 matter of great importance to them. Because their fanatical Rabbins inspire them with
 27485 the idea that at Safet, the principal, but otherwise in itself a small place in
 Galilee, not far from Bethulie, the Messiah will reveal his kingdom, and also many of
 their lawyers and supposed saints are buried there; so many from the other provinces
 are wont to go there, in order to die there, and to be buried; but which freedom they
 must buy there, at great expense, from the Turks. In this they nevertheless hold fast
 27490 to the institutions of their fathers, remaining thus, in fulfillment of Jesus' word,
 and in confirmation of the truth of the Christian religion, that people, which is
 captive among all peoples, and that generation, which shall not perish, until all
 that Christ has said shall be fulfilled. Luke XXI 32.
 Often most of these nations dwell together in one city, giving it, by its diverse
 27495 beings, statures and clothing, an enviable precedence over the largest cities of
 Europe.
 A multitude of languages are spoken in the Turkish Empire. The Turkish, as the
 dominant one, must be given the first place, with which the Tartar has close ties.
 With the first one can, fairly, come to terms with European Turkey and Asia Minor.
 27500 The Arabic, but in various dialects, extends further. By it one can help oneself with
 all Scholars and Prominents, not to say, that it is spoken in the vast Arabia, Egypt,
 Syria, and many other Countries. The Persian is spoken in the Provinces bordering on
 Persia. Among all the Greeks the Modern Greek is spoken, as is Armenian among the
 27505 Armenians, although they, often, understand only Turkish and Persian, or Arabic. The
 Coptic can hardly be counted, because the Copts, mostly, make use of Arabic. The
 Illyrian is spoken in Slavonia, Croatia and Dalmatia. The Walachian, which closely
 resembles Latin, is in use in Walachia and Moldavia. The Lingua Franca is understood
 and spoken by almost all nations on the coasts of the Levant. This is a very
 27510 corrupted Italian, in which the nominative is taken for all cases, and the infinitive
 for all tempora and modes of conjugation. The Jews have, besides the prevailing
 language of the place, mixed their peculiar Hebrew with the Spanish or Italian; for
 fear they say that the latter, and also the French, is understood and spoken among
 the principal merchants.
 27515 §. IV. Physical observations on Turkey, especially the region of Smyrna.
 The climate must naturally vary greatly in such an extensive Empire; but in general
 it may be assumed that the air is reasonably pleasant and healthy. The winter
 consists, properly speaking, only of rainy months, when after a rain, by a subsequent
 27520 north wind, a sensible cold comes, which, after the previously opened sweat-holes,
 goes through the marrow and bone, but does not last long. The water seldom freezes,
 and snow is even rarer. (*) Everyone then covers themselves with fur coats, and warms
 themselves by a fire of coals, which stands in large copper pans in the room; for
 stoves are not in use there at all. Chimneys are seldom. Instead, they make use,
 especially by the First Names [?], of the Tandur. This is a small, about 3 feet high
 27525 square table, which is provided with a bottom at the bottom, so that one can put a
 fire of coals on it. It is covered with carpets, which those who sit at it, and have
 their feet stretched out against the bottom, are accustomed to draw up to their chest
 or neck. The rain often lasts, with heavy showers, three or more days; but in Egypt

it is rare, and even rarer in high than in low Egypt. But it is also, often, fine
 27530 weather, and, especially in February, many flowers and the almond trees are already
 in bloom. Everything then grows so strongly, that one can see it. The fig tree does
 not bud until all the cold is over. This is the allusion of Christ, Luke. XXI 29. 30.
 Spring is exceedingly lovely, but does not last long. Summer comes, usually, already
 27535 in April, with a strong heat. Around Pentecost one still sees everything green; but
 suddenly a south wind arises, and within 24 hours, or at most 2 or 3 days, everything
 is white. By that one will understand the place, Psalm CIII 15. 16. The days of man
 are like grass, like a flower of the field, so he flourishes: when the wind has
 passed over it, it is no more, and its place it knows no more. Hereupon the Harvest
 27540 begins. The corn cut with sickles is brought together on the threshing floors in
 round heaps, under the open sky. There it is threshed out, according to the method
 also indicated in the Bible, by oxen as well as horses; whereas they gradually
 flatten the round heaps of corn, and thereby stamp out the corn, or else drag heavy
 wooden boards, 2 or 3 ells long, worked high at the front, and at the bottom, very
 27545 densely, set with flints, round. Here the corn is thrown against the wind, so that
 the pure corn, of course, flies away to a certain distance from the shovel, but the
 chaff (*) is scattered. Many places in Holy Scripture refer to this custom, e.g.
 Psalm I 4. and Matt. III 12. Therefore, with such threshing, one does not get long
 straw, as elsewhere in Europe: one does not need it either; for the houses, which
 have proper roofs, are covered with tiles, but most of them are provided with
 27550 terraces. Notwithstanding that such threshing, progresses easily, for a couple of
 months; yet it is not disturbed by rain; for the summer is without rain, seeing then,
 in 3 or 4 months, not a cloud in the sky. And this must be considered, as a special
 blessing, that, with the great heat in June, July and August, it does not rain,
 because otherwise the corn on the threshing floors, as well as the raisins and figs,
 27555 would spoil, as those which are dried under the open sky; and the silk-building would
 then often fail. Observing this, one will be able, thereby, to judge Samuel's act,
 Sam. XII 16-18. to raise up a sudden storm and rain, at the time of the wheat
 harvest, at the surrender of the kingdom to Saul, before the eyes of the people, upon
 his prayer to the Lord, and learn to value it as a great and effective miracle. - The
 27560 dew is indeed very strong in the East, and therefore occurs very often in the Bible;
 but is soon lifted up by the sun. For the rest the air remains perfectly clear during
 the day and at night, and no damp mist arises in it. In the period of 9 years such a
 one was once noticed at Smyrna, but was considered a special rarity. Around June all
 the grass on the plain withers, and the leaves only on the trees, the gardens and
 27565 regions that can be watered, as well as the herbs and shrubs on the mountains remain
 green. - The heat in June, July and August, (when, to quench thirst, and to cool
 drinks, much snow and ice are used, which in winter is collected on the mountains,
 and kept in ice-cellars,) is in fact extraordinary. Hence a kind of vapours and
 exhalations are produced, which make the air unbearably sultry, and darken the sun,
 27570 although there is no humidity accompanying it. The earth is greatly rent asunder; the
 rocks on the mountains become hot, and a wind that blows over them, becomes as
 burning. No one, except the common people, shows himself, in such a season, from
 eight in the morning, till four in the afternoon, under the open sky. The heat of the
 sun is not to be trifled with here. If one otherwise went naked, the head must
 27575 nevertheless be covered, so as not to make a sudden end of life by the stinging sun,
 as by a stroke. - Autumn is a very pleasant, and unusually moderate time, extending
 until the new year. Then also the thunderstorms begin to come, of which one in the
 summer almost entirely knows. - On a sufficient rain in the autumn and in April
 almost depends the fruitfulness of the whole year. The first is probably the early,
 27580 and the last the latter rain, of which, in the sacred writings, mention is made as a
 special blessing, but also, if it did not come, as a special curse. - One is seldom
 without winds, and when there are none at all, one is in danger of earthquakes.
 During the whole summer the Imbat, or sea wind, sometimes begins to blow before, or
 long after the rising of the sun, and blows, fairly strongly, until midnight, often
 27585 also almost the whole night through, whereby the country is eminently refreshed. —
 Because the Levant lies nearer the Meridian than Germany; so, there, in the summer
 the days are a few hours shorter, but in the winter much longer. And from this shines
 a special wisdom of the Creator, touching the arrangement of the world-system; for if
 the countries, under the meridian, or near it, had not the advantage of the short
 27590 days; then, because of the heat, they would have to perish. — In Smyrna there is no
 northern light, and therefore probably even less in the more southern regions. The
 Vernae in this respect are as incomprehensible to the inhabitants of the Levant, as
 ice is to an East Indian Prince.
 The earth, excepting the rocky mountains and the real deserts, is fertile, producing

27595 mostly, without great cultivation and expense, the necessities and comforts of human
 life. Above many other countries, Turkey has a precedence, as regards medicinal
 herbs. With respect to field and garden fruits, several things may be observed. Among
 the corn, wheat and barley are chiefly cultivated; oats little, rye and vetches none
 27600 at all. Barley is, in the warm regions, more palatable than in the cold; and, because
 in the Levant, fresh barley bread is baked daily, (although the bakers, except at
 rare times, are not allowed to sell it openly,) it is pleasant, and therefore often
 appears in the Bible as good bread. Barley is, there, also the usual fodder for
 horses. Turkish wheat is not sown in all the provinces. Of a kind of Manna, which is
 27605 said to fall in Arabia, and which one could eat instead of bread, as with the
 Israelites, the Caravans know nothing, and no one travels there in hope of finding
 it, without taking with him the necessary provisions. The Lentils in Egypt are the
 best, and the Peas only a garden-fruit. Pleasure gardens with flower-beds, spacious
 promenades, and other regular arrangements find no favour with the Turks. Trees that
 give shade, sufficient spring or well-water, (the latter being found in most
 27610 Provinces beautiful and in abundance,) at most a good arrangement, form with them the
 greatest ornament. The Easterners are uncommonly careful that none of the water that
 flows down from high mountains is lost, and they understand the art of distributing
 it, and of guiding it skilfully to their gardens or fields. The wells are, seldom, at
 small places in their neighbourhood, but at some distance from them, probably to have
 27615 the water the purer, and because most places are built against the hills. People
 still carry the large jars, provided with handles, on their shoulders, as in former
 days. (Genesis XXIV 15.) Not only common, but also women of a respectable rank fetch
 water there, especially in small and less populated places. The machines, to draw the
 water from low wells, not being deep, are very simple among the Easterns. A larger or
 27620 smaller wheel, provided all round with water-scoops, which reaches into the water, is
 turned by means of an upright disk, in which the teeth of the wheel are engaged.
 Above it a strong stem of equal proportion, somewhat crooked, goes over the wheel, to
 which an ass or horse is attached, which by its pulling sets the machine in motion.
 The water then runs into high masonry troughs; (Havuse,) in large gardens, for that
 27625 purpose, a house is usually built in the form of a tower, (Esaj. V 2.) and is,
 according to convenience, led through pipes, or only through the strong downpour from
 the Havuse, to the proper places. — For the rest, everything grows naturally through
 each other. They have the most, with us well-known ground-fruits, such as lettuce,
 white and cauliflower, yellow and white carrots, radishes, etc., although these are
 27630 more watery than with us, but they do not have curly cabbage at all; on the other
 hand they have Melisans, a fruit of dark blue colour, which grow almost in the shape
 of large cucumbers on fairly high stalks, and the Melons. These are of various kinds,
 among which the water- and King-melons are the best. The first are a special miracle
 of the great Creator, who wanted to prove by this, how He could produce water from
 27635 the rocks. They grow in the poorest earth, hiding in a thick green shell a kind of
 reddish spongy substance, which is full of a very unusually tasty liquid. One cannot
 well imagine what a refreshment this is to the people in the warm regions there. The
 onions and cucumbers around Smyrna are so sweet and pleasant that they are eaten raw
 on all occasions as a delicacy, and soups are cooked of them, although they do not
 27640 yet come up to those of Egypt, and one should therefore not wonder at the complaints
 of the Israelites about having to forego them. The best rice grows in Egypt, but
 before it is transported it is doused with hot water, in order to render it unusable
 for sowing abroad. The so-called Turkish, or properly Arabian Coffee comes from
 Yemen, a Kingdom of happy Arabia, and is transported from Mocha, a port of that
 27645 country, over the Red Sea to Suez in ships, thence to Great Cairo carried on camels,
 and then over the Nile to Alexandria, and other Mediterranean cities of Egypt. This
 same country also produces the best Flax. The Tree-wool is grown in most Provinces,
 as in Napoli, Syria, and Greece; but that around Smyrna is one of the best. It does
 not grow there on trees, but on a plant, the seed of which is sown towards April,
 27650 which reaches the height of a cubit; leaves, like those of the small Mallow, but
 almost of a dark blue colour, just as the blossom looks like this, and on it bears
 nuts the size of medlars, which are united in length as in three divisions, which,
 when they are perfectly ripe, split, and from which the tree wool is picked.
 Among the tree fruits, the cherries and nuts are like ours. Of Apples and Pears there
 27655 are not so many kinds, nor so good, as with us. But our Bergamots cannot come close
 to those of Angora. The Peaches do indeed surpass ours in taste; but they are rarely
 allowed to ripen properly there, but often cut off before the time. The blue Plums
 are hardly found there at all. On the other hand, their Almond, Pomegranate, Fig, and
 Olive trees have their precedence. The Pistachio tree properly belongs to Syria, as
 27660 the Palm tree with its dates to Egypt. The latter does not wither in the largest

measure, and thrives better in a sandy than in a moist soil. The Olive trees indeed shed their leaves in the winter, but others come forth again, so that they are continually green. (Psalm XCII 13.) Many Provinces have forests of Oak and Pine. (*) Otherwise, Cypress trees are found everywhere, which are planted by houses, Mosques, and in cemeteries. Vine is much planted, and the grapes are excellent, and of various kinds. In June and July there are small blue ones, then white ones, then large blue and white ones, and finally brown-red ones. They often last until January and February of the following year. The Turks themselves are not allowed to press wine from it, as is permitted to Christians and Jews only, but not in all places; but they dry, during the long summer, the wine grapes, which with us are currants. From it also the Turks prepare strong spirits of brandy, in which they, for want of wine, drink themselves drunk. The vines for the grapes that are to be dried are not allowed to grow higher than half a foot, but the other against the trees. The common wine is there as cheap, as with us the commonest beers. The wine of the island of Scopoli is the best, to drink it mixed with water; for the rest, the muskadelle wine of Tenedos, Smyrna, and Samos, as well as that of the island of Cyprus, is excellent. And the ancient custom of preserving and transporting liquid things in leather bags, still persists; as especially the oil, almost always, is transported in them, from one place to another.

Among the domestic fowl there are mostly pigeons, common chickens, and turkeys. Geese and ducks are found less, and these do not taste as good as with us. There is no lack of many kinds of wild fowl, for instance, partridges, wild ducks and geese, and francolins, or a kind of small pheasant. The turtle-dove is everywhere, and towards autumn the beccasige, a small migratory bird, which there makes up for the lack of larks. The quails are in Greece, and especially on the islands of the Archipelago, in an uncommon number, which are caught and put in vinegar, and taste very well. The storks are there, in a certain respect, sacred birds, and the swallows enjoy an almost equal esteem with the storks. No one dares to shoot them, and their nests on and at the houses and farms are considered a lucky sign. Near Constantinople one finds a kind of diver or sea raven. They fly, in all seasons, on the Channel. This happens, constantly, on the surface of the water. Because one seldom sees this bird rest; therefore the foreigners have given it, because of its constant flying, the name of damned soul, but the Turks that of Jel-Kowan or wind-chaser. It swims very well, and also dives under. He lives more on insects that fly over the water than on fish. During the day he flies, continually, from the mouth of the Black Sea to the Princes' Islands, following, by flying to and fro, the ebb and flow thereof.

Sheep with and without horns, and goats, form the greatest number among the domestic cattle. The tails of the former are unusually heavy and fat. The flesh of both, (for the latter is, there, not so unpalatable, as in Germany and elsewhere,) is most eaten by the Turks. Among Angora one finds that kind of goat, from which the hair comes, which we call camel-hair. This hair is fine and glossy, hanging almost to the ground. It is not shaved off, but combed off, and, as to beauty, does not yield much to the side. The goats themselves are of a fairly tame nature, and only medium in size. They are often washed in the small river that flows by, and grazed on the dry ground there. If they are brought from there to another country, they perish in a short time altogether. Cattle are found mostly in places where Christians and Jews live; for the Turks do not like beef very much. Bovines are still rarer, because neither Jews nor Turks eat their meat. Hares, Rheinboks and wild Bovines are also not wanting; but Deer are unknown there. The Turkish horses are good for riding, but not for working, and do not equal those of Arabia in continuous and rapid journeys. They are bred with uncommon tenderness. On the warmest summer days, even in the stables, which, because of the heat, have become as warm as a bath stove, a thick woolen blanket is nevertheless put on them, which is fastened with several straps around the belly, so that the body is covered both above and below. On winter days, 2 or 3 are put on; but because of this, these horses also become so tender, that when one has only one hour to prepare them, they have to be led around slowly for a while, before they can be brought into the stable, because otherwise, because of a cold, they might become unfit for use. And this is the reason, when they are brought to Christian countries, and are not treated and cared for so tenderly, that they are not good for long, but soon spoil. Otherwise they are often tamed by the Turks, so that they follow the rider, come to him at his beck and call, or else, without being tied up, stand still. They look fine to the eye, and let themselves be easily trained, to endure the fire, and to accustom them to all kinds of exercises. Of the noble Arabian Horses, (for there are also common ones,) people have wanted to know the origin for a few thousand years. They are also, concerning their uncorrupted kind, reasonably certain, because the mares are always covered in the presence of witnesses. Notwithstanding the

27730 Arabians, when taking oaths, are not exactly good-natured; they are, however, in the
 highest degree, when covering horses. It is even assured, that regular, legal
 testimonies and genealogical registers are kept of them. The Turks generally ride
 Stallions, and not Geldings, and are good Horse-tamers. The Buffaloes draw the
 plough. They are higher than our largest Oxen, and much thicker and bulkier, so that
 they rather resemble monstrous beasts. They do not move otherwise than by a very slow
 step; are generally ashen-grey or blackish, and have, in proportion, very small eyes.
 27735 They also draw the Arraba, or heavy trolleys with 2 wheels, which are used for
 collecting the corn, the chaff, and other household necessities. For the transport of
 real loads and merchants' goods the Asses, Mules and Camels serve. In Asia Minor
 there are only those Camels which have one hump. 'There are several kinds of them.
 The large ones, of the Persian frontiers, are usually called Turkman, after the
 Province of Turkman, in distinction from the others, and are very strong. Around
 27740 Constantinople, and on the Asiatic coasts of the Archipelago, are the smallest. They
 go very slowly, and, although they take wide steps, they must nevertheless have the
 time of 15 hours for a journey of 10 hours. But when they come to walk, this is
 surprising. Of all animals they are the ones that rest the least; and no beast of
 burden can be maintained so easily and at so little expense. They can suffer hunger
 27745 and thirst for many days. They live on the leaves of shrubs. When they are on a
 journey, a wad of common dough is put into their mouths, which they chew on for a
 day, and with it they satisfy their hunger. The large ones have unusually long and
 rough hair on their heads, necks, and joints of their legs. Their growling is
 extremely unpleasant, and often disgusting. Their color tends toward yellow and dark
 27750 brown. They cannot be tamed completely. They are not to be trusted, often striking
 out at someone's head and arms with their long necks; although their drivers are
 fairly secured against it. When loaded they must kneel, and 'crouch down to the
 ground. It is a singular thing, that even when beaten, they do not rise, if the
 burden is greater than the nature and strength of the Camels permits. One is fastened
 27755 to the other saddle, by means of a long and strong rope. The small ones do not carry
 well above six hundred, and the large ones above a thousand pounds. When travelling
 they cannot be made to move, unless a man or an animal, such as a horse, mule or ass,
 goes ahead. If the driver whistles for the first time, and pulls the halter fastened
 round their head; then they fall on their knees: if this is repeated again; then they
 27760 fall completely on the ground: if this happens a third time; then they rise. To
 accustom them to this, when they come into the world, their legs are bent under their
 bodies, and they are left in this position for some days. - Of wild animals there is
 a kind of large and voracious Foxes, which are called Schakals, which at night, often
 by many hundreds, with a howling like that of dogs and cats, go out to prey, and on
 27765 their way they go to the villages; wherefore the ease of catching a good number of
 them may be explained in the History of Samson. (Judges XV 4.) There are also
 Hyaenes, larger than the Schakals, being a mean between Foxes and Wolves. Both of
 them often dig up with their paws the buried human corpses, and devour them; they
 even tear the weaker animals to pieces; and, as the Schakals are otherwise afraid of
 27770 men, the Hyaens even attack them. They are not so high as wolves, but their hair is
 rougher, and marked with large black spots. The ancients thought that the backbone of
 the Hyaens was like that of the Crocodiles, and had no joints; but Russel, who had an
 opportunity of dissecting one, found it to have regular joints, as in dogs. The skin
 of the Schakals, there, the common people, as among us the First Nations use the furs
 27775 of other strange animals. - Rarely, there, excepting the great mountains, are Tigers
 found, and still more rarely Lions.
 There are no lack of large and small Lizards of many kinds. Among these belongs the
 Chameleon, which is distinguished from it only by a higher back and longer legs. It
 cannot move its head separately without the whole body. It catches insects with its
 27780 sticky tongue. It sticks this out to them when they fly, quite long, but so quickly
 that it can seldom be seen. The most remarkable thing about this animal is the change
 of colour, which is seen according to the variety of objects. Although it assumes the
 dark colours most lightly, and therefore looks brownish, green and blackish; yet
 these colours are usually mixed with white and red patches. When it is in the wild;
 27785 then the colours it assumes are more vivid than when it is shut up. In sleep they are
 not changed, and when dead they become pale. They have unusually fiery eyes. -
 Scorpions are found in many places, and snakes of various, but no extraordinary
 kinds. Tortoises run free everywhere, on the mountains, in great numbers, because the
 Greeks and Turks consider them unclean; but they are not large, and one will not
 27790 easily find one, whose shell in the circumference amounted to more than one ell. The
 insects common to us are also, and become, in certain seasons, very troublesome. For
 this reason one must sleep under a mosquito net. This is a covering, suitable for the

bed, of very thin lyme, tree-wool, or silk, which covers the bed like a sack, which, in order that the mosquitoes do not fly into it during the day, is pulled together at the head, when it hangs on two rods, but otherwise rolled up and tied together. – The scale insects are, in most houses, a great plague. The waters have, in general, an abundance of mussels and fish, where the sea fish have the preference over those from the rivers, for the sake of taste and health. Most of them are of the species known to us, such as eels, perches, etc. But otherwise there is also a multitude, which are not caught in the more northern seas. The Sea-lyre (rouget) of the best kind, and other kinds are, meanwhile, also not unknown on the shores of the Mediterranean. The Sword-fish is caught at Constantinople, having its name from it, because the nasal bone, according to its size, projects two or more feet, in the shape of a sword. At Alexandria are the Sea-ashes, from which one gets the roe dried in long and round pieces, which one calls Butarako. Besides the large Sea-lobsters, there are two more kinds. That which is called by the Greeks $\sigma\alpha\kappa\omicron\varsigma$ (Stakos), is larger, yes, about a foot and a half long, provided with pointed spines or claws, and also tastes better. The smaller is a medium size, and bears the name of Languste. Of Crabs one finds nothing but the larger, but also the smaller, or so called Taskrabbe. Oysters are caught at Smyrna, Mytilene, and in the Channel, but the largest and tastiest at the Princes' Islands. Among the sea animals one finds in the Archipelago and the Channel of Constantinople, especially the Dolphin. Of these one sees, especially in calm weather, whole flocks, which migrate to where the wind and storm will come from. On such voyages they are wont to leap up with great violence, and to throw themselves back into the water in an arcing manner. They come close to the ships, not only delighting the sailors, but also instructing them as of the rising wind. How wonderful is not the Creator in his works!

Because of the great heat most diseases are of a short duration, and many of our long-lasting diseases are hardly found at all in Asia Minor. To this I add, for instance, the Dropsy, the Podagra, the Tar, etc. The women are there more easily delivered, than in the Northern Countries, and also sooner recovered. The Smallpox, here and there, among adults as well as young people, in certain years, makes a horrible scourge. Although the vaccination thereof is customary in little Tartary, as well as on many islands of the Archipelago; yet, up to my time, it has not yet found a place on the mainland. The Measles are not so common, nor so harmful, as with us. The Fevers are a common Evil, and the hot ones, especially those that prevail in the Autumn, soon put an end to man's Life. Many also die of strokes. The red course is very common in the summer, especially when eating unripe fruits. Very many are plagued by hypochondria, which is probably caused by the much sitting of people, especially in the hot seasons. Women are very exposed to hysterical fits (ascensions), which often turn into madness (Mania). The strong heat of the sun, and the much fine dust raised by the wind also makes many people blind, of whom there are often more in a single city in the Levant than with us in entire provinces. More rare, but not very strange, is the Leprosy, with which the people on the Syrian coasts, the island of Kandia, and elsewhere are infected, and which, by prolonged association and contact, communicates itself to others, whereby the flesh is gradually consumed, so that nothing but skin and bones remain, but whereby even the skin is eaten away by a foul rash. People may suffer from it for ten years or more, and often still work and go and stand. The Lepers, at Smyrna and elsewhere, live together with other people, or, when the Disease becomes very bad, keep to the roads, to be able to beg. Where there are many; there they are wont to keep themselves together, and apart from other people, but at the same time to places where they can conveniently beg.

The greatest Evil of all is the Plague. This makes the most populous people deserts, and the regions waste places. During my nine years' residence in Smyrna, I have experienced, in the years 1759, 1760, 1762, and 1765, general plagues, not counting the less general ones. Usually, at the end of them, there were 15 to 20 thousand fewer inhabitants than before. In the months of May, June, and July, this Evil rages most violently, and daily, between 60 and 300 dead people were usually buried. At Constantinople, the plague is first spoken of when the number of people who die from it amounts to four or five hundred, and when more than a thousand people are carried off daily, it is called a great plague. As to the attack of the plague; it often confuses some people, because of the different circumstances and accidents of its outbreak, and, especially in the beginning, the symptoms are mostly uncertain, and, in appearance, often, of little importance, and not dangerous. Otherwise, he who is infected with it, is aware of a strange headache. His back hurts, and the whole body loses all its strength. This is followed by a strong fever, which makes people fall into a frenzy, and in which he also dies, by a very malignant plague. The peculiarity

of this disease is the effect on the soul of the sufferer; for at the moment he becomes despondent and disconsolate. After death the plague boil then bursts out. But if the plague is not so violent; then this happens before death. Everything goes very quickly here. With some, illness and death are almost in a moment, with others in a few hours, at the most in 3 days. The boils break out, mostly, on the softest parts of the body; sometimes there is only one, then again there are several. There are very clearly two kinds of them. With the malignant one, no cure can be hoped for; with the soft one, the sufferer is still in danger of death for 40 days. The good kind of boils, when they are quite ripe, are opened, from which then flows a stinking Matter. During those 40 days a strict Diet must be kept, and if the Sufferer then may eat any of meat, fish, butter, oil, eggs, etc.; then another plague boil bursts out, from which, without help, he is a child of death. Rice, herbs, barley-drink, etc., are its only food, — It has been observed, that lepers, and people, afflicted with foul rashes, are quite safe from this Evil. — As long as the Plague rages, all other diseases usually cease, or decay in it. But, when they, and especially the Smallpox, begin, and spread; then this is regarded as a sign of the plague coming to an end. Who has once had the Plague; is therefore not free from it at another time. There are examples that people who have had them twelve or more times have finally died from them. Yes, he who has had them once is, in a certain respect, more susceptible to them than another. Such a person can even often know in advance when a Plague will occur; because he has a sharp, stinging, and restless affection from the plague sore he has had. But if someone has had another one, called Carbuncle, in addition to the usual plague sore, and has recovered from both; then it rarely happens that such a person gets the Plague again. Such people also do not usually fear it any more, or take care of it.

Remedies against this Evil have no place. In the beginning it was customary to give a person infected with the Plague a strong diaphoretic, to promote the ripening and passing of the pimple. If it is of a good kind; then the opening of it, and a good Diet, are the way to be restored again. In the opinion of the Public, who regard drinking their own water as a remedy for the Plague, the intelligent certainly think otherwise. It is natural that a fluid already so much corrupted must still increase the Evil. Wherefore the honest Physicians also disapprove of this, and, with right, consider it an unfounded fancy of the filthy Public. Otherwise garlic, burnt waters, wine, vinegar, and strong incense are considered good preservatives. Drunkards at least are not easily snatched away. The Plague spreads itself from one place, very rapidly, to the other countries of the Turkish Empire; for there is no known enclosure of the infected places. For the rest, this Evil is like a fire. Notwithstanding that it is not at all, as far as one can notice, continued by the air, for that remains as healthy in Turkey as before; so the smell or the touching of infected persons and things is more dangerous, since he, who guards against it, remains unaffected. And, because the communication takes place so unnoticed, David was right, when he says, (Psalm XCI. 6.) that the pestilence walks in darkness. The Plague kindles through everything, except bread, wood and liquid things. The beginning, continuation and end of this Evil are uncertain. Often it begins in the Fall, but mostly in the Winter; increases in the Spring, and ceases about the time of the great heat in July. By St. John the end, or at least the abatement of the Plague, is mostly there, especially in Egypt. Not only the Levantine Christians, but also the Mohammedans, depend on this. — Experience teaches that the Plague from the Southern and Eastern Provinces of the Turkish Empire is more dangerous to the Northern, than when it spreads from these to none. For this reason the Egyptian and Syrian Plague is more formidable for the Archipelago, for Nato and Rumelia, than that of Constantinople and Smyrna in Egypt and Syria; yes, the Smyrna at Constantinople is more dangerous than that of Constantinople at Smyrna. The Egyptian Plague usually comes from Ethiopia, and is formidable for Egypt. — The influence of the earthquake on the plague, either to put an end to it or to increase it, seems, upon careful observations, to be more a national prejudice than anything real. — It is most dreadful when animals, for instance, dogs, cats, etc. die of plague boils, as formerly in Egypt. Exod. IX. 3. The Greeks, as well as the inhabitants of the Levant, in their delusion, imagine the Plague as a fearful monster, which, according to some, comes precisely at noon, but according to others at night, and becomes visible. Many even want to assert that they mark the houses where they want to make a slaughter with an indelible mark.

If one asks for the causes, why this Evil, the Plague, rages so often in Turkey? then one can also give the following, among other things. It is certainly bred from putrefaction. Unhealthy food; filthiness, not indeed in the rooms, but nevertheless in the squares and streets; excessive fear, which one can call the beginning of the

27925 Plague; terror, and a sudden inactivity of the body, by which the exhalation is
 stopped; all this subjects men, steadily, more and more to the Plague. But the
 principal reason is this, that the spread is never stopped. The infected houses,
 places and landscapes are never closed off; nor the things subject to infection, such
 27930 as clothes, beds, etc., are never burned, buried under the ground, or properly
 purified, but openly sold, or, if they are inheritances, even locked away in chests
 and cupboards, and a few months or years afterwards brought out again: and so the
 Plague breaks out anew. This unreasonable conduct rests on the feeling of the
 Mohammedans concerning an absolute fate, so that what happens must happen, whatever
 one may do or set oneself to. And this is also the reason why no Mohammedan shuns a
 27935 contaminated place or house. The plague is in his eyes nothing else than arrows of
 God, which hit the intended target; so that it is therefore fruitless to want to
 avoid it. – For the rest I would also hereby acknowledge the traces of God's
 Providence, in the Heaven-provoking sins of the inhabitants of this country.
 The Europeans are not easily exposed to this evil. Their way of life protects them
 27940 possibly against it. In addition, their caution is unusually great, (*) When the
 plague somewhat takes over; then they lock themselves in their houses, or flee to the
 country. They let nothing into their houses that cannot be purified by a strong fume,
 by vinegar or water. The trade is then generally broken off, or only driven to the
 distance of a few paces. All meetings are suspended; and the Protestants close their
 27945 churches, but the Roman Catholics seldom theirs, and the Christians on land never
 theirs. But what always seemed strange to me in this respect is this, that
 nevertheless, in the most terrible times of plague, the English, the Dutch, the
 Swedes and the Danes, load their stuff in their ships, and yet it very seldom happens
 that they become infected. The earthquake is no less great inconvenience in Turkey.
 27950 Although it is, that this also prevails in other countries, such as Portugal, Italy,
 etc.; it seems, however, to belong there as if it were at home. One can, often, know
 it in advance. When the sun, in clear weather, shines reddish, the air sultry, and
 there is no wind; then this is an evil omen. Before the earthquake itself goes a
 peculiar rushing, and, when it will become strong, a noise beforehand. There are two
 27955 kinds of earthquakes. The first, and not so harmful, is when it proceeds as a wave-
 like, or one after the other under the earth; but the other, as the most terrible, is
 when the earth, by fits and starts, rises up. The duration of this is, as is known,
 very different, and usually it does not remain the same. A phenomenon in the world is
 not more hideous than this. The terrible emotion caused by it is seen both in men and
 27960 animals. Therefore the Holy Ghost, in the sacred pages, could not name a more fitting
 sign concerning the dreadfulness of the end of the world, than to mention
 earthquakes. – The wounds, which one might possibly receive in an earthquake, are,
 according to the well-founded or unfounded opinion of many, considered incurable. We
 will not investigate this further, but say only that, if there is anything to it, the
 27965 difficult healing may well come from the fact that fear strikes the blood, and this
 cannot be brought back to its usual course. – Whoever else is somewhat calm in mind
 in an earthquake, takes refuge under the pillar of a door, in order to be protected
 from the wood and stones falling down. And this is also the reason that houses are
 built as much as possible low and close, so that they will yield all the more in the
 27970 event of an earthquake, and will not collapse so quickly.
 Since the manner of building in a country is usually directed to the air, the
 climate, the soil, and other natural circumstances; so here too, seems to be the best
 place to speak of it. In the cities and in the villages it is, everywhere, irregular.
 The streets in the cities are very narrow, and generally not more than two to four
 27975 yards wide. People try to protect themselves from the heat by this, and to keep the
 strong sunshine out of the streets. They also do not need wide streets, because there
 is no carriage in use, but the burdens are carried by men or animals, namely donkeys,
 mules or camels; and those who do not go on foot ride on donkeys or horses, and great
 women, at most, have themselves carried in Tachtaravans, a kind of horse litters. –
 27980 The houses are never built regularly; some of them are two, others more stories high.
 It cannot be otherwise: for, except for large and public buildings, no house is built
 according to a previously made plan, and the parts as a whole are not finished before
 the actual erection, but one builds by pieces, where the thoughts, at the beginning
 of a new part, can change. But often, the natural position with the unforced layout
 27985 of the houses, the decorations added to them, the trees planted around and the
 gardens, as well as the fountains, surpass our artistically worked regularities. In
 large houses one usually finds baths, which consist of two or more rooms, covered
 with lead above, lighted from within, and provided with basins, pipes and all
 conveniences. – The Turks abstain from splendor in building, because, according to
 27990 their thoughts, that is the sign of a puffed up and immoderate heart, which promises

itself, in this Life, as a permanent dwelling. They are content when they are only protected against robbers and evil, as travellers in inns. (*) Most houses, especially in the southern provinces, have, instead of roofs, terraces; these are in the middle, or on one side, somewhat raised platforms, so that the rainwater may run off the easier. Around them runs a railing. On these people go for walks, and also sleep on them in the summer; which rightly serves as a source of many scriptures. – In the middle of large buildings, at the height of one or two steps, there is a large hall, completely open to the forecourt, from which one can look over the gallery into the forecourt. This open Hall is, certainly, the αὐλῆς and υπερωον in the Bible, which served for all kinds of solemn uses, Mark XIV. 15. Acts I.13. IX. 37. XX. 8. and where also, probably, Christ was heard; so that he could see Peter below in the forecourt, Luke XXII. 61. Through a large gate one enters the forecourt from the street, and from this the staircase goes upstairs.

In average houses there is at least one forecourt; in noble ones there are at least two. – The lowest floor is, almost always, used for warehouses, stables and cellars: in the second and higher floors, a gallery runs around the inside like a balcony, which is covered by the roof of the house, and is very good for a walking place, as well as for taking in fresh air. This also leads, for the most part, to all the rooms. In these there is a double row of windows. The lower ones, which are fairly low, and not exactly large, rarely have glass panes, but only a more or less narrow latticework, and they only serve, when sitting on the sofa, for looking out: the upper ones, through which the light actually falls into the rooms, are still smaller, of various shapes, and often covered with glass of various colours. Average rooms therefore sometimes have more than 20 windows. – The open market-places or places of sale of the Turks in the cities, where they, as well as the Christians and Jews, put their goods for sale, are called Basars. Every branch of commerce has its own special Basar, assigned to it. The sellers bring their goods there; whether they lock them up in shops, or only bring them there on market-days, and, when they cannot sell them, take them back again. Therefore it is said: the price of the Basars, or the Rate, may be so or so high. The Besestane, a kind of Halls, are the actual shops, in which all kinds of goods, as well as articles made of gold and silver, etc., are sold, and which are rented to merchants, craftsmen and artists. They are, for fear of fire, made of stone and vaulted, provided with iron doors, and covered with domes, through which the light falls. Because each one lets his goods in; so they are closed at night, and guarded by special watchmen appointed for that purpose. Every nation and every kind of commerce is accustomed to have its own particular places there, or in large cities its own separate Besestane. The Tscharsu does not differ much from this, being a multitude of shops built together, both for craftsmen for their work, and for the sale of goods, in a kind of streets, which are often protected from rain and sunshine by awnings above. – For the rest, fire in Turkey is a dreadful matter. For, as the streets are narrow, the houses, because of the earthquakes, are very lightly built of wood, hung with carpets for ornamental purposes, and provided with wooden galleries; then also all the woodwork is covered with many kinds of olive paints; so, especially in the summer months, everything burns away like straw, and the Turks use no other means to extinguish the fire, than by having a great number of houses pulled down around them. Since there is now much to rob, and the Janistas, in extinguishing fire, are mainly used; so they often even set it up, and in extinguishing it to go slowly to work.

(*) During my nine-year stay in Smyrna the ice in a river was only 2 days so strong that people could stand on it. The snow lay, seldom, on the country so long.
 (*) The chaff is the winter shelter for the cattle; for in the East no hay is won.
 (*) The firewood is, in many places of the Levant, for instance in Smyrna and Jerusalem, bought and paid for by weight.

(*) Most Christian nations have, in Constantinople, Smyrna, as well as in other places, their hospitals with the necessary attendants, in which they are accustomed to receive their, infected with the plague, especially poor fellow believers, as well as foreigners.
 (*) According to the construction method of the East, one can very naturally explain Dan. VI. 11. There one reads, that Prophet Daniel in his summer house (as the Lutheran translation has it, in the Dutch it is opperzaale,) had open windows towards Jerusalem. This is either a hall built onto the house in the Eastern style, still in use today, open on one or three sides and with a roof resting on pillars, or a pleasure house built on a raised spot and open on all four sides, which is called a kiosk there.

§. V. Of the cities in general, of which in the Revelation of John, Head, II and III, are spoken, and of Smyrna in particular.
 Smyrna is a fairly large place. It is, as is known, one of the 7 cities, of which Revelation II and III are spoken: for the Biblical name, Church, might not well be

appropriate to it, considering that it might differ greatly from the description of
28060 Revelation II. 8-10. In the meantime, however, the praise that is found there seems
to determine the reason why it is spared, and has remained to this day. War,
pestilence and earthquake have often visited it, yes, completely destroyed it; but
nevertheless it has, continually, reappeared again: as the other places, of which are
28065 spoken in the said Chapters of Revelation, have mostly become a heap of ruins. —
Ephesus, by the Turks Aja'saluk, still points out an exceedingly great quantity of
remains of antiquity, in demolished churches, aqueducts, chimneys, other buildings,
and broken magnificent pillars; but it is now no longer even a village, and the
standing bits and pieces of the Temple of Diana, besides that of an old St. John's
28070 church, are only the shelter of shepherds with their cattle. The Candlestick of the
Angelium has been entirely banished from this place — (Rev. II 5.) — Pergamus is, at
present, a sort of a village, almost under its old name; likewise Thyatira, under the
name of Akhifar, which is inhabited almost exclusively by Turks, and where a great
deal of tree-wool is collected: Sardis is a common village, excepting the ruins of
old buildings, which has retained its name by abbreviation. Philadelphia, by the
28075 Turks Ala-Kair, is no better, although the Christians there, after Smyrna, form the
most flourishing Church among the cities of which the Revelation speaks, and thus
also experience the promised blessing. (Rev. III 9, 10.) But Laodicea would have
disappeared altogether, if some inscriptions on stones had not pointed out the former
laying of this place, favorably. It was therefore spat out of the mouth of him, on
28080 whom the foundation and overthrow of human buildings depend. (Rev. III 16.) The Turks
call it Eski-Hifa'r.
Smyrna bears the name of Ismir among the Turks, and lies on the so-called Smyrna Sea-
bay. It is, for a very large part, built against the mountains, like an Amphitheatre,
on the top of which an old Castle is still found. In some places there are old, in
28085 others new walls; in others clay walls, and in many it is quite open. On the north
side runs the Meles. Although this, in ancient History, is mentioned, it remains,
however, in the Summer, after he has watered some gardens, scarcely a small arm left,
which is sufficient for the mills, bleaching and weathering. The city contains,
probably, more than a hundred thousand inhabitants, and it is the strongest
28090 commercial city of the so-called Levant. One must be at this place oneself, if one
wants to form a correct idea of the bustle of people in the matter of Commerce. The
Caravans and the Shipping cause such a liveliness, on water and on land, that the
contemplative eye can only be satisfied with it. A Kadi is the Chief, and a Moslem
the Second-in-Command of the city. One finds here almost all the nations of the
28095 world, which differ from each other in their dress and religion. The Greek Church is,
among the Christian denominations at Smyrna, the strongest. It has one Bishop, under
whom stand 12 Archpriests, a great multitude of Deacons, and many foreign
ecclesiastical Persons, who have also obtained the freedom to perform various
religious acts. It has 2 Churches, of which the largest, dedicated to St. Photinus,
28100 burned down in the year 1763; and the smaller one bears the name of St. George. The
first had not yet been rebuilt in the year 1777, and there was doubt whether it would
ever be rebuilt.
The Armenian Church is also served by one Bishop, and 12 Archpriests. This Christian
disposition is, there, not nearly as strong as the Greek, and has only one Church.
28105 The Roman Catholics have one Episcopal Vicar, and three Churches, of which one
belongs to the Franciscans, the second to the Capuchins, and the third to the
Jesuits. The Chapels in the first were much damaged in the fire of 1763, but those of
the Jesuits were completely reduced to ashes. The restoration of the Churches of the
Franciscans and Capuchins could not be effected, owing to the severity of the Turks,
28110 until the year 1776; but the completely burnt down Church of the Jesuits will not be
rebuilt after the subsequent destruction of their Order, although it is probable that
they will subsequently be allowed to enjoy their possessions in peace. The
Protestants have, for the most part, their Chapels by the Consuls, of which there are
three, namely the English, Dutch, and German. The Christian nations, as well as the
28115 Europeans, for example the English, Dutch, French and Italians, as of the Christians
of this country, namely the Greeks and Armenians, have Hospitals, where the sick,
especially those infected with the Plague, are taken care of and cared for.
The Jews there are, for the most part, descendants of those who were expelled from
Portugal and Spain. Their number amounts to more than twelve thousand, and they have
28120 7 Synagogues.
The number of the Turks amounts to 40 or 50 thousand. They observe their worship in a
great number of Mosques. There are there, as in most of the largest places in Turkey,
three religious days: Sunday for the Christians, Saturday for the Jews, and Friday
for the Turks.

28125 The layout of Smyrna is, in all respects, pleasant and advantageous; as one can see
from the plate, by the illustration of the Archipelago. It lies, immediately, at the
end of a bay, which extends from the Archipelago to about 12 German miles in Asia
Minor. This furnishes a rich quantity of fish, oysters, and mussels, and makes the
supply of provisions to the city easy; not to say that it promotes considerable
28130 navigation. The entrance is north-west between Foglieri, (Foggio) and Cape Karaburno.
Not far from the latter, inward, are the English Islands, and still further inward
the Islands of Urla. It cannot be navigated everywhere by large ships, owing to the
number of sand-banks, which the Dutch call Riffen, and which are especially formed by
the Hermus which drains there, and the channel for it becomes, a few German miles
28135 from the city, unusually narrow. On an isthmus, which defines it still more on the
south side, lies a small fortress, enclosed only by a wall without ramparts, which is
called the water castle. The Ree by the city is safe, very situated, so that ships,
without danger, can lie fairly close to the land, and is spacious enough for about a
thousand. The European residential quarter, or the so-called Frankenstreet, lies
28140 northwards close to the sea. At the end of it, to the south, is the large house, the
Tol [Customs office], built in the water; and beside it, inland, the building with
domes provided the large Visier-chans, and still more to the south the lower Castle
provided with old towers. The city itself runs, from the sea, against a fairly high
mountain, on one of whose peaks lies an old Castle for the defence of the city. This,
28145 in ancient times, had as great a circumference, as the top of the mountain is above,
on whose side, towards the city, a small fortress cut off from it has been
constructed. Of the larger one only the fallen walls are visible, and in the vicinity
large and unrecognizable heaps of ruins; a small, now useless and open St. John's
Church, of which the lower part indicates a considerable antiquity, but the upper
28150 part is new; and a very large, but partly ruined, and now completely unusable
cistern. The gate towards the city is complete, and shows itself very well below and
from the sea. To the west of it a large marble slab is bricked in, on which the head
of a supposed Amazon, Smyrna, is depicted, after whom the city is said to have its
name, which is four times as large as a natural head; but the nose and face are very
28155 mutilated. The smaller fortress mentioned has some cannons, and janissary families
for its defence. So it is also with the other fortress, surrounded only by walls,
situated near the sea, where the old harbour used to be, but which is now filled, and
for the greater part built up with shops and houses: so that, if it were not an abuse
of the word, fortress or Citadel, one could say, the city was protected by three
28160 Citadels. - On the north side is a plain, which is watered by small brooks, well 3
hours long, and about two wide, planted with olive, fig and other trees, as well as
many vines, and surrounded all around by high mountains. This is, besides the kyf,
one of the most pleasant and fruitful valleys. Of the mountains, most are covered
with various herbs and shrubs. In this plain, a little hour from the city, is the
28165 bath of Diana. Some old stones are considered to be the remains of the Temple of this
Pagan Goddess. This bath is filled only by some springs, which give up an astonishing
quantity of water from the ground, and make a large basin. On the south side of the
town, below on the hill, are the remains of a church dedicated to the martyred Virgin
Veneranda, where the Greeks have their principal Plague-house and burial-place, and
28170 the Dutch and English have theirs, very remote from their habitations, walled up, but
the Jews have their open cemetery. Superstition holds the well-water at St. Veneranda
to be miraculous. Not far from it, but immediately on the sea, and therefore at the
very end of the town, are a number of houses for the soap-works, and the public
slaughter-place. In the town itself are considerable Chans, Basars, and Baths.
28175 Monuments of antiquity are no longer found, destroyed everything. The so-called St.
John's Church in the upper castle, and a Polycarpus church, not far from it on the
mountain, are indeed dilapidated old buildings, but hardly dating back to the
earliest times, and the remains of an old Amphitheatre, in which Polycarpus suffered
his martyrdom, were sold in the middle of this century, and houses were built in the
28180 Jewish quarter. The Polycarpus church seems, otherwise, to be of no small age. In
front, in the width, is a covered, but not very wide passage. This building, which is
damaged in the vault and otherwise, is not high and without pillars. On each side is
a Chapel of the length, but not of the width of the main vault. Because Smyrna is
also said to be the birthplace of Homer; thus one points to the Castle-mountain of
28185 its cave. Behind it, to the east, between the mountains are some aqueducts, and the
region of the land there is called Paradise because of its beauty.

§. VI. Of Constantinople.

28190 Constantinople is called by the Turks, by abbreviation, Stamboul. From its position
this city seems to be the mistress of two parts of the world. The ease of the waters,

the glory of the air, the easy supply of products from all parts of the world, the virtue and abundance of the fishes, together with other advantages, give it the precedence over most cities on earth. Europe and Asia are, here, only separated from each other by the Canal, which comes from the Black Sea, and is scarcely the eighth

28195 part of a German mile broad, called by the ancients Bosphorus Thraciae. Both banks, through the fertility of the soil, seem to dispute for precedence now by small valleys, now by hills planted with vines, or by mountains, against the rises of which pygmy and cypress trees are placed, and by other projecting regions. The waters, which are in the middle, permit sufficiently to see freely on all sides. From the

28200 North comes the above-mentioned Canal; from the West, and therefore from the side of Europe, comes the so-called Canal of the sweet waters, being the real harbour of the Residence, and bearing the name of Horn because of its crooked shape, into which a river, caused by two large brooks, empties, but which, after mixing with the former, becomes salt, and is also just as broad at the Seraglio or castle of the Turkish

28205 Emperor; to the east is the Bay of Nicea, and to the south the Sea of Marmora. If the former did not extend with the latter in a reasonable breadth as far as Asia; then the waters would converge at Constantinople, almost in the shape of a large cross. - Constantinople itself lies on the European soil, on the Sea of Marmora and the Channel of the Sweet Waters, which forms the harbour, and at the head, where these

28210 two unite, is the Seraglio; the great suburbs, Pera, Galata, Tophana, etc., lie between the Channel of the Sweet Waters, and that which comes from the Black Sea; Scutari, Chalcedon, and an old Seraglio of the great Lord lie on the Asian side, on the latter channel, fairly near the Bay of Nicea. All these cities and suburbs are situated on hills, which gradually become higher towards the land, and which, as

28215 regards Constantinople without the suburbs, are counted in a number of seven or eight, in the same way as ancient Rome. The high buildings project. The Mosques, roofed with lead, and the Minnarets belonging to them, and provided with gilded transepts, spread an uncommon splendor, especially when the sun rises. The Cypresses planted in the squares of the Mosques, and in the gardens of the Seraglio, provide a special variegation. When one imagines all this together; then, without having seen

28220 it oneself, one can justify the proverb: "He who has not seen Constantinople, has not yet seen anything glorious". - The interior of the city, certainly, does not at all come close to the exterior. By this means another proverb may be judged: "Constantinople must be seen only from without, and not from within;" and it is

28225 related that an English traveller, after having examined this city closely from without, had departed again without setting foot in it, in order not to diminish the advantageous idea which the external layout had given him. The representation of this city in the accompanying plate will fully prove this.

The air at Constantinople is very healthy. The summer is very moderated by the winds

28230 coming from the Black Sea; but the winter is, on account of these same winds, often more severe and sensitive than in Germany. This is caused, especially by the very rapid change of the weather, when, on a sudden, a very cold follows, and so the body is completely unprepared until the end.

From the foregoing it may easily be inferred that it is not possible to calculate the

28235 size of Constantineple accurately, especially since the Mosques with their large circumferences and spacious cemeteries are found therein: but, in all probability, one would not be giving too high an estimate if one were to estimate the circumference of the city itself and its extensive suburbs at about 5 German miles: considering that for Constantinople proper, inland, one and a half German miles, for

28240 the side of the suburbs, Kassum-Pascha, Pera, etc. more than one, and seaward, including the harbour, also one and a half, but for Constantinople alone, without the suburbs, one can determine 3 miles. (*) - The inhabitants are estimated at one million, of whom about two hundred thousand are Christians of the Greek nation, about forty thousand Christians of the Armenian nation, and about sixty thousand Jews, but

28245 the rest will be Turks. - The Seven Towers form, to the south, towards the Sea of Marmora, the extremity of the city; it lies, then, in a not very unequal line, up to the point of the country, where the Canal of the sweet waters, or the Haven, unites with the Canal, which comes from the Black Sea. On this point lies the Serail. From this around the said Canal, the actual Constantinople extends towards the land. In

28250 the middle one finds, here, the headquarters of the Greeks, which is called Fänär. It ends behind the Armoury, by the most inland suburb Ejub, which has its name after the Ejubs- (Hiobs-) Mosque situated therein, (*) in which the new Emperor is girded with the Imperial dagger. From here one only has to draw, inland, a not too crooked line to the 7 Towers, and one will see, that Constantinople, in itself, is almost a

28255 Triangle, of which the Serail forms an obtuse angle. To the quarter belonging to the Armoury, which turns round on the other side of the Channel of the Sweet Waters, are

added still smaller parts, which extend to about Galata. These are understood under the name of Kassum-Paschi. Herein is the residence of Captain Pasha, the Armoury, and the shipyard, or the place where the Imperial ships are built, as well as the docks for the galleys. Not far from it is the Banje, or prison for the Imperial slaves, who are treated very badly at this hateful place, by a severe work. Galata is cut off from Kassum-Paschi and the other suburbs by a cemetery, and besides by a special wall, and lies opposite the Seraglio, on the Channel of the Sweet Waters, and that which comes from the Black Sea. It is fairly built against the mountains, on one of which is a fairly high round tower, erected by the Genoese, and of such size that it can pass for a decent city in itself, as there is a good number of suitable and solid houses in it. Next to this lies, still further on the Channel of the Black Sea, Tophana, (Top Chäanek) which bears that name after the gun foundry, and where also an unusual number of metal cannons are used to be placed on the streets and squares.

Next to this, on the Bosphorus, follow Thraciae, Fondukly and Besiktas, which with many others also belong to the suburbs. On the upper heights of Galata and Tophana lies Pera, where the European ambassadors always reside. In the neighbourhood of the latter is the open cemetery of the Europeans, and close by, on a mountain, lies another fairly large suburb, mostly inhabited by Greeks, called St. Demitri. — Let one cross from Tophana or Galata to the Asian coast; then one finds, almost in the middle of the Channel, the Tower of Leander, which the Turks call Kis-Kälä'fzy, which is built on a rock, being a kind of fortress and prison, where some cannons are placed. Fable-lore teaches, why it was built. Notwithstanding that it is thus built in the sea, one finds there, however, sweet and delicious water, which is attributed by some to a spring found there, but by others to a cistern, in which the rainwater from the roof is collected. From this small fortress one could fire the Channel to [?] both seas. — On the Asian soil and ground lies Scutari, also a city of a large circumference, and after the sea-bay of Nicaea an old Seraglio, directly opposite that of Constantinople. Chalcedony, formerly, especially in the history of the Church so famous, is found in the neighbourhood, being, except for some remains of earlier destructions, only a village. — The strength of Constantinople, both on the water and on the land side, does not mean much. On the sea-side there is a single wall, from 14 to 20 feet high, also reasonably thick, and reinforced with square towers; inland it is doubled and stronger, of which the outer is noticeably lower than the inner; but both are, in their entirety and circumference, provided with many towers at a certain distance. Since the invention of artillery, loopholes have also been made in it. One part consists of hewn, another of baked bricks. — Six gates go inland, among which the Adrianople is the most important, seven to the side of the sea Marmora, and thirteen to the Haven. Others may reckon more or less, according as they include or omit the small gates on the water side. — A large part of the suburbs is entirely open; but some parts are surrounded by an old wall, built by the Greeks and Genoese, where, in many places, there is a deep and dry ditch towards the land side, in others not.

What has been said with regard to the manner of building in general, also occurs at Constantinople, namely that most of the streets are narrowly, but fairly well paved, and most of the houses are light and built of wood. Among the streets, the one that runs from the Seraglio to one side of the Hippodromus is the most beautiful, and therefore serves for public entrances and exits. From this one can understand why, when the by fire, thousands of houses, in a short time, can be reduced to ashes. But there is also no lack of a great number of open buildings, which are very thickly built of stones. For the rest, one need not look here for regular houses or streets; for to the Turks this would seem much too uniform, just as the uneven ground, which alternates with mountains and hills, would not permit this.

Among the open buildings, one must certainly mention the Seraglio first. This word is indeed of a general meaning among the Turks, so that it is also used of the Palaces of the Grands of the Court, and of foreign Ambassadors; but if one uses it without an adjunct, one understands by it the residence of the Turkish Emperor. The Turks therefore call it Padischah Serai, the Imperial Castle. Concerning the laying, the necessary has already been mentioned in advance. Constantine the Great, as some have supposed, had his residence at another place, which is still shown. This is known under the name of the Palace of the Blaoners, but of which nothing remains but ruined walls and a few damaged marble pillars. The present Serail has a very pleasant view; to the southeast it has the bay of Nicea, Asia, and especially Scutari; to the northeast the beautiful regions of the Channel, which comes from the Black Sea, and the suburbs, Fondukli, Tophana, Pera, Galata, which on the other side of the Channel from the harbor, are built almost gradually in height on the mountains. It forms in itself, including the gardens, a moderate city; is surrounded by a high wall, on

which, after the canals, on the rocky and stone-covered parapet, many cannons lie on Lavettes. These cannons are only fired at the Emperor's arrival to the Throne, at the delivery of a Sultana, the two Beyrams, and at public joyous deeds in time of war. For at the Emperor's games, and other less important occasions, the cannons serve from Tophana, (Top Chaäne) the armory and Kis-Käläh: and when a Janistar is strangled, it is, for the present time, customary to fire a cannon shot from and the citadel Rumeli-Hhifar. The inner seraglio is covered with leaves, but the upper decorations, such as the knobs, the half moons, etc., are gilded. On the forecourts and in its gardens there is a great multitude of cypresses; which all gives it a magnificent display from the outside. From the inside it has no such beauty. The entrance to the first square is reasonably high and wide, and is the main gate, which is certainly worth seeing. This main gate of the first square of the Seraglio the Turks call Bah Humajun or the Majestic Gate, and have great respect for it. At the entrance into it the Dschjebheidschiv (Armourers and Harness Makers) have their Armour House, in which the helmets, sabres, guns, suits of armour, and all kinds of war supplies are kept according to the old and new manner. Through this gate the public entrances and exits of the Emperors, the Grands of the Empire, and the Ambassadors pass. In front of it, on one side, is the former Sophia Church, and on the other side a very beautiful Fountain. After the entrance, which is occupied by a guard of Guards, a fairly large, much longer than broader, but very irregular and badly paved Square opens up; further on the left hand is the Mint, a hideous building; on the right are the stables, a large hospital, in a word, all that which belongs to the Seraglio in a remote way in buildings for people and cattle. Here one also finds the Court Mosque. At a distance of about 1000 paces, calculated from the outer gate, comes the second gate. This is even more ingenious, than the first, and is also guarded by Guards. Here one comes to the second Square, which is not as large, as the first, but is more beautiful. The buildings around are not of the same height. Some rest on pillars, under which one can walk dry, others do not. In this Square the Grand Vizier, and the principal State and Court servants mount their horses, and descend from it; while the other First Names and Europeans, on the days when audience is granted, do so on the first, near the gate to the second. In the middle is a beautiful Fountain, which is shaded by many Cypress and wild mulberry trees. At this place, in former times, the heads of the Grand of the Empire, the Pasha, and those who fell from grace, were cut off. Almost directly opposite the second gate, a stone, not inconsiderable building with a corner projects. This is the Divan: it is higher than the other buildings. In the lower story are two, not very high halls, which form two vaults, which rest on marble pillars, and are joined above by a stone baluster. The arch of the vault makes, above, a distinct division; but below is a free passage, (*) whose posts, and especially the upper parts, are quite well sculptured. In the front Hall are the principal State Servants, in the other the scribes, the accountants, and the treasurers. Above these two halls stood the Sultan, and watched when any one of the Court was to be tried, and there, wishing to show mercy to the condemned, he gave a sign with his handkerchief. From here one comes, on the right hand, to the third Square, but the entrance to which is forbidden to all who are not Turks, and even to these, if they do not belong to the Court, or are expressly called in, and of which therefore nothing can be said. From the outside they appear to be many and large, but irregularly built houses, which converge in Domes, covered with leaves. For the rest, here is the proper residence of the Emperor and his wives, and ends with the extremity of the ground, where the harbour unites with the other waters. Here are several Kiosks, being a kind of Balconies, built outside, where the Sultan and Sultans take fresh air. One can indeed see from several houses in Galata and Pera, some parts of the Seraglio; but it is accompanied by mortal danger, if someone, to satisfy his curiosity, wanted to use a telescope, and there are examples, that people, who had done so, were hanged for that reason. Besides this Main Seraglio, there is, almost in the middle of the city, another old one, which Mahomet II built, of a fairly wide circumference, and, like the convents of women, surrounded by a high wall. From it, the concubines of the previous Emperors, who have brought sons into the world, are never married off. The number of Mosques in Constantinople is unusually large. In general it is estimated at 3 or 4 thousand: (*) but it is difficult to determine the exact number of the other Mosques, except for the Imperial ones. The principal of them, or the Dschjamis, stand apart in large enclosed places, which are generally planted with Cypress trees, and furnished with fountains; and these Mosques are roofed with lead, and adorned within with marble, or other costly pillars. - The oldest and most famous of all, as regards the order of architecture, is that which, in the time of the Christian emperors, was called the Church of St. Sophia, and is considered larger

28390 than St. Peter's Church at Rome. (*) Before the Turks took possession it seems to
 have been larger than it is now. The form is square, and each side by the third half
 a hundred common paces long. The Dome rests on pillars. of various marbles. The 4
 Menarets or towers Selim II had raised, with the fore-end, of a different
 construction order. It stands quite free, and is surrounded by a Hall, as if by an
 28395 ambulatory. Of these, all the other Mosques are but Copies, except that they are
 larger or smaller, or more expensively constructed, and have fewer or more Towers.
 The Mosques of Selim, Mahmud, Achmet, Solyman, of the Sultana Valide, of the Mother
 of Mahomet IV, and of Bajazet are, furthermore, the most famous, and are called
 Imperial Mosques, from which it is evident, that they have more than one Tower. They
 are mostly covered with lead, and the knobs and half-moons above are gilded. - The
 28400 Grand Lord is accustomed, according to the row, now to say his Friday prayers in
 this, then again in one of the other Imperial Mosques. - Two particular Mosques, in
 which the Dervish observe their supposed worship, will be spoken of in the section of
 the Mohammedan Religion. By the Imperial Mosques, for instance the Sophie Mosque, are
 also the burial places of the Emperors. These are small, square buildings, built of
 28405 white marble, and provided with towers, which are called Kubbe' or Turbe' after the
 Dome. The graves in them are closed off by a fairly long gate. The Imperial body lies
 in the middle of a large marble coffin, broader at the head than at the feet. Over
 this lies a silk, in some cases a stitched spry, and at each end stands an unusually
 thick and high wax candle. The women and children have their place around it. The
 28410 coffin of a woman is covered with only a spry, whereas that of a Prince has, at the
 head, a Turban, by the equipment of which one can distinguish the naturally dead from
 the strangled. Alms are distributed to the poor at these cemeteries, to pray for the
 repose of the souls.
 The Emperor has, besides the Seraglio at Constantinople, others at Pera and Scutari,
 28415 which he is accustomed to visit, but not to make his permanent residence there, not
 to mention the multitude of pleasure-houses and castles, both on the Channel and
 inland. That at Pera is also called the Seraglio of the Idschochlans, because the
 Sons of the Chiefs of the Empire, and other Young Men, whom the Emperor is fond of,
 are educated there. The seven Towers form almost the same thing at Constantinople,
 28420 which with us is a Citadel. They bear that name in fact; for on their walls stand
 seven fairly high and with leaves covered towers of the old order of construction.
 They provide at the same time for a State and Military dungeon of the Court.
 Previously the treasure of the Mosques would have been kept there, although this is
 no longer done, because the remainder of that must be delivered to the Myry (the
 28425 Finance Chamber). Since the time of Murad III the treasures have been kept in the
 Seraglio. Otherwise, according to circumstances and the good pleasure of the Court,
 those Princes of the blood were also locked up there, against whom the Emperor had
 taken a suspicion; as well as the deposed Emperors, as was the case with Mustapha;
 but usually the most important prisoners of war, the Ambassadors of other Powers,
 28430 when a war with them broke out, and the Princes of Wallachia and Moldavia, when they
 fell into disgrace. It goes without saying that they are of a reasonably large
 circumference. Many of the deposed State servants do not enter, as those who, after
 the deposition, remain safely in their houses at Constantinople, except the Grand
 Viziers, who either forfeit their lives, or are banished to this or that island of
 28435 the Archipelago, and must remain there until they are, possibly, recalled, and put
 back into service.
 The Vizirate or Palace of the Grand Vizier is indeed a spacious and fairly high
 building, but built only of wood, and has often been burnt down; but the stairs in it
 are much better than in the usual Turkish buildings, and the audience-halls are very
 28440 large and airy, and the Tapestries very skilfully worked.
 The Hippodromus, in Turkish Afmeidan, is an unusually large plain. The meaning of the
 Greek and Turkish word indicates that it is adapted for a race-course for horses, and
 it does serve that purpose. It is a real ornament for so large a city, and at least
 three times as long as it is broad; the width is now more than two hundred paces.
 28445 Several Palaces stand around it, and especially the Mosque of Achmet with 6 towers,
 having a regular forecourt, which makes a magnificent sight. On this spot stand two
 Obelisks; the first of which is of Egyptian, reddish granite, stands on a large
 pedestal, said to be 50 feet high, is quadrangular at the top as if converging into a
 spire, and is full of symbolic figures, which have remained fairly undamaged. On the
 28450 pedestal are also Greek and Latin inscriptions, which indicate that he was raised on
 the spot where he was buried, by order of Emperor Theodosius the Great, and that he
 was given the present pedestal. The second is round, higher than the one just
 mentioned, and thinner, but equal above and below, and made of workpieces in the
 shape of millstones, 9 feet and 4 inches thick, but without inscriptions, and badly

28455 damaged by fire. There is another, though somewhat damaged, copper, 15 feet high
Pillar of three snakes, like a roll of tobacco, coiled together, with open throats,
but the time and insight of the raising is unknown. (*) It runs, at the top, pointed
together up to the throats; but the heads are no longer there. Otherwise this plain
is the usual meeting-place of the rioters, as soon as they want to make their riot
28460 openly known.

The Bird-parlour of the Great Lord would have been a Greek Church before this, and
has, for the rest, nothing remarkable. - There are two Casers for the Janistas; the
new one, where their Aga lives, is very spacious, and reasonably well, but the old
one, although small, is very magnificently built, the entrances to it, especially the
28465 upper parts or Thawams, being heavily gilded. But, because many Janistas have wives,
and do needlework, so live in their own houses; only the unmarried stay there. The
public buildings also include the Besestans, which are the vaulted shops of the
merchants and various workmen, especially the fine artists, such as goldsmiths and
jewellers; just as the trading places themselves are called Basar. In Turkey,
28470 especially in large places, the merchants and workers are not spread out in the
cities, but are bound to fixed places. The merchants, in silk and cloth, the
druggists, the goldsmiths, etc. have their special buildings, where they, in divided
shops, put their goods for sale, or work. The great Besestan is an unusually spacious
square hall, whose thick walls are built of hewn stone, and whose very high vault
28475 rests on strong masonry pillars. Around it and against the walls are the shops, (*)
At the Basars there one can get everything that the four continents produce. When
they are lighted up by lamps at night, at the time of Donalma (Feast for the delivery
of a Sultana) or Ramasan (Lent), it presents a most glorious sight. - The Chans and
Caravanseras are a kind of lodging-houses or inns. I say, with fore-day, a kind; for
28480 they are not proper inns, because one finds neither furniture, nor food, nor fodder
in them, but must provide for it himself. The former are, properly speaking, in the
cities; the latter on the highways, where, at a stretch of road, one sometimes finds
small villages or towns. On these Chans there are, as a rule, neither doors nor
28485 windows, but only the bare walls, and on them, all around, a height, like a parapet,
to sit and sleep; sometimes hearths for the people, and cribs for the animals; at the
best also a fountain built of stone. The traveller must provide for wood, beds and
food himself. The most beautiful is called Valide'-Chan, after its founder, the
Mother of Emperor Mahomet IV. It is, like most Chans of this kind, a large square
28490 building, having a spacious inner court, and being provided with a hall, as a
gallery. Behind it, on the ground, are the warehouses for the storage of the
merchants' goods. The stairs are very high, which lead to the upper floor, there
being also a corridor, from which one goes into the rooms, which are reasonably
large, and equal each other. In each is a chimney. The walls of all the Chans consist
28495 of buildings, or very thick baked bricks; the rooms, warehouses and corridors are
vaulted, and the roofs are either provided with good terraces, or consist of domes,
which, like this Valide'-Chan, are covered with lead. In the middle of the courtyard
stands a beautiful fountain.

Baths, in which the Levant women spend a great deal of time, are numerous and
splendid in Constantinople. Those of any importance are found to be built thickly and
28500 strongly, in the manner of a dome, which is covered with lead, in which glass balls,
the size of a human head, are placed, so that the light may fall through, because
there are no windows on the sides. On the inside, all around, are the sophas.
Emperors and wealthy people place honour in them, and supposed religious empires make
a merit of having such built.

28505 About in the middle of the city lies the square slave market, on the sides of which
are found all around partitions for the white slaves, whose wives, when sold, are
very expensively dressed, and are sold for 500, to 1000 and more piastres; the black
ones, on the other hand, sit almost naked, in the middle of the market. Such slave
markets are also in the great cities of Turkey. Touching people cannot enter them
28510 without pity and horror, when they see creatures of their own kind, which according
to the destiny of the Creator should be rightly free, being traded as merchandise and
animals.

An excellent relic of antiquity is still found, which has possibly been spared,
because it is under the earth. It is a subterranean vault, which, it is said, would
28515 have been a Cistern or rain-tank. One climbs down by a common wooden staircase, and
is surprised to find almost a labyrinth under the ground. The several, but united
vaults rest on 450 pillars, which are 100 feet high, if not higher. The ground is
very marshy, and therefore at the place where one has to go, it is covered with
planks. The light enters through several openings from above. It serves for the
28520 present to wind the silk in it.

The Fountains in the principal places in Constantinople are magnificent, and therefore look very well. Their circumference is about 20 feet square, and on each side are pipes. There are always cups of water ready to drink, for the filling of which, expressly, men are appointed. These small buildings are of marble, and the front is worked with foliage of flowers and horns and gilded.

On this occasion it must also be noted, that, except for the cisterns, there is no other water in Constantinople, than that which is brought there by aqueducts, two or three miles long. And this is also the reason, why, often, during dry summer months, there is a great lack of water. In the neighbourhood of Belgrad, a village, at the distance mentioned from the city, one sees therefore the diligence of the Ancients, to remedy such a defect. It is a delight, almost every quarter-hour, to see a large or small water-conduit. Before one comes from the city to this village, one finds a large one of more than 20 arches; but somewhat to the side three, of which the first goes through a broad valley, and has more than 40 arches; the second through a narrower, but deeper, wherefore 3 rows of arches one above the other were necessary; the third is indeed not so long, as the former, but, because the valley is still deeper, necessity demanded, that each of the 3 rows of arches was made still higher. Here below is only one arch, but of an astonishing height, and the walls are about 20 feet thick. One can also, at the last two, go over each ridge, and ride along regular roads. In these lonely places one is amazed by the beauty of nature in the deep valleys, and the art of man to lead the water over them. These water-pipes were indeed laid by the Greek Emperors; but, because they had suffered much through the wars, as well as neglect, they were restored by Solyman, the founder of the great Mosque of his name in Constantinople.

Christian churches are in a great multitude in Constantinople: but they may not have towers or large bells. They must either be covered by walls from view, or have the appearance of other buildings from the outside. On the inside they may be as beautiful as they wish. - The Greeks have, in the city and its jurisdiction, 22 churches, large and small together. The Patriarchal church, but which, like all the others, from the outside only shows a house, and is also much smaller than the residence of the Patriarch, which forms a reasonably spacious building, does not look bad. The bodies of St. Euthymia and the Empress Theodora are shown in two coffins covered with velvet. - The Armenians also have several, but not so many churches as the Greeks. The principal is the Georgian church, but which is very commonly built. Adjoining it are two chapels, in one of which, they say, the general council was held. The Armenian Patriarch has no fixed seat, but at the principal churches his apartments, with whose habitation he is accustomed to interchange. - At Pera there are four public Roman churches, and two chapels; for at Constantinople itself they have none. Two of the first are parish churches, namely, that of St. Mary, which belongs to the Barefooted (Minores Observantes Reformati), and of St. Anthony, which belongs to the Franciscans proper (Minores Conventuales); then the Church of the Trinitarian, and finally the Church of St. Louis or the Capuchins, which originally was nothing else than the Chapel of the French Ambassador. Among the chapels is that which belongs to the Fathers of the Holy Land of the Barefoot Orders, and one of later foundation, which serves as an inn for the Capuchins, destined for the Georgian mission. At Galata there are three public churches. The Parish Church bears the name of the Apostle Peter, and is served by the Dominicans, as is the Georg Church of the Capuchins, and the Benedict Church of the Jesuits. Moreover, each Roman Ambassador has a special Chapel, with the Parochial Right, in his Palace and his own Chaplains. - Three Protestant Ambassadors keep Embassy preachers, namely the English, Swedish and Dutch. In the Palaces of the first and the last are Chapels for religious service. In the Palace of the second, religious service is only held in a common hall. The Dutch Ambassador may not use a newly built Chapel for religious service, but as a Magazine, and has therefore, in order to prevent great inconveniences, had to submit a written assurance to the Porte. In that hall, where the Evangelical worship is held by the Swedish Ambassador, there is, within a partition, an Outaar and Pulpit placed.

At Constantinople one finds Europeans of almost all nations: especially a large number from Geneva, who enjoy the protection of France. All the Ambassadors live in Pera; but the Merchants, for the convenience of Commerce, in Galata. But one is, in several respects, more definite there, than in Smyrna, but in the main the legal liberties are the same. The cemetery of the Europeans is outside Pera, and entirely open.

When one sails on the water at Constantinople; then one has, besides the magnificent layout of that city and regions, the special sight of thousands of small vessels, serving to transport people from one place to another. They are called Kayken there;

the Greeks call them τεραμίδια (vessels for crossing), and the Europeans, by abbreviation, Permes. They are long and narrow, and partly very costly ornamented, and besides uncommonly light. One can move forward quickly with them; for the Kayks, or rowers, are handy: but one can also be knocked over very easily with them. Everything here has its order. The Kayks for the Court are gilded all around inside and outside above the water; for other First Names white outside, and for the rest painted black. The Sultan's Kayk is rowed forward with 13, but that of the Grand Vizier with 12 pairs of oars. The Grands of the Court, as the Pashas and those equal in rank with them, the Ambassadors, as well as the Russian Resident, since the times of Rumanzow, at the peace of 1739, sail with 6 or 7 pairs of oars, according to each one's liking. Other persons may not have more than 4 pairs of oars; just as these are also not allowed a deck over the Kayken: and in the neighbourhood of the Seraglio one may not even hold a sunshade above one's head, because this is considered as something that would diminish the Emperor's Highness. Whereof such a large city was meanwhile provided with necessary provisions, is not inappropriate to speak here. The European land side would not be nearly sufficient for this; but this deficiency is remedied by the great supply from all sides. Nearly all the countries situated on the Black Sea, and especially the Crimea, Wallachia and Moldavia, send an innumerable number of vessels with all kinds of provisions to this capital. If these are stopped by contrary winds, or run into a storm, or are lost; then Constantinople is in distress. Asia also supplies very many necessities. Finally, the islands of the Archipelago, Syria and Egypt supply the rest. From this last kingdom comes the almost indispensable rice for the Turks, and via Egypt the so-called Levant or actually Arabian coffee is also transported to Constantinople. Therefore, in time of peace, this Residency cannot lack supplies. If the wind is south; then the Archipelago, and the countries situated on the Mediterranean Sea offer the necessities: but if the wind blows north; then the supply of the Black Sea remedies the deficiency. For the rest, the waters near Constantinople are rich in fish, lobsters, oysters and other sea creatures. As nearly all nations of the world may trade in Constantinople, it is, of course, very extensive. Indeed, the large and small ships, and of various makes, lie near Constantinople, and on both sides of the Channel of the sweet waters, as well as on the Channel running from the Black Sea, for a length of 2 or 3 German miles, everywhere so, and often so close together, that their masts, from a distance, resemble a forest. - The Channel of the sweet waters is the most splendid harbour, which nature has made without art, having about 2 miles in circumference, and of which the two banks are, seldom, an eighth part of a German mile apart. The ground is indeed boggy, but nevertheless firm, and so deep, that not only warships lay there, but also large merchant ships can come so near the land, that one can go out, by means of a plank. Because it is very difficult and dangerous for medium-sized ships, because of the strong current in the Channel, to go out of the harbour into the sea of Marmora; so they must first, after Besiktas, cross above Tophana, and sail from there. The Channel, which runs downwards from the Black Sea, is, certainly, one of the principal things worth seeing in the world. From Tophana it runs upwards, by four German miles, to the Black Sea. By two miles it is, for the most part, of such width, that medium-sized guns, fired from both sides, can cover it. On the European and Asian sides one sees several Imperial and other Palaces, Mansions, and fine villages, which lie so close together, that one, especially on the first side, hardly knows where one begins and the other ends. They lie so close to the Channel, that one can step out of the house into the barque; but the others are built up against the wine and other mountains. At Terappia and Bujukdere most of the Ambassadors and Europeans have their homes. Of the French also many have theirs on the Princes' Islands, which lie about 2 German miles from Constantinople in the Nicene Gulf, and are inhabited only by Greeks, who have there the freedom of churches, monasteries, towers and bells. But the most splendid pleasure-houses are gradually falling into ruin, because the heirs of the Grands, and even of the Viziers, are not rich enough to maintain them. The voyage on this Channel furnishes one with beautiful and varied views, which were worthy of being depicted. It is often as if covered with dolphins, which come round the barges, and play together; not to say, that a certain kind of migratory birds, in an incredible multitude, are constantly flying up and down. - In order that Constantinople, from the side of the Black Sea, may not be so easily troubled by the enemies; Thus, at the distance of a large German mile, 2 Castles are built on each side, of which that which lies on the European ground, is called Rumeli-Hisar, but which on the Asiatic ground is called Anatoli-Hisar, both consisting only of walls without ramparts, and planted with Cannons, and were founded by Muhammed II, before

- he undertook the siege of that capital, in order to cut it off from communication with the Black Sea. The Canal there is not much more than a quarter of a mile wide. But in a serious attack they would be as little serviceable as the Dardanelles and Castles on the other side of the city. The Emperor uses them to keep the State prisoners in them, and also to have the rebellious Janistas there taken their lives, and especially of the former such as they do not wish to put in the 7 Towers. After the mouth of the Channel, which is about half a mile wide, and 2 miles distant from the preceding one, there are 2 more castles, called Rumeli-Käläh and Anatoli-Käläh, built by Mürad IV. In the war against the Russians, in the year 1770, they were still provided with Batteries; just as, at the same time, 2 strong Castles were built by the Knight Tott, one on the Asian, and the other opposite on the European ground, very near the mouth of the Black Sea. — Near the mouth lies, on the European side, the village of Fanaratti, near which, on a small rock surrounded by the sea, stands the supposed pillar of Pompey. From thence to the above-mentioned village of Belgrad, there stands, in the open field, a kind of a fairly wide, square and thick Tower, which is called the Tower of Ovid, because that Poet, it is said, would have kept his residence there. There is no roof on it, and moreover it is very dilapidated; that he has nothing, which would be remarkable, to see; just as 'there were around, before now, more such towers built, it seems, at the time of the Cosak robberies, to protect these regions against them.
- Of Constantinople, one will be able to form a complete idea, by the accompanying illustration of the ground plan, to whose elucidation the following statement of numbers and figures serves.
- A. The Seraglio.
 - B. The entrance in the first square.
 - C. The entrance in the second square.
 - D. The Divan.
 - E. The entrance in the third square, or in the inner Seraglio.
 - F. The Auditorium.
 - G. The Imperial residences and buildings.
 - H. The Harim, or residence of the Emperor's wives.
 - I. Residences of the Idschoglans, (Servants) and other persons of the inner Seraglio.
 - K. The Mint.
 - L. The Tower, from which the Emperor, without being seen, can see the Ambassadors riding to the Vizier.
 - M. The Porte, or the Serail of the Grand Vizier.
 - N. Bostandschi Kapi, or gardeners' gate.
 - O. The Gate of the black carved ones.
 - P. Bujuk-Kapi, the great Gate, through which the Emperor embarks on his ship.
 - Q. Kiosks, pleasure or garden halls.
 - R. Stables.
 - S. Eski-Serail, the old Serail.
 - T. Ejub-Dschami.
 - V. Fanale, or lighthouse for the ships.
- Names of the gates around the harbour.
- 1. Bagdschjeh-gate.
 - 2. Baluk-Basar-gate.
 - 3. Sindan-gate. 4. Odun Gate.
 - 5. Ajasmah Gate.
 - 6. Uen-Kapan Gate.
 - 7. Dschjäbäly Gate.
 - 8. Ajan Gate.
 - 9. Jengy Gate.
 - 10. Padry Gate.
 - 11. Fener Gate.
 - 12. Balad Gate.
 - 13. A'ywan-Sferay Gate.
- Names of the gates towards the sea.
- 14. Achar Gate.
 - 15. Tschadlady Gate.
 - 16. Kum Gate.
 - 17. Jengy Gate [as 9?].
 - 18. Daud-Pascha Gate.
 - 19. Samathya Gate.

20. Narly Gate

28720

Names of the gates on the land side.

21. Bricked-up gate. (porta aurea.)

22. Jedi-Kuli-Kapi.

23. Bricked-up gate.

28725

24. Selivri-Kapi.

25. Jeni-Kapi. Here was Mahomet's attack.

26. Top-Kapan. at the siege and conquest.

27. Edrene-Kapi. of Constantinople.

28. Bricked-up gate from the Palace of Constantine.

28730

29. Egiri-Kapi.

Mosques and Churches.

30. Hagia-Sofia-Dschami.

31. Sultan-Achmet-Dschami.

28735

32. Sultan Bajazet-Dschami.

33. Jengi, or Valide-Dschami.

34. Sultan-Mahomet-Dschami.

35. Sultan-Solyman-Dschami.

36. Sultan-Selim-Dschami.

28740

37. Schech-zade-Dschami.

55. Bird enclosure.

56. Madhouse.

57. Sarfans, Leather Market.

58. Egyptian Besestein.

59. Idschoglan-Serai at Pera.

28765

60. Very beautiful Fountain on the plain at Tophana.

61. Tophana, the building for the gun foundry.

(* The famous Danish traveller, Niebuhr, thinks the measuring stick on the Map of Constantinople by Reben is too large. He found the circumference of that city, without the suburbs, according to his measurement, not more than thirteen thousand good paces, and therefore not much more than two German miles in size. Perhaps one can rely on him, here, much more than on the Lord of Reben, when he had his Map before him.

28770

(* The Ejubs-Moshee is the first that the Turks built in Constantinople. Opposite the suburb in which it stands, between the sweet waters and the Armoury, at the end of the harbour, is the suburb of the Jews (Askjoy).

28775

(* That there is a birdcage hanging in the Divan, at the top of the ship, and in it a white dove, as some report, is unfounded.

(* At the time of Count Marsigli there were, in Constantinople, 485 principal mosques, among which seven Imperial ones; and in 4 thousand, 4 hundred, 85 quarters of the city inhabited by Turks, there were, in each one or two common mosques, so that this last number might well amount to 7 or 8 thousand. After his time, both kinds of religious places have increased rather than decreased.

28780

(* Concerning the first St. Sophie-church the writers do not agree at all; but this is a settled matter, that Emperor Justinian, when it had previously been burned down several times, and destroyed by earthquakes, had increased the burdens, decorated it much more beautiful and splendid than it was before, made the walls and vaults of baked bricks, covered the inside

28785

with various precious marbles, and the whole

(*) When the Besestam or vaulted shops, at their usual time, are not opened; then this is a sign, that 'there is already a commotion among the people or certainly to be feared.

()??building, at various places, fasten it with anchors. If it is not as large, as the St. Peter's Church in Rome; then it follows immediately after it. Although the Sophie-church is very large, and perhaps does not yield to it in height; nevertheless it remarkably surpasses none in length, for it is a cruciform church. The dome of the Sophie-church is flat, and surpasses that of the Peters-church very much in beauty and boldness of workmanship. This is indeed decorated with a great deal of marble and paintings in mosaic work; but has not such fine and precious pillars as none. Its form is square, and within the walls the length is 42, but the breadth 38 fathoms. Thus Grelot gives both, in his description and drawing, and it seems, that one may rely on him here. If one fathom is reckoned at 6 feet, and multiplied by it; then the length made 252, and the breadth 228 feet. This came pretty close to the statement of Gyllius, who places one at 240, but this one at 230 feet, but at the same time says that he had the measure taken by another.

(*) Concerning this last pillar on the Hippodromus, some researchers of antiquities assert that this monument was brought from the Temple at Delphos, where it was dedicated to Apollo. - In the gardens of the Seraglio, there is, otherwise, in the middle of the Cypresses, another pillar, the inscription of which was made illegible some time ago. Among the words that remain here and there, one can still read: ob victos Gothos, (in memory of the victory over the Goths.) It is thought that it originates from the time of Theodosius, if not even of Constantin. (*) When the Besestam or vaulted shops are not opened at their usual time; then this is a sign that a riot is already brewing among the people or is certainly to be feared.

§. VII. Of the Europeans in Turkey.

The Europeans, who are called Franks in Turkey, are spread among the various principal merchants. The name Franks probably comes from the warring peoples, who in the so-called Holy Wars were to take the promised Land (Palestine), and who consisted mostly of the then Franci. The principal trading cities, where the Europeans settled with their residence, are, in European Turkey, Constantinople, Adrianople and Thessalonica, in Natolia or Asia Minor; Smyrna and Angora; in Syria, Aleppo, Seyde, Jaffa, Ptolemais or St. Jean d'Acre; and in Egypt, Greater Cairo and Alexandria. At other places of less importance in Morea, Candia, Cyprus, the islands of the Archipelago, Barut, Rosetto, etc., some nations, especially the French, as well as the Venetians, of whom the former are, in general, the most numerous among the Europeans in the Levant, also maintain warehouses. Concerning these places, the necessary information has been stated in § I. above.

Those Europeans now have the liberty to trade in Turkey, whose government has concluded a peace treaty with the Porte. These are the Roman-German Emperor, the Russian Court, France, England, Holland, Denmark, Sweden, Poland, Prussia, Venice and Naples. All these various Powers, Poland excepted, have their ambassadors at Constantinople at the time; but Poland sends there only on special occasions, for instance, when a new Sultan has ascended the Throne, extraordinary Ambassadors. In all the merchant cities one finds likewise Consuls or Agents, one of whom, often, attends to the affairs of several nations.

Other Europeans are not allowed to trade at all in the Turkish Territory, or must go under the protection of a Power friendly to the Porte: formerly Genoese were also in the Levant; but now they are no longer there openly, but live, in such a case, under French or other protection.

For the rest, the liberties are not small. The Europeans may observe all religious ceremonies openly, that is, baptisms, marriages, burials, etc. This is done even with persons, exalted above the common man, with more stateliness, than elsewhere. At places where ships are moored, equipped with artillery, the guns are discharged; the ships let the pennants fly, and the flags on the flagpoles, kept in the houses of the Consuls, are hoisted. But towers and bells are absolutely forbidden. None of them can be forced to the Mahometan religion, and if anyone, through imprudence or other circumstances, wishes to oblige himself to do so, then the nation to which he belongs has the right to question him three times solemnly before the Turkish authorities. If he then answers by retracting his word, then he must be extradited on the spot. The Europeans, and even their ecclesiastical Persons, may also, in most places, go in their ordinary dress. The disputes between persons of one Nation are settled by its special Consuls; those of several Nations by their Consuls; but the mixed disputes between Europeans and Turkish subjects are, according to the treaties of peace made, also decided between the Consuls and the Turkish Authorities. Each Nation has, under its Ambassador or Consul, a proportionate settlement. It has its Chaplains, Treasurers, Transcribers, Interpreters, Janistaries, and, besides the members of its Nation, also its comrades among the inhabitants of the Country, who are attached to it by means of a Berat (Letter of Freedom), and on that account enjoy almost the same privileges as they have themselves. The French must have a certificate from the

Chamber of Commerce at Marseilles, to carry on Commerce, for a certain period, for instance ten or twelve years, and when these years are over, they are obliged to return to France, or to have it renewed. The trade is unusually large, and that all the more, as there are few goods that are forbidden to import or export. The taxes on the goods are very moderate, and set at three per hundred. But, because this is an old stipulation, and the goods are now almost three times higher in price, only two per cent is paid by the bank. If a merchant is caught in subterfuge, he pays double the tax as a penalty. This leniency not only surpasses, in a natural and human fairness, the tolls of many Christian powers, but also makes the trade flourish unusually. The shipping of the Europeans is considerable, and is protected and promoted by the warships and merchant ships of the Turks. The pirates on the African, Greek, Nato and Syrian coasts nevertheless often make them unsafe and dangerous. They especially take possession of the small ships, either by cunning, or by suddenly attacking them, because they are accustomed to approach them at night, and then with their sabre in their fist.

The various nations living together in Turkey live, as far as trade and conversation are concerned, in good peace among themselves; but a familiar intercourse has precisely no place. Each one among the Christians, Jews and Turks limits himself to persons of his denomination, the cause of this being not so much the religion, but rather the way of life, which flows from it. Among the Easterners the women do not take part in the companies in which men's sons come. They also live quite differently in them, than the Europeans. Instead of that with us many speak at once, so that the noise, even in an average company, is quite great, so people speak seldom there. It is considered improper to interrupt each other. Most sit quietly, under a pipe of tobacco, and let their thoughts go over one thing or another. The residence of the Europeans, in most of the places of the Levant cited, is divided between the city and the country. They are in general, and therefore also the Ambassadors and Consuls, accustomed to spend the summer months outside the cities, both to take fresher air, and to enjoy more liberty, and to protect themselves better in case of a possible prevailing plague. Their country houses, as regards natural graces, far surpass our artificially made pleasure-houses. The alternation of mountains, valleys, fountains, woods, bushes, etc., furnishes uncommonly enchanting views, and the Europeans live there without ceremonial constraint, with the enjoyment of all the ease in walking, making short excursions, fishing and hunting. — The Ambassadors and Consuls in Turkey represent distinguished persons. Their goods, coming from abroad, are not examined, but they receive them without cost, and without being opened and examined. — The Turks make no distinction between an Ambassador and Envoy, and between an ordinary or extraordinary Envoy; but use for all the name Eldschi. — Their Palaces are filled with various persons belonging to the mission, besides with Servants, Interpreters, Janistaries, etc.; their Audiences with the Grand Vizier and the Grand Lord take place very seldom, because everything must pass in writing through the hands of the Interpreter of the Porte; yes, they must, before the Audience, deliver everything in writing, so that the Turks can consider it beforehand: but, when they take place, with all the greater pomp; and the visits which one Ambassador pays to another, are also not without many solemnities, for instance, that, on their entry into a Palace, a small bell is rung, and they, like the Consuls, Janistas and Interpreters, let them go or ride before them. Before this, however, there was more Honour and Dignity associated with it, than now, since the Ambassadors, because so many Courts have sought the friendship of the Porte, which the Turks regard as a kind of homage, are very common and therefore little esteemed. (*) Decent people are, in the Levant, well received not only by their own, but also by other nations. Generally there prevails a courtesy which is found there only, and not in the most civilised countries. All Europeans there regard each other as countrymen and good friends; wherefore a traveller has a very good time at the place where he stays.

(*) The Ambassadors, Consuls, and the Persons belonging to their nation have great reason to behave cautiously and regularly in Turkey. There one forgets less, than in other places, the mistakes once committed; and those that one commits in particular, are, as a rule, put on the account of his whole nation.

§. VIII. Of the Audiences of the European Ambassadors and Consuls to the Turks. The European Ambassadors, at Constantinople, observe a certain rank, according to which the Consuls in the various maritime cities of Turkey direct themselves. First are the Envoys, namely the French, the English, the Venetian and the Dutch; then come the Envoys, of the German Emperor, who bears the name of Internuncio, the Swedish, the Danish, the Prussian, the Russian, who is called Resident, and the Naples. The last, in order not to detract from the Ceremonial of his Court, goes to the Audiences

eleven days after the others. - The visits of the Consuls to the Cadis are the least frequent. Two or four Janistas with their state caps, and four or five foot long staves, and behind them the Interpreters, go in pairs before the Consul, who follows at a certain distance, and according to the Consulate is accompanied by more or fewer servants; whereupon the journey is concluded by those sons of the men who are under his protection. On arrival at the Mechkeme (meeting-place) he is conducted into the audience-room, whither he has had a state-chair brought, and where, after the Kadi has come and has taken his place on his sofa, raised by some cushions, he sits down. All the other persons present remain mostly standing. After the compliments and a short conversation, the Kadi gives a sign to his Attendants, two of whom place embroidered handkerchiefs on the laps of the Kadi and the Consul, instead of a napkin, and two others hand each a cup of Coffee with Jams, which is likewise offered to the principal Europeans, as well as to the Officials of the Kadi. Then the Sorbet is handed over in large porcelain bowls. Then, to put an end to the visit, the Attendants, at a repeated sign, bring silver or gold sprinkling-pots filled with fragrant water, with which they sprinkle the hands of those who have had the honour of drinking Coffee, and then the Kadi and Consul, holding a handkerchief over their heads, but the others without such a handkerchief, incense with Aloe. At the farewell, at which the Kadi remains seated, the Consul is honoured with a stitched handkerchief or other handkerchief, as are also two or three of the principal persons of his retinue. The audience of a Consul with a Pasha differs from that with a Kadi only in that the latter receives him sitting, and instead of handkerchiefs distributes Kastans. - The Ambassadors of such Powers, who have many ships in Turkish waters, pay an annual visit to the Captain Pasha or Grand Admiral, before he sails with the Ottoman fleet to the Archipelago in the summer, in order to recommend to him the ships of their nation. But this visit is a trifle, compared with the Audience with the Grand Vizier, which all Ambassadors have, on their arrival and departure, as well as on all changes of Emperors and Viziers. In other cases an Ambassador is not easily granted an Audience, but the matters are settled in writing, and the proposals, in Latin or Italian, are handed to the Interpreter of the Porte, who translates them verbatim, and must deliver his translation with the Original to the Porte; and this is followed again in writing, and in the Turkish language, by the answer with a verbatim translation from that Interpreter of the Porte; who forfeits his head, if there be but one word wanting in that translation, or if he does not conceal the Secret. But no Ambassador requests an audience, except in cases of necessity, in order to save the expense of several thousand guilders, which it incurs.

Because with the Turks the main matters are settled early; Thus the Ambassador sets out at about 4 o'clock. First go 12 or 24 Janistas, in pairs in front, with Ceremonial staves in their hands, and caps on their heads, from which, at the back, hangs a white stripe of nearly 2 ells long and a quarter wide; then follow 5 or 7 beautifully adorned hand-horses, at the head of which is the groom on horseback; then 12 to 24 Servants, accepted by the Ambassador, dressed in the manner of the country; the House-Servants dressed in European style, preceded by the Door-keeper; 4 or 8 Chamber-Servants with the Steward; the Interpreter; the Secretary of the Ambassador, who carries the credentials of his Court on a precious cushion; furthermore the Ambassador himself, either on foot, or on horseback, or in a bier, and when he has Heiduks, surrounded by them; the castle makes his retinue, which consists of his nation, and also many foreigners, who wish to see this ceremony. At extraordinary Audiences, when the Ambassador has to deliver letters from his Court, he is also accompanied by the Tschausch-Baschy (Chief Master of Ceremonies) and several Servants of the Porte, as well as by several Janistas. This journey goes as far as the Canal of the [zoete] water, or the Harbour, where the Vizier has sent a sufficient number of Kayken to ferry him across. On the other side is the Tschausch-Baschi, to receive the Envoy. Both, with the principals of the latter's retinue, are brought into a small, very common house, set apart for the purpose, where they are offered Coffee. During this time the Grand Vizier sends the horses to fetch the Envoy. Having mounted on horseback, the journey continues in the order aforesaid, with this difference only, that the Tschausch-Baschi rides at the right hand of an Envoy, as an Ambassador does not readily permit him to do so, but either lets him ride ahead, or at least can demand that someone of his retinue rides at his left hand. When one has entered the Vizier's Palace, the Ambassador is then brought into a hall by the Interpreter of the Porte, in order to report it to the Vizier. A while afterward the Ambassador is led into the Auditorium. The Ceremonial is here very strictly calculated, so as not to yield to each other; wherefore the Vizier does not enter by the door through which the Ambassador has entered. This Auditorium, in which he is received, is built

exactly according to the four points of the sky. It is somewhat longer than it is
 28990 wide. To the north and east are the windows. To the south is the door for the
 Ambassador, and to the west that for the Vizier. Along the said windows are precious
 Sophas, or Eastern couches. In the north-eastern corner is a height, by means of a
 double Sopha for the Grand Vizier; before it, at the distance of three paces, a chair
 28995 without back or support for the Ambassador; for since the Grand Vizier will not give
 him his right hand on the Sofa, and he will not sit on his left hand, such a middle
 way has been devised. On the right side of the door through which the Ambassador
 enters, a row of the principal State servants stands near the Ambassador's chair; and
 a similar row also stands on the left side of the door through which the Vizier
 29000 enters, up to his seat. The Ambassador enters first, and passes through the middle,
 but does not sit down, but remains standing until the Vizier comes and takes his
 seat, because otherwise he would have to get up when he entered; but his retinue may
 not pass through the middle, but must pass between the row and the glasses, and thus
 step behind the Ambassador. A moment later the doors of the Vizier are opened, and he
 then also passes through the middle, to his seat, at the same time receiving the
 29005 Salam or a Turkish Vivat, three times, by all the Turks present. Such a cheer also
 the other Viziers, Pachas and the Captain-Pacha, make of theirs on solemn occasions.
 While he is sitting down, the Ambassador also sits down, and they make each other a
 sort of Compliment, being in the conversation of the Grand Vizier with the Ambassador
 the Interpreter of the Porte the translator. The Grand Men of the Court, and the
 29010 retinue of the Ambassador remain standing. The latter presents his credentials to the
 Vizier, and also receives the written answer to them; for everything has been settled
 beforehand. At the Audience no business is transacted at all, as the bystanders would
 hear everything; but only indifferent things are talked about, and after a few
 moments Coffee with Jams is handed over, followed by a sort of Sorbet or sweet drink.
 29015 With fragrant water one is sprinkled on the head, hands and clothing. Since there are
 now very many people who bring and carry out these things, and each, according to
 Levantine custom, receives only one cup of Coffee; so everything is settled very
 quickly. At the same time the Kastans, or supposed Garments of Honor, are also put on
 the Envoy and his retinue. These are of tree-wool and interwoven flock-silk, thinly
 29020 wrought, mostly whitish, with a few misshapen pale yellow flowers. They resemble ours
 well, except that the sleeves hang almost to the ground, and are so narrow that the
 arm cannot pass through; for which reason they have an opening at the bottom, through
 which the arm may be put. Give a sign to the Grand Vizier that the perfume should be
 brought, and if the Ambassador and his retinue are incensed with it; then it is a
 29025 sign that they will part. The Ambassador then stands up, and bows to the Vizier, who
 also bows, but remains seated; he goes out of the palace of the Vizier, (where, as in
 the Seraglio at the Audience with the Grand Lord, the Turks show him and his retinue
 a respect, according as his Court is respected by the Porte,) in the same order as he
 came. The Audience itself lasts only half an hour, and the Europeans are there, as
 29030 also at the Audiences with the Grand Lord, covered with their hats.
 As for these last Audiences; they are certainly the most solemn. The journey on the
 other side of the Channel of sweet waters is the same; but must go up to that to be
 done under the illumination of torches, because, except during the longest days, it
 is usually still dark. The crossing is then, because of the darkness, difficult, and
 29035 one has work to find the horses. At daybreak one arrives at the Palace of the Vizier.
 Here one must wait in the open air, whatever the weather, on horseback. This often
 takes a fairly long time. For many Grands have to meet with the Vizier, to fetch him.
 They also ride ahead, whereupon the Grand Vizier follows. The Interpreter of the
 Porte closes the gate. Then comes the Envoy with his retinue. One rides through the
 29040 first gate of the Seraglio; but at the second gate one must dismount, and go through
 on foot. This is, on account of the thousands of people who must be in the Seraglio,
 exceedingly difficult, and one is almost crowded and trampled upon. One then goes to
 the Divan, which is opened a short time afterwards. This is a vaulted room, about 50
 feet square. The door is to the East. To this and the South side are also the
 29045 windows. Directly opposite the door, in the wall, about 16 feet from the ground, is a
 golden grating, which may be 4 feet high and 3 feet wide. By means of this, in the
 room adjoining it, which is kept dark there, one can hear and see what passes in the
 Divan, and the Great Lord makes use of it for that purpose. One cannot therefore see
 him, and besides that one is lectured by the Interpreter of the Porte not to look up
 29050 much. Over this, as well as on other places of the wall, are the words, written in
 Arabic in large golden letters: There is no God but God, and Muhammad is his Prophet.
 Under this latticework the Grand Vizier sits alone on a divan, which occupies the
 whole side, and after the south and north sides extends almost to the middle of the
 divan. On the right hand of the Grand Vizier, in the corner of the divan, sits the

29055 Captain-Pacha, when he is in Constantinople, as well as other Pashas, when they are
 there, and beside him, on the side divan, the Nischandschy; (great Chancellor,) and
 on the left hand the two Kadhyleschkjer (Chiefs of the army) and beside these on the
 side divan the Defterdar. (Chief Treasurer.) On the right side near the door sits the
 29060 Ambassador on a chair without backrest; the Interpreter of the Porte stands on his
 left hand, and the Ambassador's retinue stands behind him. Legal proceedings are
 begun. There, sometimes, 12 or 18 persons are brought in. A judicial person reads, in
 a few words, the case of each one, and the Grand Vizier, with the Council of
 29065 Byssisters, gives the verdict in a few but clear words. This lasts from 6 to about 8
 o'clock, in which 2 hours more than 50 disputes are settled. Then they proceed to the
 coinage matters; the newly minted coin is shown, and the multitude of purses is
 counted out, which must be distributed among the Janistas for Soldy. This may last
 until about 9 o'clock. Hereupon the Cooks of the Grand Vizier appear. They carry as
 many small round, besides very common, tripod tables, as there are Turkish Ministers
 in the Divan. For each of these one is placed, and a silver table-top is laid over
 29070 it, on which some spoons are laid. Napkins are not given, forks not at all, and only
 one knife, to cut up, what possibly had not already been cut up in the kitchen, or
 could not be done with the fingers of one. The Envoy is, on this occasion, placed at
 the table of the Grand Vizier, opposite him. At every other table sit 2 or 3
 29075 Europeans. As the meat is cooked very soft, and is sprinkled with pepper very
 heavily, and is served in greenish porcelain, indeed strong and thick, but common
 dishes, (whereby the Turks have the fancy, that one could see by this, when the food
 was poisoned,) there is little desire to eat of it, so much the more, when one has to
 touch it with one's fingers. There are several hundred dishes served. One must say,
 29080 served: for one is hardly set up, when it is already taken away again, and another
 brought. But all this is done in the utmost order and silence. For, because the
 multitude of cooks is placed even in the Divan in such a manner, that the dishes from
 the kitchen are given from one to the other, and so set before, are also given back
 in the same manner; so there is no running back and forth at all. At least in half an
 hour this whole meal is finished, however big it may have been. During that whole
 29085 time the second square of the Seraglio is not empty either, but to several thousand
 Janistries the pay for several months is paid. One company after another their
 purses, of which there are 500 piastres in each, are thrown, and because he who
 catches them first draws a reward for them, so almost reaches the ground, because of
 the running of the Janistas. Except for this, there is such a silence in the
 29090 Seraglio, as if there were no one there, and the soldiers do not dare to leave their
 post without being called. These are also fed on such a day with Pillau or rice. When
 the banquet in the Divan is over; then water is given for washing, and the further
 arrangement for the actual Audience is made.
 All the Ministers of State, after a bow to the Grand Vizier, leave the Divan. At the
 29095 same time, the Emperor makes known the desire of the Ambassador for an Audience, by a
 written request, which, like all letters from the Grand Vizier to the Emperor, is
 called Talkysch, and he likewise gives written permission for it, which, like all
 immediate answers from the Emperor, bears the name of Katischerif. The Ambassador,
 after bowing to the Grand Vizier, but who remains seated, goes with his retinue into
 29100 the fore-court, and is brought, on the same side of the Divan building, into a corner
 of the Seraglio to the North, under the open sky, where a crowd of Attendants come
 with Kastans, in order that the Ambassador and his retinue may be clothed with them,
 in order to be worthy to appear before the Emperor in these Turkish garments of
 honour. This Eastern custom clarifies the allusions to the words of the Bible, that
 29105 we, in our sinful condition, need special garments of salvation, in order to be
 considered worthy to stand before the Son of man, the Judge of all flesh. The
 Ambassador with his retinue being dressed in this way, he is placed at the wall under
 a somewhat projecting roof, where he can, in any case, sit down on an old bench, so
 that he has the whole forecourt before him, and at the same time the Janistas also
 29110 place themselves in a certain order.
 On the left hand of that corner, where the Ambassador stands, is the Auditorium of
 the Great Lord. From it come 2 Chamberlains with silver rods, and go straight to the
 Divan. The Grand Vizier comes out of it, to be led to the Emperor. The serious
 attitude of his gait cannot well be imagined. He lays, several times, his right hand
 29115 on his heart, greeting in this manner the several ranks of Janistas, and the
 Ambassador and his retinue. After he has remained with the Grand Lord for some time,
 as many pairs of Masters of Ceremonies come forward, as there are persons allowed to
 enter the Auditorium, this number being, including the Interpreters of the Ambassador
 and the Porte, limited to 10 or 12 persons. Two of them lead a European under their
 29120 arms, and bring him in, fairly held fast. The Emperor sits on a Sopha or Throne,

which has almost the shape of a square bed. The heaven rests on pillars. All the clothing is covered with gold and pearls exceedingly richly. The Grand Vizier stands on his left hand; but the Interpreter of the Porte lies flat on the ground before the Sultan, with his face turned towards the Vizier, as if he were unworthy to look at the Emperor. The Ambassador then makes a bow to him, making at the same time his proposal by handing over the letters of credence, which, if he is prudent, he kisses with a bow from his Secretary, because he must show the same respect to the Emperor's letters. The Interpreter of the Porte translates the Compliment, and the Grand Vizier accepts the letters. He also answers everything; for the Emperor does not deign to speak with the Ambassadors. He hands him the letters at the same time, and in about five minutes the Audience is over. When they leave, the Europeans are called out to go outside the Seraglio. They do not let themselves be told twice; for, because they know what a danger they run at the second gate, where so many thousands of people have to go through and out, everyone does his utmost to get out quickly and to mount his horse. But they cannot get through the third gate until all the State servants and soldiers are outside. As troublesome as it is to wait after so many people, because one has to stop under the open sky, so pleasantly is this trouble nevertheless rewarded, because, besides a few thousand Janistries, one sees all the Civil and Military servants, in their very different dresses, passing or riding before one. After all this the Ambassador also, in the previous order, takes his return, and arrives again at Pera about 11 or 12 o'clock. From this one sees how hearty not only such Audiences are, but also how a barbarous arrogance of the Turks is combined with boorishness and clumsiness, and the prestige of the European Ambassadors is greatly diminished. Truly, one must wonder that the Christian powers can tolerate the Titles of the Turkish Emperor, in the letters written to them, in which he presents himself as no less than a King of all Kings, calling himself among others Schehin-Schah, and Tsill-ullah, that is, Emperor of the Emperors, and the shadow of God on earth; and, when the Title of a Christian king is set, he wishes thereby, whose end may be happy, which among the Turks means, who may become a Mahometan!

SECTION TWO. The condition of the Christian religion in Turkey.

§. IX. Of the religious freedom of the Christians in Turkey in general.

The Christian religious freedom among the Turks is based on various prescriptions in their Koran, of which the so-called Testament of Mahomet may be regarded as a brief summary. Namely, it is said that he came to the monks on Mount Sinai, and was received very kindly by them, and therefore, in gratitude, he gave them a letter of freedom under the said Title. This writing remained in the hands of the monks until the time of Sultan Selim, who judged that it was unholy to leave it in their hands. Wherefore he had them requisition that supposed treasure, giving them a copy in return, which they still preserve. Solyman II confined this entire Testament of Mahomet, and the Catecheriff of Selim resting upon it, to the monastery of Mount Sinai alone, and it was not far off, but that he had destroyed both, on the advice of Kuproli Ogli Mustapha Pacha. The Lord of Mosheim, in his Church History, near the seventh century, gives the necessary account of what our judicious scholars think of it. (*) Whatever thoughts these may now entertain, this is certain, that the Turks nevertheless acknowledge this Testament as genuine; and, because the religious freedom of the Christians among them, in fact, rests on it, I will follow it with a translation, which is this:

"God is great and a Ruler; from Him have all the Prophets come, and before Him there is no unjust testimony: by God's Grace Muhammad, the son of Abdallah, the Messenger of God, and faithful guardian of the world, has drawn up for all those who belong to his people and religion, this present testimonial as a firm and express promise, which the people of the Christians, and the followers of the Nazarene, of whatever kind, great or small, honored, or whatever they may be, will be held; and establish the following:"

I. "Whoever of my people will dare to break my promise and my oath, contained in this letter of freedom, break; he destroys God's promise, acts contrary to the oath, and becomes a despiser of faith, (which God forbid!) for he becomes guilty of the curse, he may be a King or a pauper, or generally, whoever he will".

II. "If any of these Monks, in his travels, should stop on any mountain or hill, in a village or other habitable place, by the sea, in the desert, or in any monastery, in a church or house of prayer; then I will be in the midst of them, as the keeper and protector of their persons, goods and means, with my soul, help and protection, and all my countrymen; for they form a part of my own people, and are my Honour".

III. "I charged all my servants, not to exact any poll tax, nor any other tribute from them; for they shall not be compelled to do anything of this kind".

IV. "No one shall undertake to change their Judges or Overseers, but they shall remain in their office, without being deposed".

29190 V. "No one shall molest them on the highways, in their journeys".

VI. "No one shall deprive them of their churches".

VII. "Whoever destroys any of these liberties granted to me, let him know that he destroys God's order".

29195 VIII. "Furthermore, neither their Judges, Overseers, Monks, Servants, Pupils, nor any others dependent on them, shall pay poll tax, or be taxed in this matter; for I am their protector, whether they be by land or by water, East or West, North or South; for they as well as all that belongs to them are included in this oath and letter of freedom".

29200 IX. "And from those who live quietly and as hermits on the mountains, no poll tax, nor the Tithe of their income, shall be exacted. Nor shall any Orthodox take part in theirs, for they work only for their maintenance".

X. "If the fruits of the earth should prosper, the inhabitants shall be obliged to pay them something of every measure".

29205 XI. "In time of war they shall neither be expelled from their habitation, nor compelled to take the field, nor shall a poll tax be exacted from them".
(Thus far goes that which concerns the Monks of Mount Sinai; the rest concerns all Christians.)

XII. "Those Christians, who are settled in the habitation, and by reason of their wealth and trade are able to pay the poll tax, shall not give more than 12 Drachmas".

29210 XIII. "With this exception, nothing further shall be exacted from them, according to God's express command, which says: do not burden those who have respect for the books that come from God; but share with them, in a loving manner, some of your goods; associate with them, and keep each one from their insults".

XIV. "If a Christian woman should at any time marry an Orthodox, he shall not force her inclination to deprive her of her church, prayers, and religion."

29215 XV. "No one shall prevent them from improving their churches".

XVI. "If anyone acts against this my letter of freedom, or believes the contrary; he falls away from God and his Divine Apostle, in consideration of the protection, which I have granted them, in accordance with this promise".

29220 XVII. "No one shall make war on them; but the Ordinaries shall, rather, make war for them".

XVIII. "And hereby I command, that no one of my people dare to do or act against this my promise, to the end of the world". "Witnesses were: Ali, the Son of, Abu Thaleb (with fifteen others").

29225 "This present was written by the Chief of the Army, the successor of Ali, the Son of Abu Thaleb, when the Prophet, (in which peace be!) had signed it with his own hand, in his Mosque, in the second year of the Hegire, the third day of the month Mahorem".
(*)

29230 Those who are new to History already know the reason why Mahomet, especially at certain times, allowed the Christians so great liberties, namely, partly, by means of their assistance, to subdue the heathen Arabs, partly to avail himself of all Christian denominations, who were excluded from the Greek Church, for the destruction of the Eastern Empire; partly to attract to themselves, by such toleration of that Religion, the more easily the Christians who were discontented under this Empire; and

29235 how, therefore, in a certain respect, an absolute necessity has extorted it from him. But, putting this aside, it remains certain, that, when this so-called Testament was followed by the Turks, the Christians must have lived very quietly among them, which is now very much the case. Mahomet did indeed charge, that the Christians as well as the Jews should be excused, as to their Life and Religion; but on condition, that

29240 they would submit, with good will, to the Mahometans, and pay the ransom, which is called Charatz, for their Life. Most did the first, and all do the latter; henceforth we see why they are tolerated. But nevertheless this liberty has unusually great conditions. The instances are not rare, that whole multitudes of Christians, and still more often, that individuals, in all sorts of incidents, especially when false

29245 witnesses, said that they had heard that such persons wished to adopt the Mohammedan religion, and so also others, in order to escape the penalty of death, were forced to it by force. The clearest examples of this are found in the Lives of Osman and Orchan. Up to the time of Amurat IV, there was a law that the tenth part of the sons born of Christian parents was taken from them by force, and after circumcision was

29250 incorporated into the Janistas; and Selim I was somewhat hindered by the Grand Vizier and the Mufti from making all Christian subjects Mohammedans. But this is the main rule of the Turks, to curtail and to determine the public religion. In places where there have been no Christian churches, or where they have fallen into disuse, the

establishment of them is usually impossible. In places where there are still
 29255 Christian meetings, they are steadily, more and more suppressed. What is defective in
 the churches, and only in small details, such as the roof, the tower, etc., may not
 be improved, except with a special permission from the Court. And this is so
 difficult to obtain, and also involves such great costs, that especially smaller
 29260 communities, one after the other, are ruined by it. The wantonness of the common
 people in public wars, as well as internal unrest in Turkey, very often causes
 plundering and damaging of churches, and even complete destruction. But some
 provinces still have some privileges in this respect, such as Moldavia, Wallachia,
 many parts of Greece proper, and several islands of the Archipelago. In these many
 churches are found with towers and bells, which are not found elsewhere. The churches
 29265 therefore everywhere, at least from the outside, also look very sad, and are,
 especially in the villages, hardly distinguishable from our stables. Monasteries are
 usually found in places where no Turks live: but, contrary to Mahomet's Testament,
 they must either pay all taxes from them, or an even larger sum be raised for gifts
 to the Turks. European Turkey allows the country's Christians somewhat more freedom
 29270 than Asia, where Christians are unequally more oppressed, and their religious
 arrangements destroyed; and this is also the reason why the number of Christians
 there is less than in the other.

Where there are churches; there all religious customs can be observed fairly
 undisturbed. For the public religion, baptism, marriage, etc., no money is paid, but
 29275 for burials one does, for which the permission must be bought with one or more
 thalers. The freedom to hold religious services on the night before the first Easter
 day, and on that feast itself to be allowed to perform all kinds of Christian
 merrymaking, without recourse or punishment, must be bought for about 500 thalers,
 depending on the place, and for example in Smyrna. This last is a real disgrace to
 29280 the Christians. But, the custom has been introduced once, and the Turkish authorities
 would demand this money, even if no irregularities occurred. The ecclesiastical
 persons of the Christians, as Patriarchs, Archbishops, Bishops, Priests, etc., enjoy,
 with the exception of special circumstances, a perfect safety, and go about
 everywhere in their priestly garments unmolested; yes, they are respected because of
 29285 their position, and gifts are even made to them, when they are called, here and
 elsewhere, to read the Gospel over their sick, and to drive away the diseases by
 incantations. They are, according to an Imperial charter, exempted from the poll tax,
 which the Bishops for themselves and the ecclesiastical persons under them are
 obliged to purchase. No Christian disposition is permitted to make Prophets among the
 29290 Turks. Whoever would risk this, would forfeit his head, just as the Turk, who thought
 he would become a Christian. The death penalty is in store for all those who speak
 against Mahomet and his religion, or who wish to express his thoughts with contempt
 concerning it. Criminals, if they are Christians, can often escape punishment by
 becoming Mahometans. Apostate Christians enjoy the privilege of being exempted from
 29295 the poll tax; they can then be raised to all kinds of honorary offices, and are
 capable of doing great harm to their relatives who persist in the Christian religion.
 Husbands, and those children who are over fifteen years old, need not follow such a
 renunciation of religion. Sons of men who wish to marry women of the Mahometan
 29300 religion, must first renounce the Christian faith; the female sex may, however, when
 marrying Turks, continue in her faith; but is, according to the church laws of the
 Eastern Christians, excommunicated, and is no longer admitted to the Sacraments; all
 the children, born of such marriages, must be brought up in the Mohammedan religion.
 A Christian woman, who has once married a Turk, may not, after his death, enter into
 marriage with a Christian. From this one sees how useless the missions of the Roman
 29305 Church among the Turks are, and how false are the boastful statements printed in
 Paris, especially of the Jesuits, concerning their works in the Turkish Empire; (*)
 also, how many mockers of the Christian religion betray their, but unexcusable
 ignorance or malice, when, in contempt of the Christian religion, they so broadly
 declare the toleration of Christians among the Turks. The spirit of persecution is
 29310 not the Christian religion, but only a certain party of Christians, who add human
 statements to the only source of truth, namely the Holy Scripture, and indeed give
 the latter precedence over the former.

(*) See Mosheim's church history, 3rd part, page 60 etc. of the Dutch edition of 1771.

29315 (*) As for the signing of Mahomet's so-called Testament; someone who had stayed in Turkey for
 many years and had certainly heard of it, testifies that, instead of a signet, the flat hand
 and fingers were printed under it with Eastern ink, and the genuine copies thereof were sealed
 in the same way.

(*) See the Memoires des Missions au Levant par la Compagnie de Jesus.

§. X. Of the condition of the Christians in the Turkish Empire.

The condition of the Christians among the Turks is not of the same kind. Concerning the European Christians, or rather such as are born in other countries, living in peace with the Great Lord, the most important has already been communicated in § VII., and it remains only to be noted that the greater or lesser liberties which they enjoy depend on the countries in which they reside. In Smyrna, Constantinople and Aleppo they are best off, in other places worse, and in Egypt worst. In the latter Empire they would expose themselves, by the European dress, to much rough treatment from the common people, and in Great Cairo not even a European, except the Consuls, may ride on horseback, but must make use of Donkeys. The native Christians, or the subjects of the Great Lord who are devoted to the Christian religion, must, in many respects, suffer much. The word, Raja or subject, is presented to them by the Turks as if it meant Slaves. The Greeks they call Thauschan, that is, Hares (*), and all Christians Jauer, that is, unbelievers. The native Christians are also not allowed to wear the kind and color of clothing, as the Turks. They are not allowed to use the color green at all. White Turbans or a kind of rolled up caps are also forbidden to them. The Charatz or the head-tax is exacted from them by certain Gadermeesters, Charatzschies. The female sex is exempted from it, but the male sex must pay it from the 15th year. It must be paid every Turkish year, which is about a third of a month shorter than ours, and is of three kinds. The least amounts to one Dschindscherli; the second two, and the third four. All Christians are excluded from testifying at legal proceedings, when something has to be testified against Turks; and they are also not admitted to any offices of honor or government functions. In the meantime, however, this last is subject to some regulation. The Patriarchs and Bishops have another kind of jurisdiction, which the Emperor grants them by his open letter, called Ferman, over their co-religionists, but which does not extend to punishments, and still less to death sentences. But the Bishops cannot, as a rule, exercise this otherwise than with the consultation of the Chiefs of their nation, who are called Primates, and are at certain times interchanged. If the parties are not satisfied with this; then they go to the Turkish courts. Then, one must give the greatest praise, that they direct themselves according to the admonition of the Apostle, I Corinthians VI 1. etc. They leave the decision of their disputes, rather, to their Patriarchs, Bishops, and ecclesiastical Persons, with the consultation of other mediators, than that they turn to the tribunals of the Turks. The principalities of Moldavia and Wallachia, having been transferred to the Turks by a sort of treaty, have their Christian princes, who are chosen by the Grand Lord from the principal Greek families at Constantinople. But notwithstanding this election, they must purchase their appointment, which may amount to 700, or even 1000 purses. In the event of a peace, it sometimes happens, through the mediation of Christian powers, that the sum of money which the princes of Moldavia and Wallachia would otherwise have to pay to the Porte for their appointment, is not so great: but this is a mere accidental advantage, and is of no use to their successors. Their appointment usually lasts only 3 years, and the same expenses are, in the event of renewed security, necessary again; not to mention the unusually large gifts, which must be continually given, in order not to be deposed before the time. A rank of such a Prince is equal to the Bassas of 2 horse's tails. Because he is not assured of his time, and also wants to keep something for himself; so he rather emaciates his Principality. A Prince of Wallachia could make more than 3000, but a Prince of Moldavia about 2000 purses annually. If they are deposed; then the Porte takes everything from them beforehand, and often they are punished with Life. Mostly the Interpreters of the Porte are accustomed to do this. This last Dignity is always held by a Christian of the Greek nation, who receives it for nothing; but besides Turkish must at least understand Latin and Italian. He must be daily, except on Sundays, in the Palace of the Vizier, and in foreign affairs he works under the Reis-Ejferendi, who is the Minister of these affairs, and in this profession directly depends on the Grand Vizier. - Moreover, the Greek Christians have a shadow of jurisdiction on the smaller islands of the Archipelago, where there are no Turks, and where, at the most, there is perhaps a Kadi, being the supreme judge over one or more islands. - The Turks strictly maintain the Greeks by these few privileges, in order thereby to feed upon them continually a tumult, since one seeks to rob the other, by money, of his Dignity, and thus, by this means, to deprive them of their treasures, as a sponge does of water. - Otherwise, alas! one cannot deny that the Christians themselves are continually worsening their condition. Ecclesiastical as well as secular persons endeavored to dispute among themselves the precedence and advantages, in obtaining Patriarchates, Principalities, and winning Lawsuits: as, for instance, the dispute between the Armenian Patriarch at Edschmiazin with that at Jerusalem, concerning the

- preparation of the Holy Oil, his Nation, and the dispute between the Greeks and Romans, concerning the possession of the Holy Sepulchre, both cost incredible sums. The decisions of the Porte on such occasions are, generally, of such a nature, that both Parties are given right or wrong, or the sentence is rendered equivocally, in order that the dispute may soon begin again, and may bring in money. This is an unfortunate source of the impoverishment of Christians, from which, often, arises the despair of passing over to Mahometanism.
- (*) When the Greeks, especially of the Islands of the Archipelago, are called by the Turks Thanschan, that is, Hares; it can be determined with no certainty, whether they were given that name from their skill in running, even on rocks and mountains, or from their former shameful flight before the Turks.
- §. XI. The ignorance and uncivilization of various Christian denominations. One would not at all think that in those countries, from which the heathens obtained their knowledge, and where the Christian religion was planted by the Apostles themselves, such ignorance and uncivilization in divine and human matters have prevailed. And yet the greatest number there live in a dark night, mostly without reading and writing. The latter in particular is something rare. The Bible is only known in name, and what is still known of it, consists of a few Psalms and parts of the Gospels. Of which hardly anyone has a Bible, but only a prayer book. The Armenians deserve some exception, as they are much more fond of the Bible, and among them respectable families, very seldom, are accustomed to be without a House-Bible. The female sex, which is especially sad, is left almost without all instruction and knowledge of religion. One might naturally wonder at such a perverse conduct. But, as the female sex does not appear in public at all, but almost always has to keep the house, it cannot go in schools; and to have teachers come to the house, would partly be expensive, partly, because of the general suspicion, bring such women into a bad reputation. In addition, the parents think how the old custom is thereby violated, and so the ignorant mothers also prefer to keep ignorant daughters. The Greek and Armenian Monks, like most of the Roman Church, do not apply themselves to literary exercises, but spend their time, outside the appointed times, in some manual work, in collecting alms, and in idleness; the few apply themselves to schoolwork and learned things. The actual Priests also, seldom, have more ability for it; for the greatest number are chosen from the Common People, who seldom know more than, as if it were a business, to read the Liturgy, and to observe the other Ceremonies. Except those they call Professors, there are few who can compose a Homily or any kind of Sermon. The Bishops, it is proper, should have studied; but, because money is most used to obtain bishoprics, it is natural that the necessary gifts are very often lacking. There are reading schools almost everywhere; but such that could be compared with our city schools are unusually few; proper universities not at all. For the higher schools at Constantinople, Smyrna, etc., hardly serve to teach something of ancient Greek, the Aristotelian philosophy, and as much theology from the Church Fathers as is necessary to cobble together a sermon. The Greeks still have schools and seminaries on Mount Athos, which is called the holy mountain (Monte Santo) because of the multitude of monasteries; but they do not progress there further than in the aforementioned schools, except that ancient Greek is learned better. Few understand this right, and some books, translated from Italian or French, or composed from them, are their guides. Those who wish to study Medicine, go to Italy, Holland, and sometimes also to Germany and England. The most learned are oppressed by others, or accused of not thinking purely, of deviating from the old custom, etc., so that they are now forbidden the pulpit or the chair of learning. – The Armenians are not much better off; but not so much from neglect and their own fault, as from the sad circumstances in which their nation is placed. Because their fatherland, for a long time, has been the bone of contention between the Persians and Turks; so the inhabitants have been dispersed, the schools destroyed, and the monasteries and churches demolished. From this one can conclude how much all good arrangements, especially those concerning learning and religion, have been destroyed. The prejudice of antiquity and the attachment to their old school and church teachers is, according to the custom of most Easterners, so great, that they remain with it, and adhere to what they say. Now, since the Jews, as mostly with us, live in a completely learned wilderness, and the Turks, as will subsequently appear, are great promoters of ignorance; one may easily conclude from this the general darkness of learning in Turkey. Linguistics has completely decayed; the knowledge of antiquities is entirely unknown; the best Philosophy is corrupted Aristotelian; History, Chronology, Mathematics are covered with great errors and obscurity. The best Physicians have studied in Europe; the others have been servants of these, or mere pharmacies, who have become Physicians

from pretended experiences and books. Of Jurisprudence and Theology we shall be able
 29455 to speak more conveniently next. Public libraries are not found at all. In
 monasteries, as almost privileged dwelling places of superstition and ignorance, one
 must not to search. A few persons are accustomed, here and there, to have a moderate,
 at least small stock of books. The Patriarchs of Constantinople, as well as those of
 29460 Jerusalem, and other Bishops residing there for the continual Synod, have fairly good
 collections; but for such large countries this does not mean much. One would be
 disappointed in the hope of seeing and possibly buying old Manuscripts. Credible
 persons assert that there are few, and that they were preserved and hidden as great
 sanctuaries in places where the Turks had so often not committed plunderings and
 devastations, for instance, in the monasteries on Mount Athos and the Islands of the
 29465 Archipelago. One is seized with a kind of sadness, when one reads in these regions,
 where the former learning is so very degenerate, and considers the present situation.
 There also no improvement can easily be hoped for before a general introduction of
 printing, considering the small printing of the Armenians, as well as that of the
 Maronites on Mount Lebanon, do not yet want to say much.

29470 §. XII. The admirable preservation of the Christian religion in Turkey.
 Here an observation is made, which flows quite naturally from the foregoing, namely,
 that under such circumstances the preservation of the Christian religion is an
 admirable thing. One would think that, with such great ignorance of Christians,
 29475 nothing would be more common than the renunciation of their faith; and yet the cases
 are rare. The profession of Jesus' religion exposes them to great difficulties; the
 names Thauschan (Hazen) and Jauer (Infidels) they must hear, openly, from the filthy
 common people; in the courts their causes are, for the most part, badly treated, and
 the insults done to them by Turks are left unpunished. There is no lack of various
 29480 special taxes; and the poll tax is for the poor, as well as for numerous families, a
 very heavy burden. They could avoid all these inconveniences by a renunciation of
 religion, and obtain the opposite advantages. Daily examples teach, that if the
 Apostates are at all capable, they can go unusually far, and that most Bassas, as
 well as the principal Ministers, yes even Grand Viziers are Apostates, or children of
 29485 them. Crimes, if they are Christians, usually escape the death penalty by an
 abjuration of the Christian religion. To this, often, comes the cruelty of the Turks
 with a barbarous compulsion. There are instances, that many provinces and places have
 proposed the embrace of the Mahometan religion, or its complete extermination, and
 the sons of whole provinces and cities have been circumcised by force, and thus with
 29490 their own have been brought to Mahometanism. This also happens, often, with a few
 persons, who seem to the Turks capable of war, or other affairs. Finally, the Porte
 has not lacked any advisors, that at least the Greek Christians, by circumcision,
 could be forced to the Mahometan religion, and in the year 1760 it was rumoured, that
 the Emperor himself was of this opinion. But this cruelty has nevertheless been
 29495 constantly renewed. Yes, there is no lack of examples, that little children, who fell
 to the Turks, would be violently led to apostasy, but who would rather lose their
 lives than consent to it.

Now, after so many centuries, one sees such a large number of Christians; the service
 of the true God is solemnly maintained, and the name of Jesus Christ openly
 29500 confessed; yes, the attachment to the Christian religion is so deeply pressed into
 the hearts, that all kinds of temporal advantages are forsaken, Christians undergo
 the greatest hardships, yes, in multitudes, they would rather give up their lives
 than deny faith in Jesus; then one can still conclude from this, to this day, the
 truth of Christ's promise: the gates of hell shall not prevail against my Church.
 29505 Matth: XVI 18. A statement, which must give us the well-founded hope, that she will
 never cease, however many weapons, writings and mockeries her enemies may continually
 use for her corruption and downfall.

It is true, and one must, alas! admit it, that the general Christian religion
 professed in Turkey, has been darkened by many impurities; but nevertheless there
 29510 remains, always, a standing signpost to the truth, and an easy possibility, to come
 to the knowledge of salvation.

PART THIRD. OF THE GREEKS.

§. XIII. Of the Greek Church, and its constitution.
 29515 The Greek Church has its name from the famous Greece and its inhabitants, the ancient
 Greeks; and therefore it bears it for the same reason as the English and French
 Churches. It prefers to call itself the orthodox Eastern Church. By this is
 understood the great number of Christians, who either stand under the Patriarch of
 Constantinople, as their highest Head according to the laws of the Council, or at

29520 least maintain an ecclesiastical communion with him. In our regions it has become a custom to understand under the Greek Church only the first kind of Christians; and to this belong the four Patriarchates of Constantinople, Alexandria, Antioch and Jerusalem, but which in external circumstances differ greatly from each other. The Alexandrian is much weakened, because nearly all the Christians living in Egypt and the surrounding Provinces have become Monophysites. The Antiochian is, partly for the same reason, partly for a still worse one, namely, the devastation of Syria, and the apostasy of the Christians to Mahometanism, caused by various incidents, very much decayed. The Jerusalem has suffered greatly both from the Crusades, and from the particularly severe governments of the Bassas in the Holy Land, and from the plunderings of the wandering Arabs. The Constantinople is still in the best circumstances; and to it belong European Turkey, the Islands of the Archipelago, and Asia Minor or Nato. The other Patriarchs, in fact, do not come into comparison with the Constantinopolitan, as the latter far surpasses the others in power and prestige, although otherwise all four are independent in their Parishes. The Constantinopolitan has its residence at Constantinople, the Alexandrian at Cairo, the Antiochian at Damascus, and the Jerusalemian at Jerusalem. They often stay all together at Constantinople, to attend the Synod that is permanently held there, which consists of the Patriarch of Constantinople, 12 Archbishops, and 4 other notable Greeks, and provides for the welfare of their Church, especially at Court. On it depends the desire of all the Bishoprics, and all ecclesiastical affairs must come before it. The Patriarch of Constantinople, who calls himself a general (οἰκουµενικόν), and presides at such a Synod, formerly contended with the Pope at Rome for rank. He still considers himself equal with him, although the submission to the Turks, under which the Greeks sighed, has put an end to the public dispute. With the Turks he has the dignity of a Bassa of two horse-tails. Formerly it was still more respectable than at present. The Turkish Emperor, at the time of his appointment, for which he paid no money, made a present of a white horse, a ceremonial robe, and 1000 zecchins or ducats. But after the time, that rank and self-interest, often caused the deposition of the Patriarchs, not only has the just mentioned generosity of the Turkish Emperors ceased, but also an infinitely greater Evil has been introduced. That Patriarchate is sold by the Porte. If this, or the Greek nation, is not satisfied with the Patriarch, or if another offers more than he has given; then he is immediately deposed, and whoever then pays the most, gets his place. The expenses, incurred on this, are indeed uncertain, but formerly amounted to about 30 thousand, and now to almost 100 thousand Piastres; and it is to be feared, that, through the rank and greed of the Greeks, they will subsequently run still higher. As great as this Evil is, because it usually exalts very incompetent persons to Dignity; it is nevertheless, with respect to another arising from it, still small. And this consists in the fact that the new Patriarch places all the Bishops under him, if they wish to retain their Bishoprics, under a heavy Contribution, to pay his debts, and these in return seek to recover their damages from their Clergy, who in turn, for the most part, by illicit means, try to make up for their own, with their Congregations. — If the Patriarch has purchased that Dignity; then he receives from the Grand Vizier the Ferman, or a sort of letter of confirmation, and is brought to the Parochial Church by a Tschaus or Master of Ceremonies, under the guidance of a multitude of Janistas, on horseback. The principal Archbishops and ecclesiastical Persons receive him, with wax candles in their hands, and lead him in. The Tschaus reads the Firman; the new Patriarch takes his place on the special Patriarchal See, and the Greeks must, without further contradiction, acknowledge him in his Dignity. The consecration is, in fact, previously performed by the Archbishop of Heraclea, who in his Pontifical robe leads the new Patriarch by the hand to the Patriarchal See, and after that he is seated thereon, puts on him the Crown, and gives him the shepherd's staff. The Liturgy being sung, the ceremony of this introduction ends. — The deposed Patriarchs are usually, unless they have been accused of a crime, sent into exile, for which purpose the monasteries on the islands of the Archipelago are mainly intended, but from which they are also often recalled, and can even be restored to their office. — In times of war between the Christians and the Turks, the Patriarch always stands at a dangerous post, because he is almost always accused of an understanding with the former, subsequently deposed, and then even put to death. For the rest, no Patriarch or Bishop can hold office unless he has obtained a Barat or Letter of Freedom, at great expense, from the Sultan. By means of this he can maintain the rights of the Church, over the lower Clergy, yes, in a certain respect, rule over his Parish, and protect the monasteries. — The surrender of the other Patriarchates takes place in a freer, and not subject to so much noise, way and manner; for they are further from the Court, and the greed cannot be satisfied so much, because of the small income. But

even then there is no place for so many expenses. The Patriarch of Constantinople resides constantly in the Emperor's Residence, unless the calling of his office calls him to his Parish, or he retires to a country house for a recreation. His dress, outside the church, is not distinguished from that of other Bishops, or even common Priests, consisting of a black wide Surplice with fairly large sleeves over the long Eastern garments, and a black cap, which in the same circumference, as it is pressed on the head, is one and a quarter of an ell high, and then flat. From it hangs, above, a sort of bag down to the neck, which is made of thick crape. If this bag is lacking; then the cap can only serve a Monk, or Deacon, or lower Clergy. In the Church they are clothed with mantles and ceremonial vestments, also wrought with gold and silver, and the Bishops then wear a Crown on ceremonial occasions. For the rest, the Patriarchate of Constantinople is a place that brings in very much. The newly appointed Bishops must, according to the condition and income of their Dioceses, give the Patriarch a few more or less thousands of Piastres, and give him, on many occasions, considerable presents; not to say, that he is the usual heir of the deceased Bishops, and of the Priests, who are immediately under him. (*) But, besides the expenses at the acquisition of the Patriarchate, he must also, annually, for confirmation in it, make great presents, and moreover, have his mind on his Existence after the deposition, or even to obtain it again.

In most cities of any size one finds a Bishop, who is called Despot; (δεσπότης) and each has an Assistant, (πρωτοσυγγελος) whom he himself chooses, and to whom he, as often as he pleases, gives over a certain part of his business. The appointment of the Bishop depends on the Synod; the consecration is performed by the Patriarch, and the Porte grants the security. All this demands very great expenses, and, when a Bishop comes with the Barat (letter of freedom) of the Porte to his Parish, then this always happens with more or less thousands of Dalers, the payment of which falls at his charge; wherefore most Foundations also are in great debt, and many gradually fall into debt. - Most Bishops come to their Dignity, by a sort of Simony, they seldom understand, what is necessary, to satisfy it. They must be unmarried; but widowers are not excluded. They seldom concern themselves with ecclesiastical and spiritual affairs: because they form a sort of Christian Authority; so worldly disputes are their main business. For the rest they are reasonably esteemed, even by the Turks, and their Bishop's staff, which is black and reasonably long, gives them, when they go out, a great authority. As the Patriarch bears the name of Most Holy; so they are called Your Holiness. To them belongs the votive offering of the Priests and lower Clergy, and on high Feast days they are accustomed to say Mass. With them there are the same Cabals, as with the Patriarchs, or after better Bishoprics, or even after the Patriarchate. When a Patriarch or Bishop dies; then he, in his Pontifical robe, is placed on a Throne, and every Greek considers it a religious duty to kiss the hand of the deceased. Failure to do so would be considered a sin by them. Priests are in the congregations in a greater number than is necessary, and it may be calculated that there are many more without than with parishes. These they have to buy for money from every new bishop, and these costs are again extorted from the congregations. These two circumstances today cause and nourish the great corruption in the Greek church. The congregations impoverish themselves without being noticed, and the priests, in order to obtain their existence, resort to lawful and unlawful means, whereby ignorance is nourished, and superstition is increased. Among these belong the showing or selling of common, or so-called miraculous images and relics; the use of powerful prescriptions of prayers that are supposed to have a magical power; the release from fasting for money, etc. For the rest, they may marry once, but nevertheless not otherwise than with a lover, who must be honorable, young, healthy, and beautiful. If they violate this law; then they forfeit their priestly dignity, and must become deacons. Their occupations are to say masses, to hear confessions, to baptize, to marry, and to bury the dead. Preaching is not their work; for few understand this, and, also, during the Lent before Easter, and a few feast days excepted, no sermons are preached. In the meantime some apply themselves to founding and maintaining reading schools for the benefit of the youth. Among the people they are held in great esteem, and are called Papas, just as a Priest's wife is called παπαδία (Papadia. If a Priest misunderstands himself, so that he is unworthy of his Character; then the Bishop has his beard shaved off, and thus he is forever deprived of his Priestly office.

The Deacons take care of the common things in the Church. They have even more freedom to marry than the Priests. They must assist the latter in all ecclesiastical matters, observe the Ceremonies at the Mass with incense, etc., read and sing many pieces at the Liturgy, light the candles, keep the church clean, etc. They are therefore excluded from all priestly works, but are ordained as Priests when they are deemed

capable. The by the Priests lack a little pocket attached to the Cap above, and distinguish them from it; and if they should lose their office of Deacon, then their beard is also shaved off. I consider it unnecessary to mention the lower orders of readers, precentors, etc. in particular.

The Monks (καλόγεροι) are not comparable in number or in prestige with those of the Roman Church. Among them there is only one Order, namely that of St. Basil. Those who live on Mount Athos still devote themselves, in part, to some ecclesiastical learning; but the greater part, in general, observes the Mass and many religious ceremonies by day and night, observes a much stricter fast, and is occupied with manual labor, especially in the cultivation of the vineyards, olive groves, etc. The former is, properly speaking, the work of the Abbot or Archimandrite (ἡγούμενος) with the active Monks, and the latter that of the lay brothers or people who wish to isolate themselves from the world, and imagine the common labors in the monasteries to be more sacred than elsewhere. They keep to their strict, supposed ancient customs, and the modesty in their monasteries, as well as the Turkish rudeness, do not permit them to aim at higher things.

There are also monasteries for the female sex. The Nuns (καλουρία, good old one) also follow the rule of St. Basil, but not in so strict a manner as the Monks, under a Supreme. (ἡγουμένησσα) - In Greece proper one also finds Hermits, who dwell in the caves of the mountains, and, by their rough and strict way of life, deprive themselves of common sense, health of body, and Life; people, possessed with a far-reaching fanaticism.

(*) Of the inheritance which falls to the Patriarch, on the side of the Bishops, and of the Priests immediately under him, the Porte nevertheless takes its own, and often the greater part. The Bishops also inherit the goods of the unmarried Priests who have died in their Parish, if they do not fall to certain monasteries; which is not a fixed and general rule here. The goods of the married fall to the wife and children. In the meantime, however, it is not lacking in all these cases that the Commander of the place would not appropriate a part of it. - The costs in the forgiveness of the Bishoprics are constantly increasing. Whereas a new Bishop in Smyrna; previously, perhaps paid 10 or 20 grants; this has now risen to about 100.

§. XIV. With distinction of the Greek Church from other Christians.

In order that the distinction of the Greek Church from other Christians may become clear, its separation from them must first be noted. Up to the 9th century it was united with the Western Church, as regards faith. For although many disputes had taken place between the two; yet these were more about church customs, boundaries of the Patriarchates, etc. than about actual articles of faith. In this they remained reasonably in agreement, even in their misunderstandings; peace was restored by various treaties, and the erring Teachers were condemned in common. But from the aforementioned time the ground was laid for that great schism, which continues to this day with great violence. The famous Photius, Patriarch of Constantinople, had been long and often persecuted by the Roman Pope, Nicholas; whereupon he excommunicated him, together with the whole Roman Church, solely for the following, but in his opinion very important errors, which he mentions in the general letter sent to the Eastern Patriarchs: 1) that the Roman Church fasted on Saturday; 2) that in the first week of Lent before Easter they should permit the use of milk and cheese; 3) that they should absolutely forbid the marriage of ecclesiastical women; 4) that they were of the opinion that the Bishops alone could administer Confirmation with the Holy Oil, and thus reconfirm those who had received it from the Priests; and finally 5) had falsified the Constantinopolitan creed with the addition, and from the Son, and therefore the doctrine that the Holy Ghost proceeds not only from the Father, but also from the Son. Photius' successors indeed continued to hold this opinion, but the ecclesiastical ban was no longer thought of, and an outward peace was maintained. But in the eleventh century all unity was broken, by the rashness of Patriarch Cerularius, and the lust for power of Pope Leo IX. The former added to the accusations of Photius others; for instance, that the Latin Church used unleavened bread at the Lord's Supper, did not abstain from the blood in the stitched bread; its monks used pig's fat; its bishops wore rings; the priests were without beards, etc. The Greeks fell upon their patriarchs, and excluded the westerners from their church community. When Leo IX had tried in vain to bring them under his yoke again, he likewise openly excommunicated them. From that time this schism lasted; and the means tried for union, especially the Council of Florence, in the year 1438, have all been fruitless. Nay, the hatred of the Greeks against the Roman Church has, since the capture of Constantinople by the Turks, increased still further, because they regard the popes as the cause of the fact that the western powers did not render them any help against it. In addition to this there is also a great deal of mischief which

29720 befalls them from the side of the Turks, through the agency of the Roman Catholics, and the seduction of many by the Roman missionaries. As often as one speaks to the Eastern Patriarchs and Bishops, so often do they show their very unusual aversion to everything that is Roman; and one sees that it is only a pretext, what the Roman Church presents concerning its agreement with the Greek, as well as with other Eastern churches, and how little one can rely on Leo Allatius and similar writers.

29725 Having let this pass, we must now present the principal doctrines of the Greek Church. We will present these, with reference to a book very much regarded as symbolic by her, which is called *ορθόδοξος ομολογία της πίσεως της καθολικης εκκλησίας της ανατολικης*, and with a Latin translation, published by Laurentius Normann, at Leipzig, in the year 1695, and reprinted by D. Hoffman, at Wittenberg,

29730 with a preface, and Hoogd: translation at Breslau, 1751. As a first foundation of religion, not only the Holy Scripture serves the Greeks, and indeed as with the Protestants, only and exclusively in the Canonical books, but the Apocryphe also has with them almost the same authority. In addition, there are the statements of the church, made at the Councils. In the 96th question of the first part in the

29735 aforementioned book it is said: "although the Church is a creature, and consists of men; she has nevertheless Christ, the true God, as a Supreme Head, and with him the Holy Ghost, who teaches her everywhere. — Therefore we are moved to believe not only the Holy Gospel, but also all other scriptures, and Synodical ordinances". The quotation from the Old Testament is made according to the 70 Translators. Of God's

29740 essence, attributes, and the mystery of the Holy Trinity they have the same conceptions as the other Christian denominations, except that they deny the communication of the Divine essence of the Son to the Holy Spirit, and assert that he proceeds from the Father alone, they refer in this respect solely to the passage of John XV 16.

29745 Of Jesus Christ, his Person, divine and human nature, his threefold mediatorial office and both States, they have the same concepts with the Evangelical Church. But concerning Christ's descent into hell they express themselves (1 part, question 49) thus: "The soul of Christ was indeed separated from the body, but nevertheless it remained always united with the Godhead; with it it also descended into hell. We have

29750 indeed, in this place of the confession of faith, (in the second article) nothing of that; but nevertheless it is confirmed by all the church hymns that deal with it. — As when it is said: You, Lord Christ, were bodily in the grave, in Hell as God with the soul, in Paradise with the murderer, and on the Throne of Glory you fill with the Father and the Holy Spirit, as the immeasurable, everything. And from Hell he has

29755 delivered the souls of the Holy Fathers, and led them into Paradise, and with them also the murderer converted on the cross". Concerning the Angels they teach the same with other Christians, but they still believe that, according to the statement of Pseudo-Dionysius, the good were divided into 9 Choirs, and these into 3 Orders. To the first they bring those who should be next to God, namely the Throne, the

29760 Cherubim, and Seraphim; to the second the Powers, Dominions, and Strengths; and to the third the Angels, Archangels, and Principalities. Of all these they also have the opinion that they brought our prayers, alms, and other good works before God, and were our Advocates with Him.

29765 Here also seems to be the best place to quote the opinion of the Greeks concerning Mary, the Saints, and the worship of images. For the first, the Greek Church has appointed this congratulation: "O Virgin Mary, most divine, hail! the Lord be with thee! blessed art thou among women, and blessed be the fruit of thy body; for thou hast born unto us the Saviour of our souls!" The Church has enjoined to use this congratulation frequently in prayer. "She has exalted her (42 question, 1 part,)

29770 "above the Cherubim and Seraphim. She now also excels all the Choirs of Angels, since she is placed at the right hand of the Son with all Honour and Glory; as the Psalm says: (XLV 10.) The Queen stands at thy right hand, in all precious gold. Every Christian must use this congratulation with reverence, and stand by the intercession of that Virgin, &c". They also maintain, with all zeal, her constant virginal state

29775 until her death. The intercession of the Saints must therefore be humbly requested, that they may pray for men; they declare thereby, that they should not be invoked as Gods, but as friends of those whom they serve, and not to help us by our own strength, but to obtain God's grace through their intercession. The passages which are quoted from Holy Scripture in proof of this, indicate nothing else, than that the

29780 faithful on earth pray for one another, and the perfectly Just in Heaven call upon God to destroy the enemies of his church. They themselves object, however, that the Saints do not hear our prayers knew; but they answer by saying that God makes them known to them. The objection that the invocation of the Saints conflicts with the first commandment: Thou shalt have no other gods besides me, they seek to remove in

29785 two ways; because they partly think that the honour shown to them passes over to the Majesty of God, to whom they, by their faith and virtuous conduct, had been well-pleasing; partly they make a distinction between adoration (λατρεία) and invocation (δουλεία), and thus grant them the latter, because they invoked them as their brothers and friends of God, to seek His help for them, and to take their place with Him. In proof of this, it is only brought from the Bible that the prayer of the Righteous avails much with God on earth. (Jacob: V 16.) – With regard to the worship of images, after the rejection of pagan images, the invocation (highägting) (δουλεία) of the images of Christ, the Virgin Mary and the Saints, (55 question of the 3rd part) as well as the Crucifixes, is given up as permissible under this pretext, because people did not honor the images, but those whom they represent; and in proof it is said that the Israelites worshiped the Cherubim in the Temple, (which is nevertheless untrue,) and that the Seventh Council condemned the iconoclasts. Concerning the matter of which they are teachers of creation, Providence, election, God's image, and the fall of the first men, one finds precisely no diversity of the Evangelical Church. And the same can be said of them, with respect to the article concerning sin and its divisions.

29790 Touching upon the free Will they are teachers: (27 question of the 1st part) "although the Will in the desire of the good or evil has remained unblemished; yet he is in some more inclined to evil, and in others to good. Although man's Will is stained with original sin; yet it is in all this in everyone's power to be good and a child of God, or evil and a child of Satan. This depends on the person. God's grace helps to the good; from evil she draws man away, but without forcing his freedom". They count the 10 commandments, like the Reformed, so that 4 are counted to the first, and 6 to the second table.

29795 29800 They do not attribute the justification and forgiveness of sins to faith alone, but also to good works; although it seems that they understand by faith such a thing, which is without works, and they therefore do not so much attribute justification to faith and good works, as to a living and active faith. They count seven Sacraments, or, as they express themselves, mysteries; (98 question of the 1st part) "baptism, anointing or confirmation, the Holy Supper, Penance, the Priesthood, marriage, and the olympic".

29805 The essential concerning Baptism is by the Greeks so, as taught by us; of the extraordinary, something more will be said next. They consider it especially as a cleansing and washing away of the corruption, which is transmitted from the parents to the children. The confirmation takes place after Baptism, and is performed with an oil, consecrated by the Patriarch and the Bishops, on Good Friday, which is mixed with other ingredients, such as Myrrh and Balm. But in proof thereof nothing is added, except such passages, which treat of the laying on of hands, and the sealing of the Holy Ghost. Their opinion concerning the Holy Supper is more remarkable. A private confession, in which the sins, as much as one knows them, are related by name and piece by piece, must precede the enjoyment, which is fixed at twelve, four, at least once a year. The administration of the Lord's Supper to the sick is highly recommended by them. The wying is considered an unbloody sacrifice. The Creed Teacher, (Part I, Question 107) "when the Priest consecrates bread and wine; then one must believe that the Essence thereof was changed into the Essence of the true body and blood of Jesus Christ. This is done by the operation of the Holy Spirit, for whom, in order that this Sacrament may be rightly performed, thus is prayed: send upon us and these proposed gifts thy Holy Spirit, make of this bread the precious body of thy Christ, and of that which is contained in this cup, the precious blood of him, while thou changest it by thy Holy Spirit. After these words the change continues. The bread is changed into the true body, and the wine into the true blood. There remains only, according to a divine destiny, an appearance falling into the senses". The proof of this is derived from the words of the institution: that is my body, that is my blood; and, in order to hold the interpretation of the Greeks to be true, they quote Christ's saying: blessed are they that have not seen, and yet have believed. (John XX 29.) For the rest, they want that not only the Priests, but also the Laymen should partake of the cup, and that the same Honor should be shown to the consecrated Elements as to Christ. One cannot enter into the feelings of some Teachers and persons concerning this Sacrament, who are often as sensual as the Roman Catholics, but often agree with the Evangelical creeds. What was taught of the other alleged Sacraments does not deserve further presentation. From this it follows of itself that their presentation, concerning conversion, must differ much from ours. Their faith is indeed not much different, than a historical knowledge of religious truths; their good works consist in only external acts, as in a civilly honorable behavior, or in a multitude of recited or read prayers, the giving of alms, fasting,

29810 29815 29820 29825 29830 29835 29840 29845 29850

pilgrimages, etc.

They extend the name of Catholic or universal Church to all Christian denominations. They consider the Church of Jerusalem to be the mother church of Christianity; but, by an Imperial command, and according to the decision of the Council of Nicea, the churches of Rome and Constantinople are allowed precedence over the rest.

Concerning the state after death; they reject Purgatory, which the Roman doctors; they assert a feeling of joy among the pious, and pain among the ungodly; (I part 61-66 question) but of the latter, they think, many were delivered from hell, not well by their penance and confession, but nevertheless by the alms of the deceased, the intercession of the church, and by the bloodless sacrifice of the mass. This strange feeling is proved still more strangely, namely from Christ's words: fear him who has the power to cast into hell. (Luke XII 5.) For (as Theophilactus concludes from it,) in order that Christ does not say, who always and forever casts into Hell, but only, who has the power to cast into Hell; thus one must pray for the deliverance of the dead, distribute alms, and say Mass.

The Greek Church differs, in several respects, from all Western churches. It denies the going forth of the Holy Spirit from the Son; it maintains the necessity, that to a legitimate Baptism belongs the immersion of the Baptized person under water; the use of leavened bread at the Holy Communion seems to it absolutely necessary, and very small children are with it partakers of the Communion: the marriage of priests is, as we saw before, determined by it, and a third or fourth marriage is held by them as fornication. No less does it differ in many points from the Roman Church. The high opinion of the Romans concerning the Pope at Rome, as a visible Governor of Christ and the Supreme Head of the Church, appears to the Greeks blasphemous; their graven images and statues are in their eyes abominable; the withdrawal of the drinking cup they consider a mutilation of the Sacrament, and the prohibition of the marriage of priests as unlawful; Purgatory appears to them ridiculous, and the persecutory spirit of the Romans [Catholics] they utterly reproach.

§. XV. Religious customs of the Greeks.

Since the Greeks follow the old style in the Almanac, and therefore the year also begins 11 days later than we do; so their and our Feasts, except the movable ones, never agree in the days; and, since they never want to celebrate the Easter Feast at the same time as the Jews, this already causes a remarkable deviation from our Feasts. Besides the Apostles and Church Fathers, they have a great multitude of general and special Saints; so that the Sundays with the Feasts take up something more than a third of the year. But the latter are, for the most part, Church Feasts, that is, such as are celebrated by ecclesiastical Persons and Monks alone: for there are those who celebrate them in Chapels, near the cities and villages, or far away from them, in ruined churches, and supposed Holy places, and on which, after Mass, they pass the time in eating, playing, and dancing. At such times there is almost no end of Ceremonies and solemnities. — The first day of May is still always spent in walking and merrymaking. On Corpus Christi, in the Episcopal Churches, the Bishop washes the feet of 12 Priests. For that purpose a stella is erected there, on which the Bishop sits in his Mass vestment with 12 Priests. To represent Judas, a priest with a red beard is brought from outside, if such a priest cannot be found in the city. While this person is seated, a bishop or priest reads from the pulpit the Gospel story of the washing of feet; and at the words, Jesus took an apron and girded himself, (John XIII 4.) the bishop stands up, lays aside his vestment, puts on an apron, and performs everything according to the contents of the story; even he who represents Peter speaks his words to the bishop. Before this ceremony the Holy Communion is celebrated, in which he first distributes himself, and then the priests. — The Easter feast lasts 6 days. On the first day, from the rising of the sun, one hears χρίσας ἀνέζη, Christ is risen; to which the acquaintance to whom it is shouted answers: ἀληθως ἀνέζη, he is truly risen; and after these spoken words one kisses each other three times, namely on both cheeks and on the mouth. Since the Lent of 40 days has come to an end beforehand; so the people then, by far-reaching extravagances, make great display, and one sees whole rows, hand in hand, passing through the streets, singing and playing, in a sort of religious dance. — The Pentecost festival lasts only 2 days with them.

The Lent days cover at least half a year. The first great fast begins on the 15th of November, and lasts until Christmas; the second is that of 40 days before Easter. This is the most difficult; for then nothing of any kind of meat, fish, butter, eggs, oil, cheese, etc., may be eaten. One must content oneself with foodstuffs, which can be boiled with water, almond milk, vinegar, etc. Rice, groats, mealy foods, vegetables, mussels, oysters, therefore, constitute the food alone. But they are also

free to eat caviar, or dried roe of sturgeon and other fish: about which the Romans mocked them, because they ate the eggs of fish, but considered the eating of the fish itself to be unlawful; but the Greeks pay in the same coin, and reproach them, because, in the forbidden enjoyment of fowls, they nevertheless used the eggs. But on the 25th of March, being the Feast of the Annunciation, when this does not fall in Holy Week, and on Palm Sunday, they may eat fish; just as they are permitted to do with eggs and milk-meats in the first week of Lent. The third Lent is named after the Holy Apostles, beginning after Pentecost week, and ending with St. Peter's and Paul's day. As they may eat fish in this, although milk is forbidden, it does not trouble them as much as the others. The fourth Lent precedes the supposed Assumption of Mary, and lasts, with the utmost strictness, from the 1st to the 15th of August, excepting the 6th, when, as on the celebrated Feast of the Declaration of Christ, they may use oil and fish. All Wednesdays and Fridays are fast days, except Saturday, as with the Roman Catholics, except the silent Saturday before Easter. There are also other single fast days; but at certain times they have no place at all, as from Christmas to Epiphany, the Easter and Pentecost week, and a few weeks before Lent of 40 days. But this only affects the Laity in general. Even those among them who are after a greater holiness, likewise the Priests, and especially the Monks, increase the number of fast days, and go much further in the abstinence of all kinds of food. They are also usually so strict and strict about this, that they would rather die, than, for instance, in illness, break their fast, and eat meat. They must have a special permission from the Bishop or other Priests, but from whom they do not easily obtain it. Many even consider murder, fornication, adultery, theft, etc., as minor sins, compared with the violation of Lent. The strictness and rigor which they observe in this respect is wonderful, and they endure them with great patience, in the hope of making up for their loss at the following Feasts; which they do not fail to do; wherefore great joys and excesses are wont to occur at them. The sign of the cross is held in an uncommon esteem by them, as it, in all fairness, ought to be by all Christians, so much the more, as all enemies of the Christian religion hate the thing indicated by it, and it is the best outward sign of distinction among Jews and Turks. But they do not stop there, but believe that there is an uncommon power in it against the Devil and all Evil. Therefore it is made on all occasions, when rising, going to bed, before and after eating, likewise innumerable times in church, for instance, when in their Liturgy the words occur: In the name of the Father, and of the Son, and of the Holy Ghost. Amen! They make this sign of the cross, while at the words, in the name of the Father, they raise the three fore fingers to the forehead; then at the words, and of the Son, they lower the hand; then at the words, and of the Holy Spirit, they direct it to the right side of the arm, and with a movement of it to the left side, they end at the word, Amen. At the prayers in church they do not kneel, but stand, bowing themselves only according to the circumstances, especially when they make the sign of the cross, deep on the ground; Pentecost excepted, when they kneel three times at their prayers. - They have, like the Armenians and Turks, Rosary beads, of which they do not make the proper religious use, like the Roman Catholics, but nevertheless, often, when counting the corals, they pronounce the words, Lord, have mercy on us! or, God be praised!, just as the Turks, besides playing with them, add God's attributes to them.

As soon as a woman in childbirth is delivered, a priest is brought, who pronounces certain prayers over her. On the eighth day the child is brought to the church; at the door with the sign of the cross on the forehead, the mouth and the body are consecrated, and a prayer is pronounced over it. This is called the Sealing, and is considered a preparation for Baptism. This is not long delayed, and the child is assigned godfathers. Baptism is done in houses. The child is undressed, and, after the Priest has blown upon it three times, he holds it above the body under the arms, cuts through it three times with its feet, but in the form of a cross, the water, which reaches the child to the belly, and, while he holds it, further, with one hand in the water, he pours it, with the other, three times with it. Then after the Baptism the anointing with oil takes place; it also receives the Lord's Supper; and then the Parents always let it go to the Lord's Supper with them. The woman in childbirth may not come into the church before the time, appointed in the Mosaic religion.

The Mass is read with and under long and many Ceremonies. The Romans reproach the Greeks with much mockery, that they worship bread and wine, even before the communion. They use leavened bread at the Lord's Supper, having a round shape, and with the words, but abbreviated, Ἰησοῦς χριστός νικᾷ (Jesus Christ has conquered), drawn, as the figure next to it shows.

It consists of two, but baked on top of each other, two-baked or rusks, so that one

can see where they are baked together. The upper one is about three, the lower two fingers, and all around it is equally thick. Small pieces are broken off from it, and
29985 put in a measured spoon with some consecrated wine, which is mixed with water, and both are thus given to the communicant. The bread consecrated on the proper altar, like such a drink, if there be any left over, is consumed by the Priest alone; but all other bread, lying on a side table, over which prayers have been said, but which was not consecrated on the proper altar with the words of the institution, is
29990 distributed among the people, who, with great devotion, keep it for a holy use. It is indeed brought to the sick, but not worshipped; just as no Processions or walks are made with it. Otherwise, the Greeks observe a very strict Lent before they go to the Lord's Supper. Marriage is performed among them without previous proclamation of marriage orders, and is performed by the Bishops in the case of important Persons,
29995 but by other Priests in the case of Minors. The examples are not rare, that the Bride and Groom were only 26 years old together, just like the premature marriage is very much in vogue among all Eastern peoples. In it there is a great multitude of ceremonies, which are partly modest, partly ridiculous. It takes place mostly under the open sky. There some holy images, especially the image of the Virgin Mary, are
30000 exhibited; two lighted wax candles are placed on a chair or table, and two crowns and two rings are laid by them. Bridegroom and bride must have invited fathers (*) to this ceremony, at the beginning of which the bystanders place their marriage gifts in dishes or baskets. After several incenses and prayers, the rings of the bridegroom and bride are lit and taken off several times, as well as the crowns are put on and
30005 taken off again. After that they, further, take each other by the hand, and in front of the said table or chair, have turned several times around the Fathers; while the Priest, rather inattentively, reads the Form, they drink, at last, a little wine from a glass offered them, which the Priest then drinks down completely, and then breaks into pieces. – The forbidden degrees in the Mosaic law are strictly observed, and
30010 there are many other ecclesiastical regulations. Blood relations may not marry together until after a certain degree; and those who have been godfathers by a baptized person are forbidden to themselves and their descendants, up to certain degrees, all marriage alliances. But such parties, who do not wish to submit to these laws, or where one wishes to marry more than twice, apply to the Turkish courts,
30015 seeking permission from them to live together as spouses. This is called Kapin, and is obtained for a small sum; but the church usually excommunicates such people. Divorces are not rare, and the Patriarch, for want of money, can easily be persuaded to grant permission.

The dead are not kept long in the house. He who dies in the evening is buried early
30020 the next day; but he who dies in the morning is buried after noon. The dead, of whatever opinion he may be, are dressed in his best clothes, and, because the Levantines do not use a coffin, he is laid on a stretcher with no side rails, and on it open is carried to his resting-place; wherefore the youth, who, according to Luke VII 12-15, was carried to the grave in this manner, could not, at the emphatic word
30025 of Christ, arise, stand up without hindrance. More or less priests, according to the circumstances of the persons, go before the corpse, bring it, with singing and much incense, into the church or cemetery, and then masses are said for the deceased, but not in such number as among the Roman Catholics. An unfortunate premonition is derived from it, when a corpse, after the lapse of a year, has not yet decayed,
30030 except in the case of one who was canonized as a saint, when then the non-decay is considered a special grace of God: otherwise it is believed that this body was animated by an evil spirit; and the soul that previously occupied it as its abode is considered lost. At the burials there is a horrible wailing of the blood relatives, even of very strange persons; people even pull out their hair, and walk with their
30035 heads against the walls. This real or feigned commotion takes place both with the dead, whom one once loved, and with such, from whom one wishes to be freed, and in order to remove this already in former times, Paul wrote to the Thessalonians: (1 Thessal. IV 13.) We will not withhold from you because of them that sleep; that ye sorrow not, as others which have no hope. (*) The Greeks make some great work of painted images. The poorest man has many or few of them in his house, the richer more
30040 and more beautiful. They are accustomed to hang them by the bedsteads, as well as inside at the headboards. Every evening before Sundays and feast days, or on other occasions, lamps and candles are lighted, hanging before them, as well as incense offered. They are attributed a magical power for the preservation of all kinds of
30045 ailments, as well as for the healing of diseases; and here and there many images are even held in special esteem, and are borrowed for the aforementioned purposes. Before someone lives in a house, it is consecrated by certain prayers and other ceremonies. But it does not stop there, but on Epiphany or Three Kings' Day such a

30050 consecration is repeated, and often extends to certain waters, fields, etc. They attribute a magical power to many parts of the Holy Scripture, forms of prayers and customs, and on that account they are used for the healing of common and extraordinary diseases, as well as for the conjuring of Elements and Spirits.

30055 A church custom, which fills the Greeks with fear and terror, is the Excommunication or ecclesiastical ban. This is done after a solemn mass. A certain number of candles are lighted beforehand, and these are extinguished according to the forms of ban pronounced in their anathemas. The Bishop alone, or in his absence another ordained ecclesiastical person, can perform the excommunication; and he who is afflicted by it, sees one of each released. But it does not only concern persons who can be named; but is also pronounced over unnamed persons who have committed this or that, for

30060 example, stolen, and on whom it would attach, if no restitution or compensation was made. A multitude of true or fictitious examples of God's judgments, which are said to have come upon the Excommunicated, and are everywhere related and believed, the horrible curses in the Form also included among them, keep this Church usage in its power, notwithstanding that it is often, and even on minor occasions, abused, and one must therefore think that its impression and authority would be greatly diminished.

30065 The Patriarchal See at Constantinople has reserved for itself the Canonization or Canonization. But, in order to make someone, because of his holy Life and alleged Miracles, a sharer in such an Honor, not only the examination of the Patriarch and the Bishops at a Synod is required, but also thousands of witnesses, besides many other circumstances, are required. Since it now entails much expense, not to speak of

30070 any other circumstances and objections; so this ceremony now almost entirely falls away.

30075 (*) These Fathers on the wedding-day are, with the Greeks, not that, but in a stronger sense, what with us the playmates are.
 (*) Christians and Infidels in the Levant are accustomed, at certain times, to visit the graves of their ancestors; the former usually on one of the Easter days.

30080 §. XVI. Of the Holy Places, and the Worship of the Greeks. That the church buildings of the Greeks are of a diverse construction, has been remarked before. It depends mostly on the Provinces in which they are situated, and in which there is a greater or lesser freedom, as well as whether there are many, few, or no Turks at all living there. The old churches, which they have had since the times before the Turkish conquest, are unusually different from the later ones. These

30085 are, often, so badly built, that here and there they resemble common huts. In other places, for instance on the islands of the Archipelago, where one finds a great number of such common churches, they serve as housing for foreigners, and other common uses. Otherwise the arrangement in all large churches is about the same, namely in the form of a Greek, that is, on the four sides equally long cross. Its

30090 layout is from the East to the West; and to the first point of the sky the altar is also always situated. This stands, according to an imagined necessity, under a vault, and is separated from the rest of the space of the church, which is usually lower, by a fence, through which a Holy of Holies is created. This partition is, on the side towards the church, painted with a great multitude of images, which form the object

30095 of their worship, and in it, besides two doors on the sides, in the middle, is a double door of reasonable size, through which the congregation can look at the altar, and which, therefore, is called the Holy Gate. No unconsecrated person may pass through this middle or so-called Holy Gate. The altar has no backrest, on which ornaments or images stood. On it stand one or more Crucifixes and Candlesticks, and

30100 so it has only the form of a raised table. Behind it, at a little distance, is a circle in the wall, and in it a special seat, like a Throne on which the Patriarch or Bishop, on high Feasts, sits down with the crown on his head, and pronounces the blessing over the altar, through the above-mentioned gate, over the assembly. On both sides of the altar, opposite the side doors, stand two tables. On the table on the

30105 left hand side one places the Communion bread, and the cup with wine and water; on the table on the right side books, the Holy vessels and priestly garments are placed. In the church itself, not far from the partition, on the left hand, one finds the usual and somewhat elevated seat of the Patriarch or Bishop, and somewhat lower the seats of the other ecclesiastical persons according to their rank. Opposite the seat

30110 of the Bishop is the Pulpit, and next to it are, often, the seats for the foreign Bishops. Furthermore, there are also other seats for ecclesiastical persons opposite the aforementioned, so that they form a double Choir, and can answer each other in the chants. The seats of the women are, as a rule, within partitioned galleries, and provided with lattices, so that they cannot be seen, although outside that they are

30115 covered with a veil. By a great multitude of candlesticks and lamps the churches are

not only decorated, but also, because they are generally quite dark, lighted. In front of the partition in the church stand candlesticks of various metals, which are partly of a man's height, partly lower, and partly also higher; and according to the height and thickness are also the wax candles sticking on them. The lamps are, according to the wealth of the church, often of silver, hanging on small chains in a certain order in the churches, which decorates them very much on the inside. When entering and leaving the church the Greeks always make the sign of the cross, in the manner and manner mentioned above.

There is no lack of monasteries; but the cruelty of the Turks seems to have greatly reduced them in Asia. In European Turkey, and on the islands of the Archipelago, there are still quite a few. The church stands in the middle of the Square, and around it are the Monks' Cells. The most famous monasteries are on the Princes' Islands, not far from Constantinople; also on Mount Athos, where the large and small ones extend to twenty; then also on the island of Pathmos by the Cave, where, according to tradition, John set up the Revelation; and chiefly on Mount Sinai. From the principal monasteries one or more monks are usually sent out everywhere to collect support money for the monastery, in order to be able to make good the expenses, especially the exactions of the Turks. — Most monasteries are under the Patriarch at Constantinople, who has the priests warded there, and appoints the guardians of the monastery; but some, like those on Mount Athos, do not depend on him. Most of them also have to pay an annual tribute, not to mention other extortioners.

There is no lack of places where the Greeks go to make pilgrimages. The principal pilgrimage is to Jerusalem to the Holy Sepulchre. As this, with the church built over it, had been since the Crusades fairly in the power of the Romanists, who abused it with contempt for the Easterners; so the later Turkish Emperors have greatly reduced it, and assigned the principal share to the Greeks, as their subjects. The pilgrimage there takes place in Lent, to celebrate Holy Week and the Easter festival in Jerusalem. They are especially drawn thither by the Holy fire, which, in the Chapel of the Holy Sepulchre, is said to descend from Heaven on the Saturday before Easter, to which the Greek Patriarch, and afterwards the Patriarchs or principal Bishops of the other Eastern Christians light wax candles, and to them the people theirs. (*) But, because this is not seen to come through the church, and from above into the Cave of the Holy Sepulchre; no one is admitted therewith, except the Patriarchs; thus the deception is evident, which, in familiar conversation, is not denied, but is partly excused by the custom, partly by the prevention of difficulties about Religion among the common people, and by the oppressors of the Turks, who, if such a deceitful Miracle were stopped, would have to forfeit much money. But the Roman Clergy in Jerusalem has no part in it. Otherwise there are still many Pilgrimages. Here and there are even holy Caves; and places, where before there were Churches, Chapels and Monasteries, as well as tombs of Martyrs and supposed Saints, also cause the holy journeys.

The worship is done in the ancient Greek Language. It is incomprehensible, how so many Denominations, because of an excessive adherence to custom and antiquity, observe the worship in dead languages. The Greeks would fear to desecrate it, if they had to perform it in modern Greek. There are few Scholars among them, who understood ancient Greek so well, that they could understand the Religion in it. At the most, in the Sermons, for better comprehension, some modern Greek is spoken. Now let one judge how little use the common man can derive from it. The prejudice of an old custom is also the reason that the worship is held more by night than by day, and, except on the longest days, is usually not ended until the break of day. Now and then, as on Good Friday, Saturday before Easter, and on the first day of Easter, it lasts day and night, so that almost everyone, especially the priests, faint from fatigue. It consists of a fabric of Psalms, short and long prayers, moral lessons, which began with the priests, but are continued and ended by the people; of hymns, which are sung very uniformly, and of the reading of Epistles, Gospels, as well as other parts of the Holy Scripture, and the Legend of the Saints. All this is done according to four distinct Liturgies, namely, that which is wrongly attributed to the Apostle James, and those which bear the name of Chrysostom, Basil, and Gregory the Great, and are divided according to the week, Sundays, and feast days. Sermons are seldom delivered, and those which otherwise last long and are obscure, are most esteemed. During and during the Mass, incense is also very strongly burned. For the rest, there is no peculiar edifying attention to their worship, neither by the Priests nor by the Laity; attention is almost entirely lacking, because most of them, besides the unknown language, understand only a few words even when reading quickly. Of them nothing is noticed, except that they make upon themselves the sign of the cross, in

the manner described beforehand, whereby, at large assemblies, a great noise is caused. – Sunday has the special freedom, that Christians may not be disturbed by the Turks on account of taxes and lawsuits, on it. – Church books are not kept at all; and therefore no one can obtain testimonies of baptisms, marriages, and deaths.

(*) By the pretended holy fire in the Chapel of the Holy Sepulchre in Jerusalem, as formerly in the Tabernacle, and the Temple of Solomon, God's presence at the Holy Sepulchre would be made visible.

§. XVII. Character and domestic disposition of the Greeks, with other things pertaining thereto.

One must allow the Greek nation, in general, a natural understanding. In children, the capacities of the soul and the dexterity of the body develop much earlier than in us. They also learn to speak earlier, learning usually two, or even three or more languages, without much trouble, at once; but the purity in this respect tends to falter greatly, because art and culture are neglected. With the years all these capacities increase noticeably, and come to a sharpness of understanding, which other peoples, through great diligence and trouble, cannot obtain. But in the communication of the power to judge, nature has not been so favorable to them. They run over everything easily, and things that require a continuous, long and active reflection are none of their business. Yet a good judgment is not thereby denied to a few persons, here and there. History seems to confirm this even in ancient times. The most famous Greek philosophers, with the exception of Plato and Aristotle, have made themselves famous more by mere ingenious sayings, than by a really coherent system, and in every way the understanding shines through in their philosophical thoughts. The modern Greeks (and probably the ancients were also) are fiery in their proposals and undertakings, lively in their intercourse, jocular and full of sense in their expressions. Their passion leads them, as in a moment, to innumerable different objects. In disputing they are indeed fierce, but they also fade away just as quickly. They find much taste in little stories and romantic tales. Their disposition and manner of conduct betray a great instability. The most important things are only passed over by them in passing; their sorrow does not last long; and, as difficult as the Turkish yoke is at other times, they nevertheless bear it so easily, when the outward exercise of religion and the amusements on the feast days are only permitted to them. – Deceit is a crime, peculiar to the wit, and the Greeks are not lacking in it. To fish something out, and to find out, they succeed more easily than others. The ancients have all considered them mendacious, and, when they spoke of Greek loyalty and faith, they always understood by that, deceit and falsehood. The modern Greeks give their ancestors nothing in this respect. They lie, without thinking it themselves, and support their lies, without gravity, by swearing by God, their Soul, their Life, their and other people's eyes, and by their and other people's children. – The imagination and pride concerning the excellence of their Religion and their nation above others, is peculiarly theirs. And the Europeans have therefore the proverb, that in the Levant and among the Greeks no one could live, unless they were kept in check by the Turks. But, however much this is done, their haughtiness and splendor in clothing cannot be restrained. – As proud as a Greek is, so dismayed is he, as soon as he sees a Turk. The flatteries which they show to the latter, the cringing patience with which they endure their insults and severe treatment, and the baseness in the title of them, (*) make one feel an uncommon aversion; and yet there is no lack of a very far-reaching boasting behind the back. This one sees, in an apparent way, in the Princes of Wallachia and Moldavia. When they attain to that Dignity, and possess it; then their puffed-up and conceitedness, their wanton pride, their spiteful, nay cruel and inhuman conduct exceeds all that one can think of: but in their misfortune, when they are deposed, one can think of nothing baser, more dejected, more cringing and cowardly than them. Self-interest, greed and avarice are with them as home. For money the Europeans use the Greeks, as they please, and therefore they also tolerate everything. This is the main source, why they spoil themselves with the Turks themselves in the ground, and let what is theirs be taken away. And it is sad to see how their accusations before the Turkish courts arise from this, and how religion, honor, life and property are destroyed there.

One cannot well imagine, what deep roots credulity and superstition have taken among them. However insignificant a priest may have become among them, who has quarrelled with them, drunk himself, or behaved basely in any other way; they still ask his blessing, and kiss his hand, or lay it on their head. (*) The most wicked men, generally, make the most considerable Legacies in their Testaments, in order to atone for sins by such a liberality, and to obtain the intercession of Priests, Monks, and the Poor. In the Provinces, where they are fairly free, as on the countries of the

Archipelago, the rich, at their death, fix a certain sum of money, to build a chapel;
 30250 and this is the reason, why one finds such a great number of chapels. — Many springs
 and waters, both in forests and caves and mountains, which are naturally mineral,
 have been made miraculous, and thus become holy. The Greeks call them hallowed or
 atonement waters. (αγιασματα.) By them, as well as on those images, which are
 30255 supposed to have a healing power, they hang up cloths, as a sign, that they hope for
 healing. Not only other Eastern Christians do it this way, but also the Jews and
 Turks. Of miracles, which are supposed to have happened here and there, one hears
 daily. Apparitions have occurred there; Crucifixes fall from Heaven, which disappear
 again; there are changes seen in the images; the deceased show themselves at night,
 30260 etc. When the writer once went into the Greek church in the Dardanelles, because it
 was somewhat dark there, he saw, by the screen before the altar, a heap in which
 something was moving; coming closer, it was a sick woman on a bed, who, for some
 time, had had herself carried into the church, because she pretended that she was
 greatly refreshed by the sight of a painted image of Mary. (*) Had not the miserable
 30265 nature of this sufferer proved the truth of her illness; what should not a natural
 suspicion have thought about such a thing? Meanwhile the priests approved of such
 superstition, and that at a place so considerable, and not far from Constantinople.
 During his second stay there he visited the Patriarch Karatscha, who had been
 recalled from his exile on the island of Lemnos, and whom he had come to know in his
 30270 dignity during his first stay. At the same time he had many archbishops and bishops,
 as well as important worldly persons, visiting him with congratulatory messages. Can
 one imagine that this patriarch had the audacity to boast before this assembly of the
 appearance of the Virgin Mary in a dream, (*) announcing that he would be recalled
 from his exile, and that he found approval from all? But even prominent worldly
 30275 persons are not free from this superstition. About the year 1763 the Dutch Consul of
 Negroponte, a Greek by religion, had a trial for many previously committed
 subterfuges. Could one believe that this man, on all occasions, turned to his images,
 and asked them for advice, what he proposed, and how he should answer? When those who
 hold Dignities and Offices think and act in this way; what should one expect from the
 30280 Common People? They adhere very much to vanity, and those vices, which the Apostles,
 especially Paul in the letters to Timothy and Titus, charged their ancestors with,
 and punished them for, have been propagated to their descendants. For the rest they
 help themselves very commonly in eating and drinking, if they can only dress
 themselves excellently. (*)
 30285 The language of the Greeks is modern Greek. According to the assurance that was given
 to the writer in Constantinople and Smyrna, one would have difficulty in finding a
 dozen people in the Turkish Empire who understood ancient Greek at the bottom and
 could speak it unadulterated. Modern Greek does not deviate much from this, and the
 30290 difference is no greater than between Latin and Italian. The artificial words and the
 principal expressions are ancient Greek; nothing but the inflection of them, and
 especially the declensions and conjugations are modern. The purer it is spoken, the
 closer it comes to ancient Greek. This takes place chiefly round Athens, and on Mount
 Athos, as well as in all those places, where there are few or no Turks at all,
 30295 consequently the mixing with other languages has not taken hold. In pronunciation
 they are themselves, with the more or less tenderness of some Provinces excepted,
 fairly similar. Generally they are for the Itacismus. The β sounds, in their
 pronunciation, like bh, nay almost like our V; theirs βαλεριάνος Valerianus of the
 Romans; the γ not, as in many Provinces of Germany, like j, but like the true g; the
 30300 δ almost like ds; the θ almost like ths; the η entirely like i; the ζ like a soft s;
 the σ like a sharp s; the αι as ae; the ει and οι as i, the ου as av; the ευ as ev;
 and finally the ου as u. If they wish to express our proper b; then they use for it,
 as μπ, as μπορο (borò) I can; μπάλα (bála) a bullet. Of the Erasmian pronunciation,
 therefore, the Greeks know nothing, and it would sound barbarous in their ears, since
 30305 Greek, according to their pronunciation, is very pleasant to hear. One may think of
 them, that they have the true pronunciation; for, since, notwithstanding their
 subjection to the Turks, they have constantly observed their worship in the ancient
 Greek language, and for the recitation of its parts the Deacons, Monks and priests
 are regularly taught; they are also uncorrupted in many places of the Turks, and
 their religious customs, in many monasteries, have remained unimpaired in the daily
 30310 worship; so one cannot well dispute the true tradition of the sayings, except for
 trifles. — In their chronology they follow the old style.
 Their opinion about various Denominations is not too scriptural. They keep a
 reasonable amount of each other, often calling themselves brothers and sisters.
 Because of the agreement of faith with the Russians they bear them a natural
 affection, often admitting that, to know the Turks, by which they, here and there,

bring upon themselves great inconveniences. They generally regard them as those who will, at some time, deliver them from the Turkish yoke. The Turks know this, and according to their superstition they also imagine that this will happen; yes, from this cause prophecies have arisen which wish to foretell this, without nevertheless determining in advance times, persons, and other circumstances necessary for the fulfilment, which so clearly distinguish the prophecies of the Bible from the lying ones. The Porte, meanwhile, seeks to prevent all communication between the Greeks and the Russians, and the Russian ambassador at Constantinople is not even allowed to enter a Greek church, because otherwise he would expose the Greek nation, and especially its principal ones, especially the Patriarchs, to misfortune and calamity.

30325 - Towards the Protestants the Greeks are most friendly disposed, because they allow them in their countries the freedom of religion, the Protestant ambassadors and consuls also render them many services with the Turks, and do not seek to make them apostate from their religion; but would not a union of religion between the two be so easy to expect, considering that, putting aside the Pope and religious coercion, the same causes almost separate us, which separate us from the Romans. From the latter they have not received what they received from the Protestants; rather they must ascribe to them many persecutions, and therefore they bear them a natural hatred. To the Armenians they have not such hatred, as to the Romans; but nevertheless they have less love for them than for the Protestants, because they have been excluded by a general church council, and that ban has never been withdrawn. They have the most extreme aversion to the Turks, calling them nothing else than dogs. This has become such a habit for them that they are surprised when someone asks them the reason for it, and shows the impermissibility of such a course of action from scripture. Otherwise they have not yet ceased to be hospitable.

30340 To what offices the male race among the Greeks can come, has been indicated in § X.. But the Turks also employ them very much for domestic affairs. They conduct their trade, mostly, in the interior of the Empire; but many also go to the European countries, and conduct it there. The common people are much supplied with agriculture and gardening, or are in the service of Christians and non-Christians. The dress of these common people differs from that of the First Names, while the former use short garments, over which, if they possess any means, they wear on feast days a long fur coat hanging down to the ground; but the latter wear long garments, although the trousers are in all cases very wide, and reach to the feet. (*) The Priests wear moustaches, and also let the hair grow on the chin; but worldly Persons have only the first. (*) In companies they give coffee and tobacco. Of the first, only one cup is always given without milk, and often without sugar. The Tobacco is offered in long pipes, which are of various kinds. The commonest come from Moldavia and Wallachia, and are called Jermessee. The best are those which are made in the Levant itself from Jasmine and Cherry trees, and a black kind, which bears the name of Mussa. Of these a piece may cost 6, 12, and more Piastres. Such a Tobacco pipe is 2 or 3 ells long, and it is considered pleasant to smoke from it, because the smoke comes cold to the mouth. - They carry, like the other Levantines, in companies, especially a kind of rosary with them, which the Rich have of amber, which they serve to play with, because they count the beads with their fingers, and let them pass through their hand. During the visits, not only the Greeks, but also all Levantines, of both sexes, take off their shoes or slippers at the door, or at least when coming to the Sopha. The Firstnames also sometimes have a pair carried by their Servants, Maid or Slave, in order to exchange the good with the bad or the latter with none.

