

THE AIA SOPHIA. Consecrated fourteen centuries ago.

by Prof. Dr. F. J. DE WAELE.

"Church of fourteen centuries" I wrote as a variation on Schaepman's song, in my diary a few years ago, when I was sitting all alone on the long Turkish mats under the dome of Justinian's masterpiece in Constantinople, officially: in Stamboul. There happened to be no tourists, no guards, no praying Turks, no scaffolding. What a stroke of luck, to be allowed to walk around all alone, without shoes on, out of respect for the place, as well as out of aversion to the ship's keels of Turkish slippers, which were prescribed when entering the church. What a heart-warming feast of memories and examination of history, to be alone for a few moments with the shadows of the old masters, with the pages of history and the poets' praises of this wonder of the world, which was a church, became a mosque and is now a museum. On December 27 of this year it will be exactly fourteen centuries since it was consecrated, and although we know that there is human megalomania in celebrating such anniversaries, we still believe that we should think less of human ability now than of the psalm's word, which in this case would be, that fourteen centuries for the Most High are but as many as fourteen days or fourteen minutes. We have reason to rejoice in the church of holy Wisdom, even though it is in foreign hands and condemned to rigidity, even though we are now further than ever from the prophecy of consolation in the famous lamentation on the fall of city and church: "Comfort yourself, Mother, comfort yourself, one day this church will be yours again; the Aia Sophia has now become a museum and the "Allahoe Akbar", the Mohammedan owl screeching has now come to an end, while the nightingale song of Christian symbols still resounds. New nightingales have come to light: the plastered faces of the Cherubs are indeed still hidden behind their Islamic mask, but in the last years from 1931 to 1934, the English Byzantinist Th. Whittemore, in the long inner hall (esonarthex) exposed musical visions of piety and beauty and once again the intimacy of the Byzantine churches begins to live, although is the melancholic smile of the Mother of God still very modest with the ostentatious curls of the beautifully calligraphed letter shields of the caliphs under the Cherubs of the pendentives. The Holy Wisdom. In the eyes of Constantine it was not yet the Godhead in her all-wise governance of all humanity, but, when he built the first Aia Sophia in 325, it seemed as if the "Holy Wisdom" was a compromise deity, to which the pagan symbolism could not take offense and in which the Christians found a spiritual core for lofty contemplations and Byzantine hair-splitting. Constantine's son, Constantius I, expanded the basilica, which after an existence of three-quarters of a century was completely destroyed in a fire with the senate building; that fire was not only a material disaster, but also a flaming symbol of the popular anger at the banishment of the great Chrystomos. Once again the torch was thrown into the "new" Wisdom Church, which Theodosius had built in place of the Constantine and which had become 117 years old: this fire, during the bloody unrest of the city revolution in 532, destroyed many quarters, — such a mass destruction also happened in the wooden Stamboul of 1911 and 1917 — also a part of the imperial palaces and the baths of Zeuxippes. A few days later the emperor conceived the plan to build a church, "such as never had been a cult building since Adam's time and never will be", but the site of the old basilica was much too small. How the one and a half hectares, which were needed for the building itself, and the surrounding square, were obtained by force, or cunning, or otherwise, from the many owners in this densely populated quarter, are told by many edifying legends, which perhaps conceal a violent expropriation plan. But not only Constantinople, but also the entire empire would contribute to the gigantic construction costs, although the riches and ancient art treasures of this Empire were still largely pagan. In Asia Minor and in the East, as in Greece, the mighty temples were still standing, although the statues of the gods had been abducted and the pious no longer brought an increase to the temple treasure. But then they would give pieces from their own bodies, and so the four green columns that separate the main space from the side aisles are violent borrowings from the temple of Artemis at Ephesus, while the red porphyry columns in the side aisles were stolen from the sun temple of Aurelian at Heliopolis. Just as the Venetian sailors on the Levant supplemented their shipload with antique sculptures and a travel gift each time brought with you for the building of San Marco, ships and fleets now travelled to Constantinople with stolen temple pieces, with white marble from the Prokonnesos, green marble from Carystos on Eubea, red marble from Iasos in Caria, verde antico from Numidia, not to mention the other cargoes of gold and precious metals with this gigantic St. Peter's or rather Holy Wisdom Medal from the "oikoumene".

