuzikos, where the Argonauts were said to have once erected it. 71) This stolen

statue he deliberately spoiled, to the great annoyance of the pagans, 71) by removing the two lions on either side, which she held, and also by changing the position of her hands so that they were folded together in prayer. Thus he Christianized the whole figure into a woman praying for the salvation of the city she surveyed, and possibly into an image of the "god-bearing" Mary (Maria Theotokos). In the other so-called temple he placed the image of the goddess of fortune of Rome, called Tuche or Fortuna. This was not so much a sly concession to his new, pagan fellow citizens as a sign of his own indestructible superstition. He also built, at the foot of the first hill, a large complex of palaces, almost as large as those in Rome. It lay east of the Forum Constantine, and was connected to it by a wide imperial avenue (Via Regia) with two large colonnades, decorated everywhere with statues and marble works. Just in front of the palace, as the starting point of the Via Regia, stretched a wide square, the Augustaeum, so called after his mother, the Augusta Helena, whose statue here adorned a purple pedestal in the middle. 69) Next to the large, copper gate of the imperial residence (Chalke) a senate building was built, which equaled the Curia in Rome.

A secret spiral staircase led from the palace to the imperial tribune of the adjacent racecourse. This circus or Hippodrome, possibly built for him, he completed in all its splendor. For this purpose a so-called temple of Castor and Pollux was erected to the side of one of the colonnades as decoration. Elsewhere in this racecourse he placed, on a golden tripod, a statue of Apollo, both taken from the Delphic temple 71). Right at the entrance, there had already been a public bathhouse, dedicated to Zeuxippos (nickname of Zeus), but now Constantine had it completed and embellished with columns and bronze statues and mosaic work of multi-coloured marble. Once the main buildings were there, he had magnificent villas built, spread throughout the building site, and invited many senatorial families from Rome and decurions from the province to move there 72). Also countless lesser citizens from the nearby cities of Asia Minor and Greece moved in large numbers, attracted by the many privileges that the new imperial city would receive. The whole was enclosed by a long, high wall on the west, which was fifteen stadia or three kilometres longer than the former city wall of old Byzantium 73).

Finally, in 330, the construction of New Rome (Nova Roma), as the emperor called it, or Constantine's City (Konstantinou polis), as his flatterers renamed it, was completed. On 9 May of this year the inauguration or birth festival was celebrated 74).

The day began with trotting races in the hippodrome. While the emperor and people were assembled there, a gilded wooden column, on which was carved the image of Constantine, holding the Tuche of the city, was carried in solemn procession amidst detachments of soldiers in gala uniforms, all carrying long white wax candles, burning dully in the bright day. Before the imperial tribune they stopped, and here the founder solemnly pronounced the secret name of the city, personified in the image of the Goddess of Fortune, and called her Authousa, the Flourishing 74). It was therefore an "unbloody" consecration festival, 74) i.e. without sacrificial animals, and even somewhat Christian in disguise, but nevertheless still pagan in essence and nature.

And Constantine commanded that this birth festival "according to his own divine example" should be repeated every year, until the distant future. And when then the image of Constantine and Tuche was carried in procession into the circus, to the seat of the prince who then reigned, then he had to stand up and kiss the image of the founder and the city with reverence.

Thus from then on, except for a few more journeys in the vicinity, he continued to live here with his entire court. The city of Constantinople was taken from the presidium of Europe (the banks of the Bosphorus), and was given its own praefectus praetorio and other high officials, just like Rome. 74)

It also received the same privileges, for example free distributions of bread, since May 18, 332. 75) The grain of the various provinces, first given to Rome (annona), was henceforth divided equally between both cities, so that Rome henceforth received the grain of Africa and Sicily, Constantinople of Egypt, Pontus and other Eastern countries.

In addition to this privilege was the financial support that impecunious converts could receive from churches and government.

All this attracted even more residents than before to the city. Especially the poor and beggars crowded within its gates, attracted by the "generosity and compassion of its citizens," as Sozomenus (II, 3) claims. But he adds: "so much did it attract everyone to Christianity that most of the Jews, and almost all the pagans who came to live there, were finally won over to this faith." In other words: they were put under

some pressure by charity, even by coercion, because pagan temples were not tolerated here. Thus Constantinople received the outward stamp of a Christian city, "never defiled by idols or altars or pagan sacrifices," except for the temple of Tuche. Yet there remained a tremendous difference between rich and poor. Between the luxurious senatorial castles, the hovels of the urban proletariat were crammed together. For the latter there was soon no more room on the terrain within the city wall, so that one pole houses had to be built in the sea. Also, Constantine's state palaces turned out to have been so hastily thrown together that some of them sank into ruins within a century 76).

Of course, the foundation of this world city and the emperor's never-ending building passion required millions of money. In addition, there was the maintenance of his court and all its expensive splendor, and the unheard-of waste with which he squandered the state's resources on unworthy favorites. As Nicomedia had been in the past – under Diocletian – so now Constantinople became the great leech of the juices and strengths of the provinces: their tribute of money and natural rights. Thus the foundation of this city, although a sign of the short-term revival of the Roman state, also became one of the causes of its approaching downfall.

But danger also threatened from outside, although for the time being it was still small.

In the latter part of his life, the emperor conducted an extremely imprudent policy towards the northern barbarians 77).

Diocletian had wisely stationed the legions as guards in the border regions, but Constantine moved them to the cities.

The motives for this are clear. The city populations, especially those of Rome, Milan, Alexandria and Antioch, were always inclined to revolt because of the high taxes, and had to be kept strictly under control. Furthermore, the former soldier emperor and world conqueror wanted to maintain his personal favour with the troops by granting them rest and luxury after long years of war and deprivation. Moreover, thousands of barbarians had already been taken into the army, and these could not be won over better for the Roman-Hellenistic culture and morals than by stationing them in the main centres of the empire.

Yet this remained a mistake, because in doing so he delivered the cities to the wantonness and debauchery of the soldiers, who were softened by visits to the theatre and other recreation, while he deprived the border of guards. Thus he opened the gate for the barbarians in the North to invade the Roman Empire, which did not happen often under him, but later repeatedly 77).

He also did not fight them himself at the end of his reign, as he had done at the beginning. However, after a victory 79) of his generals over the Goths (327), he had a stone bridge built over the Danube in 328, in case a new punitive expedition against the Goths became necessary. But when one of their tribes, the Taifali 78), with 500 horsemen invaded Thrace at the end of 331, and plundered right up to the outer moat of his capital, the emperor did not go to meet them, but even crossed over to Asia Minor, 80) which looked very much like a flight. The further war – he entrusted to his fifteen-year-old, eldest son Constantinus, who drove out the enemies and defeated them in the territory of the Sarmatians (January 332). This defeat of the Germans greatly weakened their prestige among the Sarmatian (Slavic) tribes, among whom they, less numerous, lived as a dominant warrior caste. Two years later (334) the oppressed rose up and drove one of the Gothic tribes, the Limigantes (later called Argaragantes) into Roman territory 81). A prelude to the approaching migration of the people.

In order to strengthen his dynasty, the emperor, immediately after his conquest of the entire empire, had called his brothers and other relatives to the court and invested them with the highest offices. Thus, of his half-brothers, he appointed the youngest, Dalmatius, the father of Dalmatius and Hanniballianus, as censor, and the eldest, Julius Constantius (father of Gallus and Julianus) as praefectus praetorio of the East 82) (end of 324). The latter remained so until the end of 329, and was then replaced by a new favourite, Flavius Ablabius, who had not been praefectus praetorio of Italy for a year before that time. This Ablabius was, according to his gentile name Flavius, a presumably distant relative of the emperor, which is also proven by the address "parens carissime", with which the emperor addresses him in one of the laws 83). This influential favourite, fiercely Christian, stiffened the emperor in his clerical, anti-pagan policy, and was partly guilty of the judicial murder of Sopator, a pagan sophist, who had been temporarily admitted to the palace 84) (330). Yet, because of his tremendous influence on Constantine, he had many envious people at court, where he often stayed, so that he did not survive Constantine's death for long. In the meantime, however, the emperor had also appointed his third surviving

son, Constans, as caesar at the end of 333 85), after Constantinus II had already become caesar in 317, and Constantius in 324. Dalmatius Jr. was soon to be appointed caesar. In the year 333, a violent plague 85) raged in Syria and Cilicia and probably also on the island of Kupros (Cyprus), so that there were not enough people left to bring in the harvest. Nevertheless, for the food of the imperial city, as much grain as other years, and the little grain was stolen away here. As a result, a great famine 85) and high prices arose: the price of a bushel of grain rose to 400 pieces of silver. 86) Then riots broke out everywhere in the villages of Syria. The inhabitants even attacked many grain warehouses and plundered them. The soldiers soon restored order, but there was no improvement in the lot of the peasants. Only the Christians in the cities were well off: for example, the emperor gave the church of Antioch 36,000 bushels of grain to distribute among its poor and clergy 86). Naturally, this increased the discontent among the pagans, to whom most of the countrymen belonged, — especially since Constantine had shortly before destroyed many of their temples or robbed them of their images (331).

Moreover, in the same year a great earthquake ravaged neighboring Cyprus, where the city of Salamis collapsed into rubble and was almost completely destroyed 86). All these disasters were attributed to the wrath of the gods over the attacks of their enemy Constantine.

A certain Kalokairos, overseer of the imperial camel herd on Cupros, and probably a native of this island, now took advantage of this displeasure to stir up a revolt here and proclaim himself emperor. But Dalmatius Jr. soon landed on the island in the name of the emperor with a small army, captured the presumptuous usurper, and had him burned alive in the market place at Tarsus as a criminal (334) 87).

As a reward for this, Dalmatius Jr., who had previously been consul (333), was appointed Caesar the following year, 88) (335) and temporarily seconded to Mesopotamia as a general, because of a threatened war with Persia 89). At the same time his brother Hanniballianus received the rank of rex or nobilissimus of Cappadocia 89) and Pontus, 88) and was sent to the capital Caesarea of the first province (335).

This was also accompanied by a division of the remaining empire territory among the three sons of Constantine. Constantine II, the eldest, received Britain, Gaul and Spain, Constans the youngest, Italy and Africa and probably also Illyricum (the Balkans except Thrace), while Constantius received the entire East, except the possession of Dalmatius. It is not certain whether Dalmatius received Thrace or Mesopotamia, but in any case he was Caesar and made equal to the sons of Constantine. On the other hand, Hanniballianus became a future vassal of Constantius. Constantine remained supreme emperor and kept a close eye on his sons and nephews by means of the praefecti praetorio which he gave them as advisers, but it proves that he felt his end approaching. Two years later, when the Persian king had just renounced his friendship and he was preparing a war against this empire, he died at Ancyro, a suburb of Nicomedia, after having been baptized an Arian Christian shortly before 90). His body was carried to Constantinople, and from all sides his sons, nephews and brothers rushed to it. Then, encouraged by Constantius, the middle son, a riot arose among the soldiers, in which, among others, the hated praefectus praetorio of the East, Ablabius, 91) and all of Constantine's brothers and nephews were murdered, except the two sons of Constantius, Gallus and Julianus. The first was spared because he was seriously ill, the second, the later pagan emperor, because of his youth 90). Later this bloodbath was motivated by the claim that it happened at the behest of the deceased. Constantine himself, in a will that he gave to Bishop Eusebius of Nicomedia before his death, is said to have expressed the fear that his brothers had poisoned him, and therefore called upon his sons to avenge his death 92).

However this may be, this explains the anger of the soldiers against the supposed murderers of their beloved emperor. Yet this claim was possibly only a fabrication by Constantius, to incite them.

This was how the Christians behaved immediately after the death of the great Constantine. The pagan senate, however, honored this moment more worthily by granting the renouncer of their faith an apotheosis 93).

THE ECONOMIC STATE OF THE EMPIRE. Constantine, a lavish and wasteful man, was in constant need of money. That is why his economic policy was limited to one point: the strict, carefully controlled collection of taxes. The interests of himself and his officials came before the prosperity of his subjects. In addition to taxes and tributes, the imperial treasury had other irregular incomes through the high fines imposed for violations of many laws. The word "fiscus" therefore recurs in almost all

- 135020 his edicts.
But what was the situation like for Constantine, and how did it change?
Let us exclude a few irregular taxes (such as wealth and release taxes) to which the citizens of the city of Rome had also traditionally been subject, while only the others, that is, Italians and provincials, were subject to taxation.
- 135025 This consisted, before Diocletian's reign, of the following tributes:
I. An annual corn delivery, imposed on all landowners for the annual bread supply of the capital (annona urbis), which, according to the purpose for which it served, was also called annona.
II. An extra tax in times of scarcity and want, only introduced by special order of
- 135030 the emperor, and therefore called indictio.
III. Irregular tributes and requisitions in every province where soldiers were stationed, and which concerned all kinds of naturals, e.g. bread, meat, wine, oil, besides beasts of burden and material for the army.
The first tax, the annona, was already made by Diocletian from a land tax, also into
- 135035 a poll tax (capitum), i.e., the new tribute was not only dependent on the land ownership, but also on the number of inhabitants, people and cattle. However, since the small landed estates and the farms of the tenants were relatively more densely populated than the large estates, the small farmers were hit hardest by this regulation.
- 135040 The second tax, the indictio, soon became a regular tribute, which was levied every 5 years under Diocletian.
All these tributes, annonae and indictions, weighed unbearably heavily on the provincials, and because of the constant repetition they hardly gave them any chance to take a breather.
- 135045 Moreover, the tax collectors (susceptores) and officials took much stricter action against tax refusers (exactores) against poorer citizens than against rich and important ones. The former were flogged and tortured even when they owned nothing; the latter, who could have themselves defended by slaves in case of default, were often not dared to do so. As a result, they had the most arrears in debt to the
- 135050 treasury, and not the poorer ones. But Constantine, who largely adopted this oppressive fiscal system of Diocletian, made it even more onerous. 95) From 313 onwards he held the indictions for a period of 15 years instead of every five, but this tax was now of course three times as high, which again helped the emperor to enormous sums of cash. And not yet satisfied with this, he introduced an old,
- 135055 obsolete tax of Septimius Severus 94) on all traders in his empire (314). This so-called "collatio lustralis" or five-yearly contribution was a tribute in gold and silver, hence called chrusarguron by the Greeks. 96) It had to be paid at all accessions and lustra (or five-yearly jubilees) of both the August and the later Caesars. Thus he repeated himself in 315, 317 320, 322, 324, 325, 327, 329, 330 etc.,
- 135060 so on average every two years.
He levied this tax, as the name already expresses, mainly to be able to pay for the expensive celebrations at all those jubilees, and also the five annual gifts to the army, without worrying about the financial capacity of his subjects. But he thereby destroyed trade and industry, the food root of the prosperity of his cities, just as
- 135065 his predecessor had already ruined the farming business, the prosperity of the countryside, by annonae and indictions.
For all tradesmen, from the richest wholesalers to the poorest craftsmen, peddlers and carters, were subject to this collatio lustralis. Yes, even the unfortunate sluts who had to offer their bodies for sale were not spared, but had to give up some of
- 135070 their humiliating profit to the emperor 97).
Whenever a year approached in which the tribute had to be paid, sighs and lamentations were heard everywhere in the cities. Those who could not pay because of their great poverty were flogged and tormented with the most cruel tortures. Mothers were forced to sell their sons, fathers to prostitute their daughters, in order to
- 135075 find gold and silver for the ruthless tax collectors 97). Even the rich were now forced much more severely than before. Their slaves and household goods were confiscated, and if they had not paid off their debt within two months, their property was sold for the benefit of the treasury 98).
And to all these direct taxes there were also the indirect ones, which mainly
- 135080 affected the notables, that is, both the perfectissimi or members of the senatorial nobility and the decurions or members of the aldermen of the provincial cities, and the regent nobility that arose from them. These had been plagued from time immemorial with munera or expensive offices, for example with the office of praetor or quaestor, an honour that cost them enormous sums.
- 135085 Since the perfectissimi were too few in number, and many of them belonged to the

imperial officials or favourites and therefore enjoyed exemption from munera, this duty fell mainly on the decurions.

In order not to ruin themselves or their families, those doomed to this sought to escape the decurionate by all kinds of means. For example, they married their slaves, to be expelled from their position, they joined the Christian clergy, moved to less highly regarded cities or to the countryside. But the cunning legislation of Constantine thwarted all these attempts. Moving to another city gave a decurion double duty as munera, both in the place where he came from and in his new place of residence.

Marrying slaves was made strictly punishable, the children born from this were considered illegitimate and even for that reason were persecuted and abused in the cruelest way. Becoming a priest was only permitted to non-decurions, that is, to the poor. All these means of escape therefore did not release anyone from the decurionate.

Even this was made, by the emperor's order, a hereditary position, and therefore the decurions were permanently taxable. 99)

This clarifies for us the nickname latro or highwayman that Constantine received in his middle period. But the foundation of Constantinople increased the tax burden still more, and was accompanied at the same time by such a tremendous waste that he was then called "pupillus" (immature), or "ripe for guardianship" 100).

And since Constantine's successors did not lighten his heavy tax burden (except, very briefly, the pagan Julian), this cruel system of extortion completely exhausted the strength of the people. The state was henceforth cursed with its fiscal tyranny, and this became one of the causes of its later downfall.

Let us now follow the emperor's policy towards the various social professions. Two of these, the corn shippers and the bakers, had already been charged with appropriate munera from ancient times, for the benefit of the treasury. The former had to transport the corn tributes or annonae in their ships free of charge to Rome, and later to the new capital 101). The bakers had to bake this imperial grain in their ovens free of charge for the bread supply of the court, army and capitals. For a long time these professions had been united into guilds and because of their free services to the state, exempted from all other munera, a privilege that was repeatedly perpetuated (among others 18 September 326) 102).

But now Constantine made it virtually impossible for both the corn shippers and the bakers to desert their professions by declaring them, like the decurion position, hereditary 103).

Thus in 314, 19 March, he orders that corn shippers who were originally bakers (pistores or levamentarii) 104) should nevertheless also become members of their parents' profession.

A law from the following year 105) also explicitly declares that one can only belong to the bakers' guild by right of inheritance. If one wants to be released from this guild, one must refuse the entire inheritance of one's parents with this right of inheritance, and give it to a blood relative or to the guild. Of course, most will have thought twice before buying their way out of this guild in this way.

The corn shippers also had to remain this from father to son, and if one of them possibly became a clergyman and had thus cunningly obtained freedom from munera, he was nevertheless not released from the guild of the nauticalarii (corn shippers) 106). However, there was one way left for them to get out of this, namely by selling their ships and other possessions to others. The emperor granted them this, but on

condition that the new owners were then forced to submit to the obligations of the shippers' guild 107) (28 October 326).

As long as there were still two princes ruling over the Roman Empire, Licinius competed with Constantine in the East to maintain the very useful profession of corn shipper. Thus he had forced members of the senatorial class to equip ships for the transport of grain, and thus lowered them to the rank of corn shippers. But this coercion did not seem tactical enough to Constantine, and when he had conquered the Eastern Empire and destroyed the laws of the tyrant, he left it to the Senate to determine which persons were most worthy of returning to their birthplace (15 July 325) 108).

A general aim therefore dominated Constantine in his regulation of social ranks: to let everyone remain in the position of his parents.

Senators were not allowed to descend in rank. Decurions were made unable to rise to an imperial office, for example the presidency, unless they had first gone through all the municipal ranks in their hometown in succession 109).

And not only the senators, the decurions, the corn shippers and bakers were made hereditary professions, but also, for example, mint masters 110). This one was

eternally forbidden to become perfectissimus or judex 110).

Thus under Constantine we get the beginning rigidity of the whole society in hereditary castes, which so typifies the Middle Ages.

All these laws and institutions were exclusively for the better fiscal overview. Constantine, who was more military than legal, has a lot to say about the further economic life promulgated fewer laws than, for example, Diocletian, the regulator of maximum prices and the correct observance of purchase contracts.

He was therefore little interested in the ordinary trades. Only one type of these he strongly encouraged, with exceptional privileges, namely all intellectual and artistic enterprises.

As early as 321 or 324 111) he declared, possibly through the efforts of the clerics who often practiced these subjects as well, all physicians, grammarians, rhetoricians and teachers of letters free from munera.

This was not new, because he thereby restored an old law of Antonius Pius, 112) which Diocletian 112) had also maintained, but had nevertheless been forgotten again in the time of persecutions and dynastic wars. Nevertheless, by this decision he formed a favourable contrast with Licinius, the hater of the intellect, and could therefore even pass for a protector of civilisation. In 333, besides this privilege, he also granted the physicians and men of letters exemption from military service 113).

Also in connection with the many basilicas that he had built everywhere, he also strongly encouraged the building trade. Now there was a great shortage of architects. Therefore he ordered Felix, the proconsul of Africa, to encourage all those who at the age of twenty-two refuse to devote themselves to the "artes liberales" by granting them munera exemption and extra allowances, also for their parents, to this profession (334) 114).

In 337 he extended this munera exemption to all architects, physicians, veterinarians, painters, sculptors, marble workers, woodworkers, goldsmiths, silversmiths, coppersmiths and ironsmiths, plumbers, glassblowers, ivory workers, potters and countless other professions. 115)

He grants them this privilege "so that they may rest, learn their art as they wish and become more proficient in it and teach it to their sons". So here too the effort to make these professions hereditary.

But since they were not eligible for public state services, or munera, because of their poverty, this privilege meant very little, especially since they remained subject to direct taxation: the collatio lustralis.

We therefore notice nothing of Christian influences that would lead to milder treatment in Constantine's economic policy.

Nor is this the case with his attitude towards the lowest classes of the population, the slaves and freedmen. There was no question of a softening of slavery, as is often claimed, at most of sporadic whims of princely leniency towards that unfortunate caste.

Thus, in one of his laws, presumably under spiritual influence, he praised the freeing of slaves, especially on Sundays, as a pleasing work. (See chapter CHRISTIAN EMPEROR AND PAGANISM). But in another edict he declares that a freedman who insults his patron out of ingratitude, together with all his descendants, will be reduced to the slave status 116).

Elsewhere he forbids, under specious slogans, that in the case of inheritances a family of slaves or coloni be divided among different heirs 117). "For who can separate children from parents, sisters from brothers, parents from husbands!" Yet this was more out of considerations of utility, because he wanted to tie the coloni to the fields where they worked.

That is why he took much stricter action than Diocletian before him against fugitive slaves and coloni. Those who were caught fleeing to the barbarian country had their leg amputated, or they were killed or otherwise punished 118). However, whoever received a fugitive slave or colonus in his house or on his land without the knowledge of his master, had to return him to his master with another serf or with 20 solidi 119). However, if he received him for the second or third time, he had to retribute 2 or 3 others or the prescribed values in addition to the slave.

This binding of the serfs to their fields, a commandment so typical for the later Middle Ages, was again done for fiscal reasons. Because in this way the slave ownership remained virtually stable on each estate, and the official lists of these did not have to be changed every time.

That is why he also determined that coloni could only be sold within the province where they lived (27 February 328) 119).

He also took action against the abuse of many slave owners who, in order to avoid the capitatio (or poll tax), outsourced their slaves to foreigners as so-called free wage

laborers. The slaves in question could, if they lied about being free, be forced to confess on the rack, and of course they fell into the treasury 120). In general, the number of slaves in Constantine was not reduced, because many poor people, because they were unable to pay their taxes otherwise, had to sell their children as serfs. This is confirmed not only by Zosimus 121) but also by a law of the emperor himself, 122) which in this case allows the unfortunate parents to buy back their children, if they had more money again. That possibility will have occurred rarely.

The emperor issued strict laws against the mixing of classes. This was, as we have seen, general precisely in the time of the soldier emperors, so that Constantine himself was born of an innkeeper's daughter. First he now forbade decurions and perfectissimi to marry slaves or slave girls "because slaves are born from this" 123). Then he extended this prohibition to the above-mentioned dignitaries also having intercourse with all persons of low rank, such as freedmen, actresses, landladies, innkeeper's daughters, procurers' daughters, merchants' wives, etc. 124). If they declared the resulting natural children to be legitimate, they were branded and lost their Roman citizenship. Inheritances to these natural children were invalid and had to be returned to legitimate descendants. But he persecuted the innocent bastards most cruelly. These became part of the treasury and were sentenced to forced labor.

Thus we see that Constantine sacrificed the prosperity of his empire and the free development of society entirely to his fiscal interests.

CHRISTIAN EMPEROR AND PAGANISM.

As we saw in Chapter IV [THE RISE OF CONSTANTINE], superstition and politics had led Constantine to identify Christ with the hitherto revered Sun-god (Mithras), and thus to unite both, Christians and Mithras-worshippers, under his labarum (312).

Now both religions had much in common. The worship of Mithras, too, (performed in subterranean caves or Mithrae) had only one god, and upheld a much stricter morality than the rest of paganism. But when the emperor had once admitted Christian bishops into his circle (as early as 312), who informed him of the essence of their doctrine, their influence gradually displaced that of the Mithras priests.

From 312 onwards he became increasingly Christian, but at the same time he continued to spare Mithraism, the religion of the army; yes, possibly he professed both religions at the same time for a time. This is evident, besides from the choice of the labarum, from a second, masterly attempt at mediation between Christians and Sun servants, namely the introduction of Sunday 125) (5 March 321). Instead of many pagan holidays, 52 official days of rest were now instituted. This day, although

immediately intended as a Christian Sabbath, he does not yet call it, like later emperors, "day of the lord" (dies dominicus), but dies Solis, the day of the Sun. In this way he could give both Christ and Mithras, the god of peace and the god of the army, each his own, and he lived in friendship with all gods and subjects. As an example of the unctuous, almost benevolent tone of Constantine's religious edicts I quote this edict:

"All judges and townspeople and all services and businesses must rest on the venerable day of the Sun. Those who are placed in the fields may, however, tend the agriculture, since it often happens that on no other day can the grain be entrusted to the furrow, the vine to the ditch more conveniently, so that the favorable opportunity granted by heavenly providence is not lost" 125).

But as a correction to this law it was soon added (3 July 321) that it was pleasing to the emperor to fulfill votive vows on that day, or to free slaves. So the day of rest was immediately intended for Christian and Mitharistic worship 126).

However, from the beginning he had a completely different attitude towards the other polytheistic pagan religions, such as the worship of Jupiter and the other Olympian gods, than he did towards the monotheistic worship of Mithras. With the term "pagans" we now mean, speaking of Constantine, for the sake of brevity: the great mass of polytheists.

He gradually regarded these in the same way as his new co-religionists did.

Now the first Christians from ancient Judaism had imbibed the same intolerance towards dissenters that actually characterizes all Eastern forms of monotheism (including Mazdaism and Islam). Where did this come from? The Christians, like the Jews before them, did not see in the pagan polytheists pitiable sufferers of superstition, but criminal devil-worshippers. For they themselves, like the pagans, believed in the existence of demons. The New Testament is steeped in this superstition: Christ banishes the devils by his word.

The Christians now saw in all the pagan gods demons 127) or fallen angels, thus

ministering spirits of Lucifer or Satan.

These had namely, in human form which they could assume at will, lived for a time on earth, so that their graves were still shown, like those of Zeus on Crete 127). After their death, however, these beings had devilishly seduced the survivors to worship them as gods, while in truth their souls only continued to exist as evil spirits. According to the Christians, their demonic character was first apparent from their immoral character, and it was certainly easy to enumerate all the infamies of the Olympian gods.

Moreover, they could creep into the souls and bodies of people. In the latter case they only caused material ailments, but if they overpowered the souls, idolatries and heresies. 128) But from the name of Christ and the sign of the cross, the devils would flee. Christian priests therefore also served as exorcists and medicine men, and were said to be able to cure diseases just like Christ himself.

Of course, according to them, the persecutions of Christians had also happened under the inspiration of demons. 129) Only through the labarum, the Christ monogram, on his banners had their protector Constantine overcome those enemies of God. No wonder then that this emperor, the more he came under the influence of the clerics, learned to detest those polytheists as servants of the devil.

Yet his initial attitude towards these pagans was one of uncertainty and political caution. Although he was personally more devoted to the Christians, as "pontifex maximus" or pagan high priest (one of the old powers of the emperors) he was not allowed to the majority of army and people.

Thus he submitted himself for the time being, when he could not do otherwise, to all kinds of pagan customs. After his first triumphant entry into Rome (29 October 312), for example, as pontifex maximus he offered the obligatory thank offering of the "suove-aurilia", and as such he is depicted on the triumphal arch, erected for him soon afterwards (313, 314 or at the latest 315).

But even then he clearly showed his aversion to these senseless ceremonies and tried, if possible, to withdraw from them. For example, he did not celebrate the "ludi saecularii" or the solemn centenary in honour of the foundation of the city of Rome, (313, 21 April), which was repeated every 110 years or Etruscan century 130) and was last shown to the people with grand pomp in 203 by Septimius Severus 131).

As an excuse for his avoidance of these pagan ceremonies he was offered an important meeting with Licinius which he had to attend in Milan at the end of January 313. But by this hasty departure from Rome, after a stay of barely three months, he not only spared himself the reproach of idolatry, but also the enormous costs connected with this public festival. Even after his stay in Milan he did not return to Rome, but travelled on, first to Illyria, then to Gaul, under the pretext of a new war against the Franks.

But an old oracle threatened Rome with ruin if these games of the century were skipped. In this neglect of old traditions superstitious pagans of that time and later saw treason against the fatherland, so that around 430 Zosimus reproached Constantine for the then disasters of the empire.

But in the beginning Constantine expressed his hatred of the old, official religion of Rome only negatively, never openly. In accordance with the Rescript of Milan, which placed both religions on an equal footing, he pursued an apparently impartial, conciliatory policy, and for the time being he took care not to turn the polytheistic majority in this western empire against him by overly hostile laws.

Nevertheless, he preferred the Christian doctrine, and he immediately attempted to prevent pagan propaganda. In two successive laws of 319-132) he forbade haruspices or diviners, and soon other pagan priests as well, to visit private houses, on pain of burning. They could, he says, "serve their superstition according to their own rite within public temples."

"Go to your sanctuaries," he calls to them, "we do not prevent you, in the open light, from maintaining a long-expired custom."

In this he shows a certain tolerance, but also a fear barely concealed by mockery. Yet Constantine continued to attach superstitious trust to those same haruspices or diviners, who precisely because they served "devilish" spirits, learned the future from them. This became apparent, for example, when the Colosseum or amphitheatre of the Flavians, from whom he and his family claimed to be descended, was struck by lightning in Rome. Constantine, who was staying in Illyria (Sardica) at the time, saw this as a dangerous omen, and immediately had the haruspices consulted. He also

determined in an edict of 17 December 320 or 321 133), that henceforth these diviners had to be consulted carefully if the palace or other public buildings in Rome were touched by the flames of heaven, but that they (the diviners) had to refrain from offering sacrifices in private houses. This latter was a repetition of an earlier

law.

Constantine was by no means alone in this superstition of pagan divination and oracles. He shared it with most of his, even Christian, contemporaries, for example with Lactantius. According to this apologist, the Sibylline books would have predicted not only the coming of Christ, 134) but even of Nero, 135) the forerunner of the "antichrist". Moreover, these Sibyls 136) like Apollo of Colophon 137) would have already proclaimed monotheism in one of his oracles, by virtue of their prophetic gift. However, the Christians found it difficult to explain how it was that the demons knew the future, yes, God's most secret decrees. They saved themselves from this by claiming that the devils themselves, as fallen angels, had a certain divine element in them, and therefore knew – but only partially – what would happen 138).

Related to his laws against pagan priests, but much stricter in tone, is his edict against sorcery (321 or 324, 23 May) 139). All practitioners of the black art, who either seduce chaste souls to lust by it, or conspire against the welfare of mankind, or raise rain clouds, hail or thunderstorms to destroy the harvest in the fields, are threatened with severe punishment. This law also explains Constantine's later behavior against the magician and weather-maker Sopater 140). Here too he shows himself to be the first type of a medieval man, because this law, once ingrained as a custom, gave rise to the later, so horrible witch trials.

Since pagan priests often also acted as miracle workers, this law also affected them. Nevertheless, he remained quite tolerant towards the polytheists at first, until around 323, because of his increasingly worse discord with the pagan Licinius, he changed his policy. This became apparent at the end of this year, when in the part of his colleague's empire, in honor of his 15th anniversary, Catholics and even their priests, as of old, were forced to sacrifice to the emperor. Constantine now strictly forbade this, on pain of public flogging, and thus immediately threw himself into the role of protector of Christians also in the part of his rival's empire. At this time he clearly changed his attitude towards the polytheists: he became openly hostile to them 141).

After Constantine's victory over Licinius, as well as after Maxentius' fall, all his laws and decrees were declared invalid. First of all, the emperor naturally annulled his persecutory measures against the Christians 142) (324, 16 December). This was done by an edict to all the inhabitants of the Eastern provinces, including Palestine; which had suffered the most severely. The main provisions of this were: (see Euseb. Vit. Const. II, 24-42):

- a) The banished Christians were recalled.
- b) Those who had been deprived of their property for religious reasons were given it back.
- c) Clergy who were deliberately forced to munera were exempted from this.
- d) Those who had been sentenced to forced labor in the mines or to slavery, or to shameful women's labor (spinning and weaving) were released from this.
- e) Those who had been expelled from the army because of their faith were allowed to return to the same rank they had previously held, or, if desired, to be honorably discharged.

f) The property of those who had been killed because of their faith went to their blood relatives, or, if they were no longer alive, to the Church.

g) However, if the tax authorities had given or sold these confiscated goods to private individuals, they had to be returned to the former, lawful owners. The later owners received no compensation for this, but were allowed to keep everything they had enjoyed through usufruct from these possessions, if they, in a humble petition to the emperor, begged his forgiveness for their "greed". This provision also and above all concerned the secularized property of the Church.

We can therefore clearly see a great difference between this edict and the earlier rescript of Milan, which also returned the stolen goods to the Christians and their Church, but against compensation from the state to the later owners. In addition, Constantine sent an edict to all metropolitans (supreme church princes) and governors of the provinces concerned to rebuild the destroyed churches, so that the new ones were at least as high or higher than the old ones. The costs had to be met partly from the imperial treasury, partly by "voluntary" contributions from the inhabitants, which of course greatly increased the tax burden. (Euseb. Vit. Const. II, 46).

So there is a growth of Christian disposition and hatred of the pagans in the emperor. And no wonder. He now no longer had to take into account a pagan colleague, and had also moved his residence to the East, where there were many more Christians than in the West. That is why he now took much more fierce action against the polytheists than before.

About the same time as his privileges to the Christians, he forbade his still pagan officials to sacrifice to the gods. The text of this law has not been preserved, and the report about it in Eusebius (Eus. Vit. Const. II, 44, 47) is often doubted (among others by Burckhardt), but it must have existed, since in 341 the later emperor Constantius explicitly appealed to such an edict from his father. (I quote:) "Away with superstition, let the madness of sacrifices be abolished. For whoever still dares to sacrifice against the law of our divine prince and father and the command of our benevolence, will be hit by a fitting and immediate sentence." (Cod. Th. XVI, 10, 2).

Constantine did not dismiss pagan officials from his service, but he prevented them from religious exercises. At the same time he forced them in a gentle, non-violent way to become Christians. Many obeyed, in order to remain in the emperor's favor and not to waste the opportunities for their career. And although there remained in his service die-hard pagans, – for all the offices that became vacant, the emperor usually appointed Christians, in order to increase the number of his followers. At the same time (October 1, 325) Constantine, certainly at the request of his new co-religionists, prohibited the bloody gladiatorial games, which the lower, pagan people, especially in Rome, were still fond of. This law, however, was often evaded, so that it would last almost a century before the last sword fight would be stopped by the self-sacrifice of the monk Telemachus (403).

Thus we see that Constantine, at the beginning of his openly Christian policy, that is, from the fall of Licinius to the building of Constantinople, still acts moderately towards the pagans (323–328). Even around 328, as towards the Arians, a certain rapprochement with the pagans can be detected in him.

According to the pagan Zosimus (143) (II, 29) remorse for his murder of Crispus, and soon of Fausta, would be the cause of this, and this is quite possible. After such great misdeeds he felt as if persecuted by furies, and sought a means to remove that torment. Should he confess everything to the Christian bishop Hosius? He did not dare to do this, because most Christians did not yet know anything about his murder of Crispus and he was afraid of losing his popularity with them if this became known. Therefore, in his growing superstitious fear of the demons of vengeance, he first sought refuge with the priests of Mithras, the sun god, who had the reputation of being able to exorcise and banish spirits. But they declared themselves powerless to cleanse him of the guilt of so many murders and perjury.

He now decided to consult a famous neo-Platonic sophist and magician, Sopater and pupil of Iamblichus, and summoned him to his new palace in Constantinople (330). Soon, through the power of his dialectic, he gained such favor with the emperor that he was allowed to sit at the table on his right (144).

This annoyed the Christian party at court, especially since the pagan sophists at that time tried to win back the people and the emperor for Hellenic paganism by means of public debates. They did not succeed, however, since mixed meetings of pagan and Christian speakers were soon forbidden. (145) – but the danger of a sudden pagan disposition of Constantine greatly frightened the Christian priests.

Moreover, the imperial favor that Sopater enjoyed aroused the envy of the courtiers, especially of the Christian praefectus praetorio Ablabius, who feared to lose his growing influence over Constantine. According to Eunapius, he managed to make his master believe that Sopater, the cunning magician, had tied the winds, so that the grain ships from Egypt could not reach the imperial city. And Constantine believed that slander, (146) and saw in Sopater one who was working for the destruction of his empire. And since he had not been able to free him from his remorse for the murder of Crispus, he decided to kill the man. In doing so, he immediately gave in to the Christian priests, who saw in all practice of magic arts a damnable intercourse with the devil, and he openly showed that he was no longer pagan-minded (147).

At the same time as Sopater (or possibly just before the consecration of Constantinople) another pagan fell as a martyr, namely Kanonaris (148). This philosopher repeatedly addressed the people from his orator's chair on the forum Constantini. He found support especially among the old Byzantines, in particular among the so-called Gazans, descendants of colonists from Gaza, whom Septimius Severus had transplanted here a century ago, after the massacre of Byzantium. These latter, fiercely pagan, had at that time supported Licinius in his struggle against Constantine, and had defended Byzantium with tenacious force. Now they were indeed subjugated to the new emperor and had even had to hand over their weapons as metal for his statue, but they remained secretly hostile to him. This now became apparent in the appearance of Kanonaris.

When, however, Constantine showed himself on the forum and the well-disposed among

the people cheered him, the pagan orator from his loftiness called out to him: "Do not be wiser than your ancestors, you who have destroyed your ancestors." The emperor then admonished the man to stop his pagan propaganda, to which he replied loudly: that he wanted to die for his ancestors.

Then Constantine had him beheaded, to the horror of the still pagan Gazans. The pagans also have their martyrs. After having been bloodily persecuted at first, the Christians now took revenge, against the teaching of the gospel, on those who did not believe as they did.

From then on the emperor took increasingly fierce action against the polytheists. After the earlier ban on sacrifices (324), he now (around 330) made divination and asking oracles punishable.

Nevertheless, many continued to persevere in the old faith. In order to accelerate the Christianization of his empire, he finally resorted to violence.

Thus, at the instigation of his former mother-in-law Eutropia, the mother of Fausta, a Syrian by birth, he decided to destroy an idol altar near the sacred oak of Mamre in Palestine, 149) At this tree God was said to have revealed himself to Abraham, 150) and therefore Constantine now built a basilica there.

Since then the emperor continued to persecute the pagans. First, shortly before the dedication of his city, partly out of a desire for plunder, partly out of a need for money, he had a real campaign held against all the images of the gods. 151) For this purpose his trusted courtiers went from city to city, from temple to temple, and then ordered the mortally frightened priest to fetch his god from the most holy place.

With the strangling snare they were dragged closer, these "gods of the expired fables", to be sent to Constantinople, if they consisted of bronze or marble, to adorn a palace or circus or senate building or one of the grandest public squares. 152) If, however, the outside was covered with gold, then this was knocked off, and only the ivory or bone supporting skeleton of the once so highly revered deity. The gold, however, was carefully collected, and melted down in the imperial melting pot into hard coin, for the benefit of his treasury. The only remainder of the statue remained, some worthless junk.

Thus Constantine achieved a double goal: enrichment and strengthening of his own power, and discouragement of the pagans. For many of them began to doubt the value of their religion after this violent iconoclasm and – according to Eusebius – surrendered to Christianity.

Because of this, the emperor finally dared to order in an edict in 331 the demolition of the most honored or notorious pagan temples 153). He did this, both because of a lack of building material for new churches to be founded, and because of fanatical religious zeal.

Now he, and all Christians, hated above all the worship of Aphrodite, who was badly reputed – also among the pagans – for the unbridled fornication committed in her idolatrous houses. Thus, first of all, the temple of Aphaka 154) of the Syrian Astaroth on the summit of Lebanon, where emasculated priests committed unnatural filthiness in honor of the goddess, was thrown to the ground by soldiers on the emperor's orders. Another such "house of worship" in Phoenicia, at Heliopolis, where the priestesses prostituted themselves to all pious visitors, was also destroyed. In Egypt he strictly forbade the worship of the Nile goddess by emasculated priests and ordered these eunuchs to show themselves nowhere.

Since a wise legislator must guard against certain moral standards, these actions of the emperor are entirely justifiable, even in the name of humanity and civilization. Hatefully intolerant, however, was the destruction of the temple of Asclepius at Aigai 155), a kind of ancient Lourdes, where thousands of pious pagans came to be cured of their ailments. This was done mainly at the instigation of the Christian priests of the time, who immediately served as exorcists and medicine men, and wanted to stifle the competition of their pagan colleagues. At the emperor's beckoning, the house of the "soul-seducer" was razed to the ground.

By these powerful measures against the religion of the Hellenes, he would have cured many of them, according to Eusebius, of their delusion and brought them to Christianity. With some that may be true, but with others the emperor, precisely through his fanaticism, provoked a reaction, as was shown, for example, by the uprising of Calocerus in 333 on Cyprus, which was partly favoured, if not caused, by pagan discontent.

And against all this destruction of the old he set the construction of the new faith. He showed this first of all by founding numerous churches, often on the ruins of destroyed temples, and with stone and marble columns originating from them. Thus he had one built in Heliopolis in place of the recently demolished sanctuary of Aphrodite. Even a bishop was given his seat here, assisted by priests and deacons.

And in order that "many people would come closer to God's teaching, the emperor also provided rich gifts here to support the poor, in order to urge on rapid Christianization," says the pious Eusebius 156). He therefore established in each such church a well-stocked fund for converts in order to bribe the surrounding residents to Christianity with money. It is understandable that the pagan priests could do nothing against such means.

But not only proselytizing zeal, but also veneration of saints and martyrs guided him in his church building. Shortly before, he had built a precious church over the grave of the martyr Lucianus, who died at Drepanum during the persecutions, and enriched the city with many other beautiful buildings (327). Out of love for his mother, whom Lucianus particularly revered, and who was probably born in Drepanum herself, he called it Helenastad or Helenopolis from then on.

It was also she who, in her steadily increasing piety, assisted by the Constantinopolitan presbyter Eustathius 157), advised him to build a basilica on the grave of Jesus. The emperor therefore gave orders to Macarius, the bishop of Jerusalem, and to Dracilianus, the vicarius orientis 158).

They searched in vain for the grave site, demolished a temple of Venus that had been erected there later, and so it was finally thought having dug up the cave of Jesus' resurrection, deep underground.

Soon a high basilica was built there, decorated on the outside with a pomp of gold, and with interior walls of multi-coloured marble.

Shortly after the Synod of Tyre this church was consecrated by Macarius, in the presence of most of the bishops of the East (17 September 335) 159).

On hearing this, Constantine's mother, as old as she was, set out on a journey to undertake a pilgrimage to the holy sepulchre in the last years of her life.

On the way she donated large sums of money to the Christian communities of the cities she passed through, to everyone who personally approached her, and further to garrisons who were stationed there 160).

She also made money and clothing available to the poor and freed countless prisoners who – possibly because of tax debts – had to languish in the mines. Thus Constantine attempted, by some alms from his mother, to reconcile his Eastern subjects somewhat with his fiscal extortion system. The money that had flowed to him through the diligence of millions of workers he now squandered on a handful of lazy beggars and parasites. This journey was also intended as financial propaganda for Christianity.

When Helena arrived in Jerusalem she organised a special order of nuns for the service of the Holy Sepulchre Church, that of the "Hestiades", apparently after the example of the Roman Vestalinen 161).

About the same time her son sent honourable letters to Antonius the Egyptian hermit 162) so that monasticism was also encouraged by Constantine and his family.

They also led their subjects in the veneration of relics. She had excavations carried out on Golgotha, and according to the legend 163), three crosses actually came to light there. Also found was a loose plank with the trilingual inscription "I.N.R.I." engraved on Pilate's command. But it was not known to which of the crosses this belonged, and therefore also not known which had been the true cross of Christ.

However, through the healing power that emanated from it, whereby a sick woman became healthy, Bishop Macarius discovered the true cross. This non-historical story proves what a miraculous power the Christians of that time, in their superstition, attributed to all relics.

Furthermore, Helena enriched the city of Jerusalem with many buildings and also had churches built on the Mount of Olives and in a cave in Bethlehem, where Jesus was said to have been born.

Then she died, at the age of eighty, and her remains were transported to Constantinople and buried with military honors (336).

Shortly afterwards Constantine built churches in his own city above the graves of several martyrs, and also in Antioch and Nicomedia. In the last years before his death we can therefore see in him a steadily stricter church-mindedness, and at the same time a growing hostility to paganism. This also appeared from his habit of giving speeches and sermons both to his court circle and also in public to the people of Constantinople. Sometimes he spoke immediately to give hints to his palace companions who had fallen into disgrace; but his main aim was the propaganda of monotheism against the pagans. Eusebius has preserved such a speech for us, namely: "Speech to the assembly of the saints". There is no reason to doubt its general authenticity, but there is reason to doubt the purity of the text, which may have been changed and supplemented here and there by the Greek translator(s), it is nowhere original, but it contains many reminiscences from the work of Lactantius, both from his "Divinae Institutiones" 164) and from his "De mortibus persecutorum."

But with a certain eloquence, Christian dogmas are defended and pagan superstitions refuted.

Thus Constantine, despite his bloody, anything but Christian life, also acted as an apologist, albeit as an all too slavish follower of the church father Lactantius. The lasting result of the emperor's championship for Christianity against the pagans can be summarised as: the secularisation of the Church.

The primitive church of the apostles strictly adhered to Jesus' words: my kingdom is not of this world. Now, however, the Christian communities had grown from small, pitiful, half-secret burial funds (165) into a huge, widely branched public organisation. Their landed property, previously consisting of only a few burial grounds, had expanded in proportion to the increasing wealth of their believers. They had become a very worldly, social power, and Constantine had placed them in the service of the state. Their relationship to it had also changed completely. If she had previously opposed the deification of princes, she now cooperated in an equally great cult of the emperor, by venerating him as sole ruler by the grace of God. Moreover, her rite, which was so simple at first, had changed completely, had adapted itself to the ostentation of paganism, with its celestial ceremonies. Through the veneration of saints the ancient polytheism of the newly Christianized Greeks and Romans had been revived in her.

In many respects, through the efforts of Constantine, the new Catholic Church had become a hybrid of pompous paganism and the sober primitive Christianity of the Jewish fishermen and apostles.

CONSTANTINE AS PRINCE OF THE CHURCH.

Since his conversion to Christianity (312), the emperor, as pontifex maximus or pagan high priest, also assumed the highest authority in ecclesiastical affairs of his new co-religionists. That is precisely why he called the bishops his "brothers" and himself "general bishop" of the empire (166).

From the beginning, he therefore attempted to make the Church, his personal domain, unassailable to the outside world, and to maintain the inner unity of its confessors, either by gentleness or by coercion.

Now, during the persecutions, disputes had broken out among the Christians in Africa and Mauretania. There they wanted to exclude from the Church all a certain Donatus (not Lactantius' friend) and his followers who, under the compulsion of the last persecution, had renounced their faith or had delivered Christian books to the pagan authorities for burning. In contrast, there were other Catholic clergy (especially those outside Africa) who wanted to forgive the sins of the repentant "traditores" (translators), since there were far too many of them, and it was not so much the quality as the number of faithful souls that had to be taken into account.

Moreover, the Donatists also differed from the other Catholics in doctrine. They doubted the value of the sacraments and made them dependent on the worthiness of the participants. In strictness of requirements, they therefore mostly agreed with the later Protestants.

There was great tension between the two parties. When a certain Caecilianus was consecrated bishop of Carthage by a clergyman (Felix) whom the Donatists regarded as a traditor (the Catholics denied this), discontent broke out. A Numidian council, mostly Donatists, declared his choice illegal.

But now Constantine intervened. Towards May 313, although he was just travelling through Gaul to Trier, he called a council in Rome. Caecilius soon appeared here with 10 African bishops, who were soon joined by the bishops of Autum, Arles (Arelate) and Cologne. Under the leadership of the Roman bishop Miltiades, they met in the Lateran palace of Empress Fausta, who, like her husband, was Christian-minded, and gave them hospitality in his place.

But they achieved nothing, and a subsequent council in Arles, where the emperor was also not present (1 August 314), did not lead to reconciliation between the Donatists and Caecilians. On the contrary, precisely because of the statement that Felix was not a traditor, and Caecilius' choice of bishop was therefore legally recognised, the disputes in Africa flared up again. Finally, after this futile council at Arles, Constantine settled the ecclesiastical conflict at Milan in August 315 (when he was back in Italy after a long stay in Gaul and Illyria). On the advice of the African proconsul Anulinus and the emperor's own court preacher, the very orthodox Hosius, Caecilian's appointment was maintained, but the Donatists were thrown out of the Church as troublemakers and heretics. (Augustine, Epist. 43, 7, 20).

He considered them schismatics, who broke the united front of the Christians against their pagan enemies. And since he only considered a united, Catholic or universal Church as a useful support of his authority, he equated heretics with traitors. In

- 135680 this Constantine, with his striving for caesaropapism, behaves just as Charles V later did towards the Protestants 167). Once he had condemned the Donatists, the orthodox were given one privilege after another (All according to me: 21-31 October 315).
- 135685 First of all, Caecilian and his followers were paid a large sum of money, possibly as compensation for what they had endured from the Donatists, who had, among other things, set fire to many of their churches, and the right to unlimited support from the state. This was the first historical example of remuneration of the clergy by the emperor or the state, not of regular salaries, but provisionally in the form of donations, and Constantine continued with this in the rest of his reign (Eus. Hist. eccl. X, 6). Secondly, all Catholic priests were declared free from munera 168) or compulsory state offices, i.e., they no longer had to hold expensive and time-consuming offices in their home towns, "so that they would not be kept from their worship by the sacrilegious envy of some." (Cod. Theod. XVI, 2, 1 and 2). In an additional letter, exclusively in his letter to Anulinus, the emperor adds that he
- 135690 should especially watch out for the execution of this edict in Africa, since before that time the heretics had deliberately plagued the Catholic priests with inconvenient appointments (Cod. Th. XVI, 2, 1), which was now no longer allowed (See also Eus. Hist. eccl. X, 7). A few years later (July 5, 321) he even granted the Church the right of inheritance, so that it could enrich itself immensely 4) through testamentary dispositions of private individuals (Cod. Th. XVI. 2, 4).
- 135695 Yet ch then there arose in many cities such a great influx of decurions (rich dignitaries) to the clergy, simply because of the high ecclesiastical salaries and the freedom from munera, that the emperor took action against it. In an edict of July 18, 320, he forbids decurions or their sons to become priests, if they are rich and educated enough to hold public offices. (Cod. Th. XVI, 2, 3).
- 135700 Yes, Constantine increasingly interfered with the appointment of clerics, for the sake of the treasury. Finally, on June 1, 326, he only allows the priesthood to those who have no family among their fellow citizens, and are therefore without political influence, and moreover possess too little for a city office. "For it befits the rich to undergo the necessary burdens of the worldly state, but the poor to be supported by the wealth of the Church." (Cod. Th. XVI, 2, 6).
- 135705 Thus the emperor knew how to prevent overly wealthy lords from joining the clergy, as this was doubly damaging to his treasury. For firstly, they profited from the state salaries to the clergy, and by being exempt from munera, they escaped the obligation of the decurions to be liable for the taxes of their city.
- 135710 In worldly affairs, Constantine therefore decided on his own judgment, although in dogmatic matters he also followed the advice of the clergy, especially of his court bishop Hosius.
- 135715 Yet their influence also increased greatly in public life, because in 318, 321 or 323 he granted the bishops the authority to administer justice, if one of the parties to a lawsuit requested this. 169) He did this for two reasons. First of all, he wanted to use his fellow believers and followers as officials, and he also wanted to exercise control over the previously all-powerful judges, whose fierce pagan bias had become apparent during the last persecution of Christians.
- 135720 However, due to the opposition of educated professional lawyers to ecclesiastical competitors, this law was not properly implemented at first. Thus Constantine had to repeat his own decision in 333 in a rescript to Ablabius, then praefectus praetorio of the East 170).
- 135725 This law is especially important, because it gave rise to the later ecclesiastical courts of the Middle Ages, with all their damnable aftermath of coercion of conscience and inquisition.
- 135730 At the same time as he opposed the heretics, Constantine also took a stand against the Jews.
- 135735 Here too, Constantine followed a new course. Or rather, he restored the old, almost forgotten anti-Semitism of the Flavian emperors, whose family name "Flavius" he adopted, possibly with that ulterior motive. For after the Flavians Vespasian and Titus, the destroyers of the Jewish state, and Domitian who also persecuted them as a people in exile, the Jews had known peace and prosperity – except for a suppressed uprising during Hadrian, many emperors had even protected and favored them above the Christians, because only the Jews were exempted from the sacrifice to the imperial Genius.
- 135740 Now, however, when a Christian prince came to the throne, all this ceased. Only the Christians were favored, and for the Jews a thousand-year period of confinement within their Ghettos began.
- 135745 In 315, October 18, Constantine then issued an edict in Milan 171), where he had just

settled the Donatist struggle, also against the professors of the Talmud, who had apparently tormented fellow tribesmen who had recently become Catholic. "We want to impress upon the Jews and their rulers and rabbis that if after this edict one of them dares to harass another who has fled their pernicious sect and has gone over to the service of God, with stones or any other kind of fury, (which fact we just heard happened), he will immediately be given over to the flames and burned with all his accomplices." (Cod. Theod. XVI, 8, 1=Just. 1, 9, 3).

From these words the emperor's ecclesiastically tinted hatred of Jews is clearly evident. He also proved this by choosing an official, also Christian day of rest, which had to fall on a different day than the Jewish Sabbath, and also at the Council of Nicaea, when determining the Passover, the date of which was deliberately not set on the Jewish Passover, but on the day of Jesus' resurrection. Apparently the emperor wanted to strictly separate the future of Christianity from the Judaism from which it had originated. Moreover, Constantine's policy towards this religion is subject to all sorts of princely whims and vagaries.

For example, in 321 he orders the decurions of Cologne to make all the wealthy Jews there – except for three – available for the city offices or munera, which hit them hard financially. (Cod. Th. XVI, 8, 3). But in 330 he exempts the Jewish rabbis and synagogue leaders from this, so that they received the same exemption from munera as the Catholic clergy.

This is therefore remarkable, because they were privileged by this were placed above the heretics, that is, the Arians, whose priests and communities were excluded from all ecclesiastical privileges. (1 September 326, see Cod. Th. XVI, 5, 1).

However, Constantine naturally did not proceed to legal equality of Jews and Catholics. By an edict of 21 October 335 he even forbade Jews to keep or circumcise Christian slaves, and ordered them to set them free immediately. (Cod. XVI, 9, 1). This Jewish law was also extended 3 years later by his son and successor Constantius to heretics, pagans or other non-Catholics, all of whom were denied the right to own Catholic slaves. (Cod. Justin. 1, 10, 2), this edict became the cause:

- 1) Of the decrease in the number of slaves, since many were only enticed by the promise of freedom to be baptized orthodox.
- 2e) Of the economic weakening, indeed the downfall of all non-Catholics, who since that time could hardly keep any slaves.
- 3e) Of the emergence of an overwhelming Catholic majority among the free population, in which the dissenters sank into insignificance.

After this digression, let us now follow Constantine's internal ecclesiastical policy again, and indeed since his seizure of the sole power (324).

Already in the time of Licinius serious dogmatic disputes plagued the whole East, and his successor hastened to settle them.

The dispute was about the doctrine of the Trinity. This system of God, Christ and the Logos (Holy Spirit or the Word), although not originally present in Christianity, was, once arbitrarily "hineininterpretiert" in the Gospel of John (1 and 5), brought into use as a pious deception by the African bishop Theophilus. (Late 2nd century). Soon the believers throughout the empire had accepted it, under the motto "credimus quia absurdum".

With that, Christianity, still strictly monotheistic by Origen and Tertullian, had in fact degenerated into a tritheism.

The Sabellians were openly tritheistic, but the others cloaked this under a compromise with monotheism, the famous "three times one is one". However, among these, however, a difference of opinion arose about the relationship between God the Father and God the Son.

In the rest of the empire, this was not a concern. But in Egypt, the traditional land of priestly rule, and especially in Alexandria, a city where the Hellenistic frivolity of the rulers (Greeks and Romans) had never been able to kill the gloomy, fanatical seriousness of the natives. And as there had been ecclesiastical unrest here of old (as under Decius and Diocletian), so now it also came to an explosion. The bishop of this city, Alexander, came into conflict with his presbyter Areios. The latter distinguished Christ's heavenly nature, however divine, from that of God, since he had also led a separate life on earth as a man. ("Heterousion"). His superior, however, did not see Christ as similar, but absolutely equal to that of God, while at the same time, inseparable from his divine nature, his humanity had lived on earth. So God had remained God in Jesus and yet become man. ("Homo-ousion"). Both parties were inflamed to the utmost in their blind, dogmatic superstition, and Alexander summoned his presbyter Areios or Arius to submit to his verdict. He refused, was expelled from the Church, but continued his sermons in the same city. There he soon gained many followers, especially among the heretical sect of the

Melitians 172), who, already arising during the last persecution, now largely joined him. Thus first Alexandria, soon all the cities and villages of Egypt, later even Libya and Thebais, were split into two parties. (Euseb. III, 4). This frenzy soon spread to the neighboring provinces through propaganda letters and messengers from both champions. The quarrel became so heated that Arian (?) fanatics even insulted the images of the emperor, and that even in the theater of the pagans the Christian doctrine of God was scorned and mocked. The prestige of the Church and of the imperial authority was thus in danger. Constantine, who heard and understood all this, wanted to end the dispute immediately. He first sent a "god-fearing man", his favourite Hosius, as a peacemaker to Alexandria, with a letter to both Alexander and Arius.