30365 The Women have, just as with us, the domestic duties; but for the rest they abstain from all such, in which they should have uncovered the face. They are thus, in their work, and in their trade and conversation, for all not visible, certain places, where greater freedom reigns, excepted. They spin the yarn, the wool and silk on the spindle, weave the lyves themselves; they sew, stitch and embroider. The latter is especially the work of great women. If all the modes of dress in different countries, in certain respects, differ; yet no real change of fashion takes place. In their house, the court and garden they wear slippers or shoes, (Sandalia) but immediately over the stockings socks of fine leather (μερίλα) with which they slip their slippers or shoes; and when riding out, or when they want to go far, they wear yellow boots. The shoes are, often, artfully made, inlaid with mother of pearl, and the straps stitched over it. The wooden sole, a finger thick, has two cross-pieces underneath, to make it the height of a hand broad. This is, probably, the cothurnus of the ancients. The Greeks all wear, according to the uniform custom of the East, trousers, which hang down to the shoes. Over this hangs the very wide shirt, which, therefore, for adults is made in one way and in the same size, being very fine, or made of tree wool and flax or silk. The sleeves on it are wide, hang almost over the whole hand,

and cover the place of the lobes of the hand. In front of the neck it is made with a button of small or great value, or only with a pin. Over this goes a dress, which fits the body just, only that it is somewhat wider at the bottom, one side folded over the other, and at the chest somewhat cut out, so that it is reasonably
30385 transparent through the fine shirt. The outer garment, Feredsche, consists, when it is winter, of a fur skirt; in summer time of a light material, which is completely open at the front. The undergarment, such as the men, and both ideas among the Armenians, Jews and Turks wear, is fastened around the body by the girdle. This is often, and especially with the women, very beautiful and expensive, so that such a
30390 one can cost a thousand or more Dutch ducats. The necklaces and bracelets usually consist of gold chains. The cloth around the head of the women is made of many kinds and colours, as well as gold and silver threads, and is called Tschember. Their hair is braided in a multitude of small locks, which are twisted together three or five times, and tied in rows around the Tschember. With others these locks hang around
30395 them, and down on the shoulders. One sees easily how naturally they wear it, and how beautifully it must suit the body. When the women go out; then they are obliged to wear a white cloth over their head, to cover their face. (*) It consists of muslin, and is covered with gold threads, a few fingers wide, by the Nobles. It is called Mahraman. In Constantinople, and in many other places, they must, like the Turks, cover themselves almost entirely with this veil; but in places where more freedom
30400 prevails, they only let it hang down over their shoulders. The fan of the Greek women is by the Nobles fairly large, made of peacock feathers, and provided with an ivory handle. In the side towards the inside, at the top of it, is a small mirror. When they are in the house, or under a tree; then they let maids or slaves guard them with
30405 it. For the rest, the domestic condition comes very close to the Turkish. The children are restrained, and kept under a fairly sharp discipline, and the women by their husbands strictly. The love of the children to their parents, and that of the latter to none, is generally great. The maids are not allowed to speak alone with the sons of men. If any one from outside enters the room, the daughters go away, and do
30410 not come in again, unless they are called by their parents. They sew, spin, sew, and do their other work by and before the lattice of the windows, that they may watch the passers-by without being seen. Many Greek women, notwithstanding that they are otherwise fairly well-made, and have a lively colour, paint themselves, laying on all
30415 sorts of places of their faces little muffs of various sizes. They also often paint their eyebrows black; but this is more proper to the Jew women. To express love and joy, or a feast, they have their heads covered with many flowers. – The Minnemoeders are still used, under the name παραμάννα, paramana, (as a second mother) by the principal Greeks. They are, often, incorporated into the families as familiars, and remain, during their lives, in the house.
30420 Of furniture or household goods they know little, who have had no intercourse with the Europeans, and have adopted customs from them. In most of the halls and rooms there is a stool or footstool, which occupies a third or half of it, covered with a Mat or a Carpet. (*) Around the wall at this height is the Sopha, the coverings of which are of very great value according to the condition of the families. Yes, in the
30425 various kinds of cushions each one seeks to show his taste and wealth. In front of the Sopha, cushion, stands a small box of more or less size, and according to the condition of the owner, inlaid with mother-of-pearl and other ornaments. In it the man has his paper, writing equipment, book, etc. and the woman her embroidery, silk, etc. lay. Tables and chairs are in the fewest houses. One sits on the knees crossed
30430 one over the other. The food is placed in small dishes on large copper plates in the middle. Bedsteads are also not in use. There are no feather beds, but they use such mattresses as are filled with wool; and the upper beds are filled with tree wool, and quilted. These are spread out at night on the said height of the footstool, rolled up
30435 into the room at night; then all those present, and the inferiors the superiors, wish themselves a good evening. This is observed as sacredly as by the ancient Greeks. – The secret comforts consist among the Levantines of a triangular hole, which is nevertheless not too large, so that no one falls into it; and the opening is covered with a somewhat raised piece of wood. (*) Not only when discharging, but also when
30440 making one's water, one crouches down on it. One always has clean water at hand to wash oneself. This the Turks never fail to do, because religion obliges them to such a purification. – The Greeks do not lack amusements of various kinds; and where is a place, where the people were not very fertile, to invent them? Most of their games are of such a nature, that bodily exercises are combined with them. They are
30445 uncommonly fond of dancing. This they do a great deal on the feast days; but then it consists, in fact, only in a row, or a kind of marches, processions, and leaps. Among

their games belongs the jumble of money, whether heads or tails fall. They like to play even or odd with axes, nuts, beans, or pieces of money. The game of cards, so corruptible in Europe, is only played by those who have learned it from the Europeans. Their alternate singing, as in choirs, is still very much in use among them. All sorts of merry tunes and love songs are in fashion among them, and are to be found in great abundance, although they have neither Sappho nor Anacreon among them. To avoid the former, the Lyre is still a necessary, at least agreeable instrument among them. European music very seldom pleases the Oriental. The instruments and chants are, with a few exceptions, Turkish; but the words and meaning of them are Greek. The Jews and Armenians have, here, with the Turks even more, nay, almost everything in common. – The walks of the Greek women are taken with their children, the maids and slaves, if they may have such. This journey is done both with splendor, and for the sake of propriety, in distinction from the whores. – At weddings, not only do the guests themselves enjoy themselves with games, dances and merrymaking; but hired jumpers and dancers must also try to entertain them with the music. With the corpses, it is no strange thing to hear the mourners' conversations with the dead, as if he were still alive.

(*) Regarding the Titles, the First Names are very inflated. The Men want to be called Princes (αρχοντες) and the Women Princesses (αρχοντισσας). The Spouse of the Interpreter of the Porte lets herself be called the illustrious Lady. (*) The Greek lords and ladies give their hands to children, servants and slaves, and the Firstnames also their coat, first to kiss, and when this is done, as a sign of still greater reverence, to press it to the forehead. Those in love or tender-hearted people are accustomed to kiss their eyes, and therefore one often hears them say: I want to kiss your eyes. (να φιλησω τα ματια σου.)

(*) In the East the custom is still, as it was in the time of Christ, that a sick person is carried on a bed (κραββατιον, Mark II 3. etc.), to beg, or to be seated before the Churches. And on the Princes' Islands, so near Constantinople, there is a monastery, where they often bring sick people, who lie and sleep in the church, to be restored, as they think, by the action of an image.

(*) The Greeks place much reliance on dreams, and some apply themselves to their interpretation, which is certainly, like all divinations, uncertain and deceptive.

(*) At a marriage the greatest part of the expenditure consists in jewels and clothes, which are put on display. What was reproved in 1 Timothy II 9. and 1 Peter III 3. is still in use. With regard to the braiding of the hair the opinion still prevails: the more, the more beautiful!

(*) The r is often and usually pronounced as a d by modern Greeks after v: for example, παντα ταλαντα, panda talanda, and νομνιτζα domnitza. The pronunciation of Greek has naturally, as with all languages, even those that have remained free from the influence of foreign nations, undergone some change over time; but from this one would very wrongly conclude that the Greeks did not have them more authentically than the foreigners. This would not be a valid objection either, if one were to say that the present Italian pronunciation of Latin was not the old Roman one, notwithstanding that the worship in Italy was held in the Latin language. The case is different with the Greeks. All their churches in Asia and Europe have only one pronunciation during worship, without organ and music. The sayings are clearly recited, and then sung. The Greeks are unusually fond of this. The yoke of the Romans, Persians and Turks has never been able to move them to renounce their language.

(*) The long outer garment, especially the rough and hairy one among the common man, (Kapot") or the Fur among the First Names, still serves at night as a covering, both at home and especially when travelling. (Exod. XXII 26, 27.) The long petticoat fitting to the body is fastened by a girdle. Such a one is often worn more for show than out of necessity. Its use is, according to scripture, very old. It serves to tie the money-bag to it, or to put the money in it. (Matth. X 9.) Our leather money-bags may perhaps have been stripped of them. Nowadays most people put their money-bag, as well as their watch, in a pocket, which is found in the lining of the body-fitting garment near the heart.

(*) Among the Turks it is still by Persons, who nearly equal each other in condition, and request something of each other, the touching and kissing of the beard in use. (2 Sam. XX 9.) The Inferiors among all the Levantines embrace the knees of the First Names. This is the falling down and adoration (προσκυβειν) in the Bible.

(*) The veil of women is an ancient custom, and chiefly depicting modesty. – Gen. XX 16. XXIV 65. But they know how to hang it so, that it increases beauty.

(*) Before this height in the room the house servants among Christians and Turks keep themselves; by which we can explain the Latin expression, ad pedes stare, (to stand before the feet). By the First Names they must administer the coffee, sweets, etc. on their knees.

(*) All Orientals are, by, the natural discharge of the body, very shameful. They wrap their long clothes around the body, and so crouch down. By this one understands, what it means, to cover one's feet, I Sam. XXIV 4.

FOURTH PART, Of the Armenians.

§. XVIII. Of the Armenian Church and its constitution.

The Armenian Church has its name from the people, the inhabitants of Armenia, and the

Armenian language, which they employ in their worship; and this name is all the more due to them, as the natives of Armenia, or their descendants only, on the other hand, no people of other nations belong to this Church. Church history shows that it is a Branch of the Monophysite religious party, whose adherents, for a certain reason, are called Jacobites and Copts. The rejection of the Chalcedonian council has separated it from the Eastern and Western Church. This separation could have been effected and maintained all the more easily, if the Armenians had nothing to do with the Patriarch at Constantinople. They agree with the Monophysites in the main points; but they have their particular customs, and would not accept their Church teachers from them. As none regard the great Patriarch of Alexandria, but his seat is actually at Cairo, as the supreme head in matters of religion; they regard the Patriarch of Edzmiazin as such. The Armenian people, in the change of their country, because it was now a kingdom of its own, now under Persia, now under Turkey, have had peculiar fortunes. The greater part of them have left it voluntarily, or have been carried away by the conqueror. The Persian Kings have sought chiefly to depopulate it, in order to make a desert there, which kept the Turks from warlike attacks on Persia. In such a state of affairs an incredible multitude of people has been carried away, and the suburb of Julsa before Isfahan alone has become populated with about a hundred thousand people. There is no principal city in Persia, as well as in Turkey, especially Asia, in which there were not considerable populations of Armenians; not to mention the great multitudes residing in Poland and Russia, as well as smaller groups in Italy, France, England and Holland. Of the Greeks and Romanists they are, everywhere, looked upon with squints, and called schismatics; but they themselves, with all humility, have a good confidence in their cause.

Although they have several Patriarchs; some are, however, only in name, as that of Constantinople; others in fact; but nevertheless they all give precedence to the one at Edschmiazin, which otherwise had its seat at Schaste in Armenia proper. This Edschmiazin, which is called by the Turks Uetsch-Klissie, in Dutch Driekerken, is a monastery, not far from the mountains of Ararat, in the city of Erivan, lying on the borders of Turkey and Persia. It has the Turkish name after actually three churches, but of which the largest is actually only used; but the Armenian name because of the descent of God's only begotten Son, because, as is alleged, Jesus Christ had visibly appeared to St. Gregory, who was the first Patriarch there. In this monastery, the main seat of the Armenian religion, the Patriarch resides. This is the nursery of the principal Church teachers and Bishops. There are, here, also of them, always, a good number, besides many Monks, who provide the general welfare of the Armenian Religion, besides the Worship and the education in the monastery. The Patriarch is chosen from one of the Bishops; but he lives without outward splendor and pomp; and the Dignity alone distinguishes him from the other Churchmen. He has indeed a large income, but must also spend an unusually large amount, to maintain his Character and the Religion among the Mahometans. The Bishops are all unmarried. The greater part is sent from Edschmiazin, where they are also ordained. They are from there every 3 years exchanged in their Bishoprics, or confirmed anew. This confirmation, both of the Bishops and of the Patriarchs, is held in very high esteem by the Mahometans. Wherefore Simony is not unknown to the higher and lower Clergy. In their calling they are more zealous and diligent than the Greek and Roman Bishops. They preach themselves, but sitting down, and visit the Churches belonging to their Parish very accurately. The Vartabets (*) are a kind of Monks; who come fairly near the Bishops, in the absence of these preaching, and as their Vicars, and often at the same time are Bishops. They form at the same time a kind of Teachers in Theology, who have a certain oversight over the Church. The number of monks among the Armenians is not so great, because they are not kept to go idle, but in the hope of making them teachers of the church at some time. They all follow the rule of Basil. They must read the book of Psalms through, at least on the day of their initiation; at other times it depends on their zeal and devotion. With regard to this last, the Book of Psalms is divided into 8 large divisions, and each of these is again divided into 8 smaller ones, at the end of which: Glory to God the Father, etc. must be said. Their ecclesiastical duties consist only in reading Masses; for other pastoral duties are forbidden to them. They must often endure a long period of probation, and are not easily dressed for manly old age. In this dressing, very strict exercises of solitude, of fasting and prayer are prescribed. Their hair is then cut into the shape of a cross, and, when it has grown again, into the form of a crown, which they endeavor to maintain. This last is customary among all Armenians, in remembrance of Christ's crown of thorns. The Eastern males, in general, do not have long hair hanging down over their shoulders, like the Western ones. The priests, who bear the name of Derder, must necessarily marry once, and besides the religious service, also

attend the elementary schools. By a second marriage they would lose their priesthood. Outside of the services in the church, the Armenian clergy are not distinguished from secular persons in their clothing, except by the dark colours. At the religious service they wear cloth choir-gowns, and the Vartabets a kind of high, pointed, but hanging over the back black Capuchin hood; the latter are also accustomed to wear such hoods in the street. One must give the Armenian clergy the praise that they have a precedence in modesty and restraint above any other denomination. Besides the usual revenues of baptisms, marriages, and burials, she has a special one, to sell from the Holy Olive, which the Patriarchs refuse, and to the Bishops, but these again to the Priests, and which to the people sell very dearly, and to which great powers are attributed; not to say, that they do not forget themselves, in the imposed penances and excommunications. Otherwise the Patriarch of Edschmiazin alone had to refuse the great revenues from the Holy Olive; but about the year 1670 the Patriarch of Jerusalem also took upon himself this, and the very costly dispute about it has been decided by the Porte, just like all such disputes, from which the Turks draw much money, so that both parties can do what they please.

(*) The Armenian Honorific, Vartabet, signifies an ecclesiastical Dignity, as for instance Prelate in the West, and is given to Bishops, Archbishops and Patriarchs. Of the so-called degrees in Theology and other sciences they know nothing.

(*) A letter from Smyrna, of the year 1777, reports that the printing of the Armenian Bible had not yet been accomplished, and in the Armenian translation the Septuagint, that is, the Greek translation of the so-called seventy translators, was followed.

§. XIX. The Creeds of the Armenians, and their Distinction from other Christians. The Creed, which Schroeder has had printed in his work, Thesaurus linguae Armenicae, is so accepted by the Armenians, that they refer all those who wish to have knowledge of their faith to it. It reads thus: "We confess and believe with all our hearts in God the Father, who was not made, nor begotten, nor had a beginning; who begets the Son, and from whom proceeds the Holy Spirit. We also believe in God the Word, who was not made, but from eternity begotten and generated by the Father, neither later nor less; for as the Father is Father; so also is the Son, Son. We believe in the Holy Spirit, who was not made, but eternal, not begotten, but proceeds from the Father, of one Being with him, and of one and the same glory with the Son. We believe in the Holy Trinity, one Nature, one Godhead. There are not three Gods, but one God, one Will, one Kingdom, one Dominion, the Creator of visible and invisible things. We believe one Holy Church, the forgiveness of sins, the communion of saints. We believe that one of the three Persons, God the Word, who was born of the Father from eternity, in time, descended into the Mother of God, the Virgin Mary, took her blood, and united it with his Godhead; that it was preserved nine months in the body of the immaculate Virgin, and thus God became a perfect man in his infusion, mind and body; one Person, one manifestation, and indeed united in one nature. God became man without deformation, without change. Without seed was his conception, and without corruption his birth. Just as his Godhead is without beginning; so is his humanity without end. For Jesus Christ is yesterday, and today, and the same also forever. We believe that the Lord Jesus Christ, after he had walked on earth for thirty years, was baptized; that the Father testified, this is my dear Son, and that the Holy Spirit descended upon him in the form of a dove; that he was tempted by the devil, but that he overcame him; that he preached salvation to men, experienced bodily infirmities, became weary, hungered and thirsted, then voluntarily came to suffer, was crucified, and died bodily, but remained alive according to the Godhead; his body, united with the Godhead, lay in the grave; that he in the Spirit, he the undivided Godhead, descended into hell, preached to spirits, destroyed hell, and delivered spirits; that after three days he rose from the dead, and they appeared to his disciples. We believe that our Savior, Jesus Christ, ascended into heaven with the same body, and sits at the right hand of the Father; also in that same body and glory of the Father shall come again, to judge the living and the dead, which is also the resurrection of all men. We believe finally in a reward of works, namely, eternal life to the righteous, but eternal pain to sinners".

The Armenians are, in the first principles of divine truths, much purer than all non-Protestant Christians. The reverence for the Bible is among them unusually great; and the Church and Church teachers count for them no more than human, though otherwise excellent testimonies. Have they now nevertheless accepted much leaven from their ancestors, and do they retain it; this comes from the immoderate respect, which they have for antiquity in all things. — Everyone has the liberty to read the Bible, and it is also read aloud in church, for a reasonable long time. They have, since 1767, begun to collect the oldest manuscripts of their Bibles, the most learned among them

To call together the ecclesiastical people, and to make an apparatus for a printing-office, in order to publish an improved Bible at Edschmiazin, and to leave it to their nation, in a larger quantity, for a more moderate price, than has hitherto been possible. It is to be wished, that God will let a work, in every respect so salutary, come to pass. (*)

The Confession of Faith itself shows us the healthy and Christian thoughts, which the Armenians have of God in general, and the Mystery of the Holy Trinity, their particular opinion, concerning the outgoing of the Holy Spirit from the Father alone, excepted. In the Doctrine of Christ, and especially the union of his two natures into one Person, the error charged against them, as many Scholars think, seems to rest only on indefinite, or different artificial words from us. What in the aforementioned translation is brought out by representation, bears in Syriac the name of Barsopa, and is the same as the Greek $\pi\rho\acute{o}\sigma\omega\mu\omicron\nu$. But the words, united in one nature, they do not understand in the sense in which they are taken by us and whereby they destroyed the distinction of natures; because they add further:

"God became man, without deformation, without change".

The Doctrine concerning justification by faith in Christ is not so very pure, because much is built on supposed good works, for instance Fasting, etc. They retain the intercession of the Saints, and the reverence for images, because of tradition and custom, because this seems to them to be something innocent; and to the images of the Saints they show an internal and external Honor.

To express the idea of a Sacrament, they have no proper word, but call it a Mystery. They have seven after the manner of the Romans, and also the same, although with some other Explanation and use; for the formation, for instance, they continue after baptism, and the last Olyzel usually takes place with them concerning ecclesiastical persons, and that only after death. But if one finds them in this, and in other new errors, agreeing with the Greeks and Romans; this should not surprise anyone. It is natural that the later missionaries can quite unnoticed inspire many things as orthodox in a people who were previously very ignorant, and not yet sufficiently vigilant against the wiles and baseness of the Roman Court; not to say that, in the union with the Greek and Roman Church that had often been in view, they may have accepted many things in such negotiations: as is evident in their feelings concerning the Mass and Transubstantiation. At Baptism they also make use of Godparents, who hand the Baptized person over to the Priest. The Priest sprinkles his head three times with water, while he pronounces the words of the institution. He is also immersed three times under the water, and the whole body is washed. This is followed by confirmation with oil; in which the Armenians have something special above other Eastern Christians. The Priest anoints with it, in the form of a cross, the forehead, the eyes, the ears, the lower body, the flat of the hand, and the soles of the feet. Then he also smears the lips of the Baptized person with the consecrated forms of the Lord's Supper.

Before the enjoyment of the Holy Supper, Confession must precede. This must extend to all particular sins. The penances imposed for sins are very severe, and the priests do not forget their purses at all. The Mass is with them about the same as with the Greeks and Romans. They use leavened bread and only wine without water. They also believe in the change of the consecrated bread into the body, and of the consecrated wine into the blood of Christ. This deserves some attention. The Lutherans and Reformed, in the diversity of their thoughts concerning the Holy Supper, appeal to the opinion of the early Church. The clergy is of the opinion that the latter fell short before its judgment seat. The question is in fact questionable: which thought could have educated all Christians, before the Reformation, to Transubstantiation? Those which the Reformed nourish, that in the Supper there is nothing but bread and wine? or those which the Lutherans, concerning the real presence of Christ's body and blood in this Sacrament, nourish? Of these, in the dark times, the Transition, light, to Transubstantiation, was, but not of none. But, if all Transubstantiation is believed by the Armenians, yet the carrying of the Host is unknown to them. They also give the cup to each one. But the two forms are administered together, because the consecrated bread is dipped in the consecrated wine.

Their opinion concerning the deceased does not seem to be pure, however much they contradict the Purgatory of the Romans. They have several candles lighted above their graves, at certain times also prayers said, and other Ceremonies performed; especially they are very careful in this for their deceased blood relatives, and for this purpose the Easter Monday is appointed. Although they do not now believe that the souls of the Righteous will come to the immediate sight of God before the resurrection; nevertheless they do not consider the invocation of the Saints absurd. The ecclesiastical ban is in use among them, as among the Greeks.

§. XX. Religious customs and ecclesiastical circumstances of the Armenians.

- 30720 As to the feast days the Armenians are not so extravagant as the Greeks and Romans. The number of these is much smaller. They make a distinction between those who celebrate the Church and those who also affect the people. Of the former there are many, and the priests must observe the public worship; but each one remains at ease with his calling, at the most he attends one Mass, and then goes back to his work. Of
- 30725 the latter there are very few: Christmas, New Year and Epiphany are celebrated by them on the latter feast day at the same time. Then the congratulations are much stronger among them than among us. But they are accustomed to go to church the night before, and come out again at the break of day. During this whole time a multitude of ceremonies must be performed. Corpus Christi is also very solemn with them, marked in
- 30730 the afternoon, after a very long service, the feet of all the sons of men are washed by the priests, and a cross is smeared on them with butter. Easter is a great feast with them. The preceding strict fast of 40 days makes that they wait for it very seriously. On Saturday afternoon before, when they come out of church, they have the liberty to break it, except for the use of meat. Then the Easter believers must
- 30735 observe it exceptionally. The Greeks are wont to mock them on this account, (*) as with people who cannot wait a few hours until the end of the great Lent. The greater part of the night between Saturday and Easter is, likewise, spent in church on account of the many ceremonies. The feast of Pentecost is also very solemn among them.
- 30740 The fasting is unusually strict among them. That which the Romans observe is slight, in comparison with the Greek, and this slight, in comparison with the Armenian. Wednesday and Friday are the usual fasting days in every week. There is also a great difference between the fasting of the ecclesiastical and that of the people. The latter lasts nearly half a year; that of the former will probably account for two-
- 30745 thirds of the days of a year. It is of three kinds. The first only commands the abstinence from meat; the second also forbids the use of fish, eggs, milk food, oil and all fat; the third consists in the abstinence from all food until the evening, etc. The clergy are often subject to the latter, and the monks never eat meat, and never drink wine. Eggs, milk, butter and fish they may eat only on Saturday and
- 30750 Sunday outside Lent. Pilgrimages to Jerusalem and other supposed holy places are also not lacking among the Armenians; meanwhile, that after Edjchmiazin is the most important. The religious service is among them, often, at night and generally held in such a way that, except on the longest days, it is ended before the sunrise. It lasts unusually
- 30755 long, by three, four and more, yes on the high feast days by six or eight hours. The Armenians are unusually zealous in attending him. The worship itself, namely the Mass, the reading of the Holy Scripture, the Psalms, the principal confessions of faith, etc., are done in the old Armenian language, of which, alas! the common people understand nothing. Everyone does not sing with it, but, except the priests, only
- 30760 certain appointed people. Their Liturgy consists partly of that which is attributed to the Apostle James, and partly of that of which Chrysostom and Basil are said to be the authors. The sermons are done in a new Armenian language; yes, in order to understand them better, translations into Turkish and Syriac are mixed with them, according to the Provinces, which makes them excessively long. From this we see what
- 30765 Antiquity can do over the East. Whereas the first Christians, on account of the heathen persecutions, observed the worship by night; so, although that reason has ceased, they continue with such a custom; and, because their ancestors, in their former mother tongue, served God, so they do it in the same, although a newer one has come in its place. Music is 'not used with it', unless one had to reckon thereto the ringing of a small bell, and the assembly of thin metal disks, which are round, and on which, sometimes, bells hang round; but all the more church ornaments, incense burners, candles, etc., take place with it: although in this respect it is with them simpler and less glittering, than with the Greeks and Romans. The use of dead
- 30775 languages in public worship, and, in order to make them at least somewhat understandable, the mixing in of one or more living languages, must be charged to all Eastern Christians. For there are provinces where, in public worship, one can hear Armenian, Arabic, Syriac, Turkish, and many other languages. The weddings take place under great ceremonies; - the marriage lasts unusually long. It takes place in the church, where the bridegroom and bride must enjoy the Holy
- 30780 Communion, and the bride is covered with a veil under which it is also administered to her, so that she remains covered. She is not seen by her bridegroom during the day, even on the wedding day, and among the strict Armenians in 3 days. She sits,

like a statue, in the most important corner of the room on the Sopha, with a broad cap on her head, over which a red, fine veil hangs down to her feet. Suitors must marry suitors, and widowers widows. To marry for the third time is considered by them as fornication, and with regard to the forbidden degrees they think, like the Greeks. Burials take place there in the country with them, as with the Greeks, after death. The Bishops and the principal ecclesiastical bodies are, beforehand, anointed with a consecrated oil, but all others are only washed. The dead man is wrapped in linen and sewn up, so that nothing of him can be seen. Before he is carried away, many prayers are said and sung over him by the ecclesiastical bodies, during which time the nearest blood friends, in very common clothes, and the women covered, embrace him and mourn him, yes, they act as if they would hardly let him be carried away. When the prayers are ended, the body is then laid on a stretcher. The priests go, or almost walk in front; and those who follow the body follow one after the other. The body is placed in the forecourt of the church, after which prayers follow; then it is carried to the grave, where one or two men stand and receive it. This whole Ceremony is very disagreeable to a spectator, and a European feels a chill through all his limbs, to see a body so sewn up, and treated without a coffin.

In the Churches there is just nothing to be noticed, except that they have no such farewell before the altar as the Greeks, nor so many images as these. But the seats of the women are entirely separated from the men, and provided with latticework. Monasteries there are, in comparison with the Greeks and Romans, very few, and not nearly so rich as with the latter, but in every Armenia they are more considerable. They are left by the Mohammedans quite undisturbed in their state, and by gifts to the Great, as well as certain taxes, to the enjoyment of their other goods.

(*) The custom of this nation, before the breaking of the great Lent of 40 days, of eating Easter eggs, which is much ridiculed by other Eastern Christians, is declared to be very sensible by an experienced European physician at Surinta. He has found that to him and other physicians, because of the all too rapid transition from Lent to fatty foods, more sick Greeks and Turks than Armenians came, because the latter had at least a short interval to accustom their stomachs to something else.

§. XXI. National Character of the Armenians, and other things pertaining to it. The Armenian nation has, above many others, something in advance, as regards its disposition of mind. One would think that its warm Fatherland made it loose and exuberant; but in this one would be mistaken. It is ??l and serious; not nearly as noisy and quarrelsome as the Greek; lives unusually reserved, and helps itself with little. Constancy is its own, and the change of religion of an Armenian something very unusually rare. It is also not subject to so many lapses and vices, as other peoples. The Armenians remain with the utmost obstinacy in their once adopted feelings. They have no great share in intelligence. Their judgment does not seem to extend itself to learned researches; but to commerce they seem as if born. In this they are so cunning, that they are called Christian-Jews, and it is maintained, that they could not be deceived by any Jew. There is hardly any important Merchant in the three ancient parts of the world, but there are Armenians in it. With the Turks of rank they are the Money-changers and Agents. Their loyalty is praised, although they do not lose sight of their own interest. Their uncommon avarice becomes a proverb with other nations. Their desire for trade prompts them to make the most difficult journeys through the whole world, and they learn many languages by intercourse, but seldom pure and complete. Both thoughts are only of average size, but generally somewhat compact. The head is strong; the being full and flat; and their bodily movements, by nature, not so rapid as with others. The parents still give themselves a patriarchal appearance in their houses. The women live in a submissiveness to the men, which indicates little more than their preference over the girls. The fourth (fifth) commandment is so strictly observed by the children, that their respect for the parents can serve as an example to other peoples. Among the Turks, the Armenians are also usually held in the highest esteem among all Christians. Their adherence to the customs of their forefathers has already been noted. They propagate them, in an admirable way, to their children, and their modest way of life makes this all the more possible. In their clothing they resemble the Turks most, except for the green colour and the turban. Instead of the latter they wear a small undercap, which just covers the head, and over that another, which is fairly high, and made of single skins, to which the hair is curled. Such a one is also used by the principal Greeks, and this is called Kalpak.

Up to the present they have not singularly applied themselves to learning. This is almost exclusively confined to the ecclesiastical; of whom only a moderate number devote themselves to study, so that one cannot, of course, expect such great things

30850 from them. And, as these hardly ever come outside the bosom of their nation, they seldom understand other languages than their own, and can therefore make almost no use of foreign aids at all. The books printed in their language in Holland and England they give precedence over all others, because they found those printed in Roman countries to be very falsified. At Constantinople and Smyrna they had small
30855 printing presses, but these were sent to the Bible printing press after Edschmiazin with more printing type bought in Europe, and other necessary things belonging to it. The abductions from their native country have caused the manuscripts to become unusually rare among them. The old Armenian is very different from what they now speak; the pronunciation sounds rough and hard; but the letters look elegant (*).
30860 They praise their language very much, because it expresses everything very well, especially the old Armenian. But all the Easterners are great braggarts in boasting of old things. In domestic customs the Armenians come unusually close to the Turks. They go to bed early, but rise early again. They do not eat at noon, but have a good breakfast early, at 8 o'clock, and have their main meal at 5 o'clock in the evening. Of chairs, tables, cupboards, etc. they know little. A sofa and many cupboards in the wall serve them for their necessities. The women keep themselves unusually hidden. Except for their closest friends, no one gets to see them. In the streets they are so covered that one sees only a little of the tip of their nose, and almost nothing of both eyes, so that then, like the similarly disguised Turks, they look
30870 like ghosts. Indeed, a bridegroom does not see his bride until the day of the engagement. Those who still live in Armenia have this additional arrangement, that no son of a man, not even a young man in the tenderest years, travels outside the country, unless he is betrothed to a son of a woman of his own age, and must be of older years. To perform the marriage, return to his native country; whereupon he then
30875 travels and returns, according to his calling. Superstition also prevails, in all respects, among the Armenians, but in matters of religion it is not so great, as among the Greeks and Romans. For the rest, one must account for their religion as something good, that he has much more love for man and Christianity towards other religions and their adherents, than he can promise himself of these. For the Protestants he has a true affection; and a Bishop at Smyrna, in the year 1762, openly prayed in church for them, which would also happen elsewhere often. As regards the Greeks they behave in a friendly manner. The Romans are a thorn in their side. For since much mischief is done to them by the Turks, and their missionaries draw away many members of their church, and the wealthy
30885 especially seek to gain all kinds of, especially temporary advantages; so they have constant disputes with them at the Porte; and the name, Pope, is almost as repugnant to them, as others are to the name, devil. From which one can judge again, what those Roman scholars are making the world believe, who present the Armenians, as well as almost all Eastern Christians, as being of one mind with them in faith. They are and
30890 remain all equally of one mind, in contradicting the main article of the Roman Church, that the Pope is the Governor of Christ, and the visible Supreme Head of the Church.

30895 (*) Their letters, especially in old Armenian, provide a kind of figurative language. Its shape is apparently borrowed from humans, animals, plants, etc.

FIFTH SECTION. Of other Christian denominations in Turkey.

§. XXII. Of the Roman Church.

30900 The Roman Church has also in the Turkish Empire fairly large congregations. To them belong all Europeans from Roman countries, and their descendants who remained in Turkey; not less a large number of families, who lived in provinces, formerly belonging to the Imperials or Venetians. Many Greeks have, likewise, now and then, exchanged their religion with the Roman. The Propaganda in Rome has the supreme oversight over them, and there is also in Constantinople an Archbishop, but who must be under French protection. To be observed, namely, that the Roman Churches and ecclesiastical arrangements, the monasteries and clergy are neither directly nor indirectly subject to the Porte, but by means of a European protection, principally of France, but also of other Powers, yes even of England and Holland, are only tolerated as foreigners. They have places where European Roman Catholics live,
30905 Churches or Chapels, also Monasteries; and the latter possess, on the islands of the Archipelago, considerable lands. There are monks of all kinds of Orders in the Levant who are accustomed to have their superiors at Constantinople. They are looked at askance by the Turks, and they gradually lose much of their cunningly acquired, or legitimate privileges, as they then usually lose in the disputes with the Eastern
30910 Christians before the Porte, and not very long ago in the Trial, arose about the Holy Sepulchre, they have come very short. For the rest they have the same trouble with

them, in the restoration of Churches destroyed by old age, or fire, or other accidents. The greater part of the Monks are at the same time Missionaries; but among the Turks they are not allowed to venture. The Jesuits have indeed, in the third volume of their Levant letters??, or memoirs of the Missions au Levant par la Compagnie de Jesus, published in Paris, given up on many conversions wrought by the Turks; but these are the most complete untruths that have ever been conceived. But for the other Christian denominations these missions are extremely disadvantageous. Partly they cause such very unfortunate schisms and divisions, which have a great influence on their religious and civil condition, of which the Syrian Christians have had sad experiences; partly they seek to make the most wealthy people averse to them, which the Armenians in particular have experienced; partly they cause them, and that often even by the European ambassadors and consuls of their religion in Turkey, great and expensive lawsuits with the Turks. It is not only oral proposals, but especially also temporary promises that are the reason by which the Eastern Christians are moved to convert to the Roman Catholics, but also the books printed in the vernacular languages, which are occasionally brought among the people. It is a pity that the Protestants have not tried the latter way, in order to open a wider door for the knowledge of the truth to godliness. Because the Roman Catholics, for the rest, live entirely in ecclesia prejfa??, or under pressure, among the Turks; so they are much more flexible towards the Lutherans and Reformed there, than they are otherwise accustomed to be in those countries, where they are the ruling church. They often have the sorrow to see their greatest enemies in those who were converted in Rome and in Italy, or in France, and educated there; and those in the East who have gone over to them for various reasons, when they cease, change their minds again, or adopt the Roman religion only on certain conditions.

§. XXIII. Of the Monophysite and Nestorian Church.

The Armenians are indeed a branch of the Monophysite church, because they have adopted the thesis of the same, concerning one nature in the Redemption, as has been previously noted, in their doctrine, although, because of many particular customs and sentiments, they nevertheless maintain no particular church community, but have their various church forms of worship and ecclesiastical persons. The Monophysites form a very popular denomination, which began in the ??th century under Eutyches, an abbot at Constantinople, and has spread into Syria, Egypt, and Abyssinia, and is divided into the Asiatic and African. The former bear the name Syrian after Syria, and after one of their principal teachers, Jacob Baradaeus, the name Jacobites; but which, outside Syria, also inhabit the countries on the Euphrates and Tygris, whose chief Patriarch is the Antiochian, although he has not his See at Antioch, a city now entirely destitute of its former prosperity, but transfers it now to Aleppo, now to another place or monastery. A second Patriarch on the Persian borders has the ecclesiastical oversight of the Churches there. All these Patriarchs bear the name after the Martyr Ignatius. The African Monophytes are the Copts, of whom § III has been treated.

The Nestorians form the opposite party to those mentioned above, and have seemed to assert not only two Natures, but also two Persons in Christ; for which reason they were also excluded from their church community by the old Christians. Their origin in religion they have from Nestorius, a Constantinopolitan Patriarch in the 5th century. They have, in the following times, made themselves exceedingly famous, because of the extension of the Christian religion, and have planted very considerable communities throughout the East, even in great Tartary and China. These have indeed perished in the latter countries; but in Mesopotamia, from which they are also called Chaldeans, and in the surrounding countries, and in Arabia, there is still a good number of them; even the St. Thomas Christians on the coasts of Mediæval belong to them. The Nestorians have the reputation, among all Eastern Christians, of having preserved the purity and simplicity of the first Church the most. By the Roman missionaries great commotions have arisen among them. The principal Patriarch of the true Nestorians is called Catholicus, and has his See at Mosul, or in the neighbourhood. For two centuries past he who is raised to this Dignity has been wont to take the name of Elias.

When the old controversies have been calmly judged, it has been found that the principal sentiments of the Nestorians and Monophytes, the sound of the words being set aside, do not differ much as regards the matter itself from the opinion of the other Christians. In an unfortunate way, the antiquity of the separation is a cause of the still continuing division, and the Mahometans chiefly prevent the union of the various Christian denominations to the utmost, by fostering among them, most carefully, all possible hostilities and tumults.

- 30985 §. XXIV. Of Western Christian denominations that arose after the Reformation. These have all, up to now, formed only small communities in Turkey, consisting of persons who, while they were there, stay for the sake of trade and commerce, or who, while they were married to Christian women of this country, have left children, brought up in their paternal religion. They enjoy their ecclesiastical protection
- 30990 only from the European ambassadors or consuls, and they are not regarded by the Porte as natives, but as foreigners. There are four Lutheran churches in Turkey, namely in Smyrna, Constantinople, Bukhareil and Bilipschi. The first was at first founded by private persons, and maintained by the Community, until the Royal House of Denmark and the Free City of
- 30995 Danzig took care of it. It is maintained, under the supervision of the Danish missionary college, according to a strict church order. The second, at Constantinople, is solely a matter for the Swedish Ambassador. In his Palace the divine service is held in a common hall, which serves as a passage to the apartments. The reports are untrue, that the Swedes had built a public Lutheran Church there. The
- 31000 Church at Bucharest in Wallachia is in bad circumstances, because the supporters of that Community were not wise enough with the money. The institution at Bilipschi has been well laid out. This place is on the Moldavian soil and ground, on the Niejier, opposite the Polish spot Salisch-Tschik; by which the Lutherans in the surrounding Provinces keep themselves.
- 31005 Reformed Churches are only in Constantinople, Smyrna and Aleppo. In the first two cities there are two, namely by the English and Dutch Nation. By the latter keep themselves the Genevans and Swiss who are in Turkey. In Aleppo there is only one English Chapel. The Remonstrants and Mennonites are accustomed, for the most part, to keep themselves
- 31010 by the Dutch Churches. It has pleased the Count of Zinzendorf, to dedicate his work, published in the year 1739, the good word of the Lord and, to the Hernhutsche Congregations, and among a multitude of them, also to give some in the Levant; but these are fictions, and no one there knows anything about them.
- 31015 SIXTH PART, Of the Turks.
§. XXV. Of Muhammad. 'The news concerning the Turks and the Mahometan religion to which they adhere, demands a preliminary treatise concerning Muhammad or Mahomet himself. A detailed
- 31020 biography of him, however, must not be expected here, because that would be contrary to the purpose of this work, and one can come to the right elsewhere. The Englishman Sale, in his preface to the Koran, (*) is in this respect, in the opinion of all intelligent men, the best teacher; but, whoever would take issue with
- 31025 Boulainvilliers, in his work, vie de Mahomet, hond. 1730. 8vo.; he would be just as deceived as he who would believe a novel. Herbelot was, by his Oriental Linguistics, and by the sufficient number of books, pertaining to these matters, able to deliver something genuine, and he gives us, in his Oriental Dictionary, (*) on the article, Muhammed and Ajat or his Wonders, and Hegrah's?? following report, which, as regards the main points, is literally this. "The commentators of the Koran, and other
- 31030 Mahometan Teachers, have extolled this supposed Prophet as highly as the Arians, Paidicians, and other Heretics have praised Jesus Christ, although they deny his Godhead: for they assert that he was created before all time, that the world was made for him alone, and that he is finally the only Mediator between God and men; not to speak of so great a part of the mysteries which they relate of him. The first thing which God created, they say, was light, in which they agree with the Holy Scripture; but they assert that this light, which they call Nur, was a Substance, out of which the Soul of Muhammad, and afterwards the souls of all other creatures, among whom those of the Patriarchs and Prophets had the preeminence, were produced. As to his earthly origin, the Arabia, among whom he was born, and who are the most accurate
- 31040 people in the investigation of genealogical records, say unanimously that he was a son of Abdallah, a nephew of Abdal-Mothleb, and a second cousin of Haschem. They let the genealogy of the latter go up to Adnan, and from him to Ishmael, Son of Abraham: but they confess, that one does not have the same certainty concerning it from Ishmael to Adnan, as from him to Mohammed". Although the year of his birth is subject
- 31045 to much doubt, and falls in the last half of the sixth century; one knows with perfect certainty, however, where he was born. "He was born in Mecca, of the Family of the Koraishites, which was considered one of the oldest and most famous of Arabia, and was distinguished above others by the fact that the preservation and supervision

of the Kaaba or Temple was entrusted to them. (*) To understand the Mahometan History and the numbers of several persons concerning the succession of Mohammed, it must be known, that Abdal-Mothleb, his grandfather, had 10 sons: Hareth, Gaïdak, Abuleheb, Abdalkabah, Dheran, Abbas, Hazmah, Zobeir, Abuthaleb, and Abdallah. This last was Mohammed's father. Of the rest, as well as his uncles, Abuleheb was his greatest and most implacable enemy. Abbas also was for some time his enemy, even making war against him; but, being taken prisoner, he was reconciled with him, and accepted his doctrine. Abuthaleb, the ninth Uncle of Muhammed, was the Father of Ali, Muhammed loved them both exceedingly, and chose the latter for his Son-in-law, because he gave him his only Daughter, Fatima, to wife".

Since the necessary of the Koran will occur in the following Paragraph; it seems not amiss to us to speak here of the Hegire. "This is the time, when Muhammed with his followers departed from Mecca, to escape the persecution of the Koranites, who were very powerful there, and could not tolerate that he abolished idolatry, and established his new Religion. This flight, which was not the first, but nevertheless the most remarkable, happened after Muhammad had for fourteen years set himself up as a Prophet and Messenger of God, made known the Koran, and preached his religion. It happened, according to the report of some, during the day, and in the company of a few persons, although more followed afterwards, who did not think themselves safe enough in Mecca. Muhammad fled to Jatreb; for so Medina was called, before his stay there, and arrived there at the end of the month RdbUal-aual, which is the third in the Arabian years, which are only lunar years, and therefore only of 354 days. In the meantime the Mohammedans begin the Hegire of the preceding month Muharram, which falls in the middle of Julius in the year 622 after the birth of Christ. This must be observed, as the commonest sentiment of the most famous chronologists, in order to determine the years of the Hegire, or of the Mahometan calendar".

"As to the Miracles of Muhammad, it is said that the Kordishites, who rejected his Doctrine, turned to him. We said: You tell us that when Moses struck a rock in the desert with his rod, fountains gushed out from it, and that Jesus, the Son of Mary, raised the dead; we believe it: do you also for that reason some such miracle; then we will believe that you are a Prophet and a Messenger of God; to teach us His law: pray to God that He will turn this mountain of Safa into gold; for if you obtain this from God, then every one of you will follow and be obedient. Then Muhammad began to pray to work this miracle; but the Angel Gabriel, who always helped him out of his embarrassment, came to his aid, and made him understand, that if men doubted the mission of God's Prophets, and demanded some miracle in proof thereof, he granted their request, but on this dreadful condition, that if after the miracle they continued in their unbelief, they should perish without mercy, as had happened in the time of the Prophets, Heber and Salah; when the nations to whom they had preached, and for whom they had wrought miracles, had been punished for their unbelief with the entire extermination of their persons, and the utter destruction of their country. Choose therefore, said Gabriel to Mohammed, one of these two, either to do this Miracle, with which so terrible a punishment is attached, or not to do it, until the Korahites, for their infidelity, shall have done penance, and shall have returned to God. Mohammed made no difficulty in choosing the latter, according to the great love for his countrymen, whom he did not wish to expose to such great danger; therefore the mountain of Safa remained, without being changed into gold. He has always been reproached, that he did not do Miracles, to prove his mission. In the Chapter of the Thunder, we find these words: the Infidels say, when he did a Miracle; then we could believe in him. They put it to him, you are but a fool, doing nothing but preaching to others. The commentators, to whom this passage gives trouble, pretend, that the Infidels had desired, that God should have given to Muhammad, like Moses, a rod, or like the Messiah, the power of raising the dead; but, according to their opinion, they endowed every Prophet with the gift of working miracles, in that sort of things which are most in esteem in the country in which he preaches; just as, therefore, magic was in use in Egypt in the time of Moses, but the healing of the sick in Judea in the time of the Messiah, so also the miracles of Moses and Jesus Christ were suited to the times of these Prophets. And, as the eloquence and purity of language were especially in esteem among the Arabs in the time of Muhammad, the Koran was his greatest miracle. For, said he, when he boasted of its beauty, who among you can produce a single chapter equal to it in beauty or purity? This is certain, that Muhammad, in order to make this miracle the greater, often spoke of it, and even increased his ignorance in many places".

"In the Chapter of the Koran, which bears the name of Aaraf, it is written, that those who shall follow this ignorant Prophet, shall find his name in the law and the Gospel, that is, in the Old and New Testament. And of this deceitful deception he

31115 makes use, to prove to the Jews and Christians the Divinity of his mission. To this
end he introduces, in the Chapter, Surat Saf, Jesus Christ thus speaking to the Jews:
Ye children of Israel, I am he whom God hath sent unto you, to confirm unto you all
that hath been revealed of me in the law of Moses, and to fulfil it, and to announce
31120 unto you another Messenger of God, who shall come after me, and shall be called
Achmeo (which is as much as Mohammed). But these and more such places are not in the
Holy Scripture".
Among Muhammad's remarkable deeds, which his followers give as Miracles, they
especially count the victories which he gained over his enemies; – and they endeavor
to attribute to him almost all that which the Prophets have said of the Messiah. They
31125 also assert that he, like Jesus, was preserved from original sin and evil lust by the
Angel Gabriel. But they confess that he had 21 wives, although the law permitted only
4. Of these he repudiated six, and five died before him. From the story of An Ben
Malek it appears that he boasted of 4 privileges above all other people, namely, of
surpassing them in courage, generosity, strength of fist, and power in the married
31130 state. As the Arabs speak ill of his customs; so they spare still less his religion,
which they consider to be a fraud, and give to its founder the surnames of a Sabi,
Zendik, and Medschiuschy, that is, of a man who concocts many religions, and
consequently has none at all. They describe him as a light-hearted man, and in the
promulgation of his law a fickle man, who afterwards destroyed the laws once
31135 established, as the establishment of the Ke??a, or the place to which one must turn
for prayer, because for that purpose he first prescribed the Temple at Jerusalem, but
afterwards that at Mecca. He forbids all compulsion for the acceptance of his
religion; but afterwards he commands to wage war with all unbelievers, permitting his
own not to make peace with them, but only to conclude a standstill of arms. In
31140 support of his doctrine he appeals, almost generally, to the Old and New Testaments;
in the meantime he annihilates both, on the pretext that both were falsified. He
almost contradicts himself in all the Histories, which he here or there quotes; –
and, though he broke the idols, he nevertheless retained all the Ceremonies which
were in use with the Pagans in the Temple at Mecca. The Mahometan Historians are not
31145 agreed as to the time of his death; but in this they agree, that he died of a slow-
working mistake, which was suggested to him by a woman, seduced thereto by his
Enemies. – Medina, whither he had betaken himself, in his flight from Mecca, became
the Seat of his Kingdom, and finally also his burial place. – He left no male heirs".

31150 (*) This work bears, in English, the following Title: "the Koran, commonly called the Alcoran
of Mohammed, translated into the English immediately from the original Arabie &c. by George
Sale". Land. This work has indeed been translated into High German by Theod. Aknold, and
printed in Lemgo ?? but the best High German translation, directly from Arabic, is so far that
of F. C. Boysen, Halle 1773-??.

31155 (*) This was published in Paris in the previous century, under the Title Bibliotheque
Oriëntale, fol.
(*) Muhammed, or according to the Turkish pronunciation Muua'mmid, as a Koraischit, did not
descend from a minor, but in a certain respect Princely Family, which also waged war with the
multitude of small Arab tribes, in which then, as now, this Nation was divided.

31160 §. XXVI. Of the Koran.
The Koran, which is wrongly called Alkoran, marked Alm. the Arabic word, the,
signifies, is that book, which Muhammad has placed in the hands of the world as a
Divine Revelation. Herbelot gives us, in his aforementioned Oriental Library, on the
31165 Article, Alkoran, the following well-founded report of it. "The Mohammedans have very
exalted thoughts of it. They say: it is taken from the great book of the divine
decrees, since the creation of the world detached from it, and preserved in one of
the seven heavens, which are under the firmament; from this, from verse to verse,
Gabriel, one of the principal orders of angels, delivered it to Muhammad. In the
31170 seventh chapter of the Koran he introduces God concerning this supposed mystery,
saying thus: we have caused it to descend from heaven on the night of the decree, and
we declare to you that this night is more worthy than a thousand full months, because
the angels descend in it to the earth, and among them also the Spirit of God by his
Will! Concerning this night the Mohammedans have various opinions, – but in them they
31175 are they agree that from that time Gabriel communicated the Koran, verse by verse,
within 23 years, to Muhammad, according to the need of the people and the
circumstances that occurred. They claim that the verse that he received is in the ??
Chapter. He received it in a cave on the mountain of Harah near Mecca. Gabriel
appeared to him, saying: God has sent me to you, to teach you, that he has made you a
31180 Prophet and Apostle to this people; take and read! Having said this, he held up the
following verse to him: Read in the name of your Lord and, who created all things,
made men from one blood, and united them in his parts. Muhammad confessed to the

Angel that he could not read, and saw no writing on the paper that was held up to him. Whereupon Gabriel seized him, plopped him three times on the ground, and enabled him to read. This has, among several Sects of the Mahometans, given rise to great disputes and persecutions, because one party considered the Koran to be created, but another considered it uncreated.

After Abubaker had collected the scattered leaves of the Koran here and there, and brought them into a volume, he called it Moschaf, that is, the book, as all books; which Ketab also indicates. When the Mahometan writers quote any passage from it, it is done with these words, written in large or red letters: God says it, without mentioning Chapter and Verse. There are principal editions of the Koran, of which two were made at Medina, one at Mecca, one at Kufa, one at Bassora, one in Syria, and lastly one, which is called the common. They differ only in the verses, — but not in the words and letters, because in all the editions 77639 words, and 323015 letters are found. — Abubekker entrusted this arranged Copy to Hafessah, daughter of Omar, and Widow of Muhammad. — Since Muhammad, in his Koran, wished to imitate the language of the Prophets; he thought to effect this, when he made use of a frequently broken style, which had no coherent propositions; and there is, in fact, almost no connection of verses with each other. — He borrows, often, passages from the Old and New Testaments, but which have always been changed, and bases all his authority and pronouncements on them. The commentators unanimously say, that the most eloquent passage of the entire Koran is in the Chapter H??d, where God, in order to put an end to the flood, speaks these words: Earth, swallow up your water! Heaven, scoop up what you have poured out! Immediately the water flowed away, God's command was fulfilled, the Ark descended upon the mountain, and the words were heard: Woe to the godless! The Arabic is, here, in fact, very emphatic. These same commentators also observe, that the most excellent passage of all in the entire Koran, at the end of the Chapter Aaraf, is contained in this verse: Forgive easily, do good to all, and do not contend with the ignorant. A certain writer reports that Muhammad asked for an explanation of this verse, sent to him by Gabriel from God, and he gave it to him in these words: seek not him that persecuteth thee; give him that robeth thee; forgive him that offendeth thee; for God willeth that thou shouldest be perfect, even as he is! It is easy to see that this is taken from the Bible. The most probable thing concerning the composition of the Koran is, that some Nestorians, Eutychians, etc., condemned by the Councils, and banished from the Greek territory, communicated to Muhammad unfaithful and misunderstood drafts of the Old and New Testaments, with which he thought to cover up his deceits. The Jews, who had then greatly expanded in Arabia, also contributed their part to this. One is all the more entitled to believe this, if the Koran is full of the sentiments and errors of the aforementioned Heretics and Jews". The Arabic word, Koran, signifies a reading, therefore a book, which must be read in particular; and this name is given to it, perhaps, for the same reason, as we call the Divine Revelation the Bible. Among the Mohammedans it is considered unlawful to let someone, who is not of their faith, come to it, because he would be desecrated thereby. Therefore it costs extraordinary difficulty, that a Christian can get a copy of it. If a Mohammedan sat on it, that would be considered a sin, and, if a Christian did it, a punishable crime. They also consider it, in the Arabic language, so sacred, that they do not approve of any translation of it into other languages, so much the more, if, in their opinion, it his exaltation, cannot even be translated into it. He is not only considered a Revelation necessary to salvation, but also the principal source of all useful human knowledge. For this reason Omar, the successor of Abubekker, burned the famous Library at Alexandria, because, possessing the Koran, one could do without all other books. In schools it is the principal textbook. In the chapels of mosques, where the bodies of important persons may be interred, it is customary, often, to place some copies fastened in chains, in which religious Mahometans read for one or more hours for the repose of their separated souls; yes, for that purpose certain readers are also kept and paid. As a proof of the whole Koran, the following remarkable passages, according to the true and excellent translation of Sale, will be recorded.

The First Chapter.

The Preface or Introduction, with the Title: Revealed at Mecca. (*)

"In the name of the most merciful God!

"Praise be to God, the Lord of all creatures, the most merciful, the King of the Day of Judgment! To Thee do we worship, and from Thee do we pray for help. Guide us on the right path, on the path of those on whom Thou hast been gracious; not of those against whom Thou art angry, nor of those who go astray!"

From the Second Chapter.

31250 "It is He (God) Who created for you everything that is on earth, and then cast His thoughts upon the creation of the Heavens, and formed them in 7 Heavens. He knows all things. When thy Lord said unto the angels, I will appoint a Governor in the earth, they said, Wilt thou appoint therein one who will do evil upon it, and shed blood? But we declare thy praise, and extol thee. God said, Verily I know that which ye know
31255 not. And He taught Adam the names of all things, and commanded them to the angels, and said, Show me the names of these things, if ye speak the truth. They said, Praise be to thee, we have no knowledge save that which thou teachest us; for thou art All-Knowing, All-Wise. Then God said, O Adam, tell them their names. And when he had told them their names, God said, Did I not tell thee that I know the secrets of the
31260 heavens and the earth, and know that which ye reveal, and that which ye conceal. And when We said to the angels: Worship Adam, they all worshipped him, except Ihlis; (*) who refused, and was puffed up with pride, and became one of the number of disbelievers. And We said: O Adam, dwell thou and thy wife in the Garden, and eat of its fruits in abundance wherever thou wilt. But come not near this tree, lest thou
31265 become among the number of transgressors. But Satan led them astray, to lose Paradise, and drove them out of the state of bliss in which they had been. So We said: Go, get you hence; let one of you be an enemy to the other, and it will be a dwelling place for you on earth, and a provision for a time. And Adam learned words of prayer from his Lord, and God turned to him; for he is easily reconciled, and full
31270 of mercy. We said: Go, take all of you from here. Then you will receive a precept from me, and all who will follow my precept, on such will come no fear, neither will they be tormented. But those who are unbelievers, and accuse our signs of falsehood, they will increase the company of hell fire, there it will remain forever. O ye children of Israel, remember my favor, wherewith I have favored you, and fulfill your covenant with me; then will I fulfill my covenant with you, and honor me, and believe
31275 the Revelation which I have sent down to you, which confirms those that you already have, and be not the first to disbelieve. So also do not exchange my signs for a small price, and fear me. Clothe not the truth with vanity. Neither hide the truth from your own conscience. Observe the times of prayer, and give alms commanded you in
31280 the law, and bow down with them that bow down. Would ye command men to do righteousness, and forget your own soul? Yet ye read the book of the law; understand ye not therefore? Pray for help with perseverance and prayers. This is indeed difficult, but not for the humble, who seriously consider that they find their Lord, and shall come unto him at last. O children of Israel, remember my grace wherewith I
31285 have favored you, and that I have chosen you above all people. Fear the day when no soul shall equal another: then no intercession will be accepted from them, nor will they receive any reward, nor will they be helped. Remember when We delivered you from Pharaoh's people, who oppressed you terribly, so that they killed your children of the males and left alive those of the females. Therein was a great trial from your
31290 Lord. And when We divided the sea for you and delivered you, and drowned Pharaoh's people because you were looking on. And when We spoke with Moses forty nights, then you took the calf for your God and did evil. Yet We pardoned you afterwards, that you might give thanks. And when We gave Moses the Book of the Law and taught him the difference between good and evil, that you might be governed. And when Moses said to
31295 his people: O my people! Surely you have sinned against yourselves in that you have taken the calf for your God. So turn to your Creator, and slay those of you who are guilty of such a sin. That will be better for you in the sight of your Creator. And he turned to you. For He is easy to appease, and full of mercy."

31300 From the Third Chapter.

"It was God who hears and knows. Remember the wife of Imran (*) who said: My Lord, I, have betrothed to thee, that which is in my body, that it may be consecrated to thy service. Therefore accept it of me. For thou art he that hearest and knowest. And when she was delivered thereof, she said: Lord, verily I have brought forth a girl,
31305 (and God wills well, what she brought forth,) and a boy is not as a girl. I have called her Mary, and commended her to thy protection, as well as that which shall come of her, against Satan, who was driven away with stones. Wherefore the Lord received her with a gracious consent, and caused a sticking out branch to grow from her. And Zacharias took care of the child. Whenever Zacharias went into her chamber,
31310 he always found her cared for, and said: O Mary, whence hast thou this? She answered: This is from God. For God provideth whomsoever he will, without measure. Then Zacharias called upon his Lord, saying, Lord, let me bring forth of thee a good Branch; for thou hearest prayer. And the angels called unto him, as he stood and prayed in the chamber, and said, Of a truth God hath promised thee a Son, called

31315 John, who shall bear record of the word which is of God; an honourable person, chaste, and one of the righteous prophets. He answered, Lord, how shall I have a son, seeing I am well advanced in years, and my wife is barren? The angel said, So doth God that which seemeth him good. Zacharias answered, Lord, give me a sign. The angel said, Thy sign shall be, that within three days thou shalt not speak with any man, 31320 save with signs. Remember your Lord often, and praise Him in the evening and in the morning. And when the angels said: O Mary, verily God has chosen you and purified you, and chosen you above all women in the world. O Mary, be religious to your Lord, and worship, and prostrate with those who prostrate themselves. This: is a hidden story. We reveal it to you, if indeed you were not present with them when they cast their rods to cast lots as to who should have the upbringing of Mary. Likewise, you were not with them when they fought among themselves. When the angels said: O Mary, 31325 verily God sends you good tidings that you will bear the Word, which proceeds from Himself. His name shall be Christ Jesus, the Son of Mary, worthy of worship in this world and in the world to come, and shall be one of those who approach the presence of God; and he shall speak to men in the cradle, and when he is grown up, and he shall be one of the Just. She answered: Lord, how shall I have a son, seeing I know not man? The angel said: God creates what he pleases. When he decrees a thing, he only says: She! then it is done. God shall teach him scripture and wisdom and the law and the gospel, and shall ordain him to be his apostle to the children of Israel; and 31335 he shall say: Surely I come to you with a sign from your Lord. For I could make of clay like the figure of a bird before your eyes. Then will I blow upon it, and by the permission of God it shall become a bird. And I will heal him that was blind from his birth; and the leprosy: and I will raise the dead by the permission of God: and I will foretell you what ye shall eat, and what ye shall lay up in store in your 31340 houses. Verily in this shall be a sign unto you, if ye believe. And I come to confirm the law which is revealed from me, and to grant you a just portion of that which was forbidden you; and I come unto you with a sign from your Lord. Therefore fear God, and obey me. Verily God is my Lord, your Lords. Therefore serve him. This is the right way. But when Jesus saw their unbelief, he said: Who will be my helpers before God? The apostles answered: We will be God's helpers. We believe in God, and bear Thou witness unto us, that we are true believers. O Lord, we believe in what Thou hast sent us down, and we have followed Thine Apostle. Write us therefore down with those that testify of him. And the Jews devised a plot against him, but God devised a plot against them, and God is the best discoverer of plots. When God said: O Jesus, 31350 verily I will cause thee to die, and will take thee unto myself, and will separate thee from among the unbelievers: and I will make them that follow thee rulers over the unbelievers until the day of resurrection: then shall ye return unto me; and I will not judge between you any thing concerning which ye differ. But I will punish the unbelievers with a severe ?? and there will be none to help them. But to those 31355 who believe and do what is right, He will give them their reward. For God does not love those who do evil. These signs and this wise exhortation we recite to you. Surely the likeness of Jesus in the sight of God is as the likeness of Adam. He created him from dust, and said to him, Be! and he was. This is the truth from the Lord. Therefore not one of those who doubt. And whoever wants to contend with you 31360 according to the knowledge given to you, say to such: Come, let us call together our sons and your sons, and our wives and your wives, and ourselves and you, then let us use curses and put the curse of God on those who lie. Verily this is a true History. And there is no god but God, and God is Omnipotent and Wise. When they return, God knows best the wrongdoers. Say: O you who have been given the Scripture! Come to a just decision between us and you, that we worship no one besides God, nor associate with him any creature; and that none of us take others as lords besides God. But if they return, say: Bear witness that we are true believers. O ye, to whom the scripture was given, why contend ye about Abraham, seeing the law and the gospel were not sent down till after his time? yet understand ye not? Behold, ye are they that 31370 contend about that which ye have no knowledge of. Why then contend ye about that which ye have no knowledge of? God knoweth, but ye know nothing. Abraham was neither a Jew, nor a Christian; but he was one of the true religion, who had surrendered himself unto God, and not of the number of idolaters. Surely the men that are next unto Abraham are they that follow him; and this Prophet, and they that believe in him. God is the protector of the believers."

From the Eighth Chapter.

"Surely the worst cattle in the sight of God are those who are hardened unbelievers, and will not believe. When you encounter in war those who enter into a covenant with you, and then, at every suitable opportunity, break their covenant, and do not fear 31380

God; then make them an example, and scatter also those who will come after them, that they may be warned. Or if you fear treachery from a people, then throw back their covenant with the same treatment. For God loves not the treacherous, and do not think that the unbelievers have escaped the vengeance of God. For they will not weaken the power of God. Therefore make such strong military preparations against them as is possible, with troops and horsemen, whereby you may terrify God's enemies and your enemies, as well as other unbelievers besides them, whom you do not know, but God knows very well. And whatever you spend in defense of God's service, that will all be repaid to you, and will not be taken ill of you in the least. And if they are inclined to peace, let them also find you inclined to it, and put your trust in God. For it is he who hears and understands. But if they seek to deceive you, then God will be your protection. It is he who has strengthened you with his help and with that of the believers, and has united their hearts. And if ye had devoted to it all the wealth that is in the world, yet ye could not have united their hearts. But God united them. For he is Mighty and Wise. O Prophet! God is your protection and your help, and such of the true believers as follow you. O Prophet, encourage the believers to war."

From the Thirty-third Chapter.

"O believers, when ye marry women who are believers, and afterwards put them away before ye have touched them, then no certain time is prescribed for you, which ye must fulfill concerning them after their divorce; but give them a present, and let them go voluntarily with an honourable discharge. O Prophet, We have granted to you your wives, to whom you have given their captivity, and the slaves whom your right hand possesses from the spoils which God has granted you; and the daughters of your nephews and the daughters of your nieces, both on your father's side and on your mother's side, who fled with you from Mecca, and every believing woman, if she surrenders herself to the Prophet himself; in case she desires to take the Prophet for a wife. This is a liberty specially granted to you above all other true believers. We know that We have revealed it to them for their wives and for their slaves whom their right hand possesses, so that it might not be explained to you as an evil thing if you make use of the liberty granted to you. For God is gracious and merciful. You may set aside such of your wives as may come to your bed, at your pleasure, and take with you those whom you like best, and those whom you have put away before, and it will be no mischief on your part. This will be easier, that they may be perfectly content and not grieved, but with what you shall give each one, they may be well contented: God knows all that is in your heart, and God is omniscient and merciful. It will not be at your liberty to take others for wives afterwards, nor to exchange any of your wives for them, though their beauty may please you: except the female slaves, whom your right hand shall possess: and God see all things. O true believer, do not enter into the Prophet's house, unless it were lawful for you to eat with him, without waiting for his convenient time: but, when you are invited, go in; and when you have eaten, go away again, and do not stay there to engage in familiar conversation; for this wearies the Prophet. He is ashamed to order you to depart. But God is not at all ashamed of the truth. And, if you want or desire to obtain anything from the Prophet's wife, then demand it from her behind a covering. This will be purer for your hearts and their hearts. So it is not fitting that you should displease the Apostle of God, or marry his wives after him for eternity; for that would be an abomination in the sight of Allah. Whether you spread a matter openly or conceal it, surely Allah knows all things. It will be no wrong for them, as for their fathers, or their sons, or their brothers, or their brothers' sons, or their sisters' sons, or their wives, or the slaves whom their right hand possesses, if they speak to them openly: and fear ye Allah, for Allah is Witness to all things."

From the Sixty-second Chapter, the collection, under the Title, revealed at Medina. "In the name of the most merciful God!

"All that is in heaven and in earth praise God, the King, the Holy, the Mighty, the Wise. It is He who raised up among the unlearned Arabians an Apostle from among them, to recite to them his signs, and to purify them, and to teach them the scripture and wisdom; since before, certainly, they were in open error; and others of them have not yet come to it by accepting the faith, although they will be converted at the time acceptable to God. For he is mighty and wise. This is God's free grace; he grants it to whom he will. And God is endowed with great bounty. The likeness of those who were burdened with keeping the law, and yet did not keep it, is like the likeness of a Donkey, laden with books. How contemptible is the equality of the people who accuse the signs of God of falsehood! And God does not rule the unjust people. Say: O ye who

follow the Jewish religion, when ye pretend to be friends of God above other men, ye desire death when ye speak the truth, but they will never desire it, because of what their hands have sent before them. And God is well aware of the unjust. Say: truly death, from whom you flee, will surely meet you enough: then you will be brought before him, who knows as well what is hidden as what is discovered, and he will show you what you have done."

(*) This chapter is used by the Mahometans, as the Christians use the Lord's Prayer.
 (*) The Angel, who by this, according to Mahomet's grounds, has become the Devil.
 (*) Is, according to the opinion of the Mahometans, the Father of the Virgin Mary.

§. XXVII. Of the various Sects among the Mahometans. (*)

It makes a great difference that the Mahometans should be unanimous in their faith: because no religion has more Sects than they count among themselves, Mahomet himself wanted to predict that in his doctrine 70 Sects would arise; but the Turks themselves confess that there were more, and they do not consider this a disgrace either. Party-taking already took hold in his time, but it increased and enlarged in his successors. The greatest schism is made by the Sunnites and the Scyites. The Sunnites have their name from the Arabic word, Sunnah or Sunnet, which means the second or oral law, which was not written down by the Legislator, but derived solely from his reasons and actions, and preserved by the tradition of credible persons. This Sunnah is obligatory for the greater part of the Mohammedans, and serves them, as the Jews the Mishna, and the Romans the Traditions?? traditions, as a rule of faith and life. The Turks, Tartars, Arabs and Africans generally accept it. But they are by no means entirely agreed in religion, and the Tartars, for example, are considered heretics by the Turks. (*)

The Schiytes have their name from the Arabic word Schiah or Eschya't, which generally denotes a group of people united together, or a particular religious party. The orthodox Mohammedans who call their faith Sunnah, give the name Schiah to that party who are followers of Ali, and have many special customs and sentiments. A Shiite is therefore the opposite party to the Sunnit, and the principal difference between the two consists in the fact that the former believes and professes that the Supreme Imamat, that is, all spiritual and temporal power over the Mohammedans, according to the divine right, belongs to Ali and his descendants. The Persians and partly also the Mughals are Shiites, who are again divided into various Sects. All these Sects are very hostile to each other. From this a great many persecutions have arisen, and the wars have been quite bloody. But all agree in this, that they consider Muhammad to be God's last Prophet, whom every one, if he wishes to be saved, must follow, and that they consider his Koran to be the obligatory Revelation of God. They covet the name of Mussulmen, that is, Orthodox. When Christians therefore give them this name, they either do not know what it means, or they declare themselves by it to be Irreligious or Unbelievers.

Many Mohammedans, especially in Arabia, and of a more practical than contemplative kind. But in the latter case they have reason to be very on their guard, and to keep quiet.

(*) Concerning these Sects the attached lists give the clearest instruction.

(*) The Tartars, especially the Kasan, Astrakhan, Nogai, and Circasian, are not considered by the Turks to be strict observers of the law. But the Tartars in the Crimea, as being the most civilized, are considered as orthodox as the Turks themselves. In general, in Turkey it is sufficient for Orthodoxy to be achieved when only the sovereign and the lawyers nourish orthodox principles, because the whole is judged and estimated by them.

§. XXVIII. The principal contents of the Mohammedan religion.

Many are accustomed to speak of the Turkish religion; but this is just as wrong as if one wanted to speak of the German or French religion. One should therefore really say the Mohammedan religion, which the Turks profess; namely as Sunnites, which expression has been explained in the preceding paragraph. One might well think that there could be no sects in Mohammedanism, considering that the disputes about the God who is very strictly forbidden them; but, according to the preceding paragraph, there are nevertheless more of them than in other religions. This gives rise, meanwhile, among Mohammedans of a certain sect, to a very special kind of conversation in companies about matters of religion. Instead of others having heated discussions about the latter, because of the different opinions, and the reasons for and against them being brought forward; it is much more calmly done among the Mohammedans about it. Even if someone has proposed the opinions that are traceless, yet no one contradicts him, but one person nods his approval with a nod - another immediately expresses his astonishment; a third with a silence his indifference: possibly the

31515 exact opposite will come to light shortly afterwards, and his proposal will have to
 expect the same behaviour from all those present. In Turkey no division in the
 religions once adopted is tolerated, because the government fears danger to the State
 by it. For that reason also no synods and religious discussions are permitted among
 31520 the Mohammedans; but they prefer to leave everyone in ignorance, so as not to see
 themselves divided in their opinions. This being supposed, their doctrinal works must
 now be considered more closely.
 The sources of their religious knowledge deserve the first place. Because in
 Muhammad's time, not only among the Jews, but also among the Christians, a great
 multitude of apocryphal books was found; thus he has attributed a great number of
 31525 Divine Revelations to these and no Holy Men, such as Adam, Seth, Enoch, Abraham, etc.
 The Old and New Testaments are especially praised, (*) and some parts of them,
 especially David's Psalms and the Gospels, are also still read with reverence by the
 Mohammedans. But it is pretended that the Bible was falsified by the Jews and
 Christians, and that instead of it the Koran was made known by Muhammad, as the seal
 31530 of all Divine Revelations; that one must adhere to it alone, and thereby dispense
 with all the rest. From the Koran, therefore, and the accepted traditions, of
 Muhammad's first helpers and followers, for example Abubekker, Omar, Othman, Aly,
 etc., the Mohammedan religion must be learned. But how uncertain are these two
 sources? The confusion, in which a Chaos of divine, civil and historical things is
 31535 presented in the Koran; the broken and bloated style, in which the matters are
 presented, do not at all allow, to make a certain meaning, which is laid in the
 words, or 'derived from them, but only to guess and guess. The Traditions or
 traditions are covered with still more darkness. Some blunt Free-spirits, but who
 nevertheless have heard of Turks and Mohammedans, have been of the opinion, that in
 31540 the Christian religion we have very many articles offaith, and on the other hand in
 the Mohammedan religion only a few, and this because the latter prescribe nothing but
 this short confession: I believe that there is no God besides God, and that Mohammed
 is his Prophet. One must confess, if this is taken according to the words, that it is
 short enough; but an equally short one can make of the Christian religion. But if one
 31545 takes it, as it must be taken justly, according to the meaning and opinion; then this
 confession becomes so verbose, that one finds no end to it: for to prove that
 Muhammad is a Prophet of God, and to deduce from an accepted truth of this eternally
 unprovable proposition the system of religion, which would naturally follow from it,
 leads to infinite verbosity. – The Mohammedans are strict defenders of the Unity of
 31550 God's Being, and this is laid down in the preliminary formula of the confession,
 which is proclaimed from the Mosques, to indicate the hour of prayer. The single
 word, God, is so venerable to them, that they lay their hand on their foreheads, and
 they can move other Denominations not to profane God's name. In this they go so far,
 that they do not let any written paper be laid on the ground, or used for common
 31555 things, for fear that the word, God, might stand upon it, but keep it, or put it in
 chinks and crevices, that it may not be trampled underfoot. No greater enemies of the
 religion of healing are found than they, and therefore they regard those Christians
 who worship images as no better than heathens. Of God's attributes they have very
 exalted ideas, but more of the so-called natural, than moral. Thus they think of
 31560 omnipotence, for example, much better and more exalted, than of God's holiness, will,
 justice and goodness. They fiercely oppose the mystery of the Holy Trinity, because
 they consider it to be polytheism, because they lack a faithful instruction
 concerning it. They do not have the same thoughts concerning the Person of Jesus
 Christ. Many place Muhammad above him only because he was God's last Prophet in their
 31565 judgment, and therefore had to be heard. The Koran could give no other account of
 him, than that which corresponded with the misgivings of the then unorthodox.
 Muhammad appeals to him, as to the one who had done miracles before him, and for
 whose sake the world was obliged to obey him, because he had testified of him. Jesus
 Christ is even called the Spirit of God; an expression which has remained
 31570 unanswerable to Mohammedans, when this conclusion has been drawn from it against
 them: whoever is the Spirit of God; he must belong to God, or be of one essence with
 Him, consequently also Jesus Christ. They therefore do not honor in him the Sacrifice
 of mankind. Of the Saints they have such notions, which indicate that they regard
 them as a sort of intercessors; for they make pilgrimages to their graves, pray over
 31575 the last, etc.
 The creation of the world, as the Bible relates it, and the arrangement of the
 heavenly and worldly bodies, they have, by childish and ridiculous fables, deformed.
 Just as God's decrees, in their presentation, are a mixture of great and wallis??
 sheep absurdities; so the Doctrine of God's Providence will not differ much from the
 31580 blind fate of the Pagans with them. They call it Kismet. And, when this word goes out

of their mouths; then it is as much as if a Pagan Poet speaks of the Parcae or Fates. With them, by this, human freedom is almost destroyed, and they think, that, just as, without their seeking, the destined happiness must come to them, they also, with all prudence, could not escape the misfortune that befell them.

31585 - Of the Angels they have, besides the but very falsified, biblical reports, a multitude of fictions, which are better suited to the ipinkarhers??. than this work. That they think, that God has given many Revelations at various times, has been noted beforehand. They imagine, that this happens because God often changes His Will, and by new Revelations clarifies the old ones. Therefore we should not be surprised, that
31590 the number of Prophets among them exceeds a hundred thousand, even though they differ among themselves concerning the determination of them. Concerning their Morals, many more cases will occur. It is not presented to them in any connection, but only in scattered proverbs. A good part of it is borrowed from the precepts of Holy
31595 Scripture, especially Jesus' speeches, from which they derive even more Miracles than are in the Bible. These are good; but the rest, which Mohammed has added, betrays its fanatical and deceitful inventor. And what can one expect from a Morals which does not recommend to man a complete conversion, instruct him about it, and impart the necessary powers to it, but leaves it to rest solely and exclusively with proposals for an outward change. The future state after this Life is not unknown to them,
31600 though with much superstition. They believe in a resurrection of the dead; a judgment on the world, whose permanence the Koran fixes at very many years, to wit, up to a thousand and fifty thousand, and therefore contradicts itself in this respect; a recompense according to the various works; the refreshment of the Righteous in Paradise, which however, according to the description in the Koran, is placed almost
31605 in the enjoyment of carnal pleasures, and after a previous atonement for the sins will take place in Hell; and finally they believe the hellish punishments of the ungodly.

Reland, who has made a plan of the Mohammedan religion, especially after the system of the Sunnites, is accused by the Scholars, of having presented it on the best side, by the observance of hard places, and by a most possible flexible explanation of the indubitable statements of the Koran. This should not seem strange to anyone who knows the nature of man. In what one wants to praise and defend, appearances are never
31610 lacking. One then presents persons and things, not as they really are, but as they should be according to our ideas. In this, one part ends in improper exaltation, and another in contempt; and thus, often, the truth is diminished through no fault of its own, and untruth is raised without reason. This can easily be transferred to Reland. Just as, according to Bossuet, the Roman religion is not as he arranges him, but as he must be regarded by others; so it is with Reland, with respect to the Mohammedan religion.

31620 Besides the previously mentioned articles of faith, there is a multitude of religious observances, which are just as necessary, as none, which one can consider as the practical?? part thereof, and which will be booked next.

31625 (*) As to the respect, which many Mohammedans have for the Bible; concerning this, a special example of an Arabic language master from Damascus comes to mind. He read the New Testament as attentively, as if by a Christian, and showed a kind of reverence at the name of Jesus, almost always.

§. XXIX. Religious customs of the Mohammedans.

31630 One will be able to perceive, with a little knowledge, that all false religions build the salvation of their adherents on the holiness of works, or promise them the same, if they only experience the external religious duties in a certain measure. This takes place among the Mohammedans in the highest degree. A multitude of religious works commanded in the Old Testament, but mostly arbitrary, will pave the way for
31635 them to Paradise.

Circumcision is considered by them as the distinguishing mark, by which the believers are incorporated into Mohammedanism. It is not charged in the Koran; but is nevertheless strictly observed in imitation of Muhammad, who is said to have been circumcised. With boys it is usually performed from the seventh year onwards, and in
31640 case of some hindrances up to the fifteenth year; but with apostates it is performed after the apostasy. The place as well as the time, as well as the person who performs it, is left to the discretion of the parents or guardians. The circumcision of Jews is considered lawful; the apostates are not circumcised again, but are only obliged to recite the short Mohammedan creed under the upraised index finger. It is performed
31645 otherwise with great solemnity, especially with children of important parents, who are previously led around the towns or villages on horseback, in costly finery; and it is considered a good work, when a rich father has the sons of poor parents

circumcised at the same time, who are also among the stately retinue of his son. It is performed in the houses. At the circumcision the first names are accustomed to have music played, so that the children are encouraged, and their cries are not heard by those present. The latter are received with dignity; also some cattle are killed, as victims, while the name Allah (God) is called out, and the meat thereof, with recommendation of intercession, is distributed among the poor. The name is not given to the children at the circumcision, which extends beyond that only to the sons, but from the father, after birth. Prayer is considered by them to be a necessary duty. According to the Koran it must be done three times a day, shortly before the rising of the sun, about 2 hours before the setting of the sun, and as much time afterwards. The Mohammedans are invited to this, instead of bells, by the priests, who from the towers of the mosques, or, if they have none, next to them, from an elevated place, according to the 4 points of the sky, cry out: God is great / There is no God but God, and Muhammad is his Prophet! This being proclaimed twice, it is added: come ye people to the place of quarrel and truth?? come to the place of sanctuary of salvation. This sign for public prayer is called Efany and is given eight times on Friday, but on the other days five times. On Friday it is done for the solemn worship, two hours before noon. To pray three times a day God would have charged Muhammad; but to do it five times he commanded, as a pretended Prophet of God. And it will not easily be found a Mohammedan who will not pray five times, to wit, besides at the times aforesaid, also at noon, and in the first quarter of the night. Now he who lives in places, goes to the Mosques; he who is in the field, seeks out a green place; and he who rides on horses, asses, or camels, gets down, to prepare himself for prayer. After this, before the prayer, follows a purification and washing with water, to cleanse oneself from sins, which the Turks call Abdefi; or, if there is no water at hand, the rubbing of the forehead and hands with dust. To wit, in ordinary faults it is sufficient with them to wash the feet, the arms up to the elbows, the neck, the face up to behind the ears, the eyes, the mouth and the private parts; but in serious crimes the whole body must be washed. For this reason the sanctity of works has installed fountains and water-conduits on the highways, wherever possible, so that travellers can also make use of them for their prayers. It is indeed worthy of note to see a multitude of travellers and workers in the fields in their devotion at the time of such a prayer. The face must be directed towards the Temple of Mecca while praying; for, although Muhammad, first of all, destroyed the direction of the face towards a certain region, he nevertheless changed, in order to gain the ??, he their superstitious esteem for the Temple, of thoughts. The positions of the body change very often during prayer. At first the hands are raised to Heaven, and then they let them fall, holding them before the lower abdomen, in that form as slaves stand before their Lords. Then the body is bent forward, and the hands are placed on the knees; but, after that then one straightens up again, and then has knelt on the ground, the praying person sits on his legs stretched out behind him, and finally he throws himself down so long that even his head touches the ground. Putting aside these gestures, which they judge to be important, they have a rule of prayer, namely that one should beware of strange thoughts, and if they have disturbed someone in the devotion, the prayer should begin again from the beginning; a rule which the Christians also had to follow. Besides, they also shame them in the boldness with which they, in these mostly very humble bodily postures, pray in all places, and in the presence of all kinds of people, without reserve, since we often falsely shame ourselves because of prayer, and especially more appropriate gestures with it. But one knows, because of the innate corruption, how to abuse the good in all religions. If one of them is in company and negotiations that he does not like; then he pretends to prayer, and breaks off, going away, as he thinks fit. The prayer, if it is not done in the mosques, is very short, and lasts only a few minutes. In public worship the Mohammedans tolerate no music, for the same reason, which they pretend, why they suffer no bells on the towers of the mosques. They are of the opinion that God should be honored only with human voices. In this respect there is only one exception among the monks, who are called Draajers. On working days it consists only in the previously mentioned prayer exercise, which in the mosques therefore lasts longer, because a chapter from the Koran is also read out; but in the time of a quarter of an hour, also in ?? or 12 minutes everything is finished. Friday is, in fact, their Holy day, and when examining the reason why Muhammad chose it, besides that that day was already suitable for the religious meetings of the Arabs, it is the most important, because he wanted to distinguish his religion, by that, from the Christians and Jews; although the Mohammedans maintain that this happened because Muhammad had to flee from Mecca to Medina on such a day. Then the service lasts three quarters of an hour. Besides the prayers and the reading of passages from

the Koran, sermons are also preached in larger places, in which, instead of arranging
 31715 the proposals morally and emphatically, they are usually about worldly affairs,
 political events, bad weather, wars, etc., and with such imprudent expressions that
 simple minds were more inclined to dissolute subjects, and incited to them, than
 deterred and restrained from them; unless a fanatic or spirit-driver, such as have
 31720 always been and still are in the warm countries, would advocate an excessive and
 extravagant morality concerning the sanctity of absolute poverty, a fanatical
 introspection in God, the usefulness of alms, pilgrimages, laying of ashes and
 renunciation of human reason, etc. The Christians and Jews are forbidden, under
 penalty of death or under the risk of being forced to convert to Mohammedanism, to be
 present there. The female sex may also not appear there at the same time as the male.
 31725 Otherwise they are very strict about this, and the Emperor himself never misses a
 Friday to go openly to this or that Mosque. Apart from this longer religious
 exercise, the Friday is almost equal to the working days. The First Names employ it
 in visits, walks, and other amusements: a reproach which is often made against
 Christians for observing Sunday! the Merchant goes to his trade, and the common man
 31730 to his handicraft. The traveller by water and land, if possible, postpones his
 journey till Friday, and sets out on it when he comes out of the Mosque. (*) Besides,
 there are extraordinary services on their festivals and fast-days. Fasting is, with
 the Mohammedans, likewise, a very obligatory article of faith. There are fixed and
 voluntary Fasts. Of the first kind, that which falls in the month of Ramasan is the
 31735 most important. This does not always fall in the same season, but he shifts the
 shorter years of the Turks, annually, eleven days, so that Ramasan, within 33 years,
 falls in all seasons. Concerning this Fast it is strange: for during the day one may
 not eat anything dry or wet; but, as soon as the stars become visible in the sky,
 until the time that they disappear, everyone makes up for his loss in eating and
 31740 drinking, without making a distinction in the kinds of food. Then the night is only
 changed into day, and the day into night. The walk above the Minnarets is then
 lighted with a certain kind of lanterns, to indicate that it is the permitted time
 for the meal, which they do in the Mosques after the prayer. The travelers and the
 sick are well aware of it excepted, but for that they must, afterwards, fast at
 31745 another time. If this Fast falls in the hot months with long days; then it is,
 especially for the laborers, very troublesome. For the rest, the violation of this
 Fast can also be made up for by feeding a poor person. If it ends at the setting of
 the sun on the last day; then the revelries are incredible. – On the day after
 Ramasan the so-called Beyram, or the Feast of Sacrifice, begins. On this feast the
 31750 Radja, or such subjects, who are not of the Mohammedan religion, must give presents
 to the principal Turks, with whom they have intercourse, as also the Europeans to the
 Grand of the Porte, as well as to the Pachas and Kadhys in the place where they live
 and trade. The Turks are accustomed, about that time, to arrange themselves and their
 house anew, and the chiefs among them to send presents to the lesser ones. This
 31755 Beyram, to distinguish it from a second Beyram, or Kurban-beyram, which falls 70 days
 later, when the Pilgrims arrive at Mecca, is called by many the great (Bujuck), just
 as this is called the small (Kiutschuck). This is said to be a memorial of Ishmael's
 sacrifice by Abraham. The lambs killed on the last are, usually, distributed among
 the Poor, so that they may pray for the Rich. The beginning of the Barnajan and
 31760 Beyram must be reckoned from the first day of the new moon. This reckoning is not
 done according to an Almanac, but according to the Moon seen by persons expressly
 appointed for that purpose. For this reason the places are divided into four,
 especially when they lie deep in the country, or the air is overcast. The large
 places give notice of their discoveries, and the firing of guns and cannons gives the
 31765 surrounding regions notice of the invaded Beyram, which, as mentioned above, is
 called the great Beyram, in distinction from a second Beyram. On such feasts the
 people are very wild and exuberant; and the Christians and Jews usually keep
 themselves, as much as possible, at home, in order not to incur any inconvenience.
 The great Beyram is celebrated for three, but the small one only for two days.
 31770 The distribution of alms is, in the Koran, not only very seriously recommended, but
 every one is also urged to be willing to do so, under great promises. The Mohammedans
 therefore consider themselves obliged to give necessary, and also voluntary alms. But
 how far one should go in this, according to each one's circumstances, they do not
 agree. Some set the tenth, others the twentieth, still others even the half part of
 31775 the income. The first seems to be the most natural. But there is also a reduction;
 (*) for, because the subjects of the Great Lord must bring the tithes to him, the
 greater part already considers this as alms. In the meantime, however, many
 distribute something considerable; and this extends not only to men, but also to
 animals, especially to dogs, of which there is an unusually large number in the

31780 cities and villages, and to which one throws bread and meat. Yes, the animals often have more to expect than the people, especially the Christians. For the Turks are not infrequently of the opinion, that, because God has given the latter reason, but has refused it to the former, they in a certain respect deserve less compassion, because they have not used it rightly, and therefore, through their own fault, suffer want.

31785 There is also no lack of people who buy a multitude of captured birds, then let them fly again, and thus grant them freedom. To treat animals harshly, or to torture them, when they have not deserved it, is considered the greatest cruelty, nay, a formal godlessness. Most of them, meanwhile, spend their alms on more lasting causes. They spend much on Mosques and schools, on the construction of fountains for travellers, on the improvement or making of paved roads and bridges, as well as water pipes, on the building of Caravanseras or buildings on the highways, especially in regions where there are no towns or villages, so that the travellers, under the roof, may be safe from storms and cold. The Mohammedans highly value such public good works, which tend to the best of the Common Good. But ambition and a work sanctity have the

31790 greatest share in it, which is why the name of the Founder, where it could happen, is carved somewhere in a stone.

Concerning the Pilgrimages, the necessary will occur in the following Paragraph. But here some mention must be made of them, because they are imposed on the Mohammedans as an essential duty of religion. Several outward things which are forbidden are also

31800 religious with them. Mohammed had indeed, at first, permitted the use of wine; but afterwards he forbade it with all games. But his followers know how to avoid both an. Many, in fact, do not drink wine, but use drinks that are much stronger. And if anyone drinks wine; he is accustomed, however, to abstain from it at least in Ramasan. They must also abstain from that which has been strangled, from blood, and from that which has been killed by an unfortunate accident, as well as from pigs' meat, etc.; all which, as well as many other such things, Mohammed has borrowed from the Levitical law; but they do not take this so strictly, but say without hesitation, to the pure all things are pure. Usury is indeed strictly forbidden, and, if there are complaints before the court for debts, no interest is allowed: but, nevertheless, nowhere is there more usury than in the Levant. One accepts from 10 to 25 per cent interest, but also notes this in the debt notes, so as not to fall short for the courts. So that he who, for example, accepts 100 piasters, must sign for it a bond of 110 to 125 piasters, according to the extent that one has agreed on the interest.

31805 Marriage takes place with many ceremonies, and is there a ceremony that affects not only the Church, but also the Government. The method concerning this in Turkey is actually this. After the proposal for the bride has been made, and her mortuary has been determined, the freedom to marry is requested from the Kadhy (Judge). The Bridegroom and Bride then usually send Proxies to the Imam (Chief of the Priests), who asks the one on the Bridegroom's side: whether he is prepared to give such a dowry? and the one on the Bride's side: whether he is satisfied with it? This being answered in the affirmative, the Bridegroom and Bride appear before him; he places their hands together, the morning's dowry is paid, and the treaty is concluded with a prayer from the Koran. The Bridegroom can then take his Bride to himself at his pleasure. — Poor men often make do with one wife. The Koran allows those who can support them four. Wives can each take as many as he likes. Not only can he repudiate this at any time, but a second divorce of the woman against her will is also

31810 permitted, but for the third time it is not granted otherwise than with her consent. But if a man takes back the divorced woman, and she has not been married to another since the divorce, then the shameful law is this, that she must first be slept with by another. This is disguised with the pretext, that thereby the capriciousness of men may be kept in check, and that a shame may be done to those who abuse the freedom of divorce. But in order to lessen the shame, which the man would undergo, who marries a divorced woman again, he first brings her before the Judge, to conclude the marriage contract anew. Then he asks a good friend, who in the presence of the man

31815 lies down with this woman on the bed, as if it were by sleeping together, and therewith she is accepted again. — Forbidden degrees in marriage take place among the Mohammedans, almost in the same way, as among the Jews. For the rest, women can also insist on divorce.

If a Mohammedan sick person is in mortal danger, then an Imam, if one can get one, reads certain prayers. As soon as he has died, the head is laid to the side of Mecca. Then other pious people come with the Imam, wash the corpse with warm water and soap, and kick it on the abdomen, in order to squeeze out the filth everywhere. Finally, they plug it, the ears, the nose, the mouth, and the back with tree wool.

31820 Burials, finally, form a special religious ceremony. The dead has hardly become cold, or he is buried. The body is wrapped in a linen cloth, and thus laid on a bier. The

31825

31830

31835

31840

31845

coffin is spared in many places, and, if one is used at all, then it consists of common planks joined together. It is carried away very quickly, and those who follow it, run after it without order. People, who meet it on the way, continue to lay hands on the bier, to show the dead the last honor. Even travelers and horsemen dismount from their horses, at least to touch the bier. This is, with persons who have died of the plague, a dangerous opportunity to spread the Evil in all houses. The dead are carried to the grave with their heads forward. In the grave it is laid towards the side of Mecca, and the body is surrounded with small pieces of planks, if no coffin has been used, and covered with earth on top. Prayers are said on the graves at various times by the survivors of both deceased. They sprinkle them with various flowers. It is also customary for names and rich people not only to place standing stones with inscriptions on them, but also very often to plant cypresses. This may well be derived from the ancient custom of the Fathers and Israelites to bury the dead, as an indication of the resurrection they expected, under trees. Genes: XXXV 8. i Sam: XXXI 13. In these cemeteries one also finds, not infrequently, pieces and fragments of old columns and monuments of the finest marble, and other fine stones. At the top of it a turban is carved. And, because its various forms indicate the state or the way of life of the deceased; thus one knows of what rank he was. Under the r?? one usually finds a golden inscription on a blue field. The tombstones are always erected upright by the Turks, so that God's name is not, in their opinion, trampled underfoot in this respect; and on that account they blame our lying graves. By persons of rank, at the four corners of the circumference of a grave, a wall of hewn or baked stones, also marble, is customary, to be erected to the height of an ell, and the hollow between the two is left empty, or is to be raised with square and other large stones, but without an inscription, like that on the pillar. The common man has only one oblong stone at the head, and one similar at the foot. — In many places, from the multitude of gravestones, one can see that there must have been large cities there before. (*) Because one never buries another on the spot where someone has already been buried; but, when a place is filled with corpses, it is then left unused, and new places are sought; Thus, in populous places, the surrounding fields become mere burial grounds: and if Turkey were as populated as, for example, Holland; then it would already have become a cemetery, or would soon become such a one.

(*) Although the Levantines are indifferent about the other days of the week; they are not so about Tuesday. On such a day, as an unfortunate one in their opinion, neither the Turk nor the Greek etc. will set out on a journey. If there is an urgent need; then one breaks off in the last hours of Monday, and then, on Tuesday, continues the journey without difficulty.

(*) Many think, in their opinion, to satisfy the ordered distribution of alms, or to give a certain portion of one's to the poor, also by this means. Someone, for example, must give a hundred out of 1000 piastres. Now he may have such a high, but uncertain, debt, so he puts some ready money with it, calls the first one for the best poor, and asks him; whether he, what he wanted to give him, would accept for a thousand, or so and so much? He, who must naturally fear, that if he refuses, he will receive nothing, answers: Kabul, I accept it. In this or a similar way they feed and clothe the poor, setting, for example, worn-out things and rags at a price, as they think fit.

(*) Accounting for the prayers, gestures, and other customs belonging to the public Worship or Religion of the Turks, one can read about them with profit: Tractatus Alberti Bobonii &c. de Turcarum Liturgia, peregrinatione Meccana, circumcissione, aegrotorum visitatione &fr. ex editiane Th: ??yde. ?? 1690.

§. XXX. The Holy Places.

Among the Holy Places the Mosques deserve the first place. In Turkish they bear the name of Mesdschjid. They are with the Turks that which with us the churches are. In Turkey they may not be built without the express permission of the Emperors. Above the common Mosques the Dfschamis have the precedence, because in these, but not in none, the solemn Friday prayers can be said, and public schools (Madrass) and hospitals (Imarets) are usually built there. The principal ones, which are also called Imperial Mosques, because they were founded by the Sultans, after a victory over the infidels, are usually only at such places where they had their seat, namely at Brussa, Adrianople and Constantinople. They are like our churches, from the outside, by their construction, distinguished from other buildings. The most important ones are provided with Menarets (Towers), vaulted in the manner of a Dome, and the roofs covered with lead. The Menarets are round towers, and only of such thickness that a spiral staircase can go up from within. Below the roof one finds at the Mosques a walkway or gallery, and at the Dschamis two or three, from which the Imam, at fixed times, calls the people together to prayer. These walks or galleries below the roof of the Menarets (not of the Mosques) are, in the fasting month, at

night, hung with lamps or lanterns, which in cities, where there are many Mosques, makes for a pleasant sight. In order that these Menarets may not be easily overthrown by earthquakes, the stones are united with very many iron supports. The best old churches of the Christians have been changed into mosques, after the images, crucifixes, altars, and other signs of the Christian religion have been removed from them. On the inside, according to their size, they are without or with pillars. The Turks are very careful, wherever they have mosques or prayer-places (Namas-Kjah), to take the best precautions, so that one may know where one must turn one's face during prayer or worship. For this reason there is in it, towards the region where Mecca lies, a table or case in the wall, in which perhaps copies of the Koran are laid, with the characteristic that this is the region of the sky towards which the praying must turn their eyes, which is called Kebla or the sight. In front of this Kebla is a raised place, to which one climbs by means of some steps, and on which prayers and sermons are said, which one can therefore compare with our pulpits. For the rest one finds no benches or chairs in it, but the ground is only covered with mats, made of thin reeds, or with carpets, so that the praying does not find it so difficult to kneel down on the ground. The principal ones are, on the inside, artfully hung with many precious lamps, and between these usually also ostrich-eyes or all kinds of rarities are placed. Otherwise the Mosques enjoy great liberties and revenues, which no Government may encroach upon. This causes an extraordinary disorder in the State; for persons and Families of all persuasions, who do not think themselves safe from the Emperor in their houses and possessions, make them for a Mosque, which they please, on such conditions, as they think good, so that, for instance, they pay one or more Piastres annually to it, but retain the rest of the full possession thereof for themselves and all their descendants. – The goods of the Mosques are calculated in order, and of those that lie in Turkey, an account must be made to the Grand Lord: but he can take nothing from it, and at the most he is only allowed support from it for war against the enemies of Religion. To none but the Mohammedans is the entrance into the Mosques open, because, according to their opinion, they would be desecrated by the entrance of persons of other Denominations; but the possessions which are made to them are called Vakuf. The Stewards of the Ecclesiastical Revenues bear the name of Mutewelly, and they are co-supervisors of the goods of one or more Mosques. These are generally under the Kislär-Aga; but often they must also render accounts to the Myry, according to the Government's pleasure. The respect of the Turks for the Mosques is extraordinary. They do not spit in them; they do not allow filth to pass outside them, and they do not allow animals, such as dogs, etc., to run into them. In the squares, or in the neighbourhood, fountains are laid out for religious washing. Whoever enters to pray, after having purified, leaves his slippers at the door, or takes them under his arms, so as not to spoil the mats and carpets. If one has to spit, then one uses his handkerchief. No one greets another, but each one gives his attention to God alone.

In Constantinople, with regard to the prohibition not to enter a Mosque, two exceptions take place. The former St. Sophia church is shown in order, according to an old custom, to the Venetian ambassador, after his audience with the Emperor; (*) and whoever offers the Overseer of it two or more Zecchins, also receives the freedom to be led around it, at sunrise, on one of the galleries, for a shorter or longer time. Moreover, there are 2 Mosques of Dervish or Turkish Monks, which, besides the freedom to enter, also grant another, namely to be allowed to attend their worship, at least at certain times. We could give one kind of them the name of Draajers, and the other the name of Roepers. But both permit all Confessions to behold it, because they think to bring them to Mohammedanism. From what we shall observe concerning both, it will soon be seen whether this can easily move an intelligent person to it. The Mevelevi, after their Founder Mevelane, who, because of one of their principal religious practices, may not unjustly be called Draajers, have their Mosque and Cells at Pera, where they practice therein not only on Fridays, like the other Mohammedans in other Mosques, but also on Tuesdays, their supposed alluring and strange Religion. The Mosque is round; it has, on the inside, a row of pillars, which stands about 6 paces from the wall, and is closed off with a gate, so that the space within the pillars remains completely free. The spectators stand outside it. To the heavenly region of Mecca was the previously explained Kebla, as well as a height, resembling not so much a pulpit, as an altar. Before it sat the Sheik or Chief of the Monks, somewhat elevated, and they sat as if at his feet. Instead of music never being permitted in the Mohammedan worship, because it is thought that instrumental music is unworthy of it, and that God can only be honored with human voices; so here, however, he began with Arabic chants, accompanied by instrumental music, but so disagreeable to European ears, that one was glad when it ceased. The Chief of the Monks is also

31980 accustomed, at this worship, to make a proposal. The Monks kept quiet until the sign
of their Chiefs; but when it was given, the first stood up, and made a deep bow to
him. Their dress is singular. An ash-gray cap, as long as a reasonable sugar-loaf,
and nearly equally thick above and below, covered each head; the hair hung down
31985 behind, somewhat shortened; a close dark-brown dress covered the upper body; over it
was girt a skirt, like our women's skirts, but innumerable full of folds; the color
of it drew toward black; and hung a foot longer than the feet. When the monk arose,
he had his pleated skirt thrown about his legs; but when he, after bowing to the
Supreme, turned himself round quickly, like a top, the air entered him, and also
31990 expanded it, under him, for a width of some yards in the round. Both arms wheeled in
length, extended. The rapidity with which he turned round is incredible. When the
first monk, by this turning round, was about three paces from the Supreme, the second
of these received a sign, and brought himself in a similar motion behind the first.
Finally all seven came to the plain, which, one behind the other, within the row of
pillars, moved so quickly, and then in time around the pillars, that one could see
31995 their faces and the backs of their heads. One of us, in such an exercise, would soon
fall to the ground; but these Monks not only held themselves upright, but also lay
down, in the space of about twenty minutes, their turn round in the Mosque, and, when
they came again to the Supreme, they made a deep obeisance to him; the air went out
of their coats, and they sat down again at his feet, as calmly as if they had not
32000 moved. When they were all in their places, I thought that the Furies, of whom the
Pagan Poets sew up so many fables, had become real. The music, with the accompanying
Arabian songs, continued, by which they seemed to be inspired, and with the end of
that the whole supposed worship ended. These Monks, besides their other follies, are
uncommonly humane, and have no such religious hatred of the Christians as other
32005 Mohammedans. Their principal monastery is at Iconium. Its Chief is the General of the
Order. They are accustomed to dance from an early age, which they do in memory of the
Founder, of whom it is said that he endured it for a fortnight without taking any
food. — The Kadri, who, from their religious shouting, may justly be called Shouters,
are not of this good sort, but rather look surly. They shout, in their religious
32010 dance, the Arabic word, Hu?!, which is the same as Allah, namely God, means, so long,
until they fall to the ground as if beside themselves, and foam stands before their
mouths, yea, in many cases even the blood runs out of them. These have their
monastery at Tophana.
The principal place to which the Mohammedans make their pilgrimage is Mecca.
32015 According to the Koran they must all do this. But its expositors have moderated this
severity, and thus it is asserted, that he who has many occupations, may send another
in his place. And, because the necessity of the pilgrimage extends only to those who
can afford the necessary expenses, consequently the poor are not obliged; so they let
themselves be sent there by the rich, to a very great extent, and even several times.
32020 The Great Lord himself cannot fail to send there annually a camel very richly laden
with gifts, especially precious materials. These materials are used to hang the Kaaba
(Temple, Mosque). (*) The camel is then considered sacred and is not used any
further. Mecca is considered so sacred that no one who is not a Mohammedan may show
himself within a radius of nine miles. In this city, according to their opinion, is
32025 the most holy Temple, which is called the Haram, and in the middle thereof the Kaaba,
or an ancient building of the Arabs, in the wall of which, on one side, is built a
black stone, inset with silver, more than two cubits high from the ground, which
seems to have been an idol before the time of Mohammed, and by him was destined for
the Kabla, that is, for an object for the direction of the face in prayer. He foresaw
32030 the harm which would be done to him by the Arabs in the destruction of their highly
esteemed Kaaba, and the destruction of its black stone. Hence he supposed that the
first built by Adam, was indeed destroyed by the flood, but had been restored again
by Abraham and Ishmael, and that with the intention that the only God of the faithful
was worshipped in it. By this device the superstition of the Arabs was, by a slight
32035 perversion, consecrated to the worship of God. Within the Haram, at some distance
from the Kaaba, is the spring Zemzem, from which the Mohammedans drink with great
reverence, and which, according to their pretense, is the spring pointed out by the
Angel to Hagar. The Pilgrims have to make several very arbitrary preparations, both
at home and on the way. As they must arrive at one time for the pilgrimage ceremonies
32040 at Mecca; but some travellers, from the insecurity, could not escape the danger; so
the Pilgrims from particular countries form small Caravans or travelling companies,
to which, on their journeys, several others continually join, and who, for better
order, choose a Caravan-Baschi or Head of the Caravan. There are three principal
Caravans, to which the others usually join. The first starts from Great Cairo in
32045 Egypt, with extraordinary ceremonies, after the African Caravans have first arrived;

the second from Damascus, to which the Mohammedan Pilgrims from Europe usually join; the third from Bagdat, to which the Persian and Indian Pilgrims belong. The Bassas of these places are obliged, with several thousand soldiers, to accompany, or to have accompanied, the Caravans that depart from thence; and yet it often happens, that although they may amount to fifty thousand men, they are nevertheless attacked, plundered, and scattered by the wandering Arabs in the deserts. They all three meet at one place, at a certain distance from Mecca. Up to this point each has its Chief; but from there the Pasha of Damascus receives the government of all, and is therefore called Emir Hadschi (leader of the Pilgrims). He then leads them to Mecca, and from there back to the former place. To these 3 Caravans would, generally, belong 200,000 men and 300,000 beasts of burden. For the rest, the pilgrimage ceremonies are more ridiculous, than serious, I say nothing, than sensible and religious. The Pilgrims, on their arrival in the neighbourhood of Mecca, are instructed by the Imams concerning their duties. This accomplished, they go into the city, and seven times around the Kaaba, where they begin from the black stone, which they touch, and, if possible, also kiss. The first three times they go quickly, the remaining four times more slowly, when, as they pass by the black stone, they touch or kiss it; and finally, after this circuit, they go into the Kaaba, and perform their prayers. They must, in memory of Hagar seeking water for her Son, go seven times, from Mount Safa to Mount Merva, partly walking slowly, partly on foot. They remain day and night on Mount Arafat in prayer exercises. They have their heads shaved, and in the valley of Mina they sacrifice cattle, of which they eat themselves, and the leftovers to distribute among the poor. Then they are given testimony that they have accomplished everything properly. Finally they are accustomed to visit the Kaaba again, to take leave of it. On the seventeenth day they all assemble, and receive, after a solemn prayer, in a certain respect, the blessing with these words: "May God let you return in peace to the place from whence you came." Furthermore, this Kaaba also has an astonishing income; for there is hardly a city in the Turkish territory where houses, lands, land taxes, etc. have not been made for it. — Those Pilgrims who wish to do a really good work also visit Medina and Jerusalem on their return journey in a religious manner. And otherwise pilgrimages are also sometimes made to the graves of various supposed Saints, especially of the first Caliphs, such as Ali, Otilman, etc.; but these are of less importance, and do not compare with the pilgrimage to Mecca.

(*) Notwithstanding that the Venetian ambassadors are shown only the Sophie Mosque openly; nevertheless, the other ambassadors would not be refused the public viewing of it, if they so desired. But they leave this, in order to save unnecessary expense, visiting it, like other private persons, for a gift of ?? or more ducats.

(*) At each Kurban-Beyram, (Sacrifice-feast) when the new cloths donated by the Sultan for the Kjiïbet (the Temple at Mecca) arrive at Mecca, the covering of the previous year is taken away, and left to the Pilgrims as a precious Relic. The gifts of the Great Lord include 500 zecchins and a gold-plated Koran.

§. XXXI. Of religious persons.
Among the Mohammedans there are many religious persons, but who, often, have to do not only with spiritual, but also with worldly affairs. Thus the Kadhy-Leschkjer, (supreme judge of the army), the Mulla (Governor) and the Kadhy (Judge) belong to the Clergy, although they are also civil persons. They are namely also charged with civil affairs, because the Koran, just as the books of Moses among the Jews, contains not only the precepts of religion, but also the sum of civil knowledge, and therefore, what belongs to these two objects must be decided from there. A clergyman and a lawyer by profession are therefore with them almost the same, and the boundaries between theology and law are therefore difficult to determine. The whole group of them is called Uleua, or, as we would express ourselves, the Geejlelykheid. The most important of them all is the Grand Muftif, who is also called Sheik-Ulifam, that is, the Chief of the chosen ones, or the Elder of the Faith. He is chosen by the Emperor himself, and, after he has had him called into the Seraglio, is raised to this Dignity. On that occasion, it is said, the Emperor, while he stoops to brush his coat, gives him a kiss on the shoulder. And otherwise he has also the privilege of being allowed to kiss the Emperor's shoulder on other occasions, whereas otherwise even the Grand Vizier may not kiss more than the hem of his coat. He is one of the most distinguished in the Turkish Empire, having only the Grand Vizier above him. With him is taken counsel in all important, both spiritual and state matters. Although the Emperor receives everyone, yes even the Grand Vizier, sitting; yet when the Mufti enters he stands up, or receives him standing. Without his approval nothing can be done, no war announced, and no peace made. If he has set this down in writing

according to his approval; then it is called a Fetfah. If, for certain reasons, certain cases are withheld from him, and his Fetfah is nevertheless necessary; then the question is put to him, without naming the persons, etc., thus: for example, what does someone deserve, who has done this or that? what should be done about a Kingdom, which behaves in this or that way towards the Porte? etc. Whereupon, in very few words, he gives the decision, and, signing his name, at the bottom on the edge of the paper, always adds: the lowly servant of God. Since the punishment of honor, in putting to death the great, consists in strangling; such a punishment cannot be inflicted on him, as long as he is in his Dignity; but another means is used: the Emperor deposes him for minor crimes, but confiscates to him the revenues of some courts, or banishes him to a certain place. As an assistant he has an Eetf'ah - Emini, or his Secret Scribe, who supports him, and in matters of less importance writes the decision, and submits it for signature, or at least predicts it; so that, when such a one is bribed, two and indeed contradictory Fetfahs may come forward in one and the same case. - In great men one finds a Sub-Mufti, who cannot buy his appointment from the Grand Mufti, but nevertheless does not receive it without considerable presents. The Muftis are very modest in their dress and carriage. In this, and by their large Ceremonial turban, they distinguish themselves from others. Those ecclesiastical Persons, who make the announcement of the prayer of the Menarets, have the name of Muedsin; but those who perform the worship in the Mosques everywhere, are called Imam. These are therefore actually the Mohammedan Priests, and they are taken from the first. The Imam in the Seraglio bears the name of Imam-Efendy, or Chunkjar (that is, Imperial) Imam, but a Preacher that of Scheych. In their dress they are not distinguished from the people, except that the head-ornament or the Turban makes some exception. They draw their income from the Mosques, which have received the necessary Legacies from their Founders or charitable persons. A kind of co-helpers of the Imams, who read in the Mosques, or do the prayers, especially the public intercessions for the Sultan, are called Chatibs. The Dervish are, among the Mohammedans, that which the Monks are among the Romans. There are several kinds of them. Of two of them at Constantinople we have spoken in the preceding paragraph. Besides these there are also the Bektaschi and the Seyah. The former have their name from a Hadschi Bektaschi, whose tomb is named at the village Beflktaschi??, not far from Tophana, on the Channel of the Black Sea; and according to their rule they must travel in Mohammedan countries, and call upon their fellow believers one of God's names, and one of his attributes, viz., his love. The latter are, probably, the most numerous. They do not all live together in monasteries, but also keep themselves here and there, especially on the roads, to offer travellers a drink of water, etc. Some marry, others do not. The greater part of them, especially of the Seyah, consists of melancholy, melancholy and wandering people, such as one finds many in the climate there. Wherefore it is true, as the Church history also shows, that monasticism with all its arbitrary cults, fanaticism and extravagances had its beginning there, and subsequently, by degrees, spread from the East to the West. Many of them, especially of the latter kind, are also the most subtle and hateful deceivers, yes even highway robbers. They generally wear high, and pointed, but withal blunt caps, of grey felt, by which they are recognizable. They have free access everywhere, take in the markets and in the shops, what they like, sit down, without circumstances, with the principal ones at table, and go away again in the same way.

Of the Emyrs they often speak even the newspapers. They are also called Sharifs (Saints), and are not considered as ecclesiastical Persons, before they are actually accepted among them. These are the descendants of Mohammed and his Family. They distinguish themselves by a very green Turban, which is entwined round over the head, from all other Mohammedans. They have, generally, fallen into great poverty and want, earning their bread, often, by the lowest handicrafts. They are very great in their descent; more foul than others, and the masters of riots and mutinies. They are generally much esteemed, and, as their testimony is decisive in court, so, when their mode of life is regulated, they are much respected. They are under the Nakyb, or, as it is fully stated, Nakyb-ul-Eschraf, (Holy Overseer) who always belongs to the Ue'lema, in dignity next to the Mufty, is in a certain respect the Overseer of Mohammed's standard, and has under him the Ae'lemdav or Ensign, who bears it on solemn occasions. They are free from the general burdens of the country, and cannot be summoned before any worldly Judges. If they are punished; then, out of respect for their state, they first take off their green Turban. From the Emyrs are taken the Scheyks or Heads of the Sophie and Ejubs, and also other Dschamis, and one of the two represents the Great Scheyk. These ecclesiastical Scheyks, or Heads of the great Mosques, may, in a certain respect, be compared with the public Teachers of Theology,

such as formerly were the Bishops at the Cathedral Schools; as they always have to
 32180 instruct a certain number of Students (Sochtahs) in the Mohammedan Religion. They not
 only preach before the Sultan in their Mosques, but are also employed in political
 affairs. The Sheik of the Ejubs-mosque is a Vicar of the Head of the Order residing
 at Joco?iien, who has the privilege of girding the sword on the Emperor, on his
 ascension to the Throne, but usually hands it over to the former.

32185 The Preachers among the Mohammedans are taken from the Imams, Dervishes and Emyrs.
 Concerning the contents of their sermons, the necessary has already been mentioned
 beforehand. They are always admirable by the Authorities; for not so much the truths
 of religion, but rather state and civil affairs are, as a rule, the subject of their
 treatises. They are the public firebrands, and, when they agree with the Janistas at
 32190 Constantinople, then it is over with the Great Lord.

Those who have made the Pilgrimage to Mecca are called Hadschies. This name is also
 given to those Greek and Armenian Christians who have been as Pilgrims to the Holy
 Sepulchre in Jerusalem. Now, since the Mohammedan Hadschies make this pilgrimage
 solely and solely out of a work-holiness, or for others to do it for money; that
 32195 pilgrimage is also not capable of improving people; but that journey tempts them to
 idleness, theft and other irregularities; so they are considered the most reckless,
 and the Mohammedans themselves judge that whoever does not yet know evil enough,
 learns it by and on his pilgrimage. The idea that they have for the rest of a Saint,
 Dely in their language, (which word also means a Fool,) is the strangest that anyone
 32200 can ever form. All mad and senseless people, in a word, all Fools are considered by
 them to be Saints. As strange as this feeling is, so foolish is the reason that is
 brought forward for it. They pretend, namely, that these people, in thinking strongly
 about divine things, are so deeply in thought, that they have lost all communication
 with the lower world. To the Fools also the most liberality in alms extends with
 32205 them. A Mohammedan considers it a happiness to be allowed to touch and spy them.
 In Egypt they are most, and there also most seen. Therefore, they are considered to
 be the best of all rashness. And the result of this is that many a villain shows and
 adopts such a foolishness, and then appears in a torn garment, whereby, in idleness,
 they live on other people's simplicity and expense, commit great irregularities, and
 32210 often cause great mischief to those who do not wave the desired incense to their
 holiness. Otherwise, at least from the intelligent, they are regarded with an almost
 incredible pity. But if they cause public disturbances or insults; then they are
 locked up in a madhouse.

32215 §. XXXII. Of the difficulty of converting the Mohammedans, and of the apostasy to
 them.

Let no one be surprised that it so seldom happens that the Mohammedans are brought to
 the Christian religion. The reasons for this are tangible. If one deplores that the
 32220 prejudice of education is general, and that children remain with the religion of
 their parents, for no other reason than because they lived in it; so also this
 prejudice of education is with the Mohammedans as at home. With them, the hatred of
 other denominations is instilled in the children, with such unintelligence, that it
 cannot be expressed. They learn to pronounce the word, Jatter, that is, Infidel,
 32225 sooner than the word Allah, that is, God. They grow up; then they see nothing but the
 hatred of adults against other co-religionists and their insults, noting no less the
 great oppressions under which they sigh. What is therefore more natural with them
 than an absolute aversion to everything that has not sworn by the banner of Mohammed?
 But, even supposing that they would think about matters of the Christian religion,
 will not the danger that accompanies a change of religion deter them from further
 32230 investigation? Mohammedans do not settle in a Christian country, but live only under
 governments of their faith. The wandering Tartars under Russian protection make,
 here, no real exception. But what punishment is set for the apostasy of a Mohammedan
 from his faith? None less than the death penalty. In addition, they are the strongest
 enemies of all idolatry and image-worship. Unfortunately, the vast majority of
 32235 Christians who live among them are great advocates of the latter, and the offences
 given by them are no less than those in use among us; what temptation can there be
 among them to the Christian religion? If we add to this, that they lack almost all
 instruction in the Christian religion in their language; that in general, with the
 exception of the New Testament, little is printed in Arabic and Turkish, and that
 32240 even this does not easily come into their hands; printed books are generally despised
 by them, but manuscripts are of great value; yes, finally, the greater part cannot
 even be read, and the death penalty is imposed on all oral instruction; then we need
 not at all wonder at the difficulty of bringing the Mohammedans to the Christian
 religion. Should the Gospel therefore take root among them; then the prohibition must

- 32245 be annulled, that among them its Teachers shall not be killed, and the rightful liberty of conscience must be permitted. This depends, in the meantime, on great changes of the Empire, which God's Providence alone can arrange, and through which the necessary door to the knowledge of the truth can open.
- 32250 One would hardly believe, that people of other Religions, especially if they rest on truly divine Revelation in gene??, as Christians and Jews, could convert to Mohammedanism: and yet there is no lack of such Apostates. That there are such among the Christians, in Turkey, or otherwise in Mohammedan countries, can surprise no one. What can a wicked man, who has no religion besides that, lose by gaining at the same time some temporal advantages, as previously mentioned? Can a criminal, he who has
- 32255 already seared his conscience, find it difficult to exchange Jesus Christ for Mohammed, only to escape the punishments that his deeds deserve? Many, through unfortunate circumstances, become Apostates, who, after having acknowledged the fall, would gladly rise again and return, if the death penalty imposed upon them did not frighten the weak flesh. These are accustomed, then, to honor Christ inwardly, but
- 32260 Mohammed outwardly; such double-minded men there are even many among the Turks, who, through no acquired complete conviction, or through fear of man, remain doubters. All these have, in the meantime, some semblance of excuse; but what shall we say of Europeans who adopt the Mohammedan faith? Some take flight from European States or ships, to escape responsibility for crimes committed, of which the Count Bonneval has
- 32265 given a notorious example. On the ships of war one finds the foulest scum of the people, and they seldom land in a Levantine port, but some escape, and become Mohammedans. But one would think that it at least did not happen, that sober men, and to whom one must ascribe a sound mind, nay, who even boast of great erudition, would commit such rashness, or rather such impiety. In the meantime there are Petit-Maitres
- 32270 and Abbes, as well as other persons, who leave their native country, and come to Turkey, to become Mohammedans. One is perhaps eager to know the motives and temptations of these presumptuous men to such an undertaking. These are usually but two in number. The reading of liberal books, especially of the French, who almost always, by wittily dressed proposals concerning the Turks, degrade Christianity,
- 32275 confuses the little understanding which these people still possess to this degree. In addition, the freedom of thought, this beloved word and the motto of the supposed strong Spirits, but at the same time the freedom, or rather the audacity, of living according to their own taste, and by the Turks to bathe in the so beloved lusts of the flesh, unpunished and without gnawing of conscience, is so attractively depicted,
- 32280 that they, as Mohammedans, here, tried to obtain a Paradise, for which unbelief left them no hope after this Life. One sees from this, what harm the letters, memoirs, composed in the style of the Romance do to people, who, because nature has not provided them with a sufficient capacity to judge, are blinded by a playful and false wit. But all these poor and pitiful bloods soon become aware of their error. The
- 32285 Turks count few such windbreakers. The sweet dreams of the Apostates, at their conversion to Mohammedanism, concerning offices of honour, riches, women, etc., disappear further after circumcision, because they can only become doorkeepers, grooms, or something so lowly. They experience shame and confusion, after they see themselves deceived by witty rhapsodies and groundless proposals. And, if their
- 32290 Conscience cannot awaken, because they have none, the freedom to think, it no longer deceives them so strongly, but they try to escape from this labyrinth by flight, which is indeed dangerous, because if they are caught, they must forfeit their Life, but to which, however, compassionate persons still always offer their hand.
- 32295 Thoughtful Turks also do not think much of such Christian apostates, if they are not people of exalted circumstances and great treasures; for their fundamental principle is: a lying Christian cannot be a good Mohammedan. Jews also fall away; but the examples concerning this are nevertheless not so many; and the Turks do not count them much either, because they consider them very little. (*)
- 32300 (*) That the Jews, in the renunciation of their religion, first had to be Christians, and also baptized, is untrue: but they must, according to the Mohammedan religion, consider Jesus a true Prophet.
- §. XXXIII. Of the Turkish Emperor.
- 32305 Of the origin of the Imperial House § II. has been treated beforehand. The Turkish Emperor is named with the Arabic word Sultan, which means a Lord or Regent in an absolute sense, and expresses Schach in Persian. Padischah is considered higher by the Porte, and the Turkish Emperor assumes this honorary title, as Schach is given to the Emperor of Persia. Schach is more than Chan, having such a one as a subject under
- 32310 him. Padischah means the Regent very briefly. When one asks for example: who comes there? then the answer is: Padischah! But, since the Turks have given this title to

some Christian powers, it has lost much of its great significance with them. The Sultans now so often no longer make use of this in enumerating their Titles, but rather of the Title, Schah or Schehinscha, which is never given to Christian Princes.

32315 In addition, they add, after their other Titles, and indeed after their own name, the distinguishing Title of Chan, for instance, Ibrahim-Chan, in order to indicate their Royal descent from another Royal Line of the Tartars, which bears the name of Ogusian. For this word, Chan, which signifies a King and Emperor, is given to all reigning Princes of the Family of Dschjingjiys-Chan.

32320 The Succession to the Throne of the Turkish Emperors differs from all other Governments; for, as by this either a free election, or primogeniture gives one the right to govern, so in Turkey not always the Sons, but often the Brothers, according to age, succeed the deceased Emperor; and if there are no more of these, then the Throne falls to the eldest Prince of the Main Line, and the Princes of the last

32325 Emperors are passed over. (*) The salutary purpose of such an arrangement is undoubtedly to avert the inconvenience which the Bible presents with these words: "Woe to the land whose King is a child!" and consequently to obtain no other than Emperors of mature years, who are no longer subject to the laxities of childhood; but also the depravity of man has destroyed this desired benefit. In the destroyed good

32330 intentions of the Founders of worldly governments we see the truths ?? holy saying: "men have all turned aside, and altogether become wicked; there is none that doeth good, no, not one". For although they in the Monarchical, or Aristocratic, or Democratic, or mixed forms of government, wanted to secure their welfare in every possible way, they have nevertheless also, in this respect, had to find: "the Lord hath cursed the earth, for man's sake". In Turkey it has happened the same way. Because the Emperors fear that their successor, before the time, might gain desire for the Throne, or that the people, if they promised themselves anything good from him, might elect him in a rebellion; so he, like a child, is kept and preserved in useless occupations among women and eunuchs. From which one may conclude, how

32335 immature in understanding, at older years, the Turkish Princes come to the government. In former times the education of these was indeed very free, as with other Princes; but now it depends entirely on the permission of the Sultan, to what extent they will be freer and nobler or not. The history of the Turkish Empire forms a principal subject of instruction. A Turkish Emperor has, for the most part, had a pitiful education. Except for the Mohammedan religion, and some Arabic and Persian, he knows almost nothing at all. In his former company he is deprived of all knowledge of the world, and much more deprived of the disposition necessary for government. Since, as in his dungeon, even the name of freedom has remained unknown to him, and he sees himself, at the opening of it, idolized by the Seraglio and the people, and

32350 exalted to the Throne of his Ancestor; one can easily imagine what an impression such a sudden and blinding change must make on him. - The death of a Turkish Emperor is, in order to prevent adieu and unrest, as much as possible kept hidden outside the Seraglio until the successor to the Throne has been raised to the vacant Dignity by the Grand Vizier, the Mufti, the Aga of the Janistas and the principal persons of the

32355 Seraglio. Then the great Divan is summoned, by it the new Emperor does homage, and his name is proclaimed by the Telals or public Heralds. He shows himself to the people, while riding to the Mosque. The actual appointment is not done by an anointing or crowning, but by the girding of the Sabre, which in the Ejuhs-Mosque in Constantinople, by the Sheik, is performed with these words: go, yours is the victory, but only by God!

32360 The Title of the Turkish Emperor is Eastern, that is, blown up to the point of being lost. A part of which exists only in imagination, but nevertheless does not signify much less than a King of other Kings, a shining sun, a crown of many, a shadow of God, the gate of salvation, and such vaunts more; another part is spurious, giving up small Provinces, which are already included in the larger ones, or very particular cities, which are situated in them; still another part mentions things, which signify nothing at all, as when he is called a Lord of the Holy Places. Nevertheless the Title is not the same with all Sultans, but, as with other Princes, according to the increase or decrease of their possessions, is subject to many changes. Muhammad IV gave himself the following Title: "the Governor (namely of God) on the face of the earth, the Lord of Lords on the face of the earth, the Ruler of the necks of men, the King of the faithful and unbelievers, the King of Kings in the world, the Emperor of the East and West, the Emperor of Emperors, great in power, the Prince and Lord of the happiest heavenly signs, the Majesty's Emperor, the seal of victory, the refuge

32375 of mankind, the shadow of God spreading rest on the face of the earth, the King of Greece and Asia Minor, of Arabia, Persia, Turkistan, Tartary, the happy and rocky Arabia, of Egypt, Syria, Karmali Kjurdiplan, Circalli, the Abasites and Georgians, a

Lord of the white and black Sea and of the Ocean, Lord of Hungary, Wallachia and Moldavia, of Africa, Algiers and Barbary, no less the Heir of many other thousands of Kingdoms and Provinces, Sultan Muhamm?? Cte. a Son of Sultan Ibrahim Chan, a Son of Sultan Achmed Chan, etc". And otherwise the Title of a Sultan, in a letter to a German Emperor, was abbreviated thus:

"I, the Lord of all Lords, the Ruler of the East and West, who have the power to do and to leave undone what I please, the Lord of all Greece, Persia and Arabia, the ruler of all that a King and Lord can be subjected to, the great Hero of this time, and the strong Giant of the spacious globe, the Lord of the white and black sea, and of the Holy, with God's splendor shining city of Mecca, the city of Medina, and the Holy and pure city of Jerusalem; the King of the famous Empire of Egypt; the Lord of Jonia, and the cities of Athens, Senamim, the Holy Temple of God Zabilon and Bajjio, Rethfan and Magodvn; the Seat and Throne of the great King Nashin Retram; Lord of the island of Algiers, and the Prince of the Empires, Tartary, Mesopotamia, Media, Georgia, and all Greece, of Morea and Natolia, Asia, Armenia, Wallachia, Moldavia, and very many other Kingdoms and Principalities, of which I am Ruler; the greatest Emperor, Sultan N. N. a Son of the great Emperor, Sultans, N. N. who has the power from God to keep all peoples in check, and to open the gates and locks of all cities and auctions; into my hand are delivered all the ends of the earth, without exception; I, the Lord of the East, from the Kingdom of Chin (China), to the ends of Africa, whom God has appointed as a brave warrior; among whose brave Kingdoms the invincible Castle, Caesarea, is considered small, and among my hereditary kingdoms the territory and dominion of the Great Alexander is considered small; with me is the strength of the whole world, and the power of the Firmaments: peace be upon the King N. N. who is the mighty Lord of all Christendom, and the chosen vessel of the mighty Christian faith, the real and chosen Emperor of the Roman people, etc." By the Holy places, of which the Sultans commonly call themselves Lords, are understood, as appears from the last Title, Jerusalem, and especially Mecca and Medina. Of the first the Sultan calls himself a Protector, but of the two last only a Servant. But this Title nevertheless includes much with the Mohammedans; because the Sultan, as Supreme Lord of these places, is therefore held to be the Chief of the Religion, and a true Successor of Mohammed.

On the seal is not the crescent, as which, properly and solely, is a symbol of the nation and of the Empire; but his and his Father's or Ancestor's name, with the suffix: victorious and invincible Emperor.

As for the occupations of a Sultan; they must be infinite, if he wanted to burden himself with them: but it depends, as with other Princes, mainly on his own inclination, whether he wants to take much or little part in them. And the Eastern Greatness seems to entail, that he must, as much as possible, show himself and speak seldom, in order to remain in an all the more unknown Highness with those who approach him. Nevertheless it must have the name, that the most important matters happened as if under his eyes; and, since these must be taken off in the Divan, and he can observe everything that goes on in the adjoining room, through the aforementioned golden latticework, without being seen, therefore the Grands of the Empire treat everything in order: or else he causes secret councils to be held, to discuss and settle matters of importance in his presence. Since in the meantime most State servants in the Provinces and places where they are, have almost an indefinite power, yea even the right over Life and Death; so one sees, that so many things do not come before the highest government, or before the Divan, as with us. In this Divan the Grand Vizier decides almost everything, and only matters of the utmost importance come before the Emperor, who nevertheless adheres to his opinion, unless the Favorites and women of the Seraglio make him change his mind. The Grand Vizier also executes most of it in the Emperor's name. Such orders and answers are called Verman: but if they come directly from the Emperor; then they bear the name of Chath-Scheryf, that is, holy noble writing, under which he has written these words with his own hand: my command shall be done according to its form and content. But usually he only lets his name be printed above the commands by the Nischandschy-Pascha (Grand Chancellor). This command is irrevocable, even supposing it were ever so unreasonable. Between this and the Papal Bulls there is a perfect agreement. By this the Persian custom, of which mention is made in Eph. 1. 19. and Dan. VI. 9. 13. 16. is made, may be elucidated. He pardons the highest offices of honour, but seldom without consulting the Grand Visier. He and the other Grands of the Empire pardon the lower offices. Every Friday, unless he be detained by any weighty impediment, he rides openly, and with great solemnity, to the Mosque. This time the oppressed often take advantage of, to convey their distress by petitions, delivered to him during this ride, as if before his Throne. For this purpose, in order to discover the weight

of their petition, and to attract his attention, or to induce him to take part in
32445 their circumstances, they have well covered their heads with a piece of reed mat,
which they either light above, or hold a burning candle over it. As soon as this is
seen, let them fetch the Emperor, and receive their petition. (Rom. XII 20.) Woe then
to him against whom, in this manner, a complaint is justly made! He takes most of his
32450 pleasures in journeys by water to his country castles. Here and there he pays a visit
to a Great Man of the Kingdom; but nothing is more troublesome and costly to the
Tranquillity than such a one. — On all sorts of occasions, as on the Beyram festival
and other times, the Great Men must bring him presents, an ancient custom which
already occurs in Sam: X 27. 2 Chron: XVII 5. He often gives the Great Men such
32455 things; but this demands return presents, which must amount to ten or twenty times
more. — He often goes out in disguise, especially when the times are troublesome.
Disguised guards follow him, who understand a sort of language, by speaking signs,
and on such occasions what is stated in Prov. XVI 14. is fulfilled: The King's wrath
is a messenger of death. In this manner the Emperor Mahmud discovered the many plots
32460 against him, and 'there were for a time so many people thrown into the Channel, that
every one had an aversion to eating fish. The number of his wives and concubines is
great. These are indeed Secrets to all those who are not in the Harim or the
habitation of women; but yet so much is known, that the Emperor is accustomed to
divide his time among them, although it is not easy to decide whether he takes much
32465 pleasure in it. For, as they must love him even against their Will; each of them
seeks to fetter his heart; one is against the other; and thus, besides the slavish
determination of their freedom, jealousy and commotion are common among them; so,
often, unpleasant investigations, nay, even sharp executions may be necessary. The
Sultan associates with no one in confidence, except his wives and one or other of his
32470 favourites. Few persons have the privilege of speaking with him, for instance the
Grand Visir, the Mufti, the Kisler-Aga, the Bostanschi-Baschi, the Lyfarts, etc. All
others may not speak with him until after a previous permission. No one may eat with
him. Everyone approaches him with downcast eyes, and hands placed together in a
cross-like manner towards the abdomen. This brings with it the Eastern Ceremonial;
and a Sultan would be relieved who would abolish it.

32475 For the rest, the Turkish Emperor need not be a false or untrue politician, nor a
Machiavellian. This is only necessary for small Princes at its highest, in order to
thereby obtain for themselves Dignity, greatness and prestige, which, in their vanity
and ambition, the small extent of their country would not grant them. The Great Lord,
in his Dignity, proceeds absolutely. He commands as Emperor, and as a vice-regent of
32480 Mohammed. The greatest hope considers him as having died a blessed death, who is
strangled at his command. He is almost worshipped in his dignity. His Seraglio, which
only lasts as long as he is Emperor, regards him as the sun, on the setting of which
a night of death would follow for it. He who is given his Chath-Sheriff (writing)
rises, and presses it to his forehead when he receives it. The streets through which
32485 he rides are made clean, and in the summer sprinkled with water. In a word, his whole
government is despotic, and the respect which the people show him, almost divine. But
this despotism or absolute power rests solely on the foundations of the Koran, and
the customs which flow from it. By it he is often very much limited. In addition, the
nature of man, by all this Majesty, cannot be eradicated. It retains its freedom. As
32490 great as in general the Sultan's power is over the State servants and the Great, who
are considered his slaves, and are also called so; he must nevertheless proceed
cautiously, when it concerns the rights of the people, or a State in particular, or
the well-being of an entire Province. Then one takes no delay in maintaining one's
rights. The Mohammedan religion does not change men, but leaves them as corrupted as
32495 they are by nature. The people begin to mutiny, abandoning their otherwise customary
respect because of a just, or at least supposedly just, displeasure. The Emperor's
Person is then no longer sacred. His star??, his wink and his commands have then lost
their enchanting power. 'It is a crime against him.' Happy is he, when he is thrown
into the dungeon, in which he, hitherto, kept the successor to the Throne locked up,
32500 and which is raised to the same pinnacle of Honour from which he was made to tumble.
But there is also no lack of examples, that he has become a victim of the people's
anger. And this always happens, under the appearance of justice, or under the real
protection and defence of the law. The Mufti or one of the Sheiks of the Sophie or
Ejubs Mosque, or at least one of the principal Judges and Lawyers must, on the side
32505 of the discontented, give him the reason for his incompetence and unworthiness to
govern, and at the same time announce the sentence. Let no one imagine that the Turks
are worse in this respect than other peoples. But that, among Christians, such scenes
in the oppression of their subjects, take place so seldom, and many centuries show us
scarcely one King of England in this kind, the Princes owe this solely to the

32510 Christian Religion, which makes a multitude of their subjects from natural men to
patient Christians, and among the rest, especially by the public intercessions from
the pulpits, leaves such an impression, that they are even in the burdens subject to
the Government, who have power over them, Rom: XIII 1.5. and that not from necessity,
32515 for the punishment, but also for the sake of Conscience. Would to God, that all
Princes would think of this! and, when even the English Scene is caused by a wrongly
understood Religion; nothing should go more to their hearts, than a purified one.

(*) In general, this is the rule concerning the succession, that, upon the death of a Sultan,
the eldest Prince of the blood becomes Emperor; unless he is declared incapable, or there has
32520 been a rebellion. In such a case, one does not look at the distant or near relationship with
the deceased Sultan.

§. XXXIV. The Emperor's Procession.

32525 Although all the districts of Constantinople are provided with sufficient guards,
courts of justice, and other civil arrangements; the Emperor, nevertheless, often
goes about the city in disguise, and he is accompanied by disguised persons, who at
his beck understand his will, and carry it out. But, at certain times, he holds
public processions. The most magnificent among the usual is on the great Beyram
32530 festival, when all the First Names greet him in the Seraglio, give him gifts, and
from there must sail to the Mosque. Every Friday he rides with him to a Mosque. The
streets through which he rides on horseback, (for riding in a carriage is not at all
customary,) are cleaned, and in the summer sprinkled with water. From the Seraglio to
the Mosque, on either side, stand Janistas or other guards, but without guns, who, as
a sign of slavish submission, have their hands laid downwards against their bellies,
32535 crosswise over each other. The principal servants of the Seraglio walk or ride before
him. His horse is surrounded by about a dozen Schurbahdschys, who wear on their
ceremonial caps thin, but extended in length, and at the same time standing quite
high, plumes, and walk close around him. In such a procession he also rides, often,
at other times, through the streets of the city, also paying visits to the Grand Men
32540 of his Court. The Tractant must indeed do everything in his power to entertain such a
great Guest properly; but he may not draw anything for it, and must also make him a
suitable present. When riding through the streets, every one who is in the shops and
before the glasses must stand; if he were to sit he would run great danger. The
Emperor is accustomed to salute the guards and people on both sides, while he turns
32545 his head with a little bow, and lays his right hand on his left breast; whereupon the
people answer with an applause: just as, according to the Turkish custom, the Greater
salutes the Lesser first. When sailing on the water, the Emperor is accompanied by
the Servants of the Court or Seraglio, but the Grand Vizier by the State Servants;
but both never sail together in one barge; and then the Guns of the Seraglio are
32550 fired: but both may never remain outside the city for a night, unless a Kaym-Maekam
(Respondent) were appointed.

§. XXXV. Of the Turkish Court.

32555 After the Turkish Emperor, in a natural order, the Osman Porte, or, which is the
same, of the Turkish Court, must be dealt with. Concerning the name and origin of the
word, Osman, there is no objection, since it is derived from one of the principal
Founders of the Empire, namely Osman; but concerning the word, Porte, opinions are
divided. The most probable is determined by the Bible, according to which the
32560 Easterners regarded the gates of a city as the principal places for negotiation and
legal proceedings. Because therefore, from the first foundation of this Empire, the
residence of the Princes was united with the main court; hence the name of the Osman
Porte arose. That this derivation is the real one, is still secured by custom, since
one hears the Palace of an Envoy, a Cashier, etc., given by the inhabitants of the
country, the name of Porte. And if one speaks in Constantinople simply of the Porte,
32565 without using the adjective, high, then everyone understands by it the Palace of the
Grand Visier, in which most business is conducted. As the Turkish Empire has
expanded; so also the Porte or Court has been transferred to other cities, for
example ??en, Brussa, Adrianople, but finally, after the capture of Constantinople,
to this city. There now in the Seraglio the Turkish Court has established its seat.
32570 Everything that belongs to this Court, and stays in the Seraglio, consists of many
thousands of people. After the Emperor, Imperial women deserve the first place here.
These consist of the most select beauties. They are not only bought, and then brought
to the Seraglio, but the Paqhas (Raffas) and the Great also make a merit of bringing
them there, by way of a present. For if they have won the favour of the Prince; then
32575 they generally promote the happiness of their benefactors. The consorts of the
Emperors are, by the Europeans, by a mistake, called Sultans. The Turks call them the

first, second, third wife, etc. Actually that title belongs only to the Princesses of the Great Lord, or to a really and effectively appointed Consort of him. These so-called Sultans of the former Emperors were, formerly, often put to death, but now they are preserved with due decorum in certain State prisons, and generally in the Old Seraglio: but the mother of the reigning Emperor, who is called Sultana-mother (Walidet-Sultan), has a special prestige. Her Chief Steward bears the name of Walidet-Kjetchudafzy. — Among the active Sultans, as is known, he has none as precedence as the first Prince brought into the world. Of females there is no certainty, but nevertheless a great number. It is remarkable, that according to a fixed arrangement, which has the force of a law, no Turkin, at least never of respectable parents, comes into the Seraglio. All the Sultans are brought there as slaves. The reason for a thing which seems to us so strange, rests partly on their religion, on that the holy race of the Turkish Princes does not require mothers who are connected with families, but such as must be considered as familyless; partly on political grounds, in order that no Turkish Family, through a Sultana, may be related to the Imperial, and thus may lay claim to the Throne. At least this custom has been maintained since Bajazet I. For when he, with a lawful Spouse, got into Tamerlan's prison, and was very badly treated; nevertheless the shame and disgrace which she had to endure in his presence seemed to him the only thing that mattered most. And therefore his successors do not marry lawful wives, so that in such misfortune no similar shame may befall them: unless one would place the cause of this not marrying, actually, in the economy, namely not to establish and maintain a special court for such a Sultana, which would cost half a million Piastres annually. There would be no end of commotion among these Sultans and concubines. If one of them is pregnant; then she is almost carried on the hands. Around and in the Seraglio there then reigns an unusual silence. The European ships, which otherwise make their arrival known by a few cannon shots, this shooting is already prohibited at the Dardanelles in advance. Yes, because otherwise, during the Emperor's recreational voyage on the Channel, the cannons are fired around the Seraglio, this shooting is then stopped. For the rest they are all deprived of their liberty, and shut up in the Harim or the Seraglio or the country castles. If they go out to play, or sometimes walk in a garden; then this is done where one can be seen from mountains or some other place, so covered, that one can hardly breathe, and always under the supervision of the eunuchs, who see and observe everything with an Argus eye. Nothing is more confused, than when by the Emperor's wife when a Physician is needed. It would end badly with such a one, if he should desire to see the tongue, the eyes, and the sight, to judge of the disease; and the danger is most great, and he would be seen especially at Court, when he has the liberty to feel the pulse, without the hand being covered with a veil. For the rest they pass the time in an idle idleness, such as visits, which they pay each other in their shut-up dwellings, dancing, music, embroidery, &c. But I break off here, so as not to be rambling on in useless trifles, and even to incur suspicion of a reprehensible judgment of the way of life at many European Courts. Now comes a Sultana in childbirth; then a great Donalmaoi Feast is celebrated for the birth, and indeed for a Prince in the whole Empire, but for a Princess only in Constantinople. The streets and lanes are then illuminated at night, and the revelries last for three or more days. The Princes of the reigning Emperors are, at first, educated by women, but afterwards all have their tutors, (Chodschjah) and are well treated; but the fate of the other Princes is sad. But these are now no longer, as otherwise happened before, deprived of Life by their brother's coming to the Throne. They are locked up within a small circumference of the Seraglio, are very carefully guarded, and are cut off from intercourse with all others. They may only make their appearance at the Emperor at a few times, such as on the Beyram Feast. Otherwise they usually do not see him; and if they show anywhere that they wish to stand for higher things, or if the people seem to place any confidence in one or the other, only in name, then his Life is in danger, and strangling or mistake is the last mercy. The Circumcised are their strict rulers, and when they come to manhood; then they are given only wives who are barren; and if it should happen that children, especially of the male sex, are born, then they are put to death by poison. — With the Princesses the Great Lord uses to conduct a common trade. He marries them off, when they are only 2 years old, to old Visiers or Bassas. But the Bridegroom does not see his Bride. In the meantime he must give her considerable presents, which the Great Lord takes to himself. If that man dies; then everything falls to the supposed Spouse, or actually to the Great Lord. Such a game lasts so long, until it is actually given to a man already previously, or newly engaged to her, which happens under ridiculous ceremonies, that, for example, she draws a dagger against him at his show, but also at public ceremonies in Constantinople. Nothing is more foolish, than such a marriage. When the

man, as usually happens, has his office abroad; then the Spouse, who by reason of her descent is still always called Sultana, remains, according to a fixed law, in the Residence. The man has, without her special permission, no freedom to keep co-wives; for more wives are not allowed to one who has a Sultana. This blood relationship with the Emperor also seldom helps him in time; for he can be deposed, sent into exile, and strangled by all this. If the fate of the children, borne by Imperial Princesses by their husbands, is sad, because they are sometimes deprived of Life after birth; yet the children of the female sex are better off: for they are allowed to live, and are called Kanum Sultanen (women of the blood). If such marry, then all their children remain alive. Sometimes the sons of the first are also allowed to live; but they have no rank or part in the Imperial Family. Besides, all this depends on the Sultan's caprice, according to whether he wishes to deal kindly or cruelly with his sisters or daughters. The object of these arranged marriages is therefore only this, to attract to himself the Estate of great and wealthy persons, to whom the Great Lord can under no pretense of right come; or to allay the fear which he must have from their prestige, acquired in the Provinces, since they must often come to Constantinople on account of their Wives, and one can always seize upon their persons on such an occasion. — No one may refuse the offered marriage; and, when he himself is married, he must, by the proposed union with the Imperial blood, repudiate his former Wife. As for the number of the Persons of the Imperial Family, as well as other things that happen in the Seraglio; these are for those who are not admitted to anything in person, Secrets that are covered with thick darkness. Of adult Princes and Princesses one knows from many circumstances whether they are still alive or not; but by new births, as well as deaths of young Princes, the people are greatly deceived. The former are often concealed, none of the women having been with child. The latter are kept hidden from the world, as long as it pleases; they are still counted among the living, when they have long since died and decayed. For these and all other Secrets the Engraved Ones are employed. These creatures, which no one of either sex otherwise assumes, or acknowledges as his own, are the secret motives of the Seraglio. They are of two kinds, namely, black and white. Among the white Engraved Ones is the Chief Chamberlain, or the Overseer of the Chafz-Ocla, that is, the Chafz-Oda-Baschy, the Chief Treasurer, Chafynehdür-Bajchy; the Chief Kitchen and Cellar Master, Kjilardschjy-Baschy; and the Casteschi of the Seraglio, Sheraydar-Agafzy. Their Chief is called Kapi-Aga, who is in a certain respect the Chief Court as well as the Regaejl??-master in the Seraglio. The blacks are most powerful; for they best fit the evils of the Seraglio; they also have less attractiveness than the white; and one wishes to have perfect monsters in them. From these is taken the Kislär-Aga or Chief of the Disciples, (*) who, after the Great Lord, is the most important in the interior of the Seraglio. This office, so contemptible to human nature, is reckoned among the first of the Court; for it permits immediate access to the Emperor, to the Sultans, and to the innermost of all affairs of the Empire and State. Everything lies and bows before him in the Seraglio, and even the Grand Vizier and all the Grands of the Court must respect him, and seek to make himself a friend. Under him he has a very large body of Chief Surgeons, among whom then their numerous bands are gradually distributed. His Secretary, under the name of Jafydschy-Efendy, is also an important person, especially because of the immediate influence on the Grand Lord. For the rest, according to true descriptions, nothing is more untamed than the disposition of these Emasculates. Because they are not only, at some time, cut off, but also that which is wholly taken away from them, by which nature has wished to distinguish the two sexes from each other; so they betray on all occasions, that they have expelled themselves from humanity, and renounced human nature, since they are neither married, (*) nor can ever expect a Family; so all those who show inclinations of tenderness under their care, are the hated objects of their jealousy and envy. They have been treated unmercifully; therefore they endeavor, by mercilessness, to make themselves harmless. Noted that they have abandoned all blood relationship, because they were taken from their parents at an early age, and they can hope for no new kindred; thus they are alienated from all natural connection with men, and a filthy avarice, ambition, and pride rule their souls. In order to burn incense to these idols, the very lowest means are chosen. A cowardly flattery towards those who are above them, a blind obedience to execute their most unreasonable commands, the deepest silence, filthy calumnies of women and other persons under them, the fostering of disputes among them, and an inviolable loyalty in all this are their own. To these Servants, who seem so necessary to the Turkish Court, belongs, besides some old women, appointed to oversee the Seraglio, another class of people, and these are the Mutes. The aforementioned Eunuchs would already seem to us very useless; but the Turks consider them as bars for the preservation of chastity and

marital fidelity, and the most capable among them occupy the place of teachers: but
32710 what should we think of the mutes? Nevertheless they have their use. It is not
fitting that one should speak in the presence of the Emperor, and in his vicinity.
There must therefore be mutes, who are such by nature, or at least have renounced the
use of speech, but are otherwise able to communicate the commands of the Great Lord
and their thoughts among themselves, by certain signs. And in this they would have
32715 come so far, without words, that, besides the imagery during the day, they could even
express their opinion at night, by touching their limbs. To this we must add the
dwarves, who are just as useless, do not observe serious matters, but merely occupy
the place of court jesters. As to these Dumbs and Dwarves; it all depends on the
Emperor's inclination and caprice, whether they be many or few, and whether they are
32720 esteemed or not. The Cooks, among whom the first is called Aschaschjy-Baschy, but the
Chief of all Muthpaech-Emyny, also form a Band of some hundreds: of them often become
great State servants; and it has happened, that one of them, who dissected the meat
into larger parts, came out the country's Courts as Envoy. It would be very wordy,
without any use, if one wanted to speak of the other Servants, for instance the cup-
32725 bearer (Kaedaehkjar), the ?? of (Tschaschnyghyr-Baschy), the Tschoadars, that is,
Chamber servants, Groomsmen and servants, the Ibrikdars, who offer the Great Lord the
lamps and basins before prayer, the Berber-Baschy or body-healer, etc. The Silahdar-
Aga (Sword-bearer in Chief), the Tschoadar-Aga (Grand Chamberlain), the Rikjahdar-Aga
(Sultan's Styrofoam-bearer), the Dulbend-Aga (who puts on his Turban), the Ibrykdar-
32730 Aga (Lampet-bearer), and the Berber-Baschy (first surgeon) are the first Officials in
the Seraglio. They are called, together with the other persons belonging to them,
Chafz-Odaly, that is, Chamberlains of the Great Lord. Their number extends to forty,
and the Sultan, whose person they serve immediately, is their Chief. Some, such as
the Bostandschy - Baschy (Head of the Guard) and the Equerries, with some others, are
32735 called Kpltuk-Wefyr, that is, Vizier,s of the shoulders, and are often made Pachas
(Bassas) of 3 horsetails. Besides these worldly Courtiers, there are also
ecclesiastical or Ulema, who at least become great Mullas or Kudileskiers, (chiefs of
the army), when they leave the Seraglio; namely the Hod??, Instructor of the Sultan;
the Hekim Effendi, first Body Physician; the Munejin-Baschi, first Soothsayer; and
32740 the Dscherrah-Baschi, first Physician.
To the Seraglio, although not so immediately, many important Servants still belong.
Of the Nischandschjy-Pacha, when he is of the Masse of the Pachas, because otherwise
he is only called Nischandschjy-Effendi, has been spoken of before, who must always
be near the Emperor. If the Grand Vizier has duties which separate him from the
32745 Emperor, then he appoints him a Nischandschjy-Effendi, (*) to express the Tura or
name of the Sultan. The Bostanschi-Baschi, having his name from Bostan, which in
Turkish means a Garden, is the Overseer of the outer part of the Seraglio and its
gardens, as well as the Chief Overseer of the entire Canal, and all the Imperial
pleasure-houses situated thereon. He constantly accompanies the Sultan on his
32750 pleasure-boat trips on the water, and keeps the rudder of the Imperial vessel in
view. He alone has, like the Emperor, as a sign of freedom, the privilege of wearing
a beard in the Seraglio, since all the others, like slaves, must shave it off, and
may only wear a moustache. Such a Bostanschi-Baschi is not only at Constantinople,
but also at Adrianople. He has many thousands of Bostanschi under him, who in a
32755 certain respect keep watch at the Seraglio and that pleasure-house where the Emperor
stays; they are also his rowers, and secret executioners. The Court Marshals and
Ceremonial Attendants bear the name of Tschausch, and the principal one that of
Tschausch Baschy, which, according to our title, one might well bring out by a Chief
Court Marshal, a Chief Master of Ceremonies, as well as a State Petitioner. To him
32760 are referred for decision the less important cases by the Grand Visier and the Kadhy-
Leschkjers (chief judges). The Chief Master of Ceremonies at the ceremonies in the
Seraglio itself is called Kapudschjylar-Kietchnadafzy. On such occasions he often
performs services at the same time as the Tschausch-Baschy, who is actually the
Porte-Master of Ceremonies outside the Seraglio. Under him are the Kap??dschy, of
32765 Kapu, door, and could be brought out by Doorkeepers; as they then actually keep watch
not only at the gates of the Seraglio, but also in times of war around the tent of
the Sultan, and are at the same time often the foreign executioners of the Porte. Of
these the Kapudschy-Baschy (Chamberlains) differ entirely. These are men of a good
Family, who do not belong to the inner but outer Court of the Seraglio. For instance,
32770 at the Audiences they conduct the foreigners into the Sultan's auditorium. Outside
Constantinople they execute the more important commands of the Emyr-A'lem, that is,
the Governor of a small Province. - The Chief Groom is called Bujugh Emyr Achori, the
Under-Groom Kjutschugk Emyr Achor; both in general, in a corrupt pronunciation,
Imbrahor. The training school of all high and low Court and State offices are the

- 32775 Ytsch-oglaus, Chamber servants, Pagiën or Youths, to serve with the Prince, and to pass over to State offices; and the Adschjam-oglaus, Youths for lower duties. The former are under their Chief Oda-Baschy, and the latter under the Bostandsckjy-Baschy. From these are taken the Bastandschjys, as well as the Baltahdschjys or Hellebardiers, a kind of Guards, provided with axes, whose Chief is called
- 32780 Baltahdschjylar, Kjetchada. Both enjoy, among the Gesnedenen, an unusually sharp and strict education in the Seraglio, especially to teach obedience, silence, and moderation.
- They are kept under a severe restraint, for the slightest misdeeds, they are punished with flogging, and after the years of apprenticeship the former, as has been said,
- 32785 are even raised to the highest offices, but the latter are destined for the low, and are raised to Bostandschjys, Kapudschjys, etc. The actual State servants live outside the Seraglio, appearing there only at the time of the Divan. For the rest, no one is allowed in the Seraglio, except those summoned, although admission is also granted to the Doctors and such Christian and Jewish women who have galantries to sell. Where
- 32790 there are no fixed characteristics that reveal one's sex with certainty, or because of a familiar intercourse; there one is kept outside, or sharply investigated beforehand. But, if they are allowed in; then they are accompanied everywhere by the Genedenen, and kept in view, so that no Secrets may be discovered or heard, or anything else may happen that one does not want to tolerate. And hereby one can
- 32795 understand, why it always remains Secrets to the world, what actually goes on in the Seraglio.
- (*) The Kislär-Aga and other prominent Ge??n have, likewise, their Haerem, (women's residence), but not for their need, but because their Dignity and the Character of an orthodox Mohammedan entail, to have wives. These poor women are very bad at it. All satisfaction for their suffering, which they have to endure from their emasculated husbands, consists only in riches. (*) The Kislär-Aga and other great Gene??n have, likewise, their Haerem, (women's residence), but not for their want, but because their Dignity and the Character of an orthodox Mohammedan entail, to have wives. These poor women are very bad at it. All satisfaction for their suffering, which they have to endure from their emasculated husbands, consists only in riches.
- 32800
- 32805 (*) The Nischandschjy is in this respect nothing, what a Grand-Chancellor is with us. As a State servant he properly belongs to the Divan. His post gives more Honour, than advantage and influence over others, unless he is a Favourite of the Emperor. Nijl??ian gives a sign, and here the drawing of the name.
- 32810
- §. XXXVI. Of the Turkish State Servants.
- In Turkey, with the exception of the Imperial Family, there is no distinction between the Families. Consequently, no one serves, in fact, his descent, to recommend him.
- 32815 One finds only exceptions in this respect among the descendants of Ibrahim-Chan-Oglu and Kjøprogli-Oglu, none of whom ever accept public offices of honour, but do not refuse them so sternly. The former descend from the Grand Visir, Ibrahim, at the time of Mahomed I, who, after his death, was succeeded by his successor Amurat II very deserved, received the Title of Chan, with the privilege, that his Family should be
- 32820 free from all the Offices of Honour, which are so dangerous in Turkey, and usually involve the loss of Life and property, and not, like the Turkish Emperors, mix with foreign blood, but might propagate themselves through slaves. The latter descend from the famous Grand Vizier Kuprogli, and content themselves, without accepting Offices of Honour, to be Mutewellys of their property, which are all Vakuf. But both Families
- 32825 are, nevertheless, at Court and among the people in the greatest respect. — Each serves therefore from below, and, according to Providence, which of unknowing men by the word, happiness, so often forgotten, governs the fallen in the world, so he rises or falls. Of which nothing is more common than to see the children of the meanest people raised to the dignity of Visiers, but those of the great placed in needy
- 32830 circumstances. One would therefore think that, as hardly any one is educated in youth, except in a remote way, to what he will become in time, the places were very poorly filled; and yet one is mistaken. A little experience, which they gain in filling various offices, enables them, with a naturally good understanding, if they are not corrupted by malice, self-interest, and other views and vices, to fill with decency the higher offices of honour, of which one sees constant examples there. Nor does the manner of government suffer at all by such changes, noting that the subordinate officials, who are trained in business, remain, or even rise, and thus become the leaders or assistants of him who first received an office. Then, from this one might form a wrong idea, and imagine that all offices were given according to
- 32835 merit. This had to happen; but money decides for each. No one can get to a place, unless he makes presents to those on whom the recommendation at Court or the appointment itself depends, according to the offices of honour. Now this is, among
- 32840

many other circumstances, one of the principal reasons for the falsification of Turkey. Everyone must think of four kinds of expenditure, partly to get an office; partly to maintain his rank; partly to be able to exist afterwards, until he gets another, because the offices, usually, are only forgiven for one to three years; partly finally to be able to bring in the gifts again in order to obtain a new office. What source is left for him, therefore, to make up for his loss? None other, than the most hideous extortions, injustices, or cunning deceits.

The Divan is the highest State Council of the Turkish Court. It is generally held, twice a week, namely on Sunday and Tuesday, (*) and before noon, in the hall of the second Court of the Seraglio, which is therefore also called the Divan, as well as Kubbh (Dome in a special sense). The number of its members is not always the same, but depends on the time and the circumstances. The Grand Vizier presides therein, the Mufti only appears there when he is expressly invited to do so. The Aga of the Janistas, the Spahilar-Aga, Silhadar-Aga and others keep to the door outside the Divan. Each in particular then appears in his official robes. — In times of war extraordinary council meetings, which are there called Muschawaret, are also held by the Mufti, in the presence of the Emperor. Therein are present the Mufti, Kaym-Maekam, (Vicar of the Sultan or Grand Vizier) Reys-Efendy, (Chief Secretary of State) and some of the Chiefs of the Uelema, (Scholars of the Law) as well as the two Kadhy-Leschkj'er, (Chief Judges of the Army) and the Istanbul-Efendy (Secretary of Constantinople). The great council meetings, in which at the same time the civil Councils (Khodschjah-Aefan) and the Chiefs of the various warring nations are consulted, are held in the Seraglio, or with the Grand Vizier. But the first and usual Divan, which bears the name of Galibî-Divan, is distinguished from that in the Palace of the Grand Vizier, in a room open on the fourth side, called Divan-Chane. In Zen he usually presides himself, and on Mondays he has the Mullas of Ejub and Scutari, on Wednesdays the Stanibol-Efeniy, on Fridays the Kadile Kiers of Rumelie and Notolie, and on Saturdays the Mulla of Galata to Bystanders. Here are lawsuits settled, and the Spahis paid; whereas on the contrary, in the Galir be-Divan the payment of the Janistas is made. For the rest, the courts of the Mullas or Kadis are called Mechkeme.

The Grand Vizier (Visir Asem) is the most important of all the State servants, and his Dignity is equal to that which Pharaoh gave to Joseph. (Genesis: XLI 40 etc.) His Title, as well as that of the Emperor, is in the m?? far exalted, above what we call Highness and Majesty. One finds, for example, the following Titles in the Imperial written answers to him: "Most honorable state, most excellent Counselor, Governor of the world, Ruler of the State in a lofty way of thinking, Executor of human affairs with an attack that reaches the target, Guardian of the building of Ottoman well-being, Builder of the foundations of Ottoman Majesty, Dispenser of the Dignities of the highest Calyphat, Executor of the law of the greatest Empire, the Forest Lion in war, the Mountain Lion in battle, who is loaded with many favors and benefits from the highest King, etc." Many an Emperor has not been distinguished from the Visier in much more than name, unless he were known as Mustapha III in the last years, the power itself reserved. He is as the born Generalissimo of the Army. At the Courts of Europe nothing comes near his Dignity, and the so-called Premiers Ministers (first Ministers) are scarcely a shadow, compared to him. He executes the most important things, using, at the most, only the Emperor's name. As the Imperial Seal Keeper, he wears the seal constantly around his neck. Hanging it with it constitutes his appointment, and taking it away also his deposition. Without further inquiry and account, having printed this seal, he executes all orders for the Empire. He may indeed be appointed by the Sultan alone, but often the Sultans, the Grands of the Seraglio, and often even the Janistas, or the people of Constantinople, may bring much or little to his appointment. Everywhere he is the real Governor of the Emperor. On the water-tours he accompanies the Sultan, but is nevertheless never with him in one and the same barge. At the regular meetings of the Divans he must appear at the Seraglio, and is, besides that, invited there to the secret conversations with the Emperor. In this last case he is accustomed, when the circumstances are dire, to prepare himself for death before he goes there; for it is often the place of justice of the Grand Viziers. The gates of the Seraglio are closed after he has been admitted; then it is a sign that his life is over. Those who are next to the Emperor, such as the Sultana-mother, the Kisler-A'ga, the Bostanschi-Bafc??, and other favourites, he tries to oblige by services, and especially by gifts. He must also do the same to the Grand Lord, several times, for the trifles, which he receives from him. For this now his fixed annual salary would not suffice; for that can be estimated at 80 purses, or 40 thousand piastres; but his other income amounts, annually, to several millions. All requests of subjects, especially the gift of

offices, bring in so much, that, if he holds his post for only a short time, he leaves behind a treasure of several millions. His Court is in fact Kingly. But all this Highness is very uncertain: because in his Person all the Offices of Honour are united, and he is the highest Judge, the supreme governor of domestic and foreign affairs, and the real General; so he has an astonishing responsibility, and innumerable enemies against him. — During a campaign the Emperor, in sight of the army, takes one of the three black and beautiful Candid heron plumes fastened to his headdress, and puts it on the Turban of the Grand Vizier. This is a badge, that he commands on the Emperor's side, and the army therefore shows him the same obedience. Happy is he, when he is only deposed, and banished to an island of the Archipelago, or to another province or city of the Empire, with or without confiscation of his goods. But he is seldom so happy. The strangulation usually puts an end to his Life. — As dangerous as such a Dignity seems to be for a chief Empire; so advantageous is it for the Turkish. The Grand Vizier, in case of rising riots, is like the Sultan's stab, against which he can stop all attacks, when he throws the blame for the supposed or real irregularities on him, and then makes him the victim of the Rebels. Because it would be impossible in the meantime, in such an extensive Empire, to observe so many things; so he has, like most State Servants, two Kihajas or Governors. The chief adds him Emperor, and by him is called Kjetchuda Begh, but the other he accepts as an accomplice or Kjetchuda himself. After the Grand Vizier there were formerly six others, who were only called Vizier,s, or Kubbeh-Welyre, and were the real State Councilors. They had their seat in the Divan, saying their opinion at the questioning of the Grand Vizier, and had only to carry out the things which he charged them with. But Ibrahim Pascha considered them disadvantageous to the Grand Vizier, persuading, under the pretext of saving expenses, Muhammid III, to make them depart for the most advantageous Stadtholderships. Otherwise the Porte still gives the Title Vizier,s to all Bassas of 3 Horsetails, and these only, because they are so by virtue of their Stadtholderships; for the word Wesyr (Visier) signifies one who carries out the Prince's command.

Of the Mufti, who is the first Counsellor in matters of Religion and State, § XXXI. has already been treated of.

A Bassa or Pascha is, hereinafter, one of the principal State Persons. This word, Pascha, is composed of the words Pa, (foot,) and Scha, (great Regent,) and therefore signifies a Governor of the Prince. Such a one is indeed appointed by the Sultan. but in his appointment the Divan, and especially the Grand Visier, nevertheless has a great deal to say. A lesser one has two, but a more important one three Horsetails. The latter are also called Beglerbeks, Princes of Princes, from Beg, Prince; although three of them in particular receive this name, namely those who have their seat at Sophia, Kutaja and Damascus. The Beglerbeg of Sophia is called Rumeli??, that of Kutaja Anadoli?? and that of Damascus Schaem-Begler-Beg. The origin of Horsetails is said to have originated from the invention of a War Hero, who in a battle, when the standards were lost, cut off a horse's tail, stuck it on a pole, and kept the soldiers in order with it. The Turks call them Tugs. Such a Tug consists of a long pike, at the top with a golden apple, from which a white horsetail hangs down. When the Sultan takes the field in person, he must carry seven such Tugs or Horsetails before him; the Visier has, as a rule, but three, as do all the Bassas of his rank, whether they be Sfer-Askjir (Army-Chiefs) or not; except in the case when he is in the army, when, like the Tartar-Chan, he has five. On journeys and when entering cities they have them carried before them; and in the army the tents of the Bassas are distinguished by the number of these tokens of honour erected before them. — These Bassas are civil soldiers, and commanders over larger or smaller Provinces, and are therefore called Baschalics. They are indeed accustomed to be changed several times every three years, here and there. The Baschalic of Babylon (Bagdat) is the most considerable, and its Bassa has even opposed the Emperor. The principal Bassas have indeed the dignity of a Vizier, but have nothing to do, than the Stadtholderships of their Provinces, which were formerly Kingdoms, as of Babylon, Cairo, Diarbekir, etc. The journeys of the Bassas through the Turkish Empire are uncommonly desolate, being, namely, often, done with small armies. These they keep at their own expense, partly for their bodyguard, partly to have their orders most strictly executed. Their cavalry is called Seradsche, and their infantry Seimen. During these journeys the Tschaus-Baschi goes before with a horse's tail, sticking it up at the Konak, that is, at the place, where one wants to rest and stay the night. On the arrival of the Bassa, the second and third horse's tail are also stuck up. During these journeys they must be kept free from the places through which they pass. Is it not known that the Bassa maintains a very strict military order; then everyone runs away, except the inhabitants of the cities, leaving house and yard, and whatever

32975 he cannot take with him to the mountains or elsewhere, behind him. If he therefore
keeps a day of rest somewhere; then he sets out to places, where there are no equal
or greater Commanders than he, his Divan or court, to hear legal cases, ??rest, etc.
and the usual courts must be silent at that time, and approve of his actions and
omissions, which causes an astonishing confusion, not to mention the crying
32980 injustices that are then committed. If, after complaints have been brought in, he is
deposed by the Porte, and also strangled; then the Sultan approaches all his
soldiers, who have been discharged from service by the death or deposition of a
Bassa, and Kapuszies, that is, people called outside the Porte or Palace of a Bassa,
then go in droves, and plunder the Provinces. After the Bassa comes a Beg or Bey.,
32985 and then a Sandschiak. A Bey has two horsetails; the Sandschiak but one horsetail, or
one banner, as this word also means. And a Sandschiak-Beg is someone who has a Fief
or a small Stadtholdership. In Jerusalem there is no Bassa, but a Sandschiak
appointed, who indeed does not have his qualities, but otherwise observes the same
duties, and possesses all the privileges, whereas the Sultan himself, under his own
32990 Titles, uses the name of a Stadtholder of the Holy Places. Although it is now, that
the Begs (Beys) and Sandschiaks are lower, than the Bassas; they nevertheless have
their Dignity, immediately, from the Porte. The deposition of a Visier or Bassa takes
place in the following words. "You, for instance?? Ibrahim! so notorious are your
crimes, that you are absolutely guilty of death, and are condemned to it.
32995 Nevertheless, we want to acquit you of this, by an operation of our grace. But the
high command, proceeding from us, is, that you raise the Dignity of Vizier (Bassa),
and go to the place of your exile Candie etc." All offices of honor, except the Grand
Vizier and the actual Courtiers, are, usually, forgiven by the Divan, under the
Emperor's ratification. It is the same way with Captain Bassa, who is actually the
33000 Grand Admiral of the Empire. As such he is also a member of the Divan itself. This
place he seldom holds longer than a year, and is the Chief Overseer of the Sea State,
of which he usually understands nothing. His rank depends on whether he is Bassa of 2
or 3 horsetails. If he has 3 horsetails; then he is called Denies- or Derja-Begler-
Begh, that is, supreme Prince of the sea. His main work is the summer voyage to the
33005 Archipelago with a part of the Turkish fleet. For this purpose he receives an
Imperial plenipotentiary power, which has its force as soon as he is outside the
Dardanelles, being drawn up in such high-flown terms, as if the Pagan Poets spoke of
Neptune. The purpose of this voyage would be to exercise the fleet, and to receive
the Imperial revenues of the whole Archipelago; but otherwise he holds judgments
33010 there, as well as in the ports and sea-cities, like the Visiers and Bassas at their
places, and exercises justice.
The Defterdar is the Chief Overseer of Finance and of the 12 Chancellors under him,
and the Grand Treasurer; but the Kasnadar-Baschi is the proper treasurer of the
Sultan for his special Fund; and both are, according to the nature of things, only
33015 civil persons: just as the Aga of the Janistas, before he is made Bassa, is a proper
soldier. He is, in times of peace, always at Constantinople, figuring, as General of
the Janistas, especially in times of commotion, a distinguished person, according as
he joins one party or another. He alone is the Judge of his soldiers, and lets them
be arrested according to their merit, likewise appointing the Serdars or Under-
33020 Janistar-Agas to other places. The Spahilar-Aga is the General of the Horsemen. The
two Chief Judges or Cancelliers of European and Asian Turkey bear the name of Kadhy-
Leschkjers. (*) These have their rank after the Mufti, and often take his place: they
are called Judges of the Army, because it is judged by them alone. In the part of the
Empire under them they appoint the Kadhys. or Judges. The Reys-Efendy, who is also
33025 called Reyful-Kittal, that is, Director of writings and Cancellary, is the Head of
the Chodschjah-A?jan, civil-councilors and Secretaries, and the Court-chancellor and
Chief-secretary of state. He thus directs and executes both the domestic and foreign
Cancellary affairs. The Teskjerehdschjy (writer) is like the Sub-Reys-Efendy, in
whose custody are the registers of the Cancellarye. The Istanbul - Efendy has the
33030 supervision of the means of subsistence in Constantinople, in order to prevent
dearness and fraud concerning it. He is thus like the enforcer of the City laws, only
one degree lower than the above-mentioned Kadhy-Leschkjers; and, what these are over
European and Asian affairs, he is over Constantinople. The Reis-Kitab is the State or
Secret Writer of the Sultan. The words, Mulla and Kadhy, indicate almost the same
33035 person, this difference being only that the first has a higher rank, namely that of
Chief Judge in civil and criminal cases, and which is also, often, the Governor of
large cities, but then is changed annually; note the Arabic word, Mulla, a Governor,
just as Kadhy means a Judge. They must be Learned, and in the laws and customs of the
Empire, which are everywhere the same, well practiced. They have a great power; for
33040 their sentences are, furthermore, carried out both until further notice in civil, and

absolutely in criminal cases, whether death or other life sentences. Their accommodation is at the Mechkjeme (Town Hall). Upon their arrival they must be entertained for three days, at the expense of the city. Each of them keeps a Kiaja or Advocate, and states, when he remains absent for a longer time, a Naib or deputy, who, in that absence, is a sub-judge, and also the real scribe. Under the Mulla or Kadhy is the Moslem, who executes the sentences of the court, and could not badly be called a Commander under a Governor. His appointment seldom lasts more than one year. Wherefore also every Bassa has a Moslem, who differs from his Kiaja in that he accompanies him everywhere, and passes judgment under him, which a Moslem only does in his absence. An Aga generally means a Chief, as Janista Aga, Meimar-Aga (Chief Architect), etc., but in the Provinces it is the commander of a larger or smaller circle, or only of a village. Baschi also means a Chief, as Tschaus-Baschi, but of less importance than Pascha. Efendy is an honorary title of all kinds of State persons. All these honorary offices are, in Turkey, of great importance; each requires a sort of court retinue, and the power, to judge about life and death, without inquiry of the Court, goes with it. It would be useless to speak of other further offices, which, by reason of necessity, take place among the Turks as well as among us, and to give an extensive register of Turkish titles. But of 2 honorary offices, mention must be made, in the right understanding of the reports in the newspapers and elsewhere, namely the Sfer-Askyr and Kaym-Maekam. A Sfer-Askyr is a General-Field-Marshal; a Dignity of very indefinite power, which on special occasions, especially in times of war, is conferred by the Sultan upon the deposed Grand Vizier or Bassas. For the actual Grand Vizier, as long as he is really such, cannot be made a Sfer-Askyr, since, according to his Post, he is already the natural Generalissimo. Rather, he has to command a Sfer-Askyr, and can even depose him; but must then be assured of the Sultan's approval. A Kaym-Maekam is the substitute of a Grand Vizier, who, in his absence from Constantinople, or upon his deposition and death, is appointed, in case the Emperor cannot then decide to appoint a new one: wherefore this Dignity also ceases upon the appointment or presence of the Grand Vizier. He may not decide on important matters, unless they suffer no delay, but must await his orders beforehand. Moreover, the Emperor also appoints, in his own absence from the Residence, a special Kaym-Maekam, to whom he then, within Constantinople, is accustomed to give a power almost equal to that of the Vizier,; but whose reign also ends upon the Emperor's return. According to the nature of the case and the meaning of the word, there can be no permanent Kaym-Maekam.

(*) Under the reign of Mustapha III, the Divan was held only on Tuesdays, and only once every 2 or 3 weeks, to collect the large coins that are made from the special treasure of the Sultan's {Ciafyiehj estate, as which, every journey, on account of the Pilait fry?? for the Janistas, and the tables of the State servants, amount to about ?? purses.
 (*) Selim I did indeed appoint a Kadhy-Leschkjer in Cairo. But he is not so much a third party, as the Great Kadh?? of Egypt, whose jurisdiction extends also over Arabia, Syria, and some parts of Armenia.

§. XXXVII. Of the civil condition of the Turkish Empire in itself. The foundation of the entire civil condition is the Koran, which, as has been said, like the books of Moses among the Jews, contains not only the prescriptions of religion, but also those for worldly government. But, because its style is broken and does not cohere, the decision that must be derived from it in doubtful cases is so uncertain that one and the same place is made the basis for completely conflicting decisions. Moreover, its pages bend, without great weight, to the weight of the money offered for the settlement of a case: not to say, that the Koran, which at first was composed only for a small group of Arabs, is very defective in the great empires which subsequently arose, such as, for instance, the Turkish, and therefore has had to be explained and made more complete by a multitude of Commentaries. – Certain Travellers have indeed reported, that, besides the Koran with its Commentaries, the corpus juris civilis Romani, as well as the Codex of Justinian and Theodesius, had been translated into the Turkish language, and were taught in the schools; but I have been absolutely assured that neither the Arabs nor the Turks have ever thought of such a translation, since in Jurisprudence they refer solely and exclusively to the Koran and the Fetwa collections or legal expositions on all sorts of cases, which their principal Kadhys have drawn up. These Fetwa books are therefore legal prescriptions and questions, which have been collected with their solutions and decisions. And, since these are all known to Jurists, the disputing parties need only turn to the Fetwa-Emyny (advocacy of the Mufti), and demand the solution of such or such a legal question. Generally they providethemselves with several Fetwas for all those cases to which their cause could be subject, and they present them before the

Judge, according as they think they fit the circumstances of their case. It is the Judge's duty to decide whether or not the Fetwa presented to him can be applied to it. These Fetwas therefore always correspond with their law, and are therefore considered sacred. Should one party lose the trial, although the Fetwa was in its favour; then the reason is that it was not judged applicable to the disputed case. And so it is the same with it, as in other places with the legal Consultations. — One poses, according to the collected regulations, the question in a few words: for example, whether this or no act deserves death? whether one may announce war to a Power that has behaved in this or that way? The Mufti answers, below, to the question presented to him, with the single word: Olfun! (yes! — one can,) or with the negation: OU mas! (no! — it cannot be done!) without adding a further signature, because without such a one these Fetwas already bring with them the marks of their legality, marked they agree with the Fetwa books and regulations, which are in the hands of all jurists, and can be secured from each one. — For the rest, the Turkish administration of justice is not entirely like the European: now it seems more advantageous; but then again more disadvantageous. For the most part, the cases are settled very quickly, and further. A poor blood, in legal complaints, often has the advantage over a well-to-do man. The former is safe, but the latter is burdened with the payment; and the former, often, wins with the Judge at the same time. Yes, the false accuser is never punished; but perhaps still has use for a false accusation; and this is the reason that naughty people gladly let themselves be used for this. Every man is his own Advocate, and cases are more settled than decided. The saddest thing is when in a dispute it comes to witnesses; for for little money one can get as many as one wants. Yes, many Turks consider it a merit to take false oaths against Christians and Jews. But when an oath has to be taken, then the Christians must lay their fingers on the Evangelists, the Jews on the law, and the Mohammedans on the Koran. Otherwise money has the strongest influence on the Judges, who are mostly only for one year, and must provide for the future Existence. The written judicial records are short; the disputing parties pay not nearly so much, because of sealed papers and salaries to advocates and solicitors, as in other countries. All judicial decisions are sealed by the Judge with his own signet. When these are shown before a higher Court in proof of what has been decided, then the seal is left with the Mufti; for with him are found the impressions of all the signets of those who have been appointed Mulas or Kadhys. A Ylarn or judicial decision is signed by no one but the Judge alone with his Signet. Other judicial writings, such as Contracts, etc., which come before the Judge, bear the name of Hudschjet, and are, according to the cases, sealed by witnesses, or rather their names are expressed under the writing. Other, decided among private persons, are, sometimes, ratified by many seals or signatures, and then one can say: it seems that their number gives them a greater force or emphasis. For the rest, the judicial writings always retain their generally accepted form and simplicity according to the form and usage. — In all Processes, the tenth part of what is disputed belongs to the justice. They can also be renewed at greater or lesser cost, at a constant pace, upon the arrival of a new Judge, or upon the passage of a higher Judge. If a Trial is renewed by new witnesses or motives and pretexts, then, however, the first sentence passed is considered true and legal, with respect to the reason presented therein. It is never heard to be said that a sentence passed was unjust. That would be considered blasphemy. Nor can one find any example of a sentence being quashed as unjust, unless it had been pronounced by an ignorant person, who had not known how to observe the formalities required for it, namely, to reconcile the decision and the application of the law with the previous judicial investigations presented in the sentence. But the injustice is committed in the organization of the Trial. Incorrect circumstances are stated; the case is presented in a completely different way than it actually is; and the parties are allowed to speak to the witnesses, as they think fit, in order to achieve the aforementioned goal. The worst evil of justice is the Avani, that is, someone can summon me to court without any semblance of right he wants; I am responsible for it; great expenses are demanded to release me from it; and if it concerns money and goods, then I must often consider myself lucky if I get away with the payment of the tenth part: this also includes that a house, a neighborhood, a region remains responsible for a murdered person for so long, and, where there is a blood avenger, must pay the blood money, until the actual perpetrator is discovered. These Avani are, in fact, not subject to the Europeans, because they are released from them by treaties; but examples to the contrary are not entirely lacking, and one must seek to prevent them, with a gift, before the outbreak.

For the rest, the City Servants can maintain their duties, on the spot, with great sharpness, if they were not, as everywhere, also in Turkey, bribed by money and

yeast. But here and there punishments are exercised, which one must wonder about, and
33175 by which, in an otherwise so badly constituted country, the frauds are still fairly
counteracted. For example, 'an unexpected investigation of weights, measures,
merchandise and provisions takes place. If irregularities are now found; then, if one
sees that action has been taken, the fraudster is laid on his back, and receives,
33180 besides other punishments, usually 100 lashes under the soles of the feet. Criminal
cases are also dealt with much more quickly than with us. Criminals are not allowed
to eat useless bread for so long. Lesser crimes are punished with lashes under the
soles of the feet. Among them the Jewish law still applies, to give forty lashes less
one. But this divine forbearance of punishment is destroyed by the Turks in another
way; for they only allow 39 lashes to be given at once, but these by repetition, so
33185 that the criminals die under these lashes, or afterwards. Dishonorable women, false
witnesses, and people of a bad stamp are mounted backwards on donkeys, led through
the city, and then mostly banished from that place for their lives, or for certain
years: although this seldom happens, because otherwise the Judge would soon be
deprived of the means of getting money through the disappearances of such people. A
33190 more severe punishment is banishment from a place to this or that island, where the
banished must remain, until he is, possibly, recalled from there. The death penalty
is something common in Turkey: but money can also ward them off. This latter occurs
especially in the case of manslaughter, if it can be shown that it was committed in
haste and in the course of some dispute; but it is more seldom sustained if it was
33195 committed treacherously; and in such a case it usually depends on the consent of the
relatives of the dead, whether the punishment shall be completed by the forfeiture of
life, or by a blood-money. If any one kill a married man, then such a one is also
condemned to marry his wife. The Turks laugh at our formalities, courts,
executioners, etc. If someone, for example, has to be hanged; then they hang him on a
33200 tree or house, or other place, where the theft or murder has been committed, or on a
place where they think it good. In the latter case, they erect four wooden ones,
almost in the shape of St. Andrew's crosses, put a cross over them, and hang the
criminal on them without any circumstances. The first, the best one hangs him, and if
'possibly, not one more' offers to do it, then someone from the crowd, or a passing
33205 traveler, is forced to carry out this good work. If he is faint-hearted in doing so;
then he is still ridiculed, or ill-treated, for which reason the Christians and Jews
do not like to be present at such punishments. (*) Although the punishments are now
so severe, there is nevertheless, except for the cities, where houses are only
slightly kept, and of thefts in actual fact seldom heard, of street rioting and
33210 murders there is no end. A city or a village, or even a whole district must 'assure
it; but the Commissioner of the Porte puts the tax imposed on it in his pocket; the
murderers or robbers flee to a distant Province, and the offended or his own is not
compensated for the damage. Insignificant people are even impaled for gross crimes.
Prominent people and the Janistas are strangled, and either buried further, or their
33215 heads cut off, and left unburied for three days. In general, no criminal who has been
put to death remains hanging in the open air any longer. The heads of rebels are also
sometimes sent to the Porte from the most remote provinces. The slain or put to death
are usually buried on the spot where they were killed or slain, unless this may have
been done in houses or towns, and two oblong stones are erected, one at the head and
33220 one at the foot. A number of such burial places are found on the roads of the Lord.
Burial places are even sewn into a bag and thus thrown into the water. The stamping
of the head in a mortar would actually be the punishment of the Muftis and Judges;
but that is no longer in use. (*) That the offices of honour and offices are
purchased throughout Turkey, or at least obtained by gifts, has already been noted.
33225 This brings in extraordinary sums. The Kadi of Smyrna alone pays for his Post, which
lasts only one year, more than 40 purses. Of corn, oil, wine grapes, etc., the tithes
must be paid, which the Porte leases to the Agas and other persons. The tolls are, as
has been said beforehand, perhaps the fairest in Turkey. The Turks and Europeans pay
three in all, but the land registers and Jews five per hundred. In trifles it is not
33230 even taken very seriously. On the other hand, the right of inheritance is a crying
injustice. He who observes this for the Great Lord is called Beytul-Maldschy. (†) If
there are male heirs present; then, in fact, the tenth part should be paid. But,
because the Beytul-Maldschy values everything very highly, on the other hand, has
himself paid in cash; in that case the tenth part goes double. If there are only
33235 children of the female sex and a widow; then they may consider themselves lucky if
they keep the tenth part. If there are no children at all, or very close friends;
then parents, if they do not want to sell their goods, are accustomed to adopt
someone for a child. This last is done mostly by the country Christians. They choose
a child according to their wishes, and bring it, if it still has parents, with them

33240 before the government, to legally adopt it for a child. Those parents then also solemnly relinquish their child, and it cannot be disinherited again. It is called a child of the soul. (*) Besides these inconveniences, to which all the inhabitants of the Turkish Empire, without distinction of religion, except the Europeans, are subject, the native Christians and Jews feel a special one, and that is the Charatz.

33245 By virtue of the payment of this, as a head and ransom, all those who are not Mohammedans or Europeans, retain their freedom of religion. The female sex never pays this, but the male sex only, from the 14th year onwards. It varies according to the state and the goods, amounting, annually, from one to 4 Turkish Zechines, and of that kind, which is called Dschindscherli. If one makes a small assumption about these

33250 submitted documents, and considers that the Great exploit the Small, and that the Emperor finally takes everything away first, or by confiscation, and finally that these, except for the expenses of his Court, the military affairs and the soldiers of the Janistaries, are deducted from his income, which is so astonishing

33255 end his, spends nothing, but leaves everything in the treasury; then one can easily imagine how full it must be. According to the Turks' own proverb, the Imperial Treasure is like a water-bowl in a valley, from which indeed everyone draws water for his need, but which soon falls back again. The usual treasure is kept in 4 chambers, (*) but the whole remains in bags, in each of which are fifteen thousand Zecchins, and which are placed in strong chests, in a subterranean vault. The chests, as they

33260 are filled, are closed and sealed, and not opened until the necessity of war demands it; in which case the treasure of the Mosques is also allowed to the Emperor, but only under the pretext of defending Religion. And such a one is very easily found, because according to the opinion of the Turks, everything that opposes the Sultan, as Mohammed's Governor, is considered unbeliever, and therefore every war can be

33265 considered a matter of religion. For the rest, the policy with which this Empire is governed and maintained is strange. To the highest offices of honor come either bought, or slaves stolen in war, or other persons drawn up in the Seraglio, who know nothing but an indefinite subjection to the Sultan, and who, because they rarely have considerable families as

33270 next of kin, can all the more easily be deposed, banished, and put to death. The offices remain in the hands of one person only for a short time, and the children of the First Names rarely attain to a Dignity. The slightest faults, even the slightest insincerity, are punished most emphatically as crimes of the State. If one has something to fear from the subjects because of a Judge or Stadtholder, wealth,

33275 prestige and acquired love; then he is now publicly, now again cunningly humiliated. All those subjects who are not Turks, such as Christians, Arabs, Turkmen, Druses, etc., are emaciated by extortions, provoked disputes, and other tricks and tricks?? The Provinces, which form the boundaries of the Empire, are devastated, and the inhabitants thereof drawn to the inner States. To what extent the Princes of the

33280 Blood are kept from rebellions, and the Princesses are used for the downfall of the Great, has been indicated beforehand, § XXXV.

(*) There are examples of a strange judicial procedure, when field mice or other vermin devastate the country. In the years 1760, etc., the region around Smyrna was visited by an

33285 astonishing number of locusts. The complaints of the inhabitants became general, and the then Mula Helde set to work the following judicial procedure: He had the magistrates summoned, sent a Muhdhir or Summoner, summoning the troops and bands of locusts before the Divine court, to be tried against the inhabitants. This having been done three times, but in vain, he declared them, in his judicial sentence, to be rebels against the Divine laws and the Judge, and gave everyone freedom to exterminate them. Scarcely had this been done, when the air in the city was darkened by the locusts, which covered the roofs, houses, streets, and the sea-bay to a considerable extent, and were either drowned, or else killed. Their defeat caused a horrible slump.