A whole lustrum passed before the two Asiatic master builders, Anthemios of Tralleis and Isidoros of Miletus, made Justinian's dream come true. In the meantime, the emperor himself had encouraged the progress of the building work with word and deed: every day he was in simple clothing among the 16,000 workers who worked "for God and prince".

One of the main concerns had been "the piling" for the new church. Several times a century the city and the area around the Bosporus are ravaged by disasters: for example, 80 years before the construction of the Justinian church, an earthquake had razed the walls and 57 towers of the city and buried the patriarch Euphrasius under the ruins of his palace in 527. It could have been foreseen that the largest church in Christendom would also suffer damage from the many seismic vibrations and tremors, although no one would have dared to foresee that the dome would collapse in such an earthquake only 20 years after its completion. The underground work of the church was gigantic: an extensive system of deep wells and colossal pillars was constructed on the rocky ground with the intention of increasing the elasticity of the entire building, which formed a rectangle of 75 by 65 m. To which were added the annexes: the large western forecourt, the two vestibules, the outer and inner narthex, the baptistery and the "skevophylakion" or sacristy. We must imagine ourselves without the later Turkish buttresses and the many tombs, the four minarets, the school building, etc.

On the third day of Christmas 537 it was the great day of the dedication. On a triumphal chariot and with his entire court retinue Justinian rode to the new church, the "megali Ekklesia", as it was stamped in the bricks; at the entrance of the building the patriarch Menas received him and the emperor himself hurried inside, where, before the iconostasis, in ecstasy and with raised hands, he exclaimed: "Glory to God, who has deemed one worthy to complete such a work. Solomon, I have surpassed you!" However much has disappeared, the idea of church lives on here, yes, even more than, for example, in Rome in St. Peter's Church. What has disappeared? The living blood of this work of art is gone, while the beautiful mask has remained. No more altar, no iconostasis, no amboon, no singers' tribune, and moreover that miserable Turkish plastering over of so much beauty!

But just as in the Asian Minor churches, which I found after the disaster of 1922 as Christian churches even though they had been converted into mosques, here the prayer niche carved out towards Mecca can make the eye turn away from the apse built towards Jerusalem, that is, in a south-eastern direction. Although we want to leave out much pathos and rhetoric from the 900 hexameters that the imperial secretary Paulus Silentiarius dedicated to the great church as a poem of praise, as an "ekphrasis" (the poem was however only recited in 563 on the feast of the blessing of the water, our Epiphany), yet in reading his work the fairy tale of splendor and wealth comes to life again before our eyes: precious stones and pearls were fused together for the altar, the recess on the altar was decorated with cameos, gems and enamels. Columns of the purest gold and adorned with pearls and diamonds supported the golden roof of the ciborium or tower-like tabernacle, of solid gold was the globe with the cross above it. Of solid gold was also the dove, the symbol of the Holy Spirit, in which the "immaculate Mysteries" were preserved. Around the altar, — which in itself was a wonder of the world — lay the choir stalls with seven steps, — all gilded silver, — for the patriarch and higher clergy, and twelve golden columns divided the iconostasis, the end of the choir, into smaller parts. Under the dome sat the numerous lower clergy and the amboon, the tribune of honour for the emperor was in the middle of the church, where the presbytery ended. When we speak of a "sea of light" that put the church in full splendor, we use the poet's image: "Like a fleet of barges you see there in the heights the silver lampwork, it is a sea of light in which one could swim, it is a fleet of light, that is not richly laden with goods and possessions, but with shining rays. Like a man who adorns his royal bride with love and veneration and chooses a necklace from the most precious stones, so that it may shine in competition with the flaming glow of the sun's lamp: so has my emperor on all vaults a fleet of lamps hang"...