The emperor expressed his opinion that "such trivial questions should not have been raised", but also admonished Arius to bend to the will of his superior.

This shows that Constantine himself was indifferent to the dogma, but that the preservation of the hierarchy and the unity of the Church was his main concern. However, neither of them was inclined to reconcile, since there had already been mutual bloodshed between their adherents.

Then the emperor decided, just as he had done in the West before during the Donatist disputes (311-315), to convene a synod. First he determined as the place of meeting Ankyra, but he soon moved it to Nicaea in Bithynia, his summer residence, in order to be able to be present there himself.

At this council the dispute over the determination of the Easter festival could also be settled.

This so-called "Easter controversy" is already very old, and dates back to about 190 AD. The Jewish Christians, especially in Syria, Palestine and Asia Minor, continued to adhere to the ancient Passover, the festival that Moses had commanded to be celebrated on the 14th of Nisan, the first month of the year (Exod. 12, 6; Levit. 23, 5). However, the Israelites then and still today (just like the Mohammedans) reckoned with lunar years, so that this festival, always falling on a full moon, was nevertheless dated on a different day of the year according to the Roman and Greek-Macedonian calendar. When the later Jews in Roman times also had to take into account the Western year of 365 days, and therefore the Jewish Christians too, there was complete confusion. And so there were some Christians, such as Anatolius 173), who finally looked for a fixed rule for determining the Passover, immediately important for them to determine the commemoration day of Jesus' Resurrection. And since the Alexandrian Jews had determined the Passover on the first full moon after the equinox, and Christ would have risen on the day following the first Sabbath day after Passover, Anatolius determined the Christian Easter festival on: the first Sunday after the first full moon following the equinox, (although the term "Sunday" did not yet exist as such).

In Constantine's time this custom already prevailed in the entire West, as well as in Greece, Asia, Pontus and Egypt.

But the inhabitants of Palestine, Syria, Phoenicia, Cilicia, and Cappadocia, mostly Jewish Christians or baptized Jews, celebrated the feast of Jesus' resurrection on the same day as their ancient, beloved Passover. This now caused much strife in the border districts of both areas, because some were still fasting and mortifying themselves, while others were already celebrating the Easter feast. Constantine now saw the great importance of unity of rite for the entire Christian Church, and therefore also raised the Easter problem at Nicaea.

Meanwhile, the day of assembly at Nicaea, the metropolis of Bithynia, to which all the bishops of the world had been invited, drew near. For their journey they were allowed to use the horses and carriages of the imperial post, and where these proved insufficient, other vehicles were provided by the state. (Eus. Vit. Const.)

But the two champions Arius and Alexander had already set out earlier to win followers, Arius to Syria, Alexander, who was smarter, to Nicaea itself.

There, even before the council began, he managed to win Hosius, the all-powerful court preacher, for himself and his doctrine. (Philostorgius, Vit. Const.)

Arius was much less fortunate. Possibly at his request, shortly before the meeting in Nicaea, an unofficial pre-synod was held in Antiocheia, of mostly Eastern bishops. But there his doctrine of hetero-usion was rejected, and he himself and two others (including the historian Eusebius of Caesarea) were given a term until the next council (Nicaea) to retract their theses. Finally, on 20 May 325, over 300 bishops gathered in the great throne room of the imperial summer palace at Nicaea, mainly from the East of the empire, but also from the surrounding barbarian countries, such as the Persians and Scythians (=Goths). However, there were few participants from the West: for example, Pope Sylvester, the bishop of Rome, had apologized because of his

age, and was only represented here by envoys (including Hosius). This also contained a protest against the fact that Constantine had deliberately bypassed the capital of the empire when choosing a synod city.

So, when everyone was sitting together in silence in the throne room, in their colorful, changing clothing of Westerners in pallium, Easterners in long robes, and barbarians in bearskin caps and wide, foreign breeches, – a procession of stately striding courtiers announced the arrival of the emperor. At last the chief chamberlain beckoned that he should approach. 174) At his entrance all rose from their seats, and thus he came into the midst of the assembly "like an angel of God, radiant in the flaming glow of the purple and adorned with the bright glitter of gold and precious jewels". The tremendous majesty of his tall, sturdy heroic figure overwhelmed all present:

they thought they could read nothing but mild grace on the face of that emperor, to whom they and their church owed so much. Finally he lowered himself onto a small, clear-golden seat in the middle of the hall, and delivered the opening speech in a calm, sonorous voice. He spoke in Latin, another interpreted his words in Greek. The short sentence of it was: Be of one mind in your doctrine, cease your quarrels and accept my mediation!

Then he gave the chairman there was a meeting, Hosius, the word. Then a chorus of accusations and counter-accusations soon arose between homo-ousians and their opponents. They had already accused and slandered each other by secret letters and pamphlets to the emperor, 175) but the emperor pretended not to know anything about it. Now he only threw in a few calm, sarcastic words in Greek now and then, and thus calmed the stormy quarrel. He immediately convinced himself that the majority of the meeting, as Hosius had predicted, consisted of supporters of the homo-ousion. All the Western and most of the Eastern bishops belonged to it, only a few inclined to Arius. At a subsequent meeting things became even more heated. In vain the minority party attempted reconciliation. A letter that one of them, Bishop Eusebius of Nicomedia, read as his confession of faith, in which he strove for mediation between homo-ousion and hetero-ousion, was not listened to to the end, but his opponents tore it from his hands, in the presence of the emperor.

But the decision did not come from the side of the clergy, but from the secular overlord. However, he had long been incited against the Arians by his court preacher Hosius, the bishop of Cordoba. Now Constantine, as a true soldier impatient about the endless theological wrangling, ordered Arius and his followers to yield. All, 180) except Arius, Eusebius of Nicomedia and four others, bowed to this princely command 176) and thus by the will of the emperor the homo-ousian or Catholic (universal) doctrine, now precisely formulated in the "Symbolum Nicaenum" was imposed as the only true one on all Christians in the empire. Arius himself, who had not appeared at the synod, was struck with all his followers by the ecclesiastical ban (anathema), and henceforth expelled from Alexandria. But the emperor punished him still further by banishment and soon Eusebius and the four other "recalcitrants", shamefully branded as "Porphyrians" 177), also shared his fate. Moreover, all their books were publicly burned. This petty, hair-splitting dogma dispute thus betrays the inner discord of the Church, as well as the narrow-minded persecution of its so-called orthodox majority towards every minority, as also became apparent in the later Middle Ages. It was officially said that the Church did not persecute heretics, and this was initially true, but it repeatedly incited the orthodox secular authorities to do so, both then and later.

The Easter controversy was also settled according to the wishes of the overwhelming majority and of the emperor himself. In a speech full of fierce hatred of Jews, he adjured the assembly to break all customs that connected them with the people "who had murdered Christ". 178) Thus, from then on, the Easter festival was dated according to the prescription of Anatolius. (see above)

The main goal, the unity of the Church, seemed now to have been achieved. Except for a few older heretical sects, for example the Novatians, 179) who, despite an invitation to the synod in which they had also participated, did not want to return to the Church, the overwhelming majority of Christians had remained orthodox.

Constantine, showered with gifts and exhortations to unity, sent the bishops home. The emperor remained homo-ousian-minded for another two years. In 326, for example, on 1 September, he promulgated, probably in Rome, a strict law whereby heretical and schismatic (=Arian) clergy lost all privileges, including freedom from munera, and were preferably to be tormented with this 181). The restitution of previously confiscated church property, which had not yet been completed everywhere, did not apply to them either. Their houses of worship were to be given forthwith to the orthodox Church, their other places of meeting were to be forfeited to the treasury,

while further meetings of heterodox were forbidden 182). Their books were also to be sought out and burned, as had already been decreed the previous year concerning Arius' writings. Only towards the Novatians, whose bishop Acesius had obtained church peace at the synod at Nicaea, was this heretical law soon softened to the extent that they retained their churches and coimeteria 183) (25 September 326). Yet they were by no means put on an equal footing with the Catholics.

But soon there was a change in the emperor's dogmatic preference. Possibly out of remorse for the murder of Crispus, and aversion to the hypocritical orthodox impostor Fausta, to whom he had just given her well-deserved punishment, he turned away from his court bishop Hosius and the homo-ousians and became more disposed towards the Arians, even the pagans.

Moreover, there was another cause. In 327 (or not long after) his sister Constantia, who could not survive the cruel murder of her son, lay dying in Thessalonica (?) 184). Shortly before she fell ill, she came under the influence of a secret Arian presbyter, who convinced her that Arius and his followers had been treated unjustly. On her deathbed, when Constantine came running to her, she now adjured her brother to recall the innocent banished.

This happened. In November of the same year he summoned Arius to court and promised him rehabilitation, provided he would subscribe to the Symbolum Nicaenum by a declaration. This Arius did, but in such ambiguous terms that they could be interpreted as both homo-ousian and Arian. (November 327) 185)

Thus he was restored to his honour and soon the other exiles, including Eusebius of Nicomedia, returned at the emperor's command after having written letters of repentance. But when Arius left for Alexandria again (summer 328) and wanted to become presbyter there again, Athanasius, who had been bishop there since the death of Alexander (28 June 328), refused him access to the Church 186).

This Athanasius, formerly deacon of the previous bishop, was a domineering, fanatical, truly medieval prelate, and already filled with the later papal ideal of elevating the Church above the State in power. He sent the emperor a haughty letter, that he could no longer receive an apostate, who had once been struck by the anathema, into the Church. Then Constantine ordered him, also on the advice of Eusebius, his new favorite, to admit Arius immediately and to rehabilitate him, on pain of deposition and banishment. 186)

Athanasius, however, did not care, and the emperor, averse to further disputes, gave in for the time being. Arius, however, both in Alexandria personally, and elsewhere through his followers, zealously made propaganda against his enemy. In Antioch he had the success, that the homo-ousian bishop of this city, Eustathius, was overthrown by an Arian majority in his community (329) 187) and banished. A synod convened in that city appointed a certain Eulalius in his place, and after that the Arians maintained themselves in this important seat until the end of the 4th century.

In the meantime Eusebius and his followers intrigued fiercely with the emperor against the Alexandrian bishop. First they accused him of demanding linen garments from the Egyptians as a tax. 188) When this charge was refuted by Alexandrian presbyters, who happened to be at Nicomedia at the time, the Arians accused their enemy of political conspiracy against the imperial authority. Thereupon Constantine (331) personally summoned Athanasius to Psamathia, 189) a suburb of Nicomedia, convinced himself of his innocence, and sent him back with honor to his bishopric. Then his enemies thought they had finally found the right weapon against him. They accused him to the emperor of the murder of Arsenius, the bishop of the Melitian sect, who was after all close friends of the Arians. He was said to have misused the severed hand of his victim to commit black magic with it. 190)

Since both pagans and Christians at that time, including Constantine, were convinced of the existence of sorcery, and the Christians in particular abhorred it as a criminal collaboration with Satan and his demons, this was a serious accusation. For these and other accusations Athanasius was now summoned before a new synod, which the emperor convened at Tyre 191) (335). His enemies even showed, so they claimed, the corpus delicti, the severed hand of Arsenius to the assembled clergy and the imperial president Dionysius. But according to the orthodox he completely destroyed this accusation by suddenly bringing the living Arsenius, whom the Arians had kept hidden all this time, into the hall. On the other hand, according to an Arian historian, 192) Athanasius is said to have hired a slut in order to shame his enemies, who in turn should have slandered Eusebius of Nicomedia as her seducer. This plan did not succeed, however, because the woman in question refused to accuse such a respectable man of such infamies. 192) The result was that Athanasius was declared deposed from his seat as a troublemaker by almost unanimous votes. Then all the members of the synod went to Jerusalem, where the church of the Holy Cross, built by

- 136010 order of the emperor, was about to be consecrated. 193) Here Eusebius and the other bishops solemnly received Arius, as a repentant, back into the ecclesiastical community, so that he emerged victorious from the battle. But Athanasius did not acquiesce in his sentence, but hastened to Constantinople, to appeal to the emperor. Just as he arrived, Constantine rode out of his palace on horseback. The proud outcast raised his hands imploringly to him for a moment's hearing, but the emperor did not recognize him and, when he was told who he was, at first refused to hear him. But Athanasius persisted, obtained an audience, and the emperor promised him that he would immediately summon all the members of the synod of Tyre to Constantinople, to deliver their judgment again in his presence.
- 136015 to speak. The accused bishops, however, feared a new Nicaea, and now dared for the first time to defy the emperor's orders. Instead of coming themselves, they sent six party leaders, including Eusebius of Nicomedia, to the capital. These again succeeded in inciting the emperor against their enemy.
- 136020 Now they accused Athanasius of having threatened to prevent the annual grain shipments from Alexandria to Constantinople. 194) This was the decisive factor. Finally the emperor banished the orthodox bishop to Trier, but on condition that no one else would occupy the chair in Alexandria for the time being, so that the exile's honor would not remain out of the question 195).
- 136025 But now Arius tried to seize the vacant chair. He had almost persuaded the emperor to do so, when he suddenly collapsed in the middle of a square in Constantinople and died. 195) The orthodox, of course, spoke of a judgment of God, but Arius' friends whispered of poisoning by his enemies. The emperor, however, fell more and more under Arian influence, especially that of Eusebius of Nicomedia. Towards the spring of 337 he suddenly felt ill and used the baths in his capital to recover. 196) When this did not help, he crossed the Bosphorus to Helenopolis, where he visited the martyrdom church of Lucian, which his mother Helena had once had built there. Here he knelt down and begged forgiveness for his past sins, and for the first time received the solemn laying on of hands from the attending priest.
- 136030 Now feeling his end approaching, he went to his palace at Achuroon (Acyro), a suburb of Nicomedia, and there summoned the neighboring bishops of that region. 196) After a short speech he finally requested Eusebius of Nicomedia to give him "the bath of regeneration." According to the custom of those days, he had postponed baptism until his baptismal day, in order thereby to retain freedom in his actions, 197) to which many acts of robbery and blood testified.
- 136035 He had murdered many enemies, yes friends and relatives, yes even his own son and wife, and all their reproachful shades now appeared to him in tormenting visions. Now, in superstitious fear, he hoped to wash away all these former sins that burned him to the core, with a little holy water. When this ceremony was accomplished, he had himself wrapped in a purple robe of state, and laid down on the imperial bed of state. After this he spoke a prayer of thanksgiving, and then died soon, on the afternoon of the feast of Pentecost.
- 136040 Since he died in the Arian dogma, his death caused the greatest discord between the two parties of the Church, which he had tried in vain to reconcile.
- 136045
- 1) Only since a large city was founded in the Balkans, Constantinople (330), the prosperity of this part of the empire was also lost.
- 136060 2) Only the West of Illyricum (Noricum, Pannonia and Dalmatia) was Latinized; the rest was not. The expansion power of the Latinized Illyrians was still evident in their late descendants, the Walachians, who pushed across the Danube around 1000 and settled in present-day Romania. (The Romanians are therefore not descended from Romanized Dacians). Of the other Illyrians, only the tribes between Skodra (= Skutari) and Apollonia have retained both their original language and their place of residence (Albanians) throughout the centuries. Their relatives in Moesia, however, had already been Hellenized in the late imperial period.
- 136065 3) The origins of Emperor Claudius and his two brothers Quintilius and Crispus lie in obscurity. Most contemporaries at least considered Claudius to be a natural son of Emperor Gordian III from his youth, "when he was sexually initiated by a mature woman." (Epit. de Caesaribus, 34). But to hide his shameful or less honorable birth, Claudius himself took the name Flavius and claimed to be descended from the house of Vespasian. Later members of his family, such as Constantius and Constantine, followed him in this, so that their eulogists called them by this flattering name. – Seeck, however, doubts, without further proof, Constantine's relationship with Claudius.
- 136070 4) Drepanum was the birthplace of Constantine's mother Helena, and was later called, in her honor, Helenopolis. (Hieronym. Euseb. Chronicon).
- 136075 7) That she was later Constantius' lawful wife follows, among other things, from the demand that Diocletian made of her, to divorce her. (See also Eutropius Aurel Victor de Caes, Epit.

de Caes, etc.)

8) See Euseb. Hieron. Chronicon. Flattery of Constantine and the following Christian emperors led later historians (Aur. Victor, etc.) to degrade their pagan predecessor Diocletian to a freedman or the son of a freedman of a certain senator Anulinus. But if that were so, then the gentile name that Diod. placed before his own, "Valerius" would have to have been borrowed from a Roman patron of this family. And now no Anulinus of that time originated from the gens Valeria, but from the gens Annia, as for instance the praefecti urbis of 306 and 312. Diocles was therefore not a freedman, and could therefore arbitrarily place the name Valerius before his own, even if he did not descend from this gens, which also remains possible. By the way, his Christian enemy Eusebius calls him "son of a clerk". Eutropius gives both readings without any particular preference (Eutr. IX, 19).

10) According to other sources he was a Batavian, Aur. Victor 39, 20: "Menapiae civis" (Eumenius, Eutropius). The similarity in sound and accent of "Menapiae" and "Bataviae" makes it likely that one of these texts must be corrupt.

12) The later veneration of Constantine and his successors by their courtiers was only slightly inferior to that of Diocletian.

13) See evidence Lact. De Mort. 7, Euseb. de Mart. Pol. 13. Zosimus II, 32, however, attributes this innovation to Constantine, and Burckhardt and Seeck follow him in this.

15) The doctrine of the Manichees, like that of the earlier Gnostics, was a so-called syncretic faith, i.e. amalgamated from Christianity and numerous other religions, including Persian Mazdaism or the doctrine of Zoroaster. The Manichees honored as the founder of their religion a certain Manes, who suffered martyrdom in Persia around 272 on princely orders. Not long after, his doctrine spread throughout the Roman Empire and was fiercely opposed by pagans and also by Christians, for example by Augustine, who had belonged to that "heretical" sect for a while.

26) Moreover, there was general embitterment because Galerius had recently deprived Rome, formerly tax-free, of this privilege and had the taxes collected with great severity by the hated quaestor Abellius. 28) It is true that Constantine had been legally married earlier, from the end of his boyhood ("ab ipso fine pueritia") (Paneg. VI, c.4). But this unknown woman bore him no children, and apparently died or was divorced. He had fathered his son Crispus with a concubine Minervina (See p. 21 of this book and further in Seeck, Untergang II Anhang p. 508).

30) Lactantius speaks of ulcers; Aur. Victor says (Epitome c. 40) "consumptis genitalibus defecit", which justifies my assumption.

31) For example, the martyrdom of Barbara is known, which is attributed to Daja's governor Martinianus (later transferred to the service of Licinius).

34) This was only completed later (313-315). The bas-relief images on the four friezes on either side above the side gates glorify his last campaign, against Maxentius. Two inscriptions on either side above the main gate still bear witness to his triumph "over the tyrant and all his followers". The expression "instinctu divinitatis", a mediation between pagan and Christian monotheism, proves Constantine's carefully veiled Christian disposition. An earlier opinion, that under the word "divinitatis" another, completely pagan text, also of 11 letters, would shine through, namely "IOVISOPTMAX" (Jovis Optimi Maximi) was refuted by de Rossi, after examination of plaster casts in 1863 made at the behest of Napoleon III. The legend of the baptism of Constantine by Pope Sylvester, which first occurs in Zonaras, I pass over with understandable silence.

35) The difference between the texts in Eusebius and Lact. comes down to this:

I. Those in Eusebius were addressed by both emperors (and perhaps originally also, officially by Max. Daja, according to Seeck) to all governors and prefects, at least none are named further); those in Lact. only by Licinius to the governor of the newly conquered Bithynia (after the 2nd war with Daja).

II. Lact. differs from Eusebius in the absence of the introduction (which guarantees tolerance and state protection for all religions), and further in some details that could make Licinius (and thus indirectly Constantine) pass for a Christian. For example, Eusebius gives: hopoos ho ti pote esti theistetos kai ouraniou pragmatos hemin.... eumenes einai sunethei (lit: that what there is of divinity and heavenly substance might be favorable to us).

Lactantius: quo quidem divinitas in sede coelesti nobis. – propitia possit existere. (Mercifully might act).

The latter reading is clearly Christian-anthropomorphic; the former, a vague middle form between Christian and neo-Platonic pagan. Probably Eusebius, otherwise an arch-falsifier, in this case gives the literal, translated from Latin text: Lact. a twisted for his purpose to present Licinius, and therefore certainly Constantine, as declared Christians. (See further Josef Wittig, Rom. Quart. schr. Suppl. XIX, who however does not dare to come to this conclusion).

36) Lactantius' writing also probably published in the spring of 314, under the fresh impression of the persecutions and victories of Constantine and Licinius, mentions the death of Diocletian before that of Maximinus Daja and before the murder of his Prisca and Valeria, so in 313. But how can the year 316, in Eusebius' Chronicon, and in the Chronicon Paschale be reconciled with this? Probably Constantine D. deliberately kept his suicide a secret, in order to heap the full odium on Licinius, who had the two ex-empresses Prisca and Valeria killed in the same year. Only after the successful war against Licinius did Constantine no longer have any objection to making it known, and even granted the deceased pagan emperor the honour of an apotheosis by the senate (316).

37) Candidianus, Galerius' forefather by a concubine, was engaged to Daja's 7-year-old

daughter, and was therefore not allowed to live to avenge her death.

38) The two ex-empresses, although Christian-minded before the persecution, must have turned away from that doctrine later, and that explains the little compassion Lactantius showed for their miserable fate.

39) Only with the final division of the State into the Eastern and Western Roman Empire (395) were the borders between the two parts precisely determined.

40) The writers call him Caesar, but according to coins he was Augustus.

41) According to Anon. Vales. Valens was simply deprived of his rank; Zosimus (II. 20) expresses himself ambiguously and suggests that he was also put to death; Aur. Vict Epit. attributes his death to Licinius.

42) Although no document tells us anything about the extradition of Senicio, I think that Zosimus, who has Valens called "the instigator of all evil", means Senicio.

48) According to Socr. I, 4 he also forbade the bishops to associate with pagans in order to prevent Christian propaganda.

49) Since he was acknowledged by Constantine as his son, he was probably born at a time when Constantine was rich and powerful enough to be able to afford such luxury, i.e. after 305, when he met his father in Britain and soon became heir to the throne. The earliest year of birth can therefore be considered to be 306. Earlier is difficult, because then Minervina would have to have accompanied him with or without child, or else followed him long afterwards, alone and unprotected, neither of which is likely. Even later than 306 is not possible, since Crispus had his first child with his lawful wife Helena in 322, and would not have been married before his fifteenth year, (z. Cod. Th.)

Seeck does claim that emperor's sons were usually married off "ab ipso fine pueritiae" and understands this as from their 14th year, but that is incorrect, since the pueritia was considered to last until the 17th year.

52) Zosimus, from whom all this is borrowed, gives the following figures: 130,000, of which 30,000 remained, but he forgets that Licinius sent about half of his army with Martinianus had sent to Lampsacus.

53a) At the same time - 8 November 324 - his younger stepbrother Constantius, then not yet seven years old, was appointed Caesar. But it is highly unlikely that he was already charged with the government of Gaul, as Gibbon assumes on the basis of Julian. Orat. I. 53c). It is remarkable that it is mainly Arians and pagans (Philostorgius and Zosimus) who glorify the memory of Crispus, and not the Catholics.

56) That his death must be attributed to suspicion of fornication is evident:

I) From the agreement of 4 witnesses of different faiths, namely Zosimus (pagan, ca. 475) lib. II, 29; Philostorgius (Arian, ca. 400) lib. II, 4; the Artemii Passio 43. (orthodox) and Zonaras (orthodox), while it can also be read, with some good will, from the anonymous Epitome de Caesaribus: ("Fausta conpuge, ut putant, suggerente") and the Chronicon Paschale.

II) From 5 fragments of edicts against fornication that Constantine all issued at the same time, (see next page in the text).

III) Eutropius, Eusebius-Hieronymus (Chronicon) Aurelius, Victor and Sidonius Appollinaris only mention that Constantine first killed Crispus and then Fausta, but these testimonies do not exclude suspicion of adultery. Nor does the silence of Anonymus Valesius, pars I on this. As for Licinianus, two witnesses Eutropius and Eusebius-Hieronymus (Chronicon) state that he was killed at the same time as Crispus, so that I doubt Seeck's assertion that he lived on until 336. All the more so because the passages of evidence on which he relies (Cod. Th. IV, 6, 1 and 2) have been misinterpreted. First of all, it is not Licinianus that is mentioned here, but "filius Liciniani", the son of a certain Licinianus, and moreover, the frequent occurrence of the names Licinius and Licinianus throughout the empire forbids identifying two so-called persons.

57) The text usually bears the heading "de raptu virginum ac viduarum", but one of the variants has "de raptu virginum ac feminarum", which seems more appropriate.

An even earlier edict of Constantine, dated 3 February 326 in Heraclea, also associated with the case of Crispus by Seeck, cannot have anything to do with it, because of the place and time of dating, and because of the content. After all, it states that innkeepers are punishable for adultery, but slaves in an inn are not, and it lacks the strict, moralizing tone of the other edicts. (Cod. Th. IX, 7, 1). Seeck's assumption that all these edicts would be fragments of a single edict seems to me unprovable. I also reject his claim that Crispus was indeed guilty of adultery, which is contradicted by all sources.

59) Cod. Justin. V, 26. With this last edict he wanted to show how he regretted having fathered Crispus with a concubine. 60) Philostorgius II, 4 calls him "cursor" or prodromos, which probably does not mean charioteer here, but runner. He is indeed the only informant of this story, but the details correspond entirely with the character of Fausta.

62) Hieron. mentions the year 328 in the Chronicon, but his chronology is often confused; Zosimus states that it happened in Rome, so in the summer of 326, the last time that Constantine stayed there after Crispus' death. The Chronica Gallica A. DXI (M. G. H. Chronic. Minora I) also states that Fausta was killed in the same year as Crispus and Licinius Jr. Despite the many errors in the chronology, this document remains valuable, as it contains other sources that are now lost.

65) The marble was obtained from the islet of Proconnesus in the Propontis. (Zosim. ibid.)

74) Chronicon Paschale, from which the further details of the initiation feast are also taken.

78) Id. II, 31. These Taifali also appeared later, after the battle of Adrianople (378) when they crossed the Danube with other Germanic and Sarmatian tribes and plundered Thrace together with the Goths.

- 80) Here he had promised Athanasius of Alexandria a meeting in Psamathia, near Nicomedia (Ath. apol. c. Ar. 61, 62). Characteristic of Constantine in these years is that he put ecclesiastical matters above military ones.
- 136230 81) Gibbon has misinterpreted this place in the Chron. Hieron. He presents it as if the subjugated people were called Limigantes. The text is: "Sarmatae Limigantes, dominos suos, ui nunc Argaragantes vocantur, facta manu in Romanus solum expulerunt."
- 82) After the victory over Licinius, all of his decrees were annulled, and many new officials were appointed in the East. (Cod. XV, 14, 1).
- 136235 92) Philostorgius II, 16. But he may only tell this story to cleanse his fellow Arian believer, Emperor Constantius, of guilt.
- 108) Cod. Th. XV, 14, 4. Seeck wrongly calls this a countermeasure against a decree of Maxentius, and sets this law without proof in 312 or earlier.
- 136240 118) This was thus the average price of a slave. See Cod. Just. VI, 1, 3 and 4.
- 122) Cod. Just. August 17, 329. It is reminiscent of modern Chinese conditions during the last famine there, when women and children were also offered for sale.
- 124) Cod. Just. V, 27 and Cod. Th. IV, 6, 2 and 3. The name Licinianus in this last law need not be identified with the murdered ex-emperor Licinius as Seeck believes. The law therefore need not be directed against the young Licinianus. (See previous chapter).
- 136245 126) Cod. Theod. II, 8, 1. Shortly afterwards he also turns against another pagan abuse, the growing number of holidays, which were often arbitrarily instituted by higher officials within their area. He expressly forbids them this, and declares the determination of holidays an exclusively imperial privilege.
- 127) See Lact. Div. Inst. I, 11-14. The theory that Lactantius here adheres to, as do most of his Christian contemporaries, originates from a certain Euhemerus of Messene or Cyrene, a philosopher who lived at the court of Cassander of Macedonia around 300 BC. He proclaimed that polytheism originated in the veneration of famous men after their death. It escaped the Christian apologists that this Euhemerism provided strong arguments against their own religion as well.
- 136250 130) This also proves that the Livian foundation year 754 BC is not correct. In truth, it was not known then, just as it is not known now, when Rome was founded.
- 143) Also told by Sozomenus, but doubted. (Sozom. I, 5.) However, the final conversion to Christianity that Zosimus links to this is incorrect, since the laws prove that Constantine had already been under Christian influence.
- 136260 145) This is the probable explanation of the miracle story in which Bishop Alexander of Constantinople is said to have struck a pagan debater dumb "in the name of Christ". (Sozom. I, 18).
- 146) This ridiculous superstition was common among all fourth-century people, pagans and Christians, so Constantine may well have considered it to be true. Shortly after Julian's death, for example, Emperor Valetianus (a Christian) had his former teacher Maximus, the Neoplatonic theurgist [??], killed as a sorcerer.
- 136265 155) Eus. Vit. Const. III, 57. Burckhardt's opinion that the god Asclepius had also occupied himself with political questions and, for example, would have supported the revolt of Calocerus is incorrect, since 1st the temple was destroyed in 331, and Calocerus did not break out until 333 and 2nd. the Asclepius temple did not give oracles.
- 136270 162) Hieron. Chron. As early as 320 the emperor had, in order to please the Christians, repealed the old Roman law against unmarried and childless persons (Cod. Th. VIII, 16, 1.)
- 166) Constantine was still unbaptized, but as a follower of the Christian religious exercises or catechumen he was generally regarded by the Christians as a fellow believer.
- 136275 167) Nevertheless, Constantine's favoritism towards the orthodox did not bring the Donatists back to the Church, but rather alienated them from it for good. Their sect continued to exist, despite the oppression, and shortly after the Council of Nicaea (325), in 330, it had again gained so many followers that Constantine, supposedly to protect the Catholics, took new measures against them. (Cod. Th. XVI, 2, 7 and Optat. Milevitanus I). Under his successors the Donatists were oppressed even more than before. Nevertheless, they continued to exist as an independent sect for three centuries, so that during the migration of the peoples they greeted the Vandals as liberators.
- 136280 168) There are three documents concerning the freedom from munera granted to the orthodox clergy:
- 136285 a) Cod. Th. XVI, 2, 1, dated PRID. KAL. NOV. CONSTANTINO A. III ET LICINIO III C. CONSS., i.e. 313 October 31. But in one of the mss. stands CONSTANTINO A. IIII, which points to the year 315.
- b) Cod. Th. XVI, 2,2, dated XII KAL. NOV. CONSTANTINO A. V. ET LICINIO CAESARE CONSS., i.e. 319, 21 October. However, since the previous document (Cod. Th. XVI, 2, 1) clearly refers to an earlier law with the same content, document b) must have been issued before document a), so probably 21 October 315 or 313.
- 136290 c) EUSEBIUS, Hist. eccl. X, 7 which agrees in content and partly verbatim with document b). My theory now is that all these 3 documents are from the same year, and not from October 313, (because then Constantine was in Trier and was much too busy with Germans), but from October 315. After all, at that time the emperor was in Milan, where he had settled the Donatist conflict in favor of Caecilian. Moreover, in document a) the Donatists are already spoken of as "haeretici", i.e. heretics. If this law was from October 31, 313, as Seeck assumes, then it would be very unreasonable and premature of Constantine to speak out against the Donatists at that time, while no council had yet condemned them positively, (also that in Rome not of May 313). So all that remains is: the year 315 for all three documents, namely document b) and c)
- 136300

21 October 315 and document a) 31 October 315.

The letter of state remuneration to Caecilianus (Eus. hist. eccl. X, 6) must also be from around the same time, intended as a reward for the torment that this cleric had to endure from the heretics, and in which the Donatists are spoken of as an insignificant group, so apparently after their defeat.

171) The text says "Murgillo", possibly a typo for "Mediolano" since Constantine was staying there at the time.

172) So named after Melitius, bishop of Alexandria, deposed during the persecution of Diocletian and replaced by Peter because he had sacrificed to the pagan gods (Socrates, I, 6).

173) Anatolius, Alexandrian by birth, and bishop of Laodice in 279 AD, was a learned and versatile man (Euseb. Hist. Eccl. VII, 32, 6 sqq.). (Euseb.-Hieronymus, Chronicon) 177)

Porphyry, Neoplatonic philosopher of 232-304, who wrote against the Christians, among other things. Not to be confused with the poet Publilius Optatianus Porphyry, a pagan contemporary of Constantine. 179) Novatus taught during the reign of Emperor Decius that those who had sinned after baptism should be excluded from the holy sacraments.

180) Among those who slavishly denied their own opinions was the historian Eusebius of Caesarea.

184) Sozomenus II, 27. Constantia probably died in 327, since the emperor stayed in Thessalonica, her place of residence, only in that year between 326-329 (February 327, see Cod. Th. XI, 3, 2).

185) Socrates I, 25. Arius could not have been recalled by the emperor in 326, as Seeck claims, since he must have traveled to Alexandria at most a year later, where Anathanasius was then bishop, which could not have been until after 28 June 328. Moreover, Arius was rehabilitated shortly after Constantia's death, so probably in 327.

192) Philostorg. II (ap. Phot.) both the Arian and the Orthodox reading of what happened at the synod are uncertain. Only the result, the deposition of Athanasius, mentioned by both, is reliable.

197) Sins committed after baptism were considered unforgivable.

THE STUDY OF MEDIEVAL LATIN

PAST, PRESENT, FUTURE

FAREWELL LECTURE OF CHRISTINE A. E. M. MOHRMANN

Farewell lecture, given on Saturday, November 10, 1973, by Christine Mohrmann upon her retirement as professor of Vulgar Latin, Old Christian Latin, and Late Latin at the University of Amsterdam.

Dear Audience,

It was in 1938 that the Utrecht medieval scholar Oppermann spontaneously asked a young private lecturer, after delivering her inaugural lecture, entitled "The Structure of Old Christian Latin," whether she would also be willing to take on the teaching of Medieval Latin. With the optimism characteristic of youth, which I now find incomprehensible, the aforementioned private lecturer accepted this suggestion, and thus her licentia docendi was soon expanded to include Medieval Latin. After a few years, the private lectureship at Utrecht University was converted into a lectureship. Thus, Medieval Latin was taught ex professo as an examination subject at a Dutch university, based on a special teaching assignment.

The late Oppermann, a man who made such great contributions to the practice of medieval studies in our country, with this act sided with his distinguished German compatriots Wilhelm Meyer, Ludwig Traube, Paul von Winterfeld, Paul Lehmann, and others, who had introduced the study of Medieval Latin as an autonomous philological science. That Oppermann was right in his desire to give medieval Latin education its own place is proven, among other things, by the subsequent development of the subject at our universities: today, 35 years later, almost every Dutch university has a chair in medieval Latin, whether or not it is connected to Early Christian Latin. Institutes for medieval Latin are becoming hallmarks of the practice of a subject that is slowly but surely gaining its place in education and scholarship in our country as well.

Without going into details, one can conclude that the Netherlands now holds an honorable place among the countless practitioners of medieval Latin in Europe and overseas, both through its education and research. For this—in its philological form—our young science shows evidence of great vitality: one is gradually realizing that Classical and Early Christian Latin, in their literary form, find their natural, yet very specific, continuation in Medieval Latin, and that these three—essentially forming a unity in multiplicity—cannot be ignored from our cultural pattern.

Although from the outset, more general works on the phenomenon of Medieval Latin and Medieval Latin literature appeared in considerable numbers, and Ernst Robert Curtius, in his masterpiece: *European Literature and Late Middle Ages* (first edition, Bern 1948), also made a significant attempt at a literary synthesis from antiquity to modern times, it seems to me that in recent decades a certain preference has been given to specialized, detailed issues in the fields of codicilology, paleography, philology, and—especially—the much-needed textual criticism. I see this, first and foremost, as a symptom of the seriousness with which our studies are approached. People are unwilling to indulge in general speculation before laying a solid foundation through detailed study. But the incomprehensibility of the mass of Latin texts left behind by the Middle Ages, which is often referred to with the—not always adequate—label of "Medieval Latin literature," also plays a role. This mass is currently difficult—if not impossible—to approach systematically, and so people resort to detail. One must not forget that, regarding the volume of surviving texts, there is a significant difference between Classical and Late Latin literature and Medieval literature. Classical Latin literature as it has come down to us forms a closed-comprehensible-corpus. As a result of a choice—often conscious, sometimes also more coincidental—this corpus is limited. This choice is partly determined by educational tradition, partly by a judgment of value; what was deemed worthy of being copied onto expensive parchment? Medieval Latin literature, however, was never actually subjected to such a sifting. Hence this unmanageable mass of texts – which arose on a very extensive territory – which has been inventoried with great care and patience in a handbook such as that of Manitius and his successors, but which has hardly yet been assessed for their value or worth. In his *L'essor de la littérature latine au XII siècle* (2 vols., Paris 1946), De Ghellinck attempted to approach the exceptionally rich – and generally high-quality – Latin heritage of the twelfth century from a literary perspective, but due to a one-sided classicist assessment, he is still too much stuck in the tradition of Traube and co.

And this brings me to the actual topic of this afternoon, which is not of a literary-historical nature, but of a philological-linguistic nature. How should we assess Medieval Latin as a linguistic phenomenon? To what extent is there unity or diversity

here? Should one speak of evolution or merely of change? And first of all: what is the status of the chronological fixation of what is called 'sloppy' Medieval Latin? These are all questions that were addressed, especially in the earliest studies of Medieval Latin, but to which no definitive answers have yet been given. This remains a major task for the present and the future. I would like to make some general remarks about these problems, more as a pointer to tasks to be accomplished than to provide any definitive answers. My swan song may thus also be aimed at the future.

Generally, there is agreement on the standard that must be applied to determine whether a form of Latin can be classified as Medieval Latin. Medieval Latin was not the everyday language of an ethnic community; it was not passed down from mother to child, nor did it develop as a national language of everyday life. Instead, it was passed down through education and schools, used by an intellectual elite. It transcended national boundaries to gradually become the higher language of culture in what would one day be Western Europe. Through education and tradition, it played its role as the vehicular language of what is called the *respublica litterarum*. From this description, it follows that "Medieval" in this context is not a chronological designation in the strict sense of the word. How to classify such a phenomenon linguistically is a much-discussed problem, to which I will return.

The survival of Latin in this special form was made possible by several factors: first, by the emergence and centuries-long persistence of the classical literary language and style, which—following the Greek example—was strongly normatively determined, passed down through an almost constant school tradition until the end of antiquity. The existence—and teaching—of these literary normative language and stylistic forms has, on the one hand, hindered the development of the Latin colloquial language, but on the other, as the gap between colloquial and literary language widened, it has also facilitated the autonomous survival of a literary language across large areas. The survival of the classical literary tradition, with secular classical literature as its norm and center, was fostered and ultimately made possible during the fourth and fifth centuries by Christians' acceptance of the ancient school system and by Christian writers' faithfulness to the ancient literary tradition and its stylistic devices, despite the uniqueness of their language. Augustine—and others with him—considered knowledge of ancient secular literature and its time-honored stylistic devices useful, even for Christians. While it is true that since Augustine, the study of ancient literature and classical stylistic processes has increasingly been considered a kind of propaedeutic for Christian biblical study, a view that would find an influential advocate in Cassiodorus in the sixth century, this Christian attitude created the possibility for the survival of the Latin literary tradition. It has rightly been said that the decisions that enabled the survival of Latin in the centuries to come were made in the fourth and fifth centuries. Yet, it would be inappropriate to think solely of this literary development here: it goes hand in hand with the Western Church's acceptance of Latin as the language of liturgy, Scripture, and all forms of "institutional" church life. This explains why the first expansion of Latin as "Medieval Latin," i.e., as a non-national, higher-level language of communication, occurred as a result of missionary activities. Latin initially expanded its territory by preaching Christianity to peoples who had had no contact with Latin culture in antiquity. The first, Roman, expansion of Latin was marked by the sword, the second, Christian, by the cross. But expansion by the sword generally displaced the indigenous national languages, while the cross allowed them the freedom to maintain their own native language.

We first see this expansion of Latin in Ireland, so isolated and barely touched by ancient culture. I cannot here enter into a discussion of the problems associated with the Christianization of Ireland, nor concern myself with all the mysteries surrounding the controversial figure of the apostle of Ireland, St. Patrick. I have commented on this elsewhere. It is well known that the last word on this subject cannot yet be spoken. 1. But whether one considers Patrick's preaching the absolute beginning of the Christianization of the Green Isle, or believes he had predecessors, or whether one places the beginning of his missionary work around 431 or 461, it is certain that Latin was brought to Ireland along with Christianity. In my opinion, Patrick's Latin shows clear traces of fifth-century Latin in Central Gaul and perhaps has some affinity with the dying Celtic Latin of Britain. However this may be, after the episcopal Church of Ireland, shortly after Patrick's mission, had developed into a form in which an extremely rigorous monastic system, perhaps a Christian interpretation of the ancient clan system, had taken over the leadership of the church, monastic schools emerged in Ireland. There, a Latin was practiced that, in its bizarre artificiality, bears all the marks of a school language, drawn from

glossaries and late antique textbooks: a pseudo-learned language adorned with foreign, often Greek or pseudo-Greek words, with neologisms, such as "prosator" for "creator," and with Hebrewisms like "iduma" for "manus." As strange as all this may seem to us, here—at a time when Latin was still very much alive in the late antique world—we are dealing with the oldest form of Medieval Latin. This Latin tradition would soon also have a stimulating effect on our own native language: a phenomenon we will find again in the Germanic regions.

The isolation of Irish Latin culture has been somewhat broken by the peregrinations to the continent and thus by contact with Anglo-Saxon Latin culture. Yet the Irish remained faithful to their own tradition for a long time, which drew primarily from their Christian Latin past and manifested itself in a bizarre predilection for rhetorical flourishes. I have delved into this early, in many ways enigmatic, Irish Medieval Latin in some depth, firstly to demonstrate how artificial its initial beginnings on non-Roman soil were, and secondly to clarify that Medieval Latin did not—as many still believe—begin with the Carolingian Renaissance.

The course of events in Anglo-Saxon Britain was again different. The Roman occupation of the island, once populated by Celts, had not led to complete Romanization. When the Roman armies withdrew at the beginning of the fifth century, the Latin tradition gradually disappeared. And when the Germanic—still pagan—Angles and Saxons occupied the country in the mid-sixth century, the only partially Romanized population was pushed back to the western fringes. There, the ancient Latin tradition languished for some time in the Celtic monasteries. It was there that Gildas described the downfall of Celtic Britain, and it was also in these monasteries that a certain contact with the monastic culture of Ireland was established.

As for the Anglo-Saxons, they were—as is well known—converted to Christianity by a well-organized Roman mission sent by Pope Gregory the Great. At the same time, Christianity was also preached among the newly settled Germanic population from the north by Irish monks. The Irish educational system was brought to the Anglo-Saxons from Irish monasteries like Lindisfarne and Whitbey. However, after an initial conflict between "Romans" and "Irish," the Roman movement gained the upper hand. This was the result of direct contact with the still-existing late antiquity civilization. When Pope Vitalian sent Theodore, born in Tarsus and raised in the Greek East, along with the monk Hadrian, originally from North Africa and educated in the ancient Roman school system, both familiar with ancient and Christian literature, to the Anglo-Saxons, contact was re-established with the ancient cultures after Augustine's preaching. This contact would determine the development of Anglo-Saxon Latin culture for the foreseeable future. Although the connection with the Irish tradition was not broken, the arrival of Theodore and Hadrian, if we are to believe Bede's testimony, opened up a new world. In the schools of Canterbury, the Roman educational tradition was reconnected. And thus, the foundations were laid for a new beginning. But it was above all the generation following Theodore and Hadrian who, through continued contact with the late remnants of ancient civilization, would make Britain a treasure trove of much that was in danger of being lost in the ancient world. But wherever instruction was given, it drew from the two sources of Antiquity and Christianity, as once recommended and taught by Augustine of Hippo. In Northumberland, a foundation of Benedict Bishop, the double monastery of Wearmouth and Jarrow, would be filled with, first of all, of manuscripts brought from Rome by the tireless "Rompilger." Then, in his diligent work as compiler and author of schoolbooks, and simultaneously as a gifted historian of his people, Bede would lay the foundations for a tradition that, as—in the cycle of culture—would reconnect the ancient, once Romanized continent with the treasures of the Latin past.

Bede's Latin, in its sometimes monumental, sometimes naive simplicity, deviates sharply from the baroque style of the Irish tradition. It undoubtedly draws more on the late antique Christian tradition than on the ancient classical one. But however "natural" and "evolving" this early Anglo-Saxon Latin may be, here too, as among the Irish, the vernacular, alongside Latin, will soon play its role as a literary language. Even in the North Germanic regions later Christianized by the Irish-Anglo-Saxon mission, people would be aware of the evident bilingualism, and soon—following the example of Latin—the vernacular would also assert its rights in written form. This clear awareness of bilingualism, which already early stimulated the vernacular languages, clearly distinguishes the Celtic-Germanic regions from the old Latin cultural regions.

For there, development was different. First and foremost in Italy: here, the continuity in linguistic awareness undoubtedly persisted for a long time. People lived in the old literary tradition there and accepted the distinction between vernacular and literary language as normal within the context of a centuries-old

tradition. Thus, the development of the language towards Romance also occurred more slowly and gradually than elsewhere. In Italy, the cities also retained a certain importance as cultural centers, although it is unclear to what extent the old lay schools—following the ancient pattern—were able to maintain themselves here and there. Contact with the Byzantine world also had a conservative effect. And a certain literary tradition undoubtedly survived in the monasteries. In Italy, for example, the linguistic situation seems to have long been perceived as a continuation of the ancient dualism between a normative literary language and a freer vernacular. People here are far removed from the bilingualism of the Celtic and Germanic countries, but they also haven't experienced the shock therapy that, abruptly and imposed from above during the so-called Carolingian Renaissance, brought about a kind of restoration of the literary tradition. The so-called Eden of Capua from 960 is generally considered the first literary text in what one might call the, now Romance, vernacular of Italy. 2 But a chronicle, written shortly after 974 by a monk from Salerno and generally considered Medieval Latin, demonstrates how close the two linguistic forms still were. Be that as it may, during the tenth century, evidence emerged demonstrating an awareness of bilingualism. In 915, the Senate complimented Berengarius at his coronation with "patrio ore" (in Latin), while the people did so with "nativa voce" in the vernacular. And Pope Gregory V, who died in 999, was praised for his trilingualism in his tomb inscription: "Usus francisca, vulgari et voce latina instituit populos eloquio triplici." 3

Developments in the other major Mediterranean Latin-speaking country, Spain, initially ran more or less parallel to those in Italy. Just as Cassiodorus and Boethius reflected on the Latin heritage under Ostrogothic rule, Visigothic Spain underwent a similar, though somewhat more Renaissance-tinged, development. More than in Italy, Visigothic Latin literature was marked by a classicist-retrospective normativism. The world of Isidore of Seville, Braulio of Saragossa, Eugene of Toledo, and others is a typically classical, "schöngestige" world, but one that still has some contact with everyday language. This is not (yet) Medieval Latin. 4 The Arab invasions, at least externally, do not seem to have immediately broken literary continuity. Classical verses were still being written 150 years after the beginning of the invasions, but by then the character of literary Latin had become so artificial and the distance from the vernacular so great that these products may be considered part of Medieval Latin literature. The Spanish diplomata and charters, the oldest of which date from the eighth century, display a remarkable parallel with similar documents from the Merovingian world, and they may lead us to conclude that already then—in contrast to Italy—the separation between vox nativa and Latin had taken place. Linguistic development in Spain, too, therefore, exhibits its own characteristics. 5

This is even more true for the development in Gaul, which would culminate in the so-called Carolingian Renaissance. I can say a little about this. So much has already been written about this phenomenon that the general outlines can be considered well-known and clear. Gaul, which can be considered an ancient Latin cultural country, had suffered more from the invasions than the two major Latin peninsulas. 6 In Aquitaine and Provence, a certain literary culture persisted for some time—thanks to the continued existence of a few urban centers, but even more so to the culturally preserving activities of the inhabitants of the large estates and the bishops who emerged from these circles. But elsewhere, under Frankish rule, the ancient school system, which until then had perpetuated a certain literary culture, disappeared. With the disappearance of the ancient school—around the middle of the seventh century—the conservative literary influence on language use also disappeared, and the structural change: the transition from Latin to Romance, occurred rapidly. The scant instruction in Latin provided by the clergy to future clerics, primarily with a view to the—still officially Latin—liturgy, could not halt this development. Merovingian diplomats and charters demonstrate how people still tried to make do institutionally with Latin—but what kind of Latin—using fixed formulas and fragments of traditional word combinations. These documents demonstrate that people always felt the need for a Latin written language, but also their inability to master it according to traditional norms. 7 The reforms, primarily orthographic, of Pepin the Short could not rectify the chaotic situation. 8 Finally, through the energetic intervention of Charlemagne and his followers, an intervention that was primarily politically determined, a conscious restoration of Latin was achieved. This is a different situation than the introduction of Latin among the Irish, Anglo-Saxons, and Northern Germans as a result of a Christianization process; It is also far removed from the gradual development in Italy. After the chaotic conditions of the Merovingian era, a

restoration could only be achieved with external help. This help came from the Irish-Anglo-Saxon and Italian traditions. Thus, Carolingian Latin bears more clearly than elsewhere—the hallmark of Classical-Christian dualism. At the same time, the political ideal—a continuation of the tradition of the Roman Empire—led to a kind of humanistic idealism, which expressed itself at Charlemagne's court in a Renaissance interplay, a bizarre blend of biblical and classical tradition. In education and in the now flourishing literature, the restoration initially manifested itself in the form of a still convulsive, often slavish, classicism. But one already hears tones that seem to herald a new, different world. The Carolingian Restoration, in its conscious reconnection with both classical and Christian tradition, in its attempt to renew a literary-oriented monastic culture, and in its reorganization of the liturgy, presents a colorful and varied picture. But in assessing the value of this dynamic phenomenon, people too often mistake it for a distinct culture, which was merely the result of a primitive impulse to imitate.

What I have sought to demonstrate with this brief overview is that Medieval Latin in its first period, which lasted until around the year 1000,[9] is by no means a uniform phenomenon: that a clear distinction must be made here according to time and place, and that even the major dividing line between Celtic and Germanic areas on the one hand, and Romance areas on the other, does not adequately capture this diversity. In Gaul, centrally located in this new period of European history, as we have seen, after a crisis that threatened to sever the literary Latin tradition, the various elements of early Medieval Latin converged. There, a new pattern was woven, which, despite its modest—at times even childish—would be decisive for centuries to come. For although the Carolingian Renaissance has, in my opinion, wrongly been considered the beginning of Medieval Latin, it did leave its mark on later developments.

Clear lines emerge in the rise and fall of the following centuries: first, the expansion of the Latin territory—again under the influence of Western Christianity. Hungary, Poland, and the Scandinavian countries joined the already extensive Latin area. As in later antiquity, the unity of education—now based on secular and Christian literature—would also be a powerful fermentum unitatis. And so, the period progressed towards the high point of the Latin Middle Ages: the twelfth century. Decisive factors in this development include the rise of cities, with their trade and commerce, and the dynamic nature of the Middle Ages.

Western society, expressed, among other things, in the countless pilgrims who filled the roads of Europe and beyond, on their way to Compostella, Rome, Jerusalem, and the holy places. The opening up of the East through the Crusades strengthened contact with the Eastern world. The monastic reforms, which increasingly showed an international character, culminated in the lightning actions of a Bernard of Clairvaux: in the space of a generation or two, large parts of Western Europe were dotted with almost uniform monastic foundations, centers of strict asceticism, but also inspired by a new socio-economic ideal. 10

All this led to a rapid maturation of medieval man and to a greater need for education, even outside of church circles. The ancient cathedral and monastery schools could no longer meet the need for education. The great discovery of the twelfth century, the establishment of the *licentia docendi*, a teaching qualification independent of nationality and placed under papal authority, gave the free masters the right to teach here and there, thus confirming the international character of the *respublica litterarum*. The medieval universities in Italy and France would therefore see teachers and students from all parts of what would become the Western cultural world come together.

In the field of literature, this maturation manifested itself in an unusually rich and multifaceted Latin literature, which increasingly lost its strongly elitist character. A creativity now manifested itself that, according to some, culminated in poetry, but which, in my opinion, was equally present in prose: both in the humanistically oriented prose texts originating from the world of cathedral schools and in the more spiritual-mystical prose from the monastic world. And it also manifests itself in the more popular hagiographical literature, in pilgrimage reports, and in so many other forms.

Certain norms in language use are always observed, but it is certainly not the case, as Traube believed, that the now mature medieval person constantly looks back to Antiquity as an example and a standard. The connection with Classical and Christian Antiquity has certainly never been broken, but there is more awareness of continuity than of dependence.

And this brings me to the question, already frequently asked, how one should classify this Medieval Latin as a linguistic phenomenon.

136665 The first practitioners of Medieval Latin philology were plagued by the recurring question of whether Latin was a living or dead language. 11 In my opinion, a terminological error is being made in this endless debate, which has not yet entirely died down. When one speaks of a dead language—a term still applied to Greek and Latin, but which, in my opinion, is best forgotten because it unintentionally acquires a pejorative nuance—one means a language that is no longer spoken here and now. A language we know only from a preserved, closed corpus of written documents. "Dead" here, therefore, refers to a situation as it presents itself to us. But this "dead" says nothing about the so-called "dead languages" themselves. These languages were, for those who once spoke them and also wrote the texts we still possess and from which we must draw our knowledge of them, just as alive as any contemporary language. In other words, the term "dead," linguistically speaking, says nothing about the nature and structure of the languages in question. Now, there can be no doubt that, historically speaking, Medieval Latin is just as "dead" for us as Classical Greek or Latin: that is, here too, we have only a closed corpus of surviving texts. But this was not what those who posed the question of "dead or living languages" with regard to Medieval Latin meant: they were asking whether Medieval Latin as such, for the medievalists who had learned this language in school and who created an extensive literature in it, was a dead or living language. It is remarkable that in the long discussion of this problem, this terminological "error" or this specific use of the term has never been pointed out.

136685 Now, it is amusing to see how people have wrestled with this problem and how, in order to reach a satisfactory conclusion, they have tried to save the cabbage and the goat, to use a vulgar expression for once. Because people couldn't see a language learned at school, strongly oriented towards literature, as living, as a "real" language,[12] yet still felt the lifelike quality emanating from these texts, they were tempted to use the most unexpected metaphors. They speak of a corpse, from which nails and hair still grow (Traube); of a water nymph who, in her contact with a human, acquires a human soul (Vossler); of a wild animal in captivity (Lehmann), etc. Later scholars have separated the problem from the question of living or dead language, but these have often been replaced by simplistic or oversimplified designations. Strecker and Van de Woestijne see Medieval Latin as the normal continuation of Classical Latin, in the form it took in Late Latin writers. The great Latinist Einar Löfstedt also strongly emphasizes continuity in his last publications, seeing the transition from Late to Medieval Latin as a gradual process, in which Medieval Latin can be seen as a normal, organic language. This view, too, seems too simplistic to me. In my opinion, it may be valid for certain early phases of Medieval Latin, but it hardly does justice to the phenomenon as a whole. This theory of Löfstedt's can be explained by the fact that he specifically—and almost exclusively—concerned Late and Early Medieval Latin. 13

136705 Franz Blatt defends a remarkable, and in my opinion untenable, view. He considers all of Latinity "from Cicero to Copernicus" as an organic unity. But within that unity, according to him, lies a major division and division between profane, non-Christian, and Christian Latin. Between Symmachus and Ambrose, between Claudian and Prudentius, there exists—as Blatt says—a clear antinomy, also in language, while there is an evident continuity between early Christian writers and most medieval writers. 14

136710 Although I am deeply convinced of the uniqueness of Christian Latin and literature, I would certainly not endorse this opinion, for reasons of both linguistic and historical-cultural nature.

I do not wish to bore you further with a list of various, even recent, theories that very often refer more to the function of Medieval Latin than to its own nature as a linguistic phenomenon. Very recently, Professor Galabov of Salzburg devoted a study to Medieval Latin as a "supernational cultural language," in which he pointed out, as a very interesting parallel with Medieval Latin, Old Bulgarian (Church Slavonic), introduced in the East by King Boris as a "supernational cultural language" more than half a century after Charlemagne's reforms. 15

136720 The question remains how Medieval Latin can be defined and understood linguistically. First of all, we must let go of the "entweder - oder" (living or dead). We must also be aware that a language learned at school—or otherwise secondary—can function as a real, living language in the mouths of the speakers who use it. The general human capacity for language is also active in a learned language. The problem of language acquisition, of the relationship between competence and performance, of the generative function of language, cannot simply be ignored by a phenomenon like Medieval Latin. Furthermore, the phenomenon of the 'second language,' so intensively studied in recent decades, as it currently exists primarily in Third World countries, shows striking parallels with the oldest Irish and especially Anglo-Saxon Latin.

Studies on 'second languages' can help us better understand the phenomenon of early Medieval Latin. 16 Regarding Medieval Latin in its mature form, as it presents itself to us in the greatest diversity in twelfth-century literature, one must consider, among others, the perspective of Roman Jakobson, who, following the Russian formalists, emphasizes the creative activities of language within the framework of its aesthetic function, what Jakobson calls 'literalité,' a full-fledged manifestation of human language. In this context, I might point to what I said earlier about Medieval Latin as a 'Kunstsprache', a stylized language form, in which the *respublica litterarum* fulfills the function of an ethnic linguistics. 17 I will leave it at this remark. In my view, there is every reason to reexamine Medieval Latin as a linguistic phenomenon in the light of our modern linguistic theories. It will then become increasingly clear that this form of Latin is not an epigonistically dead phenomenon, but a living linguistic form, emerging from the creative and generative linguistic capacity of medieval people, a means of communication for a society that, in conscious relation to the past, is evolving toward a new world and new cultural forms.