33290

(*) The great mortar, in which the head of a Mufti, it is said, was once vaporized, is still

33295 in Constantinople, but is overturned, and is now unfit for use.

(†) Beytul-Maldschy is an Arabic word, signifies one who provides for the Fiscus, in a certain respect a Fiscal, or household goods-leaseholder. In the appointment of such an Official there seems in itself nothing unreasonable. By this means an inheritance will be secured for absent heirs, and they will be handed over to them, after having proved their rights, against a fair

33300 compensation for the trouble. Whoever occupies this place, leases the Sultan's rights to the hereditary estates, so that the profit arising from it is legitimate, and does not seem to correspond with what takes place elsewhere in a different form.

(*) The main provision, which is made to the Sultan by the inheritances and estates, consists in the fact that the heirs enter into a treaty with the Myry; not to say, that the women are

33305 usually allowed to keep their matrimonial property, and the children something for their education, and also the fixed property of their ancestors.

(*) Actually there are 2 treasuries in the Capital. That which belongs to the Emperor in particular, (Chdfyneh) is in a part of the vaults of the Seraglio, which the Sultan inhabits.

- 33310 The Treasury or Finance Chamber (Myry) (is under the management of the Defterdariat, and serves to defray public expenses. This is often exhausted, whereupon a loan is made from the former, which is afterwards made good. Many Sultans have also collected a special treasure, a legacy.
- 33315 §. XXXVIII. Of the Political Condition of the Turkish Empire, with Relation to Other Countries.
- 33320 The external condition, or the relation of the Turkish Empire to other States, also deserves a special explanation. With which European countries the Porte has concluded peace treaties, is mentioned in § VII. The King of France, Francis I, preceded the other Christian powers in an alliance with the Turks, and in the year 1535 concluded the first Commercial Treaty with the Porte. Most European Powers followed him: and with Persia, as well as all African Countries bordering on the Mediterranean Sea, the Porte also maintains friendship.— It has cost many of the European Princes great
- 33325 difficulty to purchase peace by considerable gifts; others, in all their searching, have not succeeded to this day. The Porte does not easily enter into novelties; and the design to obtain its friendship has made it so proud, that it considered it the greatest favour, to grant it a European country. Therefore one should not wonder at its haughty conduct towards the Europeans, but it must surprise one, that our Powers can stand such an exaltation of them above them in Titles and the whole treatment, which can hardly be reconciled with their rest of their affectation. The peace
- 33330 treaty, which the Porte grants, bears the name of Capitulation, by the Turks Aelid Nameh Humajun, that is, open Imperial letters, or by these permitted and fixed conditions: being such a one with all European nations, the secret Articles excepted, as to the principal points, the same, and of the French pass something else than a copy. It is always drawn up in the Turkish language. In treaties of peace it is
- 33335 sometimes permitted that the other party should have a translation ratified by the Interpreter of the Porte; but in fact the Turkish original is only considered obligatory. By this the Turks sometimes find occasion to stir up subtle and deceitful disputes about the meaning of words, the full force of which they know, or at least pretend to know them better than the foreigners. Nevertheless, the Turks must be
- 33340 praised for being fairly punctual in coming to and keeping the Capitulation. They grant the Europeans many things that would hardly be granted to them in other countries. Otherwise their policy towards them is strange, and not easy to reduce to fixed rules. Most things are obtained by the Porte with money; on the contrary, in other things, which we would even consider trifles, the largest sums of money and all
- 33345 motives can avail nothing. If the friendship is sincere; then that State sends an Envoy, who is received at the borders of Turkey, with many ceremonies, by some Court servants. From that day on he is also maintained at the expense of the Grand Lord. This provision concerns the Transport, the provisions and a certain sum of money, together with a guard of Janistas, called Tain, and which after the arrival of the
- 33350 Envoy remains at Constantinople, sometimes higher, sometimes lower, and, according to circumstances, continues for more or less months. From these journeys of the foreign Envoys, the places through which they pass also have great inconveniences. Their inhabitants are forced, by blows and violence, to provide the necessary carriages and provisions; whereas, on the contrary, the Master of Ceremonies, who is called
- 33355 Vizier,—Aga, with his people and the Janistas, is accustomed to make use of the money fixed for this purpose by the Emperor. — The Audiences have already been dealt with in § VIII. After them, the Ambassador is given Letters of Freedom (Berate) by the Porte, the number of which used to be between 30 and 50, (*) which he may hand over to the Christians and Jews of the country for the service of his mission and nation, who are thereby regarded as Europeans, and are exempted from all land taxes. Since
- 33360 they do not now need so many Letters of Liberty for this purpose, they sell the rest, and receive, according to the times, for each open letter between 2 or 3 thousand Piastres: but after the death of the purchaser it reverts to the Ambassador, and he can sell it again. — If the Porte sends Ambassadors to a Power with which it is on friendly terms; then they must be provided for and maintained in the same manner as its own. Although it now sometimes sends persons of little reputation as Ambassadors to foreign Courts; yet, generally, persons from the Chancelleries are taken in, who, before, have held all kinds of offices, and after the mission is ended, are often
- 33365 elevated to the most important offices. As many are hungry for such embassies, so dearly do they cost the Court, according to which they are done: for according to Eastern Ceremonial it would be unseemly, to admit such an Envoy to an Audience at once, but one must postpone it for a long time, in order to show that one is pleased to have the Guest; for after the Audience he must, in all fairness, take his return journey.
- 33370 According to the prescription of the Koran, no Mohammedan Power, and therefore not
- 33375

even the Great Lord, can conclude a permanent peace with a Christian state. The famous name of an eternal peace, which often has the power to oblige Christian powers for a few years, is unknown to the Turks. Besides a standstill of arms, they have, at the most, in later times, out of necessity, concluded a permanent peace, as in the year 1718, with Venice, and in the peace of Belgrade with Russia. For in general the Koran charges, on all occasions, the Gaur (Infidels) to be brought to the Mohammedan Religion by means of arms. But otherwise they are of the opinion, that that party, which breaks a standstill of arms, before the elapse of time, by a war, is unfortunate. Therefore also various circumstances must occur, if this is to happen on their side. But if otherwise a war should begin, then the first step of their declaration is taken by having the Envoy of the hostile Power placed in the 7 Towers, where he is now worse, now better treated; This is indeed considered cruel according to our missionary law, and in fact not without reason; but it must be observed, that the Turks regard the permanent and constant ambassadors at Constantinople almost as nothing else, than as plenipotentiary state spies, and those none but as real ambassadors, who, like the Persian, Polish, Moroccan, etc., come for certain negotiations, and after the execution of them go away again. (*) Moreover, they also retain those ambassadors as hostages, so that, if a Grand Vizier or any other great man should be taken prisoner, an exchange may be made the more easily. With the arrest of the ambassadors also goes the imprisonment of all persons belonging to his nation, and the confiscation of their goods. Moreover, certain, but not always the same ceremonies are usually performed at the declaration of war at Constantinople. Thus all the crafts and guilds, before the departure to war, must hold a procession through the Capital with some of their tools or goods, such as bakers, furriers, grocers, smiths, etc. who thereby offer themselves as being at the service of the Great Lord, but at the same time must give considerable presents. When the Court was still at Adrianople, Mohammed's standard was hung at the Seraglio, and a horse's tail at that gate from which the people were to march to war. Whereby the Turks relate, that, when Selim I ordered the Grand Vizier to hang up the horse's tail, and he asked at which gate? he had him put to death; which was done by two others, until the Grand Vizier appointed thereupon, by the same command, had one put up at every gate, and further, to the Emperor's question, where the horse's tail was put up, answered: "at all gates! Your Majesty can go out wherever she pleases!" whereupon he would have been considered a particularly capable Person.

Concerning the opinion of the Turks, what one should think of other Kingdoms and Powers, various reports from writers who deal with Turkey, very much. Every European claims in Turkey of his Nation, that it is most esteemed. But all are in general in the case, to be feared according to circumstances, more or less highly esteemed, according as one needs their friendship more or less. This is generally the course of human affairs, and therefore this rule has been almost everywhere adopted in Policy. There is hardly a nation in Turkey which, notwithstanding its supposed pre-eminence, has not had to experience many unpleasantnesses. By the natural instability and ferocity of the Turks, the most extreme indignities are here and there inflicted upon those who were a short time before their favour. The Turks are too puffed up and too much pleased with themselves to allow those of them who are treated as infidels to compare themselves with them and their nation. They are always seeking an opportunity to degrade those who wish to exalt themselves, because this offends their national pride; and they seldom care for the consequences, because every civil servant does not long retain his office; to satisfy their self-will and revengefulness, this moves them most for that moment and at the present time. Morocco is treated courteously by the Porte; and both States, as co-religionists, maintain a mutual friendship. The distance only prevents a closer union. Persia was, about the middle of this century, much hated and also feared by the Turks; but, after the old Imperial family died out there, and the Empire is so much troubled, fear has changed into indifference, and the size of the Turkish Empire has somewhat prevented the Porte from profiting from its internal disturbances. The alliances with Christian powers are either old or new. Among the old belong France, the German Empire, Russia, Poland, Venice, England and Holland. France trades as much in Turkey as all other Christian empires put together; but the high esteem of the Turks for it is not determined by this. The Turks never place a right of trust in it. The French must, here and there, suffer humiliations which are not made to experience by other nations; and even the common people look at them with eyes of contempt. Do they believe that they are misguided by the French? or is their conduct concerning the Imperial Court, when they fell upon it in the rear in the wars with the Turks, doubtful? or do they stumble at their national character? That would be difficult to determine. But this is certain, that nevertheless they often yield to them in many things, because they count on their assistance, in case

they should come to war with other Christian kingdoms. They deal cautiously with the German Imperial Court. The German soldiers are always a terror to them, and, if they have overcome them, then, according to their own statements, it was not due to the soldiers, but to other circumstances. Russia is for them, for various reasons, the most formidable of all Christian kingdoms. Its inner greatness is questionable to them. The agreement in religion with the Greeks causes them much suspicion. With the Russian soldiers they can hardly come to an agreement, because they either stand and conquer or die. In addition, there are predictions according to the Turkish ideas, which will make Russia their conqueror. — Poland and Venice are considered by them as small, and as countries that depend on their mercy. The English and the Dutch are the most beloved among all Europeans. They have high respect for both, because they have never had war with them, but only trade and intercourse are sought, and the Turks, by all kinds of treaties and mediations, have at some time enjoyed advantages. The alliances of the Prussian, Danish, Swedish and Naples Courts are new, and therefore the degree of respect is by no means determined. But in general the Turks consider them either as small, or very remote kingdoms, whose friendship or enmity can have no strange influence on their State. With Spain, Portugal and Sardinia they have, up to now, nothing at all to do.

(*) Berat actually means an open letter or diploma ??t to appoint someone, for instance a Pasha, to his office, at the same time being clothed, according to his Dignity, with a Fur or Chestnut. The Berate issued for the Europeans are therefore Imperial orders, that this or that person must be considered as Consul of his nation at such or such a place. The same is the case with Interpreters, who would not be recognized in their post without a Berat. The advantages allowed therein are, that such a one may, for his Person, of the Charad (the poll tax is exempted, in his house then necessary stock of wine, which is otherwise generally forbidden, although it is tolerated in private), dress according to his condition, wear yellow slippers, etc. He may also, if he trades, easily obtain from the Publicans the reduction of the toll up to 3 per hundred, although other good merchants may also come to that, since the Publicans find their own account in it. The French, English and Dutch have, from former times, the most Berate, although they have also begun to determine it. The later, friendly nations with the Porte, such as the Swedish, Danish, Prussian, and Naples, have only Berate for 4 Interpreters in Constantinople, and for one at the Consulates in the Levant. Consequently, the Berate are no longer as advantageous as before, and there is no longer so much money spent on them: only perhaps the freedom to wear yellow slippers usually induces a Petit-maitre to buy one.

(*) The Turks themselves do not keep a permanent Ambassador to other Courts, because they do not need to spend much money on messages from other countries. Their Rajas, (subjects) Greeks, Armenians, and especially the Jews, who are scattered everywhere for the sake of commerce, give them these in order to gain favor by doing so. These spies are, in other States, less noticed. In the year 1750, and probably before that time, it was the duty of the Princes of Moldavia and Wallachia to deliver reports from the Christian States, and the Interpreter of the Porte had to hand over the Leydsche Fransche Courant translated.

§. XXXIX. Of the Military State of the Turks.

It seems very unfortunate to someone who has spent some time in Turkey when he reads European writings in which the military state of the Turks is described as either formidable or merely mediocre. Such novels (for they cannot be considered higher) are either hatched out of greed in the rooms of those who have never seen Turkey, and cobbled together from former military histories, or by those who have travelled rapidly through the Ottoman Empire, according to the custom of writing about foreign countries not so much true as wonderful things, among other things making known fictitious cases.

In Turkey everyone travels armed, because of the many street robberies. No traveller is without a harquebus, pistols and sabre. The farmer goes with the last two behind his plough. No one is forbidden to hunt either. Wherefore it should not surprise us, that, while every one carries the murder-guns, murder and manslaughter are very common, every farmer is almost a land-soldier, and the Turkish horses can fearlessly endure the shooting with the harquebus. But without preparing for war in the least, all this does not mean much. The actual Land and Naval Forces require a further discussion. The Land Forces belong first of all to the soldiers. The real infantry are the Janistas. But these are no longer the old ones, which, in former times, were such a terror to the enemies of the Porte. They do not consist at present of Christian children and Christian slaves, but are nearly all born Turks, yea, sons of Janistas, who have received by inheritance the pay of their fathers. This pay is not one of a kind; for because of old age or wars experienced, it is greatly increased. A soldier has, at the beginning, no more than 6 Aspers per day, and, when he advances in time, 15 Aspers. This pay is paid every quarter of a year; but the necessary provisions of bread, rice, and meat are given with it. At the same time they are free

to observe the agriculture, the trade, and what each has learned differently. For with regard to the trade of arms they are completely free, and exempted from it, because it finds no place. For what it means to exercise, to march on the Parade and to be on guard, is completely unknown to them. From which one can easily judge that closing in ranks and lines, marching, turning right and right, evolutions, firing in Battalion and Platoon, a Battalion square, and still more important matters of war are things which they do not understand at all. The Turks consider themselves fortunate to belong to this militia, not so much because of the small pay, as because of the great privileges. - They are divided into 126 Odas or Regiments, each of which would be about 800 men strong, but they are never complete. Each Ode is under a Captain, Shvrbalidschjy, who commands outside the barracks or Odas, and under a Sub-Captain, Oda-Baschy, who commands within them. From these Janissaries a bodyguard of the Emperor is taken, which are called Solak and Karipi. The former consist of 500 men, and are the bodyguard on foot; the latter amount to a number of 3 thousand, and form his bodyguard on horseback. The Peygk are ceremonial youths and footmen, who march with the soldiers at the side of the Sultan. Their general Chief is the Janissary Aga at Constantinople, where the principal body is of 8 or 10 thousand, and forms the garrison of that city, while the latter are divided into smaller parties in the largest cities. They are so little trained in military affairs, that they are even forbidden to bear arms, because their rebellion should thus be thought of before; for of that they are the ringleaders and the troublemakers. But the lust for power, by which this militia, now of a changed nature, could heretofore demand from the Emperor the deposition or the killing of the Ministers of State, is now quite destroyed. They are not soldiers, therefore, because they understand the craft of war, for that does not take place; but because they must go to war for their pay, while for the rest everyone can remain at home. Their remuneration, which with that which the Spahis (horsemen) receive, amounts annually to about 4 thousand purses, is distributed to them on the Divans days in the Seraglio. On that occasion they are also always fed with Pillau. The Seraglio trembles, if they refuse to use it; for that is a sign, that they are making sharp demands on the head of one or other Minister of State, or are dissatisfied with the whole Government; and if they are not satisfied on the spot, then a riot is the result. There is already danger, if they do not attack the plates with Pillau at once, and swallow him greedily. In the war itself it is a restless and easily injured militia. If there is no rice and coffee, and no fresh bread is baked daily; then grumbling and riot are to be expected. In one battle they can only be brought to an attack three times. If the enemy does not then give way; then they recoil and if he still presses forward, then they take flight and seek a good escape. - The Horsemen of the Turks are called Spahi or Sipahy. Their soldiery is, like that of the Janistas, unequal, and can amount daily to from 12 to 100 Asprs. Mutejerrikeh are about five hundred Horsemen of good descent, selected from the Spahis, who serve as a bodyguard and for dispatches of the Sultan, and form a militia of higher rank, even above the Tschausche, under the Muteferrikeh-Baschy. The Sultan himself is their Chief, and they therefore only fight when he takes the field in person. Whoever imagines that the Spahis are a Cavalry like ours, and imagines that their horses are as difficult to keep up as ours, and that they can separate from each other and get back into order, would be very much mistaken. They are an irregular party, who have voluntarily taken up the race, and whose whole exercise consists in one chasing the other, and trying to throw a club of about one and a half yards long (Dscherid) at his head, but the one after whom it must be thrown tries to avoid or catch it in flight and speed. They are divided into 6 Standards, and are said to number more than 12 thousand men. They, who with the lands, taken from the Christians, as a kind of fief, are endowed, according to their value, in one or more persons on horseback in the field. Their number is, especially because of the Provinces, the Venetians are deprived of, very considerable. The Firstnames and Riches bear the name of Zaims, but the others Th??riots, The above-mentioned types of soldiers are the usual war-people, which name they do not deserve, because they were possibly regulated, but because they have to serve on account of pay. But these form the smallest part of the Turkish Army. There is a general summons in the country; In the Mosques a war prayer is openly read, and in it an encouragement to take the field against the Heretics, that is the Persians, or against the Infidels, that is the Christians, and from this arises a general desire for war. These are only Volunteers. All highway robbers and filthy riffraff go to the appointed place of war. Everyone who has nothing to lose; people burdened with debts, take the field; even many who have something, sell it, and go to war, in the hope of rich booty. They do not actually receive any soldiers, but only some provisions; on the other hand, everything they capture is their own property. These Volunteers often

do not spare the Turkish places themselves: but they do spare an enemy country, into which they penetrate! But if the enemy power can secure its borders, so that no plundering and subsistence can be seized from the plundering class, or if things do not go according to plan in attacks and battles; then these Volunteers very quickly leave the Janistas and Spahis, and return to their country, or run elsewhere. Wherefore a large Turkish Army, in a few days, can melt down to several thousand. For the rest there is neither among the ordinary soldiers, nor among the Volunteers a true subordination. The former, at the least displeasure, cause a riot; and the latter come and go, flee and cease this, as they please. So that a Turkish army, in the present state of affairs, is an irregular group, in which, besides the soldiers mentioned, servants, murderers, street violators, idlers, etc. are considered soldiers, who, as long as things go well and there is something to rob, increase in size like a snowball in the march, but also by an unfortunate chance, when the snow melts suddenly due to warm weather. In the Eastern Kingdoms in general, and in Turkey in particular, the so necessary military support is lacking. And woe to us! if this, with the ease of raising such numerous armies, were to take place. Europe would then soon be devoured. In addition, the soldiers are not divided among sufficient officers. A Commando of soldiers of various kinds is called Buluk, and its leader Buluk-Baschy. No European State of any importance need fear the naval power of the Turks. Their ships are neither dangerous to the enemy, neither by their number nor by their construction. The warships of the Great Lord (caravels) are of an astonishing size and resemble castles. They also project, especially behind, about three medium-sized levels from the sea, and can be hit and shattered all the more easily by the cannons. The heavy and large construction naturally causes a great difficulty and clumsiness to turn them. In proportion to their terrible size, there are also by no means enough cannon holes bored in them. All of the ship life and motion, is bad and misshapen. Masts, rudders, ropes, sails, etc. do not correspond at all to the size. They do carry very large guns; but the height of the bearing prevents hitting, and in their direction they are also badly adjusted; not to say that loading is slow and takes a long time. They have galleys of various kinds. But the defects that occur in warships on a large scale, are also found in these on a small scale. Then, the ships are floating houses and auctions, powerless in themselves, unless the sailors on them can make the right use of them. These bear the name of Leventi; and everything that has been said before about the inexperience and disobedience of the land soldiers, applies equally to these. Besides, what can be expected of them, since Captain Pacha (Grand Admiral) himself does not understand seafaring? For the rest, their navigation has neither art nor safety. Their pilots know nothing of rules, but have some experience as a teacher. They make no use of sea charts, and understand almost nothing at all the daily calculation of the distance travelled and the region where they are, if they do not see the coasts, and have other guesses before them. They also do not know how to make proper use of the compass, so that they would thaw out in the wide and open sea and perish. Their sailors make no use of a light breeze, but usually wait half a day, to see whether the wind will continue to blow, whereby much is often neglected; not to say that they do not know how to resist the wind, and therefore let themselves be driven back by slight headwinds. The Turkish warships are a mockery of the European merchant ships, because of their ignorance and singular mode of trading. The chief of these is done by slaves, condemned criminals, and Greeks. How little one can rely on all these, was proved by another example from the year 1660, when on the Admiral's ship, on a Friday, when Captain Pacha had landed on the island of Stanchio, a riot arose, the above-mentioned people set themselves free, and brought the ship, which, as the most important of the warships, had been called Sultana, to Malta. The naval officers are therefore bad, the sailors worse still, and the gunners worst of all. The latter bear the name of Toppedschis, and are about 2 thousand strong, to whom one must add about as many Dschebedschis, who take care of the ammunition, and also a certain number of Bombardiers.

The Turkish fortresses do not deserve a lengthy report. The fortifications have not risen to such a degree among them that one could learn anything from them. What can still be found about them, can be seen in places that have been in Christian hands, and whose fortifications have come into their power either completely, or at least damaged. The cities within the country are either still surrounded by old Greek walls, and also have a ruined castle, or are open, like the villages with us. The roads and harbours, as well as the sailors, are accustomed to have castles, which originate from the Genoese or Venetians; in particular, the almost incredible labour of the former is still visible to this day. But such fortifications are useless in our times; and a few well-directed shots from warships render the garrison incapable of loading and defending themselves. The manner of the Turks in waging war is not at

all such as to entice European warlike volunteers to join them. In dangerous campaigns, Mohammed's banner is taken along. To this old rag of red colour, which
33645 will be the remainder of the real banner of this deceiver, the same, and almost a greater power is attributed than in the dark times was attributed to the banners which the Pope had consecrated. It now mostly remains in the Seraglio; but the water in which it is put is considered strong, and is at least communicated to the war
33650 chiefs. When in the field, it is not allowed to fly freely, lest the wind should tear it to pieces, but it remains rolled up round the topmast. The principal military ensigns are the Horse-tails; and the lesser the banners (Sandschak) of green colour, for which the model is taken from Mohammed's banner. A kind of rather broad banners is called Bairak. — A Turkish army, which wants to take the field, is a misfortune to all the Provinces of the Empire which it attacks. These are made deserts. The Land-
33655 Christians are especially ill-fated at such times. The rich lose their lives and goods, under the charge of treason, secret correspondence with enemies, etc. Young persons, capable of war, are taken away, forcibly converted into Mohammedans by means of circumcision, and then under the Janistards, not to mention the heavy and extraordinary ??all, plundering of their churches and houses, and other acts of
33660 violence. Among the oppressions to which the countries are exposed in the Turkish war, belongs also this: that the Great Lord declares this or that Province, rightly or wrongly suspected, guilty of treason. Then its inhabitants can be made slaves, and their property, without circumstances and responsibility, be taken away. — The food and military provisions are brought to the Army, mostly on camels and mules, and only
33665 to places where the roads permit it, on Arrabas. As sad as the shortage is in all armies; so dangerous is it especially in a Turkish army. Should the Turks proceed in a more defensive manner; then they are unusually quick to retreat, to protect themselves by raised ramparts or sorts of fortifications, etc. If they make the attack; then it is done, by the infantry, with a fierce shouting, and almost with a
33670 bestial fury. What then does not stand firm or is well closed; that is divided, or run over. This attack is, with the larger parties, repeated three times. But if they are then received with the Cannon or a good fire from the guns and repulsed; then no Turk can be brought to a further attack; and if the party then presses on, then a complete defeat of the Turks, the desertion of their Generals, and the abandonment of
33675 the artillery, the Baggage, the provisions and the war-supply is certain. Whoever tried to stop them here; he ran the risk of being thrown over. — It has generally been observed, that if a Christian army, in sight of a Turkish one, holds out for a few days, the latter entirely loses courage, and one must endure its first fire for some time, in order to be able to conquer with ease. That they attack in ranks and
33680 ranks in a savage manner, is a mere fiction. — In special circumstances a few, whose brains are heated by their feelings concerning the Kismeth or an absolute fate, make a mad beginning, which more others imitate, in the hope of penetrating the more easily through the openings made by none. They are not a little prompted to this by another feeling of their Religion, which declares those who die in the war against
33685 the Christians to be Martyrs, and promises an excellent and very pleasing place in Heaven. Besides these Daredevils, Dely, (which word properly signifies Fools, but here in the aforesaid respect courageous, good men, who are with a Turkish Army,) a certain Guard of the Grand Vizier also bears this name, and their leader is called Dely-Baschy. — Their cavalry does not make a regular attack in closed ranks and
33690 ranks. Nor is it trained for it. It comes running; turns, if it is opposed, and comes again. Where it finds little resistance, or the enemy defenseless or in flight, it inflicts a great slaughter; for the Turks are trained to slash, when they are allowed to do so. But their soldiers cannot hold their own against a closed Army. Their commanding army chiefs understand nothing of the art of war. The Renegades, as well
33695 as the foreigners, who are base and godless enough to want to teach them anything, make little fortune with them in this respect. They will learn nothing from them, and they are regarded by the Turks as the Bear in Gellert's sabre, who, on his return from foreign lands, was bitten by his fellow-bears on account of the learned dancing, because they could not bear that he understood more than they. Bonneval, with his
33700 otherwise great Credit, has sufficiently experienced this. They have accepted nothing else from him than this principle, never to lead their Army against the enemy at once, but to divide it, so that when one part was beaten, another had to repair it; and besides, they have only allowed themselves to be better instructed in the artillery foundry. — Against this proposition, concerning the bad military condition
33705 of the Turks, the objection might perhaps be made concerning former victories. But against this it must be observed, that they were, formerly, very different Heroes, than at present, now that their military Character has so much declined and degraded. If they keep to a war in the condition in which they were, or even win it; then

nothing can be thought of as prouder than they: the whole world seems too small to
 33710 them, and the propositions concerning it are so Eastern and pompous, that the cases
 of Don Quixote seem to one in comparison only common affairs. In the meantime, woe to
 the conquered Provinces! For fear that they might not keep them, and especially to
 grant the soldiers their plunder, the people are made slaves, the places are burned,
 and, as has been said before, all goods taken away. But if they are subdued and lose,
 33715 then nothing is more fearful than a Turkish army. When this is once driven to flight,
 then there is no thought of stopping it again. Because it almost completely
 disperses, it strikes fear and terror into all the remaining soldiers, placing the
 whole Empire in the utmost dismay. This happened several times, in the time of
 Eugenius, and still in the year 1739, when the Count of Munich defeated the Turks at
 33720 Choczi??n. The Porte does everything it can to prevent disadvantageous consequences,
 and although one loss follows another, it nevertheless, in order to deceive the
 people, lets the cannons fire at Constantinople. – For the rest, the Turks do not
 lack military supplies. Gunpowder and lead, cannons, pistols, sabres, and
 33725 harquebuses, they either have themselves, or receive them from outside in abundance;
 but nothing is in order, and not even in unison.
 The defense of those places, where there are mosques, is very unusual. The law
 obliges them to defend themselves there, until they surrender by force, or by a
 storm. They therefore do not think of capitulation, even though they knew that they
 would die by the sword or hunger. Therefore, during the sieges of their auctions, one
 33730 must prepare oneself for patience and violence.
 During sieges, the Turkish soldiers are very zealous; for the Emperor and Generals
 promise them, with the exception of the buildings, and what belongs to the government
 of the country, a general plunder. What is this not a powerful motive for courage and
 diligence? In conclusion of this consideration of the Turkish military equipment, I
 33735 must remark that we have very extensive explanations on this subject from Count
 Marsigli. He was himself a soldier, and had stayed with the Turkish army. His reports
 are partly drawn from the regulations and arrangements, drawn up in the Turkish
 language. The irregularities, which have now crept into their Armeen, have arisen
 partly from the neglect of their first military force, the inexperience of their
 33740 Generals, and other causes, and have therefore had the same evil consequences as in
 other States.
 In order to see the Turkish army with one glance of the eye, I will present the
 following illustration. (*) "The Turkish Army consists of four kinds of forts of
 troops. To the first belong the Kapikuli, whose name means to confess, just as, in
 33745 former times, in Germany and elsewhere, soldiers were called Landsknechts. They are
 actually standing in zoldy, and according to the Ottoman manner regular soldiers, and
 form the first and most important part of the Turkish Army. They are either
 Infantrymen, or Cavalrymen, or Artillerists. The Infantrymen bear the name of
 33750 Janistaries, besides whom the Ottomans have no troops on foot, on whom one can make
 any dependence. Their number amounts, at present, to scarcely 40,000 men, and of
 these one must deduct at least 16 thousand, who are stationed in the fortresses, and
 in the cities of Constantinople, Adrianople, and Bursa, as well as those who, because
 of old age or other reasons, do not need to take the field, and are a kind of
 33755 invalids. There remain only 24,000 men, who can actually appear in the field. For the
 rest they are divided, both in peace and war, into 196 companies (Odas, chambers). 2)
 The cavalrymen are called Spahis. They would be 20 thousand men strong; but there can
 hardly be brought into the field 15 thousand; the rest remain behind for various
 reasons. 3) The Artillerists, in the last war with Russia (1773), formed two Corps,
 each of 3000 men, but in times of peace they are only half as strong".
 33760 "To the second kind of troops belong Toprakli or Provincial soldiers, who have to
 supply the Pashas (Bassas) from the Provinces over which they are placed. They form
 irregular light troops on horseback; they are now never more than 75 thousand men
 strong, but usually much less. Because they do not draw soldiers, they decrease with
 every campaign, and go home, especially when the first or second does not turn out
 33765 well, and they lose their Equipagie".
 "To the third kind of troops belong those, which the Countries, under the supremacy
 and protection of the Sultan, supply. The first would be the Wallachians and
 Moldavians, and the last the Tartars; but none are completely exhausted, and these
 cannot now yield much, after that, by the peace treaty of 1774, the Crimsche-Khan has
 33770 been declared an independent Prince".
 "The fourth kind constitutes Serradknlly (Serhaedkuly), that is, those troops, which
 protect the borders of the Turkish Empire. They consist of Infantry and Cavalry. To
 the first belong, besides the Reserve Corps for the Artillerists, which may amount to
 4000 men, mainly the Azaps, who are a national militia, and, when this is too weak,

33775 about 10 thousand Bosnians and Arnauts are taken into service in the same way as the Swiss by some European powers. The cavalry does not exceed 10 thousand men. If we now add up these above-mentioned sums, we can calculate:

	i. In troops on foot	
33780	1) Janistries proper, who can take the field, about - - -	22000
	2) Egyptian Janistries - - -	3000
	3) Border soldiers to supplement and reinforce the Janistries - - -	10000
	4) Regular artillerymen - - -	6000
	5) Artillerymen, lying on the borders - - -	4000
33785		45000
	ii. To troops on horseback:	
	1) Spahis - - -	20000
	2) Provincial - riders, at most - - -	75000
	3) Border riders - - -	10000
33790		105000 (*)

(*) This following essay is literally in A.F. Buschings (Hoogd.) weekly reports of new maps, etc. being the piece of the year, and is an extract from the Etat présent des forces Turques par terre 1774. from a (probably Russian) officer, and is found in detail in Buschings (Hoogd:) Magazine of the year 1777. With this Etat &c. as well as Buschings extract from it, it is indeed, as stated, situated. But one must not forget that the description of the Turkish land power only refers to a war with Russia, namely from the year 1774, and therefore also suffers various changes in wars with other powers at other times.

33800 (*) The power calculated according to this statement in the year 1774, in the war against the Russians, would therefore, according to the state of the Turkish Empire at that time, have amounted to 150 thousand men.

§. XL. Of the learning of the Turks.
Learning owes an extraordinary amount to the Arabs and Caliphs (Governors of the Prophet); for in the dark times it was nourished and maintained by them. But the Turks have no share in this gain. Their former warlike government has choked all desire for it in them. In the villages, with the exception of the Imam, there is seldom anyone who can read. There are schools among the people, (Maedras), which also vary according to the size of the cities. But most of it does not consist so much in public as in private schools. Besides reading and writing in Turkish, one mainly applies oneself to the Persian and Arabic languages: but those who do so are few in number. Such Pupils and Students, who often grow quite old, generally form the worst people. The female Sex is, for the most part, left out of all instruction; and the Common People also receive no education. Only those remain who wish to become merchants, or something else in the State. One must not think of Universities. Public Libraries are not found, except those which belong to the great Mosques, and are sometimes reasonably numerous, but are not open to any Christian. A few persons often possess a fair stock of books. To purchase these requires all the more money, if they consist solely of manuscripts. The printing press, namely, has not made great progress among the Turks, up to now. That of Constantinople was established in the first half of this century, under the promotion of a Grand Visir, and the instigation of a certain Ibrahim Efendy. That one is still there, but is no longer used. The Armenians and Jews also have small printing-offices, where they print all sorts of trifles, for instance the prices of goods, but no Bibles or parts thereof, in their languages. The manuscripts are sold in the bookshops, just as books are sold with us. (*) But none that touch religion are left to Christians; and when buying other books they are even ridiculed and mocked. In the above-mentioned city there are, possibly, 20 thousand people, (and how many will there not be in the whole Empire?) who either entirely or partly live by the copying of books, and therefore, if printing were established, would have no existence. When printing was invented in Europe, this difficulty was but slight, because most of the copyists of books were monks, who earned their living outside that. Such a deficiency now protects the Turks against an inundation of so many useless and harmful books; but at the same time it prevents so many sciences, and their more general spread. It would also encounter difficulties, if one wanted to make use of printed Korans, and the state of their religion might especially oppose it, as they had to fear that many un-Mahomedan books would be imported into the country from Europe, and the people would be brought to other thoughts. Even the Turkish policy prevents the establishment of book printers, in order that no rebellious writings or unpleasant reports may come so easily among the people. In general, the Turks do not like printed books as much as they do manuscripts. And this disdain arises among other reasons, because their manuscripts, often, are beautifully written, and they, because of the Arabic letters hanging

together, certainly look much more elegant than almost the still so beautifully and elegantly printed books. Their copyists of books are also book binders. The books are covered with common or Turkish leather, and very artfully covered with gold in all sorts of figures. Their style is pompous and long-winded. The high-flown with conceit makes it unnatural. — In poetry they claim to have done something special. They observe the measure in this respect, with and without rhyme. The figurative in it climbs so high in symbols, that one almost needs a divine understanding, to be able to understand the contents. What they now know as genuine of the description of the geography, that still comes from Ptolemy, but it is very falsified by many spurious additions. Their descriptions of the country are very defective and wrong; and their ignorance concerning other countries and peoples is incredible. Their history is full of fables; the chronology, except their Hegire, very confused; the Biblical history entirely wrong; the general History a hodgepodge. They find a special taste in descriptions of lives, which are not so much true as wonderful. The Antiquities, instead of being preserved, are steadily, more and more spoiled, and, the matter continuing in this way, there will be scarcely any more remains of them to be found in a short time. This is experienced by those who have read the descriptions of travels, at the beginning of this century or in the previous set up, with the present view, because the Weather, and still more superstition, has made the then legible Inscriptions illegible, and the Pyramids, Figures, Statues, etc. unrecognizable, or even mutilated. The Inscriptions namely always arouse the suspicion among the Turks, that they contained an announcement of hidden treasures, and that the Europeans therefore so eagerly sought them out. But their Religion induces them to destroy the Figures in the Bas-reliefs, and still more the Statues, because they consider them on the one hand as objects of idolatry, and on the other hand imagine, that the image or statue representing a person was in some way inspired by such a one, and that its soul cannot therefore be completely at rest; wherefore at least the heads are cut off, or the faces are defaced. They also imagine that the statues of men were entitled to demand souls from their makers, and, because they could not give them, that the Devil makes use of them to disturb men; but that this should be prevented when they are mutilated. For this reason they tolerate no paintings on which men are depicted, and no statues, except those of the Sultans, which are preserved in the Seraglio at Constantinople. (*) — They calculate the months strictly according to the Moons; wherefore their years are shorter than ours, as consisting of 354 days, as one can clearly deduce from the following list, according to which, in 33 years, their shorter months fall again at the same time: for example,

33880 Lunar months. 30 Muharrem
29 Safur
30 Rabial-aual.
29 Rabial-achar.
30 Dschemafiul-aual.
33885 29 Dschemafiul-achar
30 Redscheb.
29 Schaban.
30 Ramassan.
29 Schewal.
33890 30 Silkade.
29 Silhidsche.

Solar months.
September 16.
33895 October 16.
November 14.
December 14
January. 13.
February. 11.
33900 March 12.
April 11.
May 10.
June 9.
July 8.
33905 August 7.

The account of time bears the name of Hegire. They esteem Mathematics highly, but make little use of it, and lack the instruments to make a proper use of it.

Archimedes and Euclid are known to them. Their Philosophy is that which Averroes and
33910 Avicenna have learned from Aristotle, consisting more in imitated subtleties than in
independent and free investigations; which the Koran prevents them from doing. In
Physics they have not got far. With them it contains little more than the common
knowledge of a Farmer. Their Medicine rests solely on experience. Averroes and
33915 Avicenna are indeed mentioned, and quoted in boast, but partly not rightly
interpreted, partly wrongly applied. Anatomy is not even allowed to take place on the
corpses of men, and they do not think of making experiments on the bodies of animals.
Of chemistry, for the sake of medicine, they know nothing at all. With aschemy only
here and there one and another is so much occupied, that he and his family come to
the beggar's pocket. A Doctor of Physician is called by them Hekim, and the chief
33920 Physician at Constantinople Hekim-Baschi, who must always be a Turk. But there, as in
other countries, three special and different sciences do not belong to medicine,
which also require three different men, namely a Doctor, Apothecary and Surgeon; but
one and the same person must be knowledgeable in all these things. As great as this
elf is; so badly is it satisfied by the physicians there, and such a medical polymath
33925 would not be considered a slob among us, in all such cases. The main cure consists in
prescribing a very strict diet. The sufferer is only allowed water with rice or white
bread and some lemon juice in it. Therefore the European physicians, as well as those
Jewish and Greek, who have studied in Europe, do not make much headway among the
Turks. But they are accustomed, because they are bad payers in healing, and
33930 especially in death, to make a contract at the beginning of the cure, and then to
have the first half paid, so that if the second does not follow, they are in any case
free from compensation. Their barbers would not be at all right with us; for they are
not at all handy. Namely, they sit down on a high place, take the head of the one who
is being shaved between the legs, pull his skin upwards to the resin pan, and shave
33935 his beard in this way. The washing is done so clumsily that one must fear to lose the
skin in the process. Touching theology and jurisprudence, one knows, from what has
been said before, that, according to the Mohammedan religion, they go together. Their
morality is not in any connection, but in short and witty, even often ambiguous,
phrases which, after the Eastern manner, are symbolically disguised. They are
33940 especially great in that they exorcise the incantations of spirits, the rigid witch-
doctor, the soothsayer and magic in general among the sciences known to them. Sultan
Mustapha III occupied himself with the prediction from the stars; and this was the
reason, that, in his war against Russia, nothing was taken up in important matters,
before and until the Star-dowser of the Seraglio (Munefckjm-Bafcky) had been
33945 consulted. He calculated the days, and indicated, when the army had to break up,
cross a river, yes, a battle had to be fought. No journey of a Great was undertaken,
in matters of importance, for the Sultan, unless the hour and minutes for the
departure were determined and calculated in advance. The result, on all occasions,
clearly showed, that one had been deceived; but nevertheless there was no lack of
33950 excuses, to excuse oneself.

Note that the Turks form a branch of the Tartar nation; thus one can also very easily
understand that their language is a daughter of the Tartar. It sounds very rough to
the ears, and is not rich in words in itself. They need Persian to give their
language grace and elegance in conversation, poetry, and indulgences that do not
33955 belong to a fine taste; and Arabic to express artistic, learned, and divine matters
properly. This mixture of the manifold Arabic and Persian under Turkish makes the
latter unusual for the foreigners, and very difficult for the natives themselves. It
suffers not only from the various Provinces, but also from a profession and the
duties of the office, extraordinary changes, since, according to the matter and its
33960 content, now more, now less Arabic or Persian is mixed in. And this difficulty of
that language is, moreover, increased beyond measure by the various Characters of the
letters, together with the usual utterance of the vowels, which have besides that
few, and many sounds. — They use Arabic letters with some slight changes, and also
read, like the Jews and Arabs, from the right to the left hand. They also write in
33965 the same manner. They get their paper from Europe, especially from Venice, but have
it, before use, made so smooth that it looks like our folded linen. Their pens are
cut from a fine reed, and their ink resembles our printer's ink. They write on their
knees, and at the most a board serves as a support. The masters, even among the
Christians and Jews, who can write, still carry their writing instrument on the left
33970 side in their belt, as Ezekiel IX 2, 3, 11. says. The vowels, which consist of
straight or curved strokes, and are now placed above, now again below the consonants,
are, except in the Koran, seldom expressed. The manner of writing in these is almost
as in our printed books: but that used in judicial essays, accounts, letters, and
other essays, differs from it. In the Koran everything is written straight; but in

- 33975 this crooked, like a fourth part of a chariot wheel. The letters to important persons are not sealed in an envelope, as is often the case with us, but put in a purse, which, according to the dignity of the person to whom they are addressed, is less or more precious. On their Signets are never figures, but flecked names, or something from the Koran, or else a motto. The material on which they print the Signets is a
- 33980 multifaceted wax, consisting of many soft, but hardening Compositions: by which one can easily add Dan: VI 18. and similar passages from the Bible. That manner of writing, which serves for inscriptions, and becomes very artful by many strokes, bears the name of Kufi. No one should have the desire to travel to them, in order to learn the Music. Their vocal music is not harmonious, but falls into the rough and
- 33985 wild, and seems to be suited to indicate and express the strong and pleasant emotions of the mind. Their instrumental music is more for the gardens and the open field, than for a closed room. Thus a strong affect prevails in their songs, but mostly in a melancholy manner. Although they understand the Measure; the way to write notes, however, is wanting to them. They learn only by hearing, and yet the Measure is kept, when several play together. They have neither a Bass, nor other changes in the Music, but all play the same. (*) Very simple kinds of Zithers, Violins, Lyres, Toggles and Timpani are the usual instruments, which express something wild by rustling and croaking tones. The commonest, which even women use, to accompany the voice and other instruments, is a round bent, thin piece of wood, about the width of a hand, in which
- 33995 a stretched skin is fastened. In the round there are also 5 or 6 holes, in which pieces of broadly beaten white can be turned on thin shafts. This instrument is called, shaken in a trembling manner, in the hand, and with the fingers, according to the measure, struck on the sheet.
- 34000 (*) In a Greifwald newspaper of the year 1773 it was reported: "that old manuscripts were not seldom, and often for a reasonable price to be had by the booksellers in Cairo and Constantinople". But this is unfounded. It may, perhaps, have happened about this or that, by a special coincidence; but in general it will never happen.
- 34005 (*) The images of the Sultans in the Seraglio are said to have been painted with watercolour without shadow; of which subsequently other Turks also had copies made, without bothering themselves about the superstition of their co-religionists. (*) Mr. Murat, Swedish interpreter at Constantinople, invented the art of setting Turkish music to notes, and published the following work: *Essai sur la Melodie Oiëntale, ou explication du système des modes & des mesures de la Musique Turque* par Antoine du Murat. This report can be read in Prof. Biornstahl's letters of the Schloeizersche Correspondence, part II. piece 8. No. 23.
- 34010 §. XLI. Of the civil condition, and other things pertaining thereto. The various kinds of money, and their Value, must be known, one will rightly understand the Turkish reports and affairs. At Constantinople, Adrianople and Great
- 34015 Cairo are large mints, to mint money, on which never busts, but only the Emperor's engraved name is stamped. On the obverse is written: Sultan N. N. Ibn Sultan N. N. El-Sultan, Ibn El-Sultan; that is, "Emperor N." N. a Son of Emperor N. N. who himself is "Emperor and a Son of an Emperor:" and on the reverse is written: Sultan el-Ben-eyn, we Chakan el-Bahhrein. Which Title rhymes, and in both, relative words, Berrein and Bahhrein, would, according to the opinion of the Turks, convey something exalted and much expressive. They are of an Arabic origin, and stand in the twofold number. This rhyme actually means: Lord of both lands; Lord of both seas. By the heathlands are understood Europe and Asia, and by the two seas the black and white, that is, the Mediterranean Sea. One does not want to be grand about Africa and the Indian and Red
- 34025 Sea, in the imagination, that the twofold number, here, indicates something more exalted. Chakan is a Tartar Title, which means something like King of Kings. Even when the Emperor takes the field, money is minted in the army, with this inscription: *Fi Ordüi humajun*; that is, under the tent of the Most Illustrious. There is silver and gold money. To the first belong the Asper, the Para and the Piaster. An Asper is the smallest kind of money. Three of them go into a Para. There are not many of them, and the merchants in their accounts counted one, of which two and a half go into a Para. Forty Para make a Piaster. There are single, five, ten, twenty, thirty Para-pieces, as well as Piasters, and also one and a half Piaster-pieces. A Piaster is a (German) Specie-guilder or ?? Groseen. Of gold-money only Dir coats, which are
- 34035 expressed by the Italian word Zechinen, are minted; but they are of various Values. Some are of a hundred and five Para; others, and indeed the most common, of a hundred and ten Paras are called, after the various places where they are minted, Dschindscherli and Sermappuppen; the Arabic are of 130 Paras; the Fondukli of 155 Paras. Of foreign silver money, only Raguser pieces to one and a half Piastres, and Imperial Dollars to ?? Piastres are current; on the other hand, all European Ducats are accepted. The Venetian are considered equal to the Fondukli; but the Dutch and all others are reckoned at 146 and 2 thirds Para, and therefore three to 11 Piastres.
- 34040

Here and there, also, in merchant cities a variable Exchange takes place, although it is prohibited by Imperial regulations. Five hundred Piastres make up a Purse; and besides these usual Purses in accounts, as well as in trade and commerce, (*) there are also gold purses, in which go 15 thousand Turkish Ducats. Of the great Interests which the money gives, has been spoken of before; but the least among good Friends are 7 or 8 per hundred. The Money Doubters, who also shoot money to high per cent, are called Saraphs. — There is no doubt that a country so rich in mountains would not also be rich in Mines, as such are then, from time to time, actually discovered; but the Turks are bad at constructing mountain works, and for Christians this is also a very questionable and dangerous matter, because they can expose themselves to great Avanis. Of good kinds of stones. Marble, Porphyry, etc., there is no lack. There is an abundance of sea salt, and the mountain salt comes from Moldavia.

Trade and commerce is, in the Turkish Empire, reasonably free. There is no hunting right there, but everyone may shoot the Game. A tax is imposed on the Fisheries, although the Europeans may fish freely. Monopolies, which are so common in European States, under many apparent pretexts, to the detriment of the largest number of the country's inhabitants, were in my time, up to now, not yet introduced. An unusually large quantity of goods is brought from Europe, especially much English, Dutch, and French cloth. The Armenians and Jews are, between the Europeans and the country's inhabitants, mostly the Brokers (Censals). Otherwise, the Persian trade was also very considerable; but, since Persia, about the year 1740, with the extinction of the Royal Tribe, became a scene of internal wars and devastations, it has almost ceased. Turkey in itself supplies the merchant with considerable goods. The wool stands almost at the top. Very many ships are loaded with it. What we call Camel's hair is goat's hair from Angora. The Turkish yarn is dyed at Adrianople and Smyrna. This, however much the Europeans have tried, has not been able to be imitated, although they knew even the ingredients for this dye. And, since this can not even be done to all places in Turkey, this is a characteristic that it is due to the water and other circumstances of the country. More detailed reports concerning the Levantine trade in Corn, Tree Oil, Figs, Razines, Coffee, Rice, Medicines, Spices, Silk, etc., are found elsewhere. — In the Levant almost everything, even wine and firewood, is sold by weight. At Smyrna the weight consists of Drachmas, Okkes and Kanthars. An Okke is two and a half our pounds, and the Kanthar resembles 100 our pounds by weight. As for the rest wagons are not common; so everything is transported from one place to another 3 by means of Camels and Mules, whereby a necessary number of men are found for the delivery and safety. A certain company of such travellers with merchandise is called a Caravan, and a road which they can cover in one go with Camels, Konak. Yet one Konak is never the same as another in width and distance, but is adapted to the condition of the road, thus requiring more or less hours. But, as Camels and Mules keep almost everywhere a fairly constant pace; so one can reckon 2 hours to a German mile, and from that conclude to the day's journeys, which occur in the Levant travel descriptions, which can amount to between 4 and 6 German miles. It should be noted that the Camels never go side by side, but always behind each other, so that a Caravan, depending on its size, extends half a mile, or even a whole mile in length. — Such posts as we have with us, are not in Turkey; but every fortnight, letters from Constantinople to Vienna, and also back, are brought by mounted Janistas; and from the first mentioned place to Smyrna, Angora and Aleppo are fixed letter carriers; to other places and in extraordinary times one must make use of the opportunities that arise. On the principal roads, certain guards are indeed posted for their safety; but if the commanding Bajfaoi' Aga himself is not strict; then they are, not infrequently, highway robbers themselves, or at least make themselves pay dearly for the safety they provide. Otherwise, the trade by water, within the various Provinces of the Empire, is carried on by means of various kinds of ships. Between Constantinople, Egypt, and Syria, this is done with armed frigates, in order to be able to defend themselves against the Maltese; but in the Archipelago and the Hellespont with Voliken. These have only one mast, but long sprits to stretch the reasonably large sails. The stern projects higher out of the water than it is under it. Above, it is often decorated, and hung with garlands of flowers and other things. The ship itself is flat, and has a widely projecting prow. — Rich or distinguished travelers provide themselves with a Ferman from the Porte. Then, without contradiction, they can take away the horses for the continuation of their journey anywhere. This same power is also possessed by all messengers sent out by the Porte. Although those arts do not flourish in Turkey, which necessity, convenience or splendor has produced with us; nevertheless they do not lack all this, according to their country's manner or customs. Although they are not far advanced in mechanics;

yet they have no lack of gold, silver, copper and ironsmiths. They do not come close
34110 to ours in hammered work, in new models, and in purity in large pieces; but they
know, nevertheless, that in making gold arm-ornaments and other pieces, in use there
in the country, as well as in working copper and tinning it, advantages which we do
not have. (*) For fine work in gold, the artist is allowed to come into the house,
who brings his tools and furnace, and, where he wants, sets up his workshop. – The
34115 silk-bow succeeds, with a reasonable ease and still greater profit, on the islands of
the Archipelago, and the Greek, Natolian and Syrian coasts. Cloth-manufacturers are
entirely absent; but all the more there are manufactories, in which silk, tree-wool,
camel-hair fabrics, and indeed according to their taste, are made very beautifully
and costly. Constantinople, Angora, Aleppo, and the island of Scio are very famous in
34120 this respect. The silk shirts for the more affluent women, belts, veils, as well as a
kind of velvet for the sofa-cushions are made with great beauty. In this the
inhabitants of Brussa excel in particular. Embroidery is brought there to the
greatest perfection. In Turkey they embroider images and flowers from life; and this
is the work especially and mostly of women, not only of the great, but also of
34125 slaves. The Turkish carpets in all their thickness, variety of colours and flowers,
and various sizes, are worked with large needles. They also make, especially in
Egypt, mats, which are of fine reed on thin rope, very pure, and worked after all
kinds of models. In Smyrna and other places are good Cotton-Printing-Houses; also
there, and especially at Kanea on the island of Candia, much soap is made.
34130 The same crafts are there, as with us, and indeed by way of guilds, as masons,
tailors, shoemakers, carpenters, etc. What they cannot make themselves, they get from
Europe, or from European and resident artists. Among the latter, however, the watch-
makers made a great fortune; since clocks, instead of other imperfect time-keeping,
for instance by water-glasses, have become fashionable among the Turks. The Painters
34135 do not know much more, than to make some shoddy work, or at the most common figures
and trees. Becoming a master at the crafts is fixed at certain times, when solemn
processions are held with Music in the cities. Agriculture is diligently practised,
and in the winter, which is the rainy season there, most is sown. It is there almost
as in Europe, but easier, because the ground is light, and with the plough, which is
34140 generally made of wood without any iron, one does not cut the earth at all deep, but
only about a hand's breadth. One ploughs the land once, sows it, and harrows the seed
under. No trouble is made to weed out the weeds. All fields rest and bear one year
after the other. No horses are used for ploughing, but oxen, and chiefly buffaloes.
The greatest diligence is still expended in planting olive trees and vine, where it
34145 thrives. Cattle breeding is mostly limited to stud farms and herds of goats and
sheep. But, because of everything large tributes must be given, and no one knows
whether he, what he has, his heirs will receive, and the encouragements, and even
more the rewards are usually lacking; thus the greatest hope does not work more, than
he needs for himself and his age.
34150

(*) It is strange, that the true calculation of the Purses, so often, is done wrong. Still the
greatest geographic writer of our time, Mr. D. Busching declared, in his (Hoogd:) weekly
reports ?? Maps for the year 1773 No. 40. 15 hundred Purses for 7 hundred and 50 thousand
34155 Prussian Reichsthalers: because it is only so many Piastres, of which one is only three
quarters of such a Taalder. And in that for the year 1775 5 Piasters are declared for one
Ducat (page 410) and 4 thousand Purses for 2 millions of Daalders (page 412.). Will these be
Prussian Daalders, as it seems; then it is untrue. There are only so many Piasters or Lion-
Daalders.

(*) The frequent use of copper vessels in the Levant is, as much as is generally believed, not
34160 harmful because of the there holding, very protruding and often repeated tinning.

§. XLIII. Of the domestic condition of the Turks.
Among the Turks, almost all families are esteemed equally; none is excluded from the
ascent of the highest offices of honour; as also none, by their actual possession, is
34165 insured against a complete fall. – Marriages take place in a manner very different
from ours; they are concluded before both parties have seen and spoken to each other;
although it sometimes happens that the Bridegroom, through his mother or some other
person, may obtain a picture of his future wife. On the wedding day, the dowry is
sent to the Bridegroom's house. When the Bride is fetched, then this is done in
34170 disguise, and her Father's house; mourns and weeps over it as if someone had died. At
the wedding feast as well as at all other solemn visits the male and female sex have
their company and amusements separate and apart from each other. – The condition of
most Turkish women is severe, and the man's good nature makes at most an exception.
Because a well-to-do man has several wives; this alone causes jealousy and envy among
34175 them, not to mention other passions. The man can, on all occasions, repudiate them,

and, by threatening to do so, make them afraid. The rule of the man can therefore be tyrannical, and otherwise he can also, by using slaves, break the marital fidelity as often as he pleases. These are kidnapped or bought Christian women, who fall into the hands of the Turks on the Russian, Polish, Hungarian and Italian borders; and besides

34180 that Georgia and Circas with the neighboring countries must also pay a common human tribute; yes, the inhabitants there are so dehumanized, that the husbands and wives, not less the parents the children, and these sell them either by force or cunning. – The number of white and black slaves, which are brought annually to Constantinople, can indeed be determined with no certainty; but they will amount, one year counted by

34185 the other, to no less than 25 thousand. What one cannot get rid of there at a reasonable price; that is carried to other provinces, especially to Egypt, where the white slaves are rare and expensive. Otherwise the Christians and Jews might also buy slaves of the Christian religion; but Mustapha III has forbidden this, under severe punishment, which can extend to death. (*) A man may sell the bought or stolen

34190 slaves, when he is tired of them; although they usually then obtain their freedom, if they have brought children into the world. A real, but divorced woman must be returned her matrimonial property, except when she has given occasion for divorce by an indecent act. Women do not obtain these so easily; but they may desire them, when the man does not give her the necessary maintenance, or has wanted to abuse her

34195 unnaturally. In order to indicate this latter point to the Judge, they are accustomed, without saying a word, merely to turn over the thin undershoes they have taken off, with which they go into the rooms. The Judge understands this metaphor further. Meanwhile, among the Turks, the children bred from co-wives have the same rights, as well as the same paternal inheritance with those who are born of

34200 legitimate women. It is almost unnecessary to mention how, in polygamy, the discipline of children is placed. The understanding, especially in the female sex, is left very untrained; no one thinks of the real improvement of the will and heart. The necessity of it is not even understood. Wild and licentiousness is considered something unconstrained. The

34205 children of common people run, without any instruction or discipline, along the streets; those of nobles, whose sons are called Tschelebi, have Slaves and Enslaved Men as Tutors and Stewards; certainly, very unfit persons for such an important matter. The Mohammedan religion is not able to produce anything good in children, and domestic examples are able to further pervert nature, which is already corrupt in

34210 itself. The Eunuchs are also by the Chief overseers of women, and are entirely deprived of their manhood, so as not to give the landlord the least suspicion in expiation of his lusts with his wives. With regard to the long garments of the Turks in general, I thought it worthy of

34215 remark here, that the Chiefs not only wear a light long outer garment over the long petticoat, and 'also a' fur over it, but moreover, on their journeys and otherwise, take several with them, to be able to exchange for convenience and splendor. This is very conveniently transferred to the prohibition of Christ, whereby he forbade the Apostles to carry more than one coat on their journey; just as he would not allow

34220 them to use shoes, but instead to tie on shoe soles. X 10. Marc. VI 9. Their shirts are made nearly like the European women's shirts. The trousers are, in many classes, of an unusual width, and so full of pleats, that for a pair well over 40 yards of linen three-quarters wide are needed. The turban gives them a special dignity, and is of very different kinds and shapes, according to the rank of the persons who wear it. Gold and silver are not seen at all on the clothes of the men's sons, as it, in their

34225 opinion, does not belong to the ornament of men; but they spend a great deal of money on horsebacks and saddles, daggers, pistols and harquebuses. The Emperor himself makes no exception here, plumes with precious stones on his Turban, besides three plumes of Candid herons, one in front, and two on either side, somewhat

34230 distinguishing him from others. The principal Bassas have of the first kind one of the same on the left side, and lesser persons only one in common. It is known that the Turks have appropriated the colour green; and no one, who is not a Mohammedan or a European, may wear such a colour in their country, as a colour in a certain respect sacred to them. – When riding they use boots; but when walking only slippers, which they take off in the apartments and when praying. This last serves to explain those

34235 passages in the Bible, where the taking off of shoes is given as a sign of outward reverence for God and man. The Easterners of the male race seldom wear stockings. When therefore the first Christians were baptized among them, it happened very easily, by their climbing into the edge of the water. Handel. VIII 38. – The watch is worn in a purse on the breast near the heart. The undergarment, (Dtiaman) over which

34240 the outer garment, (Feredsche) often hangs open, only from the shoulders down, is provided with narrow sleeves, and tied around the hips with a belt, in which the

pistols are stuck, as well as the Hattagan or a certain knife, in the shape of our sabres, three quarters long or a perfect El. This is seldom seen, because it is covered by the outer garment; and one can understand by this, ??the Ehud, (Judge: III 20. etc.) Joab, (2 Sam: XX 10.) and others could use their Eastern swords, unnoticed, to pierce. The outer garment is, in the summer, of very light material; but in the winter of cloth, lined with fur. The Turks are exceedingly fond of the beard. They consider it an essential privilege, by which God has wanted to distinguish the male from the female thought. And so one can easily understand, why in David's time it was considered the greatest insult, that one had cut off his ambassador's. 2 Sam. X 4. 5. They are also accustomed to comb it, to puff it up, to incense it, and to anoint it with fragrant waters and ointments. And since they remain unyielding in this ancient custom, as in the mode of dress in general; so one can, without mistake, conclude with certainty from the present to the former customs. – Even the meanest people wear gold or silver rings, which in the case of the better-off are set with stones, on which their names or an inscription are engraved. And, since these rings serve the Easterns as insignia, seal and inscription are identical expressions. (2 Timothy ii 9.) These seals are printed with black ink, similar to our printer's ink; wherefore the passages from the Holy Scripture, Rev. vii 2. etc. Ezek. ix 4. will not seem strange or absurd to anyone. The greater part of their names, especially male ones, are taken from the Old Testament, and are bent and changed somewhat to the Arabic or Turkish pronunciation. The Turkish women in their mode of dress come fairly near the Greek, and, however concealed they may be, are never idle. There are special days and places in Turkey, when they sell and buy, but covered, raw wool and silk, as well as wool, silk and all kinds of woven materials. At Smyrna, Angora and elsewhere are common women's markets. And their work is still, as I have often seen, that they, covered with a veil, fetch water from the often remote springs. Wherefore the punishment which Joshua inflicted on the Gibeonites, (Joshua IX 21. etc.) consisted in their degradation from military affairs to womanly occupations. The female sex is, as is known, exceedingly modest. For Christians and Jews it is a very dangerous business to have to do with a Turkin. They either forfeit their lives, or must adopt the Mohammedan religion, and marry her; at least it costs them a great deal of money to settle the matter. The common women of all kinds go out of the rooms, even covered with a white veil. The Turks, for instance, are of the opinion that beautiful women cannot be looked at without the evil desires of men, and that they are therefore considered and concealed. If they go walking alone; then they often disregard the rules of European politeness: and this is the reason that male sons, especially of other persuasions, gladly get out of the way, to avoid their attacks and presumptuous impudence. But otherwise this is done, for the most part, in a large company, under the supervision of Eunuchs or black Arabs. Since carriages are not at all in use, the men ride as well as the women. – If prominent male sons go out for pleasure; then a certain number of servants go ahead in pairs, carrying the things necessary for eating and drinking, as well as for changing clothes. To ride on donkeys is, in most Provinces, not contemptible. Their saddles differ much from ours. These are long and soft, and the children are usually placed behind them. The stirrups are short and broad, so that the slippers do not fall out so lightly. There is a great difference between these saddles and those for camels and asses (Sphemer). These are mainly fitted for girding up the burdens, of wood and leather, therefore hard and uncomfortable; wherefore one must put either coverings, or the long Eastern garments on them, in order to ride at all comfortably: as this was also observed by Christ's disciples at the time of his entry into Jerusalem. Matth: XXI 7. -- In European Turkey there is indeed a kind of carriages: but these are not so much used for travelling, as for taking a rest. They have long wheels, are small, with latticework, and hung with common or precious material. The latter can be moved aside to create air, so that the latticework remains, so that those who sit in it are not seen on their sofa cushions.

Companies of both ideas are considered indecent. Each one joins his peers. Brothers and sisters-children of different generations will not easily see each other, I am not mentioning any further kinship. No one asks after the health of another's wife or daughter, because this would be completely against their politeness, and would be taken as an insult. A familiar intercourse with other religious parties does not take place. They are merely visits for action or ceremony. The offering of coffee is begun, if rank does not permit a pipe of tobacco to be offered. Immediately before the coffee, some preserved fruit is also offered. Only one cup of coffee is served, only half full, and usually without sugar. This is followed by a sorbet or sweet drink. During this time, business is transacted. If they wish the visit to come to an end, then a sweet-smelling water is brought, and the guests are sprinkled with it;

then follows an incense, with which very fine cloths are spread over the heads, so that it does not evaporate so quickly. The Turks of rank are very industrious, both in their visits and in their intercourse with other peoples, and the Europeans are despised by them with their much chatter and laughter. But as silent as the male sex is in its intercourse, the louder and more talkative is the female. Wherefore the Turks have this proverb: "Two Asses make a noise like a Caravan; but two Wives like a Council". — Persons of a low rank stand before the Great in a very humble form. The hands hang down against the lower abdomen, one over the other, and the eyes are cast down to the ground. With deep Compliments the custom so often found in the Bible still holds good among them, namely, that the inferior should fall on his knees before the Great: and before the Princes and Great in the East no one may appear without a present. — It would be very improper if a woman were to go to the door of her husband, even after a long journey, and receive him. — In common intercourse they regard no rank; but in ceremonies and ceremonies each is assigned his own place. With men of the law (Ulema), as with us, the right hand is the place of honour, but with soldiers the left; so that the Grand Vizier and the Mufti, when they come together, have no difference in this respect, since each, according to his opinion and the prevailing custom, has the higher hand. Their greetings among themselves and toward others consist in these words: Salam-aleikom, that is: peace be with you, with which they, while bowing their heads, lay their left hand on their breast: but Christians and Jews may not address them with this, just as if they could not wish them peace. The turban is never taken off in greetings, and a Turk would believe that a European was making fun of him if he took off his hat in his presence. The inferiors, when addressing and departing, kiss the hem of the coat of a noble, or press it against his forehead. The Orientals are not fond of walking. When the weather is good they go to a pleasant place, where there is water and shade, and stay there from morning till night. Many even stay the night under tents. They are not accustomed to sit on chairs, but either on the grass, over which a carpet is sometimes spread, or on a low sofa, and indeed with their legs crossed over each other. The domestic servants of the Orientals of both sexes are not only sent out with the children alone, but are also taken along when the husband and wife go out. The servants take children, especially when they are a bit bigger, usually on their backs, so that they put their hands around their necks, but keep their legs at their sides, and look over them with their heads. Although the furniture is not so abundant among the Turks as it is among us; nevertheless there is an exception in this respect. For one finds the Grands of the Empire, who have furnished their apartments, after the European manner, with costly mirrors, armchairs, cupboards, tables, etc. from France and England, or else with paintings of landscapes and country views, but without human figures. In the apartments, where they keep house, everything is so clean and neat, that no one wears shoes in them; but the floors, stairs and forecourts are not lightly swept and dusted; for they are very indifferent about their houses and palaces. This is done partly from a true principle of religion, because they were only foreigners there; partly also for political reasons, because no one knows whether he will long possess them, and whether their descendants will inherit them. For this reason one seldom sees them improve a house. They inhabit it as long as they can. If they are still alive then; then they break it down completely and build a new one. The most secluded part in larger houses serves as a dwelling place for the women, and bears the name of Haerem. (*) The attics in the rooms are painted, sometimes gilded, and the floor is covered with mats or carpets. On the walls all around is the Sophar. The preparation of their food differs a great deal from ours. Instead of butter, which does not succeed there, as it does with us, they not only use their excellent oil, but also have the fat of curdled milk, which can be eaten fresh on bread, and is probably the Cherriah (ntf??) of the Hebrews. Judge: V 25. The rest they dry or use as an ingredient in certain dishes; or use it as sour milk for food and drink. Meanwhile the European Turks, in many provinces, use butter in abundance. As to the use of spices, especially pepper and camel, they are excessive. Their thin bread is baked not only in Nato, but also in an unusually large number of regions of Arabia, Syria, and towards the Euphrates, for want of wood, over cow and camel mist. And so it can surprise no one that Prophet Ezechiel (Chapter: IV 12.) had to bake his bread over the dung of man's extremity, instead of camel mist, as a foreshadowing of impending punishments. These cakes, like their bread, are put on the table almost as warm and fresh as they come from under the ashes. Because no leaven gets into them, they only last the day they are baked. Otherwise they are white, of a good smell, and only half a finger thick. If they are used the next day, out of necessity; then they must be warmed over coals, because otherwise they would be too tasteless. A liquid, that which is pressed from Susam-seed (Tachin'), and another, that which is called

Petmes, and is also sweetish, are poured together, and are like their butter. Without
34375 the well-known Pillau or boiled rice, a meal is not easily done. According to
proportion, for instance one measure of rice and two measures of water, they boil the
latter first, and then put the rice in, to let both boil together. Then they leave
the pot open, and, without covering it further, or stirring the rice, let it boil
34380 or brown butter or fat, stir it with a spoon handle, cover the pot for about five
minutes, and then ladle up the Pillau. Otherwise it is also sometimes finished with
fowl or mutton, and boiled with raisins, and, when it is put on the table, sprinkled
abundantly with pepper. Mutton and goat meat, with fowl is their favourite food. But
in general they are not great meat eaters, but are more fond of garden and tree
34385 fruits. In eating Turks are generally very moderate. The lesser ones content
themselves with salt and bread, garlic or onions and sour milk, to which occasionally
olives are added, and on ceremonial occasions other food; so that a Turk, according
to our way of living, generally helps himself to little food. Important persons
use spoons made of tortoise shells, smaller ones of horn, and the common ones of
34390 wood. Knives and forks are not used on the table, and the meat is already cut into
small pieces in the kitchen. Besides, the meat is cooked so soft that it falls to
pieces when touched. Their way of eating is therefore repugnant to us, because what
we eat with spoons, they put into their mouths with their fingers. With respectable
people the tablecloth consists only of a round piece of leather, which is spread out
34395 on the floor. They use tinned copperware, and the drinking vessels are large dishes
of copper or porcelain. The guests of equal rank sit on their feet crossed under
them, and the lesser ones on their knees all around. On the leather they place the
bread cakes all around. With their right hand they only touch the dish, putting food
on the bread, or sometimes on the leather, they break the meat into pieces with their
34400 fingers, and then eat at will. When they get up from eating; then they say, God be
praised! Water is their principal drink. After the meal they always wash themselves.
For refreshment they use the Sorbet, which is not made in any way, and is seldom to
the taste of the Europeans. The coffee pot with them only gets cold, because on a
summer day it stands in the kitchen, but in the winter on the cooking-pan in the
34405 room: but, because the cups are small, and are often poured barely half full, a
strong coffee-drinker there only drinks as much, as an average one with us. The
coffee is fairly strong, but is never drunk with milk, and as saucers are not in use,
the cup, to avoid burning the fingers, is placed in a sort of saucer, which among
common people is made of copper, but among nobles is made very purely of broken
34410 silver or gold. A Turk does not easily live without tobacco. Both in the country and
at home he has his pipe almost always in his mouth; and from a sort of cleanliness it
is, that he, at least in company, swallows his saliva. But the tobacco is smoked very
slowly, and indeed from pipes, the stems of which are from 2 to 4 ells long; through
which nothing but an airy vapour comes to the mouth, which does not bite the tongue,
34415 nor is it as intoxicating as with us. The stems are often covered with silver or
gold, and sometimes even wrapped in some kind of material, which, especially in
summer, is moistened with a sponge, so that the smoke may come very cool into the
mouth. The landlord himself or a servant hands the lighted pipe to all. The opium is
taken by many in such a measure that they become intoxicated in a certain sense, and
34420 thus, as if enraptured, give themselves up to their dreams. At first they become
waking dreamers; but gradually all the powers of mind and body are so weakened that,
while the body is still alive, they become senseless, insensible and inactive. Rich
and distinguished Turks keep a great number of servants and slaves of both kinds. If
they buy the latter by the more mature years; then they will not easily force them to
34425 their religion; nor do they deal with them so mercilessly as the Mohammedans do on
the coasts of Barbary. Their cruelty is well understandable. For the scum of those
Turks, whom, except by death, they wish to punish most severely, are banished from
Turkey to the coasts of Africa, or, in some places, are taken by the Moors and
employed, where they make a great fortune there in a short time. For the rest, the
34430 Slaves of both kinds, who are not robbed in their youth, or bought and then brought
up, are generally the worst creatures. Otherwise, their worldly condition could not
be considered unhappy. In their native country they are for the most part no better
than the Savages; but now they are well maintained and clothed; instructed in many
things, and often make a great fortune; as one finds examples of this in the earliest
34435 Histories, that they, behaving well, are adopted by their owners as children, and
made sons-in-law, Genes: XV 3. 1 Chronik: II 34. 35. The beautiful slaves are
described as exuberant, proud and self-willed, and those who are stolen in tender
youth, are inspired by the Turks with a great hatred against the Christians. The
children of slaves are, according to the law, their own, unless the owner grants them

34440 their freedom.
 The Turks, as a lazy, idle people, are uncommonly fond of pastime; but not of such as they should exert their energy in, but of such as they can act as dreaming
 34445 spectators. Tightrope walkers, fighters, wrestlers, and indeed in a coarse taste can gain something by it. There is also no lack of such rabble of men and women. While showing their works of art, in which they often express the most lustful movements, they always let a music be heard, which with a common drum and some hoarse wind
 34450 instruments are made. Actual plays, comedies and operas are not a fashion with them. The fighters, after the custom of the ancients, smear themselves with oil, and have no other clothes on, except a pair of leathern stockings. As they behave like monkeys, with their various swings and simulated attacks; one becomes dissatisfied in oneself, that one can thus degrade people below their natural dignity. The games are short in their separate performances, and at each end the principal spectators are asked for a tip. Gambling is not so common among the Turks, except the game of chess, the draughts-board and the Mangala, or the counting of a multitude of beans or small
 34455 stones in 12 hollowed-out holes in a thick board. In winning or losing they show neither joy nor sorrow. It is also done for no money; for gambling with money is considered a great sin by them. Both thoughts seek the greatest amusement in gardens or pleasant regions, especially where there is a rushing water, or a strong passage of travellers, to pass the time as if dreaming, while listening to music or smoking
 34460 tobacco. For this reason, coffee houses are also built not only in the cities and villages, but also on popular highways. The Dscherid or stick game is for the riders, and is considered by them, in a certain respect, as a martial exercise. One spurs the horse on with all one's might, and, while one lets it run around, one tries to get behind the back of one's party, and to throw the stick at its shoulders, because one
 34465 should never aim at its belly. They pick up the sticks from the ground at full gallop without dismounting, turn themselves around the belly of their horse, and make several swings, to avoid the throw intended for them. In this bodily exercise they are very skilled. Among the pastimes belong the Baths, (*) which, on a medicinal pretext, are visited by the women during the day, and by the men's sons towards the
 34470 evening, several times a month. Now, because large companies of one sex, but nevertheless of all peoples and denominations and ranks, usually come there, and converse with each other without ceremonies; thus they stay there, while bathing, drinking coffee and talking, for 3 or 4 hours. These are the proper places of meeting: for the women to tell each other all sorts of news, and to show each other
 34475 their precious things. Should a man's son sneak in; then, when he is undressed, he would not only be easily known, but even be in danger of his life. When the inhabitants travel in Turkey; then they take with them a Mat or a Carpet, to sit and sleep on, some blankets, a cooking-kettle and a bowl with a drinking-bowl and a coffee-pot. These are all their utensils; and if they have no Servants or Slaves,
 34480 then they boil their own coffee and rice.

(*) Notwithstanding this Prohibition, they are still allowed to buy them, for the benefit of the Turks, as their owners. But the buyers close the deal before the court, and have a Tlam?? or judicial testimony given concerning it, in order to be assured against all the Avaniens?? in the future.

34485 (*) Haerem not only means, as in a similar Hebrew word, a holy place, but also the women and their dwelling. Haeremcyn, in the double number, expresses the two supposed holy places, Mecca and Medina.

34490 (*) Bathing has become almost a necessity with them. It must, for example, be done before marriage; and they do not take a slave into the house who has not first been bathed.

§. XLIII. National Character of the Turks, and other things pertaining thereto. In such a large Empire as the Turkish, which is composed of so many Provinces situated under many climates, the inhabitants cannot well have one national
 34495 Character: for example, the Turks in Greece proper, in Egypt, on Kandia, Cyprus and elsewhere are more wicked than those living around Constantinople, Smyrna, etc. The Europeans are considered active, impetuous, brave, rough in their morals; the Asiatic, on the other hand, are considered cowardly, tender, effeminate and lazy. But the following will generally be true and sufficient for their representation.
 34500 The Turkish nation has a natural intellect and judgment. This can be inferred from the fact that the Turks, without much justification, by themselves, in all sorts of things, come reasonably far. The examples are many, that men of the lowest state attain to the highest dignities, and know very well how to conform themselves to them. It is a great amusement to the hearers, in judicial, and often very delicate
 34505 investigations, with what subtlety and ignorance the Judges, without being instructed in our legal matters, question the parties, and are able to discover the most secret

acts. Their ideas are, often, singular in their kind. But this does not prevent them from being uncommonly superstitious. There is not a people who could be more attached to superstition. Almost all chance things, yes, even the colours of their clothes, furnish them with matter for good or evil premonitions. They consider dreams as a kind of divine inspirations. Supposed astrologers, soothsayers, and enchanters are always very popular among the principal people. Many carry talismans with them during their lives. These superstitious signs, to protect themselves from injuries and accidents, are not of one kind. One of them consists in certain sayings from the Koran, or in prayers, which are written on paper or parchment, and worn in a little bag on the naked body on a cord. Another contains certain forms, cut on metal or stone, and is fastened by means of a ring passing round the arm, or elsewhere. They are even hung on the necks of horses. None of them is free from the imagination that one can do much harm to another by an evil glance of the eye. Charms to make a person fall in love are believed to be used there, besides by the Mohammedans, also by the Jews and Eastern Christians. Various charms are used with the sick; indeed, passages from the Gospels are read for their cure, and recourse is had to the graves of supposed Saints among the Christians and Turks. If they have a strong and constant pain, in whatever part of the body it may be; then they hold a small burning blade or cloth to it; with which various words are spoken by Christians, Jews, and Mohammedans, and crosses are made by the former over the painful place. This is called the holy fire, and great power is attributed to the ceremonies customary with it. — In Egypt it is generally believed that the Feast of John the Baptist puts an end to the plague. Their stature is well-made, stout and manly. Their strength is not small, and they can bear burdens which one must resist. Their bodily posture and movements are simple, not so made, as ours, and they do not fence, while speaking, so much with the limbs, especially with the hands. The Turkish women are described as beautiful. Their skin, because of the covering, must naturally be more tender. — A high opinion of themselves is theirs in a very high degree. But which peoples are free from this pride? Are not a Spaniard, Englishman, Frenchman, etc., in their own eyes exalted above all others? According to the imagination of the Turks, no State is better constructed than theirs; no nation equals theirs to precedence; no religion more wholesome than theirs. What we have previously remarked concerning their learning, enables us to judge whether they may be considered infallible judges in these respects. — They give all nations epithets; the Greeks they call Tauschein, hares; the Jews Schifud, dogs; the Armenians Boktschi, dung-eaters; the Germans Dschurur-Kiafir, filthy swearers, etc. In their conduct they are serious, and one cannot well imagine what dignity they are able to display constantly. As to customs, habits, and manner of dress, they are extremely constant and obstinate. They regard these as things connected with religion, so that he who would change them, seems to change religion along with them. When therefore Sultan Mahmud, in this century, borrowed some arrangements and customs from the Europeans, he had to tolerate that he should adopt the Frankish ??auer or the European Infidel was called. Their way of life is very uniform. They go to bed early, except for Ramasan, and rise early again. At 7 or 8 o'clock they have a moderate breakfast, and towards evening their main meal. They spend the day either in idleness or in occupation. City clocks for dividing time are not at all in use. The calling of the Mosques to prayer serves for this purpose, and one would believe that by the construction of the first their Imam and the Dignity of the Religion itself would lose something. The largest group lives moderately, making do with little and small food; and, as their main drink is water, the table does not require great expense. Of soups they know almost nothing; and many live, in the season of fruit, only on bread, fruit, and water. — Avarice is also with them the root of all evil; and generosity is an almost entirely unknown virtue to them. With money one can get the most from them. One can make everything right with it, buy off life sentences, and procure as many false witnesses and perjurers as one needs. Even the First Names of the Court, the women, the eunuchs, and other Trustees are won by this metal. And therefore things that are not of gold and other precious materials are of no Value to them. Our taste in paintings, furniture, porcelain, etc., is despicable to them. Has one given a present to a Turk, of whatever state he may be, on a certain occasion, as on a solemn day; then he regards this as an obligation to a superior, and demands a new one in return: why also the word, Baechsersch (gift), which is none, which one hears so often in Turkey. They have little inclination for fine arts. They love idleness more than work, so that they often spend the whole day in playing. — If the earth, with a little effort, did not produce almost everything of itself, and if the Turks did not live so moderately; then they would soon have to perish. In business and conduct they seldom keep the middle way, but are either naturally just and hypocritical, or very malicious and

deceitful. They can become very easily angry and irascible. They are idle, and can dissemble unusually. They incline to cruelty and tyranny. Their desire for revenge is not easily sated. Trifles can set them to second thoughts, which can seldom be taken from them. Their love, as a rule, results in cruelties, of which one or the other party becomes a horrible victim. Not infrequently, young men or women are found murdered in lonely places or in the water, their faces mutilated, so as to remain unknown. As insatiable as the Turks are in their desire to amass wealth, so wasteful are they when it comes to satisfying their lust or splendor. Their lust is worldly; and both minds, to satisfy it, devise the most cunning means, or fall into the most unnatural tracelessness: so that in them the very remarkable word of the Apostle, Rom. 1 26-28. is fulfilled. This should surprise no one. The climate is hot; and the Mohammedan religion, instead of restricting and appeasing the lusts of the flesh, rather leaves them complete freedom, and, instead of providing means to subdue them, gives them food to follow. Among them unnatural sins are in vogue, whose names must be covered with eternal silence, and which nevertheless often form the substance of their songs, and furnish matter for conversation, especially among the Great. They have only base thoughts of the female sex, considering women to be an inferior sort of people. On this account no care is taken for their education, but they grow up without any knowledge, and are wild and dissolute. Very few of them have any understanding of religion. It is considered a matter of indifference whether they pray or not; whether they go to the Mosque or not. When a crowd of them is in the street or elsewhere; then they go as far out of the way as they can, to be protected against their excesses. — For the rest, the Turks are great lovers of tame cattle. Most common fathers of the house have a sheep, which goes with them to the fields, and follows them everywhere. Such a custom probably took place in David's time; and therefore, on a certain occasion, the Prophet Nathan spoke to him of a sheep, which had been fed and maintained with such care by its owner. 2 Sam. XII. 1, etc.

Dogs and cats are so well cared for by them, that the former are nowhere better off than in Turkey. The streets are full of them, and it is considered a good work to throw them bread and meat. If they were as quick-witted as we are, then the pedestrians would be unhappy: but they are lazy and do not stir, even greater would be the misfortune, if they became mad; but of this they know nothing there. But the cats alone are tolerated in the houses and rooms, and not the dogs, which are considered unclean animals. From this one can understand, why they, Rev. XXII 15. are presented as a symbol of reprehensible people, and unworthy of salvation. Because now, because of a wrong and ill-conceived conception of love, they do not let them be killed; so they multiply in the streets and on all corners unusually. They are extraordinarily fond of horses, and take almost more care of them, than of people. Each horse, while grazing, is fastened to a pole by means of a rope on one leg, in such a way, however, that it can walk around freely up to a certain distance. In addition, they are all, according to the owner, covered with a bad or expensive covering, to be protected against heat or cold. The Turks generally ride on stallions, and not on geldings. They are good horse-tamers, straightening the horses more with good and gentle words, than with cursing and beating. The bits and bridles are also different from ours, oppressing the tongue at the slightest pull, so that the horses let themselves be controlled further.

The thoughts of the Turks about other nations and beliefs are not the best. They consider it not only permissible, but even a work of religion, to revile and mock them, in order that, to avoid this, they might be induced to adopt the Mohammedan religion. Although the free gift is not exercised among them to the same degree as among the Tartars; yet it is not easy for anyone to perish of hunger among them. For the Mohammedans of other sects they have as little love as the Romanists have for the Protestants. The hatred against the Christians is great, and among them those who worship images are a scandal to them, nay, a horror. As for the Jews they have an uncommon contempt, and they are an object of their ridicule. But this reproach may also, alas! be made of many Christians.

§. XLIV. Internal condition of the Turkish Empire.

As great as the Turkish Empire is, so weak is it in all this. The population does not at all correspond to its size. (*) In many places the whole is destitute of people. One need not travel to the borders between Turkey and Persia, or to the Arabian deserts, to convince oneself of this; but the best Provinces show this fully. The regions around large cities are still quite well populated; but in places that are further away, the inhabitants decrease imperceptibly, and the few that remain, also leave them at last, and go to large cities. These are, according to all observations, the abyss in which the human race is devoured. The Polygamy, as experience teaches

there, does not populate the countries, but it does depopulate them. There are, in
 34640 comparison with our families, but few, in which, with many wives, there are as many
 children, as we find among us in the succession of the divine laws of marriage. – The
 reason why the people of the country go to the great cities, is the severity and
 cruelty with which the farmers are oppressed. – The wild regions are steadily
 34645 increasing, and one finds not only a few houses, but even whole villages, which no
 one inhabits any more. Many kingdoms and provinces bring little to the Porte. The
 Emperor, in comparison with this rich country, draws little from the fat Egypt.
 Moreover, it is full of internal unrest. It is the same with Morea, Georgia, Kandy,
 and other countries. Many nations wandering wildly in Turkey increase the disorder,
 and diminish the strength of the Empire, among which belong the Turkmen, the Druses,
 34650 and the Arab Hordes. – Although many and various denominations are tolerated; yet
 this tolerance is so badly regulated, that mutual oppressions, hostilities, and
 hatreds are never wanting. – The Mohammedans indeed constitute the dominant religion;
 but of Christians and Jews there is no less an extraordinary number. – The Turkmen
 and Druses, in a certain respect also the Arnauts, seem only outwardly to profess
 34655 Mohammedanism, but to abhor it in their hearts; which latter the Jesids also do. The
 oppressions which the inhabitants of Turkey, especially by the Avanians, and under
 the government of the Bassas, Kadis, etc., have to endure, are terrible and infinite.
 Wherefore they also seek to hide their treasures, as much as possible. The rich
 therefore live, in appearance, poor and lowly, and their houses do not look very
 34660 strange from the outside. This makes them all discontented, and in times of war the
 Great Lord cannot rely on them. – The whole Empire is badly disposed within. Many
 Bassas and Agas obey only as far as they please. For this reason there is never any
 lack of internal unrest. The Porte often sees this gladly, allowing such to arise and
 be caused between them, in order that they may consume themselves among themselves.
 34665 It mostly approaches the treasures of the underlying party; but the country suffers
 irreparable damage from it. Thousands of inhabitants are spoiled by it; others are
 driven away; towns and villages are destroyed; and fields and pastures are
 devastated. – From all this it appears how easy it would be to put an end to the
 Turkish Empire. Possession of it in part or in whole would certainly be too
 34670 advantageous for one European Power, and would give it too great a preponderance over
 all others. But this difficulty would disappear if one of the principal countries
 were appointed King or Emperor. It needs no proof what advantages would arise for
 humanity, the Christian religion, and the European, as well as other countries, from
 the destruction of the Turkish Empire. (*) For the rest, one must wonder that such an
 34675 irregular Empire can still exist; and this must be attributed to God's permissive
 Providence alone, which allows such a monstrosity to maintain its permanence for the
 humiliation of the European Powers.

(*) The population in Turkey, up to now, cannot be calculated with certainty at all, not even
 34680 in a single large Turkish city. No lists are kept of those who are born, nor of those who
 marry or die; and the poll tax is only collected from those who are not Mohammedans, and
 indeed only from the male, thought to have reached the age of thirty.

(*) This proposal, to make one of the principal Christians of the country King or Emperor,
 upon the destruction of the Turkish Empire, would also, I admit, encounter great difficulty.
 34685 Of the former Imperial Families there may well be no descendants left, although many still
 claim to be descended from them. In this connection one need only recall what I have
 previously stated, § XVII. concerning the Charaer of the Greek nation, especially if it is
 going well with it.

34690 End of the first Part.

NOTICE.

The Maps and Places belonging to this first Volume will be supplied in the coming
 34695 year, when the second and last Volume is published.

DESCRIPTION OF THE TURKISH KINGDOM ACCORDING TO ITS PRESENT STATE AND RELIGION IN THE
 LAST HALF OF THE EIGHTEENTH CENTURY, WITH MAPS AND PLATES, BY CHRISTOPH: WILH:
 LUDEKE,

34700 Teacher of Theology, first Preacher of the German Community, Chairman of the
 Consistory in Stockholm, and Supervisor of the schools;
 according to the High German second edition translated under the motto:
 ALTISSIMO ANNUENTE VIRIBUS MEIS.

SECOND PART.

34705 Behind which follow HISTORICAL REPORTS Of the Government, Customs and Habits of the
 OTTOMAN MONARCHY BY PETER BUSINELLO,

Secretary of State of the Republic of Venice. At LEYDEN, By A. and J. HONKOOP,
Booksellers
M D C C L X X X I I.

DESCRIPTION OF THE TURKISH KINGDOM, etc. SEVENTH SECTION, COMPARISONS OF RELIGION AND STATE FROM THE PRECEDING SECTIONS.

34735

\$. XLV. The precedence of the Christian religion, according to the Bible, above the Mohammedan.

The basic principles of a religion can indeed be learned from its textbooks, without having to stay in the countries where it is practiced; but the consequences, effects, and other circumstances, which accompany them, can best be learned by seeing them, and the grounds themselves are thereby placed in a clearer light. For this reason I considered myself obliged, notwithstanding many trials of the Christian and Mohammedan religions, to make such remarks as may reassure Christians, but may shame unbelievers.

34740

— When I now speak of the Christian religion, I mean only that which rests on the Bible: whereby, furthermore, a great multitude of mockeries fall, which are produced by Roman or ignorant Freemen, who do not touch the Christian religion according to the fundamental principles of the Bible, but only in general, but according to their narrow concepts, or actually the Roman religion. The first foundation of the Christian and Mohammedan religions, where the first acknowledges the Bible, the second the Koran, already offers very clear characteristics to distinguish the divine from the ungodly. This appears as clear as day, when one compares them both together. The writers or compilers differ greatly from each other. Among the writings of the Old and New Testaments, one finds, according to number, many, of which a part in a rather broken series, and indeed in a period of about a thousand years, and, four

34750

centuries before the birth of Christ, the first; but another part after the same, indeed in a shorter period of time, but nevertheless from many purposes, and in several places, the last has been left in writing; whereby, however, in the principal ends, for which a divine revelation is necessary, they agree with each other in every way; yet so that one can see how they did not agree together on what they wanted to write. Of the Koran, Mohammed is the only author who lets in many main parts of it implausible contradictions flow in, which one does not hold to the best of any

34760

writer, even if he does not claim to have any divine inspiration; I say nothing of the fact that one could forgive him a supposed Messenger of God, for whom Mohammed nevertheless wanted to be regarded. — An actual Revelation of God also brings with it undeniable characteristics of Divinity. The Bible is confirmed by Miracles, by which the Jews and Christians were moved, to often, against their will, become obedient to the faith; which the Koran and Mohammedans by no means deny, but allow them, and even increase. There are predictions in it, which neutral and unprejudiced minds clearly see fulfilled, and which Mohammed himself, by a perversion and a wrong quotation, attempts to apply to himself. How much these characteristics are wanting in the

34765

Koran? since its author always refuses to comply with the demand made of him to work miracles, and appeals to Christ, by means of perverted predictions of scripture, as

34770

having done miracles before him; and since his supposed predictions are of such a nature, that every guess, subsequently, may as well be considered a prediction. The content and presentation of sowing in both, likewise, differ greatly from each other. One need not be a great Scholar to see, by their comparison, the vast difference which exists between the Biblical proposals for arriving at the knowledge of God and eternal Life, and those of the Koran. One may, without fearing a well-founded contradiction, boldly assert that all that is good in it, is taken from Scripture, especially Christian Morality, and that consequently this alone, out of ignorance and malice, can be abused to belittle and disparage the Christian Religion. What then must one think of Writers, who, from the entire Koran, on a few pages, devise a brief conception of its teachings in good ideas, and thereby wish to persuade the Readers that there are principles in it which equal the Biblical sublimity? How deceitful and malicious is not the design of the conduct of such? And how easy would it be to think that even from a common book of some size a few pages of good thoughts could not be gathered, especially when they were drawn from a certain source, such as the Bible is in comparison with the Koran? The manner in which they both make their doctrines known to man for salvation is decisive in favor of the first. He commands him to test himself, and, since his particular parts proceed from men who possessed the gift, to speak of several languages, and which each people in its own language proclaimed the religion orally; thus the first Christians saw themselves authorized to translate it for general publication into different languages. The Koran shuns both the test and the translation.

The Christian religion surpasses, infinitely, the Mohammedan in the proposition of the condition of mankind, its present corruption, and the restoration of it. The latter treats man as a creature, which is only pathetic, and must be guided by pathetic feelings; the former deals with him as a rational creature, which can be guided and improved by reason and convictions. The latter flatters man's natural inclinations, yea, his carnal lusts, as if they were indifferent emotions, so much so, as if man had no reason, and had to act according to them chiefly, and had to try everything: the former explains to him, that between the emotions and inclinations in themselves, as they are created in him by the Creator, and the use or abuse of them by man, in a corrupt nature, a great distinction must be made. The Koran gives a very defective and wrong account concerning the origin or origin of sin; man's present condition in his moral relation to good and evil is presented very superficially, and thus also the sad consequences of natural depravity are extremely diminished; This now is as harmful to the soul of man, as if one were to be negligent in his bodily disease, and not consider its real danger. Just as little as one thinks here of powerful remedies, and of the disease at its root; just as powerless are, in the face of the real sinful evil of man, the remedies of the Mahamedan religion, and consequently also small, nay, insignificant, the improvement and restoration of man sought thereby. It is true, the Bible gives, in the statements: "the whole world is in evil, (John V, 19) and all the writing and endeavoring of the heart of man is evil from youth, and only, (Genes. vi, 5. vin, 19) an explanation against which the heart of a natural man rises up: but should we be surprised by this? Does a dangerous sufferer love the announcement: that his Evil is incurable for man? Nevertheless, the Bible proceeds as a faithful and true Physician. He tells us the first origin of our entire decline; he describes to us its consequences in a general depravity of all our powers; but he conceals from us as little the means by which we can be helped in the bottom, as the order in which we must use them, in order to save ourselves from to cure our spiritual disease, so that we may, in a certain and sensible manner, safely err.

The Christian religion gains a very decisive victory, when its Founder is compared with that of the Mohammedan. The birth of both affords the first ground for this comparison. At the birth of the first, special evidences of God's Providence were seen. The nation from which he came; the family from which he descended; the place where he saw the light of life; the time when he would appear; these circumstances, in many more strict determinations, had been indicated, thousands of years before, by so many Prophets; so that in the lapse of about four thousand years after the creation of the world, the coming of the Savior of the world was expected. Jesus of Nazareth fulfilled, by his birth, the predictions previously briefly mentioned, and a short time afterward such changes took place, that they can no longer be fulfilled by anyone. The birth of Mohammed has nothing extraordinary, nor in that respect different from other men; no one had a divine prediction to expect him; and when, against all the thoughts of the Arabs, he presented himself as a Prophet, he saw the necessity of resorting to violent perversions of the Bible passages; and, in order to defend these, to pretend in an absurd manner that the Jews and Christians had

falsified the Bible. Both lay claim to a divine mission; but what a diversity is not
34840 visible in this? Christ said in his earliest youth, "Know ye not that I must be in
that which is my Father's?" Luke II, 49; Beginning, to accomplish his mission, was
announced by John the Baptist, a man for whom the Turks have the greatest respect.
Christ himself accepted his mission, by the open announcement of God's command to
34845 call men to repentance, and to fulfill the law for them, with the declaration: that
he needed no angel to give him knowledge of God's will, but that he knew all things,
because he was one with the Father. Mohammed, first of all, at a great age, came to
the thought, to present himself as a Prophet, whereupon his wife and relations
considered him a madman; and, as his affairs took a favourable turn, his supposed
Revelations gradually came to light with many changes and contradictions. The Angel
34850 Gabriel was, as he pretended, his executing Messenger from God. But how far one can
rely on this, the preceding 25. and 6. Paragraphs in the first part concerning
Mohammed and the Koran do not obscurely teach us. — As diverse as the mission of both
is; so diverse was also the execution thereof, and their conduct in it. Christ, in
his doctrine, presented without respect to persons, laid this, as its principal
34855 content, for a foundation: "the Kingdom of God is come near: do penance, and believe
in the Gospel." Mark. I, 15. His Doctrine and Way of Teaching remained the same, and
no violence or outward coercion accompanied it. Could one think that Jews and
Gentiles would have accepted this Doctrine? But the Miracles that accompanied it
convinced them of its Divinity: Miracles that Christ performed by His own power, but
34860 His Apostles by the power that He communicated to them: Miracles that the Jews did
not deny. One of their Superiors said to him: "We know that you are a Teacher come
from God: for no man can do these Signs that you do, except God be with him." John
III, 2. And the Jews of the present day know of no other escape than this: Christ did
them by sorcery, or by the workings of Satan; an evasion, too simple, to refute, or
34865 to dwell upon. The miracles of Christ were so well known to Paganism, that the
apostate Julian, that idol of Free Spirits, expressly acknowledged them, and sought
to weaken the proof of the divinity of the Christian religion which arose from them,
that they should be attributed to magic, a pretext, which to a truly free or neutral
person can only appear ridiculous. How convinced the Mohammedans are of the miracles
34870 of Christ, has been previously recorded. — He moreover confirmed his doctrine by the
holiest example, so that his enemies could find no apparent ground of accusation in
him, and a Pagan judge openly testified that he condemned him innocently. And, as he
came chiefly to give up his Life in death for the atonement of mankind, he also
fulfilled this principal object of his mission, and became, in death on the cross, a
34875 curse to God's enemies, that he might thereby deliver them from the curse. Mohammed
accomplished his mission quite differently. The substance of his Religion is
presented in §. 28. of the first part, and a mediocre intellect is conceived, that to
concoct it, neither inspiration nor anything supernatural was necessary. And, as he
lacked the gift of working Miracles, he sought to remedy this defect by the facility
34880 which is permitted to corrupt men in following the lusts of the flesh, as well as by
the force of arms. For the rest he has no merit whatever with mankind. It cannot be
taught by him as it is done by the Bible. His way of life serves as no example to be
followed, and he has not even thought of the reconciliation of man with God. — The
principal enmities to life, and the moral character of both founders of religion,
34885 differ, likewise, greatly from each other. Christ's birth was the only one of its
kind. His education took place in an obscure place; and yet everyone, when accepting
his teaching, must ask in amazement: whence comes this such wisdom? Matt. xiii, 54. A
deep poverty was his lot in this world, with a special abstinence from all earthly
things, by this explained in: my kingdom is not of this world. Joh. xvii??, 36.
34890 Friends and enemies alike had to admire his holy conduct. A Pharisee?? fancy, which
places holiness without inward change of heart in gestures, clothing, and such habits
as are proper to hypocrites, objected to him, that he was a friend of Publicans and
Sinners; but this set the design of his mission beyond all contradiction, that he had
come to save the souls of men without respect of persons. He proved by his example,
34895 how one should regard the worldly Powers, and pay tribute without deceit. He was the
highest example of the strictest chastity. His humility, in his conduct towards
people of the lowest estate, and even children, was endearing. His meekness was
equally great towards high and low, friends and enemies; yet he also showed, on
suitable occasions, what he ought to show as a Teacher sent from God, an earnestness
34900 and zeal in the punishment of the ungodly. Such love, as he showed to the people
sensibly, is without example. He has sought everywhere to do good and to make
healthy. Handel, x, 38. And, since according to the thoughts of men no one has
greater love than this, that he lays down his life for his friends, or for the
fatherland; a love, by which one, usually, in an almost fanatical manner, encourages

the soldiers in battles, conquests and sieges; so Christ had this love, which surpasses all our conceptions, that he laid down his life for his enemies. His last suffering and his death, with what would follow, he foretold. He endured everything with an admirable patience, which was neither an insensibility, nor even less a hardening. He proved himself, after his resurrection, the one visibly, who would be the sufficient witnesses thereof to the world. After his Ascension he partly fulfilled the promise made to the Apostles, to endow them with a never heard of miraculous gift of God's Spirit; partly the threat pronounced upon the Jewish people, that their spiritual and civil state should be destroyed, and that it should be scattered among all nations, and among them should live as a separate people to the end of the world. In this respect also Mohammed differs entirely from Christ. His purest adherents allow him no other birth, as they can, according to a credible history, allow him no other, than that which agrees with the natural order in the generation of men. He devoted himself to commerce; a clear proof that he was not so ignorant as he pretended to be. The desire for earthly goods tempted him to commit open highway robbery. His Life was, according to the principles of a natural Morality, scandalous. Against his own Government he became a bloodthirsty Rebel. In the shame of an unbridled lust and carnal impurity he placed his Honour. Of humility, humanity, patience, and other virtues he gave no, but of his impetuous and cruelty, horrible examples, by which many thousands of men lost their Lives. His death was, like the death of other men, and his grave, as it is found at Medina, does not distinguish his body from other dead.

Perhaps someone could admire in Mohammed the duty of charity and almsgiving, so emphatically prescribed by him. But could he have recommended it with more emphasis than Christ did in the so-called Sermon on the Mount, and in the proclamation of the rewards of good works on the day of judgment? It cannot serve in the least to defend his other moral character. It was a mere political invention to provide his new religion with the most general acceptance; for the poor, who need alms, are always the most among a people, and the rich were also provided for. For they could, with their wealth, bathe themselves in all sorts of pleasures, and yet boast of their good deeds before God and man, and even by them, with their other irregularities, earn Paradise. Moreover, Mohammed, in this and many other pieces, thought and acted as it is now the manner of all crafty and cunning enemies of revealed religion; namely, to conceal from the eyes of men the renunciation and neglect of far more important truths and duties, they choose some virtue or other, which they know is easy for earthly-minded men (of whom the greatest number consists), and has the most general approval, endeavoring to excel others in it. Many a man, merely from hatred of Christianity, is in such cases outwardly virtuous. The celebrated Mosheim, on proposing the question, Whether Mohammed was among the enthusiasts or impostors?, is of the opinion that he was both; and he is probably right: for hot Arabia nourishes many of the former, and the bodily and mental weakness to which he was subject at first, to the great relief of his own, as well as the idea that one has there of a Saint, could easily make him such a one. An Enthusiast has by his imagination, of seeing that which he does not see, and of hearing that which he does not hear, a good disposition for artifices and the finest deceptions. What has been said for the rest, in this comparison between Jesus and Mohammed, flows impartially from the Koran, and what the Mohammedans themselves profess. They seek the shameful in the customs of their Legislator. by which to justify, that it was free to him, as a Prophet, especially through Divine Revelations, and that his manliness, courage, bravery, etc., shone through in it. - A small comparison of the principal turns of both Religions, will soon give the Christian the preference. When Mohammed himself confesses, that Jesus of Nazareth led a very holy Religion on earth, but which is too difficult for man, in his present condition, to observe, and that he had come to present a more convenient one; then one may infer from it, what one ought to adhere to in conscience. As to the pretext, that the Mohammedan religion has few articles of faith, and the Christian so many; this has been answered beforehand; and whether the former is more intelligible than the latter, may also be easily decided. For whoever can nevertheless hold Mohammed, according to the confession made by himself, and according to the reports of his adherents, to be an ambassador of God, and commend his religion, and even set this against Christ and the Christian religion, proves not unequivocally, that the limits of intelligibility and incomprehensibility are very unknown to him.

One may, with right, expect from a truly divine religion such a report of our future state, which can exist with God's attributes and the spiritual disposition of man. Here now one sees a remarkable difference between the proposals, which the Bible and the Koran give us concerning it. The first sets the future state of the pious and the

impious in a complete light; and, because it is written for everyone, without exception of sex, rank and age, it expresses itself about it not only with proper, but also with improper and symbolic proposals, which are derived, from that which in this Life, either in a legitimate way is pleasant, joyful and splendid, or else unpleasant, painful and loathsome. This makes a very powerful impression on the minds of most people. But what is one to think of the proposals of the Koran in this respect, which describes Paradise so carnally, as if the lusts could not be followed more licentiously, and the passions nowhere better satisfied, than just there? Let us not bring the symbols of the Bible and the Koran into one class. The former, however sensual they may be, to suit us, may be represented, to none other than divine and rational; but the latter, visibly, to irrational and animal pleasures. The condition of the female sex would indeed be deplorable, if it had to be decided according to the Koran, because the Paradise of women, from that which men inhabit, differs infinitely in perfection, and the parents are, by it, little comforted at the death of their children. People appeal, as proof of the divinity of a religion, to the good effects which it must produce in its adherents. This may be expected, with right, from a divine religion. I do not refer here to the wrong and often fanatical notions which many have of piety. The question is not what someone thinks of it according to his imagination, but what he must think of it, according to the sources of his religion. The Bible now gives this description of it: a Christian, by the saving grace of God, who has appeared to all men, may be so instructed, that he may deny the ungodly deeds and the worldly lusts, and live moderately, justly and godly in this world; and wait for the blessed hope and appearance of the Judge of the world. (Tit. II, 11-13.) What a happy person then is not a true Christian for himself, and what an excellent fellow-member is he not for the State? What, according to the fundamental principles of Mohammedans, belongs to a godly man, and how far this differs from Christian virtue, is fully evident from what has been said before. In order to see by experience the apparent influence which both religions have on men, one must go to countries where they prevail. The irregularities which have taken the upper hand in all States in Turkey, street desecration, extortion, murder, unnatural sins, etc., are in vogue there everywhere. Severe punishments are indeed imposed on many of these; but yet it is clearly seen that these, even to the suppression of outward sins, are powerless without sharper bonds of conscience. However much one complains of licentiousness among us, and is justified in it, because of the neglected use of opportunities and means for improvement; we still live in the light, when we compare ourselves with the people in Mohammedan countries. If one is there; then one clearly understands what advantages arise from the Christian religion for particular persons, entire societies and states, and what a general improvement of morals follows from it. Since the Mohammedan religion freely permits very many sins, does not sufficiently define others, and leaves the hearts of its adherents untouched and unchanged; so their immoralities must also be placed at his account. But if there are vices among us, then this would be wrongly charged against the Christian religion; the false Christians one must blame it alone, who will not follow his teaching, and give no place to its salutary power for improvement. For the rest, the finding that here and there one naturally finds honorable and sincere Turks, cannot be used to abuse the common phrases, which one so often hears used to diminish the power of the Christian religion: there are good and naughty people in all denominations. For the question here is not, what kind of people there can be in a denomination; but how people, by a true adherence to their religion, by a pure adherence to its grounds, - and by the influence thereof on their minds, become. If one does this, and imagines a Mohammedan, according to the grounds of his religion; then it will be found, that man by that not at all can become so?? Text can, if it must be written, to please God, and therefore to be saved.

Freedom of conscience, which the Christian religion allowsevery neutral mind, to investigate it for itself, in a proper way, is an uncommonly noble thing, which the Mohammedan does not grant to anyone. While therefore the Founder of the first cries out to us: if any man will do the Will of my Father; he shall acknowledge, whether this Doctrine be of ??, or whether I speak of myself; (??, 17.) Thus the founder of the latter forbids the investigation of his religion, begging to exterminate those who would not accept his doctrine, or to allow them to live only on payment of a ransom, and not to conclude peace with strangers but only one of arms.

§. XLVI. Precedence of the Christian-Biblical Religion over the other Christian denominations.

From the contents of the preceding paragraph flows a very clear consequence, namely that, if by comparing the Mohammedan religion with the Christian religion, in

succession the grounds of the Holy Scripture, the latter obtains a divine predominance over the former, among the Christian denominations that do not have the precedence over the rest, which accepts the Bible as a sole first source of doctrines for salvation. Those who do not remain alone with this, either allow reason too much; or follow the established doctrines of supposed great or holy men too slavishly; or they imagine that they still receive Revelations from God. Who can wonder that, by so many errant ways, men have also deviated from Christ's own religion so strangely, and have fallen into great errors, whereby they have been greatly corrupted? Because men have thus chosen themselves or others as leaders; thus the corruption of man, of which learned philosophers among the heathen so much complained, has been greatly diminished, and the proposition concerning a Savior of the world and the work of redemption accomplished by him, has lost much of its force. One party has wished to make religion and its principal object, God, very accessible to the human understanding, and to separate all mysteries from it altogether; but makes itself, by that, extremely suspect, especially among actively thinking people: for, upon the discovery of many secrets in the creatures, to persuade oneself, that for us there were none to be found in the infinite Creator, is to assert the most incomprehensible thing. Another party has succeeded definitively, and invented secrets, wherefore and the religion there has increased with immoderate doctrines, to which belongs in particular the so very conspicuous idolatry, worthy especially of extraordinary offense to Mahmedans. The state after this life has, by the way, become. One party has given the godless hope, that after death they may still be cleansed of their sins, while another, by their complete destruction, has wished to put an end to their punishments. Another party has allowed such unbridled freedom in religion, that every one, without generally arrived at and established principal doctrines, can think what he will, and thereby open a free course for the extravagant mind and the corrupt heart of man: but the opposing party has forbidden the freedom of man's religion according to God's word, under threat of prison and death sentences, and has attempted to spread the religion, which in its own opinion is solely and exclusively saving, by fire and sword. I have only examined the external side of this unscriptural system of religion; what will one find when considering the internal? What great advantages will one not gain, if one directs oneself in the Christian religion solely to the grounds of Holy Scripture? Then all real scandals, together with the well-founded attacks of Mohammedans and other infidels, will cease, and they will be made more willing to accept Christianity.

§. XLVII. Precedence of Christian modes of government over the Turkish. The complaints about the modes of government are as common as those which the Lords have over the servants, and which they have over them. Perhaps they are never unfounded; for the Monarch, Aristocratic and Democratic, or of a single or mixed disposition, have their many defects. But should this surprise us? We must indeed perceive precisely that everything here is imperfect, and the earth is oppressed by the curse of sin, and that we must therefore strive for a better world. But in Christian countries this discomfort is felt less than in Turkey. In the former the relation of the Authorities and Subjects to each other is more clearly defined; Religion, if it has not been able to show all its power, by a wilful opposition, yet has in a certain respect taken care of the hearts, so that the Authorities do not easily fall into tyranny and cruelty, and the subjects into disobedience and rebellion. Few in both cases harden themselves to such a degree, that they do not feel remorse in conscience because of an approaching account. In Turkey this is wanting. The Mohammedan religion does not at all, instruct and tame the Authorities and subjects, in a convincing manner. When one compares our civil laws and legal arrangements, with what has been said concerning them, beforehand, of the Turks; then one might at first think, that with us everything was more regular, but there more quickly done. But these thoughts will soon be abandoned, when one considers that everything is decided there by force, that usually one, and at most only a few persons pass judgment, and who can therefore become very unjust through ignorance, haste and bribery; that the law itself is very indefinite and ambiguous, and, by the mixing of religious and state laws, the confusion must be increased. Therefore, in our country, in most cases, one will gain by the multitude of judges, and the prolongation of the course of justice. This circumstance becomes still more important, when one considers that in Christian countries the judges may never assume the tenth of the disputed case, and we know nothing of the unjust Avani. Criminal affairs also have a completely different form among Christians than among the Turks. It is unbelievable how little the latter esteem the Life of men. It is astonishing that so many Visiers, Bassas, Kadis, etc. have the power over Life and Death, and can

maintain them without a wide-ranging investigation. If, in many Christian countries, possibly on good grounds, the death penalty is very quickly established after broken laws and committed crimes, this case nevertheless differs very much from the first, in which one proceeds without many circumstances, and not seldom from rashness and other unfounded reasons. The waging of war raises the Christian methods of government infinitely above the Turkish. From this, certainly, arose the proverb, that when one speaks of soldiers who behaved inhumanly, one says: the Turks could not have done it worse! However great an evil the war may be with us, it is small, compared with a Turkish one. The cruelty extends first of all to our own countries. These are plundered by the dissolute military people; the places where the inhabitants do not wish to submit to plundering, or which they have abandoned for fear of it, are laid waste; the children are stolen; people, not of the Mohammedan religion, are horribly maltreated, and forced to their religion by force, and the female sex violated. What must the enemy countries now expect? Everything that can ever be called misery is brought upon them by a Turkish army. If defeat does not compel a hasty and fearful flight; then everything is destroyed, and men are made slaves. Among Christians this is almost unheard of, and from recent times one will hardly find examples of it. Now to whom do Christian countries owe this better fate? Jesus' religion alone. For, whatever one may say of equity and humanity, these are words without meaning among peoples who are not Christians, and Christianity has first determined them, and attached a force to them. From which we can conclude how happy all countries would be, if all the inhabitants were true Christians.

§. XLVIII. Precedence of the domestic condition in Christian countries above the Mohammedan.

The Christians may consider themselves happy not only because of their religious and political disposition, but also because of their domestic condition. Without involving myself in the decision of the question, whether slavery is permitted among us, according to the grounds of our religion, or not? without determining whether the corporal property, as it still persists in some countries, is of the same nature as slavery among the Turks and Mohammedans? This is at least certain, that Christians do not obtain slaves in the same way as the Turks, nor generally treat them in the same way. The relationship that must take place between parents and children, if mutual well-being is to be promoted, is lacking among the Turks. Excepting the natural tenderness, which is even peculiar to animals, there is a want of that bond of conscience, by which parents are induced to a true love and care for their children, and these to a pure respect and obedience towards them. As also in general moral improvement is very little, or hardly at all, sweetened among the Turks, no strange instruction, and still less good examples for the civilisation of the children, can be expected from the parents. Their usual irregularities, their beating and fighting with each other, their reviling of strangers, and other wantonness, are almost entirely overlooked. - In a family among us, a very great godlessness must certainly have prevailed, if the parents did not regard their children as co-heirs of eternal life, and both, on that account, would treat each other lovingly. The closest bond of human society is found in the married state. But if there are causes that break this bond; then, of course, the real state is dissatisfied. Now, when women are considered by the Turks as an inferior species of humanity, and the natural equality between the sexes is thereby destroyed; can the wife of a man who is only somewhat unfair, expect anything but contempt on the slightest occasion? Since polygamy is permitted among them; must not the jealousy, with which every woman seeks to win the heart of her husband, make them all dissatisfied? Since divorce, even according to their supposed divine laws, can be so easily accomplished among them; must not this fill the heart of every right-thinking woman with fear for the future? These inconveniences of the aforesaid inequality of both sexes, of jealousy and divorce, are common to all true Christians; and where they are found, they are signs of a prevailing godlessness. To what exactly must we attribute this pre-eminence of the domestic condition among us? Precisely also to the Christian religion, which teaches us the creation of man and woman after the image of God, and produces in us the renewal to it.

§. XLIX. Judgment of the Free Spirits and Mockers of Religion among Christians.

A person who has had occasion to see the workings of the Christian and Mohammedan Religion in various countries, cannot be angry enough with the Free Spirits and Mockers of Religion, who, in devising new tricks for their cause, have fallen into the habit of elevating the latter by various pretexts, and thereby degrading the former. What else can one expect, than that, by this, many immature minds will be confused, and at least doubted in the faith? In order to remedy this, and to show

such an artifice in its true form, I have written down the aforementioned matters in a few words, and thereby proved myself a true Free Spirit. Then, do they, to whom this name is so dear and worthy, consider well what it signifies? and how it does not allow itself to be brought into agreement with blinding and deceptive partying, and just as little with the servitude of self-will, pride, superstition, sins and vices? Do they consider with other mockers of Religion, that in that of Mohammed their calumnies would not be permitted? that they must thank the Christian Religion for this pardon of their abused freedom, which has an aversion to the coercion of conscience, and calls out to its true Disciples in general: you gladly bear with Fools, because you are wise. (Corinth. XI, 19.)

After that now the necessary, touching Mohammed, the Koran, the Turkish Empire, etc., has been presented in the first part; thus one will be able to judge the liberal exaltation of the Mohammedan religion above the Christian. Nothing but a punishable ignorance, or a wilful malice can be the cause of it. That the Bible is so variously interpreted, is an old objection that is made against it. Experience confirms it; but the conclusion that one wishes to deduce from it, that there is no certain meaning to be found in it, is false. This is even seen by the erring Denominations among Christians; for this reason they do not derive their proofs from the Holy Scripture, but from prejudices and false conclusions, which they call conclusions, or from the pronouncements of the Church, or from new revelations. If only the Mohammedans were somewhat unanimous about the interpretation of the Koran; What would not be inferred from this to the humiliation of the Christian religion? Nothing has been more dear to the Free Spirits than that they might humiliate its servants to the utmost. But can they have the power and right to do so, since they do not, like the Imams, present their listeners with earthly things, and are still less the ringleaders of State unrest? Does not from them, as the instruments of religion to the whole people, still proceed that improvement of morals which sets some limit and restraint to the innate and general depravity of men? To whom must one attribute the good order in the domestic state? Who keeps the greatest number of the inhabitants of a State, even without external punishment, in submission and obedience, and this by means of the firm bonds of conscience? Apparently the dogmatic order. And, when it has ceased in any country, how (one has the experience of it in Asia and Africa!) have men, very quickly, become exuberant, and animals in human forms? - Nothing is more agreeable to natural man than to satisfy the lusts of the flesh. Whoever would expect anything else; he must have little knowledge of the general depravity. But this must surprise us, when one arranges this abomination, presents polygamy and whoredom?? as useful to the population of countries, yes, even wants to appear an animalistic succession of carnal lusts as harmless. Sophistry does not detract from this; one should pay attention to experience: and, whoever is not taken in by prejudice, can fully justify Turkey in this respect. For the rest, the cry of reason cannot at all be reconciled with the conduct of the Free Spirits, who, by the commendation of such licentiousness, and the further destruction of the essential great distinction between good and evil, wish to make men into animals again, from which the Creator, by a sound reason, has so clearly distinguished them. The imagination has arisen since the creeping in of free spiritism, and is steadily increasing, so that according to it the times have been more and more clarified. It is true, every Free Spirit imagines himself to be a Philosopher, a Historian, a Theologian, in a word, a Know-it-all; whatever is not written in a sharp and mocking tone, is, with all brevity, declared to be trifle. But do they consider that even among the most stupid and unlearned Turks there are no lack of scoffers against religion? as proof that with an evil heart, a tendency to sins and vices, a bold impudence, and some corrupt wit, nothing is easier for a man than to become a mocker of Religion. And he openly betrays the deepest ignorance, which denied the former times to learning, and would deny that the Christian Church was the preserver of it. How have not, in the darkest times, the ecclesiastical persons made themselves deserved for the writing out of manuscripts, and the preservation of libraries? The Christian Religion and learning have always risen and fallen together; a sign, that they are well tolerated together: whereas Mohammedanism, on the contrary, except the time of the Caliphs, has always shunned free learning, and still shuns it. Superstition is rightly considered a great Evil, and every one is encouraged to rid himself of it. But what has best discovered and banished it? The Christian religion according to the grounds of the Bible. That has freed us from so many sinful and strange things, under whose yoke other peoples slavishly sighed, not because they lacked reason, but because they were not enlightened by a further Revelation, and educated to that truth, which is indeed reasonable, but to whose discovery reason itself would not have come. Where now there is still superstition among Christians; of that they alone are the cause, which do

35235 not surrender themselves purely to Jesus' religion, who discovers and destroys it; whereas, on the contrary, it is inseparably associated with all false religions, and especially with the Mohammedan religion, and the traces of which are also seen in those Christians who live intermingled with the Mohammedans. May they, who abuse Mohammedanism to the contempt of Christianity, consider that by the latter they offer
 35240 a strong support: for Mohammed gives, in the Tonsera, the clearest and most emphatic testimonies of the miracles of Jesus and those of his Apostles, as well as the credibility of all that the scoffers so willingly wish to make uncertain with religion. From my own experience I derive for myself, and from my lecture for my
 35245 readers, the obligation to be thankful for that light which we have received through the extensive knowledge of the Holy Scripture, and the Christian religion based upon it, and to walk in this light, so that darkness may not overtake us.

\$. L. Of the travels in Turkey.

One often falls into a kind of ecstasy when one inhabits or travels through those
 35250 places and regions where, in ancient times, so many famous men lived, so many remarkable cases occurred, and of which so much has been written. Therefore I venture to make some proposals to those who wish to travel profitably in the Levant, either for themselves or at the expense of others. - They must especially try to find out whether they possess the necessary health and physical strength to
 35255 endure all kinds of discomforts that go with it. In many places one must be content to sleep under the open sky. In summer travels one makes there of the day night, and of the night day, in order to travel by night because of the heat, and to rest during the day. In Winter one is almost paralysed by the rain and the cold winds; and in Summer one is almost suffocated by a stifling heat. The bad condition of the Turkish
 35260 inns, or Chans and Caravanseras has been mentioned before, and in many regions there are not even such. - In order to learn the national languages, especially Greek, Turkish and Arabic, the easier, one must have laid the groundwork for it in Europe beforehand: for otherwise the wind-breaking language masters will take a very long time with it. One must also, in advance, draw up a certain Plan, or have one drawn
 35265 up, of which regions one wants to travel through, and read the principal travel descriptions about them, so as not to set out on the journey without all instruction; but to have already been made aware of the remarkable things, in accordance with that excellent arrangement which the Lord Hofraad Michaelis, at Gottingen, has made for the Danish travellers. - Before actually starting on the journey, one must stop in
 35270 the Levant at a place where there are few or no Europeans at all, in order to associate more with the inhabitants of the country, to learn the languages more quickly, and to accustom oneself to the Eastern dress, customs and way of life, as well as to the food and drink. Many Europeans have had to pay for their waywardness or recklessness in this respect with their lives. - One must provide oneself for the
 35275 journey itself with a Passport (Ferman) from the Porte, by means of a European Ambassador; just as one also needs and can very well use the letters of recommendation of these, as well as the Consuls, Merchants and Roman Monasteries, also the Greek and Armenian Patriarchs and Bishops. One does much with them, everywhere, and can usually promise oneself good results, much help and charity. For
 35280 the Europeans of all nations and denominations, even the Roman Monasteries, are, when receiving recommendations, there, much more courteous to a Foreigner, than in any other country. - From Magistrates-Persons among the Turks, unless they bring along special circumstances and relations, one should not seek recommendations or
 35285 Addresses; otherwise one seems to them too respectable, and they would not only be a burden to the purse, but also to others, who become suspicious that much can be extracted from someone. Merchants and needy Scholars are the most useful intercourse. The expenses run high in the journeys, in many ways, and yet great caution is required, in order not to show that one can do them. - One cannot travel through many
 35290 Provinces or Cities without not giving the commanders, especially the Bassas, a present; those places alone are excepted, because the Europeans have much intercourse; and in the Holy Land, at very many places, the Kaff thief must pay a toll on the roads, and a certain amount for going into cities and churches, which is often not small, and can consist of twelve or more Piastres. - The less expense one makes; the better it is and the less one is stopped. For the rest, one must not make
 35295 a note of posts, or good roads, or vehicles and other conveniences; but one must provide oneself with horses or mules, tents, provisions and other necessities, of which one obtains sufficient instruction there. On the journeys one succeeds best with such servants, especially of the Armenian nation, who have already been formerly at the place where one intends to travel or to stay. If one hires the animals and the
 35300 persons belonging to them; then one usually pays half in advance, and the rest at the

- end of the journey. — For the rest one must conceal the purpose for which one travels, as much as possible, from the Turks. A European is easily suspected of seeking treasures, and then he is exposed to Avani??. — With caravans one travels most safely, especially when one is a merchant or a physician, or at least can pass for one. Many went disguised as Roman Catholic Fathers, especially Franciscans and Capuchins, and traveled in that way, because they were considered poor. — One must not think of wanting to travel alone or with a few persons, especially in certain Provinces; because one would soon run the risk, especially if one were taken for a foreigner, of being plundered or even murdered.
- One must keep a watchful eye on one's goods, so as not to be robbed by the robbers during the day, or by the fellow-travellers of the Caravan itself at night. — Travelling is everywhere difficult and expensive, and voyages by water with Levantine vessels are besides that dangerous. But short voyages on them, for instance from Constantinople to the Archipelago, or in general around the coasts, are, especially in Summer days, not so unsafe, because they are very often done by the sailors there, and at the appearance of the least danger, are sought for the harbours or roads. The sea voyages in general have certain advantages over the land voyages, but also their inconveniences. One is on the ships like at home; but with a strong wind, and in sunny storms the movement is often so great, that what is below, is above, and what is above is below. This causes with most people, especially when they travel by sea for the first time, that seasickness, which is accompanied by illness, vomiting, etc., so that one seems more dead than alive, although he continues to pass over, as soon as one is brought ashore. For the rest, one cannot imagine anything more beautiful than to have a circle of German miles on the flat sea around oneself in clear weather, and then especially to see the rising and setting of the sun. But nothing is more terrible than the violence of the waves, stirred up by a storm, and rising sky-high, and the roaring thereof, when they beat against each other or against a ship. The latter is often covered by them with deposits. During calms one sees many kinds of fish, which often pass in an innumerable multitude before the ships. — At night, by rapid navigation, one learns to understand the seething of the sea, and the lighting thereof. Job XLI, 22. 23. What is there attributed to Leviathan, can be pointed out par excellence to the course of a ship. The lighting there mentioned, or the coming out of the water like sparks, and the electrical matter caused by it, remains for physicists an inexplicable phenomenon. From later researches it appears that it is caused by the illumination of several species of small, slimy marine animals, which are produced when the sea-water is rubbed against each other.
- §. LI. Of the Turkish travel accounts, and the reports of Turkey in general.
- One has reason to be cautious when reading the reports and travel accounts of Turkey. Many of them are composed in book rooms, without ever having been there, from other books and hearsay. When good sources have been used; however, much will be lacking in true accuracy, unless the writer, by appearance, has brought the knowledge to himself, or arranged it in some other way. Many things are made known by travellers, who have passed through Turkey as if in passing. Prominent and wealthy, and at the same time curious young people appear in Turkey; stay for a short time in various places, where Europeans live; take part in their amusements, and see and travel, in order to be able to say that they had seen and traveled. Of this kind one sees so often Travelers in Turkey, when new Ambassadors are sent to Constantinople; and one understands, without my needing to remark, what one must make of their reports. Many even want to achieve one-sided aims by such descriptions, as is visible in so many Lettres, Memoirs, etc. (*)
- Therefore I do not at all think it superfluous, but rather advisable, to let a factual report of the best-known writers on the Levant follow.
- I leave the travel descriptions before the 16th century there, because, with the exception of the researcher of ancient history, they contribute little to the knowledge of the present state of the Turkish Empire. Anyone who now desires instruction in this regard and wants to read a lot of it, should I refer to the *Voyages faits principalement en Asie dans les XII. XIII. XIV. et XV. siècles* par Benj. de Tudele Jean du Plan-Carpin, N.A Scelth, Guillaume de Rubriquis, Marc Paul Venitien, Haiton, Jean de Mandeville et Ambroise Contarini, accompagnés de l'histoire des Sarrassins et des Tartans ?? par Pierre Beugeron, la Haie 1735. 2 tom. in fol. Arias Montanus published the *Itinerarium Benjamini Tudelensis*, in Antwerp, separately in the year 1578. in 8. He found the Hebrew manuscript of this well-known travel writer, a Jew of the 12th century, in Trent, and published it in a Latin translation; but otherwise it had been printed in Hebrew a few times long before him. The

translation was published again in Leipzig in 1764 in 8. with various additions and clarifications.

I may not, however, omit to mention two works of the 15th century, of which the first actually belongs, and the other in a certain respect also belongs to it; namely Breydenbach itinerarium, and the travel book of the Holy Land.

Bernh. the Breydenbach itinerarium Hj??rtfol. is, in small fol. without mention of the printing place and the year, but probably in Ments in the year 1490. This man undertook, in the year 1483, with a considerable retinue, the voyage by water via Venice to the Holy Land, where he made the Holy Pilgrimages; whereupon he gives a short description of it, and then of the various Denominations in it, the Mohammedans, and indeed very extensively, but much more briefly, of the Jews, Greeks, Syrians, Jacobites, Nestorians, Armenians, Abyssinians, Maronites, and finally speaks of the Latins or Romanists. He laments the state of the promised land, and exhorts the Christian princes to its defence, or new Crusades. From Jerusalem he travelled, through the desert, to Mount Sinai, and was on his way from the 27th of August to the 22nd of September. On the 27th of that month he set out on his usual journey to Cairo. At the end of the Red Sea he saw remarkable monuments of the former great undertaking to unite it with the Nile by a canal. At Matharea, near Cairo, where he arrived on the 6th of October, he was taken into the balsam gardens which were then still in existence. His description of Cairo is a pleasure to read, as is also his return via Rosetta and Alexandria to Venice. In the appendix one finds a short account of the conquest of Jerusalem, the taking of Negropont, the siege of Rhodes, and the taking of Id??runt. There are enclosed impressions of the alphabets of several Eastern languages, as well as several wooden plates with representations of cities, but which still visibly reveal the infancy of this art at that time. Although this work is full of many religious and other prejudices of that age; it is nevertheless one of the first good travel descriptions, and contains various reports, which make it still worth reading today. This itinerarium is a translation of a German original, which would have been published around the year 1486. The contents of this book will be discussed in the following article.

Credible travel book of the Holy Land etc. (*) Neurenb. 1569. and a second part, Frankf. aan den Main, 1609. both in Folio. This is a collection of 21 journeys made in the Holy Land and its surrounding regions, which are hereby included are printed together, and, besides their descriptions, also report various things concerning the nations and denominations living there. The list of works contained therein, and differing greatly in importance and credibility, is as follows. 1) Ruperti, Abbot of Bergen, description of the mighty army of Christians in the Holy Land, in the year 1095, under Godfrey, Duke of Bulion. 2) Description of the journey to the Holy Land of Duke Alexander, Count Palatine on the Rhine, etc. in the years 1495 and 1496. 3) Journey of Bugislaus X, Duke of Pomerania, to the promised Land, in the year 1496. 4) Joh. Count of Solms etc. journey to the Holy Land and Mount Sinai, in the year 1483 and described by Mr. Bernh. of Breitenbach. 5) Joh. Werli of Zimpern pilgrimage to the Holy Land, in the year 1484, described by Brother Feux etc. 6) Pilgrimage of Albrecht, Count of Löwensteint etc. to the Holy Sepulchre, Egypt, and Mount Sinai, in the years 1561 and 1562. with 7) an added Pilgrim's Book. 8) Jac. Wormsers etc. journey to the Holy Land and Egypt, in the years 1561. and 1562. 9) Steph. van Gumpenberg etc. journey to the promised land, in the year 1449. 10) Mesch, van Seydlitz etc. journey and pilgrimage, from 1556. to 1559, described in order by himself. 11) Joh. Van Enrenberg journey to the Holy Sepulchre, in the year 1556. 12) Leonh. Rauchwolf, M. D. journey to the Holy Land and other Eastern countries, in the year 1573. 13) J. Tuchers van Nuremberg, journey to the Holy Sepulchre and other surrounding places, 1479-14??. 14) Helffrichs van Leipzig, journey to the Holy Land and other adjacent places, in the year 1565. 15) Dan. Eckleigs van Arm travels to the Holy Sepulchre, in the years 1552 and 1553. 16) Joh. de Monteville travels through the promised land, India and Persia, in the year 1350. 17) Travel of Rudolph, Churchmaster at Suchen in Westphalen etc. to the Holy Land, as well as a clear description of that and other countries and important places, from the years 1336 to 1350. 18) Brother Brocard's diligent description of the Holy Land, as it was in the year 1283. 19; Sal. Schweigger's travels to the Holy Land in the year 1576. 20) Nicol Christ. Radzivil, Duke etc. travels to Jerusalem, 1583. 21) Joh. Schwallart's Pilgrimage to the Holy Land, in the year 1586. As thick as this work is, as thin it would become, if it were to be taken out of what is contained therein ten or more times. Several of these descriptions, which describe the journey, made almost at the same time, are almost of the same content. Most of the earlier ones rarely contain

more than the names of the so-called Holy places to which one is taken, and the legends which are usually told to travellers and pilgrims. Some are filled with the most absurd fables, for example those of Motteville; others only provide the supposedly serious pilgrimage histories, and their compilers did not even consider it worth the trouble to visit those places where no indulgence was to be obtained; and some others, of which I shall subsequently speak separately, as a Rauchwolf, Radzivil, etc. (*) also deserve to be read in our vieden, as they can also serve to compare matters as they were in former times and are now, and to gain knowledge of the then times and circumstances of the world. I content myself with merely recording a little, partly to point out to the reader who may desire it. Breitenbach gives (pp. 117-138.) a regular description of the Holy Land. Concerning the Sea Maron he reports (page 121.) what is otherwise well known, that it becomes completely dry in the summer, and trees, grass and shrubs grow in it; but he adds: that there then hide themselves lions, bears, and other wild animals, for the instruction of those who will not admit that there were such in the Holy Land. Touching the Dead Sea, he reports (page 129.) that it sometimes rises, as the snow melts on Mount Lebanon and other mountains, and that there the Jordan and many other rivers swell, as if by rain. He took the highway from Jerusalem to Mount Sinai, through the desert, which is seldom chosen by travellers. He reports that the costly work, by which an Egyptian King had wished to unite the Red Sea by means of a Canal, for the accomplishment of which, certainly, great mountains and dunes had to be dug through, and many rocks had to be broken up, had for that reason remained stuck, because the fertile Nyl water would thereby have become salty, and a large part of Egypt might have been flooded by it. The Balsam Garden, he says, page 195, by Matharea, two German miles from Cairo, was very carefully guarded and kept closed. Of the companions of the journey, only six were allowed in at one time, and that under strict threat not to touch anything, much less to take anything with them. The one who led them around, took a branch, bent it against the Sun like a hoop, and, when it pressed, a clear fluid like oil ran out of it, with which the air around was completely filled; yes, when one of the travellers anointed his hand from the inside with this oil, he had, according to his report, so penetrated it, that one had seen and smelled it on the other side. When one only rubbed the leaves or branches vigorously between the hands, they even smelled strongly. The balsam bushes grew to the height of a man, and resembled currant trees. In December they cut the branches three times in the bark, and hung glasses under the incision, from which the oil dripped into them. What was gathered from the first cutting was for the Sultan; whoever took anything of it and kept it, was punished with death. The balsam of the second and third cutting was as good as of the first, and was sold openly. The Prince of Radzivil, who travelled a hundred years after, in the interval between which the country had come under the obedience of the Turkish Emperors, also saw this garden, and some plants in it, which were nearly two ells high, but withered. For Hassan, who had been Governor in Egypt a short time before, had caused the Moor who had had the superintendence of it, and had collected much money by it, to be strangled; whereupon it had followed, that the balsam bushes had entirely perished, because no one could be found who knew how to look after them. He also relates, that in happy Arabia, by the arrangement of the Emperor Soliman, the balsam bushes grew in abundance, which had been transplanted thither from the Egyptian Garden, and were now brought from Mecca by the Caravans. Concerning the Pyramids, one finds, and several of these travelogues, for instance, Löwenstein, Helfrich, and Radzivil, reports which others have made use of; but touching the largest, I will quote the following from the first (page 366.) books among others, there was a deep cistern, which had three partitions, and, when we had let three of our companions down on one side, three of us also had to go to them; upon this we let them go further, then three more had to come to us, who let us down; but the others waited above, until we had examined everything. (I leave untouched, what he reports of the care to keep lanterns and lights burning.) When we were now completely on the ground, we found 2 dead bodies standing leaning against the wall, which, as soon as we touched them, fell into ashes. We also saw a bricked-up door under the ground there, which we broke open with pickaxes, for we had always been told that a treasure was hidden there, but no Turk or Arab had dared to go down so deep, whereupon we found a very fine, smooth, vaulted passage, so that a man could stand upright in it and walk. We also went quite far into it, but, because night overtook us, we had to go further. We were told that this passage ran to Axandria. - All this was the treasure that we found there. "Touching the usual bread of the wandering Arabs, Löwenstein reports (page 376.) when he was among them as a prisoner: "it was baked under camel dung; as was their custom, to carry flour and dried camel mist everywhere. Now when they are in the field, or in their houses; then they make cakes,

- lay them on the ground, put camel-mist over them, which burns easily, and gives great heat; then they turn them over, and thus they bake. Wurmser reports the same, (page 414.) saying, when he had come to an Arab house: "we found the bread there tasteless; for it was baked of flour on the ground in the sand, by means of dry camel-mist, noting that there was no wood. But we thanked God, that we had it".
- (*) How difficult it is to get thorough information about Turkey, even the English Ambassador ??Porter confesses. In order to prove this more forcefully, and at the same time to make the readers of Turkish travelogues attentive to an accurate, nay, almost suspicious, judgment of the information contained therein, I cannot pass over the words of the High Hon. Björnstahl, when he stayed in Constantinople in the years 1776 and 1777, and as one reads in Schlözer's (High Hon.) correspondence, 2, ?? piece 8. 0. 23. finds, to be placed here: "it is infinitely difficult, (he says there) to obtain a complete and full knowledge of the Turks' character, way of thinking, customs, habits, arts, amusements, festivals, games and pastimes, their way of governing and living, offices and occupations of their servants. -- The only way to do that is a long stay in that country."
- (*) In the Hoogd. Bewahrtes Reisbuch?? des heilige Landes &c.
 (*) Nicol. Christ. Radzivillii Principis Hierosotymitana peregrinatio &c. in latinam translata & correctius in lucem edita. Antw. 1614. fol. This description consists of 4 pieces, in which the diary according to the travels, in the year 1583 in various countries, is divided. There is an image of the Church of the Holy Sepulchre, and the external design as well as the mediaeval of the Holy Sepulchre itself, as well as the Liturgy of the Procession with it, and the ceremony added, when someone is succeeded as a Knight of the Holy Sepulchre.
- §. LII. Of some writers of the 16th century; contents of their works, and judgment thereof.
- Among the travellers and writers of the 16th century I notice especially the following, giving first place to Auger Gislen of Busbek. He was in Commynes, in the year 1522 born of a distinguished family; was highly respected for his learning, and employed by Emperor Ferdinand I in state affairs, but especially as extraordinary ambassador sent to Constantinople. Because he did not find the Turkish Emperor, Soliman, there, he had to go to Amasia in Asia Minor, where he could only obtain a rest from arms for 6 months. He then returned; but was again sent to the Sultan, and remained in Turkey for 7 years, also bringing about a standstill of arms for 8 years. In the meantime he acquired great knowledge of the Turkish state, having made it known in four Latin letters under the title, *Itinerarium Turcicum*, which work was also printed among others, at Leiden, in the year 1633. It is indeed not an actual description; but nevertheless one finds in it a report of the Turkish form of government, the state of war, and some customs, not to speak of weighty remarks, very well-founded information, and those letters can be read very well in Latin. In his time it was still the custom, (as he also mentions this with melancholy,) that the Janissaries were taken by force from Christian children of the inhabitants of the country. He died 1592.
- To this we follow: *Itinerarium Hierosolymitanum* Barthol. de Saligniaco equitis et jureconsulti Galli. Magd. 1587. He made his journey in the year 1522. This work is half an Alphabet in 4to size; but is, by the later, made very redundant. Turkey, Chronika, Glaube, Gesetz, Sitten. From a Siebenburger, so that he was born in Turkey, and lived happily ever after, Zwickau 1530. col. 4. One would almost think that this work, written in old High German by a Zevenberger, is the same, which is cited here and there under the title: *Septem-Castrensis de moribus Turcarum*. This work mentioned here, according to the title, would have been composed already in the year 1436, dealing in 25 sections with its subject neither so detailed nor so pleasant, that one could have a desire to read it. It remains fairly true, but is not precise nor punctual enough in its expressions. Whoever is therefore not interested in reading the reports of a writer of that time, can, in our times, leave it completely at that. The observations of several singularities & memorable things, found in Greece, Asia, Judea, Egypt, Arabia & other foreign countries, edited in three books by Pierre Belon du Mans. *Reveus de nouveau & augmenté de figures*. In Paris 1588. 4to large 468 pages. This Author, born about the year 1518, became an early Scholar, Doctor Medicinæ in the Faculty at Paris, and was murdered in 1564. The accusation is not sufficiently proven, that he took away a part of the writings of P. Gyl, after his death, and published them afterwards for his own work. His journey falls in about the year 1537, making a considerable part of it with the then French Ambassador, Fumet. - After a short introduction he describes, in the first book, the island of Crete, mentioning at the same time much of the Greek nation. He travelled through some islands of the Archipelago, especially Lemnos; saw Mount Athos and a part of Greece; stayed at Constantinople, on that occasion recording all sorts of observations about the Turks. The second book contains the actual Eastern voyage. He sailed through the Hellespont

and Archipelago, where he touched at the Dardanelles, Tenedos, Scio, Samos, Pathmus, Rhodes, to Alexandria. On the Thracian soil one finds many, artificially raised, fairly high round hills, which can also be seen from the Marmore Sea. These are the tombs of the former Kings and Emperors of Thrace. In his time one saw more of Troy than at present; from him the aforementioned Abbot de la Porte has borrowed the report that one can see the remains of it on the sea between that ruined place and the island of Tenedos. From Alexandria he took the usual road via Rosetta and Cairo. Here he stayed for a fairly long time, viewed the Balsam Garden at Matarea, and the Pyramids. In the largest he found the Base (ground) 380 somewhat wide steps, from one end to the other. In ascending he counted 250 steps, each at the height of five feet, the foot being counted to 9 Points. He thinks that the best archer, who shot down from the top of the Pyramid, could hardly shoot the arrow so far that it did not fall down on the steps. I leave there what he says of the other Pyramids, the Sphinx-head, the Mumien, etc. He then travelled to Mount Sinai, assuring by the roundabout way which he, like usually happens, around the Red Sea had to assume that it, like the Ocean, has ebb and flow. (*) The journey to Jerusalem was made from Cairo by land. This was a laborious journey through the sandy desert to Gaza. From there it went via Ramah to Jerusalem. For this, 9 or 10 days are usually required. He saw the Jordan in November near Jericho. He found the bed of that river not wider than about 7 or 8 fathoms, so that a small boy could throw a stone over it, as it was also not very deep. He certainly saw it at a season of the year when many rivers there are almost completely dried up. In the laying of Jerusalem he observes that, from whichever side one comes there, the road always goes upwards, clarifying there by the expression of Holy Scripture, in which it is always said of the travelers to Jerusalem, that they went up. (Mark x, 32. 33 etc.) The further journey he made by land through Galilee to Damascus, Mount Lebanon, Caesarea, (modern Balbek,) Tarsus, to Aleppo, the old Berrhoeen or Bereen, from here to Antioch over the mountains

(*) Mr. Niebuhr has confirmed this even more accurately, on his travels, by ordinary observations, and has put it beyond all contradiction.

Amanus to Adana, and from there over the Taurus mountains to Iconien. In the third book, in several principal parts, the Turks, Mohammed, the Mohammedan religion, the customs of the Turks, the Armenian and other Christians in Turkey, and the Jews are spoken of. The latter printed, in his time, Hebrew books, but without points, at Constantinople; likewise also Spanish, Italian, Greek, German writings; but Turkish and Arabic they were not allowed to print. He continued his journey to Constantinople via Brussa. In his time, according to his report, the former would have been richer and more populous than the latter, but which now has no place. — This is, certainly, a very good travel description, especially for natural history, because the places, animals, and generally the Naturalia of all the countries traversed are accurately noted. For learned travellers of those regions it is very useful, and according to its Value, certainly not by far sufficiently known. It is very accurate, although many things, as to places, antiquities and other circumstances, have naturally changed with time, and the former have either been diminished or entirely destroyed. Thus, for example, the German Imperial Ambassadors must no longer reside in the actual city of Constantinople, nor must the ships leaving through the Hellespont stay three days at the Dardanelles for inspection. For the rest, the author reasonably well satisfies the Title of his work, describing mostly only the particularly remarkable things. (Singularities) Travel remarks, which one often finds too much with other travellers, are almost entirely absent from him. He is in all respects a serious travel writer and it is strange that the following ones do not follow his example, but have often cobbled together such bad and uncertain stuff. The arrangement could have been a little better. It goes without saying that the French is as it was written before the third half century. Many wooden plates have been added to illustrate regions, plants, trees and animals, but those that are supposed to serve as maps are the least good. It is truly a pity that an index, at least in the aforementioned edition, is lacking.

Barth. Georgieuitz de Turcarim moribus epitome seems, according to the dedication, to have been published in Rome in the year 1552, but was published with all kinds of small appendices in Geneva, 1629, measuring 184 pages. and then with the addition: Autore Joh. PICKERO, in Hanau 1686, reprinted again. This booklet can now be completely missed.

P. Gyllii de Bosphoro Thracio, lib. 3. Lugd. Batav. 1632, large 379 pages in 12. He was born in the year 1490. in Albi, and, after completing studies in languages and

- 35635 natural history, was ready to travel. In a work, dedicated to Franciscus I King of France 1533, he encouraged him in the dedication, to let some Scholars travel at his expense; about which he found approval, and was himself sent to the Levant. But, because he had not drawn an annual stipend during the King's lifetime, he found himself forced, after his death in 1547, if he wished to survive, to take service among the soldiers of Soliman II. Three years later he returned from the Levant with the French ambassador, and died in the year 1555. - After a reasoned introduction to the description of the Bosphorus, it is dealt with, but solely and exclusively according to the old Geography, so that the places found about it by the old land-describers are collected, and partly, according to the way he found them and imagined them, are compared. - His Topographia Constantinopoleos, lib. 4. is to the above-mentioned place, in the same year and format, published in the size of 428 pages. In the preface hy describes the whole extraordinary good legging this city very circumstantially, and in the first book, probably among all writers the most completely, its fortunes, building, seven hills and valleys, walls and gates. In the following books he goes, equally elaborately, through all the Wykent city, comparing, what Strabo, Stephanus, Euagrius, Procopius, Suidas, Cedrenus, Tzetzes, Zonaras, and Nicephorus did not mention, very accurately, without what he himself said. Later added Anonymi cuiusdam (which lived before the time of Justinian,) libellus de regionibus nova Roma Constantinopolitana, with the comments of Guido Pancirolus. - Otherwise, the writer has fulfilled his purpose in both works.
- 35655 Turkish Chronicle. True, actual and brief description of the Turks. Arrival, Management &c. It. of the Turkish Religion und Gesetz &c. from Italy. translated into German by the Licensee Muller, with plates, Frankf. on the Main, 1577. 3 volumes of 300 leaves. It is reported in the supplies, that a Genoese, Joh. Ant. Menavin, the writer is, who was imprisoned in the Turkish Court. It is not worth it, to continue reading this book. The cases are better and more accurately presented by other writers. The wooden plates, which are fairly gross, and the Emperors, battles and other incidents imagined, are solely and solely from the power of the imagination. The style is so sloppy, and so old-fashioned, that one must, at least, guess at the phrase. Weshalven it would be useless, say with the content to want to stop.
- 35660 André Thevet Cosmographie de Levant, à Lyon 1556. in 4. met fig. large 418 pages. Of these the Dictionaire historique portativ, published in Paris, reports that he made the voyages as a Franciscan monk, and died as a Historian of France in 1590, having been otherwise childish, superstitious, and possessing little judgment, and therefore worthy of being read. This judgment, being perfectly true, I co-sign. He traveled in the Levant, between the years 1550 and 1552, and wrote down everything he saw and heard, old and new, without distinguishing the true from the false; yes he is so superstitious and stupidly sad, that he wants to impress readers with his last as essentially believable: for example, page 146. that Muhammad was buried in Mecca; that the Nile, Tiger, and Ganges had their origin in the earthly Paradise, on a high mountain, from which water pours down a Sea, and that it makes such a great noise, that all who were near them were deafened; A bladder. 148. that there is a country of Dwarves, to the size of half or two Ellen, zy, who also, on ??Hamels and Bokken fighting with the Crane-birds, are depicted in one plate. The truth of this is proved by the fact that, in his time, there were some Dwarves at the Castle at Cairo, which he himself had seen. It would hardly be worthwhile, therefore, to give the contents of the Principals; but we prefer to trace the beginnings of the writers and their works in the 16th century.
- 35670 Nicolo di Nicolai navigation and trips made in Turkey. Translated by Franc, in hal. in Venice 1580. Fol. with 67 plates, on which people of both sexes are depicted in various dresses. The writer made these voyages with the French Envoy, in the year 1551. The voyages to the Barbary Coasts he narrates very briefly. (Book I.) more extensive is hy by the description zyner voyages from Malta to Constantinople, both in respect of some islands of the Archipelago, than the said city itself. (Book II.) In the further description of Turkey he assigns to the Adschjamoglans, Janistaaren, Solaks, Peygks, Worstelaars and Kampers, Koks des Sultan, Physicians, KadhyLeschkjers, Monks, Emyrs, Hadschjys and others. {Book III.) Further hy nopens brings forth the Persians, Armenians, Jews, and Greeks various things, and presents the Persons in their various costumes. - Notwithstanding now the principal case therein has almost always remained the same; there are, however, many things although the length, brevity, and other such incidental circumstances of dress have changed, happiness can be very clearly deduced from the comparison of your time with the
- 35685
- 35690
- 35695

- 35700 present. In several respects, and even to satisfy curiosity, this work also retains
zyne value two centuries after it was written.
- C. Furers von Haimendorf Travel description in Egypt, Arabia, Palestine, Syria &c..
Nurnb. 1646. with plates, large 360 leaves. in 4. Zyne reis takes place in the years
35705 1565 and 1566. It is, as the Title also indicates, a tamely executed diary, with
appended dialogues and histories. - He landed at Alexandria, taking the usual route
from there to Cairo. Of both places, especially the last, hy speaks very
circumspectly rather indefinitely about the circumference and position of the
35710 Pyramids. "The largest of these is, (according to his story,) of some large,
considerable square stones, of which one was about 7 feet long, and so high, that
many of them came to my breast; but one is nevertheless larger than the other. Below,
at the ground and the stones, it is, at all four corners, very much fallen down,
especially in the middle; but we have measured the length of one side, which was
about 300 and a few my paces long, and yet they did not measure it entirely at the
35715 bottom, because it is broader. When one stands below, it appears, because of its
great height, to be pointed at the top, but nevertheless has about 52 my feet in
circumference. From below, to the top, there are about 212 steps or square stones,
and has a fine entrance at the north-north-west; but the opening, through which one
must pass, is not very large, &c." - He undertook the journey to Mount Sinai with
35720 several others, among whom was also J. Helffrich, of whom was spoken in the preceding
paragraph. At the Red Sea it was just low tide, so that he could enter it almost half
a mile away. On the return journey he ventured to cross the Ebbe with some, having
been taken through an arm of it, but they nearly lost their lives. For however they
hurried, the water still went up to their oxen. He found the Arabs in those regions,
35725 as all travellers describe them, very bold and shameless, because they consider
themselves lords in their deserts, and spare no one. The famous Greek Monks'
Monastery lies in a narrow valley on the Mount Sinai, built quadrangularly of square
stones, reasonably strong and high. The one side is 125 common paces long, makes 500
paces square, without the little triangular forecourt, through which one enters. He
35730 traveled again via Rosetta, to Alexandria, and from thence again via Rosetta to
Damiate. Here still stood the Tower, on which the dead pigeons were kept, which were
then used to convey some message to Alexandria and Cairo. In the first of these
cities there was also a Tower, built for that purpose; but they no longer kept such
pigeons there. Now he took the highway to the promised land at Gaza, covering it,
35735 according to the usual day's journey of the Camels, in ten days. Thus he traveled
through the former country of the Palestine, and thus came via Jaffa and Ramah to
Jerusalem. Here occurs the usual description of this city with its pretended holy
places. He also made several journeys in the neighbourhood, such as to Bethlehem, the
Monastery of Sr. Saba, the Dead Sea and Jericho. On this occasion the entire
35740 travelling party fell into the hands of the rapacious Arabs, from which nothing came,
except with much difficulty and danger. He travelled from Jerusalem through the
promised land to the Gallic Sea, came to the beautiful Balbek and so to Tripoli. Via
Cyprus he returned to Europe. - This work is not one of the best, but also not one of
the worst. It contains several things, which one possibly does not find in other
35745 travel accounts in such detail, although everything is not described with the skill
and accuracy of a Belon and Rauchwolf. One naturally finds in him many things, which
at his time, but were not found afterwards. In what he himself has seen, he seems to
deserve credit; but often it is difficult to distinguish what he himself saw from
what he relates from hearsay. In Egypt and the Holy Land he quotes, everywhere, the
35750 Biblical Histories in their entire circumference often unnecessarily, often even
incorrectly; whereby this book has become more verbose than was necessary.
- Itinerario di Marc Antonio Pigafetta. Londra 1585. klein 4to. One would hardly
believe that in this old work, the size of 140 pages, there were so many real and
35755 beautiful things, as are actually found in it; so that even now, were it not so rare,
it can be read with great pleasure by someone who understands Italian; and one must
wonder that the writers who subsequently wrote about the Turkish Empire did not
prefer to make use of it, rather than of other works, less valuable. - The writer
found himself among the great mission that Emperor Maximilian II, in the year 1567,
35760 sent to the Sultan Selim II. The reason and occasion of this embassy, the journey
from Vienna to Belgrade, further through Rascia, Bulgaria and Thrace to
Constantinople, he relates in the first four; and the Audience, but the circumstances
of which at that time differed somewhat from those of the present, in the fifth
Chapter. From the 6th to the 16th he interweaves reports concerning Turkey in a good
35765 order. He describes Constantinople with its curiosities, Pera and the Thracian

- Bosphorus; he treats of the origin of the Turks in general, and how their empire increased up to his time, and the condition of the Christians in it; furthermore he gives an account of their manner of dress, their customs, and religious persons; speaks of the Soldiers, to whom, at that time, the tenth Christian child was enrolled, and was brought up in the Mohammedan religion; particularly of the Seraglio, and the persons belonging to it, who lived either in or without it; next of the Janissaries, Solaks, Sipahys, and their order; the several Visiers, their rank and number, of the Person of the Great Lord himself, and the number of the Soldiers under the several Beghler-begs, who were then under the Ottoman Empire. The 17th, with the remaining Chapters to the end, contains the return journey, with what he remarked touching the several places through which they passed, and particularly of Adrianople; forgetting also, on occasion, without becoming too wordy, to add good historical and geographical remarks.
- Historia universale dell' origine & imperio de Turchi; raccolta da M. Francesco Sansovino in Venezia, 1568. in 4. large 430 pages. This Sansovino was, in his time, a prominent writer in Italy, who had this work, consisting of treatises by various writers, printed. It is therefore a kind of collection, but whose parts are nevertheless worthy of a mention. The first book provides, without indicating the sources, from various writers the way of life, laws and customs of the Turkish nation, as well as the court of the Sultan and the condition of the Christian slaves. Added to all this are treatises by a certain Luigi Bassano of Zara, and by a Greek, Theodori Spandugini, on the customs of the Turks, and concluded with the latter's biography of the Persian Kings, Shah Ismaël and his Son Shah Tamas, as well as the letters of Pope Pius II to the Sultan Mohammed II., to admonish him to adopt the Christian religion. - In the second book are collected a treatise by an Andr. Cambini of Florence, on the origin of the Turks; the above-mentioned Th. Spandugini's treatise on the origin of the Turkish Princes; an argument by Bishop Paul Jovius concerning the Turks before Emperor Charles V; Jac. Fontanus's description of the war waged over the island of Rhodes; acts of Sultan Suleyman after the taking away of this island, up to the year 1533, and a letter from a Secretary of Sigism. Malatesta, concerning what Muhammid II has accomplished in Morca. In the last book one finds a short Chronicle of the Saracen and Turkish History; a treatise by an unknown person on Mahomed and his successors; letters from the Archbishop of Metelino, Leonhardus, and Cardinal Isidore to Pope Nicolaus V, concerning the conquest of Constantinople, as well as reports from a certain Christ. Richerius on the same subject. The other Treatises treat of Dalmatia, Negroponte, Skanderbegh, and the failed undertaking of King Philippus Catholicus concerning Africa.
- Leonh. Rauchwolf, M. D. (High) proper description of the journey etc. to the East, etc. 4 parts in 4to, Laugingen 1583. covering the first 3 487, and the last 42 pages. In the first book, the 1st chapter begins with the journey from Augsburg, in the year 1573. to Marseille, and from there to Tripoli in Syria. That city is described in chapter 2., and in the 3rd a report is given of the Turks of high and low status, male and female persons, as well as their offices, customs, habits and clothing, but in the following of all kinds of crops, as much as the writer could observe about it, during his stay in Tripoli. His journey from there to Aleppo is described in the following chapter at whose end he remarks, that neither there, nor in the other Turkish cities, a stranger may ride in on horseback, but which is now permitted in most cities. The four remaining chapters of this book treat of the city of Aleppo, its buildings, tasty fruits and herbs; the Bassas and their court, as well as of the Turks' way of life, liberties, nobility and conduct; the great trade there, as well as the Turks' food, drinks and ceremonies, and their reading of herbs. In August of the year 1574. (Book 2, chapter 1.) he departed thence, and sailed over the Euphrates. The water of this river, he says, is turbid, and therefore not good to drink, unless it has previously stood in earthen pots and jars, and the sand and dirt therein have sunk. He sailed (chapter 2.) down this river in a vessel, describing the neighbouring regions, the wandering Arabs there, the city of Raka, (chapter 3.) the inhabitants of the mountains and the great desert, (chapter 4.) the city of Anna, (chapter 5.) the journey from there to ancient Babylon, (chapter 6) with the ruined remains and surrounding regions, (chapter 7.) besides his journey to Baghdad and that city itself, its situation, crops, trade, nations and other things, quite extensively. (chapter 8.) His report concerning the supposed Tower of Babel I want to book here. "It has indeed half a mile of road in the vicinity, but is so dilapidated that it is no longer high, and is also infested with so many vermin that one should not come near it for half a mile, except in the winter for a month or two, when it is

still in sight". From there he returned (Chapter 9.) through Assyria, the land of the Kurds, to the river Tyger, via Mosul, at the beginning of the year 1575, as well as through Mesopotamia via Orpha (Chapter 10.) to Aleppo. He concludes this book with a
35835 report concerning the Turkish physicians and chemists, and some particular observations, (Chapter 11.) Mount Lebanon, its inhabitants and herbs, (Chapter 12.) and the plans of the Turks, (Chapter 13.) to make war on those who are Druses and Maronites. The 3rd book describes the Holy Land. He travelled from Tripoli via Jaffa (Chapter 1) to Jerusalem, (Chapter 2.) Before starting his journey there he had to
35840 give 9, but a Greek 5 ducats for the freedom to travel, and safe-conduct. Of present-day Jerusalem and its surrounding regions he first speaks in general, (Chapter 3.) and then more particularly. He viewed, as much as was permitted him, Zion and its holy places, (H. 4.) as well as Moria, and the pretended Temple of Solomon, or actually the Mosque built by Omer, the third Mohammedan Chief of Army after Mohammed, to which entrance is forbidden to all who are not Mohammedans. (H. 5.) Here he
35845 inserts true and false information concerning the Saracen and Turkish religion, ceremonies, way of life, etc., together in a special treatise. (H. 6.) He was further shown the houses of Pilate and Herod, (H. 7.) Mount Calvary, and the Church of the Holy Sepulchre, (H. 8.) at which Eastern Christians entering had to pay from two to five, and the European five ducats, and finally the epitaphs of the Christian Kings. (H. 9.) This gives him occasion to give a general account of the various Christian
35850 denominations there; (H. 10.) which is followed by a special, but very short, therefore superficial and defective report, concerning the Greeks, (H. 11.) the Syrians, (H. 12.) the Georgians, (H. 13.) the Armenians, (H. 14.) the Nestorians, (H. 15) the Jacobites or Copts, (H. 16.) the Abyssinians, (H. 17.) the Maronites, (H. 18.) and the Roman Catholics. (H. 19.) These sent two monks to the Church of the Holy Sepulchre on each journey, to remain there for a fortnight at a time, to guard the Holy Sepulchre, to attend to the Getae, and to keep burning the very precious lamps
35855 venerated there by Kings and Princes. For the same purpose there are also Clergymen of other Christian denominations. These are all usually obliged to stay there for 14 days. The doors are bound shut by the Turks. In the largest are three holes of various sizes, through which the necessary provisions are given. All European travellers are accommodated by the Roman Catholics, and according to the circumstances there are well received. In recent years there have been complaints
35860 that they have to pay a bit dearly for the accommodation, but this is rarely the cause of the Fathers, but rather the Oppressions to which they are exposed according to their position there, and which always involve great costs. Here follows (H. 20.) a report concerning the Orders of St. John, or, as they now say there, the Knightly Orders of the Holy Sepulchre, which the Father Guardian, that is, the Pope's Overseer
35865 over all the Roman Clergy in the Holy Land, distributes. He also visited Mount Olivet and the Holy Places, (H. 21.) as well as Bethlehem and the mountains of Judah. (H. 22.) Then he returned via Tripoli to Venice, and so to Augsburg, (H. 23.) where he arrived in February 1576. The fourth book contains 42 wooden plates of foreign herbs. – One would hardly think that two centuries ago such a good travel description had
35870 been drawn up as this one actually is. He certainly inserted strange, and often untrue, reports into it; but, where he speaks and describes himself, he seems, generally, to deserve the absolute credence. He has carefully observed the Eastern customs. This book would not be unworthy, that one 'for the general service, made a good extract of it.
35875 Sal. Schweigger (Hoogd.) neue herausgegebene Reisbeschreibung nach Konstant. und Jerusal. Numb. 1664. with many wooden plates, 4to, large 346 pages. The first book contains ?? pages describing in brief the journey from Tübingen via Vienna to Constantinople, as well as the places through which it passed, with added comments. The second book deals with Turkey. The 9 first chapter describe the then residence of
35880 the German Imperial Ambassadors in Constantinople proper, their care by the Sultan and their audience with him, as they then still had to kneel before him on the ground, and the Imperial gift that was considered by the Turks nothing more than a tribute. Here is also mentioned the Seraglio, the succession of the German-Imperial Ambassadors at Constantinople, the expenses incurred on the mission, the freedom of religion in the residence of the Ambassadors, and of the burials of the Germans. Of the 27th Head, several cases are mentioned, which occurred during the Author's stay at Constantinople with Georgian Princes, a Persian mission, etc.; and herein he
35885 relates in detail the sad fate of the Christians who fell into slavery. In the 2nd Head, he gives a description of Constantinople, in the ??st, of the Turkish Temples and burial chapels; in the 30th and 31st of the Turkish schools; in the 3rd of the Tibypials; in the 33rd of the Baths, and in the 34th of the Caravanserai. – But Constantinople has since then been remarkably changed and enlarged, so that the

descriptions are mostly incomplete for one who has not been there. — The 35th Chapter treats of the Monastery and the residence of the Greek, and the 36th of the residence of the Armenian Patriarchs. Both have now been changed. — The 37th Chapter describes the Hippodrome and the Pillars; the 38th the Emperor's pleasure gardens and the snow and ice trade; the 39th the water buildings in and outside Constantinople; the 40th the rare animals; the 41st the Bezestein; the 42nd the Eski-Serail; the 43rd the 7 Towers and other ancient buildings. In the 44th and 45th Chapters. he ends the description of Constantinople with Galata, Tophana and Scutari. The 46th contains observations on the usefulness of the Turkish Empire, the Tyranny, and the causes of its long endurance, as does the 47th of the Table, the servants, stables, pharmacies and the Sultan's ride to the Mosque. In the 48th he examines the then reason of the Turkish victories over the Christians. After having described in the 4th Chapter, the Sultan's Officers and Commanders, he treats in the 50th of the Turkish courts, authorities and punishments of criminals. In the 5th it is reported that the Turks cheered beforehand, while they took the field against an enemy. The following 10 Chapters. are mostly devoted to describing the religion of the Turks, namely their confession of God and Mohammed, the Koran, their worship, method of preaching, circumcision, vain and feasts, monks, funerals, household and clothing, marriage and divorce. The 6th to 64th Chapters speak of the Greeks, mainly their religion, as does the 65th, but both very briefly and incompletely, of the Armenians. The third book provides a description of the journey from Constantinople to Jerusalem. In the 9th first Chapter, the arrangements for the journey are partly described, partly the navigation through the Propontis, Hellespont and Archipelago to Alexandria is described: in the following 11 Chapters. one finds the description of the aforementioned city, Rosetto, the Nile, the fertility of Egypt, the buildings there, the camel, the languages, the currency, the clothing, customs and Mummies. — But the whole description does not say much. The 21st and 22nd Chapters contain the Sea voyage to Palestine. From the 23rd to the 36th Chapters we deal with Ptolemais, Joppa, Rama, the Arab escort, the arrival at Jerusalem, the Patriarch there, the going to the Holy Sepulchre, of this, the Temple and its sanctuaries, of the Ceremonies to make someone a Knight of the Holy Sepulchre, of the present city of Jerusalem, the surrounding region, and of Bethlehem. In the 37th Chapter he tells of his departure from Jerusalem, and up to the 431st his return journey via Damascus, Tripoli and Kandia to Germany. The style was good for the times then, but not at all now. The wooden plates are not bad, but those that are supposed to depict places are not the best. The journey from Constantinople to Egypt was made from 3 March 1581. to November of the same year to Germany. From which one can easily conclude that everything is almost short and incomplete. Also, much hearsay is mixed in. A Tournefort and Pococke make the whole work superfluous.

I. Leunclavii annales Sultanorum Othmanidarum a Turcis sua lingua scripti, Francoph. 1588, 4to 519 pages. C) The Ottoman Yearbooks in the Turkish language had an Austrian Nobleman

(*) The well-known Swedish Prof. Björnstahl, who stayed in Constantinople in 1770 and 1777, and had ample opportunity, through his intercourse with Mr. Muradschja, (see I. Part, genealogical register of the Turkish Emperors, opposite page 46, below the remark.) to learn the quality of the Christian historians concerning the Turkish Empire from himself, about this in a letter written from there (ZicSciillozers ((lied.) briefvethfel. 2 part, 8 fiêh 11. 23.) in this way. "There is still no good history concerning the Turks. The last published Hist. de l'Empire Ottoman from his origins until the peace of Belgrade in 1740. by Mr. l'Abbé Mignot, in Paris 1771. in is, in several parts are badly written, and in many places nothing but a Romance, although the author affirms that he has drawn from good sources, in the Royal Library at Paris. Mr. Mignot is a Nephew of Voltaire, and in fact equals this great Poet, who uses fiction even in History; but in style he certainly does not equal him. The History of Prince Cantimir is likewise no good; but his added observations are good; for they concern the Turks and their state. Leunclavius is reasonably good, but too old: he came out in the year 1596, (to wit, in a later edition,) and therefore nearly two centuries are lacking to our time. Ricaut, de Guer and others contain many apocryphal and other absurd reports. The same is also true of Chalkokandytes, and other Greek historians. They were enemies of the Turks, in whose mouths even the truth is suspected. It seems strange to me that such a great collector as Mr. Büsching did not know Leunclavius' Annales Turci, or at least did not use it. Otherwise it would have considerably reduced the number of his

- misdeeds. We shall speak of this reproach elsewhere. It is much too indefinite, and
 35965 also too unfounded, to be approved.
- bought at Constantinople and brought them as a gift to Emperor Ferdinand. Leunclavius
 35970 had also been there, having brought with him good knowledge of the Turkish Empire,
 and was requested by the latter to translate them into Latin. These annals extended
 only to the year 1551. He added to them the history of the following 37 years, and a
 multitude of observations, which he calls Pandelles, in which he compares the Turkish
 35975 stories with the Greek, Latin, Italian, French and German history. The whole work is
 finally concluded with a history of the siege of Vienna in the year 1529. A list of
 about 60 writers or manuscripts, which were used in compiling the Pandelles, is added
 to the preface. The first, the history with the supplement, occupies 184 pages, but
 the last extend to page 482; and the history of the siege forms the rest of the work.
 These annals do not really concern me; at the most they serve only, as far as they
 reach, to clarify \$. II. in my first Part; but the Pandects?? deserve here, justly, a
 35980 place, containing besides the descriptions of the countries and places, which
 gradually came under the Turkish obedience, also the old Geography, the State and
 Military Condition of the Turkish Empire, and the explanations of the words, with
 respect to offices as otherwise occurring, which one searches in vain elsewhere, and
 remains an important book in this field. The explanation of the Porte of
 35985 Constantinople (page 409-419.) is, with the exception of Gill, the most complete,
 that I have ever seen on it. It is a pity, that in the said edition an index is
 missing, and therefore the search for many useful Articles is made so difficult.
- Epistola continens Hodoeporieon navigationis ex Constantinopoli in Syriam, Palastinam
 35990 & Aegyptum, '6? montem Sinai, Vienn. 1583. in 4t0 consists of only one and a half
 pages, being not much more than a scanty list of places.
- H. von Lichtenstein (Hoogd.) Reisz auf Constantinopel im jahre 1584, described by
 Meschior Besolt, is only a day-narrative of the journey from Vienna to
 35995 Constantinople, in 16 pages in folio, in which not much can be said.
- Joh. Sanderson, an English merchant, made several journeys between 1584 and 1602 in
 the Levant. The first went in the first year mentioned to Constantinople, and from
 there to Cairo and Tripoli in Syria; the second in the year 1591 again to
 36000 Constantinople and the Syrian coasts; the third in the year 1598, again to
 Constantinople, and from there to Syria in Palestine. There is also added a special
 description of Constantinople.
- M. Heberer van Bretken Aegyptiaca servutus, that is, a true description of a three-
 36005 year slavery, which began in Alexandria and ended in Constantinople, has been
 published in Heidelberg, without mentioning the year when it was printed, in the size
 of 522 pages. In 1585 the author had the misfortune to end up in a very hard prison
 of the Turks. He relates this with all the remarks that of course cannot be read
 without emotion. But to know the provinces, this work does not say much, and one can
 36010 therefore, in this respect, do without it very well. The wooden plates added to it
 also do not say much. Since it could not come into many hands in the meantime, I want
 to place his report concerning the notorious Neuser (page 348.) here, which he
 received from the mouth of one of his fellow apostates, namely, who had been a
 learned reformed preacher in Heidelberg, had later apostatized, become an Arian, and
 was imprisoned for his apostasy, but nevertheless escaped, fled from Germany to
 36015 Turkey.
- omen, had travelled through Zevenbergen, and had urged him and one of his companions
 to be a travelling companion, and had incited and moved him to a similar apostasy
 from religion. — After they had all three arrived at Constantinople, they had adopted
 the Turkish faith, and offered themselves to serve the Turkish Emperor. They were
 36020 then circumcised, and promoted to Tschaus, that is, to travelling services. But,
 because Neuser had thought that he would climb a higher ladder of honour, he had,
 when this had not happened, led an Epicurean and bestial life; was finally attacked
 by the plague, and died in that disease in the utmost despair, so that his last words
 were: after this life nothing more".
 36025
- Jules Turci?? Othomannitique imperii descriptio ab Antonio Gen??eo gallice edita,
 deinde latine reddita, Basil. 1587. ??, is a collection, which we can do without.
- A. Hoeniger von Königshofen aan de Tauler Hofhaltung (Court) des Turkischsn Keizers.

- 36030 (Hoogd.) Basel 1596. 2 parts in small folio, is, according to the author's own report, a collection, which we now no longer need.
- 36035 Fvnes Moryson itinerary, hond. 1617. fol. In it are European and Asian travels. From page 210. begins the Eastern journey, which he 1596. of Venice to Palestine. He visited Jerusalem, travelled to Jaffa, Tripoli in Syria, Aleppo, Scanderona, and returned to Venice the following year by sea via Constantinople. In the third part are the practical descriptions of his travels, as (Book I.) of travelling in general, and the geographical description, as well as the location, fruitfulness, trade of Turkey, and way of life of the Turks, book III. Everything is of course presented very briefly.
- 36040 Some treatises on the Turks, published around this time or later, are in the following work: Herm. Conringii h??ri varii de bello contra Turcas prudenter gerendo. Helmst. 4T0. 1664. In it are found the following Treatises in Latin. 1) Lazari Sokanchii Patrieii Veneti Ottomannus feu de inu perio Turcico. Ex Italico vertit Jac. Geuderus üb?? Herolzberga. This work was written in the year 1598. was good for those times, but now unnecessary. 2) Achillis Tardücii ?? ca venerabilis in Ungaria fifo also came out at the end of the 16th century, belonging to the great, and then occupied, subject of many writers, how to resist and overcome the Turks. In the first part the writer points out the means and ways by which the Turks had come to such a power, and proves that it was not by mere luck, but by cunning and courage. Hungary and Germany are, according to the second part, perfectly sufficient to subdue the Turks, showing at the same time in detail how one should conduct the war itself. The third part, as the application of the two preceding ones, concerns itself with the number and disposition of the soldiers, as well as the armies, their distribution in their various stations, and how one should conduct oneself in a battle with the Turks themselves. This treatise is very regularly written, lays a good knowledge of the Turkish State in its entire vicinity as a basis, and would perhaps still be worthy, by one who understands the present circumstances, by consulting with a Warnery and Marsiglt, civilized, and those who wage war with the Turks, to be given into the hands.

- Johannis Cotovici itinerarium Hierofolymitanum& Syriacum, Antw. 1619. 4. 518 pag. This is an excellent and original travel description, which would have been worthy of having been printed with better plates, which occurs in the years 1598 and 1599, and must be equated with a Boxen Rauciiwolf. What these have in Natural History, they have in Antiquities and the illustration of customs. Instead of a preface, the author has preceded with a practical instruction for those who wish to travel those regions, and then treats of his subject in five books. The first describes his sea voyage from Venice to Jaffa, in which he learns of the islands, regions and places, for example. Ragusa, Corfu, Serigo, Morea, Rhodes, Cyprus, Sydon, Tyre, Ptolemais, etc., which he encountered on the way. The second concerns his Palestinian journey, especially to Jerusalem and the surrounding provinces. Here one is referred to Jaffa, Karna, Jerusalem itself, Bethlehem, Jericho etc. very extensively maintained. Many will not find it unpleasant to find the Liturgies here recorded, which are prayed or sung at various, whether real or pretended holy places, many of which are very moving and powerful. The third book elucidates his Syrian or further journey from Jerusalem to Aleppo. He begins with a general introduction to Syria, and leads his readers to Shiloh, Shechem, Sebaste, Nain, the mountains Gilboa and Hermon, Nazareth, Tabor, the Sea of Tiberias, Damascus, Mount Lebanon, (where he also speaks of the Druses), Emesjen, Heman and Aleppo. Everywhere he remains the same in treating important subjects. The fourth book gives his acquired knowledge concerning the religion, customs, manners, and habits of the Mohammedans as well as Christians living in Syria, for which a stay of three months in Aleppo was very profitable to him. He begins with the Turks, their and the Mohammedans' origin and different disposition, as well as their feelings of religion; speaks of their washings, baths, public worship, fasts, ecclesiastical persons, pilgrimages, monks, public customs, alms and

- good works, the condition of the dying, and the burials, as well as the churchyards of Christians and Jews; notes the necessary concerning the Bassas, Sandjaks and Snbaschys, as well as the Soldiers of the Turks and the punishments, ending this book with the manners and condition of the native Syrian Mohammedans and Christians, the Turkish Coins, dwellings and furniture, food and drink, clothing of the Turks; Moors, Christians and Jews of the male and female sex, as well as the ornaments and way of life of the latter. The fifth or last book contains his reports concerning Aleppo, Antioch, Mount Amanus, and Alexandria, as well as his return journey by water almost along the same route that he had taken on the outward journey. This is one of the best travel descriptions that one has of Palestine and Syria, and a masterpiece for the time in which the author lived. In the first three books most has been elucidated by plates. Many have made use of these as well as his reports, without naming him. A Latin reader will be able to gather from this work an unusually large number of useful and pleasant things, which should be much better known than they actually are.
- Georg Douser de itinere fuo Constantinopolitano epistola. The journey took place in 1598. The description of it is very short, and especially remarkable because of the added old inscriptions, which are found in Constantinople. Voiage du Mont Liban traait de italien du R. P. Jerôme Dandini &c. or it was treated with the creation of the customs of the Maronites, which touched upon the many particularities of the Turks and the few literary places of the Orient, with remarks on the Theology of the Christians of the Levant and the Cells of the Mahometans, by R. S. P. in Paris 1685, in 12 ?? pp. The original, under the Title: Missione Apostolica al Patriarca e Maroniti del Monte Libano, was printed in 1656, much more extensively than it appears here in the translation. But the translator reports that he considered it useless to translate the account of a journey to Jerusalem contained therein, because it contained almost nothing that other travellers had not already said about it. In this abbreviated form the journey made in the year 1599, occupies 198, but the translator's comments occupy the remaining pages. It contributes nothing to a correct knowledge of Turkey, because it abounds in errors, which the translator has partly, but by no means all, corrected. Therefore it serves no other purpose than as a report concerning the Maronites, and in particular the author's activities, who was sent to them as Papal Nuncio.
- §. LIIII. Writers of the seventeenth century; contents of their works, and judgment of them.
- Joh. Baptista Tavernier, Baron of Aubonne, was born in Paris in 1605, and began to travel through Europe from the 22nd year of his age. Subsequently, within 40 years, he made six journeys through Turkey, Persia and India. Because he spoke French poorly; he used partly the pen of de Chappuzeau, who assures that, with the exception of certain memoirs, the former had given him the rest from Memory in his pen; partly also of de la Chapelle. He also published, in Tavernier's name, the report concerning the Turkish Seraglio. From which one can understand why the style is different and bad. The High. Title is: J. B. Tavernier sechs Reisen in Turkey, Persien und Indien &c. Geneva 1681. fol. with many (but common) plates. (xl yearly Travels of Tavernier, Amji. 1682, 3 parts in 40) Only the first part contains reports concerning Turkey. The first book deals with various roads from Paris to Isfahan through the northern provinces of Turkey, especially in the 2nd, 33rd and 7th Heads. In the 10th the Caravanserai and Caravans are discussed, and in the 11th the Camels. In the 2nd Head, the book, there are observations on the Trade on the island of Kandy and the principal islands of the Archipelago. Everywhere the places and the most important cases of the author are described. In the 4th book, Chapters 9-14, an account is given of the Armenians, and in particular of their Communion, Priest-Winging, Baptism, Marriages, Burials, and permanence in the Worship. To the 3rd part is added a new description of the internal condition of the Seraglio of the Great Lord. This matter, recorded in Chapters 19, etc., I have nowhere read so completely, and, as far as I know, not so accurately, as treated as here. In the 4th Chapter of the Hall, in which the Sultan listens to the Ambassadors, he reports that on the left side of the Throne there is a small seat, covered with red velvet, and lined with gold braid, on which the Ambassadors sit down, after they have kissed the Emperor's coat. This is either generally untrue, or it is no longer customary. George Sandys has published an account of his voyage in English. He made it from the year 1610, went by water from Venice to Constantinople, and on the way visited several islands of the Archipelago. In describing Constantinople his proposition will not easily be approved, to wit, that the Turkish Empire was, possibly, the largest of all the Empires that had existed since the creation of the world; for the Roman Empire surpassed it in size. The condition of the Turkish Empire, the manner of life of the Turks, as well as the

condition of the Greeks under the Turkish yoke, he represents, and seems to deserve credit in what he himself has seen, but which has not always been accurately distinguished from what has been heard elsewhere. From Constantinople he sailed to Egypt. Here he made the usual voyage from Alexandria to Cairo on the Nile; from Egypt he travelled to the Holy Land. He viewed Jerusalem with all its antiquities and neighbourhood, Mount Carmel, and several cities, such as Seyde, Damascus etc. This travel description does not seem to have to be put aside, considering that he was actually on the places themselves, although many of the later ones are more accurate and detailed.