That's how it was once, and today this memory may be recalled again, although the Christendom so impoverished in Stamboul feels deep pain for the disfigured Aia Sophia. I have walked around there for hours, and repeatedly, laid my hands on the old marble, caressed the stone lacework with my eyes, because one could not touch it with the hands, even put my finger in the hollow of the "sweating column", of course not to bring the moisture to our eyes, as the thousands of superstitious Turks did, supposedly to obtain the cure for their eye complaints, while in reality it usually meant a worsening, but to live through the symbol of the greatest wound of Eastern Christendom.

Finally, one wanders back to the statues in the narthex, to Christ and the dear Lady, who in this petrified museum now have a great jubilee Christmas. There in the narthex we find another pure piece of Byzantium, there the crosses and flower stars shine on the vaults and lunettes and speak to us in the same symbolic language as that cryptographic confession of faith in mosaic and in astronomical allusions, which glorified the Logos (Father), Christ, the Son, and Sophia, the Wisdom of the Holy Spirit (see Christmas number 1935). The abstract symbolic part of the narthex decoration certainly dates back to the time of Justinian and is related to the emperor's policy to win over the Monophysites (the followers of Eutyches who claimed that in Christ only one nature, the divine, existed, and were therefore averse to the originally Syrian cross representation with the bloody body of Christ) for the official church: in the mosaics only the cross trees are depicted. But, although we gladly admire the image of the enthroned Christ, before which Emperor Leo VI (886-912) kneels (two medallions of the Mother of God and of the Archangel Gabriel flank it) and which is already known through the discovery and restoration work of Fossati in 1847, we are particularly attracted by the "imperial Christmas" in the narthex: a variant of the Magi is the representation of the seated Mother with the Child on her lap, while the two fathers of Byzantium, Constantine with the model of the city in his hand and Justinian, who carries the church, stand next to it. It was not until the end of the 10th century, according to Whittemore, when the church was solemnly put into use again after a long period of abandonment, that this mosaic of the two great Magi was installed. It does not seem to me a daring hypothesis to think that the musivist wanted to glorify the glorious Christmas Day of half a millennium ago (for the artist of that time) in such a traditional artistic scheme, and it can hardly be otherwise than that on this centenary we turn again to this "Christmas mosaic" with the greeting of the Bethlehem angels, which Justinian repeated on 27 December 537: Glory to God, who has given and preserved for us this masterpiece of high art.

The Serpent Column of Delphi in Constantinople

There is no record of the Serpent Column's removal from Delphi in the early fourth century, but there are numerous references among Roman sources to its arrival on the Bosphorus. Constantine I's importation into the capital of a great many divine and profane statues was an embarrassment to his Christian friends. Eusebius claimed that the emperor collected and displayed the artworks only to demonstrate that the idols of the past were now decoration to be laughed at or scorned. Sozomenus and Socrates echoed this in their continuations of Eusebius' Church History. Eusebius did not mention the Serpent Column directly, but rather that 'the Delphic tripods were deposited in the Hippodrome'. Sozomenus, however, explicitly recorded that among them was the famous tripod which Pausanias and the Greek cities dedicated after their victory over the Persians.

See https://www.academia.edu/3334914/The_Serpent_Column_of_Delphi_in_Constantinople_Place_ment_Purposes_and_Mutilations

The Column of Constantine (Turkish: Çemberlitaş Sütunu, from çemberli 'hooped' and taş 'stone'), also known as the Burnt Stone or the Burnt Pillar, is a Roman monumental column constructed on the orders of the Roman emperor Constantine the Great in 330. It commemorates the declaration of Byzantium (renamed by Constantine as Nova Roma) as the new capital city of the Roman Empire. The column is located on Yenîçeriler Caddesi in the eponymous neighborhood of Çemberlitaş, Fatih, central Istanbul, along the old Divan Yolu (the 'Road to the Imperial Council') between the Hippodrome of Constantinople (now Sultanahmet Square) and the Forum of Theodosius (now Beyazıt Square).