I would like to add a few practical observations to these considerations. Now that it is becoming increasingly clear that Medieval Latin, with the cultural world from which it emerged, is not a kind of channel from antiquity to modern times, but an autonomous phenomenon that has determined the development of the Western world for centuries, we must ask ourselves whether we can contribute to this phenomenon in education and research should not be given more attention than they have been. Or rather: whether the study of Medieval Latin, integrated into that of medieval culture in the broadest sense, doesn't deserve its own place in our academic education and, perhaps even more so, in our academic research. In other words, hasn't the time come for us, as the successor to a classical philology (in the sense of what the Germans call 'Klassische Altertumskunde'), to also create a fully-fledged academic subject: Medieval Latin philology (in the same broad sense)? Now that our entire academic system is in flux, this possibility would certainly be worth considering. For two reasons, I would certainly not want to sever the connection with classical philology: Medieval Latin philology can learn much from the methodology of classical studies. Furthermore, one must never forget that, despite all the autonomy of Medieval Latin, medievalists themselves never lost their awareness of its continuity with the ancient past. On the other hand, this—let's say, a sister or perhaps daughter science to classical philology—would bring it out of a certain isolation, which is still expressed, among other things, in the incorrect and derogatory term "dead languages."

Dear listeners,

For over 25 years, I have had the privilege of teaching a number of subjects at this university, which, despite their outward diversity, nevertheless formed a unity, and of which I have been able to highlight only one today—but one that has always aroused particular interest here.

In 1947, I gave my inaugural lecture as a lecturer; in 1946, I had already officially begun my teaching. But—perhaps I may mention this here—I had already met Amsterdam students before that. When, in the later years of the war, after the closure of the universities, some of my Utrecht students requested that I help them continue their studies at their hiding places in Amsterdam for two-week lectures, *Amsterdammers* spontaneously joined this group. They never actually asked my permission or approval to join the Utrecht group—they were there. Amsterdam students have always been quite outspoken. My first Amsterdam memories, for example, go back to the ever-changing attics of canal houses, to those small rooms on the fourth floor, sometimes also to more comfortable suites in the South, where the not-always-amusing curriculum of Vulgar Latin managed to establish a human connection that will always remain a highlight in my academic memory. Was it this very first, human contact that has maintained a sense of understanding connection with the Amsterdam students throughout the many years I taught here?

Dear Colleagues,

Circumstances have dictated that I have only ever been able to devote a small portion of my time and energy to teaching at this university. The diverse tasks placed upon me here were, especially in the first, staff-less period, very demanding. I have tried to fulfill them to the best of my ability. But in my quest to do my work of teaching and scholarship as effectively as possible, I decided early on to withdraw from other, more organizational and outwardly academic duties. You rarely saw me at faculty meetings, nor at academic ceremonies. You may be convinced that this was not

due to a lack of interest, but rather the result of weighing what, in my view, should be considered most important.

With gratitude and a certain nostalgia, I think back to the many Wednesday afternoons spent in the old-pseudo-solemn-professor's office in the Oude Manhuispoort. I will always remember with gratitude the human connections made there with colleagues, many of whom have since passed away. They enriched my mind, both humanly and scientifically.

Finally, I would like to thank you for the way in which you cooperated with my successor—with a wisdom and discretion that are sometimes lacking elsewhere. I am delighted that in my colleague Smit, whose qualities I have come to appreciate over many years of collaboration, I have found a successor who will be able to devote himself entirely to his duties in Amsterdam.

I would like to conclude by expressing my special thanks to the members of the Classics Department, among whom I—a somewhat unusual fellow—have always worked with such pleasure.

I have said.

The Theban Legion

(also known as the **Martyrs of Agaunum**) figures in Christian hagiography as an entire Roman legion – of "six thousand six hundred and sixty-six men" – who had converted en masse to Christianity and were martyred together, in 286, according to the hagiographies of Saint Maurice, the chief among the Legion's saints. Their feast day is held on September 22.

According to Eucherius of Lyon, ca. 443-450, the Legion was the garrison of the city of Thebes in Egypt. The Legion were quartered in the East until the emperor Maximian ordered them to march to Gaul, to assist him against the rebels of Burgundy. The Theban Legion was commanded in its march by Saint Maurice (Mauritius), Candidus, Innocent, and Exuperius, all of whom are venerated as saints. At Saint-Maurice, Switzerland, then called Agaunum, the orders were given – since the Legion had refused to sacrifice to the Emperor – to "decimate" it by putting to death a tenth of its men. This act was repeated until none were left.

According to a letter written about 450 by Eucherius, Bishop of Lyon, bodies identified as the martyrs of Agaunum were discovered by Theodore (Theodulus), the first historically identified Bishop of Octodurum, who was present at the Council of Aquileia, 381 and died in 391. The basilica he built in their honor attracted the pilgrim trade; its remains can still be seen, part of the abbey begun in the early sixth century on land donated by King Sigismund of Burgundy.

The earliest surviving document describing "the holy Martyrs who have made Agaunum illustrious with their blood" is the letter of Eucherius, which describes the succession of witnesses from the martyrdom to his time, a span of about 150 years. The bishop had made the journey to Agaunum himself, and his report of his visit multiplied a thousandfold the standard formula of the martyrologies:

We often hear, do we not, a particular locality or city is held in high honour because of one single martyr who died there, and quite rightly, because in each case the saint gave his precious soul to the most high God. How much more should this sacred place, Agaunum, be revered, where so many thousands of martyrs have been slain, with the sword, for the sake of Christ.

As with many hagiographies, Eucherius' letter to Bishop Salvius reinforced an existing pilgrimage site. Many of the faithful were coming from diverse provinces of the empire, according to Eucherius, devoutly to honor these saints, and (important for the abbey of Agaunum) to offer presents of gold, silver and other things. He mentions many miracles, such as casting out of devils and other kinds of healing "which the power of the Lord works there every day through the intercession of his saints".

In the late sixth century, Gregory of Tours was convinced of the miraculous powers of the Theban Legion, though he transferred the event to Cologne, where there was an early cult devoted to Maurice and the Theban Legion:

At Cologne there is a church in which the fifty men from the holy Theban Legion are said to have consummated their martyrdom for the name of Christ. And because the church, with its wonderful construction and mosaics, shines as if somehow gilded, the inhabitants prefer to call it the "Church of the Golden Saints". Once Eberigisilus, who was at the time bishop of Cologne, was racked with severe pains in half his head. He was then in a villa near a village. Eberigisilus sent his deacon to the church of the saints. Since there was said to be in the middle of the church a pit into which the saints were thrown together after their martyrdom, the deacon collected some dust there and brought it to the bishop. As soon as the dust touched Eberigisilus' head, immediately all pain was gone.

Thebaei is the proper name of one particular military unit, the Legio I Maximiana, also known as Maximiana Thebaeorum, recorded in the Notitia Dignitatum.

According to Samir F. Girgis, writing in the Coptic Encyclopedia, there were two legions bearing the name "Theban," both of them formed by Diocletian sometime after the organization of the original Egyptian legion, stationed at Alexandria. It is not certain which of these was transferred from Egypt to Europe in order to assist Maximian in Gaul.

The monastic accounts themselves do not specifically state that all the soldiers were collectively executed; an eleventh-century monk named Otto of Freising wrote that most of the legionaries escaped, and only some were executed. It is possible that the legion was simply divided during Diocletian's re-organization of units (breaking up legions of 6000 men to create smaller units of 1000), and that some of the soldiers had been executed, and that this was where the story of the legion's destruction

originated from. Henri Leclercq suggests that it is quite possible that an incident at Agaunum may have had to do not with a legion, but with a simple detachment. Johan Mösch, after comparing information from the various chronicles on the events and geography of the martyrdoms of the legionaries, concluded that only a single cohort was martyred at Agaunum. The remainder of the cohorts (battalion sized units of which there were ten to a legion) were either on the march or already stationed along the Roman road that ran from Liguria through Turin and Milan, then across Alps and down the Rhine to Colonia Agrippinensis (Cologne).

L. Dupraz and Paul Müller, by examining the military titles and ranks of the legionnaires and thereby determining the total number of soldiers involved, estimated that the Thebans martyred at Agaunum consisted of but one cohort whose number did not exceed 520 men. Thus the execution of an entire cohort is equivalent to decimation of a legion.

Denis van Berchem, of the University of Geneva, proposed that Eucherius' presentation of the legend of the Theban legion was a literary production, not based on a local tradition. David Woods, Professor of Classics at the University College Cork, alleges that the model of Maurice and the Theban Legion based on Eucherius of Lyon's letter was a complete fiction.

The strength of the account is based on the historical reputation for the first monks in the Christian tradition, the hermits of the Egyptian desert known as the "Desert Fathers", and the almost fanatical Christian following they inspired during the first two centuries. The most famous of the Desert Fathers was Anthony the Great. The persecution of high-ranking Christian nobility under Emperor Valerian following his edict in 258 and the purge of Christians from the military from 284 through 299 under Emperor Diocletian indicate that noncompliance with emperor worship was the common method for detecting Christian soldiers and eventually executing them.

Donald F. O'Reilly argues that evidence from coins, papyrus, and Roman army lists supports the story of the Theban Legion. A papyrus dated "in the sixth year of our Lord the Emperor Caesar Marcus Aurelius Probus Pius Augustus, Tubi sixteenth" (13 January 282), shows rations which would sustain a legion for about three months to be delivered to Panopolis to the "mobilized soldiers and sailors". Coins from Alexandria from the same time period were minted in a style used only when troops for a new legion were leaving port. During the trial of the martyr Maximilian, it was noted that there were Christians serving in the Roman army, and the existence of Theban Christian legionnaires in the same units as mentioned in the Notitia Dignitatum was shown.

Henri Leclercq also notes that the account of Eucherius "has many excellent qualities, historical as well as literary". L. Dupraz countered Denis van Berchem's assertion by sifting through the stories, carefully matching them with archeological discoveries at Agaunum, thus concluding that the martyrdom is historical and that the relics of the martyrs were brought to Agaunum between 286 and 292 through the office of the bishop Theodore. Dora Ruinart, Paul Allard, and the editors of the "Analecta Bollandiana" are of opinion that "the martyrdom of the legion, attested, as it is by ancient and reliable evidence, cannot be called in question by any honest mind".

Saints associated with the Theban legion

Attilio

Attilio, one of the legendary martyrs of the Theban Legion, is venerated as a saint in the area of Trino Vercellese, in Piedmont, north-west Italy and commemorated on 28 June. However his cult is no longer officially recognized by the Roman Catholic Church and he has no entry in its current martyrologies. He has been depicted with a flag, a helmet and the palm of martyrdom.

Maurice

Maurice (also Moritz, Morris, Maurits, or Mauritius; Coptic: ⲁⲃⲃⲁ ⲙⲁⲣⲓϥ) was an Egyptian military leader who headed the legendary Theban Legion of Rome in the 3rd century, and is one of the favourite and most widely venerated saints of that martyred group. He is the patron saint of several professions, locales, and kingdoms. According to the hagiographical material, Maurice was an Egyptian, born in AD 250 in Thebes, an ancient city in Upper Egypt that had been the capital of the New Kingdom of Egypt (1575–1069 BC). He was brought up in the region of Thebes (Luxor). Maurice became a soldier in the Roman army. He rose through the ranks until he became the commander of the Theban legion, thus leading approximately a thousand men. He was an acknowledged Christian at a time when early Christianity was considered to be a threat to the Roman Empire.

Naspeuringen van Paul Theelen: Constantinus Imperator

The legion, entirely composed of Christians, had been called from Thebes in Egypt to Gaul to assist Emperor Maximian in defeating a revolt by the bagaudae. The Theban Legion was dispatched with orders to clear the Great St Bernard Pass across the Alps. Before going into battle, they were instructed to offer sacrifices to the pagan gods and pay homage to the emperor. Maurice pledged his men's military allegiance to Rome. He stated that service to God superseded all else. He said that to engage in wanton slaughter was inconceivable to Christian soldiers. He and his men refused to worship Roman deities.

When Maximian ordered them to murder local Christians, they refused. Ordering the unit to be punished, Maximian had every tenth soldier killed, a military punishment known as decimation. More orders followed, the men refused compliance as encouraged by Maurice, and a second decimation was ordered. In response to the Theban Christians' refusal to attack fellow Christians, Maximian ordered all the remaining members of the legion to be executed. The place in Switzerland where this occurred, known as Agaunum, is now Saint-Maurice, Switzerland, site of the Abbey of St. Maurice.

So reads the earliest account of their martyrdom, contained in the public letter which Bishop Eucherius of Lyon (c. 434-450), addressed to his fellow bishop, Salvius. Alternative versions have the legion refusing Maximian's orders only after discovering innocent Christians had inhabited a town they had just destroyed, or that the emperor had them executed when they refused to sacrifice to the Roman gods.

Veneration

Maurice became a patron saint of the German Holy Roman Emperors. In 926, Henry the Fowler (919-936), even ceded the present Swiss canton of Aargau to the abbey, in return for Maurice's lance, sword and spurs. The sword and spurs of Maurice were part of the regalia used at coronations of the Austro-Hungarian emperors until 1916, and among the most important insignia of the imperial throne (although the actual sword dates from the 12th century). In addition, some of the emperors were anointed before the Altar of Saint Maurice at St. Peter's Basilica. In 929, Henry the Fowler held a royal court gathering (Reichsversammlung) at Magdeburg. At the same time, the Mauritius Kloster in honour of Maurice was founded. In 961, Otto I, Holy Roman Emperor, was building and enriching Magdeburg Cathedral, which he intended for his own tomb. To that end, in the year 961 of the Incarnation and in the 25th year of his reign, in the presence of all of the nobility, on the vigil of Christmas, the body of St. Maurice was conveyed to him at Regensburg along with the bodies of some of the saint's companions and portions of other saints. Having been sent to Magdeburg, these relics were received with great honour by a gathering of the entire populace of the city and of their fellow countrymen. They are still venerated there, to the salvation of the homeland.

Maurice is traditionally depicted in full armour, in Italy emblazoned with a red cross. In folk culture he has become connected with the legend of the Holy Lance, which he is supposed to have carried into battle; his name is engraved on the Holy Lance of Vienna, one of several relics claimed as the spear that pierced Jesus' side on the cross. Maurice gives his name to the town St. Moritz as well as to numerous places called Saint-Maurice in French-speaking countries. The Indian Ocean island state of Mauritius was named after Maurice, Prince of Orange, and not directly after Maurice himself.

Over 650 religious foundations dedicated to Saint Maurice can be found in France and other European countries. In Switzerland alone, seven churches or altars in Aargau, six in the Canton of Lucerne, four in the Canton of Solothurn, and one in Appenzell Innerrhoden can be found (in fact, his feast day is a cantonal holiday in Appenzell Innerrhoden). Particularly notable among these are the Church and Abbey of Saint-Maurice-en-Valais, the Church of Saint Moritz in the Engadin, and the Monastery Chapel of Einsiedeln Abbey, where his name continues to be greatly revered. Several orders of chivalry were established in his honour as well, including the Order of the Golden Fleece, Order of Saint Maurice, and the Order of Saints Maurice and Lazarus. Additionally, fifty-two towns and villages in France have been named in his honour.

Maurice was also the patron saint of a Catholic parish and church in the 9th Ward of New Orleans and including part of the town of Arabi in St. Bernard Parish. The church was constructed in 1856, but was devastated by the winds and flood waters of Hurricane Katrina on 29 August 2005; the copper-plated steeple was blown off the building. The church was subsequently deconsecrated in 2008, and the local diocese put it up for sale in 2011. By 2014, a local attorney had purchased the property for a local arts organization, after which the building served as both an arts venue and the worship space for a Baptist church that had been displaced following the hurricane.

Naspeuringen van Paul Theelen: Constantinus Imperator

On 19 July 1941, Pope Pius XII declared Maurice to be the patron saint of the Italian Army's Alpini (mountain infantry corps). [The Alpini have celebrated Maurice's feast every year since then.

There are several Coptic Orthodox churches named for him.

Apparition

The Our Lady of Laus apparitions included an apparition of Saint Maurice. He appeared in an antique episcopal vestment and told Benoîte Rencurel that he was the one to whom the nearby chapel was dedicated, that he would fetch her some water (before drawing some water out of a well she had not seen), that she should go down to a certain valley to escape the local guard and see the Blessed Virgin Mary, mother of Jesus, and that Mary was both in Heaven and could appear on Earth.

Patronage

Maurice is the patron saint of the Duchy of Savoy (France) and of the Valais (Switzerland) as well as of soldiers, swordsmiths, armies, and infantrymen. In 1591 Charles Emmanuel I, Duke of Savoy arranged the triumphant return of part of the relics of Saint Maurice from the monastery of Agaune in Valais.

He is also the patron saint of weavers and dyers. Manresa (Spain), Piedmont (Italy), Montalbano Jonico (Italy), Schiavi di Abruzzo (Italy), Stadtsulza (Germany) and Coburg (Germany) have chosen Maurice as their patron saint as well. Maurice is also the patron saint of the Brotherhood of Blackheads, a historical military society of unmarried merchants in present-day Estonia and Latvia. In September 2008, certain relics of Maurice were transferred to a new reliquary and rededicated in Schiavi di Abruzzo (Italy).

He is also the patron saint of the town of Coburg in Bavaria, Germany. He is shown there as a man of colour especially on manhole covers as well as on the city coat of arms. There he is called "Coburger Mohr" (English: "Coburg Moor").

Portrayal and modern debates on race

In the modern era, there has been debate surrounding Saint Maurice's race and physical depictions. The earliest surviving work portraying Maurice as a dark-skinned African dates from the 13th century. Before the 13th century, he was usually depicted with European features. The oldest surviving image that depicts Saint Maurice as a dark-skinned man in knight's armour was sculpted in the mid-13th century for Magdeburg Cathedral; there it is displayed next to the grave of Otto I, Holy Roman Emperor. Jean Devisse, author of the book *The Image of the Black in Western Art*, laid out the documentary sources for the saint's popularity and documented it with illustrative examples. The Magdeburg cathedral in the 13th century presumably had other images of Maurice that did not visibly represent him as being an African, though with the exception of a statue from c. 1220, none has survived.

During the 11th century, before art of Maurice began depicting him as visibly dark-skinned, he was seen as "the symbol of the Germanic offensive against the Slavs". Devisse argues that Frederick II likely initiated the "black St. Maurice" trope, around 1240–1250. As a military saint, Maurice played an important role for the Holy Roman Empire during the Crusades, most of which had been failing at the time.

Frederick seemingly wanted to symbolically state that, even though Christians cannot reconquer Africa, Christianity once triumphed in Africa before the arrival of Islam.

Given that Maurice was a Christian, his foreignness could not be depicted with iconographic vocabulary such as curved swords, insignia on shields or headdresses. As such, Maurice was "turned" into a "black" or darker-skinned man to specify his geographic provenance with racial characteristics of color and physiognomy. Paul Kaplan, agreeing with Devisse's thesis, additionally argues that Frederick II also wanted to propagandistically emphasize how "All races are equal before God, and... the Christian mission is universal", and also that one of his goals was to "advance his claims to global rule by promoting the visibility of his most strikingly 'different' subjects".

Gude Suckale-Redlefsen gives another view on the subject, arguing instead that it was not Frederick who transformed Maurice into a "black man", but rather archbishop Alfred I of Käfernburg, after 1220, or his half-brother Wilbrand later on. Suckale-Redlefsen reasons that Alfred had read the *Kaiserchronik* which described Maurice as "the leader of the [black] Moors". As such, according to her, Alfred took cognizance of this new idea of the saint as a dark-skinned Moor and commissioned a "black St. Maurice" in the context of a new building program after a fire devastated the old cathedral in 1207. Devisse had also raised this idea but had eventually dismissed it because of "what [he] assumed would be negative psychological reactions on the part of the populace to the sudden arrival of a black African saint substituting for the old Maurice at an inopportune moment, and also because of the financial costs

137115 involved".
 Images of the saint died out in the mid-16th century. Suckale-Redlefsen suggests that this was due to the developing Atlantic slave trade. "Once again, as in the early Middle Ages, the color black had become associated with spiritual darkness and cultural 'otherness'". There is an oil-on-wood painting of Maurice by Lucas Cranach the Elder (1472-1553) in New York's Metropolitan Museum of Art.
 137120 The city of Coburg's coat of arms honoured the town's patron saint, Saint Maurice, since they were granted in 1493. In 1934, the Nazi government forbade any glorification of the "Black" race, and they replaced the coat of arms with one depicting a vertical sword with a Nazi swastika on the pommel. The original coat of arms was restored in 1945 at the end of World War II. Today, the silhouette of Saint Maurice can be found mainly on manhole covers as well as the city coat of arms.

History
 There is a difference of opinion among researchers as to whether or not the story of the Theban Legion is based on historical fact, and if so, to what extent. The account by Eucherius of Lyon is classed by Bollandist Hippolyte Delehaye among the historical romances. Donald F. O'Reilly, in *Lost Legion Rediscovered*, argues that evidence from coins, papyrus, and Roman army lists support the story of the Theban Legion.

137135 [According to the hagiographical material, Maurice was an Egyptian, born in 250 in Thebes, an ancient city in Upper Egypt that was the capital of the New Kingdom of Egypt (1575-1069 BC). He was brought up in the region of Thebes (Luxor). Maurice became a soldier in the Roman army. He was gradually promoted until he became the commander of the Theban legion, thus approximately leading a thousand men. He was an acknowledged Christian at a time when early Christianity was considered to be a threat to the Roman Empire. Yet, he moved easily within the pagan society of his day. The legion, entirely composed of Christians, had been called from Thebes in Egypt to Gaul to assist Emperor Maximian to defeat a revolt by the bagaudae. The Theban Legion was dispatched with orders to clear the Great St. Bernard Pass across Mont Blanc. Before going into battle, they were instructed to offer sacrifices to the pagan gods and pay homage to the emperor. Maurice pledged his men's military allegiance to Rome. He stated that service to God superseded all else. To engage in wanton slaughter was inconceivable to Christian soldiers he said. He and his men refused to worship Roman deities.
 However, when Maximian ordered them to harass some local Christians, they refused. Ordering the unit to be punished, Maximian had every tenth soldier killed, a military punishment known as decimation. More orders followed, the men refused as encouraged by Maurice, and a second decimation was ordered. In response to the Theban Christians' refusal to attack fellow Christians, Maximian ordered all the remaining members of his legion to be executed. The place in Switzerland where this occurred, known as Agaunum, is now Saint-Maurice, Switzerland, site of the Abbey of St. Maurice.

137150 So reads the earliest account of their martyrdom, contained in the public letter which Bishop Eucherius of Lyon (c. 434-450), addressed to his fellow bishop, Salvius. Alternative versions have the legion refusing Maximian's orders only after
 137160 discovering innocent Christians had inhabited a town they had just destroyed, or that the emperor had them executed when they refused to sacrifice to the Roman gods.]

Alexander of Bergamo
 Alexander of Bergamo (died c. 303) is the patron saint of Bergamo, as well as Capriate San Gervasio and Cervignano d'Adda. Alexander may have been a Roman soldier or resident of Bergamo who was tortured and killed for not renouncing his Christian faith. Details of his life are uncertain, but subsequent Christian stories consider him a centurion of the Theban Legion commanded by Maurice.

137170 Before the commencement of the Diocletianic Persecution in 303, both Galerius and Maximian in the West inaugurated, on their own responsibility, a crusade against Christianity and sought particularly to remove all Christians from the armies. Alexander, traditionally considered the standard bearer of the Theban Legion, was one of the victims of this persecution. He is reputed to have been a survivor of the decimation (the killing of every tenth man) ordered against the legion at Agaunum. He fled to Italy.

137175 At Milan, he was recognized and imprisoned in the Zebedeo Prison in Milan, later site of the church of Sant'Alessandro in Zebedia. He refused to renounce his Christian faith. However, he was visited in jail by Fidelis and Bishop Maternus. With the help of Fidelis, Alexander managed to escape. Alexander fled to Como but was captured
 137180 again.

Brought back to Milan, he knocked down the sacrificial altar, enraging Emperor Maximian. Alexander was condemned to death by decapitation. However, the executioner's arms went stiff during the execution. He was imprisoned again, but Alexander once again managed to escape and ended up in Bergamo after passing through Fara Gera d'Adda and Capriate San Gervasio. At Bergamo, he was the guest of the lord Crotacius, who bid him to hide from his persecutors. However, Alexander decided to become a preacher instead and converted many natives of Bergamo, including Firmus and Rusticus, who were later martyred. Alexander was once again captured and was finally decapitated on August 26, 303, on the spot now occupied by the church of San

Alessandro in Colonna.

The Martyrdom of St. Alexander (Workshop of Lorenzo Lotto, after 1560)

The oldest Passio dates from about the 8th century, but his cult is much earlier.

Alexander was most likely a Roman soldier, native or resident of Bergamo, tortured and killed for not having renounced his Christian faith.

Bergamo Cathedral is dedicated to him. He is one of the saints in the dedication of the church in Rome for natives of Bergamo.

The 1887 "The Martyrdom of Saint Alexander of Bergamo" by Ponziano Loverini is in the Pinacoteca Vaticana.

Many Italian cities and towns have Saint Alexander of Bergamo as their patron saint.

Bessus

Bessus, sometimes Besse, (Italian: San Besso) is venerated as a member of the legendary Theban Legion, whose members were led by Maurice and were martyred for their Christian faith in the 3rd century.

Legend

Evidence for Bessus's existence is confused and uncertain: the name of Bessus is actually identified with two different, semi-legendary saints with the same name: one was a martyred bishop of Ivrea who lived in the eighth century, the other was a hermit with the same name who lived in an Alpine sanctuary near Campiglia in Cogne Valley.

In addition, there are two feast days associated with Bessus that were celebrated at Ivrea: August 10 and December 1. The cult of Saint Bessus may actually represent the Christianization of the cult associated with the Egyptian god Bes, also invoked for fertility. Bessus and Bes, as Fabio Arduino points out, are both associated with an ostrich feather in their iconography.

According to tradition, Bessus survived the decimation of his legion and fled to valleys of Aosta and Cogne. He then dedicated himself to converting the local shepherds to Christianity.

Numerous legends were connected with Bessus. A breviary dating from 1473 states that Bessus was martyred in the following manner: he was invited to a banquet by some Piedmontese who had stolen the cattle that was now being served as a meal. When Bessus discovered this, he denounced the cattle thieves. Angered, the thieves chased him and forced him to jump the cliffs of Monte Fantino. Bessus survived but was then killed by the Roman legionnaires who had slaughtered the Theban Legion at Agaunum.

The cliff preserves an imprint associated with Bessus. According to local tradition, the sanctuary dedicated to the saint was constructed on the place of Bessus's martyrdom, which remains today a place of pilgrimage. A different version of the tale states that Bessus hid himself in the Valley of Cogne before being killed by the Roman soldiers.

In 1912, Robert Hertz, a French historian and anthropologist, collected at Cogne a different version of Bessus's death, which was part of an oral tradition passed down from generation to generation. This version states that Bessus was not a soldier of the Theban Legion at all, but a local shepherd who was so pious that God rewarded him with a prosperous, fat, and healthy flock. Envious of his prosperity, some shepherds killed him by forcing him off a cliff.

Except for the cult of Saint Maurice, veneration for Bessus enjoyed a wider popularity than those associated with other saints of the Theban Legion and remains popular today.

According to a local tradition, Bessus's relics were stolen in the ninth century and taken to Ozegna, to the chapel now occupied by the sanctuary known as Beata Vergine del Convento e del Bosco. Subsequently, during the reign of Arduin of Italy, the relics were translated to the cathedral of Ivrea, where they were placed in a Roman sarcophagus. Today, the relics rest in a lateral altar along with those associated with other martyr saints. Bessus is depicted in an altarpiece by Claudio Francesco Beaumont.

Bessus was considered to be a great thaumaturgus and miracle-worker, and a protector

of soldiers against the dangers of war; he was also invoked for fertility.[
On August 10, an annual festival and pilgrimage is held in the mountains of Gran
Paradiso National Park (Parco Nazionale del Gran Paradiso), in the Val Soana. A
137250 statue of the saint is carried to the cliff that is associated with his martyrdom.
The honor of carrying the saint was once a cause of dispute between the towns of
Cogne and Campiglia. Each town had once been under the jurisdiction of separate
dioceses, but in the 13th century, the two towns became part of the diocese of Ivrea.

137255 Candidus

Candidus (died c.287 AD) was a commander of the Theban Legion. The Theban Legion was
composed of Christians from Upper Egypt. He is venerated as a Christian saint and
martyr.

Candidus was first mentioned as a member of the Theban Legion by Eucherius, Bishop of
137260 Lyon (434 AD). The 13th-century Golden Legend states: "And the noble man, Maurice,
was duke of this holy legion; and they that governed under him, which bare the
banners, were named Saint Candidus, Saint Innocent, Saint Exsuperius, Saint Victor,
and Saint Constantine, all these were captains."

Candidus is called Maurice's senator militum or staff officer. He opposed Maximian,
137265 who had ordered them to harass the local Christians in his name, stating that "we are
your soldiers, but we are also servants of the true God. We cannot renounce Him who
is our Creator and Master, and also yours even though you reject Him."

Candidus, along with Maurice, the other staff officers and 6,600 soldiers, is said to
have been martyred at the Swiss town of Saint Maurice-en-Valais, then called Agaunum.
137270 His feast day is September 22.

Remains

Candidus' relics were stored in a 6th-century reliquary at the Abbaye de Saint-
Maurice d'Agaune. His skull is kept in an embossed silver bust in the Abbey's
Treasury. Some of Candidus' relics are stored at Our Lady of Malibu Catholic Church,
137275 given by the Archdiocese of Los Angeles to the newly formed parish in 1960 under
founding rector, Joseph Burbage. The relics were rededicated by Archbishop Jose Gomez
in November, 2014. It has been confirmed that his relics can also be found at St.
Bonaventure Catholic Church in Huntington Beach, CA.

137280 Cassius and Florentius

Saint Justin of Siponto, as well as Saints Florentius, Felix, and Justa, are
venerated as Christian martyrs by the Catholic Church. Information about them is
fragmentary but their names were inserted into various martyrologies. Tradition
states that Justin was a priest and bishop, that Florentius and Felix were his
137285 siblings, and that Justa was his niece. The earliest document about them dates from
the 15th century; this is their legendary passio.

They lived in Siponto at the beginning of the fourth century. Justin as the most
erudite and eloquent of the three brothers. He was appointed bishop of Siponto.
Florentius, meanwhile, married and had a daughter named Justa, named after Justin,
137290 who had baptized her. After a decade or so, the four left Siponto and went to Chieti,
where they preached and performed miracles. Pagan priests, alarmed by this, contacted
Maximian; the authorities ordered the four to sacrifice to Jove. Justin escaped to a
mountain named Tubernium while Florentius, Felix, and Justa were arrested and taken
to Forconium (Furci). Florentius and Felix were decapitated immediately, on July 25,
137295 310. Justa was thrown into a burning furnace, but after emerging unharmed, was shot
with arrows on August 1 of that year. She was buried in a place two miles from Furci
where a basilica would later be built.

Justin, meanwhile, buried the bodies of his brothers beside that of his niece and
died of natural causes at the age of eighty-four. He was buried near Offida (province
137300 of Ascoli Piceno), where a basilica was also built.

The varying dates of celebration and places with which they were associated has led
scholars to believe that they are purely legendary. Justin was confused with the cult
of Saint Justin of Chieti, whose feast day falls on January 1, and May 11 locally.
Florentius and Felix were sometimes identified as soldier saints, probably through
137305 confusion with Felix of Nola. Of Justa it is known that there was a crypt dedicated
to her at Bazzano, where her body was conserved. The church there was expanded in the
13th century. Her cult, with a feast day of August 1, was centered in the Abruzzo and
Campania regions. There were three churches dedicated to her in Penne, Sulmona, and
Chieti. The four saints all had their own feast day of July 25 in previous Roman
137310 Martyrologies; currently they are not mentioned in this martyrology.

Bonn Minster (German: Bonner Münster) is a Catholic church in Bonn. It is one of

Germany's oldest churches, having been built between the 11th and 13th centuries. At one point the church served as the de facto cathedral for the Archbishopric of Cologne, because it is the major church of what was then the Archbishop-Elector's residence. It is now a minor basilica. It served as the inspiration for the Kaiser Wilhelm Memorial Church in Berlin, as Kaiser Wilhelm II had studied in Bonn. The basilica was built on the site of the graves of two martyrs Cassius and Florentius, the patrons of Bonn. They are piously believed to have been Roman legionaries of the Theban Legion. At some point during their march to Gaul, the legion refused to follow the emperor's orders either to kill the indigenous Christians or to worship Maximian as a god. As a result, a large number of legionaries were martyred in Agaunum, now named Saint Maurice-en-Valais after Saint Maurice. According to legend, Saints Cassius and Florentius, who were under the command of Saint Gereon, were beheaded for their religious beliefs at the present location of the Minster.

A memorial chapel was built in the early fourth century in what was a suburban cemetery about 1 km south of the Roman fortress. In the sixth century, a memorial building took its place. In the eighth century the Collegiate Church of SS. Cassius and Florentius" was built. The medieval town developed around the minster. A late Romanesque monastic church was constructed from 1140 to 1250. At one point the church served as the cathedral for the Archbishopric of Cologne. The cathedral was the model for the Gedächtniskirche in Berlin. On Pentecost Sunday 1956, the church was elevated to the status of a minor basilica.

A fund raising initiative was launched in 2014 for necessary renovations to the 1,000-year-old building to address cracks in the vault, water damage, and an aging electric service, among other concerns.

The church has square towers decorated with Lombard bands; a Romanesque feature, the minster also shows adaptation of some Gothic elements. Writer T. Francis Bumpus said, "The most beautiful stone spire in Germany is that of the minster at Bonn." The Minster in Bonn housed one of the first organs in Germany, when in 1230 one was placed on the east wall in the north transept.

Chiaffredo (Theofredus)

Chiaffredo (also Chiaffredus, Theofredus, Ciafrè, Chaffre, Teofredo, Jafredo, Jafredus, Eufredus, Jofredus, Sinfredus, Zaffredus) is venerated as the patron saint of Saluzzo, Italy.

Tradition considers him a member of the Theban Legion, but instead of being martyred with this legion at Agaunum (in present-day Switzerland), he escaped to Piedmont and was martyred there.

A 14th-century account relates that, around 522, a man fell from a precipice near Crissolo but remained unharmed. The local population attributed his being unharmed to relics discovered by a peasant plowing in the vicinity - a discovery attributed to divine intervention. The mysterious skeleton was given the name of "San Ciafrè" and the tomb became the focus of a celebrated sanctuary at Crissolo.

The first documentary evidence pointing to a cult devoted to Chiaffredo dates from 1387, when Avignon Pope Clement VII granted indulgences to those who visited the church at Crissolo and helped in its repair. A late 16th century legend written down by Guglielmo Baldesano states that Chiaffredo or Teofredo, soldier of the Theban Legion, escaped to Piedmont to avoid sacrificing to pagan idols and was martyred at Crissolo around 270. Fabio Arduino believes this story to have no historical foundation, as it would have been unlikely for a Roman legionary of the 3rd century to bear such a clearly Germanic name. The name is a variant of Theudofridus, derived from the Germanic theuda- "people," and frithu- "peace."

The sepulcher identified as Chiaffredo's burial place may have been a tomb of pagan origins. Similar to the cults of Constantius at Crissolo, Bessus at Val Soana, Tegulus at Ivrea, Magnus at Castelmagno, and Dalmatius at Borgo San Dalmazzo, the cult of Chiaffredo was linked with that of the Theban Legion to lend antiquity to a local saint about whom nothing was really known.

In 1902, a scholar identified Chiaffredo as the 8th century figure Theofredus (Chaffre, Theofrid, Teofredo), abbot of Le Monastier near Puy-en-Velay, who was killed by Muslim raiders and was also venerated in Piedmont.

Tornabuoni, bishop of Saluzzo, declared Chiaffredo patron of his diocese during a synod of 1516, with Constantius (San Costanzo) as co-patron. Chiaffredo's relics were translated to Revello in 1593, and thence to the cathedral of Saluzzo in 1642. Constantius and Chiaffredo are depicted together in the altar of Saluzzo Cathedral. Chiaffredo enjoyed veneration in Piedmont; one English scholar has written that "beneath the shadow of Monte Viso, San Chiaffredo, a runaway apostle of the Theban

legion, has usurped the worship paid in old time to the river-god Eridanus..." Due to his alleged Theban origins, he is venerated by the Coptic Church. He is however, not mentioned explicitly in the Roman Martyrology, although this martyrology includes Maurice and the Theban Legion as a whole, without naming Chiaffredo specifically.

Constantius

Constantius (Italian: San Costanzo) is venerated as a member of the legendary Theban Legion. Similar to the cults of Chiaffredo at Crissolo, Bessus at Val Soana, Tegulus at Ivrea, Magnus at Castelmagno, and Dalmatius at Borgo San Dalmazzo, the cult of Constantius was linked with that of the Theban Legion to lend antiquity to a local saint about whom nothing was really known.

According to tradition, Constantius survived the decimation of his Legion and fled to the Val Maira, today in the province of Cuneo, with some other survivors. These included Constantine, Dalmatius, Desiderius, Isidore, Magnus, Olympius, Pontius, Theodore, and Victor. They dedicated themselves to preaching the Christian religion, but all of them, except for Constantius, were soon killed by the Roman authorities. Constantius buried his companions.

The local geologic formation known as Ciciu del Villar, which are columns formed by natural erosion, was connected with Constantius' legend: the stones are said to be the Roman soldiers sent to kill him, who were miraculously petrified before they could harm the saint.

According to tradition, Constantius was eventually beheaded on Monte San Bernardo, where a sanctuary dedicated to him was built, known as San Costanzo al Monte. This sanctuary probably dates to Lombard times; some eighth century sculptures remain. The sanctuary was rebuilt and altered in succeeding centuries, and the stone church was completed in 1190. A Baroque façade was added later. The Benedictine abbatial church of Santi Vittore e Costanzo, also in Villar, conserves some important archaeological remains, including a marble slab bearing vermilion symbols and worn down by the hands of the faithful.

Constantius' cult became popular, with a pilgrimage to Villar by the faithful taking place every year.

Tornabuoni, bishop of Saluzzo, declared Chiaffredo patron of his diocese during a synod of 1516, with Constantius as co-patron. Statues of Chiaffredo and Constantius can be found in the altar of the cathedral of Saluzzo. Due to his connection with the Theban Legion, Constantius is considered to have been of Egyptian birth; this has led to his veneration in the Coptic Church.

Defendens

Defendens of Thebes (Italian: San Defendente di Tebe) is venerated as a martyr by the Catholic Church. Venerated as a soldier-saint, Defendens was, according to Christian tradition, a member of the Theban Legion, and thus martyred at Agaunum.

Particular veneration for Defendens was widespread in Northern Italy; evidence for this cult dates from as early as 1328. His feast day was celebrated in the cities of Chivasso, Casale Monferrato, Novara, and Lodi on January 2, and oratories, altars, and confraternities were dedicated to him. He also enjoyed veneration in Marseille; the Catholic Encyclopedia states that "several saints belong in a particular way to Marseille: the soldier St. Victor, martyr under Maximian; the soldier St. Defendens and his companions, martyrs at the same time..." But as Antonio Borrelli writes, some scholars believe that the Defendens venerated in Italy is different from the martyr who was a member of the Theban Legion.

There is an oratory dedicated to him at Solto Collina. There is also a church dedicated to him at Clusone, the church of San Defendente, and another at Invorio. Until 1476 his relics, according to the 1578 Martyrologium Sanctae Romanae Ecclesiae of Pietro Galesino, were kept in the church of Santa Croce in Casale Monferrato, which suggested that his martyrdom may have taken place in that region.

Exuperius (Exupernis)

Exuperius or Exupernis is venerated as a saint and martyr by the Catholic Church; according to tradition, he was the standard-bearer of the Theban Legion and thus a companion to Saint Maurice.

Exuperius' relics were translated in the 10th century to Gembloux Abbey. This translation was performed by the monastery's founder, Saint Guibert (Guibertus), who dedicated the monastery in honor of Saint Peter and Saint Exuperius. The saint thus enjoyed special veneration at Gembloux; Sigebert of Gembloux wrote a long poem on the martyrdom of the Theban Legion. The buildings of the abbey, which largely survived,

137445 are used for the Agronomical University of Gembloux.

Felix and Regula, the patron saints of Zürich

137450 Felix and Regula (together with their servant Exuperantius) are Coptic Orthodox and Roman Catholic saints. They are the patron saints of Zürich.

137450 Felix and Regula were brother and sister, beheaded in the third century, along with Exuperantius, for converting to Christianity. Their feast day is 11 September in the Gregorian calendar, celebrated on the same day using the Julian calendar (which is the 24th of September Gregorian), the 14th of Tout in the Coptic Calendar.

137455 Felix and Regula were siblings, and members of the Theban legion which was based in Egypt under Saint Maurice and stationed in Agaunum in the Valais, Switzerland. When the legion refused to sacrifice to Emperor Maximian, the order was given to execute them. The siblings fled, reaching Zürich (then called Turicum) via Glarus before they were caught, tried and executed in 286. According to legend, after decapitation, they miraculously stood to their feet, picked up their own heads, walked forty paces

137460 uphill, and prayed before lying down in death. They were buried on the spot where they lay down, on the hilltop which would become the site of the Grossmünster. This story was revealed in a dream to a monk called Florentius in the 8th century. It largely contributed to the massive conversion of the inhabitants of these regions to Christianity and had such an impact on Zurich that these three saints still appear on the seal of Zurich today.

137465 In the 9th century, there was a small monastery at the location, outside the settlement of Zürich which was situated on the left side of the Limmat. The Grossmünster was built on their graves from ca. 1100, and the Wasserkirche was built at the site of their execution.

137470 From the 13th century, images of the saints were used in official seals of the city and on coins. On the saints' feast day, their relics were carried in procession between the Grossmünster and the Fraumünster, and the two monasteries vied for possession of the relics, which attracted enough pilgrims to make Zürich the most important pilgrimage site in the bishopric of Konstanz.

137475 With the dissolution of the monasteries by Huldrych Zwingli in 1524, their possessions were confiscated and the graves of the martyrs were opened. There are conflicting versions of what happened then. Heinrich Bullinger, a Protestant theologian, claimed that the graves were empty save for a few bone fragments, which were piously buried in the common graveyard outside the church. The Catholics, on the

137480 other hand, claimed that the reformers were planning to throw the relics of the saints into the river, and that a courageous man of Uri (who happened to be exiled from Uri, and by his action earned amnesty) stole the relics from the church. He carried them to Andermatt, where the two skulls of Felix and Regula can be seen to this day, while the remaining relics were returned to Zürich in 1950, to the newly

137485 built St. Felix und Regula Catholic church. The skulls have been Carbon 14 dated, and while one dates to the Middle Ages, the other is in fact composed of fragments of two separate skulls, of which one is medieval, and the other could indeed date to Roman times.

137490 Zurich's Knabenschiessen competition, which started in 1889, originated with the feast day of the saints on 11 September, which came to be the "national holiday" of the early modern Republic of Zürich.

The account of the Theban legion is regarded as fictitious by many modern historians. However, other historians believe that historical and archaeological evidence places the legion in Switzerland at that time.

137495 Fidelis of Como

Fidelis of Como (Italian: San Fedele) (died c.304) was an Italian soldier-saint, according to Christian tradition.

137500 Fidelis' cult is associated with Carpophorus and Exanthus, two soldier-saints. Variations on their legend are applied to Fidelis. The first says that he, with Carpophorus and Exanthus, were Roman soldiers, members of the legendary Theban Legion, who deserted during the persecution of Christians by Maximian. The three split up at Como, with Carpophorus and Exanthus going into hiding, while Fidelis took a boat across the lake to Samolaco. All were eventually caught and beheaded.

137505 The second says that Fidelis was an army officer who was guarding Christian prisoners at Milan, including Alexander of Bergamo. He managed to procure the freedom of five of these prisoners. With Carpophorus and Exanthus, he and these five attempted to make their way to the Alps, but were executed at Como.

137510 More likely, he was a Christian missionary sent by Maternus (bishop of Milan) to convert the still pagan area around Lake Como, and there met his death.

The cult of Fidelis at Como is ancient. Milan, Como, and Arona claim the relics of Fidelis.

Magnus Felix Ennodius describes, in the early sixth century, a tomb at Como containing the relics of the martyr. Reports of miracles at the tomb fomented the popularity of his cult. Como's claim is based on an account of 964 that describes the translation of Fidelis' relics from the spot where he was killed to Como in that year. Sometime before 1000, the church of Sanfedelino, which was dedicated to him, was built on the site of a much earlier simple chapel, from around the fourth century, previously dedicated to Saint Euphemia.

Relics are said to have been transferred to Arona during a time of war between Milan and Como. In Arona, the presence of the relics of Fidelis and Carpophrous is attested in documents dating back to 1259 and 1321

In 1576, Charles Borromeo transferred to Milan relics of Carpophorus and Fidelis. Though until then their veneration in Arona was minimal, Borromeo's proposed transfer angered the people of the city. As a compromise, Borromeo brought back to Arona the two left forearms of the saints. This occurred on March 13. The city council, which had been pressured by the populace to bring back the relics, decreed that an annual festival occur on that day, which in succeeding centuries has increased in importance. The purpose of the festival was extended to include the celebration for the martyrs Felinus and Gratian, thereby uniting their cult to that of Carpophorus and Fidelis.

At Milan, Borromeo commissioned the church of San Fedele to Pellegrino Tibaldi (1559).

Fortunatus of Casei

Fortunatus of Casei (Italian: San Fortunato di Casei) is venerated as a saint by the Catholic Church. Tradition makes him a member of the Theban Legion, and thus martyred at Agaunum. However, his relics were situated in the catacombs of Pope Callixtus I in Rome until 1746, when Cardinal Guadagni, Roman vicar to Benedict XIV, re-exhumed and displayed Fortunatus' relics in the collegiate church of Santa Maria in Via Lata in Rome. It is unclear how the relics of Fortunatus reached Rome from the saint's supposed place of death in the Swiss Alps.

From Santa Maria in Via Lata, Fortunatus' relics were translated to Casei Gerola in 1765, as a gift to the church there from the Holy See. Casei Gerola, in the province of Pavia, was an important village of the diocese of Tortona, which had close ties to the papacy. His relics were kept in an urn; Fortunatus' skull was crushed, indicating the cause of death to be a fatal blow to the head.

Another source states that he was venerated in the catacombs of Saint Priscilla in Rome until 1600, when some of his relics were translated to Turbigo, although his relics were also claimed by Casei from 1700 onwards. There may have been two saints with the same name of Fortunatus. Some of his relics are also claimed by the parish of Lonate Pozzolo.

He was proclaimed patron saint of Pantelleria after he is believed to have aided the island through miraculous intervention during an earthquake in 1831 and a seaquake in 1891. A procession in honor of the saint is held on October 16; a statue of the saint is carried on a boat.

Gereon

Gereon of Cologne (French: G r on), who may have been a soldier, was martyred at Cologne by beheading, probably in the early 4th century.

The Roman Martyrology states that "In Cologne in Germany, the Saints Gereon and his companions, martyrs, who with sincere piety, courageously offered their necks to the sword." That brief outline is the official account of the church, that is, the martyrdom by beheading, in the famous German city, of a group of Christians headed by a certain Gereon. In fact, nothing more can be said about them with historical certainty.

According to his legend, Gereon (called the "Golden Saint") was said to be a soldier of the Theban Legion. Gregory of Tours, writing in the 6th century, said that Gereon and his companions were a detachment of fifty men of the Theban Legion who were massacred at Agaunum by order of Emperor Maximian for refusing to sacrifice to pagan gods to obtain victory in battle.

Some of his companions' names are stated as being Cassius, Gregorius Maurus, Florentius, Innocentius (Innocent), Constantinus, and Victor.

Bede the Venerable mentions that their feast was included in the Sarum calendar, as well as the calendars of Barking and Durham. Later medieval legends increased the number of Gereon's companions to 290 or 319, and Norbert of Xanten is said to have

discovered, through a vision, the spot at Cologne where the relics of Ursula and her companions, of Gereon, and of other martyrs lay hidden.

Gereon became a popular military saint and is often represented in art as a Roman soldier or medieval knight. Along with other saints who were beheaded, he is invoked by those suffering from migraine headaches. Hélinand of Froidmont's Martyrium mentions Saint Gereon.

St. Gereon's Basilica, in Cologne, is dedicated to him. Stefan Lochner painted a triptych in the 15th century which, in the centre piece, shows in almost life-size figures the worshipping of the Magi, and the side panels of which represent Ursula with her companions, and Gereon with his warriors. In 1810 the triptych was moved from the town hall to the choir chapel of the cathedral.

Saint-Géréon is a small town located in the department of Loire-Atlantique of the French region Pays de la Loire.

The martyr is depicted on the 13th century seal of the Convent of St. Gereon, Cologne.

Magnus of Cuneo

Magnus of Cuneo (Italian: San Magno) is venerated as a martyr and member of the legendary Theban Legion. The center of his cult is situated at the mountain sanctuary known as the Santuario di San Magno, in the Valle Grana, Castelmagno, in the province of Cuneo. His feast day is August 19.

Local tradition says he was a soldier of the Theban Legion, which had been commanded by Maurice. The legion is supposed to have been decimated at Agaunum in 286 AD, but Magnus fled to the mountains of Piedmont, preaching the Christian religion in the Alps. He was eventually martyred and buried in the spot now occupied by the Santuario di San Magno. The church may have occupied a spot once dedicated to the Roman god Mars. The current church was built between 1704 and 1716, in Piedmontese Baroque style, though its interior still preserves frescoes of the 15th and 16th centuries. As Damiano Pomi points out, neither documentary nor archaeological evidence supports the connection between Magnus and the Theban Legion. Similar to the cults of Chiaffredo at Crissolo, Bessus at Val Soana, Tegulus at Ivrea, Constantius at Villar San Costanzo, and Dalmatius at Borgo San Dalmazzo, the cult of Magnus was linked with that of the Theban Legion to lend antiquity to a local saint about whom nothing was really known.

Magnus has theoretically been identified with Magnus of Füssen (Mang), a later monk of the same name associated with the Bavarian monastery at Füssen, whose cult would have spread south to Piedmont by the Benedictines. However, due to his association with the Theban Legion, Magnus was depicted as a Roman soldier holding a banner and the palm of martyrdom. He should not be confused with Magnus of Anagni or Magnus of Cappadocia, whose feast days occur on the same day. A set of relics, translated from Anagni to St. Martin of Tours Catholic Church in Louisville, Kentucky in 1901, may belong to one of them.

Solutor, Octavius, and Adventor

Solutor, along with Octavius and Adventor (Italian: Solutore, Ottavio, e Avventore), (died ca. 284 AD) is the patron saint of Turin.

Historical detail regarding these martyrs is sparse; their memory is preserved because the three were mentioned in a sermon by Maximus of Turin. However, Maximus makes no precise geographic or temporal references regarding Solutor, Octavius, and Adventor.

Their legend states that they were members of the Theban Legion during the end of the 3rd century. While the legion's leader, Saint Maurice, was killed at Agaunum, along with many other soldiers, Solutor, Adventor, and Octavius managed to escape. Adventor and Octavius, however, were caught at the Dora Riparia and killed there. Solutor would be killed at a quarry near the Dora Baltea near Caravino. A matron of Ivrea collected their bodies in a quadriga and carried them to Turin.

In 490, Victor of Turin, bishop of the city, enlarged the church that housed their relics. In 1006, a monastery, San Solutore in Turin, was established by Bishop Gezo of Turin. The relics of the three martyrs, together with those of Saint Juliana and Saint Gozzelino (Gosolino), second abbot of San Solutore, were transferred to the Turinese sanctuary known as the Consolata after Francis I of France ordered the demolition of San Solutore. In 1619, the relics were translated to the new church of the Holy Martyrs (Santi Martiri) on the Via Garibaldi. This church was built with the support of the Piedmontese pontiff Pius V and Emmanuel Philibert. The relics are still found at this church.

According to legend, a vision of the Virgin Mary appeared in a dream to John Bosco in

1844 or 1845 and revealed the site of the martyrdom of Adventor and Octavius. The Basilica dell'Ausiliatrice was built on the spot.

The cult of Saint Solutor is particularly strong in the diocese of Ivrea, and he is also venerated in Caravino, Romano Canavese, and Strambino. The codex called the Codice della Catena depicts Saints Octavius, Maximus of Turin, Adventor, Solutor, John the Baptist, and Secundus of Asti.

Tegulus

Tegulus (Italian: San Tegulo, Tegolo) is venerated as a member of the legendary Theban Legion, whose members were led by Maurice in the 3rd century. The center of Tegulus' cult is at Ivrea. Veneration of Tegulus actually arose at the end of the 10th century, when during the episcopate of Warmondus (Varmondo), the Tegulus's relics were discovered in a sepulcher situated a short distance away from Ivrea. The relics were translated to the cathedral of Ivrea within the city walls, and placed in the chapel of San Giacomo. The relics were later translated, with those of Bessus, to the chapel of Santissimo Sacramento.

According to local tradition, Tegulus survived the decimation of his legion but was eventually beheaded on the road to Montaldo Dora, at the spot later occupied by the chapel of Santa Croce, which was built in the 14th century.

However, nothing certain was known of him, though he may have been a local Christian martyr for his faith during the last imperial persecutions; his cult was linked with that of the Theban Legion to lend antiquity to a local saint about whom nothing was really known. Damiano Pomi theorizes that the relics may have been the remains of a soldier that were mistaken for those of a Christian martyr. The name Tegulus, as Pomi also theorizes, may in fact not have been his name at all, but a reference to the building material commonly used for Roman graves: the tegula or tile.

Ursus of Solothurn

Ursus of Solothurn was a 3rd-century Roman Christian who is venerated as a saint in the Eastern Orthodox Church, Coptic church and Roman Catholic church. He was associated very early with the Theban Legion and is recorded in the Roman Martyrology, commemorated with St. Victor of Solothurn on 30 September.

The Life of Ursus was written by Eucherius of Lyon in the 5th century; it recounts that Ursus was tortured and beheaded at Solothurn under Emperor Maximian and the governor Hyrtacus for refusing to worship idols around 286. The legend is classed by Bollandist Hippolyte Delehaye among the historical romances.

The first church dedicated to Ursus in Solothurn was probably built after Victor of Solothurn's remains were taken to Geneva in the late 7th century. The Treaty of Meerssen of 870 mentions a monastery of St. Ursus in Solothurn.

His relics are displayed in churches throughout Switzerland, and his coffin was found in 1519 under the choir altar of St. Ursen. His feast day is September 30.

Saint Ursus Fountain in Solothurn, Switzerland, where St. Ursus is depicted as a soldier.

Ursus is depicted as a soldier in arms, often with his head under his arm. He is depicted in the Solothurn Madonna by Hans Holbein the Younger.

Ursus is the patron of the Roman Catholic cathedral in Solothurn, Switzerland, where his body is located.

Victor of Xanten

Viktor of Xanten was a 4th century martyr and saint recognized by the Roman Catholic Church and the Eastern Orthodox Church. Since the 12th century, his presumed bones have been kept in a shrine, which is embedded in the high altar of the Xanten Cathedral. His feast day is October 10.

Tradition states that Viktor, as a Praefectus cohortis of a Cohort of the Theban Legion, was not caught up in the decimation at Agaunum but then fell victim to the persecution under Emperor Maximian together with other companions in Xanten. He was executed in the amphitheater of Castra Vetera (the site of present-day Xanten) for refusing to sacrifice to the Roman gods. He was closely associated with Ursus of Solothurn, and is said to have been a relative of Saint Verena.

Victor was first mentioned by Gregory of Tours in connection with the discovery of the bones of a Mallosus in the village of Birten, today a suburb of Xanten. The place name "Xanten" is also derived as "ze santen", which thus refers to a widely known and revered burial place. According to legend, Helena of Constantinople recovered the bones of Victor and his legion and erected a chapel in their honour.

According to other traditions, he was a companion of Gereon of Cologne. The tradition of Victor as a member of the Theban Legion is mixed with that of Victor of Agaunum

and Victor of Solothurn.

Victor of Solothurn

Victor of Solothurn is a martyr and saint of the Catholic Church. He was a soldier of the Theban Legion led by Maurice and died in Solothurn.

Victor was one of the soldiers of the famous Theban legion that, under the leadership of Maurice was dispatched to put down a revolt in Gaul. The soldiers came from the Egyptian city of Thebes, and were for the most part Christians. Sent to clear the Great St Bernard Pass across the Alps, they arrived at Agaunum, the present town of Sankt-Moritz in Switzerland. When ordered to harass some local Christians, they refused. They then refused to sacrifice to the Roman gods, because that would have meant betraying their own God. This cost them all their lives.

Otto of Freising wrote in his *Chronica de duabus civitatibus* that many of the legionaries escaped and only some were executed at Agaunum, and the others apprehended later and put to death both at Bonn and Köln. Victor reached Solothurn near Bern before the Roman authorities caught up with him and he was beheaded.

In 480 the body of Victor was brought to Geneva by the Burgundian Queen Theudelinde. He is buried in the former St-Victor's Basilica in Geneva.

Victor is the patron saint of the city of Geneva. He and Ursus of Solothurn are patron saints of the Cathedral of St. Ursus and St. Victor in Solothurn, Switzerland. A relief on the front facade shows Saints Ursus and Victor refusing to worship idols.

His feast day is 30 September.

Verena

Verena of Zurzach, also known as Saint Verena (c.260 - c.344), was an early Christian consecrated virgin and hermit. She is venerated as a saint in the Eastern Orthodox Church, Roman Catholic Church and Oriental Orthodox Churches. She is especially venerated in Switzerland, where her cult is attested in Bad Zurzach, the reported place of her burial, from at least the 5th century. Her feast is on 1 September.