W. Lithgow discourse of a peregrination from Scotland to the most famous Kingdomes in Europe, Asia and Africke, Lond. 1614. large 14 pages in 4 to. In it everything is so short, that one finds little more, than the names of the places and some remarks. *Voïages de Pietro della Valeöefau la Turquie, ?? Egypte, la Palestine, la Perse, les Indes Orientales & autres lieux, T. I-VIII. a Paris 1645. 8 (Travels of P. della Valla, ??mst. 1666. 6 vols. -)* The author was born in Rome in 1586, and has described his journey in several letters, which were subsequently translated from Italian into several languages. The first letter, written in 1614, describes the voyage from Venice to Constantinople by water. On this occasion he visited the coasts of Troy, finding there a fair number of ancient buildings and pyramids. In the second letter he describes Constantinople in its layout, size, fortifications, houses, Mosques, the Bosphorus of Thrace, places, Columns, cisterns, markets, the 7 Towers, the Seraglio, Dervishes, Ramasan, with the death of a Grand Vizier, and the riding of a Sultan to the Mosque. In many respects he gives preference to Naples. In the third letter his own and the Turks' domestic affairs appear, also speaking of Coffee, as a drink then still unknown in Italy. The fourth is a single special letter. In the fifth he describes the still customary entry of a new Venetian Envoy to the Porte in the suburb of Pera, and his Audience with the Great Lord. These two Articles are detailed and precise. The remark is offensive when it says: that the Ambassador, as little as his retinue, the Grand Vizier and the other Ministers in the Divan, had greeted with their hats, because they had not been greeted by them. For the Turks would consider the taking off of the hat as a mockery, or at least laugh at it. The sixth letter gives a very detailed account of the departure of a Turkish Army to war against the Persians. In the seventh to tenth, mostly special matters occur. In the ninth he mentions the difficulty of buying books from the Turks; also refuting Belon, who had praised the Church of St. Sophia (which has now been converted into a Mosque) as superior to the Rotonda in Rome. The two following letters are written from Cairo, and contain his sea voyage from Constantinople to Egypt. He came to the island of Stanchio (for this Colony) and Rhodes, describing what he saw remarkable at Alexandria, Rosetta, and finally Cairo. The new travellers, such as Pocock and Niebuhk, are certainly more accurate and detailed about all this; but nevertheless one reads with pleasure what he reports of it, as well as of the Pyramids, Mumi, Copts, Arabs, the Monastery on Mount Sinai, this mountain itself and Mount Horeb, the Red Sea, and some animals. Here and there very good remarks, even examples, concerning the caution so necessary there in travelling are inserted. The reports concerning the horrors of lust that grip the Hand there dishonour humanity. He speaks of Pigeons, which were trained in some places for carrying letters; (which is certainly not common, but only a rare thing,) of the so-called Palace of Pharaoh; the beautiful burial-places of the Turks, and the Ovens in which the eggs are hatched; but he found that the chicks were not nearly so tasty as those hatched under a hen. In the 2nd part follows the 1.3rd letter concerning Aleppo. He travelled with a Caravan from Cairo, through the desert, via Gaza, Ramah, Emmaus to Jerusalem, and from thence to the Jordan, Bethlehem, Hebron, then via Shechem, Samaria, (where he relates some things concerning the Samaritans and their books,) Nazareth, Tabor, in the neighbourhood of the Sea Genesareth, finally to Damascus. After a stay there the journey went, with a caravan, overstem, (formerly Hemesfa??) and Hamah (formerly Apamea) to Aleppo. Notwithstanding that all this is to be found more extensively and accurately, and by means of the plates for the imagination clearer, in Pocock, and as for Egypt, also in Niebuhr; nevertheless it will not be unpleasant and useless to anyone, and especially to him who wanted to travel to these regions, to read the things themselves and their incidents on the journey. It goes without saying that he was shown all those places and things, which are supposed to have become remarkable by this and not by Biblical history. Several times he corrects places and rivers Belojst, which he praises for the rest. How money is extorted from the Christian pilgrims on their journeys to the Holy Land, is evident from the fact that in his time each had to pay five ducats for going to the city of Jerusalem, eight or nine for going to the Holy Sepulchre, four or five for the journey and the protection of

the Turks on the road to the Jordan, and as many ducats for the journey to Hebron. The three following letters contain indifferent matters. The 17th was written about the end of the year 1616, and at Bagdad. The writer provided himself, at Aleppo, before his departure, with the necessary necessities, which were required for such a difficult route, through the sandy deserts of Arabia and Mesopotamia, which were bare for many days' journey from towns and villages. In this one is as on the Sea, and in the sand one needs special guideposts, just as on the Sea one needs pilots. He also gives some account of the Turks and Arabs; but d'Arvieux is more circumstantial about them. He approached the Euphrates, the banks of which are here and there fairly inhabited, and came to the city of Anna. There he heard of a Mohammedan sect, but which had to keep very quiet, in order not to be persecuted, but whose doctrines he found to be the same as those which the Magi had accepted. Here he went with the caravan over the Euphrates, and came, by dangerous roads from Mesopotamia, to Bagdad, through which the Tiber flows, so that nevertheless the principal and strongest part of this city lies on the Persian side, and both are united by a bridge of boats. The Tiger he holds to be a fifth part wider than the Euphrates. No stone bridge can be made over either; for as low as they are in times of drought, so exceedingly do they increase when the snow melts, so that they overflow high lands, and by their rapid course sweep away everything. He shows very clearly that Bagdad is not the old Babylon; noting that the first to lay on the Tiger, and the last to have lain on the Euphrates. He also, on a journey made thither, inspected the demolished remains, finding among them clear signs of the Tower of Babel described in the Bible. It was a confused heap of various building materials, which had the size of a mountain, was almost square, and had the shape of a Tower or Pyramid, the four sides of which were directed towards the four points of the compass, and was about 1140 paces in circumference. He also made a journey to the region of the Tiger, where at one time Seleucia towards Turkey, and Ctephiphon towards Persia were said to have been situated so that they were only separated from each other by the said river. In the letter, also at Bagdad ??, he describes some Apothecary's goods. - The last two in this part form a beginning of the Persian correspondence, which is followed in the third part until the middle of the sixth. Then follow the journeys to India, which end with the seventh part. In the last one finds the tenth letter of Bassora, describing his journey from Mascat to the said city, which is situated on the united rivers, the Euphrates and the Tiger, before their division into ?? arms, and their course in the Persian Sea. Various reports occur of this as well as of Bassora. The following letter is a diary of his journey from there to Aleppo, through the Arabian deserts. He finished this in the months of June and July. This diary would be useful to those who wanted to make a journey there. The wandering Arabs, the winds by day, which blow up the dust and sand, but at the same time lessen the otherwise unbearable heat, the cold by night, and the deceitfulness of the Arab guides, are equally troublesome to the travellers. The other letters were written from Cyprus, Malta, Syracuse, Messina and Rome, and their contents do not concern us. This travel description is, for its time, above all expectation good, has every credibility, and can not only be read with pleasure now, but will also be of use to many a traveller. But the newer ones quoted by me here and elsewhere are, certainly, much more complete and detailed. Although this is not the place to make remarks, I must nevertheless place this, that the writer, at??, married a Mesopotamian Christian woman, who left her native country, and accompanied him bravely on his journey. She died in Persia. He had the body embalmed, placed in a strong coffin, taking it with him, with great and costly trouble, on his East Indian and other journeys, until he had it interred in his own tomb at Rome. Whether one should admire the certainly rare love of the Knight, or the excellence of the Lady, who had made himself so lovable to him, I leave aside. In the meantime she is worthy to be included here: her name was Sim Rob??Wither, an Englishman, has published a description of the Seraglio, being at the same time a treatise of the Porte and the whole Ottoman State. I find this in Purchas Pilgrimes, the second part, Lond. 1625 fol. from pages 1580-1613. inserted by paragraphs, without knowing exactly whether the author himself composed them in order, and when. But the latter seems to have happened about the year 1618. The laying and division of the Seraglio, the Divan and the administration of justice, the Audience of the Ambassadors, the inhabitants of the Seraglio, especially the female sex, the Adschjamoglans and their education, the Eunuchs and important Servants of the Seraglio, the way of life and ceremonies in it, the old Seraglio, and then the Religion, feelings and customs of the Turks are here and mostly described so accurately that one must wonder that this treatise is not better known and has been omitted by a multitude of useless sketches?? on this subject. Trattato delle Piante ed image of the factory edifizj of ierra Santa defegnate in Jerusalem fecendule

- regole della Prospettiva [e vera mifura della lor grandezza dal R. P. F. Bernardino. In Firenze, 1620. Here on about 60 pages, in small fol., the Church at Bethlehem, the Church of the Holy Sepulchre, the city of Jerusalem, and the other remarkable buildings, partly in sketches, partly in designs, are so clearly represented that one can form correct ideas of all these things. But it is a pity that few will be able to obtain this book.
- Voiage de Levant par-le Commandement du Roi (to wit, deFrance) en fannée 1021, parle Sr. D. C. feconde Edition h Paris, 4*0; large 495 pages. with some good plates, drawings of places and maps of those regions. The first 98 pages give an account of his journey through Germany and Hungary to Constantinople; which is then described very accurately. Many things have changed with time, as everywhere else. Helling is, as everyone knows, unfounded, (page 123) that the Supreme Head of the Armenian Church, namely its Patriarch, in Great Armenia the Pope for the general Supreme Head of the Church acknowledges; also the two churches belonging to the Roman Catholics in the city of Constantinople itself were taken from them. Concerning the Seraglio follows (from page 127.) a special report. Here he places the following lists of the supply of meat for its use: annually 400a oxen; daily 200 lambs; 100 lambs or goats; 10 calves; 50 geese; 200 head of birds; 400 chickens, 200 pigeons. Concerning the Audiences of the Ambassadors some change occurred; and the children's tribute customary at the time of the writer has also ceased. Here he treats (page 157.) of the Emperor's wives, and of the gardens of the Seraglio, (page 167.) where also the private life of the Sultan among his courtiers and wives, his pleasures, religious exercises, conduct towards his children, etc., occur. "When riding to the Mosque, he who believes he has suffered an exceptionally great injustice, holds a lighted torch above his head, to indicate to the Great Lord that if he does not do him justice, his soul, like this torch, will burn in the future Life.— After the Mosque he is, as a rule, accompanied by seven or eight hundred horses and four thousand Janistars. He sits down in it on a raised place, where he is separated from the people. — The deawi/aarro go ahead on foot, and have no other weapon than an Indian reed in their hand. They are led by forty of their Headmen on horseback. Finally their General, the Janistar-J ga, comes. After him follow three or four hundred Kapudschjys, all on foot, except their Headmen, who lead them. Behind them ride 300 Tschausche, who are clothed with gold or silver, and whose horses are adorned with precious saddles and bridles. On these come 200 Mutefertikeh, still more splendidly dressed. From 12 to 15 hand-horses of the Great Lord are each led by two servants. One cannot easily see anything more beautiful, because of the costliness of their saddles, which are in every way set with precious stones. The Sultan himself rides in the midst of 40 or 50 Sfolaks. (Guardians.) His first groom, who lays his hand behind the saddle-tree of his horse, walks beside him with many Peigks (Lakeys). The Sfolaks make loud wishes for the well-being of his government, to which the people respond with a not too loud voice. Although the Turkish horses never hold their heads stiff, 5 his is nevertheless almost without any movement, which does not tire him at all, because he has not been allowed to sleep for three nights before. The Vizier,s and many of the Seraglio's servants, Engraved as well as Idsch-Oglans, (Pages) make the castle. "Under the Title: Relation de iEtdt du Gr. Seigneur (page 183.) there is actually a description of the State of the Turkish Empire, with regard to its size, and yet its small population, the Land Militia, the Naval State, and the many defects, which must naturally arise from the depopulation, the diversity of denominations and nations, the lack of auctions, and the difficulty and length of time to gather soldiers. While he speaks of the Finances (page 226.) and the Government (page 231.); he also brings up the most remarkable, concerning the State and judicial employees, as well as the Processes in criminal cases, on which follows from page 254. to 274. a treatise on the Mohammedan Religion, especially that Sect, to which the Turks adhere. After that he, herein, has generally remarked the necessary concerning the form of government in the Provinces and also in Algiers; he gives the reason of the general obedience to the even cruel commands of the Great Lord. (page 281.) He finds it in the skill of their execution, whereby the subjects had no time to flee, and at the same time the principle of Religion, that they then died happily! Persons, who held the highest Posts, were mostly of a Low descent; had therefore no support to hope from a powerful Family; could not easily come beyond the borders; were ignorant of the Gcographic, and thought that most of the other Princes under the Sultan (showed, or would, like him, take possession of their money, by murdering them: large rewards and severe punishments, the marriage of the sisters or daughters of the Sultan to the Great, kept the State standing. The war is troublesome for them. (page 288.) Many months pass before the army from the great Empire can go to the theater of war, and with the middle of November the troops, who are not in a fixed wage, part. Their field army is

36360 well and magnificently organized. They easily hold out in the field, because they are accustomed to a modest way of life. The Empire falls under great state defects; the previously unknown, but now completely introduced sale of honorary titles, the distribution of commanderies or Tymare to Persons who draw the income but keep no Soldiers, and the acceptance of Turkish instead of Christian children in the

36365 Seraglio, and drawn into the Mohammedan religion, certainly cause, in time, a great weakening of this State. In presenting the interests of the Christian powers in their treaties with the Porte (page 396.) France would have only the maintenance of the Christian (he means Roman) religion, the preservation of the Holy Places, the release of captive Christians, and the welfare of all Christendom in view. His observations

36370 on the interest of the German Emperor, the Republic of Venice, of Poland, Russia, Persia, Abyssinia, with the Porte, are no longer appropriate in our times, when circumstances have almost entirely changed. — His journey to Jerusalem follows from page 332. It is no longer customary now that ships coming from Constantinople must stop for three days at the Dardanelles, whether perhaps an inquiry might be made from there concerning concealed fiaves or a smuggling trade. I leave the description of the voyage to Jerusalem through the Archipelago untouched, as well as that of the Holy Land (page 377), as it is of no use at present. A report concerning Jerusalem and the Holy places in and outside its Veilen is found from page 389 to 419. But, because he stayed there only 22 days, the reports concerning various regions and

36380 places in the Holy Land seem to come from others, and not from himself, although they agree reasonably well with other credible travel descriptions. The return journey from Jerusalem (page 429.) to Europe, with the presentation of the usual routes from France to Constantinople, together with a not unpleasant description of the most remarkable regions and places, through which they pass, constitutes the essence of this work, which was certainly accurate in its time, and is still usable today, although many things have changed since then, and the writer only stayed six weeks in Constantinople.

Henr. Rantzowen (High) Reisebuch auf Jerusalem, Cairo und Constantinopel, Copenhagen 1669. 4t0, large 92 pages. One notices easily from the small number of pages, that here not much more than a meager, and almost too short diary occurs, in which more is seldom indicated, than that one has seen this or that. Moreover, it is written in an unpleasant style, and with many Italian and Latin periods interspersed. Because of the short time, not much more could be done than has been done. For on the 7th of February 1623, the writer travelled from Venice, and returned on the 4th of December

36395 of the same year. The first 24 pages deal with his journey to Cyprus. He landed on the way at Saide, and thus arrived at Acre. From there he rode to Galilee, Samaria and Jerusalem, page 29. Here he was led around with other pilgrims, making the journey with them to the Jordan. From Jajfa (page 40) he travelled to Damiate, (page 41) and up the Nile to Cairo. (page 42.) He found that river so rich in fish that one could catch the fish with one's hands. He stayed in the last-mentioned city for twenty days. At Matharea he found the garden, where the excellent balm grew for it, but eight years before it had been spoiled by a too great flood of the Niles, and now no balm grows in all of Egypt. (page 44.) He climbed the well-known great Pyramid by means of 225 steps, many of which were so high that one alone reached his chest. He

36405 had to climb down a hundred steps from the plane of terribly large square stones on top of the Pyramid to the well-known entrance into it. He, like all travellers, is in the greatest astonishment at it, saying: "I can write no more of it, than that it is an "astonishing work, and of great expense." "He is of the opinion that one can ride round the actual city of Fözzo, which is rightly inhabited, in five hours; but if one were to include Old Cairo and Bulak, as is commonly done, then they would be eight German miles in circumference. He sailed on the Nile to Rosetta, and rode from there to Alexandria. Here he apparently went to Constantinople (page 65.) where he stayed nearly two months, and thus returned to Venice by way of Dalmatia. Here, except for the places and the description of the things, there is nothing to be sought, and,

36415 what may have been read of reports here and there, seems moreover to be based on a suspected hearsay.

Purchas Pilgrimage, Lond. 1626. fol. fourth edition, is by the same author Pilgrim distinguished work. Here, in the third book, a treatise drawn together by several writers on the Arabs, Saracens and Turks occurs. The religion and political condition of the latter is treated quite extensively, from pp. 223-342.

36420 The description of the travels of Balthasar of Monconys to Asia and Palestine is such that it is not worth the trouble to give a content of the main part, although they are in the year 1697. in Leipzig in 4t0 in the High German were published. The bad style, the unimportant circumstances of his intercourse with common people, and the

36425 widely reported purchase of Turkish things are still bearable, in comparison with the

Recipes of supposed Secrets, the signs of a far-reaching superstition, and the multitude of foolish fortune-tellings.

Joh. Mocquet (High D.) Reise-begebnisse in Africa, Asia und Oost- und West-Indien translated from the French, Lunenburg, 4to. probably 1688*. The Original came out in Rouen 1645. Hyde made a journey from Syria to Jerusalem and the Holy Land around the year 1630. In it are the usual Pilgrim's reports concerning the Holy Land, an extensive description of old Jerusalem, the Temple, etc., which no one would look for there, and for the rest travel notes, so that one can do without this book without any disadvantage, and a special statement of its contents would be quite useless. He refers very much to the following travel description of Neitzschitz.

G. C. von Neitzschitz (High Rev.) fiebenjalu ngeund gefährliche Reisebeschreibung &c. after his death, from his handbook published by M. Chr. Iëger, Budissin 1663. in kl. 4to, 389 pages. The author, a Saxon nobleman, made this journey from 1630 to 1637. First he took the route across Italy, by water, to Smyrna and Constantinople, and so back by land to Vienna. From there he made a second journey to Constantinople with an Imperial mission. He relates this in the first two main divisions. The third treats, in several books, of his journey to the Levant. This went from Vienna through Austria via Venice, (book 1.) to Egypt, (book 2.) and according to custom to Alexandria, Rome and Cairo. (book 3.) The journey to Mount Sinai, where he stayed for 7 days (books 4-6.) is the best and most detailed in this work. One will hardly find so many reports about this elsewhere. The journey to the Holy Land, and through it, he did not make with the pilgrims in their own way and along their usual, and almost always the same roads; but the anxieties about it did not extend further than what the Roman monks told him. The return journey forms the last main division. During his stay in Egypt he visited Matharea, in the neighbourhood of Cairo, and there was still a beautiful garden of Balm, (*) Palm, Lemon and other fruitful trees unknown to him. Qag-163-)° On one (but he does not state which) side he climbed the great Pyramid, and counted 320 stones or steps, each from one, one and a half, to two ells high" and a third half, also three ells long, which were squarely worked, and very flat, like a well-polished Marble stone. At the opening or the entrance in this Pyramid he measured exactly 160 to each corner, and thus found the one whole side 320 common paces wide, from which he judges that it

(*) Pantzow, who traveled in 1623., reports that the balm jars had already perished 8 years before, in a very great flood of the Nile.

itself whole circumference must amount to 1280 such paces. (page 168, 169.) On the journey to Mount Sinai the Arabs showed him, at several places, (page 185, 188, 195, 192.) old inscriptions, hewn in hard rock, which, according to them, were Hebrew, and of the Children of Israel, as a sign of their former passage there. But they had rather perished. According to his report the letters were longer than one finger, and many had become almost equal to the stone. At one place there were also all kinds of Egyptian characters, but which had rather faded away, and were no longer recognizable: the Manna is usually found at a certain season; (page 221.) it was, when it was shown to him, a thick dew of a sweetish taste; it can be collected and preserved as melted wax, or rather as a soft dough. On his return journey from Mount Sinai, in the fore-journey to the Red Sea, there was just ebb in it, as it then, according to his report, page 231, runs out daily, at a certain time, so that he rode with his Camel to the deserted place there, but where, because of the slippery ground, he had almost been unhappy. At Damiate he was very surprised at the Pigeons, which were used as letter carriers to Cairo, when a ship had arrived there; page 248. they tie the letters under their wings or to their legs, and let them fly with them. The writer seems to tell the story honestly everywhere, but does not go further than he has seen and heard. His own reports are not accurately distinguished from hearsay, rather according to the old taste, and therefore seldom sufficiently definite. It was a pity that he did not travel with the knowledge of a learned man, and of natural history, as well as mathematics, he seems to have understood nothing. It is therefore, as the title shows, a world-view, but not a perusal and comprehension. Itinerarium orientale Philippi a SanStisstma Trinitate Carmelitee, ab ipso conseriptum &c. Lugd. 1649. 8. groot 431 peg. This monk made that journey 1629 to the East, stayed nearly eight years in East India, and returned 1639 via Goa. He traveled from Italy over the Mediterranean to Syria, arrived at Aleppo, passed through the Arabian deserts, and arrived via Bagdad at Ispahan, and from there via Bassora, the Persian Gulf and the Indian Sea at Goa. This is the contents of the first book, and relates on 39 pages the outward journey, just as the tenth or last, on as many pages the return journey, which he took almost along the same route; with this difference only, that instead of taking the road through the Arabian deserts, he took it through

Armenia, and tarried on the coasts of Syria and the Holy Land. If one could fully
 36495 rely on this writer, his travel book would be much more worthy: but in this respect
 we may encounter difficulties. That he adopts the usual song of his Order, and
 asserts its origin from Prophet Bias, one may at least take it to his credit, as if a
 certain Order wanted to derive his from Noah. But this betrays an almost
 unforgettable belief, and makes his own observations very uncertain, when he does so.
 36500 as a true event relates, that before his departure from Rome, he took the Holy
 Communion, and after partaking of it saw fresh drops of blood in the chalice and on
 the fingers with which he had touched the Court: page 8. His use of other reports
 might become just as uncertain, if he did not deceive himself somewhat cautiously. He
 reports in person, p. this unbelievable incident, which is said to have happened at
 36505 his residence in Goa, that a Crucifix, during the ceremonies of Lent, the Passion,
 and especially on Good Friday, the GQgeq had been opened, had its face distorted,
 moved, and once the whole attitude became so expressive, as if it had been animated.
 But nevertheless he is so circumspect in this, that he does not relate it in his own
 words, but places the translated report of the Nuns of the Augustinian orders at the
 Archbishop's See at Goa, and then only reports, that this incident was, justly,
 36510 declared to be a Miracle, and was publicly celebrated by a Te Deum (which is so often
 abused even in civil and war cases), as well as by Processions, etc. - His learned
 guesses are often wrong; for instance, after he had investigated and rejected foolish
 feelings concerning Paradise; (pa. 128.) thus he presents his own account, according
 to which it would now be situated on earth, and indeed in a pleasant plain, temperate
 36515 with cold and heat, on top of a mountain in great Armenia, near Erivan, where Enoch
 and Elias still lived, and by the enjoyment of the fruit of the tree of life, were
 freed from all the infirmities of old age and disease. For the rest it would be to be
 desired, that still that which he himself has certainly seen and experienced, were
 clearly separated from that which he has heard of. Between the first and last single
 36520 and real chapters of travel he now inserts his acquired Eastern knowledge and
 reports, that they are certainly of the same value. The more 2 dTief"ZyV°Or dQGaphie,
 the second and third books. The first contains 16 main parts: of the Turkish Empire;
 the Holy Land; His wild and happy Arabia; of Mesopotamia; Chaldea; Armenia; of the
 Persian Empire, its description and the Parthian Empire East in general, its sea
 36525 coasts and the islands of the Indian Sea; but especially the island and the city of
 Goa. The last aforementioned treats, in a main objects, of the Mediterranean Sea; the
 Persian Gulf; the Ar?? Greene Z- enabyde S ? and Orontes-For the »4*« in the 7th
 book the wdk in * the *-* other flesh of animals, snakes and worms, East Indian birds
 and fish, fruit-bearing bulb one d besides other trees and plants is described. The
 36530 knowledge of the four so-called Monarchs of the Ashrymians and CJtó*»», of the Jv f«
 and Jfifi* of the Greeks - *ede of the Turkish Emperors, the Indian Kotiingen, and
 the Kings and Princes of the Holy Land, one can leave for him alone. Not many
 important things are found in the 5th and 6th book. The first is suitable for the
 Colonies of the Portuguese in the East, their government and trade there, then the
 36535 other Eastern Christians, namely the Armenians, Greeks, Nestorians and Jacobites; the
 latter is for the knowledge of the Turks, Arabs, Persians, heathen Indians, the
 unjustly so called St. John's Christians and Eastern Jews; but both books are far
 below the expectation of a man who lived so long in those regions, and could well
 have gathered better knowledge. The 8th and 9th books may, possibly, be of service to
 36540 one or other. They treat of the Roman missions in the East in general, and then in
 Persia, India, Arabia, Syria and the Holy Land in special, and relate many, in such
 Kingdoms, in his time, events that occurred. Of the Armenians he reports, page 243.
 the following, of which I, in my frequent intercourse with important and ancient
 Families among this Nation, have heard nothing, and which seems to me, at least in
 36545 our time, as incredible, as the assertion of the Jews, that they still have somewhere
 in a country, (but which is never mentioned,) a King of David's lineage. "The
 Armenians obey the laws of those Princes, under whose rule they stand; for they have
 no visible Armenian King. The Turkish Emperor and the King of Persia have divided
 themselves in Armenia. But secretly they have a King, who descends from the old
 36550 Armenian Royal Family, and is secretly anointed by the Patriarch, as he himself
 assured our Fathers (Patres), although few know otherwise. "The following report
 (page 403.) concerning a Persian settlement is all the more certain: "because in
 Persia there are no permanent stopping-places, where the horses necessary for a post
 may be taken; so the King's Messengers can, at their pleasure, take the horses that
 36555 come to them, and take the Life of those who resist; and thus, often, the travellers,
 After the horses were taken from them, they were forced to remain on the road."
 Pauxli Strasburgii, Suecics Regis quondani Consiliarii secretioris Aulici & ad
 Amurathem IV, legati, relatio de Byzantino itinere ac negotiis in Ottomannica aula

- perattis, no non de Jlatu ac facie Orientalis imperii, qualis er at circa. A. 1633. This is a very short, but otherwise very humane message, covering 41 pages. in 4 to. A. Olearii, (Hoogd.) Beschreibung der oriental. Reife, Schleszwig 1647, M with plates, large 546. pages. (published in Dutch under the Title: A. Olearius Persian travels of the Holstein Ambassadors, Amst.1691. 4-) The author's journey went with the Holstein Ambassadors to Persia, in the years 1035-1639. over the Baltic Sea, through Russia, over the Caspian Sea, and so through Persia's Mediterranean, and from there along the Caspian Sea almost the same route back to Holstein. The usefulness of this book for the countries travelled is certain; but it has no real relation to Turkey, and so I am exempted from its further assessment. - The same applies to J. A. von Mandelslo Hoogd.) Travel description, which was also published in Paris in 1679, in French, in 2 parts in 4C0. John Graeves description of the Pyramids b c mth a description of the Gr. S. Seraglio, Lond, i737. 2volk in 8/0. These are the well-known, and often, even as regards the description of the Pyramids, miden, especially in the general History produced fruits of a journey, which the writer made after the year 1638. to the Levant.
- Historiea., Theologica & raoralis Terrce S. dilucidatio. Auctore Fr. Ojjaresmio, olim term f. Prafulc ac Commrio Apost'jii, 2 parts infol. Antw. 1639. This work contains indeed an unusually large number of things, for our times and way of thinking not at all suited; but, whoever wants to know, of what the Pilgrimage used to be shown there, as well as of the state of the Order of the Patres de Terra S. will find here an extensive explanation. There are also some plates added.
- A completely different writer is Lorent d'Arvieux. He was born in Marfeille 1635 and traveled 1653. to Sayd, where he stayed for 12 years, learned the Eastern languages, and at the same time studied the ancient history, customs, habits and learning of the ancient peoples. The King of France sent him 1668. to Tunis, 1672 to Constantinople, then made him Consul in Algiers, and finally in Aleppo. He died in the beginning of the 1.8th century in his native country. His work was published in High German under the following title; *ow Arvieux Nachrichten, worin er feine Reifen nach Constantinopel, in Asten, Syrian, dem gelobten Lande, Aegypten und der Rarbarey &c. heschreibt, 6B. 8. Kopp-und Leipzig 1753-1759. The first part begins with the author's journey to Smyrna, and is dealt with in the first four chapters; just as his journey to Egypt is dealt with in the four following chapters. From the 9th to the ttzHead, one finds his journey to the Holy Land, so that nevertheless many chapters are filled with matters of commerce, biography and observations. The second part describes the Holy Land, and a part of Syria. In the third part appear the reports concerning the Arabs and Tunis. The fourth part continues the accounts of Tunis, and describes the journey to Constantinople and Adrianople, and the stay there. The fifth part treats of Algiers, and many matters of Commerce, and Treaties of France with the Powers of Barbary and the Sultan, as well as of the author's recent stay at Aleppo; which is continued in the sixth part, and concluded with several military, commercial, and private histories. Innumerable, and often rambling, stories and quotations, and a multitude of useful* empty remarks have made this work grow to such a thickness, which otherwise, if they were omitted, would constitute a very useful travelogue; all the more so, if the writer remains faithful to the truth. Small errors, for instance when he gives the Armenian nation at Smyrna two churches, are unavoidable. In his time all Europeans in the Levant had to wear beards; but this custom has now ceased in most places; also, since that time, they have been determined in many privileges and liberties.
- De Turcarum moribus Commentarius, autiore Joh. Bapt. Montalbano, Lugd. Bat. 1654, in i6mo. large 120 pag. seems to have been collected partly from personal experience, partly from other reports.
- Clas Kalams Constantinopolitaniske Resd, Stokholm 1679. in 4. large 93 pp. At the conclusion of the work it is shown that many more and more detailed things are in the writer's diary than in this description, which were worthy of being made known by the print. One may not doubt that when one reads these abbreviated travel reports. He collected them as extraordinary ambassador of the King of Sweden, Karel Gustavus, in the years 1657. and 1658. Despite all their brevity, they are, nevertheless, still worthy of reading because of their accuracy. One will read there many events of that time, and especially the Porte, as well as the course of his negotiations with them, and his journeys there and back, not without amusement. The state of the Turkish Empire (pp. 70-79.) he relates according to the faithful instruction of a certain Alb. Bobowski, a Pole of reformed parents, who was taken prisoner in his youth, and brought up in the Mohammedan religion, but nevertheless always retained an inclination to Christianity, and was a very learned man, especially in languages.
- JÜRGEN ANDERSEN and VolQUARD IVERSEN (High) Orientalische Reiseschreibungen,

- published by OLEARius, Schleswig 1669. kl. foh of about 200 pages. They mostly go over the East Indies, and only briefly, on about 6 pages, touch upon a part of the journey, from there over Bagdad, Moful, Aleppo, Jerusalem and Skanderona to Malta. Eduward Melton's Sea and land journeys through Egypt etc. translated from the own notes and letters of Mr. Melton, Amst. 1681. and 1691, 4. with pl. The preface with the title assures that these journeys were made in the years 1660-167-., and the collected reports, above many other writings of this kind, were worthy of translation. In this I agree with the publisher, with regard to the time, and I think I have discovered clear traces elsewhere that this writer, without quoting his name, has mostly written out. The plates do not depict countries, places and antiquities, but almost exclusively events, for instance judicial executions, and therefore they can usually be dispensed with. The first part (of 119 pages) deals only with Egypt, and is also possibly not yet redundant with a Maillet, Pococe and Norden. The second part (from pages 121-226.) describes the West Indian journeys, and the third (from pages 227-357) the Turkish and Persian. Via Livomo he travelled to Smyrna, visited Ephesus, describes from experience the inns and journeys in the East, as well as his journey via Sardis, Philadelphia and Tokkat to Erzerum. Hylascht, everywhere, '6 remarkable, both about places and countries, as well as peoples and their customs. He was in the main monastery Driekerken. His journey went to Isfahan. This gave him the opportunity to report much about the Turkmen, the Armenians, the Gwebers and Persians. The fourth and last part relates his return journey from Isfahan to the Asian Turkey, and his five months' stay in Constantinople. The comments given about this city, the Seraglio, the Porte, the Turkish religion and the religious ceremonies are quite true, but what he heard from others is not so certain. He says nothing about the Turkish Empire in general and its form of government. The rest concerns Persia, the East Indies and the African coasts, and does not belong to my Plan. Franz. Ferd. von Troilo &c. (High.) Orientalische Reisheschreibungen êfV. Leipz. and Frankf. if-ip 8. large in p. The writer made this journey in the year 1666. etc. He traveled from Germany via Venice to the Gulf of Venice to Candida, p. 1-30; from there to Cyprus, which he describes according to its fruitfulness, cities and inhabitants, to p. 53. ' On his further journey he treats of Tripoli in Syria, Mount Lebanon, of Balbek, Barut, Sidon, Sarepta, Cana, and therewith of the fountain of living water, of Fyrus, Ptolemais, Mount Carmel, of Cefarea and Jaffa to p. 101. At this city he notes that every traveler, for his person, must pay 24 piastres poll tax upon his arrival there. Now this sum has been reduced to 11, at least for the poor. As for the Holy Land, of its fertility in general, even at the time of the writer, (*)
- (*) Since still in our days, the mockers of religion dispute the credibility of the O. T. also for the reason that in the Holy Land such a multitude of people as is stated therein, cannot live, and therefore the well-known Mr. du Luc, te Gerieve, writer of the Observations for the Savans incredules, desired sufficient testimony; so I have procured him such a, in the year 1-69 from the Chevallier de Montagu, who there can almost be regarded as a native of those countries and therefore no mocker; with religion will be, nor can be suspected. Of course this was made known openly from the first in a writing, or somewhere else, and no one will -with gTondj anything, amnen fabw _ notes that Chevalier has drawn up, signed with his own hand, and ratified with his Family fignette, but in which he has indicated in detail and assured that, in proportion to the cultivated lands and their yieldability to the uncultivated, the H. Land would certainly have contained and could feed the specified, large number of inhabitants.
- Of Jaffa, Rama, Lidda and other places and churches up to Jerusalem he speaks until page 120. He gives reports of his reception there in the Monastery of the Holy Redeemer, of old Jerusalem and its builders; of the owners of the Holy Land and that old city up to the time of Christ; of the new city of Jerusalem, as well as its and the country's possessors and inhabitants in the first centuries after Christ's death, and on this occasion also of the Maronites, the Eastern Greeks, their laws and errors; the Eastern Armenians and their errors; the Nestorians, Syrians or Jacobites, Georgians, Abyssinians, and their errors; where also the old fable of the Priest John, as an Emperor of Abyssinia and the East Indies, occurs; and of the Iciscan monks, to page 194. - Certainly what is related here is far from sufficient to know those religious parties, and the saying is, often, also unfounded. the report, concerning the possessors and inhabitants of the Holy Land from the 6th to the 12th century, he follows up to page 2ii. - Dealing with the Church and Monastery of St. Salvador to page 214, he also mentions the various curiosities in Jerusalem, namely what is said there concerning the house of Hannah, the old and so-called Temple of Solomon, the house of Herod, the Palace of Pilate, the road to Calvane, at the same time citing all the fables concerning them. From page 256, etc. he gives a description of the Church of the Resurrection, its furnishings, and other truly or

36695 falsely impersonated holy and remarkable places, chapels, hills, stones, caves, springs, valleys, graves, especially the Holy Sepulchre. On this occasion he gives a full account of the deception concerning the so-called Holy Fire, and wishes to prove from many examples of the pious and the impious, that one cannot enter the Holy Sepulchre without a holy fear, which makes a strong impression on the mind; he also relates the manner and method of the Orders of the Knights of the Holy Sepulchre, and the Procession, which the Supreme of the Monastery of St. Salvador, belonging to the Roman Catholic Church, with his fellow believers, and all who wish, makes openly from Bethphage to Jerusalem, on Palm Sunday, on an ass, and during that journey causes the History from Matthew to be read aloud in certain places. The Author adds, on all occasions, the actual history of all the places from the Bible, as well as the History thereof from the Middle Ages and later times, besides the modern traditions, or rather fables. In the treatise, page 380, etc. touching the road to Bethlehem, of Bethlehem itself and the surrounding places, as well as of Hebron, the road to the Jordan, this river and the superstitious solemnities occurring there, of the city of Jericho and the Dead Sea, there appear, in detail, the traditional feelings of the supposed Holy houses, springs, caves, deserts, mountains and chapels. On page 454, etc. he mentions how he traveled from Jerusalem to Cairo, and from there to Mount Sinai and the Red Sea. He completed the journey by land in sixteen days, and gives a general description of Egypt. Of Cairo he says that one needs four good hours from one end of the city to the other, but nine to go round it. He reckons in it and in the foremen 24 thousand streets and three hundred thousand houses. Among these must certainly have been counted the very smallest streets, otherwise each street, counted together, would have had only 12 or 13 houses. According to page 491, etc. he speaks of the Nyl, the rice, the flax and the sinker, as well as of Heliopolis. – P. 512, etc. the journey to Sinai, the description of the mountain and the Monastery there, of the city of Suez and the Red Sea occur, besides the viewing of the Pyramids, the Sphinx and the Manden. Then he travelled, page 527. via Jerusalem to Damascus, where he speaks of Silo, Shechem, the field of Esdraelom, Nazareth, Tabor, the Galilean Sea, Tiberias, Capemaum and Damascus itself, and at the same time mentions the many, dangerous and costly troubles of the Arabs and Turks, because in some places they exact an arbitrary toll for each person of up to 6, 10 and more Piastrs. From Damascus he travelled to Aleppo, page 602. etc. which he briefly describes, as well as the further journey to Antioch and Alexandria, as well as the unpleasant conditions of travel to Constantinople. Of this he leaves a short description, page 662. etc. When he puts the number of Christian churches in that city at 447; then this, being the reason of the actual churches, is undoubtedly too great, although there were more then than at present. According to page 673 he speaks of Mohammed's progress; the pilgrimage to Mecca; the Mohammedans in general, and the Arabs and Turks in particular. The latter he considers with the Turkmen as one people. Of the Turks' ecclesiastical government, religion and ceremonies he treats imperfectly. Although even that which he further reports of their and all Eastern customs is not sufficient; one sees, however, that they have made no change at all in this respect up to the present. The adventures of his journey from Constantinople to Alexandria by land he gives page 728. etc. as well as page 750. etc. that of his journey to Tripoli in Syria, Ioppe, Jerusalem, Damiate, Cairo, Rosetta to Alexandria. Finally he reports his return journey to Europe, and various things concerning Algiers, where, on this return journey, he ended up in prison. The style in this book is by no means attractive. Many Italian words have been left unseen, and therefore unintelligible to many; for example Turcolmen, (Translator) Caffarierer, (a Tax collector on the roads in the Holy Land) Vaschallen, (Schepen) Avangardi, Retrogardi etc. One finds many remarks and events everywhere, although the fortunes of the places, especially in whose hands they were, are very well recorded. His assertion is, by far, generally not true, that in all of Turkey, in all cities and villages, the Turks had burial places outside them and without walls and fences. Otherwise the work generally has the stamp of truth. Since the writer probably made his journey for pleasure; so his intention seems to have been only to provide a description of what he saw and heard, and in this respect he must also be judged. Whoever is therefore open to criticism; he will be better satisfied here, than he who desires precise descriptions of things. J T Struis travels, noting the wreck etc. with pi Amst. The writer was finally a sailmaker on a Dutch East Indies ship, and from 1647-1673 on land and water on voyages. His reports consist more in the rare cases that came to him, than in actual descriptions of countries, places and peoples. These are not reported only on occasion, and do not seem to correspond with the truth everywhere. So little is said about Turkey, that this work could very well do without in a Turkish Library. Steph. Gerlachs (High) Tagebuch einer Reifean die Ottomannische Pforte &c. Frankf. a

- 36760 M. 1674. Fol. large 552 pages. It is written in the manner of a diary, and a collection of all kinds of true and untrue things that the writer has seen and heard. The style is not at all pleasant. Many untrue things he has either written down himself, or have been inserted by the publisher, S. Gerlach. Many very strange histories, for example. what has happened in the meantime in the other parts of Europe, and strange stories with remarks are mixed with it. It is perhaps pleasant to
- 36765 many a one to find here a part of the negotiations, between the Tubingen and other theologians of our (Lutheran) Church with the Patriarch of Constantinople and the Greek Church, to give them an idea of ours. One reads more than once, one and the same thing repeated. The circumstances then oppressive for Hungary and the House of Austria are very clearly depicted; as well as the astonishing perfidy of the Turks, and their unbearable pride concerning the Christians, yes all European Powers. One
- 36770 also finds in it various letters from German and Turkish Emperors, from some Kings, Envoys and Baifas. One can do without it completely, to know the Turkish Empire; unless one wanted to look specifically at the times in which he lived.
- 36775 Q. F. von der Groeben (Hoogd.) Orientalische Reisebeschreibung. Marienwerder, 1694 it! 4:0. large 399 pages. He made this journey in the year 1675, and passed through Malta, Kandy, Rhodes, Cyprus, Jaffa and Jerusalem. From here he made several journeys to Emahus, Bethany, Jericho, the Dead Sea, and the Jordan, as well as to Bethlehem, and show the curiosities in and outside Jerusalem itself. Then he took his way through Galilee to Ptolemais. Here he embarked, landed at Tripoli, travelled to
- 36780 Lebanon, came to Damascus, and departed with a caravan via Ashdod and Ascalon to Cairo. He climbed, like all travellers, the great Pyramid, found the length of each of its four sides, below, 324 paces, and climbed by 250 steps, of which each was five feet, (*) and these each were reckoned to 9 inches, to the top, which exists in a plain, where about 50 persons can stand side by side. He also made a journey to Mount Sinai, returning then via Cairo, Damiata, Rosetta and Alexandria to Europe. The
- 36785 author seems to have travelled with great zeal for religion. He is extensive, where one does not
- 36790 (*) In this respect he differs from other travellers, who testify that, according to the height, the thickness of the steps decreases, and they become thinner.
- 36795 desired, as with the insertion of whole extensive and unsacred histories, and very short, where one nevertheless wanted to read more; so that, with a reasonable thickness of the book, curiosity is nevertheless not very satisfied. But in his apology one can say, that he refers, in remarkable things, to Be. Ion, Breidenbach, Radzivil, Rauchwolf and others, and points to them, to read them further. There are many, but fairly coarse wooden plates of countries, churches, etc. added to this work. A not very well known, and yet in many respects strange book is the following: L'état present de la Turquie, ou il est traité des vies, moeurs & coutumes des
- 36800 Ottomans & other peoples of their Empire &c. by Michel Febure in Paris 1675. 8. large 450 pages. Although the author's style is not exactly enticing, one is nevertheless kept going because of the content, and especially many examples. In the dedication to the King of France, he is very flatteringly presented as the future Conqueror of Turkey, which the peoples there, according to the author, desired, and which their pretended Prophets confirmed. But here either an untruth is told, or the matter must have changed a lot since then. The first part treats of the infidel nations, and the first main part of the Turks. Here in 16 divisions the following subjects are found: their policy, and that it will still cause the downfall of their empire; their
- 36805 religion, superstition, festivals and fasts; their mosques, dervishes, pilgrims, marriages and domestic circumstances of women; their conduct at deaths; their disposition, manners and inclinations; cruelties; their maintenance of justice and the abuses therein; their ignorance and many customs. The 17th division considers their peculiar customs, opposed to ours: for instance, they wash themselves after eating; cut the hair of their head, and let the beard grow; wear clothes of very many
- 36815 bright colours; write from the right to the left hand; never uncover their heads, to salute and show respect; let those who visit them come and go alone; keep the place in a corner for the most important; cover the floors and not the walls; sit on carpets, and sleep on them; destroy the frontiers and boundary-places; have seldom windows into the streets; tolerate and honour the magicians; change the offices of
- 36820 honour almost annually; have their grand meal in the evening; let no one enter their houses lightly; request, besides the Mohammedans, also the Christians and Jews, to pray for them openly and secretly; are cruel to the vanquished, humble and friendly in defeat, and hasty in winning, &c. With us the opposite occurs. The three following Sections represent the power and weakness of the Turks, as well as their opinion of
- 36825 the Christian princes; as he then in two other councils partly to bring and keep

Turkey under France, partly to make the Turks Christians, and finally all Christians in Turkey Roman Catholics. To the first he reckons, besides a general peace of the Christian powers, a sudden attack on Constantinople with a fleet, and a war of the German Emperor as well as of the German Empire on land against the Turks, whereby he absolutely assures, that the various discontented nations in the Empire would not sit idle, the war of Spain against the Coasts of Barbary, not to stop at sea with other places, but to continue to seize the Dardanelles, because there the whole Empire was divided in the middle; - to treat the conquered peoples with gentleness, and to allow the Soldiers no plundering; but the neighbouring Christian powers had to come to an understanding, peacefully, because of the provinces situated near them. To the latter he proposes to change the Turkish Empire into one or two Christian empires, in which the Princes should be chosen from the House of Bourbon. The Levantines were to be left to the old customs under Christian governors, but the Christians were to be increased, and the Mohammedans were to be decreased; which would happen if the latter were placed in the circumstances in which the former are now among them. But in order to unite the Christians among themselves, the same advantages should be granted to all; all churches should be arranged for general use, and no special Roman, Greek, Armenian, etc. churches should be built; in the schools everything should be taught only in the Turkish and Arabic languages, and if they did not formally want to convert to the Roman Church, they should be charged with half of what the Turks had to give. The principal ports in Turkey, and the goods which are imported and exported, he describes in the 23rd section. At that time the English cloth was in use, but now the Dutch, and especially the French, are the most popular. As the Venetian were too dear to the Turks; so now the English, and almost also the Dutch, are; but the French, being cheap and of very bright and beautiful colours, were most in demand. In the last two parts he speaks of the manner of travelling, especially with caravans, and especially of the principal offices of government in the Turkish Empire. The second head treats of the Arabs; the third of the Kurds; the fourth of the Turkmen; the fifth of the Jesids; the sixth of the Druses; the seventh of the Jews. Here he remarks, that before they were admitted to the Mohammedan religion, they had first to confess that the Messiah was come, and to have learned the Gospel. Other writers go still further in this respect, even stating, that they had to be baptized. Both have either never been true, as at least the latter seems incredible; or it is now altogether out of use, although, according to the accepted Mohammedan doctrines, they must consider Christ, and subsequently the Koran, as a great Prophet. In the last six nations the author praises the special esteem and affection for Friry??. The second part, dealing with the Christian nations, begins with an introduction to the customs of all Eastern Christians, where, besides a fairly extensive account of their objections to the Roman Church, it is observed that the Bishops and Patriarchs, before they attained to their Dignities, had to put on the habit of a monk, but the Priests and Deacons were married. Hereupon he speaks of the marriage itself, the Holy fire at Jerusalem, and the deceptions concerning it; of the difference between their traps and those of the Romans; of their tributes, and that they were not allowed to keep Turkish servants. The added information, that the young women-Persons need to go to church, at the most only four times in one year, and that the Christians there did not differ in their attire, is untrue; unless such freedom were so limited to a few places. Hereupon he comes to a special, but for the most part only short and superficial treatise. In the first chapter, of the Greeks, he adds many things, concerning the disputes of the Romans with them. Of the Armenians, in the second chapter, he seems to speak much too harshly, out of a general hatred of the Romans against them. Of the Syrians Jacobites, he shows, in the third Head, how they are drawn to their Church by the Roman Missionaries. Of the Nestorians or Chaldeans, the Maronites, the Copts, and Abyssinians, he speaks in the following Heads. In the sixth he makes mention of the Shamfi, of whom it is believed that they worship the Sun. They were not numerous, and very secret in their doctrines; they had no Churches, but held only secret meetings until, by the compulsion of the Turks, they professed a Religion accepted in the Empire, and then, in a certain respect, joined the Jacobites. In conclusion he makes a long address to the Cahinists, as he calls them, asserting the agreement of all Eastern Christians with the Roman Church, but with which he apparently contradicts what he had previously related. Everywhere he shows that all Christian denominations in Turkey were also very inclined to accept the King of France as their sovereign, but which, with the exception of the Romans, is by no means the opinion of the others at present. It is thought that George Guillet, who was born in Auvergne around the year 1625, and was appointed first hororiographer of the?? Academy of Sculptor and Painter in Pau in 1682, is the author of the following work: Guilletiere Athene ancienne & moderne ??

The State Present of the Turkish Empire in Paris 1678. 8. Large 456 pages. In it one finds a multitude of insignificant, yet extensive histories of pirates and mischief, as well as disputes of the French Consuls on account of rank with others, and a long dispute of a Greek priest with the Europeans, that they had obtained their knowledge from the Greeks, and had deserted them, in their sad circumstances under the Turks. A journey from Athens to the army for Candie will form the description of the then state of the Turkish Empire, but is not at all sufficient. One side object of this work is, to discover the coasts, fresh water sources on them, and several courses in the sea for the use of navigation; but the principal object is certainly, partly to furnish a history of Athens from the ancient writers and in the state of his time; partly to give a picture of the antiquities, which were no longer there, and of the construction of the old theatres; partly by occasion to place the doctrines of the ancient philosophers, who read in Athens. This book can be entirely dispensed with.

George Wheler and Jacob Spon made, 1675 and 1676, a journey to the Levant. The first was an Englishman, and his work bears, in the French translation, the following title: George Wheler Voïage de Dalmatie, Grèce & du Levant, à Amst. 1689. 2 part. 8. with plate. together large 607. pag. In the first part the 1st book describes a journey from Venice to Constantinople, and in particular the coasts of Dalmatia, and the islands of the Venetians, Corfu, Zante, Zephalonia, etc. and those islands of the Archipelago, which the writer touched on his journey to Constantinople, such as Serigo, Lino, Delos, Mykonos, Lesbos or Mytilene, furthermore the Trojan shore, the Hellespont, Gallipoli, Lampfacos and Heraclea, with many both Latin and Greek inscriptions, and a decent list of herbs. The second book contains no bad description of Constantinople and the neighbouring places, but without plates of the Channel and Constantinople. Here one finds, besides several former inscriptions, also the representation of all the Pyramids, and a Botanical register, as well as the doctrines of the Greek Church, especially in the part of the Holy Communion. The third book relates the journey in Natolie to Brussa, Thiatyra, Magnesia, Smyrna, Ephesus, Pergamus, Sardis, Laodicea, Philadelphia, Phoce, Melasso, and several small places, where not only many pictures of cities, antiquities and plants, but also many inscriptions and explanations of old coins occur. In the first book of the second part one finds the journey from Zante to Athens, and the description of many places in Greece, such as Patrasso, Lepanto, Salone, Delphos, Parmus, Thebes etc. with the pictures of many places and plants. The 2nd book provides the description of Athens and the surrounding places. Here the writer is quite extensive, and by many plates and inscriptions the matters are also clarified, and various observations concerning the Greek Church and language are added. The third book contains the journey from Athens to the surrounding regions of Greece, as well as to the Attic region, to Corinth, Megara and Negroponte, where many things, concerning the Greek monasteries, as well as great lists of plants, and the illustrations of many of them, not less the explanations of the ancient places mentioned in Classical writers occur. Of the Turks little is mentioned, and that only in passing. The plates of cities and islands are common, but the illustrations of antiquities more accurate. I do not answer for all the descriptions. At least that of Smyrna concerning the listing of the inhabitants, in particular the relation of the Europeans to the native Christians, as if the former outnumbered the latter, is absolutely untrue; although there may have been more of the former then than now. Otherwise this work is very readable.

The Italian, Dalmatic, Greek and Oriental Description of Reie by Jacob Spon, a Frenchman and travelling companion of the aforementioned, was translated from French into High German, and published in Nuremberg, 1690 in fol. 2 part. large 240 pages with plates. [in Dutch in Amsterdam, 1689 with pl. in 4. under the Title: Jac. Spon and Wheelers travel through Italy, Dalmatia, Greece and the Levant.] Here one finds the same places described, as Wheler has done, but he does not at all enter into the Botanical field, looking more at the antiquities. This book is, at least in the (High) translation, precisely not pleasant to read. The plates are common, but possibly better in the Original. By Negroponte one finds information, concerning the Ebb and Flood of the Euripus. At the back is placed a small dictionary of the modern Greek language, and with each part a great multitude of Latin and Greek inscriptions with a German translation are added.

Jean Chardin, a jeweler's son, was born in Paris in 1643, and was subsequently knighted by Charles II, King of England. He started traveling early and came from P for the first time in 1666. After a second journey he had his Journal du Voïage de Persie printed in a volume, ??, with beautiful plates, in London, whither he had fled for the freedom of religion. (In Dutch known under the title: Chardyns reize naar Persien en Oostindien, met ??. Amsterd. 1685 4to) the first part, after the introduction, something comes before the trade at Smyrna, and at the stay at

Constantinople a long story of the difficulties at that time, which the French encountered in the restoration of their Capitulation. Furthermore he gives an account of his journey from there over the Black Sea to Caffa, and further over the same to Mingrelien. In the description of this country is placed the report of a Theatian monk, Zampi, who had been there for 23 years, concerning the religion of the Mingrelien, to which the writer adds his remarks about the Principalities of Gurriel and Imirette; all of which inhabitants adhered to a very degenerate Greek religion, very ignorant and the ecclesiastical and secular Persons are so barbarous, that they leave their own to the Turks for a tribute, or sell them as slaves. He relates the difficulties and dangers of his journey in this wild Mingrelian; his plunderings suffered by the inhabitants; while the writer remarked, when he paid his visit to the Prince, to complain that he himself had been among the robbers; and the manner of undertaking war, or rather plunderings, among themselves, or of enduring it from the Turks. He inserts an account of the rebellions of the Princes of this country, as well as of his own incidents, which testify to the injustices of this country, and the Tyranny towards foreigners, with a short description of the Caucasus mountain. In the journey, the stay and the description of Georgia, and in particular; the capital Tiblis, he notes, that the Georgians with the Mingretians are one, although in the national Character somewhat better, and the women are famous for their beauty and cleverness, but besides faithless. The journey to Armenia he made over the Taurus mountains, where he gives a short description of Armenia, as well as necessary information about Erivan, Edschmia, ?? and Ararat. The rest with the second part deals only with Persia, and therefore does not belong to this field. This entire travel description has the stamp of truth, and one can learn from it, in particular, the Avanis concerning travelers.

The book, Relation nouvelle d'un Voïage de Constantinople à Paris 1681. with ?? plates, in 8vo, is, as the almost extravagantly flattering dedication to the King of France indicates, published by Greeot. After the preface are printed some testimonies of learned eyewitnesses concerning the authenticity of the plates, which are in fact quite accurate. The description of the Hellespont and the Dardanelles, the Sea of Marmora and the places around is filled with so many indifferent things, that one could write folios on all kinds of subjects on this basis. Constantinople is treated in detail, but very incompletely, but on the contrary very extensively of the Sophie-, Ackmets-, Solimans-, and Valide-mosques. Under the Title: Performance of the Christian Religion in the Sophie Church, the general appearance of the Greek Worship is described, such as the ecclesiastical Persons, Liturgy, Monasteries, as well as the Worship itself; but under that: the exercise of the Mohammedan Worship in the Sophie Mosque, the external observation of the entire Mohammedan Worship. Finally, the author gives some, but, except for the comments, little information of interest about the winds in Constantinople, the visits to the Mosques by the Mohammedans, the Divan and the Turkish justice, and the activities of the Turks. For the rest, this work remains very useful for getting to know Constantinople, although there is neither an image nor a drawing of this city among the plates. Meschis. Thevenot, a famous traveller of Europe, Royal Librarian, who died in 1692, has also earned himself a place among the Levantine and Oriental writers of the 17th century, although he did not see those countries himself, but only from the mouths of travellers and credible writers, especially Arvieux, collected the materials for his work. The title is: Voïages de Mr de Thevenot &c. en 5 tomes, 3 edit. U Amst. 172?. 8. with plates. (in Dutch 1 hevenots reizen, 3 parts with pi. Amst. 17 q 0 In the first 2 parts he treats extensively of Turkey. He pretends to have made the journey there in the years 1655 and 1656, presenting all the circumstances as if he had actually made them. One cannot dispute that he made good use of another's knowledge; but nevertheless one can see that he has been in those regions -eleven ' with. He gives, for example, for, of the ship on the Asian shores, opposite Tenedos, the ruins of Troja; he makes no mention of the outer castles of the Hellespont, on the JanitCaaren cape; asserts that the present-day Dardanelles stood where Sectos and Abydos once lay; says of Scutari, it was a village; and makes no distinction between the Divan and the Serail, and the Palace of the Grand Vizier. He reports to many places that he wishes to record credible reports concerning this or any place and circumstances, which had come into his hands.

Voïage au Levant &c. translated from the Dutch by Corneille le Bkvn,"u Delst 1700. fol., 408 pages in size, with many maps and plates. (In 't Nederduitsch, C. de Bruin travels through Muscovia, Persia and India, with pl. Amst. 1714. fol. and through Asia, with lp/. Delst 1698. fol.) In the preface the author reports that he had prepared for his travels by means of the works of della Valle, Thevenot and Grelot, indeed had them at hand, and had mainly devoted himself to accurately recording the

drawings (for he was a painter) on the spot. His travels fall in the years 1678 to
37025 1684. The first five chapters contain short reports of his European travels, and the
next two of Smyrna and Ephesians; the eighth of his journey to Constantinople, and
the three following of that city itself, its suburbs, the Bosphorus Thracians, the
Sea of Marmora, (Propontis,) the places adjacent thereto, and the external appearance
37030 of Constantinople. From thence to the 29th Chapter the following treatises are
placed: special observations on the religion of the Turks and Greeks; by the first-
mentioned prayers and feasts prescribed in the law, besides the forbidden things,
such as images, various kinds of meat, wine, and interests; the esteem of the Turks
for the various Orders of their clergy; their feelings about Jesus Christ, the Virgin
Mary, and the Prophets; their marriages and divorces; their mourning and sorrow over
37035 the dead; as well as their thoughts concerning the last judgment and the
resurrection; their, and also the Jews', both men's and women's clothing; food and
drink; gay advice; punishments; virtues and vices, besides their conduct towards the
female sex; learning; the hunting, travelling, table, and other circumstances of the
Sultan who was living at the time of the author; about his military force, etc. which
37040 is concluded with the description of an entry of a Grand Vizier who had returned
victorious from the war, as well as some observations on the character of the Greeks
and Greek women, besides that of the Jews, especially with regard to their early
marriage. I cannot say that I have found anything extraordinary here, and the author
himself says: he borrowed all that from Grelot. In the 3rd Chapter. he describes his
37045 return journey to Smyrna, and in the following his stay there. From the 32nd onwards
his journeys through the Archipelago to Egypt, especially to Damiate, Cairo, the
Pyramids, the Mumien field, to Rosetta and Alexandria; all of which he describes, as
well as other curiosities of Egypt, for instance, the inhabitants, the Nile, etc.,
mostly in Thevenots and other words. chapter 45 follows the journey to the Holy Land,
37050 Jaffa, Rama, Jerusalem, Bethany, Bethlehem, Tripoli in Syria, Mount Lebanon, to
Ptolemais, Nazareth, Tyre, Sayde, Aleppo, Scanderona, Cyprus, Sattalia, etc. via
Smyrna back to Europe. — A large part of the descriptions occurring here is, so to
speak, taken verbatim from the aforementioned writers, whereby one can believe him,
as often as he gives them his permission, and in what he himself declares to have
37055 seen, because, what I know with certainty, has been described by him accurately: but
with time one thing and another has changed. The views and plates are correct; but
possibly they are even more accurate in the Dutch edition; and therein lies, in my
opinion, the greatest priority of this work.

J. Dappers Beschreibung von Asien, translated from the Dutch, Nurnb. 1681. fol. with
37060 many plates. (In Dutch, J. Dapper beschryving van Asia, of het Rijk van den grote
Mogol Atnjl. 1672.) In it Mesopotamia, tfatyfo. me, Assyriën, Anatolia and Rafoe are
described. Concerning the Mohammedan religion an extensive appendix is added.
Everything is a collection from other writers.

Critique de la Cróance & des Coütfumes des nations du Levant publiée par le Sr. de
37065 Mont, a Francf. 1684 large 229 pp. (Low German: du Mont reizen naar de Levant, 2
parts with pl. Utrecht 1695. 4.) The author declares in the preface that this is a
writing by an unknown person, and was of great service to him during his travels in
the Levant; that only the appendix comes from him. The work will actually serve to
settle the disputes then taking place between the Reformed and Roman Catholics in
37070 France concerning the Doctrine of the Holy Communion, and indeed to unite them among
themselves, because it is shown that the Eastern Churches agree in most of the pieces
with the Roman Church. One must almost in every respect do justice to the author,
whoever he may be, for the historical truth. He often refutes the Roman writers, who,
in a deceptive way, attribute to the Eastern Christians sentiments which they do not
37075 have, or pretend to have more agreement with the Roman Church than there really is.
The previously mentioned main object of this work would almost lead to the idea that
it has been compiled with good advantage from other reports. It has indeed nothing
special; but can nevertheless be read with great profit. — This is the content of the
sections.

I. Of the Doctrine and Customs of the Contemporary Greeks.
37080 II. Of the Tranfubstantiation. Whether it was also permitted to those Greeks who are
called Schismatics, that is, such as did not wish to unite with the Roman Church?
III. Of the adoration of the Sacrament in the Holy Supper, and whether it is
customary among the Greeks?

37085 IV. Of the creed of the Meschites.
V. and VI. Of the religious positions and customs of the Georgians and Iberians, as
well as of the inhabitants of Coschis and Mingrelia.
VII. Of the religious sentiments and customs of the Nestorians.
VIII. Of the St. Thomas Christians in the East Indies.

- 37090 IX. Of the ceremonies and customs of the Jacobites.
X. and XI. Of the sentiments and customs of the Copts and Abyssinians.
XII. Of the Armenians.
XIII and XIV. of the Maronites.
XV. Of the doctrines and sentiments of the Mohammedans.
- 37095 The appendix consists of
1) two registers of the Churches, which depend on the Patriarchate of Constantinople, of which the first is taken from Leo Allatius de confenfu ecdef. Occid.tf Orient, the second from the slatus prcef. ecdef. Greece;
2) three testimonies for and against the Transubstantiation; finally
37100 3) Usca's register of the Armenian Churches] which depend on the Patriarch at Edschmiazin.
- Voïages du Sr. du Mont and Frame, en Italië, en Allemagne, a Malthe & en Turquie. 4 part in kl. 8" with pi. a la Haye, 1699. (Low German: du Mont reizen door Europa en Asta naar H Oojlen, met pl. Utrecht 1699. 4C0 This work consists of letters. In the
37105 second part, with the 3rd Mef, the stories concerning Turkey begin. This and the following describe, in the usual way, Constantinople, so that I have often thought that the words were borrowed from other writers, and especially Grelot. He confesses his ignorance concerning the reason why that city and other Turkish cities had such narrow streets, since there was no lack of space. But, besides the first design of
37110 old cities, which almost always have narrow streets, there is another natural reason, namely this: to keep the great heat out of the streets, and thereby the traffic in the cities during the day easy Biaks. Wherefore often the outer narrow streets with coarse linen, or with light and movable wooden awnings, at least during the time of the greatest heat, are covered. In the 5th letter, a triumphant entry of the Sultan into Constantinople occurs, in detail, together with the history of a tried Vannel. To this is added a historical appendix, under the title: Constantinople thrice besieged. The 6th letter treats of the islands of Metelino and Scio; the 7th of Delos, Nicaria, Kalami, Lango, Rhodes, Cyprus, and the Knights of St. John; the 8th of Axandriax, the customs, religion and chronology of the ancient Egyptians, the
37120 various revolts in Egypt, the Column of Pompey, the earlier and later Arabs, besides their customs and religion; the 9*8 of the Pyramids, the Sphinx, the Mumien and their preparation, as well as a history of Cairo, and the description of that city, of the Castle and the magnificent spring therein, of the soil and its produce, and of the Crocodile. This is concluded with a treatise on the origin of the Nile and the cause
37125 of its growth, as with the last letter of this volume partly on Smyrna, the earthquake, the Turkish ships and slaves. The third part treats almost exclusively of the Mohammedan religion, and is everywhere secured with translated passages from the Koran. The author makes, in all honesty, general remarks on it; letter x. relates hereto, letter 2. their doctrines and fundamental teachings concerning God, the
37130 angels and men, predestination, ascension and the last judgment, Paradise, Hell and the middle state between the two; treats of the Koran, Mohammed and his mission, and the sentiments of the Turks concerning the Christians and all erring ones, in letter 3.1. From Ricaut he propagates, page 69. the error that Mohammed's so-called Testament was given to the monks on Mount Carmel; and from its contents he infers, page 70. the result is that those writers are very wrong who say that it is lawful
37135 for the Turks to kill Christians or to oppress them. Here is an extract from the Biblical history according to the sense of the Mohammedans are in their rightful place, (letter how namely their, and especially the Koran follow, raving the creation of the world, the flood and some Prophets after Noah, Abraham, Joseph, Moses and the exodus of the children of Israel from Egypt, the journey of Moses, Job, Alexander the Great, (as who according to their dreams also belongs to the Prophets,) the 7
37140 Sleepers, David and Salonion, Zacharias and John the Baptist, Jesus Christ and the Virgin Mother, and finally Mohammed himself. This piece is worth reading, to see at a glance the deformed perversions of the Holy Scripture and the fixed reckoning of time that occur in the Koran. - Then, further, in the 5th letter, the duties towards God are enumerated, and in addition to that circumcision, washing, fasting, the
37145 pilgrimage to Mecca, prayer, abstinence from wine and forbidden foods. These are followed, letter 6. by the social, as well religious, as civil duties, as works of charity concerning people and animals, and marriage. Here he accuses Thevenot of a mistake, who wrote: "the Turks do not believe that women came to Paradise; scarcely did they consider them to be reasonable creatures, and they regarded them as nothing else than horses in their "services;" which is in every way crude and too harshly expressed. He does not forget the legal proceedings, the punishments, the lawsuits concerning marriage and divorce. On this occasion he quotes from the chapter of the
37150 Koran, bearing the Title, the Cow, the following passage: "He who has put away his

wife three times, cannot take her again, "until she has married someone" who has put her away likewise. Then "they can come together again, and without sin marry again, when they think that they can live according to God's commandments, which he has revealed to the wise and prudent. "This letter ends with adultery, testaments, sleeping with slaves, murder and manslaughter, false oaths and ecclesiastical orders. Concerning the superstition of the Turks he brings many things worth reading, especially in comparison with the superstition of other peoples; he dwells most extensively on the evil glances of the eyes, letter 8. The effeminacy and inactivity of the Turks; their attachment to old customs; their greedy nature and ignorance; way of life, skill on horseback, manner of dress, inclination towards the female sex; various marriages; slaves; irregular love of women and their weeding; public baths, pastimes, music, dancing, ceremonies, etc. close the last letter. Of the fourth part the first letters still belong to Turkey. The author begins with the Greeks: a brief account of their history, their present slavery, clothing, dances, feelings of the East concerning the virgin state, greetings, religious feelings: of their Bishops and Priests, especially of Cyril Lucaris, their Churches and images: of the Armenians and their fasts: of the Greeks' thoughts concerning unperished corpses, and their ceremonies at burials: of the Jews in the Levant (letter 1) To the report that the Greeks accept the Transubstantiation, he adds, under the assurance that he was an eyewitness to it, the following: "that the Greeks, on Good Friday, came in Pro"ceffie to the Parish Church of the French, to worship the Sacrament exhibited there, and even 500 Piastres" paid, to have the freedom to do so. "So true it is, that they did not wish to be separated from the Roman Church. "Concerning the Jews, he says, as his opinion, with Ricaut's words, in the Life of Murad IV. "Secretly cursed, but in general they are loved. Everywhere they are slaves; meanwhile they are sought. They seem to possess nothing; yet they live in abundance. They are vagabonds; but wherever they dwell, they find a fatherland. They may possess no lands; yet they accumulate immeasurable treasures. Their number increases daily, for they all marry, and war does not destroy them. They are the Confidants of the Turks, and the sworn enemies of the Christians. In a word, at Constantinople avarice is the open whore, before whom every one makes his appearance, and where the Jews are the negotiators of such traffic. "Of the beauties, or, as we say, the Pagans, the Tschakals, the extraordinary strength of some Turks, their burials, the Plague, the Opium, the peculiar land and sea products of Nato; of the intermediate kingdoms and the pride of the Sultans. In this he greatly deceives himself, nay, speaks again himself, when he considers the Plague as a necessary Evil, to relieve the large population in Turkey, which was so much promoted by Polygamy; for this could, with so many uncultivated lands, support five times more people than are actually there. He remarks, very emphatically, the great pride with which the Sultans regard other Princes. (letter 2) Of the Coffee, its condition and preparation he speaks at length in the 3rd letter; but thereby falls into a great error. Namely he wants to describe the many kinds of dearness of it in the Levant, mentioning that it is better bought in Marseille than there, and that therefore they have it brought from there to Turkey; but forgets the great difference that exists between the Arabian and American coffee, so that the former would not be available for the same price in Turkey and France, but that the American, as of a lower price, is often brought to the Levant, and not only mixed with the Arabian, but also, if it is good, in a deceptive manner, out-spirited for the latter, and sold dearly. In the three following letters, which still belong to them, he relates various incidents at Smyrna, the history of the reign of Muhammad IV, and some of the affairs of the time in the peace negotiations with the German Emperor. All these letters were written, mostly in the years 1690 and 1691, as one imagines, at Constantinople, Alexandria, Smyrna, etc. At first I thought that it was a collection, because too many books are cited, which a traveller can hardly carry with him; but because of the various particular reports, which a foreigner can hardly give so well, I have changed my mind, and think that the writer, perhaps, after his return, may have composed those letters first, or at least revised them anew. He has quoted Belon, Croix, Gill, Grelot, Monconys, Ricaut, Spon, Tavernier, Thevenot, Thevet, Wheler and others, now with approval, then again with disapproval and even refutation of their reports, added many comments to them, and interwoven all kinds of treatises from the history of other peoples, so that this work belongs to the good books of this kind; but the plates do not say much. Ricaut Etdt prefent de Empire Ottoman &c. traduit de l'Anglois par Bespier, T. I & II. h Rouen, 1677 8. with pl. (Low German: Ricaut story and state of the Turkish or Ottoman Empire, next to the Life of the last four Turkish Emperors and, with pl. Amsterdam 1670 4) The text with the publisher's notes amounts to 720 pages. He has put the names of 90 writers, such as historians, poets, etc., from which he wants to

have such observations taken, although it is difficult to understand how they will all contribute to this. — In the first book the following subjects gradually appear. The last chapter serves as a general introduction: the government of the Turks differs from most other forms of government in the entire world, also requiring special principles and rules for its maintenance. Therefore (chapter 2) the absolute rule of the Emperor is the most important support of the Empire, and (Chapter 3) the obedience which was shown to the Sultan, was among the Turks more a principle of Religion than of State. In the 4th Chapter, he places a detailed account of the remarkable conspiracy of the Sultana Kiosem against her Nephew, the Sultan Mohammed. The 5th gives a description of how the youth were educated in the Seraglio. From these are taken sons who reach the most important offices of State; and it is a fundamental principle of Turkish Policy, that the Sultan has no other persons in his service, than such as he can raise without envy, and take from power without danger. Five Chambers, like so many chambers, are appointed for the youth. The first two differed according to the number of the intellects, and were therefore divided into large and cringe, although otherwise they stood equal in Dignity. From thence they passed to the third, which was called Kilar-Oda (Spice-perfume-etc. chamber), then to the fourth, Haf na-O de (Treasury chamber), and from thence to the highest, Has-Oda or special chamber, that is, that to which the Sultan's Nobles belong. Hereupon he relates in the next Head, the manner of instruction, according to which the young men in the Seraglio were instructed in the arts and sciences appointed for them, speaking, by way of an appendage, of the unseemly inclination and friendship, which, notwithstanding all strictness and regard, they nevertheless had for each other. In the 8th Head, he speaks of the Dumb and Dwarfs* of whom the Seraglio now holds less, than then; chapter 9. of the black and white Sentences, and the women in the Seraglio, and chapter 10. of the Adschamoglans. The following Heads treat, that which has not so much with the Seraglio, as with the Empire proper, go in common. The 11th Head, begins with the Great Vizier and his exalted post. The places of the Vizier, of the Bank mentioned therein have been destroyed since that time. Speaking of the horsetails, he reports, that only dnchajfas, to be known of Babylon, Great Cairo and Or and, (which then also belonged to the Turks) had the liberty to conduct three such, but that the others might have only one. This is untrue, contradicting even that none, what he himself says, page 160., that 2j8 and more Beglerbegs or Bassas of the first rank had three. The Divans-days' customary at his time (page 14r.) have been changed afterwards. In the 12th chapter he gives an account of the highest State offices and the various Stadtholderships of the Empire, concerning which, according to the present situation, one is further informed in Businello; chapter 13 of the Tartars, their Clan, and how they depend on the Turks; and chapter 14 of the Princes, who pay tribute to the Sultan, to wit, of Moldavia, Wallachia, Sevenbergen and Ragusa. Hereupon he gives the reason for the stability of the Turkish Empire. To this he adds, Chapter 15, the devastation which the Turks wrought in the Asian and other Provinces remote from the Capital; the custom (Chapter 16) of not allowing any important office and Governorship to pass from the Father to the Son, and of exterminating the old important Families; the fundamental principle (Chapter 17) of frequently changing the State officials, of elevating them and of not depriving any of their power; and finally (Chapter 18) their intention to increase the number of their subjects in every possible way, especially by plundering and in war. The last four Chapters concern the foreign affairs at the Turkish Court, to wit, how the Turks regard and receive the foreign Ambassadors, but concerning which, for some time, changes have occurred; how they must conduct themselves towards them in their negotiations; how the Turks regard the other Princes, and how they keep the Treaties and Treaties which they conclude with them. The remarks which the second translator of the English original, Bespier, (for it was already an earlier, but imperfectly translated,) has added, refer especially to the spelling and explanation of the Turkish words, and other circumstances, and are important. But this can hardly be forgiven him, that, at the end of it, in the first part, against Ricaut, he greatly exalts the moral Character of the Turks, and this by justifying the unlawful Thevenot, that is nothing else, than to wax the Moor. It is improper, in a remote country, to assert such a thing against a writer, who by many years' experience could know the more precise concerning it. The 2nd book deals with Religion. The first head, contains a general introduction. The second deals with the promises, which Mohammed made at the beginning of his Kingdom, to tolerate other Denominations, and how badly they are fulfilled. On this occasion he places his so-called Testament; but commits two almost incomprehensible errors, by pretending, partly, that this is in the Monastery of Mount Carmel, near Mount Lebanon, and partly, that the latter is a day's journey from Mecca. What various devices the Turks employ to extend their

religion, forms the content of the third chapter The next two report what the work and power of the Muftis is, and how they conduct themselves with regard to religion, in which mention is also made of the Kadileskirs, Mollas, Kadis, etc.; what the income of the Muftis is, and from what they receive it. For this purpose a new Mufti also received a visit and presents from the Christian ambassadors; but this has long ceased. The sixth Head, gives an account of the Emirs, and the next of the revenues of the Imperial Mosques, as well as of the manner in which the Turks bring in the Tithes for the support of their Clergy. On page 347 it is asserted that the Sophie Mosque has, annually, about 100 thousand ducats. The eighth Head: considers the Doctrine of the Turks concerning predestination; the next their several Sects and sentiments concerning Religion in general. The three following Heads give an account of the two principal Señors, the Sonnites and the Schiites, with an annexed list of their errors, by a Mufti of Constantinople, and the earlier as well as later heresies. Of the Dervish or Mohammedan Monks in general, and of the various Monastic Orders in particular, the 13th to the 20th Head treats of them more fully than I have found elsewhere. While he mentions the various Sects, page 39*, he adds the remark, that every Hodschia or Teacher of the Mohammedan Religion, who possesses any more ability than a single Pedant, and has read some books of fables composed by Arab writers, would imagine that he is doing his Honour a disservice, if he did not distinguish himself from other Teachers by some particular sentiments, (but which must not run counter to their principal religious principles,) but in this respect they give imaginary insights into other Denominations, even Christian ones.

The sixth Head deals with the Marriages and Divorces of the Turks, with which the Priests have nothing to do, but only the Judges; the 22nd of the circumcision; the 23rd (12th of the five main articles of Mohammedanism, viz. washing, praying, fasting, distributing alms, and the pilgrimage to Mecca; the 24th of the Beiram and its ceremonies, especially in the Serail the following of the prohibition of eating pig's meat and drinking wine, the Last Head ends with the observation that the moral virtues of the Turks seldom have any other basis than to be seen and praised by men; of which he cites the building of the Chans, and the public eating of the leagues and other animals as examples.

The military state is described in the third book. "The first Head, paints it in general, representing him as already then very much deteriorated. He has since become even more aggravated. In the following Chapters he shows himself in particular pieces in, after the assurance previously given, how he may be dealt with in all things, since he had received these reports from a well-experienced Turkish military commissioner. He divides, (Chapter 2.) the Militia into horsemen and infantry, and the first again into two classes: 1) that which has its income from lands, and is called Zaims and Timariotes, which in the third Head, are calculated, as in the fourth certain customs pertaining thereto are added; on which in the fifth the of the Egyptian militia, commanded by the 12 Beghs, and the auxiliary troops of the Turks on the side of the Tartars, Moldavians, etc. is dealt with. 2) Which is paid from the Sultan's treasury. These are the Spahis. (Chapter 6) When the Great Lord himself takes the field; then he must make each of these, as well as each fanatic, a present of five thousand extortions. The writer observes that the first-mentioned, because of their mutinies, had lost all their old prestige; that their payment was from 12 to 100 extortions daily. — In the treatise on the infantry, the 7th Head begins with the Janiifars, describing their organization, strength, and disposition; the next relates the various means of humiliating this rebellious Militia; the 9th Head treats of the Tschaufen, and the 10th of the other types of Turkish militia, namely the Toppedschis, Dschebedschis, etc. In the next Head, one finds observations on the manner of camping of the Turks, the splendor of their tents, and the cleanliness of their quarters. — The unfounded feeling, concerning the so-called Paulliners living in Sophia, the Miss of Montagüe, probably, copied from him, and revived it in her letters. The last Head, represents the state of the Turkish navy, which in the writer's time already did not want to say much, so that the Turks themselves had this proverb: God had given the Christians the sea, but them the earth.

This writer has been an eyewitness of everything, and very credible. He deserves all possible praise. Almost everyone has copied him, even down to the few mass days; and, instead of so many collections published in Germany and other countries, he should have been given to the readers only with comments on the new changes. Memoires heloriques & geographiques du Roïaume de la Morée, Negropont & de places maritimes jusques a Theffalonique per P. M. Coronelli, translated from Italian into French, Amst. 1686 8o with many plates, size 232 pages. The author is the, because of so many writings, mainly of a mathematical and geographical content, well-known Geographist of the Republic of Venice. When it is said of these Memoires, that they were

37355 collected by him; then this actually means: he took the geographical and historical observations about the described countries from other authors. This also seems to be testified by the unnamed French translator in the preface, but in such a way, that it was done with great accuracy; which must be left at his place, because no guarantee has been given concerning it. *Descriptio imperii Turcici: das ijl: Beschreibung und Entwurfung des Turk. Reichs unter Muham. IV mit kupf. Wurzb. 1687 4to.* The Asian

37360 Turkey covers 154, the African 72, and the European 162 pages. According to the title, this description is drawn from the later and most credible *Cosmo-Geo-Choro-Topo- and Historiographi*, and therefore a collection. P. della Falie, Struis, Vansleb, Oleerius and some others are quoted verbatim. The plates are common. Since we have later and better Originals and collections; we consider it unnecessary to

37365 give an extensive account of the contents of this book, which is otherwise not badly written for its times. *Voïage en divers et dis d'Europe, entrepris pour decouvririr un nouveau chemin a la Chine, a Paris 1693 8.* Dejeffuit P. Avril is the author of it. (In Dutch German considers this work to be entitled: P. Avril travels through Turkey, Persia and Armenia, with pl. Utrecht 1694 4.) The journey went by water to

37370 Scanderone, and then by land through Astatic Turkey, Armenia and Tartary to Russia, Poland, European Turkey, and so back to France. To get to know Turkey, this work does not say much, but it can be of service to a traveller there, and not unpleasant to a reader.

37375 *Stato militare dello imperio Ottomanno, incremento e decremento del medefimo del Sgr. Conté di Marfigli éfc. Opera ornata di tavole, tagliate in ram. Part.I. inHaga, 1732.* Opposite is the French, but the Italian seems to be the original. The writer belongs neither to the travelogues, nor to the Collectors, but to the few original writers* who have seen, found and investigated everything themselves. Not only a stay at Constantinople with the Venetian Ambassador, which was like a preparation for the

37380 following remarkable life, but also a slavery of several years under the Turks, during which he was an eyewitness of the last siege of Vienna; finally a German-Imperial task assigned to him at the conclusion of the peace at Carlonitz, enabled him to write with certainty what he wrote. As a foundation he has laid the so-called Kanon-name; these are the State registers of the Empire's income, military

37385 conditions, etc. to which he came by money. Everything has been clarified by pure and clear plates. The first part contains 151 pages. The first seven chapters give, in a certain respect, a preliminary introduction to the work, concerning the condition of the Ottoman Empire; the difference between the earlier and later Turks; the progress and prosperity of the Ottoman Empire; the decline of this flourishing condition; a

37390 general proposal of the laws, finances and military state of the same; various languages and denominations therein, besides an investigation concerning the prestige of the Sultan, the Vizier and the Baf as well as a consideration of the character of the Turks. — I content myself with merely recording from it a few things which are either the author's own, or very well presented by him. This includes almost the

37395 entire 2nd Chapter, in which he clearly indicates that the present Turks, because of the multitude of either bought or robbed people, are a mixture of Syrians, Armenians, Greeks, Illyrians, Poles, Russians, Hungarians and Germans, Italians, French, Jews, etc. Regarding the astonishing extent of the Empire, which is in many places very wild, he remarks that, since everything must nevertheless be kept in obedience, the

37400 expenses amount to more, and more garrisons are required, than many large Provinces are worthy of; certainly an important lesson for Princes, not so much to look to the possession of many countries, but rather to their real good governance. In the Turkish Empire there were, in his time, forty-eight different Sects among the Mohammedans, and seventeen Dervish orders. He believed that the supposed Paullicians

37405 were to be found between Adrianople and Philippopolis. The Armenian Patriarch carried the Title of Catholicos, (general), and his Parish extended far into the States of the Prince of Persia. This proves him much esteem; let him sit beside him, perform his office, and enjoy his considerable incomes, which he draws from Persia and Turkey. He must also have his letters of confirmation from the Princes of both

37410 Empires. The outward splendor of the Sultans and the Bassas, besides the tyrant abuse which they often make of their power, and the almost incredible respect which the people seem to show them outwardly, but at the same time also the great regulations which are imposed by the Uilema and the military state, these provincial Divans, consisting of lawyers, generals, elders of the militia and guilds, leave the Count in

37415 doubt whether the Ottoman Empire should be called a monarchy or an aristocracy, or a democracy. The many baths weakened the people and made them effeminate; wherefore "they were also obliged to use the pelfen" and could endure heat rather than cold. To indulge their lust, they spared no expense, and even in the field, where they were not allowed to carry off any female sons, they knew how to keep themselves harmless.

37420 In smoking much tobacco, they never spat out the saliva, but let it pass; as a result, the hairs on their bodies fell out everywhere. In general, they, and especially the Most Eminent and Courtiers, were great hypocrites, in order to deceive the world. They did indeed make great foundations; but this was not so much done on account of piety, as for their descendants, in order to provide them, by the

37425 principal share of their income, with a large income, which the Sultan must not be allowed to indulge. The Turks, he seeks to acquit from the reproach of complete ignorance, while, as is also true, relates that no learned man was found who did not understand, besides Turkish, also Persian and Arabic; and he possessed a book list of 86 thousand writers of the last century. Although this defends this nation, to some

37430 extent, against the all too great uncivilization charged to it by others; nevertheless, the state of learning there may not in the least be compared with that in France, Germany, England, etc. The printing of books was also, in his time, in the Capital, prevented by a number of 90 thousand copyists, who earned their living by writing. He is of a different opinion, that not easily a State could be found, which

37435 had such good registers for its Traditions, receipts, publications, Ceremonial, services and regulations, as the Turkish. In general they were, and especially the Chiefs and Courtiers, great hypocrites, to deceive the world. They did indeed make great foundations; but this was not so much done for the sake of piety, as for their descendants, in order to provide them, by the principal share of their revenues, with

37440 a fixed income, which the Sultan may not abuse. The Turks, he seeks to acquit from the reproach of complete ignorance, while he relates, as is also true, that no learned man was found, who did not understand, besides Turkish, also Persian and Arabic; and he possessed a book list of eighty-six thousand writers of the last century. Although this defends this nation, in some way, against the too great

37445 uncivilization charged against it by others; however, the state of learning there may not in the least be compared with that in France, Germany, England, etc. The printing of books was also, in his time, in the Capital, prevented by a number of 90 thousand copyists, who earned their living by writing. He is of a different opinion, that not easily a State could be found, which had such good registers for its Tra&aaten,

37450 receipts, expenditure, the Ceremonial, the services and regulations, as the Turkish. He praises the patience of the Turks as such, one whose equal was not found at all among other nations. In the example cited he is completely right. When namely a modern Vizier is robbed of all his Dignity; then he tolerates that with a kind of absolute indifference; and if, as has happened here and there, he is again exalted to

37455 it; then he is as grand as if no accident had befallen him. But the old Stoics and fateful men could hardly give them anything in this. He rightly reproaches them with their dissimulation, the duplicity of their expressions, and their avarice; but do not forget to remark that one must not think of obtaining everything, especially from the Ministers of the Porte, by money. - I should have to write out an unusually large

37460 amount if I were to furnish such extracts from all the Chapters as from the first seven. Of the following, which almost mostly concern the Court and Military servants, I will only set down the Titles: of the kinds of money, but concerning which, since the Count's time, some change has occurred; the weight and measure at Constantinople; the trade of the Turks; the income and expenditure of the Ottoman Empire. From the

37465 beginning to the end of the first part, one finds the treatise on the Military State. Here are Tables, concerning the Army and the various military peoples belonging to it, on foot, on horseback and at sea; as well as concerning the Paschals and the Beghs, Sae'yms and Tymariotes belonging to them, their income and the soldiers they have to provide, added. The lists concerning the Paschals differ frequently from the

37470 statement of Businello, and may well have undergone various changes since Marsigli's time, as is visible in those who closed the Persian and Hungarian borders. - The second part (Parte II. SV) was printed in the same year and format, and is 199 pages large. with very many plates, well. can depict the war machine, army, marches, battle order, and battles of the Turks. It deals entirely with military affairs, and ends

37475 with the final remark, how little one has to fear the Turkish armies, with the current decline of the Ottoman military state, and with the answer to some objections against it. - This work cannot be missed by a soldier who has to fight with the Turks; one probably finds it at all courts, and is very useful for all who want to know the internal condition of the Turkish Empire, especially with regard to its true

37480 strength, accurately. It is a pity that most Turkish words in Italian as well as French have been very distorted in print, and here and there almost unrecognizable. H. Maundrel Travels from Aleppo to Verufalem. Utrecht (1713-14) The writer made them from Aleppo, where he was Chaplain of the English Pastory, in the year 1696. The journey once via Lattakia, Tortofa, Tripoli, Barut, Sidon, Trus, Ftolemais, Sebaste,

37485 or the former Samarie, Naplufa, (the old SrchemJ to Jerusalem. Here he attended the

Easter diplomacies. About the rarities and antiquities he does not expand himself in much, if not as others, but refers to Sandys. He made the usual journey with the pilgrims "aden fordaan", the region of Jicho, the Dead Sea, as well as to Bethlehem. The city of Jerusalem he went carefully around on foot and finds it in its circumference 46 30 his paces large. The return journey he took over Nazareth, Sidon, Mount Lebanon, Damascus, Bal. bek, Lebanon, and the Maromosque principal monastery of Kannobin, and over Emessen Aleppo. Because he came to Jerusalem with a French Consul, he could enter with him and the entire retinue on horseback and with arms, which is otherwise absolutely forbidden. This travel description not only bears the stamp of truth; but also contains many useful and genuine remarks concerning the antiquities, Geographic and the Bible, which &g to be read.

A. de la Mortraye Voïages: 2 vol. in fol. with maps and plates. For Turkey only the first part serves, a la Haye, 1727. In the 5. and 6. Heads, is the description of his journey to the Syrian and Egyptian coasts, in the year 1697. I have found there, except for the description of a bathing stove and the bathing itself, mostly only travel notes. After Napoli he travelled in the year 1698. From the ?? Head, to almost the end of the first part, he describes his almost ten years' stay in Turkey. He was in Smyrna for half a year, during which time he visited several islands of the Archipelago. He stayed in Constantinople for several years. Of that city itself, the Seraglio, the Turkish marriages, and various religious ceremonies, as well as the public buildings, he delivers quite extensive reports. He made a journey to Nicomedia, Brussa, Angora, Synope, some islands of the Archipelago, Salonike, Adrianople and Troja. The description of these places does not occupy many pages. There occur important and less important cases, which happened in his time in Turkey, both in State and religious affairs, not only at the Porte, but also by foreign ambassadors, among the Eastern and Western Christians. The magnificent entry of Sultan Mustapha into Constantinople he describes in chapter 13. and relates many things of Prince Tokeli and King Carl XII. Concerning coins and antiquities he reports various things, and also depicts them on plates; just as such plates are more suitable, to know the clothing, religious ceremonies, amusements, etc. there. In general this book will be pleasant and useful to the great mass of ordinary readers. This is certain, that very many collectors have borrowed an unusually large amount from him, whereby they have wanted to make their works attractive and engaging.

§. LIV. Some writers of the eighteenth century; content of their works, and assessed. At the beginning of this century, Joseph Pitton le Tournefort made a journey to the Levant, at the expense of the King of France. He was, as is known, one of the greatest herbalists of his time. His travel description consists of twenty-two letters written to the Secretary of State, Count de Pontehartraust, under the title: Relation du Voïage du Levant, fait par ordre du Roi de France fif c. par J.P. de Tournefort. Tom. I. & II. a Paris, 1717. 4. with very many plates: (in the Dutch P. de Tournefort travels to the Levant, with pl. Amst. 1736. 4. and in the High D. at Nuremberg, 1776. in 8th.) The first two letters describe the island of Kandia, and the third the present state of the Greek church, rather neutral. The following 7 letters mention his journey to the principal islands of the Archipelago. In the 11th and 2nd ?? one finds the description of the Dardanelles, Gallipoli and Constantinople. The 13th treats of the form of government, and the 14th of the religion, customs and habits of the Turks. In the 15th there is a description of the Channel and the Black Sea. The 16th and 17th contain the journey after, and the description of the southern coasts of the Black Sea from the Channel to Sinope, and from there to Trapezium. The journey through Armenia and Georgia is found in the letter. Here he relates in detail to how many unjust insults one is exposed, when one travels from Turkey to Persia. He also describes the Kurds, but is mistaken, when he considers them together with the Sesides as one people. The 19th letter gives the journey to Edschmiazin, Ararat, and the return journey to Erzerum, concerning which he agrees reasonably with Chardin. The 20th letter provides an appendix to the two preceding ones, by illustrating the customs, religion and trade of the Armenians. Here he seems somewhat bitter and partisan, although the matter is generally true, and in many respects very circumstantial. The 21st and 22nd letters conclude the journey of Tokkat and Angora, and of Smyrna and Ephesus. Smyrna has certainly changed much since its time, and the number of its inhabitants has become much greater. — This travelogue deserves, in general, all possible praise. It is correct and accurate; and the islands, cities, antiquities, modes of dress, plants, etc., are depicted on beautiful and clear plates. Everywhere the old Geography is compared with the present. A series of Antiquities is found in it, and probably a third part of this work is well devoted to botanical researches. These, as they are unintelligible and of no service to most

readers, had been omitted from this edition, placed in the *Systema Botanicum Tournefortianum*, and there a third part could be shortened by this travel description. Otherwise one reads the travel notes with pleasure, and the style is graceful. In his time the German Imperial, Polish and Ragusian Ambassadors were still housed in Constantinople. This no longer happens. The former have a regular Palace in Pera, and for others, upon their arrival, houses are rented there.

Travels through a part of Europe, Little Asia, several islands of the Archipelago, Syria, Palestine, Egypt, Mount Sinai etc. by I. A. van Egmond van der Nyenburg etc. and Joh. Heyman. II parts. Leyden, 1757. 1758. in 4. The latter, Professor of Oriental languages at Leyden, made his travels from 1700-1709; but the former, extraordinary Dutch Ambassador at Naples, in the years 1720-1723. Both travelled through almost the same regions, and from their papers J. W. Heiman, M. D. produced this travel description by way of letters. The first six letters, which deal with Europe, do not belong to my field. The 7th speaks briefly of some islands of the Archipelago. In the four following, Smyrna, Ephesus, Scala nova, Tiria, Sardis, with the surrounding countries, and added, numerous Greek and Latin inscriptions, such also occur elsewhere in abundance, are described. The 12th and 13th contain a journey by water and land from Smyrna to Constantinople, with the places visited on the way; like the two following, a description of the capital itself, an audience with the Sultan, the public ceremonies and rejoicings, as well as many customs and usages. Scio, Rhodes and Cyprus occupy the 16th-18th letter. The remaining letters up to the ??th treat of Palestine, and especially of Jaffa, Rama, Jerusalem, the Church of the Holy Sepulchre, and the Easter ceremonies, the Jordan, the Dead Sea, Bethlehem, and the curiosities there. However much information we have of all this; one will nevertheless, to one's amusement, be informed of many things unnoticed by others. — In the second part one reads, letter. 27-29. news, touching Mount Carmel, Nazareth, Mount Tabor, Cana, Tiberias, Bethsaida, Saphet, and the present condition of the Jews at the last place, where they had a printing-office and a high school. Then the journey to Egypt continued, (Letter 30-34.) via Damiate and Cairo, and from there back via Rosetta to Alexandria. On this occasion the cities as well as the curiosities there are described, and observations on the Coptic scripts and Pyramids are given. The 35-39 letters deal with the journey to Mount Sinai, to Suez, the Red Sea, and some reports concerning the Nyl, the Caravan to Mecca, the Mumien, the natural condition of Egypt, and the qualities of its inhabitants. The remaining 40-50 letters deal with Syria, especially Tyre, Sidon, Damascus, Balbek, Mount Lebanon, besides the Cedar Trees, the monastery of Kannobisn and the Maronites; about Tripoli, extensively about the Druses, Lattakia, Antioch, Aleppo and Alexandre, also about various Eastern Christians and the Carden??. — The publisher has, in the appended notes, pointed to other writers, where one is either instructed more extensively about the matters, or where also illustrations and plates, which one does not find in this work, are found. I can assure with complete conviction, that this is in every respect one of the best travel descriptions that we have; much more satisfactory, than most, give, and would have been worthy of a good extract. The Turkish words are also, here, sometimes incorrectly stated; but this does not detract from the excellence of this work. Maillet's description of Egypt is too well known for me to have to speak of it in detail, and it also belongs here only in a special respect, namely insofar as this Kingdom is one of the countries now under the Sultan. Here is the title: *description de l'Egypte &c.* composed on the memoirs of Maillet by Mr. l'Abbé le Mascrier, a la Playe, 1740 2 tom. 8. with maps and plates. (in Dutch: *Maillet beschryving van Egypten*, 2 parts with pl. Amst. 1737. 4.) Maillet was, from 1692 onwards, French General Consul in Egypt for 16 years, collecting the materials that Le Mascrier described in letters. Many would have preferred to read those materials as they were at first, rather than in the form of letters; but possibly they have become more attractive there. I will do no more here than set down the contents of the letters. The first part is 328 pages long. The first letter deals with Egypt in general, its extent, borders, pleasure, number of cities and inhabitants: the 2nd letter, with the Nile, its origin, course, mouths, causes and effects of its growth. The 3rd letter contains the division of the country into Upper and Lower Egypt, where also the so-called Delta and the coasts, the cities Damiate and Rosetto, the Sea Sirbon, and some other remarkable sights in this part of Egypt are dealt with. The 4th letter contains a description of old and new Alexandria, its monuments, and in particular the Pyramid of Pompey. The fifth letter is about the city of Cairo, its origin, its climate, antiquities, and especially Joseph's corn-magazines and springs. Then follows in the 6th letter a description of the famous Egyptian Pyramids, especially the largest, their interior, and the secret places in them. The second part is large 397 pages. The 7th letter treats of the places of the

- Mumien, and the famous city of Memphis: the 8th letter of Upper Egypt, its climate, cities, riches and antiquities, the deserts of St. Macarius and Thebes, the famous Monastery of St. Anthony, etc. the 9th letter of the natural history of Egypt, fruitfulness of the land, trees, plants, flowers, fruits and animals: the 10th letter of the religion and religious customs of both the former and later inhabitants of Egypt: the 11th letter, of their customs, together with a comparison of their former and later customs: the 12th letter, of the government over Egypt, and the various arrangements of the warriors formed for the defence of this kingdom: the letter, of the present state of the arts and trade in Egypt, with a proposal for the union of the European and Asian Trade, by means of the Red Sea. The last letter gives a description of the Caravans, especially of those that go annually from Cairo on pilgrimage to Mecca, with remarks on Mecca, Medina, the tomb of Mohammed, and the so-called house of Abraham. How much such an important description of Egypt is used by others, and how it justly deserves it, can be fully gathered from the single statement of the main parts.
- Damni Anselmi Banduri imperium orientale, sive antiquitates Constantinopolitanae in IV partei distributa, 2 Fol. U Tom. Parisiis 17???. The preface, large 54 Wa?? contains, besides some necessary preliminary remarks, 111 the last and largest half, a chronological register of the Emperors and Patriarchs of Constantinople, which began with Constantine the Great until the conquest of Constantinople. In the 1st and 2nd parts, 214 pages in size, the following parts are provided: the Emperor Constantine's Porphyrogenneta, two so-called books de thematibus Orientis & Occidentis, and Hieroclis Grammaticus Synecdemus, or work of the Provinces and cities of the Eastern Empire, etc. In the third part, 440 pages in size, various reports concerning the Antiquities of Constantinople are printed in eight books, namely in the Greek originals with a Latin translation. Added to this are Petri Gyelii de Bosphoro Thracne, Ub. 3. and his Topographia Constantinopoleos, sif de illius antiquitatibus, Ub. IV. The second part continues with the third part of the pages, and together makes up 1017 pages. It is decorated with approximately 50 pure plates in fol. and maps, which partly depict many coins, partly many things from Grelot about Constantinople, but in a larger format, partly in particular very detailed the so-called historical Pyramid, with what was on it. In it are eight books Commentaries of the author about the antiquities of Constantinople, etc. From this list one will easily notice with what advantage this work can be used, to know the earlier and later History of Constantinople, the Eastern Empire, and the Greek Church.
- Frodnuan (High) reports the working use of the Turks, Tartam, and the in foschen Landen unter ihnen walmenden Christen. Stralsund 1715. I do not know with certainty whether the author has given his true or merely a fictitious name. According to his pretense he had been in Turkey with Charles XII. and writes, according to his report, from a fresh memory. This work consists of 8 pages, in kl. 8vo, and seems to have been composed more for the common man than for other readers. It would not be worth the trouble to report the contents further.
- G. C. von den Driesch (High) historical Nachricht von der Römisch-Kaiserlichen Grossbotschaft nach Constantinopel Nurnb. 1723, large 494 pages in 4to. In it one finds, according to the indication on the title, very special reports of the Turkish politics, religion, Greek antiquities, and other remarkable, elsewhere in vain sought matters, in which many things are clarified with the most accurate plates. But it is a, filled with an unusually large amount, and for most readers indifferent matters, actually a Gezandschap-dagverhaal, in which, according to occasion and circumstances, this and that about Turkey is noted, outside all order and coherence, and not at all in an enticing style. There are indeed all kinds of things in it; times; those are found, by other writers, collected much more regularly and concisely. One will certainly find, here and there, some important remarks; but to obtain a sufficient knowledge of the Turkish Empire, it is not worth the trouble, to read it through. From him and others come the masses; for example, page 283 that at Mecca is Muhamed's grave; his pretended Testament (page 334) was granted to the monks of the Monastery on Mount Carmel by Mount Lebanon, and this lay only one hour from Mecca; on Mount Sinai (page 366) there were 22 monasteries, and there were no women to be found; since this of the Monastery mentioned only applies to the so-called Holy Mountain (Athos); the Mufti girded the Sultan (page 429) at the Ascension to the Throne, the Sabre around, etc. The plates serve little to elucidate Turkish. Paul Luke's travels have been published (in the High German) in some small parts. — mass to the Levant etc. transferred, Hamburg 1709. 8 is 165 pages large. Here is the journey from France to Egypt, and the journeys made there; and from there to Cyprus, Tripoli in Syria, to Lebanon, to Balhek, Damascus, Aleppo, the Euphrates, to Erzerum and Kars. — The plate touching the Nile, from Cairo to the Waterwalls seems to have been laid by Pocock as

a good foundation. For the most part they are more travel stories and short events, than actual descriptions. Pocock and Tournefort provide better information. – Journey to the Levant, Armenia, Persia, Turkey etc. Hamb. 8. 208 pages large. This is a single diary, in which he mainly reports on his travels, and what he has seen in passing; but where, rarely, descriptions of places, and much less of the various maps occur. Most places have also only been traveled through quickly, and so Chardin is a completely different man. The scornful treatment can be learned well from it, to which not only the inhabitants of the country, but also the travelers have been exposed. – Most recent journey in Asia Minor and Africa etc. by order of the King of France made by Paul Lukas etc. with an accurate map. (Hoogduits) Hamberg 15 8. large 370 pages. Here one reads the journey from France to Constantinople by water; from there via Chalcedon, Nicomedia, Nicea, Brussa, Kutaja, Angora, Cesarea, Kogni, Scutari, back to Constantinople, and thence after Adrianople, Philippopolis, Salonica, Monte Santo, Negroponte, Athens, the islands of Andros and Scio, Smyrna, Sardis, Kogni, Adama, Antioch, Aleppo, Sidon, Jaffa, Jerusalem, and the surrounding countries, St. Jean Sacre, Cyprus, Fiume and Arfinoë in Egypt, Alexandria, Tripoli in Barlnrye??, Cyrene and Tunis to Marseilles. – His stay at most places was too short to be able to do much. His aim was mainly to buy up old coins for the King of France, under the pretext of a medical journey. He inserts his travels in detail, as well as reports from others. The map seems to have been laid partly by Pocock as a foundation for his. It is a single diary; wherefore one must seek the materials in two or more of these travel pieces together. The credibility may not be easily doubted. – P. Lukas travel to Turkey, Syria, the Holy Land, as well as High and Low Egypt etc. Hamburg 1721 and 1722 2 parts 8vo. Here one finds the journey to the aforementioned countries, with many comments, and is more detailed than the previous one. The second part describes Egypt in particular, being added in the sixth book a general illustration of Egypt-land, concerning its layout, advantages, power, trade customs, and a map of Lower Egypt. – It is conceivable that the Original is more pleasant to read than the translation. In many pieces, very well known to me, and belonging suitably to the travel description, I have found this work very accurate. But the aforementioned writers relieve one from the trouble of reading it now. Except for a few remarks made in passing, one finds nothing important in it concerning Turkey and the Turks.

De la Roque voïage de Syria & du Mont Liban. part 8. a Paris, 1722. On the title is the entire content of this book, thus a description of the entire country known under the name of Lebanon, An??bon, Kes?? etc. besides the origin, religion, members of the peoples who inhabited that country; the description of the ruins now called ??m, and a ??action on this city; with a short biography of a Pro??maaden Noblemen and Hermit on the mountain L??, ?? Prince Juxes, who died for the Christian religion. "If one wanted what ?? then such few pages would exist. Most of it looks at the minor red-marks- Demetrius Kantemirs i.» r Empire Othoman & c tradition and Francois pa de [oNCuiERES, h Paris, i743- * W* the Highd. published in Hamburg *74*M originally written in the Literary. The OnX neel is said to be in Petersburg, and is still with Jedmkt. The author's son had begun, an Italian translation From the A»** translation rs the W f makes In the preface he compares the HeZe with the Christian chronology, under, investigating both the name of the Turks, and the origin of the Ottoman House.

The history of the Turkish emperors is described up to Achmet III., and taken from sources, which our historians either do not possess, or do not understand; although also many errors either on the account of the translators, or of the first publisher, certainly, must be stated. And the spelling of the Turkish words in particular is not at all the best, but better is that in the German edition, where one has referred to Meninski. For the rest, those who have compared Kantemir with the Turkish original pieces assure that he has used them either superficially, and by no means with a proper accuracy.

Th. Shaw, an English physician, has published travels to Barbary and the Levant, where he stayed for a considerable time about the year 30 of this century. They differ, unusually, from the largest mass of other travel descriptions. For they do not yield cases, isolated observations, fables and ideas, but a treasure of geographical, physical, philological and other knowledge, which the writer has not collected on a fleeting journey, but during a longer stay in those regions. The French translation is in The Hague, 1743 in 2 tem in 4to, with many maps and plates, (and in two separate translations into Dutch, under the Title: Th. Shaw travels through Barbaryen and the East, with pl. at Utrecht and Amsterdam, 177& 4-) – It is not a travel diary, but a compilation, and as a result of discoveries, which the author has made, having placed for it a very useful preface, from which I will materially set down that which may be useful to readers of my work, and which

- 37750 nevertheless is not included. "To travel in the East in a manner (he says) which may make a noise, and excite the suspicion of riches, is very dangerous. In the sandy deserts, for want of water, one travels not with horses or mules, but with camels. These are made to camp in a circle around the party, so that the heads are outward. Ag
- 37755 on them they lay the saddles, goods, and whatever they carry with them, thus making a bulwark around them. The Kanwelen are by nature lively, awake at the least noise, and are therefore almost sentinels. _ With leather bags for water, with flour, oil, wine, olives, dried meat, a wooden dish to bake bread, and a copper pot for cooking, are preferred. _ The dried camel-mist of a previously drawn caravan serves for wood. -
- 37760 The presents, which one receives from the Arabs in Barbary, demand return presents of needles, maces, scissors, etc. - In Syria and Egypt one cannot travel otherwise than with caravans, and not nearly so safely, as among the Arabs in Barbary. - A traveller does well to dress like them. "The first part does not really belong, or only in a remote way, as far as Algiers and Tunis are countries, under Turkish protection, to my profession. Namely, he delivers in 414 pages geographical, natural, and mixed, but everywhere excellent observations on the two countries mentioned. The second part contains, in 192. pages, five main parts of the following content: geographical observations on Syria, Phoenicia and Palestine, on Egypt, rocky Arabia, and the
- 37770 travels and camps of the children of Israel, natural observations, or a sample of the natural history of Syria, Phoenicia and the Holy Land; such on rocky Arabia; and finally natural and other observations on Egypt. All this is concluded with an excellent appendix of extracts from old writings, verses and other additions, which serve as testimonies and explanations of the entire work. Therefore it is useful and
- 37775 useful for the researchers of scripture and nature, as well as for him who devotes himself to literature, geography and antiquities, and has, in this field, few equals. For those who wish to travel to those countries, it serves, in advance, as an excellent instruction, what they should pay attention to, and how they should conduct themselves in their reports to him.
- 37780 Nouveau voyage de Grece, #'Egypte, de tale. fine, d Italië, de Suffe, ff Al/ace & des Pats-bas, fait en * * H W. Oil\$* this broad Title, with which one would expect some folios or quartines, are 25 letters on 382 pages. printed in ottavo, which have no other stamp than that of a high and superficial collection of the best-known travel descriptions. Two circumstances seem to confirm this; partly that the writer has not
- 37785 expressed his name, partly that it has been dedicated to a lady. If the writer had really been to those places, as he imagined, this would not make his work more commendable. The thought expressed in the preface, that in the Levant the Christian religion would soon come to an end, if the Jesmts did not maintain it, I will not leave for the Protestants, but for the Roman Catholics alone to ponder. Fifty
- 37790 Families, in Egypt, who, according to his story, only follow the law of nature, and would speak about the fundamental truths of Christianity, like the Free Spirits, are nothing more than a fiction of the author. P. Angeligüs Maria peregrinans in Jerusalem: stranger in Jerusalem, or extensive travel descriptions. (Hoogd.) Vienna and Nuremberg, 1735. in 4. with many plates, large 964 pages. This is a large
- 37795 Magazine of working descriptions, and observations of all kinds, which the author, on his travels from 1726 onwards, has collected over Italy, the Archipelago, Constantinople, Asia Minor, Syria and Egypt, in which many good and genuine pieces on Geography, Physics, Antiquities, Nations etc. occur; but first of all a careful reader and researcher, with a good judgment, must search for them in the mass of
- 37800 extensive and confused reports. The plates are mostly made after those of Tournefort and others.
- Twdnne Stora Swenska Herrars (v. Hopken and Carlson, Swedish Ambassadors to the Pore) Reise-Beskrifning ifran Cypera til Asien, Jerusalem éfV. Stockholm 1768. As this travel description, apart from the publisher's preface, consists of only two pages;
- 37805 so one cannot search much in it: but nevertheless she sees nothing, except what is certain, and how it looked in the year 1733, when this journey was made, in the Holy Land and in Jerusalem; and in that respect she is also useful.
- Jean Bell l'Antermony, Voyages &c. a Paris 1767 8. translated from English. (In Dutch known, under the Title: John Bell reize van Petersburg naar de hoofd' gewesten van Asia, 2 parts, with pl. Leiden 1770 8.) Here one finds, at the end of the third part, a short account of a journey from Petersburg to Constantinople. What he says of the latter city, is, according to his own confession, indeed little, but true; but his guess, that there were probably no more than four hundred thousand people in it, is certainly unfounded. Among the few remarkable and outstanding Turkish families he
- 37815 counts the two Tschigal-Ogiu and Kuperli, among whose privileges also this is, that

the Sultan could not condemn her to death. The given, and calculated in miles, travel route between the two previously mentioned cities will not be unpleasant to many. He reckons it at 1925 English miles.

- 37820 *Voïage d'Egypte & de Nubia par Mr. Fred. Louis Norden. Ouvrage enrichi de cartes & de figures destintes fur les lieux par / Auteur même, Copenh. 1755. fW.* This work is as beautifully printed, as possible no travel description. Besides the preface and the register the work contains 278 pages and is provided with 159 equally magnificent plates. The writer, em Holjkiner, made this journey, equipped with the necessary knowledge, in the years 1737 and 1738. Since this is not really what the title
- 37825 promises; one only finds, in passing, remarks on the condition of the Turkish Empire, and therefore I need do nothing more than give the main contents of the Chapters, so that one knows what one should look for in them. The first section contains the description of old Alexandria, in 24 pages; the second, of new Alexandria, to page 44 and the third, of old and new Cairo, to page 70. Here he had to stay longer than he
- 37830 thought, due to various circumstances; why in the fourth he gives a description of the Pyramids, with remarks on the needle columns, to page 104. The following main objects provide his travel story from Cairo to Dschlrdfdie, the capital in Upper Egypt, to page 150. Continuation of the journey to Essuan, to page 190. and from there in Nubia, but with much difficulty, great expense and dangers to the city of
- 37835 Deir or Derri, to page 238. He wanted to travel from there to the second great waterfall of the Nyh; but met, in the last-mentioned city, so many really insurmountable obstacles, which were placed in his way by the inhabitants there, and especially the Aga, that he had to consider himself happy with the Life of it, and thus to return by the same road to Cairo. \i Kortens Reis mar het beloften Land,
- 37840 (Hoogd.) was published in the year 1741. at Altona, with five plates depicting the city of Jervfaem and the Holy Sepulchre. The author, a bookseller, who, according to his own confession, possessed no learned languages or other sciences, made that journey in the year 1738. This work is large 544 pages, but could be two-thirds smaller, if the mixed, not at all pertaining to the matter, mostly edifying, but here
- 37845 not sought-after remarks had been left out. As a travel description it is one of the least important books. Two traps deserve attention, and he himself recommends their further investigation, especially by a mathematician, most emphatically. First, the present Jerusalem, almost contrary to the generally accepted opinion, would stand exactly on the site of the old one, with this only difference, that it is much
- 37850 smaller than it; and he seems to have no unfounded proof for it, to wit, this: that the valleys which enclose it would not permit any displacement to that side, where it must have taken place, if it had been so. Secondly, that the Holy Sepulchre was not at all the true burial place of Christ, but that of the present rather, and that, in Constantine's time, it was laid out on the present site, and the Church built over
- 37855 it, in order to contain, as in a brief summary, all the supposed sacred peculiarities of Christ's death and burial. – The writer took almost the same road that Hasselqutst took, but may not be compared with him at all. The following passages (page 33.) from him I will here quote only, which serve to further elucidate the learned Swedish travel description. "At Jaffa I paid the Roman Procurator of the Pilgrims 66
- 37860 Piastres, whereby he told me that they did not earn the least, but that everything was spent for tolls to the Turks, and for expenses for horses and conductors. For that they provided me free to Jerusalem and back again. They ask nothing for food and good reception in their Monastery, but each gives for that according to his condition and ability, 20, 30, 50 and more Piastres; and they told me that I had four weeks to
- 37865 stay in Jerusalem for that. "That is how it ended with him. For he would have liked to have stayed there longer, but they pressed him so strongly that he had to leave Jerusalem again at the time mentioned. Further on, page 38, he writes: "In various travelogues I have read that people complain that the haughty Turks do not allow a Christian to ride into the city on horseback, but must go there on an ass or on foot;
- 37870 but we rode, on our horses, to the gate of the Roman monastery. From which one sees that such things change, depending on the disposition of a Bajfa, or whether his favor is bought by gifts." Mrs. van Moniague, Wife of an English
- 37875 her Envoy at Constantinople, has made herself famous by her letters, (known in Dutch under the Title: M. W. Montague letters, written during her journey in Europe, Asia and Africa, 1 part, 8. Amst. 1765. etc.). One must indeed admire in her the knowledge of many languages, of heathen antiquities, the intelligent ideas, a pictorial style and other excellences. But, whoever would seek in it a system concerning the condition of Turkey, would be extremely deceived. She maintains, besides unbelievable things, and the all too flatteringly painted Character of the Nation, complete
- 37880 untruths. She ascribes great liberties to the Turkish women, which they possessed, by means of their Procuresses, the Jewish women; she considers her way of life happy,

because she did not have to work in public and outside the house, as if an idle life were the happiest. In the 3rd letter she diminishes the Plague to such an extent, as if it were scarcely equal to one of our common Epidemic diseases, of which yet the opposite is evident. She denies that the images and statues were destroyed by the Turks, because they nevertheless left the symbolic figures on the Needle Columns (Obelisks) untouched; which is contrary to general experience, and moreover rests on untruth, because the Hieroglyphs or Symbols do not consist in the forms of men, but in birds, trees, and other arbitrary signs, which the Turks themselves paint. In the 27th letter she speaks of the so-called Pauainers at Sophia, as followers and special respecters of the Apostle Paul, who had a church there, in which he is said to have preached; since these are the Pauliciani, a branch of a Manichean Se&e. There she also asserts that our translations of the Koran were made from the copies of Greek Christians, who did not fail to falsify it with the utmost malice. In the same letter she judges of the Armutes, that they, in a sensible manner, professed the Christian and Mohammedan religion. Would others think so strangely, and not attribute understanding to a people who read in the utmost uncultivated heathen ignorance? Concerning the Armenians she reports in the 4th letter that they did not believe in Transubstantiation, and in the 43rd that Chalcedon is still a large city; both of which are nevertheless untrue.

With Tournefort one can, without any difficulty, equate the work of the learned Englishman, Richaro Pocock: *Travele to the East with cuts and maps* &c. Lond. 1743. 2 vol. fol. in the High Rev. bearing the Title: *Beschreibung des Morgenlandes und einiger anderer Länder*. Erlangen 3 Th. in 4. mit viel kupfern itfsla etc. by Windheim, and republished by Prof. Breier and D. Schreber. (and in Dutch, *Description of the East and of some other Lands* etc. Utrecht, Rott. and Amst. 1776 etc.) In the first part the first book deals with Lower Egypt; the second relates a journey of the writer from Great Cairo over the waterfall of the Nyls, and down to Cairo and Damiate; the third contains the journey from Great Cairo along the Red Sea, in rocky Arabia, to Mount Sinai, and back to Cairo, Rosetto and Alexandria; the fourth contains the government, customs and natural history of Egypt; and finally the fifth contains mixed observations, mainly concerning the antiquities and natural history of Egypt. In the second part the first book deals with Palestine or the Holy Land; the second with Syria and Mesopotamia; the third of the island of Cyprus, and the fourth of the island of Kandida. In the third part the author comes, in the first book, to the islands of the Archipelago, but of which he describes only Scio, Mytilene, Tenedos, Lemnos, Samos, and Pathmos. The journey through Natolia, according to the old division of Ionia, Caria, Great Phrygia, Galatia, Paphlagonia, Bithynia, Pontus, and Propontis, forms the second book; as does that through Thrace and Greece, with the description of antiquities and plants, the third. To this are added three books as an appendix, in which remarks on some parts of Europe, the old description of the earth and on travel, customs and manners, and finally on the great change of things in the world occur. – Although in this travelogue, with the exception of Egypt, almost nothing is said about the condition of the Turkish Empire, 5 it is nevertheless, in its kind, one of the most complete, and is exceptionally clarified by the beautiful maps and plates. The writer often wanders in his guesses, and it surprises the reader, on one page, in the reports, sometimes several times to read: according to my thoughts; according to my judgment, etc. But perhaps he becomes all the more credible by that, in all those descriptions, in which one finds such additions. The style is otherwise often broken, and by no means attractive; and the whole work is, in general, not for the unlearned, but for the learned.

Salmons and van Gochs modern History, cf. current State of the Turkish Empire etc. described in High German: first part, containing the Turkish countries in Asia and Africa, Alt and Flensb. 402 pages in 4to– Dlt Jf a work compiled by various writers, in which Ricaut, Mortraye, Thevenot, Maundrel, Toumefort, Rauchwolf, Lucas, della VaVe, Hamilton, Tavemier etc. are explicitly mentioned. The first Heading, is like an introduction, Inclining the layout, size, and various Provinces of this Empire for, just like the following, the mcires, seas and rivers in it. In the listing of miles there is certainly an error here. The harbour of Constantinople is said to be (page ro.) 8 miles in circumference, and the sea of Marmora yet only 15 or 20 miles broad, and 40 long. The third head, deals with the origin, inclination and disposition of the Turks, form, dress, manner of life, food and drink, amusements and ceremonies. The alleged inability of the Turks, to carry on trade without keeping accounts, and to get to it more quickly than we do, needs an explanation. Because they know nothing of a trade of exchange, and they give no Credit to foreign nations; thus the trade is much simpler than with us, and does not require so many subtle accounts and accounts – The proposition that with the Turks, when they have a quarrel, it seldom comes to

blows, and that it does not come to a duel at all, should have been put forward somewhat more widely. The rash ceremonial duel is indeed unknown to them; but otherwise they either go for the dagger and harquebus, or, on occasion, set their revenge to work in a treacherous manner. - Whether it is true, but not in general, that the Turks are respectable people in person, the reason given for it is nevertheless unfounded, because the greatest Beauties from Georgia and Circus are brought to Turkey, and the Turks buy the most beautiful Girls, because this could only take place among the First Names and Rich, that is, only among a few, and not among the great multitude. - Mortraye is brought forward, page 22, as a witness, that one can travel very cheaply; because one only had to go to the Porte or the Stadtholder of the place through the Ambassador or Referee of his nation, whereupon a request was not refused, to make the entire journey at the Sultan's expense. This is a misconception, and entirely beside the truth. Such freedom is accorded only and exclusively to the Governor of a foreign Power, or to any other person, who travels on behalf of the Sultans, and then of course at their own expense. The fourth Head, describes the Imperial power, Court and State servants, women, and other inhabitants of the Seraglio or the Haram. I will not speak of the confusion, if the Seraglio and the Haram were one and the same; for these are very different things. This also is not so generally true, as is said further in the beginning; that the Emperor's rule was not determined by laws and treaties. Not the Mufti, page 26. but the Sheik of the Eiubs-mosque protects the Sultan- Regarding the remuneration of the Grand Vifitrs, page 35. which is set at 00 pounds, must certainly be a printing error; otherwise it would be a gross mistake.

What is said about the so-called Visiers of the Bank and the Divan, is taken from old writers, and concerning it, great changes have now been made. Some ground, rules of Turkish policy are given in the fifth Head, to which in the following are added the tricks which the Turks use to increase their people, and to make neo-converts. The seventh Head, about the reception of the Ambassadors, and their conduct in the negotiations with the Porte, is full of errors. Here the Turkish Army and land militia are described; also the income of the Sultan, the State in which he openly appears, his appointment and deposition are recorded. Here, in the girding of the Sabre in the Ejüks-Dscha, in my opinion, this unfounded remark comes up, page 82. "This must be done by the Adgi-Bassa, who, according to the report of tradition, is always a descendant of Hiob. "The tenth Head speaks of the maintenance of justice, and the punishments imposed on certain crimes in Turkey, and the next examines that Sect of Mohammedanism to which the Turks are devoted. In the 12th Head, of trade, weights and measures, as well as of currencies, the following should not have been included at the time this work was composed; page 117. "that the Genoese had a Resident at Constantinople; the trade and commerce of the French and Italians had greatly diminished since the Dutch and English had come thither; at least that their trade, in comparison with the latter, was very small; the Venetians alone had the liberty of sailing to Caffa in Crimean Tartary; and finally (p. . 118.) the Dutch, annually, sent 12 ships in two fleets, accompanied by two warships, there". Marriages, divorces and funerals occur in the fifteenth chapter The other Heads belong to Geography, and so I will not mention them. What use one should make of this work, is not so difficult to decide. One should consider it as a collection, and not at all as a first source. In the first respect one can use it, but not in the last. The reports concerning all places are not equally credible. The city of Bir, in Diarbek (formerly Mesopotamia,) would, according to page 147, lie one, according to page 155. four days' journey from Aleppo. But it is possible in the first place that it is a printing error, and should be several days' journey. It seems to me so well-known Smyrna resembles not so much a triangle, as an unequal square. The Befestein is no Exchange, page 235. The dove-posts in the Levant the recorder reckons, page among the old Hiltorien, which one had to laugh at; but many credible former, and quite new travellers will testify against him. The same will have regarded the carelessness of the Turks, related in the Text (page 236.), in sowing no more corn than they necessarily need, as the happiest contentment which the Saviour had commanded. But in this he is mistaken. The Turk must pay the great burdens of his crops to the Government, and he knows in advance that a considerable part of his inheritance will not come to his heirs; therefore he is slow. Thevenot's story that many of the Mohammedan Saints went to Egypt quite naked, without covering themselves with any rags, the same annotator, page 322, wants to make uncertain, saying: he had never seen this, and hardly believed it, because the Turks had an aversion to showing the limbs that nature teaches us to keep covered. But here, according to irrefutable witnesses, Thevenot, who otherwise cannot always be relied upon, is nevertheless right. - Second part, containing the Turkish countries in

Europe, 1749. 192 pages in size in 410, to which is added, in an appendix, a brief history of the Turkish wars, especially from the 16th century onwards, up to our own times, waged in Europe, 115 pages in size. First of all, one finds, (Hoofd, ??.) a report of a narrow?? mentioned, concerning the Crimea or Little Tartary, and Oczakow or the Budziackian Tartary, which is concluded in the following with a description of Besarabia and the residence of King Karl I??. Bulgaria, Bosnia, Serbia, Moldavia and Wallachia are treated very briefly (chapter 3.), but Romania or Thrace, and especially Constantinople (chapter 4.) are treated more extensively. The introduction to the description of this city is singular. "Constantinople, the old Byzantium, is generally called the Porte by the Turks Stambour, (probably Stambul,) and by the Europeans par excellence, because there is the finest harbour in the whole world, although some think that it received its name, Porte, from the Great Sultan's Seraglio or Palace, whose principal gate leads to the city. "It is equally shocking to hear Hansen or Canvanserese speak on page 50. At Pera, it says on page 52. the Christian ambassadors had their residence, with the exception of the Imperial and Polish, who were free to have houses within the walls of Constantinople. Whoever has read the old travel writers, will soon find that this was a very bad freedom; for they were, in a certain respect, kept as prisoners in the city, and now live, like all the others, at Pera. On page 56 it is indeed pretended that the Hellespont between the Dardanelles is too wide for the ships to be stopped by the castles lying there; but it is beyond question that, in that respect, it is not too wide. In order to remedy the scantiness of the geographical description, the state of the Christian religion in Turkey, and in particular the Greek Church, is recorded, as is expressly assured (Chapter 5). This has been extensively collected from Tournefort, Smit, Ricaut, Covell, and the disturbances, which arose in Constantinople because of the Greek Patriarch, Cyril Lucaris, the result of which was his death, have been included. Macedonia and Albania, Epirus, Achaia, Thessaly and Greece proper are, as well as Morea, treated very briefly, and Athens alone is treated at length. Chapters 6-9. Kandia occupies Chapter 10 and in the remaining Chapters (11-16) the islands of the Archipelago are discussed. This part on European Turkey seems to me to be worse edited than the first. Otters *voilage en Turquie et en Perse, à Paris 1747. 2 tom.* in 8 with a map on which the author's Asian travels are depicted. He made (Book I, Chapter, ??) in the year 1734 his journey to Constantinople, of which he, Chapter 2, as well as of the Audientien by the Great of the Empire, Chapter 3. gives a short description. He also reports, from his own experience, in some examples, (Chapter 4.) to what inconveniences the Europeans expose themselves, because of their dress and way of life. He visited, (Chapter 5.) the nearby resorts. Because at that time the Turks were at war with the Russians, but made peace with the Persians; (Chapter 6.) he found an opportunity, with the Persian Ambassador, 1736. to travel to Persia. They passed through Iconia, Addma, Alexandria, Antioch, Aleppo, over the Euphrates, to Urfa, to Mosul, and via Kierkiuk to Bagdad. (Chapters 7-15.) From here the journey went to Persia, on whose borders the heat, in one day, and the thirst, with bad water, were so great, that fourteen people died, and many were sick for a long time. Concerning the wind Samum, which blows frequently in those countries, he gives the following description: "it is burning, mixed with sulphurous fumes, and kills the persons who breathe, on the spot. In those deserts it blows, chiefly, in Julius and August. It comes as a whirlwind, but does not last long. As soon as they noticed it from afar, they threw themselves down on their bellies on the ground, covered themselves well, and pressed their faces into the sand. He did not kill the hairy animals, but they stood out a lot from it, and experienced a tremor with a heavy sweat. On his journey to Persia and his stay there, I do not follow him. This description, as well as the reports concerning the undertakings of Tamas-Kuli-Chan, and the return journey to Bagdad, 1739, I leave there, as not belonging to my purpose. He now proceeded to Bassora, (Book II. chapter 4.) and that by water. On the vessel he saw doves, which are used between the two cities just mentioned, to convey news. He asked a merchant how they could travel this route without wandering; and received the answer that, in order to accustom them to it, they were first let fly from a place only a little distant, and so gradually further and further, until finally at Bassora: as soon as they were let loose, they flew very high in the air, but then descended, and took their flight directly to Bagdad, following the river Tiger as their guide. At Bassora he stayed a long time. Besides describing this city, he also relates everything he heard of Persia and the government of Thamas-Kuli-Khan. Among these is the following, which one has read in various books: that this ruler of Persia, about the year 1740? had given orders to translate the Bible and the Koran into Persian at Isfahan. The European missionaries, Armenian prelates, rabbis and Mullas had assembled daily for this purpose, and had

38080 laboured for a long time on this great work, under the supervision of Mir Mafum, Imam
of the Royal Mosque. As soon as the translation was finished, he had ordered the
principal translators to bring them to him at Tahrán. They had also gone there, and
had the honour of handing them over to him. When they had now been read to him, he
38085 had jested with the mysteries of the Christian religion, ridiculed the Jewish
religion, laughed at Mahomet and Ali, and had all the works locked up in a chest,
with this declaration, that if God would give him life, he hoped to deliver to men a
much better religion than any hitherto known. This absurd hope was shattered. For
that Hero, or rather Tyrant, fell into the folly of wishing to compel the Persians to
adopt the principles of the Turks, and was thereupon, in an uprising, put to death.
38090 (Chapter 5-26.) In May 1743 he departed from Bassora, chapter 27. he suffered many
inconveniences on his voyage by water, over Hilla, in whose neighbourhood the once so
famous Babel lay, over Bagdad through the deserts, over Kierkiuk to Mosul, and thence
over Mardin to Diarbekir, (Chapter 28-39.) which was otherwise called the fortress of
the Amid. On his further journey he saw the gold and silver mines at Argana and
38095 Kiebban, but they were no longer in their former state. The former had, formerly, had
about 400 smelting furnaces; but the latter now had only eight or ten. (Chapter 40.)
On his journey to Arebkiir and Divringi (Chapter 41, 42.) he suffered much under his
treacherous guides. People were surprised that he had taken such a dangerous route,
where probably no European had ever been. But this did not seem strange to him,
38100 because he saw how mercilessly the Turkish Militia dealt with the Sultan's own
subjects. (Chapter 43.) When he expressed his surprise at it to the Chief, he
received the answer: "The Bassas were obliged to maintain a certain number of
soldiers, but withheld their pay, and were therefore forced to tolerate their
debauchery. Some of these could do nothing else, because they received too little and
38105 had to spend too much. Others were uncertain whether
they would remain long in the governorship, which the Porte gave them, or how long
they themselves buy expensive pensions. They had therefore to watch the time, in
order not to get what they had shot back, yes, if it were possible, to seek to enrich
themselves. They were therefore, in a word, the destroyers, and not the protectors of
38110 the Provinces. After so many dangers he finally arrived at Sivas, (the old Sebaste,)
then at Tokkat, Amafia, (Chapter 44-46.) and so gradually over several less important
places of Napoli back to Constantinople. - This travel description deserves much
praise. What other travellers have already actually described, he speaks of very
briefly, and does well. In this he has a special merit, that he gives sufficient and
38115 good descriptions of Provinces, cities, mountains, rivers, products etc. At the
principal places he also notes the location according to the geographical longitude
and latitude. This book is therefore necessary for every land writer, from a certain
point of view, considering the regions travelled, and every future traveller to them
will find it a very useful preliminary instruction concerning the necessary caution.
38120 Moeurs 6? usages des Turcs, leur religion, leur gouvernement civil, militaire ??if
politique avec un Abregé de l'histoire Ottomane par Mr. Güer, in Paris 1747. 2 Tom.
in 4w. of which the first 45??, the second 537 pages large, very beautifully printed,
and provided with plates. In the preface the author declares that he has not been in
Turkey, but has compiled from Mirkond, Condemir, Pietro della Falie, Septem-
38125 Castrensts, le P. Maracci, du Ryer, Busbec, Grelot, Belon, Roland, Ricaut, le Comte
de MarfigU, de Maillet les Ah. hés Banier ??f leMaserier, Kant emir, Boulain
villiers, Vét?? présent de l'Empire Ottoman, ??pion Turc, the Dictionnaire
Geographique, the letters Persannes, the letters Juives, and their scattered reports
for the benefit of the public, of merchants and travellers to the Levant, he will
38130 bring them into a system. The first book provides a sketch of Turkish history. In
which the first chapter deals with the origin of the Turks; the second a Plan of
their history from Osman to Bajazet II., as well as the third of these to Mahomed V.
This is mostly drawn together from Kantex??, and only arranged with a few remarks, or
verses from French poets. In the fourth chapter he tackles the description of the
38135 Turkish Empire. As to its vast extent he is mistaken, when he includes the threefold
Arahe, and all the Coasts of the Mediterranean from Egypt to Longer; these are partly
self-existing Empires, partly at most alone, and not even everywhere remote Protected
Empires, which cost the Porte more than they bring in, but give it the advantage of
extending to good boundaries. Under the article of the beauty of the Turkish Empire
38140 he mentions the mountains, rivers, Mynas, etc., as well as Commerce, but only very
superficially; just as under that of the various peoples who inhabit it, the Greeks;
the Jews, concerning whom he incorrectly states that they must be dressed in black;
the Arabs; the Kurds, who, in his opinion, would mortally hate the European Turks,
and consider them heretics, as if the Asiatics had another religion; the Turkmen, the
38145 Tesulians, whose number he estimates, from unnamed sources, at more than two hundred

thousand people, and reports that they sing hymns of praise to Jesus and the Virgin Mary at their graves; and finally the Druses. Then he comes to the most famous cities, Alexandria, Cairo, Jerusalem, Constantinople, in which he places two millions of inhabitants. That the historical Pyramid was burned in 1660 is a slight mistake.

38150 The second book treats (Page 147, etc.) of the religion of the Turks. After a brief remark, that man in general has an impression of religion, by which one, if one knows how to make use of it, can easily gain entrance, he comes (Chapter 1.) to Mohammed, whom he describes neutrally from the well-known writers, and leaves a short historical account, concerning the interval between this and the first Turkish

38155 Emperor. The second Head, treats of the Koran, from which he quotes the contents of the principal chapters, and concludes with a body of its traceless doctrines. In the meantime, the added assertion, that it is written in very bad Arabic, will not be approved by those who understand it. The third Head, states the Mohammedan creeds, as well as the fourth their Moral Doctrine, and that in such a way, that the matter is

38160 stated correctly. In the fifth chapter follow their religious ceremonies, and therein especially their rules concerning prayer; ablutions; pilgrimage to Mecca" where he finds a Caravan-Baschi and Emir-Hadschi as one and the same spirit; circumcision; fasting, where he wonders how Mohammed, by his Sense and Religion, so difficult a matter, though it may easily be explained; the Mohammedan Festivals; the Saints; the

38165 Miracles and Relics, among which he reckons Mohammed's figure, and his Coat of white Camelot, both of which are sacredly preserved in the Seraglio. The seals impressed on paper with the former, and the water in which the latter is dipped, and sealed with the Sultan's ligature, are venerated as great and sacred rarities, but which cost the recipient dear. The conclusion is made by some other laws of the Koran, such as to

38170 read it diligently, not to eat pig's flesh, and not to drink wine. The sixth Head describes the Mosques, Imams, and Emirs; the seventh the Turkish Monks and their Saints. Finally, he remarks on all their occupations, that they are either fanatics, or harlots, or soothsayers, &c., and that there were also nuns, whose occupations were quite similar to those of the aforesaid. The eighth Head, treats of the

38175 divisions among the Mohammedans. This is almost all taken in a Ricatian way. In the ninth Head, he considers the reason of the uncertainty of the Turks in matters of religion, which arises from the doubtful expressions of the Koran, and the astonishing variety of its interpreters, as well as the prohibition of Mohammed to dispute about matters of religion. He might well have added, that this uncertainty is

38180 increased by the light which they receive, in a remote manner, from the Christians living among them, and the Christian slaves and slave-girls adopted into the Turkish families. The first chapter describes the Myjiik of the Turks; shows how extravagantly they present their religious propositions; and adds, as proof, an extract from the work of Echialle, an Arahifdi writer and former Mufti, which was

38185 printed at Brussels in the year 1764. In the last Head, he ends with several, both favourable and aversive prejudices for and against the Mohammedan Religion, where he rather emphatically collects all that has been brought forward in its defence, but also what can be brought against it on good grounds. The contents of the third corner look upon the habits of the Turks, and the first Head, their Character. He reproaches

38190 them with deceit and ingratitude, elucidating this clearly by very suitable examples from History. He describes them as clever, melancholy, and therefore attentive to everything, especially to the Great. He acquits them of the accusation, because they had little intercourse with each other, and the female sex was especially marked: their anger broke out in great disputes, and often in murder and manslaughter: real

38195 friendship found no place among them: they were serious in public, but exuberant at home, and insatiable in their lust. He says that their superstition extends far, and that their fixed reference to a passage in the Koran, opened by chance, to the influence of the stars on the fortunes of men, to divination, interpretations of dreams, pronouncements of the dying, charms, and benefits to animals, furnishes

38200 sufficient examples concerning it; that their finace is rough, in the contempt of true learning and fine sciences, especially of antiquities, illustrations, etc., and finally their avarice is in the highest degree shameful. The fairly general subjection of children to their parents, as in the time of the patriarchs, is

38205 praised, and the writer of the Jewish biography, who so often brings forward untruths, is at the same time refuted. In the second chapter he describes the habits of the Turks, and their manner of life as to food, drink, housework, exercises, ceremonies, amusements in games, dancing, comedies, puppets and jugglery, the public merrymaking in the processions of the various trades, illuminations and fireworks. In the third Heading he speaks of the Turkish women, the marriages and funeral stations.

38210 This is a fitting and credible refutation of what Madame de Moniague had said concerning the first. On this occasion as well as with the marriages, he describes

the many irregularities concerning lust, which are in vogue among the Mohammedans. In the reviews he places the report of some travellers, who maintained that the wives and daughters were not present, but stayed at home to entertain the Imams on their return. But this is unfounded. With common people they follow at some distance, with nobles they stay at home. Apart from that, Turkish women generally have nothing to do with entertaining foreigners, and therefore also with the Imam. The fourth Heading ends with the arts and sciences.' After he has noted their rudeness in general, and refuted Count Boulainvilliers; he then reports how things now look, and notes, but without naming his guarantors, that certain historians have the annals of the Empire, which were put away in the Sultan's private book room. In another library there would also be found 120 beautiful manuscripts in very large folio, which still came from the Library of Constantine the Great, but where the Sidtans were also very secret, and they did not show them to anyone. But concerning this the writer is wrong, that he thinks that the books of all kinds printed in Christendom, and brought to Turkey, would, there, kindle a great light. For the Turks do not understand that, and also do not count the printed books much. A small appendix, concerning the Mosques; the Chans, the Baths, the Caravanseras and prisons, besides a list of the Christian powers living together with the Turkish Emperors up to Achmet III ends the first part. In the second part the 4th of the Turkish Court is treated. The first 106 pages treat, in the first Head, of that which concerns it most nearly and immediately. A beginning is made with the explanation of the word Sultan, and the description of his high-flown Titles. Then follows his appointment and Coronation, if one may otherwise call the girding with a sword so, which, wrongly, is attributed to the Mufti (page 9.). He commits a special blunder, when he reports a magnificent conduct of the Emperor to the Ejubs suburb, which was different from the procession to the Ejubs mosque, mentioned on the previous page, for the girding of the Sabre; because it is only one procession and one place. In the manner of life of the Great Lord he observes his religious exercises, his work, his meals, his amusements in the water games, his hunting, his stay in the women's apartment, and his other travels. He divides the Emperor's wives into only Favourites (Odalike) and into Aphekis. The latter are those who have brought Princes into the world, and thereby, in a certain respect, become as much as Empresses. He who brought the first Prince into the world is called Bujuk-Apheki, great Favourite. He also relates her dissensions, commotions and avarice. In the representation of the buildings of the Seraglio, the statement is unfounded that the Chief of the White Engraved is the Chief Overseer of the Imperial Mosques. Here is a not unpleasant digression concerning the Enclaves and their occupations inserted, as well as concerning the lower Court servants and subordinate treasuries. The second Head, represents the State and Empire servants. The fifth book deals with the Government of the Turks. In the general introduction to it, it is said (page 142.) either through an error of writing, or through a printing error, that the Begkrbeg vatfmelis is always Bassa of Kutaja; whereas this is indeed the Beglerbeg of Natolie. The main parts belonging to this contain the following texts: 1) the maintenance of the law, in which also necessary reports concerning the Divan, the Magistrates and their clothing, the decisions of cases and punishments occur. The page 153 standing from the bed of the latticework in the Divan is wrongly equated with the ground, because it is indeed about 12 feet from the ground. 2) In the Finances he makes, wrongly, a distinction between Carache and Haraï, to which he has probably been led, by the different spellings of the word, Haradsch, among travel writers, considering both to mean one and the same thing, namely the head-money of those who are not Mohammedans. This is followed by 3) the Polickey, and finally the Mint, which, in most books, is a confused Article. Thus it is also stated here, page 190: that a Para amounted to four Aspers, and 260 Aspers made up a Hungarian or Dutch Ducat. The expression on the following page: la bourse d'or est de quinze mille sequins, où de trok mille kus, I find, either by a mistake of the writer or a misprint, contradictory and unintelligible. That there is a mint at Smyrna, is taken from Kantemir, and untrue; as is also the statement that only gold money was minted at Cairo. - The article concerning the military power of Turkey, because of its extent, is divided into two sections. In the first, the land and naval power are dealt with very vividly; but concerning the statement that there were only 1,200 Janistries at Constantinople, one is very much mistaken. In the second Section, which in order forms the 7th book, one finds the continuation of the state of war; the description of the Artillery and arms, Battle signs, music and horses, their thoughts about war, their way of collecting an army, marching it and defeating it, and providing it with food, their way of fighting, and their ideas about war. The 8th book describes the power of the Turks, as the departure of the Emperor to war, the ceremonies at the Beiram, the circumcision of the Turkish Princes and the marriage of

the Princesses, as well as the treatment of foreign Sentinels. Here we see he seeks to refute Ricaut, who wanted to assert that the English Ambassadors to the Porte were more respected than the French; where, however, in the description of the Audiences, several errors are committed; not to say that here, according to the rest, a remarkable defect prevails. He ends with some remarks on the truly indescribable treasure in the Seraglio and the Sultan's tent, and in the Palaces and tents of the State and Military servants.

In the lying book the Policy of the Turks is described. General remarks on it form the introduction, chapter 1. He places, (chapter 2) its principal principles partly in the hypocrisy and perfidy; partly in the desire to extend Mohammedanism. In one of these he appropriates, after an error received from Ricaut, Mohammed's so-called Testament to the Monks of Mount Carmel, because he had nevertheless drawn it up for them on Mount Sinai. In both he is angry with Ricaut, who, according to his thoughts, had spoken too unfavourably of the French in Turkey. In the third Head, he shows that the indefinite power of the Great Lord is the foundation of the Turkish government, because he was Lord over the Life and Property of all his subjects, and (chapter 4.) there was no Nobility in Turkey, who had obtained any respect among the people, and could oppose the Emperor, to which was added (chapter 5) that all elevation of his Descendants was carefully prevented. He adds (chapter 6.) that the other Denominations permitted Freedom of Conscience, under the name of a privilege, which could always be destroyed, and often had been destroyed, and the permitted polygamy had contributed much to the confirmation and extension of the Turkish Empire. In the tenth book there are observations on the power of the Turks, and on the weakening of their Empire. The former are the contents of the first in the main; the latter the contents of the rest. Among the causes of the weakening he counts (chapter 2.) the great number of abuses, which had crept into war and naval affairs, into the maintenance of justice, and into the government of the Provinces; the polygamy, which does not increase the number of subjects, whereas on the contrary the Enslaved, and the lusts prevailing among the East diminish it. On this occasion he proposes a thought which is not improbable: "this Empire, he says, would perish, if any Power should tap the springs from which the Turks draw so many slaves, and deprive it of the support of those slaves, who maintain the greatness of the Empire. "Perhaps this is fulfilled by the peace concluded between the Russians and the Turks in 1774, in which the latter, according to one of the articles of peace, must renounce the plundering of all slaves. In the third Head, the author shows how much the frequent uprisings in the Turkish Empire and the Artists of the Seraglio have weakened it. He brings the reason of the uprising on the side of the Janistas, the Ministers of State and Bassas, the Sultans, etc., and then gives several examples of the practices of the Seraglio, as well as of the mistresses that occur therein; not forgetting also the great misfortunes that arise from the Sultans interfering with the affairs of the government. In the fourth Head, he clarifies, by the deposition of Achmet III and the death of Osman, how the ambition of the State servants makes the Throne wobble; and how unstable the Osman Throne is, is pointed out in the last Head.

I have, with forewarning, dwelt somewhat longer on this work; for, except for the evident errors which I have touched upon, it is one of the best, most complete and most regular collections which have come to my attention in this field. The inserted digressions are not badly placed, and the presentation is kept lively, by a multitude of remarks and examples. The Turkish words and names, as in most works of that nature, have remained very mutilated; and this is, here, much less excusable, if the compiler could use the subsequent new edition of Rteaut, in which its spelling has been noticeably improved.

Fred. Hasselquist's M. D. iter Palcestinum. 8. Stockh. 1757. (in Dutch known under the title: Hasselqutst reize naar Paleslina, 2 parts, with plates, Amst. 8V°.) This is the original in the Swedish language, except for the learned in natural history, which is described in Latin. The work, large 619 pages, was published after the author's death, which occurred in Smyrna, by the famous Linnaeus, and he has placed a short preface concerning the life and manuscript of the author. He traveled in 1749, from Stockholm to the sea, and arrived at Smyrna towards the end of the same year. About this, as well as about a journey made to Magnefia, he gives very good and readable reports, relating here, ev

and as a matter of all, with a special distinction made, what he himself has seen, and what he has heard; he usually speaks of the first only. On the occasion of the Turkish cemeteries, which are heavily covered with Cypressess and Rosemary trees, he remarks how beneficial this is to the health, because the air, by the fragrant and aromatic exhalations of both, is protected against that of the decayed corpses. The Armenians at Smyrna had, according to his opinion, (Wslld«.5iO Second' fasting Bishop,

but adhered to the Bishops of other councils, and were only visited there by these
38345 heels. This is not so, but it is true that he was very often away from home. Concerning the external appearance of religion and ceremonies among the Greeks and Armenians he is very detailed, and reports the real. In the year 1750. he travelled to Egypt. In describing Alexandria and Rosetta he gives an account of things of
38350 nature, and customs both in joy and in sorrow. A story of the large number of crutches and sticks, which he found in a Coptic church, (page 69. 70.) possibly clears up a misinterpretation of them in certain Roman Catholic Churches, where it is imagined that those of the lame and the halt were used, but having been restored by an image or something of the kind, in remembrance of the pretended Miracle, were left there. He was told that at the time of the persecution they had served to defend
38355 themselves against the possible attacks of the enemies, but were now used to lean on, because there were no pews or chairs in their Church. Concerning the Snake-charmers, several reports occur, especially pages 70-72, of which the main thing is this: that many Egyptians, and, it is said, particular Families among them, knew the hitherto impenetrable Secret of handling the most vile Snakes with their bare hands, as they
38360 pleased, without suffering the least Injury thereby. — He remained in Cairo 9 months. With so many reports concerning this city, his are not superfluous. Among them we find the description of the caravan going from thence to Mecca. Here, in so accurate a writer, two circumstances are very shocking. According to his report namely (page 88.) Mahomed's grave would be in the last mentioned city, since it is nevertheless
38365 generally known, that it is in Medina. The second is the assurance given to him, page 89, that among the presents of the Sultan for Mecca no Koran is found, although many travel writers assured it; and yet he had previously, page 6, related, that he, by an illuminator of an unusually rich Turk, saw a picture of the Machine, or rather the Chest, in which, annually, the Koran was sent with the caravan to Mecca. This now
38370 apparently contradicts itself. — At Damiate, one, in his and everyone's opinion, for a European the most unpleasant place and in all of Turkey, he was only a few days. In the spring of 1751 he came to Jaffa, and then made the usual journey with the pilgrims to Jerusalem, Jereho, Bethlehem, and back via Ramah to Jaffa, and from there via Acre to Nazareth, Tiberias, Cana in Galilee, Tyre and Sidde. Then he returned
38375 via Cyprus, Rhodit and Scio to Smyrna, where he was prevented by his death from communicating more information about his journey to Constantinople, etc. — Here and there there seem to be gaps, which, according to all accounts, would not have been there if he himself had been the publisher. — Arriving ashore at Jaffa, he had to pay 22 piastres for the freedom, 62 piastres for his journey from that city to Jerusalem and back again, and 10 piastres for the permission to travel to Jericho to the
38380 Governor of Jerusalem. — His admiration (page 153.) for two lions carved in stone by the Turks above a new gate at Nazareth should surprise no one, for the reason that they do not suffer from statues; for this refers solely to statues of people and not to other objects. — Among many proofs of the author's good thinking, with respect to religion, is a remark (page 558.) on the occasion of circumcision, offensive: the "females circumcise their children on the eighth day, which seems to be a hard and dangerous operation for so tender a child. The Turks act more sensibly, who postpone this useful religious observance until their sons have reached the eighth year. "For as long as it pleased God to charge it as lawful under these or no circumstances, all
38385 human prudence that determines otherwise is foolishness — nay, godlessness. But perhaps this remark does not originate from the author himself; for otherwise he has proceeded very diligently, carefully and cautiously, and is an example of an accurate travel description, which philologists and naturalists, if they wish to travel to those countries, may make use of. — Concerning the Turkish Empire in'
38395 in general nothing is recorded; on the other hand his descriptions of Nature (page t87. to the end,) are excellent, and arranged according to the Method of Linnaeus. Alex. Rcssel, an English physician, has published Natv.ralhistory of Aleppo and parts adjacent, in London, US- in gr. 4- the size of 266 mg. with pure plates, which is exceptionally beautiful. (In Dutch known, under the title of A. Russel description
38400 of Aleppo, with pi. Amst. 1762. \$vfi) By the manner of treatment one would only wish that he had divided the contents of the first part by Main Parts or Sections from each other, so that one could find what one wants to look for the more easily. He so satisfies the title of the work, that he leaves few things undone, and may serve as an example to those who, according to their calling, remain long in the Levant, in
38405 order to be of service to others by instruction. The first part treats of the city of Aleppo, its layout, buildings, etc. (page 1. etc.) in general; and further of the condition of Syria, of the weather, agriculture, fruits, herbs, tame and wild animals, birds, fish, etc. (page 10.) of the inhabitants, their mode of living, provisions, amusements, clothing, studies in general; (page 77.) of the Turks, their

38410 food, customs, marriages, baths, and burials; (page T05.) Here he places a burial form at a Mohammedan burial: "O man, out of the earth you were first created; you must now return to it. This grave is the first step in your progress to the dwellings of the world to come. Have you been beneficent in your actions; then you will be acquitted before God; but if not, God's mercy is greater than all things. Remember

38415 that in this world you believed: God was your Lord, and Mohammed your Prophet; call to mind all the Prophets and Apostles, and may much be forgiven. The burial form of the bards differs from this, and thus reads: "have you taken; then you must "give back: have you done something; then you will find it: have you not believed; then you will 3, now you see. "Here follow not many, but only true things concerning the

38420 religion and the government of the Turks, (page 119. ras.) Because of the Feasts of the various Eastern Christian denominations (page 123.) he adds the following Table
oy;
Orisks, Syrians, Blaremtets, rmsniers, "Fasting before Pafiben 43 days, 48 days, 48d.igen, have in everything

38430 ii5 l?o 8?
By their Marriages (page 125.) f&Mf a detailed description of a Moroccan Wedding, because from this one, with little change, one can conclude to the others; mentioning at the same time the behavior of the women towards their husbands, as well as the burials; then (page 130.) of the Jews, and the Europeans. (page 132.) The first part

38435 ends with a general treatise on Epidemic diseases, page 130 144 - The second part provides, in regularly divided Chapters, the following: remarks on the Weather in general; (chapter 1.1) special observations on the Weather, of the year 17-1747, and of 1752 and 1753; (chapter 2.) reports of the temporal diseases that prevailed at Leppo in the years mentioned above. (Chapter 30 YW» the Plague is spoken of in the

38440 following fourth Chapter, so that first of it in general, then of its outbreaks in the years 1742-1744, and finally of the precautionary measures of the Em-oer* in plague-time are treated. These are, probably, the certain reports concerning this evil, differing from mine only in that they come from a learned Physician, who describes everything according to his knowledge. He quotes Morellus in appropriate

38445 words: the terrible pestil. cap. 5. "the dreadful circumstances accompanying the plague cause that our senses deceive, and I" think, that Hippocrates himself would be deceived". "Perhaps one is eager to know his good advice against it. Here is by: "not sobering up in the morning to go out; to avoid as much as possible all

38450 irregularities, violent affections, and too strong discharges of the body, but then also to live "neither in eating nor drinking more moderately" than one is accustomed to; one or a few glasses of good wine more, than one's usual, might be more useful; and a strong use of acidic drinks is not only "pleasant, but also useful. - When one enters the room of such a patient, or passes a corpse, or any other contagious thing, then one must not swallow the saliva, but breathe through a handkerchief or a sponge,

38455 dipped in pure vinegar or vinegar mixed with wine. - "If one had to feel the pulse, or other circumstance, examine a patient's dexterity from nearby, then one had to take the breath, as
5, as much as possible, to hold back, and as soon as one is out of the room, wash the mouth, the face and the hands with wine; when one comes home 5, put on different

38460 clothes and hang the clothes one has put on in the air. He also thinks it advisable to fumigate them with sulphur, and again to wash the mouth, the face and the hands. "The last main part, with the description of the Aleppian Sea, makes a rash of the body, the Heart of this, for the naturalist and physician, yes for all kinds of readers, over useful and credible work.

38465 Tableau de VEmpire Ottoman, a Francf. 17S7 consists of 227 pages in 12. The unnamed author says in the short preface, that he has drawn from the first sources, and has therefore published this small work, because in the French language (for he could not understand another language, because he writes French, and yet speaks of our language,) one has no such extensive work on the subjects presented here. The first

38470 mentioned is a laudable confession, and this Traétaat is therefore a collection in this field; but the latter is untrue, because one has had other translated works in this field for a long time. - In this book the Religion, the Military State and the Government of the Turks are treated. Since we have already so many such collections from other works; it is not worth the trouble to speak at length of this, which

38475 belongs to the mediocre, and it would be useless to point out the untruths and

mistakes found therein, or to properly correct the often mutilated Turkish customs. Eduard Ives Rcifen nach Indien und Persiën, in het Hoogd. translated by C. W. Dohm: (in Dutch Edward Ives travels from England to India, and from Persia to England, Rott. and Utrecht, ms.) The English original has a very long title, the beginning and
38480 end of which are as follows: a voyage from England to India, in the year 1754'. ffY. by Edward Ives, Lond. 1773. A'°- 'The (High) translator has delivered this work in 2 parts in 8*o ge, delivered. The first part contains the voyage to India, .and a party of the translator's appendices, as well as a map of India, and 2 plates, Leipz. 1774-
38485 8. Of this part I speak not here, as it does not belong to my profession. But the second part belongs to it; for it contains the journey from Persia to England, with a map of the journey from Bassora to the Mediterranean, and 6 plates, Leipzig 1775. One finds (Chapter 1.) the description of Bassora and the surrounding country, and an account of the voyage on the Euphrates to Koma, Kota and Se, .mava; furthermore (Chapter 2.) the continuation of the journey via Dewana, or Haska, and Hilla to
38490 Bagdad. Of the Aga at Dewana Ives relates, 'that, TURKISH KINGDOM etc. 251 notwithstanding that he, according to the Imperial tribute, had to bring annually only one thousand and five hundred purses into the treasury of the Bassa at Bagdad, yet he used to deliver as much again, namely three thousand purses, to maintain himself in his Stadtholdership. This seems terse, incomprehensible to Mr. D.
38495 Husching, according to a note in the translation. And why? He reckons a purse at 500 daald. Prussian money. But this is wrong. It is only so many piastres, and one of these is no longer valid, at 18 or 20 Prussian grosseri. Instead of the sum of one and a half million thalers given by him, it amounts to only a little more than one million and two hundred thousand thalers; which does not seem so incredible to me, considering that the territory of that Aga extends in length from Korna to Uilla, that is, over four degrees, or more than 60 German miles, and indeed on fertile and reasonably well inhabited banks of the Euphrates, and is the largest Stadtholdership in that province after that of Bagdad, yes, only a few of the Scheygks under it have 500 purses, accordingly the sixth part of that sum found to be so large must be paid
38500 to the Aga - The journey from Bassora to Uilla was made on the Euphrates, but the rest by land. In the third head, he gives accounts of the wind Samum, of a litter, and the great city of Bagdad, as well as observations concerning its former Bassa, the military state there, the Turks in general, and some ruins, among which also belong the aforementioned remains of the Tower of Babel. In the translator's Notes (page 93-Chapter) concerning the multitude of the people in Constantinople, as if it amounted to not much more than five hundred thousand, or half a million people, and Tavcmier and Thevenot are cited as witnesses of the small population of the city of Bagdad, many things were indeed to be noted; but they are to be found in my
38505 description. - In the neighbourhood of this city he saw the extensive remains which are called Nimrod's Tower, but which he and the translator, and rightly, deny; although no one would think it incredible that they were converted into other buildings in later times.
n used thus to be mixed with these. From Bagdad the journey went to Moful. (Chapter 4.) As journeys are here calculated according to hours, as is almost generally done
38520 in the East; so the translator is in doubt how he should understand this calculation, but finally thinks that it is a distance of an hour, and this is also so. According to the almost always equal pace of camels, donkeys and mules, according to which the horses must usually orient themselves, one can reckon two hours' journey on one German mile. On that road itself he passed through a place whose inhabitants were
38525 mostly worshippers of the Devil. - Moful is (Chapter 5.) according to his reports, one of the best built cities in Turkey, and gives, according to the unusually extensive ruins lying around it, the surest suspicion that here, once upon a time, an unusually large city, and because in this region no other, besides Nineveh, is known, this one must also have been located here. Here the writer was asked by the Turkish
38530 authorities whether he wanted to travel by post or by caravan? This seems strange to the translator, because he does not know of having read something somewhere about a post in the Turkish Empire, and he had always thought that one could not travel there otherwise than by caravan; think therefore, that they have no agreement with our Posts, and were possibly only Couriers, through whom the Governors, at certain times, dealt with State affairs, who then, undoubtedly, had a good protection, under which
38535 private Persons could also travel safely. This suspicion is true. For the Porte, as well as the High and Sub-Stadholders of Provinces and cities, do not send, not the Kapudschjy, these the Tschokahdars, or Janistas with their open commands, not indeed at certain times, but according to the circumstances, to this and no places, often
38540 alone, often with some Janistas or Servants, who, everywhere have the right, not only to certain places, but also elsewhere to take horses, by if their own became tired.

They are almost. also just as safe, as the Couriers in Europe, because every Commander must vouch for their safety, and, when it is not safe in his District, provide for it by special cover. Ives had previously also (page 150) related an example of this. He reports, (page 21 o.) that, Merdin and Nifibin were indeed in the Governorship of Mosul, but nevertheless both were under the Bassa of Bagdad, who also designates them as their Sub-Commanders: where the translator remarks, that according to Mr. D. Busching, they were under the Paschal Diarbekir. This remark seems to be true, and must be a misprint in Ives, because the layout on the map is decisive for Mr. Büsching, and Ricaut also reports it as follows: unless, because of the trade with Persia, (which is not impossible,) the Bassa of Bagdad might have had an extraordinary authority over those places. - Now the journey went to Diarbekir (Chapter 6.), of which he gives as much account as could be made during the short stay there. With the great multitude of people there is such. he also had given of Bagdad and Mosul, mostly, according to the story of the Roman monks residing there, the translator accuses the calculation of it of untruth, because he finds it all too large, and one cannot have any certainty about the Turkish cities. Now, I cannot contradict him directly on this point; he also relies on the credible testimonies of Mr. Niebuhr on this point. But I must not conceal one thing. The large cities, namely, in which the most important Bassas auction their seat, are against all expectation populous, however wild and destitute of people, often the flat country is, because they are too much pressed by the small bloodsuckers and robbers, and then are urged to take refuge in the cities; wherefore also a pestilence, famine and similar plagues make such incredible slaughters among the people in them. - At Bir he crossed the Euphrates, and thus arrived at Aleppo. - Further I do not follow him, except that I add his travel register, which may not be unpleasant to feel; from Bafora to Korna 75 miles

 together from Têri to Aleppo 990 English miles

38580 This journey made in those regions of Asian Turkey lasted from April to September. 1758, and he was, because of the heat, flies, mosquitoes and other insects, as well as because of the Arabs, Turks, and other peoples living on this way, exposed to so many inconveniences, - and the journey was accompanied by such great expenses, that one need not wonder, when so few do it. In the description one learns, as in others, in detail,

38585 the deceitful and terrible injustices, which in Turkey, especially in the places remote from Constantinople, Smyrna and Aleppo, are inflicted on the traveller. Who in the meantime wanted to make the journey to the regions of the Euphrates and Tyger; this work would be very useful to him, and it deserves to be compared with Otter, yes to be put on a par with him.

38590 Petro Businello, Secretary of State and Embassy at the Bailo, historical reports of the government, customs and habits of the Ottoman Monarchy. These are in J. F. Zêbret (High) Magazine, for the use of State and Church History, part ?? pages 52-160. and part 2, pages 107-232. Ulm?? etc. 8. (and will be placed after this work, translated according to the author's handwriting.) They consist of 80. Sections, of which the first forms the introduction, and the second speaks of the Founder of the Turkish (Mahometan) Religion, as well as of the motive which prompted him to establish it. Here one finds a good natural explanation concerning it; although the error at the same time (which I shall mention here and elsewhere in this work) occurs, that Mahomet's so-called Testament was found in the Monastery on Mount Carmel, and the

38600 Original was brought into the Library of the King of France. In the third section he shows in what the Religion of the Turks consists. In mentioning the Pilgrimage to Mecca he does the matter an injustice, when he reckons the number of the Pilgrims at only fifty or sixty thousand, considering that almost each of the three principal caravans is by itself so strong. Of the Beiram, the marriages and divorces of the

38605 Turks, how far they extend the concubine, and of their moral deeds, the fourth division treats, and of the Servants of Religion the fifth division. Here is inserted the Title which the Sultan gives to the Mufti: "to you, N. N. who are the wisest of

all wise men, instructed in all knowledge, the most excellent of all excellent men; who abstain from unlawful things; who are the source of virtue and true knowledge, and the heir of the Prophetic and Apostolic Doctrine; you solve the questions of
38610 faith; you make known the articles of true faith; you are the key to the treasures of truth; the light of doubtful Allegories; you are strengthened with the grace of the supreme guide and legislator of mankind! The 3, great God perpetuate your virtues! The income of the Mufti is certainly a misprint; for as this is reckoned at four and
38615 a half Venetian Ducats daily, it makes this not two hundred, but two thousand Aspers. Of the Monastic Orders among the Turks the sixth section speaks. He relates their unfounded boasting, to exalt their origin, but observes, that they did not originate earlier than under Orchan, who, out of gratitude to God and Mohammed for the conquered countries, appointed persons, who would observe prayer according to fixed
38620 rules, and would educate the conquered peoples. This is indeed so; but nevertheless the Turks, probably, adopted the monkhood of the Christians there. Of the Mosques, their revenues and privileges, is only briefly dealt with, of the principal divisions in the Mohammedan Religion, section. 8, and of other Sects therein, section. 9. Here comes that foolish rabble, which almost solely arose from the directly opposed sentiments of all kinds of articles of faith. In the tenth section, of the unbelief
38625 of the Turks, he asserts, that 'there are among them Atheists and Naturalists in great numbers, who partly from the evil foundations of their Religion, partly from the impiety of the Christian and Jewish Apostates, became doubters of, and deniers of, everything. The Religion of the Turks, he says in the eleventh section, rests solely on views of State, and is very accurately judged of its importance. His
38630 observation, that the Turks, continually, more and more doubted their Religion, and his hopes derived from it of a good future State, we leave in their place. He often makes Mohammed a Politician; when he is certainly nothing more than an Enthusiast. With the ??de section, he goes over to the civil government, speaking also of the Seraglio, its guard and population. The number of those there, amounting to about 8
38635 thousand people, he calculates as follows:
People at the stud farm 500
Bostandschi or gardeners 2000
Baltadschi or wood splitters 400
38640 White subjects 120
Black subjects 300
Women's sons about 430
Idschoglans, (Chamber servants) 700
In the Kitchen etc. ??00
38645 The 13th section deals with the stud farms. Besides the three thousand horses of the Sultan, there will be just as many for the Ministers, since some, like the Kislara-Aga, have about three hundred. Besides that, there are four hundred Imperial mules, to meet the necessities.
and. (Section 14.) Of the Bostandschi and Baltadschi he speaks of section 15. of the white and black Encyclopedes; section 16. of the chambers of the Idschoglans. As many
38650 as possible, Christian children were taken there. — Section 17. deals with the manner in which the young people in the Seraglio are instructed in the sciences. To this he adds the reading and writing of Arabic and Persian; the reading of Histories, especially of high-flown Novels; the study of the Koran; Poetry, Music, and some
38655 painting. Of the Mutes and Dwarves, (Section 18.) The number of the first was, in his time, about forty. In describing the apartments of the Harem (section 19.) he states that the Sultans themselves had to appease animal lust, and that they were only permitted, on solemn occasions, to take a new wife as their bedfellow, because the arrangement of the Court state demands too much expense for a woman impregnated by
38660 the Sultan. — (Section 20.) Of the tendency which prevails in the Seraglio between persons of the same sex. Very cautiously is spoken of the dumb sins which are not only in vogue there, but also throughout the whole Turkish Empire. Of the first Vizier and his Kiaja. (section 21.) This last word is everywhere, incorrectly, printed Chiafa, just as one finds more such errors in other words in the section, in
38665 the Visions of the Bank, the Bef ter Aar, etc. In the first section, he observes, by the civil government and the good order in the city of Constantinople, that the courts would have to be loaded with many more cases, if the various nations did not decide their disputes among themselves, by their Primates and imported customs. In the next section, of the nations, who live as subjects of the Sultan in
38670 Constantinople, the Jews and Christians, the author contradicts himself. He asserts, that the first, whom he estimates at 20 thousand families, were the most numerous. The same he says, next, of the Greeks: unless one, and thus all conflict would fall away, had to consider the latter, with respect to the other Christian-religious

parties, as the most numerous. In the translation or in the printing the error has
38675 been made, that the Quarter of the Greeks in Constantinople is called Feuer, where it
means Fener of a watchfire. The city laws and the maintenance of justice are spoken
of in the 25th section, as well as the Empire's offices in the 26th. After he had
here observed, that every Bajfa, by the five thousand extortions fixed revenues, in
time of war is bound to deliver one Soldier for the army; he makes the following list
38680 of it, which, generally speaking, is true, but in which I shall remark in the Notes,
in what way Ricaut differs from her. I will almost go into this more here. because he
does not express the numbers with numerals, like Businello, but with words, as I
shall do: although this can be changed after wars, when Provinces are won or lost,
and this is the reason why Ricaut himself, on both occasions, when he deals with
38685 this, is not always the same, namely, Search I. chapter 12. and Book III. chapter 3.

of Babylon two one million, seven- three hundred twenty and a hundred thousand and forty, send Aspers.

3) Bajjora four six hundred thousand and ten Aspers.

Consequently, in all Bafas were 32 7 which

Sandschakken 281 3 at their own expense, in time of war had to supply 597* men.

Each of such Stadtbouderschappen has its own Mufti, Reis-Effendi, Grand Treasurer,

j) Businello says so; but it should be Bcglerbegs.

O) Ricaut is apparently wrong when he states six times a hundred thousand ducats. of the Janistas-Aga and Spahilar-Aga. In the 2nd Section it is said of the and the government at Cairo: that it was very much determined by the 24 Beys in the country and the rebellious people. With regard to the government over Wallachia (section 28.) he notes that this Province formerly gave sixty thousand Piastres, but since 1665.

has to deliver 1) the Sultan two hundred and thirty thousand (a) Piastres, 15 thousand Ukken of honey, and nine thousand Okken of wax; 2) the Grand Fisherman five

thousand Piastres, as well as a Sable Pelt; 3) his Kiaja five hundred piastres, and an equal Pelt; 4) the Grand Treasurer five hundred piastres; (T) the Kislar-Aga, two

thousand piastres. Mol davië (Division 29.) is not much better off ' When Mahomed II made it cynsible, it paid only two thousand piastres, afterwards eight thousand. But,

after it has been brought under the Ottoman yoke, it pays 1) the Sultan one hundred and sixty thousand piastres, (c) ten thousand ocks of wax and as much honey; 2) to the Armoury 600 pounds

(a) Ricaut says: one hundred and thirty thousand; but at the same time declares that IVMacHia and Moldavia had to give even as much as was determined.

(b) Ricaut adds: and a sable pelt.

(c) Ric. states only sixty thousand, but is mistaken in all circumstances.

the sulphur, one thousand three hundred and twenty ochres of wax, five hundred skins of skins, and as many pieces of kanephas for clothing for the slaves on the galleys;

3) the GmouVistervxi one thousand piastres and a sable pelt, 4) its Kiaja five hundred piastres; 5) its Treasurer (d) five hundred piastres. The 30th division deals

with the Tartars and Allies of the Porte on the Barbarian coast. Among the culpable nations of the Turkish Empire are counted by (section 31) the Georgians, MinGrelies and Ragusans. Of the two first, the Porte receives Slavs; of the latter, the Turkish

protection comes to pay, every three years, about 16 thousand Venetian ducats. By the household of the Turkish Empire, its public treasuries, and the persons, the

government there. Speaking of which, (section 32) he testifies, how difficult it is, to know anything certain about it, because of the far-reaching arrogance of the

Turks. The Mirl or the Reichs-kasse and their annual income he calculates (section 33-5 thus:

The usual poll tax three million piastres.

Salt mines and fishery three Lettings, leases, Contribution of Offices two -

(d) Ricaut understands by this, and certainly better, the Reich.-Treasurer or Destetdar

From the public goods two million piastres.

From the Tollen Five million piastres.

From the other income about five,
so 20 million piastres.

38810 The Hafna or treasury of the Great Lord brings in just as much, without having the
expenditure of the Miri, and consists of the tribute of Cairo, Waüachiè, Moldavia,
Ragusa, the confiscated goods of the Baf as, income due to experiences, the fines,
the mines of Erzerum, Diarbekir, etc. (e) The following six sections deal with Trade,
38815 as the 34 of the Turkish. Wolocken will mean Volikèn, a kind of vessel, but Echim-
Bassi the first Doctor, Hekim Bafelh. He represents the Vietnamese trade as very much
in decline, but also the means to make it flourish again. The French trade is (as it
still is) the strongest; but that of the English and Dutch has never flourished so
much before. The Russian is very advantageous to Russia, especially with regard to
derpeltery; the German can, because of the

38820 (e) Kantemr reports that in his time, only fourteen millions had come into each of
the two; the Turkish Emperors had understood the art so well, to increase their
income by taxes, as other Princes.

38825 asks the Goods, never to become great. The Swedish trade with ironwork did not mean
much, and is more a Levantine shipping; that of the Neapolitans consists in trifles.
He comes (section 40.) to the causes of the decline of the Economy in the Turkish
Empire. He finds these 1) in that the Europeans export a lot of money for worked
38830 Goods and Diamonds. Mainly he should have reported, that most of the country's
products, such as silk, goat hair, tree wool, wool etc. go out unworked.
2) Because the government is mostly in the hands of the Neighbours, who draw all the
money into the Seraglio, but spend little, whereby the circulation of it among the
people stops;

38835 3) because of the unfortunate wars. — This is followed by the *t«è section, the
military state of the Turks. After a general introduction he describes (section 42)
the Topschi and Kumbaradschi. The former are the Artillerists, the latter the
Bombardiers. Both would number 18 thousand men, but they were far from complete. The
three following sections on the Maritime State, the Turkish ships and their
construction methods are accompanied by the observation that shipbuilding is
38840 extremely deceptive, because the Overseers and builders, for example, darkened the
iron nails and hammered in wooden ones. The 46 11th section deals with the Armoury at
Colonial. The Turks had everything that belongs to shipbuilding, at little expense,
such as wood, iron, canvas, ropes, etc., but everything was in disrepair. But they
had a supporting navy. (section 47) They received ten ships from the Barbarian
38845 coasts, and 24 from Egypt, which were used as merchant ships in time of peace, but
all could pass for ships of fifty guns and 600 men. The fanistaries, (section 48)
which are at Constantinople, he estimates at thirty thousand. The Mectors,
Bostanschi, Leventis, and Serads are described in the 49th section. The first are
intended to break up the army, to take away and transport the tents, and would amount
38850 to six thousand; the last are the soldiers of the Bassas, who must look after the
baggage in time of war, and form the reference corps. The Spahi follow in the 50th
division. They have lost much of their old Dignity, which they often abused. Among
these were also included the Zaim and Timariotes. (section 51) They could be called
the feudal militia, because the feudal lords were obliged to provide men according to
38855 their income. The former had, annually, income from 20 thousand to 99 thousand seven
hundred and 99 Aspers; the latter partly from three thousand to five thousand nine
hundred and ninety-nine, partly from six thousand to 19 thousand 9 hundred and
ninety-nine. The former had to provide a well-ridden horseman against five thousand
(because 500 is a misprint) Aspers, the latter against three thousand, (here too 300
38860 is a misprint) a common mounted horseman Rellen. The sum of which amounted to one
hundred and thirty-one thousand, 9 hundred and 64 men. The Dschedschi (section 52)
were, at first, only a foe of armourers, and 630 men strong; but now served as the
principal Spahi, and would be 30 thousand men strong, although they were not nearly
so. The Segbani had to be supplied by the Bas/as, and came near the Dragoons. The
38865 Mukladschi were the servants of the officers. From this, section 53- the following
account of the troops is then drawn up.

Foot soldiers

Janistaars, 162 chambers, each for 700 men, 113400

Toppedschis, —

38870 Kumbaradschi, — 2000

Bostanschi, — 12000

Mekterfi, — 6000

Seradsche, — 6000

	Kairo Militia, —	3000
38875	Leventi, —	32000
	Naval troops. — — —	1?000
	Summa	207400
	Ridery.	
38880	Spahi,	10000
	Zaitn and Timariotes, —	132054
	Dschedschi,	18000
	Segbani,.	4000
	Mukladschi, —	6000
38885	Free willing,	1000
	Tartars, (although they, justifiably, had to deliver 100000, —	60000
	Summa	240054
38890	Infantry and cavalry thus made up 447454 men; but of these, 120000 went to the occupation of Constantinople and other places, and 50000 men to the crew of the ships. The political system of the Porte (section 54) was very changeable. With regard to the State economy (section 55) the policy of the Turks was strange. The Families, by the right of inheritance of the Great Lord, were allowed to become impoverished, and the Bassas were deprived of the goods extorted in their Provinces,	
38895	and either sent them into exile, or strangled them. As a result the country became subjection, and the power of the Families quite pretended. As to the Policy with regard to the Government, (section 56) there was a general dissimulation. The highest State officials were drawn up as slaves, who can gain adherence, but are still hated. In their Policy, with regard to war, (section 57) he observes, how that they kept or	
38900	sent out their Missionaries everywhere, and for that purpose employed their native subjects among Christians and Turks, by whom they allowed themselves to be instructed in everything without cost. If they lost a battle, the General was blamed for it. After a conquest of the Provinces they sought further to make peace, and to depopulate them of their native subjects, in order to occupy them with Mohammedans.	
38905	For the Militia they had the greatest respect, and the Great Lords enrolled themselves in their registers. The Porte especially provided for the provisions with which Constantinople could be supplied. The laws were so arranged, and were so enforced, that the power of the Monarch was supported by them, but the subjects were oppressed, and the treasuries were enriched. This was easily put into operation by	
38910	the current false testimony, and arbitrary power of the Judges, and these were finally shaken off. They had their Policy, with respect to punishments, (section 60) which are sudden and cruel; as also to rewards (section 61) which, excepting the offices of honour, consist in trifles, as a fur or a sabre, and yet were considered as gifts from Heaven. Since therefore (section 62) the nature of Turkish policy ends	
38915	in the support of the Sultan's power, the oppression of the subjects, and the enrichment of the treasuries; therefore they made use of the oppression of families, the destruction of the natural right of inheritance, the exchange of state servants, and rapid and severe punishments. In the following ten sections he presents the Porte's way of thinking about Persia; — about the Mughals and Ushecken; — about	
38920	Muscovy; — Prussia and Sweden; (of both they sought to take advantage against Muscovy,) — about Poland, which they considered only to determine the Russians by it; — concerning the House of Oojlenryk, which for them, especially when the Imperial Dignity, and therefore the union with Germany were therewith, is formidable 5	
38925	concerning France, England and Holland. With Spain there was, in a certain respect, an antiquated enmity; Naples they respected, because it has such close ties with Spain and France. Coming to Vmetia, he naturally shows some nationalism. With regard to the peace treaties and treaties with foreign Powers, (section 73-) the Turks held the religious position that they not only could, but also had to break them, if they thereby enlarged their Empire and could propagate their Religion. They had also, many	
38930	times, made use of it, especially when they clearly saw the advantages ahead. The last 7 sections concern the foreign ambassadors to the Porte. They honour them as representatives of their courts, but they also regard them as pledges of loyalty, which must be observed in times of war, as well as otherwise. He relates the ceremonies that occurred at the departure of an ordinary ambassador of the Republic	
38935	of Venice to Constantinople; — an honour that she has, by virtue of an old custom; furthermore the audiences with the Grand Vizier and Sultan, and the circumstances at the presentation of the presents, in particular the	
	none" which the Venetian Ambassadors let the Imperial Harem handle. The necessary	

- 38940 knowledge of an Ambassador refusing to the Porte, and the requisite rules of conduct, form the conclusion of this work, which is, certainly, the most extensive and accurate of its kind, and cannot be recommended enough to those who wish to know with what eyes a Political Scientist has viewed the Turkish Empire. I have dwelt so long on the evaluation and extracts thereof, with forewarning, because my work itself
- 38945 receives many good additions therefrom, and I shall be all the more brief with others.
- Observations fur le Commerce é? fur les arts d'une part ie de l'Europe, de l'Asie cfc. par Jean Claude Flachet, 2 Tom. a Lion, 1766 8. De plates usually represent Machines, but are small and not at all beautiful. — The author travelled through
- 38950 France, Italy, Germany, Hungary, and Wallachia, beginning on page 377, with mention of Constantinople. — On page 383 he assures us that he measured the former St. Sophie's church well, and found it to be about 213 feet long, and 150 feet wide (*). Up to page 490 he writes only the truth concerning the Turks. — On page 491 Reland is wrongly called Ecclesiastique Suedois. — On pages 518-562 the whole of the Ca-
- 38955 (*) This is, certainly, far too little. Grelot says: "elle" a de long en dedans quarante deux toiles fur trente-huit" de large. "These were (the Toife reckoned to six feet,) 252 feet for the length, and 228 for the breadth. Gii.l, in his Topogr. Constant. Ub. 2. cap. 3. states the utmost height of the interior at 140, the length at 240, and the breadth at 230" feet.
- 38960 pitulation. Of these the peace treaties with other Christian powers are no more than Copies. What he writes, at the end of the first part, concerning the prophecies, which would not be very strange in Turkey, is for his account. Each, according to his particular understanding, either accepts such things, or does not believe them. — In
- 38965 the second part there are detailed anecdotes and remarks concerning the governments of Mahmud and Osman, of whom the first died in his time, and the other became his successor. These are very useful for the History of those times and secret Court negotiations, because he, as Bassarian-Baschi (chief negotiator) of the Kislar-Aga, is well in could experience. In virtue of that post he once had the opportunity to see the Seraglio from the inside, of which he relates as much as he could retain in his memory on pages 164-224. For he was not permitted to write anything down during the visit, much less to draw anything. In the remaining pages to the end he expands on other subjects, such as water pipes, the trade of France with Turkey, the dyeing of tree wool, etc. in which I am not knowledgeable, but nevertheless must judge from
- 38975 various circumstances that there are many useful things for merchants of the commercial colleges of other countries. His pretense that Mohammed's grave is in Mecca, and the Zetnzem well there in a public place, is unfounded. Otherwise this book bears the stamp of truth, although it is not apparent from the title that it is a travelogue, and the remarks in it are only made by chance. For me the description
- 38980 of the Seraglio is remarkable from the inside, and I think I can fill a gap in my work with it, and at the same time give my readers pleasure, when I communicate the most important of it; because I consider it, for various reasons, to be the most genuine, that we know of it, so far.
- One enters the third Court, or the third Square, through a very projecting Portal. Sixteen pillars of porphyry stone decorate it on either side. The vault is heavily
- 38985 gilded, and painted with somewhat raised leaves and flowers. Here one finds two rooms. The doors are closed; then the white Engraved are so safe, that they could withstand a siege. From their windows they see everything that goes on in the second and third Square. This is not so much because of its size, but rather the ornaments
- 38990 that are lavished on it, the most beautiful. The walls are covered with slabs of porphyry and other choice marble, on which one sees a great multitude of Turkish inscriptions in gold letters. The floor is special, of marble, but carved with stripes, so that the horses should not slip. The Ambassadors go from here to the famous Audience Hall of the Sultan. This consists of an open gallery, which is
- 38995 gilded, and well provided with sculptural and plasterwork. Pillars of inestimable value form the principal ornament of this free-standing Hall. It is square, and covered with a large dome, which ends in a long gilded spire, on which stands a half moon. The Sultan's Throne is worthy to be seen. — The outer rooms, courts and gardens, in fact, by their vastness, give the Palace
- 39000 of a great Prince. But, if I except the great number of precious pillars, and some other remains of the splendor of the Eastern Emperors, then one sees no masterpieces of various arts. These could have exhausted themselves here, if the Sultans had had more taste. — The Audience Hall would lie quite free, if it had not been united on one side with the Gallery leading to it. The Sepher-Oda Hall, where the Sultan's
- 39005 Guards are kept, is at the right hand at the end of the Square. The front part of a building, which is made of several large pillars of porphyry stone, raises the

magnificent floor, to which one comes by a large marble staircase. It leads to a spacious hall, around which run two galleries, resting on square beams. The Seferli sleep there on a sofa a hand's breadth high. In the morning each rolls up his

39010 mattress in the place which has been assigned to him, and fastens it to the wall with the sheet and the blanket. Under the sofa is a chest, in which they can lock away their best things. — They almost always walk under the pillars of the Gallery, to keep watch. From there one enters a bath.

The Hasne or Imperial Treasure is, on the same side, eastward, and on a floor, at the

39015 end of which is the first of the two doors, which one carefully closes, when the Hasne-Kiaja counts out the currencies, and makes his account. — They are first examined, counted and weighed, before they are thrown into the large bag, in which five thousand Zechines go. — Then the seal is pressed on it. — That Hafne consists of very many rooms. There are many under the ground, which receive their light through

39020 windows, which are opened from the side of the sea. Everything is kept there that cannot be damaged by damp. But in the rooms, laid out on the same level as the floor of the Seraglio, one sees on shelves in various compartments, or cases, materials of all kinds, vessels of infinite value, rough and worked stones; in a word, the Emperor's greatest treasures. A story of this would be too long, and seem incredible.

39025 The workshops of the Jewelers are near the Hafne, and almost next to the forecourt. They are very active. They are paid daily. For each piece they receive, according to the effort expended on it, a reward.

A steeply ascending underground passage leads to the Hall of the White Engraved, to whom the guarding of the door is also entrusted. Before one enters the Allee, which

39030 separates two beautiful flower arrangements, one encounters a small, very beautiful Mosque, whose dome is covered with lead. Two lattices are in this passage to the Allee. The view here is admirable; for it lies on high Terraces, from which one sees over the Sea and the Asian coasts.

The Boyanshi keep watch at the door, which is opposite the subterranean passage; they

39035 also have their dwelling there, just as the white Engraved ones at the said passage in the rooms, which have been constructed above it and to the side.

Then one goes down to the place of the stone pillars. The Chafz-Oda (Chamber of the Sultan's servants) and the rooms of the Seliktar are at the end of one of the two

39040 previously mentioned flower arrangements, and opposite the Hall of the Seferli. They are not far from the new Kiosk, which Mohammed V. had built for the amusements in the spring. It is near the great city wall. One enters, on the same ground, the flower arrangements, which are here maintained with extraordinary care, because they come up against the principal rooms of the Seraglio.

The large square Kiosk is visible from afar, and seems to rise from the midst of

39045 flowers, orange and other trees. It is the most beautiful of all, and built as if on a bulwark with two wings. The dome rests on painted wooden pillars. The door is to the south; the other sides are provided with glass windows. — The Orangery is below on the wall to the north. — The water runs in abundance from the upper garden there into a basin of old marble, which is carved with extraordinary skill. I return to the

39050 door where the white Engraved keep watch, and from which one comes to the Chambers of the black Engraved and the Kislar-Aga. The Mosque of the Chasz-Oda has no other decoration than a beautiful Carpet on the floor. It lies westward on the great wall. The Idschoglans have their dwelling in this court, doing their prayers in it. The Sultan also sometimes goes there, when the weather is rainy or cold. Here, opposite

39055 the floor in front of the Hasne, is a covered passage with pillars of granite stone, which serves as a foundation and support of a large building, to which one climbs by a beautiful marble staircase. The entrance is from the western side. Around the Mosque one enters a wide antechamber covered with marble, from which many fountains spring from a beautiful basin. The Seliktar, the Rikiabdar Aga and the Tscho adar-

39060 Baschi occupy the rooms on the first floor, which look out on the great Square, and the Kaffedschi-Bassi the open one, which is below it, next to the great staircase. In the sockets of the inner wall, by which the pillars are united, are kept the clothes, trinkets, horse-harnesses, and in general everything that serves for the usual ceremonies, and cannot be brought into the ??to other than with difficulty, and even

39065 danger. When one has passed the corner, which forms the western side of the Square; then one sees the great door of the Chasz-Oda, through which the Sultan enters the Harem. On each side are two Terraces, raised one foot above the ground of the Square, and paved with beautiful square stones, where the Gentlemen and Servants of the Court stay, because they are not allowed to go any further.

39070 The buildings, which form the front part of the north side, are regular and uniform. This piece of architecture would be admired everywhere. A large number of free-standing pillars provide a beautiful corridor, in which one can go to all the rooms.

39075 The Treasurer's room has his room in the corner of a very spacious hall. It looks very much like the Sefer-Oda. On both sides, as long as it is, one finds a wide Sofa, on which 50 people could sleep comfortably. — The same also on the upper gallery. Each floor or section is lit by well-placed windows. From this first room one goes into another, which is just as large, and laid out in the same way, and is intended for the same use.

39080 The warm room, where one smokes tobacco on the sofas, is the last, and is only separated from it by an antechamber. — The walls of the bath stove and its antechamber are furnished with imitation porcelain vessels. — The aforementioned other room occupies the entire front part of the third square on the north side; the two doors and the windows provide a pleasant view, notwithstanding the fact that the construction method is very simple. It is on the side of the above-described Audience Hall. — Between these two Sowings of the Idschoglans a special building has been constructed. In it are three rooms, level with the ground. — The Hasne-Kiaja gives Audience there. There is another, at the same distance from this and the Sultan's Audience Hall. From there he sees the exercises and games which are arranged in the square for his amusement. It is two stories high, regularly built, and covered with very beautiful marble.

39090 The noon-time of the Minnarets is announced everywhere. The Imam climbs, to that end, on the third square of the Seraglio, on a pillar of porphyry stone. This rises only six feet above the ground. The rest with the foot is under the ground. From what one sees of it, one must regret that it is intended for this use, so admirably is it wrought.

39095 On returning to the gardens I saw with pleasure the large square Kiosk again, which lies to the north. The light falls in through 40 windows. The panes were 22 inches wide. The lead roof runs in a square pointed shape, and carries an octagonal lantern with glass. The small dome, which covers it, and the spire placed on it are heavily gilded.

39100 There is another, also large Kiosk, although of a different construction, in the upper garden, but also northward, in the shape of a cross. Each wing is supported by seven arches. The Hall is laid out according to the same design. — The main building consists of 4 sections, and gets its light by a lantern from the large dome. — These two buildings with a smaller Kiosk make up the entire outer side of the gardens northward. You see them from far away.

39105 When you come to the third square of the Serail; then the Audience Hall was at the right hand. At the end of this square is the entrance to the interior of the Serail. — The Chasz-Oda (the Hall of the Idschoglans) is the first room level with the ground towards the west, very spacious, and covered with marble. — In it they keep watch day and night. I do not repeat here, that all the rooms are covered with lead, and most of the domes are gilded. Through a lantern on the large dome the light falls into each room.

39110 From here one goes into two vaulted rooms, which are kept by black carvings. A small square separates them from each other, and each has stoves on the side, to heat in the winter.

39115 A gallery, which is covered with five domes, and runs towards the south, leads to a large place. It is the ante-room to the first chamber of the Sultan. One can also reach it through an upper gallery, which is attached to the residence of the Kislär-Aga. The principal servants of the Porte are also brought in there, who have to deal with important matters with the Sultan. A large number of black Ennemies live around in small rooms. This room has two doors; the first is to the north; the other to the south; none for the Sultan, this one for the Kislär-Aga. The first leads to a corridor, to which the boundaries of the Harem. They are of medium size built of stone; they overlook a garden, which is surrounded by a very high wall; they are clear, and furnished with fine furniture. These consist of carpets, hangings, curtains, mirrors, clocks, and small chests, which are placed in the corners of the sofa, which goes all around, and on which one stays day and night. — From this first garden one goes into a second. The two-story high Kiosk is in the middle, and a pleasant place to stay. The Sultan often goes there with the Sultans.

39120 The principal inner court of the Seraglio is at the end of this garden. It consists of four principal buildings. The Sultan occupies that which lies to the west, whose outer walls are upholstered with porcelain. In the others, which also all rest on arches, the Sultans live. This square rather resembles the Place Royale in Paris. It is longer than it is wide. The rooms are heated by stoves, standing on the ground below.

39125 After the Grand Duke's room, one climbs a magnificent staircase. The floor is square; the anteroom is much larger; the room itself extends to the corner of the square, and

39130

39135

on this side forms an end of the building of the Seraglio.

39140 Here one can form an idea of the opulence of the Sultans. Everything is in the utmost
splendor. Everywhere one sees unusually fine porcelain, with excellent flowerwork.
The walls are hung with gold fabrics. The sofa is of the same rich material. The
mirrors, clocks, small chests, in a word, everything is remarkable. The most
39145 remarkable thing is that it is almost always masterpieces of foreign artists with
which one tries to arrange this room.

Then one comes to the Gallery, where the rooms of the 12 Sultans are. These are
large, and furnished with excellent furniture. There are lattices in front of the
windows, and they have a view of the square. On the garden side they have Saxons or
small projecting balconies, in which they sit, and can see the country, and what is
39150 going on in the gardens, without being seen.

In the middle of the north side they have a projecting building. This is like the
meeting room; there the women come, to be on the lookout for the Great Lord, and to
make themselves comfortable with him by a thousand pleasures. - From there one goes
to the large bath. This consists of three divisions, all of which are covered with
39155 marble. The middle one is the most elegant; its vault rests on marble pillars;
through inset crystals the light falls in. Between both are only doors with glass, to
see everything one does. - The women's sons of a lower rank, and the black Engraveds
have their special, very pure and comfortable baths.