The oldest tradition of the life of Verena is found in the so-called *Vita prior* by Hatto, the abbot of Reichenau (and later bishop of Mainz), written in c. 888. The younger *Vita posterior* was most likely written by a monk in Zurzach in the 11th century, the oldest extant copy dating to the 12th century.

According to Hatto's account, Verena was born in Thebes as the daughter of a notable Christian family. She was educated by a bishop named Chaeremon (*Vita prior*, ch. 3). A bishop Chaeremon of Nilopolis is mentioned by Eusebius as martyred in 250, which would place Verena's birth before that date.

After the death of Chaeremon, Verena travelled to Lower Egypt with a group of Christians, where the Theban Legion was being recruited. With the Theban Legion, she then travelled to Milan (*Vita prior* ch. 4). While still in Milan, she heard of the martyrdom of the Theban Legion (an event of uncertain historicity, traditionally dated to 286, during the reign of Maximian) and travelled to Agaunum (Saint-Maurice). In later sources, she is said to have buried the martyred legionnaires.

Verena then moved on to Salodurum (Solothurn) in a hermitage, and spent her days in fasting and prayer, and working miracles. Hatto presents her as a prototype of the consecrated virgin, saying that she attracted a following of young virgins. She was at one point imprisoned by a local governor, and Saint Maurice appeared to her in jail to console and strengthen her. After she was released, she continued her good works. At the end of her natural days, she retired into a narrow cave.

The year of her death was calculated as 344 by Johannes Laurentius Huber (1812-1879), provost at Verenamünster in Zurzach. If her birth before 250 is accepted (based on the identification of her mentor, bishop Chaeremon), this would imply that she was more than 95 years old at the time of her death.

The Verena Minster in Zurzach was built over the grave of Saint Verena in a Roman cemetery.

Her cult became widespread from the 12th century, and Verena was one of the most venerated saints in medieval Switzerland. A Benedictine abbey existed in the 10th century at the site of her burial in Bad Zurzach. The monastery was replaced by a collegiate church at some time before 1265, with Saint Verena as its patroness. In southern Germany, a chapel dedicated to her was present at the site of the minster of Salem Abbey in 1137. The minster there includes a niche dedicated to her. The convent of beguines in Zürich, established in the mid-13th century, had a chapel dedicated to St. Verena.

Verena is often portrayed as a matron with either bread, or a jar of water in one hand, and a comb in the other, symbols of her care for the poor and lepers.

- 137775 The given name Verena is not recorded outside of the context of this saint; it has been associated with the name Berenice (i.e. Veronica). In reference to the saint, Verena came to be a commonly given feminine name in Switzerland, in hypocoristic form [Vreni" becoming an almost archetypically Swiss girls' name (cf. diminutive "Vreneli"). The name Verena or Vreneli was also transferred to numerous female
- 137780 figures in Swiss folklore and mythology; notable among these is the Vrenelisgärtli ("Verena's garden") glacier of the Glärnisch massif. The Verena Gorge Hermitage north of Solothurn, ostensibly the site of Verena's hermitage, is known to have been in existence since the 12th century (the older of the two chapels has foundations of the 12th century). The presence of a resident
- 137785 hermit is recorded for 1442. The site features Stations of the Cross dating from 1613 (restored around 1990). In the 18th century, the gorge was developed as a landscape garden in the style of Romanticism, notably due to the advocacy of French diplomat Louis Auguste Le Tonnelier de Breteuil. During 1810-1813, the footpath along the gorge was further developed as a partly Roman Catholic pilgrimage site, and a partly
- 137790 national romantic shrine for the patriciate of Solothurn. In a century-old tradition, the resident hermit is provided for by the Bürgergemeinde of the city of Solothurn. The municipality of Stäfa at Lake Zürich displays Verena in its coat of arms, from the coat of arms of Stäfa bailiwick in use since 1526.
- 137795 In 1986, a delegation from Saint Verena's Church in Switzerland, brought a part of Saint Verena's relics to Egypt. The first Coptic church consecrated in the name of Saint Verena is Saint Maurice and Saint Verena's Church in Cairo, which was consecrated by Pope Shenouda III on 22 February 1994.
- 137800 In October 2004, a delegation from the Diocese of Los Angeles in the United States of America, along with Metropolitan Serapion of Los Angeles, Fr. Joseph Boules and Fr. Gregory Bishay travelled to Switzerland to bring a part of Saint Verena's relics to her churches in Anaheim and Orange. The Anaheim church, now located in Yorba Linda, California, now has a shrine dedicated to her relic, as well as the church in Orange.

Excavations in Trier

137805 February 20, 1835 In the municipality of Niedaltorf, near Trier, near the French
border, excavations have uncovered a wall that, upon examination, was found to be 17
feet long and 11 feet wide, decorated with beautiful mosaic work depicting flowers in
blue, red, and white, made of small, square stones. A section of this wall had
137810 already been demolished before the government became aware of it, so it preserved
only a portion of this remnant of a Roman building.

April 23, 1844 COLOGNE, April 18.
The accidental discovery of the mosaic floor here has proven that the Roman city lay
8 to 12 feet below its current foundation. Ancient Trier lay 20 feet lower, and
137815 ancient Rome 20 to 30 feet lower. The discovered floor ran north to south and appears
to have been part of several separate buildings (insula); that is, the palace and its
outbuildings were completely detached, just as the Romans had built their palaces
since Nero's time. The excavated mosaic floor is 20 feet long and 18 feet wide and
surrounded by continuous border decorations. The central section covers a regular
137820 hexagon, which is itself divided into six corners. In the center, one sees a man's
head with a white beard. A green robe hangs from the left shoulder, so that the right
shoulder, arm, and chest appear bare. This head is surrounded by red and black
circles, bearing the inscription ΔΙΙΤΕΝΗC. Regular quadrilaterals appear on the sides
of the polygon, and equilateral triangles lie between them, creating a regular
137825 dodecagon. The quadrangles are decorated with rosettes of various shapes and colors:
red, green, yellow, blue, black, and white alternate. The triangles between the
quadrangles are inlaid with smaller triangles, alternating between black and white,
yellow and red. In the hexagon facing west, on a white background, one sees a head
with gray hair and a beard, turned from east to west. The robe covering the chest is
137830 light gray; under this head is written CΩKPATHC. A head on the east side has dark,
hanging hair and a long beard, with the letters EIA, probably XEIAON, one of the
Seven Sages of Greece. Under another head with a gray beard, wearing a blue-green
robe over his left shoulder, is written CΩΦOKΔHC. Some other heads have suffered
greatly; Under one of these are the letters OBOA, which would have been KOEOBOOTOC,
137835 one of the seven sages from Lindas. No mosaic floor is known to be so decorated with
busts of sages and poets. In that respect, this one is unique.

September 12, 1852 — In Trier, during the construction of a house, a magnificent,
very well-preserved mosaic floor was discovered today, 10 feet underground, with
137840 figures in the most vibrant colors, as beautiful as any ever found in that region.
This piece will be preserved in the museum there.

January 1, 1861 Constantinople and Urbs Roma.
... The above opinion of Mr. Soret is supported by a recent coin hoard discovered
137845 near Bitburg, Trier administrative district.
A farmer found in his field a hoard of small coins covered with slate, dating from
Roman times, containing 402 coins, beginning with Maximinus Daza and ending with
Constantine II. My esteemed friend, Professor Namur, acquired the hoard for the local
collection. More detailed descriptions and information about the results can be found
137850 in the next chapter of the review of Belgian numismatics. I was permitted to examine
the hoard; it contained some rarities, for example, the inscription of Constantine
the Great: Soli invicto comiti, and the emperor depicted with helmet, armor, and
lance. Then, more details regarding the minting location: MSL, which is also given as
Sabatier and which I interpret as Moneta Sacra Londinensis. However, these
137855 inscriptions were not uncommon in various forms under Crispus and Constantine II. I
am glad that the Fund is worth it over the year 326; Constantine II was only 10 years
old in this year, but had a fine victory with his stepbrother Crispus, who died in
this year, inheritances. Constantine now tries in two copies of the following young
people, fast childproof Cups of the Laurel Crown, both coins since minted in the same
137860 birthplace Arles; The right to the laurel wreath in Slovenia was already granted
during the lifetime of Crispus. This is a matter of great concern for the younger
generation of the Funds of the Year 337, in the Year of Constantine the Great and
Constantine II resigned the epithet junior.

137865 November 14, 1862 — The government has made 22,000 thalers available to carry out
excavations in Trier, on the site of a Roman palace.
In order to preserve this important ruin, which it is hoped will be discovered in its
entirety for art, the government has purchased the surrounding land for a short

period. Excavations will begin this winter.

February 9, 1874 In Euern, near Trier, work was underway to level the ground for the construction of a new church. A floor of Roman mosaic, 14.5 feet square with beautiful four-colored figures, was discovered.

November 2, 1880 – Three months ago, a resident of Ermsdorf, Luxembourg, discovered over 7,000 Roman coins while excavating a plot of land. Mr. Van Werveke, professor at the Athenaeum and curator at the Coin Cabinet of the Historical Association in Luxembourg, cleaned them and arranged them in the cabinet. They are coins of the emperors Licinius I, Licinius the Younger, Constantine the Great and his sons Crispus, Constantine II, Constans I and Constans II, as well as of the empresses Theodora, Helena and Fausta, as well as some of Alexander Severus, Maxentius, Claudius Gothicus, Maximianus Herculeus, Maximinus Daza, Tranquillinus and Dalmatius.

April 10, 1883. Recently, the museum in Trier received as a gift some very remarkable remains from the distant past, found in the ground near Wasserbillig. During the construction of a vineyard in the latter town, many graves were excavated. Most of the bodies had been cremated, and the remaining bones placed in urns and thus entrusted to the earth. Limestone membranes had been placed around the multitude of urns discovered here. In addition, other bodies were buried. They were laid on roof tiles; one of these bodies had been placed on 14 roof tiles, forming, as it were, a bed for the brickmaker—as can be seen on similar objects used in the construction of a Roman bathhouse excavated in St. Barbara's Church in Trier. Similar objects, bearing the same mark, were used in the construction of the oldest part of what is now, but later enlarged and expanded, the main church of Trier. It follows that these graves must have been excavated between 824 and 385.

August 29, 1897: A discovery. The remains of a Roman house have been excavated in Trier, on a plot of land owned by the manufacturer Schabb. It is a large house, the facade of which stood on the city's main street (Augusta Trevirorum) in Roman times. Among other things, a window was discovered there—the first ever discovered in a Roman house—as well as a very beautiful, colorful mosaic floor. According to experts, the house dates from the first half of the 4th century, the heyday of Trier under Roman rule.

September 2, 1903 ROMAN EXCAVATIONS IN TRIER. Government activities in Trier daily unearth more or less important Roman antiquities. In Pfützenstrasse, an extremely solid Roman road paved with white limestone was discovered at a depth of 2.5 meters. The street originates from the city theater and runs to the Imperial Palace. A large number of Roman coins and "Trier Charter coins" were also discovered on this occasion. In other parts of the city, well-preserved bronze vases, Roman furniture, and the remains of terra sigillata dishes were unearthed. The newly uncovered sections of the Baths complete the picture of this well-preserved bathing facility.

March 23, 1906 – During repairs to the West Choir in the Cathedral of Trier, large Roman mosaics were unearthed at a depth of two meters beneath the floor.

February 25, 1925: Trier as a residence of the Romans.
Dr. Loeschke from Trier spoke yesterday to the Natural History Society about Trier as a Roman residence. Several decades before Christ, Emperor Augustus was said to have founded the city of Trier. Before this time, there was no city or town in that region of the Moselle. The residents lived high up in the mountains and hid near a

June 22, 1931 TREASURE HUNTERS
[...] A similar discovery was made about 30 years ago by Mayor Britz from Dockscheid near Maxweiler in the Eifel region. While plowing, he came across a large collection of coins, silver and copper pieces. The coins bore, among other things, the images of Emperor Constantine the Great and Saint Helena. The find is now in the Provincial Museum of Trier. The recovered coins are valuable testimonies to the country's past.

October 12, 1931 The German Delphi.
I already wrote an article under this title a few months ago. Now new details have come to light. Until now, it was believed that the Roman Emperor Augustus was the founder of the city of Trier. Excavations in the Altbach Valley have actually revealed...

137935

A different opinion has emerged. This has established that Trier already existed before Roman rule. Cultural layers dating back many thousands of years lie on top of each other here.

137940

It was customary for the Romans to choose the ancient cultural sites of their conquered peoples as their own. Moreover, Trier enjoyed an exceptionally favorable geographical location, as the military routes from Paris and Reims, and from Lyon via Metz, converged here and continued on to Cologne and Mainz.

137945

With all the luxury of the imperial period, Trier was established as a trading and administrative center for the Roman provinces of Belgium and Upper and Lower Germany. After the division of the Roman Empire into western and eastern parts, Emperor Diocletian even elevated this city to an imperial residence in 286, from which the entire western empire, including Spain and Britain, was governed. Trier thus became one of the largest cities of the Roman Empire and acquired the impressive buildings from that period that still remain on German soil. Although these buildings were later destroyed, the remaining remains still clearly demonstrate their former significance.

137950

In recent years, foundations of large Roman buildings and palaces have been discovered, all situated along a main street. It is believed that the imperial palace, the university, and numerous temples of Roman deities are still to be found.

137955

This temple city can be compared to the national sanctuary of the Greeks, Delphi, which was also a sacred city with a large number of magnificent temples, priests' residences, and a theater. The distinction here was that most of Delphi's art was made of marble. Delphi also housed the world-famous oracle of Apollo. A wealth of masterpieces of art were preserved here, gifts from all the peoples, cities, and kings of the ancient world. Already 50 years ago, during the construction of a railway line to Saarbrücken and Metz, a number of idols, as well as inscribed stones, were discovered. When a road was to be built on the same site in 1924, Professor Siegfried Loerschke of the Provincial Museum in Trier began excavating the ground. He made discoveries that can be considered the largest on German soil in decades. This involved the discovery of an entire "holy city," a vast collection of temples within the walls of the Roman imperial residence.

137960

137965

To date, no fewer than 60 temples and chapels, a theater, houses, large columned halls, water conduits, springs, and small structures have been uncovered.

137970

Our knowledge of Roman worship has been significantly expanded as a result. It has been discovered that the ancient Trevors also venerated animal-shaped idols in historical times. For example, a statue of a water god in the form of a bull was found. Animal and human forms have been combined in two other idols found, but the animal is already the subservient element in these. This applies to the riding Jupiter or Wode, the Germanic god of the sky, and to the patron saint of horse

137975

breeding, Epona, who is already venerated here as a rider and no longer as a horse. Furthermore, an idol was found representing maternal blessing. In one instance, this goddess sat in an armchair at the entrance to the temple, holding a basket of fruit on her lap; in another, she wore a diadem on her head and a full grain of corn in her left arm. Two small children rested their arms on their mother's lap.

137980

Approximately one hundred figures representing goddesses were found in a temple cellar. The most beautiful thing found, however, was the statue of a young mother carrying her child in her arms.

Male idols were also found, including, for example, the Deus Vertumnäs. Human sacrifices were still made to this god in historical times.

137985

December 12, 1933 [...] In 1825, a farmer from the neighboring village of Fließem was searching for stones and tiles from the old building to use—according to common custom—for his own house, when he unexpectedly stumbled upon a mosaic floor. He spoke about his discovery, and it soon attracted public attention. The first excavations were carried out by Mr. Malegaux from Bitburg, by the Society for Useful Research, and by the government of Trier. [...] A remarkable discovery was made years ago by a farmer who was leading his plow, drawn by two horses, across his land. Suddenly, something unexpected happened: the earth seemed to open up and swallow the entire team. The horses sank into the ground, and it turned out that beneath the field was a brick vault belonging to the Roman estate of Otrang. It took considerable effort to retrieve the horses from the deep pit. The farmer found two beautiful gold cups, each with a 30-centimeter-long base. He presented this discovery to the artistic king Friedrich Wilhelm IV of Prussia, and received 24 taler for it.

138000

December 25, 1934 TEMPLE QUARTER IN TRIER

Major archaeological works. The entire quarter exposed. Via archaeologica.

A German collaborator writes to us:

It has now been definitively decided to completely expose the old Roman temple quarter in the city of Trier, Augusta Treverorum, the German Delphi, as is sometimes called. As is known, this city, perhaps the oldest in Germany, was originally a settlement of the Treveri, a Gallic tribe; In the third century, it was the seat of Roman emperors, and under Emperor Constantine I, it was even the metropolis of one of the four prefectures of the great Roman Empire.

The major project now decided upon will be completed in four to five years. The costs will be borne by the Prussian state, the Rheinische Provinzial Verband (Rhine Provincial Association), and the Notgemeinschaft der Deutschen Wissenschaft (Community of German Science); the Roman Germanic Central Commission (Römisch-Germanische Zentral Kommission) in Frankfurt will bear the costs of the project.

A publication on the results of the excavations is underway. This work has already been partially published and will now also be completed.

Moreover, the entire temple area will be made accessible to the public in the spirit of an open-air museum, designed by the Trier urban planner Schmidt. The most beautiful temple will be rebuilt; conveniently located viewing points will also be provided to provide a characteristic overview of this ancient temple area of Trier.

An even more far-reaching plan is also currently under serious consideration. An archaeological via will be constructed from the Porta Nigra across the main square, past the Cathedral and the Basilica, to the museum in the former palace of the Electors. This via will then lead from this palace to the imperial baths and to the temple area, as well as the amphitheater. The plan is to implement this plan within ten years, depending on available funding, in collaboration with the Trier city council and the Rheinische Provinzial Verband (Rhine Provincial Association).

February 7, 1936 LECTURE BY PROF. DR. S. LOESCHCKE.

Last night, Professor Dr. S. LOESCHCKE, an archaeologist in Trier, spoke before the Frisian Society of History, Antiquity, and Linguistics. His topic was:

"The Conquest of Nordic Power over the Roman World Power of the Rhine, Danube, and Moselle."

The speaker pointed out that the Rhine region was inhabited by Celts and Germanic people at the time the Romans arrived. The Germanic people arrived around 1300 BC; the Celts, also a "Nordic" people, previously lived there alone. At that time, the Illyrians, unrelated to the Germanic people, lived in eastern Germany. Research by Dutch, Belgian, German, Scandinavian, and Austrian researchers has shown that around 400 BC, Germanic peoples inhabited all of the Netherlands, most of Belgium, and northern Germany. The Celts were pushed south and especially west (France). Celts and Germanic peoples also intermingled. The Illyrians disappeared completely from the area. The speaker recalled the many mountains fortified as fortresses in the Moselle and Rhine regions and recounted how Caesar conquered modern-day France for Rome. Under him, and around the time of Christ's birth, under Augustus, the Rhineland was next. From approximately 50 BC to 450 AD, this land was under Roman rule. Emperor Augustus, the greatest of the Roman emperors, allowed his troops to invade Germania. All the mountain fortresses were conquered by the Romans. Trajan and Marcus Aurelius later fought on the Danube, and they had such assaults immortalized in monuments. No people could have resisted the Romans; working consistently, he had conquered empire by empire, country by country. Like living walls, the legionaries, their shields held side by side, pressed forward. On the German mountains, the gigantic ruins of the Celtic and Germanic walls conquered by the Romans still lie. In what is now the Netherlands, the Batavians were present, in Belgium, the mixed Germanic-Celtic Nervii. The Romans founded the provinces of Upper and Lower Germany and built Trier (Colonia Augusta Treverorum), the city of the Treveri, on the Moselle. On the Rhine, the present-day cities were established as fortresses against the Germanic peoples, including Nijmegen. In these fortresses, the legionaries were stationed with troops from the conquered peoples, with the Treveri serving as cavalry. Numerous finds from the Rhineland and Eifel region illustrate this and the appearance of the Germanic people, with their long beards and matching trousers, which aroused the amazement of the Romans. In the year 9 AD, Augustus summoned three large Roman legions to seize the Rhine. The Roman fleet had to sail up the Elbe, because the entire land up to the Elbe and the Danube Bend was to become Roman. The outcome is well known: the three legions and their auxiliaries were destroyed in the battle in the Teutoburg Forest by Arminius (Hermann) with his Sicambri and other tribes. Even the banners, the eagles, were lost to the barbarians, the Germanic people. Therefore, Hermann's statue rightly stands in the Teutoburg Forest, saying to everyone: "Woe to

him who seizes Germany when Germany is united." Despite all attempts to erase the insult, the Germanic lands east of the Rhine remained free. The Parthians had first defeated the Romans; however, Germania put an end to their advance once and for all. An inner force must have dwelt within the Germans that brought this about. It took Rome a hundred years to recover: only then did it manage to establish a foothold in southern Germany, where Celts and Germans lived together. They now wanted to advance from the south, because in the north, where the Batavians and the warlike Frisians lived, it was not so easy. The Romans built a large border wall with 76 castles and 170 watchtowers protected the Germanic people. The Baalburg, now rebuilt, was one of these castles. Trajan's Column in Rome depicts the alarm towers and other fortifications, along with the alarm signals on the limes Germanicus. The rebellious young Germanic people were tied to a column with shackles or chained neck to neck as slaves. Trajan's Column depicts approximately 2,500 human figures, all immortalizing the Emperor's military deeds. Marcus Aurelius crossed the Danube and built his fortresses and castles there. During this campaign, the Romans were astonished that the Germanic people sought to recover the wounded and even the dead during battle. The statues on the Roman column depict these examples of Germanic loyalty. The Germanic leaders, the speaker continued, were beheaded one by one after their defeats, to frighten the tribes. Thus, Dacia on the lower Danube was conquered. Like all subjugated countries, it had to order tribute after tribute. Ultimately, payment was refused, and the Emperor himself went to Dacia to see what was happening. One of the rebels spoke for all, for he had given impetus to the movement. He refused to renew the oath; the motto was: better a new war than subjugation. Unfortunately, there was a traitor among the leaders, a Dacian, whose tribe was the first to flee. Once again, the Romans were victorious; they killed the men; the women, who protected their children to the last, were taken away!

In truth, the speaker said, the statues on the column in Rome are not only a glorification of Roman glory, but above all, though not intended as such, a hymn to Germanic courage and loyalty. Some of the old men, women, and children managed to hide in quarries and caves. The inner strength of the women would live on in the children, in the new generation. This generation retook Dacia and conquered the limes Germanicus. The Germanic tribes invaded Gaul and destroyed numerous towns and villages. Trier was also burned—as the speaker himself discovered in his excavations. However, Rome was so immensely strong that only the land to the right of the Rhine remained free; the area to the left of the river was forged even more firmly into the Empire. Trier became one of the largest cities and for a hundred years the seat of an emperor or crown prince.

Much of the fortifications remains, which was virtually indestructible. Enormous baths were constructed, and large workshops were built on the outskirts of the city, including numerous potteries. In the Frisian Museum, one can admire so-called Orpheus dishes from Switzerland, which resemble the finds in Trier. After the break, Professor Loeschcke discussed the products of the potteries in Trier; the old Germanic pots and vases are black, the Roman ones red. The Trevian people also made black pots in the Roman period, the so-called Terranigra pots, a beautiful collection of which can be found in Nijmegen. Wooden pots were also imitated in clay. The Romans increasingly taught the indigenous population to master the technique. Cups, boxes, and bottles were made for Moselle wine, which was transported from Trier along the Rhine. Drinking mottos also appeared on the bottles: among others, "Spare the water; put undiluted wine in here." A protest against the Roman custom of drinking wine mixed with water, still valid in the Moselle region! Vases and pots bearing the swastika were also in use at that time. These were likely intended as a sign of Germanic aversion to Rome. The speaker displayed on the white canvas the image of a piece of leather, depicting a banner between two swastikas. According to him, this was perhaps a symbol of the Treveri, proud of their Germanic heritage. They were also known for their well-fed pigs and wool production. Horse breeding was also highly regarded. The Romans understood the art of exploiting indigenous industries and cultures to their advantage. Wine cultivation flourished along the Moselle very early; Emperor Probus did not introduce it, as is often said; he only provided the initial support to the winegrowers after their vineyards were destroyed by the invading Germans in the third century. The wine was transported in typical Germanic ships resembling Viking boats. In the land of the Treveri, Bacchus was not the god of wine, but a bearded Germanic deity.

There were also barrels there, which were unfamiliar to the Romans. Professor Loeschcke reported that he had succeeded in discovering the oldest temple remains in Trier, temples dedicated to the indigenous gods. The excavations have already identified 75 temples and chapels. In the center stood the Imperial Temple,

requisitioned by the Romans; alongside it, the Germanic and Celtic gods were worshipped in temples. The Trier temple district was three times as large as the temple complex at Delphi and twice as extensive as the Acropolis in Athens. Discoveries have shown that a settlement existed in Trier long before the arrival of the Romans. Trier is therefore an ancient cultural land. The 500-year Roman occupation could not erase the original indigenous character, any more than that would have been possible in the Netherlands. However, much was learned from Rome, including building in stone. Several examples of this still remain. Beneath many Christian churches lie the old pagan temples. In these, the Gallic warrior god was depicted with three heads; this depiction was later transferred to the Christian Trinity, but was ultimately forbidden. The bull god was also worshipped in Germania and Gaul; there is even a legend that a golden bull statue is said to have existed near Trier. For the Celts, the bull was the water god: the great fertilizing element in nature. The Rhine was sometimes depicted as a god with two bull horns; It was also found on a stone beneath Notre Dame.

This bull was always accompanied by three birds, three cranes. In this context, the speaker recalled that, in earlier folklore, storks carried children from the water to their parents. And the hare still brings us Easter eggs. Originally, the Germanic people did not depict their gods; they held them in too high esteem; their worship of the gods took place in nature. Professor Loeschcke pointed out that the names of the Germanic gods and goddesses, as well as those of the Romans, still live on in the names of the days. However, there is a significant difference between Freya, the mother goddess, and Venus, both of whom gave their names to the sixth day of the week. All sorts of symbols have defied the centuries. Even today, for example, children in the land of Trier wear lucky horns around their necks. On the coast, in the Netherlands, Nehalennia was worshipped as the mother goddess, and this was the case throughout Germanic lands. The Romans, on the other hand, revered women only as sensual Venus, not as faithful mothers. Herein lies the great distinction. The indigenous element, the professor concluded, not only rose up against the Romans with weapons, but also conquered them spiritually and morally. The speaker depicted the Great Migration, when the area left of the Rhine was liberated from the Romans and the world empire collapsed under their power. Not a single Germanic became Romani; they left that to the Celts. However, beyond the boundaries set by nature, the Germanic people could not establish a new empire either; the unnatural borders of countries and peoples never endured.

August 10, 1940 Coins from the time of Constantine the Great. The excavations on Kruisstraat-N. Lindestraat-Coriovallumstraat in Heerlen have recently led to an important discovery. Near the large heating furnace, which is slowly being uncovered, coins from the time of Constantine the Great have now been discovered. This is of great significance because several historians – including Holwerda and Peters – were of the opinion that around 250 AD, no Romans had settled in South Limburg and that the country had been an almost entirely deserted wasteland. This coin discovery now contradicts that theory, as the Roman period of residence is extended by at least 100 years to approximately 350 AD. The discoverers of these coins, including the renowned archaeologist Dr. Becker from Beek (L.), are now leaning toward a theory that discoveries from the early Christian period may also be made. During Constantine the Great's reign, as is well known, the Edict of Milan granted Christians religious freedom in 318. It is therefore highly likely that there were Christians in South Limburg around the year 350, and that some remnants of these Christians may also be found.

April 23, 1942 THE ROMAN WALL PAINTINGS OF TRIER
The "Nationalzeitung Essen" contains a detailed report on the major archaeological discoveries in Trier, which have been described as the oldest Pompeian wall paintings on German soil. To give our readers an overview of these discoveries, we present an excerpt here. In 1920, during the excavation of a wine cellar, an archaeological discovery was made, the full significance of which was not immediately recognized and therefore remained undiscovered for almost twenty years before science officially intervened. The director of the Rheinland National Museum in Trier, Prof. Dr. von Massow, the restorer of the Pergamon Altar in Berlin, who was then an assistant there, immediately began devoting himself to this task after becoming the museum's director. At the time, more than one hundred crates containing fragments of ancient Roman wall paintings were recovered, which, according to current scientific knowledge, amounted to approximately 100 AD. A series of significant sections were

138200 successfully restored and it was established that the paintings certainly originate from only two rooms. The decorative principle could also be established to a certain extent. The first room is divided into a series of rectangular panels by vertical stripes, half a meter wide, each with a double frame, blue-green on the outside and yellow-red on the inside. The further divisions have not yet been discovered.

138205 In contrast, the decoration of the horizontal stripes is perfectly clear. These are decorated with candelabra; the candelabra stem emerges from a green chalice with a dark red base, resembling a goblet. The base of the chalice is flanked by two green shields, red ibexes stand on the chalice rim, winged amoretts with flower baskets leap on a central panel, and a fallow deer stands on the uppermost panel. This fantastic group is held aloft by two tritons. Another candelabrum has a similar grouping, but

138210 instead of ibexes, blue birds, instead of amoretts, red jars with ears, and instead of the fallow deer, a sphinx. All depictions, in terms of fluidity and splendor of color, are no match for any magnificent piece from Pompeii. Immediately above the fallow deer is a square painting depicting the hero Hercules, with his left hand strangling the hydra, his right hand raising to strike with his club. The second room

138215 must have been even larger and more elaborately painted. The most striking section is a half-life-size Apollo, the upper half nude, the lower half clad in a brilliant blue cloak. He leans on the lyre to his left and rests his right hand on his head. Below him hangs a large decorative bronze disk with a blue head in the center; garlands radiate from this disk, which blend seamlessly into the surrounding architecture. The

138220 most surprising feature is a larger group, which depicts a monumental tripod before a tabernacle. On the beams, a whip-lashed Cupid drives a team of seahorses forward, and within the tabernacle, remnants of further architectural elements appear. Another beautiful fragment shows a laurel tree between blue columns under purple beams. This suggests that this room was used for worship; after all, everything seems to revolve

138225 around Apollo, whose sacred animals, tools, and trees can be found here. The composition of the whole remains uncertain. However, the division of the wall into three sections is already established: an upper floor, containing the black plinth discovered during the excavation, with yellow interspersed fields. Plants are painted on the black surfaces.

138230 For the individual motifs, but also for larger complexes, Professor Van Massow was able to point out surprising similarities from Pompeii. It should also be noted that the quality of the Trier paintings, although partially affected by weathering, must have been originally excellent. Yet, they differ in detail from Pompeian pieces, insofar as even in these works of art, the provincial element within Roman imperial

138235 art can be clearly distinguished from the classical works of the South.

February 11, 1943 Archaeological discoveries in Trier.

– In a lecture in the "Gesellschaft für Nützliche Forschungen," according to the "Frankfurter Zeitung," the director of the Landesmuseum in Trier, Professor Dr. van

138240 Massow, spoke about the archaeological discoveries made within the Trier city area over the past year. Among other things, a mosaic measuring 3.40 by 3.90 m was discovered, closely related in style and technique to the Nennings mosaic and, like it, likely dating from the end of the second century AD. Its special significance lies in the fact that all nine muses are depicted here. Furthermore, the wallwork of

138245 a Roman hall, measuring 10.60 by 7.20 m, was discovered, also covered with mosaic. Above this hall was medieval brickwork with Romanesque murals. The discoveries made north of the amphitheater were a real sensation. Written accounts already knew that a circus had existed in Trier during the Roman period, which, in a eulogy to Emperor Constantine in 310, was equated with the circus maximus in Rome. While it was

138250 previously assumed that this circus was located on the temple grounds in the Altbach valley, Professor von Massow believes, based on the latest discoveries, that it should be located in the Gartenfeld district of Trier. (E.K.B)

November 2, 1943 Sensationelle Funde im Raum von Trier

A Quellsanctum de Treverer entdeckt
Trier, November 2.

Trier had a great deal of rain and overheated Bodenfunden. Let's consider the visual impact of the circus maximus and a review

The discovery of the surviving mosaics of the Muses was announced. Now, the director

138260 of the Rhineland State Museum, Professor Dr. von Massow, announced sensational reports on the truly "groundbreaking excavations" in front of Trier Cathedral and on the discovery of "vast quantities of remnants of ancient wall paintings" that were rediscovered in Trier's Palace Square and whose study and reconstruction have been underway for several months. According to Dr. von Massow, these ancient finds will

far surpass anything previously known in this field, stand comparison "with the treasures of Pompeii," and certainly represent the most magnificent finds ever unearthed north of the Alps, and especially on German soil. Furthermore, Professor Dr. von Massow was able to report the discovery of a spring sanctuary of the Treveri in the Idarwald forest in the Simmern district. Initially, simple, hewn slabs were discovered during work on a water conduit in the middle of the dense forest. Finally, the outline of a temple emerged, revealing a considerable size and clearly a national sanctuary, an ancient pilgrimage site of the Treveri. The altar was located outside the temple, while the statue of the worshipped god stood inside, facing the altar through the temple gate. Numerous grave goods and votive offerings in the form of clay figurines and bronze busts were found in the sanctuary's spring. Coins of Trajan, Hadrian, and Faustina the Younger allow for a dating between 100 and 150 AD. A statue of a cheerfully smiling Apollo was also discovered in this sanctuary. However, the most important statues of the sanctuary were a larger-than-life Apollo, of which only fragments could be recovered, and a statue of his consort, the Treveri goddess Sirona—an exceptionally valuable and likely unique find. This is a larger-than-life high relief in front of a stone slab resembling the back of a chair. The goddess is dressed in a richly draped gown, with a cloak and diadem, and holds a snake that is sucking an egg from a vessel the goddess presents to it. This depiction of fertility also explains two sculptures from Metz in Sainte Fontaine. W. L.

November 5, 1943: ARCHIVAL DISCOVERIES NEAR TRIER AND IDARWALD. Including a temple from the Roman period.

BERLIN, Nov. 4 (S.P.T.) — In recent months, sensational excavations have been conducted in Trier and Idarwald, far surpassing all the results achieved thus far in German excavations into Roman antiquity. Prof. Dr. von Massow, director of the "Rheinische Landesmuseum" in Trier, compares the finds to the treasures of Pompeii and calls them the most astonishing results of excavations north of the Alps. During work to protect the Cathedral of Trier, the foundations of a large basilica from the fourth century were discovered. On the Cathedral Square, during the construction of air raid shelters, Roman houses from the early fourth century were discovered. Emperor Constantine had his seat of government established here and, for that purpose, had several rows of houses demolished. In the remains of these houses, an extraordinary quantity of ancient wall paintings was discovered, probably dating from the second century.

A third, no less sensational discovery was made in Idarwald. When new pumps were to be installed here, a "spring sanctuary" from the Roman period was discovered, which must have been intended for the local population. Further excavation then took place, revealing the outline of a large temple, making the excavation one of the finest finds of this century.

August 15, 1944 MANNHEIM AND TRIER ATTACKED. Under closed cloud cover.

BERLIN, August 14 (Interinf). — Formations of Anglo-American bombers again took advantage of the poor weather conditions prevailing over southwest Germany today to launch terror attacks on Mannheim and Trier. Under almost complete cloud cover, they repeatedly dropped their high explosive and incendiary bombs, completely indiscriminately, on residential areas, outskirts, and cultural monuments. The German fighters were severely hampered by the unfavorable weather conditions. Only a few of the squadrons launched at the alarm signal made contact with the enemy. In contrast, the batteries of heavy anti-aircraft guns stationed in southwest Germany engaged in defensive combat against the American formations with effective barrage fire. Despite the difficult conditions, they succeeded in destroying several four-engine American bombers. So far, reports have been received of the downing of ten aircraft. According to the International Information Bureau, American bombers have laid a carpet of bombs in Trier amidst the most valuable cultural monuments in the old city. According to reports received so far, the cathedral, the basilica, the Church of Our Lady, and the Electoral Palace, among others, were severely damaged or partially destroyed. There are no military or industrial targets in the vicinity.

June 4, 1951 The ancient Roman Imperial City of Trier is discovered from the rubble. The Basilica is believed to have been originally built as a throne room for Constantine the Great.

NEW LIGHT ON THE TRANSITIONAL PERIOD BETWEEN ANTIQUITY AND THE MIDDLE AGES

Although the aerial bombardments of the last World War destroyed sixty percent of

Trier's buildings, while grand and precious historical monuments such as the Basilica from the time of Emperor Constantine the Great, along with the adjacent Electoral Palace from the 17th and 18th centuries and the renowned early Gothic Church of Our Lady (built between 1235 and 1260), were severely damaged, and others, such as the magnificent rococo convent of St. Irmine, were completely destroyed, still enough remains to allow us to see for ourselves the nature and quality of both pre-Roman and ancient cultural heritage, and its aftermath in later times. Yes, one could even say—with a touch of bitter humor—that the bombings had at least one positive aspect: that, while destroying ancient structures, they revealed many older ones that might otherwise never have become known to us. As a result, the bombings have provided us with new and transformative insights into all sorts of questions of art and cultural history, particularly regarding late Roman and early Christian art and its aftermath in the Middle Ages. So important were the discoveries that an archaeological conference was convened in Trier the week after Pentecost, chaired by Dr. Kutsch of the Wiesbaden Museum, to give the scientific community the opportunity to assess the discoveries on site and also to discuss various related topics.

The research led to findings that completely differ from the views previously held regarding the architectural history of these two impressive churches. Both the largely Romanesque cathedral and the graceful central section of the Church of Our Lady were found to stand above the remains of two enormous early Christian basilicas, whose construction, according to completely reliable coin finds, began around 326, thus still under Emperor Constantine. The floor plan of these basilicas is particularly remarkable, as together they form a double cathedral, as it were. Against the west wall of the wide transepts on the east side and of the three-aisled cathedrals, an adjoining rectangular tribuna (altar) was found, flanked on either side by two smaller square rooms each. These can be interpreted as diaconicon and prothesis (sacristy rooms), a layout that remarkably prefigures the later Syrian and Ravennatic early Christian basilicas. It is somewhat difficult to grasp that Constantine erected such a massive complex as these two grand basilicas here in Trier. In 326, thus simultaneously with his St. Peter's Church in Rome (presumably begun in 324) and his Golgotha Basilica in Jerusalem. This makes one realize the significance of the city, Treveris, which will be mentioned later, since it was designated the capital and residence of Gaul by Emperor Diocletian I at the division of the Roman Empire in 286, and especially since Constantine, ruler of the Western Roman Empire, preferred to reside here from 306 to 316. The pompous emperor, deeply conscious of his calling, wanted to make his residence the equal of Rome. This is also evidenced by the well-known so-called "Basilica of Constantine," the red-brick colossus located near the current cathedral complex, a characteristic example of Roman "practical" architecture. During an aerial bombardment on August 14, 1944, the Baroque church interior was completely destroyed by fire; The Roman wall, however, held firm unscathed, striking evidence of the strength of this masonry technique. Here too, the disaster had the fortunate consequence of providing an opportunity for closer examination of the structure. First, it was established with complete certainty that the strict vertical movement of the heavy wall piers, rising in a single course, was originally interrupted in two places by galleries running under the two window areas, which thus functioned as two heavy horizontal frames. The heating system, with its familiar Roman hypocausts, was also discovered. It has been concluded that we are dealing here not with a "basilica," but with an "auditorium," the Constantinian throne room, which forms the east wing.

The ruins of the imperial palace complex.
On the eastern bank of the Moselle, on the opposite side of the city, lies the ruined Monastery of St. Irmine, which we have already mentioned. Only a few walls remained standing, but, stripped of their Baroque plaster and stucco by the bombs, these once again displayed Roman red sandstone masonry, interspersed at irregular intervals, with two layers of brick each. It could now be determined that they belonged to two large buildings that formed the "Horrea," silos that stored the city's supplies. The Franks also later used these warehouses, which were converted into nunneries from the 7th century onwards. Among the most important works of art that were further unearthed, we must consider above all the ceiling paintings, which were found, broken into pieces, beneath the floor of the aforementioned Constantinian basilica, which preceded the present-day cathedral. The busts of princely figures belonging to this group, painted as frescoes on a layer of plaster, are set against a wickerwork of coniferous wood, unique in art history. Among these busts is that of a woman, whom one reasonably believes to be Constantine's mother, Saint Helena. The publication of

these paintings, as well as that of an exceptionally large mosaic floor discovered beneath a destroyed house, depicting scenes likely related to a secret pagan cult, should be awaited with great interest in the near future.

Thus, from the ruins of present-day Trier, the late Roman imperial city of Treveris has risen before us, richer and more complete than anyone could have imagined, a center of ancient culture whose influence radiated throughout Eastern Gaul and the Rhine Province well into the Middle Ages. And here we touch upon the still-murky question of the transitional period between "Antiquity" and the "Middle Ages," which was addressed in the closing sessions of this congress. In an excellent paper on the survival of Roman cities along the Rhine and Danube, Dr. H. van Petrikovits demonstrated how the Roman cities of the 4th century AD established numerous connections to the medieval city, with the episcopal sees, such as Trier, forming the strongest bridge. Dr. K. Böhner discussed the question of continuity between Antiquity and the Middle Ages, seen in the light of Frankish antiquity. In conclusion, the Hamburg professor, Prof. Dr. Aubin, delivered a masterful argument on "the question of the boundary between Antiquity and the Middle Ages." The period in which this separation occurred spans eight centuries: from the birth of Christ to Charlemagne, an era full of momentous events heralding a new era. All these mark either the significance of Christianity as the beginning of a new era, or the downfall of the ancient world, or finally, the impact of the actions of the Germanic peoples. The year 476, when Romulus Augustulus, the last emperor of the Western Roman Empire, was deposed and the empire permanently disintegrated into Germanic states, is undoubtedly a major milestone, but it is not yet decisive, and no other date is entirely delimiting. Aubin concluded that a true separation in all areas can be observed in the Merovingian period, around the middle of the seventh century. All in all, this archaeological conference in Trier proves to be of extraordinary significance for our entire Western European cultural history. The Roman and early Christian monuments that came to light here are of the utmost importance, not only for archaeology, but for historical scholarship as a whole. In particular, the historiography of early Christian art will have to be completely revised.

FRANS VERMEULEN

Photos: DOM AND CHURCH of Our Lady in Trier seen from the northwest, before the 1944 bombing. BASILICA (auditorium) of Constantine the Great before 1944 in Trier.

June 21, 1956 Meetings with the Treveri, the Romans, and the Four Sons of Aymon [with some photos of the paintings]

[...] A remarkable contrast in the cityscape is formed by the very Baroque bishop's palace and the enormous Roman "Emperor's Hall"; the intention was to make the latter a wing of the former, but it seems more like a jostling between two completely different ways of thinking (and therefore also of building). They form the backdrop of a beautiful park with flowering shrubs and people enjoying themselves on benches. The "Emperor's Hall" – incorrectly called a basilica – was severely damaged during the war but will be restored, at enormous financial cost. The enormous hall—one undivided space – 60 m long, 27 m wide, and 30 m high, was the largest room in northwestern Europe in the fourth century AD. Charcoal fires were located under the floor, from which the heat was led upwards through the walls. For this heating, the hall was divided into three separate sections, each to be heated. At the end of the hall, the wall formed a semicircular arch, the apse. There sat the emperor in all his majesty, and those who came to greet him—the envoy from a distant land, the defeated ruler of a conquered people, the subjects paying him homage—must have felt quite insignificant as they crossed that overwhelming space, which transformed the distance between them and their mighty emperor into a breathtaking journey. Ceiling Paintings But the most beautiful thing among the countless treasures Trier has to offer visitors are the ceiling paintings. They were created 1,500 years ago, remained in place for only a few years, and were recovered after the war in more than 50,000 fragments, now being patiently pieced together by human hands like a gigantic jigsaw puzzle!

An imperial palace must have stood on the site where the cathedral now stands, and the ceiling came from one of the palace halls. Shortly after its installation, the palace was demolished—one can date this, among other things, based on the women's fashions of the time—and Emperor Constantine, who played such a significant role in the Christianization of his empire, commissioned the construction of a church. The paintings, which, due to their short life, had not suffered any damage, emerged from the ground in magnificent condition—albeit in small fragments. The ceiling must have consisted of squares alternating between playing angels (putti) and portraits. Some of these squares have now been restored, and it's difficult to

convey the impression these paintings make on twentieth-century people. As if the master had recently painted these works of art, in the beautiful green and terracotta-painted frames, separated by a golden-yellow cord border, the dark eyes of the slightly larger-than-life female portraits gaze at the group of assembled tourists. From the attributes (the halo, the crown, and other ornaments), one might deduce that, among others, Emperor Constantine's wife—Maxima Fausta—and his mother—Flavia Helena—are depicted here. The lively cherubs, with playful hands and feet—the delicate veils of the imperial princesses—it's incomprehensible that all of this was created fifteen hundred years ago!

31 januari 2016 **HELENA AUGUSTA The mother of Constantine the Great and the Legend of Her Finding of the True Cross**

[p. 24] Amidst the excavations the archaeologist Th. K. Kempf found tiny remains of ceilings frescoes. On reconstruction, these paintings appeared to be of such high quality and artistry that they presumably were made to adorn the room of a member of the Constantinian family. The coffered ceiling was divided into fifteen unequal panels, separated by garlands. The frescoes, found in fragments and often incomplete, date from the first quarter of the fourth century. A terminus post quem is given by a newly minted coin, struck in Trier in c. 315, bearing the legend SOLI INVICTO. This coin, embedded in the mortar of a piece of mosaic, was found in the room of the frescoes. A terminus ante quem is offered by coins found in the floor of the oldest part of the church building, which was constructed above the frescoes room. These coins were all minted in 325/326. It is assumed that the room was part of the living quarters of Crispus, Constantine's eldest son. He resided in Trier as representative of his father in 318–323 and possibly also in 324–326. This would explain why in 326 the frescoed room and probably also the adjacent quarters were demolished. In that year Crispus was executed by his father for reasons which remain obscure. The deliberate demolition of his living quarters in Trier may have been a consequence of his damnatio memoriae, after which the cathedral of Trier was constructed over the remains of the imperial rooms.

[p. 28] A suitable place for paintings referring to the happiness of married life is naturally the bedroom, the cubile. It therefore seems plausible to consider the frescoed room not as the cubile of the elder Helena, as Kempf suggest, but as that of the younger Helena. This bedroom was part of the great complex of imperial quarters in which the Caesar Crispus and his wife Helena lived. In 326, after Crispus' execution and damnatio memoriae, the quarters, including the cubile, were demolished; then Trier's cathedral was built on the remains.

[p. 15] In his funeral oration for Theodosius I, Ambrose implies, by referring to her as stabularia, that Helena came from the lower social strata of the Roman Empire. Literally translated, a stabularia is a woman who comes from or works in the stables. Because stables are often associated with inns, the word stabularia can also mean female innkeeper or servant at an inn. In the antiquity the social prestige of somebody working at an inn was low.

24 september 2016 **Double Basilica (326–346) Trier Cathedral Augusta Treverorum**
Trier's palace to cathedral transformation

It is uncertain whether the origins of the Helena-tradition date back as far as the first quarter of the fourth century. If it does, we can wonder whether this tradition goes back to the elder Helena. It seems reasonable to assume that the frescoes were made for the occasion of the wedding of Crispus and [the younger] Helena. The attributes on the frescoes refer to married life, as do the putti. The marriage took place c.321. Hardly anything is known about the younger Helena, except that she was married to Crispus, bore him a child in 322 and was probably with child in 324. The man with the scroll may also be connected with Crispus (and [the younger] Helena); he is identified as Lactantius, Crispus' teacher. A suitable place for paintings referring to the happiness of married life is naturally the bedroom, the cubile. It therefore seems plausible to consider the frescoed room not as the cubile of the elder Helena, as Kempf suggests, but as that of the younger Helena. This bedroom was part of the great complex of imperial quarters in which the Caesar Crispus and his wife Helena lived. In 326, after Crispus' execution and damnatio memoriae, the quarters, including the cubile, were demolished; then Trier's cathedral was built on the remains. Although very little is known about the younger Helena, it is not impossible that her cubile and domus were known among the inhabitants of Trier as the

138530 cubile and domus of Helena, as we find in the medieval texts. The younger Helena soon disappeared into oblivion, and the cubile and domus were soon considered to have been those of the much more famous elder Helena. The latter was a renowned and indeed legendary figure because of her alleged discovery of Christ's Cross. Moreover, her name was often mentioned in connection with the foundation of churches. Both Helenas
138535 may possibly have become confused, which might explain why in the Middle Ages the origin of the Helena-tradition at Trier is dated back to the elder Helena. It may in fact have been the figure of the younger Helena which lay at its roots. For this reason various medieval vitae may attribute Helena's descent to an illustrious family in Trier. Perhaps the younger Helena, about whose origin nothing is mentioned in the
138540 sources, came from a rich and distinguished family in Trier? Maybe Crispus, who resided in Trier from 316 onwards, had met her in this northern capital. Her relatively ignoble descent -- the local aristocracy of Trier -- and hence her obscurity, could clarify why, even while Crispus was still alive, the younger Helena is not mentioned in the ancient historiography of the Constantinian period.
138545 [by] Jan Willem Drijvers, *Helena Augusta: the mother of Constantine the Great and the legend of her finding the true cross* (New York: E.J. Brill, 1992), p. 28-29.

Trier's cathedral, dedicated to St Peter, has a long history which ultimately reaches back to the time of Constantine. Our mediaeval sources report that Helena donated her
138550 "house" in Trier, so that it might become a church, and that Bishop Agritius of Trier dedicated this church. The mediaeval sources which offer this statement are generally not very reliable, and it is known that the cathedral was not completed until many years after Helena had left Trier and also some years after Bishop Agritius had died. It is not surprising, therefore, that in the past scholars have denied that Helena
138555 had anything to do with the beginnings of Trier's cathedral. But archaeological excavations underneath the nave of the cathedral in 1945-6 and again in 1965-8 have dramatically changed that view. These excavations revealed a room, measuring c. 10 x 7 m, which had been built after 316, but was torn down after 330. The location, the date of construction and the quality of the decorations have persuaded investigators
138560 that this room was once part of the imperial residence, "Helena's house" and that it was taken down to make room for the Constantinian church. The painted ceiling of the room was found in situ but in thousands of fragments. The fifteen panels which made up this ceiling have been painstakingly restored and are exhibited in Trier's diocesan museum. Four of these fifteen panels depict richly dressed and bejewelled
138565 ladies, who represent either members of the imperial family or allegorical figures. If the former interpretation be right, the four ladies would be Constantine's mother Helena, his wife Fausta, his half-sister Constantia, and the wife of his son Crispus, also named Helena. This writer is persuaded that the latter interpretation is the correct one.
138570 [door] Hans A. Pohlsander, *The Emperor Constantine* (New York: Routledge, 1996), pp. 17-18.

28 oktober 2016 Interpretations of the frescoes in Trier
The interpretation of the frescoes is still a matter of debate. The frequent use of
138575 the colour purple seems to indicate that the portraits represent imperial figures. This is true especially of the ladies depicted. Unlike the men, all four women are shown with a nimbus and with costly attributes. Some scholars have identified these women as members of the Constantinian family, symbolising the prosperity of the dynasty. Others do not believe that the portraits should be identified with
138580 historical figures, but should rather be considered allegorical representations. When only a few panels had been found and reconstructed, A. Alföldi interpreted the frescoes as an expression of the imperial laetitia, gaudium and hilaritas. He identified the woman holding the jewel-box as Helena representing the hilaritas populi Romani, and the putti on either side as expressions of the gaudium
138585 laetitia which Constantine's reign had brought to the world. M.R. Alföldi agrees with this interpretation and with the identification of the woman with the jewel-box as Helena. But on the basis of the depiction of attributes like the cornucopia and veils, she thinks that the frescoes refer to a marriage. According to W.N. Schumacher the frescoes not only picture the women of the imperial family but also in an
138590 allegorical way refer to a marriage. The marriage in question must have been that of Crispus and Helena the younger, which took place in circa 321. The frescoes decorated the bedroom of this Helena. The woman with the kantharos in the centre of the ceiling Schumacher identifies as the younger Helena.
138595 Nowadays most scholars--those at any rate who think that the women represent imperial

figures-believe that the young woman with the lyre is Crispus' wife. Unfortunately, it was this very fresco which had to undergo large-scale reconstruction. The woman holding the jewel-box is identified as Constantia, Constantine's half-sister and the wife of Licinius; the woman holding the mirror is supposed to be Fausta, Constantine's wife, and the woman with the kantharos is thought to be Helena, mother of Constantine. Other scholars do not accept that these frescoes should be identified with the women of the imperial family. A strong argument is presented by H. Brandenburg. He believes that there can be no question of the depiction of imperial ladies, because the depicted men definitely do not belong to the Constantinian dynasty. The portraits of the ladies should be interpreted as personifications of the prosperity of the age and the happiness of life. Others think that the portraits are allegories of the various seasons, or that they personify Sapientia, Pulchritudo, Iuventus and Salus.

28 oktober 2016 Trier

Under the rule of Constantine the Great (306-337), the city was rebuilt and buildings such as the Palastaula (known today as the Constantine Basilica) and the Imperial Baths (Kaiserthermen), the largest surviving Roman baths outside Rome, were begun under Constantius and completed in 314, constructed by his son Constantine, who left Trier in the hands of his son Crispus. In 326, sections of the imperial family's private residential palaces were extended and converted to a large double basilica, the remains of which are still partly recognizable in the area of the Trier Cathedral (Trierer Dom) and the church "Liebfrauenkirche". A demolished imperial palace has left shattered sections of painted ceiling, which scholars believe once belonged to Constantine's young wife, Fausta, whom he later put to death. From 318 onwards, Trier was the seat of the Gallic prefecture (the Praefectus Praetorio Galliarum), one of the two highest authorities in the Western Roman Empire, which governed the western Roman provinces from Morocco to Britain. Constantine's son Constantius II resided here from 328 to 340.

The trilingual inscription of Šābuhr at "Kaaba i Zardušt"

Res Gestae divi Saporis

Šābuhr

I, the Mazdayasnian Majesty Šābuhr, king of kings of Aryans and non-Aryans, who is of the ciθra of the Yazata, son of the Mazdayasnian Majesty Ardašēr, king of kings of the Aryans, who is of the ciθra of the Yazata, grandson of (His) Majesty Pābag, king, am lord of Ērānšahr.

Description of the Kingdom (Ērānšahr)

And I hold (under my protection these) lands: Persis, Parthia, Xūzestān (Σουσιανή), Mēšān (Μεσηνή), Āsūrestān (Ἀσσυρίαν), Nodšēragān (Νοδισρηγανή), Arabia, Ādurbāyagān (Ἀδουρβαιγανή), Armenia, Viruzān (Georgia, Ἰβηρία), Segān (Μαχελονίαν, Mingrelia), Arrān (Ἀρβανίαν), Balāsagān until forward to the Kap mountains (Καύκασος) and the Alans' gate, and all the Parišxvār mountain chain (Alburz), Māh (Media, Μηδία), Gurgān (Γυρκανία), Marv (Μαργιανή), Harēv (Ἀρειά, Herāt), and all the upper lands (Abaršahr), Kirmān (Karmāna, Καρμανία), Sagestān (Σακαστιανή), Tūrān, Makurān (Mukrān), Pāradān (Παραδηνή), Hindustān (India), and the Kušān-land until forward to Pašakbur (Purušapura, Pēšāwar), and up to kāš (Κασία χώρα, Kāshgar), Suγd (Σογδιανή), and Cācestān (Tashkent), and on the other side of the sea the Mazūn-land (Oman). And we have given [to a city] the name Pērōzšābuhr (Anbār), and we have given the name Ohrmazdardašēr (to another city). And these many lands, land rulers and district governors, all have become tributary and subject to us.

The account of the war between the Persians and the Roman empire
First Campaign

And, when at first we were established over the kingdom, Gordian Caesar assembled from all of the Roman, Goth and German lands a military force 12 and marched on Āsūrestān against Ērānšahr and against us. And on the border of Āsūrestān at Mešik (Μησιχη), a great frontal battle took place. Gordian Caesar was killed. We destroyed the Roman military force. And the Romans made Philip Caesar. And Philip Caesar came to terms to us, and, as ransom for the life, he gave us 500000 denars, and became tributary to us. And for this reason we gave the name Pērōzšābuhr ('victorious Šābuhr') to Mešik.

Second Campaign

And (Philip) Caesar lied again, and did wrong to Armenia. Then we set out for the Roman Empire, and at Bēbališ (Βαρβαλίσσον, Bālis) we annihilated a Roman army of 60000. And the Āsūryā-land (Syria) the environs of the Āsūryā-land we all burned with fire, ruined and plundered. And on this one occasion (Gr. ὁλωγή) we took of the Roman Empire forts and towns:

The town of Anat (Ἀναθαν, 'Āna) with surroundings;

Birt-Arūpān with surroundings;

Birt-Aspōragān (Βίρθαν Ασπωράκου) with surroundings;

the town of Šūrā (Σοῦραν) with surroundings;

the town of Bēbališ with surroundings;

the town of Mambōg (Μαμβόγιν, Manbij) with surroundings;

the town of Halab (Βέρροιναν, Haleb) with surroundings;

the town of Kennešrā (Χαλκίδα, Qinnasrīn) with surroundings;

the town of Apamiyā (Ἀπάμιαν) with surroundings;

the town of Refaniyos (Ρεφανέαν, Rafaniyya) with surroundings;

the town of Zūma (Ζεῦγμα) with surroundings;

the town of Urnā (Οὔριμα) with surroundings;

the town of Gindaros (Γίνδαρον) with surroundings;

the town of Armenāz (Ἀρμενάζα) with surroundings;

the town of Selōkiyā (Σελεύκιαν) with surroundings;

the town of Andiyok (Ἀντιόχιαν, Antākiya) with surroundings;

the town of Kirros (Κύρρον) with surroundings;

another town of Selōkiyā with surroundings;

the town of Aleksandriyā (Ἀλεξάνδριαν) with surroundings;

the town of Nēkpolis (Νεικόπολιν, Işlāhiye) with surroundings;

the town of Sinzar (Σίνζαρα, Λάρισσα, Šaijar) with surroundings;

the town of Hamāt (Χαμαθ, Hamā) with surroundings;

the town of Ariston (Ἀριστιν, Rastan) with surroundings;

the town of Dikor (Διχωρ) with surroundings;

the town of Dūrā (Δοῦραν, Şalihiye) with surroundings;

- the town of Dolox (Δολίχην, Dülük) with surroundings;
 the town of Korkusyā (Κορκουσίωνα) with surroundings;
 138695 the town of Germaniyos (Γερμανεῖκιον, Kahramanmaraş) with surroundings;
 the town of Batnān (Βάτναν) with surroundings;
 the town of Xānar (Χαναρ) with surroundings;
 and in Cappadocia:
 the town of Sātal (Σάταλα) with surroundings;
 138700 the town of Domān (Δόμαν) with surroundings;
 the town of Artangilyā (Ἀρτανγίλαν) with surroundings;
 the town of Sūš (Σουισαν) with surroundings;
 the town of Suvid (Σουιδ) with surroundings;
 the town of Frāt (Φρέατα) with surroundings – a total of 37 towns with surroundings.
 138705
- Third Campaign
 And on the third occasion, when we set out for Carrhae (Xarrān, Κάρραι, Ḥarrān) and Edessa (Urhā, Ἐδεσσα, Urfa), and were besieging Xarrān and Urhā, Valerian Caesar marched against us, and he had had with him, from Germany (Germān-land), Raetia (Rešyāland), Noricum (Nirkos-land), Dacia (Dākyā-land), Moesia (Mūsyāland), Istria (Estriyā-land), Spain (Espāniyā-land), Africa (Afrikiyāland), Thracia (Trākyā-land), Bihynia (Butniyā-land), Asia (Āsialand), Pamphylia (Pamfaliyā-land), Isauria (Esuriyā-land), Lycaonia (Lūkunyā-land), Galatia (Galātenyā-land), Cilicia (Kilikiyā-land), Cappadocia (Kappadukiyā-land), Phrygia (Frūgiyā-land), Syria (Sūriyā-land), 138715 Phoenicia (Funikiyā-land), Judaea (Jehūdiyā-land), Arabia (Arabiyyā-land), Mauretania (Murin-land), Germania (Germānyā-šahr), Rhodos (Rodās-šahr), Osrhoene (Asenyos-šahr), and Mesopotamia (Meyānrōdān-land) an army of 70000 men.
 And on that side of Carrhae and Edessa with Valerian Caesar a great battle took place. And we made captive Valerian Caesar with our hands. And the others, the 138720 praetorian prefect, and senators and commanders who were chiefs of that army, all were captured and deported to Persis.
 And Syria and Cilicia and Cappadocia were burned with fire, ruined and plundered. This time we seized from the Roman Empire:
 The town of Alexandria on the Issus (Ἀλεξάνδριον τὴν κατ' Ἰσόν) with surroundings;
 138725 the town of Samosata (Šamošād) with surroundings,
 the town of Katabolos (Parth. krtr'y) with surroundings;
 the town of Aegaea (Aygā, Αἰγέα, Ayas) with surroundings;
 the town of Mopsuestia (Māmsestiyā, Μοψουεστίαν, Mamistra) with surroundings;
 the town of Mallos (Μαλλός) with surroundings;
 138730 the town of Adana (Ἀδανα) with surroundings;
 the town of Tarsus (Ταρσόν) with surroundings;
 the town of Augusta (Agustinā, Augustopolis) with surroundings;
 the town of ... with surroundings;
 the town of Zephyrion (Zefiron, Ζεφύριον, Mersin) with surroundings;
 138735 the town of Sebaste (Sebastiyā, Σεβαστήν) with surroundings;
 the town of Korykos (Κώρυκον, Kız Kalesi) with surroundings;
 the town of Anazarbus (Ἀγριππιάδα, Anavarza) with surroundings;
 the town of Castabala (Καστάβαλα) with surroundings;
 the town of Neronias (Νερωνιάδα) with surroundings;
 138740 the town of Flavias (Φλαυιάδα) with surroundings;
 the town of Nikopolis (Νεικόπολιν) with surroundings;
 the town of Epiphania (Ἐπιφάνια) with surroundings;
 the town of Kelenderis (Κελενδερίν, Aydıncık) with surroundings;
 the town of Anemuri(o)n (Ἀνεμούριον, Anamur) with surroundings;
 138745 the town of Selinus (Σελινοῦν) with surroundings;
 the town of Mionopolis (Μιών; Μυωνία) with surroundings;
 the town of Antioch (Andiyokiyā, Ἀντιόχιν) with surroundings;
 the town of Seleucia (Parth. srty'p) with surroundings;
 the town of Dometiu-polis (Δομετίου πόλιν, Parth. mwstynprws) with surroundings;
 138750 the town of Tuyana (Τύανα) with surroundings;
 the town of Caesarea (Kēsariyā, Μηιακαρίρη) with surroundings;
 the town of Comana (Κόμανα, Şar) with surroundings;
 the town of Kybistra (Κύβιστρα) with surroundings;
 the town of Sebasteia (Σεβάστιαν, Sivas) with surroundings;
 138755 the town of Birtha (Βίρθαν) with surroundings;
 the town of Rhakundia (Ρακουνδιαν) with surroundings;
 the town of Laranda (Λάρανδα, Karaman) with surroundings;
 the town of Iconium (Ἰκόνιν, Konya) with surroundings – altogether all these towns

with their surroundings.

And people who are of the Roman Empire, of non-Aryans, captive we deported. In Ērānšahr in Persis, Parthia, Xūzestān (Susiane), Āsūrestān, and in any other land where our own and our fathers' and our grandfathers' and our ancestors' estates were, there we settled them.

We searched out many other lands, and we did many fame(worthy) and heroic deeds, which we have not written here, these many things (we have written before). We commanded to be written for this reason that whosoever will be after us may know this fame, heroism and kingship of us.

The deed of settlement

Victorious Fires

Then, for this reason, that the Yazata have thus made us their "protégé", and with the help of the Yazata we search out and take these so many lands, therefore we too in every land have founded many Victorious Fires, and have conferred benefices upon many Magi-men, and (as for the cult of) the great Yazata we established it well.

And here also, by the inscription we have founded:

One Fire, Husrō-Šābuhr ('fair-famed is Šābuhr') by name for our soul and to preserve our name;

one Fire, Husrō-Āduranāhīd by name, for the soul of our daughter Āduranāhīd, queen of queens, and to preserve her name;

one Fire, Husrō-Ohrmazdardašēr by name, for the soul of our son Ohrmazdardašēr, great king of Armenia, and to preserve his name;

another one Fire, Husrō-Šābuhr by name, for the soul of our son Šābuhr, king of Mesene, and to preserve his name;

one Fire, HusrōNarsē by name, for the soul of our son the Aryan, the Mazdayasnian Narsē, king of India, Sakestān and Turān to the seashore, and to preserve his name.

Funds for the maintenance of the Fires

And that which we have donated to these Fires, and which we have established as a custom, thus also all we have written upon a deed of settlement. Of those 1 000 lambs, of which custom reserves for us the surplus, and which we have donated to these Fires, we have ordered to be done as follows:

For our soul each day one lamb, one grīv (= 1 modius) and five handfuls (= ½ modius) of bread, and four pās of wine.

Sāsān the lord; and Pābag the king; and Šābuhr the king, son of Pābag; and Ardašēr, king of kings; and Xvarrānzēm, queen of the kingdom; and Āduranāhīd, queen of queens; and Dēnag, the queen; and Vahrām, king of Gēlān; and Šābuhr, king of Mesene; and Ohrmazdardašēr, great king of Armenia; and Narsē, king of Sakestān; and Šābuhrduxtag, queen of Sakestān; and Narsēduxt, queen of Sakestān; and Cašmag, the (royal) lady; and Pērōz, the (royal) prince; and Mirrōd, the lady, mother of king of kings Šābuhr;

and Narsē, the prince; and Rōdduxtag, the princess, daughter of Anōšag; and Varāzduxt, daughter of Xvarrānzēm; and Staxriyād, the queen; and Hormazdag, son of the king of Armenia, Hormazd; and Ōdābaxtag, and Vahrām, and Šābuhr, and Pērōz, sons of the king of Mesene; and Šābuhrduxtag, daughter of the king of Mesene; Ohrmazdduxtag, daughter of the king of Sakestān - for their soul (each day) one lamb, one grīv and five handfuls of bread, and four pās of wine.

And the other lambs which remain, as long as there is enough left, for the souls of those persons whose souls we (king of kings) have ordered to perform the Yasna-ritual, and in particular it is mentioned <by name> in writing (and listed) in the inscription on the monument, day by day, one lamb, one grīv and five handfuls of bread, and four pās of wine.

Those who lived under the rule of Pābag the king: Sāsān son of Ārnēk; Farrag son of Farrag; Vahrāmpād son of Horag; Aspūrag son of Aspūrag; Puhrag son of Mardēnag; Zīg, master of ceremonies; Šābuhr son of Vēzan(ag); Šābuhr son of Mihrbūzan(ag).

Those who lived under the rule of Ardašēr the king of kings: Sadārūb, king of Abarēnag; Ardašēr, king of Marv; Ardašēr, king of Kirmān; Ardašēr, king of Sakestān; Dēnag, mother of Pābag the king; Rōdag, mother of Ardašēr the king of kings; Dēnag, queen of queens, daughter of Pābag; Ardašēr the bidaxš ('second after the king', viceroy); Pābag the hazāruft ('chief of a thousand men', chiliarch); Dēhēn of the family Varāz; Sāsān of the family Sūrēn; Sāsān, lord of Andēgān; Pērōz of the family Kārin; Gōk of the family Kārin; Abursām of the family Ardašērfarr; Gēlmān from Dumbāvand; Raxš, the army chief; Mard, chief of scribes; Pābag, master of ceremonies; Pākcihr, son of Visfarr(ag); Vēfarr son of Farrag; Mihrxvāst son of Barēsag; Hōmfrād, the māyagānbed ('chief of the royal guard?'); Dirām, chief of the armory; Cīrīg, the

- 138825 (chief) judge; Vardān, chief of (royal) stables; Mihrag son of Tōsar; Zīg son of Zabr(ag); Sagbus, in charge of hunt; Hudōg, the chief steward; Jāhēn, the (chief) wine-keeper.
Those who live under the rule of Šābuhr, king of kings: Ardašēr, king of Nodšēragān (Adiabene); Ardašēr, king of Kirmān; Dēnag, queen of Mesene, "protégée" of Šābuhr;
- 138830 Hamazāsp, king of Viruz (Georgia); Valāš, royal prince, son of Pābag; Sāsān, royal prince, who was maintained by the Kadōg family; Narsē, royal prince, son of Pērōz; Narsē, royal prince, son of Šābuhr; Šābuhr, the bidaxš; Pābag, the hazāruft; Pērōz, chief of cavalry; Ardašēr of the family Varāz; Ardašēr of the family Sūrēn; Narsē, lord of Andēgān; Ardašēr of the family Kārin; Vehnām, the framadār ('governor');
- 138835 Frīg, Satrap of Gundīšābuhr; Sridō šāhmust; Ardašēr ardašēršnōm; Pākcihr tahmšābuhr; Ardašēr, satrap of Gōmān; Cašmag nēvšābuhr; Vehnām šābuhršnōm; Tirmihr, chief of fortress of Šahrgird; Zīg, master of ceremonies; Ardavān, of Dumbāvand; Gundfarr avgān razmjōy ('who seeks combat', combatant) and Pābag pērōzšābuhr son of Šambīd; Vārzan, satrap of Gay; Kirdesrō, the bidaxš; Pābag, son of Visfarr; Valāš, son of Seleucus; Yazdbād, counselor of ladies (queens); Pābag, the swordbearer; Narsē, satrap of Rind; Tiyanag, satrap of Ahmadān; Gulbed (Vardbed), the peristagbed ('chief of services', majordomo); Jōymard son of Rastag; Ardašēr son of Vēfarr; Abursām of the family Šābuhr, chief of court-personnel; Narsē son of Barrag; Šābuhr son of Narsē; Narsē, the chief steward; Hormazd, the chief scribe, (son of
- 138845 Hormazd, the chief scribe); Nādūg, the zēndānīg ('prison governor, jailer'); Pābag, the darbed ('master of the gate'); Pāsfal son of Pāsfal; Abdaxš son of Dizbed; Kidēr, the teaching priest (Magus); Rastag, satrap of Vehardašēr; Ardašēr son of Bidaxš; Mihrxvāst, the treasurer; Šābuhr, the governor; Aštād of the family Mihrān, the secretary (scribe of epistles), from Ray; Sāsān, the šābestan ('harem-ward, eunuch'), son of Sāsān; Virōy, the vāzārbed ('supervisor of markets', market inspectorate); Ardašēr, satrap of Nērēz; Bagdād son of Vardbed; Kirdēr ardavān; Zurvāndād son of Bandag; Gunnār son of Sāsān; (Mānzag the eunuch); Sāsān, the judge; Vardān, son of Nāšpād; Gulag, the varāzbed ('chief of boars') <-altogether, one lamb, one grīv and five handfuls of bread, and four pās of wine.

138855

Conclusion

- Now, as we are diligent in the matters and services of the Yazata, as we are the dastgird ("protégé") of the Yazata, and we sought out and took these many lands with the help of the Yazata, and we did name(-worthy) and heroic deeds, in order that
- 138860 whoever after us shall beome lord (fortunate), may he become more reverent and more benevolent to the Yazata (Parth. "may he also be diligent in the matters and services of the Yazata"), so that to him also in this same manner the Yazata may be a help (Parth. adds "and make him his dastgird"), as he was to us.

Shapur I's inscription at the Ka'ba-ye Zartosht

Shapur I's Ka'ba-ye Zartosht inscription (shortened as Shapur-KZ, ŠKZ, SKZ), also
139325 referred to as The Great Inscription of Shapur I, and Res Gestae Divi Saporis (RGDS),
is a trilingual inscription made during the reign of the Sasanian king Shapur I (r.
240–270) after his victories over the Romans. The inscription is carved on the Ka'ba-
ye Zartosht, a stone quadrangular and stepped structure located in Naqsh-e Rostam, an
ancient necropolis located northwest of Persepolis, in today's Fars Province, Iran.
139330 The inscription dates to c. 262.
The inscription is written in Middle Persian, Parthian, and Greek, containing 35, 30,
and 70 lines, respectively. The Middle Persian variant is partially damaged, while
the Greek and Parthian versions are better survived, although they are not exactly
the same as the Middle Persian text. In this inscription, Shapur introduces himself,
139335 mentions his genealogy, enumerates the provinces of his empire, describes his
campaigns against the Roman Empire and talks about the fire temples he built. The
inscription is considered the most important inscription from the Sasanian era.

The relevant passage enumerating the territories part of Shapur I's empire:
139340 ...[I] am ruler of Ērānshahr, and I possess the lands of [provinces; Greek ethne]:
Pars [Persis], Pahlav (Parthia), Huzestan (Khuzestan), Meshan (i.e. Maishan, Mesene),
Asorestan (Mesopotamia), Nod-Ardakhshiragan (i.e. Adiabene), Arbayistan, Adurbadagan
[i.e. Atropatene, 'twrp'tkn], Armenia [Armin, 'lmny], Iberia [Wiruzān/Wručān, wlwc'n,
i.e., K'art'li], Segan [or Machelonia, i.e. Mingrelia], Arran ['ld'nm, i.e.,
139345 Caucasian Albania], Balasagan, up to the Caucasus mountains [Kafkōf] and the Gates of
Albania/of the Alans, and all of the mountain chain of Pareshwar/Padishkwar[gar], Mad
(i.e. Media), Gurgan (i.e. Hyrcania), Merv (i.e. Margiana), Harey (i.e. "Aria") and
all of Abarshahr, Kirman, Sakastan (Sistan), Turgistan/Turan, Makuran,
Pardan/Paradene, Hind [India i.e. Kushano-Sasanian Kingdom], the Kushanshahr up to
139350 Peshawar/Pashkibur, and up to Kashgar[ia], Sogdiana/Sogdia and to the mountains of
Tashkent (Chach), and on the other side of the sea, Oman (i.e. Mazonshahr).
In the inscription, Shapur I mentions his victories over Gordian III, Philip the Arab

- and Valerian. He relates that Gordian departed from Antioch and was killed in a decisive battle at Misiche in 242/4 on the border of Sasanian-ruled Mesopotamia. Shapur mentions that Misiche was subsequently renamed Misiche-Peroz-Shapur, which translates as "Misiche-(where)-Shapur-is-victorious". In relation to Philip the Arab; Shapur mentions that negotiations in 244 resulted in Philip being forced to pay 500,000 denarii to the Sasanians. In addition, the Romans promised that they would surrender Armenia to Shapur. However, Shapur relates that the Philip the Arab didn't keep his promise and tried to reinvade Armenia. As a result, another battle was fought in 252-256 at Barbalissos, against a 60,000-strong Roman army. Shapur was victorious, and he mentions that he captured 36 Roman cities. Shapur also mentions his major victory at the Battle of Edessa, which resulted in Valerian being captured by the Sasanian ruler, "along with the Praefectus Praetorio, senators, and chiefs of the army". He furthermore relates that Roman captives were settled in the province of Pars (i.e. Persis). The Oxford Dictionary of Late Antiquity notes that this particular part of the inscription, where Shapur mentions the capture of Valerian and his deeds in general, is reminiscent of the "Persian epic tradition". In the following part of the inscription, Shapur mentions the Zoroastrian sacred fires he established under his rule to honor each member of the royal family. He also mentions detail of "sacrifices and ceremonies". The final part of the inscription contains valuable content about the Sasanian administration as well as the courtiers and nobles during the lifetimes of Papak, Ardashir I in addition to Shapur I himself.
- 7 december 328 The Namara inscription (Arabic: نقش النمارة naqš an-Namārah) is a 4th century inscription in Arabic language, making it one of the earliest. It has also been interpreted as a late version of the Nabataean Arabic language in its transition to Arabic. It has been described by Irfan Shahid as "the most important Arabic inscription of pre-Islamic times" and by Kees Versteegh as "the most famous Arabic inscription". It is also an important source for the relationships between the Romans and the Arabs in that period. The inscription is written in the Nabatean Aramaic script, but there are ambiguities, as the script has only 22 signs (some with added annotations), and the Arabic dialect had 28 or 29 consonants. The script has ligatures between some letters that show a transition towards an Arabic script. Some of the terms used in the text are closer to Aramaic than Arabic; for example, it uses the Aramaic patronymic "b-r", rather than the Arabic term "b-n". However, most of the text is very close to the Classical Arabic used in the Qur'an in the 7th century.
- The inscription was found on 4 April 1901 by two French archaeologists, René Dussaud and Frédéric Macler, at al-Namara (also Namārah; modern Nimreh) near Shahba and Jabal al-Druze in southern Syria, about 100 kilometres south of Damascus and 50 kilometres northeast Bosra, and 120 kilometres east of the Sea of Galilee. The location was near the boundary of the Roman Empire at the date it was carved, the Limes Arabicus of the province of Arabia Petraea. Al-Namara was later the site of a Roman fort.
- The inscription is carved in five lines on a block of basalt, which may have been the lintel for a tomb. It is the epitaph of a recently deceased Arab king of the Lakhmids, Imru' al-Qays ibn 'Amr, and dated securely to AD 328. Imru' al-Qays followed his father 'Amr ibn Adi in using a large army and navy to conquer much of Iraq and the Arabian peninsula from their capital at al-Hirah. At this time, they were vassals of the Persian Sassanids. Raids on Iran triggered a campaign by Sassanid emperor Shapur II which conquered the Iraqi lands, and Imru' al-Qays retreated to Bahrain. He moved to Syria to seek help from the Roman emperor Constantine. Imru' al-Qays converted to Christianity before his death in Syria and was entombed in the Syrian desert. His conversion is mentioned in the Arab history of Hisham Ibn Al-Kalbi, but not mentioned in the inscription itself; equally there is no mention of any pagan belief.
- The first tracing and reading of the Namara inscription was published in the beginning of the twentieth century by René Dussaud. According to his reading, the text starts by informing the reader that this inscription was the burial monument of the king, then it introduces him and lists his achievements, and finally announces the date of his death. Many other scholars have re-read and analyzed the language of the inscription over the last century but, despite their slight differences, they all agreed with Dussaud's central viewpoint that the Namara stone was the burial monument of King Imru' al-Qays. In 1985, James A. Bellamy offered the first significantly different tracing of the inscription since Dussaud, including a breakthrough tracing correction of two highly contested words in the beginning of the third line (pointed out on Dussaud's original tracing figure as words 4 and 5). However, despite Bellamy's new important re-tracings, his Arabic reading fully agreed with the general

theme of Dussaud's original reading. Bellamy's widely accepted new translation of the inscription reads:

This is the funerary monument of Imru' al-Qays, son of 'Amr, king of the Arabs, and (?) his title of honour was Master of Asad and Nizar.

And he subdued the Asadis and they were overwhelmed together with their kings, and he put to flight Madhhij thereafter, and came driving them to the gates of Najran, the city of Shammar, and he subdued Ma'add, and he dealt gently with the nobles of the tribes, and appointed them viceroys, and they became phylarchs for the Romans. And no king has equalled his achievements.

Thereafter he died in the year 223 on the 7th day of Kaslul. Oh the good fortune of those who were his friends!

Below is Bellamy's modern Arabic translation of the Namara inscription, with brief added explanations between parenthesis:

تي (هذه) نَفْسُ (شاهدة قبر) امرؤ القيس بن عمرو ملك العرب، ولقب وملك الأسديين ونزار وملوكهم وهرب مذحج عكدي (كلمة عامية تدمج الكلمتين "عن قضى"، بمعنى بعد ذلك) وجاء (أي امرؤ القيس) يزجها (يقاثلها بضراوة) في رُبَحِ (ابواب) نَجْران، مدينة شمر، وملك معد (بنو معد في اليمن) وتبّل بنبه الشعوب (عامل نبلاءهم باحترام ولطف) ووكلهن (أي عين نبلاءهم شيوخا للقبايل) فرأسو لروم

The mention of the date – the 7th of Kaslul in the year 223 of the Nabatean era of Bostra – securely dates his death to the 7th day of December in AD 328.

Parts of the translation are uncertain. For example, early translations suggested that Imru' al-Qays was king of all the Arabs, which seems unlikely after he moved to Syria. It is also not clear whether he campaigned towards Najran while he was based at al-Hirah or after his move to Syria and, in either case, whether he did so alone or with assistance from the Sassanids or the Romans.

The inscription is now held by the Louvre Museum in Paris.

Twenty canons in Greek

α'. Εἰ τις ἐν νόσῳ ὑπὸ ἰατρῶν ἐχειρουργήθῃ, ἢ ὑπὸ βαρβάρων ἐξετιμήθῃ, οὗτος μενέτω ἐν τῷ κλήρῳ· εἰ δέ τις ὑγιαίνων ἑαυτὸν ἐξέτεμε, τοῦτον καὶ ἐν τῷ κλήρῳ ἐξεταζόμενον πεπαῦσθαι προσήκει· καὶ ἐκ τοῦ δεῦρο μηδὲνα τῶν τοιούτων χρῆναι προάγεσθαι. Ὡς περ δὲ τοῦτο πρόδηλον, ὅτι περὶ τῶν ἐπιτηδεύοντων τὸ πρᾶγμα καὶ τολμώντων ἑαυτοὺς ἐκτέμνειν, εἴρηται, οὕτως εἴτινες ὑπὸ βαρβάρων ἢ δεσποτῶν εὐνουχίσθησαν, εὐρίσκοιντο ἄλλως ἄξιοι, τοὺς τοιούτους εἰς κληρὸν προσίεται ὁ κανὼν.

β'. Ἐπειδὴ, πολλὰ ἤτοι ὑπὸ ἀνάγκης ἢ ἄλλως ἐπειγομένων τῶν ἀνθρώπων ἐγένετο παρὰ τὸν κανόνα τὸν ἐκκλησιαστικόν, ὥστε ἀνθρώπους ἀπὸ ἐθνικοῦ βίου ἄρτι προσελθόντας τῇ πίστει, καὶ ἐν ὀλίγῳ χρόνῳ κατηχηθέντας εὐθύς ἐπὶ τὸ πνευματικὸν λουτρὸν ἄγειν, καὶ ἅμα τῷ βαπτισθῆναι προσάγειν εἰς ἐπισκοπὴν, ἢ εἰς πρεσβυτερεῖον, καλῶς ἔδοξεν ἔχειν τοῦ λοιποῦ μηδὲν τοιοῦτο γίνεσθαι. Καὶ γὰρ καὶ χρόνου δεῖ τῷ κατηχουμένῳ, καὶ μετὰ τὸ βάπτισμα δοκιμασίας πλείονος· σαφὲς γὰρ τὸ ἀποστολικὸν γράμμα τὸ λέγον, «Μὴ νεόφυτον, ἵνα μὴ τυφωθεῖς εἰς κρῖμα ἐμπέσῃ καὶ παγίδα τοῦ διαβόλου.» Εἰ δὲ προϊόντος τοῦ χρόνου ψυχικόν τι ἀμάρτημα εὗρεθείῃ περὶ τὸ πρόσωπον, καὶ ἐλέγχῃτο ὑπὸ δύο ἢ τριῶν μαρτύρων, πεπαύσθω ὁ τοιοῦτος τοῦ κλήρου. Ὁ δὲ παρὰ ταῦτα ποιῶν, ὥς ὑπεναντία τῇ μεγάλῃ συνόδῳ θρασυνόμενος, αὐτὸς κινδυνεύσει περὶ τὸν κληρὸν.

γ'. Ἀπηγόρευσε καθόλου ἡ μεγάλη σύνοδος, μήτε ἐπισκόπῳ μήτε πρεσβυτέρῳ μήτε διακόνῳ μῆτε ὅλως τινὶ τῶν ἐν κλήρῳ ἐξεῖναι συνείσακτον ἔχειν, πλὴν εἰ μὴ ἄρα μητέρα, ἢ ἀδελφὴν, ἢ θεῖαν, ἢ ἄ μόνον πρόσωπα πᾶσαν ὑποψίαν διαπέφευγε.

δ'. Ἐπίσκοπον προσήκει μάλιστα μὲν ὑπὸ πάντων τῶν ἐν τῇ ἐπαρχίᾳ καθίστασθαι· εἰ δὲ δυσχερὲς εἴῃ τὸ τοιοῦτο, ἢ διὰ κατεπείγουσαν ἀνάγκην ἢ διὰ μῆκος ὁδοῦ, ἐξαπαντος τρεῖς ἐπὶ τὸ αὐτὸ συναγομένους, συμπλήρων γινομένων καὶ τῶν ἀπόντων καὶ συντιθεμένων διὰ γραμμάτων, τότε τὴν χειροτονίαν ποιεῖσθαι· τὸ δὲ κύρος τῶν γινομένων δίδοσθαι καθ' ἑκάστην ἐπαρχίαν τῷ μητροπολίτῃ.

ε'. Περὶ τῶν ἀκοινωνήτων γενομένων, εἴτε τῶν ἐν κλήρῳ εἴτε τῶν ἐν λαϊκῷ τάγματι, ὑπὸ τῶν καθ' ἑκάστην ἐπαρχίαν ἐπισκόπων, κρατεῖται ἡ γνώμη κατὰ τὸν κανόνα τὸν διαγορεύοντα, τοὺς ὑφ' ἐτέρων ἀποβληθέντας ὑφ' ἐτέρων μὴ προσίεσθαι· ἐξεταζέσθω δὲ, μὴ μικροψυχίᾳ ἢ φιλονεικίᾳ ἢ τινὶ τοιαύτῃ ἀηδία τοῦ ἐπισκόπου ἀποσυνάγωγοι γεγένηται. Ἵνα οὖν τοῦτο τὴν πρέπουσαν ἐξέτασιν λαμβάνῃ, καλῶς ἔχειν ἔδοξεν ἐκάστου ἐνιαυτοῦ καθ' ἑκάστην ἐπαρχίαν δις τοῦ ἐτους συνόδους γίνεσθαι, ἵνα κοινῇ πάντων τῶν ἐπισκόπων τῆς ἐπαρχίας ἐπὶ τὸ αὐτὸ συναγομένων, τὰ τοιαῦτα ζητήματα ἐξετάζοιτο· καὶ οὕτως οἱ ὁμολογουμένως προσκεκρουκότες τῷ ἐπισκόπῳ κατὰ λόγον ἀκοινωνήτοι παρὰ πᾶσιν εἶναι δόξωσι, μέχρις ἂν

- 139485 τῷ κοινῷ τῶν ἐπισκόπων δόξη τὴν φιλανθρωποτέραν ὑπὲρ αὐτῶν ἐκθέσθαι ψῆφον. Αἱ δὲ σύνοδοι γινέσθων, μία μὲν πρὸ τῆς τεσσαρακοστῆς, ἵνα πάσης μικροψυχίας ἀναιρουμένης, τὸ δὲ ὄρον καθαρὸν προσφέρηται τῷ Θεῷ, δευτέρα δὲ περὶ τὸν τοῦ μετοπώρου καιρόν.
- 139490 ς'. Τὰ ἀρχαῖα ἔθη κρατεῖτω τὰ ἐν Αἰγύπτῳ, καὶ Λιβύῃ καὶ Πενταπόλει, ὥστε τὸν ἐν Ἀλεξανδρείᾳ ἐπίσκοπον πάντων τούτων ἔχειν τὴν ἐξουσίαν, ἐπειδὴ καὶ τῷ ἐν τῇ Ῥώμῃ ἐπισκόπῳ τοῦτο σύνηθές ἐστιν· ὁμοίως δὲ καὶ κατὰ τὴν Ἀντιόχειαν καὶ ἐν ταῖς ἄλλαις ἐπαρχίαις, τὰ πρεσβεῖα σώζεσθαι ταῖς ἐκκλησίαις. Καθόλου δὲ πρόδηλον ἐκείνο, ὅτι εἴ τις χωρὶς γνῶμης τοῦ μητροπολίτου γένοιτο ἐπίσκοπος, τὸν τοιοῦτον ἢ μεγάλη σύνοδος ὥρισε μὴ δεῖν εἶναι ἐπίσκοπον. Ἐὰν μὲν τοι τῇ κοινῇ πάντων ψήφῳ εὐλόγῳ οὔσῃ, καὶ κατὰ κανόνα ἐκκλησιαστικόν, δύο ἢ τρεῖς δι' οἰκείαν φιλονεικίαν ἀντιλέγωσι, κρατεῖτω ἡ τῶν πλειόνων ψῆφος.
- 139500 ζ'. Ἐπειδὴ συνήθεια κεκράτηκε καὶ παράδοσις ἀρχαία, ὥστε τὸν ἐν Αἰλίᾳ ἐπίσκοπον τιμᾶσθαι, ἐχέτω τὴν ἀκολουθίαν τῆς τιμῆς, τῇ μητροπόλει σωζομένου τοῦ οἰκείου ἀξιώματος.
- 139505 η'. Περὶ τῶν ὀνομαζόντων μὲν ἑαυτοὺς Καθαροὺς ποτε, προσερχομένων δὲ τῇ καθολικῇ καὶ ἀποστολικῇ ἐκκλησίᾳ, ἔδοξε τῇ ἀγίᾳ καὶ μεγάλῃ συνόδῳ, ὥστε χειροθετούμενους αὐτοὺς μὲν οὕτως ἐν τῷ κλήρῳ. Πρὸ πάντων δὲ τοῦτο ὁμολογῆσαι αὐτοὺς ἐγγράφως προσήκει, ὅτι συνήθονται καὶ ἀκολουθήσουσι τοῖς τῆς καθολικῆς καὶ ἀποστολικῆς ἐκκλησίας δόγμασι· τοῦτ' ἐστὶ, καὶ διγάμοις κοινωνεῖν, καὶ τοῖς ἐν τῷ διωγμῷ παραπεπτωκόσιν, ἐφ' ὧν καὶ χροῖνος τέτακται, καὶ καιρὸς ὥρισταί, ὥστε αὐτοὺς ἀκολουθεῖν, ἐν πᾶσι τοῖς δόγμασι τῆς καθολικῆς ἐκκλησίας. Ἐνθα μὲν οὖν πάντες, εἴτε ἐν κώμας, εἴτε ἐν πόλεσιν αὐτοὶ μόνοι εὐρίσκονται χειροτονηθέντες, οἱ εὐρισκόμενοι ἐν τῷ κλήρῳ ἔσονται ἐν τῷ αὐτῷ σχήματι εἰ δὲ τοῦ τῆς καθολικῆς ἐκκλησίας ἐπισκόπου ἢ πρεσβυτέρου ὄντος προσέρχονταί τινες, πρόδηλον ὡς ὁ μὲν ἐπίσκοπος τῆς ἐκκλησίας ἔξει τὸ ἀξίωμα τοῦ ἐπισκόπου, ὁ δὲ ὀνομαζόμενος παρὰ τοῖς λεγομένοις Καθαροῖς ἐπίσκοπος τὴν τοῦ πρεσβυτέρου τιμὴν ἔξει, πλην εἰ μὴ ἄρα δοκοίῃ τῷ ἐπισκόπῳ τῆς τιμῆς τοῦ ὀνόματος αὐτὸν μετέχειν. Εἰ δὲ τοῦτο αὐτῷ μὴ ἀρέσκει, ἐπινοήσῃ τόπον ἢ χωρεπισκόπου ἢ πρεσβυτέρου ὑπὲρ τοῦ ἐν τῷ κλήρῳ ὅλως δοκεῖν εἶναι, ἵνα μὴ ἐν τῇ πόλει δύο ἐπίσκοποι ᾤσιν.
- 139515 θ'. Εἰ τινες ἀνεξετάστως προσήχθησαν πρεσβύτεροι, ἢ ἀνακρινόμενοι ὡμολόγησαν τὰ ἡμαρτημένα αὐτοῖς, καὶ ὁμολογησάντων αὐτῶν, παρὰ κανόνα κινούμενοι οἱ ἄνθρωποι τοῖς τοιοῦτοις χεῖρα ἐπιτεθείκασι, τούτους ὁ κανὼν οὐ προσίεται· Τὸ γὰρ ἀνεπίληπτον ἐκδικεῖ ἡ καθολικὴ ἐκκλησία.
- 139520 ι'. Ὅσοι προεχειρίσθησαν τῶν παραπεπτωκότων κατὰ ἄγνοιαν, ἢ καὶ προειδόντων τῶν προχειρισμένων, τοῦτο οὐ προκρίνει τῷ κανόνι τῷ ἐκκλησιαστικῷ· γνωσθέντες γὰρ καθαιροῦνται.
- 139525 ια'. Περὶ τῶν παραβάντων χωρὶς ἀνάγκης, ἢ χωρὶς ἀφαιρέσεως ὑπερχόντων, ἢ χωρὶς κινδύνου, ἢ τινος τοιοῦτου, ὃ γέγονεν ἐπὶ τῆς τυραννίδος Λικινίου, ἔδοξε τῇ συνόδῳ, εἰ καὶ ἀνάξιοι ἦσαν φιλανθρωπίας, ὅμως χρηστεύσασθαι εἰς αὐτούς. Ὅσοι οὖν γνησίως μεταμέλονται, τρία ἔτη ἐν ἀκρωμένοις ποιήσουσιν οἱ πιστοὶ, καὶ ἐπτά ἔτη ὑποπεσοῦνται, δύο δὲ ἔτη χωρὶς προσφορᾶς κοινωνήσουσι τῷ λαῷ τῶν προσευχῶν.
- 139530 ιβ'. Οἱ δὲ προσκληθέντες μὲν ἀπὸ τῆς χάριτος καὶ τὴν πρώτην ὁρμὴν ἐνδειξάμενοι, καὶ ἀποθέμενοι τὰς ζώνας, μετὰ δὲ ταῦτα «ἐπὶ τὸν οἰκεῖον ἔμετον ἀναδραμόντες ὡς κύνες,» ὡς τινὰς καὶ ἀργύρια πρόεσθαι, καὶ βενεφικίοις κατορθῶσαι τὸ ἀναστρατεύσασθαι, οὗτοι δέκα ἔτη ὑποπιπτεύσαν μετὰ τὸν τῆς τριετοῦς ἀκροάσεως χρόνον. Ἐφ' ἅπασιν δὲ τούτοις, προσήκει ἐξετάζειν τὴν προαίρεσιν καὶ τὸ εἶδος τῆς μετανοίας· ὅσοι μὲν γὰρ καὶ φόβῳ καὶ δάκρυσιν καὶ ὑπομονῇ καὶ ἀγαθοεργίαις τὴν ἐπιστροφὴν ἔργῳ καὶ οὐ σχήματι ἐπιδείκνυνται, οὗτοι πληρώσαντες τὸν χρόνον τὸν ὠρισμένον τῆς ἀκροάσεως, εἰκότως τῶν εὐχῶν κοινωνήσουσι μετὰ τοῦ ἐξεῖναι τῷ ἐπισκόπῳ καὶ φιλανθρωπότερόν τι περὶ αὐτῶν βουλευσασθαι. Ὅσοι δὲ ἀδιαφόρως ἤνεγκαν, καὶ τὸ σχῆμα τοῦ εἰσιέναι εἰς τὴν ἐκκλησίαν ἀρκεῖν ἑαυτοῖς ἢ γήσαντο πρὸς τὴν ἐπιστρέφειαν, ἐξ ἀπαντος πληροῦτως τὸν χρόνον.
- 139535 ιγ'. Περὶ δὲ τῶν ἐξοδεύοντων ὁ παλαιὸς καὶ κανονικὸς νόμος φυλαχθήσεται καὶ νῦν, ὥστε εἰ τις ἐξοδεύοι, τοῦ τελευταίου καὶ ἀναγκαιοτάτου ἐφοδίου μὴ ἀποστερεῖσθαι· εἰ δὲ ἀπογνώσθῃς, καὶ κοινωνίας πάλιν τυχῶν, πάλιν ἐν τοῖς ζῶσιν ἐξετασθῇ, μετὰ τῶν κοινωνούντων τῆς εὐχῆς μόνῃς ἔστω. Καθόλου δὲ καὶ περὶ πάντος οὐτινοσοῦν ἐξοδεύοντος, αἰτιοῦντος δὲ μετασχεῖν εὐχαριστίας, ὁ ἐπίσκοπος μετὰ δοκιμασίας ἐπιδότω.
- 139540 ιδ'. Περὶ τῶν κατηχουμένων καὶ παραπεσόντων ἔδοξε τῇ ἀγίᾳ καὶ μεγάλῃ συνόδῳ, ὥστε τριῶν ἐτῶν αὐτοὺς ἀκρωμένους μόνον, μετὰ ταῦτα εὐχεσθαι μετὰ τῶν κατηχουμένων.
- 139550

ιε'. Διὰ τὸν πολὺν τάραχον καὶ τὰς στάσεις τὰς γινομένας, ἔδοξε παντάπασι περιαιρεθῆναι τὴν συνήθειαν τὴν παρὰ τὸν κανόνα εὐρεθεῖσαν ἐν τισι μέρεσιν, ὥστε ἀπὸ πόλεως εἰς πόλιν μὴ μεταβαίνειν μήτε ἐπίσκοπον, μήτε πρεσβύτερον, μήτε διάκονον. Εἰ δέ τις μετὰ τὸν τῆς ἀγίας καὶ μεγάλης συνόδου ὅρον τοιοῦτῳ τινὶ ἐπιχειρήσειεν, ἢ ἐπιδοίῃ ἑαυτὸν π

139555 ράγματι τοιοῦτῳ, ἀκυρωθήσεται ἑξάπαντος τὸ κατασκευάσμα, καὶ ἀποκατασταθήσεται τῇ ἐκκλησίᾳ, ἣς ὁ ἐπίσκοπος ἢ ὁ πρεσβύτερος ἐχειροτονήθη.

ις'. Ὅσοι ῥιψοκινδύνως μήτε τὸν φόβον τοῦ Θεοῦ πρὸ ὀφθαλμῶν ἔχοντες, μήτε τὸν ἐκκλησιαστικὸν κανόνα εἰδότες, ἀναχωρήσουσι τῆς ἐκκλησίας, πρεσβύτεροι ἢ διάκονοι, ἢ ὅλως ἐν τῷ κανόνι ἐξεταζόμενοι, οὗτοι οὐδαμῶς δεκτοὶ ὀφείλουσιν εἶναι ἐν ἐτέρᾳ ἐκκλησίᾳ, ἀλλὰ πᾶσαν αὐτοῖς ἀνάγκην ἐπάγεσθαι χρῆ, ἀναστρέφειν εἰς τὰς ἑαυτῶν παροικίας· ἢ ἐπιμένοντες, ἀκοινωνήτους εἶναι προσήκει. Εἰ δέ καὶ τολμήσειέ τις ὑφαρπάσαι τὸν τῷ ἐτέρῳ διαφέροντα, καὶ χειροτονῆσαι ἐν τῇ αὐτοῦ ἐκκλησίᾳ, μὴ συγκατατιθεμένου τοῦ ἰδίου ἐπισκόπου οὗ ἀνεχώρησεν ὁ ἐν τῷ κανόνι ἐξεταζόμενος, ἀκυρος ἔστω ἡ χειροτονία.

ιζ'. Ἐπειδὴ πολλοὶ ἐν τῷ κανόνι ἐξεταζόμενοι τὴν πλεονεξίαν καὶ τὴν αἰσχροκερδεῖαν διώκοντες, ἐπελάθοντο τοῦ θείου γράμματος λέγοντος, «τὸ ἀργύριον αὐτοῦ οὐκ ἔδωκεν ἐπὶ τόκῳ,» καὶ δανείζοντες ἑκατοστὰς ἀπαιτοῦσιν, ἐδικαίωσεν ἡ ἀγία καὶ μεγάλη σύνοδος, ὥς, εἴ τις εὐρεθεῖη μετὰ τὸν ὅρον τοῦτον τόκους λαμβάνειν, ἐκ μεταχειρίσεως ἢ ἄλλως μετερχόμενος τὸ πρᾶγμα, ἢ ἡμιολίας ἀπαιτῶν, ἢ ὅλως ἕτερον τι ἐπινοῶν αἰσχροῦ κέρδους ἕνεκα, καθαιρεθήσεται τοῦ κλήρου, καὶ ἀλλότριος τοῦ κανόνος ἔσται.

ιη'. Ἦλθεν εἰς τὴν ἀγίαν καὶ μεγάλην σύνοδον, ὅτι ἐν τισι τόποις καὶ πόλεσι, τοῖς πρεσβυτέροις τὴν εὐχαριστίαν οἱ διάκονοι διδῶσιν, ὥσπερ οὔτε ὁ κανὼν οὔτε ἡ συνήθεια παρέδωκεν, τοὺς ἐξουσίαν μὴ ἔχοντας προσφέρειν τοῖς προσφέρουσι διδόναι τὸ σῶμα τοῦ Χριστοῦ· κάκεῖνο δὲ ἐγνωρίσθη, ὅτι ἤδη τινὲς τῶν διακόνων καὶ πρὸ τῶν ἐπισκόπων τῆς εὐχαριστίας ἄπτονται. Ταῦτα οὖν πάντα περιηρήσθω· καὶ ἐμμενέτωσαν οἱ διάκονοι τοῖς ἰδίοις μέτροις, εἰδότες ὅτι τοῦ μὲν ἐπισκόπου ὑπηρεταὶ εἰσὶν, τῶν δὲ πρεσβυτέρων ἐλάττους τυγχάνουσι· λαμβανέτωσαν δὲ κατὰ τὴν τάξιν τὴν εὐχαριστίαν μετὰ τοὺς πρεσβυτέρους, ἢ τοῦ ἐπισκόπου διδόντος αὐτοῖς, ἢ τοῦ πρεσβυτέρου· ἀλλὰ μὴδὲ καθῆσθαι ἐν μέσῳ τῶν πρεσβυτέρων ἐξέστω τοῖς διακόνοις· παρὰ κανόνα γὰρ καὶ παρὰ τάξιν ἐστὶ τὸ γινόμενον. Εἰ δέ τις μὴ θέλοι πειθαρχεῖν καὶ μετὰ τούτους τοὺς ὅρους, πεπαύσθω τῆς διακονίας.

ιθ'. Περὶ τῶν Παυλιανισάντων, εἴτα προσφυγόντων τῇ καθολικῇ ἀκκλησίᾳ, ὁρος ἐκτέθειται ἀναβαπτίζεσθαι αὐτοὺς ἑξάπαντος. Εἰ δέ τινες ἐν τῷ παρεληλυθότι χρόνῳ ἐν τῷ κλήρῳ ἐξητάσθησαν, εἰ μὲν ἄμεμπτοι καὶ ἀνεπίληπτοι φανεῖεν, ἀναβαπτισθέντες χειροτονείσθωσαν ὑπὸ τοῦ τῆς καθολικῆς ἐκκλησίας ἐπισκόπου· εἰ δὲ ἡ ἀνάκρισις ἀνεπιτηδείους αὐτοὺς εὐρίσκοι, καθαιρεῖσθαι αὐτοὺς προσήκει. Ὡσαύτως δὲ καὶ περὶ τῶν διακονισῶν, καὶ ὅλως περὶ τῶν ἐν τῷ κλήρῳ κανόνι ἐξεταζομένων, ὁ αὐτὸς τύπος παραφυλαχθήσεται· ἐμνήσθημεν δὲ διακονισῶν τῶν ἐν τῷ σχήματι ἐξετασθεισῶν, ἐπεὶ μὴδὲ χειροθεσίαν τινὰ ἔχουσιν, ὥστε ἑξάπαντος ἐν τοῖς λαϊκοῖς αὐτὰς ἐξετάζεσθαι.

κ'. Ἐπειδὴ τινὲς εἰσιν ἐν τῇ κυριακῇ γόνυ κλίνοντες, καὶ ἐν ταῖς τῆς πεντηκοστῆς ἡμέραις· ὑπὲρ τοῦ πάντα ἐν πάσῃ παροικίᾳ ὁμοίως παραφυλάττεσθαι, ἐστῶτας ἔδοξε τῇ ἀγίᾳ συνόδῳ τὰς εὐχὰς ἀποδιδόναι τῷ Θεῷ.

Twenty Canons in Latin

I. Si quis in morbo a medicis excisus, vel a barbaris exsectus est, is maneat in clerico. Si quis autem sanus seipsum abscidit, hunc, etiam in clero constitutum, abstinere convenit, et deinceps nullum talem promoveri oportet. Sicut autem hoc manifestum est, quod de iis qui de industria hoc agunt, audentque seipsos abscindere, dictum est: ita si qui vel a barbaris, vel a dominis eunuchi facti sunt, et ii alioqui digni inveniantur, tales in clerum admittit canon.

II. Quoniam multa vel necessitate, aut aliter cogentibus hominibus, facta sunt praeter canonem ecclesiasticum, ita ut homines e gentili vita nuper accedentes ad fidem, et exiguo tempore eruditi, statim ad spirituale lavacrum ducantur, et simul atque baptizati fuerint, ad episcopatum vel presbyterium promoveantur; recte habere visum est, ut nihil deinceps tale fiat. Nam et tempore opus est catechumeno, et post baptismum probatione maiore: apertum enim est apostolicum scriptum, dicens: Non neophytum, ne forte inflatus in iudicium incidat, et laqueum diaboli. Si vero procedente tempore aliquod animi peccatum inveniatur in ea persona, et duobus vel tribus testibus convincatur, abstinere talis a clero: qui autem praeter haec facit, ut qui magnae synodi adversarius esse audeat, ipse de clericatu periclitabitur.

III. Vetuit omnino magna synodus, ne liceat episcopo, nec presbytero, nec diacono, nec ulli penitus eorum qui sunt in clero, extraneam [subintroducendam] habere mulierem; nisi forte aut matrem, aut sororem, aut amitam, vel eas tantum personas quae omnem suspicionem effugiunt.

IV. Episcopum oportet maxime quidem ab omnibus qui sunt in provincia episcopis constitui: si vero hoc difficile fuerit, aut propter urgentem necessitatem, aut propter itineris longitudinem, tres omnino in idipsum convenientes, dummodo consenserint qui absint, et per litteras approbaverint, ordinationem faciant. Confirmatio autem eorum quae in quaque provincia geruntur, tribuatur metropolitano.

V. De iis qui communione privantur, seu ex clero, seu ex laico ordine, ab episcopis uniuscujusque provinciae servetur haec sententia secundum canonem qui pronuntiat, ut hi qui ab aliis abjiciuntur, ab aliis non recipiantur. Inquiratur autem ne simultate, aut contentione, aut aliqua alia molestia episcopi sint excommunicati. Ut hoc ergo decentius examinetur, recte habere visum est ut singulis annis per unamquamque provinciam bis in anno synodi fiant, ut omnes in unum convenientes episcopi provinciae, ejusmodi quaestiones examinent, et sic qui manifeste offenderint episcopum, juste excommunicati ab omnibus esse videantur, donec episcoporum coetui visum fuerit pro iis humaniorem ferre sententiam. Synodi autem fiant, una quidem ante Quadragesimam, ut omni similitudine sublata, munus purum Deo offeratur: secunda autem circa tempus autumnii.

VI. Antiqui mores obtineant, qui sunt in Aegypto, Libya et Pentapoli, ut Alexandrinus episcopus horum omnium habeat potestatem, quoniam illa est Romano etiam episcopo consuetudo. Similiter autem et in Antiochia, et in aliis provinciis privilegia servantur Ecclesiis. Illud autem omnino manifestum est, quod si quis praeter sententiam metropolitani factus sit episcopus, hunc magna synodus statuit non oportere esse episcopum. Si vero communi omnium suffragio rationi consentaneo, et secundum ecclesiasticum canonem, duo aut tres contentiose, seu propria pertinacia inducti contradixerint, obtineat plurimorum sententia.

VII. Quoniam consuetudo obtinuit, et antiqua traditio, ut Aeliae episcopus honoretur, habeat ordinem honoris, metropoli propria dignitate servata.

VIII. De his qui se catharos, id est puros, nominant, si aliquando ad catholicam et apostolicam Ecclesiam redierint, visum est sanctae et magnae synodo, ut accepta manuum impositione, sic in clero maneant. Prae omnibus autem eos scripto profiteri oportet, quod consentient, et sequentur dogmata Ecclesiae catholicae et apostolicae, id est, et cum digamis communicare, et his qui in persecutione lapsi sunt, quibus etiam tempus constitutum est, et opportunitas definita, ut in omnibus sequantur dogmata catholicae Ecclesiae. Ubique autem, sive in vicis, sive in civitatibus ipsi soli inventi fuerint ordinati, qui inveniuntur in clero in eodem ordine permaneant. Si autem catholicae Ecclesiae episcopo aut presbytero existente quidam accedunt, manifestum est, quod episcopus Ecclesiae dignitatem episcopi habeat. Qui autem apud eos, qui dicuntur cathari, nominatur episcopus, habeat honorem presbyteri, nisi forte placuerit episcopo nominis honorem illi concedere. Si hoc autem ei minime placuerit, inveniat ei locum chor episcopi, aut presbyteri, ut in clero omnino esse videatur, ne in civitate duo sint episcopi.

IX. Si qui sine examinatione presbyteri promoti sint, vel cum discuterentur, peccata sua confessi sint, eisque confessis, homines contra canonem moti, manus imposuerint, tales canon non admittit: quod enim reprehensibile est, catholica Ecclesia non defendit.

X. Quicumque ex lapsis ordinati sunt per ignorantiam, aut dissimulationem eorum qui eos ordinarunt, hoc non praejudicat canonem Ecclesiasticum; cogniti enim deponuntur.

XI. De his qui praevaricati sunt sine necessitate, aut facultatum ablatione, aut sine periculo, aut aliquo ejusmodi, quod factum est sub tyrannide Licinii, visum est synodo, licet misericordia indigni sint, benignitate tamen in eos uti. Quicumque ergo vere poenitent, tribus annis fideles inter audientes habeantur, et septem annis jaceant: duobus autem annis sine oblatione, populo communicent in orationibus.

XII. Quicumque vocati per gratiam, primum quidem ardorem fidei suam ostenderunt, et cingulum militiae deposuerunt, postea vero ut canes ad suum vomitum reversi sunt, ita

ut aliqui et pecuniam darent, et beneficiis militiam repeterent, hi decem annis jaceant, post triennii auditionis tempus. In his autem omnibus observare oportet propositum et modum poenitentiae. Quicumque enim et timore, et lacrymis, et patientia, et bonis operibus conversionem absque simulatione demonstrant, hi definitum tempus auditionis implentes, tum demum orationibus communicabunt, et postea licebit episcopo, de his aliquid humanius cogitare. Quicumque vero indifferenter tulerunt, et habitum Ecclesiam introeundi sibi arbitrati sunt ad conversionem sufficere, hi definitum tempus omnino impleant.

XIII. De his qui vita excedunt, vetus et canonica lex nunc quoque servabitur, ut si quis vita excedat, ultimo et necessario viatico minime privetur. Si vero desperatus, et communionem assecutus supervixerit, sit inter eos qui communionem orationis tantummodo consequuntur. Generaliter autem omni cuilibet in exitu posito, et eucharistiae participationem petenti, episcopus cum examinatione oblationem impertiat.

XIV. De catechumenis lapsis placuit sanctae et magnae synodo, ut ii tribus annis audientes tantum sint, postea orent cum catechumenis.

XV. Propter tumultus et seditiones quae fiunt, placuit omnino consuetudinem tolli, quae praeter canonem in quibusdam partibus invenitur, ut a civitate in civitatem nec episcopus, nec presbyter, nec diaconus transferatur. Si quis autem post definitionem sanctae et magnae synodi, tale quid aggressus fuerit, vel se rei ejusmodi dederit, quod factum erit omnino infirmabitur, et Ecclesiae restituatur cui fuerat episcopus, aut presbyter, vel diaconus ordinatus.

XVI. Quicumque temere et inconsiderate nec Dei timorem praeculis habentes, nec ecclesiasticum canonem agnoscentes, ab Ecclesia discesserint presbyteri vel diaconi, vel quicumque omnino in canone recensentur, hi nequaquam debent in aliam ecclesiam recipi, sed omnino cogendi sunt in suas ipsorum paroecias redire: vel si perseverent, eos a communione privari oportet. Si quis etiam ausus fuerit eum qui ad alium pertinet, surripere, et in sua ecclesia ordinare, non consentiente proprio episcopo, a quo recessit qui in canone censetur, ordinatio hujusmodi irrita erit.

XVII. Quoniam plerique qui in canone recensentur avaritiam et turpem quaestum sectantes, obliviscuntur divinae Scripturae dicentis: Pecuniam suam non dedit ad usuram (Psalm 14

15).5), et foenerantes centesimas exigunt, aequum censuit sancta et magna synodus, ut si quis inventus fuerit post hanc definitionem usuras sumere ex mutuo, vel aliter eam rem consecrari aut sescupla exigere, vel omnino aliquid aliud excogitare turpis lucri gratia, a clero deponatur, et alienus a canone existat.

XVIII. Pervenit ad sanctum magnumque concilium, quod in quibusdam locis et civitatibus, diaconi presbyteris eucharistiam praebeant; quod neque canon, neque consuetudo tradidit, ut qui potestatem offerendi non habent, his qui offerunt corpus Christi porrigant. Illud etiam innotuit quod jam quidam ex diaconis etiam ante episcopos eucharistiam attingant. Omnia igitur ista auferantur, et diaconi intra propriam mensuram maneant, scientes quod ministri sunt episcoporum, et presbyteris inferiores existant: accipiant autem suo ordine eucharistiam post presbyteros, vel episcopo dante vel presbytero; sed nec sedere in medio presbyterorum diaconis liceat, id enim fit praeter canonem et ordinem. Si quis autem obedire noluerit post has definitiones, desinat esse diaconus.

XIX. De Paulianistis, si ad Ecclesiam catholicam confugerint, definitum est eos omnino rebaptizari. Si qui vero praeterito tempore in clero fuerint, si quidem inculpati et irreprehensibiles, rebaptizati ordinentur ab episcopo catholicae Ecclesiae. Si vero examinati, minus apti deprehensi fuerint, deponi eos convenit: similiter autem et de diaconissis, et omnino de his qui sub canone versantur, eadem forma servabitur. Diaconissarum autem meminimus, quae in habitu quidem esse censentur, quia vero nullam manus impositionem habent, ut omnino inter laicos ipsae deputentur.

XX. Quoniam sunt quidam, qui die dominico genua flectunt, et in diebus Pentecostes, ut omnia similiter in omni paroecia servantur, visum est sanctae synodo, stantes Deo orationes persolvere.

Venantius Fortunatus

- 139600 Diu apex carne effigians genetalia limi
vitali terrae conpingit sanguine gluten,
luciferax auras animantes affluit illic:
conditur enixans Adam factoris ad instar;
exiluit protoplasma solo, res nobilis usu,
139605 dives in arbitrio radianti lumine: dehinc
ex membris Adae vas fit tum virginis Evvae:
carne creata viri dehinc copulatur eidem,
ut paradyssiaco bene lactaretur in horto.
sed de sede pia pepulit temeabile guttur,
139610 serpentis suasu pomi suco atra propinans.
insatiatrici morti fames accidit illinc.
gavisurus ob hoc caeli fluis arce locator,
nasci pro nobis miseraris et ulcere clavi
in cruce configi: tali malagmate ininctis
139615 una salus nobis ligno agni sanguine venit.
iucunda species: in te pia brachia Cristi
affixa steterunt et palma beabilis, in hac
cara caro poenas inmites sustulit haustu.
arbor suavis agri, tecum nova vita paratur;
139620 electa ut visu, sic e crucis ordine pulchra
lumen spes scutum gereris livoris ab ictu.
inmortale decus nece iusti laeta parasti.
una omnem vitam sic, crux, tua causa rigavit,
imbre cruenta pio: velis das navita portum,
139625 tristia summerso mundasti vulnera clavo,
arbor dulcis agri, rorans e cortice nectar,
ramis de cuius vitalia crismata fragrant,
excellens cultu, diva ortu, fulgida fructu,
deliciosa cibo et per poma suavis in umbra.
139630 en regis magni gemmamtem et nobile signum,
murus et arma viris, virtus, lux, ara precatu,
pande benigna viam, vivax et fertile lumen;
tum memor adfer opem nobis, e germine David,
in cruce rex fixus iudex cum praeerit orbi.
139635 Dulce decus signi, via caeli, vita redempti.
In cruce mors Cristi curavit mortua mundi.
Crux pia, devotas Agnen tege cum Radegunde.
tu Fortunatum fragilem, crux sancta, tuere.
139640 vera spes nobis ligno, agni sanguine, clavo.
arbor suavis agri, tecum nova vita paratur.
- Extorquet hoc sorte dei veniabile signum
rusticulas laudes viventi reddere flatu,
139645 in me qui regit ire lutum plasmabile numen,
portio viventum, curatio fausta medellae,
excluser culpae, trinitas effusa, creator,
cuius honor lumen ius gloria regna coaeve.
- 139650 Sic pater et genitus sic sc̄s spiritus unus.
Eripe credentes, fidei decus, arma salutis.
Munere, Criste, tuo removetur causa reatus.
Dulce mihi lignum, pie, maius odore rosetis.
Dumosi colles lignum generastis honoris.
139655 Ditans tampla dei crux et velamen adornas.
Ex fidei merito magnum, pie, reddis Abraham.