When one comes out of the great Harem; one takes one's way through a very gloomy
39160 passage; this goes through the principal residence of the Engraveds, and leads
directly to the prison-house of the Princes, who as Sons of the Sultans can stand to
the Throne. It resembles a strong fortress, and is surrounded by a great wall. - One
enters through two gates, carefully guarded from within and without by Engraveds,
each of which has a double iron gate, the stay there seems to be sad. There is a very
39165 pretty garden with good water by it. The Princes have beautiful buildings and baths
in the principal buildings, which enclose the court. The Engraveds appointed to their
service, inhabit the apartments that are level with the ground.

So far I have spoken only of the buildings that one inhabits in the Seraglio. - In
general, an admirable simplicity reigns in this vast Palace, to the eyes of the
39170 Connoisseurs. Although one finds few masterpieces of architecture and other arts that
they sail away; one must nevertheless admit that everything announces the Palace of a
great Emperor. - I should have to digress too far; if I were to mention and describe
all the apartments and subterranean water-basins. I am less surprised at the
astonishing vastness of these places, than at their manner of construction. Under the
39175 apartments, and even under the squares of the Seraglio, there are vaults, which rest
on large stone pillars. The walls can withstand all tests. - The Sultans are there,
as in an invincible fortress, completely safe. In times of unrest Mahmud came back
quickly from the other Imperial pleasure houses where he did not consider himself
safe enough. In the meantime it seemed that he left the shores of the Sea with
39180 dissatisfaction, because he took great pleasure in them. And this was the reason why
he decided, in the year 1745, to build the Serail of Top-Kapi, even in the vicinity
of the great Serail.

This was built on the Sea. The residence of the Great Lord is between East and South,
opposite Scutari. The Court occupies the main buildings from North to West. One
39185 enters from the Sea side through two gates. One (Top-Kapi) is defended by two towers
rising high. The entrance is very dark. One goes for a long time under a surprisingly
long vault, on which a beautiful garden has been laid out, and to which one can come
directly from the second floor of the Harem. - The apartment of the Sultan surpasses
in the costliness of its furniture that of the great Seraglio. - The prisons of the
39190 Bostanschi-Baschi are near the Sea-Kiosk. This rests on 9 high vaults, whose pillars
are of an unusual thickness. - The Kiosk, which is before the second gate (Jali
Kioske-Kapi), where the Bostanschi and Kapidschi keep watch, has only one floor. -
The Hall, where the Sultan gives audience to the Captain-Bassa, receives its light
from the lantern of the great dome. - One climbs it from the four sides by a large,
39195 white marble staircase. The Throne or Sofa of the Sultan is at the end; a gate
prevents one from coming near it; the vault, which is painted, decorated with
sculptures, and gilded in a reasonably good taste, rests on 24 pillars. It is
generally one of the most beautiful Kiosks in the Imperial Palaces.

When one goes through the gate Jatli-Kioske; then an Allee leads to the Kioske, a
39200 gate of the Harem, which is called Kalfaje. - From there one goes, by various Alleys,
to the rooms of the Bostanschi-Baschi, the new Kioske of Aganum-Harem, the Harem of
the Sultan, the Chasz-Oda and the old Seraglio, which is decorated with beautiful
pillars and Mo??. - From there I came to the so-called iron gate Demir-Kapiy Tower
Alai-Kioske, which is opposite the Palace of the Grand Visir. - Continued on the

right hand; then one could continue to the place Tfiragan, where the apartments of the Kislär-Aga are. - When one approaches the sea from here; one can go down to a square, which is longer than wide, and at the end of which is a large wooden surface, which forms an ante-room of small rooms, as well as a covered corridor, from which one goes into a magnificent, longer than wide Hall - This is equipped with precious, European furniture, even with an Organ and Clavier. - attached to this is a square, richly decorated Cabinet, from which one comes into the Harem described above. My description would have become too long if I had wanted to mention all the valuables. - The Sultans have made it a law to themselves not to let anything leave the Imperial Palace. They either buy or receive, as a gift, what the whole world has in the way of more ornaments or rare things. - In the choice of these, no less attention has been paid to the perfection of the work than to the material from which it is made. I saw nothing in common. Each gem was found in its rightful place. - It would have taken whole days if one had only wanted to examine quickly the products of any art. - Everything is displayed in open cases. The most beautiful crystalline vessels, full of new Zecchins, seem to be intended only to separate the gems from each other. - But this is only, so to speak, the Cabinet of jewels; many others follow, where one finds in a very excellent order, hanging candlesticks, cabinets, chests, writing desks, boxes for tea, coffee and chocolate, mirrors, tables, armchairs, sofas, all kinds of fabrics, watches, gold and silver work, etc. Nothing is uniform; everything is different. - From these rooms one enters a long Gallery, which is loftier than the great wall, for the defence of which a great number of towers are placed, like the walls of the city, which enclose the houses and gardens of the Seraglio. It receives its light through 15 cross-windows; and from it one sees the walls, Scutari and all the waters nearby. From here one comes, on one side, to a small Kiosk, and on the other side to a beautiful bath. There is another one just like it for the upper rooms.

Here I was led back over a Terrace, and through a small garden to the large court, from which one comes to the previously described Chasz-Oda, and had thus seen the whole Seraglio, and even the most secret places. - In general I must declare, that everywhere the ancients and later ones have been imitated. One has made use of what time has left. At every step one discovers remains of the ancient splendor of the Greek Emperors.

Voyage litteraire de la Grèce, ou lettres fur les Grecs anciens & modernes avec un Parallele de leurs moiurs Tom. 1. pag. 420 Tom. II. pag. 244 a Paris 1771. 8. This book has been translated into High German, under the Title: Literary journey to Greece etc. Leipzig 1772 2 parts. The author is a French merchant from Marseille, who was very well experienced in the Greek language and ancient writers, and described his journey in letters from Constantinople, Adrianople and Smyrna to a Mr. Bourlat de Montredon, for the use of his children, but was subsequently persuaded by his friends to publish the edition. The first letter is written as a preface, and 1750. For the benefit of those who do not understand Italian, it would have been necessary to translate the expression, ü paterna nido (the; fathers hm). - Letter 2 contains general observations on the Turks, Armenians and Jews. This is a very useful illustration of these peoples for those who have to do with them. But this is far from the truth, (unless the translation were wrong,) that the Armenians formed the most numerous, wealthiest and most intelligent nation. In the third letter one finds real general observations on the later Greeks, they were still the old ones, only with the loss of freedom and knowledge under the Turkish yoke. In the fourth letter, of houses, apartments, lamps, sofas, fire-pans, women, embroideries, etc., a passage is quoted from Madame Dacier from Hesvchius, according to which, in the Greek apartments, a fire-pan was placed, and dry wood was burned in it, to warm themselves by. This is not so; for then they had to swallow the smoke: they put extinguished cages in it. - Letter five treats of lovers, mistresses, maids, daughters, who live very modestly, and of honors, by kissing the hands. - Letter six of the dressing-table, the hair-toysel, clothing, precious stones, fanes. - Letter seven of the head-veils. - Letter 8. national character, conversations, liveliness, expressions, proverbs, nobility. - Letter nine, belts, face covering, painted eyebrows, black eyes. - Letter ten, Feasts, meals, far-reaching extravagance at banquets, entertainment with flowers, songs, etc. In the eleventh letter, about the Greek religion, superstition, predictions, dreams, etc. one must wonder that a Roman Catholic can write so much about the ignorance of the Greeks in matters of religion. He thereby, always, silently rebukes his own denomination. - From the i2d to the 18th letter he describes dreams, dances, games, baths, marriages, nymphs, women in childbirth, love for children, hospitality and burials. In the i0th letter, about the graves, burial places and ruins, he wrongly denies that the former were surrounded by

walls; for many have, where there is a strong passage, a wall about three or four feet high. Thus also the assertion is groundless, that they are all outside Reason. Within Constantinople and Smyrna there are many. In the letter of reconciliation of the Turkish counts he praises the steadfastness of an old Father, thinking that it was more than Christian; but it must be ascribed to the Turks the fanatical feeling concerning an absolute fate. — Letter 21 he quotes a great number of Greek stories (rupapuh*). — Letter 22. treats of the oaths of the Greeks: letter 23 of trade and navigation: letter 24 of fishing and the origin of the mandrakes for catching tony, that is, to show how the mandrakes or drag-nets, for catching tony by the roe, originated with the ancient Greeks. The four following letters contain various customs, and a review of the preceding ones. Here he quotes, from hearsay alone, two customs on the island of Mi-telin, which are discussed further on. — Letter 29. treats of the Libatien, for example, when a new ship is launched; then the builder takes wine, and pours it into the stern, and expresses good wishes for the success of the voyage and of the bystanders, then he drinks, and lets the bystanders drink with it. Nor does one ever end a solemn Greek meal, not even at burials, without, as of old, pouring wine, while at the same time one makes good wishes for the Tractant and the Guests. — The thirtieth letter provides observations on various passages in the book, *Esprit des ioix*, on some customs of the Turks, and Mahomed, in which Montesquëteu was wrong. When the writer, in the four following letters, treats of the Arts; he observes therein, that, although they had almost all perished under the Turkish rule, yet among the Greeks there was still all the genius to practice the ancient arts, if they had but the freedom to do so. — In Architecture (letters) he assures, that for public buildings, (for the private houses do not look pretty from the outside,) there were still good Greek architects. — The Music of the Greeks and other Eastern peoples (letter 36) he certainly exalts, because of a strange one-sidedness, above ours. On the Plague (letter 37) he quotes very good observations, especially from ancient History; In the meantime I did not like to follow the writer Hippocrates, who thinks: "that it arose from the frequent rains and south winds, which always blow before the summer, and which were followed by a great calm and heat. "I do not deny in the least the great influence of the weather on health and disease; but I have clearly noticed that the plague by all kinds of i Weather and in all seasons has come out. He further relates how the Jesuits on the island of Scio formerly pretended that of the Romans hardly any had died, and only of the Greeks so many had been carried off; but this is natural; for the former do not compare with the latter, as to numbers. He hereby places an essay by a certain English physician, Mackenzy, on the Plague, who attributes its first origin to the wind, but maintains of the plagued, who suddenly fall down and die, that they must have had the plague beforehand, and had only tried to conceal it, in order not to be abandoned by their friends. But this last point is entirely rejected, because the Turks, especially the common people, with their sense of absolute doom, are not accustomed to abandon their own. — He represents the love of the Fatherland among the present-day Greeks (briest) as still as great as among their ancestors; and it really is; for otherwise they would have long since abandoned it under the tyranny of the Turks, especially when they have little or nothing to lose. — In the 30th letter he gives the following contents of an inscription discovered above one of the Constantinople gates: "in less than two months" the victorious Conjlantyn, on the orders of Theodosius, had these walls built. "Palias himself would hardly have erected such a strong citadel in so short a time. "The three other letters have no specific subject, except that in the last he gives his children instructions on how to compare the earlier and later Greeks in travel, and how to judge the travel descriptions written beforehand. He recommends those who had the opportunity of entering the gardens of the Sultan to draw an obeliscus on which he had read the words: Theodofio Magno ob Gothos devictos; and adds the following in the first letter the two customs mentioned on the island of Mytilene are the real solution of the former French Consul at Smyrna, Mr. de Peyssonnel by: " 'there is on this island a village, Katotrito, where an arriving foreigner is addressed in the following words, to give himself in marriage: avö putros èurut', Travrpevtrovl If you are a man, enter into marriage! This is all that has been retained from the old custom." For the rest it is true that the old laws of this island grant the inheritance of father and mother to the eldest daughter, without the sons being able to demand the least of it. The inhabitants adhere faithfully to this law, when they are not forced by the Turkish Commanders to accept the succession in the inheritance introduced by the Koran. The author has written, as an accurate eye-witness, with such good proof, that it might seem to many as if he had gone too far, and even to trifles. One cannot find any real mistake in his work, and he remains, in his profession, a leading writer for

those who wish to hear the ancient Greeks and Latins on such subjects. He provides a multitude of quotations from Greek and Latin writers, y whose true opinion, as far as it rests on usage, is very well elucidated.

39340 C. Niebuhrs Reischeschreibung nach Amerika und andere umliegenden Landern, Koppenh. 1774 in 4. (in Dutch reize naar Amerika etc. Amsterdam en Utrecht 1776). Preceded by a short travel description from Copenhagen to Constantinople. Regarding this last city he further provides some remarks, suspecting on probable grounds that the measuring rod on Reben's map (which is also laid down in my description) has been
39345 made a third too small, and consequently the city has been made just as much too large. In the further calculation of the number of inhabitants he found very clearly, that many travellers, who judge them solely by the number of people during the day in the principal districts, are very much mistaken, partly because the streets are very narrow, partly because thousands of traders, artists, craftsmen, etc. stay there
39350 during the day because of their business and work, but in the evening, at some distance, even two miles or more, return to their own homes by water or by land. Of the Pyramid with symbolic figures on Atmeidan he provides a drawing. Then follows the voyage by water to Alexandria, with remarks about it. Thence the voyage went to Cairo; then over the Red Sea to Temen, and after some stay there from Mecca, by
39355 water, to Bombay. In the last treatises this travel description is therefore, in accordance with its purpose, most extensive, deserving all the praise that has been given to it elsewhere.

Travels in small Asia by Richard Chandler. Translated from English into High German, Leipzig 1776 in 8 large 396 pages (in Dutch R. Chandler's travels through small Asia etc. Utrecht 1777 in 8.) I have this traveller with his two travelling companions in person, and as diligent researchers known. In the preface one finds an instruction, which the Society of the Amateur in London gave this traveling society, and from which it appears, that the principal aim was indeed to make such discoveries and observations, as the traveling society found itself, of the old state of these
39360 countries, but nevertheless by no means to limit them to that; that they were rather to record everything, which could attract the attention of curious and observant travelers. And at the same time it is said, that the works: Ruins of Athen, and Jewish antiquities, as well as Opfichristen had already been published, and possibly still, when the journeys in Asia Minor were well received, also those that were made
39370 in Greece would be published, (as they were published in Dutch translation, under the Title: R. Chandler travels through Greece, Utrecht 1779.) The journey related here takes place in the year 1765, describing the region around the Dardanelles, Troy, Smyrna, Ephesus, Miletus, Laodicea, Philadelphia, Sardis and Magnifica, provided with a map, which represents the Archipelago and the adjacent part of Asia Minor. This
39375 work, which can be read very well, is more suitable for scholars than unlearned, although some travel notes are inserted; provides the old, and partly also new History of the places; is occupied with the old and new Geography; and gives good extracts from Pocock, Wheler, and Chishull. The climate and the changes of Weather in the four seasons are fairly accurately noted, and for the rest the regions and
39380 customs are very naturally described, as they appear to a foreigner.

Sir James Forter observations on the Religion, the Government, and Manners of the Turks, (Ch.) from the English. Leipzig 1768 8vo4 186 pages. The author was, about the year 1760, for some time English Ambassador to Constantinople, and for this he provides important and true news. In the first Head he represents the difficulties of
39385 obtaining true news in Turkey; by which one can understand, Why, for example, Madame MonTaöue, in many respects, records untruths. He at the same time paints the Character of the Turks according to Truth, but in an imperfect manner. The second Head, treats of the Mohammedan Religion and the Pilgrimage to Mecca; the third of the Setton of the Mohammedans; the fourth of the Mohammedan Church Government and their
39390 civil laws, and the fifth of the Koran, mostly supplying scattered but genuine observations, the sixth of Despotism and its appeasement, is not ill-suited to refute Montesquieu. The two following main parts supply, in the incidents, for the elucidation of the preceding Chapter, and on the Turkish Government, besides the Vizirate of Rahib Mehemet Bassa, fine observations of the same kind also in the ninth
39395 and tenth parts. on the change of the Visier, the order concerning affairs, the Policy of the Turkish Ministers, and the maintenance of justice with choice examples. Of the Ambassadors and their Audiences he speaks, from his own experience, in the following main part. The mixed observations on the customs of the Turks, in the twelfth chapter, provide things worth reading. The last two chapters deal with the
39400 Greeks and their religion, in which their disputes with the Roman Catholics before the Turks about the so-called Holy places arerelated truthfully and accurately. A few unfounded propositions do not detract from the value of this work. One never

hears, it is said on page 23, of executions, pains, punishments or fines among the
 Turks, which were inflicted on and imposed on anyone for religion. This conflicts
 39405 with what is recorded on page 27, that death is the punishment for an apostate. On
 page 26 he asserts in the observation that, since the beginning of the Hegire, not a
 single example of the conversion of a Turkish to another religion can be brought
 forward. Now this proposition is, in general, not only difficult to prove; (for who
 can give the necessary historical guarantee for it?) but is also apparently
 39410 unfounded. Kantemir, in the Life of Solyman I §. 12. relates a very extraordinary and
 readable example concerning this, presented more fully below. (*) And the cases are
 also lacking

(*)" The civil unrest of that time was followed by another, which concerned religion, and
 39415 1527- broke out. In Constantinople there was namely a scholar of the first rank, in religion
 and sciences exceptionally sad, by name Kabyzi Aijie, who openly maintained that the Christian
 religion rested on better grounds than the Mohammedans, and did not at all conceal his
 thoughts on this. He defended this both in the schools and in the mosques, doing everything
 possible to convince the people of it. Not only the common people stumbled at this, but also
 39420 the lawyers, who heard this reason with displeasure.

and, and with believing, that a man of his learning could do it. They sought in vain
 to induce him to recant; he stuck to his language; so that they saw themselves forced
 to arrest him, and bring him to the Mufti. There he repeated with great boldness,
 39425 what he had so zealously impressed upon the people, living by the strongest proofs
 and the comparison of the Koran with the Euan«lium, that the Christian religion with
 its precepts had an infinite precedence over the Mohammedans. He was again pressed to
 accept his opinion; they even sought to win him by self-love, representing to him
 that a holy Life, like his, seemed to exist with his apostasy, and that his acquired
 39430 fame of virtue was sullied by a hateful error. He despised the admonitions and
 threats, remaining steadfast in his opinion; so that the Emperor could not fail to
 approve the sentence of his beheading. On this occasion a law was made, in which all
 those who, even under the pretext of disputing, should dare to give the Christian
 Religion the precedence over the Mahogany. Although for the reason stated it is rare
 39435 for the Turks to go to Christian countries and become Christians. The remark, page 59
 below, that a thaler makes 120 Aspers, is, at least for the Germans, expressed
 indefinitely. This is a so-called Leeuwenr thaler or Piajler, of which eleven make
 three Dutch ducats. – This work has been translated into French, and has been
 published under the following title: Observations for the religion, the law, the
 39440 government, & the customs of the Turks &c. by Mr. Porter, Nouvelle édition
 confiderablement augmentée de nptes, faites par w Vdiageur, qui afait unféjour
 enTurquie, Neuschatel 1770. This title is, with regard to the added notes, very
 deceptive. One must wonder that one can so shamelessly deceive the public in our days
 by additions to newly improved and enlarged editions. The notes made, which are said
 39445 to have been made by a traveller, do not at all refer to the improvement or
 enlargements of Potter's work, but are generally remarks which one can make in one's
 study, without travelling. For instance, when on pages 53 and 54 of the French
 edition, the far-reaching religious disputes were discussed; one finds, below, this
 remark: "from old times it has been said: "tantum religio potuit fuadere malorum! (so
 39450 many misfortunes can religion bring about!)" These errors, imbibed by religious zeal,
 have not only devastated Asia; but the whole world has also become the horrible scene
 of devastation, caused by a furious and armed fanaticism. For 16 centuries one sect
 has destroyed another. The Christians have nothing to reproach the Muslims with in
 this respect. Should one not be surprised to read again such a remark, the
 39455 groundlessness of which, when it is so generally put down, has been demonstrated so
 many times? It is not religion in itself, not Christianity according to the Holy
 Scripture that brings about devastation, but so-called Christians, who have departed
 from the latter, and others who want to express their own conceived sentiments under
 the name of Christianity, by fire and sword, to impose. – After Porter had spoken of
 39460 the various Sects among the Turks, the annotator makes the following observation on
 page 60: "the Turks, indeed, in matters of religion, show no tolerance towards
 unbelievers, but nevertheless among themselves. This cannot be said of the
 Christians. The various Sects among the Turks live in peace, and do not judge each
 other. How groundless is this observation! Can we deny the Turks all tolerance
 39465 concerning the religion of others, whom they call unbelievers, since so many
 Christians and Jews actually live among them? But do they exercise it among
 themselves, when they strictly forbid investigations into matters of religion, and
 absolutely do not tolerate strange feelings among their own co-religionists? Are
 these Christians according to the Holy Scripture, who persecute their fellow

39470 Christians with fire and sword? - The remark, page 100, is of this content: "Mr. van
Bre?? ?? presents us, in an excellent essay, 5, in the collection of the Academy of
Inscriptions in Paris, tom. 32., Mahomed in a quite different light, than that in
39475 which he has hitherto been generally exhibited. If we may concern this famous
Academician; then Mahomed, by his birth, and by the example of his ancestors, was
called to that role, which he played in Arabia. As he was the heir of the priestly
and princely Family; so he had no other aim, than the preeminence of his House, and
the purity of the ancient Religion, which it maintained.
This essay is full of new prospects, deep investigations, and the most enlightened
39480 judgment. "I have not read that essay; but I wonder at its design and intention. What
will it profit to present Mohammed from time to time in a different light, so long as
one can instruct oneself, as to his business, character, and religion, from his
Koran, and the wit expended in his veneration will be wasted? It would then have to
come to the point that, as the unbelievers do with the writers of the Holy Scripture,
one would deny him this. - I will only quote the addition on page 192: "the
39485 extraordinary ambassadors of Poland (to the Porte) have also some special advantages;
perhaps because, at the Audience, they appear in the Seraglio in long robes. They
are, by the Porte, from their arrival in the Empire and during their stay kept free
etc. "Now this is confused and unfounded. The Venetian Ambassador is also, at the
Audience, long dressed; and as for the advantages; they are, in a certain respect,
39490 due to all Ambassadors; concerning which the work of Porter, in the same Head, should
only have been checked.
Lord Baltimore has published: travel in the East, in the years 1763, in 1764 and
observations on the city of Constantinople and the Turks, together with some selected
39495 samples of the wit and poetry of the East. (at least that is the title of this book
according to the High German.) Augsburg 1770 large 100 pages in large 8vo. The Lord,
known for his treasures and literary exercises, describes, in the first 26 pages his
journey from Naples through the Archipelago to Constantinople. His stay there lasted
from August 1763 to May 1764. He communicates his observations on this capital up to
page 46, and from there to page 74 the samples of the Eastern way of thinking,
39500 learning, wit and poetry. The rest contains the return journey by land. On many
occasions the places of the Latin poets are quoted. The title does not correspond
with the content, because a journey to the East promises more than a single journey
to Constantinople. No one may doubt the truth of the reports, since the Lord, during
his stay in Constantinople, tried to live entirely according to the customs of the
39505 Turks. The short time he was there certainly prevented him from judging the Plague
better than he actually does, when he asserts that "it is not nearly so dangerous
there as is generally imagined. He considers it no more contagious than other
epidemic fevers. He is right in thinking that in the Eastern countries the Levantine
Plague is too dangerous, and as it is wont to rage among us; but a longer stay would
39510 nevertheless have informed him better. Here I must discover another error concerning
the Plague, which is found in a travel description to the island of Cyprus. (Viaggi
per Vifola di Cipro de Giov. Mariti Lucca. According to the Higher Göttingische
Anzeigen 1770, 139 St.) "Egypt would have the Plague of Constantinople. For from
here, from Smyrna and Thessalonica, the Plague would spread, unusually easily, to
39515 Egypt. Such and similar untruths propagate themselves unnoticed, especially among the
writers.
We have now also received a Thevenot of the present century in France in an Abbot de
la Porte, (translated into Dutch and known by the name of the new traveller, ger.
Dordrecht 1709 etc. 8.) of whose work the first and second parts of Turkey deal. They
39520 are fictional letters from a Frenchman to a Lady; and who would doubt that this work
was not ingeniously written? The writer also plays his part not badly, and
understands the art of composition very well; but nevertheless she has not been able
to protect him against several, and fairly gross mistakes. He asserts in the tenth
letter, that the islands of Corfu, Zephalonia and Zante, which are under Venetian
39525 obedience, belong to the Turkish Empire: in the thirteenth letter, "it seemed from
afar, as if the castles of the Dardanelles could cover Europe and Asia with cannons,
which, when the reason is the Hellespont, does not only seem, but is in reality as if
the size of Constantinople were only a fourth part of Paris. - Almost to the 7 towers
extends one corner of the city, because it extends all the way to that. And the
39530 middle square of the Seraglio is larger, than the outer one, which is untrue. In the
14th letter he places the city of Abydos and Leander's tower very near each other;
notwithstanding the former on the Hellespont not far from the present Dardanelles,
but the latter between Galata and Scuiari in the Bosphorus Thracia lies. The
assurance that the Turkish women had more than once allowed him to lift and take off
39535 their veils is indeed only an endearing idea for those with whom he corresponded. The

writer of the (High) remarkable facts from the best writers for those who do not read great works; Tübingen 1772-1778. for he testifies in the preface that, because the great works were too precious and too verbose, and the French were full of misdeeds, he wanted to provide an extract from the best. To that end he has drawn together
 39540 Cantemir, Arvieux, Deguignes, la Croix, Ricaut etc. and especially the first two, almost word for word, in his work, and divided them into the following Chapters. In the first he treats of the name, origin, former residence, and principal cases of the Turks, up to the foundation of the Ottoman Empire; and in the second Head, of the Religion, and the Religious customs of the Turks. In this I would not fully approve
 39545 of the comparison of the Kadileskier there with our General Auditors. The prestige and the position of the first are more important, and include more. In the third Head, treated of the Constitution and the principal offices of the Ottoman Empire, several errors are found. It is untrue that the Bostanschi-Baschi is the Chief Overseer of the suburbs of Constantinople, for they have their Molla or Voivodes; that the Nidschanschi-Pascha sits in the Divan just under the window, for that is the place of the Grand Vizier; that at Smyrna there is a Mint, for this is not so. The Article, concerning the Audience of an Envoy to the Sultan, is confused, for instance: the Envoy sits next to the Grand Vizier and the other Vizier,s of the first rank; – the money being divided, he goes to table with the Vizier and Testerdar; – after the meal he is conducted into a private room; – the squares through which the procession from the Divan to the Emperor passes are occupied by Janistaries; – the Sultan himself answered, in a few words, to the proposal of the Ambassador. One see on this the work of Porter and my book, where one will find all this more accurately. It is further ambiguous, that the Divan is under a vault in the outer square of the Seraglio; it is in the second. The fourth Head, deals with the Military State of the Turks, where Cantemir, Marstgli and others are very well compared with each other; just as in the fifth Head, the Court of the Ottoman Emperor, and something of the way of life of the Turks occurs. It is stated here, that the Seraglio is divided into the inner and outer court. But there are, in fact, three Courts: that the Eski-Serail or old Palace is a large building surrounded by high walls, and by it separated from the other parts of the Serail; which is not so, because they are separated from each other by reasonable quarters of the city, as the illustration of Constantinople shows. The author complains, in this Chapter, of the quarrels of travellers, and he is right; for they have, generally, not time enough to learn fully the Character of the Turks and their customs. The last Head, delivers a concise History of the Ottoman Emperors from the foundation of their Empire; in which page 252, contrary to the established custom, the castles of Constantinople towards the Black Sea are called Dardanelles at the mouth thereof. Otherwise this work is well composed and useful. A. F. Buschings (Hoogd.) new description of the land, five parts of the first part, etc. Hamb. 1768. 580 pages in 8. (in the Dutch new Geographie etc. fifth part first part, containing various countries of Asia, Amsterdam and Utrecht 1770. 8.) The preface contains a list of the great number of travel descriptions, from which the famous author made extracts, compared them with each other, and compiled them into a system. In this part, after a general introduction to Asia, the countries of the Turkish Empire appear on 446 pages (of the Dutch edition), the remainder deals with Arabia. In my opinion this piece is one of the most difficult works that can be thought of, and everywhere one notices the uncommon accuracy with which the author has treated his subject. We have not yet had such a work in this field, and we wished to have such an appropriate composition (I take the word here in a good sense) concerning the rest of Asia, and then of Africa and America. He recommends his book to travellers as a special manual, but then also for improvement and perfection. That Mosques and Mescheds are taken for two kinds of religious buildings; Anatoli Eski Hifar attributed to Bajazet I, as the Founder, (page 55.) and Brussa was given up as the Ottoman Capital for so long, until it became Constantinople, and certain, partly small villages around Smyrna were recorded as towns, etc. (page 73.) can neither diminish nor detract from the value of this work.
 N. E. Kleemans Reifen von Wien über Belgrad in die Krim (fc. in the years 1768-1770 with an appendix about Crimean Tartar, came out in a second and enlarged edition (in High German) with plates, in Leipzig, 1773 large ??8 pages in 8. (in the Dutch daily story of the travels of N. E. Kleeman. Haarlem 1774?? This is a single travel description, which does not say much about Turkey, but about Little Tartary is somewhat more satisfactory and for him who wanted to make such a journey, it would be very useful to read, in order to learn the necessary caution with the ingenious deceptions and acts of violence of those peoples. The author is wrong, when on page 195 asserts, that the Channel is narrower at the Castles than at the Dardanelles. Reife durch Sicilien und Grosz-Griechenland. (Hoogd.) Zwibmi. 8. large 272 pages.

The title of this book, published by Baron van Riedesel, could give rise to the misconception, as if here also of the real Greece, under the Turks, was treated. This did not happen, but this journey only goes over Sicily and the lower part of the Kingdom of Naples.

Neueste Reisbeschreibung durch die vornehmsten Provinzen der Ottomannischen Pforte &c. (Hoogduits=German) Berl. en Leipz., large 169 pages without name of the author. He testifies, that he has composed this work in a political manner, contrary to the title, as which a travel description suggests. - The State changes of the Turkish Empire go to § 21. By the origin of the Turks, which was correctly stated at the beginning, he thinks, that Turkomanie had received the name of, the first invasion of the Turks in it; since the Turkmen are a nation different from the Turks, and inhabiting Turkomanie. The following under the Title: Boundaries and principal rivers of European Turkey, is stated too definitely; for, as the sequel shows, it deals not only with European, but with the whole of Turkey. But in § 11. the length and breadth of European, and in §. 22. with Asian, are stated more than half longer and wider than it really is, unless other than German miles are meant. In §. 25. Constantinople is described as 15 Italian miles in size, but it is somewhat larger. Adrianople is estimated at 8, probably also Italian miles in size. The assertion in §. 43. that the Church of the Holy Sepulchre is only 100 paces long, and 60 broad, is untrue; not less, that the Latins alone observed there the public worship, which the Greeks and Armenians do just as well, yes, according to the institution, Christians of all denominations can do. In the given size of Damascus and Smyrna it is not stated what kind of miles they are, but they must be Italian. In §. 45. it is said of Tripoli, that it is a small city in Napoli; but it lies in Syria. It is equally strange, that in §. 48. Tyre is reckoned to Napoli, since it nevertheless lies in Palestine or Syria, in a wider sense. It is strange, that according to §. 49. Comana is not far from Tocat, and yet would border on Muscovy and the Caspian Sea; since between the first and these last two lie fairly large kingdoms, compared to which Comana is a trifle. The author is very much mistaken in §. 52, when he considers Tenedos as 50 German miles in the vicinity; there are hardly so many Italians; and similar mistakes are found with the islands of Sciro, Jcaria and Pathtnos. In the saying concerning Candia it will probably be a misprint: "the inhabitants were" mostly Greek, most of them adhered to the Mohammedan religion. "Instead of most, the least should often stand. Such a mistake must also be suspected in the statement in §. 53, concerning the island of Cyprus: "the inhabitants are partly Christians, partly Turks; the latter, when they are rich, hide their treasures here under the earth, so that they are not taken from them". "This refers to the first, namely the Christians; for the Turks have no great need of this caution. The air at Smyrna is described in §. 85. as unhealthy. At the end of it he says, according to the statement of others, that on most of the islands of the Archipelago, in the summer, it seldom rains or thunders; now this certainly happens seldom. In §. 88. the customs of the East are declared to be strange and hideous; which I would not assert. They certainly pass this judgment of ours also. The customs are, everywhere, of a mixed nature. §. 90. treats of the state of religion, and gives the following principal parties: "Armenians, Nestorians, Jacobites, Marabutes, Malekites, Ilanefites, Scha'feits, and Hanbalites. The last four are to be noted in particular, because all Maho'medans, except the Persians alone, "usually belong to one of these names. "Here the two principal parties of Mohammedanism, namely, Sonnites and Schiites, should have been mentioned before the Subsidiaries. Notwithstanding the Jews are so numerous; yet no mention is made of them. It is very strange to want to call the Jesids, §. 91. Disciples of Jesus. Of the Mosques, §. 99. assured that: around them were six Towers (Minnarets)"from which the Muessins called the people to prayer. This is untrue. There is but one Mosque of this kind in Constantinople; even the Sophie Mosque has but four, most have but one Minaret: and not from this, but from the Gallery that goes round it, the proclamation for prayer is made. It is equally untrue that women may not enter Mosques; they may only not be there at the same time as men for the Divine Service. At the end of §. 102. he says: the other Christian denominations had only Patriarchs in name, whom the Pope appointed. This applies only to the Maronites, and to those who apostatized from the Armenians, Copts and Nestorians, and to the so-called united Schismatics with the Roman Church. Thus it must also be said that §. 103. Of the Eastern Christians it is related, that they held the Patriarch at Constantinople for the visible Supreme Head of the Church, of the Greek Christians only is understood. That the lesser Clergy mostly live from Commerce, is not true; but they often soothe themselves with tillage, gardening and gathering silk. What occurs §. 104. concerning the Monastic Orders, is very ambiguous. If he speaks only of the Eastern; then it is too much; but if he includes the Roman, then it is too little, the report concerning monasteries,

\$. 106. is uncertain; but it is untrue, that all Churches in the whole country are called Monasteries; as well as that none, which \$. 107. It states that those who entered the Monastery of the Holy Father were not allowed to marry; because marriage is not permitted to the consecrated, but only to the secular ecclesiastical, although only once. In this place \$. 108. states: "Mahomet" is said to have been born in the Monastery on Mount Sinai," it should have said: he would have come there, and have been well received by the Monks, and have given them the well-known Testament on the way. From \$. 114 to 118. the learning there, with a neglected distinction between Turks and Christians, has been dealt with very ambiguously for the uninformed. According to \$. 119. the Commerce would mostly be left to the Christians; since the Jews nevertheless have just as much part in it, and the Genoese have, there, openly nothing more to do. The Commerce of the English and Dutch does not disappoint compared to that which the French and Italians drive. The price of slaves is ten, nay twenty times higher, than is stated in \$. 121. In the Turkish money \$. 125. the calculation of the Aspers to three pence, (Prmssischf) and therefore of the Para to 9 pence is false, and the Titci of the Emperor, \$. 128. is very briefly condensed. The following words, \$. 129. suffer many changes: "as soon as an Emperor comes to the Throne, he is led, with great state, to the alleged monument of the Prophet Job. Here they pray that God may bless the new Emperor, and enlighten him with wisdom. Hereupon the Mufti embraces him, and pronounces the blessing, etc. It is asserted \$. 137- absolutely contrary to the truth, that the Kislar-Aga and Kapi-Aga were from the number of the Dumb and Court Madmen; for they are indeed the Chiefs of the Enlightened, but at the same time also the principal Ministers of the Seraglio. In \$. 141, the error so often recounted is stated, that only an Imperial Envoy, when entering the Turkish frontiers until his return journey, is kept free in everything. For the Porte shows this honour to every extraordinary Envoy, of whatever nation he may be; but it also expects the same from other Courts, when it sends someone. To the Audiences, \$. 142. and 43 several things are incorrectly stated; just as this \$. 174- it is absolutely untrue, that the brothers of the Sultan could never become Kapidisch-Baschi again. "- Just as it seems very uncertain to me, when the unnamed writer assures in the preface, that he had seen much on his travels; just as the fulfillment of his request seems unnecessary to me, to express himself widely, more bitterly in another work; because that would in fact be of no use, if it were to consist only of a collection,

Staats-und Kriegsgeschichte des russischen und türkischen Reichs. Leipz. 1772. groot 34 Hoogd, Madz. in 4to. On the 14 first page the writer deals with the Russian Empire. This is followed by a historical description of the Turkish Princes, and page 16. a geographic one of the Turkish Empire. Regarding the assertions occurring therein: that Osman raised the Janistas, and Selim II Cyprus taken away, one can consult the second paragraph of my work. In the description of the inhabitants and the way of government, page 18. says in general that every Christian must pay a ducat poll tax annually. In the discussion of the Turkish faith, which sounds just as if one wanted to speak of the German, Swedish, etc. faith, he mixes Critics and Satyrs of his kind. On the remaining pages, which deal with the previous Turkish war, many things occur (and everyone will wonder how that fits in here) concerning penny disputes and the stupidity of the Christian cliques for, which, according to the author's opinion, were al, too, an appendix to these. When one despairs of offering to the world so few, hastily composed, and as regards the war, drawn from the newspapers, under a splendid and very promising title; then the complaints about the multitude and boldness of the authors, as well as the deceptive titles of the books, will be steadily, more and more justified.

Rémarques fur le militaire des Turcs & des Russes; fur la facon de combattre les premiers 6? c. for the Georgians, Coschidois, Mainottes, Montenegrins, Albanois, Chrétiens Gfecs (tfc. avec Plans par Mr. de Warnery, Major General. Breslau 1771. 12. large 264. pages. In the first Heading, he treats of the Military State of the Turks very nicely. One must allow him minor errors: for instance, in the beginning, that the dead three Turks were buried only about one foot deep under the earth, whereas it is nevertheless about two yards: the Commando in a Turkish Army was not separated, (Wade. 48.) and the General does indeed hold a Divan, but decides according to his own judgment; which is only true of a Seraskian. According to his assertion (page 49.) the Bassa of Runielië would have led the Turkish army command, if it were in Europe; but the Bassa of Natolia, if it were in Astë, because these were like the native SetasBërs. He assures (page 61.) quite, that one counts all Servants, Merchants, etc. in a Turkish Army, and thus constitutes a large Army, but that one can consider only the third part as Soldiers. That these for the rest, (page 6a.) excepting the men in the service of the Porte, are only administered from the day of

George to Demetrius, according to the old style. — In the second chapter he judges
 39735 not bad of the Russian Army, the Fleet and the character of that Nation. The idea,
 common to Voltaire (page 142.), that men could not have proceeded from an earlier
 Pair, because they were so different in several Provinces, I leave to the judgment of
 the readers. — When, in the third Heading, he speaks of the Georgians, Cossidae, and
 39740 other peoples, who could take up arms in favor of the Russians; he expresses the
 misunderstanding, as if the greater part of the subjects of the Porte consisted in
 Christians of the same Denomination as the Russians. By Asia he mentions the old
 Czschis, to which at present Mingrelia, Imirette, and Guriel are reckoned, of Georgia
 proper and Armenia; but by Europe, of the Greeks, Maroons, Albanians, Montenegrinese,
 in short. The last Chapter presents the manner of fighting the Turks on nearly a
 39745 hundred pages. The whole work is a very good instruction, which no Officer, I do not
 mention a General, can do without in the war against the Turks. But I must not forget
 that the remarks, very inappropriate, are ordered in the Text. Description of the
 City of Constantinople and of the Bardanellen. (Hoogd.') Berlin, *7?i. 8. large one
 and a half pages, without the name of the author. This is a, according to his
 39750 confession, drawn together from Journefort, Thevenot, Spon and others, and not a bad
 description. To give Thevenot a Rem is, according to what I have previously reported
 of him, indecent. In the meantime, one rarely remains without misdeeds, when one
 draws from even the most certain sources, but has not oneself been to the place or in
 the provinces. For example, on page 18 it is said: that an Asper is about three
 39755 pence, which is much too high; it is noted that three of such Aspers go to a Para,
 and 146! of these to a Dutch Ducat. According to page 25, the Genoese were still
 Patrons of the Georgian Church, since they were nevertheless cast entirely outside
 the Levant, and had to move there, in trade, under foreign protection. On page 26, it
 is stated of the Hungarian, or German-Imperial, as well as of the Polish Ambassadors,
 39760 that they lived in the city of Constantinople: this was so in former times, but no
 longer; for now they dwell with the other Ambassadors at Pera.
 These are the principal Authors, of whose works, as far as they belonged to my
 profession, I have set down my judgment, with that impartiality, as I myself wish,
 that the readers may pass their judgment on my essay.

39765
 END of the SECOND and LAST PART.

HISTORICAL REPORTS OF THE GOVERNMENT, CUSTOMS, AND CUSTOMS OF THE OTTOMAN MONARCHY
 BY PETER BUSINELLO, Secretary of State of the Republic of Venice.

39770
 PREFACE.

The Author of these reports, of which I have given a material extract in my work, \$.
 LIV. by quoting and judging the writers of the eighteenth century, died in the year
 176??, in Venice, and was, in his lifetime, considered one of the greatest
 39775 politicians of his time. Formerly he was Secretary of the Embassy of the Bailo or
 Venetian Envoy to the Porte; and on that occasion he collected the materials for this
 work, which he sent and appropriated to the then Doge of Venice. The famous Professor
 and first Librarian, ??e Bret, at Stuttgart, has divided it, and made it known in the
 first and second part of his Magasin for the use of History. I have looked it over
 39780 again with an Italian Manuscript, and changed several things in the notes, but
 especially restored the often completely mutilated Turkish words and names. Otherwise
 the Text, with the exception of a few minor improvements, is printed as it was, only
 the unnecessary dedication, as well as the repeated transitions from one section to
 another being omitted, because they are indicated above each section itself.
 39785 STOKHOLM, in March 1778.
 D. CHRISTOPH. WILL. LÜDEKE.

I. INTRODUCTION.

You, Most Illustrious Prince, have charged me, when I left Venice, to write to you
 39790 often, and I have promised you to do so.
 I know your noble curiosity; I know therefore also that you desire essential, and not
 small and common things from foreign countries. For what use is there in the
 knowledge of the condition, the state, the factories, the customs, etc., when they
 are only such things that one finds in all countries? Since, I now know that you
 39795 require essential knowledge; I want to enable you to form a right idea of this great
 Empire, which, perhaps, will differ entirely from what one forms about it in Italy.
 I will therefore give you a description of the origin, the religion, the doctrine,
 the customs, and various religious arrangements of the Osmanis. Hereupon I shall
 conduct you into the Seraglio, and concerning the distinction of the people and

39800 offices of that same jurisdiction. Then I shall speak of the Ministry, the variety and prestige of the Ministers, of the manner of government in the subjected cynical and united Provinces, of the order in maintaining the law, and of the Policy in the capital. Then I shall proceed to the State-household, and distinguish the funds, revenues and State charges, as well as speak of the Commerce which the subjects and
 39805 inhabitants of Asia, Africa and Europe now carry on here. Whereupon the Military State will follow, which I shall indicate accurately: I shall also treat of the Artillery, the State of War, and of the Militia. Finally you will find, what kind of Policy the Ottomans observe in the government of their own Kingdom; as also, how they regard foreign Princes, their Ministers, and with what Ceremonies they receive them; and lastly, what must be observed in the negotiations with this Court.
 39810 If you do not find in these documents that accuracy which corresponds to this vast Empire; then permit me to tell you, that the size of the Empire itself makes a greater accuracy impossible. How can you desire that a Minister, who, during his Ministry, must employ Interpreters, should know everything? He learns to know the Nation, with which he stays, from a certain Ministerial point of view. But of this you may be assured, that what I write to you is true and credible. It is true, that this is the usual assurance of every one who writes of a foreign country; but perhaps this assurance is not always well founded. To convince you now of my sincerity, I need only assure you that I have not the least interest in this nation, which could
 39815 induce me to exalt its virtues. I have therefore no other motive than pure justice, which teaches me not to charge it with those faults which it has not, and not to magnify those which it has. I will therefore not be one-sided, nor show hostility and prejudice against this nation; and I will not even blind my place of residence, which otherwise keeps many writers captive. I will report nothing but what I have either
 39820 seen myself, or about which I have many credible witnesses.
 39825

II. Of the Founder of the Mohammedan Religion, and the Motives which moved him to establish it.
 Everyone knows that Mohammed is the Founder of that Religion which the Osmanis profess. All writers also agree in this, that Mecca was his birthplace; but all
 39830 differ in respect of the nature of his origin, and the Motives which determined him to set himself up as Legislator. After that I have, in this respect, examined many old original writings, which are found here in the Library of a distinguished Greek; I will now inform you of what seemed to me most probable in this respect concerning this fortunate Chief of Army. To know him aright, it must be known, that Arabia, which, because of its
 39835 fruitfulness, is called the happy one, in which also Mecca, the fatherland of Mohammed, lies, was at the time of his birth, (as it is now,) inhabited by peoples, who were divided into several Republics. Each Republic, which was called a Tribe, had
 39840 at its head or Head, the oldest and most distinguished of one of the principal Families of which the Republic consisted. The tribe of which Mohammed was, bore the name of Kureysch, whose principal Family was called Haschem. This had at that time for Head Ae'bdal, Mothleb, whose first-born son was called Ae'bdullah, being Mohammed's Father. This Family dwelt on the coasts of the Red Sea, and Ae'bdal-Mothleb was Priest in the Temple at Mecca, where the Idols of the country were worshipped. As Head of the Tribe he was Prince over these places, and in this
 39845 capacity he waged wars against the Persians and Ethiopians; which proves that Mohammed was not, as many pretend, descended from the lowly common people. His father died before his grandfather ?? Mohammed's youth caused him to lose his own rights, when his uncle placed himself in possession of the sovereignty. In this way Mohammed, who was born to command, found himself in the sad necessity of going into the service of a rich widow, Chadiga. The writers are not agreed whether they traded with camels and mules in Syria, or whether they only had a shop at Mecca. But however it may be, whether he served as a boy in that shop, or as a mule-driver; this much is at least
 39855 certain, that he was in the service of this Widow; that, afterwards, through her close intercourse with Mohammed, who had no common strength, she fell in love with him, and married him, whereby she made him one of the richest Merchants in Mecca. Mohammed was then thirty years old, but at the same time subject to epilepsy. He desired that his wife should not perceive his weakness. His wealth made him ambitious to reassert his own rights, and to place himself again in that post which his uncle had taken from him. Intercourse with the Christians of Egypt, and with the Jews of Judea, whom he had become acquainted with in his business, had instructed him concerning the variety of Sects, from which he concluded what a consequence the variety and zeal of sentiments might have in matters of Religion. On this resolution
 39860 he built his own interest, and resolved to become a Legislator of a new Religion. The
 39865

circumstances of the time could not have been more favourable to his purpose. The Arabs were weary of their old Idolatry, and were falling into a sort of Ungodliness; therefore Mohammed began to lead a sober and exemplary Life, and spent most of his time in a few contemplations. When his illness came upon him; then he told his wife, he fell because he could not bear the face of Gabriel, who, in God's name, revealed to him many important things concerning religion. Chadiga, who was either really deceived, or pretended to be deceived, spread in all houses that her husband was a prophet, which he had confirmed by his servants, and by another trusted person, whom he had instructed for that purpose. When he saw that he had admirers, he began to speak more freely of his revelations and visions, knowing well that these are the most powerful means to attract the people.

In the meantime his uncle, the governor of Mecca, died; and, not being strong enough to obtain the government, he was obliged to yield to one of his blood friends, who, on account of Mohammed's designs, became jealous, and forced him to leave Mecca, and flee to Medina, where the greater part of the inhabitants, who were Arians, were seduced by his intrigues, and adhered to him. Seeing his followers daily increasing, he ceased to prove his new sect by reason, and persuaded his friends that his doctrine must be extended by force of arms. To this end he sought to strengthen his own party by alliances, and married the daughters of the four most important inhabitants of Medina. With the help of these he began to conquer one tribe after another until he finally became master of the city of Mecca. But, because he had wars with the Arabs, and had much reason to fear from the Christians; he was, as a good politician, anxious to protect himself against this danger, and concluded with them a solemn treaty, of which the original was found in the monastery on Mount Carmel (*), and brought to France, where it is still preserved in the King's library. According to this treaty he bound himself to protect the Christians in their Persons, Churches, Monasteries and Properties, not to disturb the Clergy in their Parishes, never to compel them by force to renounce their faith, nor to compel the Monks to give up their Orders, not to destroy any Church, nor to convert it into a Mosque, not to burden them with greater taxes than the Mussulmans, to relieve their Ecclesiastical Fathers from all burdens, not to compel them to perform military services, but rather to be concerned with their defence, not to compel the Fathers and Mothers of Christians to marry their daughters to Mussulmans, and, if a Christian woman married a Mussulman, he would allow her freedom with regard to her religious practice. He further commands the Mussulmans not to compel the Christians living in their States to do slave-services, nor to act tyrannically towards them in any way. On the other hand, the Christians, according to this Treaty, bound themselves not to help an enemy of the Mussulmans, to support him, nor to receive him, nor to shelter him in their houses, but rather to treat the Mussulmans well, and to exercise hospitality towards them. — This Treaty, which Mohammed himself, afterwards, so little followed, protected him then from danger, and made him accomplish his own Plan. His hypocrisy and deceit helped him, at last, to the Sovereignty, to which he stood, having the happiness, so rare for impostors, to see the progress of his Religion, and to transmit his Dignity, at his death, to his posterity. This is the History of the false Prophet, which I hold among so many to be the most probable, because it agrees most with the thing itself, and the nature of Policy.

(*) This is a mistake: it must be Sinai. Also, the alleged Original is from the Secretary of the Seraglio in the Library of the King of France.

III. Of the Religious Postulates of the Turks.

The law of the Turks is contained in three books, the first is the Koran, which prescribes the articles of faith. The second bears the name of Esfunnet, explaining the traditions of the Prophet, and the sentiments of the Wise Men. The third treats of the consequences which may be drawn from the first two. — The Koran was written by Mohammed himself, who, besides the religious commandments, also added a rule for civil government. The other two were drawn up by his four first successors, namely Ebubekr, Omer, Osman, and A'ely. Also the decisions and decrees of the Chaldeans of Babylonia and Egypt were considered infallible, because they were teachers and expounders of the law. But, as their temporal power has diminished, so has the feeling of their infallibility diminished. — In the explanation of the law itself there is a great difference between these Teachers, especially between Omer and Ae'ly, the two successors of Mohammed, who directly contradict each other, and who have produced the two Sects hostile to each other, namely Omer the Ottoman, and Ae'ly the Persian. (*) Here I will speak only of the religious tenets of Omer's followers, as it is the religion of this kingdom. They have only one article of faith, namely, that there is one God and Mohammed his

Prophet. But, if one would be a good Mohammedan, there are five practical articles which he must observe, which they call the fundamental parts of the religion. The first is washing; the second, prayer repeated five times a day; the third, fasting in Ramasan; the fourth, the blind observance of the Sfaedaeket, or giving of alms; the fifth, the pilgrimage to Mecca, when there is no legal impediment. To these five principal articles are added some others, which are indeed of a lower class, but nevertheless make him, as we might say, a sinner who does not observe them. But they are not observed with much care by the Turks, and are not regarded by many of their teachers as essential parts of the religion, but as such things by which men are turned to fulfil the necessary commandments of the law. Among these are the abstinence from pig meat and wine, circumcision, and the observance of Friday as a day of devotion. Concerning each of these Articles of both classes I will tell you something. I will begin with washing, which is the first necessary Article for a true Mussulman. Of this there are three kinds. The first is called Ahdest, by which one prepares oneself for prayer. This is observed before one goes to the Mosque. The second is called Guful, and is done by the use of baths, after intercourse with the other thought, or some other chance at night. The third is called Thaeharet, and is done after one has done one's business. Of the first I must tell you a little more, especially since I have not yet come across any writer who has spoken of it. First they both wash their hands, and say: "Blessed be God, who created pure water, and gave it the power of cleansing, and has made our faith glorious." Then they take water with their right hand into their mouths three times, saying as they wash: "I pray thee, Lord my God, to give me to taste of the water which thou didst give to the Prophet Mohammed in Paradise, which is more fragrant than balm, whiter than milk, and sweeter than honey, and has the power to quench the thirst of him that thirsteth for ever. Then they draw water through their noses, and say: "Give me, O Lord, to smell the odor of Paradise; let me enjoy it, and let me not taste the stench of Hell." Then they wash their whole face to the ears three times, and say: "Cleanse, O Lord, my face, as, on the day of judgment, the face of your Prophets and all those who will have obeyed you will be. Then they take water in the flat of their right hand, and say: "Let me, Lord, on the last day, give the book of my works into my right hand, which is the hand of the Elect, and forgive me my crimes. Then they take water, as before, in their left hand, and say: "Let me not give the book of my Sins from the left hand or from behind, and do not enter into judgment with me, because of my crimes. Then they wash their foreheads, saying: "Receive me, O Lord, with thy mercy, when I shall appear before thee, and impress upon my head the virtues, and not the vices." - Then they take water with both hands, wash their ears with the two thumbs, and say: "Let me, Lord, be of thy servants, who give ear to what is written in the holy books, and direct themselves thereto." With the other fingers they wash their necks, and say: "Free me, Lord, from Hell and the bonds, which one, here, the neck and feet". They wash their feet, without ever failing to do so, at one of the five prayer hours. At other times it is enough when they touch the right foot with their fingers, which they always do with the left hand, and say the following prayer: "Hold me fast, O Lord, and do not let me slip from the bridge of Hell". They say bridge; because they believe that a bridge leads to Paradise, under which Hell is, but which is as narrow and narrow as the cutting part of a knife. Finally they also wash the left foot, and close with the following prayer: "Receive, O Lord, my prayer; forgive me my guilt: accept the offer which I make to you, that this my prayer may not be unfruitful. These are the ceremonies of washing, when they prepare to go into the Mosque and pray there. In the other two washings they do not speak a word. Now I pass on to their prayer. The Koran commands that they should pray five times every twenty-four hours; first at the rising of the sun; second at noon; third between noon and the setting of the sun; fourth after the setting of the sun; five and a half hours after midnight. To all these five times they are exhorted from the Menaret or tower, by certain appointed men, who chant prayers and pious invitations. They perform their prayer with an attention and collection of thoughts, which is worthy to be imitated by the lovers of the true religion. They so exert their minds, that nothing may distract or distract them from it; yes, according to their superstition, they go so far in this respect, that, when either coughing or sneezing disturbs them in their prayer, they consider themselves obliged to begin the prayer again from the beginning. Now these prayers are not taken from the Koran, but from the writings of the four principal teachers, Ebubekr, Osman, Omer and Ae'ly. In these prayers they make endless turns and twists of the body. They stretch out their arms, raise them upwards, fall down, and touch the ground with their foreheads. The third

article concerns fasting and in Ramasan. This lasts a whole month, which has the same name. I do not believe that there is a Confession in the world that fasts more strictly. From the rising of the Sun until its setting they may neither eat nor drink, nor smell anything; in a word: they may do nothing that affects one of their five senses. Poor people observe it with the utmost severity; for the most severe punishments are imposed for the transgression. It is said that in former times molten lead was poured into the mouth of a man who had not kept Lent. But whether people have become wiser in the meantime, or have adopted a reasonable zeal for religion, I at least, as long as I have been here, have not yet seen anyone punished for it. I also believe that this commandment has never been less observed than at present, especially by people of rank. But, as strict as the mode of life during this month is during the day, it is just as extravagant at night. People then go from one house to another; they hold banquets, and spend whole nights in drinking and revelry. The fasting consists chiefly in changing day into night, and for the present time, besides that, it is usually observed only by the common people and the common people. The fourth article prescribed by the Koran is Sfaedaeket or giving alms. By this every one is obliged, annually, to give a part of a hundred from his income, to maintain the poor. But it is difficult to think, that at least among people of rank, the Police and avarice would not oppose the strict observance of this commandment. It seems to me impossible, that avarice would permit someone to deprive himself of a sum, which in itself can become very considerable. Rather, prudence advises everyone not to let the true condition of his wealth be openly known. The fifth article concerns the pilgrimage to Mecca. The Koran commands this to all who are able to perform it, unless they have important positions in government or other legal impediments. The pilgrims usually depart from Constantinople in the month of May, going to Damascus, to join the pilgrims from Vaio?? and other Asian countries. Then they join those who come from Persia, Egypt, and other Ottoman (*) kingdoms, which amounts to a number of fifty or sixty thousand people every year, (†) who assemble on a mountain near Mecca, and there make an offering, consisting in killing some lambs, and then distributing them among the poor. Then they take off their clothes and wrap a coarse blanket around their bodies, in which clothing they climb the mountain. – The Great Lord sends, every year, five hundred Zechines and a Koran covered with gold, as a precious cloth, to cover Mohammed's grave with. (*) When the new cloth is laid over it; the old is taken away beforehand, and divided into small pieces among the Pilgrims, who keep them as Relics.

After that I have told you as much as I know concerning the principal articles of their Religion; I now come to the other less important ones. Circumcision is not prescribed in the Koran, but the Turks observe it as a custom transmitted to them from their ancestors, and consider it a necessary sign of a true Believer. It is performed by a surgeon, without the assistance of a Priest. Many Ceremonies are associated with it, but which resemble more a Bacchus festival than that they would be signs of a Religious ceremony. The observance of Friday has no other cause than convenience and amusement. Women have more advantage by it than men: for, while pretending to keep that day holy, they find, under the pretext of bathing, convenient time to communicate their ideas to each other. – As for eating pig's meat and drinking wine; I must tell you, that this is a commandment or a custom, of which now scarcely anything but the name remains. The Turks call such things Haerem, that is, filthy and disgusting things. (*) For at present, certainly, more wine is used in Constantinople than in Venice; and, if I told you, that they use twice as much, I should say no more than the truth. There is no one left, then, but a few hypocrites or sharp wits, who are by nature enemies of the name and all customs of the Christians. These people still look upon drinking wine with contempt. But among men of rank there is no one, who does not use wine, and endeavors to have the best and from the most distant countries in the house. On the other hand, they use the Liqueurs and Rofolis [Rosolis??] incredibly strongly, because they believe, that these things have more resemblance to water; as I can assure you, that I have seen them, at one time, drink whole cups full, of which we use for drinking water. Rofolis they give the name of breast-water.

(*) Instead of Osmansche it should have been Secte der Sinnitessche, ?? of Persian, Secte der Schiiten.

(*) This must be Mohammedan.

(†) Their number is much greater. Each particular Caravan?? is almost as strong.

(*) But this is not at Mecca, but at Medina.

(*) Actually, forbidden, unlawful things.

IV. Of the Beyram, the principal Feast of the Turks; their marriages and divorces; how far they extend their marriage; and of their moral works.

The Beyram is the greatest Feast of the Turks, and corresponds to our Easter. It commences at the moment that the moon is discovered, which follows the month of Ramasan. It is made known to the people by the sound of many instruments, and by the firing of the Artillery from the Seraglio and the suburb of Thöpchaneh, and the Common People rejoice for the three days that it lasts. On this occasion many ceremonies take place in the Seraglio. The Grand Lord, at daybreak, proceeds with all his retinue, in the greatest splendor, to the Mosque, and having returned he receives the Compliments of the Vizier, of all the Ministers and Lawyers, who, one after the other, prostrate themselves at his feet, and say Gianscherif, that is, Hail to the Prince, (*). The last who compliments the Grand Lord on this occasion is the Aga of the Janistas. - In these days the Sultans, locked up in the old Seraglio, have the liberty to visit the Grand Lord, which happiness also the Sultana's mother and consort, when they are present, have with the other women. On this day the Grand Lord has the principal officials of the Empire entertained magnificently, presents sixteen of them with Furs, and with that the Ceremony ends. Seventy days after this, which is called the ??roeten Beyram, follows the other, which is called the small or Kurban, that ??ijer-beyram. On this day the Sultan also rides out with great state, and goes to the Mosque before he enters it, at the door three large camels?? are prepared, which, by their beauty and size, distinguish themselves from others; they are somewhat decorated, and in some places the moon is painted on them. The Great Lord slays one, whereupon the others are also slayed. All are distributed among the people as an alms. Everyone makes, on this day, an offering, according to his ability, and these lambs are also distributed among the poor. This offering takes place on the first day; but the joy and this Feast last, as with the others, three days. Marriage is held sacred by the Turks, although none of the Ministers of their Religion take part in the ceremony; for it is only ratified by a Kadhy or Judge of the place. The Bride is not present at the ceremony itself, but in her place her Father or one of her Relatives goes for her to the Kadhy, and attends the ceremony. The Bride is then conducted to the house of her husband, who in person undresses her and puts her to bed.

The Turks have a second kind of marriage, called Kjabin, which is also concluded before the Kadhy. By means of it a man may marry a woman for a certain time, and then leave her again, when he has paid the Somme, fixed by the Contract, and which is always very small. This kind of marriage is ordained for the benefit of travellers. - The Turks may marry any woman, of whatever religion she may be, if such a religion has books written for its benefit. (*) Even the Enemies are free to marry, and there are some who have more than one wife.

Polygamy is permitted by their religion; but according to political laws it is forbidden, after the example of the legislator Mohammed, to have more than four wives, because the man is obliged to pay each her own dowry. But, in order that this law may not take away the freedom to be able to use women, who, according to them, are given to them by God, they are free to keep slaves, the number of which has no other limits than each one's caprice and ability. It is strange, and one sees clearly, how much first impressions and an old custom with such a people can do, that the women, because of such a Concubinage, show a jealousy. - The man is bound, indeed, to admit each of his wives into his bed once a week; and, if he does not wish to do this, his wife can complain to the Court, and have him compelled by a Judge.

Many such complaints are also related; but generally they are only made by people of the lowest kind. People of a higher position know well how to help themselves, without so much commotion, and in a way more agreeable to their wives. - The insult for the unchastity of a woman falls among the Turks not on the man, but on the elders of the women, who have the displeasure that their daughters are sent home to them. As for the children; those who are brought into the world by the woman are considered as children of the Father; but the children of the Slaves become Slaves of the first-born Son of one among the women, when otherwise the Father has not made provision for them in his Testament.

The Sultan is not obliged to marry, but has the freedom to take as many wives as he pleases. But it seems to be a rule of state that he may not take a wife. But I think that the only reason for abstaining from it is to save the astonishingly great expenses that were incurred in marrying the former Sultans.

The Turks have two gates of divorce, which all take place in the presence of the Kadhy. The first only separates from the bed; the second also separates completely from the house. The man must pay the woman the sum fixed in the marriage contract, and the woman has the freedom to marry whom she pleases. If the man, after the

divorce, regrets that he has divorced his wife, and wishes to marry her again; then he is not permitted to do so by law, if he does not previously tolerate another sleeping with his wife in his presence. But it is natural that there has never been a Turk who has taken a wife back on such a mocking condition. (*)

The moral deeds of the Turks consist, mostly, in giving alms to their fellow men. These extend so far that they build public houses or Chans, for the convenience of travelers, of which buildings are very expensive, which have considerable income. To this they also include the construction of bridges for the convenience of travellers over the rivers, the water pipes and fountains for the same purpose, the public hospitals for the care of the sick, the public schools for the education of children and for their instruction, not only in the Koran, but also in the Persian and Arabic languages. The most distinguished Turks seek to perpetuate their name by erecting Mosques, and on all kinds of aforementioned buildings they are wont to spend much money, according to their taste. But this part of Turkish morality is also accompanied by many prejudices and superstitions. Their love extends even to the dogs they see in the streets, and to the Camels, which they load less heavily in their freight from one place to another.

They never throw a written piece of paper on the ground; indeed many pick it up when they find it, even when such letters are written on it that they cannot read, on the ground that such letters, with which one writes God's name, may not be trampled underfoot. According to this principle, it was very offensive for a Turk, who saw one of our Latin Churches, to see inscriptions on gravestones.

The most praiseworthy, and I would almost say, the most enviable part of their morality is, certainly, their esteem for, and their trust in God. (*) In their language one does not know what blasphemy is; and they never undertake anything without saying, In Sha Allah, that is, if it pleases God. Thus, even in the most absurd and simple Religion there is something from which one can derive benefit.

(*) Should probably be: Indschjahh-Scheryf.

(*) This is: reads books that contain a Co??te Revealed, such as the Christian and Jewish.

(*) Yet it would not be without examples. But how man can moderate this, one sees after \$. ?? page 371. in my description of the Turkish ??

(*) This trust in God loses much of its value, prayer, when one thinks of the absolute predestination believed in by the Turks. According to this one seems to prove a trust in God, since it is nevertheless nothing else than this predicate: what happens, that must surely happen.

V. Of the Religious Governors among the Turks.

After I have given you an account of the origin and condition of the Turkish (Mahometan) Religion; I now come to those who maintain the affairs of Religion. The Mufti is the Head and Oracle of Religion and the law, consequently the highest Priest. His choice depends solely and exclusively on the Great Lord, who usually appoints men of standing, understanding and proven integrity. The decrees of the Mufti are as many laws for all Judges, but not for the Prince, who, when he asks him about a matter, and does not receive an answer that pleases him, takes away his dignity as well as his infallibility, and appoints in his place another Oracle, who solves the difficulties in a way that is more suitable to his wishes. Nevertheless, the Sultans always have great respect for the Mufti, and seldom oppose his decisions. These always end with the expression: God knows what is better. When the Sultan writes to the Mufti; then he uses the following words: "To you, Effad, who are the wisest of all the Wise, instructed in all knowledge, the most excellent of all the Excellent; who abstain from unlawful things; who are the source of virtue and true knowledge, and the heir of the Prophetic and Apostolic Doctrine; you solve the questions of faith; you make known the Articles of true faith; you are the key to the treasures of truth, the light in doubtful Allegories; you are strengthened with the grace of the supreme Guide and Lawgiver of mankind; the great God eternalize your virtues!"

When a Mufti is elected; then the Grand Vizier calls him to the Seraglio, appoints him himself to his dignity, and has him put on a fur coat, which is lined with white cloth; on which he has a handkerchief with a thousand piastres put in his hand. Then the Mufti goes to the house of the Vizier, who receives him at the stairs, gives him the higher hand, and likewise clothes him with a fur coat, but lined with green cloth, and has rich presents brought to the house on top of it. The Sultan allots him, daily, two thousand Aspers, which amounts to about four and a half Zechines of our Venetian money. He has no other fixed income; but, as he has the right to grant many offices to the Imperial Mosques, and all promotions of the lawyers must pass through his hands, he draws a considerable income from it. In former times his income

was about fifty thousand lion dollars; but now, when avarice and luxury supplant all strict and scrupulous honesty, I believe that the income of this highest priest amounts to four times as much. The magnificent house in which the present Mufti lives, and the numerous court which he keeps, testify to this. His physician, who has visited his sick wives in her haerem, assured me that he has about sixty of them. For the rest, this is the only dignity by which, even if the person falls into disgrace, his goods are not yet declared confiscated. What the Mufti possesses is considered something sacred, and cannot therefore be touched, even if he is guilty of a crime of state. Now since everything is in his Children, it follows that a House which has had a Mufti, always remains a large and wealthy Family.

This exalted Dignity is followed by that of a Kadhy Leschkjer. Of these there are two, one from Rumelia, and one from Natolia. Their first destiny was to judge the legal cases of the Soldiers, one in Asia, the other in Europe. But now their right extends over all kinds of Persons; they hear and decide legal cases of all kinds. This Dignity is the step to the highest Priesthood.

Then follows the so considerable Dignity of a Mula. Of these there are two kinds. Those of the first class have, daily, five hundred Aspers, and the jurisdiction of a Bassa of three Horsetails. The Kadhy in the cities depend on them. Those of the second class are the principal Judges in the smallest Provinces; and, as they have only Kadhy of small places and poor towns under them, they have consequently only moderate incomes. From the first class are usually drawn the Kadhy-Leschkjer, consequently such Persons as can attain the Dignity of a Mufti. These Mula and Kadhy, who are called men of the law (U'lema), are, like the Mufti, counted among the Religious Governors. For, considering that the civil law as well as the Religion comes from their Prophet, the Turks never separate these two classes. The College of the Mula is held in great esteem, and is also treated with extraordinary respect by the Monarch himself. As they are the interpreters of Religion and the Law; Thus, in previous times, many examples have been seen that they, because of emotional and religious difficulties, are always prepared to be supported in their decisions, even when the reason is the deposition of the Monarch.

Since they know well how strong this impression is; thus they will always know how to gain respect from the people and the Monarch. The principal overseers of the Mosques, who are called Imam, are chosen by the first Visier. (*) The people of their wisdom must recommend them to the first Minister, who then appoints them by his command, without needing any other Character or Order to perform their office. They must be able to read the Koran, and have observed the ministry of those who from the Towers call the people, with a loud voice, to prayer. The Mufti has no jurisdiction over them, because each of them is independent in the government of his district, but in civil and capital matters they are all subject to the usual Authorities. (†)

Among the ecclesiastical Persons one may also count the Emyrs, who distinguish themselves from the other Turks by the green Turban, which is the color of the Prophet. Emyrs are those who descend from the Prophet himself, and are divided into an infinite number. This right of descent is possessed both from the Fathers and Mothers. For when an Emyr marries someone who is not an Emyr; then the children born from this marriage have the privilege of the Emyrate, which they propagate to all their Children, both of the male and female kind. These Emyrs have their Chief, who is called Nakyl-al-Efchraf. His principal work is to increase the number of the Emyrs as much as possible; wherefore he enrolls all those as Emyrs who can prove their descent from Mohammed in any way. Their Chief has an indefinite power over them; but never lets them be punished openly, to prevent scandal, and to keep their thought in good esteem with the people. He has a Governor, who bears the name of Je Umdar, and has the right to carry the Prophet's banner on all solemn occasions, as often as the Sultan thinks fit to take it into the field.

The Emyrs are capable of all offices, and can attain to the highest dignities of the Empire. They have very excellent privileges, among which the most remarkable is, that they may not be offended or insulted, without the guilty one raising his hand. But the Turks soon devised means to divide this privilege: for if disputes arise, or they find an Emyr drunk, they take from him the green turban, which is the sign of the Emyrate, and afterwards, without any gravity, they pass him through clearly. The greater part of those who carry on the slave trade are of this kind. For this, besides their innate hatred of Christians, they were also in esteem because in obeying the commandments they were the most zealous Mohammedans, and in keeping their promises and treaties the most honest Turks. But, I can assure you, that it is now quite the reverse. For the Emyrs excel others in the greatest vices of lust and drunkenness.

(*) If this may happen here and there, it does not happen always.

(*) This is, by far, not to be expected of all Mosques.

(†) One should remember from the foregoing that the actual Judges are ecclesiastical and civil Persons alike.

40270 VI. Of the Monastic Orders among the Turks.

The Turks have also, after the example of many Christians, a kind of Monasteries; in which Ecclesiastical Persons live. I have taken much pains to discover, when and how such an arrangement arose. If one speaks with these Monks themselves; then they tell one such extraordinary and fabulous things about this, that, whoever has the
40275 slightest understanding, cannot possibly believe it. What they say, is also so contradictory, that it appears to be untrue.

Some of them assert, that the Orders of the Dervish, were ordained and instituted by their Lawgiver himself; others attribute it to his four Disciples; still others to a very recent origin. Some believe that he was charged, in a trance of the first

40280 Founders of the Mohammedan faith, by a voice from God himself; others will that he was presented to the Disciples and Descendants of Mohammed, in a trance, by their Prophet himself, as in a picture. Others still bring forward more absurd things, which are not worthy of being quoted. The most probable thing I have been able to

40285 ascertain concerning it, is this: that the Monastic Orders arose under the reign of Orchan. This warlike and fortunate Emperor conquered many Kingdoms; extended his dominion almost over the whole of Nato, and established his Imperial Seat at Bursa. Then, to give a witness of his gratitude to God and his Prophet, he appointed

Persons, who, according to established rules, said prayers, and instructed the newly conquered peoples in the Religion. It is said that for this purpose he made use of
40290 two Persons, who had the reputation of pious at his Court, the name of one being Nackschbendy, and that of the other Chaelwety. The first had as pupils Ebrbuhar and Mewlana; and the last six others, Kadry, Bektasch, Herevy, Edhemy, Kalendery, and Nimetulahy. All these founded a special Order according to certain obligations and Methods. It is difficult to give a true description of their Doctrine, customs, and

40295 Monasteries: but I will say something about it. The Mewelewites, founded by Mewlana, have their principal Monastery at Kogni, consisting of four hundred (*) Monks. On this Monastery depend all others of these Orders, and even that at Constantinople. They are called Dervish; (†) and I was assured that they have the greatest respect for their Superiors, before whom they never appear otherwise than with their hands on
40300 their breasts, with downcast eyes, and with their heads bent forward. They wear a shirt of coarse linen, a robe of dark wool, a surcoat of white wool, and always go with their breasts and feet bare. On their heads they wear a kind of round and long caps of camel's hair, and gird themselves with a leathern belt. They generally have a rosary in their hands, and make their prayers according to its beads, and repeat the
40305 name of God. Except the fast of Ramazan, they fast every Thursday. On Tuesdays and Fridays the Superior of the Monastery preaches a sermon, in explanation of the Koran and other books of the Teachers of the Mohammedan religion. When this is finished, they make a deep bow to their Superiors, and, accompanied by a symphony of

40310 instruments, they turn about with such a rapidity that one can no longer distinguish their faces, and with such grace that they follow in a certain respect the tone of the instruments. As soon as these cease, they also cease to whirl themselves about, and it is wonderful that after whirling about, which may have lasted at least an hour (*), they do not finally become quite intoxicated. That much does custom; for after this they practice from their childhood, after the example of Mewlana, their Founder,

40315 of whom they tell the fable, that he had whirled about in this manner for a fortnight together, without taking the least food, and that he fell into a trance, and had apparitions and revelations, which moved him to found these Orders. These Dervish have Monasteries in all the considerable cities of Turkey, where they receive all the pilgrims of their Orders, and all the Turkish Monks. For no one travels more in all
40320 the Mohammedan countries than they. All these Dervish use Opium in great abundance, to which they gradually become accustomed, and at last bring it so far, that there was not one among us, who, without fainting, could eat but the fourth part of it.

After they fall asleep by this, they lie as if intoxicated, and become aware in their Mind of a certain joy, but without order and reason. Upon this they remain senseless, which they call a rapture, saying, that their Founder brought it about by such means.
40325 Now they also accomplish such things by wine, noting that no one in Turkey commits greater excess in wine, than the Dervish.

Monks of the Orders of Honour fast on Mondays and Fridays, and with such strictness that they even abstain from smelling. They are the strictest in Morals, and
40330 constantly occupy themselves with speculations. But nevertheless they are held heretics, because they say that the journey to Mecca is not necessary for salvation. These are the two Orders of Nachsci-ibendy.

Among the six Orders that came from Chaelwet, the most important are those that Kadrv founded. The Founder of this Order, it is said, lived very virtuously and moderately. At present the Pilgrims still make pilgrimages to his grave, which lies in the region of Baghdad. According to their Order's rule, which rests entirely on moderation, none of them may eat more food during the day than eight Ours weighed by us (*) Every Tuesday they spend the greater part of the night in turning themselves round to the sound of a small drum, and in constantly repeating the word Hajji, that is, the lively, a property which they attribute to God. They follow this Ceremony with such vehemence that often the blood runs from their mouths, and their breath fails them. They always go barefoot, and never shave. They also say a kind of prayer, which they listen to each other in the ear. - Marriage is not forbidden to them; but in such a case they must live in a house, and may only go to the Monastery at the time of prayer. These Orders also often produce delights through Opium and wine. The Herewites have the giving of alms as a rule of the Order. But they extend this love to animals, and one of their greatest cares is that they take care of the dogs that run in the streets. They take a vow of poverty, and boast that the Founder of their Order was very knowledgeable in chemistry. Of these Orders, most are found in Baghdad, Cairo, and in the city of Bursa, where he was founded. Ibrahim Edhemy was an Abyssinian by birth, and it is said that he led a very strict, religious, and edifying Life. His disciples tried to follow him, and their institution has preaching as its aim. This Order is not in Constantinople, but flourishes mainly in the Persian Empire. Calendar is called the great Saint, because of the holiness of his Life. It is said that he went bareheaded, completely naked, covered only with the skin of a wild animal. His disciples, on the other hand, live quite differently, banishing all kinds of abstinence and melancholy. They say, when God lets them live a day, that He does so so that man may have use of it; now the use that one can have of it, is this, that one may make good use of it. On this account they often say: "Today is for us; tomorrow will be for him who will live, and he may enjoy it." They make no distinction between a Mosque and a Pub; and maintain as an article of faith, that one serves God just as well by using one's creatures as by abstinence and a strict way of life. Nimetulahy founded another Order, which observes no abstinence. This Order consists only in the monks singing praises to God in Arabic verses. The probationary period before one is accepted is the most severe; for they lock up a novice for 40 days in a room, and give him only 24 drachmas of food per day for his food, after which probation he is received into the Orders. Bekiasch, the sixth Pupil of Chaelwety is the last among all the founders of the Orders. He was the first Imam with the army of Sultan Murad I in his famous campaigns. A large number of Janissaries accept his Teaching, according to which they are exempted from observing prayer, as a thing not necessary for salvation. This Order easily finds a following among the Soldiers, who have little inclination for a religious Life and prayer. This Legislator is accused of having extended the stupid sins among the Turks. Besides these eight Orders, there are many others in Persia, Arabia, and Egypt, of which many traceless things are told. But, because I have not seen them, and have not been able to obtain any real reports from them, on which one can rely; I will not speak of them either, so much the more, as, if I wanted to write something about them, I would have to report nothing but annoyances and traceless things.

(*) There is no fixed and definite number.
 (†) This name is borne by the Monks of all Orders.
 (*) When I saw it, it did not last a full half hour.
 (*) Perhaps this should only be understood of the time of their trial and acceptance into the Orders.

VII. Of the Mosques, their Revenues and Benefits.
 The most magnificent buildings that one sees in the countries of the Turks are the Mosques. (*) They all have almost the same figure, a Dome, and on the side a Menaret or tower, but some have four or more, which give the Mosques a great ornament. These as well as the towers are covered with lead. Some of them bear the name of Imperial Mosques, and these are the richest. The cities of Bursa, Adrianople and Constantinople, where the Emperors had their Seats, have Mosques of this kind. The Kislär-Aga, or Chief of the Black Slits, and Chief Overseer of the Sultan's Wife, has also the Superintendence of the Imperial Mosques, which bring him large sums, because the granting of places in them depends on him. In the city of Constantinople there are ten such Mosques, first, Santa Sophia, a Church formerly built by the Emperor ?? fufiinias; then the Mosque of Sultan Muhammid, which took Constantinople; third, the Mosque of Sultan Bajsyd; (Bajazet,) fourth, Sultan Se'lym's Mosque; fifth, Sultan

40400 Suleyman's (Soliman's) Mosque; sixth, the Mosque of Schah-Sadeh, that is, of the Sultan's Son; seventh, Sultan Achmed's Mosque; furthermore one, that a Sultana, and then two more, which the mothers of the Sultans have had built. The Mosque of S. Sophia surpasses in splendor and wealth the income of all the others. I have been assured that its income, annually, at present, amounts to more
 40405 than 100 thousand Zechines, which it draws all from buildings and rents within the City of Constantinople. The Sultan himself pays it, annually, one thousand and one Aspers a day for the ground, on which a part of the Seraglio is built, which depends on this Church, and in the time of the Greeks belonged to its environs. The exterior of this building was magnificent before them, but is now defaced and spoiled. The
 40410 Turkish Emperors have had some Prayer and similar Chapels built around that Church, in which are the burial places of the Imperial Family. In these Chapels lamps burn continually, and men are paid there, who must pray there for their souls. At certain hours, daily, alms are distributed among the poor. — Some of these Imperial Mosques have certain privileges, to instruct the youth in the law; there are also Hospitals
 40415 for the sick, and dwellings for strangers and Pilgrims. There are even some, which have Kitchens, where they cook for the Poor. Many have their income from certain lands, villages, and entire Provinces. The inhabitants of such places have extraordinary privileges, chiefly that they are exempt from the quartering of troops, military services, and oppressions of the Bassas, since they depend solely on the
 40420 Kislär-Aga. The Mosques, founded by private persons, have not these privileges, and may not draw any income from lands. All their income consists therefore in interest, which amounts to eighteen out of a hundred per year; a privilege which is only allowed to the Mosques and the Wise, because otherwise, according to the Mohammedan law, on pain of losing the Capital, one may not give money on Interest. All Mosques
 40425 have something which attracts the attention of foreigners. Everywhere they are so rich in pillars of rare Marble, that one will hardly find such a large number elsewhere. Among these Mosques I must say something in particular about one, which the Turks call Imbrahor-Dsthami?? that is, Mosque of the Chief Stablemaster. It was dedicated to St. Matthias, and, if I am correct, the first building of Constantine at
 40430 Constantinople, and his Imperial Chapel. Two rows of pillars divide it into three sections; each pillar has two and a half ells in circumference, and a length of three men. They are of very beautiful old green, and have a capital of Greek marble, which is so finely carved, that it was even in wood worthy of admiration. There are 28 pillars. Many of the second row were taken away, and used for the buildings of the
 40435 Seraglio. Fourteen are still below, and remain a precious monument of the ancient splendor.

(*) The word Moschee (Mosque) originates from the Persian word, Musekkju. Mesdschjia is the name of such Temples, where daily, raaaf?? Dschjaw?? of that which is done in the solemn
 40440 Friday worship service.

VIII. Of the divisions in the Mohammedan Religion, and the two Sects, of Omer, which the Turks follow, and of Ae'ly, which the Persians follow. The Mohammedan Religion is one of those which has the most Sects. The common opinion counts seventy-two of them. But I believe there are more. For almost every Turk, with whom one has any conversation, betrays some diversity in the Religion. I will here speak only of a few of the principal ones, because it is impossible to get an account of them all. The two Sects which differ most from each other, and which bear the greatest hatred to each other, are the Sect of Omer, which the Turks follow, and of
 40450 Ae'ly, which the Persians follow. It is almost incredible how much these two Sects hate each other. I have often looked into the matter, spoken to many of them, and endeavored, if possible, to obtain an accurate account, so as to discover not only the difference between them, but also the real motive of such a violent hatred. But I have been unable to obtain anything
 40455 certain of it; wherefore I will give you some thoughts on the subject. I consider it very natural that such an ingrained and violent hatred should have a very remote origin, and that one must consequently go back to the times of the Lawgivers. I have already told you that Omer and Aely were two of Mohammed's four disciples. It is also known that Mohammed appointed this Aely as his successor and heir. Now when he was
 40460 then in Arabia; 20 In his absence the other three united to exclude him from that place to which he was destined. Ebubekr, by the force of arms, succeeded to a post which Omer received after his death. When Omer took over the place of commander-in-chief, and kept Aely in constant oppression with an armed hand, he could neither resist nor defend his own rights. As long as Omer reigned, Aely remained in Arabia, and showed to the eye such esteem as may be expected from a man who is unable to
 40465 avenge himself. But by the succession of nature, which, through lack of strength,

reveals its violence in words, he sought to make his enemy feel sorry. Namely, he composed explanations of the Koran, mixing among them such doctrines as were contrary to Omer's doctrine. In this he had the political purpose of attracting to himself a greater number of adherents, while he convinced his friends that Omer was no true disciple of Mahomet, but a heretic. Both rivals gave each other this name in turn, and when, after Omer, Ae'ly became the supreme head of the religion, he had the more power to extend his doctrine. He also extended it, in effect, throughout all Persia and all the provinces dependent on that empire. After this extension, the sect of Ae'ly opposed that of Omer; each remained obstinate in his opinion; the disputes increased, caused much bloodshed, and continue in our own times. This I hold to be the true origin of the so far-reaching hatred between these two Sects. Now I will say something more about the difference between them. This consists chiefly in the Hierarchy, especially as regards the Supreme Head of Religion. For the Turks accept the Mufti of Constantinople, the Persians on the contrary that of Persia, as their Supreme Head. Besides this difference concerning the Heads of Religion, the Turks ascribe many Heresies to the Persians. The first is this: that they reject the three great Teachers of the Laws of Mohammed, Eubekr, Osman, and Omer; further, that they do not permit the washing of bare feet; that they use the green colour, which is the colour of Mohammed's banner, only for their shoes and clothes; that they eat all kinds of meat, and drink wine, without any heaviness; that they do not consider it a sin when more than one man has to do with one woman. (*) — From this the Turks draw the conclusion, which they maintain as an article of faith, that a Persian not only cannot be saved, but also cannot convert. This prejudice goes so far that in the Seraglio, where children of all denominations and nations are accepted, no Persian is accepted, because they consider it absolutely impossible that he can become a good believer. When Sultan Murac conquered Babylon, he had all the Korans and religious books collected, and locked up in the Seraglio of Constantinople, forbidding at the same time, under penalty of a curse, to read them. Now I must tell you another peculiar prejudice, which prevails among the Turks, and which they hold as certain as their creed, viz., that the souls of the Hebrews (Jews) after their death are changed into Asses, which carry the souls of the Persians to Hell. Nay, they maintain, that a true Mohammedan acquires as much merit for himself by killing a Persian, as by killing five Christians.

Man falls into such tracelessness, when he judges matters of faith according to his passions alone. One hears many other extravagances in this regard among the common people; but I only write that no, otherwise sensible people, and true Muslim (that is, Sunni) clergymen accept.

(*) My manuscript adds: "finally they state, that one may steal a country of the Sunnis, and also rob their women naked, and make them slaves".

IX. Of other Sects among the Turks. I now proceed to the other Sects, which are very numerous in the Mohammedan Religion. The Turks regard four Sects as orthodox, namely those of Hanysch, of Schast??, of Meligs, and of Hanbaly. Those of Hanysch are followed by the Turks, Tartars, and Usbekens. The Sect of Schafiy is followed by most Arabs; that of Meligk by all Africans, especially Tripoli, Tunis, and Algiers. The Sect of Hanbaly has only a few Arabs as adherents. These four Sects are regarded as orthodox, and differ in almost nothing, except in respect of the Teacher, after whom they bear the name. (*) Of the heretical Sects I will only mention to you a few of the most important. A certain Alassan put a question to his own Teacher, and gave his opinion, without expecting an answer. He called himself Mi??tafalite, which with us signifies a Separatist, because he separated himself from all others. — He formed a Sect, and took the name of a defender of God's Unity and Justice. But his Disciples are not even agreed in the ideas of God's Unity and Justice, but have rather divided themselves into twenty-two distinct Sects. One of these, called the Hajethytic Sect, believes that the Messiah was eternal, and became a man, as the Christians believe. They have therefore added an Article to their creed, that Christ will come at the last day, and judge the world. They also use the words, Messiah and Christ, indiscriminately. — Another Sect of these (*) maintains that the Koran was nothing else than a Copy which Mohammed had stolen from the Original, which God Himself had written, and which had remained in the Celestial Library. The Sect which chiefly opposes that of the Mu'tafalites is that of the Sphephatites. They admit eternal properties in God; but are so ignorant, that they say, He has bodily senses and organs; this they assert very obstinately, and appeal to the Holy Scripture itself, in which they literally take and understand the passages which represent God on a Throne, and ascribe to Him wrath against sinners, etc. The Sect of the Kadarites is equally unreasonable. They deny God's commandments, Predestination, and attribute to

man a free Will, from which all good and evil that he does proceeds, and consequently that nothing, whether or not deserved by God, must be derived. The Sect of the Djibbaryjites stands directly against this. They maintain that man is guided by a higher Being, and that man's Will and actions are only means to enlighten the will of this Being; that man's actions proceed from a natural principle, just as water flows away, a river swells, and heavy bodies fall, according to natural causes. The most serious defender of the Mohammedanism is the Sect of the Murdschjytes, who maintain that, just as the good works of the Infidels never work their Salvation, so also the evil works and the Sins of the Mussulmans can never cause them to perish. The Sect of the Waeydites contradicts the aforementioned, and maintains that a Mussulman, for serious sins, can be damned, just as an Infidel, but with this distinction, that he will not be tortured so cruelly as this one. In this great diversity of sentiments in so important a matter, the Turks adopt the opinion, as most agreeable to their faith, that the greatest sinner, after his death, if he has done no penance, is left to the mercy of God, and that man, through the mediation of Mohammed, after he has suffered some punishment from him for his sins, can be received into Paradise. (*) For this reason also the Turks pray for the dead. The Sect of the Scythians prevails very strongly in Persia. They even place Ae'ly above Mohammed, and assert that Ae'ly alone had the gift of prophecy, received his instruction and the mysteries of religion from God's own mouth, and they expect, like the Jews, that their Prophet Ae'ly will return in the clouds. Against these the Khawaridschites oppose themselves, who maintain that no man has ever been a Prophet of God, and that God has never sent anyone into this world with an infallible power, and that this was not necessary when a new Religion had to be established; but if this were necessary, God would not have made use of any man or place. The Seydytes maintain that God had to send a Prophet to the Persians, who should utterly extirpate the memory of Mohammed's Religion. They say that the Believers will see God in the other world as we see the Sun in this; which runs counter to the Koran, which teaches that God is seen no more in the other than in this world. Another Sect maintains that man, even in this world, can come to a perfect knowledge of God, when he first knows himself perfectly. This bears the name of the Sect of Mae'hmites. Others, who are called Medfichu??n, say, that even an imperfect knowledge of God is sufficient for Salvation.

The Fabaphaisi (*) do not allow that God knows the future. They say, just as a Prince governs his State, so God governs the world, and adjusts himself to the circumstances, while he daily gains more experience. It is remarkable, that in all these Sects no novelty has arisen either in the five practical articles, or in those articles of faith, which constitute the Essence of the Mohammedan Religion. But in recent times other Sects and sentiments have arisen, which may well have dangerous consequences for their Religion and the State.

The Tschop-Meszyhhytes, or followers of the Messiah, are a Confession of this kind. They hold that Christ is God and the Savior of the world. Men of rank, the most cultured Men, and a great part of those who come from the Seraglio, are of this opinion. This has produced a sort of proverb among the Turks, because, when they wish to praise someone, in one word, as an honest man, they say to him: you are as courteous and cultured as a Servant of the Messiah.

The Kadhyphadehites take great care of the dead; pray much for them, even going to the graves, where they cry to the dead, they may remember that there is but one God and one Prophet.

The greater part of the people is possessed with this prejudice. Some of this Sect make a strange mixture of Christianity with the Mohammedan faith, saying: that Mohammed is the Spirit, the Comforter, whom God promised to send. This Sect has an uncommon aversion to images. (*)

The Bektaschites follow all the superstitions of the Mohammedan law very closely; but they deny God all attributes, saying, that, as God is an incomprehensible and infinite Being, it is too bold for the Spirit, finite for man, to ascribe to him the attribute of mercy. In practice the followers of this S??le foster another error, although it seems to be accompanied by an aversion to nature. The nearest Blood Friends mingle among themselves, without excluding the Children, under the vain pretext that whoever has planted a vineyard or a tree, has also the right to eat of its fruits.

Another Sect I consider to be much more dangerous to the State. (†) It is not altogether unknown in Constantinople, but prevails, chiefly, in the Astatic Provinces, and most of all in Me??ia. They are in a certain respect idolaters, and are therefore opposed to the true Mohammedans, who make it an honour to be enemies and exterminators of idolatry. They attribute a Deity to the Sun and Moon, because of

40600 the influences that these Planets have on the creatures. They are convinced of the
immortality of the soul (*), but nevertheless remain idolaters, and are not at all
vengeful, because they regard the insults done to them as natural effects of the
Heavenly influences: a feeling that makes them regard the most hideous things with
indifference, just as people endure cold and heat. When a false doctrine makes so
40605 much impression on unbelievers; then we must be ashamed that the holy lessons of our
law do not produce the same effect in us.
The Turks also have their Pythagoreans. This sect bears the name of Munafichites
among them. They believe in the transmigration of souls, and therefore cannot bear an
image of a living creature. (†) Concerning this they bring such traceless things to
40610 light, that one would consider it impossible, how an intelligent Being could think
so. And yet they are the most numerous among all Sects.
In a certain respect there are also Gartesians: they are called Hayretites. Their
first fundamental principle is, to doubt everything, and to establish nothing. They
also mix something Pyrrhonian with it. For when they speak of a matter in dispute,
40615 they usually say: God knows it, and, this is unknown to us. These fundamental
principles make them flexible in all things. Wherefore people of that Sect can easily
attain the dignity of a Mufti. For they gladly regulate their decisions according to
the will of the Court, which is a necessary characteristic, to attain that Dignity.
Yet they observe the ceremonies of the Mohammedan religion with the utmost
40620 strictness.
The Sect of the Ishramites I have reserved for the last, because I give it precedence
over all others. A great part of the lawyers, and especially of the Imams of the
Imperial Mosques, are of this Sect, which is entirely Platonic, and has exalted ideas
of the Godhead. They believe in the unity of God, and do not deny the Trinity; but
40625 they regard it as a number, proceeding from the unity. They allow the Koran, so far
as it agrees with their grounds, but the rest they reject as something that is simple
and unreasonable. They teach that one cannot be loved by God, without loving his
neighbour, which makes them very compassionate towards the poor, and friendly and
charitable towards strangers. They speak with much more freedom, than all other
40630 Mahoganyans, living sincerely, without harshness. They are above all others for an
honest and agreeable intercourse. They do not so much despise and shun Christians,
but rather regard them as blind, and therefore pray to God that He will enlighten
them to the true faith, which they sometimes say to a person as a courtesy, and as a
proof of their good heart, as I have had to hear more than once. Besides all these
40635 Sects, there are innumerable others, of which I will not speak, because I cannot
speak of them otherwise than with confusion. However, to form an idea of it, I must
observe, that innumerable sentiments have crept into the Mohammedans, from the
Greeks, by means of their ancient Philosophers. Other errors have their origin from
the Muscovites, Georgians, and others. For, when these peoples converted to the
40640 Mohammedan religion, they all brought something of their faith with them. From which
you can judge how many sects must have arisen among the Mohammedans, and what a
mixture their religion is.

(*) Regarding these and the following facts, see the Lasten na, in the description of the
40645 Turkish Empire, against page 344. (Overview)
(*) These are the Tsiten or Meidarites.
(*) This proposition is unfounded. Businello, who has often, and especially in this section
Ricaut quit?? written, or compiled, has misunderstood this, because he says thus: "the deceased
40650 sinner must be left to God's Will, either to be punished for his crimes, or to obtain
forgiveness because of Mohammed's past".
(*) In the French translation of Ricaut they are called Jabvakites, but in my Italian
manuscript of Euhneuo Se??ajti. Whatever I have asked or checked about this, I have not been
able to find out anything further.
(*) This is what all true Mahometans do without exception.
40655 (†) My Italian manuscript calls them ??. Per? are they the ??
(*) My manuscript adds little to it: and so it must be according to Ricalt.
(†) My Italian manuscript has, here, certainly better, and therefore Aachten no living
animal".

40660 X. Of the Unbelief of the Turks.
After having spoken so extensively of the Religion of the Turks, I must now tell you
something of their unbelief, in order that you may see how far Ungodliness has spread
in this country. I can assure you that it has penetrated even into the most secret
rooms of the Seraglio. The Bassas of the Empire and the places at Court are likewise
40665 infected with it.
It is said that the origin of this comes from Sultan Murad, (*) who, as a greedy
Prince, was pleased to see his subjects break all ties of Religion, and plunder the

Provinces, in order that he might enrich himself the easier with their booty, when he had them put to death, under the guise of justice, as a punishment for their extortions. But, leaving this aside, it is certain that not only Deisiery?? but also Ungodliness has now greatly expanded among the Osmani. Very many profess this freely, without shame or hesitation. They deny the Godhead, acknowledging nothing but Nature. By Nature they understand the internal principle of every Being, which arranges, regulates and guides all things that we see. From this principle, the Sun, moon and stars have with them their origin and their motion; from this it comes that man has the power to rise up, to bow down, and to grow like plants. Their chief proof for such a detestable Doctrine is a fallacy. They say: there is either no God, or he is not as wise as our Teachers themselves assert; for he would never have placed such men as we are in the world, who are enemies of his Existence, and laugh at his Godhead. Either there is no God, or, if there is one, he is not wise, and he is not that perfect Being, as we represent him to be. The great multitude of apostate Christians have spread this so foul poison, and their uncivil deceits have easily made an impression on a people, who are above all others in the knowledge of Religion. Wherefore this godless Doctrine has also taken strong roots among the lawyers. These godless among the Turks give themselves the name of Muszerrin, which means something like men, who possess the Secret. Those who are attached to this delusion, take great pains to show themselves courteous and hospitable towards strangers, to speak freely, and to conform to the prevailing vices, through which they easily find entrance among men.

Besides this Plague, which infects the Mohammedan Religion, I must tell you, that in no Denomination do so many people doubt the truth of their Religion, as the Turks do theirs. Now, through intercourse with Foreigners, they have become somewhat more civilized; they have acquired more insights, and thus learned to think, and to seek the truth.

Just as their Religion, in reality, is nothing else than a collection of ideas, through which one seeks to promote the welfare of the State, rather than true virtue; so they now begin to investigate this fundamental principle, and from this knowledge innumerable doubts arise among them. The learned Turks are rare, with whom one would not, when one speaks with them about matters of religion, notice some heaviness and uncertainty in their imagination, which, in their faith, does not allow them any stability. I have made this observation with pleasure, because this may be a fundamental principle, which, in time, may do this Empire great harm.

(*) Probably the fourth of that name.

XI. The Religion of the Turks rests solely on political views, and is judged quite agreeably with the State's interest.

That the Mohammedan Religion has its origin solely in Policy, and is founded solely on political views, is so evident, that I need not first prove it at length. Then, having told you what I have found remarkable in this respect, I must nevertheless tell you something more in proof of this truth, in order subsequently to unfold the fundamental principles of the Turks, according to which they maintain and extend it, because it is exceptionally useful to their political views.

When from the history concerning the Founder of this Religion, on the one hand, the simplicity and wickedness of an uncivilized Legislator appears; so I believe, that on the other hand, one cannot deny his policy. In fact, as in his rules there is nothing that can lead to true virtue, as to the source of salvation, so it seems to me rather that everything is meant for the great purpose, which he had proposed to himself, to set himself up as sovereign, and to lay the ground for a kingdom, which could become fruitful.

If one goes to the contents of Mohammed's religion in general, then one sees, that its first aim was to attract the people. He left the examples of all the religions that then flourished, and only concentrated on that, that which he wished to introduce, should permit all the ease that was in keeping with the evil inclination of man. He allowed, therefore, a perfect sensual freedom; made the atonement of sins easy, and consequently lightened the hope of salvation. These were only baits to seduce the credulous ignorance of the common people. All other little regulations, which could be regarded as inconvenient to man, who by nature loves liberty, and cannot endure moderation and inconveniences, were only ordained from political views, because they were considered necessary to the State, which the wicked Legislator, according to his wide views, intended to establish. In proof of this truth I will go through the rules of the Mohammedan religion from piece to piece, because I think they clearly demonstrate my position. — The only article of faith of the Turks, that there is but one God and Mohammed his Prophet, shows that it was adopted only to give

40735 the false Legislator the more respect, and to extend among the people the blind
 belief in his deceits, which was necessary for his political purposes.
 As to the five practical Articles, of which that concerning washing is the first;
 Mohammed understood very well that the true power of the States consists in the power
 40740 of the people, and that the first care of a Prince must be to keep it, as much as
 possible, numerous. To this end he not only permitted polygamy and the use of co-
 wives, (*) but also ignored none of the other rules of policy which he deemed
 necessary for his purpose. He saw that he had to place himself at the head of a bad
 people, to expose himself to discomforts in a very warm country, where he had to
 provide for the necessary purity, so that the people would not be infected. He made
 40745 it 'therefore' a duty of religion to wash himself often, and brought it about that
 people did not consider that a spiritual means, which really only served to preserve
 his people. The second duty is the prayer repeated five times a day. Mohammed saw
 well that the heaviest yoke for people is slavery, which he nevertheless had set as a
 principal target in his new Empire. He believed, therefore, that the people must be
 40750 accustomed to this yoke by degrees, and that it would be much easier to begin with
 it, when a people are brought under the yoke in the matter of religion, so that when
 they were once accustomed to it, the political yoke would seem the less strange to
 them. To this end he imposed repeated prayers at certain hours, which is very
 inconvenient, and a perpetual slavery to those who observe the Mohammedan religion.
 40755 The third article obliges the Turks to give one in a hundred of their income in alms.
 Mohammed understood very well how useful it was that a Prince should know exactly the
 wealth of his subjects, so that he would never be disappointed in the measures of the
 State economy, which he had to take either from a certain necessity, or from some
 other view, for the service of his State. For this reason he ordained this religious
 40760 duty, as a certain means, which he, in his taxes, according to the needs of the
 State, could make use of, or which also in the case of arbitrary avarice could serve
 a Sultan for all kinds of extortions. (*)
 The fourth Article contains fasting in Ramasan, which, according to the description
 given above, consists only in that one should fast the night in the day changed. The
 40765 fame of a Conqueror, after whom Mohammed stood, made him foresee well, that certain
 occasions might come, in which his people had to endure extraordinary hardships and
 inconveniences. For this he wished to prepare it by a commandment of Religion, well
 understanding, that, when men were accustomed by this, to suffer hunger and thirst in
 the daytime for one whole month every year, and to watch at night, they would become
 40770 the less sullen, when they were forced to endure the same inconvenience in the
 service of the State. The last duty of God's service is the journey to Mecca. Here
 was his goal, on which all his wide designs came to fruition, to found a great
 Empire. On this account he obliged the descendants to make a pilgrimage to the place
 of their forefathers, who had extended the Empire so far, as each one had to travel
 40775 from his place of residence, in order that the descendants might be the more incited
 to follow their example. He ordered this as the greatest proof that people believed
 in his divine mission, with which he wanted to cover himself, while he made his own
 Fatherland as holy and divine. The other prohibitions, to eat pork and to drink wine,
 evidently have the State's aims in mind. The first is an unhealthy food in the whole
 40780 Levant, and especially in Arabia. Therefore he forbade them to prevent diseases. The
 second weakens and bewilders man, and nothing can be worse than a Soldier who is
 deprived of his reason here. — From this you may sufficiently gather, why I judge,
 that Mohammed's Religion had its origin in Policy, and that he sought nothing else
 here, than to give the Legislator prestige, and to preserve the people, to accustom
 40785 them to slavery and inconveniences, and to achieve by this all the purposes, which a
 Prince, with respect to his own States, is necessary.
 These same political purposes also appear in the preservation and extension of that
 Religion. For, although the Turks outwardly show, that they tolerate other
 Denominations, they nevertheless legalize the temptations and violence, by which men
 40790 are persuaded and forced to the Mohammedan faith. When a person converts to their
 Religion, then his Sons, if they are not yet 14 years old, must follow the example of
 their fathers. If a person is caught in a forbidden intercourse with a Turkin; then
 he either raises his head, or he must become a Turk. If someone says either in anger,
 or in drunkenness, that he wants to become a Mohammedan; or if he utters in an
 40795 unthinking manner the words in which their articles of faith consist, namely, that
 there is but one God, and that Mohammed is his Prophet; then he must also become
 either a Mohammedan, or a Martyr.
 Just as the Turkish Empire has been steadily extended by arms and violence; so it has
 been made a principle of religion not to give up places where a Mosque had been
 40800 established. Thus with them the Goa service serves as a state service, and so the

people are encouraged by the gift of religion to regain what they have lost. For the same reason they also believe that he who dies in a battle against the Christians will certainly enter Paradise without having done any meritorious work. This idea of the Turks is the principal motive by which they, as the Histories show, are incited to such bold undertakings.

Besides, these principles of religion are no longer followed so strictly as before. Their power has diminished, and the people are weakened by vice and lust. The Empire is surrounded by much more formidable Powers than before. They therefore no longer stand so strongly on many of their old fundamental principles, allowing their weakenings which they would not have permitted sixty years ago. They have given up cities and auctions in the last peace, in which there were many mosques, of which the peace concluded with Moscow, Austria, and Venice is a clear proof.

As long as I have been in Constantinople, I have seen that Christian subjects of neighboring powers, who wanted to adopt the religion of the Turks, were not accepted by them, out of fear of the power whose subjects they were. I have also seen that a fallen Christian adopted the Christian religion again, without the Turks making the least movement to get him back. So much can the interest of the state be with a people, whose religion is too entirely political. I now pass on to their civil government.

(*) Here the writer, in my opinion, is very wrong in his guess. In order to permit polygamy, the tendency to great lust did indeed work more in Mahomed, as a purpose of State. At least this would not have been achieved in a hoped-for strong population. Experience proves this.

(*) In this piece, as in the Feasts and the Pilgrimage, the writer, apparently, but wrongly, makes Mahomed a much greater politician than he ever was: because there is no fixed sum of a hundred fixed for the expenditure of alms; therefore the calculation of the goods of the subjects cannot be made by it, and it has never been made with regard to this expenditure of alms. The writer's judgment concerning the reason for these religious propositions does not go through at all. The life-history of Mohammed, and the first institution of his religion, do not at all allow such far-seeing and artful state-objects to be suspected on any ground.

XII. Of the civil government of the Turks. Of the Seraglio, its guard and population. It is difficult to form a correct idea of the government of the Turks, if one does not know in advance what the Seraglio and the Porte are. Both have such a share in the civil government, that, in order to know them thoroughly, one must examine both separately. I will therefore first speak of the Seraglio, and then pass on to the idea concerning the Porte.

Everyone knows that by the Seraglio one understands that Palace, where the Ottoman Monarch lives. But all do not know, that this residence deserves the name of a city, rather than of a Palace. It covers the entire terrain, where the old Byzantium stood before; it contains therefore the first of the 7 hills, on which Constantinople is built, which has its view towards Asia. Its circumference covers more than three (Italian) miles. The building is completely surrounded by very high walls, provided with spires and towers according to the taste of ancient military architecture. From the large circumference one can conclude the multitude of squares and gardens that are there. The population also corresponds to the extent of the place. According to the reports that I have received from people who are knowledgeable and who have lived in the Seraglio for more than thirty years, ten thousand persons live there. People who belong to the stud farms and guards form a large part of this population, of which I want to provide you with a list, according to accurately drawn up reports: People to the horse stables and stud farms. 3500

Bostandschjy or gardeners, -- 2000
Baltahdschjy or wood splitters, (*) -- 400
White Entrants, -- 120
Black Entrants, -- 300
Woman with sons about, -- 430
Tdsch-Oglan about -- 700
By the Kitchen etc. -- 400
All others up to 10 thousand consist of persons who hold the principal Dignities, and of their Servants, living in the Seraglio.

According to this general idea of people of various status, I will indicate in the following sections, what their office consists of, and how they are maintained and paid. Now I will only tell you in general, that they are mostly Christian children, who in their early years, through war, fell into slavery, and were honored by the Princes. For they always had, and still have, the rule, that they let themselves be served by such people, who do not know their own origin, do not know their own parents, and are consequently bound to no one but the Monarch, who clothes and supports them. If one of these Youths comes into the Seraglio; then they first check

whether he has a natural defect, and in such a case they do not accept him, because the Turks are all too much taken with the idea, which is otherwise often true, that in a body, having a natural defect, can hardly house a soul, that is not defective. If they are found without defects; then their names, their age, the name of their country are written on a list of the Treasury, and the Treasurer is ordered to pay the salary that is imposed on such a person. This now amounts to only four Aspers per day. Then they are sent to a Seraglio or to Tera, or Constantinople; but those who are sent to the latter are, as a rule, the first to be raised to office. This was formerly done for all who were in the service of the Seraglio, as also the many successful wars of the Sultans, partly by presents, partly by tribute, produced a very large number of slaves. But now, when the military fortunes of this Empire have declined, only the Tdjch-Oglan are of such origin in the Seraglio. All other Servants either transmit the office from the Father to the Son, or they attain to it by services and practices rendered. – The Seraglio is guarded in the following manner. The whole circumference is entrusted to the care of the Bostandschjy or gardeners, who form the first guard; (*) the second guard consists of the Baltahdschjy or Hellebardiers, who are armed with axes; after these follow the guard of the white Cutthroats, and finally the guard of the black Cutthroats, who are next to the Sultan. This is sufficient to form a general idea of it.

(*) These are not only the actual wood-splitters, but also a kind of Hellerbardiers, who, instead of other weapons, carry an axe after the old military equipment.

XIII. Of the persons belonging to the stables and stud farms. The number of 3500 persons, which I determined in advance for the service of the Stud Farms, might seem too high; but one will easily understand it, when I say, that, for the service of the Sultan alone, 3000 horses are always kept, which number may neither be increased nor decreased. As soon as a horse is donated or bought above this number; then one of the smaller ones is given away; and if one dies, then another is bought, so that the number always remains the same. They are all from Arabia or Egypt; for the horses from Asia and Rumelia are considered far too common. In order to be sure that the best horses should be brought to Constantinople, there is an ancient law, according to which the owners of horses, as well as of the ships on which they are brought, are required, under penalty of death, to bring them before their introduction into the city to the Seraglio, in order that the best may be selected there first. They are divided into three stables; in the first are eighteen hundred, in the second seven hundred, and in the third five hundred horses. Besides these horses of the Sultan's own, there are also four hundred mules for the transport and hauling of so many things necessary for the Court of so great a Monarch, and for so many people. To these animals, belonging to the Sovereign, are added the horses and mules of his Ministers, residing in the Seraglio, of which some, for instance the Kislär-Aga, the Chafynehdar-Aga, and the Silahdar-Aga, have about three hundred for their special service. Each, even the meanest Page, has three. Consequently there may be in all about six thousand horses in the stables. – The Turks are accustomed every year, in the month of May, to drive their horses into the meadows, to eat the green grass. But the horses of the Sultan's stables have their meadows within the Seraglio, from which one may judge of their size.

(*) It is strange that the Kapudschjy are let out here.

XIV. Of the Bostandshjy and Baltahdshjy. The Bostandshjy, who form the first guard of the Seraglio, (*) are under their Chief, the Bostandshjy-Baschy, who has general supervision not only over the gardens of the Seraglio at Constantinople, but also over all the other Seraglios, fountains and pleasure-houses of the Grand Lord, which are situated in many places on the harbour and the Bosphorus. His jurisdiction extends to the mouth of the Black Sea, since now all the numerous and populous villages, on the shores of Asia and Europe, lying on the Channel, are under him, so he has a large income. – When the Sultan sails in a Kandschjabasch or rowing yacht; then the Bostandshjy-Baschy is always at the helm. Because he is therefore, by reason of this office, near the Sultan, and has easy opportunity to speak with him; he is considered by the Turks themselves as a very respectable State servant. He has his residence on the shore of the harbour, which has communication with the Seraglio itself, and is the place where the guilty are made to suffer the punishment. The duty of the Bostandschjy is now this: they have the outer guard of the Seraglio; they guard the pleasure-houses of the Great Lord; they plant and cultivate his gardens, they row on all the barges of the Seraglio, and perform the cruel office of

putting the guilty to death. Among all the servants of the Seraglio, who are mostly civilized and courteous people, these are the most uncivilized and cruel. Next come the Baltahdschjy, whose office is to chop wood and bring it to the Seraglio. They take the second watch, and are therefore one degree higher than the Bostandschjy. But they are dressed in almost the same manner, except that they have on their garments a small collar of blue colour, such as some of our soldiers wear, only with this difference, that in their case it is longer, and extends almost to the breast. The head of the Bostandschjy and Baltahdschjy is covered with a long cap of scarlet, hanging down nearly half a yard.

These two kinds of guards exercise themselves in running, leaping, wrestling, and throwing the javelin, in which they are very skilled, as they are in all such exercises, by which the body is made strong and fit.

All these sorts of people consisted, for the present, of young Christian slaves, which had been obtained in the war. From them were also taken all the following sorts of servants: first the Ashdschjy or Cooks, who wear on their heads a high cap, which has a backward-falling point; secondly the Candidates, wearing a cap of camel's hair, almost like a sugar loaf, of a dark yellow colour; thirdly the Butchers, who also wear such a cap; fourthly the Peygk or Lackeys, wearing a short coat, lined with gold trimmings, and caps of gilded metal, with a plume, more than an ell high; then the servants for the Hospital of the Noblemen, besides many other lowly and servile offices. But for the present time, when there are few Christian slaves left, they take in their place children of common people, who are taken into the Seraglio either because of certain services in the interest of their parents, or because of their poverty.

These are the lowly ministries of the Seraglio, or the persons who make up the outside guards.

(*) The Kapudschjy have the guard at the main gate to the city.

XV. Of the Lamé and Black Engraved, Just as the Mohammedans have no religious bond, by which they restrain the impure flames of nature; so no one is easily more exposed to them than they. For this reason the Ottoman Emperors, like other Eastern Princes, employ Engraved, for the internal seraglio of the Imperial Families. The white Engraved form a sort of bodyguard of the Monarch, and the black ones the bodyguard of the women.

The Chief of the white Engraved is the Kapu-Aga, who commands all the Pages and white Engraved of the Court. Under him he has three principal Officers. The first is the Chasz-Oda-Baschy, or Grand Chamberlain: the second the Sferay-Kjetckada or Chief Steward, who has the superintendence of the Pages and other court servants. The third is the Kjilar-Dschjy-Baschy, or Chief Kitchen and Cellar Master. There are other Servants of the white Engraveds, for instance the first and second Teachers, the first Chief Overseer of the Mosques of the Great Lord, and fifty other Officials, who have fifty Aspers every day. (*) Of these Engraveds they also take some, whom they call Teachers of the Imperial Mosques, whose revenues are much greater, because some of them have a hundred Zechines (†) every day. — The black Engraveds serve in the charge of the women. They are entirely carved, and the blackest of all, who come from Africa. Their Chief is the Kislär-Aga, who has general charge of the Harem, being the place where the women are guarded. He also has charge of the Imperial Mosques, which brings him a great deal.

The second Dignity is that of the Chafynehdar-Aga, or Grand Treasurer of the Seraglio. Next to him comes the Bnjugk-Oda-Aga, who has charge of the large Chambers of the Pages. Next to him comes the Kjutschugk-Oda-Aga, who is placed over the small Chambers; the Basch-Kapn-Oglany, or the Chief of the Doorkeepers of the Women's Apartments; and finally the two Imams of the Imperial Mosque of the Empress-Mother, where the women of the Seraglio say their prayers.

When there is a Sultana-Mother or a Consort of the reigning Sultan; then there are four more principal Dignities among the black Engraved, among whom some have the rank next to the Grand Treasurer. The first is the Dignity of Valikt-Aga, being the chief doorkeeper at the Empress-mother. The second is the Schafadehlar-Aga, or first Steward of the Sultan's Sons. The third is the Chafyneh-Aga, or treasurer of the Empress-mother. The fourth is the Kjuar-Aga, set over the Jams, and other delicacies of the Empress-mother. These Dignities take place, when there is a Consort of the Sultan; but in such a case, they follow the Attendants of the Empress-mother.

(*) My manuscript mentions ten other Officials, who have 12 Aspers every day.

(†) Here is a great mistake; for the Grand Mufti does not have, daily, a perfect five Zekhinās.

XVI. Of the Chambers of the Ydsch-Oglans or Pages of the Seraglio. The Pages in the Seraglio are all Christian children, (*) who, in their tender youth, have been captured in times of war, or are honored by the Generals or Ministers of the Monarch. When they are examined, and then received in the Seraglio; then they are placed under the supervision of the Chief of the white Ennemies, who places them either in the large or small chamber or school. None are called Bjugk but these Kjutschugk-Oda. Generally there are four hundred in the first, and two hundred and fifty in the second. They are kept under strict discipline, and instructed in courtesy and modesty. Their first studies consist in the religion of Mohammed, and in learning the Persian and Arabic languages, in order that they may speak Turkish as beautifully as it is used in the Seraglio. They are constantly clothed with good cloth, and sparingly supplied with rice and healthy food. They all sleep in one place together, and their beds are one behind the other, as is the custom in our Seminaries; but the attention is paid to the fact that every four or five beds have the bed of a Disciplined man, who watches them. These Disciplines keep a close eye on them, to keep them from the vices that are all too common in the Seraglio. When they reach manly old age; then they are given physical exercises, by which their constitution becomes stronger. They train themselves with the lance, the bow, the javelin, and other weapons, both on foot and on horseback. In the javelin they excel all other nations. The constant practice makes them shoot the javelin with such emphasis that they are even capable of breaking a leg. Besides these strong bodily exercises, they are also instructed in mechanical and liberal arts; for example, they make bows, arrows, horse harnesses, etc. They are instructed in painting, but mainly in Turkish music. From these Chambers they are promoted to many important offices, because they serve the person of the Monarch; then their pension is increased to eight Aspers a day. They are distributed either in the treasury of the Seraglio, or in the Chambers of spices, cordials, and elixirs of uncommon value, which are kept in abundance for the use of the Sultan. From these two Chambers they come to the Chafz-Oda, which is the most important Chamber in the Seraglio, consisting of only 40 Persons. These have the Title of Aga, and are in great esteem, because they are constantly near the Person of the Sultan. From these 40 persons are drawn the thirteen principal offices of the Court, which are 1) the Silahdar-Aga who bears the sword of the Great Lord; 2) the Tschokahdar-Aga, its train-bearer; 3) the Rikjahdar-Aga, who holds its stirrup; 4) the Ibrykdar-Aga, who holds his Lampet; 5) the Dulbendar-Aga, who prepares and carries his Turban; 6) Iskjetnlehdschjy-Aga, who carries the footstool for his mounting and dismounting from the horse; 7) Kaemizar-Aga, the Chief Overseer of the Wardrobe, who has the Great Lord's linen washed; 8) Tschaschnyghyr-Aga, the Chief of those who taste the food which is set before the Great Lord; 9) Sagardschjy-Aga, or Chief Overseer of the hunting dogs; 10) Themakdschjy-Raschy, who cuts the Sultan's nails; 11) Berber-Baschy, or his first barber; 12) Muhafebehschjy-Baschy, or his first accountant; 13) Teskjerehschjy-Baschy, his first Secretary. There are still at the Court two other very important offices, namely the Thogandschjy-Baschy, or great Falconer, and the Haemmamdschjy-Baschy, or chief overseer of the baths; but these are never changed, - and they therefore have no hope of reaching higher offices. These two do not even have the honor of being allowed to enter the Chambers of Sidtan. Nine persons have the honor of handing the Sultan the petitions; they are called Aerdhs-Agaler Four are in the great Chamber of 40, namely the Silahdar-Aga, the Tschokahdar-Aga, the Rikjahdar-Aga and the Dulbendar-Aga. The five others are: the first Official at the treasury; the Chief Overseer of the provisions and Jams; the Chief Huntsman; the first Commander of the Imperial Chamber; and the first Instructor of the Pages.

These 9 Persons have the nearest hope, to come out of the Seraglio, and to be raised to the principal Empires, especially to the office of a Bassa. The others of the great Chamber are often sent either to the Visier, or to the Bassa, or to the Princes, who pay tribute, on which occasions they receive considerable presents, because it is well known, that the Monarch therefore only sends people of such rank. Now, according as one of these Persons comes out of the Seraglio, and is raised to such principal Empires; thus his vacant place in the great Chamber is again filled, for which purpose the honors are taken from the lower Chambers. - This is the order, with respect to the Dignities of the Seraglio, and by such steps and offices one must go, before one comes out. From which it may be inferred, that a man seldom comes out before he is forty years old, and is therefore able to fill a place which is entrusted to him. The offices which those who go out of the Seraglio generally receive, are either important Bassa-places, or the Dignity of an Aga of the Janistas, of a General of Spain, and sometimes even the place of a first Visier. I am told, that they have incredible Compliments and Ceremonies, when they go out of the

41070 Seraglio, and take leave of their friends in it. I have been assured, that in the most civilized countries, they do not make so much use of Compliments, and that even the ceremonies of a certain Court in Italy do not come far short of those which the Turks observe on such occasions. It is certain that all who are brought up in the Seraglio are very courteous and polite; and, as they show no grandeur or contempt for the customs of other peoples, not even for Christians; so one may well imagine how uncommonly friendly they must be towards their comrades.

(*) The Kapudschjy keep watch at the principal gate to the city.

41080 XVII. Of the manner in which the young men in the Seraglio are instructed in the sciences.

In comparison with all other nations, the Turks do not seem to make much of the sciences. It is seen that they continually give preference to the soldiers over the scholars, because they promote them only to the great offices at the Court, or to the principal stadtholderships in the Provinces. Nevertheless, they do not neglect to promote a kind of sciences in their schools, and in particular they take great pains to ensure that the youth in the Seraglio learn something. They teach these young men to read and write. In this they must apply themselves to the Arabic language; for, as all the doctrines of their religion, and all their civil laws, are written in Arabic, this language becomes necessary to all those who wish to excel either in religion or in government. They also instruct them in the Persian language, because it is rich in lively and pleasant expressions, and improves the coarseness of the Turkish language. They let young people read many novels and romances in the Persian language, which are full of lively, witty, and charming expressions, in order that they may be accustomed to be quick and lively. Do they find, among these young people, people of a melancholy and serious disposition; then they must apply themselves, with an uncommon diligence, to the improvement of their style in writing, in order that he may be elevated as much as possible, being such a necessary quality, if one wishes to attain the important positions of a Secretary of State, a Grand Chancellor, a Secretary at the Treasury, a Grand Treasurer and others, but especially of such ecclesiastical persons, who, so to speak, are Teachers of an important Mosque of Imperial foundation.

After these first studies, some apply themselves to learning the Koran by heart; others translate books on the Mohammedan religion from Arabic into Turkish, and make comments and explanations about them, in order to instruct ignorant people. Still others devote themselves to Arabic and Persian poetry, in which they make great progress, and, often to astonishment, know how to express themselves well. Music also keeps a great part of the youth in the Seraglio busy. It cannot be denied that there is something rough in Turkish music, as regards the humming; but equally it cannot be denied that it nevertheless has a certain endearing harmony.

Up to now it was forbidden by a state rule to print books, because it was considered dangerous for the State. But for the present, now that the desire to know something has become greater among the Turks, and they no longer have such a great aversion to dealing with Christians, they have abandoned that rule, and have begun to print books. (*) They have also supplied maps and sea charts; but both have turned out so badly, that I almost consider them as altogether useless. Other sciences they understand almost not at all, such as reasoning, physics, arithmetic and mathematics, if one does not want to say that in the latter they know the most necessary propositions, having its regard to Artillery.

41120 (*) This printing house had already ceased at the time the author wrote this, and the hope that it will start up again, given the present prosperity of the Turkish Empire and other circumstances, is steadily disappearing more and more.

41125 XVIII. Of the Dumb and Dwarfs in the Seraglio.

In order that the Ottoman Emperors should not neglect anything by which they might display their Highness; thus, after the example of the ancient Princes, they have collected Dumb and Dwarfs in their own Seraglio. People of that stamp, who at other Courts serve only for the amusement of the Prince, serve at the Ottoman Court not only for the amusement of the Monarch, but also serve to instruct the Pages in an art which is not used among other nations, namely, in the art of expressing themselves by signs of movement and significance. The respect which the Turks have for their Monarch makes that silence becomes a duty with them, so that he will never be in the least disturbed by their voices. To this end there are in the Seraglio, at all times, forty men, (*) who were born deaf and dumb, who can express themselves only by significant signs. At night they sleep in the Chamber of the Pages, and during the

day they are either in their schools, or stand before the Mosque, to teach by their example the art of signifying, which is highly esteemed in the Seraglio. I am assured that in this art there are such excellent men, that they know how to tell a long story by significant signs alone. Two or three of the oldest Dumb Men are admitted into the Sultan's Chamber, or serve as Court Jesters, to amuse him. The Dwarfs are used in the same way; and, if anyone is also dumb and cut, then he is considered a great rarity in the Seraglio.

(*) Under the last governments, not as much work has been made of the Dumb and Dwarfs as under the previous ones.

XIX. Of the Room of the Women in the Seraglio.

All the women in the Seraglio are for the sole use of the Great Lord, and it is not lawful for any one to bring one even within the first gate. (*) These women are shut up in a large apartment, which is called Harem, in a secluded place, which has a view of the Sea of Marmora. No one may see them, except the Monarch and the Enthroned, when they amuse themselves in the gardens. When they go from the Seraglio with the Great Lord to the country; then they make this journey either in barges or in wagons, which are provided with lattices: and, when they climb out of the barge or from the wagon, silks are stretched on the little road to their departure, so that it is impossible to see them. All of them are either captured in war, or sent as a gift by cynical peoples, because for the Seraglio, women of perfect beauty and certain purity are always chosen. They are separated into two Chambers, like the Pages, and their work consists in sewing and embroidery. Besides these feminine occupations, they are also instructed in Music, in dancing, and other pleasant arts, which I may not mention out of modesty, but are unknown to many other nations. By this means they seek to attract the Monarch, and to win his affection. Their number depends on the inclination of the reigning Sultan. It is said, Sultan Selym has had two thousand, while on the contrary the reigning Sultan (*) has no more than three hundred. These two Chambers of women's sons have many Instructors, but no maids to serve them. They serve each other themselves according to the order, when they have come into the Seraglio. The last, who has come there, must serve the last but one, and this again the one who has come before her, and so it is with all, so that only the first serves no other, and the last herself and the one but one is the last; and the others serve, and are served. They all sleep in one place, but all on separate beds one after the other; after the fifth bed always lies, one of the sober tutors, who takes care of her behavior.

Her Chief Court Mistress bears the name of Kadun-Kjehuda, or Court Mistress of the women of State. If there is an Empress-mother; then she chooses her Court from the Ladies of these Chambers, because she has the liberty to choose those that please her best. — The Great Lord sometimes permits them to take a rest in the gardens. In this case, each of them must go there. At all posts, the Snipes are placed in a guard with a sabre in their fist; others go around, and if anyone is caught within the forbidden place, whether he has come from carelessness or ignorance, he is beheaded without any mercy: and the Snipes do indeed shy away from such occasions; for if they bring such a head to the Monarch, they are generously rewarded for it.

Sometimes the Sultan also comes into the gardens to amuse himself there. Then there is not one of the women who does not, by dancing or singing, or by talking, appeal to the Sultan's love, and to that end make the most indecent gestures and movements. It is believed in Italy, that the Great Lord, for the service of his bed, may take any one or more, as he pleases. But this is groundless. Before, it was so; but the great expense, which was required, to maintain all the women employed by the Great Lord, introduced here, under the name of household, certain regulations. Now the Sultan may indeed take any one, when and where he pleased; but this was an act of violence against the law, which the Monarchs themselves are accustomed to observe, and the chosen person could thereby lose her life. For it is related as a certainty, that under Sultan Achmet III many women were therefore put to death by poison, because they had, untimely, by artifices, procured the Sultan's love. Now the Sultan is not at liberty to take a new wife into his bed, except on solemn days, and on an extraordinary occasion; for instance, on the celebration of the second Beyram, on the birthday of Mohammed, on the birthday of the Sultan, on the day of his coming to the Throne, on the occasion of a victory, or some other occasion joyful to the Empire. On such occasions, when the Monarch has to seek a new concubine, he goes into the women's apartment, where the women are placed in rows by the Chief Stewards, from whom he then says, who pleases him best. For it is a fable, that they say in Italy (and elsewhere), that he throws her his handkerchief. The chosen wife then falls on her knees, and kisses the hem of the Great Lord's robe. Then she is taken to the bath

by her companions, washed, incense is poured upon her, and, splendidly adorned with
 41205 songs and instruments, led to the Sultan's Chamber; there she receives the Encircled
 of the guard, and brings her into the Sultan's Chamber, who is usually already in
 bed. As soon as she has entered, she falls on her knees, and, when the Sultan calls
 her, then she comes from the foot of the bed under the blanket, unless the Sultan
 41210 gave her orders, to climb in in another way. When the Sultan has amused himself with
 her; then she is, by the Chief Stewards and her companions, led back with the same
 state to the apartment of the Great Lord. If she is now with child, and bears the
 first-born son; then she is called Chassekjy Sultana, which means Princess mother of
 the first-born; she is given the honour of crowning them, and she has the liberty of
 appointing her Court, choosing from the Chambers of the women those which she most
 41215 pleases. Her particular Offspring are given her as a Guard. But those who bring forth
 Sons after her are neither crowned, nor treated with such special distinction,
 involving expenses; but such have a listless journey as Princesses. — After the death
 of the Sultan, the mothers of Princes are locked up in the Seraglio of the old
 Ladies, from whence they do not come, unless the Son of one of them ascends the
 41220 Throne. The women who have brought forth Princesses may marry again after the death
 of the Sultan; and she never lacks the opportunity of marrying the most distinguished
 men of the Empire, whom she willingly marries, in order to promote their happiness
 the better by the followers and friends they have in the Seraglio. Those whom the
 Sultan has already had as a bedfellow are locked up in the old Seraglio; and those
 41225 who remain virgins are locked up in their own chambers, at the service of the new
 Sultan.

(*) But well-known commercial women are, by the black Engraved, brought to certain apartments,
 and under special rules of prudence.
 41230 (*) It was Machmud.

XX. Of the lust that reigns in the Seraglio between Persons of the same sex.
 A matter of which no mention should be made! But whoever writes of the Seraglio must
 also report the passions that reign there. It is unbelievable how fierce the love,
 41235 and consequently also the love, that one Page bears to another are. Notwithstanding
 the severity of their Overseers, they have often committed such horrors in their
 Chambers that one had to resort to the death penalty to exterminate them.
 This filthy passion reigns not only among the youth, but there are even examples that
 the most important persons, who held the greatest offices of the Empire, were
 41240 infected with it, yes, the Sultans themselves were not free from it. Ottoman history
 furnishes us with the example of the famous Murad, who was madly in love with an
 Armenian youth, and raised him to the distinguished office of Silahdar (Court
 Marshal). Mahomed IV made the famous Culoghi his chief favourite, who reigned
 supreme. Besides these, there are many others, which prove how old this vice is
 41245 within these walls. Now this can be applied to the whole Ottoman State; for there is
 no estate, no office, not even among ecclesiastical persons, free from this vice. But
 what strikes me most astonishing in this respect, is the folly of them saying so
 openly, and naming and determining places and people, which are tolerated. What I say
 of the Men, can also be applied to the female Sex, especially those who are in the
 41250 Seraglio. I am told that they have an incredible lust for each other. The eldest wait
 for the youngest, they become impoverished at last, to give her all that they
 possess. (*) This unfruitful love has penetrated everything, and against it neither
 walls nor sharp-sighted Guards can help.

(*) This place is dark, and possibly placed so by chance, in order not to express clearly the
 ambiguous meaning that lies therein.

XXI. Of the first Vizier of the Turkish Empire and its Kjetchuda.
 By the Ministry I understand such persons, who have influence on the government of
 the State. The first Person in rank is the Grand Vizier, of whom I will now speak.
 The Turks call him Wefyr-aé'tzem, which means approximately, Head of the Council and
 Governor of the Empire. He has the great Seal, on which the Sultan's name is carved,
 having thereby a share in the Prince's entire power.
 This Dignity was established by Murad I, who wanted to reward his own Chief of Staff
 41265 Lala Schahyn, because of the conquest of Adrianople, with this. From that time on the
 Emperors, until now, have considered it useful to maintain this Dignity. His Court is
 very numerous in Officers and Servants. I have been in his Palace, when I had to go
 to the Divan, and I should not write an untruth, if I said, that his Court amounts to
 more than a thousand Persons.
 41270 He is always Bassa of three horse-tails, this being a sign of a great Dignity in this

Empire. His salary, which he draws from the Treasury, is very small, consisting annually of only 20 thousand Reals. (*) But the presents, which the Bassas make him, when they obtain their office, and wish to maintain themselves in it; that which he draws from the Envoys of the Provinces; and finally that which he extorts from every one who has anything to do at Court; all this taken together, amounts to immeasurable Sums. Therefore it is not possible to give the true income of the Grand Vizier accurately: for it depends on the circumstances of the time and the inclination of the one who holds this office, how much he wants and can gain. The extortions of a Grand Vizier are, generally, tolerated by the Monarch, who remains silent in the face of his oppressors, because the treasures which his Minister collects, return to his own treasury, since the Vizier either makes presents, or the Court has to pay money, or everything is declared forfeit, when the Vizier, by an unfortunate chance, or arbitrarily, is deposed from his office. The great treasures were, often, the only cause why a Grand Vizier lost his Dignity and his Life.

The power of the Grand Vizier was, before this, almost entirely absolute. He commanded not only the Life of the Subjects, but also the Life of the Bassas and Favourites of the Great Lord himself, without his knowledge. But for the present, now that the Government within the Seraglio, namely the Enthroned, rule over the mind of the Monarch entirely, he can no longer let one's Life be taken away, without the Great Lord permitting it, or at least notifying him of it.

Even in public Imperial Affairs, the Vizier received, before this, the letters of the Generals and Governors of the Provinces, which he presented to the Sultan, only when and as he pleased. But this communication was always done by means of certain extracts and reports, which the Vizier had made by the Travel-Efense, but in which he omitted everything that could be disadvantageous to his particular purposes. He kept silent about the disorders, which he either hoped to remove by himself, or which, according to his thoughts, might disturb the Sultan's peace, and interrupt his own happiness. But now the Grand Vizier has no more this considerable privilege. He must now send the letters sealed to the Seraglio, where the affairs are investigated by the Favourites, Moors and Enemies, and often they conceal from the Grand Vizier, now, that which he formerly concealed from the Seraglio.

A so special and sensible change has taken place under the present Vizier, who, however seen otherwise for his military valour and honesty, has very little experience in government affairs, since he cannot even write. He still retains the Appeal of all the other Tribunals. For this reason he lives in Divanby, where he goes, with a large retinue of officers and servants. Twice a week he holds Divan in his own house. There only the two Kadhyleschkjer of Natolia and Romania may sit on his bench, who are the two highest judges of the law. These have full authority to pass sentences; but the Vizier can, by his prestige, quash them of his own free will. All petitions to the Sultan must first pass through the hands of the Grand Vizier, so that, without his previous knowledge, nothing can be delivered to the Monarch. If, however, he committed any injustice, or a private person, for some other reason, wanted to complain about him; then the way is continually open to petition the protection or justice of the Great Lord, while, when he passes by, he shows himself, and holds something burning above his head, by which sign he who petitions anything is not only protected from all opposition and insult, but also has always someone at his side who takes the petitions out of his hands, to present them to the Monarch to hand over.

For the rest, the Vizier has the power to punish the Spahy and Janistas; but this he cannot do without the consent of their commanders. He always has his Kjetchuda; a considerable office, because he attends to everything that the Grand Visier, by reason of his many duties, cannot do. This post is usually filled by persons of merit and virtue, who are able to give the Grand Vizier good advice.

When the Grand Vizier grants audience to foreign Ambassadors and Ministers; then he sits alone in the corner of the Sofa; on the left side, next to him stands the Kjetchuda, and on the right side the Reis-Efendy. The foreign Ambassador places himself on a chair without backrest, directly opposite the Visier. But if one has an audience, either in the Imperial Armoury, or in an Imperial Palace on the Black Sea Canal; then the Kjetchuda is not present, because either the Vizier, or he, must necessarily always be at Constantinople.

If the Vizier goes to war; then he not only follows him, but also all the Ministers of the Secretary and Chancellor, and even the Christian of them is taken with them to the army. Although the experience of the loss of them, in the flight after the siege of Vienna, must have convinced the Turks of the folly of this custom; yet they have not yet, up to now, abandoned it. When the Vizier is on the march, then only his Governor remains at Constantinople, but he has only a semblance of power. For, since

all the registers are in the army, he cannot decide on anything without sending it to the Grand Vizier, in order that the necessary knowledge and information may be obtained from the Archives. This Kaym-Maekam, for the rest, observes the same that the Grand Vizier had to observe; but his office lasts only so long, until the Grand Vizier, who was in the army, returns. In case at that time, when the Grand Vizier serves in the field, the Great Lord goes to Adrianople or another city, as Achmed III, in time of war, went from Candia to Thessalonica; then, besides the Kaym-Maekam of Constantinople and his Minister, another with his Minister is elected on the spot, where the Sultan is staying. On such occasions one counts one Grand Visier, two Kaym-Maekams and three Ministers; but these two last only so long, until the most important one, who is in the army, returns to Constantinople.

(*) So it is in Ricaut, and so it was before. Now the fixed pension is doubled.

XXII. Of the Viziers of the Bank, the Desterdat, Nischandschjy, Reis-Efendy and the Teskjerehdschjy. Besides the first Vizier,, the Sultans were accustomed to keep six other Vizier,s at Constantinople, who were called Vizier,s of the Bank. These attended the Divan, but were not allowed to express their opinion, unless the Grand Vizier asked them. Nevertheless, as often as one had to deliberate on a matter, they were always admitted to the Cabinet college, where they expressed their thoughts with complete freedom. But, because these Vizier,s seemed dangerous to the first Vizier,s, who feared that they could be deposed all the more conveniently, because others could be appointed in their place; as they were, moreover, an obstacle to the Grand Vizier in the council meetings themselves; so the latter thought of means to be discharged from them, and under the cloak of zeal for service and the pretext of economy, persuaded the Sultans to deprive them of their office, and to send them to the richest Provinces as Stadtholders. The sharpness of the first Vizier Ibrahim Pascha succeeded in bringing about this important affair, because he knew how to make good use of the propensity of Sultan Mahomed III (*) to avarice. Under the appearance of favor to these Vizier,s, the most advantageous offices in the Provinces were assigned to them, ??confiscations of lands, loans, the annual gifts of the Bassas, Sandschaken, and all other regulations in this Empire. He gives every ship that sails from the harbor a toll-ticket, for which five reals must be paid. This brings in a great deal, considering that ships constantly sail from this great harbor, which may easily be gathered from the uncommon population of this great city, and from the great trade, which many nations from Africa, Asia, and all European nations carry on here. In addition, he has the advantage of the Cancellation, which is proportional to the number of the Provinces and subjects of the Empire. From this it may be concluded what an advantage he can draw from these rich sources, but which are all legitimate with his Dignity. Add to this what he can gain by unjust means, noting that there is no office of the Empire which could extort more and more easily than this, since a Travel Agency need only tire people by a slow execution of affairs; then his income increases still more. He has no seat in the Divan; on the contrary, this place is usually filled with people who possess virtue and a quickness of mind; qualities which, with the multitude of occupations, are absolutely necessary in so great an Empire. The Defterdar is the Great Treasurer of the Empire, and must be distinguished from the Treasurer of the Seraglio, who manages the private treasury of the Great Lord. His office involves collecting the income of the Empire, and making good the public expenditure; that he must always be on the lookout to increase the former, and to diminish the latter. I shall speak of his Cashier, when I come to the State-household. For the rest, this office is very considerable; he has, on solemn occasions, the precedence over the Court-Chancellor, and sits in the Divan on the bench directly opposite the Nischandschjy. He has many people under him; a College, which we might call the Chamber. The place where he exercises his office is a room near the Hall of the Divan.

The Teskjerehdschjy is a sort of Sub-Court-Chancellor, an equally considerable office, because he has all the registers of the Cancellary in his keeping. He has the supervision of the registers themselves, the execution of the Fermans, (orders of the Porte.) the preservation of the writings, and is obliged to vouch for the diligence and accuracy of his servants at the Travel Office, who work in great numbers in the Chancellery. He has a share in all State secrets; attends the most secret conversations, and also often says his opinion. From this post one usually arrives at the Dignity of a Travel Office.

(*) My Italian manuscript is called here, and rightly so, Achmed III.

XXIII. Of the services for the civil government, and good order in the city.

41405 The Tschausch-Baschy is a Dignity, which, in our respect, represents two persons. For on the one hand he is Judge over civil affairs, on the other hand he is Court Marshal. As Court Marshal he receives the foreign Ambassadors outside the city, accompanies them on their entry, leading them to Audience. This brings him much, because all the Ambassadors present him with rich Manufactures from their countries. 41410 But even more advantageous is his other office, in deciding legal cases. The Visier and highest Judges or Kadhy-Leschkjer refer all legal cases to him, which are either of little importance, or in which no things, touching Religion or State, take place. Since he now draws a fixed money from a hundred of all the Capitals, on which he judges; so he has a fair income from this. He is the Chief, and on him depends the 41415 whole state of the Tschauschen, which is more or less in agreement with our Commanders.

Another considerable Dignity is that of an Istanbul-Efendy, or Governor of Constantinople. He has the oversight of all the food and provisions. He endeavors to maintain the abundance of these in that city; he is vigilant that the price of them 41420 does not rise through bribery; and, if there is a shortage of anything, he takes care that it is distributed in such a measure that the city in general suffers no shortage. This office is always held by a man of policy and standing, who draws so much from it that he can live magnificently and respectably. In judging his income, it must be remembered that he draws his share from everything, even from the least 41425 things, which are demanded for the consumption of such a numerous multitude as is at Constantinople.

The Kadhy decide minor disputes, and in this way the multitude of occupations in the high offices is diminished, so that they are not hindered by minor matters in more important ones. A similar object also has the appointment of Chiefs in each trade, 41430 who decide disputes which arise either between men of the same trade, trade, or between a trade and a foreign merchant, whereby the higher courts are relieved of innumerable difficulties.

With regard to the new building of houses, which is a source of disputes in all countries, there is no special court to have the oversight thereof. All disputes 41435 concerning this are settled by the Memar-Baschy, that is, the general overseer of the buildings. There is no appeal against his verdict, and, when it is once struck at a place where one is building, then it decides for or against the legality of the building. One either continues with this, or, what has been built, is pulled down. But, just as he knows how to interpret the law according to his interest, so he is 41440 always right who offers him the most money; and so he who holds this office is always a man of means.

But the greatest relief for the Turkish Tribunal, with such a great number of cases, which such a strong population could produce in Constantinople, is this, that the inhabitants of this city seldom go to the Judge. This is because they govern 41445 themselves almost entirely.

XXIV. Of the Nations, who are subjects of the Turks, and live at Constantinople, namely, the Jews, Armenians, and Greeks.

The population of Constantinople would be much smaller, if it consisted of Turks alone; but it is considerably increased by other nations, who are indeed under the 41450 Turks, but otherwise, as regards language and religion, differ entirely from them. The most numerous are the Jews, (*) who live partly in the city, partly in the villages around it. They form 20 thousand Families. They have an Aristocratic government, under which the people stand in religion, manners, and customs. The most 41455 notable among them are the Teachers of the law, called Chacans, who decide disputes that may arise in the Families. And none of them dares to appeal to a Turkish one from a sentence passed before their court. They possess no goods, and yet they are all reasonably well-off, and many even rich. The reason for this I will mention when I speak of Commerce. For the present it is sufficient for me to have merely mentioned 41460 their aristocratic position, according to which they do not cause the Turkish courts any trouble. But now I must also mention how they behave in Constantinople.

Just as there is no respectable Turkish house to which a Jew has not been admitted; so, more naturally, the number and condition of their protectors give them great 41465 prestige. There is indeed no nation which is more mistreated and cursed by the Turks than they; but on the other hand, none is more cherished than they. They are like slaves; but always retain a certain character of mastery. They possess nothing, and yet they live with ease and in abundance. They cannot acquire lands, but accumulate immeasurable goods. They increase daily; for they all marry, and none of them goes to war. They are the greatest Confidants of the Turks. In a word: at Constantinople

- avarice is indeed abhorred in outward appearance, but in reality it is nourished; and the Jews are the negotiators of the most shameful usury. The other nation living at Constantinople are the Armenians. Their number amounts to about forty thousand, who are mostly schismatics(*) and a few Roman Catholics. The first are the Aechychians; they deny the one nature in Christ, having an aversion to the Council of Chalcedon.
- The poorest of them, of whom there is a great number, are mostly servants, and the others devote themselves to Commerce. In their dealings they all depend on their Overman, having no need to apply to Turkish courts for that purpose. Above all nations the Greek is the most numerous. She has indeed lost authority with the Empire; but nevertheless, besides the cunning, cunning and proud nature of her forefathers, she has retained some power, as well as the praiseworthy, intelligent and lively Charaster, always characteristic of that Nation, is still perceived in her. By this they know how to take the Court, and obtain, through the favour of the Ministers, the government of Wallachia and Moldavia, over which they exercise an almost absolute dominion. There are also among them some of the old distinguished Families, but who now bear nothing but a famous name without emphasis. They live almost all in Fener, being a suburb, which is united to the walls of Constantinople without.
- They possess very few lands, and their principal existence lies in the two Principalities mentioned, where they hold the offices of a Protospadar, Grand-Chancellor, Treasurer, House-steward, Lyfarts, and Agents of the Porte, because all these offices may have certain lands in these Provinces for their use. Although previous experience has sufficiently shown how dangerous rocks these two Principalities and the Dignities dependent upon them are, because there are very few who have occupied them to their death, or have enriched themselves thereby; the Greeks, however, as soon as they have accumulated any goods, are, according to their usual ambition, so strongly in it, that they willingly sacrifice the most sacred ties of blood and nature, when they deem it necessary to attain their purpose. The interpreters of Captain Bassa and the Bassas on the borders with European Princes are also all together Greeks, and are uncommonly good at it, because they not only understand Turkish and Greek, as their mother tongue, but apply themselves strongly to Italian and French. They take part in the business, and are employed in the most important affairs. The Turks rely on them especially, because they were born under their rule, and are bound to them by the ties of kindredship; yes, when their ambition is satisfied by a share in the affairs of state of the empire, they easily forget their misfortune, and gladly bear the chains of their slavery. Others become ecclesiastical, by obtaining, by the favoring of the principal Ministers and Vizier,s, the highest Ecclesiastical offices and Patriarchates. These are the offices of the principal Greeks. The inferiors apply themselves to Commerce and mechanical arts. They serve as Sailors on Turkish and Greek ships, and work in the Armoury. Now since all these people depend on their Overmen, or on the highest Ecclesiastical, or the principal Dignities of their nation; so they, usually, settle their disputes among themselves, and very seldom go before the courts of the Turks, who are therefore little burdened by such a numerous nation.
- (*) This is untrue. Then the writer himself says, that the Greeks are the most numerous.
 (†) At least it happens seldom.
 (*) To wit, according to the opinion of the Roman Catholics.
- XXV. Of the government of the city, and the maintenance of justice.
- Having spoken of the offices, intended for the civil government and good order, I must now bring something concerning the way, to observe the laws, and to maintain justice. The guard consists of a certain number of men at each gate, under the command of a captain of the janissaries. In the most populous districts sentries are posted, and in the streets patrols go round, who prevent all disorder. These men are provided with nothing but sticks; but men fear them more than in other countries soldiers who carry guns. The Turks know how to handle these sticks so skillfully, that they stop every fugitive with them. They also throw them to an incredible distance, and are sure to hit. Thus this great city is guarded; rarely is a murder committed there, in peacetime; and, when one is committed, the perpetrator is known to man. The penalty for this is death, and nothing can free him from it, except in case the guilty one should satisfy himself with the blood relations of the murdered. In such a case he is not only freed from death, but also from all punishment. Besides, since the offended, by this, becomes almost the judge of the offender, this case of mercy is very rare; the more so, if it had to be brought about in the first instance, when, in a more human way, one thinks of nothing but revenge. Every man respects and honors the life of his neighbor as much as the other loves his own.

Otherwise it is impossible that such a murderer should not be discovered. For the whole district where the murder was committed must answer for it until the guilty party is discovered.

41540 This strict law is extended so far that when a body is washed up from the sea on the shore of a village in which signs of violence are discovered, that village must pay a certain sum, which, in the absence of friends of the deceased, falls to the Bostandschijy-Baschy. In such circumstances everyone makes an effort to discover the perpetrator, and it almost never happens that the guilty party remains hidden.

41545 Justice is administered in the following manner. The Divan is a court of justice, which is open to all who wish to go there, and is held on appointed days. The ??ten Divan is held once a week by the Grand Lord in the Seraglio, always on Tuesday. (*) He attends him, without being seen, sitting at a window above the head of the Grand Vizier,, who sits directly opposite the door through which those who have anything to plead enter. In this way the Emperor hears everything his Ministers do, as well as all complaints and requests of his subjects. In legal cases no Advocates are used; each presents his own case, and hands his petition to the first Minister. If he shows clemency, he signs the petition with his name. If he refuses the request, he tears the petition to pieces, and thus the most important cases come to an end. Legal cases
41555 are dealt with briefly; for the evidence consists, as a rule, only in the examination of witnesses. If the case is obscure, and requires further investigation; then she appoints the Visier a lesser Minister, and determines the time when she shall be finished.

41560 In Turkey they know nothing of long Processes; therefore they do not know the judicial tricks which in other countries are so disadvantageous to the subjects. Almost always the two Kadhy-Leschkjer are present, to whom the Visier, although he otherwise has complete freedom, usually assigns matters of Religion. Among these are matters concerning divorce, complaints against an unchaste woman, against those who seduce girls, immoral Imams or Priests, investigations concerning the property of the
41565 Mosques, etc. On Mondays and Fridays there is no Divan, but otherwise it is always open either at the Porte or in the Grand Visier's own house. It is strange that so great a Minister, upon whom the whole care of the State rests, and who must deal with such important matters, in such a vast Empire, which daily happens, spends almost the whole morning alone with it, that he listens to the complaints of shameless women and
41570 affairs, who make much noise, however little they have to do, to all which he listens with a dogged patience. It is truly hard to believe how much long-suffering is required, and how much patience he actually shows. But where is it with, that the affairs, in advance, are already purified of all ambiguities. For he could really not possibly get ready, if he had not a multitude of Assistants, who already presented
41575 the matter to him in order.

(*) Under the last governments, to save costs, this has only been done once every two or three weeks. In general, this depends on the Sultan's caprice.

41580 XXVI. Of the Empire offices, by which the Empire provinces are governed. The Stadtholders of the Provinces of the Turkish Empire are divided into three classes, namely Begler-Begh or Bassa, Begh and Sandschjakken. One distinguishes itself from the other by the number of horse tails, which is the badge of honour that one carries on the marches before them. A Beghler-Begh has three, a Begh two, and a Sandschjak one: therefore one says, a Bassa of one', two or three horse tails. (*) This badge of honour actually consists of a horse's tail, which hangs from a long
41585 peak, like our sticks of the standards of the Infantry; above is a thick gilded knob, and at the side hang silk tassels. The origin of such a horse tail is very old. It comes from a war-case, when a brave man, when the Turkish Army was beaten and
41590 scattered, and could find no standard, fastened a horse's tail to a stick, gathered a troop of people, and on this gained a complete victory. The fortunate result caused them to be regarded as a good omen, instead of standards, to be carried for the Commander, and used as insignia of rank. — The Beghler-Begh are of two kinds, the first is called Chasz-Iieh-Begler-Begh, carrying their

41595 (*) This is not at all true; a Sandsjah receives only a standard or banner.

income from the lands of their Stadtholderships. The others bear the name of Sfalyan-Beghler-Begh, who receive their pension from the Mury's Fund or the Defterdar's Rich Fund. — After the Grand Vizier, Beghler-Beghs are the most important persons of the
41600 Empire; they hold the Stadtholderships of the Provinces and Empires, and have many Beghs and Sandjaks, as well as other Officers under them. From these Stadtholderships they draw an astonishing income; and, when the Bassa of

41605 Damascus died recently, whose Stadtholdership is nevertheless not the most profitable, he left five millions of piastres in cash. It is impossible to mention all the means they use to scrape together such sums: confiscations, breaches of covenants, sale of vacant religious offices, extortion, acts of violence, are only means they use. The government tolerates them according to the Constitution, of which I shall speak more fully subsequently. Here I will only mention the number of the
41610 Beghler-Beghs with their fixed income. For every 5000 Aspers of fixed income, one Beghler-Begh is obliged in time of war to supply a Soldier for the army. On the list which I here give of the Bassa and their income, therefore also stands the number of Soldiers which they must supply at their expense; from which one sees how many Soldiers this government can count on in case of incidents.

41615 Each of these Stadtholderships has its own Mufti, Reis-Efendy, Grand Treasurer, Janista-Aga, Spahidar-Aga, of whom the first is General over the Janistas, and the latter over the cavalry of the Province. When going to war, the Beghler-Begh of Napoli, Babylon, Cairo and Rome have precedence over all others. The rank of the
41620 others is regulated by the time when the country over which they are placed has been conquered by the Turks. — It would be too lengthy to mention the other Stadtholderships, dependent on the above-mentioned. I do this all the less, because my report cannot be as detailed as I would like it to be. It is enough for me to have given a brief conception of the external government of the Provinces, or rather of
41625 the continuing misery which is caused by the cruelty and avarice of the rulers. Among the above mentioned I have also placed that of Cairo. But, because this government, which embraces all the Egyptian Kingdoms, has more the appearance than the deed of a Stadtholdership, I believe that a more extensive account of it will not be out of place.

41630 (*) My Italian manuscript has only 885000.

XXVII. Of the Bassa and the Government of Cairo.
The Bassa of Cairo has his seat in Cairo, the capital of Egypt, the former Empire of
41635 the Mamluks. Sultan Selim I formerly subdued these brave peoples; wherefore this country is governed under Turkish suzerainty, by a Bassa sent from the Porte, and 24 Begh or Princes, whom he chooses from the principal Families of the Empire. The Bassa and they together form a Divan or Council of State. They meet on certain fixed days, to deliberate on military and state affairs, which are mainly entrusted to their
41640 supervision. But the Bassa, as Sultan's Governor, exercises an indefinite rule over them, and they must direct themselves according to his Will. For the rest this country is governed according to its laws, and this is still the shadow of freedom, which it alone enjoys, by a special favour of the conqueror. The land militia amounts to 20 thousand foot soldiers and cavalry, which are partly in occupation in the city,
41645 partly in the surrounding provinces. The Sultan can, in time of war, command only three thousand of this militia, because all the rest remain there in occupation of the Empire. This country is very populous, fertile and rich, to which the fortunate inundations of the Nile, the influence of the Climate, and the great domestic and foreign trade contribute unusually much. The wealth of this country is proved by the
41650 Jasteelij?? which it bears annually, or to maintain 20 thousand men; the tribute which it pays the Sultan; the satisfaction of so many magistrates, as well as so many other expenses; without counting what the avarice of the higher and lower commanders extorts. For the rest, it is well understood that the government of the city is indeed a mixed government, but that nevertheless the Sultan alone is really competent
41655 to act as sovereign. But the wealth of the Beghs, their exclusive character, the dependence and inclination of the subjects for them as natives, and finally the renunciation of the Imperial See, make them almost always proud and bold to throw off the yoke. Wherefore the rebellions are frequent, the Bassas are often in danger, and in the meantime the disorder and licentiousness continue. 'Civil wars arise; they
41660 fight among themselves; they drive each other away, and sometimes even refuse, according to the commotion and the confusion, to give the Sultan the annual tribute. The Bassa must always govern them; but he governs with that moderation which is more used with regard to allies than subjects.

The Porte always endeavors to send capable men to this Empire. At present there is a
41665 man of distinction, who, for many years, has been here Reis-Efendy, in which dignity he has acquired the esteem and affection of all foreign Ministers. (*) I knew him as a refined and honest man, who possessed much ability, and, which is a rare quality among the Turks, was not at all set on his own interests. Although he is now a man of very much experience in affairs of state, and of exalted qualities; yet he cannot
41670 quell the disturbances in this Province, which, for a few years, has not sent tribute

to the Porte. One of the Beghs has set himself up as Prince; governs arbitrarily; exacts the revenues; and the Bassa is forced to tolerate everything, and to flatter him, because he lacks the means to bring him under the yoke. — This is the present state of Cairo. From which it may be inferred, that the Sovereignty of the Porte over Egypt exists only in a single semblance. When it is brought to peace again, and the annual tribute is again sent to the Porte; then I cannot, however, regard this rich country as anything but a single cynical Empire of the Turkish Empire. (*)

(*) His name was Mehhmed.

XXVIII. Of the government of Wallachia.

The old Dacia, which was always famous for the bravery of its inhabitants, included the three Provinces, Sevenbergen, Wallachia and Moldavia. All three suffered for a long time much from the marauding now by the Germans, then by the Poles, then again by the Turks, so that they were finally forced to buy the Turkish protection for an annual tribute. Sevenbergen, because it bordered on the Imperial States, which Power had many auctions on its borders, first agreed for the small sum of six thousand Zechines, which was then brought to ten thousand, besides 3.00 Scudi and two silver barrels for each of the seven Vizier,s, who then still existed, namely the six Vizier,s of the Bank and the Grand Vizier,. But when this country was taken from the Turks, it came, by the peace of Carlowitz, to the Emperor, and thus passed from the rule of the Turks to that of one of the most pious Princes on earth.

But the two other Provinces, Wallachia and Moldavia, are still under the Porte. This always assigns the government of them to a Greek, who is usually chosen from the Families that live in Fanari (*). But these elections are mostly effected by presents, which the competitors distribute among the Turkish Ministers. These Stadtholders have the Title as Taywodah or Begh, which gives them the distinguishing sign of two horsetails. They are obliged to collect the tribute in the Provinces, and to send it to the Porte. Here I will speak only of Wallachia. This paid, up to now, only sixty thousand Reals (*) a year. But, after the Waywodah of Wallachia had risen against the Turks in the year 1655, and the rebels were beaten thereupon, the tribute was increased to the same rate as she now pays it. Namely, she pays to the Great Lord 230 thousand Reals, 15 thousand Oks of honey and 9 thousand Oks of wax; to the Great Vizier five thousand Reals, besides a Pels; to his Kjetchuda five hundred Reals and a Pels; furthermore to his Treasurer five hundred Reals, and finally to the Kislar-Aga 20 thousand Reals.

These are the taxes which the Prince of Wallachia must pay. But sometimes there are extraordinarily great gifts, to maintain himself or his dignity, or to free himself from wiles and deceits or other accidents, and these sums often amount to more than the usual tribute. Thus these sums, the maintenance of the Court of the Stadtholders, and the care of their Subsistence, when they are deposed, must be demanded of the subjects of this Province; and thus its inhabitants suffer. Their misery is so great, that I can affirm, according to credible reports, that in the last three years only, more than two thousand families have left this Province, who would rather go under the Bassa of Nidiri (*), under whom they live more happily, than under their own Prince.

In this manner this country is robbed of its inhabitants; the Field is not cultivated; the Products diminish; the extortions are increasing every year; and so this Province must either become very desolate, or the few inhabitants who are left live in the utmost misery. That the burdens must continually increase is a necessary consequence of the custom of the Greeks, introduced a few years ago, having its basis in their avarice and ambition. For whereas, formerly, they did not spend 100 purses to obtain this office, the present Prince has had to pay a million for it. Thus, out of blind ambition, they waste immeasurable sums, from which nothing else can arise than that they, by much extortion, try to get back their spent sums. At the end of their reign they generally have little use for it; In the meantime they have sacrificed their own name, and are often in danger of losing their lives and their goods. For often, when they are deposed, there is this misfortune added to it, that they have to give an account of their government. The last deposed Prince not only ran the risk of losing his head, which he retained only by paying a sum of 150 thousand reals, but he has also been banished for more than a year on the island of Metelino.

(*) In the meantime, the Porte, with their great dissimulation, always plays the boss again, now or soon. Compare the Hot of \$. I. in my description of the Turkish Empire, page 43.

(*) The principal district of the Greeks in Constantinople.

(*) This must be Piastres.

(*) In my manuscript it says, and probably ?? Widin.

- 41740 XXIX. Of the government of Moldavia.
Moldavia is not happier than Wallachia. It has also a Greek Prince who governs it. Since this one, in the same way, comes to his Principality; so this unhappy Province must therefore also experience the same misery. When Mohammed I made this Empire
- 41745 cynical, it paid, annually, only two thousand Reals. This tribute was, afterwards, steadily increased to eight thousand Reals. But, after she is brought entirely under the obedience of the Turks, she pays, annually, to the Grand Lord 160 thousand Reals, 10 thousand Oks of Wax, and 10 thousand Oks of Honey: furthermore, for the service of the Armoury, 600 centeners of Sulphur, 1320 Oks of Wax, 500 Ox-hides, and 500 pieces of Kanefas for clothing for those condemned to the Galleys, and for other necessities
- 41750 of the Galleys themselves: furthermore, to the Grand Vizier,, five thousand Reals and a Fur; to his Kjetchuda, five hundred Reals, and finally his Treasurer, 500 Reals. This is the annual tribute of Moldavia.
I will not give you a long list of the expenses which these two Princes must make, when they receive their offices. For these depend upon the circumstances, according
- 41755 to whether many or few are in this office, according to whether the Ministers of the Porte are more or less satisfied, and whether the Ambition is great or small with the impatience of the Competitors. On such occasions the costs mount very high. Since now also the maintenance of the Prince's Court is added to this, it follows that the Moldayans bear the same burdens with the Wallachians; therefore the population of
- 41760 these Provinces must daily decrease more than increase.
If they were governed differently, and the neighbouring peoples urged to come and populate them, then these two Provinces would be very rich; for the soil could not be more fertile. It has been calculated that even in not very fertile years the Corn increases a hundredfold. They have rivers enough for the convenience of Commerce, as
- 41765 well as abundant products of their own to carry on Commerce. Corn, wine, wool, leather, honey, wax, oxen, sheep are there in a fair abundance. As the land is little cultivated; the rivers are not made navigable; the country is depopulated; the wealthiest men cannot get a desire to improve the happy circumstances in a Climate which has the sad characteristic, that he who has any money is easily considered
- 41770 guilty of a crime; so everyone is content with what is sufficient for a mediocre Existence. The fear and malice of men therefore makes that so many gifts of nature remain useless.
- XXX. Of the Tartars and Allies of the Porte on the Barbarian Coasts.
- 41775 Having spoken of all the Provinces under the Turkish Empire, I now come to its Allies. These are the Tartars and the three provinces on the Barbarian Coast. The Tartars of Perecop, the Tauric Chersonesus, or inhabiting the peninsula of Crimea, and the Nogai Tartars, who live between the Volga and the Don on the Mo??otic marsh, are indeed peoples dependent on the Porte, but they deserve more the name of
- 41780 Allies, because of the mutual treaty they have entered into together, that if the male Line of the Osmans should die out, the Tartars, and likewise if the Princes of the Tartars should die out, the Osmans should succeed. This holds them together with the strongest bond, and makes the Tartars gladly suffer that the Porte should choose the Chan of the Tartars. - By virtue of an old treaty the Great Lord possesses the city of Caffa. For this purpose the first-born Son of the Chan of the Tartars had to remain at Constantinople as pawnbroker??; but the Tartars have, for some years, opposed this second treaty, as an injustice.
- 41785 As often as the Great Lord himself goes to war, the Chan of the Tartars is obliged, according to old covenants, to accompany him with an army of 100 thousand men. But if the Grand Visir or another Bassa, such as Sfer Askyr, leads the army; then he is obliged to send at most 40 thousand soldiers. It should be noted that this is a militia which does more harm than good, because it devastates the country of both friends and enemies, and is not good for regular battles; the Turks have seen the matter somewhat more deeply, and only use a moderate number of them in cases of
- 41795 extreme necessity. This year the Sultan demanded twelve thousand Tartars, to send them against the Persians; but not even 9 thousand came, but zebras and more than 40 thousand horses. From this it followed quite naturally that they devastated the whole country through which they passed, about which violence the subjects complained very much. It is already foreseeable that after such a great disadvantage these troops
- 41800 will be of little use. And the Osmans will therefore see more and more that the Tartar militia does them more harm than good. For the rest, the Sultan does not treat the Tartars so supremely as he treats his other subjects. When he has to send them an order, it is not done by a Ferman, but by letters, which are otherwise just as perfectly obeyed. The Title, which the Great Lord uses, when he writes to the Chan of

41805 the Tartars, is this: "You, to whom the power of ruling belongs, share in the government, lineage of happiness, gain of Bliss, rich in perfect power and glorious fame; you, who walk in the path of valor and happy chances, planted in the row of fame and Majesty, chosen by the great Grace of the favorable King; (that is, God,) you combative Gheray Chan, Emperor and Lord of the Crimea, of No?gay, Circassia, 41810 Albi-Kjerman, of That and Taman and other great holy armies; the Most High perpetuates your Highness, etc. These peoples pay no annual tribute, but send, from time to time, the Sultan and his principal Ministers some presents, mostly in horses, wives, slaves, and other products of their country. The provinces of Barbary, Tripoli, Tunis, and Algiers, are treated almost in the same 41815 manner as the Tartars; the only difference is that the Tartars honor and obey the Sultan's orders, which the Barbarian countries do only when it suits their interests. These are also obliged, in time of war, to join the Turkish fleet with all their vessels. It is reckoned that all three of them can now supply eleven ships of the line. The old treaty, according to which these Provinces are obliged to help the 41820 Porte, also obliges the Porte to assist them in case of necessity, when they should be attacked by a Power. They pay no tribute, but usually come every three years with presents of animals and slaves; in return, the Great Lord generally gives them a fully equipped Warship, but without a crew. Therefore, these peoples could also be considered Allies of this Empire on such terms.

41825 XXXI. Of the taxable Peoples of the Turkish Empire.
Taxable peoples of the Porte are three in number, namely those of Georgia, Mingrelia and Ragusa. The tribute which the Georgians pay to the Turkish Empire has its origin in earlier times. When Solman the Magnanimous took Erzerum, he concluded a treaty 41830 with the Persians, to divide with him the tribute of the Kingdom of Georgia, which consisted of 7 Provinces. It was agreed that three would be taxable to the Great Lord, and three to the Sophia of Persia, and over the seventh a Prince of the country, who then bore the name of Achjach-Basch, would be Sovereign, who at the same time as Stadtholder would also have the supreme oversight of the other six taxables. 41835 These Provinces then paid their tribute regularly, but when, instead of the Prince Stadtholder over the six, and the Sovereign over the seventh, a new Prince had to be appointed, dissensions arose in the Empire, which were partly fed by the Turks, partly by the Persians. Each Power appealed to the obligation to assist its taxable peoples. From this arose long-lasting wars, which were waged by both Empires with a 41840 mutual jealousy, the luck of Persian arms gained the upper hand under the government of Sophi Thomas Kuiikan, and the Turks lost the tribute of Georgia, so that not but a few peoples of these extensive Provinces remained to them: these consist in the district of Auchasja, which belongs to Georgia, and lies between Mingrelia and Persia. The country is barren, full of forests and barren, therefore poor. This 41845 country can now provide no other tribute than that it sends the Porte some slaves as a present. The Mingrelians are also poor people, paying a similar tribute. Every three years they send 7 young slaves, and as many young female slaves to the service of the Great Lord, and some other slaves for the Ministers. The female sex of this country is in a special esteem above all the female slaves of other nations. They are 41850 not only richly endowed with the gifts of nature, especially an uncommon beauty, but also have a quick mind and a very flattering and modest character, as one might expect from a woman who wants to make the happiness of her Lord or Husband. The experience of these excellent gifts has then raised the price of the slaves of this nation beyond measure. The small Republic of Ragusa, formerly called Epidaurus, and 41855 is situated in Dalmatia. She pays, likewise, every three years, to the Porte a tribute, which she sends by two men of her Nobility, to whom she gives the Title of Ambassadors. To these the Porte pays the Tain, but it does not amount to much, consisting only of one and a half Reals per day. These Ambassadors must wear a long robe, and appear with a beard. The tribute consists of twelve thousand and five 41860 hundred Zecchines, to which must be added the presents which they bring to the Visier, Kjetchuda, Reis-Efendy and Defterdar and other Ministers of the Porte, so that, including the costs of the Ambassadors, this amounts to at least sixteen thousand Zecchines for the Republic, every three years.

41865 XXXII. Of the Household of the Turkish Empire, the Public Treasury, and those who have the Administration thereof.
Nothing costs more trouble than the Household of the Turkish Empire, if one wishes to have a true account of it. The natural pride of the nation, which causes it to magnify all its affairs, never lets us hope to obtain a true and credible account 41870 from the persons who have their hands in it. The extraordinary size of the Empire and

the number of Provinces of which it consists, place it impossible for a Foreigner to obtain the exact knowledge of it that he desires. The many writers who have written about Turkey are so little agreed that some have been misled by the false reports of the Turks to put the income of the Reich's treasury at 40 millions. Others, on the contrary, doubting with reason the authenticity of the reports which were given to them, have given too little, and have only fixed eleven millions. I think that in this piece one must choose the middle way, to which the many reports which I have obtained, and subsequently also by many experiences, have been secured, determine me. Then, before I speak of the quantity and condition of the income, I must give an idea of the treasuries into which they flow, and the persons who have the management of them. All the revenues of the Turkish Empire are divided into two classes, one of which is outside the Serail, and is called Myry, but the other is in the Serail, and bears the name of Chafyneh. The first is the Empire-casse, under the Defterdar or Great-treasurer. The second is managed by the Chafynehdar-Aga, which is a considerable office, which is always held by a black Ensign, and this is the special Cash of the Sultan.

XXXVIII. Of the Myry or the Kingdom-cash, and of the Chafyneh or Kasse of the Great Lord, its receipt and expenditure.

The Kingdom-cash, under the Defterdar, may amount to about 20 millions according to the most convenient account. This flows from various sources; but I will speak only of the principal ones.

The poll tax is a tribute, which everyone pays, living in the Turkish Empire, except the women, and who are under the protection of the Ambassadors and Consuls. Every male son begins to pay this tribute from the 14.1st year, amounting to a Zechine. This is the least sum; but increases, according to the public need and necessity. The tribute of the poll tax is appropriate to the ability of the subjects, and is divided annually into three Classes. The most well-to-do pay 12 piastres, the middle-class 8, and the poorest 4. But if the Empire needs money, then these sums must be paid twice a year instead of once a year. According to the calculation of persons who had to do with the leasing of this tax, it brings in three millions a year. Three millions are brought in by the salt mines and fish-rich waters; two millions are received from the leases, leases, and those offices which have to give a certain tribute. Two other millions are received from public goods. The Customs houses bring in five millions. The three principal ones are those of Constantinople, Smyrna, and Salonica. These would yield much more, if they were observed with the same exact severity on the same footing, as the Europeans observe, times the tolls are otherwise very moderate, and do not exceed three per hundred among Europeans; even the penalty imposed on illicit traffic is moderate; for in this case one pays only a double toll.

Another considerable sum is brought in by the tolls imposed on things that serve the pleasure and enjoyment of life, such as tobacco, coffee and spices, which are more burdensome than all other things necessary to man's life. Still some other minor incomes, which I leave untouched, with those that I have recorded, constitute the annual income of the external government fund, under the Defterdar, and these amount together to 20 millions of reals. This Fund makes good the expenses of the fleet, the maintenance of the militia, the remuneration of so many officers in war and in the city, as well as the extraordinary accidents, which usually either consume or exceed the entire amount of the revenue. This Fund is, at present, in the worst circumstances. So many wars, which the Porte has continually waged, and which have ended unhappily, especially the so destructive Persian war, which has lasted so many years, have not only weakened it, but also brought it into the utmost confusion. Besides a debt of 16 millions, which this Fund owes the Sultan, and the advance expenditure in the revenues of two years, it cannot pay many things above that. Wherefore the confusion is so great, that, according to the confession of some persons working therein, no other means can be thought of to keep it standing, than that the Great Lord, from his own Treasury, should give a few millions into the State Treasury. This was also done several times, and this is indeed a means, to keep the Treasury standing, which is not common to the Treasuries of other Princes.

The Chafyneh or Treasury of the Great Lord is in a very different state. Its income cannot be determined precisely, because it is coincidental and arbitrary, and consequently, to a very great extent, subject to change. Of fixed incomes flow into it those of Cairo, Wallachia, Moldavia, Ragusa and Mingrelia. This last Province yields no money at present; for she is so poor, that she can only deliver a few slaves as tribute,

Cairo delivers, annually, Reals -- 600000
Wallachia -- 230000

Moldavia -- 60000
 Ragusa -- 16666

The incidental incomes, which are still much more considerable, flow from the
 41940 confiscated goods of the deposed and executed Bassas; from the goods, which, for want
 of heirs, fall to the treasury; from the fines; from the tithes of all profits, and
 from the income of the mining. This last source is, at present, for various reasons,
 very weakened. The Silver Mines, which lie in the district of Erzurum, and otherwise
 41945 yielded very much, may be considered as lost, because in that country there is too
 great a lack of wood to work them, and the transportation of wood is too expensive.
 Even the mines of Diarbekir, which yielded very much gold of the best alloy, yield
 s not nearly those great advantages which they previously delivered, For, since the
 population of this Province, by the constant raids of the Persian troops, is very
 weakened in these regions, so the work is either not always continued, or by very few
 41950 workers.

In the meantime, it cannot be otherwise, or this Kasse must be very rich. One only
 considers how many Bassas lose their goods, which provide the Sultan's Kasse with
 incredible sums. The only old Bassa of Damascus, who died last year, left five
 millions in cash. Furthermore, the Monarchs, for many years now, have been collecting
 41955 money with the utmost vigilance; but are very frugal in spending; the Sultan's own
 maintenance is regulated, and the pension of the Servants is fairly determined. Even
 the ostentation of one's own concubines is no longer so excessive as before, when the
 Sultans wasted incredible sums on them. Formerly it cost much less to declare one as
 Consort or Favorite. But now this is no longer done, in order to recover expenses.
 41960 The only case in which Economy has no place is the birth of a Prince: for then one
 must do what custom and courtesy require. Sultan Achmet has even in the Seraglio
 abolished many offices which he considered superfluous; but the incomes of those
 which could be considered necessary, he has cut back. (*) The Court expenses, which
 are now only made good from the Chafyneh, are therefore very moderate, and reduce
 41965 very little the large sums which flow into it annually. All other arbitrary expenses,
 serving the pleasure of the Monarch, for instance, buildings, furniture,
 haberdashery, illuminations, amusements, are made good by his Ministers as a dispute;
 wherefore the Chafyneh has no further charges concerning them, as she nevertheless
 had, before this, to the great disadvantage of the Treasury.

The Sultan alone has to command over this unusually rich treasury, and he very
 reluctantly resolves to meet the Imperial Treasury by a loan. If he does so, then the
 need must be great. The Ministers also avoided in every possible way to turn to him
 on this matter, in order not to receive reproaches for bad management, and not to
 give the Monarch an opportunity to become angry. This nevertheless often forces them
 41975 to do so, and in such a case they avail themselves, under the present government, of
 remarks concerning a fearful revolt; for fear alone is able to impress a Sultan, and
 to increase his natural passions, which are common to almost all Turks. There are
 also political considerations and rules, having their basis in the Seraglio itself,
 why the Monarchs are so reluctant to let money go out of the Seraglio. I will speak
 41980 of this when I shall treat of the Politics of the Turks.

{*} My Italian manuscript gives, augmented, ???.

XXXIV. Of the Commerce of the Turks and their Subjects at Constantinople, and in
 41985 general. I am writing to you about Commerce, a matter which does not belong to my
 ministerial object, and which I have not learned either. Therefore I do not promise
 you any Merchant's knowledge concerning the essence of Commerce, such as I leave to
 the Merchants. It is enough for me to give such reports concerning it, as agree with
 my general determinations, and which I have been able to learn from old, good and
 41990 experienced Merchants. I will therefore report something concerning the sources of
 this Commerce, the condition of the costs and effects, the property and the various
 prices of the materials, as well as the virtue of the Manufactures; and hereby say
 something of the accidental determinations and quality of the persons through whose
 hands the Commerce passes. Here I shall begin to speak of the Commerce which the
 41995 Turks and the nations subordinate to them carry on here. Then I shall speak of the
 European nations and their Commerce. -- The Turks trade, very seldom, with foreign
 countries; for they can content themselves with the use of their extensive Empires
 and Provinces. Therefore they have two kinds of Commerce. One is the Commerce on the
 Black Sea, which they carry on with their so-called Saïks, Voleken, and other small
 42000 ships. The cargo of these is varied, according to the various things which they fetch
 on the shores of this Sea, and according to the places where they load the Goods. On
 the side of ??fe, and especially in the neighbourhood of the river Phafis, they load
 some wood. On the European coasts they fetch coal, and in the more remote regions

42005 towards the Danube they load corn, wax and cattle. As the Crimea has an abundance of leather, small cattle, wax, honey, butter and corn; they make their cargoes there at such advantageous prices, that the merchants who carry on this branch of trade gain an unusually large amount of money by it. The other considerable and more profitable trade is carried on in the Mediterranean, with ships called Kaikes. The spices and coffee are brought over the Red Sea to Suez. Here camels are loaded with them, which 42010 carry them to Cairo. From this city the goods are brought, in large barges, over the Nile to Rosetta and Damiate, where they are loaded into larger ships. Egypt has an abundance of other products mentioned above. The cloths, which the common people use, and with which the militia is usually also clothed, are made at Salonike, which they also have the reputation of making better and finer than at Constantinople. The 42015 cameltoes are prepared in the neighbourhood of Angora, a country which has very fine wool, or rather the finest hair of goats, silk ribbons and other manufactures of this kind. On the island of Scio, especially in the city, are made cloths of tree wool and silk, but cloths of tree wool are made chiefly at Alexandria, and on the island of Cyprus. Sailcloth for the ships, and linen for the Army, are made in various 42020 countries, but that which is required for the use of the fleet, at Sifanio, an island in the Archipelago, which supplies it annually on account of its tribute. The price of such Goods and Manufactures is, generally, determined by the custom and way of thinking of the Turkish Merchants, who, however, are generally satisfied with a moderate profit. In all the Contracts of the Merchants, it is reckoned in Piastres, 42025 of which each, according to us (Venetian) money, amounts to about six Lire. (*) The Turks, therefore, in their Commerce, confine themselves only to the Transport of their own Products and Manufactures from one Country to another, and content themselves with a less profit, against which they also venture less. Among the Turkish subjects, many of the Greeks apply themselves to the Commerce on the Black 42030 Sea, and many hundreds of Saïks are occupied with Greeks, who procure themselves employment by this trade. The other Greeks apply themselves to arts and other branches of commerce; they also trade in European countries with such Products, which I shall mention, when I shall speak of those Nations. The Armenians do not venture much upon the Sea. Their greatest Trade consists in precious Stones, which they buy 42035 rough from the Europeans, then have prepared and set according to the Eastern taste, and thereby gain much Money. The Jews also do not much concern themselves with Shipping, but nevertheless venture great Capitals in the Sea Trade, which they carry on with all Nations in Europe. Many of them apply themselves to Medicine, with the permission of the Hekjym-Baschy, upon whom all Physicians depend, except the few who 42040 are in the Service of Foreign Ambassadors. Very many of them also find it a good Profit, that they are the Brokers with other Merchants. For according to a privilege no one but they can be a Broker in Constantinople. The European Merchants have often tried to avoid such troublesome people to get rid of; they have also been freed from it for some time. But, since the Jews have the Ministers of the Court on their side, 42045 with whom they converse familiarly; so they had to employ them again in their business of commerce.

The Persians, for this, also carried on a heavy and profitable trade at Constantinople. The Chan or their warehouse, where they live, and deposit their goods, is one of the country's most beautiful buildings. Indian fabrics, woollen 42050 cloths, silk goods of all kinds, were the principal articles of this rich trade. He does not want to say much now. The long-lasting war between the two kingdoms caused the journeys of the great caravans, which came annually from Persia, to cease.

42055 (*) Concerning the value of money, one can consult my description, § XLI, page 52?

XXXV. Of the Commerce of the Venetians at Constantinople.
Since the Venetians are considered the oldest Merchants in this country; I will speak of their Commerce, first of all, before all other nations of Europe. This is, at 42060 present, by innumerable accidents, considerably weakened. Many irregularities have crept in, which have given it a great blow. So many wars, waged with the Turks, which often lasted many years together, have stopped and broken it up. Other nations have taken advantage of this opportunity, and used the loss of the Venetians to their own advantage. The English, Dutch, French, and others have put themselves in possession of the harvest, and have drawn to themselves a great part of the goods, which, for 42065 many centuries, passed through the hands of the Venetians. To this end the factories established in their countries, chiefly the cloth factories, which the French promoted by the moderate and low prices, helped. Their silk fabrics were praised by the beauty and good colours, which gave them a beautiful appearance. Then also the mirror and crystal factories in France, not only, but also in England and Germany, 42070 did great harm to the Venetian trade. But the greatest harm was done to it by the

shipping, which the Portuguese and Dutch, with such good success, undertook to the East Indies. For, since these nations now, immediately, traded with the inhabitants of these coasts, they thus withdrew from the Venetian merchants, who for the latter, by the distribution of such goods, gained infinitely much, the most excellent and most sought-after effects of spice goods. At present the greater part of the trade of the Venetians consists in gold and silk fabrics, which are called Damasks. These still remain in some respect, and are placed above those which have been made, to lower the price of the Venetian Damasks. It is incredible, how great the amusement of them is among the Turks for their Families. (*)

The Venetian cloths are still highly esteemed; the amusement of them would be much greater, if the price were not too high. Those Turks, who want to save, are more in favor of the English and Dutch cloths. The most economical buy French cloths, because they look beautiful, are pleasing because of their mixed colors, and can be bought for a very moderate price. The Turks have made the experiment of setting up factories of cloth, drap d'or, silk, etc. in the capital and in other places, in order to break down other nations there, and to keep in the country the large sums of money that annually leave their country. They have made much effort, and spent much money for it. But their intention failed, either through ignorance of the masters, or because the climate and water were not favorable for it. For gold and silk fabrics, and for velvet, many spinning houses and looms were built, partly in Constantinople, partly in Bursa, partly also in Scio. The manufactures that are made there are also very good. But they do not come close to the Venetian, neither in brilliance and beauty, nor in the arrangement and liveliness of the colors. Therefore the amusement of them is also very small in comparison with ours. Besides the cloth and silk materials, other articles belong to the essential trade of the Venetians in Constantinople. Ready money, glass, caps, paper, apothecary's goods, processed wax, pickled goods, and other things promote a profitable trade, which is not to be despised. From the Turks, on the other hand, the Venetians take leather, wool, tree wool, impure wax, smoked meat, powder, oil of Candia, etc., but chiefly coffee. It is not possible to determine exactly how much the cloth, damask, silk materials, and other effects amount to, which go from Venice to the Levant, any more than what the goods amount to, going from the Levant to Venice. For this is very unmerciful, and depends on all sorts of treaties, on a greater or lesser abundance, on the fine and condition of the work, and especially also on the taxes, expenses and demand.

These are the external and unavoidable causes, which have done damage to the Venetian trade. But, before I close this article, I must say something about other causes, on which their free Will has an influence, which they calmly allow, and either do not count, or do not understand, notwithstanding that they are still much greater damage. After that the Venetians were deterred from this trade, by the multitude of dangers and the small profit, that they 'withdrew from it, compared with former times, and because of their wealth and other conveniences gradually became negligent; Thus they left their affairs to foreign correspondents, to whom they sent their goods, for instance Jews, Armenians, Greeks and Frenchmen, who took part in the trade and profit, under the obligation to treat the goods sent well. They determined their correspondents to give a certain provision per hundred of the Capital, yea, they even left them to what they could possibly gain above the fixed price.

As great as the advantage was, that they drew for their trouble; the Correspondents were not yet content with that; they wanted to gain still more, making use of the unlawful means of filthy bankruptcies, so that many of the Vmetian Merchants either had to go bankrupt themselves, or yet weakened themselves, and lost all desire for such a trade.

This notwithstanding, since all the articles of trade are very peculiar to the Venetian nation, without other nations having a share in them, because they cost much, and yet are very soft; however, the Venetian trade could revive again, if one, as much as possible, moderated the price, made the entertainment easy, and in addition took honest people and native Venetians, who conducted the trade properly, and did not, as I see with displeasure in many, draw the whole profit to themselves, while they caused the Venetian merchants extraordinary expenses, partly by charging the costs too high, partly by falsifying the accounts, partly by delaying the reclaims.

I find two ways, by which one could prevent the fraudulent corruption of our Commerce: first, when one had in the Levant itself Families, who possessed their own Capital. For these themselves conducted their Commerce; then they would not be exposed to the dirty management of the Merchants, who are after all their Commissioners: furthermore, when classes were made, and certain prices were set for each, for instance, sheets, mirrors with gilded frames, damasks, etc. Of each class

three kinds could be set, fine, medium, small. For each kind a certain price could be set, and corresponding to the condition of the Goods, which one had to prohibit or to raise or to diminish. In the same way one had to prohibit also the various stamps of the Manufacturers. For with these one only plays, and they serve more to deceive the Merchants, than to the good thoughts one has of a Good. I know by experience, how much the Capital of trade suffers by this. In this way, not only would all disputes be removed, but also the wiles and bases of our own merchants would be curbed and appeased, since now one brings the goods of the other into discredit. They conclude double contracts, of which one goods, but the other, seems only advantageous. They tolerate the great disadvantage of accounts, since everything is swallowed up by counter-accounts; they sell and allow that the payment is only made after many months.

But most of all, an oversight over these commissioners would be necessary, in order to make a balance of their cash and the condition of the warehouses every year, and these people did not take the liberty of giving the money belonging to the owners to the inhabitants of the country at interest. For in that way they alone draw the profit; the place Venice suffers, in all respects, partly by the delay of the requisitions, partly and sometimes also by the total loss of the Capital.

But above all it were necessary to exclude all foreigners who have mixed themselves in the Venetian trade, and to follow in this the example of all other trading companies. I could say more, concerning the manner of the delegation of Venetian goods, the time when the dispatch must take place, as well as the quantity, so that it does not exceed the amusement. But if I wanted to say something about every circumstance and every irregularity by which our Commerce is hindered; then I should have to say things that are all too much against my grain.