- 139660 God, the apex of the earth, fashioning the genitals of the earth, binds the glue of
the vital blood of the earth, and the luminiferous air flows there: Adam, giving
birth, is created in the likeness of the maker; the protoplasm is exiled from the
soil, a noble thing, rich in the radiant light of his will: then from the limbs of

Adam it becomes the vessel of the virgin Eve: the flesh created by man is then joined to her, so that she may be well nourished in the garden of paradise. But from the seat of the pious, the fearsome throat rushes, at the persuasion of the serpent, offering the black juice of the apple. Hunger, insatiable for death, strikes from there. Rejoicing for this, the citadel of the rivers of heaven, the owner of the citadel, was born for us, with the pain and the wound of the nail, nailed to the cross: anointed with such an emollient, one salvation comes to us on the wood of the Lamb's blood. pleasant appearance: in you the pious arms of Christ stood fixed and the palm of the blessed, in this dear flesh bore the cruel punishments with a sigh.

sweet tree of the field, with you a new life is prepared; chosen as by sight, so from the order of the cross you will bear the beautiful light of hope as a shield from the blow of bruise. immortal glory you have prepared joyfully by the death of the just.

one so, cross, your cause has watered all life, with a bloody shower piously: you give the sailor a harbor, sadness you have washed the wounds submerged with a nail, sweet tree of the field, nectar dripping from the bark, branches from whose vital chrismations are fragrant,

excellent in worship, divine in birth, shining in fruit, delicious in food and sweet in the shade with apples.

here is the jewel of the great king and noble sign, wall and arms for men, virtue, light, altar with prayer, open the benign path, lively and fertile light; Then bring us help, from the seed of David, when the king fixed on the cross will rule the world as judge.

Sweet glory of the sign, the way of heaven, the life of the redeemed.

On the cross, the death of Christ healed the dead of the world.

Pious cross, cover the devoted Lamb with Rade Gund.

You, the Fortunate, the fragile, holy cross, protect.

True hope for us is wood, the blood of the Lamb, the nail.

Sweet tree of the field, with you a new life is prepared.

This fate of God extorts a venial sign To render rustic praises to the living with breath, In me who rules the clay to go, a moldable deity, Portion of the living, auspicious cure of medicine, Excluder of guilt, Trinity poured out, Creator, Whose honor, light, right, glory reign together.

So the Father and the begotten, so the Spirit is one.

Rescue the believers, glory of faith, weapons of salvation.

By your gift, Christ, the cause of guilt is removed.

Sweet to me is the wood, pious, greater than the scent of roses.

You have given birth to the wood of honor on the high hills.

Enriching the temples of God, you adorn the cross and the veil.

By the merit of faith, pious, you render great to Abraham.

A walk around Venlo. I

The lovely spring days we now and then already experience prompt me, dear reader, to invite you for a walk. While winter this year, as it usually does, has kept us indoors through cold, snow, or rain, those short days, when the sun's powerful rays are sometimes unable to penetrate the dense clouds, nevertheless prevent many from taking advantage of the few suitable and available hours of the day. The temperature, which exerts such a significant influence on our bodies, lures us outdoors in spring; we feel involuntarily drawn to the open field, where we breathe in deep breaths of fresh air; seeing plants and trees awaken after their winter sleep awakens you from the worries of human life and work, which kept you locked up

for several months; the bird's warbling...

But let me not delve further into the fantasy; everyone can do this for themselves, as long and as much as they wish. I wish to linger with you in the field of archaeology. However barren this field may seem to most, I trust too much in your interest in your native soil to dare to invite you as a companion for this "airing." You have heard of the objects found and excavations on or near Venlo's territory by Messrs. Hub, Michels, Colonel Rudolph, Lieutenant Ort (currently rhythm), and foreman Frans Deserière, of Mr. Dr. Boetzkes (at Wambach), and of the Medusa shield owned by the Lienders family. While these gentlemen had, until now, mostly been, so to speak, "practical" practitioners, the memory naturally comes to mind of our fellow citizen, Mr. Martin Jansen, who sadly passed away so early, possessed so much knowledge in the field of archaeology and, as a "theoretical" collaborator on the path of research, could have contributed so much.

One of the aforementioned gentlemen paved the way, namely Mr. Ort, who arrived in the city around 1970. His position gave him more opportunity than anyone else to become thoroughly familiar with the terrain, and his primary task was to produce a map of Venlo and its surroundings, at 1/8000, for the garrison office, which naturally led him into the field of archaeology. In Frans Deserière, he found his mentor, who provided him with information about mounds and ancient ramparts, whose regular layout had caught his attention. Deserière had urns that he had excavated himself, and he knew burial grounds. With him, Mr. Ort, usually on Sundays, explored the soil beneath Blerik, Grubbenvorst, Lottum, Tienraai, Meerlo, Baarlo, Kessel, and other villages, as well as the Jammerdaal heath near Venlo.

The positive results spurred him on to further his knowledge in this field. When he arrived in Leiden in 1879, he soon became acquainted with Drs. Leemann and Pleyte, director and curator, respectively, of the National Museum of Antiquities there, who provided him with helpful advice on how to give his research a more scientific direction.

In 1882, he received a request from Mr. E. Von Tröltsch, Kön. Wurtemb. major, foreign service, to, in the interest of science, hand over his work on Roman roads—consisting of a map of the region between Nijmegen, Birten, Aachen, and Tongeren, with indications of sites, and his many notes—to the anthropological society in Stuttgart, to assist in the design of a prehistoric map of Germany. Mr. Ort felt he did not have to comply with this request; but it prompted him to prepare his work for the press. The first part was published a few months ago and deals with the Roman and other ancient roads north of the Rhine, between the Lippe and the Dutch border, between the Rhine and the Maas, and on the left bank of the Maas, as well as the land defenses in those regions. The second part, which will appear when interest permits, will contain a description of the discoveries made by him and others, and the old map at 1/50,000, which was requested from Stuttgart.

What lies scattered in hundreds of essays, magazines, books, and newspapers—a chaos from which it is difficult to obtain an overview—all the fragments, and everything in this area as far as our dearly beloved region is concerned, coupled with his many investigations and rich results, we now find compiled into a complete whole, for which we can be truly grateful to Mr. Ort.

I wished to take the proposed walk with you—already in its youthful greenery—primarily in his hand, freely taken here and there from the 150 pages, with additions gathered elsewhere, as best as possible in a form that will be enjoyable reading for the readers of this magazine.

Please, dear hikers, let's first have a hearty snack, light a cigar, and then we'll take our walking sticks and begin our tour.

It's good that we've chosen the early morning hour of a beautiful summer day, so we can get back before the sun rises high and makes climbing the mountains and hills even more difficult and tiring.

You all know that the main goal is to visit the areas Ort discusses, so we can only concern ourselves with other matters in passing. Along the way, I'll give you some information about the Roman roads, so as not to waste time. And now, please, from here, along Lomstraat and across the Hellschriksel, outward.

Perhaps you, gentlemen, will notice the name "hellschriksel," but the "hel" was added to distinguish it from the next street, the Maasschriksel, and because it borders the Geldersche Poort, which was formerly called the Helpoort (Hell Gate); from there, the Helbeek stream also flows just before the city. "Hel" means something like sloping or descending.

—"Say, host, do you know what kind of building that was, right there in front of us on the corner?" (We've just left the house and the questions are already starting.)

- 139860 Yes, my dear, that was St. Jacob's Church, which already existed in 1500, and in 1702, during the siege of the city by the Allies, was set on fire, largely destroyed, and never repaired. On this side, next to it, used to be the old men's house; the large building is now used as a warehouse and for other purposes. Across from there, somewhere, there lived a former turner, whose name is unknown, who is
- 139865 said to have invented bombs, which were first used in 1588 during the siege of Wachtendonk. Tests were first conducted there during the arrival of the Duke of Cleves, during a banquet, when one fell on a house on the old market square and started a fire. The bomber's house stood on Lichtenberg, a hill that received its name after the death of Valuas, a Bructeri general who settled here in 95 AD and is
- 139870 considered the founder of Venlo. He lived to be an old man, and according to history, he was highly respected by his people and the neighboring tribes, whom he often assisted with advice and weapons. His body was cremated, and the ashes were preserved in a statue. He must have lived on the hill at the corner of Houtstraat and Jodenstraat. After his death, the people honored his memory with offerings on
- 139875 the nearby hill; a fire always burned there, which is why it was called Lichtenberg. Ort considers Lichtenberg, as well as Laarberg in Velden and the hill near Velligerstraat, to be Roman watchtowers.
- Just one more moment, please; it's too interesting. You see this new sloping street here; it's called Bergstraat and belongs to the Venlo Building Association. When the
- 139880 fortress was demolished here about 15 years ago, twelve skeletons were found in a row at the foot of this bastion, along with some parts of coffins; it is suspected that they were soldiers. That's the Lichtenberg here, to which a historical reminder from the siege of 1511 is still connected, when the people of Gelderland were
- 139885 besieged by the people of Brabant; surely you've heard of our Trui. Yes, something about it floats to mind, but I'll help you out; you've probably read The Siege of Venlo in 1511 by Van den Eertwegh. Gertruid Bolwater, as she was called, must have been one of those so-called dragoons. During that siege, when Zwartzenburg was the city commander, and during which, incidentally, the tower of St. Martin's Church
- 139890 partially collapsed, the city was stormed; the inhabitants defended themselves with unanimity, guarding the ramparts day and night. Our Trui participated in this and took the banner of an ensign who had already climbed the wall, and threw stones at the assailants from the rampart. The siege was lifted, says Slichtenhorst, because of the "fierce resistance and unbridled courage of the besieged themselves."
- But now, gentlemen, if I may ask, let's turn the corner and go past the back of the
- 139895 fort.
- May I draw your attention to that ruin, the so-called "villa Büt." Fort Ginkel was built in 1731 by the then commander, Reinoud van Reede, Lord of Ginkel. – And if we turn around for a moment, across the Maas, you can also see the ruins of Fort St. Michel, to the left of De Staa House. It was built by the Spanish on Michaelmas
- 139900 Day, September 29, 1641, and completed in 1643. It cost 118,000 Brabant guilders, or approximately 52,000 Dutch guilders. And guess what it brought in? – 26,650 guilders. Look downstream: there lies the Broken Castle. It's unknown when it was founded; in Keuller's History of Venlo, it appears in 1511; its destruction must have taken place during the Eighty Years' War, namely in the first half of the 17th
- 139905 century.
- And now, let's not dwell on this any longer; we have to cross the "Hoëgschoar" (translated as "Hooge Schoor," i.e., raised, washed-up land), through the meadow, the "Miëbaend," and traverse the Veldenschenweg.
- Meanwhile, I can give you some information about land defenses and ramparts.
- 139910 The Romans, as I read in Ort, as well as the Germans, made clear boundaries on their borders, which were more or less defensible as needed. These boundary boundaries consisted of one or more ramparts with parallel dry or wet ditches. Professor Schneider has two names for them: "Gebrückgraben" (Bridge Trench) and "Pfahlgraben" (Pillar Trench). The first type is only known in the Netherlands; they run in
- 139915 separate, yet contiguous arms, which separate or enclose a terrain or region; They are planted with living trees to protect the defenders behind them; while, as with Roman roads, guard mounds for fortified observation and signal stations are located at equal distances from each other along these land defenses.
- The Pfahlgraben form a continuous line and are so named because a row of
- 139920 interconnected posts provides shelter. Instead of guard mounds, this type of land defense is constructed with masonry stone towers, probably at the same distance from each other as the guard mounds. These can be found on the right bank of the Upper Rhine.
- The Gebrückgraben were built by the inhabitants themselves, under Roman supervision,
- 139925 and they were also charged with the security duties. The Pfahlgraben, however, were

constructed entirely by Romans alone, who also performed the guard duties. In many regions north and south of the Rhine, including Limburg and North Brabant, a large number of ramparts, mostly accompanied by small ditches, separate one region from another in a straight or curved line, or enclose one or more triangular or polygonal sections of land. Such rampart enclosures are found in hundreds in some places, although they are noticeably disappearing as the soil is increasingly reclaimed; they are found not only in places where there is good arable land, but in isolated heaths, forests, and marshes, they are even more numerous and, of course, more in their original form.

To understand the former purpose of these ramparts, Schneider refers to Tacitus, Germ. 16, where the following can be read:

"It is well known that the Germans do not inhabit cities, nor that they tolerate dwellings close together. They build away from one another and spread out according to their preference for a spring, a field, or a forest. They build neighborhoods, not in our manner, composed of coherent and connected buildings; each person surrounds their house with a space, either as a means of protection against fire, or because they lack the understanding of construction."

This shows that two types of dwellings must be distinguished among the Germans: a few widely spaced farmsteads, of which a triangular, quadrangular, or polygonal rampart still remains, and a type of village, which, however, differed greatly from Roman villages. Caesar already mentions such villages among the Menapii and Sicamberi, Tacitus among the Marsi and Catti.

The places where such villages once existed can now be recognized by the many ramparts, which intersect at various angles, thus forming areas on which the dwellings stood. Roads often ran through them, forming village streets, and they had ramparts and ditches of larger dimensions than the others. Ramparts separating a larger area should be considered boundaries between villages or between properties of clans or tribes, and often still are today, such as the land defense of Calbeck and that in the Jammerdaal heath near Venlo-Tegelen. It is true that in the time of Caesar, personal land ownership did not exist among the Germanic peoples, but after the conquest of these regions by the Romans, when the tribes were tied to a permanent residence and agriculture was increasingly expanded, we may assume that personal ownership quickly arose.

Gentlemen, let us now stand on this hill for a moment; in this vicinity we have several small ramparts, such as are unique and numerous between the Rhine and the Maas, especially at Cranenburg, Kleve, Goch, Calcar, and Uden, according to Schneider; To which Ort adds those of Venlo, as:

Between the Maas and the Stralen road: Veegtes, Kruisberg, Zwartwaterkamp, Groethof, Eikelveld, Hanenkamp, Hoogenkamp, Ketelberg, Voutenberg, Neurkenskamp, etc.; Between the road to Stralen and the one to Herongen: Lovendaal, Groothoogstraat, Arenberg, Genraai, on Rijnstraat, on the Kluis (old people still remembered that a hermit lived here), etc.;

And between the Kaldenkerker and Tegelschen road: on Jammerdaal, on the Kluis, Vrijenbroek, Kleinkamp, Wylrehof, Hulsforthof, Voordijk, Wittendijk, on Vindelsroad, etc.

The largest rampart in our neighborhood is on the other side of the Maas River; it runs from the marsh near guardhouse no. 6 of the Venlo-Horst railway line, in a semicircular shape, with the concave side facing southeast, in a southwest-to-northeast direction. It is over 2 meters high, 9 meters wide, and approximately 700 meters long. Locals call it the "Germanic rampart." Following the natural hills to the northeast, Ort continues, to near the main Venlo-Horst road, one sees another rampart like the previous one, hugging the upper edge of the hill and following an east-to-west direction, behind the farmsteads "de Saar" or "Laar" and "St. Jan," to the marsh "het Meir" east of "Berkterbroek." This section of the rampart has been broken down here and there by excavations, resulting from the reclamation of the heathland. In some places, I even found two ramparts standing one behind the other.

In the southeast, there are also sections of ramparts, but I haven't yet been able to find any connection between them. The area between these ramparts is called "de Römer" (the Roman) and is a large Germanic cemetery, where, however, no trace of Roman occupation had been found until I recently had the good fortune to discover many Roman potsherds and pieces of peat stone in the low-lying area called the Meir. According to a farmer living nearby, there must have been a mound in the middle of the Meir that was dismantled; many potsherds and pieces of stone that emerged were scattered across the fields.

See the chapel there in the Kruisbergen, also known as the Genooier Mountains. There

lies buried Sister Agnes Maria Huyn van Amstenrade, renowned for her virtues, graces, and God's gifts. She lived in the Trans Cedron convent. Her body is said to be incorruptible.

139995 Formerly, the Mariëndaal convent stood on the site of this chapel, a name now adopted by the Dominican nuns who settled on Gerritten last year.

On the grounds over there between Genooi and Velden, called the Rummer, General Pichegru camped with his army in 1794.

140000 Since we still have a long walk to go, we will not continue further along the Velden road to visit the Zwartwater, but will cross over immediately.

Gentlemen, do you see that yellow house over there in front of us, on the left before Besjes, where those two tall trees, planted in 1769, I believe, stand in front of the door? It's called the "Spiker"; a ball serves as a keystone on the facade. It's an old mansion. The Groethof is right there.

140005 There, Gerritten, the convent of the Dominicans, M.H., now called Mariëndal. Mr. Heutz, founder of the charitable institution that bears his name, used to live here; before him, it was inhabited by a certain Mr. Boymans, a member of the family that founded the museum of the same name in Rotterdam. If you go past the back of the convent, you arrive at the Ketelberg; try to find your way through the thin woods, and you'll have a magnificent view of the countryside behind the hill, with the Zwartwater, the Vaalkuilen, and the romantically situated amidst the woods, the house of the... city forest ranger, which has been mentioned many times in recent months.

140015 But shouldn't we take a break now with the Jentjens ladies? Over a cup of coffee, which they make so well, I'll talk to you about what follows. Let's go sit "upstairs."

Mr.H., take a look through the window. Opposite here lies the recently renowned school building. From 1836 to 1860, Mr. Van Oeyen held sway there. It has since been closed. Currently, a little over a year later, there is a nursery school at the Sisters' house on Gerritten.

140020 Behind the school, the Venlo-Gelder railway line—see right—runs across the land where the Spanish intended to build the Fossa Eugenia in 1625, the canal to connect the Rhine and Maas rivers, from Rheinberg past Kloosterkamp, Bruggen, Gelder, where it intersected the Niers, to Venlo. —In 1806, Napoleon I planned to connect the Scheldt, Maas, and Rhine rivers. On May 10, 1806, a decree was issued to construct the "Great North Canal," as it was now called, from Antwerp via Herenthals, with an 8,000-meter-long branch to Lier, via Neerpelt, Loonen, Weerd, Meiel, and Venlo. From there, via Herongen, Louisenburg, Suchtelen, and Neerssen, it would extend to

140025

140030 Grimmhausen near Neuss. The canal had a length of approximately 115,000 meters from Antwerp to Venlo, and 52,700 meters from here to the Rhine. Its width was to be 13 meters, and it was to be navigable for ships of 400 tons. The locks, each with a drop of 4 meters, on the Maas-Rhine section, were to be built: 1. on the Maas, 2. at Fort Ginkel, 3. between Forts Ginkel and Beerendonk (the latter was located

140035

approximately where Mr. Schram lives), 4. on the hill, in the municipality of Stralen, 5. at Herongen, 6. between Herongen and Louisenburg, 7. at Louisenburg, 8. and 9. near the Rhine. — The entire undertaking would cost 20 million francs.

In 1808, work began diligently; in 1811, it was halted due to the unification of Holland with France. Had this happened a year later, the canal between the Maas and the Rhine would have been completed, that's how far it had already progressed; 12.5 million francs had already been spent on it. Completion has been requested several times by both Antwerp and Venlo, but always without success. A request made a few years ago is still more or less pending in Berlin and The Hague, but there is little hope of success. — A little further into the city, opposite the innkeeper G. Haanen, the upper part of a gauge still protrudes from the ground. I wouldn't want to withhold a fairy tale from you: there was a certain Hazenpoth, a contractor or supervisor for the construction of this canal, who, after committing all sorts of deceitful acts, supposedly received his just reward in the other world and was doomed to ride through the air, from time to time, in a glowing chariot harnessed to four fiery steeds, along the entire length of the canal. Several farmers claimed to have witnessed such a thing at the time.

140055 Dear Miss Jentjens, please! 15 cents for your delicious coffee. — Gentlemen, let us now take the road opposite, past the school, to reach the Herongerberg. In the meantime, I'd like to share some Roman roads with you.

According to a Punician writer named Isidore, Habets writes, the Carthaginians,

around the 5th century BC, were the first to build paved roads, and following their example, the Romans built major roads throughout their empire. However, they built them with great luxury and displayed incredible energy.

A large boundary marker, placed in the middle of the Forum, was the point of exit for all roads, which stretched southward, to the Euphrates (a river in Asiatic Turkey), to the Nile, to Gaul, to the dunes of the North Sea, and to the marshes of the Batavians, triumphing over all obstacles and connecting the capital with the most distant provinces.

The existing natural roads of the Celts and Germans, says Ort, were insufficient for the Roman armies and their followers, and were used under Caesar, improved, and where they passed through less favorable terrain, raised and dammed. When one considers that the Romans worked tirelessly on roads for six centuries in Italy and four centuries in the provinces, one understands that enormous sums were spent on them.

Roman roads, Hirschfeld reports, are divided into two types, depending on their purpose: 1. Military or consular roads, constructed and maintained by the State solely for military purposes, which usually ran in straight lines; 2. Vicinal roads, which were connecting roads built by farmers for their own use. These were only considered public roads if they connected several military roads.

These roads formed causeways, which ranged in height from 1.26 meters to 2 meters above the ground; in some cases, in very low places, they were even 4 meters high. This dam-like construction distinguishes them from all later roads; rainwater drained well; they offered an unobstructed view of the surrounding terrain, and one could better engage the enemy from a higher vantage point. Only in Rome was the dam-shaped form considered unnecessary.

On both sides of the central road, which was called an "agger," i.e., a dam, there were banks with a ditch, and usually side walls next to it. Sometimes, a footpath of flat stones can be found on both sides of the central dam, for example, at Andernach.

Oberst-Lieut. Schmidt states that on the Lower Rhine, the Roman roads consist of a high earthen embankment, covered with a 2 to 2.5 foot high layer of gravel, cemented with mortar. However, this is only true of the major roads, as no trace of mortar can be found on the road from Xanten to the Maas. Paulus, too, found the use of lime mortar on only a few of the many roads he examined; however, sometimes two or three layers of gravel, separated by layers of clay, are found. Instead of gravel, crushed stones, compacted with intervening earth, have also been used. The most perfectly constructed roads also have a substructure consisting of large stones set in lime mortar, while the upper gravel layers also have a lime bond. The type of stone found in the region itself was usually used for these roads. However, if that type of stone was too soft (e.g., sandstone), harder types were used for the upper stone layers (e.g., basalt, quartz, hard limestone, and gravel). According to Georg Hirschfeld, the total thickness of the stone layers, lime, mortar, and sand is 1.10 meters to a maximum of 1.25 meters. – In such roads, the lime is sometimes lacking in the substructure. On the same highway, the construction is not the same along its entire length, but changes as the terrain or the increasing or decreasing traffic made it necessary.

Very rarely, Ort reports, were the roads paved with large stones, and where one sometimes thinks one has found them, closer inspection reveals that the substructure has been discovered, while the upper layers were removed to create other roads. The side walls served to protect the troops marching on the main causeway from enemy attacks; they consist solely of earth. Deviations occur in areas where something was superfluous or made their construction impossible.

Hey, look, thank God we're on the Herongerweg. Those back roads are difficult to walk on and usually dirty. –

Now, gentlemen, we already know exactly what and how the Roman roads are. We don't need to track them down now, and for those who are interested, I refer you to Ort.

He tells us that this requires knowledge of the various constructions, understanding how they have evolved after so many centuries, so that one can, one after another, with sounding rod in hand, be able to follow a track once found through unpaved terrain.

We have now arrived at the site of such a Roman road, namely the one from Venlo to Bisheim and Homberg on the Rhine near Ruhrort. I'll let Ort speak for himself: From Venlo, a Roman road runs to Niederdorf, and where the road bends many times near Herongen, it runs straight east to the Wankum road. A few years ago, the

140125 remains of the old road were still visible at Niederdorf and Herongen. At Wankum, the gravel dam was found next to the road, and a Roman gravestone was also discovered there. This road, which I know very well, was previously not considered a Roman road by me, but the assurance of the learned and accomplished researcher Professor Schneider that remains were visible near Niederdorf and Herongen a few years ago now leaves me in no doubt. I will provide some further details about this

140130 road, and one in another direction, which I previously thought was the Roman road. Just outside Venlo, a few hundred paces south of the road, lies a high piece of land, along the stream "the old Rhine," called the "Romerskamp" (Roman Camp); a little further on, near the lane leading to the Tichelarie, it is said that a headless man (Hazenpoth) is often seen walking at night, as are fiery horsemen, etc.

140135 Where the road climbs the hills, there is an inn called "in de stad Venlo," but on Buyx's map, that place is called "Lusseike"; On the hillside behind this house, next to the old postal road from Stralen, I found shards of Roman tiles and other Roman pottery in the ground. The road now heads northeast up the hills; the old road used to run straight east as a sunken lane, and when it reached the highlands, it

140140 continued in a straight line, without the slightest bend, until it reached the northern canal near Louisenburg. On the other side of this canal, a wide road begins that runs northeast to the church in Wankum. The road is now a paved road to Lusseike; the sunken lane has been extensively altered and used as a sand quarry. On the plateau, it forms a wide carriageway on the flat heathland, flanked by small

140145 ditches. Immediately within the woods, the side walls and ditches remain intact until they disappear into the heathland near Louisenburg, where Roman antiquities have been discovered. Further to Wankum, I don't know whether there are any remains of ramparts and ditches; on Buyx's map, a section of the road is drawn and bears the name "Brühlsche Strasse."

140150 "From Wankum goes the main road," etc. — I can stop quoting further; it's no longer in our territory; it's Prussian there! Those interested in learning more should pick up the book "Oude wegen en Landwehren" (Old Roads and Land Defences).

140155 Speaking of Herongen. This town is known for the St. Amandus spring or well. St. Amandus was Bishop of Tongeren, who was considered the Apostle of the Netherlands. At this well, he baptized pagans around the year 800; the well is located on an old Roman road.

Many Roman antiquities have been discovered between Herongen and Wankum. Prof. Schneider says that on the Boschberg, there are old graves, and about 300 paces south of the road lies the "Heidenkerkhof," next to the main road, where antiquities have been found. Geometer Buyx, of Nieuwerkerk, in his Antiquarian Map of the Gelderland Region, mentions a Roman camp north of Rehboch on the Schürkesbeek; about 100 paces northwest of there, on the Dambeek, Germanic burial mounds, and near Herongen, on Bekerstraat, Roman graves and antiquities.

140160 Gentlemen, let us now return, to reach the other side of the city via Puteanusstraat to arrive, where it will become more interesting from an archaeological point of view.

(To be continued.) H.

140170 A walk around Venlo. II.

Look, we are now at 't Zand. "'Het Zand,' some of you will probably say, 'I had imagined it quite differently than a complex of houses.'

140175 Yes, gentlemen, a few years ago that was also a completely undeveloped area, a triangular, tapering lawn, stretching from the clubhouse "de Prins" to the road near the florist Vallen to the colonel. Besides the memory of the horse market and the fact that the infantry, the militia, and the nannies exercised here, there is another connected memory; namely, when Napoleon I was proclaimed Emperor of the French in 1804, he made a journey from the camp of Boulogne to Aachen, Crefeld, and

140180 also came to visit us Venlo residents on September 12 of that year. The Emperor, Keuller writes, accompanied by a mounted guard of honor, arrived in his chariot along the old Stralen road, mounted his horse at the Lusseikerweg, and, in order to avoid the Geldersche Poort, which was considered less than secure due to its dilapidated state, rode over the hilltop, even through trees and shrubs, the better

140185 to observe the fortress's position. Around ten o'clock in the morning, arriving at the Zand at the foot of the glacis, His Majesty was received by the civil authorities and a foot guard of honor, where he was presented with the keys to the city by Mayor Van den Vaero??. For the sake of curiosity, I would also like to share the following about this

140190 visit. Entering the gate, Napoleon suddenly turned his horse to the left, probably to escape the countless crowd awaiting him. He turned into the narrow street called Floddergats (which later acquired the pompous name Keizerstraat), and, followed only by the commanding officer of the engineers, headed for the Mariaweide monastery, then owned by Mr. Lenssen (now by the Berger family). His entourage, which included the Emperor's son-in-law Eugène Beauharnais, later Viceroy of Italy, Marshal Lannes, Duke of Montebello, and several generals, rejoined him. Having circled the main rampart, the Emperor proceeded to inspect the outworks, and having reached the lower end of the Maaswaard, had he not been stopped, he would have ridden through the harbor mouth, where there was more than six feet of water. A small boat, in which he then embarked with the commander of the engineers, took him, at his command, across the river, and a moment later, he was seen galloping on horseback across the batteries of Fort St. Michael. Returning to this side, he proceeded along the Maas, riding at Broesert through the water that flows into the river from the canals there, to Forts Ginkel and Beerendonk. Finally, he returned to the city, accompanied by those who had accompanied him on this hasty journey. After remaining there for a few more hours, the Emperor climbed into his chariot, drawn by eight horses, and, escorted by a strong detachment of the Imperial Guard, left the city, making his way to the Hague near Gelder to spend the night there and continue his journey the next day via Mainz to Paris. Beauharnais, Lannes, and all the staff officers in the Emperor's entourage left only the next day and headed for Crefeld.

But let's return to our archaeological layout. From here, a Roman road runs from 't Zand, which Mr. Ort traced to Hinsbeckerbroek. I'll give him the honor of speaking to you:

140215 On 't Zand outside Venlo, a branch of the road that runs from there to Kaldenkirchen branches off to Leuth. A few hundred paces from this junction, the road divides again, one branch running to Leuth, the other to the large heathland used as a parade ground. This last arm climbs the hills as a wide dirt road and has a rampart on the plateau on its right. It doesn't run parallel to the road, but forms a sharp angle with it at the edge of the hill, forming the southern boundary of the exercise grounds. The road reaches the heathland about 120 paces from that boundary. This rampart is marked on Buyx's map as a land defense. Research has shown me that about 25 meters from the first rampart, a second runs parallel to it. A road is thus formed between the two ramparts, separated from the ramparts by narrow side ditches, which in turn are separated from the surrounding terrain by a side ditch.

140225 Notwithstanding the fact that German researchers state that all Roman roads were narrow causeways, the information provided by Mr. Jos Habets has shown us that in southern Limburg there were irrefutably wider Roman roads, and Mr. Van der Rit mentions, 60 voeten (in Dutch feet) the fixed width of Roman roads in Belgium, which sometimes reached 100 feet in places with heavy traffic; we therefore obtain a width of over 17 and over 29 meters, the latter figure including the ramparts and ditches. The road runs precisely in the direction of the towers of Venlo and Hinsbeck; I followed it to near the banks of Schrolick Lake and the Hinsbeckerbruch, where I was stopped by the marshy ground; it intersects the Herongen-Leuth road almost at a right angle. Extending the road, towards the Venlo side, is a footpath through marshy terrain behind the gardens of Het Zand, past the Panhuis, where the land called "Romerskamp" lies. In the direction of Hinsbeck, on the other side of the aforementioned lakes, we find a sandy road, which connects to the present-day road to Hinsbeck at the Hombergen. Antiquities were found along this road: probably on the station grounds in Venlo, Roman pottery and tear bottles. At Hoogen Dries, just a few steps south of the road and near the lakes, Buyx notes Roman antiquities on his map; near the Hombergen, east of the lakes, I investigated a cemetery where I found Germanic urns and Roman potsherds. I left one of these urns with the forster of Count von Schaesberg, who lives near the Hombergen. This man also owns Roman pottery, which he claims originates from the aforementioned cemetery. It is noteworthy that the extensions of the Roman roads already described and those listed below in Venlo all end between the old market there and the Lichtenberg, thus near the old ferry (or Staai) across the Maas and not opposite Blerik (Blariacum).

140250 We'll soon reach the next roads, gentlemen, but take a quick look over there, that tall house in front of the hill; it's Stalberg. The architectural style still more or less reveals that the lords of Stalberg used to live here, several of whom served as mayors. The same can be said of the adjacent house, "Aan Vinken."

140255 And there, against the slope of the hill, that white house, nestled in greenery, is called "Aan de Zeven Bronnen" (At the Seven Springs) because there are seven

140260 springs. The former owner, Mr. Bontamps, had planted a vineyard there in 1833-36, as did his neighbor Verwins, who built the house Maagdenburg and converted that now dilapidated property into a magnificent pleasure garden. Hence the name "Aan de Wijnbergen" (At the Vineyards). But the grapes that grew there, although the product must have won an award at an agricultural exhibition, were never used beyond vinegar production. So the fable of the fox was quite fitting here: those grapes are too sour.

140265 In that area on the hill is also the Galgenberg, where our grandparents once saw lifeless evildoers slumbering.

140270 Gentlemen, let us now turn right onto the road past Thywissen's mill, which leads us to the so-called sanctuary of the Venlo "moetwormen" (moles), that is, diggers. Meanwhile, I must share with you a fairy tale, which Michels tells of this somewhat mysterious place, but very interesting for those who love natural beauty, in the Limburg Legends: In earlier times, in the vicinity of Venlo, near the Ondersten Houtmolen, by the basin of Venlo's fountain, a fireman walked every night. The residents of the area had to give him a cartload of sand, a pair of tin shoes, and 7½ stuivers every year. One day, a servant from the Bovensten Houtmolen (Upper Wood Mill) came out of town late one evening. Arriving at the water basin, he saw a man standing on the hilltop. Thinking it was a comrade, nicknamed "Dikke" (Fatty), he shouted, "Dikke, give me some fire!" The fireman then followed him, but the servant galloped his horse and had just entered the barn of his mill when the fireman caught up with him. In the morning, a coal-black hand was found outlined on the barn door.

140280 Let us first return to the Roman roads.

140285 From Venlo, a highway ran to Kaldenkirchen, passing close to the mill. Beyond the border town, it divided into two branches, one of which led via Breyel, Speck, Boisheim, Dulken, past the Pohlhut on Viersen, etc., to Neuss. The other branch behind Kaldenkirchen ran over Bruggen, Niederkruchten, etc., to Julich, between Aachen and Cologne.

So we have three roads starting from Venlo: the first via Herongen, Wankum, etc., to Binsheim-Orsoy and Homberg; the second to Hinsbeckerbroek; the third to Kaldenkirchen, with two branches to Neuss and Julich.

140290 If you look at these on the map, the first runs northeast, the second east, and the third southeast.

Now there's a fourth Roman road from Xanten to Tudderren near Sittard and on to Coriovallum (Heerlen). This intersects the first three: the first on this side of Herongen, the second on the hill near the Seven Springs, and then runs along this side.

140295 The road from Leuth, and intersects the third just behind Kaldenkirchen.

140300 The first Roman road from Venlo left Herongen on its right, thus running between Herongen and 't Zand near Stralen. There it is intersected by the Xanten-Tudderren road. From this point, the latter road, originating in the southern part of Niederdorf, where Roman antiquities have been discovered, continues as an old grassy path with gravel tracks through the fields and then through the woods, past Louisenburg, where Roman antiquities have also been found, and finally across the heath, where it suddenly ends. Prof. Schneider found no further traces in the Herongenheide. Only where the Venlo-Hinsbeck road intersects the Herongen-Leuth road did he find the path back into the woods, about 400 paces from the road, as a low gravel ridge that can be followed to the west of Leuth, where Roman antiquities have been discovered. From Leuth, the main road merges with the road to Kaldenkirchen; from there, under the name "Ravenstrasse," it continues here and there with side ramparts, first through fields, then through the woods, heading south, and reaching the Weissen Pfahl in the Maas valley. It now follows the German-Dutch border past several burial mounds and is called "Prinsendijk" or "Prinsenbaan." At the end of the Bruggenerbosch, where the road turns slightly to the left, it enters Dutch territory; the gravel dam is clearly visible on both banks of the Zwalm. — We won't follow him any further.

140315 Buyx, however, draws three roads from Pont: one to Arcen, one to Stralen and Tegelen (probably referring to the so-called old postal road), and one to Wachtendonk. Leemans and Habets also suggest a road that connected with the other side of the Maas at Venlo or just below the city.

140320 Gentlemen, I hope the walk through the woods and over the hills, with its picturesque valley and water basins, has made you less aware of the dryness of this description. We are now standing before the Jammerdaal heath, with its Germanic and

Roman antiquities. Here's what Mr. Ort has to say about it:

Now I must describe another site of Roman and Germanic antiquities, which, like Lusseike, is situated on the hillside that begins at the Noorderkanaal (North Canal), leaving Venlo one kilometer to the west, and extending in an almost straight line to the aforementioned Bruggenerbosch (Brugge Forest), sometimes very close, as near Venlo, sometimes further away from the Maas, as that river takes its course.

This site bears the name Jammerdaal Heath and lies near the borders of Venlo and Tegelen. It is a high heathland; in the northwest, steep hillsides, with marshy terrain below, form the border. In the northeast, a stream flows, forming two basins and a narrow valley, the Jammerdaal. To the south runs a landwehr approximately 2,000 meters long, while on the east side, between the stream and the landwehr, access is blocked by the Venlo-Kaldenkirchen road, which, as I described earlier, is of Roman origin. The construction of the Venlo-Kaldenkirchen railway line has caused many changes here, especially on the east side, but because the road runs through the stream valley, the plain itself has remained in its original state. A sunken road, which after a few steps divides into two branches, provides access to the heath on the north side; a second road, running south from the Bovensten Watermolen, must be of later date, as many of the burial mounds in which I found Germanic urns lie on the road; a third road, which originates from the Kaldenkirchen road, soon heads towards Gasthuishof and Kaldenkirchen and, I believe, is also of lesser importance. West of Leuth, a road begins, first heading south, then west near Brand and the Rosenhaus. Near the latter house, it connects to the aforementioned landwehr, continuing along both sides of it until the landwehr ends at the hillside. However, the road descends as a sunken lane with many twists and turns into the Maas valley, running past Hulsfort to the Venlo-Roermond road and to the Maas river opposite Holt-Blerik. Habets believes this road is the connecting road or diverticulum between the two roads on the opposite banks, as mentioned above.

South of the landwehr lies the Oelishof, apparently derived from Olla (pot); while it is noteworthy that in the vernacular of Venlo and Roermond, a wide earthen pot is still referred to as an oelis. Especially in the mountain slopes bordering this heathland up to the Tegelen-Kaldenkirchen road, large excavations were made to obtain earth for the production of roof tiles, tiles, etc., which are called "pot holes." A great many Roman roof tiles, urns, and other pottery have been unearthed, including some from the Middle Ages, of which I have several examples; the largest bakery appears to be in

I remember having been to the Jammerdaal, near the Lower Water Mill; just behind the mill, the miller's son, Mr. Hubert Michels, excavated a multitude of medieval pots.

In 1879, the same gentleman was fortunate enough to discover a Roman pottery on the Jammerdaal heath. It had an elongated, triangular shape, and contained numerous already fired vessels with decorations, including unfired ones, but entirely formed of clay. A few weeks after the discovery, I visited the site; a large pile of shards of broken pottery lay next to the partially recast bakery, while about 30 paces to the north, broken Roman roof tiles lay scattered about. Apparently, the potter's house or hut was once located here; indeed, after a careful examination of the hillside, Dr. W. Pleyte, who accompanied me, and I even found the exit leading from the house to the foot of the hills where the potting soil had to be obtained. A few minutes northeast of this site, I had previously discovered a Germanic cemetery with large and well-preserved burial mounds. Urns with and without lids were excavated there by Fr. Deserière and myself and are now in the Museum of Antiquities in Leiden.

On the heathland between the Jammerdaal and the railway line to Kaldenkirchen, as well as immediately south of the landwehr, I found Roman potsherds, also of terra sigillata. I discovered the foundations of buildings between the landwehr and the Oelishof, where a building appears to have stood, next to which lay a funnel-shaped well. At the intersection of the landwehr and the German border line, where a chapel appears to have stood, I found ordinary stones in both places, so that, during this cursory investigation, I concluded that both sites had contained modern buildings. Mr. Hubert Michels, accompanied by Dr. Boetskes, who lives at the nearby Wambach Castle on the Kaldenkirchen-Tegelen road, has further investigated the aforementioned location. This investigation attracted the attention of the landowners, namely the regents of the Roman Catholic almshouses in Venlo. They prohibited the investigation but continued with it. According to Michels, a cellar was discovered, constructed of loosely stacked marl blocks, while a cast wall was

built around the outer walls of lime, pieces of tiles, and bricks. He writes to me: "According to my father, a sheepfold once stood on that site, from which the bricks and lime containing the blueing, which you noticed, must have come." He further reports that a coin of Hadrian was found under the roof tiles of the aforementioned potter's house, which was bought from the finder by the prostitute Boetskes. He also mentions that the gentleman discovered an old grave in the Wambach garden near the two lime trees. The urns were broken and are kept there. This Wambach castle, located on the Tegelen-Kaldenkirchen road, is very old and was called "the farm to Wambeke" in 1326. As early as 1829, Mr. Justen explored the area on the Oelischeide and apparently found a Roman grave there, without specifying the exact location; he believes the heath I described was a Roman army camp. Mr. Peeters, who mentions this, also states in his description of Tegelen that the Roman road from Colonia Traiana to Coriovallum passes through Tegelen, without specifying its exact course. A closer and very careful examination of the road will be necessary before its course can be accurately determined, but I will share my suspicion. I believe the road from the Paesmühle ran along "the Nachtigal" to the Noorder-Kanaal, as Schneider describes it up to that point; this road is listed by Buyx as the old road from Straelen to Venlo (on old maps it's called Postweg, until past the road to Kaldenkirchen) and follows the hillside in a straight line to Lusseike. I think the main road took this direction, running past Lusseike and a few hundred paces past the Zeven Brons to the small exercise grounds, along the Kaldenkirchen road. It crossed this ground diagonally and descended the hills as a sunken lane, passing the Ondersten watermill, from the Jammerdaal into the Maas valley, and continuing past Tegelen, possibly through the Mergelstraat, past Belfeld, Reuver, etc., along the Maas bank. It's possible that more will later be known about this road from the papers left by Mr. Guillon in Roermond, but as long as the Dutch government hasn't purchased his collection of antiquities found on Dutch soil, along with these writings, there's no chance of that happening.

Mr. Ort believes that the "Sablones" station is located near Ons Zand. "Jammerdaal" is a modern name, which according to the locals, it originated when a worker was buried alive while building a well that collapsed, and he was heard groaning and moaning without being able to offer help. Ort doesn't think it's unlikely that this heath also used to belong to the Zand. If we now return across the road crossing to Tegelschenweg, you'll be able to see some of the farmsteads just mentioned. "Hey, host, turn around! What kind of building is that up there on the hill? We didn't notice it before." — My good friend, please forgive me, but one fool can ask more questions than ten wise men can answer. They call it "Casino." Ahead of us, in a somewhat straight line, as seen from the road crossing, lies Wylrehof; There, further south towards Tegelen, was the Hulsforthof, and further inland, "den Rooden Haan," which was set on fire in 1794 during a Dutch sortie when the French were near the city. When the Belgian General Daine approached Venlo at half past three in the afternoon of November 10, 1830, with nearly 1,300 men, in addition to about 30 horsemen of the so-called Maas Cossacks and a multitude of people armed in various ways, a halt was ordered at the avenue near Wylrehof. There, the second shot from the fortress killed a surgeon-major's horse. The attackers, who outnumbered the city's garrison by some 800 men, had only 4 field guns, 2 six-pounders, and 2 howitzers for artillery; They settled between the Maas and the house "Den Roskam," better known as Stevenshuisje, whose entrance used to be on the opposite side; the old road ran behind the house. On our way back to the city, gentlemen, I can tell you something about the large Roman road on the other side of the Maas, which ran from Tongeren to Nijmegen, as described by Mr. Ort: According to Habets, it leaves the church in Buggenum on the right, goes to the hamlet of Groot-Hansum near Neer, first along the bank there, and on to Kesseleik, through Kessel, which is very rich in Roman antiquities, to the hamlet of Ooien, which he leaves on the left, through Baarlo, past Berkt Castle and Laarbroek to the watermill. Habets reports that Guillon found the path in Kesseleik near the Noldissenhof, running past the chapel at that farmstead and continuing towards Kessel along the banks of the Maas.

Between Baarlo and Blerick, it is recognizable by the gravel and a side wall. At Blerik or near that village, the third Roman station of Blariacum was located at a distance of 12 leagues from Catualium. Leaving Blerik, the path veers slightly away from the Maas and heads towards the chapel of St. Anna, in a straight line past Oud-

Soest and Gebroken Slot to Grubbenvorst, leaving the church there on the right. Its course is indicated in the field "het Reuveld" by the corn, which quickly turns yellow due to the hard subsoil, especially during dry summers. It passes Marianne's farmstead, which used to be an inn where the Nijmegen post stopped, and continues through Lottum, Broekhuizen, Broekhuizenvorst, Ooien, Blitterswijk, and Wansum to Geisteren...

Locations of Roman antiquities, writes Mr. Ort, are in Buggenum, where a cemetery lies next to the highway, yielding primarily Frankish artifacts; in Neer, where Germanic urns, and at a place called "the Roman camp," Roman coins from Augustus and Nerva, Roman pottery, and a bronze mirror were found; in Kesseleik, west of the road near the Kappersberg, lies the Hunekesbosch, the place itself called "Oude Kamp"

(Old Camp); here, next to a high old rampart, Deserière discovered a Roman cemetery, of which I have pottery; A very large stone axe, found here, is now in the Museum of Antiquities in Leiden (in 1884 this forest was cleared and the ground dug up; according to reports, a great deal of Roman pottery and urns were found there); in Kessel, from where the Guillon collection contains medals of Constantinus Magnus,

Constantinus II, Valentinian I, and Theodosius; and in the Museum in Leiden, a Roman altar stone dedicated to Minerva, Juno, and Hercules. Between Kessel and Baarlo, west of the road, near the inn "De Nachtegaal," I found a Roman cemetery full of shards of Roman pottery. On one side of the cemetery runs a road parallel to the road, on the other side a road to Roggel called "de Keizersweg" (the Keizersweg); the cemetery lies at the sharp angle they form. Mr. Verhaeg from Baarlo told me that he had heard from his father that during the construction of the road, this area was excavated and yielded so much pottery that the road was covered with shards. Between this and the previous burial ground, near Kappersberg, lies another cemetery, from which Colonel Rudolph from Venlo possessed some objects: a Roman

I donated a pot from there to Dr. W. Pleyte for the Rijksmuseum. This cemetery, which Mr. Rudolph only gave us a general overview of, also lies west of the road, near the Pandu house, but I have not explored it. Between these three Roman cemeteries, west of the road, there is hardly a piece of land without Roman potsherds. The acknowledged fact that the Romans buried their dead very close to public roads, combined with the fact that Kessel must certainly have been a prominent place during Roman rule and was probably the Castellum Menapiorum, which is not mentioned on the Peutinger map, leads me to suspect that this place was not on the main route, but on the riverbank road, which had connecting roads with the highway at this point and which riverbank road is now considered the highway.

.
In Baarlo, a hoard of gold and silver Roman coins was found near the church in 1830, and in Blerik, a Roman knife handle, as well as many Germanic urns, was discovered in three different cemeteries. During my last visit to this village, in December 1883, I was told that during the demolition of a house near the Town Hall, a cellar built entirely of sandstone was uncovered. The village secretary then informed me that a similar cellar had been uncovered during the excavation for the Town Hall's foundations, containing a now-vaulted well. Nothing more could be traced of this. Furthermore, I found Roman potsherds between the watermill and the village; in a dry spot in the marsh "het Meir" near guardhouse no. 8, where a hill once stood, I also found Roman potsherds and pieces of tuff. This location is located an hour northwest of the village. From the road to Horst, north of Blerick, just past milestone no. 1, a road heads north through the lowlands east of St. Anne's Chapel. In most places, the road has two side ramparts with ditches and ends at a small, high sandy plain. This point is called "den Scherpenberg" (the Scherpenberg), and apparently, due to remaining sections, a large hill once stood here. In the sand there, I found a fragment of a Roman roof tile, a piece of terra sigillata, and other Roman pottery shards.

A Roman shield was found at Holt-Blerick on the Sprinkbeek or Molenbeek stream; however, this site is more than 2 kilometers from where the main road is still located. Between the aforementioned watermill and the village lies a section of that old riverbank road with two side ramparts, which, at a distance of 20 meters, were found to be about 20 meters apart. Between Blerick and Grubbenvorst the road runs past the Germanic cemetery "de Wienkelder", described by me in P. L. XIX. I made my suspicion known there and then that the main road would not have run via Grubbenvorst and Lottum, without denying the existence of a Roman bank road in that direction; on the Rhine, one often sees a road following the bank, but also that wherever that bank road does not run over very high ground or makes a large detour, a second road was constructed alongside it, which is considerably shorter, as it

- 140520 runs in straight lines and does not have to navigate the bends of the river. I believe that in several places, as I have already noted near Kessel, a second road was constructed alongside this main road, and that this was also the case between Blerick and Geisteren. I believe the main road can be traced back to the old postal road to Nijmegen, running from the Blerick-Horst road, at milestone No. 4, past the farmstead "bij Marianne" across the Thienraaier- and Zwolgenerheide to Tienraai; further on to Meerlo and Geisteren. The first cemetery along this road, called "De groote Tomben" (The Great Tombs), is "bij Marianne" and lies slightly north of the house, right next to the postal road and not on the road along Kaldenbroek, which Habets identifies as the main road. I have explored this burial ground several times and have found only Germanic urns, which are now in the National Museum of Antiquities in Leiden.
- 140530 The second is located on the Thienraaier- and Zwolgenerheide, is extensive, and is dotted with large, well-preserved burial mounds. I acquired Germanic urns from this cemetery through excavations conducted there by Deserière; a medal of Trajan is noted in Guillon's catalogue as originating from Zwolgen.
- 140535 Deserière discovered a third cemetery on the Wansummerheide, west of Wansum and Meerlo; he gave me two urns from this location as a gift, one richly decorated, the other made of very fine red clay. The latter contained metal fragments, probably from a fibula.
- 140540 A site containing fragments of Roman pottery is located at milestone no. 4, at the beginning of the road on the north side from Bleri[c]k to Horst. On the riverbank road, the only site for objects from that period is Lottum, where a denarius of Claudius I and a bronze coin of Valentinian I were found. At the site on the Maas where the old church once stood, remains of a Roman building and a tombstone have been discovered, of which only "IANILM" remains, which ended up in Guillon's collection.
- 140545 Schneider reports that a Roman castle once stood in Lottum, which, after being destroyed, was rebuilt by Julian. This site is also not mentioned on the Peutinger map, probably again because it was not on the main road, but on the riverbank road. Finally, Mr. H., I would like to share with you what a well-known archaeologist recently told me: "I believe Limburg had three Roman main roads, one from Maastricht to Jülich or Julich, which bisects the province at its widest point. From this road, along the left bank of the Maas, ran the road from Maastricht to Nijmegen; and on the right bank, the road from Coriovallum via Tudderren to Xanten. – Undoubtedly, both roads, which bisected Limburg at its longest, were connected by some side roads, or rather connecting roads. But I believe that some of the roads labeled as Roman date from the period of the Frankish emperors."
- 140555 And now, Mr. H., we are back home from our walk, without having tired ourselves too much. If my talking has perhaps required too much effort from you, please don't blame me so much. Too attached to my native soil, I couldn't control myself. I thank you for your patience with me.
- 140560 H.
- 140565 "Errare humanum est," dear reader! The following comments were made to me regarding the first part of the previous issue, which I would like to "rescue from oblivion."
1. The name Helpoort has nothing to do with "sloping, descending"—that phrase was slipped in at an unguarded moment—but it comes from St. Helenapoort, just as the Cologne gate was formerly called Laur- or Laarpoort, because, as even older people can remember, a St. Lawrence stood above it. See Keuller, Geschiedenis van Venlo, p. 345.
2. Northwest of Voorst Koekerslo, bordering the hamlet of Den Boekend, and west of Veldenkamp, where it is believed the old Blariacum was located, running along the stream and close to the spot where the beautiful shield with the head of Medusa was found a few years ago, ramparts are also visible, which are not mentioned in ritm. Ort's work.
3. I mistakenly placed a bullet as a keystone on the facade of the "Spiker." The bullet lies on the house of De Kaat, between Hendrikken and De Veegtes, which anyone interested can see at any time.
- 140570 H.
- 140580 Submitted.
Mr. Editor!
- In the essay "A Walk around Venlo," published in your widely read Weekblad of April 11th, several points appear taken from ritm. Ort, which I cannot ignore in silence.
- 140585 Ritm. Ort says, among other things, that a road from the Bovensten Houtmolen runs

south, which he believes to be of a later date, and that there are burial mounds on the road in which he has allegedly found Germanic urns. - His Honor is mistaken, because there are only two burial mounds on this road; one of these mounds was examined by Mr. Fr. Deserière and contained a broken urn, the fragments of which were scattered across the heath; the other mound was examined by me and contained a completely intact and very beautiful urn, which is still in my possession. It is mentioned regarding the Roman pottery on the Jammerdaal heath, or rather on the table hill, opposite the water, called "Rosdommel," in the immediate vicinity of the Tegel potholes, which I was fortunate enough to discover in 1879, that it was of an elongated triangular shape. This is incorrect; it had a perfectly square shape, as it measured 1.90 meters (6 Rhine feet) long and just as wide. Rhythm Ort further states that a few weeks after the discovery, he visited the site with Dr. W. Pleyte, who accompanied him. After a careful examination of the mountainside, they found the exit leading from the house to the foot of the hills where the potting soil had to be collected. This is impossible, because immediately after excavating the pottery, I made a detailed drawing of the site, showing the kiln, house, and exit leading to the place where the potting soil had been collected. I showed this drawing to the two aforementioned gentlemen before they visited the site, to which I also accompanied them. It is further stated: A few minutes' walk northeast of this site, I had previously found a Germanic cemetery with large and well-preserved burial mounds; urns with and without lids were excavated there by me and Fr. Deserière and are now in the Museum of Antiquities in Leiden. - This aforementioned road, running south, belongs to this Germanic burial ground and bears the name of Siberia. Messrs. Ort and Deserière did indeed examine some of these burial mounds, but found nothing except a few broken urns, the fragments of which remain scattered across the heath to this day. Ritm. Ort himself testified to this in a letter dated February 17, 1880, in which he wrote: "Dear Michels, I was very pleased to receive a letter from you, especially since I learned that you were successful in your excavations. - There seems to be much still in the ground in that area of the watermills; it's a pity I'm no longer here to jointly dedicate our efforts to that work, especially since I still don't own anything from the Jammerdaal." - After that time, no further excavations were carried out here, and therefore no urns from this burial ground can be found in Leiden. Considering that I have sufficiently demonstrated the sincere truth, I have the honor to be
Your Servant
HUBERT MICHELS
Venlo,
Ondersten Houtmolen, April 16, 1885

To Mr. H., author of "A Walk Around Venlo".
I read your aforementioned treatise with great pleasure in issues 14 and 15 of the Venloosch Weekblad, which the editors were kind enough to send me. Your interest in the ancient history of the region in which Venlo is located has become apparent to me, and therefore some information and further reflections on the matters you have addressed may be welcome. In my "Old Roads and Land Weirs in Limburg and Adjacent Regions," I wrote on page 128, I reported that Prof. Dr. J. Sohneider in Düsseldorf considers it probable that the Venlo-Gennep-Groesbeek and Hollendoorn road is of Roman origin, and that I have discovered a Germanic burial ground south of this Ossenberg; this was probably the burial place of the first inhabitants of the village of Velden. Are you familiar with the legend of the Ketelberg? If not, I will share it with you. About ten years ago, an enormous stone lay on the hill, the top of which was more than a meter deep in the ground. Farmers from the surrounding area told me that it was generally believed that a treasure was hidden beneath this stone, and because it was immovable due to its weight, they had dug it under, but without finding anything, but the stone had sunk increasingly deeper. Was this stone a boundary marker or did it belong to a grave? These are questions that are probably no longer resolvable. I know some details about the place name "Lusseike." In earlier centuries, trees, and especially oaks, were used as boundary markers because of their longevity; signs or names were carved into the bark, and in the Middle Ages, family crests. In a large part of Germany, these trees are called Loch Loich, Lâh, or Lachbäume; however, in the regions where the Franks lived, they are called Lus, Laus, Luis, and Leweseiken. In a copy of the old Weisthums of the Kempener Mark, taken in 1650, this name

appears: "Fort van den aldene Dieck op Lewes Eicke, vort van Lewis Eick op die durre Eick" (Ford of the old Dieck on Lewes Eicke, Fort van Lewis Eick op die durre Eick); these are the trees that the "lex salica" calls "arbor signata."

140655 Since Louis the Pious (814-840), more than any of his predecessors, ensured the maintenance and regularity of the boundaries of the national forests, etc., it is obvious that the place name Lus, in connection with oak, heath, or mountain, is associated with Louis, while on the Lower Rhine it is written as Luis, and in England, Lewis.

140660 The Lusseike near Venlo also appears in 1360 as a point from where the boundary line of Stralen's jurisdiction ran in a straight line to Leuthermühle; the point where that line intersects the Roman road Venlo-Hinsbeckerbruch was then called "Cruitshoum." This point must have been near the Herongen-Leuth road, between the latter village and the Venlo-Hinsbeck road. I do not know whether the name is still known there. It is noteworthy that places with names containing "Lus"—Luv—or "Lewes"—are almost always sites of Roman antiquities; this is also the case with our Lusseike.

140670 On page 68 of "Oudewegen enz.," I mentioned that I discovered shards of Roman tiles and other Roman pottery there. Since then, two bronze Roman coins have been found there: one by Augustus with an altar and "Provident" on the reverse, minted under Tiberius, and one by Domitian, minted in 95 or 96 during his 17th consulate. Among the aforementioned rubble, I also found shards of Germanic urns and a large iron nail and ring. I'm not aware of any other such place name near Venlo, except in Holt-Blerick, where a plot of land between the village and the road to Maasbree is called Op de Luis, and the road next to it is called Luisweg. I also encountered such a name in Kaldenkirchen as a group of houses, located west of the town, on the road to Tegelen, is called im Luys.

140675 A few weeks ago, when I was standing by the sunken road "de Voerdijk," where the landwehr of the Jammerdaal heath ends and near which the square pottery (triangular is a misprint in my book, which I believe I brought to your attention by postcard before printing in the Weekblad) is found, I saw that a gently sloping exit leads into the sunken road, and that its extension runs first across the bare heath and then further as an almost straight road along the Oelishof to the houses "im Luys" and Bracht. Presumably, this road has some significance, as it provides a short connection between the Jammerdaal heath (Sablonnes) and the Roman road Venlo-Juliacum, heading south. In my book, I failed to mention that between 1875 and 1878 I excavated Germanic urns on the heathland immediately adjacent to the pottery, and that in those same years and also in 1881, I unearthed the urns from the burial ground south of the upper watermill. (In the latter year, two urns and a lid were found.) Five burial mounds are clearly visible in the road that runs through this cemetery. Although partially leveled by time and sod-cutting, they are still quite visible even to a less trained eye.

140680 I have deliberately conducted my visits to the Jammerdaal heathland in recent years as secretly as possible, for the following reason. One Sunday morning, I visited the foundations of the Roman building near the Oelishof, which I had known about for about nine years. Lo and behold, a few days after returning home to Breda, I read in the newspapers that... foundations of a Roman building had been discovered near Venlo.

140695 Now that I'm discussing the Jammerdaal heath with you, I would like to briefly refute the points discussed by Mr. Michels in issue 16 of the Weekblad. I do this exceptionally and otherwise take no notice of such writings, whose purpose is other than to promote the interests of science.

140700 Regarding point 1, there are five, not two, burial mounds in the road south of the upper watermill. Moreover, M. contradicts himself in this regard.

140705 Point 2: I already mentioned the triangular or square bakery. Point 3. Mr. Dr. W. Pleyte and I investigated the bakery before we arrived at M.'s, and we went there again with him afterward. He hadn't seen the exit, nor had he concluded from the pile of roof tiles he found that there had been a house there; Mr. M.'s memory sometimes fails him, as is more evident in the last and fourth points. Mr. M. quotes a phrase from a letter of mine, written in 1880, which reads: "... especially because I don't own anything from the Jammerdaal valley yet." This phrase must refer to the valley itself, as I remember that M. once wrote to me that he had found a small cellar in the valley; or rather, I meant that I no longer owned anything from the Jammerdaal heath at the time, as the urns were in the Museum. —

Naspeuringen van Paul Theelen: Constantinus Imperator

Mr. M. visited my home in December 1877, a few days before my departure for Deventer. I showed him urns from various burial grounds, including those from the Jammerdaal heath. These objects inspired him to go there to search. On that occasion, I gave him an urn from the Romer in Blerick.

M. seems to have forgotten this, but enough about that. I'd rather share with you some details about the surrounding heath.

Near the east side of the sunken road, which runs southeast behind the lower mill to the heath, lies a very large natural stone in the coppice, not far from the pond. It has now sunk quite deeply into the ground. Upon examination, it turned out that this stone rested on smaller stones; whether it served any purpose, as with the one from the Ketelberg, is difficult to determine. Immediately behind that same watermill, a great deal of medieval pottery has been unearthed by the miller's son, Mr. Michels.

As you know, south of the landwehr, in the Jammerdaal heath, lies the Oelis or Potheide heath. I discovered that this heath is separated on the south side by a second landwehr from the arable land situated near the Tegelen-Kaldenkirchen road. This landwehr runs approximately west to east, from boundary marker no. 450 along the border, to close to the Zollhaus am Schwan, always approaching the first landwehr that joins the road at the Rosenhaus. Whether these two landwehrs had extensions towards Leuth, and whether the ramparts at the "Brand" farmstead are connected to them, I dare not yet determine. Opposite Wambach, the second landwehr consists, in a small section, of two ramparts.

n, which enclose an elongated area, which, according to Dr. Boetskes, is called "the beugelbaan" (the ring road). This name struck me, as last summer I investigated a Roman road in the Kondelwald, near Alf aan den Moesel, which bears the name "Kegelbahn."

And now, finally, a few words about the information you mentioned from a well-known archaeologist, who believes that many roads considered Roman are of Frankish origin. Limburg must have been at least as populated in the first centuries AD as it is today, as is evident from the large number of pagan burial sites already known; and how many have escaped the attention of those who take an interest in such matters and publicize them when something is discovered? Such a population needed many roads for mutual communication, while the castles on the Maas were certainly connected to those on the Rhine by roads, since the Romans designed and constructed the entire network of highways with a military purpose.

I have described in detail in my book how the Romans built roads; they did not, of course, pay the same attention to local or vicinal roads as they did to major highways, but for identifying such roads, the discovery of antiquities, especially of cemeteries, is of the utmost value, as it is known that they buried their dead immediately adjacent to the roads.

The roads I have described all bear the hallmarks of Roman roads or pass by more than one cemeteries.

Did the Franks also have a road structure that makes their roads distinguishable from others? I very much doubt this, and others agree with me, e.g. Mr. Peigné-Delacourt, who stated at a meeting of the Archaeological Institute in Rome on April 20, 1863, that research showed three types of ancient roads in Belgica Secunda. The first type was Roman, the second Gallic, and the third Merovingian. According to him, the latter established connections between princely possessions. They were generally 20 meters wide and mostly without any architectural foundation, as a result of which they will soon be impossible to trace.

It is well known that the Franks restored Roman roads that had fallen into disrepair, and as an example, I must refer you to pages 59 and 60 of my book, where the Karstrasse or Karlstrasse in Lobberich and Hinsbeck is described.

If the name of a road does not establish its Frankish origin, then one can only assume that it belongs to that period; Even finding Frankish antiquities doesn't guarantee certainty, as the Franks settled almost everywhere in ancient Roman settlements.

If the editors of the Venloosch Weekblad would like to publish this letter, I would be very pleased, as this increases the likelihood that people who have found something and read about the great interest some people have in ancient objects will share it.

Sincerely,
BREDÁ, ORT.

May 6, 1885. Rhythm. K.M. Academy.

Biography of Johannes Apollonius Ort.

"Look, there's a piece of Roman road."

"How do you know that?"

An explanation followed. About 25 years ago, I met Captain Ort, an antiquarian, during a horseback riding tour we took in the vicinity of Breda, where we both worked as teachers—he also as head of education for the cavalry—at the Royal Military Academy.

Some time later, he offered me the opportunity to view his treasures—his urns, his tableware, his coins—in his home.

Now, as a result of that closer acquaintance, which continued in later years, and primarily at the urging of his widow, I venture to comply with the honorable request of our Society's board to write an obituary of the deceased Colonel Ort. I must first confess that, as a non-expert, I am unable to place his merits as an antiquarian in the true light of his work. I will therefore confine myself to the information and communications provided to me primarily by his widow, and to a few notes concerning the writings he published.

Johannes Apollonius Ort was born in Woudrichem on May 2, 1842, the eldest son of the rather large family of Dr. W.F. Ort and Miss S.G. Hanegraaff. He received his early education there at a regular primary school until the age of 12, and continued his education at the then well-known boarding school of Mr. Kattenbusch in Gorinchem, and subsequently at the Royal Military Academy in Breda. On June 22, 1861, he was born on the 19th of June.

At the age of 18, he was appointed 2nd Lieutenant in the 5th Dragoon Regiment. His clear intellect, his gift for communication, his unusually cheerful disposition, his independent yet compliant nature, and his good military qualities—although he could, in his time, express his disapproval of existing conditions or measures taken quite vociferously—quickly made him stand out to his superiors as an officer who could and should be considered for special duties. Thus, from 1870 to 1872, he was an instructor in military subjects at the cavalry's main course in Haarlem; from 1874 to 1877, the last year he was appointed captain, he held the position of 1st Lieutenant-Adjutant in the 2nd Hussar Regiment; in 1879, as captain-instructor, he was charged with training the horses and educating the recruits in his regiment. From 1880 to 1887, he was head of instruction in cavalry subjects and horsemanship at the Royal Military Academy.

As a senior officer, he was later regularly appointed to serve on the commission for the cadet officer examination; and when his turn came for a regimental command, and the then instructor at the riding school, considered particularly qualified, wanted to retain him as a colonel in that position, the board of directors showed him their appreciation for his merits by appointing him to colonel, above the rank (on a lieutenant colonel's salary), a distinction never again bestowed upon him. After four years in command of the 1st Hussars in Deventer, he retired in April 1899. Even in his childhood, he had demonstrated his inquisitive spirit through avid reading and collecting antiques. The curriculum at the Academy at the time was not very well-suited to keeping that spirit alive; and the young, cheerful cavalry officer, having broken free, along with so many others, from the oppressive bonds with which the outdated educational system in Breda held the cadets in check, initially found too much enjoyment in the free social life, among jovial comrades, to consider devoting himself to study immediately. To be, in every respect, the carefree—if necessary, daring—cavalryman—his illusions in those years went no further.

In 1870, when he became a lecturer at the Haarlem academy, however, he had to dig out the books, and in 1874, once again stationed in Venlo, a military assignment, as it were, naturally pointed him in the direction in which he would further develop his academic skills. In all garrisons, the officers had to produce maps of the garrison town and its surroundings at a scale of 1/8000. Ort was to do this in Venlo. Upon completing this task, his dormant spirit of inquiry revived. The terrain, already so familiar to him from his horseback rides, now had to be examined even more closely. Inquiries had to be made with the inhabitants of the countryside and heathland; information was given to him about hills and old ramparts, which had already attracted his attention by their regular layout; finds were shown to him: old bronze objects, old vessels or shards thereof, urns, and coins; old burial places were pointed out to him... His mind had

discovered what—besides his military duties—would occupy and fascinate him for the rest of his life. The map was drawn, but the terrain remained his field of exploration. Wherever he went later—and cavalry officers frequently changed garrisons—the area was crisscrossed, surveyed with a searching eye, excavations were conducted, and meticulous records were kept of everything he found and learned about archaeology.

At the beginning of his investigations in Venlo, he met Frans Deserière, a foreman of the Venlo-Boxtel railway, who seemed to know him so well that he suggested they conduct joint investigations from then on. The extent of this simple worker's assistance is best illustrated by the statement in one of his writings that Dr. W. Pleyte, the well-known curator (later director) of the National Museum of Antiquities in Leiden, stated in a report to his director about Deserière: "One of the subordinates, a foreman on the Venlo-Boxteler road, is one of the most advanced individuals in the field of archaeological research in this region. He devotes all his spare time to the investigation of various antiquities and is very skilled and meticulous in excavating urns and other objects. It would be desirable if this person, F.D., could be retained for such purposes for the benefit of Limburg's ancient history."

With this "expert," Ort successively investigated the villages of Blerick, Grubbenvorst, Lottum, Tienraay, Meerloo, Baerlo, Kessel, and several others, as well as the Jammerdaal heathland near Venlo, achieving positive results.

After his marriage to Helena Catharina Grobbee in October 1876, Grobbee was often his faithful companion in his explorations. Fully sympathetic to her husband's amateur studies, she accompanied him on his walks and hikes and was present at his excavations; afterward, she attentively followed and weighed his combinations or conclusions regarding the information obtained and the discoveries made. When Ort was transferred to Deventer as a captain in 1877, he had already amassed a considerable collection of urns, jugs, coins, etc., in Limburg, in addition to the many with which he had enriched the museum in Leiden.

In 1879, he took up garrison duties in Leiden. "There, I soon enjoyed the friendship of Dr. C. Leemans, director of the National Museum of Antiquities, and Dr. W. Pleyte, curator. They most courteously provided me with the information I requested and also pointed the way to a more scientific direction for the research we continued. A large number of publications, including the Bonner Jahrbücher and the Publications du Limbourg, which I received for reading, clarified many things I had noticed but not thoroughly understood." I took notes during this study whenever it concerned locations in Limburg or near the Dutch borders, and drew a map at 1/50,000 of the region between Nijmegen, Birten, Aachen, and Tongres, on which I placed the Roman roads and a colored marker at each site to indicate the period to which the found objects belonged. This, however, was solely for my own use... it prompted me to prepare the notes and the map for the press. Dr. Leemans and Dr. Pleyte, through their help, have considerably lightened my workload, and I hereby openly express my sincere gratitude to both gentlemen.

He had opened up a new field of work. The investigations along the fields and roads would be processed in the quiet study or the living room. While Ort was working on this, his main work, his first publication appeared in 1882: "Places in the municipality of Blerick (Limburg), where prehistoric, Germanic, and Roman objects have been found." In the "Publications de la Société d'archéologie dans le duché de Limbourg," Volume XVIII, the learned Limburg state archivist Jos. Habets had described the Roman road from Tongeren to Nijmegen along the left bank of the Maas and the sites of Roman, Germanic, and Frankish antiquities near that road. Among other things, it was mentioned that excavations had taken place at the Römerheide in Blerick at the time, with the aim of searching for hidden treasures in that municipality, and that even officers from Venlo had participated.

Hardly had he read this when Ort took up his pen. He knew all about it: "I consider myself called, but also qualified, to provide some more precise information about one thing or another, but primarily about this fact." And amidst the descriptions of the various finds and locations, he recounts how in 1874 he found several people digging in various places on the heath, who told him they were searching for a treasure, supposedly hidden in a beautiful, red earthenware jar with a lid; they had heard about this from a pastor.

"There" (in connection with other circumstances)—he writes—"a light came on for me; the pastor of Ittervoort, who had searched in vain for the Roman settlement at Blerick, now hoped, without cost or effort, to find that settlement by having the farmers search for him; he had therefore given them the description of a Roman jar made of terra sigillata. I brought this to the attention of these people, who

immediately stopped searching." He concludes the booklet with the words: "I have hereby provided the further information I promised, and have cleared the Venlo garrison, as well as that good foreman Frans Deserière, of the blame heaped upon them."

Two years later, in 1884, his aforementioned work, "Old Roads and Land Defences in Limburg and Adjacent Regions," appeared. This work can be considered somewhat of a supplement to Pleyte's "Dutch Antiquities from the Earliest Times to Charlemagne," which does not address Limburg and Brabant. This work describes the Roman and other ancient roads located north of the Rhine, between the Lippe River and the Dutch borders, between the Rhine and the Maas Rivers, and on the left bank of the Maas River, as well as the land defenses in those regions. The scholarly approach is particularly evident in the preceding thirty-odd pages of notes concerning: Roman roads in general; the distribution of roads to their destination; road construction; road direction; road tracing; road measurements in the Roman Empire; Peutinger's map and Antoninus' travel book; the course of the lower Rhine and the Waal in Roman times; canals and dikes. And it certainly benefits the work that a skilled military man chose this subject for discussion. Even more than the major highways, also built in our country on Napoleon's orders, the Roman roads are primarily military roads; and thus, the details, for example, of direction and construction, would likely have been more accurately appreciated by a military-trained eye than by a less expert. Be that as it may, the work was released to the world with the following highly favorable preface by Leemans and Pleyte: "A book like this needs no recommendation. Diligently and judiciously compiled from widely scattered data, supplemented by our own research, the work is a primary source for anyone who wishes to continue this research and is interested in the history of their country. It is an introduction to the study of antiquity for the entire Netherlands, a perspective not yet explored."

"May it receive the interest it deserves and that will make it possible for the second volume, with the proposed archaeological map, to be published."

How many in the Netherlands will buy a work on Roman roads in Limburg? The answer to that question will likely also explain why the wish expressed in the last section of this preface could not be fulfilled. Ort had envisioned following this first work with a second, "consisting of an alphabetical glossary of sites with a more or less precise description of the find and of the site itself," and later with an archaeological map, produced at 1/50,000, as mentioned above. These were never published.

This must have disappointed him, but the Maatschappij der Nederlandsche Letterkunde (Society of Dutch Literature) offered him membership shortly thereafter (1886), which must have been proof to him that his work had attracted more attention than the publisher believed.

The previous year, he had contributed a piece to the work presented to Dr. Leemans, as an antiquarian, on his 50th anniversary, entitled: "Der Römerort Sablones," which, according to him, should be located on the Jammerdaal heath. In the early nineties, we find Major Ort in 's-Hertogenbosch. There, too, he would leave the mark of his tireless work, his ever-expanding research into everything related to the history of the ancient Netherlands. In the winter of 1891/92, he organized and cataloged the collection of antiquities in the museum of the Provincial Society of Arts and Sciences, for which the board of this society presented him with a certificate with a silver medal minted in his name in recognition of services rendered. The printed "Proceedings" of this society for the years 1891-93 still preserve a lecture by Ort, delivered at the general meeting of November 10, 1892. He would have liked to "provide a critical review of the region we inhabit, with regard to the various peoples who settled here in ancient times, in connection with the objects found from those times, the land defenses that separated the tribes, and their traffic routes."

"However, it has not been possible for me, as I was only in garrison here for a short time and the hours my professional duties left me free to devote to antiquities were too few, to achieve such a result; but what is not yet, I hope will one day be."

Those last words typify the persevering amateur worker: what we cannot do today, we will do tomorrow. That evening, he confined himself to showing the society's members some antiquities from the museum, describing them in all their details, and investigating, in connection with the sites and local conditions, what conclusions could be drawn from them regarding times longpast.

Wherever he went to garrison, he continued his research, and thus gradually amassed

a wealth of information. One thing led to another. "It is an introduction to the study of antiquity for the whole of the Netherlands," Leemans and Pleyte had said of his "Old Roads and Land Defences in Limburg." He was also compelled to arrive at this study of antiquity naturally; and so, after his retirement in 1899, his "Architectural Notes, Mostly Relating to the Netherlands and its inhabitants" is in print. In five major and minor installments, covering 340 pages:

I. a. The confluence of the Maas and Waal rivers during Julius Caesar's reign.

b. Caesar's campaign against the Usipetes and Tencteri.

II. c. The Marsi and their land.

III. d. Oldenzaal during the Salian Franks.

e. Crhepstini 2.

IV. f. The Germanic god Mars.

V. g. The Roman left-bank roads of the Rhine in the Batavian region.

Anyone who works through these studies will understand how much work and thought underlies them. For what we are presented here is not copyistry. Far from it; the oldest sources are being explored. First, the Greek and Roman writers are consulted, then he investigates what well-known historians have thought they read from these stories, which leave so much to be desired in terms of clarity; and in the chaotic confusion that must have repeatedly presented itself to his mind, light first comes to him from his walks, his astute observations of the terrain to which the described actions or situations pertain. There he lets the roads, the woods, the houses, the cemeteries, the ancient monuments, the stones speak to him, and he understands their language; there he listens with rapt attention to the stories of the still uneducated, superstitious country dwellers, preferably the oldest among them, who tell him of the white women, of the charades, of the werewolves, of the gray foal, of "the Gluinige" from whose eyes, nose, and mouth fire spews, and whom they themselves have seen. All of this is meticulously recorded, carefully considered, connected, and checked against the oldest maps. Only then is a personal opinion developed, often deviating from what experts had previously accepted as truth, or copied from others.

Anyone who works this way has earned the right to be called an antiquarian.

A single example. To determine the place of residence of the Marsi, the work begins with a report on what Strabo and Tacitus have handed down to us about this people, "whom we know, under that name, only through the description of the campaigns of Germanicus in the years 14, 15, and 16 AD." This is followed by the opinion of some thirty German and Dutch historians, whose accounts of this place of residence vary between Texel and Holstein, between Friesland and the Lahn.

Given that "the invasion of Germanicus in the autumn of 14 AD..." teaches us that the Marsi must have lived in such a region that the Bructeri, Tubantes, and Usipetes had the opportunity to gather quickly between the Rhine and the Roman army, which retreated from the Marsi region to that river," it is then deemed necessary to first conduct an investigation into the habitats of these three tribes, "in which the years in which this story took place should not be overlooked."

And when the conclusion is drawn: "the only region where—according to my view—the Marsi could have lived and which meets all the requirements that can be established by Tacitus' historical account is the province of Overijssel"—then it is still "necessary, in order to make this as clear as possible, to examine not only this country itself, but also that between its southern borders and the Rhine, from an archaeological perspective." Thus, the land defenses and old roads in those regions are retraced on the map and in the terrain, after which Germanicus's journey in the year 14 can be followed without difficulty. As a further indication, the following is given: "From all the above, it appears that the area of the Marsen must have been located north of the Hallerlandweer (municipality of Zelhem), and indeed at about a day's march's distance from it."

However, our researcher is not yet satisfied with this. At the beginning of his study, the supposition is made that the name Marsen could have been derived from the land they inhabited: from the marsen, low-lying places or hollows on the heaths, filled with water and surrounded by a narrow strip of grass, or from marschgrond, low-lying, marshy and fertile land, often called mersch in the Middle Ages; While Tacitus's account mentions that the highly venerated sanctuary of Tanfanae (in Marsland) was razed to the ground. He therefore believes that the soil name "Mars" and an old tradition concerning the site of the temple of Tanfanae can provide further clues regarding the boundaries of the then-Marsland, and therefore lists all the places in Overijssel and Drenthe where the word "mars" appears, which is

frequently the case there, in order to determine the approximate extent of the ancient Marsland.

He cannot yet say with certainty where the temple (of) Tanfanae once stood. A legend places it on Tankenberg near Oldenzaal, certainly the oldest town in the Marsen and Tubantenland. He will discuss this in a subsequent note.

The following note: "Oldenzaal during the Salian Franks and the old courthouses, names of farms and traditions in the Marken Berghuisen and de Lutte" (published 1901), is the most extensive (200 pages) and, in the various walks along roads and neighborhoods outside Oldenzaal, provides, especially for a layperson, a good idea of how an antiquarian can draw his conclusions from everything he encounters on his way, from the simple names of farms.

Here too, a few examples.

"Three kilometers south of Oldenzaal"—as we read on p. 153 - "The highway to Enschede is intersected by a stream that rises approximately east of the Ulenkotte farm in the "elfter lescap" of the Lutte common."

.... (p. 156) "The Ulenkotte is associated with the night owl. This bird possesses prophetic powers; its plaintive call signals the approach of death; it is a bird of misfortune, and in the wild hunt led by Wodan or Holda, two owls sometimes fly at the forefront."

.... (p. 157) "From this circumstance, I deduced that there must be a burial ground near the Ulenkotte." I actually found burial mounds a few hundred meters behind the Kotte, behind the nearby Christmas House...'

As promised, in this note, the author returns to the expression used by Tacitus: 'templum quod Tanfanae vocabant', and provides a detailed explanation of why he does not, like Van der Aa and Weeling, Grimm, and Van den Bergh, believe in a goddess Tanfanae, but believes that Tacitus should have written 'Tancfanae,' which would have meant 'sacred place of judgment'; that furthermore, the dolmens on Tancenberg (near Oldenzaal) together formed the templum Tancfanae, and that these dolmens were razed to the ground by the Romans in the year 14. In the following study, "The Germanic God Mars," he is identified as the deity who represented law in the Templum Tancfanae and also as the progenitor and legislator of the Marsi, which means that any derivation of this folk name from marsch- or marsland must be discarded.

In the fifth or final volume of notes (published in 1904), pending further action by private individuals or the government, a preliminary investigation is conducted into the Roman left-bank roads in Batavian land. Regarding this, we read the complaint at the beginning: "There has never been a regular investigation into the Roman roads in the Netherlands; I even doubt whether any attempt has been made to follow the trail found of them at Kesteren. In Germany, both the public and the government are more interested in such matters, as I have often personally witnessed."

Ort has done his part to fill this gap. Before the publication of this last volume, he had felt he should weigh in on an old controversial issue. On January 22, 1903, my learned friend Prof. Blok had given a lecture at the first meeting of the "Oud-Leiden" Association on the ancient history of the University City, and among other things, had announced as the outcome of his research that the city had no right to call itself Lugdunum.

Ort had also been garrisoned in Leiden, and naturally—one might say—he had included this point of contention in the scope of his research. That March, his "Lugdunum" appeared in print, in which, after a 20-page argument, he concluded:

1. According to the road measurements provided by Roman geographers, a place called Lugdunum formerly existed within the present-day city of Leiden.
2. This place name means courthouse on a dune. 3. This courthouse, located on and near the Pieterskerkhof, was still used by the count's court in the Middle Ages. Its local organization and the place names there and around it undoubtedly point back to the old Germanic situation.

Oud-Leiden can therefore be peaceful. It was and remains the home of Lugduno. An interesting struggle between the professional historian and the amateur antiquarian!

In the first yearbook of Oud-Leiden (1904), Prof. Blok, as promised, elaborated on his notes in a piece entitled "Lugdunum Batavorum," in which he maintained his opinion, expressed in the earlier lecture, against Ort's view. This was followed by an excerpt from Ort's brochure "Lugdunum" as a second piece. The reasons given by

the latter - mainly derived from the local location according to the Peutinger table and the travel book of Antoninus, as well as from the meaning of the word Lugdunum - were weighed in the first part and found wanting; attention was drawn to (alleged) errors; and finally—albeit with a somewhat overly strong conviction of being right—"after this digression on the assertions and assumptions in Mr. Ort's brochure, I took leave of it with gratitude for the good intentions."

But Ort was not the man to let himself or his brochure be taken away in this way. If he had dared to challenge a professor of history, it was because he was firmly convinced that his opinion was the correct one, and after having first considered the matter from all sides. In the *Nederlandsche Spectator* 1904 Nos. 10 and 16, he therefore provided evidence that his armor was stronger than his opponent had thought, and that it was not so easy to find its weak points. In this refutation, Ort's solid knowledge, his originality, and even his personality are particularly evident. Those who knew him hear him, with the somewhat screeching voice that was sometimes characteristic of him, emphasizing every word, utter the sentence before he wrote it down: "Do you now understand, Professor, why I want nothing to do with that god Lug 1 in my determination of Lugdunum?" He concluded his reply by sharing a letter he had received from Mr. Espérandieu in Paris, dated August 15, 1903, which contained, among other things, "In the next number of the *Revue que je dirige* 2, you will find a small copy of the brochure *Lugdunum*. It is possible that your conclusions are not accepted by the whole world: the Celtic language is so obscure that all opinions, whether they are justified or sufficiently justified, are permissible. But the new ideas that you express to a large extent over others and are to be seriously considered."

Professor Blok has left the final word to Ort. I will certainly reserve judgment on who should be awarded the palm of victory in this matter; but I believe the above has conveyed Ort's work in the field of antiquity, insofar as he has expressed it publicly. His writings demonstrate sound study, a keen ability to combine ideas, and above all, fresh originality. The author follows his own path. He certainly takes note of what others before him have said on the subject at hand, but he allows himself to be influenced by none of them, and he doesn't hesitate to draw conclusions that contradict what renowned antiquarians had proclaimed to be established. It is therefore understandable that his insights will not be accepted as "the truth" by everyone, especially when they concern actions and situations that must be unearthed from obscure accounts from twenty centuries ago. He never lacks grounds for his assertions; sometimes he even overwhelms them, which makes reading his writings somewhat tedious, which certainly cannot be classified as light reading. But he didn't intend to provide them either. And it was no easy task for him to compile these notes. He had to first devote himself to the study of Latin, Greek, and even Celtic and ancient Germanic; He had to acquire knowledge of Roman, Greek, and Norse theology and mythology; he appears to be familiar with ancient Germanic and ancient Dutch legends and traditions, and with folklore. Only his keen eye for the terrain is related to his military, particularly cavalry, work for which he was trained from an early age. The rest he had to learn on his own, aided by a few good friends, especially Dr. M.E. Houck of Deventer; while he frequently corresponded about Celtic expressions or obscurities with Messrs. Espérandieu in Paris and Mr. C.A. Serrure in Brussels, the latter (since deceased) visiting him several times.

Only friends and acquaintances know of his work in the field of numismatics. Through his research in the vicinity of his various garrison towns and through his travels abroad to Trier, Constantine, Badenweiler, etc., during which he naturally did not neglect to become acquainted with everything worth seeing in the field of antiquity, he gradually acquired an extensive collection not only of Roman and Germanic weapons, tools, urns, jars, jugs, etc., but also (through both finds and purchases) of primarily Roman consular and imperial coins, numbering approximately 2,000 varieties. He judiciously compiled a catalog of these, following the classification of Cohen's well-known works: "*Description générale des monnaies de la république romaine, communément appelées médail*"

The Consulates. Paris, chez M. Rollin 1857, and the *Historical Description of Monies struck under the Roman Empire*, together with the *appeal of Imperial Medals*. Paris, chez M. Rollin 1859.

The oldest coins in the collection are three from Campania (minted 268 BC); one of the most important is a denarius of P. Lucinius Stolo, minted 17 BC and originating from the collection of Dr. Phil. Paul Becker, Director of the Lyceum Richelieu in

Odessa; of Vitellius, there are three denarius coins and two medium bronze ones, one of the first found in Tiel—coins that are relatively rare because that emperor reigned for less than eight months. Several coins were found in our country, such as in Nijmegen, in the vicinity of Gorinchem, between Woudrichem and Almkerk, in Lusseike outside Venlo, in the Maas River at Andel, etc. Three are listed in the catalog as having been found in Leiden: a medium bronze of Nero, a medium bronze of Trajan, and a large bronze of Marcus Aurelius.

The entire collection — as an expert assured me — appears to have been compiled with great knowledge and care. It will be sold in Amsterdam by Mr. Schulman.

The collection of Germanic and Roman antiquities will remain together and will find its place in the antiquity room in Oldenzaal, founded by Mr. P.J. Gelderman, whose establishment Ort largely initiated, and whose expansion he always followed with interest.

He continued to devote himself to his amateur studies until his death. After his retirement, having settled in The Hague, he was inevitably drawn to the association "die Haghe," of which he became a member and board member. He had intended to give a presentation at one of the association's meetings in preparation for the excavations at Arendsborg near Voorburg (the former Hadriani Forum), which would likely have begun under his leadership in the spring; however, a brief illness suddenly ended his working life on February 8, 1908.

Thanks to his colleagues in the field of archaeology, but no less so to his many friends and acquaintances, including those from non-military circles, the warm-hearted, always cheerful former colonel will not soon be forgotten. Only she knows what he meant to his dearly loving wife, and it will be her greatest comfort to continue to remember that. His merits were recognized by the government with his appointment as an Officer in the Order of Orange-Nassau; while, besides being a member of our Society, he was also a member of the Frisian Society of History, Antiquity, and Linguistics, of 'Gelre', the Association for the Study of Gelderland History, Antiquity, and Law, of the Provincial Society of Arts and Sciences in North Brabant, of the Bonner Verein, and was also a foreign associate of the Société numismatique de la Belgique.

G.J.W. Koolemans Beijnen.

1 The former foreman still lives in Blerick near Venlo.

1 From his introduction: Old roads and land defenses in Limburg and adjacent regions. Leiden, E.J. Brill. 1884.

1 Roermond, J.J. Romen and Sons. 1882.

1 Published separately as an offprint in 1894 in 's-Hertogenbosch by the Muller Brothers.

1 The first appeared in Deventer at the Deventer book and lithography studio, the others in The Hague by the Van Cleef Brothers.

2 A word appearing on the Dutch section of the Peutinger Table, or world map of Castorius, which Ort explains as "tombstones."

1 Prof. Blok believed he should explain the word Lugdunum from Celtic, in which language, according to some, the word Lug denotes a well-known deity. Ort explained the word from Germanic.

2 Revue épigraphique du midi de la France.

I can say that it is a privilege for those interested in the dispute to have witnessed the battle between two such powerful champions.

April 11, 1884 [...] ACQUIRED: From Captain J. A. ORT:

- Baked earth. Large urn, with a wide belly, small base, wide opening; with burnt human bones and a piece of bronze wire. Height 33 cm, medium 25 cm. Found between Rooth and Dubbroek, near Maasbree (Limburg).

- Small jar with a flat base and wide opening, the rim decorated with indentations. Head 3.2 cm, medium 6 cm.

- Urn, with an upright wall and a slightly inward-curving rim decorated with impressions. Height 18 cm, medium 15.5 cm. From the Jammerdal heath near Venlo.

- Urn, with a wide belly and opening. Height 21.5 cm, medium 19 cm. Found as furrows.

- Part of an urn, like the previous one, decorated with impressed circles. Found as furrows.

- Bowl, smooth and polished with a flat bottom, which served as a lid for the previous pot. Height 7 cm, medium 22 cm. Found as furrows.

- Urn, rough workmanship, with a flat bottom, very wide belly, and narrow opening. Height 20.5 cm, medium 16 cm. Found at Schandeloo on the Ossenberg.

- Urn, roughly worked, with a wide belly and a straight rim. Partially filled with bone. Height 23 cm, medium 18.5 cm. Found on the Reumer near St. Jan, near Blerick (Limburg).

Naspeuringen van Paul Theelen: Constantinus Imperator

- 141250 - Very large urn with a flat bottom, a spherical belly, small, upright, rim decorated with nail impressions. Height 30 cm, medium 22 cm. Found on the Reumer near Blerick.
- 141255 - Bowl of glossy black, with a flat bottom and a straight rim, which served as a lid for the urn. Height 9 cm, medium 20 cm.
- 141255 - Urn with a flat bottom and a wide opening, two projections on the belly. Height 20 cm, medium 18.5 cm. Found on the Reumer, near Blerick.
- 141260 - Large urn, glossy black, with a small base, wide belly, wide opening, and a standing rim. Height 24 cm, medium 20 cm. Found on the Heldensche Heide (Limburg).
- 141260 - Part of the rim and body of a small jar with a single handle, found in the previous urn.
- 141260 - Two tapered jars, with narrow bellies and wide openings, the rim decorated with nail impressions. Heights 26 and 26 cm, medium 22 and 21 cm. Found in Swolgen (Limburg).
- 141265 - Urn, roughly worked, with hand-forming visible on the outside, the rim with nail impressions. Height 24 cm, medium 20.5 cm. Found as furrows.
- 141265 - Roughly worked and poorly fired urn, with burnt bones. Height 24 cm, medium 22 cm. 22.5 cm. Found at the Wienkelder in Grubbenvorst (Limburg).
- 141270 - Urn of finer earth and harder baking material with small, flat bases, a wide belly, a wide opening, and a raised rim. Height 17 cm, medium 20 cm. Found in Grubbenvorst (Limburg).
- 141270 - Small, compressed jar with a wide belly and a wide opening. Height 6 cm, medium 7 cm. Found in the previous urn.
- 141275 - Portions of the belly and rim of a very rough urn; the rim had indentations. Medium 16 cm. Found south of Middelraai near Grubbenvorst.
- 141275 - Small jar, red. Height 8 cm, medium 8 cm. Found in the Kaldenbroek in Grubbenvorst.
- 141280 - Urn, polished on the outside, with a small, flat base, a wide opening, and a raised rim, with burnt bones. Height 18, medium 19 cm. Found at the old Rinkesfort fortress near Baerlo (Limburg).
- 141280 - Bowl with a projection on the side; lid of the previous urn. Medium 22 cm.
- 141280 - Small jar with a rounded base and narrow opening. Height 3.5, medium 3 cm. Found in the previous urn.
- 141285 - Bronze - Part of a decoration with a needle (perhaps from a dress pin?). Width 2.8 cm. Found as furrows.
- 141285 - Baked earth. Urn of rough baking. Reddish-brown, the rim decorated with finger impressions, wide opening, flat base. Height 23, medium 22 cm. Found at Montfort near Genouwe (Limburg).
- 141290 - Brown-black bowl, with a raised rim and flat base, as lid of the previous urn. Height 9, medium. 23 cm.
- 141290 - Bowl, smooth brown, with a raised rim, small flat base. Height 10 cm, medium 21 cm. Found in Tienraai (Limburg).
- 141295 - Urn, brown, with a wide raised rim and small flat base, rim and body decorated with depressed lines. Height 22 cm, medium 17 cm. Found between Wanssum and Mierloo (Limburg).
- 141295 - Urn, light red exterior, smooth with a spherical body. Height 20 cm, medium 19 cm. Found as furrows.
- 141300 - Bronze. - Three burnt fragments of a decoration, found in the previous urn. CATUALIUM, the Mansio along the Roman road Tongeren-Nijmegen
- 141300 - November 9, 1889 CATUALIUM, the Mansio along the Roman road Tongeren-Nijmegen. The Roman road, which ran for centuries from ADUACA TONGRORUM to NOVIOMAGUM, with its stopping places or mansions TERESNE, CATUALIUM, BLARIACUM, and CEVELUM, has recently been extensively retraced by various archaeologists.
- 141305 - His E.M. Habets locates TERESNE at Mulheim, a hamlet of Eijsden (Belgium), and Lord Ort also accepts that location for TERESNE.
- 141305 - According to these gentlemen, TERESNE means Ter Eise: "on the Eis," thus by the water.
- 141310 - BLARIACUM is apparently Blerick, perhaps Hout-Blerick.
- 141310 - GEVELUM was present-day Guijck [Cuyk].
- 141310 - The endpoints ADUACA TONGRORUM and NOVIOMAGUM correspond to Tongeren and Nijmegen. Where, then, is CATUALIUM located?
- 141310 - His E.M. Habets locates this mansion at Heel; Lord Ort at Horne.
- 141310 - Numerous Roman and Frankish antiquities have been unearthed at Heel, Horne, and Melenborg (near Buggenum).
- 141310 - The distances between the stopping places are, according to PEUTINGER's map, from: ADUACA TONGRORUM(1)-TERESNE XVI League = 34,500 m

- 141315 from TERESNE-CATUALIUM XLV » = 31,108 »
» CATUALIUM-BLARIACUM XII » = 26,664 »
» BLARIACUM-CEVELUM XXII » = 48,884 »
» CEVELUM-NOVIOMAGUM the rest.
Mr. Ort says:
- 141320 "Also, Mulheim and Heel are not 31 km apart, but 25.5 km apart and 31 km apart."
"bring me to Horne" (p. 125).
- Therefore, Catualium cannot be the whole place, according to Mr. Ort and in my humble opinion.
- 141325 Mr. Ort further states (p. 122):
"Mulheim-Horn = 30,000 m; Mulheim-Melenborg 32,500 m."
Therefore, in my opinion, neither of the last two places mentioned can be Catualium, even though the three points mentioned are still so different.
- 141330 Many antiquities have been found; after all, I assume the Romans measured very accurately.
- Aided by the Publications d'Archéologie etc. de Limbourg, in which numerous archaeological discoveries were published by Mr. Habets, and by the work "Oude wegen en Landweren in Limburg" (Old Roads and Land Weirs in Limburg) by Ort and a detailed map of the Duchy of Limburg, I take the liberty of sharing my opinion regarding the location of CATUALIUM.
- 141335 It is striking how the old names, however corrupted or shortened, are still in use today.
- 141340 Examples:
TERESNE=TER EISE, now Eisden; (Mulheim).
BLARIACUM=Blerick; CEVELUM=Cuyck.
NOVIOMAGUM=Nijmegen; CASTELLUM=Kessel.
- 141345 I reasoned that perhaps there wasn't a neighborhood, hamlet, or even a single house bearing the corrupted or abbreviated name of CATUALIUM, located somewhere between Kessel and Maeseyk? Neither Horn, Melenborg, nor Heel would be suitable, as one can see immediately.
East of Grathem lies a hamlet bearing the characteristic name of CATERT.
- 141350 In my opinion, after measuring it on the map, this place meets the distance requirements better than the three mentioned.
- If my guess is correct, then we should look for the old road from Ittervoort further west, and a side road must have passed Heel and Horn.
- 141355 On Wednesday afternoon, May 15, 1889, I set out for the Chapel under the Linden Trees in Thorn.
- In front of the chapel (east side) runs the old road, indicated by Mr. Habets as the main road towards Panheel. If I can find an old Roman road running slightly west of the chapel, more in the direction of Grathem, I thought, then that road probably passes Catert, and then Catert is the manor CATUALIUM I'm looking for.
- 141360 The innkeeper, Renier Snickers, at the chapel assured me that behind the chapel (westward) there used to be a road called the Roman road.
A big step closer to my goal, I thought. He is immediately willing to accompany me, point out the way, and give his opinion regarding the direction.
- 141365 Let's follow that road.
Where the chapel lies beneath the Linden trees, the branch to Panheel seems to have diverged from the main route.
- 141370 All that remains of the main road at its beginning is "a raised path, with a manure cart passing here and there, running behind the chapel's sexton's garden towards the cross with the lime tree in the Thornerveld near Santfort," thus heading north.
- The path is elevated and slopes to the west and east. The cobblestones of the old road can be seen several meters to the left and right in the arable land.
- 141375 The road must have been very wide, but certainly not as wide as the position of the pebbles would suggest; after all, these would have been moved several meters by the harrow.
- 141380 About 1000 meters north of the chapel stands the aforementioned cross with the lime

tree. There lies a most significant intersection.

Our path is suddenly interrupted there by a sunken crossroads, and at the foot of the southern section, deep within the sunken road, stands the cross.

There, in that sunken road, no fewer than six roads converge.

a from Grathem (sunken road).

b from Thorn (a sunken road).

c from Hunsel, via Santfort (a sunken road).

d A field path in the direction of Wessem.

e A field path in the direction of Heel.

f Our footpath, the remnant, a very elevated path.

The piece of arable land north of the cross, where the northern part of our road ends, bears the name Venuskamp.

(This last name was given to me by Mr. Rubens of Hagenbroek.)

The road, now interrupted here, takes a slight turn to the right at Venuskamp and continues for approximately 250 meters behind (east of) the house "de Riet," where the new road passes in front of the door (west). It remains recognizable by the high ridge and the gravel, although from Venuskamp onwards, no footpath accompanies it or remains of it.

I followed this road until behind the farm "de Riet," when evening forced me to return home.

On Sunday, May 19th, I continued its course and was convinced, even more than two days earlier, that I had found CATUALIUM in CATERT.

That hamlet lies another 2,000 meters from "de Riet," and the road, running from the cross at Santfort, maintains the direction I took from there, apparently directly towards that neighborhood. On Sunday, May 19th, I set off in the morning, heading north through Hunsel towards De Riet. Following the gravel layer behind (eastward) that farm in the field, I reached milestone 44, through arable and clover fields, on the French-built Paris-Hamburg road, or, if you prefer, Maastricht-Venlo. Along that main road, the track becomes less distinct, but is still visible.

Soon the old road approaches the first houses in the Houthem neighborhood. One of the farmers is happy to act as a guide, but he...

Never heard of an old road.

The Neer, coming from Hunsel as a wide stream, forms a delta 10 minutes' walk north of Grathem, near Houthem. The right branch turns southeast past Panheel to Wessem.

The other branch continues its way to Haelen. Our old road must therefore cross the right branch at Houthem. This spot is clearly visible. To cross this branch at right angles, a small turn to the east is necessary just south of the stream. The road continues in this direction for a while, crossing the stream, before turning left

(westward) again, almost in line with the direction: Kruis [=Cross] te Santfort, mile marker 44.

Until several years ago, according to the farmer mentioned above, there was a bridge at the spot where the old road crosses the stream. The entire area where it crosses the stream alluvium bears the most striking traces of lowering. Indeed, the bases of the fairly large trees there stand well over half a meter higher than the surrounding land or pasture. Let us return to the road. It runs northwest through the barren Houthemerveld, where it is extremely difficult to find, only to enter the Caterveld at the end of that field.

Catert consists of only two farmhouses. The southern one is not suitable, but the other is. It is located 40 to 50 meters from the Neerbeek stream, west of milestone 45 on the road, a 20 to 25-minute walk from the center of the municipality of Grathem. Both Houthem and Catert are civilly part of the municipality of Heel; the streams there separate Heel from Grathem. At Sibert Seuntjes's farm, the farmer, the owner of the property, answers our questions with the utmost willingness. His son, Mathieu, immediately agrees when I express my wish to conduct some investigations with a spade. The generous housewife refreshes the unknown, tired, dusty, and sweaty "gentleman" with a delicious glass of fresh cow's milk.

As I approached the house, I noticed the remains of ditches in the meadow south of the current residence, enclosing a fairly large plot.

When I asked if there had been any ponds here in the past, they replied that they were now largely filled in, but still clearly visible, and that pools remained here and there. The previous house, they explained in response to my questions, stood where a small garden now stands and had only been demolished a few years ago. That house fell outside the meadows enclosed by ditches. The farmer's son also told me that he had unearthed half a pot the previous autumn.

I then went with him to that spot, right in front of the door of the new house,

about four meters away (east). From the very first turn, I saw wood ash, shards immediately emerged from the ground, and looking around, I spotted shards of Roman urns or tiles everywhere.

141450 It was Sunday, so I decided against further excavation. Now I had to continue my search.

Right where the new house is located, the road heading north seems to have left Mansio CATUALIUM. It now runs in a direct direction to the Exaten house near Baexem, leaving the monastery on its left. From Catert to Exaten, it runs along the left
141455 slope of a natural range of hills, and a cart track remains of the old road. A lot of sand must have been pushed across the road there, because the gravel layer is very deep.

Yet, it came to light while clearing a hedge just north of Catert and 't Catertveld. Besides the remains of ponds, the urns, and the name (which points to the stopping
141460 place CATUALIUM), I can also report that a few years ago, the farmer Sibert Seuntjens unearthed a silver coin the size of half a guilder, and his neighbor, while harrowing, unearthed a gold coin, both believed to be of very ancient date. Whether the place was favorably situated from a military perspective, I cannot possibly determine. However, I would like to point out that the manor was bounded to
141465 the south at some distance by the stream to Panheel, to the west by the stream to Haelen, and to the east by the deep Heelderpeel, from which it was separated by a ridge.

If this spot I have indicated along the Neerbeek is the old CATUALIUM, which I no longer doubt, then I hope that science will benefit from the publication of this
141470 discovery.

After all, then, after accurate measurements, one can determine the exact location of the other mansions.

Several roads also lead from Catert towards the east.

a A wide main road to Beegden.

141475 b A second road past the southern house in Catert towards Heel; this one leaves Catualium from the south.

c From the southernmost house in Houthem, an old sunken road leads to Heel. Tungelroy. P. MATH. PEETERS.

141480 (1) The spellings FERESNE and CEVELUM are considered incorrect on the Peutinger map.

Again, Catualium.

A brief observation on Mr. Peeters's essay. We will not discuss his research, because to do so, we would have had to visit and walk the same route he took, which
141485 did not happen. But we cannot fail to mention that the hamlet of Katert appears to us to be located outside the direction of the Roman Maas road; this road indeed ran past the chapel of Thorn, past Heel, Beegden, and Horne. This is indicated by the direction the road also took elsewhere; it never leaves the bank of the Maas, as evidenced by the investigations carried out by Messrs. Jansen, Guillon, and Habets,
141490 and further by the uninterrupted series of Roman objects discovered along that route. If a Roman building actually existed at Katert, as Mr. Peeters claims, then a side road may well have led there, but the main road, the via strata, constructed by the Romans to protect the Maas River and connect Tongeren with Nijmegen, never left the banks of that river so far.

141495 Finally, a comment on the quotation from a contribution by Mr. Ort, who believes that Heel is not 31 kilometers from Mulheim-Eijsden. The question here is not how far Mulheim is from Heel, but rather how far the Roman foundations under the Mulheim area are from these or those Roman foundations located under the municipality of Heel. There is something vague and uncertain in Mr. Ort's view, as formulated here.

141500 Where is Heel, where is Mulheim, on the map? If one starts measuring from the western border of Mulheim to the eastern border of the municipality of Heel, one will likely find a distance of more than 31 kilometers, especially if one takes into account the direction of the road and the bends and curves it has made along its course. Indeed, many things must be considered when calculating the distances on
141505 Peutinger's map, and it is often the method of arithmetic that gives rise to the differences of opinion among the authors. Pour comprendre il faut connaître is the case here.

Meanwhile, we thank Mr. Peeters for his interesting article.

The Editors of the Maasgouw.

141510 October 6, 1934: Archaeological discoveries in Hout-Blerick in the 19th century. The small hamlet of Hout-Blerick, located fifteen minutes south of Blerick, opposite Tegelen, deserves the attention of antiquarians, wrote the learned national

archivist Jos. Habets in his time, specifically because of the following two discoveries: First, it is in Hout-Blerick that traces of a Belgo-Roman settlement can be found. Twenty minutes from the Maas River in the direction of Maasbree, not far from the last houses, called "Doovend," lies a field, situated higher than the rest, called Veldenkamp. This name was given in memory of one of the last owners, named Van Velden. Over an area of twelve to fifteen acres, one finds Roman antiquities, pieces of tiles and pottery, building blocks, red cement, wood ash, and fragments of iron. Alongside this field flows the small river called "de Breebeek," where the famous head of Medusa, discussed shortly, was found. According to Greek and Roman mythology, Medusa is one of the three so-called Gorgons. These were three sisters named Sthenyo, Euryale, and Medusa.

They were hideous creatures, surrounded by a belt of hissing serpents; on their heads they had dragon scales; their large, sharp teeth protruded far; their claws and wings were made of copper. So terrifying were they that their mere sight could turn a human to stone. They lived at the very edge of the Western Ocean. The hero Perseus, who led the fight against these monsters, cut off the head of Medusa, the only mortal of the three, while she lay in a deep sleep. From Medusa's torso sprang the winged horse, Pegasus. Swift as the wind, Perseus, who had leaped onto the Pegasus, sped through the air and flew over Africa. Blood still dripped from Medusa's head, and the drops that fell to the earth there turned into serpents. When Perseus wanted to rest a while near the giant Atlas, who, at the spot where the Mediterranean Sea and the Atlantic Ocean meet, carried the pillars of heaven on his shoulders, and was not received hospitably at all, he was annoyed. He held up the Medusa's head, and Atlas was immediately transformed into a rocky mass, its crown rising into the clouds.

A Medusa's head was therefore not an inappropriate symbol on a warrior's shield. But after this digression, let us return to the Veldenkamp and the Breebeek. Around 1861, the owner of the land had begun removing the tiles and brickwork from that field and placed them in the small river. This fact attracted the attention of several antiquities enthusiasts, who began to examine the ruins. In 1879, Messrs. Pleijten, curator at the Rijksmuseum in Leiden, and J. A. Ort, lieutenant in the 4th Hussar Regiment, formerly garrisoned in Venlo, conducted some excavations at that site, the results of which are unknown.

The second discovery made in the vicinity of Hout-Blerick is that of a precious Medusa head and horse harness decorations in bronze. This discovery occurred around the autumn of 1872 in the Breebeek, a few meters from the Beldenkamp substructures. A worker digging in the stream found this treasure at a depth of 9 to 10 feet underground. He sold it to the goldsmith J. G. Lienders in Venlo, who still owned it in 1879.

This treasure contains the following objects: A very beautiful "umbo," or navel from a Roman shield. It is a copper plate, fire-gilded in the shape of a disc and richly sculpted in round molding. Its diameter is 26 centimeters. The rim of the "umbo" consists of a wreath of oak leaves interspersed with acorns. The center of the navel consists of a Gorgon head in raised sculpture, exquisitely carved. It is of majestic beauty, with a terrifying appearance like all the Medusa heads. The eyes are wide open. The beautiful proportions of the face recall the beautiful Greek style. The curls of long hair encircle the head. Below the head, she wears a short beard. Snakes are coiled in her hair, forming an elegant knot beneath the chin. Two serpent heads emerge from beneath two small wings that adorn the hair; a third slants over the center of the forehead. On top of the head, the artist has placed a flower bud. This richly adorned head is surrounded by a wreath of oak leaves, from which hang acorns; it is similar to the one that forms the edge of the navel. Below the sculpture is a garland of leaves and small petals.

The Medusa head is one of the most common representations on ancient shields. Homer places a Gorgon on the shield of Agamemnon. Phidias appears to have decorated the shield of Minerva with the same symbol. This representation can also be seen on the shields of Mars, Achilles, Victory, the Amazons, etc., which adorn Roman and Greek vases. Several holes are found in the rim of the navel, which appear to have been made either by an arrow or by the nails that served to attach it to the shield.

The depiction of our Medusa head is nothing unusual. The only thing worth mentioning is that it wears a short beard around the chin. But even that fact is not without antecedents. This Medusa head must date from the first century AD. Seven other bronze objects were found alongside the aforementioned shield navel, which were part of a horse harness. These are, firstly, a decoration of the collar with two rings through which the reins pass; then another set of rings for the

reins. All these objects have small holes to allow the nails to pass through and show genuine traces of gilding.

The statuary collection held at the baths of Zeuxippus (Ap 2) and the search for Constantine's museological intentions

Carlos A. Martins de Jesus

Constantine intended to portrait his very own Constantinople as the new (third) Troy, the most complete portrait of Greek and Roman [paidea] *paideia*. He and his team had no more than six years to redesign and rebuilt an entire city, the old Byzantium; plastic arts, mainly sculpture, played an important role in the entire public process. Looking once again at the archaeological remains of the statuary collection held at the baths of Zeuxippus, in relation to their literary description by Christodoros (*Greek Anthology* II), the present paper essays a museological reading of these statues as part of the global architectural plan of Constantine for his own new capital of the Imperium.

1. Remodelling and adorning Constantinople

"Dedicatur Constantinopolis omnium paene urbium nuditate". It was with these words, without mentioning any other political events, that Jerome chose to refer to the foundation of Constantinople. Scholars have agreed on reading this *nudity* as the look of the cities that, under Constantine's command, saw their most precious sculptural works of art being taken to the newly found capital of the Empire. Nevertheless, one must notice that Jerome talks about *nuditate* (the substantive), not simply about *denuding* (any verbal form) the conquered cities. That is why I shall propose the possibility of a different reading: that Jerome had in mind, with such a choice of wording, an intentional ambiguity: certainly he refers to the act of denuding other cities to adorn Constantinople, but he also implies to the use of these cities' own *nudity* (their pagan statues) to *dress up* the new capital, thus giving the latter an overall look of somehow sinful *nudity*, inevitably a characteristic of a whore.

Archaeology and several Christian authors, like Eusebius, have shown - thus giving credit to the view of a truly magnificent Constantinople already portrayed since the Renaissance - that Constantinople, by the time of its official dedication in 330, was everything but a naked city. Furthermore, it was probably not naked even before Constantine's conquest; dressed up enough, at least, for the new Emperor to see in it, in its already existing (and potential) *romanitas*, as Basset puts it, "a springboard for the implementation of [his own] urban vision, probably as a result of the changes already made during the previous Severan government. Indeed, scholars are now sure of the magnificent buildings and streets of Constantine's Constantinople, all of these spaces adorned with the most exquisite and rare statuary, in different dimensions and positions, always intriguing the passer-by with both its beauty and its meaning. Such was the city, very close to the one portrayed by Eusebius, a space of architectonical and sculptural ποικιλία (*varietas*), one of the most identifying traces of the new Byzantine taste; a completely different and, as Basset writes, "newly outfitted urban core of monumental architecture and sculpture".

In the course of my paper, by the reanalysis of the archaeological, iconographical and literary data, I shall approach what I think is the possible museological reading of the collection of statues held at the Baths of Zeuxippus, following an interpretation already implicit in several scholars, as recently in the book of Yegül who, talking about the Zeuxippus, called it "a veritable museum of classical art", the exact same words already used by Stanley Casson when publishing the second report of the excavations performed on the site. I therefore shall put together the evidence of what must have been a very Constantinian intention - the elaboration of a project, both public and urban, of a great exhibition of statuary, itself formed by several minor collections. More than the "intention of the collectors to display objects of art" (Saradi-Mendelovici), already noticed and studied by scholars, I shall pursue the very steps of the creation of an art collection with political and propagandistic purposes, the means and the ends of what must have been one of Constantinople's greatest national galleries, even if it held works of art that were in no way national.

By now, a first evidence takes us a step closer to the reading we are looking for: the remodelling and the provision with true art galleries of an entire city in just six years, which could not have happened without a detailed, coherent and well-organised plan. Constantine and his collaborators set afoot a wide plan (both architectural and museological) of transformation of a city in which they saw

potential enough to become a urban and public museum of Greek, Roman and Hellenistic sculpture; a project that was only possible in a city (the pre-Constantinian Byzantium) that already counted several *art galleries* in itself, spaces that required remodelling - as any room or museum nowadays still does, especially when the exhibition's importance demands it - in order to accommodate several minor exhibitions that formed the huge National Identity Museum that was Constantinople in its entirety.

If Rome was the huge urban museum that it was, due to centuries of art accumulation, the Severan Byzantium that Constantine finally conquered in 324 was no Rome. The new city's artistic *spolia* weren no longer to be collected during decades, as the result of military victories; they had to be identified, selected, collected, transported and only then exhibited in their new public galleries - and time was limited. Even if different from the primordial *spolia*, at the end of the day they kept their original meaning, as they were still an immediate and meaningful manifestation of imperial power and domination. Much work was required in only six years. Sozomen, in the fifth century, actually says that Constantine had to impose taxes to cover the expenses of building and adorning the city. Nevertheless, the Museum was ready to be seen in May 330, with every single stage of its curacy carefully performed. For the moment, let us make a tour of its major buildings and art collection.

2. The Zeuxippus, a special art gallery

Part of the Emperor's first great architectural plan consisted of remodelling or constructing from the ground up five buildings that soon became the major symbols of his power and urban plan: the Augusteion, the Basilica, the Hippodrome, the Great Palace and the Baths of Zeuxippus. They were all public buildings in the neuralgic centre of the city; all of them well connected by wide streets where circulation was easy, the postcard picture of visitation that Constantine wanted for his city. But they were also the main spaces where, by means of sculptural exhibitions and their very architectural grandeur, a new imperial image of power (of Roman imperial power) should be reflected, a wide-ranging look of *romanitas*.