(*) Mr. Grifelini has only made many new designs for the damasks a few years ago, in order to continue this trade as a new life, which have turned out well.

XXXVI. Of the Commerce of the French.

The Commerce of the French is the richest and s??. No nation surpasses the French.

(*) It is reckoned that the annual montant thereof amounts to nearly 20 millions of Reals, that not counting also what they bring from France to the Levant, and from the latter back again. From France come sheets, silk fabrics, caps for the Turks, paper, sugar, Conchenille, Indigo, gold braid, and a multitude of other Galanterie goods. In return for these go back to France corn, coffee, camel hair, tree wool, and especially wool. These are the principal articles.

Cloth is the principal branch of their Commerce. They bring cloths of three kinds of quality to Turkey: the best they sell for three piastres, the average for two and a half, and the least for two and a quarter piastres. But these prices may be subject to change, if, in case of war between France and England, the insurance costs too much. The cheap price, but not the real quality of the cloths, makes the Turks give them preference above all others. Besides that, it also makes the mixture of colours so beautiful, that they have held up until now, without any harm.

The greatest advantage of these cloths is this, that the Turks are accustomed to dress their numerous servants, whom they support, twice a year in new clothes. For this purpose they prefer French cloth, which looks beautiful, costs little, and can be worn very comfortably. This trade is managed by certain persons, who depend on the Chamber of Marseilles. They must remain here for a certain time, after which they return to France, and send others in their place.

No one can sell this cloth, without the French Ambassador, and all the French Merchants being aware of it. For the sale must be regular, and have a certain agreement: a custom, worthy of being followed, because it prevents all disputes, frauds, and forgeries, which are always disadvantageous to the Capital of trade. That nation has its Treasury, and for every bale of cloth a certain sum of money comes into the Treasury. But this burden is not heavy for the Merchants, because they derive so great profit from this branch of trade. Without burdening Commerce by the maintenance of this Treasury, they obtain the following advantages: first, they secure the Capital of the Merchants of their nation. For, if a Merchant goes bankrupt; then they enable themselves in advance, not to suffer any loss thereby. For they observe, in their Contracts, an invariable custom. The French sell their cloth, usually, on Credit of eight months. The Purchaser must pay in three installments, each one third of the Somme. If he does not pay his debt; then, as interest, ten per hundred is put into his account. This makes the Purchasers, generally, keep their word, and therefore the return purchases are not stopped, and the Capitalists convert their money steadily. If the Purchaser does not pay; then the national Treasury has the advantage of ten per hundred, which comes into it under the name of Interest.

From this source, and from what is paid for every bale of cloth sold, the Treasury, in case of bankruptcy, pays the whole sum. And, as in this way the interest continues, the Capital of the Merchants suffers nothing. This Treasury, furthermore, pays all the extraordinary necessities of the nation; from it the Palace of the Ambassador is maintained, and every year a certain sum is distributed as alms to the poor, which often goes so far that whole Families are supported from it.

By this arrangement, from which this clever nation has Honor, the Royal Household finds its advantages; Religion has its share in it; and that nation quickly maintains its interest, its peace and Honor. I cannot deny the inventor of it the praise due to him. It was the Lord Marquis de Villeneuve, who was French Ambassador at Constantinople. The next Ambassador, the Count of Chatelet, kept a very watchful eye over them, and had them observed still more strictly,

Besides this profitable trade, the inhabitants of Provence gain much more by their Tartans and other ships, with which they provide Transport. They transport people, and goods of all kinds, from one place to another. They are never idle; as soon as they have unloaded their goods, they look again for new orders. There is, so to speak, no inhabited rock, and no harbour, without a French Consul or Vice-Consul, who protects and promotes Commerce,

From this one sees how much trouble this idle nation takes, to seek in every corner of the Empire sources of income and employment. With such a happy result the French trade in these provinces.

(*) Namely in the Levantine trade.

XXXVII. Of the Commerce of the English and Dutch.

The Commerce of the English is no longer nearly so extensive as it was before. Nevertheless it is very profitable and rich. The French cloths, by the beauty of their colors and the cheap price, have diminished the great amusement of those of the English, who, before, have sold 25 thousand baizes at Constantinople, Smyrna, and Aleppo. Another considerable loss has their Commerce suffered. Formerly this was a rule in the English Commerce in the Levant: neither cloth nor other goods, neither to be given on Credit, nor to be exchanged; a very commendable rule, but which, as soon as the other nations, to the great disadvantage of the trade, put it out of sight, the English also had to abandon, if they did not want to see their Trade completely spoiled.

A certain number of Englishmen is appointed over this trade, who depend on a Company of trading Merchants. Every year, by a single Convoy, the quality of Goods is sent to them, which can be sold in Turkey. (*) But one always looks at the state of the need, so that the Goods, through abundance, do not lose their Credit and their high price. A prudence, which is advantageous for the Trade, and worthy of being followed. The articles of their Commerce are Lead, Tin, Watches, and other Manufactures, and Cloths of divers Makes, from three Piastres the El to higher Classes. The Attention with which this Commerce is conducted, may serve as an Example. Now, as these Goods are at a high Price, are certainly entertained, and one has a certain Profit by them; so it cannot fail, but this Trade must be Useful and Prosperous.

At Constantinople there is no Article, which the English bring back, and their Return Ships could load. On that Account none of their Ships land at this Port. They all go to Smyrna, where they load Wool and Tree Wool, but mostly Goats-hair of Angora and Persian Silk. But since the Russians have become masters of the trade on the Caspian Sea, most of the Persian silk goes to Afiracan, and from thence over the Volga to the Canals of Petersburg. Wherefore the abundance at Smirna has much diminished, and so the English ships do not always find cargo enough for their ships in this port. The trade of the Dutch has also, in comparison with former times, much diminished. What they now do of trade at Aleppo, Constantinople and Smirna, is a very mediocre remainder of the great, which they formerly carried on there. Their principal articles are cloth, pepper, metals and velvet. The metals and pepper they sell for ready money. But as to the cloth and velvet; they are in the same unhappy condition, as other nations, and must give them on credit for many months. Their principal requisitions are the Camel Hair of Angora, which they need for their Camels. At present, in Constantinople, there is not one single Good, and original Dutch Merchant firm. The whole trade is therefore scattered, and divided among the Foreigners, who observe them, but without paying the least attention to the general welfare of the trade of the nation. (*) They care for nothing, but their own interest, directing themselves, sometimes, solely to their needs. In this way, therefore, that formerly so flourishing Trade also declines.

(*) Both found no place in the years 1770, etc., The number of English Merchants was

indefinite; and, except in times of war, the ships came, sometimes singly, sometimes more together, to Constantinople and Smyrna.

(*) That is how it seemed to me too. But native Hollanders assured me that the State gains all the more from Consulate fees, and from the demands of the certainly very flourishing and considerable shipping; not to say that their Republican principles did not permit any provision in this matter.

XXXVIII. Of the Commerce of the Russians and Germans.

The Commerce of the Russians is a silent business, which makes not much noise, but it is the most profitable and flourishing of all the kinds of commerce of the European nations. It consists in furs of all kinds. The rarest and most expensive are the skins of black foxes and of sables. The ermines, water sables, and foxes of all kinds are most drawn, are indeed small, but nevertheless bring in a great deal of money. Since the Turks and all the inhabitants of the Empire, both male and female, wear furs at all times of the year; it is almost unbelievable how great the amusement, and consequently the advantage, is in the Russians' drawing. Besides this principal article, they also bring into the Turkish States leather, linen, and other manufactures, which make the trade of the Russians with the Turks profitable. On the other hand, they draw few and cheap things, prepared leather for shoes, limes, and dried fruits. (*)

The Germans have been seeking, for several years, to open a source of trade with Turkey, and for that purpose they have sent able men there to find them. Two ways (†) would make the matter possible: one is the land road, when the goods were brought on wagons; the other is the road on the Danube, over which the goods can go into the Black Sea. (§) But, since all the principal articles, from which they can promise themselves profit, are heavy and large, their trade will always be less profitable, because of the heavy freight costs.

I believe, that it will always be a mediocre trade, whose result is uncertain. For everything that can go from Germany to Turkey, comes in great abundance from so many other countries, and from other nations, who have been in possession of it for a long time. The articles, which can serve for their trade, are steel, tin, iron, glass, etc.

From the nature of these things, one can always conclude to the small Capital of this trade.

At present there is no Merchant of this nation in Constantinople, and the little trade, which is conducted here by Germans, is divided among the Merchants of other European nations, and other subjects of the Porte.

(*) That is, figs and raisins.

(†) My handwriting says three.

(§) My manuscript adds, and rightly so, that the third and principal way is via Trieste, by means of the Adriatic Sea.

XXXIX. Of the Commerce of the Swedes and Neapolitans.

It is but a few years since the Swedes and Neapolitans sent ambassadors, with the character of extraordinary ministers, to the Porte. Sweden sent its ambassadors when they wanted to break with Russia; but Naples, after the King had taken this kingdom from Emperor Charles VI.

The ministers of these two courts have formed two new nations of Franks at Constantinople, and both have taken great pains to introduce some trade for their nations. Although it now means so little that it hardly deserves the name of trade, I will nevertheless, in order not to omit anything, report what it consists of, and how it is conducted.

The Swedes conduct their trade in small, well-equipped ships, which they furnish with skilled men. There comes there every year only one ship, (*) laden with Swedish products. These consist of iron and other things, of which that cold country has an abundance. The other ships go more to the Barbarian Coasts ?? because the advantage of this nation, with respect to the Turkish State, consists more in shipping than in trade.

The advantage that the Neapolitans derive from the Commerce with this Kingdom is even more definite: for they lack the means to derive their profit from shipping, like the Swedes. In the space of three years I have seen only one small ship arrive here. All their other shipping consists of Tartans and small Polakers. With these they navigate the Coasts; but those ships are small, consequently the profit from freighting is also small. They are averse to goods, with which they could gain so much, that it would be worthy to be called a trade. The principal article consists in silk, which they work at Messina. Although the materials made of it are not good in longevity,

42340 and have no colours which will last; nevertheless they present themselves beautifully to the eye, and find amusement. Their whole trade consists in works of tortoiseshell, boxes, and other smaller things. Their goods, which they bring, therefore do not cost much, and the demand is consequently just as small. This cannot generally be determined. In the few opportunities which they have to provide for themselves with something, they adapt themselves to the circumstances, look for the cheap, and take
42345 what they like.

Furthermore, I cannot say anything of the trade. I would only report a little of each nation which trades at Constantinople. But whether this entire Commerce, taken together, as it is carried on by so many nations, is active or passive for Turkey, that is, advantageous or disadvantageous for the household of the Turkish Empire, we
42350 shall see later.

(*) This has changed. Now and then there is not a single ship in the year, but then again several have arrived. The latter happens, mainly, in times of war.

42355 XL. Of the causes of the decay of the economy of the Turkish Empire. I maintain quite that the Commerce which the Franks carry on in Turkey is a passive trade for the economy of the Turkish Empire, consequently one of the principal causes of its decay. One need only make a comparison between the articles which are brought from the European countries to the Turkish States, and between those which they export from Turkey; and one will
42360 see that the Goods which are imported, consist mostly of things which have a small extent, and yet are at a high price, and that, on the contrary, what is exported is of great extent and low cost. Now since the Merchants have not the means to send their return goods in smaller effects; thus they do it in great measures, robbing, in this way, annually, the country of very considerable sums of cash. (*)

42365 Among the Turkish money the best is the bondukly, because it is of pure gold and of the weight of our Zechine; (†) But it has become very rare, because they have almost all gone to France, where the merchants find some advantage in it.

A considerable sum of money goes for a commodity, which above all others yields great advantage. I have not hitherto made mention of it, because this trade is divided between three
42370 different nations, namely the Dutch, English and Venetians. This is the diamond trade, of which one can count one year through the other, a pleasure of one million reals at the least. Seldom do the Merchants, who deal there, wish to receive Returns. They all seek ready money, which they spend all the more quickly on new Capital, in order to be able to multiply the circulation of money and the profit thereof all the more. (*) As often as a Courier departs
42375 from European nations, he has many bundles of money with him. Every ship that sails has something like that. There is also no law that prohibits the export of money. From which one can deduce how strong the export of money is annually. It is beyond doubt that the more one diminishes the circulating mass of money, the more the people suffer, and the Prince's Treasury has the less profit. This I consider to be one of the principal causes of the decline
42380 of the State economy of the Empire. I have already dealt with the lack of mining works. The Silver Mines cannot be promoted for want of wood, and the Gold Mines for want of men. This is the second reason which greatly weakens the State economy.

The third cause is the present system of government. All power is in the hands of the Enlightened, who have an indescribable desire for money, and let as little of it as possible
42385 come among the people. They remain permanently locked up in the Seraglio, and care very little about the People. Consequently, the large sums that fall into their hands remain buried, and have no influence on the real course of the State. And so the people, as before, cannot possibly pay the Imperial charges. The principal and most deadly shock is finally received by the Government by so many wars, which the Porte has waged with great loss. Seldom or never
42390 does it make such booty as this, and which was the most profitable source of this Empire. The Persian war in particular has devoured immeasurable sums, which far exceeded the income, and brought the State economy into the most miserable condition. If the fortune of this Empire does not change; then it must, steadily, become more and more confused. At least I see it in
42395 such a state, that it will hardly be able to recover itself again, without a complete reversal of the present condition.

By this one can form an idea of the unhappy state of the household of the Turkish Empire, and remove the reasons which have brought it into the present bad condition.

42400 (*) There goes, now, indeed an unusual amount of Spanish, Venetian, German Imperial, and other gold and silver money to f??bye: but it does not remain there, but only goes through to the East Indies.

(†) That is, Venetian. Of its value, in my time, one can consult my description of the Turkish Empire ?? XL1. page 521. etc.

42405 (*) The diamond trade and export of money decreased, in my time, noticeably, because the Turkish had become much worse.

XLI. Of the State of War of the Turkish Empire in General. The Turkish Empire has begun to strengthen itself by arms, and by these it has come to that pinnacle of power, which made it formidable to other Powers. The bold and
42410 courageous deeds, as well as the almost unbelievable Discomforts, which the Turkish

militia has endured, prove also in deed, that it was by nature and by practice exceptionally strong and brave. But, because it, like all human things, was subject to change, it began to lose its first prestige, and the irregularities that crept in have gradually so spoiled it, that it is now no longer so formidable to its neighbors. It may be said that all kinds of this militia are corrupt, and that, instead of the old Krygstugt, vices and absences have gained the upper hand. There are among the Turks many kinds of militia, both among the infantry and among the cavalry. To the infantry belong the Janistas, (Jen Ttschjery,) the Thopdschjy, the Kumbarahdschjy, the Bostandschjy, the Mehterdschjy, the Sferradschjy and the Leventen. To the cavalry belong the Spahy, (Sipahy-) the Sfae'yms, the Tymars, the Dschjebahdschjy, the Sfeghban and the Maklahdschjy. They are not all paid in the same way; the Sfaeyms and Tymars receive their payment from the revenues of the lands, which the Sultan grants them, and which are almost to be regarded as our fiefs. All others are paid from the Myry, that is, the Empire Treasury.

Since in all Principalities the War State is divided into three branches, namely, Artillery, Militia and Navy, - I will now deal with each separately to speak, in order to get a correct idea of what knowledge the Turks have of their power, and how they use it.

XLII. Of the Thopdschjys and Kumbarahdichjys, the Artillery and the Gunpowder. The Thopdschjy and Kumbarahdschjy are the Artillery-militia; the first correspond with our Bombardiers, and the others with our Bombers. The Commander of the first is the Topdschjy-Baschy, a considerable office, who has to say about everything that belongs to the Artillery.

The Chief of the second bears the name of Kumbarahdschjy-Baschy, being usually a Bassa of two horsetails, but who always depends on others. The number of the Thopdschjy in the whole Turkish Empire amounts to 18,000 men, of whom 6,000 lie in the capital, and the others are distributed in the Provinces. They are divided into Chambers or Regiments, like the Janistries. Few of them understand the right way to handle the guns. They lack the theory altogether; therefore they do everything according to a certain experience. They do not know how to hit the right line according to the art of sight; they miss the diameter of the guns above and to the side; therefore they cannot direct the height of the gun correctly; they know nothing of the parallel line of sight. They aim therefore only with an eye to an adventure, directing their eye to the loading hole; wherefore also the bullets, generally, only hit where they happen to come. Nevertheless they sometimes practice this, and by habit some of them bring it to a fixed experience; but the number of these will always be very small. The Kumbarahdschjy do not number two thousand men. Six hundred of them are said to be at Constantinople; but their officers, in order to draw the pay in the meantime, usually wait until the war begins, when they recruit their men. This kind of men is therefore, of course, very inexperienced; and the more so, because they are hardly ever trained by their officers. As long as I have been at Constantinople, they have not even practiced throwing bombs. In this way, therefore, the Sultan will always pay men for the Kumbarahdschjy, but he will not get good soldiers by it; and, if a war should arise, it will only depend on bribes, on frequent practice, or on blind chance, when a masterpiece will be executed by such men. Are those who are in charge of the Artillery so ignorant; then on the contrary, those who are used by the gun-foundries deserve less reproach.

The gun-foundries in this Kingdom are in truth so constituted that they yield nothing to the experienced nations in this. They have brought the mixing of metals to a reasonable perfection, and the casting is, possibly, performed with more precision and skill than with us. (*) The only fault that I have been able to observe in some of their guns, consists in the little relation to the laying, where they place the ears. In some these are so far to the rear, that they have too great a preponderance in front. Therefore the front preponderance must produce the effect that the guns skip to the detriment of the carriages themselves, whereby the shots, naturally, become very uncertain. The tin used therewith comes from England, and this is an article which not only from the Emperor's treasury, but also from the State itself, annually brings a great deal of money to foreign States. The famous mortars also have the defect that they are much shorter than ours; when they are used therefore, especially on ships, especially under the wind; then this must be accompanied, as regards the fire, with much danger. Besides the warships, which nevertheless have been built in advance to make use of such cannons, they make use of them in the Sea-castles, and especially in the Castles of Sefto and Abido, which are commonly called the Dardanelles. They are planted there on beams, and are so placed, that they always stand motionless, and strike horizontally with the water. I have counted 32 in the

Castle of Afiey and 28 in that of Europe. On the occasion of the Artillery I must also mention something of the gunpowder. If it is not more perfect, it nevertheless equals ours. But in its preparation such deceits take place, which, according to
42480 experience and an accurate comparison made on this subject, can have no place at all in our countries. The gunpowder makers here always increase, in the mixture, the parts of coal and sulphur, but add less saltpetre, which is nevertheless one of the principal ingredients. This they use to their own advantage, and cheat in the work. According to the last change the gunpowder must be of 5?? ace. On each ace, that is,
42485 on each 5: part of saltpetre, one part of coal and one of sulphur is reckoned. But now I have been assured by those who have made an accurate experiment of it, that for every 7?- pounds there are not even 5 whole pounds of saltpeter taken, since it should be 5?- pounds. Notwithstanding this foul deception, gunpowder is nevertheless well proved well, and is so well preserved, that, if it does not exceed the working
42490 of ours, it is nevertheless equal to it. The Carriages at the Artillery are made of Oak, but are not at all beautifully worked. The iron fittings do not correspond with them, and this is the reason, that their artillery carriages, usually, do not last long. As to the figure, so do the Sea, as well as the Land and Auction guns, correspond with ours.
42495 But as to the gun foundries themselves; of these I can say nothing, because that is what foreigners are allowed to go there. Otherwise it is a very beautiful building, entirely of stone, and provided with 17 Domes, roofed with lead. The space from outside indicates that there must be numerous workshops inside. In the vicinity of them very spacious magazines have been constructed, to store the lightest pieces; the
42500 heaviest serve as ornaments to the street on the side, and for the large square in front of the foundry on the shore of the sea. It stands opposite the Seraglio in a street, near Galata and Pera, which therefore received the name Thopchaneh after the gun foundry. In the neighborhood is the Palace of the Thopdschjy-Baschy, who always has a numerous guard of people of his profession.
42505 (*) Businello means the Venetians alone, and then he is quite right.

XLIII. Of the Naval Power in General, and the Offices by It.
Nothing is in a greater decline in the Turkish Empire than the Naval Power. Before
42510 this, very numerous fleets appeared at sea; but after the war of Candia, which the Porte waged for 25 years with the Republic of Venice, this Empire was so weakened at sea that 'there never appeared again a fleet that constituted even a third part of ships, compared to the fleets of former times. The heavy and constant loss in that
42515 war has been of such effect to the Turks that they still firmly believe that God has destined the land for them, but the sea for the Christians. From that time their desire for maritime affairs has considerably diminished, and although they have somewhat strengthened their power at sea, on the occasion of the last war with the Venetians, they have nevertheless, after the peace, almost entirely changed their minds. To this end the continued and long-lasting unfortunate wars against Russia and
42520 Persia have also brought their share. For in them they have had to make so many expenses, that they were almost reduced to the impossibility of making good those which are required for a fleet. Their maritime power is now so weak, that not only can they hardly protect so many seas, coasts and isolated kingdoms, in the possession of which the Porte is, but that not even the necessary duties at sea on the ships and
42525 galleys can be properly performed; and one sees almost every year that either no one who has such a service leaves the harbour, or, if he does sail, leaves no ship behind. At present this Empire has only eleven galleys, and eleven partly ships, partly caravels. I count in this harbour no more than twelve already old dismantled ships, which can no longer do service. The services at sea are almost all given to
42530 men who are very ignorant in maritime affairs. The supreme Commander of the navy, namely Captain Bassa, is one of the Empire's most distinguished persons. The present one is of a high birth, descends from several Bassas, and is related to the Imperial Family through his wife. But he is very unskilled in maritime affairs, never noting navigation as his profession. Of the same stamp are the lower Commanders. On the
42535 ships there are three Officers' offices. The first is the Captain of the Ships, - the second the Patrona, corresponding to our (Venetian) Admiral; and the third the King's, agreeing with our (Venetian) Patrona. Each ship has its Captain, Lieutenant, and 10 Officers, including the Navigators, and Sailors. The Terschaneh-Emyny commands, in the absence of the Captain-Bassa, the small fleet,
42540 and is as much as our (Venetian) Proveditor d'Armaia. The Commanders of the Galleys bear the name of Begh; they are almost all rich, Sons of Nobles, and mostly Bassas of two Horsetails, to whom, for the maintenance of their own Galleys, the revenues of certain countries are assigned, or the government of Metelino, Rhodes, Chio and

others islands. The Sultan grants them the whole Galley, giving them some money for equipment; but all the rest is for the account of the Begh. These expenses are richly reimbursed to them by the income of the Stadtholderships, which the Porte allows them to enjoy; and the oldest of them are, as a rule, gradually promoted to the richest Stadtholderships.

The Turks also make use of Barques and other small vessels, which they call Kantschabasz, and which may be compared with our Brigantines. They are used for rapid dispatches because of the shallows, which are on all the Coasts of the Black and White Sea. These are under the Menexis-Bey (*) or Sfer-Askjir of the Barques, to which, on the best islands of the Archipelago, the principal income is allocated. The Commanders of the Fleet of Gallies take precedence over the others, who command the ships. (†) An old custom and a certain respect, which one has for the Beghs, on account of their descent and their wealth, makes that they maintain the precedence of their offices.

(*) This must perhaps be Ghemy-Begh, Head of the Aldermen; for otherwise the word, standing in the text, has no meaning.

(†) My Italian manuscript says: have the same rank.

XLIV. Of the Kinds of Ships, and their Equipment.

Three different kinds of ships are used in the Turkish fleet: ships of three decks, the Sultana and the Carvel. The length of the ships of three decks, calculated from the long ground beam, is 62 ells. The ell of this Arsenal has 2 and a half geometrical feet, which is half our stride. Each of these ships has 106 metal pieces of Cannon: namely, on the first deck ?? 15 gates on each side, only pieces of 50 pounds; on the second deck also in 15 gates pieces of 30 pounds; on the third deck, in 14 gates, pieces of 30 pounds; on the stem in 7 gates, pieces of 14 pounds 5 on the stern two for pieces of 14 pounds, and two culverins to 30 pounds; which together make up 106 pieces.

In order to give this heavy body a greater speed, they have provided it with high masts and ropes, which can carry much larger sails than usual. But these ships have lost their prestige among sailors, because they cannot be turned without a strong and violent wind. The equipment of these ships, in times of war, amounts to 1200 Leventi, and 100 Greek sailors. Leventi are the sea soldiers, mostly young Greeks, many of whom have learned seafaring on merchant or plunder ships. Their salary is fixed at six months to sixty Reals, upon which the ships are usually disarmed; then they receive their farewell, going in the winter to their own homes, to rest there from the inconveniences suffered. Besides this money they also receive, for their daily maintenance, a certain portion of rice, pickled meat, butter, peas and beans, besides other trifles, with which they are quite content. But what most induces them to such troublesome naval services, is the hope of promotion, or a pension for all their lives, which they receive, according to the services rendered. Before they go on board, they are paid three months' wages in advance, and when they return home they receive the other half. The ground beam of the Sultana is 54 ells long. Some have 13, many 14, and most 15 gun-holes: and each has on the first deck pieces of 50, on the second deck of 30, on the prow of 12, on the after two pieces of 12, and two culverins of 30 pounds. Each Sultana has therefore about 66 pieces, 800 Leventi, and 50 Greek sailors. The Caravelles (Carvels) have at the base the length of 40 ells and are almost equal to our Frigates. They have 36 to 48 pieces, 200 Leventi, and 30 Greeks.

XLV. Of the manner in which ships are built.

The shipbuilders who build the Turkish ships are mostly Greeks from the Archipelago. Although they lack all theory, and work everything only according to a certain experience; they nevertheless build the ships with such correct measurements, that the Turkish ships in proportion and beauty yield nothing to the most famous ships of other nations. The crooked timbers and the whole frame, which goes under water, are of oak; the upper part of pine; which makes them lighter, and in a battle also causes less loss of men, because the pine wood splinters less than the oak. The outermost crossbeams at the stern, and the Argana (*), are of elm; and the outer parts are united with those of the inside by strong wooden pins, to make them durable. At least the ships should have been built in this way, with respect to the various kinds of wood.

But this is not so, but the malice and greed of the people who are employed in it, changes and confuses everything. Slaves are made to work on it. I have heard from some of our countrymen, who, during their slavery, were employed in shipbuilding, that they mix the weak with the strong wood in advance, in order to make the frame

- less durable, to which a certain religious zeal moves them, in which they are out to inflict as much damage as possible on the enemies. To this, furthermore, comes the greed, because everywhere, where it is necessary, the wood is not joined with nails; in many places only weak wooden pins are used, in order to have an opportunity to
- 42615 steal the iron bolts. The persons, placed over the shipbuilding, agree with the slaves, share the necessities and the advantage, causing the Empire an extraordinary disadvantage. This is the reason, that the Turkish ships burst and break so easily, and do not last half as long, as ours. A proof of this can serve, that of the ships, built in the last war, not one can serve any more. This dirty way of building also
- 42620 makes that they are not beautiful on the inside. ?? the outer skin are planks of pine, oak, and other kinds of trees united together, whereby not only the strength of the vessel itself is weakened, but also the external appearance of the ship loses much. The masts consist of several pieces, which are joined together with iron bands, which method I consider better than ours, at least in that they can be repaired more
- 42625 easily in certain accidents. The sails could not be finer. They are all of fine woolen material, catch the wind easily, and require much less manpower than our sails. The ropes could not be worse, whether this is due to the bad choice of the hemp, or to incompetence in working them. All their ropes are much coarser than ours, consequently less competent, and do
- 42630 not last half as long as ours. They are exceedingly fond of tar, and on every voyage the ships are tarred once, which is sometimes done in an interval, to protect the ships from harm, and to make them sail faster.
- 42635 (*) My handwriting makes it doubtful whether it should not mean Argine, and therefore the ship's gunwale.
- XLVI. Of the Armoury at Constantinople.
- The Armoury at Constantinople lies across the harbour on the shore of the city, at
- 42640 the very spot where the harbour forms a sea bay. A part of it serves for the large, another for the small ships. Many sheds are erected for the building of ships, but the shipbuilders always build the ships, either from habit or for convenience, in the open air. The galleys and other small vessels are built under sheds, at a special place designated for this purpose. There are many warehouses there, in which the
- 42645 things necessary for shipbuilding are kept. The entire circumference of an (Italian) mine?? is surrounded by walls, to protect it against fire and theft. Nevertheless, a few months ago, a fire broke out in the largest and richest warehouse; this consisted again of 24 warehouses; it was entirely built of stone, and covered with lead: everything burned, and caused a damage of several millions. But this building was,
- 42650 within a few months, much more solid and beautiful, than before, repaired; but it will not be so easy to restore the lost building materials in the former abundance. For it will cost a great deal and require a long series of years, until everything is put in order again. The Captain Bassa lives in a Palace in the Arsenal, and has the first supervision and command over it. When he is absent, then the Terschaneh-Emyny or Chief Overseer of the Fleet lives there, who is the chief Official after the
- 42655 Captain Bassa. This Armoury is therefore a sufficient and well-regulated building, to equip numerous fleets. There is no lack of skilled Chief Builders, and Ship Carpenters are plentiful. There is wood in abundance; and, as it is only brought from the near Sea-bay, so also the Transport is easy. There is no lack of iron-work, and from the whole
- 42660 Archipelago one gets enough cloth for sails. There can be no lack of Sailors, because the Kayak-navigators of the city, and so many people, who sail on many thousands of Kayaks in the Black Sea, on the shores of the Mediterranean, and in so many special Provinces, can furnish sailors enough, to man the most numerous fleets.
- 42665 Notwithstanding this great facility, which the nature and disposition of the country, together with the uncommon extent of the Empire, offer, the Maritime State is in decline, and the fleet consists of the small number of ships, which I have mentioned above. They are now building two ships in this port, and seven others in the Armouries of Metelino and Sinope, where they are also building fine ships. But the
- 42670 small remuneration, which is generally the cause of the decline of the Maritime State, also causes these particular works to proceed slowly. To conclude this subject, nothing remains for me, but to show how considerable is the assistance which the Porte, in time of war, receives from its Allies.
- 42675 XLVII. Of the Allies of the Turks at Sea. In a time of war the Porte receives considerable help, to strengthen its fleet. The auxiliaries come from two sides; from the Cantons of Barbary, and from Cairo. The

Allies of Barbary can furnish ten ships, namely Algiers four, Tunis three, and Tripoli three. As these ships are manned with numerous and experienced men, because they are trained by the pirates; so they can do good service in a sea battle. They are also, because of their skill, very useful for cruising, for preventing supplies, and for guarding the coasts.

Still more numerous and considerable is the help of ships, which Cairo furnishes. There are 24 in all, which serve the Porte in time of war; they are generally called Cairon (or Alexandrian). In times of peace they serve as merchant ships, and belong to special merchants of Cairo. It was a good idea of the Vizier,s, who devised this reinforcement, and by it hindered the Knights of Malta, that they could not take away so many cays and other small ships, with which the rich Egyptian trade was then carried on, with so great danger. They therefore obliged the merchants to unite among themselves, and, who could not, they helped him; whereby they brought it so far in a short time, that private persons could safely trade. But still greater was the advantage to the Empire itself, because of the service, which they can render on occasion. In size they equal the Sultana, but neither the make, nor the form is so beautiful. In times of war they carry fifty pieces, and six hundred Kairiners of the most valiant men who live in the Turkish Empire.

From this it may be seen how much the Turkish maritime state is in decline. It cannot be denied that, on certain occasions, it can be given still more strength, by which the Turkish fleet could become very considerable. Even in its present decline it would, however, consist of forty-five ships of the line, namely eleven from the Empire, twenty-four from Cairo, and ten from the Barbarian Coast.

XLVIII. Of the Janissaries. (*)

Among all the Turkish Militia the Janissaries are the most important. In this Empire they are the same as the Praetorians under the Roman Emperors. Their Founder was Murad I. But according to the first design there were to be only seven thousand men. He accepted only Christian children, and even in later times officers went about in the villages to select the strongest young men. They tore them from the hands of their parents, educated them in the Turkish religion, and made them fit for this service. But this cruel custom has now been abandoned, and the Janissaries are recruited at the whim of the officers. One hundred and sixty-two Chambers or Regiments make up, for the present, the entire Corps of Janistaries of the Turkish Empire. Each Regiment was to consist of 1000 men; but now, counting one by the other, they amount to only 500. About thirty thousand are in this Capital; the others are distributed in the Provinces. In their Chambers they live with the greatest regularity and strictness. No woman's son may enter there; no wine may be brought to them; disputes and all indiscretions are forbidden, and everything is strictly observed.

Each Chamber has its Oda-Baschy or Colonel, its Treasurer, Ensign and Cook. Besides the Soldiers, they receive their own maintenance from the Prince in the Chambers. The Gagie begins with one Asper a day, and increases according to the years and merits. For the rest, this is a Militia of which one may rightly say that it is still susceptible to the feeling of Honour. For it is not possible that anyone would be tolerated who had committed the least theft, or had married a common whore, which so much dishonors our Militia. They have many privileges, and are regarded with such respect, that the Sultan himself has himself registered in one of the Chambers, with the fixed sum of 7 Aspers a day. The association, prevailing among these Regiments, makes them Honorable, and feared by the Sultan himself, who sees well that his own preservation depends on them. In the Provinces the Janistas have, in each their own particular Chief, commanding all the Janistas, who are in the Province. Their weapons are a harquebus and a saber. They fought without order, not knowing what military exercises are. In peace-time they are exercised in nothing, but in shooting at the mark, and in bodily strength, in order that their body may become the more agile. But at present they have no longer that agility and bravery which they once possessed. The avarice and carelessness of their officers have caused the old military

establishment to decay, and that young boys and useless men have crept in among them. Ten important offices are always filled by persons of this militia. The first is the Aga of the Janistas, who is their commanding General, and is always chosen from the Imperial Chamber of the Seraglio. The second is the Kul-Kjetchuda, or their General-Lieutenant}, the third is the Sfegkban-Baschy, the overseer of the dogs, at a so-called Janista Chamber; the fourth, the Thurnadschy-Baschy, who has the superintendence of the Cranes of the Grand Lord. The fifth is the Sfanznndschy Baschy, the Chief of those who guard the dogs for the Sultan's Bull-hunt; the sixth, the Sagardschy-Baschy, who has the superintendence of the Brakken. The seventh is the

- 42745 Solack-Baschy, or Captain of the Archers, commanding the Janistaries armed with bows. The eighth is the S??u-Baschy, the Chief of the Sergeants, who, on public ceremonies, go by the side of the horse of the Grand Lord. The ninth is the Peigk-Baschy, who commands the runners of the Grand Lord; and last is the Muhdhir-Jga, or Chief of the Sergeants of the Janistaries' militia. (*)
- 42750 (*) Jen-Tytschjery, that is, new Militia. But I have left Janissaries, everywhere, because we are generally accustomed to this word.
(*) The Titles borrowed from Dogs and Cranes serve here, to distinguish certain Chambers or groups of Janissaries from others.
- 42755 XLIX. Of the Mehterdschys, Bostandschys, Sferradsch and the Leventi.
After the Janissaries, among the Infantry, the most important are the Thopdschy and Kumbarahdschy. But, having spoken of these in § 42., I did not consider it necessary to dwell on them here in detail; and of the other militia of the Leventi I spoke
- 42760 above § 44., when I treated of the ships, etc. Here I will only add that this Militia also has its Chambers, but it does not live according to the arrangement and with the severity that the Janissaries live in their Chambers. The number of these sea soldiers cannot be determined, because it depends on the number of ships that the Empire must keep equipped. She is entirely under Captain Bassa, and forms the guard of the Armoury.
- 42765 Of the Bostandschy I have spoken above, when I treated of § 12 and 14. of the Guard of the Seraglio. I said then, that two thousand of them form the first outer guard, adding what their work consists of. But in time of war, when the Sultan takes the field, they form a kind of Militia, which is increased to 12 thousand men; they keep guard around the tent of the Great Lord.
- 42770 The Mehterdschy are a kind of militia, which is not well found at the Courts of other Princes. Their work is to set up camp, pitch tents, take them down, and in case of a march to transport them. It is incredible how quickly these people can erect a large tent, pack it up again in a few moments, and load it on their beasts of burden. I consider this militia to be a very useful institution, for the Economy as well as for
- 42775 good order. As this is their only duty; they take care of the preservation of the tents, which cost every Prince a great deal of money. They also make such a regular arrangement in the camp, that everyone can find what he needs; and everything is so arranged, that everyone can do his thing without confusion, and have the advantage that is possible in an army. The number of this militia will amount to about six
- 42780 thousand men. Their Chief bears the name of Mehterdschy-Baschy, a distinguished and respectable office, from which one usually comes to that of a Dschjebahdschjy-Baschy, being one of the principal Commanders of the cavalry. The Sferradsch are a portion of those troops, which each Bassa, according to the income of his Stadtholdership, is obliged to bring into the field. Their number can therefore be calculated perfectly
- 42785 according to the Bassas, and this I shall do, when I shall draw up the general calculation of the Troops, which the Turkish Empire can bring into the field. The work of this militia consists in taking care of the baggage; they form a sort of Corps de reserve, and are armed with harquebuses and sabres, like the Janistas.
- 42790
- L. Of the cavalry of the Spahi.
The Spahi were, before this, in great esteem in the Turkish Empire. They formed in every way the Corps de reserve, and served the Monarch as a guard. The precedence and the esteem which they enjoyed, made them so proud and mutinous, that they often rose
- 42795 up against the person of the Prince himself. The love for them and their esteem thus changed into fear and hatred. Sultan Mahomed III, on the advice of the famous Visier, Kiuperli??, took advantage of the disputes of this militia with the Janistas, and found an opportunity to humiliate them, while he sacrificed their principal
- 42800 Commanders to his hatred. In this way they became hated and despised by the whole nation, and there is now no longer any prospect that they will ever again bring themselves into the former esteem.
This militia is considered, according to the various methods of payment, in two ways. The most important are the Sae'yms and Tymariotes, who draw their Soldiers from the revenues of the lands assigned to them as a fief. The other kind is paid from the
- 42805 Empire's treasury, and these are the properly so-called Spahi, of whom I speak here. Their Corps is 12 thousand men strong; and these are divided into two distinct classes. The oldest, having a yellow banner, bear the name of Silahdari, that is, Sword-bearers, the later, having a red banner, are called Spahy-Oglan, that is, servants of the Spahi. Although these, according to their foundations and their name,
- 42810 follow the first; yet they have the precedence over them on marches, as a special

favor, because under Sultan Mahomed II they resumed a battle, and gained a complete victory, after the Spahi of the former class had already taken flight. The Chief of this militia bears the name of Spahilar-Agafy, being the first General in the cavalry.

42815 They carry a long sword with a very broad blade, pistols and a carbine. But many, and especially those from Asia, make use of a pike, bow and arrows. This is a militia, which cannot handle a gun; but for cutting with a saber in their fist they are very good: the Spahi from Asia are also better mounted, than the European; but these are much braver, than none. Their wages vary according to the more or less wealthy
42820 Chambers by which they are paid. In general their minimum wage is 12 aspers a day, but it can rise to 100; but in this case it is required that a Soldier has acquitted himself particularly in the war. The Sons of the Spahi have the privilege of being able to enlist among the Spahi, whenever they wish; but their wages cannot rise higher than 13 aspers a day, while the Father, on the other hand, is deducted so
42825 much; consequently this privilege has no other advantage than that one has the certainty of being taken into service.

Besides these two kinds of Spahi, in case of emergency, four other kinds are recruited, which are distinguished by the colours of their banners, and from which they also receive their special name. The first kind has a white and red one; the
42830 second a white and yellow one; the third a green, and the last a very white colour. The number of these four kinds of Spahi cannot be determined; for it depends on the circumstances of necessity, but even more on the Will of the subjects, according as they wish to be recruited for this Corps.

42835 LI. Of the Sae'yms and Tymariotes.

These two are included under the Spahi, and form the largest number of the Cavalry of the Turkish Empire. They draw their Gagie from the countries, which are granted to them as a fief; wherefore the militia of the Sae'yms and Tymariotes is the Turkish feudal militia. The difference in their names consists in the difference of income,
42840 since the least income of the Sae'yms amounts to 20 thousand Aspers per year, and may rise to 100 thousand; whereas on the contrary the least income of the Tymariotes amounts to six thousand Aspers per year, and may rise to 19 thousand 9 hundred and 99. But among the Tymariotes there are two classes. The one receives letters open from the Sultan for their countries, and these have the previously mentioned revenue
42845 of six thousand Aspers a year at the least, and of 19 thousand, 9 hundred and 99 at the most. The others receive their letters open only from the Stadtholders of the Provinces, having at the least three thousand Aspers a year, and at the most six thousand. The Sae'yims are obliged, for every five thousand Aspers revenue they possess, to furnish one Horseman for the army; and the Tymariotes must likewise
42850 furnish a man on horseback for every five thousand Aspers revenue. But the Sae'yms must make greater expenses, with respect to the Equipagie, which with them, generally, must be more splendid and costly, than the equipment of the Tymariotes. This entire militia is divided into Regiments, which have a Colonel at their head. These Captains are under a Sandschjak, and he is under a Beghler-Begh.

42855 In order to calculate exactly how many horsemen the militia of the Sae'yms and Tymariotes comprise, it must be observed that a Sae'ym can bring no fewer than four men on horseback, and at the most twenty with him to the war; but a Tymariote can have no fewer than one, and at the most six men. But it is certain that this feudal militia is not always ready to march; and, when they do march, they do not always
42860 bring with them as many men as the Imperial laws require.

Now to give the most probable calculation of them, as I have received it from several persons, who, on several occasions, have seen this militia with the Armenians; thus I can calculate that, counted together, a Sae'ym delivers four men, and a Tymariot two. According to this proportion I will draw up a list of all Sae'yms and Tymariots, who
42865 are in the Turkish Empire, and hereby very probably determine their number.

In the Stadtholdership of Natolia there are 295 Sae'yms and 7740 Tymariots, which amounts to
1180 Horsemen for the first
others 15480
in all — — 16660

42870 When the Seat of the Turkish Empire was in Bursa, consequently Natolia was a Province adjacent to the Christians, it delivered to the army thirty thousand horsemen; but the Turkish Empire further expanding its conquests, and consequently with the expansion of the countries also increasing the population, which was then only limited to Natolia; thus this Province now alone supplies the above-mentioned sum.

42875 In Carmania there are 73 Sae'yms and 2165 Tymariotes.

The first provide 292 horsemen

550	Naspeuringen van Paul Theelen: Constantinus Imperator

		the first provide	16000 horsemen
		and the latter	28000
42940		is all	-- 44000
		Of which the whole Sum amounts to	132054
	In addition, there are still volunteers, who at their own expense, serve among the Sae'yms and Tymariotes, in the hope, of bringing about the Honor by an excellent		

- deed, that they, when one of the others raises Life in war, they are endowed with his land. When a Sae'ym or Tymariot of Rumelia dies in war; then his Sia'met or Tymar is divided into as many parts, as he leaves Sons. If a Tymar leaves only three thousand Aspers income; then the Firstborn of the deceased receives it all. But if they die, outside this opportunity, or in the Army a natural death; then the Fief is left to the arbitrary decision of the Stadtholder of the Province.
- If a Sae'ym or Tymariot becomes old and out of state; then he can give his Sia'met or Tymar to one of his Sons or Next of Kin, in Natoië there are many privileged Sia'mets and Tymare, which are hereditary, and come from the Father to the Son. Whoever possesses them need not serve in person, but may send someone in his place with the troop that must deliver his fief.
- LII. Of the Dschjcbchdschjy, Seghban and Mikladschjy.
The Corps of the Dschjebchdschjy, in its first establishment, according to the former Plan, amounted to only 630 men. Their purpose was to clean and maintain the gun. They were therefore more armourers than a real Corps of Soldiers. But now it is different with them. Their Corps consists of 30 thousand men, who are divided into 60 Chambers, of which each should be 500 men strong, but which is seldom so strong. Their General, who commands them, bears the name of Dschjebchdschjy-Bassa, a considerable office, from which one often rises to a Bassa of three horsetails. For the present they are regarded as a kind of Curassiers; they ride the strongest Spahi horses, and are armed, like them.
- The Seghban form another kind of cavalry, which each Bassa, according to his Stadtholdership, must lead into the field. They correspond with our Dragoons, and also fight on foot. Their work is to guard the baggage of the Empire; wherefore this militia also usually forms the Corps de reserve. Thenumber of these we shall, in the next division, state in the general order, when we shall determine how many Soldiers each Bassa, according to his income, must provide.
- The Makladschjy are indeed considered by the Turks as a kind of militia, but are, in fact, nothing else than Servants of the Beghler-Begh and of the Bassas. As every person who holds one of these important offices, usually keeps a large number of servants, who cost them nothing but their living and clothing, while no one is paid any money; so, generally, the number of these in the Turkish army is very considerable. They are all young, strong, well-made men, but more suited to the practice of the javelin than to the real use of arms. Nor is there to be found in the whole of Turkish history an example of this kind of people having done any work worthy of being passed down to posterity.
- LIII. Calculation of the troops which the Turkish Porte can bring into the field in case of emergency, and of the arrangement concerning the march of a Turkish army. Having spoken of each type of Turkish militia, both cavalry and infantry, I will now calculate their number, in order that one may judge how many troops the Turks can bring into the field in case of emergency.
- Infantry.
The Janissaries in each Chamber were to be a thousand men strong, consequently their number made 162 thousand. But, because each Chamber, at present, has many incapable or old, often also too young men; I believe, especially when I also consider the avarice of the Officers in this respect, that each Chamber is only 700 men strong; of which 162 Chambers would amount to at most 113400
- The Thoptschjy or Cannoniers, who were to be 18 thousand men strong, are not in that disorder, as the Janistas, but can hardly amount to 15000
- The Kumbarahdschjy or Bombardiers, according to the order, were to make up two thousand men, but of them there are now only 400; but they could, in case of emergency, be brought back to the specified number, that is 2000
- The Bostandschjy, having the guard at the Sultan's tent, who in case of emergency, would certainly march themselves, would, infallibly, appear in their specified number, that is 12000
- The Mehterdschjy would be reduced little or not at all, if the Sultan marched himself; consequently they amount to 6000
- The Serradsch, according to the calculation of the income of the Bassas, should be 3000 men strong; but, as every Bassa, in case of necessity, tries to excel by his service-zeal, so this militia, without doubt, would be much stronger, and could, at the least, be counted at 6000
- The militia of Cairo is always complete, so 3000
- The Leventi or Sea-soldiers cannot be determined, because their number depends on

	that of the vessels and ships. But I reckon that, in case of emergency, this Empire	
43010	can send 40 ships, each of 800 men, to sea, which amounts to	32000
	Twenty Caravels, up to 300 men, that is	6000
	Forty Galleys up to 150 men, makes	6000
	A hundred Galleons or Kandschjabasse up to 60 men, makes	6000
	Thus the entire Infantry of this Empire amounts to	207400
43015	Cavalry.	
	The number of the Spahi is determined at 12 thousand men; they would also, in case of emergency, be reduced little, so that they can be set at	10000
43020	The Sae'yms and Tymariotes I have already calculated in advance, after some reduction they will amount to	132054
	The Dschjebchschjy or Curassiers can be determined just as little precisely, as the Janistas. Each Chamber had to be five hundred men strong 5 but they cannot be set higher, than three hundred men, which of 60 Chambers amounts to	8000
43025	The Seghban are, like the Serradsch, brought by the Bassas, and their number would therefore, according to the income of the Bassas, be increased more than decreased. According to the above-mentioned account they would amount to only 2000 men; but in case of emergency they had to be set even higher, that is	4000
	If we suppose that there are 20 Bassas of three Horsetails in the army; then the Mikladschjy, each Tassa reckoned to 300 men, would amount to	6000
43030	The Volunteers, as I have heard from many who have been present with the Turkish armies, usually amount to four thousand men; but in case of need they could rise to	10,000
	To this cavalry one must add the Tartars, who, in case of need, could be strong, but amount to at least	60,000
43035	This brings the cavalry in the entire Turkish Empire to	240,054
		207,400
	Consequently, infantry and cavalry, together,	447,454
	But all these troops can never, for the following reason, take the field together.	
43040	The sea soldiers, who are estimated at 50,000 men, must serve on the ships. The Garrison of Constantinople requires at least 20,000 men; the Garrisons of so many other people and fellings likewise 100,000 men; this in all makes a reduction of 170 thousand men, consequently the Turkish Army, at its highest, can amount to ff277454. But, when the Sultan, or the Vizier advances alone; then the number of people is much greater. For in this case he is followed by the Chancellery, the Ministry, and a part of each Guild from the city, which together make up at least 50 thousand persons. These people indeed increase the number, but not the strength of an army, by which they are, rather, a very great burden.	
43050	Now a word about the arrangement for the procession. Twenty thousand Janistas, armed with harquebuses and sabres, and the two Bassas of Damascus and Aleppo with the troops of their Provinces, have the honor of forming the vanguard. The Beghler-Begh of Rumelia with his Sandjaken covers the right wing; the Beghler-Begh of Natolie with his Sandjaken the left wing; the Bassas of Carthanie and Erzerum with the Spahi-Oglan of the red banner make up the right wing, the Bassas of Diarbekir and Kars with the Spahi-Silahdary make up the left wing: the other Bassas divide themselves right and left, according to the age when their Provinces came to the Turkish Empire. The four eldest make up the rear guard. In the middle is the Sultan with the Tdsch-Oglan, the Standards and the Music, which is always placed in the safest place, as it is the main banner, which is guarded with the utmost care.	
43060	LIV. Of the Politics of the Turks in general.	
	It will always be difficult to give an idea of the Politics of a supreme government, which never observes firm principles and stability in its aims and directions. Everything depends on the whim and the way of thinking of the Monarch, and on the particular insights of the Ministers who surround him. (*)	
43065	History also teaches us fully, that the most and cruelest wars, and the most violent changes of the State of the Empires had their first source in very small causes, and that either the arbitrariness and self-will of the Prince, or the self-interested aims of the Ministers who were around him, brought about most of it. But if there is ever a form of government in the world subject to unstable fundamental rules, unexpected changes of directions and aims, and traceless designs of the internal constitution of the State; then it is certainly the Turkish. Consequently it is altogether impossible to give an idea of a political government, which to all appearance has no System.	
43070		

- 43075 In fact, whoever knows the internal arrangement of the Turkish State; he sees that it consists only of Slaves. The Great Lord is, always, a Son of a Slave. The brothers and sons of the reigning Sultans are kept as prisoners, until they ascend the Throne. All the people in the Seraglio are locked up there for 30 or 40 years, and the sons of women remain in a permanent prison.
- 43080 The greater part of the most important persons are not born as free men. For the Turks, as a rule, have more Sons from their Slaves than from their Wives. Now, since men who are to govern the Empire, generally have an education that is in accordance with their birth, whether custom or political aims have a share in it, the youth are never taught rules of government, nor are they given any insight into the aims and designs of a State. This may arise from the same jealousy that causes future Princes to remain so long in prison. In this way, Princes, as well as their Ministers, are slaves by birth; and, after they are raised in blindness and ignorance, the former ascend the Throne, and the latter are set over affairs of State, of which they have not the least idea. To this we add the indefinite power of the Turkish Vizier,s, who, however little understanding and virtue they often possess, often with a single word, and with a still so irrational act, give examples and prescribe laws.
- 43085 Virtue is seldom rewarded. Often incompetent persons, men of low birth, men without merit, come to the most important offices of government by flattery, sometimes even by witty ideas. The government servants are often changed, and this change, so often repeated, results in a constant change and alteration of rules and insights. (*) From this confused and irregular method, everyone can gather what ideas one must form about the policy of the Turks.
- 43090 I can compare them nowhere better than to a sea, on which many ships constantly sail, but not one of them leaves any trace of where it has sailed. But this nevertheless, since there is no government, be it as confused andwithout a trace as it will, which has no fixed fundamental rules, on which the whole building rests as on a foundation; so also the Turkish Court must have certain fixed fundamental principles, of which I shall now attempt to give an idea. I shall add some observations which I have made, as long as I have dwelt in this country; for I have collected many samples on account of the negotiations which I have myself seen carried out.
- 43100 In order now to bring what I have to say on this subject into a System, I will first explain what the Turks, in their method of government, have for rules and aims, with respect to all parts in which, according to the common opinion of politicians, the policy of every State is analysed. I shall then add those fundamental rules of the Turks, which cannot be applied to other States. Hereupon I shall come to their Policy with regard to foreign Princes, and finally make some observations on the knowledge that foreign Ministers residing at the Turkish Porte must have, in order to direct themselves, on occasion.
- 43105 Just as I believe that a Prince must pay attention, in the main, to seven points, in which he needs a complete knowledge of circumstances, which is precisely called Policy; so I will give, piece by piece, an idea of the Policy of the Turks. For this I shall first speak of the State-household, then of Policy, both in times of peace and war, as well as with regard to the means of subsistence, with regard to the laws, and finally with regard to rewards and punishments.
- 43115 (*) This is so a generally not, as it is presented here. There are certain general rights of religion, the people and certain states in it, which, when they were disregarded and offended, not infrequently caused the corruption and downfall of the Sultan and his Ministers.
- 43120 (*) This is true; but it almost exclusively and exclusively takes place with the Heads of a rank or the Advocates of a College. Those persons, on whom the main matters depend, and who must submit the devised matters to the Heads for judgment and decision thereof, have generally served from below, so that, with the changes of State officials, the matters themselves do not undergo so much change.
- 43125 IV. Of the Politics of the Turks, with respect to the State Economy.
- 43130 With regard to the care of the household, I have observed among the Turks everything that one can ever observe touching prudence and policy in the most regular States. I have observed both among the Ministers of the Household; they are just as careful about the preservation of what belongs to the household, as they are attentive to make these sources more fruitful.
- 43135 To this is added a complete knowledge to impose taxes and tributes without the danger of a riot, and an ability to remove the first principles of even aseeming danger. So that the Turks, in this matter, yield nothing to the most legitimate and attentive governments. But I also notice with them more Rules in the State-household, which do not agree with the strictest justice, consequently cannot be applied to other States.
- 43140 The first is this, that they deprive the Sons of the goods of their fathers, when

they die. The Sultan takes possession of these goods, and leaves the Sons only what is necessary to be able to live. (*) This rule, which seems to mean the improvement and enlargement of the State-household solely and exclusively, has nevertheless real aims, which rest on Turkish Policy. Its aim is, that in the Turkish Empire there shall be no rich and noble Families.

This is one of the most important Rules of State; it is also almost necessary in such a form of government, which rests entirely on the despotic Will of the Monarch. Everything is accompanied by violence; everything must be done on one side, which can induce the subjects to throw off the yoke. Generally, people are moved to bold undertakings, by ease and wealth and by the feeling of Honour, which is united with an original Nobility; for from this arises the tendency to obtain more freedom. This Rule serves very well, to banish all danger from that side.

It should be noted that the Bassas are always people who possess wealth, have enough ability to undertake something, and can strengthen themselves by their followers and their friends, for which reason it would often be dangerous to sacrifice them; thus the Turks have a political means to make them poor, during the time that they distinguish them, in outward appearance, from others. The Sultan obliges such a Bassa to marry either a Sister or Daughter of his. The Bridegroom must, before the marriage-bond, give his Bride considerable presents, after the betrothal make heavy expenses, and by this means his treasures gradually diminish. But, because he is at the same time the Emperor's blood, his ambition is satisfied. The Sultan provides for a Princess, without it costing him anything, acts economically, and ensures the peace of the State.

The Sons, born of such marriages, according to the laws, seldom rise higher than to the office of a Kapudschjy-Baschy; a law, which is seldom violated, because it is too much in accordance with the fundamental rule, of humiliating the Nobility, and not allowing the succession of great Families. Another political Rule, useful to the State Economy, consists in the frequent change of the State officials. From this the Monarch derives real advantages. As often as a man is promoted, he must give rich presents. The shortness of time, which they spend in the great offices, does not permit those who hold them, to carry out designs which are contrary to blind and slavish submission, and this always remains the foundation of government.

For it is, that such men, in order to make good the expenses which they had to make when assuming their Dignity, are placed in the necessity of committing oppressions, robberies and acts of violence; so this also agrees very well with the policy of the Empire, to dampen the courage of the subjects and the common people by heavy taxes, and to accustom them not to rebel against every injustice. The rule, to let the Stadtholders emaciate the Provinces, has therefore a double purpose.

In fact, there is not a kind of oppression or any other artifice, which the Bassas and Sandjaken would not use, to enrich themselves. The Government knows this very well, and allows it. Sometimes one or other is allowed to have his head cut off, and thereby the people are led up the garden path, so that they may believe, how zealously they maintain the right; and how ardent the love towards the subjects is.

There are two cases usually, in which the Stadtholders are sacrificed to public vengeance. The first is when the people of the Province, from impatience at the exactions, begin to mutiny: they immediately cut off the head of the Bassa and quell the murmuring of the Commons. The other is when the State deems it necessary to exempt itself by the exception of a Cityholder to enrich the governor. This is a cruel, but at the same time very fine policy. The Prince, by means of the Stadtholders, emaciates the people, and yet has the appearance of committing no injustice. But in reality these Stadtholders are nothing else than agents, through whom the Treasury gains immeasurable sums. The subject oppressed, and the Treasury enriched, then the latter has sufficient means to make good the necessities of the State; but the former is unable to disturb the public peace. Consequently the fundamental rule of Turkish policy achieves its purpose.

(*) This is generally not true. With most persons, who die a natural death, and are previously of the civil state, the goods, after a reduction of legal percentages, go to the Sons.

LVI. Of the Politics of the Turks, with respect to the Government of the State. One of the principal occupations of a well-regulated Government is the Government of the State, and this the Turks understand very well. In this Art they bring it to a great perfection, because they understand the art of dissimulation in the highest degree.

They are so much taken with the excellence of this quality, very necessary for a Prince, that they sacrifice to it their most agreeable and dominant passions. Avarice and pride disappear, when they want to dissimulate. They know very well how to

- distinguish with whom they live in peace, make alliances, keep friends, do deeds. Prove without words, and about which they must use good words without deeds; yes, how, how much, when, how far, on what occasions, openly or in confidence, they must employ such means.
- I should have to enlarge too much if I were to prove all this by particular examples. In general, I only assure that, if they have an advantage by it, they know how to relate every healing. Of all the ideas that are generally formed of the Turks, this is the most wrong, when one believes that the Turks were exposed to hastiness and rashness, in the art of governing well.
- It is true that sometimes they act somewhat hastily in matters; but this only happens because they make use of a prejudice that is well suited to them. They know very well that the threats that they make sometimes cause fear. From fear always arises a complacency in the party; and, when they use this means, they almost always achieve their aim. But it is incredible what an art they possess in the highest degree, to mix the lie with the truth, to spread it, if necessary, among the people, and to profit from the credulity of others, to assure themselves of the external. For with regard to the internal they observe two rules, from which they do not depart. They oppress the people, as I remarked above with regard to the State economy, by extortions, so that the mind, choked by injustice, may bear all the misery in which it is placed, with the more resignation. The other they observe, with regard to the Stadtholderships and important offices. None last long, and these are not transmitted to the descendants. The Stadtholderships are usually given to people who have been educated in the Seraglio. Such people know neither their Family, nor their Descendants; they have no help or refuge to hope for from anywhere, and therefore can do nothing against the Sultan. Some restless spirits have sometimes raised their heads; but usually they have also had to bear the punishment for their blindness, without the Sultan being forced to use open violence. It is no work to help someone by secret tricks and stratagems in the ground, whose followers consist of people who were born in slavery, and are all strangers to him, while he has neither parents nor friends who seriously and emphatically look after his cause.
- It cannot be denied that more than once, bold and presumptuous people have caused unrest in the capital, which were dangerous to the Sultan himself and his life. But of this the rule of state was no cause, but the misfortune came, rather, from the fact that one had put its observation out of sight. It is certain, that the succession of ordinary and fixed fundamental principles causes no change in the hearts of subjects. On the contrary, extraordinary incursions and the Prince's wilfulness, all too evident injustices, and neglect of respect for the militia, are the three rocks against which the Prince can suffer shipwreck. Each of these pieces arouses anger; from anger arises the spirit of revenge; the spirit of revenge breeds parties; from party lust follows disorder and confusion; and from disorder arises the entire ruin.
- Let the Turkish Monarchs beware of that which can arouse such movements; then, furthermore, because of the tranquility of the Empire, they have nothing to fear, which is the other part of the State.
- LVII. Of the Policy of the Turks, with respect to war.
- Have the Turks a Policy, agreeable to their State-system in State affairs and the State-household; they have also certain State-principles with respect to war. They know very precisely, when it is time to begin it; by what means they continue it, and how they bring it to an end.
- But, just as the Porte well understands how necessary it is, it wants to consider every circumstance in a true point of view, that it understands the State-interest of all other Princes, not only of its allies and neighbours, but also of all others, who unite with them or can declare against them; so it spares no expense, and omits nothing, which can give it the surest, most definite and most true information concerning it. For this reason she keeps in all, even the most remote countries, attentive spies, mostly Greeks and Jews, who help each other, and find means, to send her the messages.
- If one examines the custom, to keep such spies; then one easily notices here, the most refined Policy, apparently with respect to the State and its household. The prestige and Dignity of the Sultan, in so many incidents, which can occur, is never exposed to the fate of a Minister, who clothes the Character of an Ambassador. The household gains by it: for one does not need the splendor, with which a characterized Minister must appear; and one only makes those expenses, which are useful for the true State interest, because one, partly, reports with certainty, and hears the intentions, partly also brings the matters to an end quickly. These veiled people can

- 43275 mingle in all societies, without any attention being paid to them. As one can deal with them with less reserve; so they have less difficulty in penetrating into the Secrets, and often hear that which an openly characterized Minister would find difficult to discover.
- 43280 In this way the Porte is served, without the Sultan's reputation being injured, and without it costing much. He learns everything with more precision and accuracy, than any Prince in the world. He knows with all certainty, how powerful a King is; who can and will associate with him; what disputes a Prince has with others; what kind of native unrest arises in each Kingdom, and what a Prince is like for himself. From this knowledge he draws consequences for his own circumstances, behaving towards the
- 43285 Ambassadors of foreign Powers, being at his Court, as he judges necessary. He flatters; he is proud; he arouses in one distrust of another, as he deems advisable for his purposes.
- Now since the Porte has such complete reports concerning the condition of other countries; then it is not likely that they will engage in a war, without probable
- 43290 hope of concluding it happily and well. And once it has begun, they know exactly when it is time to lay down their arms. But in order to be assured that the war is waged with all emphasis, it is a rule: the Turkish commander must win the battles, and be happy; otherwise the blame is given to him. The Generals are mostly innocent; but, as it is a fixed rule that their lives are at an end when they lose a battle; so every
- 43295 one of them is driven to despair.
- For the rest, the Turks do not know the means which civilized nations employ to preserve their conquests. They employ no other means than violence, by which they compel the inhabitants of such Provinces, which lie far from the capital, to move into the neighbouring towns, in order that they may always be under the eye of the Stadtholders, and that they may be watched the more closely and accurately.
- 43300 Two political aims induce the Turks, as much as possible, to depopulate newly conquered Provinces. The first is to prevent rebellions, and, if one should arise, to be able to suppress it the more easily, while the rebels lack the means to fortify themselves in a distant country. The other is to make it difficult for their enemies to enter with an army. For, the less a country is populated, the more it suffers from want of provisions. One may also, according to Turkish history, make the observation that the Turks, as often as they have conquered an important province, have readily concluded a peace, because they were very anxious to establish themselves there, and to have time to do so. This happened most easily, when they denuded the country of
- 43310 inhabitants, and on the other hand populated it with Mohammedans.
- For the Militia, the Turks, among all the Princes of the earth, have the greatest respect. This is evidenced by the custom of the Sultans to enroll themselves as common Janistas in one of their regiments, in order to give the people an even more exalted idea of the excellence of the militia. And this purpose they have so well
- 43315 attained, that 'there is not a man in the Turkish Empire, be he fortunate or unfortunate? who did not consider it an honour to be enrolled in the army. Every prince will do it service, when his people have lofty ideas of the military state.
- LVIII. Of the Policy of the Turks, with respect to the provisions at Constantinople. Experience itself teaches how great the diligence of the Turks is, and how serious their care is, with respect to the provisions. Constantinople, much more populated than any city in Europe, always has an abundance of provisions, and can buy them better than even one of the most fertile countries. (*)
- But the care and judgment of the Turkish government are not yet satisfied with this.
- 43325 They know very well with which peoples they must keep friendship, in order to have the abundance and supply of provisions constantly open. For this reason they turned a blind eye to many acts of violence by the Tartars, and on several occasions they paid little attention to their disobedience. For the Crimea is one of the most generous sources from which the capital is supplied. For this very reason they were at all
- 43330 times very active to maintain free navigation on the Black Sea. For the same reason they used tricks, and spent immeasurable sums, to bring the Cossacks under the obedience of the Turks; and this was also the reason why they stuck steadfastly to the fundamental principle of prohibiting other nations from trading on this Sea. The Porte is so jealous of this point, that they never consent to tolerate a French
- 43335 Consul in the Crimea. For this step was regarded as a source from which such consequences could flow in time, as would affect their rules of conduct concerning the means of subsistence.
- The Porte is equally averse to a war with Persia. For, since many Provinces in Asia lack the necessary supplies, she understands very well how much she risks when she
- 43340 starts a war in these regions, where the lack of provisions can make it necessary for

her to withdraw the army with little Honour, or to conclude a standstill of arms and peace at an inopportune time, to the greatest disadvantage of her Honour with Foreigners, and to the displeasure of her subjects.

I could add several more remarks, how careful the Turks are to determine and stop purchases, arbitrary undertakings of Merchants, and price increases. But it is enough for me to give a general idea, how vigilant and good Politicians they are with regard to the care of the provisions.

(*) The alleged population is, as is known, an uncertain matter. The price of provisions has risen exceedingly since the author's time; but it may also change again according to times and circumstances.

LIX. Of the Politics of the Turks, with respect to the laws.

The laws, which in all States are the foundation of justice, consequently also the foundation of peace and general order, seem to me to have an entirely different object in Turkey.

The outward appearance is the same. But, as essentially as the legislative Method of the Turks differs from that in other countries, so is the operation different. In other States the laws mean the maintenance of justice; but in Turkey the three principal aims of Turkish Politics must be supported by them, namely the indefinite power of the Monarch, the oppression of the subjects, and the enrichment of the Imperial Treasury.

The entire judicial process of the Turks consists in the examination of the witnesses, and the evidence drawn from them. But it is not at all difficult to find a witness, such as one would like him to be. And so it often happens that one testifies and swears against the truth.

As much as this Method offends the right; so useful is it, on the other hand, to support the absolute power and arbitrary lust for power of the Monarch, which always remains the foundation of the Political government of the Turks ?? the Judge is always free to accept the testimonies as true, or to reject them as false, according to whether or not they agree with his own interest, or according to the interest and the Will of the Prince.

In this way the right remains in the arbitrariness of the Judge, which in various cases can be determined by regulations and orders. Thus the way is open for the State to bend the right to the intentions of the Sovereign.

Such a liberty keeps the subject in oppression, and sometimes, by the chastisement and plunder of an unjust Judge, brings considerable sums into the Emperor's coffers. Against this kind of people, who maintain justice, the Government often acts in the same way as against the Stadtholders of the Provinces.

They like to see them act according to their own arbitrariness, and their acts of violence are tolerated until the clamour of the subjects brings near the moment to enrich the treasury.

LX. Of the Politics of the Turks, with respect to punishments.

As to punishments, no country can be more severe, and no Prince more hasty, than they do in Turkey. Among the Turks there is almost no difference between crimes. Everything is punished with death, whether it be a serious crime of state, or a minor error, to which ignorance or a single case often gave rise.

Such a cruel way, by which one necessarily, very often, sins through injustice, is however almost necessary in such an extensive Empire, as the Turkish is, where everything is done by force, and which is governed more by the Prince's wilfulness, than by a Stelzei.

The many changes of the Empire's offices, which are held by people, whom the Sultan has exalted by his wilfulness; who usually have no education; who often lack the ability to observe them, produce so much confusion, and cause so many wounds to the political body, that one cannot punish otherwise than by such a strict and rapid law. Therefore the Rule, however cruel it may seem, is necessary for the durability of the Turkish Empire.

As for the persons who serve in war; they are dealt with with the same strict rapidity. For this reason one seldom finds examples of commanders carrying out base deeds; on the contrary, one reads in Turkish history of examples of the boldest and most desperate deeds. Therefore the severity fetters the persons of war and peace; they must do their duty: the people, on the other hand, are kept in such calmness and patience, that one seldom finds examples of it in other countries. Truly, it is a strange thing, that in a city so uncommonly populated as Constantinople, where people of such different nations and customs are, hardly ever or very seldom a murder or any disorder is committed.

The whole merit of patience and obedience rests on the severity of the punishments. The rapidity with which unruly spirits are removed, increases fear, and besides that city enjoys the tranquillity which is justly admired by all foreigners.

LXI. Of the Politics of the Turks, with respect to rewards.

There is no government where services are less and worse rewarded than in Turkey. With common people everything consists of a small sum of money; people of rank receive a fur or sabre from the Monarch.

These are the extraordinary rewards with the Turks, with which one rewards merits. I do not want to speak of the promotions, which one receives according to the rank of age and service to the Porte. The domestic, political and military services are all considerable; one has enough Honour, and they also bring in reasonable sums. These small, extraordinary rewards are considered the greatest gifts that one of our Princes could give, whose favor nevertheless goes so far that they enrich an entire Family now with considerable estates and generous annual salaries, then again bestow upon the Nobility and distinguished Titles.

This is an effect of the Policy of the Turks, according to which the people are already taken with the ideas of an absolute power of their own Monarch, and of the blind obedience due to the Prince. The youth, who are educated in the Seraglio, and usually attain such Dignities that they sit at the helm of State, already form the idea in their first years, that the most blind obedience is the most necessary quality of a true subject.

With regard to this obedience there is no exception or determination. Educated with such impressions, they undergo death with complete resignation. They are assured that they die as Martyrs, and enter Paradise, when they die by the command of their Monarch. For this very political reason they give all those who hold Dignities dependent on the Crown the Title of Kul or Slave.

The first Vizier himself gives himself this name, which is much more illustrious among the Turks than the Title, Subject. For a Kul can oppress the subjects with impunity, and the subjects may not oppose him, without being guilty of the severest punishments.

Now if the heart is taken with such ideas; then it considers every reward, coming from the hand of the Monarch, as a gift from Heaven. They also, in fact, give their Monarch the Titles of a God on earth, a Shadow of God, and the like. The Teachers of the laws teach that the Monarch is exalted above the laws. They assert that he can revoke his promises, and withdraw his oaths, when he believes that they are disadvantageous to his highest power. For, when he swears and solemnly promises, at his coronation, to defend the Mohammedan religion and the laws of the Prophet, the same law nevertheless calls him the Interpreter of the law. Besides, there are wiser interpreters of the laws and of the Koran, who deny that the Monarch has any power in matters of religion, and who attribute to him all, even absolute power in civil matters.

From this saying one can easily see how the constitutions in the policy of the Turks are connected.

LXII. Of the nature of Turkish Politics.

So far I have spoken of the political attempts of the Turks, with regard to the household, the State, the war, the means of subsistence, the laws, the punishments and rewards, because I believe that every Prince must pay attention to these seven points, if he wants to govern his country well.

It will have been observed that the Turks, in their method of governing, have quite different ideas than those in Italy. Since they are not inexperienced in the art of governing, and know the system of every other Prince; so they do not act at all like blind men, only according to their own instincts, but according to reasons, and pay attention to their State's interest. I have observed that their Policy has three principal objects: first, to support the despotic power of the Sultan, which is not determined by any laws, and almost also not bound by Religion; next, to oppress the subjects; and finally, to enrich the Treasury. I have shown that from this may be explained the rule according to which obedience to their Prince is instilled in the youth, more as a fundamental principle of Religion, than of State; according to which, further, the maintenance of the powerful Houses, and the succession in their estates, is prevented, and the newly conquered countries, far distant from the capital of government, are depopulated. From this same reason also flows, that the Stadtholderships and Ministers are frequently interchanged; and that, finally, justice, at the least suspicion of a crime, is enforced with the greatest haste and severity. Whatever this political system may be, it is in accordance with the

43475 fundamental principles on which the system of the entire Turkish Empire rests. The
Turks have actually begun to base their political government during the war, and
during a war that had as its aim to build an Empire on plunder and violent land
reclamations.

43480 In the essential grounds nothing has changed. Wherefore one should not be surprised
that the entire State still agrees with the circumstances on which it was founded.
The great extent of the Empire has rather secured it even more. For in a large body
one must remove evil from its first birth. This is the reason why with the Turks,
often the slightest suspicion is a sufficient motive to proceed to the utmost death
penalties. The only difference between the former and latter times, which I have
43485 discovered among the Turks, is this, that in State negotiations they are now somewhat
more tractable, and in Military affairs somewhat more judicious.
This change, however, is very natural. For it depends upon the circumstances of
fortune, to which all human affairs are exposed. In former times, when the Turks were
constantly victorious, enriched themselves with a fat booty, amassed immeasurable
treasures, and were consequently dreaded by all Princes, they gave themselves up more
43490 to blind chance; and, however unreasonable the manner in which they then proceeded,
they nevertheless, by their boldness and steadfastness, removed the greatest
obstacles out of the way, because the circumstances were favourable to them. But now
that fortune has changed, their militia has fallen into disarray, and the household,
for the reason mentioned, has fallen into disorder; so, in respect of manner, they
43495 have also changed somewhat. But in deed they have accomplished nothing else than that
they refined their policy, and have now learned the art of covering the unjust
violence of their rules with the cloak of reason and common sense. On that account
they have adopted the most flattering and polite manners that one can expect from the
most refined Cabinet ministers in Europe.

43500 As much as I have been able to discover during the time that I have had the honor of
being at this Court, this is the essence of Turkish policy. But how they are disposed
towards other foreign Monarchs, both in Europe and in Asia, with whom their Empire
has some connection, we shall examine subsequently.

43505 LXIII. How the Turks are disposed towards Persia.
Three nations have only a mutual relation of importance with the Turkish Empire, the
Persians, the subjects of the Mogul, and the Ushuaks. Here I shall speak only of
Persia.

43510 The Persians are a Power, which, because of the extent of their Empire, the number of
their armies, and the distinction of their Doctrine, is no less detested than feared.
There is no more formidable enemy for the Turks, for several reasons. The principal
is, that all the Turkish people fear nothing more, than when they have to serve in a
war on the borders of Persia. The discomfort of the long and remote journey, the
43515 difficulty of the climate, which is deadly for all European nations, the lack of
provisions in wild and sparsely populated provinces, the Turks have learned by
experience that usually the least return from these regions.
The very great extent of the borders from Cabarta (Circassia) to Bassora makes it
necessary for the Turks to keep more and more armies in the field, consequently
incurring expenses that are detrimental to their household.

43520 This, furthermore, also suffers a considerable disadvantage, because then the trade
is broken off, which consists of the richest articles, and consequently brings great
profit to the Imperial toll houses. In addition, there was the sad experience since
the war with the Persians, when the Sofi Thamas Kulikan came to the throne, which
caused that, when all the fortunes of war changed, the Turks understood well, that,
43525 if they made any conquests, they could not keep them, because of the great distance
from the heart of the Empire. Even religion contributes something to wishing for
peace with Persia. Many of the Turks, namely, accept the same doctrine of Ali, and
adhere to the Persian creed. For this reason the government always nourishes a
certain distrust of those whom it chooses as commanders in such defensive wars.

43530 Wherefore, for this and similar reasons, it is a rule of the Turkish government to
avoid war with Persia, because the Porte foresees that it is ruinous for it, still
more so, if it is not ended in a few campaigns.
Because Sofi Kulikan is a brave and sensible man, and understands the way of thinking
of the Turks; therefore he conducts his war in that way, which is the most sensitive
43535 and deadly for the Turks. He does not seek to make conquests; he marches from one
corner of the frontiers to the other; he wanders everywhere, and lives at the expense
of his enemies; he drags along people of all ages and sexes; lets his troops rest in
his country during the winter, and seeks, in a word, to prolong the war, considering
this to be the best means to weaken the Turkish Empire, and to make it so weak, that

43540 it can henceforth undertake nothing against Persia.
That is how I regard Persia, and in this I am protected by the Turks' own way of
thinking about Persia. At present there is no prospect of peace; but if the Turks get
it, then they will hardly start unrest again so easily. For they know their own
43545 interest only too well, and do not get involved in war, without a moral certainty,
that they will profit from it. (*)

(*) The author's thoughts. concerning the way of thinking of the Turks concerning the wars
with Persia, is so real, that, notwithstanding that Persia, after the death of Thamas-Kuui
Khan, has fallen into the utmost confusion, the Porte trembles not to undertake to attack that
43550 Empire. She is content, if she is only left in peace on that side.

LXIV. How the Turks think of the Moguls and Ushuaks.
The war which the Turks wage with Persia has caused the Mogul Emperor to offer to
make a diversion against the Shah. The Mogul Ministers made designs which were
43555 otherwise ineffective. The real reason for this was that the Moguls are held in
little esteem by the Turks.
They know that they do not understand military strategy, and after the Persian
destruction of this country they are poor in money, and they lose courage. The great
distance, which makes fixed designs almost impossible, and prevents one from
43560 proceeding with emphasis and certainty, has caused the Porte to abandon this
negotiation. But she has shown much respect for the Mughal Ministers, to which the
uniformity of Religion and the aims concerning Commerce also brought it. For in fact
the Commerce which she carries on with the Mughal Empires is very great. This is done
through the Persian Gulf over Bashora, where one of the richest Custom-houses of the
43565 Turkish Empire is. The Porte nourishes and maintains the friendship with the Mughal
countries from views of Commerce; but further alliances are considered useless,
because of the distance and the natural condition of the Mughal peoples. The Usbeks
also sent Ambassadors to the Porte, to propose to her a diversion against Persia,
because they were angry about the depredations which the Shah had committed in their
43570 countries. The Usbek Empire borders on the Caspian Sea to the West, on Persia to the
South, on the Karakalpak Tartars to the North, and on Turkestan to the East. But,
because these peoples are not respected by the Porte because of their military valor,
it has not deemed it necessary to involve itself with them in military projects. The
Usbeks, seeing that the first subject of their mission was fruitless, made proposals
43575 for commerce. Their country is rich in diamond mines of the most perfect and rarest
kind. They offered the Turks that they could discuss with them a plan for such a rich
trade, which would be very useful to both States. Several conferences were held on
this subject. But, because the only way was by means of the Caspian Sea, they soon
saw the difficulty that arose because of navigation. For this is in the hands of the
43580 Muscovites, who profit from this precious trade. Now that the Porte is at war with
Persia, (*) it has seen fit to reject this affair, which will never be easily
accomplished.

The Porte has no dealings with other Asiatic States. Neither state aims nor interests
unite it with anyone else; for it does not believe that it should place the Kurds and
43585 Dagestanis in this class, who are peoples without religion, laws and customs, who
almost constantly wander about, and know nothing more than how, like animals, they
defend their dens.

(*) The writer speaks of the time of his stay in Constantinople, namely 1760.

43590 LXV. Behavior of the Turks toward Russia.
The Turks, who are naturally proud, despise the Christian princes. But intelligent
men and the ministers of state among them do not think so. I will only report how
they think of each one who has influence on their State or their trade.
43595 The Russians are, at present, among all the Christian powers, the most formidable to
the Turks. The numerous armies which this Power keeps on its feet even in peacetime,
and the troops which constantly keep watch on the Turkish borders, give the Turks a
correct idea of the power and strength of the Russians. They understand therefore how
dangerous it is for them to have Russia as an enemy. The Turks have experienced
43600 enough at Choczim, Oczakov and in the Crimea what they have to expect from the power
of the Russians. The alliance entered into by Russia with Austria or some other
Power, makes the Porte's affair still more anxious, and she must therefore redouble
her high esteem for Russia. It is certain that the Porte takes great pains to
maintain Russian friendship, because she has reason to fear that Russia might unite
43605 with the Persians. But, as much as the Porte, in appearance, treats the Russians with
respect, and spares them, so much does she hate them in her heart, and longs for a

favourable opportunity to curtail the power of the Russians. To this end the Porte continually seeks to arouse distrust of the Russians among the neighbouring Princes and their friends, using everything to stir up a Christian power against that Empire in one way or another, so that when the hostility between the Porte and Persia is finally ended, they may take advantage of the opportunity to gain some advantage over Russia.

The growth of Russian power has, in fact, also greatly reduced the population and the profit of the Turkish Empire. The Russians are continually active on the frontiers, and the Tartars can no longer commit those raids which they then continually dared to do, as long as Russia was less warlike and regular.

Consequently, that astonishing multitude of slaves no longer comes, which the Tartars otherwise, annually, like a branch?? of Commerce to Constantinople. It has been calculated that by this means, every year, the population of that capital increased by 20 thousand people. The Tartars supplied men enough for the service of the galleys, which, notwithstanding their small number, are now very poorly provided with sailors. With the reduction of the Turkish Empire, it is difficult to think that the Turks will ever gain great advantages over the Russians. (*)

(*) The war, waged about the year ?? between the Russians and the Turks, has fully confirmed the author's judgment.

LXVI. Behavior of the Turks toward Prussia and Sweden.

Prussia was, until a short time ago, still an almost unknown Power to the Turkish Government. But, after the Prussian House, in later times, waged wars against the Austrian House, and entered into alliances with many powerful Princes, the rumor concerning the strength and bravery of the Prussian troops also reached the Turkish Court. The new blood relationship of the Prussian House with the Crown of Sweden, has, in particular, aroused in the Turks the desire to live in friendship with the King of Prussia, and they began to flatter themselves that they could maintain a good friendship with him. The Porte understands very well that, by reason of the constitution of the States, and by reason of the numerous armies, this is a Power that can do much in the North and in Germany. It is certain that the Porte will make every effort to bring all the Powers on its side that border on the Empire or on Russia, in order to divide them among themselves when the opportunity arises. This will always be a false maxim of the Turks. Sweden is a Power that has been on good terms with the Turks for many years. She was held in good esteem by them under Charles XII. The Turks have indeed lost some of their esteem for the Swedes after the misfortune that this Crown had with Russia in Finland; but nevertheless they continue to maintain the closest friendship with them, in order to maintain the same political views against Russia for which they also seek friendship with the King of Prussia.

LXVII. What the Turks think of Poland.

Up to this time there was no Power more formidable to the Turks, for whom they had greater respect, than Poland. The wealth, the extent and population of this Empire, the number of horsemen, which it could bring into the field, and which of the Turks were considered very brave, was a motive, why the Porte had so great respect for this Power.

A stronger reason for fear were the Cossacks, dependent on this Crown. These came, often, with all their power from the Black Sea, devastated and plundered the villages almost to the gates of Constantinople, which city they often placed in great want of provisions, while they disturbed the trade of the Turks. As imprudent as the Poles were in their conduct towards this warlike nation, so attentive were, on the contrary, the Turks. They flattered and caressed them so long, until they finally obtained what they had desired for so many years. They moved the Cossacks to a revolt, and made them submit to the protection of the Sultan.

After they had obtained safety on the Black Sea in this way, they saw themselves freed from a dangerous enemy, and the Crown withdrew from Poland a strength, by which this Empire otherwise made itself formidable. When, in addition to this, the native unrest arose in this Empire, the Turks saw its weakness more and more. The more hospitable they are towards Poland, the less is their respect for the Poles.

Notwithstanding this, they endeavor to live in good confidence with them; for they consider Poland as one of the strongest means to bring Russia under the yoke. When therefore unrest arises in this Republic, then the Turks take every care to receive news of all internal events. They use all artifices, so that the Russian party does not gain the upper hand among the Vagabonds. The Princes of Wallachia and Moldavia and the neighboring countries have orders to keep a watchful eye on everything that goes on, and to give the Polish nation all possible signs of friendship and good

confidence, only to flatter it.

43675

LXVIII. What the Turks think of the Austrian House.

The Austrian House was always a Power that was treated with great respect by the Turks. The frequent experience of the bravery of the Austrian troops has taught the Turks, through their own disadvantage, to have very great respect for the German militia. They give it the testimony without contradiction, that it is the bravest among all European nations. When the Imperial Crown is united with this Illustrious House; then the Turks treat the Emperor with the utmost respect. They understand well, that when the German Princes assist him, he has a Power, against which that of the Great Lord cannot stand. The only consolation for the Turks was otherwise the discontent of the Hungarian States, who, under the pretext of religion, were always prepared to stir up trouble. The Turks always secretly rejoice in it, because, in case of war, they could use this pretext to make a diversion.

43680

43685

It was very sensitive to them, when this Empire so unanimously decided, with the utmost force and all emphasis, to support and obey the reigning Queen of Hungary, Daughter of Charles VI. For by this they were cut off from the only means of hoping for internal trouble, if they should come to war with this Power.

43690

It would be even more sensitive to them, if the Imperial Crown remained with this House. But, whatever may happen, the Turks will always have high respect for the Archhouse of Austria. For they know well, that this House, even without the Imperial Crown, because of the great following and the close alliance with the German Princes, can obtain powerful help on occasion.

43695

Another strong thorn for the Turks, and which hurts them very much, is the alliance with Russia. The Porte will never cease, if possible, to arouse distrust between both Courts, and with all its strength seek to break a chain, which is the strongest of all, and greatly hinders it, to war the Christian countries. When, for the rest, a favorable opportunity for the Turks presents itself; then, they will certainly not neglect to draw after them the Banat of Temeswar, and possibly more. Besides that they see how much without the possession of this country Belgrade is weakened, and how much it concerns them, for reasons of State, to have the rule over such an important place; so the government will also be urged to do so, by the proposal of many private people, who have an interest in it. For many distinguished Turks possessed, in this Banat, rich lands, and the Sultan granted there much Saeyme and Tymar??.

43700

43705

But, as long as the Turkish Empire remains in its present weakness, it will be very difficult, that the Porte decides on such an important undertaking.

43710

LXIX. What the Turks think of France.

The King of France was the first among the Christian princes, whose States do not border on the Sultan's lands, who, because of the freedom of Commerce, entered into negotiations with the Porte, and obtained the Title as Emperor. Since the mutual alliance of Francis I with the Turks, these two Courts have maintained a good friendship. The Turks have the most accurate and certain knowledge of the French Power and the prestige that this Crown holds among all Christian powers. But the Turks will, not only because of the power of the French, but also for their own interest, constantly endeavor to maintain the most intimate friendship with the Crown of France. They understand that France is the Power that, above all others, can keep the Austrian Power in balance, and in case of necessity can make a strong diversion. On the other hand, this is also certain: as much as the Turks will do all they can to seek assistance from the Crown of France against the enemies of the Porte; so it will be difficult for the French, in case of need, to prudently assist the Turks, if they do not see their own advantage crystal clear. The rich and liberal Commerce, which the French carry on in Turkey, also provides them with advantages, and makes them good friends together. For the Imperial Customs Houses derive extraordinary advantage from it. But, just as the Turks know the French nation as very fine politicians, who understand the handling of affairs well; so, at present, they deal with the French with the utmost caution, playing the hypocrite with them in everything. They do not trust them, always fearing that this intelligent and active nation might outdo them.

43715

43720

43725

43730

LXX. What the Turks think of England and Holland.

The Crown of England was always regarded with special respect by the Turks, because of its naval power, its great and extensive trade, and because of the merit of so many peace treaties concluded with the Porte under English mediation. But at present it is very sensible to the Turks to see that England has such a power at sea, and so numerous fleets, which sail around in the Mediterranean and in the

43735

- 43740 Ocean. On the contrary, the Turks lament the decline of their own naval power, finding it a sorrow, to which so proud a nation is susceptible, which, from the earliest times, regarded itself as the most powerful on water and on land. Besides, the Turks conceal their sorrow, trying rather to cover it up by the attention with which they treat this Crown. Although the Commerce of the English in
- 43745 these countries is no longer so great as in former times; the English Crown nevertheless deserves to be treated with respect by the Turks. For they need many English Manufactures, especially such as serve for pleasure and luxury. The great distance of England from the Turkish Empire, the special position of this island, its great power at sea, protect it from all danger and insults of the Turks,
- 43750 who see well that it is much easier to be attacked by England, than that they could on the contrary again trouble this Crown. England's friendship will therefore bring more advantage to the Turks, than that of any Monarch and such Powers, which, because of the proximity of their States, can have disputes with this Empire. The Dutch were, until the year 1660, in no special esteem in Turkey, because they conducted their
- 43755 trade there under the protection of the English. But, after the Turks have learned what a power Holland has at sea, and what rich trade they conduct in India; they now esteem this power very highly, and treat their Ministers more respectfully.
- LXXI. What the Turks think of the Kings of Spain and Naples.
- 43760 The Spanish Crown is, because of its first principles, an enemy of the Turks. There are always some armed ships at sea, which disturb the commerce of the Turks in the Mediterranean. These would also often have gladly made peace with the Spaniards, if their old enmity and natural pride had not kept them from it. For the rest, they know that the Spanish Crown is no longer as powerful as it used to be, and that,
- 43765 notwithstanding the help which it receives from its fleets from the West Indies, it has noticeably diminished in its household, through the many wars, and has no very populous country. The King of Naples is highly esteemed by the Turks, not only because of his alliance with the Crown of Spain, but also because of that with France. It may happen that peace is also made with the Spanish Crown by him on
- 43770 occasion. In the meantime, the King of Naples keeps a Minister here, with the Character of an extraordinary ambassador, who is treated by the Turks in the same way as the Ministers of the oldest Crowns. The Turks have also concluded a Commercial Treaty with the Court of Naples, but that does not mean much. For the rest, the Turks know well that Naples lays claim to some States, now under the rule of the Turks.
- 43775 Often the Kings of Naples could also, if opportunity arose, come forward with the old demands of their Kings; but on the other hand, the Turks also pay attention to every step that the Court of Naples takes.
- LXXII. What the Turks think of the Republic of Venice.
- 43780 The Republic of Venice is held in the highest esteem by the Turks, and is now regarded by them as uncommon. (*) The long durability of its rule, which they regard as a result of the shrewdness of the Council, causes the Turks to regard the Venetian government as the wisest in Europe. The long experience which they have gained of their bravery in repeated naval
- 43785 battles, but mostly in so many battles in the well-known Candidate War, has inspired in the minds of the Turks a very exalted idea of the bravery of the Venetians at sea, and of their knowledge in naval affairs. They frankly admit that from that time on the Turkish naval power has begun to decline. Then she was so weakened by so many defeats, that from that time on no more
- 43790 so numerous and powerful fleet appeared in the sea, as in former times. Since, above that of the Venetians, they have found in all negotiations, a certain sincerity, and from all Venetian merchants loyalty and honesty in their contracts; so the Turks consider the Venetian nation to be an honest and punctual nation, dealing, perhaps, with her with more sincerity, than with any other.
- 43795 In former times, on the other hand, no nation was more hated by the Turks, than the Venetian. The many wars, which arose from time to time, increased the hatred on both sides. But, after they concluded an eternal peace with the Venetians, which Venice also maintained, and even in the last disturbances observed a strict neutrality; Thus disaffection has changed into affection, and the Turks now consider the Venetians
- 43800 their best friends. I can assure you that on certain occasions, as soon as I said that I was a Venetian, I was received in the most friendly and courteous manner, and people dealt with me openly. It is beyond dispute that the wise measures of the Venetian ambassadors have contributed infinitely to the foundation of this familiarity, who by their amiable intercourse, their wise plots, their illustrious
- 43805 conduct, have brought honor, esteem, and affection to the Venetian nation. In order

to maintain this precedence, it will be very useful that men should always be chosen for this office who have experience in negotiations, and who possess the ability to perform the office of a public ambassador with that decency which is useful everywhere, but very necessary at the Turkish Court.

43810 This being assumed, I consider it almost impossible that a great dispute could arise which could induce the Turkish Empire to a breach of peace with Venice. Besides the fact that the Turks have favourable impressions of the wise and uprightness of the government, and of the honesty of the nation, they see very well that, under the present System of Europe, it is not at all advisable or useful for them to wage war with Venice.

43815 There is also, in fact, no longer any proportion between their danger and their hope. Everywhere, in the Levant and in Dalmatia, they would meet with the strongest places, which would cost blood, time and treasure, if they would bother to conquer them. And, if they did conquer any, the gain would not be as great as the loss. In addition, since the treaty of the Archduke of Austria with Russia is the most dangerous thorn for them, they must always give the Commonwealth good words, so that it takes no part in it. For since Venice is a maritime power, she would always be able with her strong fleets to make the Turkish Empire a tremendous diversion. The Porte would be forced to occupy as many separate Empires and Coasts well, and to provide them with strong Garrisons, because the Republic could attack them very easily. If therefore an imprudent Sultan should ascend the Throne, or any other accident should occur; yet, for all the aforementioned reasons of affection, policy and interest, the Turkish Empire would hardly decide to trouble the Republic of Venice.

43820 When the Sultan writes to the Republic of Venice; then he uses the following words: "To the most illustrious among the great Princes of Jesus Religion, housekeepers of notable persons of the nation of the Messiah, deciders of the affairs of the Christian nations, with the mantle of glory and majesty clothed Lords, possessors of Honor and fame, our Venerable Friend, the Doge and the Republic of Venice, whose end may be happy!" (*)

43835 (*) One will well hold this assurance to the best of a Venetian writer. One cannot accuse it of falsehood; but in general every writer testifies something of his Nation.

43840 (*) These words, whose ending is happy! form the conclusion in the Titles which the Porte gives in all their letters to the Christian powers, and so much meaning: that they might find happiness in adopting the Mohammedan religion.

43845 LXXIII. What the Turks think of the Peace Treaties and Treaties with Foreign Princes. The Code of the Mohammedans, Kitah Adia, (†) establishes as a rule of religion that the Turks not only can, but also must break the Peace Treaties, when they expand their Empire there and propagate their religion.

43850 To support this principle, say ?? Mohammed, when he was forced to lift the siege of Mecca, made peace with the inhabitants of that city, and then attacked them again when they least thought of it: by this example he taught his descendants that peace treaties should only be used to the extent that the interest of the Empire and the religion entails. Turkish history is full of examples of how the Turks have behaved in such cases, among which the Treaty of 1604 is the most extraordinary. The Plenipotentiary Ministers of the Porte and of the Emperor were assembled at Pest, to work there for a peace. The Turks treated the Imperial Plenipotentiaries in the most stately manner; but, during the Treaty, the garrison of Osen, in the hope of not finding the walls well garrisoned, set out to attack that place, but found them so well guarded that they had to retreat in shame. This proves that everyone is deceived who thinks to find any honesty or justice in the Treaty of the Turks. Wherefore it will always be a rule of policy for a Prince, to have his Ministers in Turkey, at every movement of the Turks, continue to work on the matter. Otherwise it is certain, 43860 that, when they rely entirely on Treaties, they will, at the first opportunity favorable to the Unbelievers, have a painful experience of this Turkish rule of religion, to their disadvantage.

43865 (†) I do not guarantee, whether the Title of this book is correctly given: s. In the meantime it is also so in my manuscript.

43870 LXXIV. How the Turks regard the Ambassadors of foreign Powers. The Turks make no distinction between the rank of foreign Ministers residing at the Porte. They call the Ambassadors, Envoys and Residents all by the name of Eltschjy. Their Law and the Koran regard the rank of an Ambassador as inviolable: and this notwithstanding, we have innumerable examples to the contrary. The reason of this is this: because the Turks regard the Ministers in two senses, as

if they were two very distinct people. First, they regard them as such as represent their Lord who sends them, in whose name they execute something with the Great Lord, and complain of breaches of peace and other violations of the Treaties. Secondly, they regard them as mere Hostages, to secure the treaties concluded between their Lord and the Sultan. In this second respect they make no difficulty at all in violating the right of the people, and arresting the Minister of each Power, or putting him in the seven Towers. When a war breaks out; then this violence is almost a necessary consequence. For the cases are very rare, that, on the occasion of a breach of peace, the Minister is not imprisoned in the seven towers, or in one of the Castles of the Bosphorus. As soon as they have but a small dispute with a Prince; then his Minister must suffer violence. Among all foreign Ministers, two of them, with respect to ceremonies, are treated with special respect, namely the Imperial and Venetian. As soon as an Imperial Minister arrives in the Turkish States, he is, furthermore, entertained at the expense of the Grand Lord, until he departs again. But recently this respect has also been shown to a Russian and Polish Minister. As for the Imperial Minister: he usually brings the Sultan rich presents, which he also returns through his Minister. In the same way do the French, English and Dutch Ambassadors; but this difference exists, that the Sultan does not return their presents: for he considers them as a right, and as a reward for the protection which he allows the Merchants of these nations to enjoy.

The difference which the Venetian Ambassador enjoys above others, consists in the fact that he makes a public entry into the city; a ceremony which is reserved for the extraordinary Ambassadors of other Princes, and which the Ambassadors of the Republic have enjoyed since ancient times. This is a distinguishing Honour for the Ambassador of Venice, which is indeed small in itself, but deserves all remark, because no other Minister enjoys this Honour.

On the day of St. Mark, as the National Feast, he, according to an old custom, lets some mortars be fired in his Palace, which the Porte has never been willing to permit other Ministers, not even at the marriage, birth and coronation ceremonies of their Princes. For the rest, the Turks are careful not to admit foreign Ministers to the Audience of the Great Lord, except on such days, when their Court appears with pomp and splendour. For this reason they usually grant audience on such days as the militia is paid. This true Weden of these Audiences, and the manner in which they take place, are worthy of being reported in particular. When one knows them by one Minister; then one knows them by all. There is no difference, except in that the Venetian makes his entry openly.

LXXV. Ceremonies at the Entry of an Ordinary Ambassador of the Republic of Venice. The first work that a Venetian Ambassador performs, in distinction from all other Ambassadors, is his public entry into the city. In the one I attended, it went as follows:

Early in the morning of the appointed day, at 2 p.m. according to our time, the Ambassador proceeded in a litter from his residence to Thopchaneh. His retinue went partly before, partly after. Having arrived at the shore, they embarked on kaykes, which were provided with several oars. The Ambassador separated himself, and went in a projecting kayke, which the Terschaneh-Emyr, who in the absence of Captain Bassa took his place, had sent to him. She had cushions and coverings, covered with gold, and twelve pairs of oars. In these went the Ambassador, the Secretary, and an Interpreter of the Republic. They sailed very smoothly, and with the favor of a good wind and clear sky, under a constant shooting of three Venetian ships and many barges and merchant tartans, to the staircase Meez-Skeleafy, where they usually go ashore. From here the Ambassador with all his retinue went to a house, where he was received by the Tschausch Baschy and other Turkish Ministers. They complimented each other, took refreshments according to the Turkish custom, and ate for some time, until the numerous retinue, standing on the wide shore, could be put in order to be ready for the voyage.

This was done in the following order. In front marched 300 Janistas, each with a Kjulah on his head, being a long cap of white cloth, hanging down over his shoulders. Behind them went their Cook in a dress of black fur, from which hung on many silver chains forms of implements, necessary for the Kitchen. Then came 60 Tschauschen on horseback with the Tschausch-Kjulah, or their Ceremonial cap on his head. Then followed 36 Slavonians of the Ambassador in their livery with their leader at their head; the Equerry's Master of the Horse, at the head of six beautifully equipped riding horses, half in Turkish, half in Italian equipment. These were led by six Groomsmen in their livery. The House-steward, and another house servant on horseback, led 56 Footmen on foot in costly liveries. Furthermore came 14 Chamber

servants on horseback, the Page of his Excellency on horseback, ten language boys (*) and six Interpreters on horseback; the Chief of the Janistas on horseback, with six Tschokahdars on foot; the Waiwode or Governor of Galata with six Tschokahdars; the Interpreter of the Republic Ralli; the Tschauschar-Kjetchuda or Master of Ceremonies with another Officer of the Spahilar Aga with four Tschokahdars; the Tschauschar Eniyn or Chief Overseer of the Tschausch with four Tschokahdars; the Tschausch-Baschy or General of the Tschaufen with ?? Tschokahdars. At last the Ambassador came in a red silk armour, richly decorated with gold. He had the ducal cap of the same material on his head, and rode on a horse, which the Court had sent him. Around him were six Slavonians in their livery. Three nobles of Venice, the two secretaries of the Embassy, and others of his Court, together 20 persons, rode on Court horses. Then followed 49, partly merchants, partly other Vetians on horseback. The procession was closed by one Tschausch, one Kapudschjy, and two Janistas on horseback, with other persons on foot, who were all subjects of the Republic, about a hundred persons. In this order and with this splendor the procession lasted two hours, first through the streets of Galata, then through those of Pera to the Palace of the Bailo. The Envoy rode into the Court, and with this the ceremony of the entry came to an end.

(*) Several nations, such as the Imperial, French, Venetian and others, keep a certain number of young men, who are instructed in the languages for the future service of their nation.

LXXVI. Ceremony at the visit of the first Visier. The public entry is followed by the visits to the Court. The Ceremonial entails that the Grand Visier is visited before the Grand Lord. On an appointed day, in the same order, and with the same retinue, the Ambassador proceeded to Thopchaneh, where he embarked and sailed with Kaiken across the Canal of Pera to Constantinople. He, the Secretary of the Embassy and the Interpreter sat in the Kaiken of the Tschausch Baschy; the Venetian ships and vessels fired their guns. When the Ambassador stepped ashore on the other side, he received the compliments of the Tschausch-Baschy and other Turkish Ministers; he mounted his horse and arrived with his entire retinue, the same as at the entry, within half an hour at the Palace of the Grand Visier. At the stairs he was received by the Interpreter of the Porte, who conducted him, and brought him into the Audience-hall, in the corner to the Sofa of the first Vizier, . Here the Ambassador enjoyed a special Honour. For otherwise it is the custom, that the Ambassadors are first made to sit in an anteroom, and wait a while, whereupon they are led into the Audience-hall, where they must nevertheless wait, until the Vizier comes. When the Ambassador entered, he was made to sit on a chair without backrest, on which lay a beautifully wrought sheet cushion. Around him stood his whole considerable Court, on the right hand the Interpreter of the Porte, on the left hand the Interpreter of the Ambassador, and nearer to his side stood the Secretary of the Embassy with the letter of the Council, which he held in both hands. It was in a purse of crimson cloth, embroidered with gold, but the seal pressed on a solid gold box. The whole apartment was full of the principal Turks; they all stood in a line, to make their Court to the Grand Vizier,, who came a few moments after, and was greeted by the Turks with a loud voice. Before him went the Kjetchuda and the Reis-Efendy, who stood opposite at the corner, where he sat. His dress was a long Tabbert of green colour, with broad sleeves, and lined with sable. On his head he had a long, tapering turban, which was square after the blows of the head. It was lined with white silk, and had a border with a gold plate, four fingers thick, which suited him properly. As soon as he appeared, the Ambassador rose, (*) but remained covered, as did all his retinue, as is the custom among the Turks. After they had greeted each other, the Ambassador, at the same time, sat down with the Vizier,. Thereupon the Ambassador made a suitable speech, which was answered by the Vizier with a frankness and courtesy unusual among the Turks. The Vizier even indulged in several friendly expressions and questions, touching the person of the Ambassador. After that, both the Coffee, then the Sorbet, and finally the sweet-smelling water and the perfume, all in very precious vessels, had been offered, the Envoy was presented with a fine Chestnut, as well as his entire considerable retinue of 40 persons. This Ceremony being at an end, the Vizier presented the request of the Envoy, fixing for him the Audience with the Sultan on the following Tuesday. This Audience ended thus. At the farewell, the Envoy was presented with two Handkerchiefs by the Vizier,, - one of which was interwoven with gold, and the other with silver. After the end of this entire ceremony, the Envoy went back to his own Palace.

(*) It is customary for the Ambassadors not to sit down, so as not to have to get up when the Vizier enters. For he would certainly not get up, just as he does not do so when the Ambassador departs, but remains seated.

44010 LXXVII. Solemnity at the Audience of the Great Lord. On the day appointed for the Audience, the Envoy proceeded, an hour before sunrise, from Pera to Constantinople, where he found at his landing the Tschausch-Baschy, in a magnificent dress of silver and gold, lined with fur, and with many horses from the Imperial stables. After he had consumed the coffee in a small house there, and it had gradually become day; he
44015 took the long journey to the Seraglio of the Great Lord and the Divan, where the Envoys are received. When they arrived at the great gate of the first square, they encountered the numerous guards, which, at the entrance of the Envoy, drew up in ranks. He came with his whole retinue, among an innumerable crowd of Turks, who were spectators, to the gate of the second square, where he dismounted, because no one
44020 (that is to say, Europeans) may enter further on horseback. There he was received by the Interpreter of the Porte, and, after he had spoken with him for a while in the inner court, he entered the Divan. Before him went the Tschausch-Baschy and the Master of Ceremonies, (Kapudschjylar-Kjetchudafy,) both likewise dressed, with a silver staff in their hands, with which, from time to time, after certain steps, they
44025 struck the stones that lie in the middle of the square, and immediately end at the door of the Divan. As they proceeded, it is worth noting the great company of Janissaries that paraded. There were ten thousand of them, standing on the right side of the square. At a sign, which was given them, they walked with the utmost haste, as was possible, to the aforesaid road, to take after them the P?? or rice, which stood
44030 on the ground, and which is usually given them on such occasions. The Ambassador having entered the Divan, and having made the usual Compliments to the Grand Vizier,, he was shown the usual place to sit. Next to him stood the Interpreter of the Porte and many of his own people, the Secretary of the Embassy, the Venetian Nobles of his retinue, and still others of his Court, all with covered heads, as is the custom
44035 there. The Divan is an almost square, vaulted, and not very high Hall. The whole length of this, opposite the door, serves as a Court. In the middle sat the Grand Visier on a carpet of golden cloth, at the height of two feet. He had on the aforementioned dress, and the Turban on his head. At some height above his seat is a window with lattices of gilded iron, through which the Sultan can see into the Hall, without being seen himself. One is not aware of his presence otherwise than by the
44040 shine which the jewels of his clothes give of themselves. On the right side of the bench sat no one, on the left in the back corner sat the two Chief Judges, called Kadhy-Leschkjer, with their very thick Turbans, of which one had a green, the other a white side. Further into the Hall, after entering, sat, on the right side, the
44045 Nischandschjy, or he who expresses the name of the Great Lord in numerals; opposite him the Defterdar or Treasurer. Behind the bench of the Divan the wall opens out through a broad vault, which is just as high, where one saw another place, in which many other important Ministers and Judges assemble, who hold sessions on special matters of the Kingdoms of this great Empire. Since the Divan is the place where the
44050 Grand Vizier receives petitions with open doors; so he performed this work for a while, and in the meantime called the Interpreter of the Porte by him, who stood at the side of the Ambassador. By him he had a Compliment made to him. As soon as he had finished the petitions, the payments began, which the Turks gladly prove to the Ambassadors, because they consider it a mark of their power and wealth. 'Sixteen
44055 hundred purses were brought into the Divan, and placed before the Grand Vizier,. They were all of yellow leather, one as large as the other; in each were five hundred Piastres. On the bench were placed many other purses of white linen, which were partly filled with Zecchins, partly with small silver coins, to make up the sums, as the necessity required. This cash, taken together, amounted to more than a million,
44060 and yet this was only a payment for three months for the militia, which serves only in the capital. After all this ready money had been brought into the Divan, the Visier had one of all these purses opened, to see the specie that was in it; and then the payment began. First come the Janistas. At the door appears the oldest Commander of the Regiment; and then, by specially appointed persons, as many purses are thrown
44065 out as are required for their payment. Outside the door the purses are counted again, and thrown out on the square. The Commander then makes his bow before the Divan, and walks backwards to the square. As soon as he appears there, the Janistas of his Regiment run like arrows to the purses, considering it among themselves as a bravery, the more of them one receives. Each Regiment has this ceremony. The other Soldiers
44070 follow the Janistas, who are very numerous. After them come the Seraglio's Attendants, according to their rank, into the Hall, and collect their payment very calmly and quietly. Finally the Lackeys of the Great

Lord also appear. Truly a very difficult function, which lasts about three hours. This being done, three tables were set, one for the Grand Visier, the second for the Nischandfichjy, and the third for the Defterdar: At the first sat the Envoy alone; and to the other two the Secretary, the Venetian Nobles, and other distinguished persons of the retinue, eight persons in all. They did not stay long at the table, although they served various dishes. They were all served in very fine dishes of green porcelain. According to their custom, they leave each dish on the table for only a few moments.

After eating, the Ambassador went back to his place. After this, the Travel-Effect approached the Visier with a writing to the Emperor, in which it was stated that the Ambassador requested to be admitted to an audience with the Emperor. He read it, signed it, did it in very fine silk, and sealed it with his own hand. Then he put it in another fair paper, sealed it again, and sent it by the Tschausch-Baschy, who served in the office, to the Grand Lord.

When he returned with the answer, the Visier went to the door of the Divan to receive it. After he had kissed it, and held it to his forehead in token of respect, he returned to his place, where he opened the paper, and read it, and made a sign to conduct the Ambassador to his usual place. This is a bench under a gallery, near the great door that leads to the Imperial apartments.

There the Ambassador put on the mantle of golden cloth over the ducal crimson, overlaid with gold, which he already had on. And over both he added the Imperial Chest, as he also had distributed among the Chiefs of his retinue by the forty Chests, to put on. In the meantime the Grand Vizier and the Aga of the Janistas had gone to the Great Lord, and the Ambassador was led in by two Kapudschjys-Baschys, as Honour-chamberlains of the Sultan. With him went the Secretary of the Embassy, and held the Duke's letter in both hands. After him came the other Venetian Nobles, and the Noble retinue of ten persons. Before we entered the Monarch's apartment, we passed through a Hall, by which from outside we found, besides a multitude of Ministers, also a row of Tschauschen, who held the presents of the Republic in their arms. From this Hall the Ambassador entered the Imperial Apartment, which is everywhere of uncommon splendor, and came just before the Monarch. Mahmud sat on a spacious Throne, inlaid with precious stones and large pearls. He himself appeared in the utmost splendor that can ever be expected from one of the greatest Powers of the world. The Ambassador made a deep bow, and made a speech in accordance with the rules of the Republic, according to which it expressed its desire to maintain good friendship and peace with the Porte. He concluded, and wished the Monarch a long life and a happy reign. Then he beckoned to the Secretary to present his letter of credence, which he delivered into the hands of the Master of Ceremonies. The latter delivered him to the Aga of the Janistas; the Aga delivered him into the hands of the Grand Vizier, who laid him down on the Throne.

Then the Sultan spoke for a while, and gave the Grand Vizier orders to answer the Ambassador to his presentation. At this every one stood astonished, as at an uncommon courtesy, because the Turkish Monarchs are not accustomed to speak more than a few words. (*) The Grand Vizier repeated in a loud voice what the Monarch had ordered him. After the Interpreter of the Porte had explained it, it was learned that his Majesty was pleased to see the Ambassador of a Power that was a good friend of the Porte; that he on his part wished to maintain peace; and that not only the Ambassador, but also all the Venetian subjects would enjoy his Imperial protection in all his States, as well as his own subjects.

Then they went out of the room, (and so also out of the second square,) and the Envoy mounted his horse with all his retinue. In the meantime it was a delight to see how all the Janistas and all the Servants went out of the Seraglio. After the Janistas came an innumerable crowd of Tschauschen, on whom, each in his rank, all the Ministers with their Servants, all on excellent, well-equipped horses, gradually followed. Finally the Grand Visier also came with a retinue, according to his considerable Dignity. Hereupon we began our journey again. The Ambassador was accompanied to his ship, and with it, under the firing of the Venetian ships and vessels, brought back to his residence.

(*) He was a Friend of the Europeans.

LXXVIII. Ceremonies when Presents are Brought to the Sultan.

It is an old custom of the Republic to have presents sent to the Sultan's Mother and Wife. In the absence of this, as was the case at present, the presents are handed over by the Secretary to his Majesty's Favorites.

I must also report something of this transaction. I placed myself at the usual place at Thopchaneh, with the Chancellor, two Interpreters and two Chamberlains, in a Kaike

44140 of six pairs of oars with a Janistar on the stern. In other Barques went the Liverymen and the Slavonians with the presents. Arriving at the steps of Constantinople, I proceeded in the following order to the Palace of the Grand Vizier, : for the custom is that they are shown to him before they are brought into the Seraglio. Four Janistas with their ceremonial caps went before them; these were
44145 followed by six Footmen in gala livery; then 30 Slavonians with the presents in flat baskets covered with a crimson cloth, which they carried on their heads; these were two Chamberlains, and then two Interpreters on horseback; and after them the Chancellor also on horseback; lastly the Secretary on a horse, equipped in the Italian manner. Arriving in this order at the residence of the Grand Vizier,, the presents were then taken from the hands of the Slavonians, and brought into the Hall, where he usually gives audience to foreign Ministers. He had me led in at once, and before me went two Venetian Interpreters with their hats on their heads, after the Turkish custom. Entering the room, I found the Grand Vizier sitting on a Sofa, but the presents had been placed before him. Three paces from the Vizier I stopped, and
44155 said: "The Most Illustrious Republic of Venice, which is always equal in constancy to maintain the holy and perpetual peace with the illustrious Porte, remains also equal in the zeal to give proofs of its high esteem to all who are in favor with the Majesty of the Sultan. Wherefore I have the honor to deliver to your Highness a proof of the Manufactures of the capital Venice for the Favorites of his Majesty. I am
44160 assured that this proof of high esteem, on the part of my Most Illustrious Republic, will be favorably regarded by your Highness as a consequence of the holy and perpetual peace, which was signed in the name of this Empire with your own hands, when you formerly held the office which to this day, by your virtues, the true happiness of the greatest of the Empires."

44165 The Visier replied: "the proofs of the friendship of the Republic are always pleasing to the Monarch; and, if she, on her side, continues in this way, then, on the side of the Porte, the treaty of a holy peace will be sacredly maintained." He then called one of his Secretaries, and gave him orders to conduct the Venetians with the Interpreter of the Porte to the Seraglio Ejüb, where the Court was then located,
44170 three miles from Constantinople, at the extreme end of the harbor, where the fresh water flows into the sea.

When I arrived there, I was taken with the Chancellor and the two Interpreters into a room of the Chiefs of the Forest, who form the first guard. After I had taken coffee, and smoked a pipe of tobacco, I was conducted by the guard of the Bushmen into the
44175 first square. Here the Baltahdschjy received me, and I was conducted into another room of the captain of this guard. There, after we had sat down on the sofa, we were given coffee, tobacco, sherbet, jams, and sweet-smelling water, and I and the two interpreters were each intoxicated with a handkerchief interwoven with silver. Then this same officer conducted me into the second square, where the Imperial guard
44180 of the white eunuchs took me over. In the third square the guard of the Moors conducted me into a room on the same ground. I had hardly entered there, when the Kislär-Aga, the chief of the eunuchs and favorite minister of the monarch, appeared. He sat down on a bench, and, after the presents were brought in, I addressed him in this manner: "These presents are a consequence of the holy and eternal peace which
44185 has been sworn between the glorious Porte and my Most Illustrious Republic. They are a living proof of their esteem, and I have, in that respect, the honour to present them to your Excellency for the Favourites of his Majesty. The Most Illustrious Republic and my Ambassador, who has charged me to congratulate your Excellency in his name, flatter themselves that they will be favourably regarded by the Monarch, and by the Favourites, as a public token of the confidence of a Prince who is a friend of the glorious Porte. Just as the Ambassador will endeavour to continually strengthen and confirm the confidence; so I am I also assure you that your Excellency, by his prestige, will confirm the good understanding and promote happiness, bbetween the mutual subjects, and will cooperate for the benefit of Commerce".

44195 The Kislär-Aga answered: the presents which I see are worthy of the magnanimity of the Most Illustrious Republic. They will be received with respect, because they come from a Prince who is beloved by the Monarch, and especially esteemed by me". Then he turned to his Entourage, and ordered them to prepare the Kastans, with which I, the Interpreter of the Porte, the Chancellor, and the two Venetian Interpreters were to
44200 be clothed.

After I had distributed the usual drinks; said the Kislär-Aga: "Greet your Ambassador, and assure him that I shall always seek an opportunity to prove my friendship to him. I wish that the friendship between the two Powers may be maintained unalterably, and that these presents may last for many years, so that the
44205 peace may also remain unbroken, which will be faithfully maintained on the side of

the Porte." I answered: "If these be the sentiments of the Porte; then I assure your Excellency that the peace will last forever. For the rest, I also wish that these presents may last for many years, but that they may always be placed in the hands of your Excellency, to whom I wish happiness and a long life, as your virtues deserve, which make you, justly, a favourite of the greatest of monarchs." The old Moor answered with a cheerful countenance: "I am too old; but I shall die contented, when I shall see the friendship of my Lordship with the Republic lasting. In the meantime I wish you a happy journey to Pera, and a happy stay there always." I answered: "To make it contented, the favour of your Excellency, with respect to the affairs of the Republic, will do most, which is the only wish of your Servant." Thus ended the visit, and I was conducted by the Interpreter of the Porte to the Kaike again. These are all the ceremonies which, on the arrival of an Ambassador of a crowned Head at the Porte, are usually observed.

LXXIX. Necessary knowledge of a foreign Minister residing at the Porte. From what I have thus far reported of the political measures of the Turks, and their way of thinking, one will be able to fully conclude that they are now very different people than they were before. They are becoming more civilized every day. It is therefore increasingly necessary that such Persons, whom the European Princes send to the Porte, possess such knowledge, which is not common to all. One has to deal with a Cabinet entirely educated in political groups, and with Ministers of almost all the most important Princes of Europe. Therefore much is required of a Person, when he, in the midst of so many circumstances, which usually conflict with each other, wishes to appear with Honor. Nothing is in fact more difficult than to give rules how a foreign Minister must behave. For the prudence of men must change them very often, and adapt themselves to the circumstances of time, place, affairs and persons. For this reason I will only speak of general qualities and rules, which, if they are absolutely necessary for a foreign Minister, are nevertheless more necessary for those who have to reside at the Turkish Court. Here I will speak only of those skills which I judge necessary for them. Then I will give rules which I have found necessary by experience.

The first skill which a Minister at this Court must possess is the knowledge of the world. Namely, one must know its manners and fundamental principles. To the first I reckon courtesy; to the last I require knowledge. One must understand the manners of the world, know all the rules of politeness, customary in a country, and converse with men of understanding and judgment. One must understand the principles of the world, and the motives of its actions.

If one understands manners; then one can show oneself with grace, behave with understanding, and promise oneself a pleasant reception. If one understands their fundamental principles; then one can derive benefit from their absences, guard oneself against their wiles and deceits, and protect oneself against all kinds of accidents. This twofold knowledge is necessary for every Minister; but most of all at this Court, where there is no abundance of men of great learning. If one has but knowledge of manners; then he can conceal his ignorance, and yet enjoy all the pleasure of intercourse. Just as the intercourse with people of less insight is more frequent than with persons of great merit, who are usually not only seldom, but also more active; so the knowledge of the way of life at this Court is of daily use. Still more difficult, but just as necessary is the knowledge of the fundamental principles of the world. For by that one learns to know the characters of people, who usually all differ as much as their Beings. By this means one learns to behave cautiously, in order to know their distrust or confidence, their discomfort or ease, their generosity or avarice, their pride or modesty, their duplicity and cunning or sincerity, their stupidity or their intelligence, their moderation or passion, their ability or ignorance, their disinclination or inclination to pleasure, but especially their selfish or unselfish way of thinking in the handling of affairs. It is very difficult to name all the motives of men's passions, but at the very least a Minister at this Court must have a general knowledge of them, in order to know how to behave well in his own negotiations. The second necessary skill for a Minister is the knowledge of the interest, not only of his own Prince and the Porte by which he is employed, but also of all the Princes of Europe. In fact, all the various States of Europe, with respect to the Turkish Empire, form a kind of Republic; the interest of all such States being so intertwined and connected, that each can give knowledge and rules, how to conduct itself happily with the Turks, in negotiations with them. On this account it is necessary to know their State power, their mutual relations, their alliances, friendship, and the Treaties by which they have united themselves. In a word, one must know their entire system of religion, state, and trade, insofar as it

has any influence on Turkey. The third skill, perhaps the most necessary of all, is the knowledge of languages. This would be desirable, but is seldom found, because the Turkish language is not in use in Europe. Therefore the European Princes will always have to suffer the disadvantage to which the handling of their own affairs, by means of third persons, is exposed. For however zealous and capable these may be, it is nevertheless not possible that six would not take away something either from the force, or the grounds, at least with regard to the manner of explanation, of that language, in which they are presented by the Ministers.

Wherefore the Princes, in the choice of Interpreters, had to use extraordinary attention, of which I shall now speak.

LXXX. Necessary rules for the Ministers who reside at the Turkish Court.

I now come to the necessary rules which a Minister at the Porte must observe. I will not unfold all those which are common to the Ministers at all Courts. I will only mention those which are peculiar to the Turkish Porte.

Just as here the Government is always in the hands of such people who are in special favour with the Monarch; and, because there are always many who seek such Offices, so a Minister must especially take care that he knows which favourites are most seen from time to time. Otherwise he must proceed when they are persons of the Ministry, and otherwise when they serve in the Seraglio. The first he must flatter freely and openly, so that in case of necessity they may not be disfavored. But the friendship of the others he must endeavor to win in a suitable manner, and proceed secretly in so doing, so that it does not come to the ears of the Ministers of the Porte. For they would necessarily be angry by it, because they show jealousy and displeasure to everyone who turns to the persons of the Seraglio. For they believe that they are thereby prevented from using the whole circumference of their power. If he takes this into account, and deals cautiously with both, gradually learns to know their constitution, knows their virtues and vices; then it will not be at all difficult for him to win them, and he will always find great advantage in the outcome of his affairs. In his dealings with them he must, according to a fixed principle, always enlarge the idea of his Lordship's power by a wise course of action; that is, he must behave in a becoming manner, as if he did not count the contemptible manners which are peculiar to the pride of the Turks, and show firmness, without the least fear of their threats.

A Minister must have perfect courage to oppose himself, but at the same time possess a noble dissimulation, to be able to yield in due time, so that he never lets matters come to sharp points, and may escape the danger of seeing the esteem due to his Character offended. To protect himself against such tricks, he must, in the negotiation of affairs, use firm and strong evidence, appeal to their laws and customs, and stand by their examples, even to the point of self-will.

Indeed, no Minister would be worse off with the Turks than one who readily yielded and readily complied. For it is certain that when one grants the Turks only one thing, they will then desire another, and this is sometimes enough to make a habit.

For this reason I thought it necessary that one should never show too much desire to seek the familiar friendship of the Turks. One proceeds much more cautiously when one lives with them in an apparent friendship, and always keeps oneself under wraps. For, as nothing can be obtained from the Turks without money or presents, their familiar friendship is very useless to foreign Ministers, as who in case of necessity, even if they had numerous, yea all Great and Dear Friends, will still obtain nothing without money. Therefore their familiarity, on certain occasions, is of no advantage and extremely troublesome, because they have the rule that it is free to demand as much as they want from their familiar friends.

A third rule is, likewise, very necessary for the Ministers residing at the Porte. They must deal kindly with all sorts of people. For it has already been experienced more than once, that a common and poor Kaiken-vaarder has become Grand Visier. But this friendliness must be used with moderation, and his esteem must always be preserved; in one word, to behave in such a way that one obliges the people, but at the same time keeps them in awe.

To live in the greatest confidence with all Christian ministers will certainly be very useful. For such an association can inspire the Turks in particular moderation and respect in all negotiations.

The last and most important rule is this, that one chooses and uses one's own Interpreters. In fact, too many qualities are required to make an Interpreter who can rightly be called good. Courage, fearlessness, wisdom, skill and eloquence are really necessary qualities, in order that he can explain the thoughts of his Ministers with the necessary steadfastness. (*)

Now it will be impossible to find these qualities, as long as the Princes do not come to that, that they use their own subjects, and provide people of good descent with such an important service. At present the persons, whom one chooses for this, are mostly subjects of the Turkish Emperor, who are seated in the Turkish countries, where they consequently also have their families and goods. Therefore they have a natural respect for the Prince, who has goods and friends in his power; and this causes them to seldom, nay never, with zeal and constancy do their duty, when circumstances demand that they show constancy. For it is natural, that men of this origin and such a condition, if not more, yet are just as much concerned to obtain and retain the favour of the Turks, as to attend to the affairs of the Prince, in whose service they are. They always do not tell the Turks what they have been charged; at least they do not say it as they have been ordered. They sweeten the main point; they foresaw the force of expressions; they also do not always faithfully state what the Turks have given them in answer. They are unreasonable in their demands, and want them to be continually given large presents. For this reason they do not, finally, make it a hardship to sometimes sacrifice the State-interest of the Prince whom they serve, to their own interest, their fears and their own reservations.

It will be expedient, and very necessary for the State-interest of every Prince, to choose his own subjects as Interpreters, who are obliged by their Religion, the law of nature, their descent and customs, to serve the Prince well, and in case of necessity to sacrifice themselves without hesitation, and to be assured that in all cases their own Families will receive rich rewards from the favor of their own Princes. Everyone can acknowledge this truth; but to know it rightly and fundamentally, one must be at Constantinople, where one has, daily, proof enough of it. Now I have sufficiently treated of the Religion, the Court, the Government, the State, the Household, the Militia and Policy of the Turks. These conceal their affairs very carefully. Wherefore I have only attempted to collect the essential; and I succeeded in obtaining more and truer reports than I have yet found from others.

(*) This and the following are worthy of all the attention of the Christian princes, because, in certain cases, the Interpreters can either do as much use, or even more harm, as possibly the Ambassadors themselves.

End of the second and last Part.

CONTENTS OF HISTORICAL REPORTS, ETC.

I. Introduction. 336
 II. Of the Founder of the Mohammedan Religion, and the motives which prompted him to establish it. 339
 III. Of the Religious Postulates of the Turks. 345

45250

49) Venedig.

Schon i. J. 1408 schloss Venedig met S. Suleiman, dem Sohne S. Bajefid's I, einen vertrag (II. 607);
zur Zeit der Alleinherrschaft S. Mohammed's I im J. 1413 erneuerte Franz Foscari den Frieden (I. 363);

45255

venezianische Gesandte wünschten zur Thronbesteigung S. Murad's II Und S. Mohammed's II Glück,
und nach der Eroberung Constantinopel's I J. 1454 erneuerte der Bothschafter Marcello den Frieden (II 12);

i. J. 1478 Thomas Malipieri Gesandter (II 153);

45260

i. J. 1479 schliesst Giovanni Dario den Frieden, und Pietro Vettore vertritt die Stelle des Bailo (II. 169);

der Bothschafter Melchior Trevisan brachte Reliquien des Blutes Christi und der Salbe Magdalena's (Commentarii della guerradi Ferrara, di Marino Sanuto. Venezia 1828, p. 56);

45265

Tosto che furono queste cose al Senato raccontate, furono fatti consigli, ed a tutto fu provveduto. Nel Consiglio de' Pregadi fu eletto ambasciatore al Turco Melchior Trevisan, il quale era Patrone all'Arsenale, quello cioè che dopo fatta la pace con il Turco Maometto, era primo Capitano delle gallere di Romagna, che per le mercanzie vi andavano; quello, che a Venezia portò quella piccola reliquia del Sangue di Cristo, e dell'Unguento di santa Maria Maddalena, trovato dai Turchi in una Chiesa chiamata Χρηστίχορα (cioè Delle Grazie) che donò alla chiesa dei Frati Minori. Al Trevisano adunque fu commesso, che se abbisognasse, dovesse pregare il Turco, che secondo li capitoli ci volesse dare aiuto: ed in verità se li nostri avessero voluto fare un minimo segno, il Turco sarebbe venuto con la sua armata, che era alla Vallona nella Puglia, e poi fino a Roma, cosa che sommamente desiderava. Ma li nostri mai nol vollero, abbenchè fossero esortati dall'Ambasciator del Turco a ciò, perchè non si dicesse, che i Viniziani avessero messo i Turchi nell'Italia, come il duca di Calabria, che venuto contro la Chiesa, elesse questo Ambasciatore sì per le cose, che gli abbisognavano, come pure per far timore, e paura alli Signori d'Italia.

45280

As soon as these things were reported to the Senate, councils were held, and everything was provided for. In the Council of Pregadi, Melchior Trevisan was elected ambassador to the Turk, who was the patron of the Arsenal, that is, the one who after peace was made with the Turk Mahomet, was the first Captain of the Romagna galleys, which went there for merchandise; the one who brought to Venice that small relic of the Blood of Christ, and of the Ointment of Saint Mary Magdalene, found by the Turks in a Church called Χρηστίχορα (that is, Of the Graces) which he donated to the church of the Friars Minor. It was therefore instructed to the Trevisan that if necessary, he should ask the Turk, that according to the agreements he would give us help: and in truth if our men had wanted to make even the slightest sign, the Turk would have come with his army, which was in Vallona in Puglia, and then as far as Rome, something which he greatly desired. But our men never wanted it, although they were exhorted by the Turkish Ambassador to do so, so that it would not be said that the Venetians had placed the Turks in Italy, like the Duke of Calabria, who, having come against the Church, chose this Ambassador both for the things he needed, and also to instill fear and terror in the Lords of Italy.

45295

i. J. 1481 wünschte der Bothschafter Antonio Veturini zur Thronbesteigung S. Bajefid's II Glück (II. 287);

i. J. 1483 Domenico Bolani, und sein Bruder Francesco Aurelio, zur Bestätigung des erneuerten Friedens (II. 287);

45300

im selben Jahre Giovanni Dario Ueberbringer der Urkunde der Ausfuhr von Schafen, i. J. 1484 (Mar. Sanuto Commentarii p. 187);

i. J. 1487 die Bothschafter Antonio Ferra und Giovanni Dario (II. 295);

i. J. 1497 handelt Andrea Gritte die Geschäfte, und i. J. 1498 Andrea Zanchani, Bothschafter zur Erneuerung des Friedens (II. 315);

45305

i. J. 1503 Gritti Bothschafter, und Aloisio Sagundino ihm beygegeben (II. 331);

i. J. 1517 die Gesandten Bartolomeo Contarini und Aloisio Mocenigo in Kairo bey S Selim I (II. 508 u. 525);

i. J. 1521 erneuert der Bothschafter Marco Memmo den Frieden (III. 16);

i. J. 1526 der Bailo Pietro Bragadin, abgelöset durch Pietro Zen (III. 50);

45310

i. J. 1530 Mocenigo, als glückwünschender Bothschafter zum Beschneidungsfeste (III.

96);

i. J. 1536 der Secretär der Pregadi, Daniele di Federici; dann der Bothschafter Tomaso Mocenigo, um zum persischen Feldzuge Glück zu wünschen (III. 181);

i. J. 1537 Orsini Bailo (III. 183);

45315 i. J. 1539 Pietro Zen, zum dritten Mahle als Bothschafter nach Constantinopel, und da er auf dem Wege gestorben, an seine Stelle der vier und achtzigjährige Greis Tomaso Contarini (III. 218);

i. J. 1552 Bernardo di Navagiero Bailo a) (III. 315);

i. J. 1554 u. 1555 Bernardo Trevisan (Relation im Hausarchive);

45320 i. J. 1556 Antonio Barbarico (Rel. im H.);

i. J. 1559 Martin de Cavalli (Rel. im H.);

i. J. 1562 Andrea Dandolo (Rel. im H.);

i. J. 1564 Daniele Barbarico (Rel. im H.);

45325 im selben Jahre der Secretär Bonrizzo (Rel. im Hausarchive; im selben fehlen aber die Relationen des Bailo Soranzo und des Bailo Barbaro, von denen dieser jenen i.J. 1569 abgelöset) (III. 525);

i. J. 1571 der Bothschafter Alessandro Donado (III. 590), dann Giacomo Ragazzoni, Bailo (III. 591, dessen Relation im Hausarchive);

45330 im selben Jahre Antonio Barbaro, Bailo (III. 602), und Rel. im H.), dann Andrea Baduer, als ausserordentlicher Bothschafter, und Antonio Tiepolo, Bailo i. J. 1572 (III. 602, und Rel. im H.);

i. J. 1575 Giacomo Soranzo, zur Thronbesteigung Sultan Murad's III (IV. 18, und Rel. im H.);

i. J. 1576 Antonio Barbaro, Bailo (Rel. im H.);

45335 im J. 1578 Giovanni Correr, Bailo (IV. 38, und Rel. im H.);

i. J. 1582 Giacomo Soranzo, Bailo (Rel. im H.);

im selben Jahre Maffeo Venier, Bailo (eben da);

i. J. 1584 Giacomo Soranzo, Bailo (eben da);

i. J. 1585 [Francesco Morosini](#), Bailo (eben da);

45340 i. J. 1590 Lorenzo Bernardo, Bailo (eben da).

Von hier eine Lücke im Hausarchive, bis ins Jahr 1609.

Im J. 1590 der Bailo Moro (IV. 212);

i. J. 1591 der Bailo Zani (eben da), dann der Bailo Lipomani (eben da);

i. J. 1595 der Bailo Veniero, dann im folgenden Jahre der Bailo Capello (IV. 276);

45345 i. J. 1604 Ottavio Bon, Bailo (IV. 362, und Rel. im H.), dann Mocenigo, Bailo zur Thronbesteigung S. Ahmed's I (IV. 362);

i. J. 1612 Simone Contareni, Bailo (IV. 482);

i. J. 1614 Christiforo Valier (Rel. im H.);

45350 im selben Jahre der Bailo Moro Nani (IV. 482 u. 504; seine Relation fehlt im Hausarchive, in welchem eine Lücke bis 1634);

i. J. 1619 der Bothschafter Contareni (IV. 504);

i. J. 1624 Simon Contareni, ausserordentlicher Bothschafter (V. 24);

i. J. 1628 Veniero, Bothschafter (V. 89, seine Relation fehlt, wie die des vorigen, im Hausarchive);

45355 i. J. 1634 Giovanni Capello (Relation im Hausarchive);

l. J. 1637 Pietro Foscarini (eben da);

i. J. 1638 Luigi Contareni, Bailo (V. 280, und Rel. im Hausarchive);

i. J. 1641 Pietro Foscarini, Bothschafter, erneuerte die Capitulation (V. 302, und Rel. im H.);

45360 i. J. 1652 Capello, Bothschafter (V. 558 u. 647, die Relation fehlt im Hausarchive);

i. J. 1657 underhandelt der Secretär Ballerino den Frieden (V. 647 u. VI. 179);

i. J. 1664 Andreas Holz (Rel. im H.)

i. J. 1668 Luigi Molino, Gesandter zu Larissa (VI. 214, 215 u. 242);

i. J. 1667 der Secretär Giavarino, und Padavino Unterhändler des Friedens (VI. 227);

45365 i. J. 1672 Giacomo Quirini, zur Auswechslung der Gefangenen (VI. 277 u. 307, und Rel. im H.);

i. J. 1676 Giovanni Morosini, Bailo (VI. 320, und Rel. in H.);

i. J. 1680 Pietro Cuirano (VI. 359 u. 375, und Rel. in H.), Bailo;

i. J. 1682 Giovanni Battista Dona (Rel. im H. und die gedruckte);

45370 i. J. 1684 der Bothschafter Capello erklärt den Krieg (VI. 443);

i. J. 1699 unterzeichnet Lorenzo Soranzo den Carlowiczzer Frieden und geht dann als Bothschafter nach Constantinopel (VII. 24);

i. J. 1706 erneuert Carlo Ruzzini den Frieden (VII. 120, und Rel. im H.);

i. J. 1725 der Bailo Giovanni Emmo, abgelöset durch Francesco Gritti (VII. 312, und Rel. in H.);

45375 i. J. 1733 verewiget Simone Contareni den Carlowiczzer Frieden (VIII. 449);

i. J. 1745 wird der Bailo Erizzo durch den B. Giovanni Donado abgelöset (VIII. 59), Businello war de Bothschaftssecretär (VIII. 87).

- 45380 14) Chania (Canea), auf Creya die bekannte Festung, von Constantinopel 150 Moglien; monathlich 450 Asp.
222) Retimo, auf Candia, von Constantinopel 750 Miglien; monathlich ... 150 Asp.
654) Eskijagh kapani mes., d. i. Moschee des alten Schmalz-magazins; Erbauer der ermordete Grosswesir [Ibrahimpascha](#), der seinen Stamm von Constantin dem Grosse ableitete, und die Moscheen zu Selanik, Hissargrad und Kawala gestiftet, dessen Serai zu Constantinopel am Hippodrom, und dessen Grab im Arsenal an der Zelle Dschanfefa (Seelenvermehrend) auf besonderem Soffa, wo hernach auch der hingerichtete Grosswesir Nassuhpascha an seiner Seite bestattet ward.
- 45385 831) Schreiben des Kaisers an den Wesir Mohammedpascha, Statthalter von Ofen {Osen}, dass ein Constantin Constantinopel erbaut, ein Constantin dasselbe verloren, so auch Constantinopel von Mohammed erbaut, unter einem Sultan Mohammed (III.) wieder werde verloren werden; v. J. 1002 (1593). (Venez. Inscha Nr. 5, und Nabi's Inscha Nr. 132.)
1345) Sicherheitsurkunde an den [Provveditore](#) von Canea, bey Uebergabe der Festung, auf des Feldherrn Jusufpascha Vortrag ertheilt; Ende Dschemafiul-achir 1055 (22. August 1645). (Eben da Nr. 75)
- 45395 1530) Schreiben (aufgefangenes) Morosini's an den Dogen, über den wirklichen Stand der Festung Candia, v. J. 1077 (1666). (Eben da Nr. 54.)

45515 NOTABEL SCHRYVENS UYT VENETIEN, Volgens de Brieven van den GENERALISSIMUS MOROSINI,
Aen d'Heeren Senaet vande SERENISSIME REPUBLYQUE, AENGAENDE De Successen vande
Wapenen der Christenen, tegens de Turcken in 't Coninckrijck CANDIA.
Gedrukt in 't Jaer ons Heeren 1660.

45520 1660 [http://www.delpher.nl/nl/boeken1/gview?
query=notabel+schryvens&coll=boeken1&identificer=hiLdA_pXnV4C](http://www.delpher.nl/nl/boeken1/gview?query=notabel+schryvens&coll=boeken1&identificer=hiLdA_pXnV4C)

NOTABEL SCHRYVENS UYT VENETIEN

45525 Volgens de Brieven van den Generalissimus Morosina
aen d'Heeren Senaet vande Serenissime Republique, Aengaende De Successen vande
Wapenen der Christenen tegens de Turcken in 't Koninckrijck Candia.

45530 MYNHEER, Terwijl Godt den Vrede in Europa / heeft gelieven te planten / onder de
Christene Potentaten / voornamentlich tusschen de Grootmachtichste Monarchen van
Vranckrijck / ende Spaingen ende den bloedighen oorlogh in't Noorden / tusschen de
Croonen / Poolen / Denemarcken / Sweden heeft doen cessereren / daermede meest alle
Potentaten besich waren / welke generalick naer hun trocken / het Lantverderf / ende
eene onveplige navigatie in't Christendom: waer door nu het meeste oogherck is
omtrent den oorlogh / tusschen de Christenen / ende Zarasijnen en niet wonder isset
45535 want sulckx het algemeene intrest der Christenen is: dat ten anderen oock de
curieusheden ontrent verder Nouvelles van oorlochs-faicten / door de steriliteydt der
selvige / niet konnen gedient werden / als een weynich / wegens de Poolen / Carters /
Cosacken / ende Moscoviters / die noch seer traegelick inkomen / en dienvolges op ver
naer niet so considerabel / als dien / die om de sake Christi gevoert wert / daer toe
45540 alle Christene machten / ende Potentaten in desen genadigen ouyst / van Godts
gesegenden Vrede / behoorden te contribueren / ende soodanige hant te bieden / dat nu
in dit Hemels-saysoen / uyt der Turcken Clauwen weder gerucht wierden / de schoone
Europische Peerlen van 't Christendom / t'sedert anvanck der Christenen oneenicheyt /
ende oorlogen / het Christendom ontweldicht.

45545 Dit Jaer 1660 heeft Europa veel wonders / en groots belooft: van over de dertich
jaren heb ick voorname Astrologanten vande wonderen welcke in't selfde geschieden
souden hooren spreken / en van verscheyde hare annotatien / ende memorialen noch
bewaert: en sonder dat ick wil anraken den kelck daer het gront-zop / dat Tycho-bra /
ter syden gestelt heeft / noch in is: soo staet met my uwe ooghen op de
45550 geschiedenissen / siet Spaingen / ende Vranckrijck eens aen / siet waer dat
Konincklick wonderlick instrumeet Gusradus is. Want nu de 17 Nederlanden sijn / ende
pondereert / doch rijpelick de wonderen van Engelant / 't welck onze naerkomelingen /
voor Homayns / ende voor ongeloovige Historien sullen opnemen.

45555 Onder deze wonderen bidde ick u t'examineren / de kloeckmoedigheyt vande
Venetianen / welcke alleen soo veel jaren groorlocht hebbende met geen / oft seer
weynige assistentie / tegens de Orthomansche macht / de selfde in't resisteren / ende
defenderen van het Bollewerck des Christenrijckx / so veel werckx gevonden / dat den
Turck geene progressen siende te doen / tegens die voortreffelicke Helden / die in
Candia den Standaert Christi maintineren / altijdt met schade / ende schande wierden
45560 afgewesen / tot dat sy dit jaer in Sevenbergen gevallen sijnde / daer in twee maenden
meer Steden winnen / als in 20 Jaeren / voeten aerde / op die Manhaefte Venetianen.
On-aengesien de macht des Keysers / ende vande Hungersche gespanschapen / daer
ontrent.

45565 Den Alder-Christelickxsten Koninck / hebbende / te Mardijck lest door kranck
leggende / belofte aen Godt ghedaen / de Venetiaenen / tegens den algemeenen vyant
t'assisteren / so haest den Vrede soude gesloten wesen / so heeft hy eyndelick /
onder den Modeenschen Prins Almerick d'Este tusschen de 3 a 4000 Soldaten naer de
Levant gesonden / om de Venetiaenen aldaer te conjungeren.

45570 Deze Conjunctie eyndelick geschiet sijnde / so wiert geresolveert / volgens
d'Instructie vande Serenissime Republicque / om Canea te belegeren / 't welck de
Turcken in t koninckrijck Candia inhielden met eenighe andere plaetsen / daer mede de
Turcken de Christenen / uyt de reste des Koninckrijckx meenden te verdrijven /
ghelijck so daer toe eenige jaren gearbeyt hadden / maar te vergeefs / ende daer
hielden de Venetianen stant / teghens de gansche Turckxsche Macht te Water ende te

- 45575 Lande / tot dat sy nu finalick geassisteert sijnde alle de Turcken daer uyt soecken te verjagen / ghelijck sy haer daer toe als Leeuwen zijn aenstellende: maer eer ick tot 't verhael van hare Chrijghs-daden kome / so gelieft geimportuneert te zijn / niet te weten / d'hoedanicheydt van Candia met welckx winste de Turcken Sicilien ende Malta / soudén hebben kómen te veroveren.
- 45580 De qualiteyt van het Eylant en Koninckrijck Candia door / on aengesien seer berghachtigh / heeft nochtans veek Valeyen / seer abundant / ende extraordinary vruchtbaer / door dien t'selbe bespringht werdt / door menichte Fonteyen / en bevochtigt door veel Beken ende Rivieren. Den Wijn-stock wast daer naer wensch / en in overvloed wast daer d'alderdelicaetste Malvasepe / melch en honigh isser oock
- 45585 overvloedige en vleesch in soussisance / soodanigh dat d'Oude 't selfde ten rechte ghenoeft hebben / het wel-geluckigh Eylant. Daer wassen oock d'alderschoonste Cypres diemen met oogen zien magh / ende Boomen van alle slaghe / bequaem om Schepen te bouwen / 't welck tot groot proffijt voor de Sereniss. Republ: is. Men heeft er oock niet een schadelijck Gedierte / dat wreet ende fenijnigh is / als uytgesondert den
- 45590 Phalanges, welke zijn als Spinnen; maer binnen Candia zijnde niet dangereus. Dit Coninckrijck is noch overvloedigh van Septen / Hertén en wilde Bocken / maer men ziet weynich wilde Swijnen / als naer de sijde van Canea / daer rondom den Veneetschen Standaert nu in 't veldt uytzwaeyt. Daer zijn noch Bouchestains, die niet grooter als een Geyte zijn / en hebben nochtans soo veel vleesch als den grootsten Hert / heeft
- 45595 het hayr beuckel en kortachtigh / ende draeght eenen langen zwartachtigen baert. Men vanght hem somtijts als hy noch seer kleyn is / om met de Septen t'samen op te voeden / ende daer van andere te queecken / soo om sijn schoonheyt / als om de delicatessen ende smakelijckheyt sijns vleesch. Sijn Hoorns zijn seer groot / sijn Corps is de
- 45600 Septe ghelijck / maer nochtans soo veerdigh dat hy de Hertén ont loopén overtreft / ende d'Honden int riechen / want hy de Jagers 100 passen verrieckt / sulcx darmen om hem te vangen / tamme Septen moet binden ontrent d'aenkomsten ende passagien vande geberghten / en soo komt den Bouchestain, dese riechende / tot haer / en dan wert hy vande Jagers gequetst / maer niet doodelick sijnde / ende of schoon fenynich pier [pijl?] noch in 't lijf blijft / soo gaet hy echter door / ende etende het cruyt
- 45605 Dictame geneest. Dits 't Cruyt / daer van Dioscoride secht / welckx reuck alleen Serpénten ende andere fenijnige beesten doet sterven. Aengaende d'ouwde manieren vande Candiotten / de selfde hebben so gefloreert / dat hare Koningen / by naer gantsch Griekenlant geteugelt hielden / sy sijn geweest de beste Schutters vander aerden / hebben den wijdt bekenden Dans Syrrique verdicht /
- 45610 ten tijde haers Koninckx Eydon / en vanden hoofde tot den voete waren sy ghewapent / doen sy dien dansten / en die so gecontinueert / dat de Boeren / op Feestdagen / inde grootste hitte des daechs dien dansten, sonder naer de schaduwe te kijken / gewapent / te weten met den boogh / Pijl-koker / ende 't Rappier / als of 't dansen sonder t'selfde geen goede gratie hadde.
- 45615 D'Alder uytmyténste Grieken / hebben hare wetten vande Candiotten ghenomen / selfs Plato / ende boven al / die van Lacedemonien / volghden de practique. Een haerder wetten hielt / datmen de kinders in 't gemeen moeste opvoeden / op datmen / 't voetsel so wel als de rijcke hebbende / geen oorsake mochte opnemen / om deselvige te haten: en verders warender noch Statuyten / datmen om de kinders te gewinnen / om
- 45620 niets te vreesen / maer veel eer / om alles met gedult / ende patientie te boven te komen / ende te supporterén / die van dat sy konden gaen / inde wapenen soudén oeffenen / en haer leeren verachten / hitte / koude / honger / ende dorst / ende dat sy in 't danssen boogh / ende Pijlen soudén gebruycken / ende kleederen aen hebben / op d'oorloghstoerustingé gefatsoenneert. Item alle Candiotten / waeren genootsaecht te trouwen op de jaren van Majoriteyt / en doen trockense uyt de menichte / die als
- 45625 vooren gesecht is / onder de minderjarige opgevoet wierden / doch leyden hare getrouwde niet strackx naer huys / maer sy lietense blijven / so lange tot dat sy bequaem waren / om het Huys-houden te regeren. Ende de Vrienden trouwden hun indifferéntelick / d'een met d'andere / en verders verklaerde de Weth / dat so de
- 45630 Zuster met haren Broeder ghetrouwt was / dat hy haer met sijn half Patrimonie moest doteren. Het vervoeren van Dochters / wiert meer geestimeert / dan ofmen die niet uryen wille hadde verworven. Maer eyndelick de Candiotten latende hare ouwde discipline / wierden Zee-Roovers / als die van alle tijden / d'eerste ter Zee hadden geweest / en haer so kloeckmoedich gequeten hadden / dat sy d'Attiques overwonnen /
- 45635 ende voerden hare Legerscharen geluckelick tot in Sicilien. Ende een weynigh seggende vande manieren deser tijt / weet dat de Candiotten veerdigh zijn om quaet te doen. d'Oude selfs hebben haer den naem van Logenaers gegeven / sy zijn schalck / gierigh / en tegenwoordigh können sy den arbeyt qualijck dragen / ende en leeren konst noch wetenschap volkomentlijck. Doch het is waer / volgens 't
- 45640 schrijven van Beilon, dat sy haer van haer kintsheyt af oeffenen int schieten met den

Boogh / daer in sy doch de Turcken over-treffen. Ter Zee zijn sy gauw / dispoost ende
 vaillant / soo wel als sy t'anderen tijde gheweest zijn.
 De sterckte deses Eylants en Coninckrijcx / is Candia principael / dat de Christenen
 hebben / en Canea dat de Turcken possederen / beyde seer machtigh sterck / soo door
 45645 de nature / als ter oorzake van hare gelegenthede. Maer Rettimo ende Seytien konnen
 niet gerenomeert werden / als ten opsichte vande plaets / waer sy in gelegen zijn.
 Binnen Candia is een schoon Arsenael voor de Galeyen. Aengaende de Religie /
 d'Inwoonders volgen meest de Latijnen. Dus ver van de gestaltenis deses Koninckrijcx
 45650 gesproken hebbende / soo sal ick voortgaen met de saecke vande tegenwoordighe
 verrechtinge vande Christenen Veyrkracht in dat Lantschap.
 Sondagh avont arriveerde hier een Schip van die Landen met brieven aen de Sereniss:
 Heeren / dat de Veneetsche Armada / ghekomen sijnde inde Haven van Suda / hadt
 ghelandt aen de genaemde plaets Colata / ontrent 9000 strijtbare mannen / die te
 45655 gelijck ordentelijck advanceerden naer het Fort d'Apricorni / dringende soo voorts
 tot onder de wal / ende naer dat die van binnen lange defentie en tegenstant gedaen
 hadden / wierden overweldicht / ende verlieten 't Fort met groot verlies / ende
 liepen met d'andere Garnisoenen van Cisterne / Calamo ende Calogero / binnen Canea /
 achterlatende 35 a 40 stucken / met menichte Amonutie.
 45660 Dijnsdaeghs daer aen / genoeghsaem met het krioel des daegs / aeriveerde noch eene
 Galiote / gedepescheert van den Capiteyn Generael / met Pacquetten aen 't Senaet / en
 relateerde het naervolgende / op de bovenste wijze / maer met dese bysondere
 distinctie: seggende dat d'Armada Maratim vande Sereniss: Seigneurie / consisterende
 in 30 Oorloghs-Schepen / 28 subtile Galeyen / met de 7 van Malta / (item naer dat 4
 45665 van den Paus / ende de 3 van de Grooten Herrogh van Florencen / wederom na hare
 Havens waren gekeert) 6 Galeassen / en soo veel Galioten Avonturiers. Het volck naer
 dat het gelant was / annumereerde tot 6000 Voetknechten (daer onder 2000 in Candia
 gelicht) item 3500 Franchoyzen / en ontrent 800 peerden / dewelcke naer dat sy
 ingenomen hadden de 4 boven gementioneerde Forten / togen recta tot de belegeringe
 45670 van Canea / maer doch eer sy de Linie begonden / so quam den Bassa Commandant
 uytvallen / met een deel van het Garnisoen / de Schermutsel nam furieuselik begin /
 en wedsijts kost het veel bloets en so het gemeen is / dat honden voor Menschen
 loopen / soo liepen de Turcken eyndelick oock voor de Christenen. Den Bassa
 Commandant bleef / met een van sijne Soonen / onder de voeten doot. Vande sijde der
 Christenen / is het considerabelste verlies / den Heer d'Ardena Luytenant vande
 45675 Cavallerye van welckx doode Lichaem de Turcken het hooft hadden afgezabelt / maer
 doen de Turcken 't selfde in Canea meenden te brengen / so rende een Frans Capiteyn
 hun naer / en recupereerde het selvighe / met verlies van het leven / van die daer
 mede meende te triumpieren.
 Den Prins Almerigo d'Este Generael over 't Fransche leger / van secours liep groot
 45680 perijckel van doot te blijven / soo in 't veroveren van Apicorno / als inden uytval
 vanden gementioneerden Bassa Commandant / want alsdoen trefte / ende doode achter hem
 / een Canonkogel sijnen Paige.
 Kort naer desen uytval en goede successen voor de Christenen, daer over Godt moet
 gedanckt zijn, soo ontvingen de Generaels advijs, dat uyt Candia nova 4000 Turcken
 45685 tot ontset van Canea quamen hier over vielen dispuytten tusschen den Veneetschen
 Capiteyn Generael, en den Prins Almerico, d'een meende men behoorde haer tegens te
 trecken, en daer mede te strijden, d'andere vreesde men mocht op wegh omringht
 werden, terwijl binnen Canea, boven 't verlies van den uytgevallenen Commandant en de
 45690 sijne, noch 2500 voetknechten en 300 peerden waren, en dat het nutter ende
 nootsakelijcker was de retraicte te slaen, ende in versekertheyt te rug te trecken,
 tot dat het Heyr der Christenen gerentforceert was vande Boeren, diemen uyt
 verscheyde gewesten des Coninckrijcx verwachtete, gelyck van Sfacchia elle uyren
 duysent man stonden te volgen.
 In desen stant bevonden daer de saken, doen het Galioot gheexpedieert wiert,
 45695 versoekende van het Senaet promptelyck gelt en Amonitie, strax wiert geresolveert
 dat den nobelen Heer Francisco Barbaro, 80000 Ducaten soude overvoeren, en dat de
 Keyserl: assistentie soude gelast werden datelyck te vertrecken.
 Kort daer aen volghden noch 2 Advijsen, d'eene vande 3 Eylanden, refererende dat de
 45700 onse het recours van Candia de hovo geslagen hadden, maer dat zyn Particuliere
 tijdingen, welcke naerder sekerheydt vereysschen. Het ander komende over O?trante,
 dat de Christenen de belegeringe van Canea te heet voelende, te rugh geweken waren.
 Ende eyndelijck soo heb ick hier noch een advijs by te doen van den Proveditor vande
 Fortresse Suda, bevestigende dat de Christenen van ontrent Canea waren opgebroken,
 45705 ende dat sy haer tot Calamo gingen beschanssen, een plaets alwaer sy bequameelyck
 allesints konnen zien passeren dat in Canea te lande soude willen, ende dat sekerlyck
 van Candia nova quam, het bovengeschreven bystant ende secours voor de Turcken: en

vreesende dat sy om 't Leger niet al te veel te zwacken, niet en soudén konnen belet houden de ingenomen Forten, so hebben sy laten mineren en springen het Fort van d'Apricornò. 1000 Ffacchioti waren int Leger der Christenen gearriveert, en ten
45710 eersten werden 4000 boeren verwacht, daer mede het Christen-Generalen meene bestant te zijn, om formelyck Canea te belegeren, dat ter zee alreede vande Armade nauw besloten is.

Dits is mijn Heer d'hoedanicheden in een korte descriptie van het befaeme Koninckrijck Candia, beneffens de publicque / ende particuliere advijsen / omtrent
45715 het Leger der Christen aldaer / voorgevallen / hope dat Godt / wiens sake het is deselve sal Croonen / met heyl / ende verder victorie / ende dat ick alsoo in vreucht / ende met een vrymoedicheyt H E. van tijdt tot rijdt / daer van noch sal deelachtig maken Ec.

Venetien den 8 Octobers 1660.

45720 NOTABLE WRITINGS FROM VENICE

According to the Letters of Generalissimo Morosina to the Lords Senate of the Serenissime Republique, Concerning the Successes of the Arms of the Christians against the Turks in the Kingdom of Candia.

45725 MY LORD, While God has pleased to plant Peace in Europe among the Christian Potentates, especially between the most powerful Monarchs of France and Spain and has caused the bloody war in the North between the Crowns, Poland, Denmark and Sweden to be ceded, whereby most all Potentates were concerned, who generally sought after
45730 their country's destruction and an inevitable navigation in Christendom: whereby the greatest attention is now paid to the war between the Christians and the Zarezins, and it is not surprising, because such is the general interest of the Christians: that on the other hand the curiosities concerning further News of war facts, due to the sterility of the same, could not be served as a little / because of the Poles /
45735 Carters / Cossacks / and Muscovites / who still come very slowly / and consequently not nearly as considerable / as those / who were led for the sake of Christ / to which all Christian powers / and potentates in this gracious east / of God's blessed Peace / ought to contribute / and to offer such a hand / that now in this Heavenly season / from the Turkish claws / the beautiful European Pearls of Christianity were
45740 again heard / / since the beginning of the Christian disunity / and wars / have disproved Christianity. This year 1660 has promised Europe many wonders / and great things: for over thirty years I have heard important astrologers speak of the wonders which would occur in the same history / and of various their annotations / and
45745 memorials I have still preserved: and without that I want to touch the chalice in which the ground-soap / that Tycho-bra / has set aside / is still in: so stand with me your eyes on the histories / look at Spain / and France / see where that Kingdom miraculous instrument Gusradus is. For now the 17 Netherlands are / and ponder / yet
45750 mature the wonders of England / which our descendants / will take up for Homayns / and for unbelieving Histories. Among these wonders I beg you to examine / the courage of the Venetians / who alone have prospered for so many years with no or very little assistance / against the Orthoman power / the same in resisting / and defending the Bollewerck of Christendom / found so much work / that the Turks saw no progress /
45755 against those excellent Heroes / who in Canada maintained the Standard of Christ / were always repulsed with damage / and shame / until they fell this year in Sevenbergen / where in two months more cities gained / than in 20 years / feet of earth / on the Manly Venetians. Notwithstanding the power of the Emperor / and of the Hunger troops / around there. The Most Christian King, having recently, while lying ill, promised God to assist the Venetians against the general enemy as soon as peace would be concluded, finally sent between 3 and 4,000 soldiers to the Levant under the
45760 command of the Modern Prince Almerick d'Este, to conjugate the Venetians there. This Conjunction having finally happened, it was resolved, according to the Instruction of the Serenissime Republique, to besiege Canea, which the Turks held in the kingdom of Candia, with some other places, with which the Turks intended to drive out the Christians from the rest of the kingdom, as they had labored for some years to do,
45765 but in vain, and there the Venetians held out against the entire Turkish Power on Water and Land, until now, finally assisted, they sought to drive out all the Turks, as they appointed them as Lions: but before I go into the story of their The deeds of Christianity come / so gladly imported / not to know / the quality of Candia with which profit the Turks would have come to conquer Sicily and Malta.

45770 The quality of the Island and Kingdom of Candia by / seen very mountainous / nevertheless has many Valleys / very abundant / and exceptionally fertile / by which it was sprinkled / by many Fountains / and watered by many Streams and Rivers. The

wine-stock grows there according to desire / and in abundance grew there the most delicate Malvasia / milk and honey are also abundant and meat in sustenance / such that the ancients have rightly called the same / the happy Island. There also grow the most beautiful Cypress that one may see with one's eyes / and trees of all kinds / suitable for building ships / which is to great profit for the Sereniss. Republ:. There is also no harmful Animal / that is cruel and venomous / except the Phalanges, which are like Spiders; but within Candia they are not dangerous. This Kingdom is still abundant with Septen / Deer and wild Bucks / but one sees few wild Boars / as towards the side of Canea / around which the Venetian Standard now spreads out in the field. There are still Bouchestains, which are no larger than a Goat / and yet have as much flesh as the largest Deer / it has its beak and short / and wears a long blackish beard. He is sometimes caught when he is still very small, to be raised together with the Septen, and to feed on others, both for his beauty and for the delicacy and taste of his flesh. His horns are very large / his body is like a septum / but nevertheless so strong that he outruns the deer / and the dogs in scenting / because he entices the hunters 100 paces / such intestines to catch him / tame septums must be tied around the arrivals and passages of the mountains / and so the Bouchestain, this scenting / comes to them / and then he is wounded by the hunters / but not mortally / and although a phoenix arrow [arrow?] remains in the body / he nevertheless passes on / and eating the herb Dictame heals. This is the herb / of which Dioscoride speaks / whose smell only kills serpents and other venomous beasts.

As for the ancient manners of the Candiots, the same flourished so much that their Kings held almost all of Greece in check, they were the best archers of the earth, they invented the widely known Dance Syrrique, in the time of their King Eydon, and from head to foot they were armed, when they danced it, and it continued so much that the Farmers, on Feast Days, in the greatest heat of the day, danced it, without looking at the shadow, armed, namely with the bow, quiver and rapier, as if dancing without it had no good grace. The most excellent Greeks took their laws from the Candidates, even Plato, and above all those of Lacedaemonia followed the practice. One of their laws was that children should be brought up in common, so that, having the same food as the rich, one should not take cause to hate them: and furthermore there were also statutes, that in order to accustom children to fear nothing, but much honour, to overcome everything with patience and patience, and to support them, so that they could go, to practice in arms, and to teach them to despise heat, cold, hunger and thirst, and that they should use bows and arrows in dancing, and wear clothes fashioned in warlike attire. All Candidates were required to marry at the age of Majority, and were drawn from the crowd, who, as mentioned above, were raised among minors, but did not immediately send their spouses home, but allowed them to remain until they were fit to manage the House. And the Friends married them indifferently, one to the other, and furthermore the Law declared that if the Sister was married to her Brother, he had to endow her with half his Patrimony. The transport of Daughters was more enthusiastic than if one had not acquired them willingly. But finally the Candidates, abandoning their ancient discipline, became Sea Robbers, as those of all times had been the first at sea, and had served so valiantly, that they overcame the Attica, and led their armies happily to Sicily. And saying a little of the manners of this time, know that the Candidates are quick to do evil. The ancients themselves have given them the name of Logenars, they are cunning, greedy, and at present they can ill bear labor, and learn neither art nor science perfectly.

But it is true / according to the writing of Beilon, that they have been practicing shooting with the Bow since their childhood / in which they surpass the Turks. At sea they are quick / dispatch and vassal / as well as they have been at other times. The strength of this Island and Kingdom / is Candia in principle / that the Christians have / and Canea that the Turks possess / both very powerful strength / both by nature / as well as by reason of their situation. But Rettimo and Seytien cannot be renowned / as in view of the place / in which they are situated. Within Candia there is a beautiful Arsenal for the Galleys. As for the religion / the inhabitants mostly follow the Latins. Thus far having spoken of the form of this Kingdom, I will now proceed to the matter of the present fate of the Christian Forces in that Country. Sunday evening a ship arrived here from those Countries with letters to the Sereniss: Gentlemen / that the Venetian Armada / having arrived in the Port of Suda / had landed at the named place Colata / about 9000 fighting men / who at the same time advanced in an orderly manner to the Fort d'Apricorni / pressing further to under the wall / and after that they had made a long defense and resistance inside, they were overwhelmed / and left the Fort with great loss / and walked with the other Garrisons

of Cisterne / Calamo and Calogero / inside Canea / leaving behind 35 to 40 pieces /
 45840 with many Ammunition. Dijnsdaeghs there aen / enough with the crowd of the day / did
 not arrive nor a Galiote / delegated from the Capiteyn General / with Pacquettes to
 the Senaet / and related the following / in the highest manner / but with this
 special distinction: saying that d'Armada Maratim of the Sereniss: Seigneurie /
 45845 consistende in 30 War Ships / 28 subtile Galeys / with the 7 of Malta / (after that 4
 of the Pope / and the 3 of the Grand Duke of Florence / had again returned to their
 ports) 6 Galeases / and so many Galeoten Adventurers. The people, after they were
 landed, numbered 6000 foot soldiers (among them 2000 raised in Candia), item 3500
 Frenchmen and about 800 horses, who, after they had taken the 4 forts mentioned
 45850 above, went straight to the siege of Canea, but before they had begun the line, the
 Bassa commander came out with a part of the garrison, the skirmish began furiously
 and in return cost much blood and as it is common for dogs to run before men, so the
 Turks eventually also ran before the Christians. The Bassa commander, with one of his
 sons, was killed underfoot. On the side of the Christians, the most considerable loss
 was that of Lord d'Ardena, Lieutenant of the Cavalry, whose dead body the Turks had
 45855 cut off the head, but when the Turks thought they would bring the same to Canea, a
 French Captain ran after them and recovered the same, with the loss of life, of the
 man who thought he would triumph with it.
 Prince Almerigo d'Este, General of the French army, of secours, ran a great risk of
 remaining dead, both in the conquest of Apicorno, and in the sortie of the commended
 45860 Bassa Commandant, because in doing so a cannon ball struck and killed his Paige
 behind him. Shortly after this sortie and good successes for the Christians, for
 which God must be thanked, the Generals received advice that 4000 Turks had come from
 Candia Nova to the relief of Canea, where there had been disputes between the
 45865 Venetian Captain General and Prince Almerico, one thought it was right to go against
 them and fight with them, the other feared that they might be surrounded on the way,
 while within Canea, besides the loss of the fallen Commander and his, there were
 still 2500 infantry and 300 horse, and that it was more useful and necessary to
 retreat and retreat in safety until the army of Christians had been repatriated from
 the Peasants, who were expected from various provinces of the Kingdom, like from
 45870 Sfacchia, a thousand men were following every hour.
 At this time the affairs were there, when the Galiot was sent out, requesting money
 and ammunition from the Senate promptly, it was immediately resolved that the noble
 Lord Francisco Barbaro would bring over 80,000 Ducats, and that the Emperor's
 45875 assistance would be ordered to depart immediately.
 Shortly thereafter followed two more Councils, one from the three Islands, referring
 that ours had beaten the recourse of Candia the hovo, but these are private tidings,
 which require more certainty. The other thing coming over O?trante, that the
 Christians, feeling the siege of Canea too hot, had retreated.
 And finally I have to add here another advice from the Proveditor of the Fortress
 45880 Suda, confirming that the Christians had broken up from near Canea, and that they
 were going to fortify themselves to Calamo, a place where they could conveniently see
 everything passing that would want to land in Canea, and that certainly from Candia
 nova came the above-mentioned bystander and security for the Turks: and fearing that
 in order not to weaken the army too much, they would not be able to prevent the
 45885 captured Forts from being held, so they had the Fort of d'Apricorno mined and blown
 up. 1000 Ffacchioti had arrived in the army of the Christians, and first of all 4000
 farmers were expected, with whom the Christian Generals thought they were, to
 formally besiege Canea, which is already closely enclosed by the sea from the Armadé.
 This is my Lord the qualities in a short description of the famous Kingdom of Candia,
 45890 besides the publicque / ende part specific advice / concerning the Christian Army
 there / occurred / hope that God / whose cause it is will crown it / with happiness /
 and further victory / and that I thus in joy / and with a freedom of speech H E. from
 time to time / will still partake of it Ec.
 Venice, October 8, 1660.

45900 **DE BESCHRYVING Van de leste Oorlog in 't Koninkrijk KANDIA.**
 In vier Delen onderscheiden;
 I. D'oorsprong van deze Oorlog, en de Verövering van 't Koninkryk Kandia.
 II. De Reis van de Markgraaf *Villa*, en zijn Bedrijf in de Stat Kandia.
 III. D'Intreê des Markgraafs van *S. André Montbrun*, en des Graafs *de la Fueillade* in

- 45905 deze Vesting.
IV. De Koomst der Lunenburgers, gelijk ook die van de leste Bystant der *Franschen*, onder de Hertogen van *Beaufort*, en *Navaille*, en hun Bedrijf tot aan d'Overgeving van deze plaats, en 't Vertrek der Venecianen uit dit gewest.
Alles door J.H. GLAZEMAKER in de Nederlantsche Taal gebracht.
- 45910 Ottoman era (1453-1922)
On 29 May 1453, the then-emergent Ottoman Empire conquered the city of Constantinople following a lengthy campaign wherein the Ottomans constructed fortifications on each side of the strait, the Anadoluhisarı (1393) and the Rumelihisarı (1451), in
45915 preparation for not only the primary battle but to assert long-term control over the Bosphorus and surrounding waterways. The final 53-day campaign, which resulted in Ottoman victory, constituted an important turn in world history. Together with Christopher Columbus's first voyage to the Americas in 1492, the 1453 conquest of Constantinople is commonly noted as among the events that brought an end to the
45920 Middle Ages and marked the transition to the Renaissance and the Age of Discovery. The event also marked the end of the Byzantines – the final remnants of the Roman Empire – and the transfer of the control of the Bosphorus into Ottoman hands, who made Constantinople their new capital, and from where they expanded their empire in the centuries that followed.
45925 At its peak between the 16th and 18th centuries, the Ottoman Empire had used the strategic importance of the Bosphorus to expand their regional ambitions and to wrest control of the entire Black Sea area, which they regarded as an "Ottoman lake", on which Russian warships were prohibited.
Subsequently, several international treaties have governed vessels using the waters.
45930 Under the Treaty of Hünkâr İskelesi of 8 July 1833, the Bosphorus and Dardanelles straits were to be closed on Russian demand to naval vessels of other powers. By the terms of the London Straits Convention concluded on 13 July 1841, between the Great Powers of Europe – Russia, the United Kingdom, France, Austria and Prussia – the "ancient rule" of the Ottoman Empire was re-established by closing the Turkish
45935 Straits to any and all warships, barring those of the Sultan's allies during wartime. It thus benefited British naval power at the expense of Russian, as the latter lacked direct access for its navy to the Mediterranean.
Following the First World War, the 1920 Treaty of Sèvres demilitarized the strait and made it an international territory under the control of the League of Nations.

Discoveries in Millingen

- July 3, 1845 - From Nijmegen, a report of July 1st reads:
45945 "The archaeological excavations in the Holledoorn, near Groesbeek, have led to an important discovery this month. Close to the spot where the tile with Latin cursive inscription was found last year, and where, during the planting of trees, old masonry was encountered, meticulous excavations were now carried out. These resulted in, among other things, the discovery of an almost complete Roman hypocaust (subterranean
45950 fireplace and heating system), possibly belonging to the bathroom of a large villa. The cleared foundations, which have only now become fully visible, present a striking sight. They form an oval 6.50 yds long, 5.25 yds high, and 2.80 yds deep." Running along its length, from east to west, is a subterranean passageway, vaulted by ten round arches and so wide that two people of average height can easily walk through it
45955 side by side. The arches of this passageway or vault are separated by cleverly constructed brickwork spaces of 0.25 cubits in average width, which, like the interior of the vault and the passageway, bear traces of intense fire heat, smoke, and soot. The vault and the interstices are floored with square tiles, on top of which hard-burned earth mixed with pebbles follows. A layer of square tiles finally
45960 completes the whole, in such a way that the tiles and the burnt earth above the interstices are here and there provided with elaborately crafted openings, which have allowed the heat from the subterranean passage to pass vertically upwards, down to the ground floor of the chamber. South and east of the hypocaust, new wall fragments are continually discovered from time to time, the exposing of which, however, is
45965 encountering great difficulty due to the hardness of the rubble and the abundance of tree roots present there. Among the numerous legion stones found were also some from the XXXth legion, from which one can conclude that the discovered hypocaust predates the time of Trajan, since the aforementioned legion later adopted the name Ulpia Trajana, after this Emperor.
- 45970

June 8, 1846 NIJMEGEN, June 5. The archaeological excavations, hich were again carried out this year in nearby Holledoorn, municipality of Groesbeek, by Dr. Janssen, curator at the National Museum of Antiquities, at the behest of the high authorities, have, as we understand it, once again yielded important results. Not far from the site where, last year, the same scholar discovered Roman outars with inscriptions, hypocausts, and other structures, a rare as-yet-unknown stone has now been discovered, at a depth of 0.75 meters, under hard rubble. A well-preserved Roman aqueduct was discovered, now stripped 12 cubits long. It runs north to south and was apparently connected to the structures discovered last year. It consists of round pipes of red baked clay, measuring 0.44 to 0.54 cubits in length and 0.2 cubits in diameter, tightly packed together between solid clay bricks; they are supported on the sides by Roman tile fragments. Judging by the inscriptions found on these tile fragments, the aqueduct cannot have been constructed before the time of the Antonines.

July 13, 1846 MILLINGEN (near NIJMEGEN) July 6

On July 2, during the excavation of soil to reinforce the dike, a corn mill was discovered in the Millingen municipality, just outside the dike, just downstream, opposite the point where the dike separated from Rhine and Waal, found at a depth of about half a yard in the ground, a chest with a loose lid, made entirely of dufa, which is of rough construction. Inside the chest were only a few burnt bones in small pieces, a little ash, and an irregularly round ball, also made of dufa, with a diameter of about 5 Dutch inches. Also found scattered in the ground around the chest were: 1. Four light yellow earthenware jars, narrow at the top and bottom and very wide in the middle, with handles. Two of these were broken during excavation, while one contained a substance resembling ash. 2. A veryold-fashioned small jug, also narrow at the top and bottom and wide in the middle. 3. Five red earthenware dishes of various sizes, two of which bear the inscription "Vanrodia." 4. Another black earthenware dish of greater weight and size. 5o. A copper coin, on which the coat of arms or inscription is no longer discernible. 6o. A small piece of iron, worked in an old-fashioned way. All these pieces appear to be very old.

The origins and all suggest that they are of Roman origin. Both here and elsewhere, great value is attached to such antiquities, for which reason anything further of this nature will be carefully preserved.

July 22, 1846 Leiden, July 14, 1846.

Your Honor!

In your newspaper of the 13th of this month, a report appears from Millingen, near Nijmegen, dated last 6th, about a tuff stone chest and other objects found there. It is stated that all these pieces suggest they are of Roman origin, and that two of the saucers found bear the inscription VANRODIA. Since I have meticulously recorded everything found on site, it will perhaps not be indifferent to some reader of your newspaper to learn that the objects excavated in Millingen on the 2nd of this month are definitely of Roman origin; that the tuff stone coffin is a coffin containing the cremated bones and ashes of the deceased, and that two terra sigillata saucers bear not the inscription VANRODIA, but the stamp of the pottery maker VICTORINUS.

Giving Your Honor the freedom to use this information as you see fit, I have the honor to subscribe.

Your Honor,

L. J. F. JANSSEN,
Curator at the Museum of Antiquities.

December 12, 1846 DISCOVERY OF ROMAN ANTIQUITIES IN MILLINGEN (ABOVE NIJMEGEN).

Recently, reports have been read in some newspapers regarding Roman antiquities discovered this summer in Millingen during the raising of the dike; see b. The Utrechtsche Courant of July 13th and 22nd last. A local investigation convinced me both of the incompleteness and deficiencies of these reports and of the importance of the discovery itself. Therefore, since this matter has once been discussed in public newspapers, I feel compelled to offer the public a better report on the matter; I reserve the right to a more detailed and scientific treatment in a subsequent volume of Antiquities. Such an improved report will be considered all the less inappropriate because, since the initial discovery, several other objects have been excavated at the same location, none of which have been publicly reported. I am particularly well-placed to do so thanks to a favorable arrangement: Mr. TERWINDT, mayor of the town, with the permission of Mr. COLENBRANDER, Lordof Millingen, has donated all the findings to me as a gift for the Museum of Antiquities. so that it could be examined

and assessed by me in the smallest detail here in the museum.

Half an hour west of Millingen Church, on the aforementioned occasion, some Roman remains were found in the meadowland on July 2nd. This land is owned by the municipality and forms part of a large meadow, situated a yard higher than the adjacent land. The latter is particularly noteworthy because it suggests that this land was less susceptible to flooding in the past, and the remains were therefore more protected from destruction; also because this gives rise to the suspicion that further excavation would reveal even more. After excavating the earth to a depth of over a cubit, Roman artifacts were discovered, arranged in an oblong square over an area of 25 to 30 cubits, mixed with burnt charcoal and ash, the remains of a significant combustion. The objects, with the exception of a tuff coffin, were largely from domestic life, and the entire collection unequivocally demonstrated that the discovery belonged to a burial site. The tuff coffin, oblong and square in shape and of relatively rough workmanship, was fitted with a lid that sloped gently on four sides. With the lid, it measured 0.41 meters in height, 0.75 meters in length, and 0.45 meters in width. It had nothing remarkable other than a projecting ledge on one of its narrow sides, onto which the lid rested, and in the center of which a star was carved, indicating how the lid should be placed on the coffin. Inside the coffin were household items and the burned bones of an adult human being. I was no longer able to accurately specify which household items were found inside and which outside the coffin; however, among the items found there were certainly a few terra sigillata dishes and a few white pipe clay jars. The objects found then, and during later excavations at the same site, are as follows:

Made of baked earth:

1. three small terra sigillata dishes, two of which bear the mark of the manufacturer VICTORINVS, and the third CRVMMVIF, i.e., the factory of CRUMMUUS or CAJUS RUMMUUS; also fragments of seven or eight similar dishes;
2. a small gray, hard-baked earth dish, plus

Fragments of four or more similar ones;

3. Part of a large mixing bowl, made of terra sigillata, decorated externally with foliage;
4. Part of an offering bowl made of light-red, roughly worked earth;
5. Pear-shaped vase made of fine red earth, painted brown and ribbed around the belly; as well as fragments of two similar ones, perhaps used for scented ointments or oils;
6. Remains of about twenty pots, generally roughly worked, hard-fired, and yellow, red, gray, and black in color. Based on their shape, they belong to the storage vessels, for liquids or edibles, and are primarily known as mortuary urns, because similar pots were usually used to store the cremated remains of the deceased;
7. Small drinking bowl made of terra sigillata, the bottom of which is roughly scratched with a pointed tool; IUL VICT, i.e., JULIUS VICTOR, the name of its owner or user.

It is important to note here that a master potter (magister figulorum), on a rare outlier on Vesta, excavated in Holledoorn, near Nijmegen, under my supervision in 1845 and now in the museum here, bears precisely the same name; see Oudheidk.

Mededeelingen, St. IV, Pl. XI, I, p. 337 et seq. – Also a fragment of a similar bowl, and one made of rougher earth;

8. Two water jars made of white robes, paired and provided with a single handle; as well as remains of ten or eleven similar ones;
9. Fragment of a colossal wine vessel, or apparently of a wine jug;

10. Three fragments of Roman tiles;

Of glass:

11. A beautiful spherical vase of light green glass, 0.11 cubits high;
13. Two scent or balm bottles of light green glass, such as were formerly considered tear bottles, 0.14 to 0.15 cubits high; these still contained an ancient foreign substance, the chemical analysis of which is the preoccupation of one of our most competent chemists;
13. Part of a balm or oil bottle of light green glass and square;
14. Fragments of a beautiful light green bottle, with a long neck and ribbed belly;
15. Fragments of a round jar of white glass with two handles;

Made of stone:

16. Seven roughly worked balls (apparently sling balls), made of Andernach trass,

measuring 2 to 5 inches in diameter; as well as a rough chunk of red sandstone. Made of metal:

17. Several pieces of oblong, flat iron, 3 to 4 inches wide, in which nails have been hammered at regular intervals, apparently representing bands of wooden barrels, wells, buckets, or the like;

18. A round plate of a yellow copper cloak hook (fibula), on which the bust of a Roman emperor, adorned with a radiate crown, is stamped. The image is very worn, but according to the unanimous opinion of three mint experts, it could be that of Postumus (258-267 AD);

19. A completely worn copper coin, 1st size; Finally, three horse molars.

Whether all this is the burial of one or more individuals must be left open, due to the lack of larger local excavations and accurate reports from those who found the objects. However, both the coffin and the objects of luxury reveal that this was the burial place of a prominent Roman, on whose pyre, according to custom, incense was poured, at whose grave sacrifices to the spirits (manes) were performed, and the funeral supper was likely celebrated; the latter being particularly suggested by the many broken bowls and pots found there. The name of JULIUS VICTOR, on a small bowl, might suggest that it was the burial place of the aforementioned chief potter of that name, or one of his relatives; with which the suspicion that the found objects, according to the aforementioned fibula, belong to the time of POSTUMUS would not be particularly contradictory, because the discovered outtar of JULIUS VICTOR could belong to that same period. However, we should not attach too much importance to this, because at Millingen, according to the inscription on a Roman memorial stone found there earlier, now in the museum of antiquities here, a burial place of a notable Roman woman or girl must be sought. That inscription (which was first accurately published in my Mus. Lugd. Bat. Inscriptiones Graec. et Lat. Tab. XIII I, cf. p. 89, and will be further explained in the more detailed description of this discovery) teaches: that there was a sacred grove, in which an outtar stood (in honour and memory) of RUFIA MATERNA, erected and consecrated by (her mother) MUCRONIA MARCIA; that religious activities would take place in this forest at three different times of the year, namely in February, at the time of the general Roman festival of the dead; on July 15 (probably the day of death)

(g of MATERNA, or the day on which the forest and the altar were consecrated), and in October, on MATERNA's birthday; a custom that would take place every year, i.e., as long as Roman power and Roman law were honored at that location. The memorial could also date from the aforementioned period. And who would blame anyone if they suspected that among the aforementioned remains belonged to this woman's grave?

Further investigations at this location will, we hope, provide decisive clarification in this regard. This hope is not entirely in vain; for while writing the conclusion of this report, I received from the kind hand of Mr. J. G. MAEIJER, pastor of Millingen, a communication dated December 8th, stating: that very recently, not far from the site where the object described here was found, three more sites were discovered where fires were lit in ancient times, and on which jars and bottles were found. These objects include a ribbed, fine earthenware vase (as no. 5), a glass saucer, and a square glass bottle (as no. 13), marked on the bottom with the factory letters: CG

CP

Which rare objects, through the favorable intervention of their former owner and the honored owners, we hope will once again find a worthy place in the Museum here. It goes without saying that this latest discovery once again highlights the importance of Millingen in the Roman period of our history, reinforces the suspicion that even more remains hidden underground, and revives the prospect that further research there will shed new light on both that cemetery and the aforementioned remarkable memorial stone.

Leyden,

December 9, 1846. L. J. F. JANSSEN,

Conservator at the Museum of Antiquities.

October 17, 1847, ROMAN ANTIQUITIES FOUND IN MILLINGEN (ABOVE NIJMEGEN).

Since the last reports regarding Roman antiquities found in Millingen (see Staats-Courant 1846, no. 297 and 1847, no. 84), the area where the discovery was made has been explored at a relatively low water level, and excavations have been carried out under my direction at its highest points. These, in turn, yielded not insignificant results and once again enriched the Museum of Antiquities with several objects whose mention is certainly worthy of the attention of Dutch antiquarians. Regarding the

discovery site, it should also be noted that it is located half an hour northwest of Millingen; that the depth at which the objects were buried under the earth is estimated to be 1.5 cubits (if one also considers the earth recently excavated to raise the dike), and that the area within which the objects are found is estimated to be 75 square cubits. Outside this area, at least, nothing has been found thus far, after repeated investigations; however, it is possible that remains were discovered during excavations, especially on the north side of this site, in the as yet unexcavated high meadow belonging to Mr. COLENBRANDER of Zutphen. — I owe this more precise determination of the site to investigations carried out on July 8th and 9th, using excavations and pointed iron. The objects found on this occasion, combined with those favorably preserved for the Museum by Mr. J. G. MAEIJER, pastor, and TH. TERWINDT, mayor of Millingen, are (1):

Of stone:

1. Two roughly worked balls of Andernach trass, apparently sling balls, 5 to 7 inches in diameter. They are of the same type as those under no. 16 of the Staats-Courant of 1846, no. 297.

Made of baked earth.

*2. A lamp, painted black or dark brown on the outside; the shape as, for example, in my "Memorials," etc., Pl. XVII:6.

3. A saucer of terra sigillata, inside marked with the manufacturer's mark CVDILVN, i.e., Cudiluni or Cudilunis fecit. The same name can also be found on a fragment of a similar saucer, excavated in Rinderen, and brought back by me last year for the museum there; see Staats-Courant 1847, no. 84. — Also fragments of a similar saucer.

4. A saucer of coarse gray, and two saucers of yellow, fine earth. One of these contained several small bones, which Dr. H. SCHLEGEL, curator at the National Museum of Natural History here, had the goodness to examine, and declared some to be the bones of a wild boar, and others (due to their fragmentary condition) unidentifiable. This discovery therefore also serves as evidence that similar dishes can be mistaken for dinner plates. The latter dish

The small bowl has a diameter of 0.195, a height of 0.03 ell, and the shape of, for example, Pl. XII:10 and XVIII:4 of the aforementioned Memorials. — Also fragments of two similar dishes.

5. A small bowl of terra sigillata; shape much like Memorials, Pl. XII:7.

6. A small bowl of coarse, gray earth, 0.86 high, 0.16 ell wide. Inside it lay a fine and smooth milky quartz of 5 to 6 inches in diameter. — Also fragments of two similar bowls.

7. A small pot of fine yellow earth, externally decorated with incisions and painted black; shape like Memorials, Pl. XVIII:3. — Also fragments of two similar pots. 8. A pear-shaped vase of light-red, fine clay, with five impressed grooves around the body and a glossy black exterior. — This and no. 7 appear to have been intended for storing oil or a fatty substance.