The Baths of Zeuxippus along with the Hippodrome and the Great Palace, were one of the three sites where such *romanitas* soon became more evident. Nothing more Roman, everyone agrees, than a public bath-gymnasium and a space for athletic competitions (as the Hippodrome was), even if these activities were not the only ones having place in these buildings. Constantine had already ordered the building of such a complex in Rome, named after himself; but the new capital of the Empire, his major personal achievement, should have its own. From the eight great thermal complexes identified by the *Notitia Urbis Constantinopolitanae* in the mid-fifth century - apart from the 153 smaller bathing places (*balneae*) - the Zeuxippus was certainly the most important and the one more intimately connected with the will of Constantine himself. In spite of its achievements, archaeological excavations held in place between 1927-1929 were not able to provide a very detailed plan of the inside organization of the building. Nevertheless, later excavations *in situ* unveiled other buildings of the same complex, among which there was a cistern, and provided more data for a better understanding of the building and its functions.

The Zeuxippus, Constantinople's major bathing complex, stood in the center of the city, between the northeastern corner of the Hippodrome, the Great Palace and the public forum known as the Augusteion (see Picture 1). Traditionally, literary sources ascribe its construction to Septimius Severus, in the last years of the second century. Even if we are not aware of Constantine and his team's level of intervention on the existing building - in fact, when telling the rush of building activity leading up to the dedication of Constantinople, the sixth century historian Malalas only says that the emperor "completed" or "filled in" (ἀνεπλήρωσε) the building -, it seems to admit that it was largely remodeled and amplified, besides being provided with a more direct connection to the Great Palace and the Hippodrome, via the Augusteion. Far beyond the installation of the gallery of statues, the project must have included a series of new rooms and halls, some of them meant to host the collection of statues. Constantine, in the Zeuxippus as in many other sites of the so-long called Byzantium, was preparing the galleries that were to receive the most impressive works of classical sculpture.

As said before, archaeological remains of the Zeuxippus are few when it comes to reconstructing its inner architectural organization. Nevertheless, scholars like F. Yegül seem to be correct when seeing in the remains resemblances to the Baths of Faustina in Miletus, which archaeology was able to uncover in a more efficient way than in the case of the Zeuxippus. The Baths of Faustina are also meaningful on the subject of statuary displaying, since, besides the statues naturally displayed in

this kind of building, excavations identified a square hall with a broad apse and niches in the walls that could have functioned as a lecture hall, a *museion* or a room for the display of statuary (apud Yegül).

141715 This is the kind of physical gallery that we must have in mind from now on. Although it is possible that there were rooms exclusively meant to host the works of art - and one may think especially of the case of sculptural portraits, usually smaller and more easy to accommodate in a closed room -, the better known examples of bath-gymnasia we have mentioned, as well as others, show very clearly that the main works of art, those precious sculptures brought from abroad, both in bronze and marble, 141720 were to be displayed all-along the building, inside and outside of it. Therefore, one may already distinguish two policies for display, both traditional and part of Constantine's project; one more monumental and public, meant to be a part of the user's routine - which somehow took the outer communitarian space into the inner spaces of the Baths -, alongside another one, more concentrated and possible to 141725 organise thematically, chronologically or even artistically, probably meant for more exclusive visitors; this might occupy several smaller rooms.

The reputation of the Zeuxippus is due mainly to the poetic description of some of its statues, a poem in 416 hexametres by Christodoros that was transmitted to us as 141730 book 2 of the *Greek Anthology*. Presenting in all manuscripts of the *Anthology* the epigraph

Ἐκφρασις τῶν ἀγαλμάτων τῶν εἰς τὸ δημόσιον γυμνάσιον τοῦ ἐπικαλουμένου Ζευξίππου, the 141735 poem describes eighty statues or statue-groups, from the much larger collection that was possible to see in the Baths. Scholars have been divided on their approaches to the relations between the poem and the statues themselves, giving more or less credit to the truth of their description and to the words of Christodoros. Indeed, it is datable in the first years of the sixth century, under the government (and probable commission) of Anastasius, mentioned in lines 403-404. Archaeology has shown that Christodoros worked upon a real collection of sculptures, even if we are forced to 141740 believe that it was no longer the same collection prepared by Constantine, at least 170 years before. Among other remains, excavations unveiled three base-statues, two of which had inscribed the names of Hecuba (Base B) and Aeschynes (Base C), characters whose statues are described in the *Ekphrasis*, respectively in lines 175-178 and 14-17.

141745 The very re-appreciation of these bases will soon provide us new arguments on the reading we are following. First, the bases must be placed somewhere in the fifth century. Therefore, they are posterior to Constantine, i.e., they were very probably not part of the original exhibition in 330, "when Roman square bases were more common" (Casson); on the other hand, being previous to the time of Christodoros, it 141750 is highly possible that he saw them when composing his poem. This hints at the constant remodelling of the exhibitions inside the Zeuxippus, something that receives further confirmation in the holes found in Bases A and B, enough to prove that each base must have supported at least two different statues and allowing the possibility of the existence of temporary exhibitions. We must accept the idea of an open 141755 gallery, even several open and multipurpose galleries, being constantly reformed. And this is different from the simple accumulation of statues, as the result of military *spolia*, for instance; the archaeological data we now have support that idea that, in the Zeuxippus, statues were moved and frequently added to the collection also as a response to museological or artistic concerns.

141760 In spite of the (few) spatial indications provided by Christodoros and the intricate attempts of reconstructing the order of the statues by some scholars, we are actually unable to reconstruct the look of the sculptural exhibitions in the Zeuxippus. Nevertheless, it seems that Christodoros follows a somewhat linear order, and that is why we give credit to the opinion of Bassett, when arguing for the *Ekphrasis* as a 141765 description of the statues exhibited in the *frigidarium*, which was, indeed, "the showpiece of any Imperial establishment". There, statues could stand at ground level - and that was Stupperich's biggest mistake, to assume that every sculpture was displayed this way -, but also in open spaces (like halls and corridors) or niches and

141770 *aediculae*, in the best architectural tradition of similar buildings found everywhere throughout the Roman Empire. The room on which Christodoros focused, and with it the entire complex, would have such a *poikiliakos* aspect, as *poikiliakos* was the poem that describes it with such creative versification. Once again, the three bases, contemporary as they are, can afford some confirmation. Base C (the "Aeschynes' base") 141775 is smaller (height 1,35 m; shaft 58 cm) than Bases A and B (height 1,40 m diameter 1,08 m; shaft 83 cm), but its inscription presents the same lettering than Base B, which suggests that they were part of a same gallery purpose. With all this evidence,

Bassett seems to be correct when arguing that "a concerted effort was made to provide a homogenous display" and that "presumably all of the bases in the collection were round". If so, even if the inner structures of the building were also used to exhibit (its niches, its corners, its halls), one may accept the idea that the very conception of these bases was part of a museological plan.

Yet another question requires an answer as we *revisit* the Zeuxippus sculpture gallery: the medium in which these works were sculpted. Christodoros, in the fifth century, persistently mentions bronze (with chalkon and derivative forms), and archaeologists actually detected remains of such material in the uncovered bases of the statues (Casson); in the sixth century, Malalas says that Constantine adorned the Zeuxippus "with variegated marbles and statues of bronze" (κοσμήσας κίοσι καὶ μαρμάροις ποικίλοις καὶ χαλκουργήμασιν) and colourful marble seem to be mentioned not as medium of the sculptures but as covering the walls and floor of the building. On the other hand, in the twelfth century, Cedrenus provides another description of the complex, mentioning, "many painted marvels and well-made splendours of marble, stone and mosaic, as well as bronze images that were the work of ancient men" (ποικίλη τις ἦν θεωρία καὶ λαμπρότης τεχνῶν, τῶν τε μαρμάρων καὶ λίθων καὶ ψηφίδων καὶ εἰκόνων διαχαλκου πεποιημένων τῶν ἀπ' αἰῶνος ἀνδρῶν ἔργα) but also this author is unclear on the media of the statues. Nevertheless, nothing undeniably supports Christodoros' exclusive references to bronze as the medium of the collection. Once again, we face the limits of the reading of the *Ekphrasis*. Is Christodoros working upon a single gallery, probably the one at the *frigidarium*? Or is he arbitrarily focusing on some statues he sees when walking through the Bath? Once more, archaeology provides a possible answer.

The main artefact recovered in the site of the Baths that can directly be connected with the museological plan of Constantine is a fragment of the face of a colossal female statue or bust, which is nowadays lost but we are told it was found "among the debris at the very bottom level" (Casson et alii). Because of that, the report of the second excavation already stated that the marble fragment "derived from a statue which once stood in the baths, quite probably one of the early Greek statues looted from Athens by one of the first Emperors of the fourth or fifth century AD." Even if a direct relation to Constantine is unsafe, we obtain confirmation for another characteristic of the exhibitions in the Zeuxippus: there were, in the same space, statues of marble and bronze, from the very beginnings of the building as a public bath and a art museum.

The main artefact recovered in the site of the Baths that can directly be connected with the museological plan of Constantine is a fragment of the face of a colossal female statue or bust, which is nowadays lost but we are told it was found "among the debris at the very bottom level" (Casson et alii). Because of that, the report of the second excavation already stated that the marble fragment "derived from a statue which once stood in the baths, quite probably one of the early Greek statues looted from Athens by one of the first Emperors of the fourth or fifth century AD." Even if a direct relation to Constantine is unsafe, we obtain confirmation for another characteristic of the exhibitions in the Zeuxippus: there were, in the same space, statues of marble and bronze, from the very beginnings of the building as a public bath and a art museum.

3. Masterpieces at the Zeuxippus (the possible guided tour)

The fragment of a colossal head we are looking at is also the best proof available to confirm the practice of importing sculpture to Constantinople from the very first years of its foundation. As mentioned before, Constantine's use of sculptural *spolia* is to be understood differently, since it was part of a detailed plan to provide the city with some of the greatest masterpieces of both Greek and Roman culture. From now on we shall look at some examples of sculptures we know, mostly from Christodoros' account, to have been displayed at the Zeuxippus. Samples of true antique sculpture, that at least is how the inhabitants would have looked at them - brought from several parts of the Empire. One must also keep in mind the common use, at the time, of copies, some of them ordered for a specific building, a practice that, besides not being a sign of bad taste, must have had its own market.

Archaeological interventions at the site of the Zeuxippus, apart from the aforementioned fragment of a colossal head, have not been able to uncover any complete or even partial statue that might have been displayed in the Baths. Nevertheless, the better-known history of other famous sculptures and their presence in the galleries of Constantinople allow us to imagine that no less important works of art must have stood in the rooms of the Zeuxippus, at first as the result of Constantine's museological plan. One single example would be enough: the eleventh century historian Kedrenos records a tradition according to which the fifth-century chryselephantine statue of Zeus, the work of Pheidias first exhibited in the Temple of Zeus in Olympia, was carried off to Constantinople, most probably in the years of the preparation of the city for the official dedication, where it was displayed at the Palace of Lausus, another building renowned for the vast and rich collection of statues housed within its walls.

As for the Zeuxippus collection, the most recent and complete essay on listing the sculptures displayed is the one by Bassett 2004. When working on the Zeuxippus, Bassett does it probably in the only way possible, i.e. from the list of statues and sculptural groups given in the *Ekphrasis*. But the poem, in spite of the aforementioned persistent indication of bronze and other indirect information, says

nothing on the statues' provenance, antiquity or authorship. In face of such a lack of information, both literary and archaeological, the only way to forward is the way of moderate imagination and comparison with known sculptural models of each character, when such a work is possible. And some interesting identifications have been made or suggested. I give here two examples, and dare to make a suggestion. Richter 1965, for instance, thought that the statue of Sappho described between lines 69-71 of the *Ekphrasis* could be an original brought from Lesbos, not necessarily from the classical period, since Christodoros mentions the poetess as a seated female figure, an image frequent in coins found at Mytilene, from the second century AD. In another example, all the three descriptions of statues of Aphrodite (lines 78-81, 99-101, 288-290) fit the model of a series of half-draped fourth century BC representations of the goddess, as the so-called Aphrodite (or Venus) d'Arles, a first-century BC marble sculpture now at the Louvre that is thought to be a copy of the Aphrodite of Thespiae of Praxiteles, a work from his early career in the 360s BC that could also resemble the model of the so-called *Cnidia Baldevere*, nowadays in the Vatican Museum (N° inv. 4260). Scholars have for long noticed this resemblance, but I suggest what seems to me a strong possibility, that the statue standing at the Zeuxippus may have been the original fourth century BC sculpture by Praxiteles. Besides Pausanias' (second century AD) mention of having viewed the statue at Thespiae in Boeotia, as part of a group made up of Cupid, Phryne and Aphrodite, nothing else is known about its destination. Therefore, if we only remember that in the latter years of the fourth century Theodosius II brought the Aphrodite of Cnidos of the same Praxiteles to his court in Lausus it is not hard at all to suspect that Constantine himself or any other emperor after him might have brought to the city this other Praxitelean work.

141870 4. A thematic gallery on national identity?

Such as the Zeuxippus in terms of statuary. As for Christodoros' poem - which in selecting its characters seems to obey above all artistic, poetic and commissioning interests - it mentions and describes figures from the following main categories: mythical characters that participated in the Trojan War (25), mythical characters not part of the Trojan conflict (6), mythical prophets or seers (8), male and female divinities (11), poets and other writers (16), philosophers (7), political men and other public characters (7) and athletes (3). If the collection prepared by Constantine might not have had the very same statues, as said before, Christodoros' account is still useful for providing a sample of a collection with an intention akin to those of Constantine. Indeed, it makes sense that some of the ideological purposes were the same.

141885 The large amount of statues portraying mythical heroes from the Trojan war, 25 (29 in other authors' account), led Stupperich 1982 to develop his very polemic theory that the *Ekphrasis* was mostly a bronze *Ilioupersis* - indeed, the most part of the characters are described as being in a miserable situation, close to or as result of the fall of the city; and that the Emperor himself had wanted to present Constantinople as the new Troy, the third, after Rome. Furthermore, Stupperich's paper actually reads the Trojan iconography at the Zeuxippus as Constantine's intention, arguing, among other things, from three literary testimonies that mention Constantine's first thought of founding his new capital in Troy (or at a nearby location in Troad).

141895 In general, even if it remains impossible to determine how far the mythical (Trojan and non-Trojan) statues described by Christodoros in the late-fifth or early-sixth century were part of Constantine's inaugural collection, I think it might be assumed that this original collection was composed mostly with mythical characters, models of virtue, happiness and even learning from pain, all of them derived from the very best characters of ancient Greek-roman culture. On the other hand, it is also easy to understand that the portraits and freestanding statues of political and more contemporary figures were later added to the collection, as the result of successive individual or group dedications. Yet, when thinking about its origins, the exhibition had to reflect, as well said by Bassett, the "desire to detach Constantinopolitan identity from the confining agenda of local history and link it with the universal cultural traditions of Greece and Rome". Myth, music, poetry, rhetoric, politics and even sports, those were the bases that Constantine wanted as the new Christian Empire's *paideia*. Constantine needed to provide his people with a plastic sample of this *paideia* within the walls of the Zeuxippus and other Constantinopolitan public

141910 places. And so these places became museums of art, but also museums of (yet unspoken) very meaningful words (Bär 2012), where pagan gods and seers were meant to transmit a message not to be the object of any kind of cult. In 382, merely 50 years after the official inauguration of Constantinople, an imperial decree from Theodosius I, referring to a certain temple at [Osrhoene](#) in Mesopotamia [=Edessa, now Şanlıurfa, Turkey], commands the local authorities to keep it open so that the inhabitants may enjoy its precious gallery of statues. The text of the decree is clear on saying that the statues were brought to the temple more "artis pretio quam divinitate", a phrase unequivocal in relation to the purely artistic importance ascribed to these collections of statuary.

141915

141920 The urban project prepared for the new capital, in spite of the Christian tradition surrounding the foundation that gained voice after it took place, insisting on seeing it as the *naked luxuriant whore* possibly implied by Jerome; it was not permeable to (or at least not defined by) the ideological demands of the new official religion of the Empire. Far from being intimidated by the popular beliefs of the pagan statues as containing evil demons one may actually think that even that must have created an aura of mysticism favourable to the existence and keeping of the statues themselves.

141925

141930 In other words, as recently concluded by Elsner, "the very re-appropriation and redeployment into private collections of these objects, many with pagan themes, helped to neutralize their religious value to a sort of antiquarian chic which was hardly in opposition to the new Christianising tendency." On the other hand, as postulated by James, pagan statues were the medium of a paradox that is no more than apparent: they are intentionally used by Constantine (and by the emperors after him) as a means to unify an officially Christian empire. And such a fact proves how far the inhabitants accepted these works of art as part of their daily-life, their collective and more immediate culture.

141935

A last plausible interrogation, in relation to Constantine's artistic agenda, may come from a literary and performative enquiry on the *Ekphrasis*. The poem, with regard to its context of production, commission and much-probable performance - and if it was not for its literary value - could fit in the same group of texts such as the so-called Παραστάσεις ὑντοποι χρονικά... ("Brief Historical Expositions"), a confusing little book from the eighth or ninth century that consists of a series of comments on Constantinoplian topography and monuments, mainly its statues and their mystic relation to the inhabitants. More than revealing the Byzantines' distrust of classical statues, this book (and others like it) is to be interpreted, if not as a kind of tourist's guidebook to the curiosities of Constantinople (Mango), at least as having been compiled also from such guidebooks, among the several and very distinct sources most certainly implied in its composition.

141940

141945 As James writes, "statues were perceived on both the intellectual and popular level as animated, dangerous and talismanic", which suggests an official intention to promote no more than the artistic valour of the sculptures.

141950

When reading the full text of the *Ekphrasis*, we sometimes receive the impression of being in front of a text to be performed; several marks of colloquialism, space indications (scenic indications indeed) and other aspects of Christodoros' verses make it easy to imagine an actor (or the poet himself) at least reading his text aloud to an audience, around and in dialogue with the statues themselves. We can think, for instance, of a guided tour of some of the masterpieces of the Zeuxippus, or even a poetical and dramatic performance prepared for one of the several dedications of statues we know to have taken place in the Baths. More than a simple speculation, this chance becomes a real possibility if we think of parallel poems that we know to have been performed for an audience such is the case of the *Ekphrasis* of Eagia Sophia that Paul Silentiarius wrote in the late-sixth century, after the rebuilding of the temple, to be performed in the day of its dedication, in 563. The only manuscript that transmits the text clearly shows marginal annotations and other scenic indications destined for the actors. That Christodoros' poem could have been written for a similar ceremony and performative end is a very plausible possibility. Maybe we only lack the manuscript to prove it.

141955

141960 The arguments provided so far seem to unveil a little more of Constantine's artistic convictions and careful plans for his own city of Constantinople. Archaeology, literary sources and the comparison with contemporary or neighbouring examples show how the case of the Zeuxippus, as for its functioning as an art-gallery, is indeed special. It was not the result of years of sculptural integration in a public building, rather the best-known (and documented) case of the construction of a national gallery of antique sculpture, with very clear political and artistic purposes. But the Zeuxippus, with its statuary, was also a space of memories. It was the space where art was meant to forge the inexistent memories of an entire people,

141965

141970

141975

the Byzantine people. A people to whom past-references were not part of its own history; a people who needed, more than any other and in a very crucial moment, to fulfil its lack of *paideia*. And plastic art was an important part of the imperial plan to do so.

Zosimus, New History, book 2

[...] Experience assures us, that while these ceremonies were duly performed, according to the direction of the oracles, the empire was secure, and likely to retain its sovereignty over almost all the known world; and on the other hand, when they were neglected, about the time when Dioclesian laid down the imperial dignity, it fell to decay, and degenerated insensibly into barbarism. That I state nothing but truth I will prove from chronology. From the consulate of Chilo and Libo, in which Severus celebrated the secular games, or rites, to the ninth consulate of Dioclesian, and eighth of Maximianus, was a hundred and one years. Then Dioclesian from an emperor became a private individual, and Maximianus followed his example. But when Constantine and Licinius were in their third consulship, the 110 years were completed, and the festival ought to have been kept according to custom; but it was neglected, and affairs consequently declined to their present unfortunate condition. Three years after Dioclesian died, and the reigning emperors, Constantius and Maximianus Gallerius declared Severus and Maximinus (who was nephew to Gallerius), the Caesars, giving all Italy to Severus, and the eastern provinces to Maximinus. Affairs being all regulated and the barbarians quiet, since the Romans had been so successful against them, Constantine, who was the son of Constantius by a concubine, and had previously an ambition of being emperor (but was more inflamed with that desire, since Severus and Maximinus had acquired the name and honour of Caesars), was now resolved to leave the place where he had resided, and to go to his father Constantius, who was beyond the Alps, and generally in Britain. But being apprehensive of seizure by the way, many persons being well acquainted of his anxiety for dominion, he maimed all the horses that were kept for public service, whenever he came to any stable where they were kept, except what he took for his own use. He continued to do this throughout his journey, by which means he prevented those that pursued him from going further, while he himself proceeded toward the country where his father was.

It happened that Constantius died at that time; the guards, therefore, who thought none of his legitimate children to be fit for the imperial dignity, considered that Constantine was a person capable of sustaining it, and conferred the honour upon him, in hopes of being remunerated with handsome presents. When his effigy according to custom was exhibited at Rome, Maxentius, the son of Maximianus Herculus, could not endure the sight of Constantine's good fortune, who was the son of a harlot, while himself, who was the son of so great an emperor, remained at home in indolence, and his father's empire was enjoyed by others. He therefore associated with himself in the enterprise Marcellianus and Marcellus, two military tribunes, and Lucianus, who distributed the swine's flesh, with which the people of Rome were provided by the treasury, and the court-guards called Praetoriani. By them he was promoted to the imperial throne, having promised liberally to reward all that assisted him in it. For this purpose they first murdered Abellius, because he, being prefect of the city, opposed their enterprise.

Maximianus Gallerius, when he had learned this, sent Severus Caesar against Maxentius with an army. But while he advanced from Milan with several legions of Moors, Maxentius corrupted his troops with money, and even the prefect of the court, Anullinus, and thereby conquered him with great ease. On which Severus fled to Ravenna, which is a strong and populous city, provided with necessaries sufficient for himself and soldiers. When Maximianus Herculus knew this, he was doubtless greatly concerned for his son Maxentius, and therefore, leaving Lucania where he then was, he went to Ravenna. Finding that Severus could not by any means be forced out of this city, it being well fortified, and stored with provisions, he deluded him with false oaths, and persuaded him to go to Rome. But on his way thither, coming to a place called the Three Tabernae, he was taken by a stratagem of Maxentius and immediately executed. Maximianus Gallerius could not patiently endure these injuries done to Severus, and therefore resolved to go from the east to Rome, and to punish, Maxentius as he deserved. On his arrival in Italy, he found the soldiers about him so treacherous, that he returned into the east without fighting a battle.

At this period Maximianus Herculus, who lamented the tumults which disturbed the public peace, came to Dioclesian who then lived at Carnutum, a town of Gallia Celtica, and endeavoured to persuade him to resume the empire, and not to suffer the government which they had preserved so long and with so much difficulty to be exposed to the madness and folly of those who had possessed themselves of it, and who had already brought it near to ruin. But Dioclesian refused to listen to him; for he wisely preferred his own quiet, and perhaps foresaw the troubles that would ensue, being a man well versed in matters of religion. Herculus therefore, perceiving that

he could not prevail with him, came to Ravenna, and so returned to the Alps to meet Constantine, who lay there. And being naturally a busy faithless man, he promised his daughter Fausta to Constantine, which he performed, but persuaded him to pursue Maximianus Gallerius, who was then leaving Italy, and to lay wait for Maxentius. To all which Constantine agreed. He then left him, designing if possible to recover the empire, as he hoped to create a quarrel between Constantine and his son Maxentius. But while he attempted these things, Maximianus Gallerius assumed Licinius, as his colleague in the empire, with whose assistance he hoped to cope with Maxentius. But while Gallerius deliberated on these affairs, he died of an incurable wound, and Licinius then also claimed the sole dominion. Maximianus Herculus endeavoured, as I have said, to recover the empire by alienating the soldiers from Maxentius. For which purpose, by gifts and insinuating addresses, having brought them over to him, |42 he endeavoured to form a conspiracy against Constantine, in which his soldiers were to join. But Fausta revealed it to Constantine, and Herculus, who was now overborne by so many disappointments, died of a distemper at Tarsus.

Maxentius, having escaped this danger, and being of opinion that he was now well enough established in the empire, sent persons into Africa, and in particular to Carthage, to carry his image about that country. But the soldiers in that country forbade it, out of regard to Maximianus Gallerius, and the respect they had for his memory, until they heard that Maxentius was coming to make war on them on the plea of an insurrection. They then went to Alexandria, but meeting with a great army with which they were not able to contend, they returned to Carthage. Maxentius, being disturbed at this, resolved to sail for Africa, and to punish the authors of the commotion. But the soothsayers having sacrificed and given him ill omens, he was afraid to go, not only because the entrails had that appearance, but also lest Alexander, who was prefect of the court in Africa, should be his enemy. To secure his passage thither from all doubt, he sent to Alexander, desiring him to send his son as an hostage. But he, suspecting that Maxentius did not desire his son for the mere purpose of an hostage, but to deceive him, denied the request. After this, Maxentius sending other agents to him to take him off by treachery and stratagem, the plot was discovered; and the soldiers, having then got a favourable opportunity to rebel, conferred the purple robe on Alexander, though he was by birth not only a Phrygian, but a timid cowardly man, and unlit for any difficult undertaking, and was, moreover, of an advanced age.

At that time a fire happened at Rome; whether it came out of the air or earth is uncertain. It broke out in the temple of Fortune; and while the people ran to extinguish it, a soldier, speaking blasphemy against the goddess, was killed by the mob out of zeal, by which a mutiny was occasioned among the soldiers. They would have destroyed the whole city, had not Maxentius soon appeased their rage. Maxentius after this sought every occasion to make war on Constantine, and pretending grief for his father's death, of which Constantine was the cause, he designed to go towards Rhaetia, which is contiguous both to Gaul and Illyricum. For he imagined that he should subdue Dalmatia and Illyricum, by the assistance of the generals in those parts, and of the army of Licinius. But thinking it better first to arrange affairs in Africa, he raised an army, bestowing the command of it on Rufius Volusianus, prefect of the court, and sent them into Africa. He sent Zeno also along with Rufius, who was a person not only expert in military affairs, but esteemed for his courtesy and affability. On the first charge, Alexander's troops retired on a body of men in the rear, nor was the other party left unconquered by the enemy. Alexander himself was taken and strangled.

The war being thus at an end, a good opportunity was afforded to sycophants and informers of impeaching all the persons in Africa, who had good estates, as friends to Alexander: nor were any of the accused spared, but some of them put to death, and others deprived of all their possessions. After this he triumphed at Rome for the mischief done at Carthage. Such was the state of the affairs of Maxentius, who conducted himself with cruelty and licentiousness towards all the inhabitants of Italy, and even to Rome itself. Meantime Constantine, who had long been jealous of him, was then much more disposed to contention. Having therefore raised an army amongst the Barbarians, Germans, and Celts, whom he had conquered, and likewise drawn a force out of Britain, amounting in the whole to ninety thousand foot and eight thousand horse, he marched from the Alps into Italy, passing those towns that surrendered without doing them any damage, but taking by storm those which resisted.

While he was making this progress, Maxentius had collected a much stronger army; consisting of eighty thousand Romans and Italians, all the Tuscans on the sea coast, forty thousand men from Carthage, besides what the Sicilians sent him; his whole force amounting to a hundred and seventy thousand foot and eighteen thousand horse.

Both being thus prepared, Maxentius threw a bridge over the Tiber, which was not of one entire piece, but divided into two parts, the centre of the bridge being made to fasten with irons, which might be drawn out upon occasion. He gave orders to the workmen, that as soon as they saw the army of Constantine upon the juncture of the bridge, they should draw out the iron fastenings, that the enemy who stood upon it might fall into the river.

Constantine, advancing with his army to Rome, encamped in a field before the city, which was broad and therefore convenient for cavalry. Maxentius in the mean time shut himself up within the walls, and sacrificed to the gods, and, moreover, consulted the Sibylline oracles concerning the event of the war. Finding a prediction, that whoever designed any harm to the Romans should die a miserable death, he applied it to himself, because he withstood those that came against Rome, and wished to take it. His application indeed proved just. For when Maxentius drew out his army before the city, and was marching over the bridge that he himself had constructed, an infinite number of owls flew down and covered the wall. When Constantine saw this, he ordered his men to stand to their arms. And the two armies being drawn up opposite to each other, Constantine sent his cavalry against that of the enemy, whom they charged with such impetuosity that they threw them into disorder. The signal being given to the infantry, they likewise marched in good order towards the enemy. A furious battle having commenced, the Romans themselves, and their foreign allies, were unwilling to risk their lives, as they wished for deliverance from the bitter tyranny with which they were burdened; though the other troops were slain in great numbers, being either trod to death by the horse, or killed by the foot.

As long as the cavalry kept their ground, Maxentius retained some hopes, but when they gave way, he tied with the rest over the bridge into the city. The beams not being strong enough to bear so great a weight, they broke; and Maxentius, with the others, was carried with the stream down the river.

When the news of this victory was reported in the city, none dared to shew any joy for what had happened, because many thought it was an unfounded report. But when the head of Maxentius was brought upon a spear, their fear and dejection were changed to joy and pleasure. On this occasion Constantine punished very few, and they were only some few of the nearest friends of Maxentius; but he abolished the praetorian troops, and destroyed the fortresses in which they used to reside. At length, having arranged all things in the city, he went towards Gallia Celtica; and on his way sent for Licinius to Milan, and gave him in marriage his sister Constantia, whom he had formerly promised him, when he wished him to unite with himself against Maxentius.

That solemnity over, Constantine proceeded towards the Celtae. It was not long before a civil war broke out between Licinius and Maximianus, who had a severe engagement, in which Licinius at first appeared to have the disadvantage, but he presently rallied and put Maximianus to flight. This emperor, travelling through the east into Egypt, in hopes of raising a force to renew the war, died at Tarsus.

The empire being thus devolved on Constantine and Licinius, they soon quarrelled. Not because Licinius gave any cause for it, but that Constantine, in his usual manner, was unfaithful to his agreement, by endeavouring to alienate from Licinius some nations that belonged to his dominions. By this means an open rupture ensued, and both prepared for war. Licinius took up his head-quarters at Cibalis, a city of Pannonia, which stands on a hill; the road to which is rugged and narrow. The greatest part of this road is through a deep morass, and the remainder up a mountain, on which stands the city. Below it extends a spacious plain, which entertains the view with a boundless prospect. On this Licinius fixed his camp, and extended the body of his army under the hill, that his flanks might be protected from the enemy.

Constantine in the meantime drew up his men near the mountain, placing the horse in front, thinking that to be the best disposition lest the enemy should fall upon the foot, who moved but slowly, and hinder their advance. Having done this, he immediately gave the charge, and attacked the enemy. This engagement was one of the most furious that was ever fought; for when each side had expended their darts, they fought a long time with spears and javelins; and after the action had continued from morning to night, the right wing, where Constantine himself commanded, began to prevail. The enemy being routed, Licinius's troops, seeing him mounted and ready to fly, dared not stay to eat their portions, but left behind them all their cattle and provisions, taking only as much food as would suffice for one night, and marched with great precipitation along with Licinius to Sirmium, a city of Pannonia, by which runs a river which discharges itself into the Ister. In passing this town he broke down the bridge over the river, and marched on with an intention to levy troops in Thrace. Constantine, having taken Cibalis, and Sirmium, and all the towns that Licinius had abandoned, sent five thousand men in pursuit of him. But as these were ignorant of

142185 the course he had taken, they could not overtake him. Constantine however, having
rebuilt the bridge over the Saus, which Licinius had broken down, was with his army
almost at his heels. Having entered Thrace, he arrived at the plain where Licinius
lay encamped. On the night of his arrival there he marshalled his army, and gave
142190 orders for his soldiers to be ready for battle by day-break. As soon as it was light,
Licinius, perceiving Constantine with his army, drew up his forces also, having been
joined by Valens, whom he styled Caesar, after the battle of Cibalis. When the armies
engaged, they first fought with bows at a distance; but when their arrows were spent,
they began to use their javelins, and poignards. Thus the battle continued very
142195 obstinately for a considerable time, until those whom Constantine had sent in pursuit
of Licinius descended from an eminence upon the armies while they were engaged. These
wheeled round the hill before they arrived at them, deeming it best to join their own
party from the higher ground, and to encompass the enemy. The troops of Licinius,
being aware of them, courageously withstood against them all, so that many thousands
were slain on both sides, and the advantage was equal, till the signal was given for
142200 both to retire. Next day they agreed on a truce, and entered into an alliance with
each other, on condition that Constantine should possess Illyricum and all the
nations westward, and that Licinius should have Thrace and the east; but that Valens,
whom Licinius had made Caesar, should be put to death, because he was said to be the
author of all the mischief which had happened. Having done this, and sworn on both
142205 sides to observe the conditions, Constantine conferred the rank and title of Caesar
on Crispus, his son by a concubine called Minervina, who was as yet but a youth, and
on Constantine, who was born but a few days before at Arelatum. At the same time
Licinianus, the son of Licinius, who was twenty months of age, was declared Caesar,
Thus ended the second war.

142210 Constantine hearing that the Sauromatae, who dwelt near the Palus Maeotis, had passed
the Ister in boats, and pillaged his territories, led his army against them, and was
met by the barbarians, under their king Rausimodus. The Sauromatae attacked a town
which was sufficiently garrisoned, but its wall was built in the lower part of stone,
and in the upper part of wood. They therefore thought that they might easily take the
142215 town by burning all the wooden part of the wall; and with that view set it on fire,
and in the mean time shot at those who stood on the walls. The defenders threw down
darts and stones upon the barbarians, and killed many of them; and Constantine then
coming up and falling on them from a higher ground, slew a great number, took wore
alive, and put the rest to flight. Rausimodus, having lost the greater part of his
142220 army, took shipping and crossed the Ister, with an intention of once more plundering
the Roman dominions. Constantine, hearing of his design, followed them over the
Ister, and attacked them in a thick wood upon a hill, to which they had fled, where
he killed many of them, amongst whom was Rausimodus. He also took many of them
142225 prisoners, giving quarter to those that would submit; and returned to his head-
quarters with an immense number of captives. These he distributed into the different
cities, and then came to Thessalonica, where having constructed a harbour (this city
not possessing one before), he made new preparations for war against Licinius. For
this purpose, he fitted out two hundred galleys of war; each with thirty oars,
besides two thousand transport vessels, and raised a force of a hundred and twenty
142230 thousand foot, and ten thousand horsemen and sailors. Licinius, hearing of the great
preparations of Constantine, sent messengers to every nation, commanding them to
prepare a sufficient number of men for the navy, besides horse and foot soldiers. The
Egyptians therefore sent out eighty galleys, the Phoenicians an equal number, the
Ionians and Dorians of Asia sixty, the Cyprians thirty, the Carians twenty, the
142235 Bithynians thirty, and the Africans fifty. His foot-soldiers amounted to nearly a
hundred and fifty thousand, but his horse only to fifteen thousand, which were sent
to him from Phrygia and Cappadocia. Constantine's navy lay at Piraeus, that of
Licinius in the Hellespont. When they had thus established their naval and military
forces, Licinius encamped at Adrianople in Thrace, whilst Constantine sent for his
142240 navy from Piraeus, which was built and manned chiefly in Greece. Advancing with his
infantry from Thessalonica, he encamped on the bank of the river Hebrus, which runs
to the left of Adrianople. At the same time, Licinius drew up his army in order of
battle, extending from a mountain which is above the town two hundred stadia, as far
as the junction of another river with the Hebrus; thus the armies continued opposite
142245 to each other for several days. Constantine. observing where the river was least
broad, concerted this plan. He ordered his men to bring trees from the mountain, and
to tie ropes around them, as if he intended to throw a bridge over the river for the
passage of his army. By this stratagem he deluded the enemy, and, ascending a hill on
which were thick woods sufficient to conceal any that were in them, he planted there
142250 five thousand archers and eight hundred horse. Having done this, he crossed the

Hebrus at the narrowest place, and so surprised the enemy that many fled with all their speed, while others, who were amazed at his unexpected approach, were struck with wonder at his coming over so suddenly. In the meantime, the rest of his army crossed the river in security, and a great slaughter commenced. Nearly thirty
142255 thousand fell; and about sunset Constantine took their camp, while Licinius, with all the forces he could muster, hastened through Thrace to his ships.
As soon as day appeared, the whole army of Licinius, or as many of them as had fled to the neighbouring mountains and vallies, together with those that Licinius through haste had left behind him, surrendered themselves to Constantine. Licinius being
142260 arrived at Byzantium, Constantine followed and besieged him in that city. His navy, as before related, had now left Piraeus and lay at Macedon. He therefore sent orders to his admirals to bring the ships into the Hellespont. This being effected according to the command of Constantine, the officers of his navy thought it not prudent to engage with more than eighty of their best sailing vessels, which were gallies of
142265 thirty oars each, because the place was too narrow for the reception of a greater number. Upon which Abantus, the admiral of Licinius, making use of two hundred ships, despised the smallness of the enemy's fleet, which he thought he could easily surround. But the signals on both sides being given, and the vessels meeting stern to stern, the seamen of Constantine managed their ships so as to engage in good order;
142270 but the ships of Abantus, sailing against the enemy without any order, and being confined by the narrowness of the place, became exposed to the enemy, who sunk and otherwise destroyed them. Many were thrown overboard; till at length night put an end to the engagement. The fleets then separated and put in at different places, the one at Eleus in Thrace, and the other at the Aeantian harbour. The following day, the
142275 wind blowing hard from the north, Abantus put out from the Aeantian port and prepared for action. But the galleys of fifty oars being come to Eleus by order of the admirals, Abantus was alarmed at the number of vessels, and hesitated whether to sail against the enemy. About noon the north wind subsided; the south wind then blew with such violence, that the ships of Licinius, which lay on the Asiatic coast, were some
142280 driven on shore, others broken against the rocks, and others foundered with all on board. In this affair five thousand men perished, together with a hundred and thirty ships filled with men, whom Licinius had sent out of Thrace to Asia accompanied by a part of his army; Byzantium being too small to contain all that were besieged with Licinius. The sea-fight being thus concluded, Abantus effected his escape with only
142285 four ships into Asia. The navy of Constantine, having arrived in the Hellespont laden with abundance of provisions and stores for his troops, weighed anchor in order to join in the siege of Byzantium, and to blockade the city by sea. The foot-soldiers of Licinius, being alarmed at the sight of such a navy, procured ships in which they sailed to Eleus.
142290 Meantime Constantine continued intent upon the siege, and raised a mound of equal height, with the wall, on which he placed wooden towers that overlooked the wall, from which his soldiers shot: those who defended it, in order that he might with greater security bring battering rams and other engines of war near it. By these means he thought himself sure to take the city. At which Licinius, being terrified,
142295 and not knowing how to act, resolved to leave Byzantium, and the weaker part of his army therein, and to take with him only such men as were fit for active service, and had given proofs of their attachment to himself, and to hasten without delay to Chalcedon in Bithynia. He flattered himself that another army might be raised in Asia, which would enable him again to contend with his adversary. Arriving therefore
142300 at Chalcedon, and, having appointed Martinianus to the command of the court guards, whom the Romans call Magister officiorum, his associate in this dangerous enterprize, he declared him Caesar, and sent him with an army to Lampsacus, to hinder the passage of the enemy from Thrace into the Hellespont. He posted his own men on the hills and passes about Chalcedon.
142305 While Licinius was thus occupied, Constantine, who had a great number of transports as well as warlike vessels, and was desirous to make use of them in crossing over and possessing himself of the opposite shore, fearing that the Bithynian coast might be inaccessible to ships of burden, immediately constructed some small vessels, with which he sailed to the sacred promontory, which lies at the entrance of the Pontus,
142310 two hundred stadia from Chalcedon. He there landed his army, which, having done, he drew them up upon some adjacent hills. Licinius, though he then saw that Bithynia was already in the hands of his enemy, was rendered so desperate by danger, that he sent for Martinianus from Lampsacus, and in order to encourage his men to fight, told them that he himself would lead them. Having said what he thought necessary to encourage
142315 them, he drew them up in order of battle, and marching out of the city, met the enemy, who were prepared for him. A sharp engagement taking place between Chalcedon

and the sacred promontory, Constantine had the superiority; for he fell on the enemy with such resolution, that of a hundred and thirty thousand men, scarcely thirty thousand escaped. When the Byzantines heard of this, they immediately threw open their gates to Constantine, as did the Chalcedonians also. Licinius after this defeat went to Nicomedia with what horse were left him, and a few thousands of foot. At this time a Persian named Hormisdas, of the royal family, came over to Constantine for refuge, under these circumstances. His father had been king of Persia. He was once celebrating his own birth-day after the Persian manner, when Hormisdas entered the palace, bringing with him a large quantity of venison. But as the guests at the table did not rise, and pay him the respect and honour due to him, he became enraged, and told them he would punish them with the death of Marsyas. This saying most of them did not understand, because it related to a foreign story; but one of them, who had lived in Phrygia, and had heard the story of Marsyas, explained to them the meaning of Hormisdas's menace, while they sat at table. It was therefore so treasured up in their recollection, that when his father died, they remembered his threat, and chose his younger brother king, though according to law the elder should be preferred above the other children. Not contented with that, they put Hormisdas in chains, and confined him on a hill which lies before their city. But after some time had elapsed, his wife effected his escape in this manner. She procured a large fish, and put a file in its belly, and, sewing it up again, delivered it to the most trusty of her eunuchs, charging him to tell Hormisdas, that he must eat the fish when no one was present, and use what he should find in its belly for his escape. When she had formed this contrivance, she sent several camels loaded with wine, and abundance of meat, to entertain her husband's keepers. While they were enjoying the feast she gave them, Hormisdas cut open the fish, and found the file; having with that filed off the shackles from his legs, he put on the robe of the eunuch, and passed through the midst of his keepers, who were by that time perfectly intoxicated. Taking one of the eunuchs along with him, he fled to the king of Armenia, who was his particular friend. By these means he got safe to Constantine, who shewed him all possible kindness and respect.

But Licinius being besieged by Constantine at Nicomedia also, knew not what to do, being sensible that he had not an army equal to engage. Going, therefore, out of the city, he submitted himself to Constantine, and brought him the purple robe, proclaiming him his emperor and lord, and intreating pardon for what was past. He presumed that he certainly should escape with life, because Constantine had sworn to his wife that he would spare him. But Constantine delivered Martinianus to the guards that they might put him to death, and sent Licinius to Thessalonica, as if he were to live there in security. However, he afterwards broke his oath, which was usual with Constantine, and caused him to be executed.

Now that the whole empire had fallen into the hands of Constantine, he no longer concealed his evil disposition and vicious inclinations, but acted as he pleased, without control. He indeed used the ancient worship of his country; though not so much out of honour or veneration as of necessity. Therefore he believed the soothsayers, who were expert in their art, as men who predicted the truth concerning all the great actions which he ever performed. But when he came to Rome, he was filled with pride and arrogance. He resolved to begin his impious actions at home. For he put to death his son Crispus, stiled (as I mentioned) Caesar, on suspicion of debauching his mother-in-law Fausta, without any regard to the ties of nature. And when his own mother Helena expressed much sorrow for this atrocity, lamenting the young man's death with great bitterness, Constantine under pretence of comforting her, applied a remedy worse than the disease. For causing a bath to be heated to an extraordinary degree, he shut up Fausta in it, and a short time after took her out dead. Of which his conscience accusing him, as also of violating his oath, he went to the priests to be purified from his crimes. But they told him, that there was no kind of lustration that was sufficient to clear him of such enormities. A Spaniard, named Aegyptius, very familiar with the court-ladies, being at Rome, happened to fall into converse with Constantine, and assured him, that the Christian doctrine would teach him how to cleanse himself from all his offences, and that they who received it were immediately absolved from all their sins. Constantine had no sooner heard this than he easily believed what was told him, and forsaking the rites of his country, received those which Aegyptius offered him; and for the first instance of his impiety, suspected the truth of divination. For since many fortunate occurrences had been thereby predicted to him, and really had happened according to such prediction, he was afraid that others might be told something which should fall out to his misfortune; and for that reason applied himself to the abolishing of the practice. And on a particular festival, when the army was to go up to the Capitol, he very

indecently reproached the solemnity, and treading the holy ceremonies, as it were, under his feet, incurred the hatred of the senate and people.

Being unable to endure the curses of almost the whole city, he sought for another city as large as Rome, where he might build himself a palace. Having, therefore, discovered a convenient site between Troas and old Ilium, he there accordingly laid a foundation, and built part of a wall to a considerable height, which may still be seen by any that sail towards the Hellespont. Afterwards changing his purpose, he left his work unfinished, and went to Byzantium, where he admired the situation of the place, and therefore resolved, when he had considerably enlarged it, to make it a residence worthy of an emperor. The city stands on a rising ground, which is part of the isthmus inclosed on each side by the Ceras and Propontis, two arms of the sea. It had formerly a gate, at the end of the porticos, which the emperor Sevirus built after he was reconciled to the Byzantines, who had provoked his resentment by admitting his enemy Niger into their city. At that time the wall reached down from the west side of the hill at the temple of Venus to the sea side, opposite to Chrysopolis. On the north side of the hill it reached to the dock, and beyond that to the shore, which lies opposite the passage into the Euxine sea. This narrow neck of land, between there and the Pontus, is nearly three hundred stadia in length. This was the extent of the old city. Constantine built a circular market-place where the old gate had stood, and surrounded it with double roofed porticos, erecting two great arches of Praeconnesian marble against each other, through which was a passage into the porticos of Severus, and out of the old city. Intending to increase the magnitude of the city, he surrounded it with a wall which was fifteen stadia beyond the former, and inclosed all the isthmus from sea to sea. Having thus enlarged the city, he built a palace little inferior to that of Rome, and very much embellished the hippodrome, or horse-course, taking into it the temple of Castor and Pollux, whose statues are still standing in the porticos of the hippodrome. He placed on one side of it the tripod that belonged to the Delphian Apollo, on which stood an image of the deity. As there was at Byzantium a very large market-place, consisting of four porticos, at the end of one of them, to which a numerous flight of steps ascends, he erected two temples; in one of which was placed the statue of Rhea, the mother of the gods, which Jason's companions had formerly fixed on Mount Dindymus, which is near the city of Cyzicus. It is said, that through his contempt of religion he impaired this statue by taking away the lions that were on each side, and, changing the position of the hands. For it formerly rested each hand on a lion, but was now altered into a supplicating posture, looking towards the city, and seeming to observe what the people were doing. In the other temple he placed the statue of the Fortune of Rome. He afterwards built convenient dwellings for the senators who followed him from Rome. He engaged in no more wars; and even when the Thaifalians, a Scythian tribe, made an incursion into his dominions, he not only neglected to lead his army against them, but after he had lost most of his troops, and saw the enemy plundering all before them, even to his very intrenchments, was contented to save himself by flight. When he was delivered from the distractions of war, he yielded himself to voluptuousness, and distributed to the people of Byzantium a present of corn, which is continued to this day. As he expended the public treasure in unnecessary and unprofitable buildings, he likewise built some which in a short time were taken down again, because being erected hastily they could not stand long. He likewise made a great change in the ancient magistracy. Till that time there had been only two prefects of the court, whose authority was equal; not only were the court soldiers under their control, but those also which guarded the city, and who were stationed in its neighbourhood. The person who had the office of prefect of the court, which was esteemed the next post of honour to that of emperor, distributed the gifts of corn, and punished all offences against military discipline, as he thought convenient. Constantine altered this good institution, and of one office or magistracy formed four. To one of those prefects he committed all Egypt and Pentapolis in Libya, and all the east as far as Mesopotamia, with Cilicia, Cappadocia, Armenia, and all the coast from Pamphylia to Trapezus and the castles near Phasis; to the same person was given all Thrace and Moesia, as far as the mountains Haemus and Rhodope, and the town of Doberus. He likewise added Cyprus and all the Cyclades, except Lemnos, Imbrus, and Samothracia. To another he assigned Macedon, Thessaly, Crete, and Greece, with the adjacent islands, both the Epiruses, the Illyrians, the Dacians, the Triballi, and the Pannonians as far as Valeria, besides the upper Moesia. To the third prefect he entrusted Italy and Sicily, with the neighbouring islands, and Sardinia and Corsica, together with all Africa westward of the Syrtes. To the fourth he committed all beyond the Alps, Gaul, Spain, and Britain. Having thus divided the power of these prefects, he invented other methods likewise of diminishing their influence. For as

there used to be in all places, centurions, tribunes, and generals, he appointed officers called Magistri militum, some over the horse and others over the foot, to whom he gave authority to discipline the soldiers, and punish those that had offended, by which the power of the prefects was diminished. That this innovation was productive of great injury to public affairs both in peace and war I will immediately prove 4. The prefects had hitherto collected the tribute in all places by their officers, and disposed of it in war expences, the soldiers at the same time being subject to their authority, whose offences they punished at discretion. Under these circumstances, the soldiers, considering that the same person who gave them their pay had the infliction of punishments whenever they offended, did not dare to act contrary to their duty, for fear of their stipend being withheld, and of being duly punished. But now since one person is paymaster and another inspector of discipline, they act according to their own inclination.

Constantine likewise adopted another measure, which gave the Barbarians free access into the Roman dominions. For the Roman empire, as I have related, was, by the care of Dioclesian, protected on its remote frontiers by towns and fortresses, in which soldiers were placed; it was consequently impossible for the Barbarians to pass them, there being always a sufficient force to oppose their inroads. But Constantine destroyed that security by removing the greater part of the soldiers from those barriers of the frontiers, and placing them in towns that had no need of defenders; thus depriving those who were exposed to the Barbarians of all defence, and oppressing the towns that were quiet with so great a multitude of soldiers, that many of them were totally forsaken by the inhabitants. He likewise rendered his soldiers effeminate by accustoming them to public spectacles and pleasures. To speak in plain terms, he was the first cause of the affairs of the empire declining to their present miserable state.

However, I must not omit to relate, that having given to his three sons, Constantine, Constantius, and Constans, the title of Caesars, he so greatly enlarged the city of Constantinople, that many of the succeeding emperors, who made it their residence, drew to it too great a number of inhabitants, who flocked there from all parts, as soldiers, merchants, and in other occupations. On this account, its walls were rendered more capacious than those which Constantine built, and the buildings were permitted to be placed so near to each other, that the inhabitants are exposed to much inconvenience and danger both in their houses and in the streets. Besides this a considerable portion of the sea was added to the land by driving down piles, thus forming dry ground, on which was built a sufficient number of houses to form of themselves a considerable city.

I have, indeed, often wondered, since the city of Byzantium is become so great that no other is equal to it either in felicity or magnitude, that our ancestors had not any prophecy concerning its good fortune. Having directed my thoughts some time to this enquiry, I consulted many historians and collections of oracles, and at length, after much difficulty and taking great pains to interpret them, discovered an oracle, which is attributed to Sibylla Erythraea, or Phaello of Epirus. Nicomedes the son of Prusias relying upon this, and interpreting it to his own advantage, by the counsel of Attalus made war upon his father. The oracle I speak of is this:

Thou among sheep, O King of Thrace, shalt dwell,
 But breed a savage lion, fierce and fell,
 Who all the product of thy land shall spoil,
 And reap thy fruitful harvest without toil.
 But thou shalt not enjoy thy honour long,
 Torn by wild dogs, which shall about thee throng.
 Then a fierce, hungry, sleeping wolf shall thou
 Awake, to whom thy conquered neck shall bow.
 Next a whole herd of wolves Bithynia's land,
 By Jove's decree shall ravage, and the hand
 To which obedience the Byzantines yield
 Shall in short time her royal sceptre wield.
 Bless'd Hellespont! whose buildings by the hand
 Of heaven were rais'd, and by its order stand.
 Yet shall that cruel wolf my forces fear,
 For all shall know me, who inhabit here.
 My sire's designs no longer I'll conceal
 But heaven's intent in oracles reveal.
 Thrace shall e're long a monstrous birth produce,
 Baneful to all by course of time and use:

142515 A swelling ulcer by the sea shall grow,
 Which when it breaks, with putrid gore shall flow.

This oracle, in an obscure manner, points out all the particular evils that were to befall Bythynia through the heavy impositions laid upon it; and that the government was to devolve on those to whom the Byzantines were then subject, in this distich:
_____ and the hand
To which obedience the Byzantines yield
Shall in short time her royal sceptre wield.

142525 And though the events foretold did not occur until many ages afterwards, no one can suppose that the prophecy related to any other place; for all time is short in respect of the deity, who exists through all ages. This conjecture I have formed both from the words of the prophecy and from the event. Should any believe that this prophecy has a different import, they have liberty to enjoy their own opinion.

142530 Constantine, having done this, not only continued to waste the revenue of the empire in useless expences, and in presents to mean and worthless persons, but oppressed those who paid the tributes, and enriched those that were useless to the state. For he mistook prodigality for magnificence. He also laid a tax of gold and silver on all merchants and tradesmen, even to the lowest classes, nor did he even spare the

142535 poorest prostitute. Thus, on the return of every fourth year, when the tax was to be paid, nothing could be heard through the whole city but lamentations and complaints. When the time arrived nothing but whips and tortures, provided for those who on account of their extreme poverty could not pay the money. Mothers were even forced to part with their children, and fathers to prostitute their daughters, for money to

142540 satisfy the collectors of this exaction. Wishing likewise to invent some trouble for the rich, he summoned them all and made them praetors, for which dignity he demanded a sum of money. Upon this account when they who had the management of this affair arrived in any city the people fled into other countries, in the fear of gaining this honour with the loss of all they possessed. He had the schedules of all the best

142545 estates, and imposed a tribute on each of them, which he called a purse. With these exactions he exhausted all the towns; for they continued in force so long even after the time of Constantine, that the cities were completely drained of money, and many of them forsaken by their inhabitants.

After Constantine had oppressed and tormented the people in these various modes, he died of a disease, and was succeeded by his three sons, who were not born of Fausta the daughter of Maximianus Herculus, but of another woman, whom he had put to death for adultery. They devoted themselves more to the pleasures of youth than to the service of the state. They began by dividing the nations between them. Constantine

142550 the eldest, and Constans the youngest, having for their share all beyond the Alps, together with Italy and Illyricum, the countries bordering on the Euxine sea and all that belonged to Carthage in Africa; Constantius obtained all Asia, the east, and Egypt. There were likewise others who shared in the government; Dalmatius, whom Constantine made Caesar, Constantius his brother, and Anaballianus, who had all worn robes of purple embroidered with gold, and were promoted to the order of

142560 Nobilissimates by Constantine, from respect to their being of his own family. The empire being thus divided, Constantius who appeared to take pains not to fall short of his father in impiety, began by shedding the blood of his nearest relations. He first caused Constantius, his father's brother, to be murdered by the soldiers; next to whom he treated Dalmatius in the same manner, as also Optatus whom

142565 Constantine had raised to the rank of a Nobilissimate. Constantine indeed first introduced that order, and made a law, that every Nobilissimate should have precedence over of the prefects of the court. At that time, Ablabius prefect of the court was also put to death; and fate was just in his punishment, because he had concerted the murder of Sopatrus the philosopher, from envy of his familiarity with

142570 Constantine. Being unnatural |58 towards all his relations, he included Anaballianus with the rest, suborning the soldiers to cry out, that they would have no governors but the children of Constantine. Such were the exploits of Constantius. In the mean time Constantine and Constans were disputing for that part of Africa which belonged to Carthage, and for Italy. Constans, who wished to surprise, his

142575 brother, concealed his enmity for three years. He took occasion, when he was in a province that was attached to himself, to send soldiers to him, on pretence of assisting him in the war against the Persians, but in reality to assassinate him by surprise. This they accordingly performed. Such was the end of Constantine.

142580 Constans, having thus removed his brother, exercised every species of cruelty toward his subjects, exceeding the most intolerable tyranny. He purchased some well favoured

Barbarians, and had others with him as hostages, to whom he gave liberty to harrass his subjects as they pleased, in order to gratify his vicious disposition. In this manner he reduced all the nations that were subject to him to extreme misery. This gave uneasiness to the court guards, who perceiving that he was much addicted to hunting placed themselves under the conduct of Marcellinus prefect of the treasury, and Magnentius who commanded the Joviani and Herculiani (two legions so termed), and formed a plot against him in the following manner. Marcellinus reported that he meant to keep the birth-day of his sons, and invited many of the superior officers to a feast. Amongst the rest Magnentius rose from table and left the room; he presently returned, and as it were in a drama stood before thorn clothed in an imperial robe. Upon this all the guests saluted him with the title of king, and the inhabitants of Augustodunum, where it was done, concurred in the same sentiment. This transaction being rumoured abroad, the country people flocked into the city; while at the same time a party of Illyrian cavalry who came to supply the Celtic legions, joined themselves with those that were concerned in the enterprize. When the officers of the army were met together, and heard the leaders of the conspiracy proclaim their new emperor, they scarcely knew the meaning of it; they all, however, joined in the acclamation, and saluted Magnentius with the appellation of Augustus. When this became known to Constans, he endeavoured to escape to a small town called Helena, which lies near the Pyrenean mountains. He was taken by Gaision, who was sent with some other select persons for that purpose, and being destitute of all aid, was killed. Magnentius thus gained the empire, and possessed himself all 59 the nations beyond the Alps, and the whole of Italy. Vetrano, general of the Pannonian army, upon hearing of the good fortune of Magnentius, was himself inflamed with the same desire, and was declared emperor by the legions that were with him, at Mursa, a city of Pannonia. While affairs were thus situated, the Persians plundered the eastern countries, particularly Mesopotamia. But Constantine, though he was defeated by the Persians, yet resolved to subdue the factions of Magnentius and Vetrano. While he was forming these resolutions, and was very intent on warlike preparations, Magnentius still remaining in Gallia Celtica, Nepotianus, nephew to Constantius, by his sister Eutropia, collected a band of persons addicted to robbery and all kinds of debauchery, with whom he came to Rome, and appeared in an imperial dress. Anicetus, whom Magnentius had made prefect of the court, armed some of the common people, and led them out of the city to engage with Nepotianus. A sharp conflict ensued between them. The Romans being undisciplined, and observing no order, were easily routed; and when the prefect saw them fly, he shut the gates, for fear the enemy should follow them into the city. The troops of Nepotianus pursued them, and as they had no way of escape, killed every man. In a few days after, Magnentius sent an army under the command of Marcellinus, and Nepotianus was put to death.