9. A small jar of light-red, fine clay, with an ornate handle and gilded on the outside, 0.25 cubits high. This rare object was severely damaged during excavation. — Also found are fragments of a small jar of the same clay, but painted externally as terra sigillata;

10. Six small jars of white pipe clay, with a handle and 0.175 to 0.285 cubits high; as well as fragments of a large jar of the same clay; shape similar to, for example, Memorials, Pt. XII:8 and XVIII:17. Among these jars are some that were previously found and preserved by the aforementioned gentlemen in Millingen.

11. Part of a white pipe clay beaker, shaped like a wine tumbler. Furthermore, among the more than 20 different types of broken pottery, are some fragments of an offering dish and a terra sigillata bowl, decorated with relief foliage.

Of glass:

12. A light green saucer-shaped bowl, height 0.04 and diameter 0.09 ells. Compare Staats-Courant, 1846, no. 297.

13. Fragments of two bowls like *12.

*14. A square light green bottle with a flat handle and the letters CG CP in relief on the bottom, arranged in such a way that a letter is located on each corner. The shape of the bottle is like, for example, in my antiquity.

- 46235 Communications, n. III, pl. V. 2; height 0.21, width 0.11 ell. Compare Staats-Courant 1846, n°. 297.
Of metal:
15. An iron arrowhead, oxidized and damaged, but still 0.07 ell long. 16. Two iron nails.
- 46240 *17. A gold coin (tiers de sous d'or), probably of Emperor JUSTINIAN (537-566), similar to a similar one by DE SAULCY, Monn. Byzant. Pl. II, 4; on the obverse, the barbarically carved bust of the Emperor with a difficult-to-read inscription; on the reverse, Victory, holding a cross in his left hand and a wreath in his right, with the inscription [VI]CTORIA AUGUSTORUM; in the excerpt CONOB (?)
- 46245 I cannot pass up this opportunity to share the results of the chemical analysis of the substance contained in two glass bottles, which were discovered last year at the same location and described in the aforementioned Staats-Courant under number 12 as scent and balm bottles.
- 46250 Mr. VAN DER BOON MESCH, professor of chemistry here, graciously undertook this chemical analysis and has kindly permitted me to publish the results he obtained in his own words. They read as follows:
"Bottle No. 1 (this bottle is convex at the bottom and 0.14 cubits long) contained, besides some sand, very small pieces of shapeless baked clay, a very small round
- 46255 tube, almost 1.5 lines in diameter and 1 line long, carbon dioxide, lime, and resin, and a small quantity of a soft, brownish substance." composed of fat mixed with a small amount of clay and bone ash. By treating it with ether, pure water,
- 46260 hydrochloric acid, ammonia hydroxide, and hydrochloric acid, potassium hydrate solution, and chlorammonium, chlorbanum, and gypsum solutions, fat, carbon dioxide, lime, silica, alumina, and phosphoric acid were separated from the substances present in this vial, and resin was also separated from the tube.
- "Vial no. 2 (this is 0.16 meters long and approximately the same shape as no. 504 letter H. of the Egyptian monuments in the Leiden Museum) contained a grayish-white
- 46265 substance, firmly compressed, with a broken white bone peg in the center. This grayish substance was composed of fat, carbon dioxide, lime, clay, white lead, traces of common salt, and bone ash. By treating it with ether, Water, hydrochloric acid, ammonia hydroxide, sodium carbonate for the blowpipe, nitric acid, silver oxide, ammonia solution, chlorbanium, hydrochloric acid, gypsum solution, nitric acid,
- 46270 hydrogen sulfide gas-grease, carbon dioxide, lime, alumina, silicic acid, lead oxide, chlorine, and phosphoric acid were separated from it. These constituents prove (this scholar concludes) that they are not scent bottles, at least not if they were originally filled with the aforementioned substances. Had they previously contained any essential oil or natural balm, a portion would have remained as resin. Most
- 46275 remarkable is that no. 2 as much lead white (carbon dioxide, lead oxide, and lead oxide hydrant)."
- The broken bone pin discovered between the slipper is still two inches long and two lines wide; it is fairly pointed at the intact end, but must have been thicker at the broken end. One could consider it the lower part of a hair needle or one of those
- 46280 needles that the ancients used to dye eyebrows and eyelids black, and of which wooden bronze needles are found among the Egyptian monuments of the Leiden Museum of Antiquities, described by Dr. LEEMANS in the Catalogue raisonné of those monuments, letter F, nos. 57 and 63; cf. his communication on the dyes of the ancients and the dyeing of eyelids and eyebrows, in the Algem. Konst en Letterbode 1847 nos. 33-34.
- 46285 Since it However, it is highly probable that our bone pin was closely related to the material in which it was found. And that material, according to chemical analysis, has proven not to be the same as that used by the ancients to dye eyebrows and eyelids. On the contrary, a great deal of lead white was found in that material, which is a component of what is actually called face paint. One would be inclined to
- 46290 consider this bone pin a fragment of a face paint spade and the bottles, or at least one of them, face paint bottles. Thus, it would follow from the arguments presented that these two seemingly insignificant Millingen objects provided a new contribution to Roman cosmetology, and also proof that similar bottles, previously mistaken for tear bottles, were later too generally labeled as perfume and balm bottles.
- 46295 The Curator of the Archaeological Cabinet at Leyden,
L. J. F. JANSSEN.
- (1) The last-mentioned objects (two of which are noted at the end of my report in the Staats-Courant of 1846, no. 297) are marked with a * in this report.
- 46300 Regarding inscriptions and excavations in the Rhineland:

May 8, 2017 Website of the National Museum of Antiquities reports about the coin:
Byzantine coin from Rhenen; silver; Justinian; 555-565 AD

- 46325 **Domination by Alice Roberts review - a brilliant but cynical history of Christianity**
- The humanist historian brings objects to life beautifully, but falters when it comes to people and their beliefs
- 46330 Domination tells the story of how a tiny local cult became one of the greatest cultural and political forces in history. Alice Roberts puts the case that the Roman empire lived on in a different form in the church.
- 46335 It is not an original idea - after all the foundation prayer of Christianity says "thy Kingdom come" - but Roberts tells the story from the point of view of individual parishes and even buildings. It's a revelation, like watching those stop-motion films of how a plant grows and blooms. There's a section about how a Roman villa might transform into a parish, the long barn providing the footprint, the web of relationships providing the social connection, the very tiles and columns providing the building materials. I can't think of anyone who writes better about the way
- 46340 objects can speak to us. There's a passage here describing her joy on grasping what it means that an ordinary-looking clay lamp found in Carlisle is purple on the inside; there's a beautiful afterword about the history of bells.
- 46345 The book revolves around the moment that Christianity became a religion of empire - the Council of Nicaea in AD325. Roberts patiently picks away at the mythologising around this key event to figure out how a multitude of competing interests was finally brought together under the umbrella of a particular Christology. She illuminates the way Christianity manages to be both centralised and local. This is still true: a recent Bible Society report shows that if you close a church a third of its congregation will not even try to find another. Truth may be universal, loyalty
- 46350 is parochial.
- The trouble with rolling your eyes is that you end up looking in the wrong direction*
- 46355 The book (according to its YouTube trailer, at least) promises to "lift the veil on secrets that have been hidden in plain sight" and find out who started Christianity and why. It is a humanist take, so you know the who and why is not likely to be Jesus, and the forgiveness of sins. And some of the secrets have been hidden in very plain sight indeed. The fact that Christians served in the Roman army won't be news to fans of that patron of archers, gay icon, and subject of portraits by Botticelli,
- 46360 El Greco, Mishima, Derek Jarman and Louise Bourgeois: Saint Sebastian. There is a bracingly contrarian takedown of Saint Paul, reframing him as a Trumpian grifter and stupidity advocate. It's fun but no more lifts the veil on his influence than pointing out that Marie Stopes was a raging eugenicist would lift the veil on the appeal of contraception.
- 46365 If you're looking for the open, inquisitive humanism of Erasmus or Ursula K Le Guin, then you'll have to read them. Prof Roberts's approach is more brisk. Anyone who thinks the church was about anything "other than money and power", she says, is suffering from Stockholm syndrome. Illuminators of manuscripts, builders of cathedrals, makers of the objects in which she herself finds such wonder were all
- 46370 either duplicitous or duped. In a splendidly anachronistic closing flourish she shelves the empire metaphor and instead compares the church to a corporation with directors and CEOs, franchises and a product to sell. This - with its implication of top-down control and single unswerving purpose - is queasily close to a conspiracy theory, albeit one that the best bits of this book refute.
- 46375 There is a lot of disappointed eye-rolling about the things that people believed - or pretended to believe. The trouble with rolling your eyes is that you end up looking in the wrong direction. One example among many: Roberts is dismissive of saints such as Columba and Aidan who chose to live on isolated islands, pointing out that these islands were not that isolated in days when sea was safer than roads. But surely they
- 46380 were choosing to embrace simplicity not just for its own sake but as a kind of protest, a holding to account. Yes, you can more or less see Bamburgh castle from Lindisfarne - but isn't that the point? That the king in his castle is forced to consider the saint in his cell every time he looks out from the battlements. To protest somewhere truly isolated would be like shouting "fuck the patriarchy" in a penguin colony. Of course from some angles Christianity does look like a business, but then from many angles a dolphin looks like a fish. It swims, eats and lives like a fish but there's an important difference. It suckles its young.
- 46385
- 46390 Back in 2016, Alice Roberts had a go at a vastly more sacred cow than Christianity. In a piece in Scientific American, she attacked David Attenborough himself for

promoting the "aquatic ape hypothesis", dismissing it as a theory of everything, and like all theories of everything, "both too extravagant and too simple". I know this because I kept the article on my desk for years. Cynicism is also a theory of everything. If the humanism that frames the narrative here is ever to offer more than eye-rolling, it needs to embrace the fact that, to quote the Alice Roberts of 2016, the reality is "both more complex and more interesting".

Among the sciences that present almost insurmountable obstacles, historical research holds a prominent place, especially when it concerns long-ago times. In our day, when the telegraph is at our service, when newspaper reporters strive to report what happened as quickly and as faithfully as possible, it is already difficult to judge what actually took place; we often encounter contradictory reports; sometimes what is asserted today is retracted tomorrow; How much more so must this be true for the distant past, when printing did not yet exist, when the events of the day were passed down orally and, if recorded, did not come to the attention of the general public. It has become clear, therefore, how the first pages of the history of every nation consist of myths and legends, in which the truth is shrouded and of which, upon close examination, sometimes precious little reality remains. In later history, there are stories and situations that have long been considered historical, but have dissolved into mists in the face of contemporary criticism. Such a fiction usually occurred inadvertently, the result of earlier credulity, of a lack of sense of truth and reality. So it is with the well-known legend of Tell in Switzerland, so it is with the stories of the deaths of Albrecht Beiling and Jan van Schaffelaar in our national history.

These are innocent errors. Worse is when history is deliberately falsified, in the interest of one person or one party. In this, the Roman Catholic Church has always demonstrated exceptional skill. It is well known how, even today, the story repeatedly surfaces that Luther committed suicide and that he only left the Roman Catholic Church so he could marry. Well known is Janssen's falsification of history in Germany, and among us, the distortion of national history by Nuijens. But all this is nothing compared to the falsifications committed in earlier times by the Church of Rome, with no other goal than to further its rule. A remarkable example of this is the so-called Donatio Constantini, or Donation of Constantine the Great. Now that it has become apparent, on the occasion of the peace conference, that the Pope, even by Protestants, is still more or less accorded a place among the Princes, it is not superfluous to fully illuminate the origins of the Roman bishop's temporal power. As is well known, the Pope of Rome was a secular monarch until 1870. Although the Papal States had already been taken from him, the capital remained in his possession thanks to the support of French soldiers. However, when these soldiers withdrew due to the war with Germany, the troops of the Italian government entered the gates without a fight, and Rome was declared the capital of Italy. The Pope was allowed to retain only his palace, the Vatican. And although this palace is a colossal building with 1,100 rooms and a garden where one can ride around in a carriage and horse, in this respect the Pope is equal to any private individual who lives in a large house and owns a large country estate; there can no longer be any question of secular territory for him. He is a dethroned monarch, who by the grace of the Italian government has remained in possession of that palace. Nothing can be said against that. When, then, did this secular territory, which the Pope lost in 1870 and to which he still lays claim, begin? History answers: in the middle of the 8th century. Then, Pepin the Short, anointed king of the Frankish empire by Pope Stephen II in 754, surrendered to the Pope all the cities he had conquered in a war with the Lombards. From that time on, the head of the Roman Church became a secular monarch, who negotiated with kings and emperors as their equals and even felt superior to all kings and emperors. How Pepin came to thus relinquish what he had conquered by force of arms with great effort, at the cost of much human blood, can be partly explained by the spirit of the times, which believed that a head of the Church gained prestige when he could rule over lands and peoples as a monarch. This idea was not new. From ancient times, Christian emperors were accustomed to granting bishops, in addition to their ecclesiastical domains, considerable influence over the administration of secular affairs. Between that influence and actual governance was only a step. The boundaries between the secular and the spiritual were almost nonexistent. more. The Master's words, "My kingdom is not of this world," had been completely forgotten. Until the time of the Reformation, we see popes, cardinals, and bishops participating in hunting, and in times of war, mounted on warhorses, armored and armed, marching out to battle. But beyond all this, there was a special reason why Pepin the Short gave such a vast territory to Pope Stephen II. To understand this properly, we must try to imagine ourselves in the circumstances of that time. In the mid-8th century, the Pope of Rome was in a precarious position. The

city was threatened by the Lombards, a powerful tribe who, since 568, had conquered most of Italy from the emperor of the Eastern Roman Empire, the so-called Greek emperor, but had not been able to completely oust him from Italy. Rome and the Exarchate of Ravenna were still under his jurisdiction. The latter was eventually conquered by the Lombards, but lost again by their king, Luitprand, in the mid-eighth century. His successor, Aistulf, reclaimed it in 751 and now marched against Rome. While Pope Zacharias had succeeded in restraining the pious Luitprand through religious considerations and persuading him to withdraw from Rome, his successor, Stephen II, found no sympathy from the less pious Aistulf. Although he sent his brother, the deacon Paulus, *) to the king, along with the envoy of the Greek emperor, to persuade him to return the places he had occupied to the emperor, it was to no avail.

The pope now turned to the Greek emperor with an urgent plea to send an army to Italy's aid and to liberate both Rome and the entire province from the Lombards. But here too, he knocked on a closed door, and now, in desperation, the Pope turned to the West to seek help from Pepin, the King of the Franks. Pepin was one of those mayors of the palace, or administrators of the royal house, who, during the collapse of the Merovingian royal house, had managed to elevate themselves above the king through their skill and bravery. Only the title of king was still lacking. He managed to obtain this through the Pope, aided by Boniface, the apostle of the Germans. Boniface was devoted to the authority of the Pope with heart and soul. The Christianity he preached had the same fundamental articles of faith: blind submission to the Holy See. He had also managed to impress this upon the Franks. Pepin, therefore, believed there was no better way to achieve his goal than to appeal to the Pope. And the Pope declared that "he who had the power also had the right." Pepin was anointed king by Boniface, amidst popular acclaim. He was therefore under an obligation to the pope. His successor, Stephen II, took advantage of this in his perilous circumstances. Negotiations were opened, first through a pilgrim who brought Pepin a letter from the pope requesting him to send envoys to Rome, pleading with him to come to France and escort him there. Pepin complied with this request and sent Abbot Hrotgang to Rome, then a second, Dux Autchar, the king's trusted confidant, both promising to do what the pope desired. He had sought and received the consent of the leading figures of his realm for this. The pope invoked religious, not political, reasons for his visit. "It is," he says, "by God's command that I come to you. The good work has been reserved for the king of the Franks, to raise the church from its humiliation and to restore the prince of the apostles to his right. None of your ancestors deserved such a glorious task; but God has chosen you and ordained you before all time, as it is written (Rom. 8:30): 'Whom he predestined, them he also called; And whom he called, them he also justified.' You are called; hasten to vindicate the prince of the Apostles; for it is written: 'Faith is justified by works.'" (James 2:26).

"At God's command," the pope now travels to France, anoints Pepin once more at St. Denis (July 28, 754), and falls on his knees before him, praying that he protect him from the Lombards. Pepin declares himself willing to do so and also promises to donate all the cities he conquers from the Lombards to the pope. How? we ask. Wasn't this much more than the pope desired? The opposite is true. In the letter of Stephen, from which we quoted a few lines, we already heard him speak of a "raising (exaltare) of the church" from its humiliation, a restoration of the pope to his right. And as we read further, we begin to suspect that the Pope made his trip to France not intended something more than just protection against an overwhelming enemy. He draws a comparison between Pepin and Emperor Constantine the Great. "Just as God had acted in this case through the apostles Peter and Paul and through Pope Sylvester, so it is now. God approaches Pepin through his Apostle Peter, through Pope Stephen II. Thus, the blessing and grace of Saint Peter are also poured out upon Pepin."

Negotiations preceded the pope's arrival in France, and these negotiations had reached a successful conclusion. But when the pope invokes the right of the church and Pepin's obligation to raise it from its humiliation, he must have been able to prove that right with the documents. This becomes especially clear when we hear the pope, in his correspondence with Pepin, speak of a restitution (restitutio) of what belonged to the church. And when in 754 an envoy from Constantinople appeared at Pepin's camp in Pavia to request the restitution of his property on behalf of his master, the Greek emperor, Pepin replied, "that he had not gone to war for the convenience of any man, but solely out of veneration for Saint Peter and to obtain forgiveness of his sins."

The pope had thus managed to convince him that forgiveness of his sins could only be

obtained at the cost of surrendering what he intended to conquer from the Lombards. To this end, he invoked Matthew 16:18, 19, the right granted to Peter, and therefore also to his successors, to bind and loose. He had already exercised this right when he declared the last Merovingian king dethroned and had Pepin anointed in his place. But he also sent them a letter from Peter himself, in which this Apostle implores the Frankish kings, now with promises and now with threats, to save Rome and the Roman Church—a letter that has been included as genuine in the collection of the Codex Carolinus!

However, all this was not enough to achieve Stephen's intended goal. To this end, Pepin was shown a document, said to date from the 4th century, in which Constantine the Great had granted Pope Sylvester all sorts of privileges for him and the clergy, and finally presented him with the city and territory of Rome, along with the Exarchate of Ravenna. This document is the infamous Donatio Constantini, which fully convinced Pepin and was ratified by his son, Charles the Great. Thus, he came to donate everything he had conquered from the Lombards to the papal throne. We must now examine this document more closely.

It is reviewed in its entirety by Prof. J. Friedrich, in his important book: The Constantinian Gift *). It looks strange. After a long introduction, listing all of Constantine's titles, it begins with a confession of faith, in accordance with the Symbolum Nicaenum. Then the emperor recounts how he had been struck by a severe leprosy all over his body and had consulted many physicians in vain, when some priests from the Capitol came to him and told him to make a pool in the Capitol, fill it with the warm blood of young children, and then bathe in it. At his command, a number of boys were gathered, and the priests stood ready to slaughter them; however, when the emperor saw the tears of their mothers, he restrained the priests and returned the boys, laden with gifts, to their mothers. The following night, the empress dreamed of the apostles Peter and Paul, who told him that, because of the compassion he had shown, they had been sent by Christ to give him good advice for his recovery. Pope Sylvester, due to the emperor's persecution, had fled to Mount Seraptus (Soracte) and had found refuge in a cave with his clergy. He was to send for him from there; the pope would then show him a consecrated pool, in which he was to bathe three times, after which the leprosy would disappear. In gratitude for this favor, he was then to restore all the churches of the world, abandon all superstition and idol worship, and convert to the one true God.

After the emperor awoke from sleep, he summoned Pope Sylvester and told him his dream, asking which gods Peter and Paul were. "They are not gods," said Sylvester, "but Apostles of our Savior Jesus Christ. Don't you have a picture of those apostles?" asked the emperor, "so that I may see if they are the same men who appeared to me in the dream." The pope produces the requested pictures, and the emperor immediately recognizes the men he has seen. The pope now imposes a period of penance on him in his palace, the Lateran, to atone for his sins against the Christians. The clergy then laid hands on him and brought him to the Pope, before whom he abjured Satan and his works, along with those of all idols, and professed his faith in the almighty Father and his Son before all the people. He bathed three times in the consecrated pool and was cured of his illness. He was clothed in white robes, anointed with holy oil, and consecrated to the Father, the Son, and the Holy Spirit by the sign of the cross on his forehead. He then received baptism.

The following day, Sylvester instructed him about the power conferred on Peter by Christ, according to Matthew 16:18, 19. The emperor then recognized the Pope as the vicar of Christ and the successor of Peter. He decided to elevate the Roman Church above his own worldly domain and endow it with imperial splendor. He placed it above the churches of Antioch, Alexandria, Constantinople, and Jerusalem, and the Pope above the priests of the entire world. He founded a magnificent church in the Lateran and endowed it with all manner of gold and silver ornaments.

Furthermore, the Pope was given the Lateran as a residence; he was permitted to wear all the imperial ornaments: a gold crown, the phrygium, the lorium (a necklace), a purple robe, etc. He returned to this later, but with the remark that Sylvester, who already wore the crown of Peter, the tonsure, did not want to wear a gold crown over it and was content with the phrygium (tiara). Why he retracted this point and added that he performed the duties of Sylvester's groom, leading his horse by the bridle, will become clear later. The Roman clergy was placed on an equal footing with the Imperial Senate, thus obtaining the ranks of Patricius and Consul. They were granted the right to wear the insignia of imperial noble officials. They were permitted to serve the Pope as chamberlains, doorkeepers, and bodyguards. They were permitted to ride horses with white robes and wear white sandals, which was considered an

46600 extraordinary distinction. If a member of the Senate, with the Pope's approval, wished to become a clergyman, no one was permitted to prevent them from doing so. Finally, and last but not least, the Emperor granted the Pope and his successors the authority over the city of Rome and all the provinces of Italy and *) the West. And to demonstrate the exalted power of the Pope, Constantine decided to move his

46605 imperial seat to Byzantium and found a new city there (Constantinople). "For it is not right that the earthly emperor should rule where the dominion of the head of the Christian church is established." These decrees must remain inviolate until the end of the world. They are sworn to by the emperor before God and declared effective for all his successors, while the most terrible punishments in this and the next life are

46610 invoked against all who would deviate from them. This decree was ratified by the emperor with his own signature.

This was the Donation of Constantine, which was presented to Pepin. He was not a man to doubt or investigate the authenticity of this document, but accepted it faithfully as coming from Constantine the Great. As an obedient son of the church, after his

46615 victory over the Lombards, he placed the keys of the Exarchate, with the city of Ravenna and twenty other cities—of Emilia, Flaminia, and Pentapolis—on the altar of St. Peter's Church. Charlemagne was less credulous and refused to hear the story of Constantine's conversion. But he recognized his Donation as genuine and sealed his father's gift. Indeed, it was explained to him that Pepin had donated much more to

46620 the pope, including Corsica, Venice, Istria, Luni, Monfelice, Parma, Reggio, Mantua, and the duchies of Spoleto and Benevento, so that he retained little of his Italian possessions. Much of it, in fact, did not even belong to him.

The popes made little use of the Donation Charter in the early years. Their secular dominion, including Rome, existed more in name than in reality. It later became a

46625 constant bone of contention between them and the German emperors. It was not until 777 that Pope Adrian I mentioned the charter in a letter to Charlemagne. Again, in 785, in a letter to the Greek emperor. Expressions borrowed from the document also appear in the Libri Carolini, four books commissioned by Charlemagne and written by Frankish theologians on the subject of the iconoclasm.

46630 In 840, it was included in a collection of so-called papal decrees, known as the Pseudo-Isidorian Decretals. From then on, it was also disseminated outside Italy, particularly in France.

Among scholars experienced in ecclesiastical history and literature, Aeneas, Bishop of Paris, and Hincmar, Bishop of Rheims, it was recognized as genuine, although the

46635 latter was deeply convinced of its inauthenticity and, if need be, provided evidence of it. Some criticism, some doubt about its authenticity, thus began to surface even then.

The popes made no mention of the Donation in their letters until Leo IX, who, in 1054, confidently communicated almost the entire text to the Patriarch of

46640 Constantinople, Michael Gerularius, so that he would "convince himself of the earthly and heavenly Empire, the royal priesthood of the Roman See, and that no trace of doubt would remain in his mind," as if this See "wanted to arrogate power through tasteless and old wives' tales." He is the only pope who made the document public in its essence. To the extent that he did so, he did so against his intention, in that

46645 it provoked criticism.

Gregory VII, his successor, does not mention the Donation in any of his letters. But in 1081, he did demand of Rudolph of Swabia, who had declared himself king against Henry IV, an oath to restore the lands and revenues granted to Saint Peter by

46650 Constantine and Charlemagne. His friend, Cardinal Damian, appealed to the Germans to the authority granted by Constantine to the popes to judge Italy. And when the Margravine Matilda, in 1097, granted the provinces of Liguria and Fuscina to Gregory, we recall that her confessor, Anselm, recorded the Donation in his legal book, and we now understand how she arrived at this generous gift. However highly Gregory VII may have ranked in other respects, he did not hesitate to use questionable documents to

46655 expand his power. For example, in 1081, he claimed that, according to the documents preserved in the archives of St. Peter's Church, all of Gaul had been made tributary to the Roman Church by Charlemagne and that this emperor had donated all of Saxony to that church.

46660 As we have seen, Charlemagne had already given the island of Corsica to the Pope. Urban II seems to have been unaware of this; at least, he based his claim to that island on the Donation of Constantine, with the peculiar assertion that all islands were, by law, the property of the state and that Constantine therefore had the right to dispose of them. This assertion was now built upon by including Ireland among the

46665 islands. It was Adrian IV, a native Englishman, who first came up with this ingenious

idea. As a great favor, he entrusted the administration of that island to the English king, Henry II. It was a disservice he rendered him, for Ireland still had to be conquered, which was only achieved after a struggle lasting 500 years. Attempts were made to convince the Irish that their island had formerly belonged to the Pope and that he had ceded it to the English king; but they were not foolish enough to believe it. They knew full well that neither the Roman emperors nor the Roman popes had ever possessed a foot of land on their island.

Rome's example of enriching itself by invoking Constantine's Donation was too tempting not to be imitated elsewhere. Thus, one reads in a chronicle of the church of St. Mary of the Principate that the emperor had granted Sylvester, in addition to his other possessions, the kingdom of Sicily on both sides of the Faro. Only Naples was excluded; The emperor and the pope had indeed visited that city, and the former had attended mass in the aforementioned church more than once. He had granted it all sorts of temporal privileges, including a number of estates and possessions, but had not presented it to the pope as a gift.

It is noteworthy, however, that in Italy there was no objection to rejecting the Donation if it conflicted with alleged rights or political plans. For example, in 1105, the monks of the monastery of Farfa, which had been endowed with numerous privileges by the emperor, opposed several Roman nobles who, based on the Donation, wanted to appropriate a castle. While they did not deny its authenticity, they attempted to prove on historical grounds that it could not have referred to the possession of Italy, but only to spiritual rights, since all emperors after Constantine had exercised unlimited rule over Italy. Paschal II, then pope, was so little recognized in Rome itself as lord of Italy that the monks dared to declare without contradiction before the Roman court that the pope was not entitled to worldly rule, since he had received not the keys to an earthly kingdom, but only to the kingdom of heaven.

In 1152, a follower of Arnold of Brescia, Wetzel, in a letter to Emperor Frederick I, decisively opposed the authenticity of the Donation. "That lie and heretical fable," he wrote, "that Constantine ceded the imperial rights in the city to Pope Sylvester is now so clear that even day laborers and women could convince the most learned of it, and the Pope and his cardinals would have to cower in shame." The grounds on which Wetzel relies are incorrect. But it is noteworthy that even then, doubts about or the conviction of the Donation's falsity were so widespread that the author dared to invoke day laborers and women.

Little attention was paid to this contradiction by the papal government. On the contrary, the document continued to be used in Rome where appropriate. It was incorporated into the legal records by Anselm of Lucca, Cardinal Deusdedit, and Ivo of Chartres. Otto of Freising claimed, in his Chronicle of 1143-1146, that all western lands owed the German and French tribute to the Pope. Others inferred from this that imperial power was a voluntary gift from the Pope and that the Emperor should therefore be considered a vassal of the latter. On this basis, in 1157, to the great indignation of the Germans, Adrian IV spoke in a letter to Frederick Barbarossa of "benefices" granted to the Emperor, and even presented the imperial crown as such a benefice. Provost Gerhoh of Reigersberg rightly raised his voice forcefully against this, although he was otherwise deeply sympathetic to the Roman see.

Meanwhile, historians began to treat the Donation with increasing caution. Sicard of Cremona speaks only in general terms of "regalia" granted by Constantine to Sylvester, without further defining those regalia. Romuald of Salerno speaks only of the bishops' submission to the pope. Robert Abolant speaks only of a "privilege" granted by Constantine to the popes. Tolomeo of Lucca speaks only of rights and privileges with which the emperor had endowed certain Roman clergy, the later cardinals. The papal historian Bernard Guidonis is entirely silent on the Donation. Amalrich Augerii mentions only the government of Rome and the granting of the imperial insignia. The latter is not even mentioned by the Belgian Balduin, a monk at the Monastery of Ninove. Another, Gotfried, a canon at Viterbo, allows the proponents and opponents of authenticity to argue with each other, without reaching a decision. While Gervasius of Tilbury, in 1211, believed that Constantine had indeed granted Sylvester royal power over the western lands, but without thereby granting him the empire itself or imperial dignity.

Against this, the jurists and the popes continued to maintain the authenticity of the Donation for a long time. Innocent III says in a sermon on Sylvester that Constantine had granted him "all the kingdoms of the West." The same man, whose beautiful statement we placed at the beginning of this article, dared to defend the temporal power of the popes by invoking the plurality of keys, mentioned in Matthew 16:1. Only the church, he says, can command, like Christ: "Put your sword into its sheath." He

was also the one who compared the rule of the pope and the emperor to the light of the sun and the moon. The moon, that is, the emperor, receives its light from the sun, the pope. Before him, Gregory VII had asserted that all secular power that does not acknowledge its dependence on the Church is robbery and theft. The first king, he said, was the hunter Nimrod, who oppressed his fellow citizens, and to this day, most princes are true sons of this hunter.

Gregory IX asserted to Emperor Frederick II that "Constantine, with the imperial insignia, entrusted Rome, its territory, and the Empire, the realm, to the care of the popes forever. It was a favor of the popes that they had granted the emperors the power of the sword, so that they could be called to account by the popes at any time." In a letter to Bishop Herman of Metz, the same Gregory invokes a letter from Pope Gelasius to Emperor Anastasius, but through elaborations and conflating phrases, manages to distort this so that Gelasius says the opposite of what he intended, since he had actually admonished the heads of the church to obey the imperial laws.

Innocent IV went even further. He called it an error that Constantine was the first to grant temporal power to the Roman See. No, Christ himself granted both royal and priestly power to Peter and his successors. Constantine, therefore, did nothing more than return the power he wrongfully exercised to its rightful owner, the church, and deprive it of this power recovered. This doctrine was formalized by Roman court theologians. Christ, they said, was lord of the entire world; at his ascension, he bequeathed this dominion to his vicar Peter and his successors. Even the most powerful monarch possesses only as much as the Pope has granted him. This theory was intended to deprive the objections to the Donation of Constantine of all force.

For these objections became increasingly loud. A French lawyer, Pierre Dubois, stated, in his dissertation on the bull of Boniface VIII, that the Donation was unlawful from the outset on legal grounds. He invoked the judgment of all legal scholars, but added the peculiar reasoning that the long statute of limitations now granted it a legitimate existence. As if theft ceases to be theft by prolonged possession, a lie by prolonged persistence. On the same grounds as Dubois, in 1306 the Dominican Johannes Quidort, master of the theological faculty of Paris, challenged the legitimacy of the Donation. An emperor, he argued, may only expand the empire, not shrink it. Such a distortion could be undone by any successor, since the emperor alone administers his lands.

During the period of ongoing conflict between the empire and the papacy, from the death of Frederick II until Louis of Bavaria, 1250-1346, the Donation was frequently discussed. The Minorite Marsiglio of Padua, who sided with the emperor, was unsure what to do with it and used it only to emphasize that an emperor who can grant something to a pope thereby proves to be superior to him.

Opinions regarding the extent of the Donation were divided in the 13th and 14th centuries. Some, like Pope Nicholas III, applied it only to Rome. Others, like Clement V, understood it to encompass all kinds of imperial rights in general; or, like John XXII, they spoke only of the imperial seat that Constantine had granted to Sylvester, which the latter could freely dispose of, or, like a Dante commentator, of "all imperial dignities." In contrast, Rudolph of Colonna mentions Rome, Italy, and all the western empires. Nicholas of Clamenge even claims that Constantine had given the entire western empire to the Roman Church and appointed the cardinals as senators.

This went too far. The Parisian theologian Jacques Almain declares that Constantine could not dispose of any land without the consent of the people and that, moreover, the Romans had never been legitimate lords of Gaul. But he adds that it is the general doctrine of the doctors that Constantine never actually renounced the western empire. Nowhere, he says, does one read that. Luipold of Babenberg also dedicated his reflections, in a book on the Roman Empire, to the Archbishop of Trier (1307-1054). He admits, however, that all Roman legal scholars consider the Donation valid and irrevocable; but he also knows that all emperors after Constantine, as well as before him, ruled the West. He even found passages in ecclesiastical law books that only mention a surrender of the city of Rome. He dares not decide and leaves the matter to higher wisdom.

Thus, uncertainty remained for a long time. It was felt that something was amiss in the matter; but a thorough investigation was not yet undertaken. At the end of the 15th century, Johan Hug, pastor of Strasbourg, still dared to defend the Donation. And in Germany, on this basis, the clergy imposed fines for matters that fell entirely within the scope of civil law.

However, alongside the desire to enhance the church's prestige through substantial donations, the conviction arose as early as the 12th century that the church's corruption was primarily due to the clergy's greed, and that this was hindering a

radical reformation of the church. People remembered that the clergy had originally been poor and had to live on charity, and they lamented that Constantine and Sylvester had awakened in them the desire for wealth. The various sects that arose in the Middle Ages fostered this belief and spread it in Italy, Germany, and France. They themselves set the example of this poverty. Consider the Poor of Lyon. Dante's voice in this spirit was heard loud and clear. He names greed and simony as the ill-fated fruits of the Donation. Ottokar von Horneck says that Constantine gave the popes the sword, along with the stole, which they nevertheless did not know how to wield. Walther von der Vogelweide has an angel cry out "Woe!" over the church, which has imbibed poison. The St. Rabsburg chronicler Königshofen says that a voice was heard across Rome: "Today the bile and poison have been poured out in holy Christendom. And know that this is still the source of all strife between popes and emperors." The Minorite Johan von Winterthur, the theologian Johannes van Parijs, and, a hundred years later, the Augustinian monk Dietrich Vrie of Osnabrück, all speak in the same spirit. It became a popular proverb that an angel had proclaimed Woe! upon Rome. At first, it was a fallen angel, the devil himself; later, he became an angel of light. The idea that Constantine had corrupted the church through his Donation was also shared by Wicleff.

However, belief in its authenticity would not last long. As early as 1443, Aeneas Sylvius, then secretary to Frederick III, later Pope Pius II, advised the emperor to convene a council to discuss the issue of the Donation, which "confounded many minds." Apparently, he himself was convinced of its inauthenticity; neither among the ancient historians nor among Damasus, that is, in the Papal Book, *), he said, is there any evidence of it. He wanted the council to declare the inauthenticity. Around the same time, voices were heard from various quarters in the same vein. Cardinal Cusa did not yet dare to declare himself entirely in favor of its inauthenticity. In contrast, Reginald Pocock, Bishop of Chichester, conducted a very careful historical investigation of the sources. But Laurentius Valla went the furthest. Born in Piacenza in 1407, he served as a teacher of fine arts in the principal cities of Italy in 1431 and 1433. His liberal views incurred the enmity of the scholastics, but he was protected by the King of Naples. Here he published his treatise "De donazione Constantini," in which he demonstrated that the pope had no right to Rome and the Papal States, that he was only the Vicar of Christ, but not of the emperor. In a rhetorical style, he couched the evidence for the falsehood in the form of conversations between Constantine's sons, Pope Sylvester, and the Roman people, thus putting an end to the matter once and for all. The Inquisition instituted a prosecution against the author, which he escaped by flight. In Rome, however, he was protected and accepted by Pope Nicholas V, without having to recant. *)

For another hundred years, Roman legal scholars clung to the authenticity of the Donation. One of the most famous jurists of the 15th century, Nicolaas Tudeschi, declared any doubt about its authenticity to be heresy. So did Cardinal Parisius, the Spanish bishop Albertinus, Antonius Rosellus, and Louis Gomez. Cardinal Albano considered it evidence of extreme impudence not to bow to the unanimous opinion of so many and such great Church Fathers, or, as Peter Igneus put it, of the entire academy of canonists and legalists.

When Cardinal Baronius finally added his voice to that of the opponents of its authenticity, the fate of the Donation was sealed. He did, however, maintain that Constantine had offered Rome to Sylvester, but that he had refused; nevertheless, he considered the document itself a fabrication. Even popes now smiled at the people's credulity. **) Emperor Otto III had already done the same five centuries earlier. When Ulrich von Hutten, in 1510, was about to leave Bologna, he found Valla's writings in the possession of his friend, the humanist Cochlaeus. He was so captivated by it that he requested a copy, which was provided to him by Frederick Fisher, canon of Würzburg. In 1517, he published it with a mischievous dedication to Leo 7th, whom he praised in various ways as the most excellent pope, a friend of the truth, to whom a writing like this would therefore be especially welcome. He hoped that Leo would openly admit his enthusiasm; then he would make an effort to find something similar for him. He particularly highlights the clumsiness of the deception in this dedication, from which one could sense that it was aimed at the Germans, whom the Italians were accustomed to saying had no brains. If they had been dealing with other peoples, they would have planned things more cleverly. When this publication came into Luther's hands, he was astonished that such blatant lies could have persisted for so many centuries, indeed, could have been considered articles of faith. Now it became fully clear to him that the Pope was none other than the Antichrist.

The deception was indeed so clumsy that it is almost incomprehensible how anyone

could have believed in the truth of this fable for eight hundred years. The story of Constantine's baptism by Sylvester had already been thoroughly discredited.

The legends, from which one usually drew one's knowledge of the fourth century, were in direct conflict. He was not baptized by Sylvester, but by the Ananian bishop Eusebius; not in Rome, but at the castle of Akyron near Nicomedia; not twenty years before his death, but only at the end of his life.

This legend originated as early as the end of the fifth century, probably in Rome. It survives only in a Greek translation and contains no historical element. According to it, Constantine was initially an opponent of Christianity and had many Christians who refused to sacrifice, including his own wife, put to death. Fearing him, Pope Sylvester fled to Mount Soracte. Then follows the story of the emperor's leprosy, which we already know, of his miraculous healing and baptism, whereupon all of Rome, the Senate and the people, believe in Christ. Because Constantine's baptism in the East was recounted by too many Church Fathers to deny it any credibility, the explanation was devised that another Constantine, a nephew of the emperor, was meant; or it was claimed that Constantine had converted to Arian Christianity and been baptized a second time in Nicomedia. The story of the baptism in Rome was included in the Liber pontificalis without any criticism, and the subsequent popes—Adrian I, Nicholas I, and Leo IX—did not hesitate to accept it as undeniable truth in their writings. Even long after the fabrication had been proven by undeniable evidence, men of repute continued to cling to the legend.

Today, no one, even among Roman theologians, dares to defend it. And the Donation, too, has lost all historical significance after Laurentius Valla and the age of the Reformation. The only question about which there can still be a difference of opinion is that of the time in which it originated. That it was concocted in Rome is beyond all doubt. It cannot have originated in Greece, as some have believed, for internal reasons. It also only became known in Greece at the end of the twelfth century. Of France, as others believe, even less can be said. Everything points to its origin in the seat of the papacy. There, in the eighth century, the desire for secular rule had awakened. In 728, Gregory II already attempted to establish a league of cities against the Greeks and Lombards, of which the papacy would be the head and center. That attempt failed. But it increasingly fostered the desire to somehow free itself from the crumbling Eastern Roman Empire and the rule of the Lombards. The city of Sutri, not far from Rome, had already been donated to the papal throne by Liutprand; it was the foundation of the secular realm. *) That peach tasted like more. And now an obliging spirit came up with the idea of having Constantine the Great fulfill the pope's ardent desire for supremacy. Who that was will become clear to us later. As for the time of the document's creation, it was previously believed **) that it first originated in the ninth century. However, the research of Professors Döllinger and Friedrich has clearly shown that it is of earlier origin. In his Papst-fabeln ***) (1863), Döllinger generally accepted a period between 752 and 774, in view of the mention of the Donation by Pope Adrian I. He is inclined to attribute the fiction to Charlemagne, as how Pepin came to donate so much land to the Pope remains unanswered. In his 1893 work, Das Papsthum ****), he arrives at a more precise and earlier determination. There it is stated that the document was intended to be shown to Pepin and must have been written shortly before 754, just like the infamous Epistle of Peter. This makes it perfectly clear how the credulous Pepin complied with Stephen's wish by threatening him with the most terrible tortures of body and soul and promising complete forgiveness of sins. We possess an even more detailed examination of the matter in Friedrich's important 1889 book, "Die Constantinische Sehenkung" (The Constantinian Recording). In it, he adds new evidence for the existence of the document in the eighth century, at least before 785. But he also demonstrates that it did not suddenly appear in the form in which we know it today. He divides it into an older and a more recent document. And he does so so clearly that we think of Columbus's egg. Who didn't find it strange that the most important thing in the Donation, the surrender of such a vast territory, is only mentioned at the end, after mentioning all sorts of distinctions of far lesser value? And then, after everything has been enumerated by which the Roman Catholic church was elevated in prestige, she revisits the matter and presents it differently. Constantine had given Sylvester his diadem, the crown, and the phrygium, and he had accepted everything. But now we read that Sylvester felt he was not entitled to wear a golden crown above Peter's crown, the tonsure, and contented himself with the phrygium. Furthermore, the emperor performed the duties of a groom for the pope, leading his horse by the bridle. First, the Lateran Palace had been given to the pope; now, in addition, the city of Rome, with Italy and the western provinces, is added.

- 46930 Constantine leaves the West and establishes his seat in the East, because it is not fitting for a secular ruler to occupy the same throne as the ecclesiastical; the former yields to the latter. Whereas the emperor had first made the pope prince over all the priests of the entire world, in the final section it is the "heavenly emperor" who grants the earthly emperor his exalted rank.
- 46935 All this demonstrates that the charter of the Donation was initially simpler. But once the process of condensing had begun, and with success, the papal court saw no objection to resorting to new condensations and enriching the church with ever greater power and influence through Constantine.
- 46940 When would this first and most extensive section have originated? According to Friedrich, in the seventh century. From a linguistic perspective, this is already clear. A number of words and expressions are used in it in a sense similar to that found in contemporary writers of that century, and no longer so. This is supported by numerous pieces of evidence. Friedrich believes he can pinpoint the time of the first drafting of the document even more precisely, namely during the pontifical reign of
- 46945 Honorius I or Martin I, i.e., between 625 and 653. This, too, is demonstrated by numerous pieces of evidence. The confession of faith, which opens the document, is particularly relevant here. And why this confession was placed at the head of the Donation is also explicable. It vindicated Pope Honorius, who had been condemned for heresy, and demonstrated that he had taught nothing other than what Pope Sylvester
- 46950 had already presented to Constantine. The document must have been composed only after Honorius' death in 638 and before the banishment of Martin I in 653.
- 46955 Friedrich also points to the precedence accorded the Lateran Church over St. Peter's Church in the first section. The former is first called Basilica Gonstantiniana in 487, without its construction by Constantine being inferred from this. Gradually, it emerged as the main church, the only church where baptisms took place. St. Peter's Church was only mentioned as a baptismal church after 600, and then, in the time of Honorius I, after 625, it began to be placed above the Lateran Church, although opinions remained divided for a long time as to which church had precedence. Indeed, under Honorius, and with his support, the clergy of the Lateran Church succeeded in
- 46960 elevating themselves above those of St. Peter's, and we find expression of this in the first part of the Donation. Martin I confirmed the precedence of the Lateran Church in a papal letter. Since then, there has been no mention of this.
- 46965 The question of how the Donation was condensed in the seventh century is obvious. The struggle for precedence between Rome and Constantinople had lasted a long time. By this means, they attempted to secure Rome's definitive victory. Constantine the Great, who, as the first Christian emperor, was highly revered throughout the entire church, was made to solemnly declare upon his conversion to Christianity that, by his imperial will, he granted Rome precedence (privilegium) above all churches. This
- 46970 declared the Bishop of Rome the head of all bishops worldwide, a title already offered to Gregory the Great but indignantly rejected by him. Since the seventh century, the Bishop of Rome, who previously called himself "the servant of servants," has been called the "universal pope" (universalis papa) in all official documents. Papal authority is equated with that of the emperor. To this end, Sylvester receives the imperial palace in the Lateran and all the insignia of imperial dignity, the
- 46975 crown, the scepter, etc., all the honors due to the emperor. Rome was still considered the seat of the empire (Imperii solium). But the Senate no longer existed, and in reality, Rome was ruled by the pope. It was obvious that he now also considered himself the owner of the imperial crown and claimed the right to wear the imperial insignia.
- 46980 Once this was accepted, his entourage also had to correspond to the high rank he held. Hence, the Roman Catholic clergy is being considered. For a long time, they had been accustomed to adorning themselves with insignia in papal processions. Now, they wanted to elevate them to the rank of the former Senate. In the time of Gregory the Great, their presumption had become apparent. What they were denied then, they now
- 46985 managed to obtain through the Donation. And if one examines the various insignia, one finds new evidence for the origin of the first part of the Donation in the seventh century. In the eighth or ninth century, granting such insignia would have been meaningless. At the same time, this part of the document sheds a unique light on the customs and traditions of the time in which it originated.
- 46990 A hundred years later, however, people were still not satisfied with all the privileges granted to the papal chair, and once again the old and tried method of forgery was resorted to. An addition to the Donation was made, beginning with the words: Decrevimus itaque et hoe. At the end of the seventh century, attention was again focused on Pope Sylvester. In 687, between the death of Pope Conon and the
- 46995 election of his successor, Sergius, an oratory, a place of worship, dedicated to

Sylvester, previously unheard of, suddenly appeared, located in the Patriarchy of the Lateran and decorated with paintings by Pope Zacharias. A few years later, Bishop Aldhelm, who was in Rome in 690, published an addition to the Sylvester legend: a new dream of Constantine, which led him to found Constantinople and establish his see there. He did this at the pope's command. And now, in the most recent part of the Donation, we find the answer to the question of why this had to happen. This was because the earthly emperor was not allowed to have his seat in the same city where the heavenly emperor enthroned the head of the Christian religion.

When Pepin's brother, Carloman, went to Rome in 747 and became a monk, he retreated to Mount Soracte, where Sylvester had sought refuge, and there founded a monastery, which Pepin requested as a gift. This shows that Pepin was also a devotee of Sylvester, a veneration that was promoted by Popes Stephen II and Paul I. Thus, in those days, one could readily present the Sylvester legend and make of it what one wished. This most likely occurred shortly before the year 754, when Pepin undertook his first expedition against the Lombards. From 752 onward, the popes in their letters speak not of a gift, but of a restitution, sometimes to St. Peter, sometimes to the Roman Republic. And when Stephen II urges Pepin to do so, he does so not on political grounds, but at God's command and by appealing to Romans 8:29, 90. Just as God had worked with Constantine through Peter and Paul, and Paul in turn through Sylvester, so it was now. Pepin was the chosen one, to whom God approached through his apostle Peter, and Paul through the pope. Therefore, anyone who wants to achieve anything must have Peter and his vicar as "protectors," and to achieve this, the Roman Church must be "elevated," restored to its glory.

Thus began the negotiation between Stephen and Pepin. It ended with the Donation of the Exarchate, along with Rome and twenty other cities of Italy. In between lies the supplemented document, which led Pepin to believe that he was only returning to the Church what was rightfully its own. That this was indeed the pope's intention is evident from a letter from Pope Paul I, the same person who, as a deacon under his brother Stephen II, most likely led the negotiations. Regarding the Greeks' claims, he writes to Pepin that they rest on fables, while those of Rome rest on "divine words" and "apostolic documents." We find these divine words in Matthew 16:18, 19, the "apostolic" or papal *) documents in the Donation of Constantine.

It is now clear why the most important thing in that Donation, the ceding of the territory, is mentioned last. It is also clear how Pepin came to not only receive the pope with pomp but even to lead his horse by the bridle like a groom, something that had never happened before and was contrary to Frankish customs. Also, why the right to wear the imperial crown is revisited in the most recent part of the Donation? The reality conflicted with this acquired right. No pope had ever worn an imperial crown. Therefore, a solution had to be found to eliminate this contradiction. It was now said that the pope had refused the crown because he had already worn the crown of Peter in the tonsure.

The result of these various considerations is, that the oldest part of the Donation was condensed in the middle of the seventh century, specifically under Pope Martin I, between 638 and 653, and that the later part was added to it under Stephen II, in 753. Noteworthy is the similarity of expressions in seven letters of this pope with peculiar expressions in this second part. The same applies to the life of Stephen in the Liber pontificalis. This is even more true for Paul I, Stephen's brother and successor. From this, it can be deduced that no other author of the latest part of the Donation than this same Paul, when he was still a deacon under his brother. Thus, through the acumen of Professors Döllinger and Friedrich, it was possible to completely lift the veil that lay over the Donation document. Although we would not wish to assert that the rule of all other monarchs is based on truth and justice, the aforementioned revelations have made it crystal clear that the worldly rule of the popes rests on lies and deceit.

*) Untruth under the guise of sanctity must not be tolerated. It is better that scandal arise than that the truth be abandoned.

*) To be distinguished from Paulus Diaconus, a scholar among the Lombards, author of their history, to whom we owe much for our knowledge of this period.

*) It is strange that this work cannot be found in any of our university libraries. For our research, we also used Prof. Döllinger's Die Papst-fabeln des Mittelalters, 2nd edition, 1890, and Das Papstthum, 1893. The latter is a revised and supplemented edition of Der Papst und das Concil by Friedrich, by Janus. Die Const. The gift is from 1889.

*) In Constantine's letter, seu (or) appears; but in the Middle Ages, this word had the meaning of et (and). Anselm of Lucca therefore substituted et.

*) The Papal Book, or Liber Pontificalis, is a collection of biographies of the Roman popes, from Peter to Conon (687), continued from time to time later. It is of very relative historical value, especially the first part.

- 47065 *) According to Bayle and Gibbon, he seems to have done so later. See Bayle, in voce Vallet; Gibbon, Hist. of the Decline etc. V, 35.
 **) See Gibbon, V, 36.
 *) According to others, it was the cities of Osemo and Ancona that Pope Zacharias received as a gift from Liutprand.
 **) Zoo Gieseler, K. G. II, 1, 11, 189.
 47070 ***) Papst-fabeln, p. 67.
 ****) Das Papstthum, p. 28.
 *) That the word "apostolic" is indeed equivalent to papal is demonstrated by Friedrich, pp. 146 ff.

An Economic Evaluation of the Edict on Maximum Prices

Diocletian's Edict on Maximum Prices, promulgated in 301 CE, attempted to put a stop to the runaway inflation resulting from the Crisis of the Third Century. Many scholars, such as Alfred Wassink (1991), have ridiculed Diocletian's edict as poor economic policy, which they argue was widely recognized at that time as poor economic policy and was quickly abandoned.

However, Diocletian's Edict on Maximum Prices must be reevaluated with an open mind, relying on the modern economic theories of John Maynard Keynes and Milton Friedman. John Maynard Keynes published the General Theory of Employment, Interest, and Money in 1936, revolutionizing the entire field of economics with his theories concerning consumption, production, equilibrium, and fiscal policy. In the 1960s, Milton Friedman founded the monetarist school of economics, which focuses on the importance of the money supply in affecting consumption, inflation, and the economy as a whole. Both literary references to Diocletian's economic policies and numismatic evidence will be evaluated. Diocletian's edict should be considered a success because it broke a dangerous economic cycle, which was driving towards the total collapse of imperial monetary and fiscal policy.

The Edict on Maximum Prices established a price ceiling, preventing people from charging a price higher than the one prescribed. This price ceiling certainly caused economic distortions, including higher unemployment and a contraction in production. This was the result of both producers deciding to no longer produce, because at the edict's prices they could no longer turn a profit, and an increase in bartering, which, compared to monetary transactions, is inherently inefficient and economically problematic. Nevertheless, this shocking damper on the price level worked to cut inflation in the long term. It did so by eliminating the popular assumption that inflation would continue, since, according to the economic idea of adaptive expectations, people's expectations of further inflation play an important role in driving inflation higher. Therefore, breaking this negative economic cycle was, in the end, a beneficial economic decision. To draw a comparison from recent history, Paul Volcker, in combating the stagflation of the 1970s and early 1980s, increased interest rates to reduce inflation, an act which significantly increased unemployment and reduced GDP, which is the sum of all goods and services produced within a particular country. Nevertheless, by breaking the cycle of stagflation, he laid the foundation for the solid economic growth of the late 1980s and the 1990s.

Although it is generally agreed by economists that setting a price ceiling is never a good thing, the establishment of a price ceiling, in this particular situation, stabilized the economic situation of the empire. Scholars have too often viewed the people of the ancient world, including Diocletian, as having a poor understanding of economics. Of course, the field of economics only got started in the late 1700s with Adam Smith and greatly picked up speed in the 20th century. Regardless, this evaluation of the Edict of Maximum Prices shows that Diocletian, relying on the history of imperial economic policy and the knowledge of the imperial bureaucracy, was capable of crafting sensible and relatively successful pieces of economic policy. Therefore, by coming to a better understanding of Diocletian's economic policies and their effects, it will be possible to develop a better understanding of the ways in which the reign of Diocletian serves as an important transitional period between the intense instability of the third century and greater stability of the fourth century.

49 In all the aforesaid types of merchandise all the standards are to be observed for women's as well as for children's and for all other types. Any type of merchandise for which a standard has not been specifically set is to be sold after a reckoning of the quality of the purple and of the linen, and of the weight, and of the
49095 workmanship, and of the standard (that) has been made between the seller and the buyer.
- XXX. For gold and silver

- 49435 See [\(66\) New English translation of the Price Edict of Diocletianus](#)
- An English translation of the Edict on Maximum Prices, also known as the Price Edict of Diocletian.**
 (Edictum de pretiis rerum venalium).
- 49440 Issued between November 20 and December 10 of the year 301 AD, the price edict gives maximum prices for more than 1.200 products, raw materials, labour and services, transport, animals and even slaves. Prices ranged from 1 denarius communis for fresh green animal fodder to 150.000 denarii for a male lion or for purple dyed silk. The
- 49445 price edict and the monetary edict issued some months before were an attempt to check inflation.
 The edict came to us through (fragments of) inscriptions on stone slabs (fig. 1) found at a number of sites, all but one in the eastern part of the Empire where Diocletianus resided.
- 49450 The edict presents some questions. The edict was part of the legislation of the first tetrarchy (293-305 AD): co-Augusti Diocletian and Maximianus and their Caesares Galerius and Constantius ruled the Roman Empire. The tetrarchs state in the preface that the maximum prices are effective in 'our whole realm'. We would expect the edict to apply also to the western part of the Empire where Maximianus resided. Why was the
- 49455 edict not displayed in stone in the west, as the absence of surviving fragments seem to suggest? After all, chapter XXXVII (maximum sea freight rates) does include

western harbours.

Was the price edict effective and if so, for how long? From the (hostile) account of Lactantius (De Mortibus Persecutorum 7.6-7.7) we might conclude that the edict all but destroyed trade, caused a lot of bloodshed and had to be withdrawn.

But can we trust Lactantius on the outcome of the edict?

What do we know about the coins and their values at the time of the price edict?

Although all prices are quoted in denarii communes, the denarius had in fact transformed from an actual coin in mass circulation into a unit of account.

Actual payments were made in other coins.

The aureus at the time functioned as gold bullion and did not circulate.

The argenteus (nominal value 100 dc) was scarce and hardly formed a part of regular circulation. The argenteus barely left a trace in hoards and is rather scarce as a site find in many areas.

Diocletian's currency scheme, designed to be trimetallic, was in reality a monometallic system, based on the slightly argentiferous nummus (25 dc) and on the new radiate fractal, and for a time on the old but initially still circulating aureliani (both 4 dc).

In the West, the old antoninianus filled the role of fractal adjunct to the omnipresent nummus and we should consider the possibility that, if the Currency Revaluation and Edict on Maximum Prices were applicable in the West, this coin might have had a face value of 4 dc after 1 September 301, equal to that of the (in the west) virtually absent aureliani and copper radiate fractals. The rare small copper laureate never circulated.

The nummus was in fact the pivot of the tetrarchic currency system and it circulated in the entire Roman Empire. As neither aureus nor argenteus were in fact available for payments, folles or sealed and standardized bags of nummi were probably used for large payments. See Kropff, A. 2017.

Diocletian's Currency System after 1 September 301 AD: an inquiry into values.

Revue Belge de Numismatique et de Sigillographie 163, p. 167-187. Fig. 2. Nummus Maximianus (28mm, 10.22 g). Heraclea mint, RIC VI 19b. © CNG, Inc.

This webpage presents the first online translation in English of the full text of the Price Edict. Translations of some selected parts of the edict (for instance on the price of labour, of fish, of transport) and selections or cross-sections of a range of prices were available on the internet, but no translation of the entire 3 edict. This translation does not pretend to be a scientific contribution to any discussion, as some of the published papers on my website www.thirdcentury.nl do.

Latin and Greek texts are not included and no provenances (CIL reference, publication, and whereabouts of the fragments) are given. All this can be found in the source material, summarized under 'Literature' below. Graser (1940) gives an English translation, but is based on the then known sixty fragments.

Many more fragments have been found since then and Graser is outdated now.

Lauffer (1971) has included 126 fragments but provided no translation in English, only notes in German. Giaccherio (1974) offers a more complete edition, but translates in Italian. Some of the publications on more recent finds include no translation at all, as these were written with classicists in mind.

The Latin text of the first ten chapters with numbered items (numbers not always following Lauffer) can be found in the Bibliotheca Augustana, at www.hs-augsburg.de/~harsch/Chronologia/Lspost04/Diocletianus/dio_ep_i.html.

The Latin text of some of the fragments, including an important one found at Aphrodisias (CIL III, pp. 2208-2209) can be found at http://droitromain.upmf-grenoble.fr/Constitutiones/maximum_CIL.html. The items are in CIL format and consequently not numbered, so locating a Latin text for any given item from chapter XI on will be quite a challenge!

The Aezani text (Crawford and Reynolds) in Latin can also be found at http://www.mikoflohr.nl/data/texts/Aezani_Aezani/

An extensive (but unnumbered and incomplete) Italian translation can be found at <http://www.circolonumismaticomonzese.org> where the link Editto dei prezzi di Diocleziano will open the xls file of the translation.

We hope the present translation will be useful for those interested in Roman history and in ancient economy. Many items can be found in the edict, from onions to linen garments, from Menapian ham to a travel coach, from the wages of untrained farm workers to the tariffs of solicitors and Latin grammar teachers.

Or the price of a slave.

The edict provides a fascinating read. Surprising are the relatively high prices of garments compared to the relatively low prices of the cheaply produced clothes of

today. After all, every thread had to be spun by hand, using a spindle. The translation follows the numbers used by Lauffer following Mommsen (numbers added or inserted for new material) and is textually based on Graser wherever possible. Her translation has been changed for some entries. For instance: in chapter XII.1. (timber) her incorrect 'inch' (2,54 cm) was replaced with the original digitus ('finger', 1,85 cm). Some comments, marked A(nty) K(ropff) were inserted by the present compiler. When an entrance seems to require a clarification, one is proposed. For instance: the garments strictoria, dalmatica and dalmaticomafortium are explained at their first appearance. Also, for prices we followed Lauffer's reading rather than Graser's wherever entries diverged. For instance: where Graser gives a maximum price 3.500 d for linen towels (XXVIII.57). This translation follows Lauffer and gives 2.500 d. Lauffer (1971) has been consulted for all entries. This filled in many gaps in Graser's text, for instance the metals (XV.63-67, etc.). Also included are some more recent publications (providing the prices of glass, slaves, the correct prices of gold, additional items under chapter XXXVI, etc.) See the list of literature for details. A translation of the edict can never be called complete, as new fragments will probably be found in future. This translation certainly is a work in progress. For some entries the indication 'follows' implies that a translation will be included in next versions, which will also be published here. If you discover a mistake or would like an alternative comment or new material to be included, please contact Antony Kropff at info@thirdcentury.nl. Your comments are welcome!

49570

Epitome De Caesaribus

In these days, the Caesars Constantius, the father of Constantine, and Armentarius were proclaimed Augusti, with Severus in Italy and, in Oriens, Maximinus, the son of Galerius' sister, created Caesars; and at the same time Constantine was made a

49575

Caesar.
2. Maxentius was made emperor in a villa six miles outside the city, on the road to Lavicanum, next Licinius became an Augustus, and, in the same fashion, Alexander at Carthagina; and likewise Valens was created emperor. Their demise was as follows:

49580

3. Severus Caesar was killed by Herculus Maximian in Rome at Tres Tabernae and his ashes were interred in the sepulchre of Gallienus, which is nine miles from the city on the Appian Way.

4. Galerius Maximianus, when his genitals were consumed, died.

5. Maximian Herculus, besieged by Constantine at Massilia, then captured, was executed in a fashion most base, with his neck snapped by a noose.

49585

6. Alexander was slaughtered by Constantine's army.

7. Maxentius, while engaged against Constantine, hastening to enter from the side a bridge of boats constructed a little above the Milvian Bridge, was plunged into the depth when his horse slipped; his body, swallowed up by the weight of his armor, was barely recovered.

49590

8. Maximinus died a simple death at Tarsus.

9. Valens was punished with death by Licinius.

10. As for characters, moreover, they were of this sort: Aurelius Maximian, with the cognomen Herculus, was fierce by nature, burning with lust, stolid in his counsels, of rustic and Pannonian stock. For even now, not far from Sirmium, there is a spot prominent because of a palace constructed there, where his parents once worked wage-earning jobs.

49595

11. He died at the age of sixty, emperor for twenty years.

12. From Eutropia, a Syrian woman, he sired Maxentius and Fausta, the wife of Constantine, to whose father Constantius had given his stepdaughter, Theodora.

49600

13. But Maxentius, they say, was substituted by the womanly wile of one laboring to control a husband's affection by means of an auspice of a most felicitous fecundity which commenced with a boy.

14. Maxentius was dear to no one at all, not even to his father or father-in-law, Galerius.

49605

15. Galerius, moreover, although possessed of an uncultivated and rustic justice, was praiseworthy enough, physically attractive, a skilled and fortunate warrior, sprung from country parents, a keeper of cattle, whence for him the cognomen Armentarius ["Herdsman"].

49610

16. He was born and also buried in Dacia Ripensis, a place which he had called Romulianum from the name of his mother, Romula.

17. He insolently dared to affirm that, in the fashion of Olympias, the mother of Alexander the Great, his mother had conceived him after she had been embraced by a serpent.

49615

18. Galerius Maximinus, scion of Armentarius' sister, called by the name Dacia, to be sure, before imperium, was a Caesar for four years, then an Augustus in Oriens for three -- in birth, indeed, and in station a shepherd, yet a supporter of every very learned man and of literature, quiet by nature, too fond of wine.

19. Drunk with which, with his mind corrupted, he used to command certain harsh measures; but when he repented what had been done, in a continent and sober time, what he had enjoined, he ordered deferred.

49620

20. Alexander was a Phrygian in origin, inferior in the face of hardship through the fault of old age. [166]

49625

With all these men out of the way, the rights of imperium fell to Constantine and Licinius.

2. Constantine, son of emperor Constantius and Helena, ruled thirty years. While a young man being held as a hostage by Galerius in the city of Rome on the pretence of his religion, he took flight and, for the purpose of frustrating his pursuers, wherever his journey had brought him, he destroyed the public transports, and reached his father in Britain; and by chance, in those very days in the same place, ultimate destiny was pressing on his parent, Constantius.

49630

3. With him dead, as all who were present -- but especially Crocus, King of the Alamanni, who had accompanied Constantius for the sake of support -- were urging him on, he took imperium.

49635

4. To Licinius, who was summoned to Mediolanum, he wed his own sister Constantia; and

his own son, Crispus by name, born by Minervina, a concubine, and likewise Constantinus, born in those same days at the city Arlate, and Licinianus, son of Licinius, about twenty months old, he made Caesars.

5. But, indeed, as imperia preserve concord with difficulty, a rift arose between Licinius and Constantine; and first, near Cibalae, beside a lake named Hiulca, when Constantine burst into Licinus' camps by night, Licinius sought escape and, by a swift flight, reached Byzantium.

6. There Martinianus, Master of Offices, he made a Caesar.

7. Then Constantine, stronger in battle in Bithynia, pledged through the wife to confer regal garb upon Licinius, his safety having been guaranteed. Then, after he had been sent to Thessalonica, a little later he ordered him and Martinianus slaughtered.

8. Licinius died after about fourteen years of dominatio, and near the sixtieth year of his life: through a love of avarice he was the worst of all men and not a stranger to sexual debauchery, harsh indeed, immoderately impatient, hostile toward literature, which, as a result of his boundless ignorance, he used to call a poison and a public pestilence, especially forensic endeavor.

9. Obviously he was sufficiently salutary to farmers and country folk, because he had sprung from and had been raised from that group, and a most strict guardian of the military according to the institutes of our forefathers.

10. He was a vehement suppressor of all eunuchs and courtiers, calling them worms and vermin of the palace.

11. But Constantine, when mastery of the entire Roman empire had been obtained through the wondrous good fortune of his wars, with his wife, Fausta, inciting him, so men think, ordered his son Crispus put to death.

12. Then, when his mother, Helena, as a result of excessive grief for her grandson, chastised him, he killed his own wife, Fausta, who was thrown into hot baths.

13. He was, to be sure, too desirous of praise, as is able to be ascertained. On account of the legends inscribed on many structures, he was accustomed to call Trajan "Wall Plant". He built a bridge over the Danube.

14. The royal garb he adorned with gems, and his head, at all times, with a diadem. Nevertheless, he was most agreeable in many matters: by means of laws most severe he checked malicious prosecutions; he nurtured the fine arts, especially studies of literature; he himself read, wrote, reflected, and listened to legations and the complaints of the provinces.

15. And when, with his children and his brother's son, Delmatius, confirmed as Caesars, he had lived sixty-three years, half of which thus, so that thirteen he alone ruled, he was consumed by disease.

16. He was a mocker rather than a flatterer. From this he was called after Trachala in the folktale, for ten years a most excellent man, for the following twelve a brigand, for the last ten, on account of his unrestrained prodigality, a ward irresponsible for his own actions.

17. His body was buried in Byzantium, called Constantinople.

18. With him dead, Delmatius was put to death by the violence of the troops.

19. Thus dominatio of the Roman world was returned to three men, Constantinus, Constantius, and Constans, the sons of Constantine.

20. These individually held these areas as their realms: Constantinus the Younger, everything beyond the Alps; Constantius, from the Strait of the Propontis, Asia, and Oriens; Constans, Illyricum and Italy and Africa; Delmatius, Thrace and Macedonia and Achaea; Hannibalianus, brother of Delmatius Caesar, Armenia and neighboring, allied nations.

21. However, on account of the legal right to Italy and Africa, Constantinus and Constans immediately disagreed. When Constantinus, reckless and horribly intoxicated, in a display of highway robbery, rushed into territories not his own, he was slain and thrown into a river, the name for which is Alsa, not far from Aquileia.

22. But while Constans, because of a desire of hunting, was roaming through forests and woodland pastures, some soldiers, with Chrestius, Marcellinus, and also Magnentius the instigators, conspired toward his murder. As soon as the day of carrying out the business was resolved, Marcellinus, feigning the birth of a son, invited many men to dinner. And so, late in the night, while a drinking party was being celebrated, he withdrew as if to relieve himself as is normal, and assumed the revered attire.

23. When this action was discovered, Constans attempted to flee to Helena, a city close to the Pyrenees, and by Gaiso, who had been dispatched with picked men, he was killed in the thirteenth year of his reign as an Augustus (for he had been a Caesar for a three-year period), at the age of twenty-seven.

24. Disabled in the feet and hands through a malady of the joints, he was fortunate in temperateness of climate, in an abundance of harvests, and in no terror from barbarians, things which would have been still greater indeed, if he had promoted governorsof provinces not for a price, but on the basis of judgment.

25. When his death became known, Vetrano, Master of Soldiers, seized imperium in Pannonia at Mursia; not many days after, Constantius desposed him from power, granting to him not only a long life, but also a retirement full of pleasures. He was, moreover, a most simpleminded man, verging on stupidity.

Constantius proclaimed Caesar Gallus, the son of his father's brother, marrying to him his sister, Constantia.

2. Magnentius, too, made Decentius, his brother, Caesar beyond the Alps.

3. In these days, at Rome, Nepotianus, son of Eutropia, Constantine's sister, with those who had been destroyed driving him on, took the name Augustus; him Magnentius crushed in twenty-eight days.

4. At this time, Constantius did battle with Magnentius at Mursa and was victorious. In this battle, hardly anywhere was Roman might more fully consumed and the fortune of the whole empire dashed.

5. Then, when Magnentius had removed himself toward Italy, near Ticinum he scattered many who were recklessly and, as is customary in victory, too boldly pursuing him.

6. Not much later, cornered near Lugdunum, he breathed his last in the forty-second month of imperium and in about the fiftieth year of his life, his side pierced with a sword secretly supplied, assisting the blow by pushing against a wall - as he was of immense size -, spewing blood from the wound, his nostrils, and mouth.

7. He sprang from barbarian parents, who inhabited Gallia; he was inclined toward the study of reading, sharp of tongue, of a haughty spirit, and cowardly beyond measure; a master, nevertheless, for concealing terror under a pretext of boldness.

8. When his death was heard of, Decentius ended his life with a noose made of a cloth swathe.

9. At this time, Gallus Caesar was killed by Constantius. He ruled four years.

10. Silvanus was made emperor and, on the twenty-eighth day of imperium, was destroyed. He was by nature most charming.

11. Although the scion of a barbarian father, he was nevertheless, as a result of Roman training, sufficiently cultivated and patient.

12. Constantius took to himself with the rank of Caesar Claudius Julian, Gallus' brother, almost twenty-three years old.

13. In the Argentoratensian Fields in Gallia, he, with a few troops, destroyed an innumerable army of enemies.

14. The heaps were standing like mountains, the blood was flowing in the fashion of rivers; a king, noble Nodomarius, was captured; the entire aristocracy was routed; the frontier of Roman property was restored; and afterward, doing battle with the Alamanni, he captured their most powerful king, Badomarius.

15. He was proclaimed Augustus by the Gallic troops.

16. Through legations, Constantius urged him to return to his original status and title. Julian, in a rather mild, secret correspondence, replied that he would serve far more dutifully under the title of a lofty imperium.

17. As a result of these things, Constantius burned more and more with outrage and, as he was unable to endure the like, with a sharp fever which excessive indignation increased by sleepless nights, perished in the foothills of Mount Taurus near Mopsocrene in the forty-fourth year of age and in the thirty-ninth of imperium, but in his twenty-fourth as an Augustus: eight alone, sixteen with his brothers and Magnentius, fifteen as a Caesar.

18. He was lucky in civil wars, lamentable in foreign; an amazing artist with arrows, very abstinent from food, drink, and sleep, able to endure labor, a lover of eloquence, which, since, through slowness of mind, he was unable to attain, he used to envy in others.

19. He was addicted to the love of eunuchs, courtiers, and wives, by whom - satisfied by no deviant or unlawful pleasure - he used to be polluted.

20. But from wives, many whom he obtained, he especially delighted in Eusebia, who was indeed elegant, but, through Adamantiae and Gorgoniae and other dangerous abettors, harmful of her husband's reputation, contrary to what is customary for more upright females whose precepts often aid their husbands.

21. For, as I pass over others, it is incredible to relate how much Pompeia Plotina increased the glory of Trajan: when his procuratores were disrupting the provinces with false accusations to the extent that one of them was said to have greeted a certain wealthy fellow thus, "How did you get so much?"; another, "Where did you get

so much?"; a third, "Give me what you've got," she admonished her husband and, reproaching him because he was so unconcerned with his reputation, returned so much that afterward he spurned unjust exactions and called the fisc the spleen, because, as it increased, the remaining muscles and limbs dwindled.

<https://www.roman-emperors.org/epitome.htm>

Origo Constantini Imperatoris

Constantius, grandson of the brother of that best of emperors Claudius, was first one of the emperor's bodyguard, then a tribune, and later, governor of Dalmatia. With Galerius, he was appointed Caesar by Diocletian; for he put away his former wife Helena and married Theodora, daughter of Maximianus, by whom he afterwards had six children, brothers of Constantine. But by his former wife Helena, he already had a son Constantine, who was later the mightiest of emperors.

This Constantine, then, born of Helena, a mother of very common origin, and brought up in the town of Naissus, which he afterwards splendidly adorned, had but slight training in letters. He was held as a hostage by Diocletian and Galerius, and did valiant service under those emperors in Asia. After the abdication of Diocletian and Herculus, Constantius asked Galerius to return his son; but Galerius first exposed him to many dangers. For when Constantine, then a young man, was serving in the cavalry against the Sarmatians, he seized by the hair and carried off a fierce savage, and threw him at the feet of the emperor Galerius. Then sent by Galerius through a swamp, he entered it on his horse and made a way for the rest to the Sarmatians, of whom he slew many and won the victory for Galerius. Then at last, Galerius sent him back to his father. But in order to avoid meeting Severus as he passed through Italy, Constantine crossed the Alps with the greatest haste, ordering the post-horses to be killed as he went on; and he came up with his father Constantius at Bononia, which the Gauls formerly called Gesoriacum. But his father Constantius, after winning a victory over the Picts, died at York, and Constantine was unanimously hailed as Caesar by all the troops.

In the meantime, two other Caesars had been appointed, Severus and Maximinus; to Maximinus was given the rule of the Orient; Galerius retained Illyricum for himself, as well as the Thracian provinces and Bithynia; Severus received Italy and whatever Herculus had formerly governed. But after Constantius died in Britain, and his son Constantine succeeded him, Maxentius, the son of Herculus, was suddenly hailed as emperor by the praetorian soldiers in the city of Rome. By order of Galerius, Severus took the field against Maxentius, but he was suddenly deserted by all his followers and fled to Ravenna. Thereupon Galerius, with a great army, came against Rome, threatening the destruction of the city, and encamped at Interamna near the Tiber. Then he sent Licinius and Probus to the city as envoys, asking that the son-in law, that is Maxentius, should attain his desires from the father-in law, that is Galerius, at the price of requests rather than of arms.

Galerius' proposal was scorned, and having learned that through Maxentius' promises many of his own men had been led to desert his cause, he was distressed and turned back; and in order to furnish his men with whatever booty he could, he gave orders that the Flaminian Road should be plundered. Maximianus took refuge with Constantine. Then Galerius made Licinius a Caesar in Illyricum, and after that, leaving him in Pannonia, returned himself to Serdica, where he was attacked by a violent disease and wasted away so completely, that he died with the inner parts of his body exposed and in a state of corruption – a punishment for a most unjust persecution, which recoiled as a well-merited penalty upon the author of the iniquitous order. He ruled for nineteen years.

Severus Caesar was low both in character and in origin, given to drink, and hence a friend to Galerius. Accordingly, Galerius made Caesars of him and Maximinus, without Constantine having knowledge of any such step. To this Severus were assigned some cities of Pannonia, Italy, and Africa. Through this chance, Maxentius became emperor; for Severus was deserted by his men and fled to Ravenna. Summoned to support his son Maxentius, Herculus came to Ravenna, deceived Severus by a false oath, gave him into custody, and took him to Rome in the condition of a captive; there he had him kept under guard in a villa belonging to the state, situated thirty miles from Rome on the Appian Road. When Galerius later went to Italy, Severus was executed; then his body was taken to a place eight miles from the city, and laid in the tomb of Gallienus. Now Galerius was such a tippler that when he was drunk he gave orders such as ought

but to be obeyed; and so, at the advice of his prefect, he directed that no one should execute any commands which he issued after luncheon.

Meanwhile Constantine, after defeating the tyrant's generals at Verona, went on to Rome. When he had reached the city, Maxentius came out and chose a plain above the Tiber as the place to do battle. There the usurper was defeated, and when all his men were put to flight, he was prevented from escaping by the crowd of fugitives, thrown from his horse into the river, and drowned. On the following day his body was recovered from the Tiber, and the head was cut off and taken to Rome. When his mother was questioned about his parentage, she admitted that he was the son of a Syrian. He ruled for six years.

Now Licinius was a native of New Dacia, and was of somewhat common origin. He was made emperor by Galerius, in order that he might take the field against Maxentius. But when Maxentius was overthrown and Constantine had recovered Italy, he made Licinius his colleague on condition that he should marry Constantine's sister Constantia at Mediolanum. After the celebration of the wedding Constantine went to Gaul, and Licinius returned to Illyricum. Some time after that Constantine sent Constantius to Licinius, to persuade him to confer the rank of Caesar on Bassianus, who was married to a second sister of Constantine (named Anastasia), to the end that, after the manner of Maximianus, Bassianus might hold Italy and thus stand as a buffer between Constantine and Licinius. But Licinius thwarted such an arrangement, and influenced by Bassianus' brother Senicio, who was loyal to Licinius, Bassianus took up arms against Constantine. But he was arrested in the act of accomplishing his purpose, and by order of Constantine was condemned and executed. When the punishment of Senicio was demanded as the instigator of the plot and Licinius refused, the harmony between the two emperors came to an end; an additional reason for the break was, that Licinius had overthrown the busts and statues of Constantine at Emona. Then the two emperors declared open war. Their armies were led to the plain of Cibalae. Licinius had 35000 infantry and cavalry; Constantine commanded 20000. After an indecisive contest, in which 20000 of Licinius' foot soldiers and a part of his mail-clad horsemen were slain, he himself with a great part of his other cavalry made his escape under cover of night to Sirmium. From there, taking with him his wife, his son, and his treasures, he went to Dacia and appointed Valens, who was commander on the frontier, to the rank of Caesar. Then, having through Valens mustered a large force at Hadrianopolis, a city of Thrace, he sent envoys to Constantine, who had established himself at Philippi, to treat for peace. When the envoys were sent back without accomplishing anything, the war was renewed and the two rivals joined battle on the plain of Mardia. After a long and indecisive struggle, the troops of Licinius gave way and night aided them to escape. Thereupon Licinius and Valens, believing that Constantine (as turned out to be the case), in order to follow up his advantage, would advance farther in the direction of Byzantium, turned aside and made their way towards Beroea. As Constantine was eagerly pushing on, he learned that Licinius had remained behind him; and just then, when his men were worn out from fighting and marching, Mestrianus was sent to him as an envoy, to propose peace in the name of Licinius, who promised to do as he was bidden. Valens was ordered to return again to his former private station; when that was done, peace was concluded by both emperors, with the stipulation that Licinius should hold the Orient, Asia, Thrace, Moesia, and Lesser Scythia. Then Constantine, having returned to Serdica, arranged with Licinius, who was elsewhere, that Crispus and Constantinus, sons of Constantine, and Licinius, son of Licinius, should be made Caesars, and that thus the rule should be carried on in harmony by both emperors. Thus Constantine and Licinius became colleagues in the consulship. In the regions of the Orient, while Licinius and Constantine were consuls, Licinius was stirred by sudden madness and ordered that all the Christians should be driven from the Palace.

Soon war flamed out again between Licinius himself and Constantine. Also, when Constantine was at Thessalonica, the Goths broke through the neglected frontiers, devastated Thrace and Moesia, and began to drive off booty. Then because of fear of Constantine and his check of their attack they returned their prisoners to him and peace was granted them. But Licinius complained of this action as a breach of faith, on the ground that his function had been usurped by another. Finally, by using sometimes humble entreaties and sometimes arrogant threats, he aroused the deserved wrath of Constantine. During the interval before the civil war began, but while it was in preparation, Licinius gave himself up to a frenzy of wickedness, cruelty, avarice and lust; he put many men to death for the sake of their riches, and violated

49900 their wives. Now peace was broken by consent of both sides; Constantine sent Crispus Caesar with a large fleet to take possession of Asia, and on the side of Licinius, Amandus opposed him, likewise with naval forces. Licinius himself had covered the slopes of high mountain near Hadrianopolis with a huge army. Hither Constantine

49905 turned his march with his entire force. While the war went on slowly by land and sea, although Constantine's army had great difficulty in scaling the heights, at last his good fortune and the discipline of his army prevailed, and he defeated the confused and disorganised army of Licinius; but Constantine was slightly wounded in the thigh. Then Licinius fled to Byzantium; and while his scattered forces were on the way to the city, Licinius closed it, and feeling secure against an attack by sea, planned to

49910 meet a siege from the land-side. But Constantine got together a fleet from Thrace. Then Licinius, with his usual lack of consideration, chose Martinianus as his Caesar. But Crispus, with Constantine's fleet, sailed to Callipolis, where in a sea-fight he so utterly defeated Amandus that the latter barely made his escape with the help of the forces which he had left on shore. But Licinius' fleet was in part destroyed and

49915 in part captured. Licinius, abandoning hope on the sea, by way of which he saw that he would be blockaded, fled with his treasures to Chalcedon. Constantine entered Byzantium, where he met Crispus and learned of his naval victory. Then Licinius began a battle at Chrysopolis, being especially aided by the Gothic auxiliaries which their prince Alica had brought; whereupon the army of Constantine was victorious, slaying

49920 25000 soldiers of the opposing side and putting the rest to flight. Later, when they saw Constantine's legions coming in Liburnian galleys, the survivors threw down their arms and gave themselves up. But on the following day Constantia, sister of Constantine and wife of Licinius, came to her brother's camp and begged that her husband's life be spared, which was granted. Thus Licinius became a private citizen, and was entertained at a banquet by Constantine. Martinianus' life was also spared. Licinius was sent to Thessalonica; but Constantine, influenced by the example of his father-in law Herculus Maximianus, for fear that Licinius might again, with

49925 disastrous consequences to the State, resume the purple which he had laid down, and also because the soldiers mutinously demanded his death, had him assassinated at Thessalonica, and Martinianus in Cappadocia. Licinius reigned nineteen years and was survived by his wife and a son. And yet, after all the other participants in the abominable persecution had already perished, the penalty he deserved would surely demand this man also, a persecutor so far as he could act as such. In commemoration of his splendid victory Constantine called Byzantium Constantinople

49935 after his own name; and as if it were his native city, he adorned it with great magnificence and wished to make it equal to Rome. Then he sought out new citizens for it from every quarter, and lavished such wealth on the city, that thereon he all but exhausted the imperial fortunes. There he also established a senate of the second rank, the members of which had the title of clari. Then he began war against the

49940 Goths, rendering aid also to the Sarmatians, who had appealed to him for help. The result was that almost a hundred thousand of the Goths were destroyed by hunger and cold through Constantinus Caesar. Then he also received hostages, among whom was Ariaricus, the king's son. When peace with the Goths had thus been secured, Constantine turned against the Sarmatians, who were showing themselves to be of

49945 doubtful loyalty. But the slaves of the Sarmatians rebelled against all their masters and drove them from the country. These Constantine willingly received, and distributed more than three hundred thousand people of different ages and both sexes through Thrace, Scythia, Macedonia, and Italy.

49950 Constantine was also the first Christian emperor, with the exception of Philippus who seemed to me to have become a Christian merely in order that the one-thousandth year of Rome might be dedicated to Christ rather than to pagan idols. But from Constantine down to the present day all the emperors that have been chosen were Christians, with the exception of Julian, whose disastrous life forsook him in the midst of the

49955 impious plans which it was said that he was devising. Moreover, Constantine made the change in a just and humane fashion; for he issued an edict that the temples should be closed without any shedding of pagan blood. Afterwards he destroyed the bravest and most populous of the Gothic tribes in the very heart of the barbarian territory; that is, in the lands of the Sarmatians.

49960 Constantine also put down a certain Calocaerus, who tried to achieve a revolution in Cyprus. He made Delmatius, son of his brother of the same name, a Caesar; Delmatius' brother Hannibalianus he created King of Kings and ruler of the Pontic tribes, after giving him his daughter Constantiana in marriage. Then it was arranged that the

49965 younger Constantine should rule the Gallic provinces, Constantius Caesar the Orient,

Constans Illyricum and Italy, while Dalmatius was to guard the Gothic coastline. While Constantine was planning to make war on the Persians, he died in an imperial villa in the suburbs of Constantinople, not far from Nicomedia, leaving the State in good order to his sons. He was buried in Constantinople, after a reign of thirty-one years.

Constantine: triumph over a usurper

Victory in war was, as already mentioned, an integral part of generating political legitimacy, and, as during the Late Republic, civil war had to be justified if individual emperors were to obtain that legitimacy. Discussing the contested triumph of Constantine, Beard comments on later Roman triumphal celebrations:

Yet we should hesitate before we conclude that the ancient triumph lasted as long as anyone was prepared to describe ceremonies in triumphal terms. This was, after all, contested territory. And at a certain point the gap between the triumphal rhetoric and the ritual action must have become so wide as to be implausible. It does indeed seem difficult to use the evidence of panegyrists and poets to determine whether a triumph has actually taken place, and in general one should be careful with inferences on this point drawn from their effusions. Nevertheless, it is important to remember that the triumph was, as mentioned above, already contested territory during the period of the Late Republic.

But first an obvious point: we should not exclude any triumphs held outside Rome. Triumphs in imperial residences were nothing new by the time of Constantine and certainly were not problematic, moreover, but as we shall see, a similar practice can be traced to Republican times. During Constantine's time at Trier he successfully defeated several German tribes. Barnes has tabulated these victories as follows: the first German victories of Constantine appeared in 307, the second in 308, and the third preceded his decennalia in 315, most probably in 313.

The panegyric of 310 recounts the punishing of enemy chiefs within a triumphal context, referring to triumphs of the Republican period (Pan. Lat. 6(7).10.2-11.6, esp. 10.5-7). The result of the victory was peace (11.1), which corresponds to the 'sense of an ending' implicit in the ritual of the triumph (cf. Livy 26.21.2-4). After this victory over Frankish tribes, a procession was held in Trier culminating with the enemy chiefs being fed to the beasts in the arena (Eutr. 10.3.2: "magnificum spectaculum"). The spectacle and punishment of the enemy is also described in the panegyric of 307 (Pan. Lat. 7(6).4.2, 4; cf. Eutr. 10.3.2). The panegyric of 313 (Pan. Lat. 12(9).21.5-22.5; 23.3-4; cf. Euseb. Vit. Const. 1.46; RIC 7 124, 163f, 166f) also mentions the celebration of a Frankish triumph (triumphus), probably in 313 (23.3):

Nam quid hoc triumpho pulchrius, quo caedibus hostium utitur etiam ad nostrum omnium voluptatem, et pompam munerum de reliquiis barbaricae cladis exaggerat?

What is lovelier than this triumphal celebration in which he employs the slaughter of enemies for the pleasure of us all, and enlarges the procession of the games out of the survivors of the massacre of the barbarians?

Cameron and Hall suggest that this was only a generalizing statement, not a reference to a specific campaign. This cannot be entirely excluded, but a local triumph remains a more reasonable conclusion, in light of the detailed description of the fate of the enemy chiefs. In 307 and 308 Rome was under the control of the usurper Maxentius and even if Constantine desired to celebrate a triumph in Rome, he would not have had access to the city. In 313 Constantine chose to celebrate a triumph in Trier for other reasons, away from Rome and the Capitol, perhaps because this was close to the victories and because crossing the Alps with a large armed force would have weakened the frontiers.

In the Republic the Alban Mount triumph had already revealed the conundrum of the physical locality of the triumph: it concluded outside the city of Rome, approximately 30 km to the South-East of the city. As it did not end on the Capitol, it could not be considered a triumph; moreover it was the only form of triumph that was not granted to the victorious commander by the Senate. However, Alban Mount triumphs are mentioned and recorded on the Fasti Triumphales, erected during the reign of Augustus. This adaptability in the concept of the triumph can also be seen in the celebrations of Constantine in Trier: triumphs held outside Rome, out of necessity or practicality. And this adaptability reappears in the 312 celebrations in Rome.

Constantine and Rome AD 312

Having been passed over as a member of the tetrarchy, Maxentius usurped power in Rome, whereupon Galerius summoned Severus to recover the city from the usurper. This was unsuccessful, as was Galerius' later attempt to take Rome. Finally in 312 Constantine invaded Italy and after the capitulation of Verona, moved against Rome. The Tetrarchy was finally collapsing into civil war. On the 28th of October Maxentius was defeated at the Milvian Bridge, in what was to become the foundation myth of the regime, and on the 29th of October Constantine entered Rome.

As a usurper Maxentius was a *hostis publicus* and could be killed without consequence. Furthermore, Lactantius and Zosimus both claim that Maxentius declared war on Constantine due to the death of his father, allegedly killed by Constantine. This, however, may be a later rewriting by the regime, as the panegyric from 321 (4(10).9-11) observes that Constantine attacked first.

The case is similar to that of Antonius in the civil war against Octavian: if Antonius, as mentioned, was to take up arms against Octavian and the *res publica*, he would declare war on the *res publica* and thus declare himself a *hostis*. This was mainly a question of justification: civil war appeared inevitable, but Constantine did not want to be seen to cause it. He was, it would seem, closely following the tactics of Augustus.

EDICT OF CONSTANTINE I CONCERNING THE ACCUSATIONS (314-323)

Two chapters of this edict are preserved in CTh. 9, 5 and in CJ 9, 8, 3. Three copies of the edict on stone have been discovered: one somewhere in Asia Minor, before 1600, but now lost; one in Lycia, also in Asia Minor, before 1902; one in Crete, reported in 1889, which exhibits all of the surviving part of the edict. The date is doubtful, for the superscription and the subscription preserved in the codes do not agree by an interval of about a decade, but the codes and the stones all agree in the subscription, which is dated 314

1) Copy of the sacred edict.

2) ... it has been proved that very many persons not only in respect to their fortunes ... accusations ... sometimes ... by cases of this kind those who are accused as well as those who are summoned for evidence are afflicted with very serious annoyances. Wherefore, taking counsel for the security of our provinces, we provide remedies of this character, that an accuser indeed may not entirely be repulsed from court, but whoever believes that he can add proofs to his charges may have the free opportunity to approach a judge and may reveal the defendant by clear evidence of the offenses, so that according to the nature of the deeds suitable punishment may be inflicted on the person who is convicted. But if he is not at all able to establish those charges which he makes he shall know that he must be subjected to a very severe sentence.

3) To be sure, if anyone charges someone with the crime of treason, since the accusation of such a kind not at all protects anyone by the privilege of any high rank from a very strict inquisition, he shall know that he also must be subject to torture if he is not able to establish his accusation by other clear evidences and proofs, since in the case of the person who is detected in this temerity this fact properly shall be elicited also by torture, namely, by whose advice and instigation it appears that he entered upon the accusation, so that punishment from all persons who are accessory to so great a deed can be exacted.

4) Moreover, it is known to all how often an opportunity also to approach a judge has been denied to informers not only by the statutes of our parents, but also by our ordinances, since a hearing must not be granted to persons of this kind, because indeed they must be subjected to punishment in accordance with the daring of such great wickedness.

5) Also in the case of slaves or of freedmen who attempt to accuse or to report their masters or their patrons we decree that the law according to the statute of the ancient law also must be observed, namely, that, to be sure, the declaration of such atrocious audacity shall be repressed immediately in the inception of its commission itself by the judge's decision, and, after a hearing has been denied, whoever proceeds to the desperate boldness of this kind shall offer, affixed to a gibbet, an example to all others, lest anyone of like audacity should appear in the future.

6) To be sure, that everywhere counsel may be taken for the security of innocent persons, it is our pleasure that defamatory informations shall not be accepted. And

if anyone discovers these displayed anonymously, he shall be bound to remove them immediately and to tear them in pieces or to consume them by fire. And in these cases it shall be proper for the judges to take note of such a kind that, if perchance such information is brought to them, they shall direct it to be burned by fire, since a writing of such kind properly shall be removed completely from a judge's hearing, but an investigation shall remain against those persons who dare to display information of such a sort, that, when discovered, they shall be subjected to the due punishments of their temerity.

7) Accordingly, we have written about all these matters not only to our prefects but also to the governors and the treasurer and the master of our private estate, by whose other copy, when our edict has been published, it is declared most fully what kind of law and statute it contains.

8) Publicly posted January I in the consulship of Volusianus and Annianus.

Excavations by F.C. Bursch in Ukrain

October 20, 1930 National Museum of Antiquities in Leiden.

The director would like to thank all those who made the celebration of his twenty-five years in office such a memorable event. The volunteers F. C. Bursch and W. C. Braat were appointed scientific assistants. In response to the difficulties that these officials seem to experience in obtaining their PhDs here in the country, the director writes a bitter argument about the fact that Dutch archeology is still not "honest" in our scientific world. It is gratefully stated that the Government has opened up the possibility of making some foreign trips, which are necessary to keep contact with sister institutions elsewhere alive. Among the donations we mention the collection of objects excavated by the Dutch committee in Shechem, which marked the beginning of a Pre-Asian division, an important collection of Egyptian objects from the Insinger collection, a precious Roman bowl of rare millefiori glass (gift from Dr. Holwerda's anniversary); of the purchases some important samples of Sumerian sculpture, a Coptic fabric depicting a saint, and a number of objects from Swiss pile walls. It would take us too far to even give an overview of the many excavations that took place again this year.

October 21, 1930 National Museum of Antiquities.

The two volunteers, Mr F. C. Bursch and W. C. Braat, whose training at the Museum was already mentioned in my previous report, according to the director, were both appointed temporary scientific assistants on April 1. It is very regrettable that, despite the great zeal and dedication that both demonstrate, this training is not easy. It would be so simple if, in addition to their studies as scientific museum officials, they could also receive their further education at the university and could also take the exams that would provide them with the academic degree that the public now wants. seems to demand from the scientific official. However, Dutch archeology is still not entirely fashionable in our Dutch science. Those who compiled the new Academic Statute a few years ago knew as a subject of study "the archeology of any independent civilization area outside Europe", but that of our own continent, of our own country, did not exist for them. Anyone who, like our two assistants, is specifically dependent on this study for his training as a museum official will certainly find plenty of opportunity in our museum to acquire the real knowledge that his later position will demand of him, but if he wants official recognition of his studies, he wants to get a Dr. right in time. to put his name in front of his name, as the outside world actually demands of him, then he will still have to seek refuge abroad, unless he wants to undergo a double study to acquire his title somewhere in a completely different field of study. It hardly needs saying how much this complicates the training of good museum officials. In connection with his studies, Mr. F. G. Bursch was granted leave to attend classes in prehistory and related subjects at the University of Marburg during the winter semester.

From around 1930, the employee of the National Museum of Antiquities in Leiden was Dr. F.C. Bursch assistant to the director Holwerda.

The arrogance of the museum is once again evident from an article about excavations near Vlodrop. That article of October 28, 1933 by Gerhard Krekelberg ends as follows: October 28, 1933 Then a few years ago, at my repeated request, Dr. Holwerda from Leiden sent his assistant, Mr. Bursch, here with some diggers to excavate a part of the Knippeheide in which the undersigned had already brought numerous urns to the surface before then, and where Mr. Bursch now also dug up 18 urns, plus a piece of

sword at a Germanic cult site, and I later discovered more sites, it was said that this exploitation would be revisited.

50165 This whole event was reported in the Publications 1932 [an archeological magazine] with the following few words: "A remarkable urn field was excavated there (i.e. Vlodrop), on a site for which permission had been obtained (i.e. from the owner from Belgium) through the goodwill of H.H. van Cruchten and Linssen in Roermond". (Not a word was said about the fact that this remarkable field had been discovered by
50170 the undersigned after much searching, and that the digging only took place after my repeated correspondence with the Museum of Antiquities.) Summarizing all this now, it seems a bit strange, even painful, to have to hear afterwards that a competent person once said: "in the area of Vl.[odrop] there is nothing to learn." The reader can sense for himself how obvious this untruth is.
50175 GERH. KR.

August 17, 1935 PRAE-HISTORICAL FINDS IN OSS.

Royal graves in Brabant soil.

We are told from Oss:

50180 In the past week, Dr. F. C. Bursch, assistant at the National Museum of Antiquities in Leiden, conducted research at various places in the municipality of Oss, during which very important results were achieved. A dome grave belonging to the Beaker culture was found, dating from about 1800 BC.

50185 The foundation of the round wooden structure that surrounded the actual grave was still clearly visible in the solid ground. In one place a branch of this track pointed to an entrance to a vaulted space, in the middle of which the deceased was buried. This had been burned, although the shape of the deeply buried grave at first seemed to indicate the interment of an unburned body.

50190 Among the bones found was a beautiful bell beaker of Veluwe type, the first to be found on Brabant soil. It also turned out that a barbed arrowhead that had been damaged by the fire had been given to the deceased.

50195 Both in terms of construction and discovery, this hill was already something very special for Brabant. This was even more the case with the other two graves that Mr. Bursch found. These were located slightly west of the royal grave discovered in 1933 and further examined by Dr. Holwerda. On a plateau, without any elevation indicating anything special, were two graves, characterized by a large number of poles, which originally surrounded the graves in different circles.

50200 The graves themselves clearly contain traces of the dead, which in both cases were buried unburned and in a stretched position. One of these graves had a widening on one of the long walls, in which one found as an addition a large decorated pot, provided with a separate base and resembling a so-called deverel urn. If finding such a piece of crockery was already of great importance, this is even more the case with the grave shapes found. One grave was surrounded by a triple edge of upright posts, which stood out particularly beautifully in the main soil due to their gray color.

50205 The other grave was much more impressive. Here was a four-, in some cases even six-fold, wreath of such poles around the grave. These posts surrounded the grave like a strong fence. In addition, beyond the extreme of these piles ran a wide, shallow ditch, which had now filled with heather. The shape of this boundary was an ellipse, so that the space enclosed by it was only partly filled by the circle of piles and
50210 was otherwise empty. To a very small extent, this canal even disappeared under the wall of the current caravan camp. Burial mounds such as these are dated between the Beaker period and that of the urnfields.

January 23, 1936 Lectures in Leiden

50215 In the National Museum of Antiquities

The spring program for 1936 of archaeological lectures and courses, which will be held in the evening in the Rijksmuseum in Leiden, is composed as follows:

January 28: Dr. W. C. Braat, Syria and the borders of the Roman Empire in the East;

50220 February 11: Dr. S. Loeschcke, Trier: Sieg bodenstandiger Kraft, an Rhein, Donau und Mosel über rötische Weltmacht;

February 13: Dr. S. Loeschcke, Trier, Bedeutsame ceramic Neufunde aus römischen Töpferwerkstätten in Trier.

March 3: Prof. Dr. J. A. J. Barge, Leiden, On anthropology and the anthropological composition of the Dutch people.

50225 March 17: Dr. J. H. Holwerda, Greek sculptures in the National Museum of Antiquities.

March 31: Dr. F. C. Bursch, The Central European Elements in Mycenaean Civilization.

Those who wish to attend one or more lectures, please register before January 22, either in writing to the Management or by signing their name on the list available

- for this purpose at the Museum Porter, adding or paying f 1.- per person for expenses. (Postal account 171035). They will then receive a separate free admission ticket for each lecture in good time.
Registrations for the 1935 Autumn lectures are also valid for these 1936 Spring lectures.
- 50235 August 1, 1936 OLD URNS AND GRAVES IN SWALMEN
Archaeological research by the Rijksmuseum in Leiden.
In the past three weeks, archaeological investigations were conducted by the National Museum of Antiquity in Leiden, under the direction of the Curator Dr. F. C. Bursch on the Wylerheide, east of Swalmen. During the reclamation works, which took place there
- 50240 last winter as a job-providing object, some urns were found, which thanks to the good care of the municipal council, in particular Mayor Strens and the municipal supervisor Geraedts, as well as the Very Rev. Lord Pinckers, pastor in Asselt, for science were preserved and are currently being restored in the Museum in Leiden, to later be distributed among the museums in Leiden, Maastricht and Asselt.
- 50245 The aim of the research was primarily to determine, if possible, the size and construction of this urn field. Despite the difficulties associated with the fact that the entire plot of heathland had already been dug up, this was almost successful. It was established that the urn field originally extended in a relatively narrow strip along the Swalmen-Bruggen road (Germany) and was continued in the areas
- 50250 now occupied by the factory and warehouses of the company Gebr. Terstappen. As for the construction, it was relatively irregular, the trenches usually found around the urn burials were partly missing, and on the other hand they were very different in size and were not in all cases circular, but elliptical. This research also revealed various urns, which, together with the previously found specimens, gave a clear
- 50255 picture of the diversity in shape and decoration. All found urns are beautifully decorated, either with deeply carved geometric ornaments, or more simply with vertical finger impressions. The shape and decoration indicate an early stage of urn culture, corresponding, for example, to the urn types found a few years ago in Vlodrop. Of great importance was the discovery of numerous burial mounds in the same
- 50260 area, eight of which were examined this year. These date from a much earlier period and belong to the so-called Beaker culture. Apart from a few finds of pottery, this is the southernmost point in the Netherlands where this culture has been found to date. The mounds served as a grave monument for one or rarely several dead, who were interred in the center and always contain traces of a decayed grave building. In most
- 50265 cases this grave building was dome-shaped, usually built of wood, in one case particularly beautiful and clearly visible, made of sods. In one case the wooden dome could be found twice concentric to each other in the hill. Another mound showed a ring of alternating double and single poles around the burial pit. In the grave, which was sometimes not dug into the solid ground, some clear markings of the
- 50270 interred corpses were found, in a crouching position, lying on their sides with their knees drawn up and always oriented towards the East. Twice it happened that two dead bodies, lying one above the other, could be clearly identified in this way. In one of the mounds, after the original wooden grave structure had collapsed due to rotting, a dead person was buried in a stretched position in a tree trunk hollowed out by fire.
- 50275 The finds here were very rich. A total of 11 pieces of crockery were found here, including from one grave 4 and from both double graves respectively 3 and 2. All cups had a curved S-shaped profile and were richly decorated with rope impressions or other rectilinear ornaments.
- 50280 The excavations were completed on Friday, visited by a number of German scholars from Bonn and Krefeld, who expressed their admiration for the way in which the often insignificant foundation traces were revealed and explained.
The excavations will probably continue next year.
- 50285 August 14, 1936 Archaeological finds in Swalmen (L)
In recent weeks, archaeological research has been carried out on the Wijlerheide in Swalmen (L), by the National Museum of Antiquities in Leiden, under the supervision of the curator Dr. F. C. Bursch.
Last winter there were: some urns found at the reclamation works; The aim of the research was now to investigate the construction and size of the urn field.
- 50290 This investigation again revealed several urns, which, together with the previously found specimens, gave a clear picture of the diversity in shape and decoration. All found urns are beautifully carved geometric ornaments, either simply with vertical finger impressions.
The shape and decoration indicate an early stage of urn culture, corresponding, for

- 50295 example, to the urn types found a few years ago in Vlodrop.
Of great importance was the discovery of numerous burial mounds in the same area, eight of which were examined this year.
These date from a much earlier period and belong to the so-called Beaker culture. Apart from a few finds of pottery, this is the southernmost point in the Netherlands
- 50300 where this culture has been found to date.
The mounds served as a grave monument for one or (rarely) more dead, who were interred in the center and they always contain traces of a decayed grave building. In most cases this grave building was built from wood, in one case particularly beautiful and clearly recognizable, from sods.
- 50305 In one case the wooden dome was concerned twice or tritritical in relation to each other in the hill. Another mound showed a ring of alternating double and single poles around the burial pit.
In the grave, which was sometimes not dug into the solid ground, some clear markings of the interred corpses were found, in a crouching position, lying on their sides
- 50310 with their knees drawn up and always oriented towards the East. Twice it happened that two dead bodies, lying one above the other, could be clearly identified in this way.
In one of the hills, after the original wooden grave structure had collapsed due to rotting, a dead person was buried in a stretched position in a tree trunk hollowed out by fire.
- 50315 The finds here were very rich. A total of 11 pieces of crockery were found, including from one grave 4 and from both double graves respectively 3 and 2. All cups had a curved S-shaped profile and were richly decorated with other rectilinear ornaments.
- 50320 August 5, 1937 ANTIQUE RESEARCH IN SWALMEN
The excavations at Swalmen, which had already been carried out so successfully in 1936, were continued in recent weeks under the leadership of Dr. F. C. Bursch, curator at the National Museum of Antiquities in Leiden.
This year, several burial mounds located on the Boschberg, as well as three mounds on
- 50325 the grounds of Hillenraedt Castle, were examined.
The burial mounds at Hillenraedt were from the Early Bronze Age and showed similarity to the dome tombs examined last year. In one of the mounds very clear traces of corpses were found crouched, and in another, burnt bones were strewn in the grave.
The discovery of three bronze "rag axes" in the hills was important. This rarely
- 50330 happens, that one finds bronze objects in the graves in the south and center of the country and these axes of Italian model were excellently preserved. Just like last year, these finds, together with an urn buried later, will be distributed between the Limburg museums and the National Museum of Antiquities.
The hills on the Boschberg were built of sods, and the presence of some circles of
- 50335 originally upright poles could be clearly demonstrated. However, here the hills also showed a phenomenon that undermined the accuracy of the predictions already made by Dr. Holwerda's proposed reconstruction of the dome graves was confirmed. After all, at the top of the hill, within such a double circle of piles, five charred beams were found lying next to each other, just as they had been imagined in this
- 50340 reconstruction. The fact that the entire dome had not been preserved was due to the fact that in later times the skulls of criminals, whose bones were perhaps scattered in all directions, had been buried here.
The graves themselves contained unburned corpses, and in each mound later also burned bones, with or without an urn, were buried.
- 50345 Finally, the existence of Roman roads in this area was demonstrated at some points by the fact that gravel road surfaces and the road ditches on either side were clearly visible in the profile.
- 50350 August 7, 1937 NATIONAL MUSEUM OF ANTIQUITIES IN LEIDEN
Report for 1936.
Dr. J. H. Holwerda, as director of the National Museum of Antiquities in Leiden, published a report on this institution for the year 1936. It repeats the complaint that the government makes virtually nothing available for purchases, so that the "Gildemeester Fund" has again paid for almost all purchases. Mr W. Spijjer in
- 50355 Amsterdam again gave some interesting things as a gift, including a number of molds or seals from Tell Amarna. Gifts were also received from Mr Chenet and Dr I. M. van der Vlerk. Reports have been published on various excavations in which the Museum was involved. The museum's holdings have increased with various objects obtained during these investigations or through finds from private individuals; such as a zone cup
- 50360 from Varsseveld, a Roman amphora from Wamel; bronze objects from Roman times, from

Naspeuringen van Paul Theelen: Constantinus Imperator

Heerewaarden; Roman and Germanic pottery from the Maas near Lith and from Alphen aan de Maas, a "Faltenbecher" from Megen, Hallstatt pots found in Oss, a bronze Hallstatt sword and urns from near Venlo, bell beakers from a cemetery near Swalmen. The curator Dr. F. C. Bursch and Dr. W. C. Braat, titular curator and also the director, have apparently again worked tirelessly to reveal what the soil of the Netherlands contains in prehistoric and early historical terms. Since Dr. Holwerda had a serious illness in the last months of the previous year, he was replaced by Dr. W. D. van Wijngaarden. The institution also demonstrated its activity through various publications and the well-known evening lectures in the Museum. The library was increased by 159 numbers and a record collection of Tutenchamon's grave finds from the "London News" was taken over. The total number of visitors was 8859.

August 7, 1937 ANTIQUE FINDS IN HEYTHUIZEN

Ancient objects have been found in the Heythuizerbeek in Heythuizen. These come from stag horn, they may be associated with remains of a stilt house culture, which is related to the cultures found in Switzerland and southern Germany. Dr. F. C. Bursch [Bursch], curator of the National Museum of Antiquities in Leiden, has studied the objects. Since it had long been hoped to find such objects in Brabant and Limburg, the research will continue. The stag horn objects, chisels, were found during the normalization works on the aforementioned stream.

May 18, 1938 EXCAVATIONS IN HELDEN-GRASHOEK

In connection with the various discoveries made in recent years in Helden-Grashoek (L.), in which urns and other objects from earlier centuries were excavated, the museum will now, under the leadership of Dr. F. C. Bursch, van den Oudheidkundigen Dienst in Leiden, at the beginning of June excavations are being done on the ridge found there.

June 12, 1938 EXCAVATION HELDEN-GRASHOEK

Under the leadership of Dr. Bursch of the Archaeological Museum in Leiden, excavations have now begun in Helden-Grashoek (L.) on a site where several archaeological discoveries have recently been made. By digging a wide trench around the site, it is already believed that good results will be achieved. It is expected that urns will be excavated in a few days, as sites have now been discovered.

July 8, 1938 THE ANTIQUE EXCAVATIONS IN HELDEN.

Important finds again.

The second excavation in the urn field in Koningslust (municipality Helden) also revealed important finds. Fourteen workers examined the soil under the expert guidance of Dr. Bursch from Leiden for more than a week. The excavations culminated in the uncovering of a domed grave, which still clearly bore the characteristics of an old cemetery.

This dome tomb contained seven urns, including several of a rare shape, as well as a bell beaker, a stone knife and various stone arrowheads.

The finds clearly bear the stamp of their period. For example, urns have now been found from 1000, 400, 500 and 300 years BC. It was a pity that the areas in which the excavations were carried out had already been partially dug up by non-experts. The finds will be sent to Leiden for restoration, after which they will be given a destination.

September 28, 1938 Archaeological finds in Swalmen

ROMAN PAN OVENS EXPOSED.

In recent weeks, archaeological research has been carried out in various places in the municipality of Swalmen, starting from the National Museum of Antiquities in Leiden, under the direction of Dr. F. C. Bursch, curator of this central institution. Following the investigations of 1936 and 1937, two burial mounds were first excavated, containing burnt human bones buried in tree coffins. This further completes the series of different grave forms from around 1800 BC, previously demonstrated in this municipality, so that continuous habitation can be assumed here from this date until Roman times.

The remains of a Roman villa dating from the latter period, more specifically from the 2nd century AD, were excavated on his estate "Groenewoud" with the kind permission of the owner, Mr. Finken. These residential remains were located on the Swalm, close to the Roman road found there in 1937.

Finally, in the hamlet of "Middelhoven", three Roman pan kilns from the last part of the 2nd century could be uncovered, the first finds of this kind in Limburg. These

- ovens were extremely well preserved, so that many details could be studied better than elsewhere. The central flue and the side flues running diagonally upwards had been exposed to such heat from the blazing fire that their walls were covered with a fairly thick layer of green or blue glaze of beautiful colors. This fire reached the material to be fired, which stood on a clay floor above, through numerous small round openings in that floor. The whole was originally covered with a vault, in which holes must also have been left to allow the smoke to escape. Finally, these ovens were covered together with a roof resting on posts, of which, however, only the large stones on which the supporting posts rested were found in a square. In these ovens, which partly covered each other and were therefore used one after the other (first two smaller ones, then the larger one), in addition to a few shards, also the puduets of this industry, pans, floor tiles, heating pipes, etc. were found. Some pans had an inscription, others had an impression and of a Roman hobnail shoe and of a dog's or fox's paw. A row of finished tiles still rested where one of the deck posts had stood, ready to be transported to the customers. This large and flourishing industry, whose heirs in Swalmen today make the same clay tiles, etc., has fortunately unexpectedly ceased operations. The clay pit was found in the vicinity of the ovens, while at least some of the raw material must have been extracted from the Swalmen in the immediate vicinity. Since this was such an excellently preserved and historically important object, the first of its kind found in Limburg, the interest from the current industrialists in Limburg, as well as from the population of Swalmen itself, was very great.
- August 19, 1939 The forgery of prehistoric objects.
An arrest in Putten.
In yesterday's magazine, extensive mention was made of the forgery of prehistoric objects on the Veluwe, which have been marketed as genuine and of which many have already fallen victim.
- One of the victims was the retired teacher Z. from Lunteren, who had purchased approximately 30 guilders worth of so-called prehistoric objects from a certain H. de R. from Putten, who claimed to have taken them out of the ground. Dr. F. C. Bursch, curator of the National Museum of Antiquities in Leiden, who currently leads the excavations on the "de Valk" estate in Lunteren, had, however, established its inauthenticity, reports the "N. R. Crt." [now: NRC]. Mr Z. has now submitted a complaint to the police in Ede and as a result an investigation has been initiated by the police commissioner there, Mr H. P. J. Hulsman, together with the brigade commander of the National Police in Putten.
- Some counterfeit prehistoric objects were found at R.'s, but he insisted that these, as well as the collection he had sold to Mr. Z., were genuine. A report has been drawn up against him for fraud.
- The question is whether R. should be regarded as the main perpetrator of the falsifications or as an accomplice who promoted the falsifications by discovering them in the ground during excavations. He had also done this in Lunteren, where doubts immediately arose as to the scientific value of his alleged discoveries, so that he had to cease his work. In the meantime, however, he had already sold a collection of the objects to Mr. Z., including some cups, a string of beads and a flint chisel, all of which had turned out to be forgeries.
- The suspicion is not unfounded that he obtained them from someone else who manufactured these objects on a large scale. The police are now also conducting an investigation into the origin.
- July 1, 1940 14 days after the start of the war, this Bursch is appointed head of a committee for archaeological soil research. There is immediate mention of Germanic culture and they want to make an inventory per municipality of finds that are in the hands of private individuals. And in addition:
Moreover, if these are unique finds of truly national significance, we will of course make every effort to give these objects a place in the National Museum of Antiquities in Leiden, possibly by exchanging them with other museum pieces, but the main reason why we have to do this is a to have a complete overview of what the Dutch soil has yielded and will yield in terms of archaeology.
- August 10, 1940 EXCAVATIONS IN NORTH LIMBURG
Numerous important finds. Much was lost.
- The establishment of the National Bureau for Archaeological Soil Research a few weeks ago was received with great approval among stakeholders in North Limburg. This may be primarily because it will now be a thing of the past that excavations can be carried

out by unauthorized persons, with the result that important areas for excavations will be lost.

50495 More and more areas have been developed in Limburg in the last half century. In addition, many hill edges of high terrain were excavated. This has almost always happened without any attention being paid to the importance or not of these areas from an archaeological point of view. Besides the fact that Limburg has lost its beauty as a result - the hilly area that gave the landscape such a special cachet
50500 disappeared - it has also lost its importance. After all, such excavated areas often had their own history, which previously appealed to the nature lover, but has now become virtually worthless for him. Some of these areas are artificial heights - e.g. burial mounds - however, they are largely natural heights, which were often trodden by man in times long past: man lived there and left his mark left behind.
50505 Especially in the years that major works were carried out in Limburg - the construction of railway lines, the digging of canals, etc. - not only many heights were excavated that were in the route, but also many heights far away, which served as sand depots, were considered and excavated. Naturally, discoveries were occasionally made that attracted attention. However, this interest soon waned. The finds were namely previously not sufficiently studied. People contented themselves with collecting those found objects - usually only the gifts, such as urns and weapons. Shards were considered of no importance. Nor do the discovery circumstances, which would now have special significance for the experts. As a result of all these
50510 circumstances, it may have been the case that until recently it was believed that flint was minted almost exclusively in South Limburg and was traded from there in prehistoric times to other areas, whereby the the rest of Limburg thought it could count. The research of Mr. L.D. Keus in Venlo, who, as an archaeologist and reporter for the Rijksmuseum, carries out excavations in North Limburg and Oost-Brabant, has conclusively demonstrated the untenability of this with regard to the Venlo area and
50520 its surroundings. Over the past six years he has carried out numerous excavations here and has come to the conclusion that there were indeed flint workshops here, which apparently had been in use for centuries: several dating back to about 20,000 BC or even earlier until the Neolithic, others also after that. These studios are all located on high ground, almost always on flat tundra banks. As
50525 a rule, they are not lower than 20 meters above A.P. [Amsterdams Peil] and therefore - especially if they were located near inhabited areas or near roads, railways, etc. - they were sacrificed to excavations as a sand deposit. All these places have been completely or partially destroyed for road construction, raising of land, stone production, etc. Of all the studios that Mr Keus has been able to discover so far,
50530 none are now intact: almost all have been completely excavated. The workshops each had more than one battle circle (battle site). Four or five more battle sites were found in the larger workshops, which does not rule out the possibility that there may have been more. They are all located near sites where flint lumps were naturally found, as well as pieces of (lime sand) Devon rock. The
50535 oldest inhabitants processed both rocks, small tools (microliths) and larger tools from Devon rock. In addition to many beaten flints and various larger tools and working stones made of Devon rock, a knot was found here, which was used for salmon fishing and is similar to that found on the Maas side: this is a find of very great significance. Studios were found - now, as mentioned, they are all almost completely
50540 excavated - two large and three small ones to the N.E. of Venlo; one at Ossenbong and one at Lomm and one at the lock in Belfeld. Battle circles were found in Lottum, Molenbosch and Hout. Both on the east and west sides of the Maas there are mountain ridges at some distance, which are now increasingly being cultivated. These ridges are almost always places where people lived or were buried in the past. According to
50545 the research of Mr. Keus, the settlements from before Christ (indigenous population) were almost always halfway up the slope. Two of them were so low that a wall of one meter was necessary to protect the residents against high water levels. These finds of great archaeological significance were both completely excavated for sand extraction. One is halfway along the Grubbenvorst-Blerick road; the other halfway
50550 along the Belfeld-Reuver road. During the cultivation of land, a La Taine residence was found on a ridge on the west side of the Maas. In general it can be said that the ridge from Kessel-Eych [Kessel-Eik] to Baarlo is an uninterrupted series of urn fields, where all kinds of material can be found. This ridge is increasingly being cultivated, which is at the expense of
50555 many finds. All this shows how much it is necessary that the processing, excavation or cultivation of areas that may be of significance from an archaeological point of view, takes place under expert supervision, so that finds and discovery conditions can be brought to the attention of the government.

50560 September 20, 1941 EXCAVATIONS IN KESSEL-HOUT
In recent weeks, the National Museum of Antiquities led by Dr. Bursch has been busy with excavations under Kessel in Limburg. On a site reported several years ago by a correspondent of the museum, Mr Keus from Venlo, during the mobilization of military excavators Roman wall foundations were discovered. The investigation now carried out

50565 showed that we were dealing with the foundations of a fairly large but simple building from Roman times. The large mass of charcoal found indicates that a wooden superstructure once stood on these foundations; in fact, several large nails that were used for this have also been found. This building was destroyed by fire. Later, a much smaller building was built on the same site, the foundations of which have

50570 also been found, also from Roman times. The pottery found was mainly Roman, while there were also some indigenous pieces. Based on the pottery, both buildings can be dated to the third century AD. Coins were not found this time. It turned out that Roman coins have always been found on a neighboring site, which - as goes without saying - are of the utmost importance for dating. These coins are often sold well

50575 below their value. As usual, it turned out that it is in the interest of science and in the interest of the finder if finds - and this of course applies just as much to coins as to other antiquities such as urns, etc. - are reported to the National Museum of Antiquities, Rapenburg, Leiden, as it is impossible for a non-expert to determine the value of such finds. The intention is to continue the research next

50580 year on the adjacent site, where tile pieces, foundations and even chunks of mural work were also found during a test excavation.

August 6, 1942 New avenues in archaeological soil research
DIVISION OF THE PROVINCE INTO ARCHAEOLOGICAL RESORTS WITH THE REGIONAL MUSEUMS AS THE

50585 CENTERS
The establishment of archaeological departments, centered on the various regional museums, represents an important advance in the field of methodical soil research into monuments of historical value. This arrangement, which had been prepared for a long time, came into force by a decision of the Secretary General of the Department

50590 of Education, Science and Cultural Protection dated 31 July. This provides a legal basis for a arrangement that had been designed for some time and which should be can be regarded as a decentralization measure in the archaeological field. Previously, most excavations on a larger scale were carried out exclusively under the auspices of the Oudheidkundig Museum in Leiden or the Archaeological Institute in Groningen.

50595 These two university institutions had the necessary scientifically and practically trained staff and also received government support. But outside these institutions, anyone could carry out excavations on his own if he received permission from the owner of the land and had the time and resources to complete the work successfully. In this way it was quite an expensive hobby and we owe the knowledge of the history

50600 of our region (and we are thinking in particular of pre-history) to those energetic and knowledgeable men who willingly sacrificed their time and money for it. It is also thanks to these men that quite a lot of what emerged from the soil over time has been preserved for Limburg. Because as soon as Leiden or Groningen were involved (and this was especially the case with promising explorations), the objects from the

50605 Limburg soil went straight to these central collection points, while the local institutions received, at best, plaster casted copies. All this has now changed due to the official recognition of the regional museums as supervisory bodies for excavations in the area under their jurisdiction. In the case of proposed soil research, the regional museum must be made aware of it, while the finds must be made

50610 available to it. This important task has made the museum the center of historical and archaeological life in a particular region. It is therefore officially recognized. As an umbrella organization, the Provincial Historical and Archaeological Society reserves those areas for itself that have not been assigned to a regional museum. The Society will also be the connecting link with the central museums in Leiden and

50615 Groningen. The Society's task has been delegated to the archaeological sub-committee for the province of Limburg, which is under the proven leadership of Dr. H. J. Beckers Sr. in Beek. The heads of the various regional museums are corresponding members of the sub-committee and keep them informed of the status of excavations in their archaeological area by regularly sending messages and reports. According to the

50620 above-mentioned decision of the Secretary General of the Department of Education, Science and Cultural Protection, these archaeological areas are specifically the aforementioned regional museums are assigned as follows:

10. The Provincial Archaeological Museum of the Limburg Historical and Archaeological

- 50625 Society in MAASTRICHT, with the entire province of Limburg and in particular South Limburg, in the North up to and including the municipalities of Bunde, Meerssen, Valkenburg-Houthem, Hulsberg, Klimmen, Schin on Geul, Wijlré and Wittem:
20. The Municipal Archaeological Museum in HEERLEN, with the municipalities of Schinveld, Merkelbeek, Brunssum, Amstenrade, Hoensbroek, Nuth, Schimmert,
- 50630 Wijnandsrade, Voerendaal, Simpelveld, Bocholtz, Heerlen, Scheijdt, Kerkrade, Eijgelshoven and Ubach over Worms.
30. The "Museum Doctor Beckers" in BEEK, within the jurisdiction of the municipalities of Geulle, Ulestraten, Spaubeek, Beek, Elsloo, Stein, Urmond, Geleen and Schinnen;
- 50635 40. "Museum Het Land van Sittard" in SITTARD, with the municipalities of Sittard, Munstergeleen, Oirsbeek, Bingelrade, Jabeek, Limbricht, Born, Obbicht and Papenhoven, Grevenbicht, Susteren, Roosteren, Nieuwstadt, Ohé and Laak, Echt, Stevensweert, Montfort and Posterholt;
- 50640 50. The Stedelijk Museum in WEERT, with the municipalities of Neeritter, Ittervoort, Hunsel, Grathem, Baexem, Heythuysen, Stramproy, Weert and Nederweert;
60. The Municipal Museum in ROERMOND, with the municipalities of Roermond, Haelen, Horn, Beegden, Herten, Maasbracht, Linne, Odiliënberg, Melick and Herkenbosch, Vlodrop, Maasniel, Swalmen, Buggenum, Nunhem, Neer, Beesel, Heythuysen, Roggel, Meijel, Grathem, Heel and Panheel, Wessem, Thorn and Ittervoort;
- 50645 70. The Folkloric Museum of the monumental church in ASSELT, within the jurisdiction of the municipalities mentioned under 60;
80. The Tegelsche Oudheidkamer in TEGELEN, with the municipalities of Tegelen, Venlo Belfeld, Arcen en Velden, Maasbree, Helden, Horst and Sevenum;
- 50650 90. The Municipal Museum in VENLO, within the jurisdiction of the municipalities mentioned under 80., and with the provision that the recognition takes effect on the day that the museum is founded.

May 26, 1943 Excavations in Ukraine

Led by Dr. Bursch

- 50655 The East Company writes:
- On the initiative of the "Bezirkskommissar" of Dnipropetrovsk, archaeological excavations will soon be carried out in the bend of the Dnieper, between Dnipropetrovsk and Saparosje. There are a number of Scythian dolmens here, while quite extensive Gothic burial grounds are present in the same region.
- 50660 The latter in particular can make an extremely valuable contribution to the knowledge of the first Gothic settlements in these areas
- It may be considered an honor for Dutch science that the director of the National Bureau for Archeological Soil Research, Dr. F. C. Bursch, has been appointed to conduct excavations on site. These days Dr. Bursch left for the East with some
- 50665 assistants. They have been granted leave for this trip by the Department of Education, Science and Cultural Protection
- Since this concerns not only a general Dutch scientific interest, but also an important Dutch share in the opening up of the European East, the study department of the Dutch East Company has made its contribution to the success of the undertaking by
- 50670 Dr. Bursch to provide him with full scientific and field equipment and to assist him further in his journey.

June 5, 1943 NEWS FROM EMMEN

- 50675 As we were informed, Mr. Bursch from Leiden will not be doing any work here this year, as he will soon be leaving with his staff for the Ukraine for archaeological excavations.

June 11, 1943 A Dutch archaeologist in the Russian Steppe
IMPRESSIONS FROM A TRIP TO SOUTHERN RUSSIA

- 50680 We were a living demonstration of Germanic cooperation and solidarity, as we gathered at the Charlottenburg station in Berlin: a German Untersturmführer der Waffen-SS., a Russian professor of German descent from Dniepropetrovsk, a Danish employee who was an active Danish National Socialist, and the three of us are Dutch. The Russian was silent, deeply impressed by everything he experienced in Germany, where he had
- 50685 discovered that not only was culture and science at a much higher level than at home, but that individual freedom was also incomparably greater than in Red Russia. The Dane was lively, full of spirit, and an ideal tour guide when it came to caring for the salvation of the inner man, or otherwise looking after our interests. We hear a lot about our plans and prospects from the Untersturmführer and we look forward to
- 50690 the foreign country with excitement.

Meanwhile, the train rushes on, punctually, through the beautiful, well-cultivated country of Neumark, West Prussia and the former Polish Corridor. There we see what Germanic industry and Germanic culture, which had been active for centuries, could do.

Because once we have passed the former Polish-German border, then everything is over, what makes a Germanic landscape so attractive. Certainly the soil is no less fertile, the crops in the field are no worse off, but the organizing, cleansing, truly caring hand seems to be missing. Poor houses, dirty roads predominate. All those in the Netherlands who still regard the Germans as foreigners would like to be shown this difference, this difference between Germanism and Slavery, between progressive culture and backward filth. We like to believe that the Polish nobility, and perhaps also a part of the Polish middle class, may have had a decent civilization in many respects according to our ideas, but the mass of the Polish population lived in conditions so devoid of everything that our Westerners would expect makes life worth living, that we cannot imagine it from a distance.

We pass through Warsaw, heavily ravaged, in the evening. During the long delay at the station we receive the soldiers' rations, which prove to be ample and of excellent quality. Early the next morning we cross the Russian border and after transferring in Kowel we finally arrive in Rowno. We stay here for a night for some business arrangements and we find an unsought opportunity to observe life in a Russian city, even if it is in former Polish territory.

Rowno is located on the northwestern edge of Ukraine. When we leave the station, we immediately notice the consequences of the war that has raged here in all its ferocity. When we enter the city, the destruction is not that bad. There happens to be a market and the pan carts, covered with straw and pulled by two skinny horses, take the farmers to the village.

The city has one asphalted street, namely the main road that connects Ukraine with Central Europe. The rest is dirty, bumpy as far as the pavement is concerned and the houses are higgledy-piggledy and placed in perfect randomness, the whole thing indescribably more primitive than the least village in our country or in Germany. Long before we had regulations regulating the building line, the method of construction, etc., our farmers already knew that order and regularity in the development of the village were a prerequisite for it to be entirely to their taste and habitable. Every Dutch village, with for example a village green as its center, is the result of this line of thought. Not so in Rowno. There is one square space, randomly in the middle of the city, where a market is held and furthermore we find a wild series of houses and streets.

The Russian white church with its green towers is beautiful, in which we attend a service in the evening, which is quite busy and which conveys great consecration through the beautiful a capella choir. Beggars sit on the steps of the church. The next morning, when we leave our quarters, an accident has happened on the main road: a small figure, probably a boy of perhaps fourteen years old, lies there motionless, seriously injured, or at least unconscious, while a truck and a pan truck are standing there. No one cares about the injured person, who was apparently hit by the native driver of the car, but everyone shouts at each other, probably about the question of guilt, while the victim has to lie there motionless, until finally a rough guy takes him under his arms and drags him rather than carries him to the car that will probably take him to the hospital. Russia, where the individual man is nothing, has revealed itself to us...

The next morning we go to the station on spec and truly, we are lucky! We catch a freight wagon, which alone, pulled by the locomotive, takes us to the Sdolbunow railway junction. And there is another train to our destination: Dnipropetrowsk, ready. In these times of war it is important to take advantage of all opportunities that arise, because in this way we save about 10 hours of travel. In the freight wagon, the bottom of which is covered with straw, a nice heater is burning, because it is still chilly and cold from the rain this May morning.

Last night the Dane and the Dutch also sat around the Russian stove and discussed Germanic cooperation. Compared to the Russian space, all the difficulties caused by human imperfections, ambition, tactlessness, and self-interest, above all, pale into insignificance, because only here does one feel the common calling: to continuously permeate the Eastern European space with everything that the Germans and Dutch have in common possess qualities that can only be a blessing to this space!

On our further train journey we pass the border of the actual Ukraine, the land of the Black Earth, between Shitomir and Berditsjef. This land is incredibly fertile, with its meters-thick, pitch-black humus layer, created by centuries of forest

- wealth, above the loose and marl, already so fat and fertile in itself. This year the cultivation is exceptionally intensive: only 14% of the area is undeveloped, the rest of the endless plains, days away, are completely sown with all the products that Europe so needs, or, if it concerns low-lying lands, we see large herds of cattle and horses grazing there, as in the Hungarian Puszta.
- The landscape is by no means monotonous. Gently rolling slopes, mightier, but otherwise very similar to those of southern England, alternate. Here and there we find some forests and beautiful views under the spring skies that always captivate our eyes. The approach to the Dnieper is particularly beautiful, which meanders through this landscape in many twists and turns and is now beautifully illuminated. This country has an overwhelming grandeur due to its dimensions and is at the same time so lovely that it does not act as a deterrent.
- Dnepropetrovsk suffered greatly during the war. In contrast to Rowno, it is a generously laid out city with wide streets and many trees (especially flowering acacias!) and parks. Some of the trams are still running (others stand like wrecks at the station), but the main image of the traffic is formed by the army, which often passes through this city behind the front in long columns. We also see many uniforms that we have not seen before: Romanians, Italians, Hungarians, Croats and also Ukrainians and Russians, in addition to all other allies of the Empire, walk through the streets. We also meet Dutch people, as we did in Rowno. This time it is boys who work for the N.S.K.K. serve. They are very pleased when they come to chat with us on the tram and are full of praise for the care. If a Dutch boy of 18 or 20 says that he cannot eat the food that is put in front of him, then this requires no further comment.
- When we arrive on Sunday afternoon, there is a slipper parade on Broad Street. The Ukrainians make an excellent and thoroughly European impression, in contrast to the actual Russians.
- Dnipropetrovsk has several churches, but the one we visit is completely neglected and was used as a sugar warehouse. Although there are now a large number of icons hanging, one still gets the strong impression that, unlike Rowno, religion no longer has much significance for the population of this industrial city.
- We are experiencing the last rainy season before the start of the hot summer. After heavy rain, the sometimes rather steep streets of the city immediately form the beds of rushing mountain streams, which also carry some of the black earth with them as mud. Pedestrians soon can't cross the streets, motorcycles stall, cars spray fountains. For hours afterwards, the streets are covered in dirty mud, the tram rails are flooded and form obstacles for traffic that are difficult to overcome, and pedestrians always have to make long detours to get home on dry feet. Outside the city, deep gorges reveal the consequences of erosion caused by such tropical rain showers. Due to the heavy deforestation under the Soviets of the originally very forested Dnieper area, erosion becomes a major danger, also for the railway line, but mainly for the fields, from which the fertile black humus is washed away.
- When we leave Dnipropetrovsk in the morning, our car immediately comes into contact with Russian roads: wide plains, left open between the fields, with numerous deep wheel ruts next to each other, like gigantic Hesse roads, but unspeakably muddy and full of potholes. The utmost is demanded of the cars, as well as of the drivers. Shortly afterwards we drive again in this land of contradictions on a fairly good asphalt road in the direction of Saporozje, until, turning to the west, we finally reach our final destination: Solonje.
- F.C. BURSCH.
- As has already been learned from the newspapers, the Director of the National Institute for Archaeological Soil Research, Dr. F. C. Bursch, at the invitation of the Commissioner General of Dnipropetrovsk, excavations at Solonje, one day's journey by panjewagen from Dnipropetrovsk, in the inner bend of the Dnieper. Dr. Bursch has promised to occasionally write down his experiences and adventures for the readers of "De Waag"; the first article, written shortly after arrival in Dnipropetrovsk, was received by courier just before this issue went to press. We hasten to present it to our readers. The Dutch contribution to the opening up of the East consists not only of the deployment of labor power and capital, but also of spiritual labor. It can be great satisfaction, that Dutch science has already been enabled to play its part.
- EDITORIAL.
- July 2, 1943 A Dutch archaeologist in the Russian Steppe
THE UKRAINE IN ANTIQUITY

Anyone who has ever traveled to Berlin knows that, with the exception of the so-called Porta Westfalica, he constantly passed through the same, fairly flat country, which reflects the "Dutch" character of the country, both in the pasturelands and continues to speak clearly in the Veluwe-like hill areas.

If one now goes further east, either north through the former Polish corridor, or directly into Russia via Breslau and Posen, the relatively flat character of the country is preserved, until it finally merges unnoticed into the steppe. Only in Ukraine does the country become more hilly, but nevertheless there are no mountains of any importance here either until the Jaila Mountains in Crimea, and finally the Caucasus in the south and the Urals in the east.

This Western, Northern and Eastern European plain lies as one contiguous whole to the north of the German Central Mountains, and therefore extends from the Netherlands (and actually from southeastern England) in the West to the Urals in the East. In this immense space we see numerous popular movements taking place in ancient times, sometimes across this entire area, and that is why there are still wires running from the low countries on the North Sea that reach here into the Ukraine.

During the last ice age, a culture with its own unique art prevailed in Ukraine. While everywhere else naturalism flourishes among hunting tribes, who had to subdue their hunting prey through magic, and therefore restrict the animals into the image, here we find the oldest products of an abstract art, focused solely on decoration by maeanders. In the same Ukraine, this ornament revived in the centuries before about 2000 BC among the farming population, who then inhabit the wider country in large numbers. Is this a coincidence, or is there a genetic connection between the two phenomena, are we dealing with a direct continuation? As long as we do not know the ornaments of the intervening times (in general we know virtually nothing about the so-called Middle Stone Age, that is, the period between the end of the Ice Age and the beginning of agriculture as far as southern Russia is concerned!), people cannot obtain certainty here.

How important would be the confirmation of this hypothesis! One of the most important facts in world history is the transition from a wandering hunter's life, from hand to mouth, to the existence of the farmer, who, with wise precaution, grows his crops to see them ripen, and manages his flocks and one place to thrive in peace.

We must assume that this transition took place independently in various parts of the earth. One of the oldest farming populations in the world today is that whose civilization is characterized by spiral and moon decoration on the dishes, the so-called "band ceramics". We find the westernmost offshoots of this culture in our country, in Limburg, where they were probably the oldest farmers in our country. In eastern Europe, decoration of the same nature, with the same ornaments, is applied in red or yellow paint, including in the Ukrainian "Tripolje culture", named after a site near Kiev. Some sites in Asia Minor (Anau and Susa), in Greece (Sesklo and Dimini in Thessaly) and in Romania (Cucuteni et al.) show great agreement with this.

So at a very early date we find an agricultural population on the border between Europe and Asia, who is mainly known through the research of their places of residence, and who everywhere applied maeanders and spirals in paint to the dishes. In itself it is obvious that the first center from which these cultures spread across the adjacent areas of two continents must have been located in the extremely fertile regions of the Ukraine, from where we already know during the Ice Age a population that applied the same ornaments to her jewelry.

Another proof of relative primitiveness, which can therefore indicate old age, is shown by this culture, where in the beginning it still buried its dead in a squatting position in the homes of the living. Only later are cremations found in separate, but still residential, structures in which a large number of urns are housed.

People already grew wheat, barley and millet, and their pets were dogs, cattle, boars, sheep, goats and horses.

As everywhere else in Europe, this farming population was destroyed here by 2000 BC surprised by new crowds invading the country. In southern Russia we find remains of civilizations that we know well from our own country: collar bottles and beakers from our dolmens we also find in the Western Ukraine, and a little later, stone coffins of the form that followed the dolmens in Denmark, penetrated even further east with the ceramics so-called "ball amphorae", a group related to dolmen ceramics, which had an important center in Brandenburg, for example.

We therefore see that in recent times there was no one-sided contact in an East-West direction, but rather that there were two originally independent civilization areas that made reciprocal contact: the East radiates influences from the side of the

50890 Tripolje culture, the Northwest of Europe from the side of the Hunebed culture. Thus, towards the end of the Stone Age, a certain European unity in diversity was already growing, reaching from the North Sea to the Black Sea right through the Northern European plain, with two centers of gravity: the center of gravity of the Dolmen culture on the North and Baltic Seas on the one hand, the center of the band decoration on the one hand, the edges of the Black Sea on the other.

50895 Around 1800 BC we again see an appearance familiar to us from the Netherlands also appearing in southern Russia: the burial mound with a body burial in a crouching position, with a war hammer and rope cup as grave goods, as in the eastern Netherlands on the sandy soils. The graves here are painted red with a lot of ochre, which Remouchamps also noticed in the Netherlands at the time. Timber structures above the grave also occur in the hills here, and are better preserved than in the Netherlands. It is a real house, built over the dead, with an oak roof over the shaft grave. It will be interesting to compare these Russian phenomena with the Dutch ones, but this will require further research.

50900 What is striking is the great similarity in the tableware: cups, bowls on four feet, amphorae, etc. between the Central German finds, from which the Dutch phenomena can be derived, and this from southern Russia. Moreover, the first metal appears everywhere in this context.

50905 In the following century, the so-called Bronze Age, the grave shape remains completely the same. In the beginning this was also the case with ceramics and other cultural heritage, but later spiral decoration, adopted from the indigenous Tripolje culture, came to the fore. The bronzes are largely Central European in origin, and others are of Asian Minority origin.

50910 The number of burial mounds here is enormous, formerly Kurgans, now usually called Moghila (dialect Mohila), most of which date from the Bronze Age. We rarely find metal in burial mounds, but more often one finds cast molds and loose bronze objects, which are remarkably lacking in the swords and jewelry that we know from Europe. Predominant are sickles, small pins, often with hammer-shaped heads, and small lances. One must assume that bronze was intensively cast here, but with a limited range of forms and more for direct practical use than for weapons and adornment. Hollow axes, originally imported from Central Europe (Lausitz and Hungary), were later also found in cast form as proof that they were copied here. All in all, the Bronze Age would not have made an original impression here at all, and certainly not independently, if there had not been some treasure discoveries of silver and gold objects, imported from the Caucasus, which prove the wealth of the Ukrainian people of the Bronze Age.

50920 So in the Bronze Age we see the mating of the industrious Tripolje population with the newly arrived Ochre grave builders, whereby the first, soil-connected people certainly did not form the minority, but the second element apparently also remained strongly represented.

50925 Possibly one may give this people, amalgamated from both elements, the name Cimmerians, which has come down to us from classical reports.

50930 During the popular movements in Asia and Europe around the year 1000 BC the people of the Scythians (here curiously pronounced Skifien) invade southern Russia from the East. They are a nomadic people, with a totemic view of life, typical steppe inhabitants. They also bury their dead in a crouching position under large burial mounds. The princes and nobles are buried in the company of women, servants and domestic animals. Among the Scythians we also find timber construction in the burial mounds, although now often more tent-shaped, without it being possible to determine whether this is a prehistoric custom or was adopted from the original population. Perhaps the Scythians are also the direct descendants of the Ochre Tomb Builders. A few centuries later the Greeks settled in colony cities on the Black Sea (Olbia and Kertsch). The Scythians, who as a ruling class had probably achieved wealth through the labor of the natives, had Greek artists work for them in their own barbaric animal style, which had spread to China, inspired by their religion (totem animals). Especially the deer was frequently depicted, but not in a naturalistic manner, as the Greek would have preferred, but dissolved into its parts: antlers, legs, etc., from which parts in turn other animal ornaments: bird heads and snakes, for example, sprout.

50940 A well-known example of this Greek-barbarian art is the golden fish from Vetttersvelde near Berlin, with other animal figures on it, which was left behind during a raid by the Scythians (approx. 500 BC).

50950 The Scythians were replaced in their rule over southern Russia by the Sarmatians, who

- brought an even stronger Asian influence, which was reflected, among other things, in the use of colored gemstones (amaldien), imported from the East Indies.
- Then comes, in quicker succession, the conquest of southern Russia alternately by northern and central European peoples and by Asian hordes from the steppes:
- In the third century the Germanic Bastarnae and Skyren invaded. We know images of the Bastarnae from the Roman victory sign that the general Crassus had erected after his victory over them at Adamklissi in the Dobrudscha in 45. Around 200 AD they were absorbed into the Goths, who conquered the East from Scandinavia. The Bastarnae burned their dead, the Goths buried them. The Goths were especially influenced by the Sarmatians, which influences, driven to the West by the steppe people of the Huns in 375, they spread in the Germanic world of migration, among the Franks, Alamanni, etc. Some of the Goths did not make the journey to the countries around the western Mediterranean, but withdrew to the Crimea, where they maintained themselves in strong fortresses for a long time (5th-8th century), and where their language remained intact until the Middle Ages and was spoken later.
- In the 7th and 8th centuries, Tartars and Turks invaded the southern Russian space from Asia again, but from the West the Normans (Waraegi) came to dominate Central Russia, while the Genoese occupied the Black Sea coasts via the sea route from 1266 to 1475, until in the latter year the Turks, having gained possession of Constantinople, seized power there.
- First the Romanovs reconquered this area for Russia, while Charles XII of Sweden attempted to repeat the Waraegi's raids in the 18th century. In the meantime, the Germanic East colonization (Hanseatic, German Order, Anabaptists, etc.) had infused the country with new Germanic blood in the struggle against the Slavs.
- Thus, from the Stone Age onwards, we have seen the South Russian region as the scene of perpetual battle between East and West, between steppe and cultural land, between nomads and farmers, between Asia and Europe, a battle that is now being fought out again.
- It is therefore extremely difficult to unite the South Russian population, or even to see Russia as a unit. At least here in Southern Ukraine, there is a very strong feeling of being bound to this country by many ties, ties that make it easier for Western Europeans and Dutch people to feel at home there.
- F.C. BURSCH.
- July 30, 1943 A Dutch archaeologist in the Russian Steppe
- THE UKRAINIAN POPULATION
- In the previous article about Ukraine in Antiquity we briefly outlined the origins of the Ukrainian people. The impression created by these observations must be that on the old pattern of the Tripolje population, from before 2000 BC, perhaps already established in the country since the Ice Age, new influxes from East and West are being woven in later centuries. The current population is therefore largely indigenous, but strongly Germanized on the one hand, and not without a strong Asian influence on the other. What is the effect of these different components of its composition on the current population of Ukraine? Naturally, in what follows, in which we attempt to provide an answer to this question, a very preliminary first impression is decided. We are therefore aware that our view will eventually require further correction. Nevertheless, we will try to describe what immediately struck us most.
- We in the West are accustomed to speaking of "the Russian" or "the Russians" without realizing that we are doing just as wrongly as when we spoke of "the Indonesian". Just as we made a distinction in Insulinde [East India] between the Javanese, the Madurese, the Toradja and the Balinese and the Acehnese, so here we must distinguish more sharply between the different people groups.
- In our first letter we clearly highlighted the difference between Rowno and Dnipropetrovsk, but now we realize even better that this distinction has its deep foundation in the nature of the human species that lives there.
- Here in Ukraine we already distinguish four different types of people. First of all, several Volksdeutsche live here, all of whom have now been taken into German service in various positions. Many names remind us of the existence of German settlements, including in this area, where we find farmsteads called Nemetskij (Westerners, Germans) and Franzoff. The right hand of the District Commissioner here is Herr Wilms, who remembers that his family was originally settled on the Lower Rhine, and from there first to East Prussia, and then moved here for a few centuries. The

history of his family will certainly be an example for many others, who have forgotten the memory of their German, often Lower Rhine, origins, but who still speak their mother tongue to a greater or lesser extent, in addition to Ukrainian and Russian.

51025 Among those who no longer have any contact in language or otherwise with the West, we find many who nevertheless appear outwardly to be purely Western European, or rather Nordic. Blond hair, blue eyes, long and narrow face, usually a beautiful figure, we often encounter here, in contrast to, for example, Rowno. They are elegant and quick in their movements, active, intelligent and proud. 25 years of Bolshevik rule have
51030 not changed these people internally. Now that conspicuous cleanliness and cleanliness are no longer seen as proof of a reprehensible capitalist attitude, but on the contrary as a virtue, they are valued by the government, they diligently take care of the good appearance of their homes and of themselves. They wear colorful blouses decorated with crochet, are clean, often have curtains and flowers in the windows,
51035 the house is well painted and the roof is covered with tiles. They especially leave their mark on our village. Their circles mainly consist of artisans and small businesses, as well as farmers. Presumably their example is also the reason that every piece of land, even the 4 or more meters high and steep burial mounds, has been brought into cultivation, because they now know that the additional
51040 yield of their soil exceeds the obligatory part to be delivered is entirely personal to them. They will soon achieve great prosperity in the new Europe, for which they manage the breadbasket, through their industry and intelligence, when private property has been restored for a few years.

51045 We drive through the fields in our cart. It is about three o'clock in the afternoon, and everywhere people, mostly tall women, are busy in the fields. Suddenly, however, we discover two horses running loose, one of which has its two front legs tied together with a very short rope, so that it cannot walk, but can only perform short jumps while standing on its hind legs. A team stands aside. The farmer sleeps
51050 stretched out on his stomach. When we return after an hour, the man wakes up again, and we can now take him in better. It is a blond type with blue eyes, but with a yellowish complexion and strongly developed cheekbones. He is dressed in a ragged suit, consisting of long trousers and a lined vest, with a fur hat on his head, and is of short, stocky stature. In appearance and attitude this is an example of the
51055 other, Mongolian type of Russians. Slow, kind and good-natured, but stupid and lazy and extremely dirty and poor. This human species does not place the slightest demands on life, which it takes as it falls. One could briefly call it the "Nitschewo type". They are doomed to always remain the robots, the workers, the slaves, no matter under what regime. However, some of them, stimulated by Bolshevism, are able to whip up the
51060 masses of their fellow sufferers into a fanatical, stupid hatred and lust for destruction towards everything that is greater than themselves. But an attempt to level the entire Ukrainian people to the level of unity, as was at least theoretically the intention of the Soviets, had to result in everyone being brought down to this low level.

51065 In our maidservant we had another example, extremely good-willed and full of nervous care to do well, but the effect of all this effort was very poor, because she could never think ahead, and only on one thing at a time. When she called us to the table, the potatoes were ready, but we had to wait quite some time for the rest. Time and again she forgot to boil the milk, so that it spoiled in the heat. She often arrived
51070 late at the store, so that the food was already sold out. She could only be used if there was someone standing next to her who thought for her, which, however, is not to be expected from a male household, the members of which have other work to do! She wasted an awful lot of fat and butter, because her cooking was done without consultation, and then she thought that she could not keep our little house with a
51075 wooden floor clean, and that a second girl would have to come for that! She was also very good-natured, although she shed tears at every difficulty, so that the whole thing aroused more pity than anger.

She told all kinds of untruths about herself in order to pretend that she was being persecuted by fate. Completely unnecessarily, she got herself into trouble with the
51080 government, from which she tried to extricate herself by boasting about the distinguished gentlemen (us!) whom she had to take care of. For such people, the time factor does not play a role, hence the great irregularity in preparing meals. If we were also people who, at every difficulty that arose, also said "nitschewo" and nothing more, then everything would have gone well, but now this
51085 was not the case.

These people, left to their fate, would live under the most miserable conditions,

because they do not have the will and strength to work their way out of difficulties. A fatherly rule must watch over their well-being. They once allowed Father Tsar and Father Stalin to pass over them with the same good-natured submissiveness.

51090

The coachman Iwan is very tall and dark of hair and eyes. His complexion is also not white, but yellowish, and his cheekbones are visible in his narrow face. He is Cossack, completely one with his horses as a rider and as a driver, whom he takes good care of, but does not spare at all.

51095

In him we suspect Tartar blood of the steppe. The cow boys must be of his kind, who grow up outside with the cattle in the summer in a certain wildness. It is also a beautiful human character, but different from the Westerners. What opportunities are available for their development, thanks to their greater energy and courage, will have to be seen. Perhaps there are unsuspected possibilities here. Once they were the rulers of the steppes, herders of large herds of cattle and horses, and formidable warriors. Nowadays, it seems to us, they only form a small minority here in the South.

51100

It goes without saying that the boundaries between the four types listed are not clear everywhere. There are of course numerous transitions to be noted, racial mixtures, etc. All in all, in the first two categories we see the Northern race, the Central and Northwestern European, the "Nitsche woman" and the "Tartar" representatives of the East, of the steppe, of Asia.

51105

It is of course more difficult to say which popular movements were responsible for bringing this blood into the Ukrainian people. It seems impossible to us to say anything with certainty about this before anthropology (racial science) in collaboration with archeology and with the help of distribution maps can possibly arrive at certain results. Two other branches of science, folklore and dialectology, can certainly also make very positive contributions to this. Bolshevism tried to create a uniform culture, and here too it passed completely unnoticed: women with plucked eyebrows, children's toys and trinkets from the "cooperative" of a dreary formlessness and primitiveness and tastelessness, uniform furniture of false splendor: buffets, also canapés, are the proofs of it, as well as the killing of all popular initiative.

51110

51115

Nevertheless, as far as we can already conclude, the national character expresses itself mainly in two forms: in song and in wedding customs.

51120

In the evening, when darkness has suddenly fallen, one hears the singing coming up again and again: one voice, loud and shrill, starts a song in a minor key, and immediately other voices join in, and in two voices, with long outbursts and wonderfully enduring, they insist, the sound through the night.

51125

To our ear they are rather formless primordial sounds, but carried very musically like a psalm, but shrill like clarion calls, sternly chanted like German soldiers' songs.

51130

On Sundays, and also occasionally during the week (it seems to depend on this season, it happens so often!), the bridal couples pass by. She, blushing under the wreath of flowers in her hair, from which colorful ribbons hang, and sometimes adorned with a red sash, the groom with a red rosette with hanging ribbons in the buttonhole, and followed by groomsmen and bridesmaids, also decorated with ribbons. Family and friends offer the bridal couple bread as a gift, small round rolls, on the outside like a Christmas wreath, on the inside with dots at the top.

51135

The bridal couples often also ride on a wagon, and in the evening there is a party with lots of singing and playing on the balalaika.

On Sunday the Ukrainians sang for the small garrison stationed here, played the balalaika and danced. We hope to be able to be there next time and report further on this later.

51140

F.C. BURSCH.

September 24, 1943 A Dutch archaeologist in the Russian Steppe
THE HARD HEART

51145

Ukraine has asked for its price and has received it. We have all been more or less seriously ill. If a simple cold would have gotten through the summer, intestinal, liver, biliary or kidney ailments arise here, which sometimes take quite some time before they are completely cured. We got away miraculously with a light attack.

51150

And its inhabitants are also as hard as this country. They have been hardened by the climate, and through the horrors of the Bolshevik years they have also come to know the hardness of their fellow countrymen. The torments to which the Volksdeutsche and the propertied peasants have been exposed are indescribable, and indescribable are

also the expressions of their immense lack of control, which I summarized in a previous article under the name of "nitschewomensch". It is therefore better not to mention these expressions of wild anger in detail. Hopefully they will never have the opportunity to give in to these animal instincts again.

How is it that these people come to such cruelty, to such incredibly sophisticated devising of the most terrible tortures against their fellow human beings, and on the other hand to such an immoderateness that can no longer even be called animal, of which I cannot refrain from giving one example, being capable of?

What to say about people who in a village, when there is no authority in the Bolshevik revolution, have only one goal, the liquor distillery? When they have looted to their heart's content, the Bolshevik small military group finally arrives, tries to create order, shoots some people dead and finally empties the full barrels into the street. However, the residents then come with buckets and all the other dishes at their disposal and collect the alcohol flow. They throw themselves into the stream and, lying on their bellies, drink the fluid that flows beneath them. And when the entire village finally lies unconscious, the children come and shovel the alcohol-soaked mud into new buckets to enjoy this liquid as well. These are facts, told to me by a Volksdeutsche, who saw these events unfold in front of the window with his mother in their home town.

He has now returned from a stay of several days in his village, which he has not seen since. Destroyed, razed to the ground is his house, the graves in the cemetery of his relatives, the beautiful old castle is destroyed down to the last stone and terrible are the stories that once prosperous farmers told him of the torments they suffered. have been exposed, not to mention the many who have been expelled, tortured to death, exiled.

There must be factors, deeply rooted in the national character, that can explain these incomprehensible states of the soul. We can describe some facets of this national character, but we are not yet able to discover its deepest depth. The people of forced laborers who work for us have a camaraderie that goes so far that sometimes three men share one cigarette. On the other hand, they do not show the slightest sympathy. It sometimes happens that one of the girls finds her fate, her work, too difficult and she breaks out into tears. Not the slightest note is taken of this by the others and when I asked why she is crying, I was asked the surprising counter question: why does this actually interest me? On the one hand, sharing in a friendly manner all the good that the earth still offers here, fruits for example, the comrades and us too are generously offered by the lucky owner, but on the other hand there is an indifference to everything that touches the soul of others.

Permissiveness on our part, showing sympathy, is immediately met with sabotage in work. One of the girls had even put a bandage on her foot and was crying in pain. When this didn't help and I remained hard, the false bandage was removed and everything went back to normal. Horses are, by our standards, shamefully abused here. If one observes the interaction of girls and boys on the street, it is striking that there is no mention here of the "preliminaries" to interaction with each other. Only energetic suitors, who take immediate action with force, are successful. The care of the dead is deeply sad. The cemeteries are without any fence, and as one passes by they are wretched ruins; broken and sagging stones, including those with hammer and sickle, are the rule. It is clear that neither the government nor the relatives in the last Bolshevik years were in the least concerned about the final place of the dead.

And now we already understand something of the Russian mentality. What is unknown here is the concept of tenderness and compassion. When a few persistent rebels in our village had to be shot, their wives, in complete control, came to collect the bodies, without shedding a tear. This people is hard, hard towards themselves, so they can tolerate anything, hard towards others, only aiming to have the best possible for themselves.

It is said that some can also be faithful to those who know how to bind them to themselves. However, it is usually the case that they accept gentleness and kindness for granted, but are very happy to defect to the opponent as soon as the other party offers more.

For this people is childish in the highest degree. They are also cunning, with that calculation that children use to get something done from their parents. But at the same time they cannot see further than the length of their nose. They take for granted what is given to them today, but when the enemy promises them paradise in his

propaganda, they also believe in it unconditionally. They have little or no sense of
51220 duty, everything must be ordered to them.

In addition to the large collective farms, this year, for the first time, part of the
land has been allocated to the population in small fields. They can plant whatever
they want on it and the government will buy it off them at a fixed price, according
to a certain estimated yield. They may freely dispose of the additional proceeds. The
51225 result is that there is no longer any undeveloped plot of land, but the government
still has to designate certain days of the week on which they are obliged to work in
their own fields. Of course, there are also those who also weed on other days.
Because fortunately one cannot tar everyone with the same brush. There are a lot of
51230 good people here who work as much as they can and who also see the great
opportunities that are now being offered to them and seize them with both hands.
However, the government in general must have a firm hand in addition to a loving
heart and great justice.

Now that our main road needs to be repaved, it will be divided into four widthwise.
Four die-hard pavers work side by side in noble competition to see who can deliver
51235 their work the fastest and best. The government imposes strict penalties for sabotage
or laziness, but at the same time it has additional allocations of vodka, cigarettes
and similar luxury items that would otherwise not be available. These are distributed
as a bonus for extra good agricultural work.

Thus a fatherly government takes care of these childish people, with strict justice,
51240 in the only way in which dealing with them is possible. To regard and treat them as
equals is the biggest mistake one can make. They first have to earn this position,
which fortunately is already the case for many.

The image that we designed above about Ukrainian people is not as attractive as our
51245 first one, but it is necessary to also show this other side as a supplement.
Necessary for two reasons: on the one hand for the Dutchman, who will soon have to
work with these people here, and on the other hand for a good understanding of what
moves our enemies.

In this hard country, hard people are also needed. The pioneers who leave our people
51250 to the east must bury all softness and tenderness deep in their hearts, in order to
remain in charge of this people with a firm and just hand. All "ethical politics" are
just as out of the question here as before in our colonies. At the same time,
however, the core of goodwill must be strengthened here and educated towards human
51255 European life. What a task would be reserved here for a church that still had faith
in its own strength! But it often seems that the struggle for political power in the
homeland seems more important to her than the spread of the faith! Then it must be
our task as National Socialists to awaken the concept of popular culture here and to
develop it into a force that may later be able to subdue those other primal forces
that can only have a destructive effect.

51260 Here in Dnipropetrovsk I came into contact with a number of young Dutchmen, not
National Socialists, but good, young guys who can be tough, and who, after having
done compulsory work in Germany for a short time, were so sensible, for this country.
They first also experienced the harshness of the land, were also sick, but now they
go their way determined, healthy and brave, an example for our people!

51265 If the Dutch share in the so-called "Osteinsatz" is well organised, then it is
important to promote Dutch cultural life by founding libraries, educational
institutions and the like and in this way to provide support to the Dutch in Ukraine,
which will enable them to carry out their constructive work here with joy. There is
still a lot of rewarding work waiting for us here!

51270 Now we also understand what it is that distinguishes Europe from its enemies: with
them we, in East and West, miss the tender love for our own, which previous
generations have built up in Europe. Whether it is the struggle for life of the
Americans or Bolshevism, both lack warmth only a thousand-year-old culture can give.

51275 Both have that hardness, that rock-solid insensitivity, which we described above.
Naive opponents may ask whether National Socialism does not possess this harshness,
especially towards the conquered peoples? It certainly possesses this and the war is
not the time to fully get to know National Socialism. To this end, more Dutch people
51280 should have gone to Germany when there was still an opportunity to do so, to see
there with what great love and sacrifice all the beautiful things that our culture
had built up in the past were cared for, restored, and especially was brought to the
people. Not only the beautiful new museums and the beautiful books, but also the
painstaking restoration of old parts of the city spoke of this. I need only mention
the examples, now largely barbarically destroyed, of Cologne, Krefeld and Trier.

51285 And if harshness is now also applied to the Dutch, then this harshness is absolutely necessary in these circumstances, in this war, against these enemies. The war has reached a stage where people used to call thinking about sins "hard against hard". Now it is indeed a battle as to who will prove to be the toughest, Europe or the others. Western Europe was not tough enough and fell in an incredibly short time, 51290 England was not tough enough and is now at the mercy of an opponent or ally. The hardest peoples still remain and the issue now is who can remain hard the longest. Every other thought must now give way to that. It would later seem unforgivable to us if it turned out that we had not been tough enough in the decisive hour.

51295 So this is clearly our path: We must learn to be tough, to be tough in the demands we set for ourselves, tough in the measures and demands that the party has to take towards its members, to be tough towards our youth, who has already been partly raised in softness, to be hard also in our love for our people. "Gentle surgeons, stinking wounds" is now said of this regime towards the people. And this harshness 51300 will not be allowed to pass away at the end of the war as a nightmare that temporarily oppressed us. We want and must continue to work hard in order to create a spirit in Europe and among our own people that dares to face real life again, in the homeland and in the Eastern regions.

51305 Europe is now waging a stubborn battle for the existence of itself and of everything that we feel makes life worth living, against the harsh peoples in the East and West. We must guard ourselves against Americanism and Bolshevism with all the strength in us.

This is the lesson that a stay in the East has taught us, to armor our hearts against the outside world. However, we hope to be able to prove after the war that this same 51310 heart is full of tenderness and love and is prepared to pour both of these out in streams over the people. Then it is time to show the Dutch everything that is beautiful and good in us National Socialists; as the German people have discovered this in its leadership, which it therefore follows unwaveringly, even in these times of need. Because National Socialism can also appropriate the Amsterdam Rasphuis

51315 saying:
 "Hard is my hand, but sweet is my mind."
 That's how it is and that's how it should be, there is no other choice.
 There is still much to be written, especially about the development in Ukraine.
 However, this will probably be our last article for "De Waag" during our stay here.
 51320 The work, which promises good fruits, now takes up all my attention, time lost due to illness must be made up for!
 F.C. BURSCH.

December 13, 1943 Dutch archeology in Ukraine

51325 The director of the National Office for Archaeological Soil Research, Dr. F. C. Bursch, who in May 1943 had left for the Dnieper bend under the auspices of the study department of the Dutch East Company to conduct research into remains of the Goths, who were first Germans had conquered the Ukraine around the beginning of our era, returned with his two assistants and told a representative of the A.N.P. [Algemeen 51330 Nederlands Persbureau] that, contrary to expectations, in three burial mounds near the village of Solonje, 40 km of Dnipropotrowsk, no remains of Gothic culture have been found, but other discoveries have been made. Two of the three mounds turned out to date from much earlier times, one from the Bronze Age (1000 years BC) and one from the time of the Scythians, who lived in the Ukraine from 800 to 300 years BC. During 51335 the investigation of the mounds and the investigation of the most important finds, a gain has been made that, for the first time, new detection methods have been successfully applied in Russian soil, which were developed in the Netherlands and can advance science. This is a Dutch contribution to the development of archaeology. The objects brought to light are expected here soon to be studied further and then 51340 loaned to the National Museum of Antiquities in Leiden.

December 14, 1943 Dr. BURSCH ABOUT HIS TRIP TO RUSSIA

Dutch contribution to the development of archaeology

51345 Recently it has been read that the expedition, led by the director of the State Bureau for Archeological Soil Research, Comrade F. C. Bursch, which traveled to the Dnieper bend in May 1943 under the auspices of the study department of the Dutch East Company, has left, returned from the East with rich experiences. The A.N.P. has had a meeting with Dr. Bursch these days in order to learn more about the relevant experiences gained in the eastern areas. Dr. Bursch said that he had 51350 been invited by the Commissar General of Dnipropetrovsk. The "Ahnenerbe" in Berlin,

the well-known Germanic Institute of the SS, mediated for this purpose. After he had accepted this invitation, an expedition was equipped on behalf of the study department of the Dutch East Company (later the Dutch East Institute) and Dr. Bursch left with two assistants, W. J. de Boone in Amsterdam and F. van Meer in Arnhem, to the village of Solonje, 40 km southwest of Dnipropetrowsk.

"What prompted this invitation?"

The attention of the Commissioner General had fallen - according to Dr. Bursch - on some burial mounds and he hoped that these would contain the remains of Goths, who were the first Germans to conquer the Ukraine around the beginning of our era. People were disappointed in that expectation. Gutters were not found there.

The three burial mounds dated from much earlier times, two from the Bronze Age (1000 BC) and one from the time of the Scythians, who lived from 800 to 300 BC lived in Ukraine. One of these hills was about 5 m high and had a diameter of 70 m.

Four particularly well-cared for graves were found in this hill. The mound of each of these graves had been significantly raised and enlarged. Such a grave consisted of a rectangular pit in the bottom of the hill, covered above by wooden beams and a reed mat. A second mat was wrapped around the corpse, which had been laid on its back with its knees drawn up. Sometimes the walls of the burial pit were whitened with lime, while the deceased himself showed traces of red paint on the skeleton.

After these four main graves, which were undoubtedly related, the mound was enlarged several times in more modest sizes on the sides for later graves, which were simpler in nature.

The second mound, close by, contained a large number of these simpler graves. In each case the deceased lay in a crouching position in a simple and shallow pit, usually carrying one or more pieces of pottery. The main grave of this second mound, however, was covered by a large stone.

The mound was barely 1 m high, and much smaller than the first mound.

Finally, the third mound was lower and smaller again and contained only one grave, dug 2 m deep under the center of the mound. This deceased was also in a crouching position again, this time the grave goods were: bronze arrowhead, bead, gold ring, recognizable as Scythian.

The finds were further studied here in this country and therefore temporarily ended up in the National Museum of Antiquities in Leiden for that purpose.

The main benefit of these investigations in the Ukraine, however, was to provide proof that the application of excavation methods developed in the Netherlands to Ukrainian objects has been of great value for the development of South Russian archaeology. It is very likely - Dr. Bursch continued - that all three hills examined succeeded each other as graves of the inhabitants of that region, who were under the influence of the Scythians, but were already there for the latter tribe. Those

predecessors were the Cimmerians. The Cimmerian, whose remains were given the above-mentioned grave goods, probably saw the Scythians coming, given the objects that he received in the grave. "Were any more items found?"

Mostly pots and also a skull have been sent here, according to Dr. Bursch. The objects are expected here soon to be studied further and then loaned to the National Museum of Antiquities in Leiden.

Dr. Bursch expressed his opinion that this trip to the Dnieper bend, in addition to the experiences gained, has yielded the benefit that for the first time and successfully, new detection methods have been applied in Russian soil, which were developed in the Netherlands and can further advance science. This therefore concerns a Dutch contribution to the development of archaeology

January 15, 1944 DR F. C. BURSCH

The Beaker culture in Brabant and Limburg

About ten years ago it looked as if there was a great gap between the phenomena of civilization in the Young Stone Age in the area to the south of our great rivers and in that to the north.

In my dissertation, written in 1931/32 and published in 1933 nothing of the sort was known from Brabant at the time.

Some things have changed in the meantime. After all, in short succession two finds of burial mounds of Beaker culture became known, one near Oss and one near Schaik, so that suddenly the province of North Brabant also joined the more northern provinces where finds of this nature were known. Moreover, due to the excavation of a number of tumuli on the German border, east of Swalmen, the number of beakers known from our South was suddenly more than doubled, because 11 beakers came to us from this one site alone. The presence of other burial mounds of this nature, west of the Central Limburg Maas, is also very likely.

Thus, in a relatively short period of time, a completely different light has been shed on the oldest history of Brabant and Limburg, a light that is reinforced by the fact that discoveries have now also been made in Belgium (since 1940) that point out that, contrary to the original view that Belgium was not at all influenced by the Beaker culture, the people of the Beaker culture have indeed also penetrated the south of our country, so that our southern discoveries are no longer so isolated. So instead of counting on only a few finds that came here more or less by chance from the abundance of similar phenomena on the other side of the rivers, we are now obliged to take serious account of the fact that around 1800 BC In our era an important penetration of the Beaker people into our southern provinces took place.

In general it can be concluded that archeology has worked somewhat too much with the hypothesis that every change in cultural heritage is also a change of the nature of the population of a particular region. We are now increasingly coming to the realization that in any case the indigenous population of a particular region always played the leading role, regardless of the influences exerted on it over the centuries.

Now, however, it is precisely the cup culture that represents a sharp break with the past, and if it has ever happened that new elements have flowed to our country from abroad, to first play an important and independent role in the population and only in the long run to merge with the masses of the people, then that was indeed the case with these rather small crowds. It is clear that the role played by these leaders in the Europe of those days can hardly be overestimated in insignificance. In these years between 2000 and 1800 BC in large parts of Europe a completely different, enterprising, expansive, martial element emerged that was not there before. These were turbulent times, which is proven by the erection of fortifications at many points, and very strikingly by the large numbers of stone weapons, mainly arrowheads and spear points, in the moats and against the walls of some such fortresses in Central Germany found.

This appearance of a new element in Central and also in Western Europe (Scandinavia, the Netherlands and England) also coincides with similar phenomena in Greece (appearance of stone hammers and cups), and with much commotion in Asia Minor up to Egypt (Hyksos).

If we let the latter phenomenon rest outside the borders of our continent for a moment and limit ourselves to Europe itself, it becomes clear that neither before nor later can an era be found in which a cultural unity of such magnitude can be established. The slender shapes of the pottery cups appear everywhere, usually slightly S-shaped. The martial performance includes the new weapons that the people carry: the stone war hammer, the bronze dagger (because the new population elements also bring with them the first knowledge of working with metal everywhere in Europe), bow and arrow (a stone plate to protect the wrist against the return of the bowstring), and also the horse and perhaps even the chariot! (For example, we found a horse buried in a hill in Garderen.) We can now perhaps feel the effect that these new means of fighting had on the opponent better than ever, now that we have seen the effect of Stuka's and other surprising new war equipment.

Perhaps we should attribute it to the fact that in a relatively short time all of Europe north of the Alps, including West and Eastern Europe up to the Black Sea, was brought under the sphere of influence of the Beaker people.

As we saw, Brabant and Limburg were also part of the area flooded by the Beaker people, in contrast to France, for example, which was completely outside it. This therefore means that most of Europe was suddenly included in a large whole, which will probably have had no political significance (because it is of course completely wrong to apply modern concepts of state and power to periods in which primitive man was still the sole ruler!), but which did offer great economic and cultural opportunities. After all, it makes a big difference whether humanity lived in large or small, but in any case isolated, groups, or whether contact had been established between all these groups, which could thereby achieve an exchange of material and spiritual possessions. It therefore appears that it will never again be possible for the researcher to draw such sharp boundaries in the periods following the Bronze Age as this would have been possible in the Stone Age, for example between the dolmen group and the pile building group or the so-called band-ceramic group. Afterwards, people's lifestyles apparently never diverged as much from each other as they had before the conquests of the Beaker people. For example, we see that the burial mound is on its way to becoming the universal grave monument for Central and Western Europe. In Eastern Europe, the burning of the corpse, which was already competing for supremacy with the burial of the corpse in the church culture, is gaining the upper

hand. European humanity, which had also become acquainted with metal as a raw material for utensils through the beaker culture, clung to this material in later times, and thus not only a civilization based on bronze emerged everywhere, but logically also an extensive trade, because tin and copper, the raw materials for bronze, did not occur everywhere in nature, so had to be exported and imported. Naturally, the trade relations also include those countries that had not come into contact with the Beaker people, such as Spain, Italy and France. For the Netherlands, the conquest of our southern provinces in addition to the others by the Beaker people meant that not only in the short period of time of this conquest, but also for quite a few centuries afterwards, a cultural unity continued to prevail between the North and South of the country, so that we had the same type of burial mounds and graves in the North and South of the Netherlands: namely palisade mounds with corpse burial or cremation in tree coffins, and that the bronze shapes differ much less than in the past, for example the shapes of the stone axes in the North and South. It indeed looks as if a cultural unity of the Dutch (of course together with the neighboring German!) areas has emerged. The fact that this seems to change again later, during the time of the urnfields, ultimately turns out to be a temporary phenomenon.

When we have attempted to outline the significance of the Beaker people for the history of our South in the above, our conclusion was that a relatively small number of conquerors succeeded in expanding the ties between the originally sharply separated areas north of the large rivers and to the South (and West) of this, so that from now on our South would participate in the cultural and social life in Central Europe and the surrounding area. However, we must also be aware of the fact that compared to the large number of original inhabitants, the new arrivals almost fade into insignificance. From the same direction, a much stronger penetration of population elements into our South took place in the centuries before the beginning of our era (first Germanic land acquisition) and later through the Frankish colonization.

It would of course now be of the utmost importance if we knew something more about these newly arrived people than just the remains of their material culture. It is clear that this material culture is only a reflection of the nature of these people themselves. For it is not a coincidence that one people prefers sharp shapes and another prefers duller ones, or prefers bright colors rather than soft ones, or buries the dead in family (sibbe) or tribal graves or in burial mounds for one person. Ultimately, all these external phenomena reflect man's spirit and talent. And so we can say with all the more certainty that the people of the Beaker culture were undoubtedly different from those of stilt houses or those of dolmens.

The finds prove what it looked like of skeletons in the burial mounds. Already in the first systematically excavated burial mounds of the Beaker people in the Netherlands, i.e. in Nierssen (O.M. 1908), excellently preserved skeletons were found, which were found by Prof. Dr A. W. Nieuwenhuis were subjected to a systematic anthropological investigation. They turned out to have pure Northern Breed skulls. Although it was only rarely that the skeletons were found as intact as there in Nierssen, the long skull, always of almost the same high and narrow type, could always be recognized from the general shape. One gets the impression of great homogeneity, therefore of a fairly great racial purity, among the bearers of the Beaker culture. The same has also been noticed in all other countries where the Cup culture occurs, and there is currently a strong tendency to see in the Cup culture the reflection of the civilization of the Northern Race. We will therefore also have to take into account that in Brabant and Limburg, in view of this racial purity and in view of the apparently closed as a people advance of the bearers of this culture, that Northern race elements have invaded our South with the Beaker people, while we completely leave aside the question, to what extent it would be possible that such population elements were previously present.

Besides the race of these people we can probably also say something about their language. The linguists, at least most of them, assume that the great relationship between the various Indo-Germanic languages would have arisen because an Indo-Germanic speaking primitive people would have Indo-Germanicized the various previously existing languages. If this hypothesis is correct, then it is beyond all doubt on ancient grounds that no other person should be considered for this Indo-Germanic primitive people than the people of the Beaker culture, which has carried out the most extensive and intensive conquests. Moreover, the fact that these conquests took place on the border between the Stone and Bronze Ages, the period in which, according to philologists, Indo-germanization should have taken place also speaks for this. During that period, it is impossible for another, a second nation to be eligible to play this important role in addition to the Beaker nation.

51550 It is therefore clear that the discovery of several graves and objects in the Brabant and Limburg heathlands has been of far-reaching significance for the knowledge of the history of the Netherlands.

January 17, 1944 The Spade House opened

Seat put into use by the Frankish Working Community

51565 Saturday, January 15, was a great, memorable day for practitioners of local folklore in our South, in Frankish Limburg and North Brabant. After all, on that day in Sittard, with its old churches, ramparts and picturesque corners, the Frankish Working Community, which aims to study the region of our Frankish regions and whose membership has increased significantly recently, built a comfortable building of its own in the heart of the city was opened and put into use in a festive manner. A large
51570 number of ladies and gentlemen, not only from Limburg and North Brabant, but also from other regions of our country, had traveled to the town, which is the gateway to the South Limburg mining area for visitors from the North, to to witness this important fact. Present at the ceremony were, among others, F. C. Bursch, director of the State Bureau for Archeology and Soil Research, the administrative [...]

51575 March 23, 1944 DR BURSCH ON HIS EXCAVATIONS IN THE UKRAINE

In a meeting in Pulchri Studio which was convened by the socio-economic association "Netherlands and Europe" in collaboration with the Dutch East Institute, archaeologist Dr. F. C. Bursch gave a lecture with illuminated images about his
51580 excavation work last year in the south of Ukraine. Drs. Goedhuys introduced the speaker.

Dr. F. C. Bursch explained that what had been hoped to find in the three designated burial mounds at Solonje, south-west of Dnipropetrowsk - namely graves of Goths - was not found. Speaker was of the opinion that they were dealing with graves of Scythians or Chimeras, as Herodotus called them, which date from 900 to 500 BC. A very simple
51585 bell-beaker decoration was found on one cup. Furthermore, a bronze arrowhead was found and a baked bead and gold ring, both of which were probably made in Greece. Based on the simple ornamental motif - the peak of the Bell Beaker culture in the Netherlands is around 1800 BC - tried to to show that those buried here were distant
51590 outposts and colonists of the Northern Race, who, far from their own cultural center, had to gradually lose their forms of civilization under the foreign influences there. He also argued, using other examples, that it is incorrect to assume that culture and civilization came to us from the East, as Anglo-Saxon and Russian scholars sometimes want to believe. On the contrary, Central Europe with its northern race has always
51595 been the radiating cultural area. Russia was the host.

May 1, 1944 PROFESSOR OF PRAE HISTORY.

Dr. F.C. Bursch appointed.

51600 AMSTERDAM, April 29. - We hear that Dr. F. C. Bursch, curator at the National Museum of Antiquities in Leiden and director of the National Office for Archaeological Soil Research, has been appointed extraordinary professor of prehistory at the municipal university.

Dr. Bursch was born in Leiden in 1903. He studied history, archeology and prehistory at the universities of Leiden, Amsterdam and Marburg and obtained his doctorate with honors in Marburg in 1932. Dr. Bursch is a member of the German Archaeological
51605 Institute. He has written many articles on prehistory in scientific journals; his dissertation dealt with "Die Becherkultur in den Niederlande". In recent years, Dr. Bursch has conducted scientific research in Ukraine, among other places.

51610 May 5, 1944 Dr. Bursch extraordinary professor

As successor to Prof. Dr. A. E. van Giffen, the mayor of Amsterdam has appointed Dr. F. C. Bursch in Oegstgeest as extraordinary professor of prehistory at the University of Amsterdam. Dr. Bursch also carried out many excavations in Limburg and worked on the earliest history of these regions. He also recently made a study trip to Ukraine

51615 and scientifically examined old burial mounds there. He is director of the Bureau for Archaeological Soil Research in Leiden.

June 1, 1944 THE TOMBS IN THE UKRAINE

51620 For a small circle of interested parties, Dr. F. C. Bursch gave a lecture on Friday evening in the Korenbeurs [this is in Eindhoven and there were only a few listeners, we read!] about his excavations in Southern Ukraine.

In our country, Dr. Bursch has conducted research into old burial mounds, several of which he has uncovered in Drenthe and the Veluwe. Very interesting discoveries have been made, which bring us closer to the lives of our ancestors.

51625 In southern Russia this archaeologist has examined three burial mounds, where it was hoped to find the graves of Goths. However, this was not allowed to succeed. However, Dr. Bursch has made interesting finds here, whereby examination of the objects, the location of the remains and more technical details concluded that they were related to graves of Scythians or Chimeras from the period of 900 BC. Dr. Bursch then
51630 explained how these excavations may lead to the conclusion that civilization did not come to us from the East, as is often claimed, but on the contrary, the North Race has formed outposts of civilization in the East Country. The audience listened to Dr. Bursch's presentation with great interest.

51635 November 15, 1944 PROF. DR F. C. BURSCH

THE BIRTH OF EUROPE

There is no end in life,

It is always a life.

Goethe

51640 Everything that is dear to us represents the highest value to us at that moment when the threat of possible loss hovers over it. Then it is also the time to reflect on what constitutes its value, to ask ourselves how it became our own property and what powers and possibilities it gave us.

51645 This is how it is going for all of us now, when we see how large parts of Europe are being turned into a wasteland, much scorched by the violence of war, which threatens to destroy everything that belongs to the very essence of our continent. Nowhere else in the world will one find such a high-quality culture, which nevertheless grew organically and is so closely connected to the surrounding nature to form a unity. A village in the trees along the rivers or in heath and forest, isolated farms whose
51650 yards and fields blend unnoticed into the trees around, but also an old town in its ramparts or even towns that have gradually grown over the centuries such as Amsterdam gives us this enchanting feeling of bondage to land and soil.

But it is not only this unity between nature and man that affects us in Europe.

51655 Whenever we travel, we are struck again and again, wherever we go, by the familiarity that is common to all countries, in addition to all that which constitutes the special value of each region in itself. Europe is a unity in diversity, both deeply rooted in ancient, inherited values, and this sets it apart from all other continents.

51660 The problem with which we now wish to concern ourselves for a moment is the question of the deepest origin of our varied culture. And we will have to dig deep, deeper than people previously thought.

For it will not be sufficient if, in order to explain this phenomenon of European unity in diversity, we point to the influences that emanated on the one hand from the Roman Empire and the Christian faith as promoters of unity, and on the other hand
51665 from the history lived together by each nation, which would have caused the diversity.

After all, when we define culture as the ability to work something that is given by nature or through natural forces into something else, and then to use this further for purposes that cannot be achieved by the original, natural 1) then it is clear how
51670 important the nature of the human being who creates or experiences culture is.

We also speak of the undergoing of culture, because a culture does not always have to be created by the person who is under the influence of this culture. Culture can therefore indeed be imposed on man as a phenomenon originally foreign to him. In this way it can be explained that in Europe over the centuries numerous cultural forms
51675 have been absorbed or developed by the same people, which sometimes differed from each other in very important characteristics.

Fully accepting all this, it is nevertheless clear that there is a close connection between culture and the natural nature of man, closer than could be directly

51680 concluded from this. For as culture is understood as nature reworked by man, it is clear that not only is the emergence of new culture directly from nature a creation

of man, but also that this process of creation is also present when the culture has come to man from outside. In other words: every encounter between man and culture is a cause of human creative capacity, which is aimed at further developing culture in the direction that best suits man's natural talent, i.e. his own capabilities. And these powers are hereditarily given to him, are present in him outside his will. So we know the duality: man and culture. Moreover, in this culture a distinction can be made between that culture that man has created independently of others and the culture with which he comes into contact through circumstances beyond his will as something that comes to him from outside and which he then recreates in an ongoing process into something, according to his own nature.

The problem has thus been shifted to an answer to the question whether there is a characteristic present in different representatives of humanity, including in their mental powers with which they create culture, by which we can distinguish between the reactions with which they confront nature or against a culture originally foreign to them, in the creation or recreation of culture. If we are convinced that we must answer this question in the affirmative, then this conviction is based precisely on what we witnessed at the birth of European culture. After all, it is clear that we can most clearly determine the identity of the various peoples and races that inhabit Europe where they are observed in their most primitive reactions, that is, in ancient times, when natural disposition played a much greater role than now, now that advancing civilization has increasingly overgrown these natural properties with a number of other learned properties. It is the same reason why we encounter many more remains of natural bonds and resulting properties and reactions in the countryside than in the large cities, which means, among other things, that the diversity between the village municipalities in the different landscapes is much greater than the difference between one big city and the other.

Since the time of Romanticism, we have known for more than a century the existence of this non-universalistic, underground civilization among everyone who has not yet become a mass human being broken free from all natural bonds, i.e. "Americanized". This civilization, in contrast to the generally applicable, now technologicalized civilization that is increasingly uprooting itself in many forms and norms, includes everything that we will continue to call "folkish" with a much-controversial word, and that goes deeper than all shared history.

Without this folk element there would be no European diversity in unity today, just as there would be a unity without strong kinship between the original cultures in the different countries of our continent.

Man therefore creates his culture from the nature surrounding him, and he accomplishes this culture-creating act from the moment of his first appearance in the world. The most primitive tools, which show clear traces of human processing, bear the earliest testimony to this. In Europe we already know these phenomena in the early Pleistocene, and a Tertiary origin of humans is certainly a possibility. Yet in the beginning man was apparently so little differentiated that we find the oldest forms of his tools, the so-called hand axes, in exactly the same forms over large areas, even outside our continent. We only find a stronger differentiation during the last ice age.

At the time that a large part of Europe was covered by an ice cap for the last time, we already distinguished various cultural provinces in Central, Eastern and Western Europe, which were, however, partly connected. At the beginning of the last ice age, the so-called Aurignacian civilization prevailed everywhere, but it developed differently in the Mediterranean area (Spain and North Africa up to and including Egypt) than in Central and Western Europe. A completely different culture emerges in the Alpine regions. These differences are clearly expressed in the visual arts, among other things. While the Mediterranean area, mainly Eastern Spain, from the first, very primitive Aurignac art with female figures made of baked clay or stone with exaggerated sexual characteristics (steatopygia), was a lively, full of action, working mainly in black and white and also depicting humans. The art of faithfully depicting the animal as an isolated figure is gradually flourishing in southern France and northern Spain in the well-known rock paintings, hardly involved in a group or in an action as in Eastern Spain. This art, undoubtedly eidetic in origin and having numerous parallels in other parts of the world, is immediately capable of accomplishing this limited task in a way that could not even remotely be approached elsewhere. In Central Europe, the steatopygian female figures in free sculpture simultaneously give rise to beautiful, finely crafted female heads (Unter-Wisternitz in Bohemia, for example) full of expression, while in Eastern Europe art soon moves away from this naturalistic phase and moves on to depicting schematic, rectilinear figures (meanders), after similar female figures as elsewhere had first set the tone

there.

The civilization, named after Le Solutré in France, which, with extremely beautifully crafted flint tools, intrudes on the Western European development, which leads directly from the Aurignacian to the Magdalenian, and thus represents a certain break or at least interruption through the manifestation of the Solutréen, shows, this Solutréan civilization is an originally East-Central European phenomenon, perhaps partly a harking back to older forms of the hand axe.

The high art of the Ice Age shows a degeneration at the end in France, the number of tool types decreases until only a scraper remains, while on the other hand, with the melting of the ice, we can observe a further push of the Magdalenian culture further northwards into our country and near Hamburg. Central European elements are also penetrating the West and North-West of our continent.

Thus, Europe was already a unity in diversity during the last ice age. While we can still see in the hand ax a universal tool, which could possibly have been independently invented everywhere in the meantime to meet the same need (cutting down trees), from the Aurignacian onwards we see a different response to nature and consequently the origin of although still very extensive, but also independent cultural areas in the various parts of Europe. This phenomenon occurs at the same time that we see a new human type, homo sapiens, emerge, immediately in different manifestations, that is, races. The man from the caves of Grimaldi, near Monaco, looked different from those of Brünn in Bohemia, or those of Aurignac and Canelade.

Is it a coincidence that this coincidence occurs between the appearance of independent cultural areas with the appearance of separate human races: the Mediterranean, the Western European, the Central European race? We dare not judge this with certainty, but this is striking respond differently to virtually identical conditions in the surrounding world in different parts of Europe, undoubtedly. Man shows more and more that he wants to uproot himself from the compelling laws of nature, insofar as they make him too dependent, and in this cultural reaction he apparently follows much more differentiated paths than was previously possible for him.

Unfortunately, many of the important developments that undoubtedly occurred in the following centuries after 10,000 BC are still shrouded in darkness. We only have more definitive data from a few areas of Europe: Germany, England, the Netherlands and the Scandinavian North. Furthermore, we know that due to special landscape and climatic conditions in Southern Europe around the Mediterranean Sea, and in particular in Egypt and in the Two Rivers Country, man early develops into an existence tied to fixed dwellings, and thus into a higher level of civilization, earlier than in Europe north and west of the Alps, where he gradually changes from hunter and fisherman to farmer tied to permanent residences.

Was there any interaction between the areas of Europe and the Eastern Mediterranean basin and Asia Minor in these centuries? From the course of the following development one can certainly conclude that an affirmative answer to this question is given. After all, in the Near East, as well as in South-Eastern Europe (Crete, Greece, the Balkans and the Danube region) we see a similar initial development of the culture of an agricultural population. We must probably interpret the phenomena as meaning that cultural influences penetrate from the South-East into the heart of Europe, causing the gradual transition from wandering nomadic life to the existence of farmers. This is indicated by the appearance of motifs on the oldest pottery, such as the palm tree, and of shells from the Mediterranean region as an import from that side among the earliest products of the oldest Neolithic culture in Central Europe. What escapes our observation, however, is the possibility that previously Central European currents may have radiated inversely to the Balkans and Asia Minor, thus creating the possibility of these later connections. In general, especially on the basis of what we see happening later, one may assume that popular movements have always taken place in the North-South direction, and never in the opposite direction.

Around 4000-3000 BC one must therefore imagine that the naturally more favored Mediterranean region and Asia Minor formed the center from which Central, Eastern and Western Europe were influenced. Only in Denmark and the surrounding area do we see a development that takes place simultaneously, but independently of these influences, where people apparently occupy permanent residences for at least part of the year, and then proceed to the production of originally very primitive pottery without a base (the culture of Kjökkenmöddinger kitchen waste heaps). For the rest, however, Europe from the South and especially from the South East is currently being culturally influenced. This influence first takes place in the loess areas of Central Europe, which extend in the West to South Limburg. There we find an agricultural population everywhere, with bowl-shaped pottery with band decoration, who live in

village communities, and in order to defend themselves against the animal world surrounding them, but very probably also against the hunting tribes, builds their large shelters for people and livestock, which we visit from Maastricht to found in Thessaly. Local differences in this distribution area naturally occur, and it cannot be assumed that this development progressed other than very slowly from East to West. In the meantime, however, we see the phenomenon that new cultures of humanity bound to permanent residences are emerging everywhere. In southern Russia, Romania, Thessaly and as far as Bohemia we find a culture with different local variations, which is closely related to the preceding culture of the so-called banded ceramics, but on the other hand has connections with its painted pottery as far as China and Persia. Since this culture so clearly has its center of gravity in the East, it is certainly obvious to assume an Asian Minor origin, which would then continue to exert its influence, especially on Crete, in the following centuries. In Bohemia it has been shown stratigraphically that this painted ceramic is younger than the band ceramic. However, band pottery and painted ware are the only cultural influences associated with Asia Minor. In various parts of Europe we are also gradually seeing more and more independent cultures emerging, partly spontaneously, partly as a result of action on these Eastern influences.

Thus, along the coasts of the Atlantic Ocean: in Portugal, France, southern and western England and Ireland, and in Scandinavia, we find civilization characterized by memorials to the dead, consisting of large stones, either single, vertical stones (menhirs), either stone wreaths and other stone settings to enclose a space (cromleghs, etc.), or actual burial chambers of three supporting stones (dolmen) or more, which together support one or more covering stones (dolmens, etc.). If we examine this Atlantic megalithic culture more closely, we see that the similarity between the phenomena on the Atlantic coasts and along the Baltic Sea is only apparent, and that there are even differences between the phenomena in Portugal, France and western England. In France (and Brittany) this culture results in a rich, almost exuberant variety of stone monuments, to a lesser extent in England, while on the Iberian Peninsula and especially in southern Scandinavia and Denmark (where they also extend away from the coasts spreads inland) the culture has been reduced to more modest proportions. On the other hand, it is precisely in Scandinavia and Denmark that the other cultural content is particularly richly varied, and a unique style in form and ornament, mainly of the tableware, develops there, which is also spreading in the center of our continent. It is therefore clear that forces of their own are at work there in the North-West of Europe, which demonstrate forces, both in style formation and in influence to the outside world, that are not present in this form elsewhere.

In Western Europe (the Rhine region, Northern France, Eastern England) and Central Europe (Switzerland and Southern Germany) we find traces of another culture, also, but to a lesser extent, separated into local variations, which is characterized by settlements along the water and fortifications on the heights, and by the tulip-shaped, virtually undecorated pottery. In the Eastern Alpine region, a culture with plastically decorated tableware is still emerging.

Finally, on the border between the Stone Age and the Bronze Age, we see two new cultures emerge: the Bell Beaker culture, which emerged from Spain in England, France, Sicily, West, Central and South Germany as far as Hungary, and the war hammer civilization, which we, with a center in Central Germany, radiating to the West to England, to the North to Southern Sweden, to the East to the coasts of the Black Sea and Troy, to the South to Greece, Northern Italy and Switzerland. As a result, the whole of Europe, including the Baltic region, which was the last to follow this development, has become the home of a wide variety of agricultural groups, each with their own cultural forms.

So much for the facts, as the findings teach us. How should we imagine the historical events that underlie this? What we see happening before our eyes is the transition everywhere in Europe from the cultural stage, in which man lives from what the surrounding nature provides from its abundance, without its products having to undergo any special processing by man, to the stage, in which man, as it were, takes the initiative himself, forces and controls nature, and thus places himself, as it were, in opposition to nature for the first time. This is undoubtedly the most important moment in the history of human development after its origin. The completely different living conditions brought about by being tied to permanent residences also revived handicrafts everywhere and thus created consumer goods with a much greater versatility than had hitherto been possible. The most important asset was the tableware, and people also learned to take better care of their stone tools, including by sharpening them. People also faced new problems when choosing and

51880 building places to live, while much more care could be given to the graves of the dead, now that people no longer left their place of residence. Culture therefore takes on many more forms in which it manifests itself to us, namely in the guises of grave and house, pottery and tools. What we learned in these centuries before 2000 BC see happening, is responding differently to the new way of life, taking into account the natural conditions in the different parts of Europe.

51885 We then saw how man initially chose as his home those areas where his struggle against the surrounding nature was easiest for him. These were the barren loess areas in Central Europe, and the regions along the sea, rivers and streams. This is how the cultures of banded ceramics and later of painted ceramics, the Atlantic culture and the culture of "stilt houses" and mountain fortresses came into being. We have to

51890 assume that this was a process, sometimes starting from a center in all directions, or taking place in one direction, sometimes caused by outside influences. We therefore do not believe that popular movements were the basis for this in these cases. It may be assumed that the country of origin of these cultures lies somewhere in the area of their closest distribution.

51895 Hitherto the antiquary has been inclined to see in every culture the manifestation of one people, following the example of Gustaf Kossinna (1858-1931). This was connected with the half-unconscious acceptance as an axiom of the hypothesis that culture can only arise through popular movements that transferred it from one place to another. It is clear that if one regards culture a priori as transmissible, as we did at the

51900 beginning, one must also abandon this axiom. It is therefore difficult to assume that, for example in the case of the band ceramics from Maastricht to, say, Sebastopol, one people would have lived there. Once we have seen these cultures emerge, we can further understand them as spheres of influence, because there is clear mutual contact between the areas covered by them.

51905 And when we observe the further development of these cultural groups, we see remarkable differences in their behavior. The once supreme culture of banded ceramics later left not the slightest traces of its influence in Western and Central Europe. On the other hand, we see the sphere of influence of the North-Western European dolmen culture extending over Central Germany, South and East Germany (in part),

51910 Bohemia, Poland, South Russia, where it partly replaces the culture of band ceramics. The latter only persists in South-Eastern Europe in its form of painted pottery, probably because these areas were closest to the center of this culture. We therefore conclude that certain cultures have no, while others have very great, expansive power. The latter is especially the case with the Central European cup and

51915 battle hammer culture, which also imposes its shape on the inhabitants of those regions where completely different cultures used to prevail, for example in Greece, part of the old area of the colored ceramics. We also find traces of the original Spanish Bell Beaker culture in vast areas of our continent, also above or next to previous cultures of a completely different character. In these cases we see

51920 originally non-native cultures busy bringing other areas under their influence. In the case of the Bell Beaker culture we are dealing with a relatively small number of finds, which are moreover not tied to one grave shape, but on the contrary the dolmens of Brittany and Spain, the burial mounds in our heathlands, and numerous flat graves in Central Europe into use in Germany. Here we are not dealing with a culture

51925 that presents one and the same image wherever it appears. Since this occurrence coincides with the earliest appearance of metal, it is obvious to recognize influences in this type of pottery that arose through trade. One thinks of small groups of "prospectors" looking for metal. It is a different case with Northern culture and that of the war hammers. Here the

51930 influence is neither temporary nor superficial, but instead long-lasting and profound and universal. Where northern culture has once emerged, from now on nothing more than articulated shapes are made, albeit also in numerous variants of the shapes that originally came from Scandinavia. The decoration continues to adapt to these shapes, and a combative character appears in the mostly original peaceful farming cultures.

51935 So there is one choice: either the inhabitants of these regions will gradually develop a northern-tinted culture after they have temporarily undergone the influence of banded ceramics, or there will be an influx of new population flows from Northern, Western and Central Europe to the South and East. place. The first possibility is most likely in the case of the North-Western European culture, the second in the case

51940 of the militant war hammer people. Northern European humanity, after being influenced by band ceramics, is therefore regaining its identity and making Northern forms the prevailing rule everywhere in the area where people live whose sense of form corresponds to that of the Northern European countries. The war hammer culture, on the other hand, conquers fallow as well as already cultivated areas in Northern,

51945 Central and Southern Europe from Central Germany, and everywhere puts its own stamp on the future development of culture in all these newly conquered areas. The other cultures of Europe mentioned remain in possession of their original sphere of influence, except for this one to expand, or their influence is curtailed by these newly emerging influences or conquerors.

51950 The cultures can therefore be compared to living beings, who lead an existence depending on their life force. In addition to cultures that behave very passively, or even perish due to a lack of vitality, we apparently find very active cultural elements in Europe, which expand their area with dynamic force, possibly at the expense of the living space of others.

51955 With the inauguration of the Bronze Age we see an end to the emergence of new civilizations, and rather an era of consolidation dawning, in which the main centers in Europe are the Upper Rhine, Silesia, Bohemia and Saxony (with princely tombs and rich bronze industry) and other centers of bronze industry in Spain and Wales. Eastern Europe then has such a center of industry in Zevenburgen. In Greece, the

51960 Mycenaean civilization, clearly influenced by Central Europe, flourishes on the mainland, alongside the originally Asian Minor culture on Crete. Trade relations develop between Mycenae and Troy on the one hand, and Central Europe on the other, so that we find Baltic amber and Germanic sword shapes in Greece and even in Egypt, and on the other hand other pieces of Eastern Mediterranean model or manufacture in

51965 Bavaria and Silesia. These and other trade relations that are now being established, including between England and Egypt, Hungary and Scandinavia, testify that the upheavals of the Stone Age have now come to a rest. The fronts are clearly formed, cultural provinces are created.

51970 Around 1000 BC, new commotion arose: In Lusatia, Hungary and the Eastern Alps, a new culture with funeral burning and plastically decorated pottery gradually emerged from the original inhabitants with Northern European and band-ceramic culture through mixing with the warhammer people, supported by a very large population. Due to an unknown cause, perhaps due to threats from the East, where Slavs and Cimmerians first lived, and later also Scythians, we suddenly see this culture with cremation and

51975 plastically decorated forms of tableware spreading across the Balkans to Greece and Troy, on the other hand also in the North. It invades Italy, through southern Germany to the West, exert its influence as far as our country [the Netherlands], and also reach into the northern part of Central Europe as far as Mecklenburg. Without any doubt, we are really dealing here with popular movements, conquests from one area, of

51980 which the so-called Dorian migration in Greece is only a part. The Illyrians played the main role in this. Around 400 BC the movements of the Celts began, which also expanded to the East, West and South from their original area on the Upper Rhine into Asia Minor, Spain, England and Italy. From these trips they derive the classical Greek influence, which they then process independently. First pushed back by

51985 Illyrians and Celts, or at least cut off from the southern part of our continent, the Germanic people gradually broke through the ring surrounding them everywhere, first towards the East, after the Illyrians had moved into their southern settlements, then towards the South-West after the Celts had also spread out. The heyday of the Roman empire coincided with this Germanic expansion, and the collision of these two worlds

51990 ultimately ended after centuries of bitter struggle with the time of the Germanic migration, during which almost all of Europe became Germanic: Goths, Walloons, Franks, Angles, Saxons, etc. While Charlemagne once again united the Germans on the mainland under his empire around 800, the Slavs from the East pushed forward, as they did around 500 BC the Scythians had already penetrated as far as Berlin, and now

51995 Hungary is also being flooded by Asian hordes, Huns and Avars, and ultimately the Balkans also become Slavic. At the same time, however, the Normans swarm the European coasts and islands, as founders of Germanic empires on the periphery of our continent, including in Slavic Russia, but Moors and Turks threaten Europe's South and South East from Asia.

52000 In later centuries, the common struggle of Europe was again and again directed against Moors, Mussulmans and Slavs as extra-European enemies, insofar as the emergence of nations and the resulting disunity of our continent still permits a correct insight into the danger that threatens all alike. whether a high and sacred common ideal binds them together. (Final to follow)

THE BIRTH OF EUROPE

Thus, from the Bronze Age onwards we see again how the center and the north of our continent formed the areas from which the popular movements emerged that promoted the unity of Europe. Italy and Greece both received around 1000 BC fresh blood and new impulses from this side, which will help determine further development in those countries. Thus it is that classical influences in turn easily penetrate these receptive peoples, because related peoples such as the Celts and later the Germanic people, although these influences were also independently processed into something of their own. The relationship between central Europe and the classical countries therefore gave these influences a greater place in Europe than was ever the case with Greek colonization in Asia Minor and southern Russia, or with the Roman Empire in its Asian and African provinces. used to be. The deployment of power of an Alexander the Great or of the Romans, applied only to Europe instead of directed towards the East and South, would certainly have had much more effect.

Accepting the multitude of European cultures in the Stone Age, and conceiving these cultures as organisms that exert an effect, whether through the emission of indirect influence, through trade or of a spiritual nature, or through direct pressure through force of arms and conquest, we see in antiquity already the same phenomenon as with a state in the modern sense. The latter, through its bare existence, as it were without its will, through political power, biological force and economic wealth, through location, etc., exerts influence that, with a modern term, is called geopolitical according to its nature. Even in antiquity one can speak of the geopolitical influence of a culture, and therefore of geopolitical archaeology. If we examine the above-mentioned development of Europe more closely from this point of view, we see countries and cultures that behave purely receptively in all respects, against other countries and cultures that form a powerful center of forces. Moreover, there are countries that radiate cultural strength, but biologically absorb strength.

Some examples for clarification:

England is essentially a receptive country. Assuming that the Atlantic culture of Portugal and France, via England, at least became the stimulus for building megalithic memorials for Scandinavia, and seeing that in the very earliest Bronze Age, the natural resources of raw materials made England the supplier of bronze to part of Europe was made, and furthermore that in the heyday of Anglo-Saxon art cultural emanation to Europe took place, we further see England in all respects as the power receiving forces from Europe. From Europe it received the Megaliths, the "pile building culture", the battle hammer culture and the bell beaker culture, the culture of the Celts, the Roman rule, the Anglo-Saxon conquest and the Normans. The East is also culturally receptive: Russia and the Baltic countries, which areas rely almost entirely on the influence of Central Europe, and therefore always lag behind the center of our continent in terms of culture. Only the Scythians, Slavs, Avars and Huns assert their biological strength, but then to a strong extent.

In the South of Europe the situation is slightly different: people there are undeniably receptive. If we ignore the very temporary influence that the Bell Beaker culture that emerged from Spain exerts on Western and Central Europe and on Southern Italy, then we only see population movements from North to South in Spain as well as in Italy and Greece: Celts in Spain; "pole building", warhammer culture, Villanovan culture, Celts and Germanic people in Italy; spiral ceramics (with and without painting), battle hammer culture, Lusatian elements in the Doric migration, Celts, Germanic people and Romans in Greece. Undoubtedly, there are cultural radiations back to the North - behind which biological forces in no case hide: export of Trojan and Mycenaean objects from Greece to Eastern and Southern Central Europe (in exchange for bronze and amber), the Greek-Italian influence on the origins of the Celtic la Tène style, influence of Etruria on the origins of the Hallstatt style (± 800-400) among Celts and Illyrians, the strong Mediterranean character of Spain's cultural development through the influence of Crete and Greece. France once again behaves essentially receptive, until the Franks, coming from across the Rhine, extend their power back there.

Differently the Center and North of our continent: After the culture of banded ceramics was the first culture of farmers tied to permanent residences to peacefully penetrate across Europe in the loess area was completed, other cultures of completely different character arose everywhere based on her example. In Eastern Europe, banded ceramics remained partly the dominant culture, but west of it other more militant cultures of a Northern European character arose, which ensured that banded ceramics soon largely disappeared from Europe.

In a surprisingly rich variety of strictly articulated pottery forms, relatives of Northern European culture are mainly manifested, as far as Southern Germany, while the Northern European cultural radiation extends to the East as far as Central and

Southern Russia.

As we have already noted above, we do not regard all these groups as having arisen through conquest from one center, but on the contrary we believe that at this time so important for Europe we are dealing with the manifestation of the original inhabitants who emerged almost simultaneously. The example of the culture of band ceramics, to a way of life of farmers tied to permanent residences, and at the same time, each according to his own taste, making ceramics and cut stone tools at home. One sphere of influence may be somewhat larger than the other, development may proceed somewhat faster here than there, but the surrender of cultural property took place everywhere fairly quickly and without shocks. Taking into account the density of habitation and the nature of the area, it must be concluded that a lot of forest must have been cleared at that time, and that in general the fertile lands were inhabited quite intensively. These northern cultures even extend to Zevenburgen, including the area originally dominated by banded ceramics. The phenomenon of warhammer culture, which certainly did not originate in southern Russia, must, on the contrary, have its origins in Central Europe. The country of origin need not have been narrowly defined, it is very possible that it extended from Jutland to Thuringia. It seems most likely to us that in this short-lived appearance dating late to the Stone Age, on the most barren lands, we see the last remnant of the hunter peoples from the Middle Stone Age, who are now occupied by the expanding agricultural population of Europe, cornered to a certain extent, swarming to East, South and West. We also already talked about this. Illyrians, Celts and Germans later moved in the same directions, and so Europe continually received new impulses from its center. If we look again at the development in the aforementioned areas, located on the periphery of Europe, in this light, we discover that this influx of new elements from Central Europe always stimulates our own development. England's influences on Europe in the early Bronze Age and in the early Middle Ages immediately followed the influx of the warhammer people and the Anglo-Saxons. Rome's position of power follows the influx of Central European elements (Illyrians) around 1000 BC, the Mycenaean as well as the later Greek cultural development originated with the participation of warhammer people and "Dorians". The center and north of Europe is indeed apparently the heart that regulates the circulation of blood in Europe, that out of great abundance supplies forces to the rest of the world, in order to defend biological and cultural Europe on the edges of our continent. There are even times when these forces break through the boundaries of our continent: in Luristan in Persia we discover some Central European utensils from the Bronze Age, and we know that Indogermans took power there and in the East Indies. There is currently a tendency, in my opinion on good grounds, to place this Indogermanization chronologically in the Middle Stone Age to the East took place and not the other way around. We now return to our starting point: the unity in diversity in European culture. We saw the diversity of our culture already rooted in the Stone Age, when we spontaneously responded to a new phase in cultural development in the different regions of our continent, different forms of culture emerged. The unity in culture is explained by the fact that new juices continually flow from Europe's heart to all sides, which then return to this same heart as new cultural sources of power and help raise Europe's cultural level. And yet we have not yet explored and explained everything. Because now the question arises for us, why this heart is so activating, why precisely in Europe itself these forces are active that push our continent forward? Neither unity nor diversity. These can be explained by the natural condition of Europe, for why did America lag behind Europe for so long, where we find largely the same climate, the same alternation of plains and mountains? Europe is not one contiguous landscape that promotes unity, nor have most natural boundaries proven to be such that they could permanently separate cultural provinces. Far be it from us to underestimate the influences of location, climate and natural boundaries (the receptive character of England and the three Southern Peninsulas towards Europe can undoubtedly be partly explained by this), but ultimately man is decisive in this regard. For it appeared from our consideration of the unequivocal archaeological evidence that the unity of Europe was brought about by the repeated migration of the population of its North and Center. The heart of Europe bears this name not only because it is truly the center, but also because it was from there that Europe received its lifeblood, and because without this heart as a guiding organ, it could not have lived, at least not as it has lived until today: in unity through diversity. And so we finally came to the people of this North and Center as a determining factor in the history of our continent compared to the rest of the world, albeit through different paths than is usually the case. The man of Northern and Central Europe is the man who "always strives for himself", the man of the race that still today

- constitutes the predominant majority of the population in Northern and Central Europe, the race to which in ancient times the bearers of the megalithic culture, the Central German mixed cultures and the warhammer culture belonged to the race that included Illyrians, Celts and Germanic people in whole or in part: the Northern Race. And now we also understand the unity in folk culture: fairy tale, folk custom and tradition (think of the great Pan, for example x)) in Europe, and the receptivity for everything good and beautiful that our relatives in Greece, where their gods showed that they had a strong kinship with the Germanic son, both in the trembling that was placed in the hearts of men by Zeus and Wodan, as well as in the intimate familiarity between the other gods and men. The urge for the distance later drove this man through the entire world, everywhere propagating the values inherent in his being, and partly turning away from the heart of his existence. Now the time has come when the population of Europe as a whole must once again reflect on its own values and return to the source of its existence. To this end it is not necessary to neglect or forget the achievements of the European man in the world outside our continent, because they are also achievements that have naturally emerged from that same Northern race man with his longing for the distance. But one should never forget that the heart of Europe is more than just a random neighbor, but the origin of our entire existence. Long before archeology discovered the origins of our common culture in its unity and diversity, the great poet from the heart of Europe had already noticed these relationships. Because Mephisto's words from the classic Walpurgisnacht in the second part of Faust do not only apply to things from the devil's domain, but include everything that is peculiar to us European people:
- Hier dacht'ich lauter Unbekannte
Und finde leider Wahlverwandte;
Es ist ein altes Buch zu blattern
Vom Harz bis Hellas immer Vettern!
- This Europe, which emerged in conflict and with much suffering, and which is now once again assigned suffering and struggle by powers outside it, may hereafter rise again, purified and strengthened, to fulfil its mission in the world, living on the inexhaustible powers of its nourishing heart!

- August 14, 1945 Amsterdam professors suspended
- At the municipal university in Amsterdam, the following have been suspended by the military authorities: Prof. Dr. G. A. S. Snijder, Prof. Dr. L. J. van Apeldoorn, Prof. Dr. F. C. Bursch, Prof. Dr. A. F. H. Gerth, Prof. Dr. R. W. Weitzenbock, Prof. W. L. L. Carol, Prof. P. Stenimga Hzn., Dr. T. L. de Bruin, lecturer, Dr. K. Mueller lecturer, Dr. F. H. ter Poorten, curator, Dr. J. de Wit, private lecturer, while Prof. W. A. P. Schueffner, former professor, has been denied access to Senate meetings.
- Furthermore, the military authority has issued an order to cease their duties to: Prof. Dr. H. A. Brouwer, Prof. Dr. L. E. J. Brouwer, Prof. Dr. C. F. A. van Dam, Prof. Dr. H. T. Deelman, Prof. Dr. G. Revesz, Prof. Dr. Th. J. Stomps, Dr. Th. E. de Jonge Cohen, private lecturer, P. Otten, secretary of curators, because the investigation into their conduct during the occupation has not yet ended and to: Prof. Dr. B. Brouwer, Prof. Dr. J. de Decker, Prof. Dr. A. W. de Groot, Prof. Dr. J. A. A. Ketelaar, Prof. Dr. A. de Klein, Prof. Dr. N. H. Swellengrebel, Prof. Dr. H. ter Veen, Prof. Dr. J. P. Wibaut, Dr. E. M. Bruins, lecturer, Dr. A. Heyting, lecturer, because the investigation into their conduct during the occupation led to disciplinary measures being taken against them .
- January 29, 1946 APPOINTMENTS, DISMISSALS, ETC.
[...] 1945, to resign from his position to L. J. van Apeldoorn, professor at the municipal university in Amsterdam; effective September 25, 1945, to resign from his positions to F. C. Bursch, professor at the Municipal University of Amsterdam and curator at the National Museum of Antiquities in Leiden; [...]
- August 23, 1946 [...] Partly thanks to the articles of the tireless investigator Van der Berg has appointed the currently suspended curator Dr. F. C. Bursch conducted an investigation on site in 1942. The archaeologist thought he could conclude from the excavations that there was an old cemetery, possibly with a chapel, from the 10th century. So one of the oldest churches in Friesland had probably been uncovered. Mr Van der Berg was grateful, but not satisfied, he wanted the cemetery to

52210 be older, even much older (6)
 Furthermore, on the basis of similarity between the current cemetery of the village (which almost certainly already existed in 1661) and the present cemetery, he believed that we were dealing here with the old cemetery of the village of Oudehorne, which he considered a center of ancient culture - for the surrounding area - and
 52215 which would later have been moved to the North. It may be, although the evidence is not conclusive. The gentleman mentioned is definitely on the wrong track if he even suggests the possibility of having something to do with a branch of the Gravinneweg (that jack of all trades).
 Since in 1623 there is mention of "het olde kerckhoff" (7) and the peat works in
 52220 Oudehorne, with the exception of a few smaller pieces from the private property of P. van Dekama, date from around 1650, this cemetery can bear its name - now we assume, that the flag covers the load - only obtained because Jews were buried in this old, possibly disused cemetery during the time of the settlements. However, the fact that the archaeologist dates the chapel to the tenth century gives us the courage to
 52225 venture on thin ice. In addition to the Thabor monastery near Tirns, the monks of "Avert" owned land near the cemetery, and perhaps the Kikenberg itself, as shown above. Since the well-known Cistercian monastery Aduard was founded around 1200, it could be that its monks had a courtyard, possibly with a chapel, of which the abbot mentioned the priest, under Oudehorne have been mistaken for a few centuries,
 52230 something that is far from impossible considering the disturbed condition of the ground in which it was located.

July 14, 1952 PRAEHISTORY

52235 Dr F. C. Bursch has presented very interesting ideas about the oldest history of Western European man and his civilization in his book The Western Man Discovers His World (Sijthoff, Leiden). The writer approaches the mental state of primitive man with the help of the insights of modern psychology, and thus arrives at surprising conclusions, each of which is worth long-term consideration. The reproach that the author addresses to many prehistorians in his introduction - namely, that an image of
 52240 primitive man has never appeared behind their description of graves, utensils, drawings, etc. - does not affect him in any way. Despite the fact that the usual data of a factual nature can be found in large numbers in this book, Dr Bursch remains primarily concerned with the spirit and religion of the oldest bearers and founders of our civilization. The writer presents interesting thoughts, especially with regard
 52245 to the artistic work of primitive Europeans, based on an astute interpretation of long-known facts. This excellent work gains even more value due to the fascinating style in which it is written, and is therefore also very important for the layman.

September 27, 2003 Engagement with one's own

52250 Why wouldn't Dutch archaeologists cooperate with the Germans after 1933? Both groups were aware of the ethnic significance of their profession and there was hardly any difference of opinion regarding professional content.

Theo Toe Bosch

September 27, 2003

52255 'Just get some air,' said historian Martijn Eickhoff to himself. It was 1996 and he was in the Bundesarchiv in Berlin going through a file for his dissertation on Dutch archeology during the occupation, when for him every historian's dream came true. He suddenly had tangible evidence in his hands for something that he would otherwise have had to make plausible through argumentation. In front of him, in a former SS
 52260 barracks, lay a diagram that a German archaeologist had made in June 1940, showing the strategy to be followed to Nazisify Dutch archaeology. A refreshing rain shower was falling outside.

Seven years later, next Tuesday, Eickhoff (1967) will receive his PhD at the University of Amsterdam on The origin of the 'own', The Netherlands' earliest past,
 52265 archeology and National Socialism. The dissertation is the result of nine years of research, over four hundred pages long. The origins of this lie in his student days, when he attended some archeology lectures and experienced an excursion to Valkenburg in South Holland. To his surprise, he learned that Dutch archaeologists had excavated several Roman forts in the village between 1941 and 1943. 'Gosh', he thought, 'I
 52270 didn't know that excavations were also carried out during the war. Interesting. Because what role did the Germans play in this?'

The Dutch archaeologists were initially hesitant that his research would lead to the conclusion that Dutch archeology had been wrong during the war. But as befits a modern historian, he was not concerned with right or wrong. He wanted to know how
 52275 Dutch archaeologists had responded to the Nazis' interest in their work and to

investigate the professional differences and similarities between Nazi archeology and 'normal' archaeology. After the archaeologists' initial fears were allayed, he never felt like an outsider among them. The funding for his research even came from the NWO [Nederlands Wetenschappelijk Onderzoek] archeology fund.

three portraits

Eickhoff begins his dissertation with an extensive sketch of Dutch archeology in the first half of the twentieth century. He does this on the basis of the portraits of three archaeologists, J.H. Holwerda, A.E. van Giffen and A.W. Byvanck. Holwerda, classicist and director of the National Museum of Antiquities (RMO) in Leiden, was a scholar in the classical-humanistic knowledge tradition. For him, everything still began and ended with Classical Antiquity. He therefore studied indigenous Dutch archaeological phenomena in connection with what the ancient Greeks and Romans had produced. By writing popular science books and newspaper articles about his excavations, he was the best-known Dutch archaeologist around the 1920s.

Unlike Holwerda himself, Byvanck, professor of Archeology and Ancient History at Leiden University, did not excavate. He focused entirely on classical art expressions, which he considered the most important source for gaining knowledge about the 'spirit' of a period or culture. When he later became interested in Dutch pre- and protohistory, the 'folk spirit' in archaeological finds became his most important object of study.

Van Giffen was director of the Biological Archaeological Institute (BAI) of the University of Groningen. Originally a biologist, he was empirically oriented. He was concerned with the systematic classification of directly observable archaeological phenomena. *Die Tatsachen bleiben, die Interpretation schwankt* was his favorite motto. His research area was mainly in the three northern provinces. Due to commercial excavations of mounds, the historic cultural landscape was in danger of disappearing at a rapid pace. The provincial notables encouraged Van Giffen to study cultural and natural history before it was too late. Van Giffen established his international fame with the excavation of the Ezinge mound.

According to Eickhoff, there were three different research traditions in Dutch archeology at that time: the classical-humanistic of Holwerda, the romantic-idealistic of Byvanck and the empirical-natural scientific of Van Giffen. But despite the differences, there was an important similarity between Holwerda, Byvanck and Van Giffen, says Eickhoff. All three were looking for insight into the ethnic and racial composition of the Dutch people. Hence their special attention to the prehistoric dolmen builders and the Beaker peoples, the first inhabitants of the Netherlands, and the Germanic tribes who were considered their direct ancestors: the Franks, Frisians and Saxons.

The archaeological research into the ancestors influenced the way in which national history was described. Until around 1920, the starting point was usually with the Romans and the time of the Migrations, later history started with references to the Late Stone Age. The archaeological research results also ended up in folklore, physical anthropology, logical and sociological studies about the Dutch people. The concept of 'Dutch people' gradually acquired an ethnic meaning in addition to a political, social and cultural-historical meaning. People became convinced that shared descent was reflected in the character and appearance of the current population. In this way, cultural differences within the Netherlands could be explained ethnically. At the same time, the interest in 'their own' led some to commitment to their own region, others had visions of a Greater Netherlands and in the late 1930s there were also Dutch people who believed that the homeland should be absorbed into a Greater Germanic unity.

Eickhoff wants to say that ethnic awareness occurred in many sections of Dutch society. But it is mainly the German archeology of that time that is associated with it, he continues. The National Socialists stimulated the profession in the Third Reich by increasing the number of chairs in pre- and protohistoric archeology at universities. Not without reason, because they considered archeology the most national of all sciences. Cultures and peoples were one for them. Based on the origin of the oldest finds, they could say which people came from where. All attention was paid to the ancient Germanic people. In the eyes of the Nazis, these were, after all, the blond, blue-eyed Aryans, the firstborn of the Indo-Europeans, groups of whom had moved south and east from their cradle of Schleswig Holstein to bring culture and civilization there. According to the National Socialist archaeologists, scientists who believed that civilization had come from the east and south showed a shameful lack of patriotism. The true German archaeologist should look for Germanic roots

everywhere in Europe and should find it quite normal for Germany to assert historical rights in those places.

No one in the Netherlands made a fuss when Van Giffen attended conferences in Germany in the 1930s that were organized by scientists who had joined the SS or the NSDAP. Dutch archaeologists traditionally had good contacts with their German colleagues. These good contacts remained, even after 1933. In terms of professional content, is one of Eickhoff's most important conclusions, there was little difference of opinion. Although Van Giffen believed that Frisians and Saxons were too culturally related to divide them on the basis of their pottery, he also supported the general idea that cultural expressions said something about ethnicity and migration flows in the past.

dolmens

The Germans therefore had good hopes of Nazisifying Dutch archaeology. Better said, the Germans believed in the self-Nazification of Dutch archaeology. This had to be done, as emerged from the diagram that Eickhoff found in the Federal Archives, by encouraging cross-border inventories, for example by mapping the dolmens in the Netherlands and Lower Saxony. Furthermore, it was necessary to allow research in military areas. But above all, good scientific contacts had to be maintained. And so from 1940 onwards, Dutch archaeologists received invitations for a trip to German archaeological museums along the Rhine or their German colleagues visited them for tea, sometimes even in uniform.

Then came the great dilemma for the Dutch prehistorians, as can be seen from Eickhoff's reconstruction of the war past of the Dutch archaeologists. Should they or should they not cooperate with the Germans, while there were few professional reasons not to do so? As a classical archaeologist, Bijvanck was able to remain in the shadows. He wrote a retrospective work, *The Prehistory of the Netherlands*, in which he placed the origins of the Dutch national character for the Frisians, Franks and Saxons in the Neolithic. The book, which had its third edition in 1944, earned him both praise and criticism from National Socialists.

Holwerda had already given up his directorship of the RMO before the occupation, it was his student, the Leiden prehistorian F.C. Bursch, who decided to collaborate with the Germans. The Netherlands and Germany belonged together, he was convinced. That's how it had been in prehistory, and that's how it would be again in the future according to a kind of natural law. Eickhoff: "Based on his knowledge of the past, Bursch drew consequences for the present and committed himself to propaganda for National Socialist ideas. He also conducted an excavation in Ukraine for the SS." Van Giffen decided differently. According to him, science should be free of politics. He kept the Germans, including colleagues and old friends, at a distance, but without this being at the expense of his work. For the Germans, there was a good relationship with the Dutch archaeologists, especially with Van Giffen, who was considered as the best excavator in Europe, so important that they let him do his thing. Van Giffen gratefully took advantage of this. After the bombing of Valkenburg airport in May 1940, the neighboring village was in havoc. A great opportunity for Van Giffen to finally investigate the elevation in the landscape that he had already discovered in 1914 - the excavation that gave Eickhoff the idea to study Dutch archeology during the occupation.

When it suited him, Van Giffen also collaborated with the Germans or their sympathizers. For example, in early 1943 he carried out an emergency excavation with the Nazi Dutch Labor Service in the Havelter Berg nature reserve, where the Germans were going to build a military airfield.

After the war, Bursch was convicted. Van Giffen became the head of the National Office for Archaeological Soil Research, founded in 1947, and the most important and powerful man in Dutch archaeology. Among some archaeologists he was also given the name of a collaborator who had escaped the dance. Not right, says Eickhoff. "He did try to take advantage of the German interest in his profession. And after the war he quickly restored contacts with his German colleagues. At that time, he attached even more importance to scientific accuracy and objectivity than before, which meant that his research focused less and less on race and ethnicity."

The Dutch archaeologists are ultimately happy that Eickhoff, as a historian, did the research. He had a blank attitude towards people and institutions and the current structures and frameworks regarding the earliest history of the Netherlands were not in his head. As a result, he did not fall into the trap of using current knowledge as a frame of reference.

Eickhoff hopes that historians will also learn from his research. Nowadays they often see archeology as nothing but dusty pots and pans. But: "Archaeology is not only a science, but also a specific form of historical awareness. If you study

- archaeologists and their work, you learn a lot about how society thinks about issues such as who are we and where do we come from. So you get to know the ideas about the origins of your own."

- 52420 You will hear such details when you tour the exhibition Professor van Giffen and the secret of the mounds in the Groninger Museum with Tjalling Waterbolk. The now eighty-year-old emeritus professor of archeology at the University of Groningen was a student and student assistant and later the successor of A.E. van Giffen (1884-1973).
- 52425 Albert Egges van Giffen was one of the most important Dutch archaeologists, if not the most important. He developed an excavation method that is still used today and has examined and excavated numerous dolmens, prehistoric burial fields and mounds, mounds and mounds, Roman settlements and medieval churches. He was also curator of the museums of Groningen and Assen, professor in Groningen and Amsterdam and the first director of the National Office for Archaeological Soil Research.
- 52430 Originally a biologist, Van Giffen studied not only the material culture of people but also their natural living conditions, Waterbolk writes in the introduction to the book that accompanies the exhibition (and bears the same title). Van Giffen has introduced many things that are now self-evident. For example, he ensured the merger of archeology and natural scientific research such as paleobotany and zoology and he
- 52435 had landscape reconstructions drawn, complete with swirling smoke from houses and a man with an ox cart.
Waterbolk is visiting the exhibition for the second time. During the opening, where State Secretary Van der Laan unpleasantly surprised the archaeologists present by talking about the 'eighteenth-century professor Van Griffen' who dug up items 'from the Ice Age', it was so busy that he could not get a good impression. 'A beautiful, interesting exhibition,' he says now. The accompanying book is also beautiful and interesting, with beautiful full-page historical photos of the excavations of the mounds. Also beautiful are Hans Sas's photos of the current mound landscape north of Groningen.
- 52440 The book and exhibition focus on research into the mounds, but attention is also paid to Van Giffen himself and his (scientific) world. As a student in Groningen, the pastor's son Van Giffen attended lectures with the geologist Van Calcar. In 1908, he asked Van Giffen 'on behalf of science' to supervise the commercial excavation of the Dorkwerd mound. The land was sold as fertilizer to farmers on poorer sand and peat soils. People like Van Calcar, who were involved in archeology in their spare time, were afraid that the excavations would result in the loss of much information about residential mounds that had once been raised by human hands against the rising sea water in a dynamic landscape without dikes.
- 52445 Van Giffen started collecting the biological remains in Dorkwerd. He made an agreement with the excavators of seventy other mounds that they would report archaeological finds to him. He called for structured research to finally discover the history of the formation of the mounds and mounds.
A great task for the National Museum of Antiquities in Leiden (RMO), at the time the only archaeological institute in the country. The Groningen potato manufacturer J.E. Scholten declared himself willing to finance an excavation, but father and son
- 52460 Holwerda, who led the RMO, declined the offer. Too few staff, was the argument. Holwerda Jr. was nevertheless impressed by the enthusiasm of Van Giffen, ten years his junior, and asked him to become an assistant in Leiden.
It became the seed for more than thirty years of discord in Dutch archaeology.
- 52465 Stubborn as he was, as is evident from Leo Verhart's contribution in the book, Van Giffen - who thought Holwerda Jr. was a bad excavator - tried to bend things to his will in Leiden. This did not go down well in the formal RMO and after many arguments Van Giffen left for Groningen again. From his Biological-Archaeological Institute, Van Giffen led his years of prestige battle against Holwerda.
- 52470 The exhibition makers have beautifully depicted that struggle. In one room, plaster copies of classical Greek statues show the thinking of Holwerda Jr. As a classicist, he was convinced that the origins of the Dutch population had to be sought in Southeastern Europe. The 'proof': remains of 'dome graves' that he had excavated on the 't Loo estate - with the original form of the stone dome grave as it was known

- 52475 from Greek Mycenae. Van Giffen would later show that they were simply burial mounds. In the adjacent room, a microscope by Carl Zeiss and a 'mound' of animal skulls refer to Van Giffen's belief that the combination of natural science and archeology is necessary for prehistoric research.
- 52480 One wall is full of painted portraits of men who were important to Van Giffen's career. Among them, potato manufacturer J.E. Scholten, who has funded many studies. Van Giffen had the gift of winning over high-ranking people and getting everything done from them. He was strict towards his assistants. They had to be there for him day and night, Waterbolk knows from personal experience.
- 52485 In the early 1930s, Van Giffen finally had the opportunity to systematically excavate a mound in Ezinge. For the first time, an archaeologist uncovered the habitation history of a place outside the classical world. Ezinge became the 'Pompeii of the North', with, as Van Giffen established, the earliest habitation phase dating from the fifth century BC. The inhabitants of the far North were not, as the Roman writer Pliny wrote, poor fishermen in stilt houses, but farmers who kept cattle and grew crops on the artificial hill. And Roman pottery from Tunisia pointed to contacts with the outside world.
- 52490 The research into the mounds also provided the answer to the question of whether there was rapid sea level rise. Van Giffen came up with 10 centimeters per century, not bad.
- 52495 Standing in front of the portrait of geologist Van Calcar, Waterbolk notes that geology has played an important role in the history of Dutch archaeology. Van Giffen's mound research would never have received so much support if the geological issue of land subsidence and sea level rise had not also played a role.
- 52500 The still highly regarded Groningen C14 laboratory (for dating), which Van Giffen initiated in the 1950s, would also not have come about without geology. Geological research also stood at the beginning of Dutch ship archaeology. During the reclamation of the Noordoostpolder in the 1940s, Van Giffen managed to get an assistant to excavate shipwrecks. The responsible authorities had given their approval because geologists could date sedimentary layers on the basis of objects in the ships.
- 52505 The book and exhibition do not explicitly state this. That is the advantage of visiting an exhibition in the company of an old initiated scholar. Then you hear just a little more.
- 52510 exhibition: 'professor van Giffen and the secret of the mounds'. Groningen Museum, until April 9. catalogue: €34.95. ISBN 90 78214 01 5.
- December 8, 2007 Silent conspiracy
The Nazis used archeology to justify their expansion policy.
- 52515 It offered archaeologists unprecedented career opportunities. Only now are the details coming out. Theo Toebosch
December 8, 2007
- 52520 Jankuhn, Kersten, Kimmig, Dehn, Werner, Tackenberg. The archaeologist Waterbolk knew them all. "But I'm only now finding out what they did in World War II." Tjalling Waterbolk, the 83-year-old emeritus professor of archeology at the University of Groningen, rightly calls the contents of the recently published conference volume L'archéologie nazie en Europe de l'Ouest "revealing".
- 52525 Herbert Jankuhn, the colleague from Göttingen, knew Waterbolk after the war as "a real leader, a very smart man and not an unpleasant figure". But before that, Jankuhn, as Sturmbannführer, belonged to the personal staff of SS leader Heinrich Himmler and he led the Sonderkommando Jankuhn, which was involved in art theft in the Soviet Union. Karl Kersten was the man "with whom I could comfortably speak Danish": also a member of Jankuhn's Sonderkommando. And Wolfgang Kimmig, "the colleague from Tübingen" was involved in the inventory of French archaeological collections in order to - euphemistically put it - 'safeguard' them. Wolfgang Dehn, "the sympathetic colleague from Marburg", was a member of the SA in 1933 and in 1935 as an SS member Ehreramtlicher Arbeiter in Rasse- und Siedlungshauptamt der SS, received a high Nazi decoration in 1939 and was involved in excavations from 1940 in occupied Luxembourg.
- 52530 Joachim Werner, "an amicable man who did not want to know anything about C14 dating", was an employee of the Kunstschutz of the German army and was mainly concerned with the study of so-called Germanic graves in Belgium. Kurt Tackenberg, "a somewhat steep man, who sent his students to our excavations in Wijster", was a member of the Kampfbund für Deutsche Kultur and the NSDAP and, on behalf of the SS Ahnenerbe, leader of the German Institute in Brussels.
- 52535 Waterbolk: "I have never heard anything about this past, not even from their students who succeeded them. It has been, as its compilers say, a conspiracy of silence." Not

everyone was completely ignorant. It is said of the archaeologist Jankuhn that in his old age, and already a bit forgetful, he sometimes gave the Hitler salute at meetings, to the consternation of his colleagues.

The collection not only outlines what German archaeologists and some foreign collaborationist colleagues did between 1933 and 1945, but also the developments before and after that time.

Nazi archeology looked everywhere for anything that could indicate an earlier Germanic presence. And that tendency did not just appear out of the blue, says historian Martijn Eickhoff, who obtained his PhD in Dutch archeology in the Second World War and is the author of a contribution to the collection. "The idea that something like a people or ethnicity could be deduced from an excavated earthenware pot was widely accepted in the 1920s."

youth associations

However, German archaeologists drew the utmost consequences from this scientific approach. Philologist Gustaf Kossinna (1858-1932) called archeology the most national of all sciences. German archaeologists, especially prehistorians, felt the same way after the loss of German territory after the Treaty of Versailles. Many of them had become members at a young age of Nazi youth associations that saw and glorified Germanic roots everywhere. When the Nazis, who were able to use archeology to justify their expansionist policies, seized power in 1933, they offered archaeologists unprecedented career opportunities. In 1933 there were only seven chairs in prehistory, but three years later there were already fifteen. At its peak in 1942, there were twenty-five chairs. More than eighty percent of the approximately six hundred archaeologists in Germany were members of the NSDAP, a percentage comparable to that of SD officers.

During the war years, archaeologists were sent to the occupied and annexed areas to excavate and protect Germanic heritage.

Ultimately, not much came of the archaeological programs drawn up. In the Netherlands, for example, a law passed shortly after May Day made it impossible for German archaeologists to excavate themselves. They then approached Waterbolk's teacher Albert Egges van Giffen, then the best excavator in Europe, but he held off. Only when it suited him did he seek help from the Germans for excavations. Eickhoff: "Van Giffen was a master at confusing the occupying authorities and playing them off against each other." Frans Christian Bursch of the National Museum of Antiquities in Leiden allowed himself to be won over by the Nazis. But frustrated by Van Giffen in the Netherlands, he eventually turned his interest abroad. For example, in 1943 he carried out an excavation in the Ukraine - using duress.

In France and Belgium, where the Germans were able to conduct archaeological research themselves, excavations came to a minimum after the German defeat at Stalingrad in 1942. Many archaeologists were then called up for active duty.

Atlantis

As in other sections of the Nazis, there was also a struggle for power in archeology. That battle was mainly between Alfred Rosenberg's Amt Rosenberg, who wanted to use archeology to demonstrate the superiority of the Aryan Germanic people and the existence of the mythical Atlantis, and Heinrich Himmler's Ahnenerbe, the SS organization for the study of prehistory. The Ahnenerbe won that battle by sidelining Hans Reinerth, the most important archaeologist at Amt Rosenberg, through a smear campaign. In addition to being a convinced National Socialist, Reinerth was also a great supporter of interdisciplinary research, experimental archeology and popularization of archaeology. These interests came together in Unteruhldingen, where in 1922 he had prehistoric stilt houses built in an open-air museum on the shores of Lake Constance. Waterbolk also knows him as a pioneer in the introduction of pollen analysis. "He was decisive." From 1942 onwards the SS started to ridicule him. They sent out countless newspaper reports questioning the former existence of stilt houses. Reinerth himself was called a fantasist. At the beginning of 1945, the victory of the Ahnenerbe was final when Reinerth was expelled from the NSDAP after an internal investigation due to friendship with Jews.

After the war, Reinerth also became the scapegoat with which his fellow archaeologists could launder their own past. At a meeting of prehistorians in Regensburg in 1949, they distanced themselves in a resolution from the 'unbusinesslike and tendentious science of prehistory' as it had been propagated by Reinerth. People like Jankuhn simply kept their positions at the universities and quickly re-established contacts with their foreign colleagues. They even published the excavations they carried out in occupied territory, but without mentioning the

circumstances under which the excavations were carried out.

52610 "There was a perception that most German prehistorians had in fact resisted by adhering to 'pure, objective' science," Waterbolk recalls. "That image was reinforced in the 1970s by Manfred Kater's book about the Ahnenerbe, in which the archaeologists were exonerated, with one exception."

52615 Only after the fall of the Wall did new sources become available and the silence was broken. Achim Leube (1936), originally East German and professor at Humboldt University in Berlin, organized an international conference on Nazi archeology in Berlin in 1998. Partly for this reason, say the compilers of the collection, it can no longer be said that everything was not too bad, because it would only have involved a few people and archaeologists did not kill anyone and only fulfilled their 'task'.

52620 complicit

The majority of German archaeologists chose to join the NSDAP knowingly and without any external pressure. German prehistorians also gratefully benefited from the policies of the Third Reich. But the most important conclusion is that the German prehistorians are complicit because they helped to legitimize the imperialist cultural policy of the Nazis.

52625 That conclusion is still not easy in Germany. An exhibition on Nazi archeology in Trier in 2002 sparked protests before its opening.

52630 On the other hand, publications on archeology during the Vichy regime are still the subject of debate in France, and in Belgium and Austria research into archeology during the Second World War has still been minimal.

Strikingly enough, says Martijn Eickhoff, Leube believes that the publications in recent years on Nazi archeology are damaging current archeology in Germany. "Many chairs are disappearing due to budget cuts. Leube fears that the Nazi past is being used to eliminate chairs."

At Velp, near Arenscheim, not far from Arnhem (Gelderland), around 1715, treasure composed of a gold chain and bracelets, gold medallions, decorated with circles, and coins, also in gold, struck under the sons of Constantine, under Honorius, Galla Placidia, Gratian, Valentinian, Valens, Arcadius, John and others
52660 emperors and empresses of that time.
(Revue num. 1883, p. 81 et seq.).

52665 January 9, 1753 By Douay these days about 4000 pieces of old Copper Coins, including several from Aur. Valerianus, Gallius Claudius Gothicus, C. Aur. Diocletian and Maximilian, also some of Constantine the Great, found under the Earth.

52670 August 3, 1775. Severe thunderstorms have been reported from several locations recently, including Schyndel in the Meyery van 's-Hertogenbosch, in the Peelland district, on July 30. Yesterday afternoon, around 4 p.m., we experienced a most terrible thunderstorm of thunder and lightning, accompanied by heavy wind and hail. The hail was so considerable that in several places it was 3 feet high. Underneath, stones were found the size of chicken and pigeon eggs, and hail is still being found in several places this afternoon. It caused considerable damage to standing rye, oats, buckwheat, barley, and hops, as well as to young trees and plants, which were

- 52675 largely destroyed and crushed. The glass and several houses, which faced the windward side, were also completely shattered. It was found that as soon as the hailstorm had ended, a vapor arose from the ground, giving off a sulfurous odor. This sad event caused general despondency among the inhabitants, as many lost their entire harvest and were deprived of garden produce.
- 52680 1 January 1787 C. IANVARIUS] The name C. IANVARIUS can be found in Rome on an old monument in the Vinea Peretti. In Muratorius, p. MCCLXXVIII. 9. C. N. IANVARIUS: On a stone, excavated in the village of Rummel in the Meijerije of 's-Hertogenbosch, C. IANVARIUS. See Gisb. Cuperus in Confecr. Homer, p. 271, in Monument. Antiq., p. 218.

- 1 January 1789 The Lives of Illustrious Greeks and Romans, Compared by PLUTARCH THE LIFE OF ALEXANDER [in Caesar]
<https://www.delpher.nl/nl/boeken/view?identificator=dpo%3A9388%3Ampg21%3A0011&query=plutarchus+theophilus+alexander&coll=boeken>
- 52690 p. 83 of 135 ff. Having the last time to convey this to PARMENIO, he placed the helmet on his head; as if he had already donned his other weapons in the Tent, consisting (1/+) of a Sicilian-made tunic surrounded by a girdle, and over this a doubled linen armorial, from the spoils taken at the Battle of Issus. His helmet was
- 52695 of iron, made by THEOPHILUS (m/\$), who had wrought it so beautifully that it glittered as if it were pure silver. To this helmet was attached a gorget, also of iron, but set here and there with gems. His sword was of unparalleled temper and exceptionally light. It had been given to him by the King of the Cities (n/**). He wore this because he was accustomed to using a sword in battle. The sling from which
- 52700 this sword hung was more magnificently crafted than his other armor, being the work of Helicon the Elder and a tribute to the Rhodian Citizenship, which Alexander had received as a gift. Yesterday, too, he was accustomed to using it in battles.
- 52705 You have written your words, you have never heard of them, but they have not heard anything about Phalanx, and you have heard them, you have heard them, you have heard them, you have heard them, and you know them. Dan zo dra was men niet gered om aan het werk te gaan, of dit Paard wierd gehaald; het welk zo ras niet door hem was beklommen, of hy gaf het teken tot den aanval.
- 52710 (+) But it's yesterday that we're here to take care of it, but we don't know what to do with it, we'll see ALEXANDER at the end of the day, we'll do it again and describe, but also carefully record its authors. This remarkable battle, in fact, brought about the downfall of the Persian monarchy. Furthermore, DACIER has very well observed: >> that PLUTARCH also followed the example of HOMER here.
- 52715 (\$) We have heard no mention of this artist elsewhere, nor of HELICON, who is mentioned next.
 (**) Inhabitants of Citium, a city on the island of Cyprus.
- 52720 [p. 163 ff.] How, he said, would anyone personally take the trouble to prepare his horse, or to polish his lance, or helmet, if he is loath to lay hands on his own beloved body? - "Don't you know," he said, "that the main thing for victory is for you not to do the same as those who are conquered by you?" Furthermore, for this reason, he was even more enthused in all sorts of activities, from warfare to
- 52725 hunting, in which he feared no fatigue or danger. It was from this source that a certain Spartan envoy, who was present when he slew a great lion, exclaimed to him: "Truly, Alexander, you fought very bravely with that lion for the kingdom!" Of this hunting, Craterus has a dedication made in the Temple at Delphi, consisting of copper images of the Lion, the Dogs, the King fighting the Lion, and himself rushing to the rescue.
- 52730 Part of it was made by Lysippus (k), another part by Leochares.
- (k) This Gift of Craterus, dedicated in the Temple at Delphi, is mentioned among the works of Lysippus by Pliny, H.N. XXXIV, 7. Pliny himself speaks of Leochares, L. XXXIV, 8 and XXXVI, 5.
- 52735 See <https://www.delpher.nl/nl/boeken/view?objectsearch=lysippus&coll=boeken&identificator=dpo%3A9388%3Ampg21%3A0005&query=plutarchus+theophilus+alexander&pres%5Bmaxperpage%5D=36&pres%5Bpage%5D=1&pres%5Bnbuffer%5D=bottom>
- 52740 January 1, 1809 Plutarch's Lives, tr. by J. and W. Langhorne

- As soon as he had returned Parmenio this answer, he put on his helmet; for in other points he had come ready-armed out of his tent. He had a short coat of the Sicilian fashion girt close about him, and over that a breast-plate of linen strongly quilted, which was found among the spoils at the battle of Issus. His helmet, the workmanship of Theophilus, was of iron, but so well polished that it shine like the brightest silver. To this was fitted a gorget of the same metal, set with precious stones. His sword, the weapon which he generally used in battle, was a present from the king of the Citeans, and could not be excelled for lightness or for temper. But the belt, which he wore in all his engagements, was more superb than the rest of his armor. It was given him by the Rhodians, as a mark of their respect, and old Helicon 99 had exerted all his art upon it. In drawing up his army and giving orders, as well as in exercising and reviewing it, he spared Bucephalus on account of his age, and rode another horse; but he constantly charged upon him; and he had no sooner mounted him, than the signal was always given.
- 99 In this description of Alexander's armor, and the mention of the workmen by whom it had been made, as well as in the principle of his preceding reply to Parmenio, and the eagle introduced below, Dacier traces the imitator of Homer. Helicon and his father Acesus were eminent in the art of embroidery, as we learn from Athenaeus, xi. 9., who preserves an inscription to that purport copies from the temple of Apollo at Delphi.
- After this, he constantly took the exercise of war or hunting, and exposed himself to danger and fatigue with less precaution than ever: so that a Lacedaemonian ambassador, who attended him one day when he killed a fierce lion, said: "Alexander, you have disputed the prize of royalty gloriously with the lion." Craterus got this hunting-piece represented in bronze, and consecrated it in the temple at Delphi. There were the lion, the dogs, the king fighting with the lion, and Craterus advancing to the king's assistance. Some of these statues were the workmanship of Lysippus, and others of Leochares.
- October 1, 1802 [195] (a) It was also in the vicinity of Cuijk, on the road from Boxmeer to Grave, on the so-called Bord In October 1802, in Boord, a highly important medal was unearthed, worth over forty-nine guilders in gold alone. An old sword was also found with it, which, however, was so badly rusted that it shattered upon contact. An urn of beautiful, round clay was shattered by the workers; it seemed to have contained nothing but ashes. The medal itself was the size of a regular dime, and on the right side, it depicted the head of Emperor Antonius Pius, which perfectly resembled the image of that Caesar in the SCHIJNVOET coin cabinet. The edge inscription was for a portion easy to read. The reverse side showed an image, probably of victory, but indistinct, as did the inscription on the edge. A gold edge was soldered around the medal, so [196] that it was the size of a guilder coin. The right side was covered in three circles around the medal with red, white, and green glass pebbles; the bases and boxes in which they were set were colored, so that the pebbles also showed their color. The reverse side was covered with figures using a thick gold thread, beautifully worked like a cable rope. Around the edge were eighteen eyelets, through which a piece of loose gold thread ran. On the reverse side, there seemed to have been something with which the medal could be fastened, but this could not be clearly seen. [...]
- January 1, 1807 "Ringkraag"
According to a description from 1840, a kind of ridge collar was found in Meijel in 1807:
I have heard that a farmer in Deurne-Liessel was said to possess a Roman sword and a gold shield, which were supposedly dug up in the Peel. I highly doubt this, as I had never heard anything about it. Upon investigation, I also discovered that no one knows anything about it; this was probably confused with what happened in the neighboring municipality of Meyel. In 1807, a gold shield was found there. A few years ago, while in Meyel, I went to the house of the then mayor, Goossens, to see this curiosity. He showed me a shield that had been found in the Peel in 1807, about five feet below the surface of the ground in the Peel during a peat excavation. It was made of gold, or at least heavily gilded, embossed with hydroglyphs and other figures of lions, tigers, etc., and had the shape of a crescent moon, closely resembling a gorget.
- This description indicates a phalera and bears a striking resemblance to the phalara

from Starobêlsk, as can be seen in figure 20 of *Iranians and Greeks in South Russia*.

52810 May 9, 1817. In an old booklet, published in Venlo in 1821 by the widow H. Bontamps,
under the title "Short geographical sketch of the province of Limburg for children,"
page 35-36, the following footnote:
"When, on May 9, 1817, a resident of this city (Venlo), had the ground dug up behind
his house (No. 693 in Vleeschstraat) for the construction of a new factory building,
52815 they came across a stone slab, surrounded by clay, lying on a layer of pebbles, at a
depth of 7 to 8 feet. Its length was 6 and a half, its width 4 feet. The oval-shaped,
carved slab was 6 feet long and 3 and a half wide, and fitted with a very fitting
lid. This lid is a table carved from hard limestone, 4 inches thick, very smoothly
ground inside and on the edge. The tuff stone from which the sarcophagus (stone
coffin) is made is not found anywhere in the area; but the blue limestone is found
52820 the vicinity of Namur, brought here by barge. The sarcophagus stood facing east-west.
Close to the east side stood another tin urn, which, at its widest point, was 11
inches high and 15 inches in diameter. Its shape is very simple, the opening 6 inches
wide, and is closed by a lid. Inside the sarcophagus were found some pieces of white
thin glass, probably from a tear glass, some earth, and the remains of burnt bones,
52825 among which fragments of skulls and legs were clearly visible. Also in the urn was
something resembling burnt bones, but in much smaller fragments. The sarcophagus was
uninscribed; however, runic writing can be seen around the urn, which is not deeply
and irregularly impressed into the tin, and for this reason, as well as because of
the dents in the urn, is illegible. Near the burial site, another flint of 12 to 15
52830 inches in length and 6 inches in thickness."
The question is whether anything more is known in Venlo about that find and where the
objects are currently located.

52835 June 4, 1817 - En creusant, entre les anciens et les nouveaux remparts de Tongres,
for a visit to the countryside in Saint-Trond, on a large quantity of antique
romaines, the tombs, the urns, the lacrymatoires, the arms, the cendres de morts, the
poignards, the parts of the corne de cerf, and the rest ayant la pointe faite de
cette corne; the pieux pénées don't have a bronze, a beautiful design, a beautiful
font and perfect preservation; des monnaies de tous genres; the large amphorae,
52840 including inscriptions, don't leave a trace on time and the most recent communication
in the environment; In the end, it is a matter of time and hope that the success of
the job is impossible. These objects were born in 2000, prouvent l'antiquité de la
ville de Tongres, bâtie, croit-on, 800 ans avant J.-C. et 100 ans avant la fondation
de Rome, par Tongres, qui en fut le premier roi, Jules-César, ayant conquis ce
52845 royaume, dont l'existence a duré près de huit siècles, l'unit in Brabant. Ont pretend
que Salvius-Braban (qui, dit-on, le Brabant doit son nom) and fut created the prime
minister governor.

52850 October 25, 1817 To our deep sorrow, he died this morning, about seven hours, at the
ripe old age of almost eighty years, our beloved Grandmother, Widow HUB, was suddenly
shaken. BONTAMPS, born SIB. CRUSTS. All who knew the quiet domestic virtues and the
good and noble character of the deceased will mourn her loss with us, of which we are
assured, even without letters of condolence.
Venlo On behalf of my Sisters and Brother,
52855 October 19, 1817. C. H. L. BONTAMPS.

October 17, 1825 A resident of Valognes (Manches), made an important discovery of
antiquities. While digging a well in his garden, he found a gravestone, which could
only be removed with great difficulty. At the opening, a skeleton was found, which
52860 collapsed. A silver coin found in the skeleton's mouth suggests it is the corpse of a
Roman general, a comrade-in-arms of Caesar at the time of his victory over the Gauls.
On one side of the coin is the inscription "Caes. Imp.," and on the other, "Vic.
Gal." At the skeleton's feet was found a silver box, 1 foot long and 8 inches wide,
containing 150 medals: 40 of bronze, the size of our two-stuiver coins, 95 of silver,
52865 the size of our two-franc coins, and 15 of gold, the size of our five-franc coins.
These medals are decorated with the images of Caesar, Pompey, Mitridates, Cleopatra,
Crassus, Spartacus, Sylla, Anibal, Asdrubal, Scipio Africanus, Philippus of Macedon,
Pharnacus, Nicomede, Perpenna, and Sertorius.
Fifty years ago, Roman monuments were discovered in these regions, and it is believed
52870 that the ancient Crociatonum, capital of the Unelli people, with whom Caesar had a
camp, was located there.

October 17, 1825: A resident of Valognes (Manches) made an important discovery of antiquities. While digging a well in his garden, he found a tombstone, which could only be removed with great difficulty. At the opening, a skeleton was found, which collapsed. A silver coin found in the skeleton's mouth suggests it is the corpse of a Roman general, a comrade-in-arms of Caesar at the time of his victory over the Gauls. On one side of the coin is the inscription "Caes. Imp.," and on the other, "Vic. Gal." At the skeleton's feet was found a silver box, 1 foot long and 8 inches wide, containing 150 medals: 40 of bronze, the size of our two-stuiver coins, 95 of silver, the size of our two-franc coins, and 15 of gold, the size of our five-franc coins. These medals are decorated with the images of Caesar, Pompey, Mitridates, Cleopatra, Crassus, Spartacus, Sijlla, Anibal, Asdrubal, Scipio Africanus, Philippus of Macedon, Pharnacus, Nicomede, Perpenna, and Sertorius. Fifty years ago, Roman monuments were discovered in these regions, and it is believed that the ancient Crociatonum, capital of the Unelli people, where Caesar had a camp, was located there.

October 12, 1827: Excavation of a Roman building near Voorburg. It is well known that our neighbors have for many years been dedicated to uncovering the remains of antiquity, both of Roman and other origins, which are so important to early history. These remains, initially obscured by the wildness and ignorance of the Middle Ages, were later destroyed by the subsequent population growth, both for the construction of later cities and for the development of the country. In Germany, many excavations are carried out at the expense of various governments: the Austrian government in Salzburg, the Prussian near Bonn, the Neuwied government near the town of the same name; and various societies: the Thuringian-Saxon Association, the Saxon Association, the Society for Silesian Early Christianity, and the Historical Association of Westphalia, all work towards the same goal. In France, the Prefects are charged with collecting reports on antiquities, each in his own department, and the state or city governments support the excavations at the baths of Emperor Julian in Paris, at the Maison Carrée in Nîmes, etc. In England, it is often the wealthy landowners who carry out archaeological research on their own soil, in which interest has been drawn for a century by the Society of Antiquaries and the Society of Dilettanti.

The tightly packed population of our country, its early prosperity, and partly also the nature of the soil have caused almost all traces of former inhabitants to disappear here, especially in South and North Holland. Only the farmstead of Arentsburg, near Voorburg, seemed to contain any Roman remains that had not yet been entirely destroyed. Its elevated position compared to neighboring lands, and the discovery of Roman antiquities there (including, especially in 1771, that of a bronze hand of a colossal statue, described with great interest by Mr. van Wijn, had attracted general attention), which continued to be discovered, all this demonstrated that an excavation here would not be without results. His Majesty has therefore graciously agreed to purchase this farmstead, which had been in stable hands for many years and was publicly auctioned in 1826, for the state, with the intention of having its soil investigated and to entrust the undersigned with the management of this investigation.

The excavations have been carried out this current year, from June until now, mostly with a considerable number of workers; and the results are already very interesting and instructive, both for the country's history and for archaeology in general. Foundations of an extensive Roman building have been discovered, most of which have been traced with remarkable clarity. While a few had already been excavated and are only recognizable by faint markings on the ground, other areas still reveal the existing wall, at a height of more or less one Dutch yard.

It is known that the land of Arentsburg and its immediate surroundings had always retained the name "den Burg" (formerly the land "ten Hoogen Burg"), and that a municipal footpath stretched across this land from Voorburg to Rijswijk, and thus east and west. The main excavated portion of the building lies directly along this former footpath or Burgpad, namely, on the north side the lower foundations, mostly lying on white sand, and, on the south side, the higher ones, which largely rest on clay soil, filled with charcoal, ash, whole or finely crushed tiles and pottery, and even oyster and mussel shells and animal bones.

It is on this south side that the aforementioned remains of actual walls are found, in a few rooms, some distance apart, which, being considerably deeper than the others, may have been cellars. It is noteworthy that both of these cellars are equipped with a well: the easternmost has it within its walls, and this well is built square; at the other cellar, the well, which is oval and rests on piles, is only a

few steps away. This most significant section of the excavation covers approximately 80 yards north and south, and 60 yards east and west.

Furthermore, during partial ground investigations, a good 55 yards further north, another extensive section of floor was found, and a good 70 yards further on, or more than 125 yards from the aforementioned, the foundation of a long wall running east and west, covering the entire width of Arentsburg (that is, approximately 80 yards).

So far, it appears that this wall served as a perimeter wall for all of the aforementioned, if it does not belong to another building. This is the first thing that walkers coming from The Hague will see. A little further south (about 20 yards), at the eastern end of the supposed ring wall, a smaller building must have stood, perhaps connected to it. Many fragments of columns in white chalky stone have been found, but the foundations of which, at least as far as excavation has gone, have been almost completely destroyed.

The building materials, in general, are natural, mostly German stone, as well as the familiar Roman bricks and tiles, as well as slate for the roofs. Among the tiles and other baked bricks, many bear the marks of the XXX, some those of the 16th and 10th Legions; also many bear the inscription EX. GER. INF. (Army of Lower Germany), etc. A large number of fragments found attest to the fact that the lime walls were colored and some decorated with well-drawn floral patterns.

The remains of floors are made of lime with small, broken tiles. Mosaic floors, mentioned in older reports, have not yet been found here.

The walls, in the section now excavated, are mostly demolished down to their foundations. No large objects of art or household goods have been found either. Nevertheless, numerous pieces of fine Roman pottery, known as terra sigillata, or, in others, terra samia, have been unearthed, of which some thirty or forty pieces depicting figures,

A sufficiently complete set has been compiled, and many others are so complete that the majority of the drawing can be seen. These all form a beautiful and instructive series of works of art from the Roman imperial period, in a type of vessel of which undamaged pieces are almost never found.

Another series of 130 to 140 of these is marked with the names of the potters. The fragments of other pottery are also so numerous that one estimates well over 2,000 bases. Among these are a number of fragments of large oil and wine jars, which end in a point at the bottom, probably the amphorae, or more often the dolia of the Romans, which are also provided with either an imprinted manufacturer's mark or the incised mark of their weight. A great deal of broken glass also appears, which, judging by the handles, etc., must have belonged to medium-sized bottles.

The household and ornamental objects are made of bronze, among which a small reclining hunting dog stands out, as well as some clothes buckles, three finger rings, some writing styli, copper and iron keys; as well as an iron tripod to which a similar brazier, a small bronze cup, and a whetstone appear to belong; all four of these objects were found in the same well, in one of the cellars. However, no weapons have yet been discovered.

Of inscriptions, only fragments remain, found under the fragments of columns near the supposed ring wall. Another piece of stone bears two medieval letters most similar to Gothic ones. While the Nestor of Dutch scholars mentioned medals by Constantine, and even by Valentinian, as found at Arentsburg, the current deliberate excavation has not yet uncovered any later than those of Maximinus Pius. Several silver coins of this type were found together with those of his immediate predecessors Septimius Severus, Caracalla, Alexander Severus, and Julia Mamaea, all in the cellar with the well. Yet another location yielded a similar find; but generally speaking, the majority of them are in bronze of the first and second magnitude, from the first emperors, and have been found scattered. However, a few silver coins from much later periods have also come to light: one from John I, Count of Holland, the other from Maximilian and Philip of Austria, and thus from the 13th and 15th centuries. As far as the discovered building can be judged now, it most closely resembles the Roman villas, or country estates, in England, several of which have been excavated and published on plates, but are unknown to many antiquarians on the Continent. Little resemblance to the Roman camp at Neuwied, recently republished by Messrs. Dorow and Hundeshagen, has been observed, except perhaps the two middle, still incompletely known, buildings of that camp would qualify. It is certain, at least, that the Roman fortress at the mouth of the Rhine, the house at Britten, now swallowed by the sea, did not resemble the institution at Voorburg in any way, and was much smaller than it. Indeed, the newly discovered, and even the entire, land of Arentsburg constitutes

- 53005 only a portion of the Roman building, since its foundations undoubtedly continue beneath the adjacent properties. It is unfortunate, however, that a ditch dug in 1771 runs along the footpath, thus cutting straight through Arentsburg and the old building, destroying part of the foundations. This has broken the connection between the higher and lower sections, which is now very difficult to restore in a drawing, but perhaps, if the excavation continues, it will become clearer.
- 53010 His Majesty has graciously granted permission for the description and publication with plates of this important archaeological discovery at the country's expense. C. J. C. REUVENS.
- 53015 An attempt will be made to keep the excavation exposed and visible for a few more days, as long as the season permits. Enthusiasts of antiquities who wish to use them in the meantime can, until further notice, register for this purpose, stating their name and quality, at the homestead itself every day from 12 noon to 1½ hours.
- 53020 January 1, 1828 NEERHAREN. On a trip to Neerharen in 1828, during construction du canal de Maestricht at Bois-le-Duc a belle cruche romaine en argent. The vase, which is the current point, with three meters under the sol, with a height of 0.322 and the cisterns and the cercles on the col and on the pied. The fond du vase également ciselé portait une inscription. Ce bel objet fait, depuis 1831, partie du musée de Leyde (1).
- 53025 (1) C. Leemans, Roman antiquities in Maastricht, p. 69.
- 53030 June 18, 1830 - Deux journaliers de Baarlo, Limbourg, occupies à retirer de la terre glaise, ont trouvé, en creusant, une Earthenware vase filled with antique gold and silver medals, worth 300 florins; they are all the size of a 25-cent coin.
- 53035 June 19/22, 1830 To the Editors of the Political Scout. Baerlo, June 19, 1830.
- Gentlemen,
In yesterday's issue, you reported on a find made here a few days ago while digging in the clay. — It is true, gentlemen, that an urn was found filled with various coins, both gold and silver, but of greater value than the 300 florins mentioned in your newspaper.
- 53040 I know that the owner, Mathieu Holtakkers, sold some of it in the first few days to a single person for 1600 florins, and since then to others for 3000 florins. — It seems the urn never runs dry, since they still sell them every day, and you can even pay 4 francs for a silver coin and 20 francs for a gold one the size of a Napoleon.
- 53045 Most of the coins in this collection are different from one another and date from the time of Nero Vespasian, Trajan, Faustina Augusta, Diva Augusta, Antonina, and other Roman emperors. A subscriber.
- 53050 September 1, 1830, Baerlo. In September 1830, a certain Holtakkers, known as den Bisschop, found in the municipality of Baerlo, opposite the church, on the Blerick side (ancient Blariacum), an urn containing several hundred Roman coins from various consulships, in gold and silver. This collection was dispersed in the surrounding area, but the greater part of it was purchased by Mr. Louis Wolters, a banker in Venlo.
- 53055 1 January 1833 Bl. 17. Te Leende ontdekte een smid, in 1833, bij gelegenheid van veengraven, op eene diepte van nagenoeg twaalf Rhijnlandsche voeten, drie Romeinsche penningen van geel koper, van de eerste grootte, voortreffelijk behouden, prijkende met de borstbeelden en nomen van AUGUSTUS CLAUDIUS en NERO. Bl. 17. Magusamus of Macusanus. De Dommel stroomt hier voorbij.
- 53060 1 January 1834 45. Cornalijs. MERCURIUS, of een GENIUS, die in den linkerarm een horen des overvloeds draagt. From Cuyk aan de Maas; found in 1834; collection as no. 6. [=J.J. Nahuis in Utrecht] [more stones from the collection of Guyot in Nijmegen]
- 53070 January 1, 1835 MONTFORT. Weapons made of stone and bronze have been found several

- times in this village. One example of these objects is in the museum in Bois-le-Duc. It is a quarter-axe, found in 1835 in a peat bog, 8 to 10 feet below the surface. (1) Mr. Guillon, notary in Roermond, gave four stone axes or wedges to the Royal Museum of Brussels, three of which were flint and one of basalt, found in 1836 and 1837 in the peat bogs of the municipality of Montfort. (2)

- December 3, 1835 STUDY OF ANTIQUITY IN HOLLAND. - ARCHAEOLOGY. UNIVERSITY OF LEYDEN.
Obituary for Mr. C. J. C. Reuens [...]
- December 15, 1836 - At Arles-sur-Aube, on the road from Arles to Trier, a few steps from the town, on land belonging to a mound already noted as a burial site for the inhabitants before the re-establishment of Christianity, a discovery was recently made which confirms this opinion: vases of different materials and shapes, amulets, Roman medals, Charon's obol near the bones or hand bones of skeletons. A complete skeleton was found in a pit.
- January 1, 1837 Around the year 1837, in the hamlet of Pey, two feet under the ground, a fine flint weapon was found. (2)
- February 4, 1837 Deurne 3 February
Row 1837.

To the Editors of the Noord-Brabander. For eight days now, the municipality of Deurne has provided proof that this region also contains treasures, in terms of antiquity and history, that can easily be placed on a par with other parts of our country. The attention of our Dutch scholars is therefore drawn to the following: through which they may be given the opportunity not only to expand their collections of antiquities with important articles, but also to render important contributions to history. Begun by the official corps of Regt. Huss. No. 6 and continued by private individuals in the hope of finding treasures, they are here busy excavating a camp or army, or even a cemetery; presumably originating from a tribe driven out of the Ardennes by the Romans and hidden here, behind the marshlands of the Peel. Several urns or pots of various sizes, all filled with the ashes of cremated bodies and small bones, have already been excavated; while in some, fragments of metal and parts of weapons have been found. These pots are covered by mounds of varying heights, which, like the pots themselves, have certainly increased in size and height according to the prestige and rank of the person buried there. The pot is almost like a globe, tapering slightly oval towards the top and bottom, while at the top it has a slanting rim, which will have approximately the same circumference as the pot itself. The lid, which is very small in proportion to the pot, fits well and appears to be tightly covered. The largest pots will have a diameter of 3 palms, while the smallest will barely reach 1 to 1.5, and the mounds will also vary by almost a yard, as some are nearly 2 feet high, while others are more than five feet high. The pots are made of potting clay (which is also found here) and demonstrate that they had already advanced the art of turning to a considerable extent.

P. [elsewhere:] - The attention of our national scholars and antiquarians is called to this discovery, which may be useful for adding to their collections or for elucidating history.

February 4, 1837 [1] Several urns or pots of various sizes, all filled with the ashes of burned bodies and small bones [2], while in some, pieces of metal and fragments of weapons have been found.

In January and February 1837, a captain with the 10th Company of the Regt. Hussars No. 6, stationed in Deurne, had excavations carried out in the heathland for so-called dolmens, small mounds or raised hills from which various urns or earthenware pots had been dug. As soon as the residents got wind of this, they also began to dig up these mounds and retrieve earthenware pots, among which one contained a crude and inconspicuous metal statuette, approximately two palms long.

From Chronicle of Heeze or Note of Remarkable Events within the Municipality of Heeze and Surrounding Villages, by Hendrik G. van Moorsel.
This is again mentioned in the book "People in the Peel."

May 4, 1837, NETHERLANDS. In the latest issue of the Nederlandsch Magazijn (Dutch Magazine), one finds an article about the recently unearthed urns in North Brabant. It mainly concerns the recent publication of reports in several of our daily newspapers regarding the excavation of antiquities in the municipality of Deurne, province of North Brabant. The editors of the aforementioned magazine have now received some details regarding this excavation, primarily as follows: A captain in the Hussar Regiment No. 6, having previously discovered that some mounds on the Kempen heathland, excavated, turned out to be burial mounds and contained urns or ash jars, came up with the idea that some such mounds, which were present on the heath near Deurne, his current cantonment, might have served similar purposes and contained antiquities. With the permission of the mayor, having had excavations carried out, five urns or ash jars were found, which increased with subsequent excavations and now number over fifty. It is unfortunate that the farmers, hearing of this, also began digging on their own side, hoping to find treasures; they smashed or damaged the urns they unearthed. Their disappointment was great when they found nothing but ash and a few apparently half-decayed human bones, such as skulls, ribs, thighbones, etc. Not a single penny or coin was unearthed; only a small piece of metal, which is believed to be the mouthpiece of a wind instrument. The urns found are of various sizes, all of virtually the same shape, some with lids. The heathland in which the urns were found is about four acres in size, the mounds are fairly regular, but the entire area appears to have served as a burial ground, as urns have also been found outside the mounds and at some distance from them. The urns are usually covered with a layer of charcoal; after all, as soon as one finds this, one is certain to be near an urn.

Some are so high that the fibrous roots of common heather can be found at the top of the ash; others have been found deeper, but at uneven depths. The material from which these pots or urns are composed is smooth, solid, and dark brown; no vitrification is visible on them, nor any inscriptions or inscriptions. If these were made in Deurne, where two potteries are still found, then one must admit that this art has not progressed there in 10 or 15 centuries; because these urns are more refined and smoother in workmanship and treated with more care than is currently the case. Excavations are still continuing in some locations, but, as mentioned, nothing is found in the urns except ashes and the aforementioned human bones.

June 3, 1837 HAARLEM, February 30
A report has been received from the municipality of Deurne (North Brabant) concerning the discovery, near that location, of an encampment or burial ground; believed to originate from an ancient tribe, driven from the Ardennes by the Romans, who perhaps sought refuge there behind the marshlands of the Peel. The first discovery of this army or cemetery was made by officers of the Hussar Regiment No. 6, stationed in the area, and since then, excavations have continued by private individuals hoping to find treasures. Among the finds so far are several urns or pots of various sizes, all filled with the ashes of cremated bodies and small bones; in some of these pots, it is reported, pieces of metal and fragments of weapons have been found. These pots are covered by mounds of varying height, which, like the pots themselves, have likely increased in size and height according to the appearance and rank of the person buried there. The pots are made of clay and well-turned; the largest have a diameter of 3 feet, the smallest just over 1 palm; some mounds are almost 2 feet high, others more than 5 feet.

May 26, 1838 (§§) The Roman graves, even the simplest, e.g. Those that did not contain stone coffins yielded not only pottery, immediately identifiable as Roman by its workmanship, shape, color, or decoration, but also objects or fragments of metal, glass, or other composite material. On the contrary, no flint objects were ever found there. I have noted the distinct character of Roman and Germanic mound graves, among other places, in a report on the Antiquity discovery in Deurne, in the Konst- en Letterbode of May 26, 1838.

On April 23, 1839 [8], a number of urns were sent to us, which had recently been discovered in Deurne, in North Brabant; and the number was further increased by the proceeds of a deliberate excavation ordered for this purpose, donated to the Museum by the mayor of that town, Mr. van Riet. [probably NBD 2, vRD 4a, vRD 2, vRD 3, ND 3, GtD 15a, k 1942/6.1, k 1925/1.1, NBD 1, k 1942/6.2, vRD 7, k 1925/1.2, ND 2, k 1942/6.3, ND 13, vRD 4b, vRD 5a, ND 4, GtD 13a, ND 8, k 1932/12.9, ND 10, ND 5, vRD 8, vRD 5b, ND 11, k 1942/6.4, GtD 14b]
[10] The urns appear not to date from the Roman period, but from many hundreds of years earlier.

June 7, 1839 BALLO, June 2.
More than two hundred Roman silver coins, the size of a dime and about the thickness of a twenty-five-cent coin, have been found in the vicinity here. They usually bear on one side an image with the inscription: Diva Faustina, Antoninus Pius, or the like, and on the other side some symbolic representation with the inscription: Aeternitas, or the like. Perhaps a careful investigation of these coins, and the location where they were found, could significantly influence our understanding of Roman residence in these regions. It is therefore to be hoped that, since this remains unknown, the competent authorities would initiate an investigation. This, one imagines, should be easy, since the sellers of these coins are sufficiently well known.

June 18, 1839 Roman Coins.
From the outset, after I had gained some certainty that Roman coins had been found in this area, I intended, after receiving further information, to have an article about this published in the Drentsche Courant. However, the articles about this...

The subject, in the Groninger Couranten of the 7th and 14th, and in the Drentsche Courant of the 11th of this month, compels me, more hastily, yet also less precisely than I would like, to report the following:
As early as April 25th, 160 of these coins were sold to a silversmith here, who

- informed me of them on May 4th or 5th, and which I received from him on loan. Upon
 53270 examination, I found that they all date from the 2nd century AD, namely those of
 Antoninus, Faustina, Aurelius, Verus, and Lucilla.
 They are exceptionally well preserved, so that the images are clearly visible, and
 the inscriptions and inscriptions of most can be read word for word. The obverses
 show the heads of the aforementioned Emperors and Princesses; While the reverse sides
 53275 depict goddesses or other symbolic figures, applicable to contemporary events and
 mostly different.
 To give an example of each, one of my medals has the following inscription: on the
 obverse: ANTONINVS AVG PIVS. P. P. Tr. P. COS. III; on the reverse: PROVIDENTIA.
 DEORVM. A second, obverse: FAVSTINA. AVGUSTA; reverse: IVNO; a third, obverse:
 53280 AVRELIVS CAESAR AVGVSTVS}, reverse: COS; II; a fourth, obverse: VERVS. AVG.
 ARMENIACUS; reverse: TR. P. III. IMP. H. COS. II; on the extergue: ARMIN; and a
 fifth, obverse: LVCILLAE. AVG. ANTONINI AVG. F.; reverse: CONCORDIA.
 The coins are all the size of our 10-cent coin, but are thicker and each weighs
 almost three wedges.
 53285 Apparently, they initially refused to disclose the name of the finder or the location
 where they were all discovered, and it wasn't until the evening of the 8th of this
 month that I learned of this. The following day, accompanied by Mr. Homan, Mayor of
 Rolde, and the owner of the land where the coins were found, located in the
 aforementioned municipality near Ballo, I went there and had the pleasure, in my
 53290 presence, of having six similar pieces excavated.
 Those unearthed thus far (approximately 350 pieces, of which about 100 are in my
 possession) were found in a spot measuring approximately 2.5 square Dutch yards. The
 land is high sandy soil on the west side, covered with heath, but gradually slopes
 downwards, down to the Anderse Diepje canal. The excavation site is hayfield, covered
 53295 with a poor type of grass, situated on a mixed soil of peat and sand (mud), 40 to 42
 Dutch inches thick, apparently containing more sand than peat fragments, and resting
 on a stiff, grayish-yellow sandbank.
 The excavated fragments were scattered, over a foot deep in this mud, to which
 species I attribute their excellent preservation. At least, one of the six I helped
 53300 excavate had sunk onto or near the solid sandbank, and this was so decomposed that I
 could barely make out a woman's head (apparently Faustina's) on it. The nature of
 this publication does not permit more detail at this time, while mentioning the
 method of discovery of these and various antiquities in this region, traditions, the
 discovery of old Groningen and Spanish coins in the vicinity, etc., is less
 53305 appropriate. -- I would only like to point out that it was not the report in the
 Groninger Courant of the 7th of this month that prompted several of my fellow
 citizens to further investigation, as they had already been more diligently engaged
 in this earlier than the author seems to assume.
- 53310 Assen, June 14, 1839. G. W. VAN DER FELTZ.
- June 29, 1839 M. G. W. van der Feltz, de Assen, published in the Drentsche Courant,
 the following notice on Roman medals, found recently in the environs of Ballo: ROMAN
 53315 MEDALS.
- January 1, 1840 If you, gentlemen, who do not forget the noble pleasure of hunting
 during your recreations,
 are inclined, or feel inspired, to bring to light such remnants of the distant past,
 then nothing more is necessary than to observe whether your eye finds any mounds on
 53320 the flat heath, approximately one and a half yards high, and two to two and a half or
 three feet in diameter. If you come across such mounds, it is almost certain that
 urns are hidden there. The cemetery in Deurne and the one in Baarle-Nassau, at least,
 were discovered by hunters while hunting, who also claim to have encountered similar
 tumuli in the past, though without paying attention, in the North Brabant heathland.
 53325
- March 14, 1840 MUSEUM OF ANTIQUITIES IN LEIJDEN.
 [...] From Mr. S. H. van der Noordaa, of Dordrecht, two tuff mortars with pestles,
 unearthed in the vicinity of Deurne in North Brabant; these are the only objects of
 this kind in the Museum's possession, and which, as far as we know, have not yet been
 53330 found elsewhere. The proximity of the extensive burial grounds there, discovered in
 the heathland a few years ago, gives a high degree of probability that both those
 mortars and the urns found in such large numbers in that area belong to the same
 tribe, thus providing a most important contribution to the knowledge of the domestic
 life of the ancient Germanic peoples, of whose household goods, except in northern

- 53335 Europe, relatively little remains. [...]
- June 18, 1839 Roman Coins.
From the beginning, after I had obtained some certainty that Roman Coins had been found in this area, I intended, after having received more information about this, to
- 53340 have a report placed in the Drentsche Courant.
However, the pieces on this subject, in the Groninger Couranten of the 7th and 14th and in the Drentsche Courant of the 11th of this month, urge me, more hastily, but also less accurately than I would like, to report the following:
As early as April 25th, 160 of these coins were sold to a silversmith here, who
- 53345 informed me of them on May 4th or 5th, and which I received from him on loan. Upon examination I found that they were all from the 2nd century of our era, namely of Antoninus, Faustina, Aurelius, Verus and Lucilla.
They have been excellently preserved, so that the images are clearly visible, and the inscriptions and inscriptions of most of them can be read letter by letter. The
- 53350 obverses show the heads of the aforementioned Emperors and Princesses; while the reverse sides yield Goddesses or other symbolic figures, applicable to events of that time and mostly all different.
To give an example of each, one of my medals has the inscription: on the obverse ANTONINVS AVG PIVS. P. P. Tr. P. COS. III, on the reverse: PROVIDENTIA. DEORVM. A
- 53355 2nd, obverse: FAVSTINA. AVGVSTA; reverse: IVNO; a 3rd, obverse: AVRELIVS CAESAR AVGVSTVS}, reverse: COS; II; a 4th, obverse: VERVS. AVG. ARMENIACUS; reverse: TR. P. III. IMP. H. COS. II on the extergue ARMIN; and a 5th, obverse: LVCILLAE. AVG. ANTONINI AVG. F.; reverse: CONCORDIA.
The coins are all the size of our 10 cents piece, but are thicker and each weighs
- 53360 almost three wedges.
The name of the finder, and the place where they were all discovered, were not wanted to be known at first, it seemed, and it was not until the evening of the 8th of this month that this came to my attention, whereupon the next day, accompanied by Mr.
- 53365 Homan, Mayor of Rolde, and the owner of the land where the coins were found, located in the said municipality under Ballo, I went there, and had the pleasure, in my presence, of having six such pieces dug up. The excavated so far (about 350 pieces, of which about 100 are in my possession) were found on a spot of about 2½ square Dutch ells. The land is high sandy soil on the west side, covered with heath, but gradually slopes down, to the Andersche diepje. The place where the excavation takes
- 53370 place is hayfield, covered with a bad kind of grass, which is located on a mixed soil of peat and sand (derrie), with a thickness of 40 to 42 Dutch inches, as it seems to me containing more sand than peat parts, and resting on a stiff, grayish-yellow sandbank. The excavated pieces lay scattered, more than a foot deep in this muck, to which species I attribute it, that they have been preserved so beautifully, at least
- 53375 one of the 6, which I myself also excavated, had sunk to or on the solid sandbank, and this was so rotted, that I could hardly distinguish a woman's head (it seemed to be Faustina's) on it.
The nature of this sheet does not permit to be more extensive now, while also the mention of the manner of discovery of these and various antiquities in this region, of traditions, of the finding of old Groningen and Spanish coins in the vicinity, etc., is now less appropriate. -- I would only like to point out that it was not the report in the Groninger Courant of the 7th of this month that was the stimulus that prompted several of my fellow citizens to further investigation, since they had already been more diligently engaged in this earlier than the author seems to assume.
- 53385 Assen, June 14, 1839. G. W. VAN DER FELTZ.
- May 12, 1840 [letter to the mayor of Deurne]
Mayor of Deurne Liessel Helmond, May 12, 1840
The Lord Governor of this province (probably requested to do so by the board of the
- 53390 society for the promotion of sciences and arts in North Brabant) has given me a large number of questions to answer regarding antiquities in my District.
These questions, as far as they concern the municipality of Deurne Liessel, are the following:
according to a reported report, a farmer named van de Mortel is said to possess a
- 53395 Roman sword and a gold shield, which were dug up in the Peel.
1°. Is this really so? and if so, when and where on the spot were that sword and shield found?
2°. Would there be an opportunity to purchase it for the collection of old and rare items of the provincial society of arts and water boards?
- 53400 3°. If so, at what price?

4°. If the owner cannot decide to sell, would he then be willing to hand over the objects for assessment and signing against proof?

5°. Is there an opportunity to purchase some of the recently found mortuary urns or other curiosities excavated there?

53405 6°. What is the name of the place where the urns were excavated?

A somewhat speedy answer to these questions would be pleasant to me

D Distr.

October 15, 1909 Coin and Medal Auction.

53410 In the Wednesday morning auction of the coin and medal collection of the late Mr. L. G. Brouwer, under the direction of the expert J. Schülman, the following interesting items were sold, among others:

[...] In the afternoon session, the Greek and Roman coins were sold amidst great interest, including: [...] 2251, a sou d'or of Constantine the Great, f68; 2252, the same of the same with a hole, f27.

53415

February 25, 1910 The director conveys a request from Steegh to rent the floating factory three days a week at f15 per day and 12 cents for each package. The Helenaveen Company would then have to operate independently. This would require 20 people per day. This operation would then take approximately four months. However, the director fears that this approach would leave him with insufficient labor to prepare the land.

53420

Since this cannot yet be stated with certainty, the decision on whether to accept Steegh's proposal is left to the chairman and the director.

53425

February 21, 1910, email from G. Venner dated November 19, 2010

On February 21, 1910, Van Beurden offered archival documents from Well Castle and other archival materials as a gift. On March 12, 1910, the national archivist requested the Minister of the Interior to ensure that Van Beurden receives the honorary medal intended for those who have made a significant contribution to the national museums and collections. That same day, Van Beurden had already offered documents as gifts and for sale, including an incunabulum from the Franciscan monastery in Venray. A silver medal of honor was awarded to A.F. van Beurden by the minister on April 6, 1910. On August 25, he again offered archival documents, but these were not accepted because they did not belong in the Limburg depot.

53430

53435

April 9, 1910: Scientific collection.

Mr. A.F. van Beurden, surveyor for the Land Registry here, donated an important collection of archival materials to the National Archives in Limburg. Mr. Van Beurden had previously demonstrated his interest in the State's old archives on several occasions by donating archival documents. In response to this, the honorary medal intended by the Royal Decree of March 19 was awarded to Mr. Van Beurden. of May 24, 1897, and June 22, 1898, in silver, awarded as a token of appreciation for his interest in the State's scientific collections. St. Ct.

53440

53445

April 27, 1910

The Most Reverend Mr. A. F. van Beurden, Roermond.

Sir!

In response to your postcard of the 20th of this month, I enclose a map indicating the areas to be measured.

53450

The areas enclosed by red lines are being cultivated; we need the correct size for the lease.

If possible, we look forward to your visit sometime next week.

Sincerely, A. Bos.

53455

An attachment.

April 30, 1910 The article "Limburg Myths and Legends" is very noteworthy. SCHATBERG, KRONENBERG, DE MEIR AND SCHENKENBURG NEAR SEVENUM, which A.F. van Beurden published in the magazine "Buiten" on April 30, 1910, several months before the discovery of the Peel helmet.

53460

The article is actually about several hamlets belonging to Sevenum.

Van Beurden actually visits the village, as he writes: Further on the horizon are forests, towers, factory chimneys, and a drilling tower, which herald the slowly coming transformation of the Peel region into inhabited and profitable territory.

53465

That drilling tower must have been deep borehole 11, America, municipality of Horst, section F, plot 974. Period: April 5, 1909, to January 19, 1910.

Naspeuringen van Paul Theelen: Constantinus Imperator

This was followed by deep borehole 12, Beesel, from January 27 to September 28, 1910; this was probably less visible from the Schatberg in Sevenum. Van Beurden notes a story told by several people about an officer, in Roman or Spanish service, who was said to have died there, apparently in combat.

June 15, 1910 [March 18, 2006] The Curse of the Roman]

[...] He has since recovered two newspaper articles that prove that the helmet wasn't found by the peat cutter from Meijel at all, but by a peat cutter from Helden, officially named Peter Janssen, but better known as Loeves Pier. This had appeared in the newspaper because of his diamond wedding anniversary, in the autumn of 1965. Loeves Pier had told the reporter that on that afternoon in 1910, he had just managed to prevent Gebbel Smolenaars from smashing the helmet. Piet had slid into the peat pit and dug the thing out with both hands. He had rinsed the helmet in a peat puddle and then placed it on his own head. Pier had even gone to the bakery in Helenaveen to ask for a cardboard box so Smolenaars could take the treasure home. Because they had found much more that afternoon, 'like a pair of boots, a pair of shoes or sandals, a leather horse blanket, and so on.'

A silver spur and about 40 copper coins, Loeves Pier had told the reporter. [...] His father had spoken with peat diggers who had witnessed the commotion surrounding the discovery in 1910. A lot must have been lost during the digging. His father once had a piece of the lance, which had been cut to pieces by the peat diggers.

He later gave the stones to the Helden local history society and they are now somewhere in the attic.

[On October 23, 1905, Peter Janssen from Helden married Maria Wilhelmina Peters from Tegelen.]

June 17, 1910 Correspondence with the National Museum of Antiquities
Helenaveen, June 17, 1910.

Dear Mr. Holwerda! Last Wednesday, a peat worker found three coins in the peat, followed by a beautiful helmet, which unfortunately had been shattered, pieces of leather that must have formed a garment, two sandals, both of which are still very intact, a hook, such as those found among the Romans to fasten garments together, and 38 bronze or silver coins.

Several of these coins clearly depict the image of a reigning monarch; the image is a robust head with a curved nose, with a wreath around the hair. The inscription on several coins reads "Constantinus." One also clearly shows "Victoriatius"; surely a very common inscription on Roman coins?

The find extends over several meters of peat; various items were found at a depth of approximately one meter.

There isn't much peat at this location. One meter of so-called gray peat, then the objects, then approximately 30 c. M. black peat, and then already the firm sandy soil.

I hope the sketch below gives you some idea.

Approximately at the border between sandy soil and peat, where the peat begins and there is only 30 cm of peat, is the location of the discovery.

Are the objects the remains of people who died in the peat bog?

May I also mention that some pieces of wood were found; could these have come from a spear?

You would certainly be very pleased to provide information about this discovery to many, including myself.

I shared this information with you in the hope that you would find it worthwhile to learn about it.

Superficially, it seems that the objects are very old, from the time of Constantine the Great?

The found objects are carefully preserved; The finder is poor and would greatly benefit from selling them for their actual value.

I am happy to provide further information, if possible.

If you consider it worthwhile to come and view the items in person, I would be happy to open my home to you.

Sincerely, Yours sincerely, Reverend B. de Jong, Reverend Preacher

June 18, 1910 A discovery. During peat digging in Helenaveen, three coins, a pair of shoes, and a leather doublet, covered by a brown fabric, were found. These items were found in the so-called black peat, of which only a 30 cm layer is present at the location where the objects were found, covered by 1 meter of peat.

Naspeuringen van Paul Theelen: Constantinus Imperator

- 53535 June 18, 1910 The Dutch Heath Society visits Westphalia.
Hagen, I/W., June 16.
- 53540 As in previous years, several Dutch people participated in the excursion organized recently by the Association for Meadow Building, Moor and Heathland Cultures in Westphalia. Among the 17 members of the Dutch Heathland Association present were the board members, Mr. Ruys de Beerenbrouck and Mr. A. Staring, the company's director, Mr. J.B. van Lonkhuijzen, several large landowners, and Mr. A. Bos, director of the Helenaveen Association. Numerous authorities from Westphalia, including those in the agricultural field, with Dr. Weddige, the association's chairperson, as leader and Breme, the provincial meadow builder, as technical leader, jointly undertook this two-day trip on Wednesday morning. That morning, over 70 people gathered at the Maria-Veen station between Coesfeld and Hervest-Dorsten to visit the cultural center of the "Maria Veen" workers' colony. [...]
- 53550 June 19, 1910 While excavating peat in Meijel (Limburg), a worker found a gold helmet, gold footprints, a gold ball, and three quarter-sized gold coins at a depth of 2.5 meters. The latter bears the date 512. The find is still in good condition.
- 53555 June 20, 1910, M. Wijmans, Roermond, June 20, 1910
To the Hon. Ed Zeergel, Mr. Dr. Holwerda, Leiden
The Hon. Ed Zeergel, Mr.
- 53560 I have often read your name in connection with excavations, so this information may be of interest to you. Today, while traveling by train between Weert and Budel (Limburg), a gentleman pointed out to me that traces of gold helmets, coins, and gold coins (approximately 200) had been found in the peat. The gold value of the coins was said to be approximately 8 guilders. He had seen some of this, as he lived there. The helmet was silver on the inside. Many urns, etc., are also found at this location and he said it had been a coffin cemetery. I have not been able to verify the accuracy of his information as I lacked the time.
Perhaps the Weert Municipal Council knows more about this.
- 53565 Sincerely, Yours sincerely, M. Wijmans, address Nijmegen
- 53570 June 21, 1910 Remarkable find.
Meijel. As reported in our issue, peat worker G. Smolenaers found several gold objects, including three gold coins. We can now report that the same worker found another 36 gold coins on Friday afternoon at the same location, but slightly deeper in the peat. All bear dates ranging between 500 and 600. It is suspected that the man found a considerable amount of value. The objects have already attracted numerous visitors.
- 53575 June 25, 1910 A gilded silver helmet, 30 cm long and 20 cm high, was found. wide and equally high. It consisted of a strong leather cap, to which, by means of numerous silver pins ending in pearl heads, eight beautifully crafted quadrilateral and triangular plates of gilded silver were attached. They were held together by a comb of precious metal, set with silver pearls, running from front to back. At the front, above the face, the helmet was somewhat more oval. The beautiful side pieces, which hang from the helmet along the shoulders, were also present. They are 20 cm high, 12 cm wide at the top, and with a graceful taper, tapering to 5 cm. Alongside them was a gold lily decoration, 10 cm by 10 cm; a beautiful back plate, semicircular, to which the buckles and a strap were attached, and on which a long name is engraved in a very strange script. The script is reminiscent of runic script, but shows more Greek forms. Attached to a coarse shoe was a bronze-gilded spur, and attached to a piece of cloth or leather was a well-formed, heavy cloak hook or fibula. Also found among these relics from times long past were 41 coins.
- 53590 July 1, 1910 Nothing came of the leasing of the floating factory to Steegh en Esser.
- 53595 July 2, 1910 Description by van Beurden in BUITEN
It was a piece of the helmet, covered internally with leather, which even contained a small cushion to protect the head from pressure. Gradually, the leather socket, a coarse shoe, to which the bronze-gilded spur was attached, a bronze cloak hook, the endpiece of a quiver, and then the silver, heavily gilded helmet covered with embossed molding and ornamentation, held together; all of this was attached to the leather cap with silver pins, which ended in knobs. The metal is pure stainless steel, the gilding is slightly darker in color, but well preserved. Because,

53600 unfortunately, the metal was separated from the leather, the helmet has fallen into its original component pieces. Two plates of the helmet, a sword lily, which was attached to the cap by pins as an ornament, were also found. A side plate bears an inscription that one of the readers may be able to decipher. Another plate was found by another worker. Thanks to the goodwill of the Mayor of Deurne, a guard was posted at the discovery site, preventing unauthorized excavation. Among all this, 41 bronze and silver coins were found with the head and inscription "Constantinus," the reverse side, for example, depicting a crowned naked god with staff, lightning bolts, and bird, next to it a B. [...]

53610 July 14, 1910 Archaeological research. *We received a letter from Rijsbergen: At the direction of Mr. J. Gommers, mayor of Zevenbergen, last Friday Dr. A. Holwerda, director of the National Museum of Antiquities in Leiden, visited the site beneath this municipality where, in earlier centuries, the temple of the pagan goddess Sandraudiga is said to have stood. This temple appears to have been destroyed by the preachers who preached Christianity in Taxandria (present-day North Brabant). 53615 The hamlet of Hellegat was also visited, where a pagan cemetery is likely located. The intention is to conduct an investigation at both locations on behalf of the aforementioned Museum to identify any antiquities that may be present. Excavations will likely begin this year.

53620 December 31, 1910 Biography of and by A.F. van Beurden
In 1910, I moved my office to the new National Office Building on Begijnhofstraat. The old one was opposite the Brothers, belonging to Guillon and is now St. Christopher's House.
On November 1st, Victor was No. 1 in his class thanks to his perseverance.
53625 We, as was our duty, supported Mama van Schoonhoven for 30 years with 120 guilders a year, which was enough for us, as we were so richly blessed with children. When François van Schoonhoven, a draftsman at the land registry, died, we asked Mathilde van Schoonhoven, married to Pierre Bingen, to contribute theirs as well. The contributions to Mama have brought us blessings.
53630 Mama van Schoonhoven passed away suddenly and was buried amid much sympathy. Uncle Dr. Cuijpers also attended church.

December 9, 1911 Helenaveen, December 9, 1911. The Most Reverend Dr. J. H. Holwerda Leiden
53645 Sir,
I have the honor to share the following with you, based on what I read in your work "Nederland's Vroegste geschiedenis in beeld" (The Netherlands' Earliest History in Pictures), page 29, regarding the discovery in the Peel region near the municipality of Deurne.
53650 What I read in your description gives me the impression that you were not properly informed about some matters, and that not everything found was made available. The day after the discovery was made, I visited the site and inspected everything. I also collected all the leather, which had been torn to pieces due to the finders' ignorance.
53655 The objects were found in the upper layers of the black peat, almost at the transition to the gray peat. The thickness of the black peat was too great for the people who died there to have been on horseback; horses cannot ride over such layers of peat. Among the leather were the remains of two beautifully crafted shoes. A third, very simply made shoe was found about 15 meters from the first site, along with the money and the leather, probably from a small leather pouch. From this, I 53660 thought I could deduce that the presumed nobleman was accompanied by a minor, and that thus two people had perished.
I collected all the leather separately, as well as the shoes, the pouch, what had been torn from the helmet, etc. The woven fabric was already too torn apart to make

53665 much of it; it mostly looked like it had been ribbons, wider and narrower. Regarding the weaponry, it could be determined that it probably consisted of a spear or lance, a bow, and a sword. The remains of these had to be partially retrieved from the excavated peat, so they had been cut into pieces during the peat digging. 1. Pieces of round, cut wood, approximately 3 cm in diameter; some were flat and showed grooves as if they had been metal-tipped, presumably the metal point or tip. 53670 2. Pieces of flat wood, beautifully worked in the center, with metal residues as if a steel spring had been inserted through the wood; all pointed to the wood of a bow. 3. A small block had grooves to smooth the bowstring. 4. A piece of peat, approximately 30 cm long, with the imprint of a sword blade, 53675 approximately 2.5 cm wide. The metal had completely eroded and was still present only as a dark, blue-gray powder. I packed all these objects individually and returned them to the finder, requesting that they later be handed over to the buyer or to a museum, where the objects would likely be sent. However, it was later tampered with considerably, and the man took it 53680 to fairs. When I saw it again later, it had suffered greatly. The lack of interest initially shown in this discovery, and the dispute over who owns it, was the reason I stayed out of it. However, after reading your description, I now felt compelled to share the above with you. In the illustration in your piece, I'm still missing a large piece with signs or 53685 letters. I thought this was particularly important. Isn't it in your possession? Later, a third party brought me a pin, which was still embedded in a piece of leather. One arm had broken off, and a stone was included, which had two flat sides and must have served as a fastening, as everything came from a single peat and was brought to me. Here in the Peel region, finding anything in the peat is very rare. 53690 Previously, a few leather headdresses, a few large horns, and something similar have been unearthed, but everything else has been lost. If you would like any further information about any of this, I would be happy to provide it to the extent possible. Sincerely, 53695 Your Honor, A. Bos.

January 1, 1925 Antiquity reports from the National Museum of Antiquities Oudheidkundige mededeelingen van het Rijksmuseum van Oudheden te Leiden = Nuntii ex Museo Antiquario Leidensi, 1925, Deel: VI, 1925 » 1925 - Pag. 68 | Delpher 53700 A. E. REMOUCHAMPS. Excavation of a Roman villa in Ravenbosch (L.) ... 41 THE FINDINGS. Bronze Inscription Plaques. In room 20, fragments were found of two bronze plaques (Ia-b and II) on which very 53705 important inscriptions appear. A part of a third plaque (III) with a similar inscription was found at the front of the building, approximately where the large staircase that gives access to the portico has been determined. Inscription Ia. A large fragment of the first plaque has been preserved of 11.5 cm 53710 high and 13.4 cm long. This fragment is itself also broken into two pieces, while a few very small fragments also belong to this plaque. The indicated height is undoubtedly also the original, as appears from the partially preserved profiled frame. The length must originally have been considerably greater. The side edge has been preserved on one side. How large the lost part must have been we will consider 53715 later when discussing the inscriptions. The plaque is made of bronze and has a beautiful shiny dark green patina on the front; the back is duller. The bronze is slightly more than 0.5 mm thick. Presumably the original shape of this inscription was rectangular, and so we do not recognize a tabula ansata in it, as in the other plaques to be discussed below: after all, no break can be recognized on the preserved 53720 side edge, as would rightly be expected if we were dealing with a tabula ansata. Of this inscription on the front we give here an image (Fig. 54) with next to it a copy of the text as we believe we may read and supplement it: That we may assume an i for the last letter of the 1st line is beyond doubt, and the reading Vitalinius is therefore also certain. In the 2nd line perhaps only the 53725 meaning of the last two letters is somewhat doubtful. However, the beginning of the 3rd line gives reason to add "quaestoricio". IIVIR. Q. on the 3rd line could be read as duumvir quinquennalis? 1) The last line is clear: Julius Amico; this was probably followed by: optimo. However, Julius is probably the cognomen, while at the end of the 3rd line the gentilicium would have 53730 been omitted. This inscription therefore shows that MARCUS VITALINIUS, who was former quaestor of

the Colonia Ulpia Trajana and held the position of duumvir, is given the assurance of friendship by ... JULIUS.

The letters are carefully cut into the metal in such a way that the grooves, which

are quite wide on the metal surface (1 to 1.5 mm), tapering to a V-shape, as the Romans also used to do with their inscriptions on stone.

Inscription Ib. When we turn the plate with the previous inscription around its longitudinal axis, we see another inscription on the back (Fig. 55). Here the letters are formed by punched dotted lines and, as is clear from the fact that some of these dots damaged the letters on the front, this inscription is of a more recent date. As with the front, we must assume that here too part of the inscription has been lost, namely the end of each line. On the first line we see after the last letter of Tertinio an indented dot that probably points to a beginning new word, without us having any indication of the first letter of this word.

Also in the 2nd line we see after aedilicio a barely noticeable trace of a letter of which the first part consists of a vertical line.

On the 3rd line we clearly see C•V• and on a small matching fragment of this picture - corresponding with the V at the end of the 2nd line of the front - we see a dot at half the letter height after this V so that we may read C•V•. We

1) Prof. BOHN from Berlin, who during the study of these inscriptions facilitated my task by giving me many pieces of advice, points out to me that questoricio II viro quinquennali skips the dignity of the single II vir. One would therefore have to expect: quest. II vir, II vir quinq. - Cf. C. I. L. XIII. 8772. Dessau And. p. 698.

are therefore inclined to add a T here and to read Coloniae Ulpiae Trajanae as we already did on the front.

The 4th line is very clear. Here we must read Pagus Catualium. After all Catualium

2) C. Leemans: Romeinsche Oudheden te Maastricht Pl. I (Leiden, 1843).

Peutinger map, then the identification with Heel seems most likely, especially since foundations of Roman buildings have actually been established there 1). Of great

importance to us, however, is that this name, which on the said map only indicates a station, occurs here in connection with Pagus, but we will find an opportunity to discuss this further below. After Catualium, PATRO was certainly mentioned. After all, on the 5th line we read NO, and placed in such a way that we can recognize the continuation of the fourth line. Although a few words of this inscription may remain uncompleted, it is clear that we are dealing with a tabula patronatus 2) given by the Pagus Catualium to a certain Titus Tertinius, who himself was a former aedile of the Colonia Ulpia Trajana.

Inscription II. The fragments of the second bronze plaque consist of three larger and one small piece. The patina is excellent and of a beautiful bluish color. All pieces belong to the first lines of the inscription, while the other half is missing. The fragments in question all fit together. They form a plaque of 10 cm high by 8.4 cm. length, provided with a dovetail-shaped projection (which is approximately 3.5 cm long at

7 cm. at its greatest width). The thickness of the metal is almost the same as in the 1st plaque. The inscription is very well cared for; the letters are of the same nature (pointed) as on the front of the specimen already discussed (Fig. 57). It is clear that a fairly large part (possibly slightly more than half) of the plaque is missing here. The first line contains, after a palm ornament, the letters Hon and the beginning of a round letter that we can consider as an O, which makes the reading Honori likely (cf. C. XII. 3165b; Dessau 1214, 1220, 1243), behind which

1) Publicat. de la Société historique et archéologique T. XVIII, 1881, p. 207 (Habets, Découvertes d'antiquités dans le Limbourg). – The distance Atuatuca-Catualium is on the P. map 30 leugae or 66.66 K.M.
2) HUEBNER: Exempla script, epigr. latinae p. 301.

then a second palm ornament bent in the opposite direction may be assumed. If this reading is correct and therefore also the number of missing letters, then the picture would originally have been about 15 cm long, regardless of course of the projections on both sides.

The 2nd line contains the letters T. Terti, which may certainly be read as Tertinio on the basis of the content of the inscription on the back of I. So the same person is meant here, as the first name Titus also shows.

The 3rd line can again be regarded as a continuation of the previous one; but it is more difficult to fill in the missing part here, which probably consisted of 3 letters.

On the 4th line we read Dec. II VI I, the last of which must certainly be read as R. The 5th line contains the beginning of the name Mansuetus and the 6th line the beginning of the name Macrinus. It is likely that we are dealing with two persons and that we still have to add "et" after Mansuetus.

Inscription III. Only a relatively small part of the third plate has been preserved. This shows us another such inscription and here too only the initial letters of each line have been preserved. One of the two dovetail-shaped projections is also still present here. The thickness of the plate is approximately 0.5 m.M. The original height can be accurately indicated, thanks to the preserved edges: it amounts to 11.4 cm. The length of the fragment is only 3.7 cm. The projection is approximately 3.5 cm long and must originally have had a height of ±8 cm. (Fig. 58).

Fig. 58 (on 1/2).

TE...
DEC...

VIR...
FLOR.
A. .

Te(rtinio) ... dec(urioni) ... (duum)viro ... Flor ... a(mico optimo)

53870 That the first line will have mentioned the name TE(RTINIVS) again is very likely;
but the line is difficult to complete further. Since we are dealing with a very
compact font here, TERTINIO would only take up a small part (±5 cm) of space, so that
if we think of the original form of the discussed picture as a horizontal rectangle
53875 of ±14 cm long and if we assume that both before the first letter of the line and
behind the last letter about 2 cm of space has been left, after TERTINIO about 6 to 7
letters can be assumed; although this of course remains a rough guess since the
length of the picture is uncertain.

The 2nd line starts with DEC, which may be read as the abbreviation of decurio. What
follows is uncertain, but from the beginning of the next line it is clear that we may
53880 assume that the enumeration of official titles continued and that the line will have
ended on II, which together with the 3rd line can be read as IIviro.
The 4th line is uncertain. Could FLOR possibly be interpreted as the beginning of a
name such as Florentinus?

The 5th and last line, which jumps back somewhat, begins with an A and the following
53885 letter was most likely an M. The first leg of this letter can still be seen at the
break that occurred here. We are inclined to add Amico optimo here. Although we are
again dealing with a very lacunae inscription here, it seems certain that it also
contains the text of a formula by which honour is paid to Tertinius (who is here
referred to as decurio and IIvir) by a person whose name probably begins with Flor...

53890 Meaning of these inscriptions: Of these four different inscriptions, two (Ib and II)
refer to the same Titus Tertinius. We will leave III out of consideration for a
moment, although there is every reason to attribute this to the same person. From Ib
we see that T. Tertinius was a former aedile, probably of the Colonia Ulpia Trajana.
53895 As is known, the aediles (two in number) were, together with the duumviri and the
quaestors, the highest administrative officials of a colonia. While the aedile had to
fulfil special police functions (guarding streets, squares and markets, supervising
the construction and maintenance of roads, etc.), the duumvir was the head of the
judiciary and the quaestor was charged with the management of the finances and the
53900 collection of taxes. Due to the absence of the end of the second line, we do not know
what other office he held at the time that the Pagus Catualium chose him as patron.
It is very likely that he was a duumvir. After all, the aediles are usually
subordinate to the duumviri in the city government, even though they are their
colleagues, so that Tertinius could have been promoted to duumvir after having been
53905 an aedile.

Whatever the case, on II we read that Tertinius is a decurio and duumvir without any
indication of which colonia. However, it may be difficult to assume that this refers
to a colonia other than the one mentioned on Ib. After all, a decurio (i.e. the
official title for members of the city council of cities with Roman law) of the
53910 colony of Ravensbosch itself is hardly conceivable; since this settlement should
rather be regarded as a vicus, and vici and castella were usually added to
neighbouring cities. And even if we consider the vicus of Ravensbosch as the main
town of a pagus, the existence of an ordo decurionum would still not be likely there.
Pagi with such an ordo have only been established with certainty in Africa. Moreover,
53915 for cases in which aediles or quaestors have been established for a vicus magistri,
it is still assumed that these higher officials could often have been the same as
those of the colonia.

From all this it appears that a connection must be sought between the settlement of
Ravensbosch and Catualium on the one hand, and Xanten on the other. It is known that
53920 the latter was the main town of a civitas or gouw, although one was in the dark about
the boundaries of the territory of this civitas. It may be assumed that a civitas
preferably included one or more specific tribes and for the civitas Ulpia Trajana it
has been established that part of the area along the Maas must also have belonged to
it 1). Civitates are often also referred to by the name of such a tribe. In our
53925 country we know of a Civitas Batavorum through the wisdom stone from Ruimel (south of
's Hertogenbosch) (C.I.L. XIII 8771) (erected in honour of Hercules Magusanus) whose
main town has been sought both in Lugdunum Batavorum and in Nijmegen.

The connection that may now be made in the first place between the Civitas Ulpia
Trajana and the Pagus Catualium cannot be doubted. The latter was a subdistrict of
53930 the civitas; the inscription Ib provides of it for the first time the proof. It must
be left open whether the vicus of Ravensbosch also belonged to Catualium and

therefore also to Xanten.

Another valuable fact that we obtain through Ib is that Catualium (which we only know from the Peutinger map (Fig. 56) as a station on the road along the left bank of the

Maas between Maastricht and Nijmegen) is indicated here as a pagus. As for the person of Tertinius, I am not aware of any document on which this name appears with the same first name Titus; we do read on a pointer to Jupiter (C.I.L. XIII 8619), coincidentally originating from the vicinity of Xanten (dated 232 AD), the name Tertinius Vitalis. Furthermore, an inscription with the name Tertinius is known from Mainz (C.I.L. XIII 7115), among others. The reading of C. V. T. as Colonia Ulpia Trajana also deserves further discussion. After all, it may be surprising that someone who holds a position in a city council would live so far away from this city (as the crow flies, the distance between Xanten and the Ravensbosch is over 100 km.). Prof. Bohn is of the opinion, although he acknowledges that there are no examples where the abbreviation C. V. T. has a different meaning than Col. Ulp. Trajana, that the possibility remains that another Colonia is meant here: e.g. a Colonia Ulpia Tungrorum.

However, this problem can perhaps also be solved by assuming that Tertinius originally lived in Xanten or in the vicinity, but that later, when he had ceased to be part of the city council there, he settled in the Ravensbosch. He would then have taken the inscriptions that had been given to him in Xanten to his new home. The name Mansuetus, which we find mentioned on II, is also difficult to place. He does appear several times in inscriptions (C.I.L. XIII, 6871, 6873) without any connection being made 2). And we do not know Macrinus any better either, although the name appears several times (Cf. Prosop. Imp. Rom. II, p. 314, 24 and Macrinus Perpetuus on C.I.L. XIII, 7281. 230 AD). Or should we perhaps recognize the ophthalmologist Macrinus here, whose ointment stamp was found in Heerlen in 1866? (C.I.L. 10021. 109).

1) SCHUMACHER, Siedelungs- u. Kulturgeschichte der Rheinlande, Bnd. II, p. 216. The area of the Civitas U. T. was inhabited by the Cugerni, the Baetasii and the Sugambri and had numerous small towns and villages situated near the Rhine and the Maas.

2) Cf. JULIUS MANSUETUS by Otto Schilling: de legionibus romanorum 1893 p. 55; Bonn. Jahrb. 83, 136 n° 37.

If we now connect the inscription III with Ib and II, then there is no doubt that the same Tertinius is mentioned here with the same titles (decurio and duumvir) that we already found mentioned on II. We cannot determine the name of the person who pays him tribute.

The oldest inscription of the four is without any doubt Ia. After all, the bronze plate on which it appears was originally intended for Vitalinius alone. Only later was the back used for the application of Ib. Since Ia was dedicated to Vitalinius, we must assume that a certain time had already passed when the Tertinius inscription was placed on it. This oldest inscription is now entirely of the same nature as the one already discussed. It is dedicated to M. Vitalinius, decurio of the Colonia Ulpia Trajana, former quaestor and duumvir. This M. Vitalinius is very well possible the same one who is mentioned on an inscription from the vicinity of Xanten (C.I.L. XIII 8621) with the cognomen Secundus and who was then beneficiarius consularis. We may assume that Vitalinius, after retiring from military service, started to play a role in the city government of the Colonia Trajana.

Finally, we must briefly discuss the question of what the small bronze tables were used for. They are usually found with dedication formulas to a deity. The Museum of the Provincial Utrecht Society 1) possesses, for example, such a plaque from the vicinity of Kleve [Dutch Kleef]. That these plaques were attached to votive offerings is certain; the formula "Votum solvit libens merito" or "dono dedit" that often occurs on them shows this. Sometimes even the wire with which the table was attached to the gift seems to have been preserved 2). We may therefore assume that our bronze plaques were attached to a gift (for example a bust) that was then placed in the atrium or the room that served for it in the villa of Ravensbosch. After all, it is in this room that two of the plaques were found, while the third came to light near the entrance hall. Undoubtedly, the use of the table aenea was much greater than we can assume on the basis of the number of copies that have come down to us. After all, the twice-used copy Ia-b already shows us that bronze was a valuable metal. And at the looting of the abandoned villas, these bronze objects will also have been the first to be taken away. As for the nature of the gifts, we may first think of statues (compare e.g. C.I.L. XIII, 5063), especially since such gifts were also given by vici and pagi to deserving dignitaries and were placed in their homes.3)

A large number of pottery fragments were also found among the rubble of this villa,

as well as numerous metal objects, a few coins, etc. The character of all these [...]

29 juli 2005 **Emperor's Head Found in Sewer**

A 1,700-year-old carved marble head of the Emperor Constantine has been found in a sewer in central Rome.

Archaeologists found the 60 cm head while clearing an ancient drainage system in the ruins of the Roman Forum.

Eugenio La Rocca, superintendent of Rome's artefacts, described the head as a rare find and said it was possible it had been used to clear a blocked sewer.

Constantine, who reigned from AD 306 to 337, is known for ending the persecution of Christians and creating the city of Constantinople from the Greek town of Byzantium.

Although most of his subjects remained pagans, he is credited with helping to establish Europe's Christian roots by proclaiming religious freedom.

The white marble head was confirmed as a portrait of Constantine by experts who compared it with coins and two other giant heads kept in Rome's Capitoline Museums.

Probably carved between AD 312 and 325, when Constantine was at the height of his power, it may have belonged to a statue of the emperor in full armour.

"Recovering a portrait of this size and in this state of conservation in the very heart of the city is really extraordinary," said Mr La Rocca.

"We have concluded that the head did not fall by accident into the passage, but was put there on purpose.

"It could have been used as a big piece of stone to divert water from the drain, or it could have been put there to symbolise the resentment of a pagan people for their Christian emperor."

The head's unceremonious insertion in the drain may have saved it from the plundering of the Forum after the fall of the Roman Empire in the fifth century.

It is expected to go on display in Rome's museums after a brief period of restoration.

1 januari 2010 Phalerae of horse harness in the votive depositions of the 2nd - 1st centuries BC in the North Pontic region and problems of their cultural background
Valentina Mordvintseva

(1) In the history of the North Pontic region a distinctive place belongs to the phalerae - silver roundels presumably of horse harness with representations of different images - anthropomorphic and zoomorphic, and ornamented with floral and geometrical decoration. They were widespread in the North Pontic steppes and neighbouring regions during the last centuries BC.

(2) First survey of such phalerae was published by A.A. Spitsyn. The aim of his work was to discuss their chronology and to define thier stylistic features. He also noted, that these phalerae belong to some culture of the turn of the era, which still is scarcely known in our antiquities".

It is due to M.I. Rostovtzeff, that the phalerae began to play a special role in the investigation of the Sarmatian Culture of the North Pontic region. He saw in those phalerae a distinctive cultural influence from the East. He suggested, that they were brought to the North Pontic Steppes with the new tribes of the Iranian origin, which came from the boundaries of Graeco-Bactria and which were known from the ancient sources as Sakoi.

As a proof to his theory Rostovtzeff point on the non-Greek character of representations on the phalerae, its polychrome (partly gilded silver), representations of a floral rosette, which he thought to be a pure Persian motive.

(3) As an analogy - even "the only close analogy" to the Pontic phalerae he takes horse trappings of the Sasanian time. He believed, that «this Persian ornaments were taken by the Sasanians from the Parthians, and by those from the Achaemenidian Persians».

He mentions also stylistic parallels to the representations on the Pontic phalerae.

(4) A deity on the phalera from Yanchokrak Rostovtzeff suggested to have closest parallels in the Graeco-Indian Art of Taxila and Hatra. With this art Rostovtzeff compares also the floral rosettes of the Pontic phalerae.

- (5) These phalerae as distinctive burial goods were taken by Rostovtzeff to show the first movement of the great Sarmatian Migration in all his main works on the history of Bosphorus and the Scythia. A new assemblage, discovered in Bulgaria – the Galice hoard – Rostovtzeff suggested as the most western find, connected with the appearance of the Sarmatians on this territory.
- 54070 The ideas of Rostovtzeff and his predecessors were developed by K.V. Trever in her book "The monuments of the Graeco-Bactrian Art". Actually, in this volume were published items mostly without clear provenance, which were kept in the Department of Eastern Antiquities of the State Hermitage. The idea of Rostovtzeff was taken in
- 54075 whole, thus, in her book Trever even has not done attempts to find analogies around the places, where some of the phalerae were found. Thus, the animals represented on the phalera found near Starobelsk in the Ukraine were declared as incarnations of the Indo-Iranian deities Indra, Mithra and so on. Afterwards many scholars noted, that some of the published articles cannot be attributed to the production of the Graeco-Bactria.
- 54080
- (6) A special research on the phalerae was made by N. Fettich (1953). He has done very accurate study of the new finds of phalerae from the territories of Hungary, Romania and Bulgaria. Also he personally investigated the phalerae from the Soviet museums – those, which survived to the time. To the analysis he took as well items from the Dacian silver hoards.
- 54085 N. Fettich pointed out the main decorative features of the discussing group of the material – graphical elements such as lines of dots, rows of triangles, zig-zag, running wave and ovoi. With this particular group he connected not all known
- 54090 phalerae, but only from the assemblages of Yanchokrak, Taganrog, Balakleja, Galiche, Scorce and Herastreu. After all he concluded, that all these objects were produced in Olbia in the second half of the 1st century BC. He believed, that it was connected somehow with the military events of the time – wars of Burebista.
- 54095
- (7) In his work N. Fettich based himself on the idea of Rostovtzeff, that the phalerae were used primarily as the ornaments of horse harness and were a sign of the Sarmatian ethnicity. Existence of brooches made in the same style in the Dacian material he explained in some cases as second use of the phalerae of harness. Olbia he believed as a centre of production, in which craftsmen made items of the Sarmatian use (phalerae) for the Sarmatians, and items of the Dacian use (brooches, bracelets, torques, chaines) – for the Dacians and Getoi.
- 54100 T. Sulimirsky in his book about the Sarmatians (1970) thought, that phalerae, which were found in the North Pontic region were made by the jewellers of Panticapeum. The appearance of the phalerae in the Pontic Steppe he connected with the arrival to the Crimea in the 2nd c. BC of the troops of the Pontic Army of Diophantus, and with the Mithridathes' Wars of the 1st half of the 1st century BC.
- 54105
- (8) In the concept of K.F. Smirnov (1984) assemblages with the phalerae were seen as signs of the Sarmatian movement from the East to the West. He supposed, that the easternmost assemblages should be dated earlier than the westernmost assemblages. Despite the work of Fettich, which he mentioned in his book, Smirnov still named all phalerae as items of the Graeco-Bactrian style. However, in some notes in his book he suggested as possible also the Bosphoran provenance of them.
- 54110
- (9) Phalerae were also a subject of my dissertation delivered in 1996 and published in 2001. There were pointed out several stylistical groups of phalerae.
- 54115
- (10) With the namely Graeco-Bactrian Style it was possible to connect a group of phalerae with distinctive compositional, stylistic, and technical features. These phalerae are slightly concave and comparatively big in size – their diameter is about 24-26 cm. Their composition is divided in three zones. In the centre one can see the main subject. It is surrounded by a classical wreath. On the border there is a row of fine ornamentation – circles, running wave. All these parts of composition are gilded. The rest of phalerae remains ungilded. This makes a kind of colour play. Such phalerae were done in pairs. A representation on the second item of the pair is done always in mirror-reflection. On the back-side they bear 3 loops, by which they were attached to the belts of a saddlery. This type of phalerae is actually characteristic to the eastern territories. Phalerae with 3 loops on the back were
- 54120
- 54125 found even in Taxila, their representations are well-known in the Iranian world. They definitely belonged to some particular horse harness, consisted of a pair of
- 54130

saddlery-phalerae and phalerae of a bridle.

Here it is worthy to note, that phalerae of the proper Graeco-Bactrian style were found eastwards of Volga. 3-loop phalerae of other stylistic group were found also in Kuban and Lower Don region, but never in the North Pontic region.

(11) Other group of the phalerae - phalerae of the Pontic Graphical Style. These are very high roundels, which are comparatively not so big in their size - diameter ca. 15 cm. Representations are made in low relief and richly ornamented with the punch-decoration. The main subject of most of the phalerae is a rosette with leaves of acanthus and lotus.

(12) Some of phalerae bear images of anthropomorphic and zoomorphic figures. The border is decorated with many rows of graphical elements - zig-zag, running wave, ovoi.

(13) Some of these elements were made with some special tools and were used only on the phalerae found in the North Pontic region. This allow one to suggest, that they were made in this region. At the same time such special details are absent on the phalerae from the hoards of Galice, Scercze and Herastreu. Differently, the graphical elements on borders a made not with the poinsons of special shapes but by a free-hand. Consequently they were made in different workshops and not in one, as Fettich believed.

(14) Subjects of the phalerae of Pontic Graphical Style also cannot be suggested as of eastern provenance, they are far from eastern motives as in the meaning, as in the composition, as in the delivering. (14) Such a motive as the floral rosette came widely in fasion from the end of the 3rd century BC, which can be shown on the example of the mould-made bowls or silver cups with similar ornamentation.

Other subjects also have a little in common with the art of the Hellenistic Bactria and Parthia.

(15) Such compositions as two pairs of animals jumped one against another are well-known as a classical subject.

(16) Human faces-masks are the motives, which rather familiar to the European monuments of the La Tène period. Some ornaments from the Starobelsk Treasure is similar to the ordinary items of Pojanesti-Lukashevka Culture.

(16a) Half-represented figures of deities and figures of riders are frequent on the silverware of the Western Pontic region.

(17) On one of the phalerae of Yanchokrak Hoard there is a creature with the shield, on which an umbon is represented. This M. Schukin connected with representations of umbons of the La Tène type.

Deity from the other phalera resembles features of the Scythian and Thracian tradition of representation - a form of the head, a headress, a composition with a bird aside, a type of the bird, ornament on the shoulders and hands.

(18) The phalerae of the Pontic Graphical Style were found only to the west of the Volga, in the North Pontic region and in the Kuban valley. Most of the Pontic Graphical Style phalerae belong to the other type of the saddlery phalerae - with 2 iron straps on the back. Some examples bear also 3 loops, and those ones are the easternmost, found on the territory of Kalmykia and in the Kuban region.

(19) The difference between the two mentioned groups of material is not confined only by their stylistical or constructional features. They differ also by their burial rite.

In the case of the phalerae of the 1st type of saddlery they were deposited in graves. In the case of phalerae of the 2nd type of saddlery - they were found mainly as votive depositions in the kurgan mounds or even in natural hills. The easternmost votive deposit is a find in the mound of kurgan 27 in Zhutovo cemetery, situated between the rivers Don and Volga.

(20) Votive depositions of the North Pontic region are not confined only by those, where phalerae were found. Much more are assemblages consisted of other objects: horse ornaments of other kind, horse bits and psalia, helmets, weapons, silver cups and so on.

- (20a) These objects are often found in a damaged condition. Such a burial rite is not known in the Volga region, which is believed as a Motherland of the Sarmatians, and on the territories eastwards of the Volga, but it is well-known in Europe, in the Cultures of the Scythians and Thracians as well.
- Thus, from the very beginning of their research phalerae were suggested to show the movement of the Iranian tribes to the North Pontic region from the boundaries of the Graeco-Bactria. However, they demonstrate a different tendency. Stylistical and typological features of the phalerae of the Pontic Graphical Style and their special burial rite are comparable with territories situated to the west of the Scythia. How one should interpret these finds of phalerae and is it worthy to connect them with the Sarmatians?
- To answer the question it is necessary to define - what we mean under the terms "Sarmatians" and "Sarmatian Culture".
- In the original texts of ancient authors of the early Hellenistic period the Sarmatia or the Sarmatians are scarcely mentioned. Those passages are very rare, short, and unclear.
- (21) From the sources dated from the 5th to the 2nd centuries BC one can see that all writers connected the names of Sauromatians, Syrmatians, and Sarmatians with the Meotida and the Tanais.
- However, we have no chance to know - are those names the different spellings of one or do they belong to different peoples. What we know more or less definitely, is that the ancient authors of later times (from about the 1st BC onwards) did not recognize the difference. About earlier sources it is difficult to judge, because of their paucity and unclearness.
- (22) In the later sources there is a bit more information about the Sarmatians. Polybius described the treaty of the Pontic states (179 BC), in which took part one Gatal - the "kinglet of the Sarmatians". Polybius did not define the territory, from which came this Gatal, but he was mentioned as an European ruler. This does not exclude the same territory mentioned before - around Meotida and Tanais.
- The most important record for the fate of the Sarmatian archaeology was a line of Diodorus (1 c. BC), that «Many years later this people (i.e. Sauromatae - V.M.) became powerful and ravaged a large part of Scythia, and destroying utterly all whom they subdued they turned most of the land into a desert» (Diodorus, Hist., II, 43, 7). This episode was the main record to suggest a massive invasion of the Sarmatians from the East. Diodorus was not a witness to this migration. He described this as an event, which happened a long time ago. To date this event - was always a task for many historians researching the Scythia and Sarmatia. But one should notice, that it is nothing in the text to suggest that the Sauromatians came from some distant land to fight Scythia. From the text it is to conclude, that the Sauromatians invaded Scythia from their own territory near the Tanais and Meotida.
- (23) In one Chersonesian decree dated to the end of the 2nd c. is written about danger from the Scythians and some other barbarians to the city of Kalos-Limen, which was also situated comparatively close to Meotida.
- At the same time the epigraphical sources of the 2nd - 1st centuries BC also speak clearly about other events.
- In the Decree in Honour of Protogenus (the last third of the 3rd c. BC - beginning of the 2nd c. BC) is described the dangerous state of Olbia, which was threatened from the West, from the Skiroi and Galatoi, usually thought as Keltoi.
- A Decree in honour of Diophantus, which describes the events in the Crimea at the end of the 2nd c. BC, mentions several barbarian tribes - the Scythians, Reuxinaloi, Tauroi.
- (24) In the dedication of Posideos of the second half of the 2nd c. BC, found at the Scythian Neapolis, are mentioned some Satarchai. The inscription is not clear because it is very damaged.
- In the second half of the 2nd c. BC Olbia was under the protection of the Scythian king Skiluros, whose name and a name of the city were struck on the Olbian coins. The inscription on a marble plat newly found at the heroon of the king Argotus - a predecessor to Skiluros, mentions his victories under the Thracians and Meotians. It is important, that the king is named as "the governor of Scythia - rich of horse pastures". The construction of the heroon is dated not earlier than as 130 BC.
- Thus, in the epigraphical and written sources records about the arrival of the Sarmatians in the North Pontic region from the East are absent. Semi-legendary data

54265 about some Sarmatia, which lays near Meotida, corresponds with the usual information about the territory of the Sauromatians, who by ancient authors were also named as Sarmatians.

54270 (25) The great migration from the East into the North Pontic region in the 3rd - 2nd centuries BC is not noticed either by the archaeological material. Alternatively, in the archaeological culture of the barbarians of the North Pontic area there are more signs, which show the connections with the Western World of the Thracians, Celts and Germans. The traces of such connections we have also observed in the epigraphical sources.

54275 Why is it, that in all works on the history and archaeology of the Sarmatians prevails a version about the occupation of Scythia in the Hellenistic period by the Sarmatian tribes from the East?

Archaeological monuments relatively late were taken as an important source to reconstruct those historical events, which are believed to be connected with the Sarmatians.

54280 (26) The investigator, who for the first time clearly shaped the concept about the Sarmatian invasion of Scythia, which now is a part of our way of thinking, was M.I. Rostowzeff. Many elements in his "Sarmatian paradigm" were stated as an extrapolation of the later records about the Sarmatians on the earlier periods of their history. As Rostowtzeff before he started to be interested in history of the North Pontic area was a historian of the Roman period, the written sources of this time gave him a stable historical portrait of the Sarmatians, features of which became the most important for Rostowtzeff in finding the material culture of the Sarmatians. The main elements of the Sarmatian concept of Rostowtzeff were the following:

54295 1. The Sarmatians were the eastern neighbours to the Scythians, they invaded Scythia and became rulers of the North Pontic region. Generally this was based on the record of Diodorus. This event Rostowtzeff dated to the transition from the 4th to the 3rd centuries BC. After that instead of Scythia appeared Sarmatia, and the Scythians were pushed to the West (Dobrudja) and to the South (the Crimea).

54300 2. The names "Sarmatians" and "Sauromatians" are not similar, according to Rostowtzeff, and mean different peoples. The Sauromatians were a Meotian tribe. Very characteristic feature of them was to have many matriarchal customs in their culture. Separating the Sauromatians from the Sarmatians he supposed, that these names were mixed by the later authors, and the earlier authors used the names properly.

3. Under the common name of Sarmatians Rostowtzeff meant different tribes of Iranian origin, who constantly invaded the Steppes of South Russia from the East. Rostowtzeff mentions two main waves of migrations - early (Saki) and late (Yüe-chi).

54305 4. The most splendid feature of the Sarmatian culture, which one could characterise as a feature of their material culture, was a special type of weapon and arms (katafrakta). It consisted of: a long heavy lance, a long sword and a dagger, an armour or a chain-armour, and a helmet (usually of conical shape). All this - according to Rostowtzeff - was different to the arms of the Scythians. This image of the Sarmatian kataphraktarii, described in the works of Ammianus Marcellinus (4th c. AD), Rostowtzeff extrapolates on the earlier Sarmatians.

54310 5. He constantly underlines the close similarity of the Sarmatians with the Parthians, an impression he also took from the ancient sources. This connection consisted in the special features of the Sarmatian art, which was brought with them into South Russia (polychrome, animal style), in their religion (Fire-worship), in their patriarchal way of life, and in the military organisation of their society. To correspond to this image of the Sarmatians Rostowtzeff was looking for monuments of material culture, which would be situated eastwards of Scythia, dated to the end of the 4th - beginning of the 3rd c. BC, and exhibiting the above-mentioned features, which could point on their Iranian origin.

54320 (27) Such material monuments became the Prokhorovka kurgans (Orenburg group, after Rostowtzeff). Their discovery coincided with Rostowtzeff's visit to his parents in Orenburg in 1915. In kurgan 1 were found an iron armour, a long sword, polychrome jewels, items of Animal Style, and Achaemenidian bowls - i.e. direct Iranian imports, which gave Rostowtzeff an argument to suggest these monuments as belonging to the Sarmatians - the new Iranian comers from the East. But by those Sarmatians he did not mean the local population. The Sarmatians - as well as the Scythians, Rostowtzeff imagined as a group of tribes of Iranian origin, who were a minority of the population and ruled the majority of the local people. They were mounted warriors,

54330 who came to rule the Steppes of the South Russia from the East.

(28) After his opinion even in the 4th century BC the whole Steppe eastwards of the Don was in hands of these newcomers.

54335 Rostowtzeff suggested that the kurgans near Elizavetovskaya stanitsa on the Don were very close in the material culture to that of the Orenburg group. The third close assemblages he located in the Kuban region and Taman peninsula (Stavropol Treasure, Buerova Mogila, kurgans near stanitsa Beslennenskaya and Kurdzhipskaya). Thus, approximately on the base of ten or so assemblages was formed an idea about the main directions of connections to demonstrate the movement of the Sarmatian tribes

54340 from the East to the West: Orenburg group (East, the Sarmatians themselves) - Elisavetovskaya group (possible Syrmatae/Sarmatae) - Kuban group.

To show this movement of people from the East to the West by the archaeological material were drawn the phalerae of horse harness,

54345 (29) and a group of polychrome brooches found in the Kuban region. Now its Bosporan provenance is shown in works of M. Treister.

(30) The second wave of migrants - Yüe-chi - brought the new Animal Style. This event Rostowtzeff dated from the 1st c. BC to the 1st c. AD.

54350 Before 1917 Rostowtzeff has worked out his notion of the Sarmatian Culture, which later changed only in details. He created a clear historical idea of the Sarmatian Culture, he pointed out the main historical stages of this Culture and connected the historical name "Sarmatians" with the monuments of material culture.

54355 However, the concept of Rostowtzeff had its weak sides depended mostly on the lack of archaeological material for proper analysis. In fact the culture of the early Sarmatians was defined on the base of one kurgan mound (Prokhorovka No. 1), which was actually not excavated fully. And the animal style of the Sarmatians he characterised only on the base of finds from the kurgan "Khokhlach" and the Majkop-belt, which was a fake, also introducing some objects from the Siberian collection of the Peter the

54360 Great to the analysts.

In 20-s of the 20th century the chronological phases of the "Sarmatian stage" on the base of new excavations in the Volga-Ural region were worked out. The authority of the Rostowtzeff's theory about the Sarmatian character of the Orenburg kurgans was quite strong and this idea was taken as an axiom in future studies.

54365 (31) The creator of the periodisation of the Sarmatian Culture, which is still alive, was Paul Rau. Rau was a local German - a citizen of the newly organized Republik of Germans of the Volga region, who was really enthusiastic to collect all sources about the ancient history of his region and to save them for the new generations. He tried

54370 to show the development of his region in the context of surrounding territories of South Russia and Siberia. In this way the Volga-Ural region became for him a centre, a sort of standard measure in this comparison with other regions.

In his early works P. Rau made an analysis of the archaeological material - scrupulous and based on new methods (for example, with correlation tables). In his

54375 last book about Scythian arrow-heads he has proposed briefly a historical concept of the Sarmatian Culture.

The statements of the Rau concept, which became a part of the modern "Sarmatian Paradigma" are the following:

54380 1. The Volga and Ural steppes were the Motherland of the Sarmatians, the culture of whom spread from this territory westwards (North Pontic region) and south-eastwards (Middle Asia, Siberia).

2. The Sauromatian (6th - 4th BC) and the Sarmatian (3rd BC - 3rd AD) cultures are connected by their origin.

54385 After the features of burial rite P. Rau pointed out 4 stages of the common Sauromato-Sarmatian Culture. Thus, he constructed its relative chronology. Rau took the orientation and type of a grave's form to the main cultural features. With the Sauromatian stage he connected the Culture of «Ostwestgräber», and with the Sarmatian - the Culture of «Meridionalgräber».

54390 (32) It was K.F. Smirnov, who has developed and expanded the main ideas of P. Rau. Under his direction were made the wide-scale excavations in the South Ural and Volga districts. In the 1960-s the number of archaeological monuments of the Sarmatian Culture was counted in hundreds.

54395 In works of Smirnov the Volga-Ural region is seen as a centre of origin of the Sauromato-Sarmatian Culture in general. This culture - as in works of Rau - is shown

as a definite measure to compare with the barbarian cultures from other territories. Thus, Smirnov underlines the connection of the Sarmatian Culture with cultures of the Late Bronze Age to show the autochthon origin of the Sarmatian population of the Volga-Ural region.

(33) Thus, since the 3rd c. BC the Sarmatian tribes slowly moved to the West. As we have seen earlier, to show this slow movement were sets of phalerae, found as votive depositions. A lack of monuments of the Volga type in the North Pontic region was explained by the low degree of investigation in this area.

Very important for the creating of the "Sarmatian Paradigma" was also the placing of the tribes known from the written sources (Aorsi, Siraki, Alanae) on the archaeological map. The name Upper Aorsi was in fact created to call the Aorsi, who, according to Strabo, lived above the Aorsi themselves. These tribes became to be seen as confederations of tribes. This archaeological map was connected with the chronological scheme showing the stages of the Sarmatian Culture. Thus, in this periodisation the ethnical aspect became a matter of the main importance.

After the works of Smirnov the "Sarmatian Paradigma" was not remarkably changed, but it developed in some its parts.

In the following works of sarmatologists the chronological periods of the Sarmatian Culture became periods of the domination of some nomadic groups - the Sauromatae, the Aorsi, the Alanae. Dating of the appearance of some definite tribe on the historical scene began to influence the dating of the archaeological assemblages, intuitively connected with the historical events.

(34) To make a conclusion about the development of the "Sarmatian Paradigma" it is necessary to note, that initially the material culture of the Sarmatians was closely connected with the image of the Sarmatians, which came from the works of Roman historians. This connection was so strong, that it pressed other sources - epigraphical and archaeological, which - despite they were called the most objective to the ancient history - still are just passive illustrations to the historical concepts.

The main difficulties arise with the identification of the Sarmatians in the North Pontic region. The archaeological picture does not correlate with the picture painted by the historians. The Sarmatian attack - if we have in mind the monuments of the Volga area) in the 3rd - 1st centuries BC is not visible.

After my point of view, there is no ground to suggest the Volga-Ural region as the centre and Motherland of the Sarmatians of the historical sources. The movement of some people from the Volga basin to the North Pontic region in the 2nd c. BC is no more than a speculation based on the doubtful interpretation of the fragmentary and dubious written sources.

A distant eastern influence, which is definitely clear in the material culture in valleys of the Volga, the lower Don and the Kuban from the second half of the 2nd c. BC, is not seen in the North Pontic area.

Who were the people in this case, who left those votive depositions with silver phalerae? This question can not be decided easily. At any rate they were not the Sakoi, who came from the boundaries of Graeco-Bactria and whom Rostovtzeff suggested as the first Sarmatians, and they were not the barbarian tribes of the Lower Volga and Ural region, whom suggested as the Sarmatians Smirnov.

More likely seems to compare the monuments of the North Pontic region with the western Pontic territories. This could be seen as in the artistic tradition, as in the rite of votive depositions.

29 april 2016 **Massive 600 kg haul of ancient Roman coins unearthed in Spain**

Construction workers have found 600kg of ancient Roman coins while carrying out routine work on water pipes in southern Spain, local officials have said.

"It is a unique collection and there are very few similar cases," Ana Navarro, head of Seville's archeology museum, which is looking after the find, told a news conference.

Dating back to the late third and early fourth centuries, the bronze coins were found on Wednesday inside 19 Roman amphoras, a type of jar, in the town of Tomares near Seville.

Navarro declined to give a precise estimate for the value of the haul, saying only that the coins were worth "certainly several million euros".

The coins are stamped with the inscriptions of emperors Maximian and Constantine, and they appeared not to have been in circulation as they show little evidence of wear and tear.

It is thought they were intended to pay the army or civil servants.

"The majority were newly minted and some of them probably were bathed in silver, not just bronze," said Navarro.

54465 "I could not give you an economic value, because the value they really have is historical and you can't calculate that."

Local officials have suspended the work on the water pipes and plan to carry out an archaeological excavation on the site.

54470 The Romans conquered the Iberian Peninsula in 218 BC, ruling until the early fifth century, when they were ousted by the Visigoths.

15 november 2016 Minerva and Medusa

Olim Medusa, puella pulchra, in terra obscura habitabat ubi neque sol neque luna apparebat. Terra obscura puellae grata non erat. Medusa igitur Minervam adoravit.

54475 "Dea sapientiae, audi me," puella misera oravit. "Juva me! Terra obscura, ubi habito, mihi grata non est. Pulchra sum; pulchram comam atque faciem pulchram habeo. Nemo autem in terra obscura me videre potest. Desidero in terra clara habitare."

Dea autem Medusam juvare recusavit. Tum puella irata Minervae dixit, "Invidiosa es quod tam pulchra sum! Populum me videre non desideras!"

54480 Tum dea irata pulchram comam puellae mutavit.

"Tu fuisti superba propter comam pulchram atque faciem pulchram. Ego comam tuam in serpentes mutavi," dea dixit irata. "Non jam tua coma erit pulchra. Tua facies erit pulchra, sed nemo te spectare poterit. In saxa tua facies viros mutabit."

54485 Minerva and Medusa (Translation)

Once upon a time Medusa, a beautiful girl, was living on dark land where neither the sun nor the moon appeared. The dark land was not pleasing to the girl. Therefore Medusa adored Minerva.

54490 "Goddess of wisdom, hear me," the miserable girl begged. "Help me! The dark land, in which I have lived, is not pleasing to me. I am beautiful; I have beautiful hair and a beautiful face. No one however is able to see me on the dark land. I want to live on bright land."

However the goddess refused to help Medusa. Then the angry girl said to Minerva, "You are jealous because I am so pretty! The people do not want you to see me!"

54495 Then the angry goddess changed the beautiful hair of the girl.

"You were arrogant because of beautiful hair and a beautiful face. I changed your hair into serpents," said the angry goddess. Your hair will no longer be beautiful. You will be made beautiful, but no one will be able to see you. You will make men change into stone."

54500

Commentary

Throughout this passage, the genitive case is used quite often. For example, the genitive of description is shown in the phrase, "dea sapientiae" meaning the goddess of wisdom. In addition, the imperative is utilized as well when Medusa addressed Minerva. This is an instance where the imperative is present: "Juva me!" Starting from line five to line six, a form of repetition - parallel structure is shown by the recurrence of the adjective "pulchra" and the accusative case. This line proves to be significant because of the way Medusa praises her own beauty, causing Minerva to become irritated.

54510

25 oktober 2016 **In Troje offert Alexander aan Minerva, zoals we kunnen lezen bij Plutarchus:**

Τοιαύτῃ μὲν οὖν ὁρμῇ καὶ παρασκευῇ διανοίας τὸν Ἑλλησποντιον διεπέρασεν. ἀναβὰς δ' εἰς Ἴλιον, ἔθυσσε τῇ Ἀθηνᾷ καὶ τοῖς ἥρωσιν ἔσπεισε. τὴν δ' Ἀχιλλέως στήλην ἀλειψάμενος λίπα, καὶ μετὰ τῶν ἐταίρων συναναδραμῶν γυμνὸς ὥσπερ ἔθος ἐστίν, ἐστεφάνωσε, μακαρίσας αὐτὸν ὅτι καὶ ζῶν φίλου πιστοῦ καὶ τελευτήσας μεγάλου κήρυκος ἔτυχεν. ἐν δὲ τῷ περιῦναι καὶ θεᾶσθαι τὰ κατὰ τὴν πόλιν ἐρομένου τινὸς αὐτόν, εἰ βούλεται τὴν Ἀλεξάνδρου λύραν ἰδεῖν, ἐλάχιστα φροντίζειν ἐκείνης ἐφη, τὴν δ' Ἀχιλλέως ζητεῖν, ἥ τὰ κλέα καὶ τὰς πράξεις ὕμνει τῶν ἀγαθῶν ἀνδρῶν ἐκείνος.

54520 With such vigorous resolutions, and his mind thus disposed, he passed the Hellespont, and at Troy sacrificed to Minerva, and honoured the memory of the heroes who were buried there, with solemn libations; especially Achilles, whose gravestone he anointed, and with his friends, as the ancient custom is, ran naked about his sepulchre, and crowned it with garlands, declaring how happy he esteemed him, in

54525 having while he lived so faithful a friend, and when he was dead, so famous a poet to proclaim his actions. While he was viewing the rest of the antiquities and curiosities of the place, being told he might see Paris's harp, if he pleased, he said he thought it not worth looking on, but he should be glad to see that of

Achilles, to which he used to sing the glories and great actions of brave men.

54530

ON THE DEATH OF THE EMPRESS FAUSTA

By DAVID WOODS

54535 Fausta, or Flavia Maxima Fausta to call her by her full name, was the daughter of one western emperor, Maximianus Herculus (286-305), the sister of another, Maxentius (306-312), and the wife of a third, Constantine I (306-337).¹ She was married to Constantine in 307, and bore him at least five children from 316 onwards, three sons (Constantine, Constantius, and Constans), and two daughters (Constantina and
54540 Helena).² Following his defeat of his rival Licinius at the battle of Chrysopolis in 324, and the unification of the empire under his rule as the sole Augustus once more, Constantine honoured with the title of Augusta both his wife Fausta and his mother Helena, as is revealed by the issue of coins in their names each with this title.³ However, tragedy struck in 326 when Constantine appears to have executed first his
54545 eldest son Crispus, then Fausta herself. The reason for these executions, and the extent to which these deaths were related, has attracted a great deal of debate. Yet more remains to be said about the manner in which Fausta died, which may well provide an important clue as to the full circumstances of her death, whether she was executed, died by accident, or committed suicide even. Thus, it is my intention here,
54550 firstly, to offer a new explanation for the manner of her death, and secondly, to draw attention to an overlooked allusion to her death in a late Latin source, the Historia Augusta.

I. How did Fausta die?

54555 Let us begin with a brief catalogue of the more important sources for the deaths of Crispus and Fausta, that is, those sources which do not simply note the occurrence of these executions, but seek to provide some detail also concerning their full circumstances:⁴

54560 (i) The anonymous author of the Latin Epitome de Caesaribus, composed c.396, wrote as follows (Epit. 41.11-12):⁵

But when Constantine had obtained control of the whole Roman Empire by means of his wondrous success in battle, he ordered his son Crispus to be put to death, at the suggestion of his wife Fausta, so they say. Then he killed his wife Fausta by hurling her into boiling baths (in balneas ardentis coniectam), when his mother Helena
54565 rebuked him with excessive grief for her grandson.

(ii) According to the surviving epitome of his work by the 9th-century scholar Photius of Constantinople, the Arian ecclesiastical historian Philostorgius, who wrote circa 425, claimed that (HE 2.4):⁶

54570 ... Constantine was induced by the fraudulent artifices of his step-mother to put his son Crispus to death; and afterwards, upon detecting her in the act of adultery with one of his cursors, ordered the former to be suffocated in a hot bath (τη του λουτρου αλέα αναποπνιγναι).⁷

(iii) Sidonius Apollinaris, bishop of Arvernus in Gaul c.471-87, wrote to a friend in praise of his poetry, stating that (Epist. 5.8.2):⁸

54575 ... no greater power of satiric suggestion was shown by consul Ablabius when in a couple of verses he stabbed at the life and family of Constantine and put his tooth into them with this distich posted up secretly on the door of the palace:

Who would now want the golden age of Saturn?

Ours is a diamond age - of Nero's pattern.

54580 He wrote this, of course, because the aforesaid Augustus had almost simultaneously got rid of his wife Fausta with a hot bath (calore balnei) and his son Crispus with cold poison.⁹

54585 (iv) A pagan historian of the early 6th-century, Zosimus, probably working at Constantinople, did little more than abbreviate the work of a late 4th-century pagan historian, Eunapius, and reported that (HN 2.29.2):¹⁰

Without any consideration for natural law he [Constantine] killed his son, Crispus, who, as I have related before, had been considered worthy of the rank of Caesar, on suspicion of having had intercourse with his stepmother, Fausta. And when Constantine's mother, Helena, was saddened by this atrocity and was inconsolable at
54590 the young man's death, Constantine as if to comfort her, applied a remedy worse than the disease: he ordered a bath to be over-heated (βαλανειον γαρ υπερ το μέτρον έκπυρωθηναι) and shut Fausta up in it until she was dead.¹¹

54595 (v) The Passion of Artemius, a largely fictitious account of the trial under the emperor Julian of the general (dux) Artemius, which depends for much of its historical information on the work of Philostorgius above, and was probably written

in the 8th century by the theologian John of Damascus, attributes to Artemius a speech which includes the following (Art. Pass 45):¹² Constantine did kill his wife Fausta – and rightly so, since she had imitated Phaedra of old, and accused his son Crispus of being in love with her and assaulting her by force, just as Phaedra accused Theseus' son Hippolytus. And so according to the laws of nature, as a father he punished his son. But later he learnt the truth and killed her as well, exacting the most righteous penalty against her.

(vi) Writing in the 12th-century, although with access to early 4th-century sources, the Greek historian Zonaras claimed (Epit. 13.2.38–41):¹³

His [Crispus'] stepmother Fausta was madly in love with him but did not easily get him to go along. She then announced to his father that he [Crispus] loved her and had often attempted to do violence to her. Therefore, Crispus was condemned to death by his father, who believed his wife. But when the emperor later recognized the truth he punished his wife too because of her licentiousness and the death of his son. Fausta was placed in an overheated bath (εἰσαχθεῖσα γὰρ ἐν λουτρῷ ... σφοδρῶς ἐκκαυθέντι) and there found a violent end of her life.¹⁴

So what do modern commentators make of these unsavoury allegations? Obviously something terrible happened. Not only were Crispus and Fausta executed, but their memory was also condemned (*damnatio memoriae*). Their names were erased from public inscriptions, and the literary record was similarly affected.¹⁵ Eusebius of Caesarea, for example, revised later copies of his Ecclesiastical History in order to omit earlier material in praise of Crispus, and his Life of Constantine which he composed c.338 makes no mention whatsoever of either Crispus or Fausta.¹⁶ Yet there has been marked reluctance in recent times to accept the allegations of a sexual scandal, that Crispus and Fausta had become embroiled in an intimate relationship for which they both paid with their lives.¹⁷ Hence P. Guthrie, for example, has argued that the execution of Crispus was a dynastic murder by Constantine in order to remove his eldest and illegitimate son from the succession in favour of his three legitimate sons by Fausta.¹⁸ This has been ably refuted by H. A. Pohlsander who, among his other arguments, pointed out that the appointment of Crispus to the rank of Caesar in 317 had already proved his eligibility for the rank of Augustus, and that Constantine was unlikely to regard illegitimacy as a bar to succession, being illegitimate himself also.¹⁹

Yet argument and counter-argument both suffer serious flaws, the former more so, in that it is not at all clear that Crispus and Constantine were actually illegitimate. Many scholars now deny this.²⁰ More importantly, this theory does not explain why Constantine had Fausta executed also, nor the unusual manner of her death. In brief, it pays too little attention to what the sources themselves actually say in this matter.

Another theory has some merit in that it does at least accept that there was a real connection between the deaths of Crispus and Fausta. According to N. J. E. Austin, Crispus had his future predicted, and Fausta reported this to Constantine as a conspiracy against his rule.²¹ He executed Crispus immediately, but soon repented of his haste when he discovered that there was little basis to her allegation. Consequently, he held her responsible for Crispus' death, and executed her also. Again, this explanation of events pays too little attention to the testimony of the sources themselves. It ignores the allegations of adultery, nor does it sufficiently explain the unusual manner of Fausta's death. Furthermore, as J. W. Drijvers notes, it does not explain why the condemnation of Crispus' memory was not reversed when it emerged that he was innocent.²² If Fausta had been killed because her charge against Crispus was discovered to be false, then his memory ought to have been restored and commemorated accordingly. But this did not happen.

The reasons why some scholars have been so reluctant to accept the allegation of a sexual relationship between Crispus and Fausta vary somewhat. T. D. Barnes, for example, excluded the possibility of a sexual relationship between them on the basis that 'Crispus normally resided at Trier, far from his stepmother, who lived at his father's court'.²³ Hence his claim that 'Fausta or her agents (my emphasis) must have played a large role in securing Crispus' condemnation', playing down the possibility of any physical contact between the two. Alternatively, others have been deterred by the similarity of the alleged relationship between Fausta and Crispus to that between Phaedra and Hippolytus, as if the story of their relationship was an invention simply with this myth as its model.²⁴ Others again have been influenced more by the apparent origin of this allegation than by the nature of the allegation itself. For it is possible that all the surviving sources in this matter depend upon a single original source only, a pagan source which was implacably opposed to Constantine because of

his rejection of Rome's traditional cults and his espousal of Christianity. The fact that Zosimus explicitly links the murders of Crispus and Fausta to Constantine's conversion to Christianity serves to fuel this scepticism. According to Zosimus (HN 2.29.3-5), when the full impact of his deeds had dawned upon him, Constantine had approached the pagan priests and sought purification for his sins. When these told him that no purification was possible for these sins, an Egyptian from Spain, normally identified as bishop Ossius of Cordova, informed him to the contrary, that Christ would forgive all sins.²⁵ Hence Constantine became a Christian. The polemical nature of this story, and the tradition which it represents, is such that Drijvers has rejected it in entirety, claiming that 'only one option is left and that is to conclude that Constantine's motives for killing his son and wife will always remain unknown, in spite of the many ingenious suppositions of historians'.²⁶ Yet while one does not doubt that pagan historians hostile to Constantine rejoiced to recount his cruel execution of Crispus and Fausta, it does not necessarily follow that one of their number must have invented the story of their adultery also. The silence of the earliest Christian authors on this topic is sufficient guarantee that a serious scandal really did lie behind their deaths. Pagan tradition simply preserved that which most Christians were all too eager to forget, and eventually set it to serve a new polemical purpose. So why was Fausta killed in the unusual manner alleged? All the surviving sources who care to comment on the exact manner of her death, Greek and Latin, pagan or Christian, seem to agree on its location, in a bath or bathroom, even if they do not agree upon, or care to mention even, the nature of her offence. There is strong agreement also that it was the heat of the bath or bathroom which was the immediate cause of her death. However, it remains unclear whether Fausta suffocated to death in the steam, or was scalded to death by the water itself. Of our ancient sources, only Philostorgius, or his epitomator rather, favours death by suffocation, and the rest remain sufficiently vague to allow of either possibility. The problem is that the terms used to describe the exact location of Fausta at her death (balneum, *βλανεϊον*, *λουτρον*) can all refer either to the bath itself or to the room within which this bath was situated. Unless the verb used in association with these terms is itself specific, that she suffocated, drowned or was burned to death, we must remain in the dark as to the exact manner of her death. Yet while Philostorgius is quite clear that Fausta suffocated to death, it is important to remember that his original account has not itself survived, but only an epitome of the same by Photius. There must be some doubt, therefore, whether Philostorgius himself actually stated that Fausta suffocated, or Photius just assumed this upon reading Philostorgius' description of the cause of death, the heat of her bath or bathroom. It is no surprise, therefore, that modern commentators seem unable to agree on the exact manner of her death either. Drowning, suffocation by steam, and burning or scalding to death, have all had their advocates.²⁷ One scholar considers Fausta's confinement to an overheated bath (or bathroom) as an ordeal to find out whether she had committed adultery with Crispus.²⁸ It was a means of interrogation first, then execution. Yet this treatment seems no less extraordinary whether one considers it a form of interrogation by torture only, or a deliberate method of execution. A number of different forms of capital punishment were practised during the 4th century. These included beheading, burning at the stake, and dismemberment, as well as more inventive punishments such as suffocation over a slow fire, or the pouring of molten lead down the victim's throat.²⁹ However, no other case is known where the victim was sentenced to death in a bath. Indeed, there are no known instances of the application of the death penalty for adultery under Constantine, other than in the case of Crispus and Fausta, and although adulterers were often punished with death during later reigns, beheading seems to have been the favoured punishment.³⁰ Hence the suggestion that Fausta committed suicide, even if it was 'suicide under compulsion', has some merit, and the unusual manner of her death may well have been suggested to her in order to emphasize its 'voluntary' nature.³¹ One notes, for example, that during the investigation of various sexual crimes at Rome circa 368, a certain Hesychia suffocated herself on her feather bed rather than face interrogation.³² This is reminiscent of the claim that Fausta suffocated to death also, although it may be that Hesychia's choice was dictated more by the absence of other means rather than a preference for suffocation itself. A third possibility is that Fausta died by accident instead. In his ecclesiastical history Theodoret, bishop of Cyrrhus 423-466, tells of a number of encounters which took place at Antioch between the Syrian monk Aphraates and the emperor Valens (364-378), or members of his staff, including the following cautionary tale (HE 4.23):

One of the grooms of the imperial bedchamber, who threatened the godly man [Aphraates] somewhat more violently, met with the following fate. He was entrusted

with the charge of the bath, and immediately after this conversation he came down to get it ready for the emperor. On entering he lost his wits, stepped into the boiling water before it was mixed with the cold, and so met his end. The emperor sat waiting for him to announce that the bath was ready for him to enter, and after a considerable time had gone by he sent other officers to report the cause of the delay. After they had gone in and looked all about the room they discovered the chamberlain slain by the heat, and lying dead in the boiling water.³³

While this tale serves to illustrate that fatal accidents were possible when preparing a hot bath, it also shows that these were far more likely to happen to their servants than to the members of the imperial family themselves. It seems unlikely, therefore, that Fausta would have died in such a manner. One should remember at this point, though, that baths often served purposes other than those of hygiene or pleasure, being regarded as beneficial for a variety of ailments also.³⁴ It is said, for example, that Constantine visited the hot baths shortly before his own illness and death.³⁵ So was Fausta sick when she took to her hot bath, with the result that it was her illness rather than the heat which overcame her? Perhaps. Yet a darker possibility suggests itself also in so far as hot baths feature prominently among the advice which was often given to women on how to induce abortion. The 2nd-century physician Soranus, who studied at Alexandria in Egypt but practised at Rome itself, has left us a valuable work whose title sufficiently explains its contents, his *Gynaecology*.³⁶ Soranus was one of the most highly reputed of ancient medical authorities, and enjoyed great popularity in the West during late antiquity, particularly in North Africa. He continued to be consulted into the 16th century even. In his *Gynaecology* Soranus discusses various methods of contraception and abortion at some length, but sums up his basic theory thus (*Gyn.* 1.61):

For such of these things [drugs] as are styptic, clogging, and cooling cause the orifice of the uterus to shut before the time of coitus and do not let the seed pass into its fundus. Such, however, as are hot and irritating, not only do not allow the seed of the man to remain in the cavity of the uterus, but draw forth as well another fluid from it.³⁷

Cold causes the mouth of the uterus to shut, assisting thereby at contraception, but heat causes the uterus to evacuate its contents, assisting thereby at abortion. It is for this reason that baths, which are understood to be hot baths, although not too hot, feature so prominently in his advice on how to induce abortion. The patient is advised (*Gyn.* 1.64):?

She should use diuretic concoctions ... bathing daily in sweet water which is not too hot, lingering in the baths and drinking first a little wine and living on pungent food. If this is without effect, one must also treat locally by having her sit in a bath of a decoction of linseed, fenugreek, mallow, marsh-mallow, and wormwood. The advice continues a little later (*Gyn.* 1.65):

For a woman who intends to have an abortion, it is necessary for two or three days beforehand to take protracted baths, little food and to use softening vaginal suppositories; ... But if a woman reacts unfavourably to venesection and is languid, one must first relax the parts by means of sitz-baths, full baths, softening vaginal suppositories ... And she who intends to apply these things should be bathed beforehand or made to relax by sitz-baths; and if after some time she brings forth nothing, she should again be relaxed by sitz-baths and for the second time a suppository should be applied.

It seems possible, therefore, that Fausta took to her hot bath as part of an attempt to induce an abortion. Yet abortion was often fatal. Obviously so for the unborn child, but often for the mother also, even in the best of circumstances. It is reported, for example, that the emperor Domitian (81-96) seduced his niece Julia, and was the cause of her death, therefore, when he forced her to have an abortion.³⁸ Julia should have been able to afford the best medical advice of her day, but death still occurred. Indeed, it was the absence of effective contraception, combined with the dangers of abortion, that led to the widespread practice by which unwanted children were simply abandoned, either to die or to be rescued by strangers.³⁹ Many of the church fathers regarded abortion as attempted suicide even.⁴⁰ In this case, however, it was unthinkable that Fausta should continue her pregnancy and abandon her child, as there was always the possibility that he or she would one day return and lay claim to the throne. Dynastic considerations required that Fausta should have an abortion, despite the risk to her person which this inevitably entailed. Hence this interpretation of events, that Fausta died during an attempted abortion, merits serious consideration because it explains not only the unusual manner of Fausta's death, in a hot bath, but the very fact of her death also. More importantly, though, it is in perfect accord with the claims that Fausta had had a sexual relationship

54795 with Crispus, whether willingly or not. There seems a strong possibility that an unwanted pregnancy would have resulted from such a relationship. For Fausta was perfectly healthy in this regard, having given birth to at least five children in the ten years before her death, and ancient forms of contraception were not particularly reliable. As for Crispus, we know that he was fertile also, because his wife Helena had given birth in 322, and may have been expecting again in 324 also.⁴¹ It is my argument, therefore, that Fausta was pregnant by Crispus, and died in her bath when an attempt to induce abortion went fatally wrong.

54800 So how does this change our understanding of all that went before Fausta's death? Constantine cannot be held directly responsible for her death in so far as he did not order her execution as such. However, the very sequence of events, the death of Crispus followed by that of Fausta, suggests that Constantine had discovered what had happened between Crispus and Fausta, or what was alleged to have happened, and that he had forced her to have an abortion rather than that she had undergone it willingly in an attempt to destroy the evidence of her guilt. Concealment, or further deceit, was no longer possible by the time that she died. This explanation contributes towards the solution of another problem also. How did Constantine learn of the alleged adultery between Crispus and Fausta? Sidonius Apollinaris seems to claim that Ablabius had played a role in revealing his wife's adultery to Constantine, but this only sets the question a stage further back in time. How did Ablabius himself learn of this adultery? One assumes, if Crispus and Fausta really did have an affair, that they were as discreet as possible and took every measure to conceal their relationship. However, the situation would have become much more difficult once Fausta became pregnant, particularly if she was unwilling to undergo a life-threatening abortion. It seems probable, therefore, that it was her pregnancy which brought Fausta's adultery into the open. There came a time when her physical condition gave rise to rumours among her private staff, these reached Ablabius, and he reported them to Constantine.

54810 This assumes, of course, that it was obvious to those involved that Constantine could not have been responsible if Fausta really were pregnant, that is, that he must have been away from Fausta long enough for all to realize that this could not be so. However, our sources are quite clear that something did happen between Crispus and Fausta, whether an affair or the rape of Fausta by Crispus, such as would not have happened, presumably, had Constantine been at hand. So the present interpretation requires little more than our sources themselves demand. Constantine was away from Fausta for several months, at the end of which time rumours were circulating that she and Crispus were having an affair, rumours which had originated with the suspicions in some quarters that she may have been pregnant. Constantine was informed, and questioned Fausta upon his return. She confessed that she was indeed pregnant, but claimed, truthfully perhaps, that Crispus had forced himself upon her. Hence Constantine had Crispus punished, following which he forced Fausta to proceed with an abortion, in the course of which she died.

54835 Strictly speaking, therefore, Fausta died by accident, and Constantine can be absolved of guilt in this matter in so far as he had not intended her death. Yet as far as Christian teaching was concerned, this made little difference. From a Christian point of view, he remained responsible not only for her death, but for the death of her unborn child also.⁴² Hence Constantine had no choice but to conceal as best he could the real circumstances of her death, assuming, that is, that he wished to minimize the damage to his reputation as a Christian leader. There was also his personal pride to be taken into account. He hardly wanted to confirm to all and sundry that he had been made a cuckold, and this by his own son. If the fact that Fausta had died during an attempted abortion had escaped, pagan tradition would have rejoiced to recount this extra piece of scandal, if for no other reason than that it would seem to confirm the rumour that Fausta had been engaged in an illicit relationship. However, this does not seem to have happened. Constantine managed, with commendable efficiency, to keep a lid on the worst aspects of this affair. How did he do this? Enter Helena. What was her role in these events? Clearly, she must have done something suspicious at this time for the tradition to grow that she was responsible for Fausta's death. One suspects, though, that it was Constantine who sought her out and asked her to help deal with Fausta, rather than that she had sought him out in order to complain about Fausta. Doubtless there was hostility between Fausta and Helena, exactly as our sources allege, but it is possible that this was due more to Helena's role as Constantine's agent, and her attempts to persuade Fausta to proceed with an abortion, than any other reason. It is my argument, therefore, that the surviving tradition concerning Helena's role in Fausta's death depends more on external observation of the comings and goings at the palace rather than any genuine

54860 inside knowledge of the cause of all this activity. It was noted, perhaps, that
Constantine had some unusual private meetings with his mother, and that she herself
was greatly distressed. It was noted also that the two imperial ladies had become
openly hostile towards each other. Then Fausta died in unusual circumstances, and no
official explanation was forthcoming.

54865 Two and two were added to make five, and Helena was blamed for Fausta's death. In
reality, though, she was no more than Constantine's confidential agent, chosen first
to persuade Fausta to have an abortion, and then to act as her assistant during the
fatal procedure itself.⁴³ It was in this manner, therefore, that Constantine sought
to minimize public knowledge of this whole sordid affair, by entrusting his mother
54870 with the more sensitive roles.⁴⁴ It is little wonder that she felt the need to go on
pilgrimage to the Holy Land shortly thereafter, probably in autumn 326.⁴⁵
It is appropriate at this point to comment in brief upon the death of Crispus also,
concerning which two facts alone emerge, the location and means of the same. Writing
c.391, the pagan historian Ammianus Marcellinus (14.11.20) let slip that Crispus was
54875 put to death at Pola on the Istrian peninsula. This is an important piece of
information. For Pola was such an out-of-the-way place that Crispus must have had a
particular reason to be there. It is generally accepted that Fausta died at Rome
itself, and often held that Crispus normally resided at Trier in Germany.⁴⁶ So how
did he end up at Pola? It must itself have been his final destination, or the final
54880 stop on his journey to another location nearby, to one of the offshore islands
perhaps. He could not have arrived there accidentally while on a journey from one
imperial capital to another.⁴⁷ Nor was this an important military zone such as might
well have required his presence otherwise. Hence the best explanation for his
presence at such a remote location is that he had been exiled there, or that he was
54885 on his way to exile on one of the nearby islands.⁴⁸ So what sort of crimes merited
such punishment? One notes that Constantine sentenced a senator, Ceionius Rufius
Albinus, to exile on a charge of adultery at about this time also.⁴⁹ Whether this is
relevant to Crispus' own fate remains unclear, but it is important to note that
Constantine considered exile an appropriate punishment for adultery, at least as far
54890 as the highest social classes were concerned. Hence the location of Crispus at his
death, in a region to whose islands exiles were often sent, lends some support to the
tradition that he had been convicted of adultery, and exiled as a result.
Let us turn next to the means of his death. Sidonius Apollinaris alone records that
he died of poison, and in so far as no other source contradicts him in this, and his
54895 claim concerning Fausta's death, that she died in a hot bath, is supported by several
other sources also, there is no cause to doubt his testimony here. Crispus was
poisoned. This is important in that poison was not an official means of execution,
which points to suicide by Crispus.⁵⁰ Crispus, it would seem, killed himself, in
despair perhaps, or in order to pre-empt the execution which he feared was his
54900 destined lot, whether immediately at the end of his journey or at some later point in
time. Important exiles were at the mercy always of those factions at court which
feared the return to influence of their enemies once more, and sought, therefore, to
achieve their more permanent end. The elder Licinius had been exiled to Thessalonica
following his defeat in 324, but Constantine had him killed shortly thereafter,
54905 despite an oath to preserve his life.⁵¹ In 354 Constantius II sentenced his cousin
Gallus to exile only, but senior courtiers soon persuaded him to order his execution
also, and even contrived to prevent a second order countermanding this execution from
reaching its destination in time.⁵² Crispus seems to have realized that his death was
only a matter of time, and acted accordingly.

54910 II. An overlooked allusion to the death of Fausta
The *Historia Augusta* charts the lives and reigns of the Roman emperors from Hadrian,
who began to rule in 117, to Carinus, who was killed in 285, although its text has
not survived for the period 244 to 260. It professes to be the work of six different
54915 authors writing during the reigns of Diocletian (284-305), Constantius I (305-6), and
Constantine I (306-37), but there is general agreement now that it was really written
by one author only, writing at the end of the 4th or the beginning of the 5th
century.⁵³ Its value as a historical source deteriorates as it progresses from
Hadrian to Carinus, and although it begins almost as trustworthy biography, its
54920 accounts of the late 3rd-century emperors are nearly completely fictitious. This is
certainly true of its account of the emperor Carinus which is of most interest to us
here.
Carinus was the eldest son of the emperor Carus who rose to power in late 282
following the assassination of his predecessor Probus near Sirmium in Pannonia. Carus
54925 then elevated Carinus to the rank of Caesar and left him in command of the Western

Empire while he set out on an expedition against the Persians together with his youngest son Numerianus, Caesar also. The expedition was successful, and they captured the Persian capital Ctesiphon. Shortly afterwards, however, Carus was killed by lightning, and Numerianus succeeded him.⁵⁴ He was assassinated while leading his army home, and Diocletian, the commander of his bodyguard, succeeded him in turn. When news of these events reached the West, Carinus had first to put down a military revolt in northern Italy, and readied himself then to confront his rival Diocletian. In the spring of 285 their armies met near the river Margus in Moesia, and Diocletian emerged victorious.

This is a summary of what little is known about Carinus and his family, most of which comes from various 4th-century epitomators. These same sources all agree that Carinus lived a life of lust and vindictiveness, and that he lost his battle against Diocletian because his troops deserted him in disgust at this lifestyle.⁵⁵ Of most relevance to us here, however, is an anecdote concerning his decadence which occurs in the *Historia Augusta* alone. Following a description of his bejewelled finery, his luxurious banquets, and his custom of showering his banqueting-halls and bedrooms with roses from Milan, Carinus' bathing habits are described as follows (V. Can 17): The baths which he [Carinus] used were as cold as the air of rooms that are under the ground, and his plunge-baths were always cooled by means of snow. Once, when he came in the winter to a certain place in which the spring-water was very tepid - its wonted natural temperature during the winter - and he had bathed in it in the pool, he shouted to the bath-attendants, it is said, 'This is water for a woman that you have given me'; and this is reported as his most famous saying. When his father heard of all that he did, he exclaimed, 'He is no son of mine', and at last he determined to appoint Constantius - afterwards made Caesar but at that time serving as governor of Dalmatia in the place of Carinus, for the reason that no one even then seemed to be better, and he even planned, as Onesimus relates, to put Carinus to death.⁵⁶ With the possible exception of the reference to the position of Constantius I as governor of Dalmatia, these allegations are obviously and totally fictitious. But what was the purpose of this unhistorical nonsense? It is generally accepted now that many of the fictitious claims within the *Historia Augusta* allude to various 4th-century events.⁵⁷ It has been argued, for example, that its account of the emperor Elagabalus (218-22) consists in large part of a satire on Constantine I.⁵⁸ It has even been claimed that 'Elagabalus' unsuccessful attempt to murder his adopted son Alexander Severus recalls Constantine's murder of his son Crispus'.⁵⁹ It is not unreasonable, therefore, to seek a similar allusion in the above passage, and there is a strong case to be made that it alludes to the deaths of Crispus and Fausta in particular.

Firstly, the claim by Carinus that the water in the pool where he was bathing, which happened to be too warm for his liking, was 'water for a woman' (aqua muliebris) reminds one of the claim that Fausta died in an overheated bath. Indeed, it is difficult to make sense of this passage otherwise. In so far as mixed bathing was common practice in the public baths, and there is no evidence that baths were maintained at different temperatures for women, the description of water which was too warm as 'water fit for a woman' seems to make little sense in and of itself.⁶⁰ Secondly, Carus' alleged exclamation concerning Carinus, 'He is no son of mine', taken literally at least, raises the question of illegitimacy and adultery. At one level this reads as an accusation by Carinus against his wife that she had committed adultery and passed off another man's child as his son, reminiscent of the tradition that Fausta was guilty of adultery.⁶¹ Finally, the claim that Carus wished to put to death Carinus, his eldest son and Caesar, cannot but remind one that Constantine put to death Crispus, his eldest son and Caesar also, or so the story went. It is my argument, therefore, that the author of the *Historia Augusta* had before him a source which included an account of the controversy surrounding the deaths of Crispus and Fausta, and wove different elements of this account into his narrative concerning Carinus. He did not intend an exact analogy, but expected rather that the very combination of these elements would be enough for his reader to understand the subject of his allusion. Furthermore, there is a strong similarity between the vices and excesses which he had attributed to Elagabalus earlier and those which he attributed to Carinus here.⁶² Why is this? The fact that his life of Elagabalus was a satire on Constantine I, and that his life of Carinus reminds us of Elagabalus once more is surely important. The author is trying to signal to us that he has returned to the subject of Constantine once more in his life of Carinus, and that it is to his reign which we must turn again also if we are to hope to understand the real significance of his words.

In conclusion, therefore, Constantine has been unfairly blamed for the execution of

his wife and eldest son, neither of whom he had wished to see dead. The best explanation for the unusual circumstances of Fausta at her death, in a hot bath, is that she died by accident during an attempted abortion. This ties in with the allegation that she was guilty of adultery with Crispus. As for Crispus, he was sentenced to exile, a punishment which points towards his conviction of adultery also. He then committed suicide.

Constantine did his best to cover up this whole sordid mess. He managed to conceal the details of Fausta's death, that she had died during an attempted abortion, because it had taken place in the privacy of the imperial bathroom when Fausta was attended only by the other imperial ladies, not least her mother-in-law Helena. He could not, however, conceal the fact that she had died in a hot bath, which information is surely due to the servants who had prepared the same. Nor could he prevent people from assuming, as a result of their close succession, that the deaths of Crispus and Fausta must have been related, an assumption fuelled by a palace rumour that the pair had committed adultery together. Indeed, the veil of secrecy with which he surrounded the death of Fausta in particular only served to confirm people's worst suspicions, that he must have ordered their executions. He further reinforced these suspicions by condemning the memory of both, or by allowing this condemnation to stand even after their deaths. This reflected merely his continuing anger at their adultery together, and at the situation in which their untimely deaths had placed him, but it encouraged people to assume the worst.⁶³ Together with his apparent refusal to justify 'his' actions, since, of course, he did not regard himself as responsible for either death, one a suicide, the other an accident, this left a vacuum which rumour and innuendo strove to fill. In the end, therefore, Constantine proved the worst enemy of his own reputation.

2. See T. D. Barnes, *The New Empire of Diocletian and Constantine* (Cambridge, Mass., 1982), 42-3.
3. See P. Bruun, *The Roman Imperial Coinage VII: Constantine and Licinius AD 313-37* (London, 1966), 116, 137, 203, 263ⁿ, 325-6, 383, 447, 475, 514-15, 551, 612-13, 647, 709.
4. In his *Liber de Caesaribus* composed c.361, Aurelius Victor notes only that (De Caes. 41.11), 'When the eldest of these [Constantine's children] had died on the orders of his father, suddenly Calocerus, commander of the imperial camel herd, insanely seized the island of Cyprus and pretended to rule', with no mention of Fausta. In his *Breviarium* composed c.369, Eutropius claims that Constantine became arrogant with the result that (Brev. 10.6) 'First he persecuted his relatives and killed his son, an outstanding man, and his sister's son, subsequently his wife and afterwards numerous friends'. Writing c.380, Jerome notes in his *Chronicle* for 325, 'Crispus, the son of Constantine, and Licinius Junior, the son of Licinius and Constantia, Constantine's sister, are most cruelly killed', but misdates the death of Fausta to 328, stating simply, 'Constantine kills his wife Fausta'. The anonymous compiler of the first recension of the *Consularia Constantinopolitana*, writing c.388, dates the death of Crispus to 326, stating only, 'Crispus was killed'. He dates the death of Licinius Junior to 325, but does not mention Fausta at all. Finally, the ecclesiastical historian Orosius, writing c.417, claims, following a brief mention of the Arian heresy and the Council of Nicaea in 325, that (Adv. Pag. 7.26) 'Constantine turned the sword of vengeance and the punishment destined for the impious against even his close relatives. For he killed his own son, Crispus, and his sister's son, Licinius.'