The Column of Constantine is one of the most important examples of Roman art in Istanbul. The column is 35 m tall today. Restoration work has been under way since 1955. Cracks in the porphyry were filled and metal brackets renewed in 1972. Since 1985, the monuments of the historic peninsula of Istanbul, including the column, have been listed as a World Heritage Site.

The column was dedicated on May 11, 330 AD, with a mix of Christian and pagan ceremonies. In Constantine's day the column was at the center of the Forum of Constantine (today known as Çemberlitaş Square), an oval forum situated outside the city walls in the vicinity of what may have been the west gate of Antoniniana. On its erection, the column was 50 m tall, constructed of several cylindrical porphyry blocks. The exact

number of porphyry blocks is disputed, but common figures range from seven, up to as
 200 many as eleven. These blocks were surmounted by a statue of Constantine in the figure
 of Apollo. The orb he carried was said to contain a fragment of the True Cross. At
 the foot of the column was a sanctuary which contained relics allegedly from the
 crosses of the two thieves who were crucified with Jesus Christ at Calvary, the
 baskets from the loaves and fishes miracle, an alabaster ointment jar belonging to
 205 Mary Magdalene and used by her for anointing the head and feet of Jesus, and the
 palladium of ancient Rome (a wooden statue of Pallas Athena from Troy).
 A strong gale in 1106 felled the statue and three of the upper cylinders of the
 column. Some years later, Byzantine emperor Manuel I Komnenos (reigned 1143-1180)
 placed a cross on top in place of the original statue and added a commemorative
 210 inscription that read "Faithful Manuel invigorated this holy work of art, which has
 been damaged by time". Bronze wreaths once covered the joints between the drums, but
 these were taken by the Latin Crusaders who plundered the city during the Fourth
 Crusade in 1204. The cross was removed by the Ottoman Turks after the fall of
 Constantinople in 1453.
 215 Earthquakes and a fire in 1779 destroyed the neighborhood surrounding the column,
 leaving it with black scorch marks and earning it the name 'Burnt Column' (or, as
 referred to by Gibbon, the "burned pillar"). The column was restored by Abdülhamid I,
 who had the present masonry base added. The base was strengthened in 1779. The
 original platform of the column is 2.5 meters below ground.

SEXTI AVRELII VICTORIS

LIBER DE CAESARIBVS AVRELII VICTORIS
HISTORIAE ABBREVIATAE

560 ab Augusto Octaviano,
id est a fine Titi Livii, usque ad consulatum decimum
Constantii Augusti et Iuliani Caesaris tertium.

565 34 1 Sed Claudii imperium milites, quos fere contra ingenium perditae res subigunt
recta consulere, ubi afflicta omnia perspexere, avide approbant extolluntque, viri
laborum patientis aequique ac prorsus dediti reipublicae, 2 quippe ut longo
intervallo Deciorum morem renovaverit. 3 Nam cum pellere Gothos cuperet, quos
diuturnitas nimis validos ac prope incolas effecerat, proditum ex libris Sibyllinis
est primum ordinis amplissimi victoriae vovendum. 4 Cumque is, qui esse videbatur,
570 semet obtulisset, sibi potius id muneris competere ostendit, qui revera senatus atque
omnium princeps erat. 5 Ita nullo exercitus detrimento fusi barbari summotique,
postquam imperator vita reipublicae dono dedit. 6 Adeo bonis salus civium ac longa
sui memoria cariora sunt; quae non gloriae modo, verum etiam ratione quadam
posterorum felicitati proficiunt. 7 Hoc siquidem Constantius et Constantinus atque
575 imperatores nostri (?) orisque acceptior militibus praemiorum spe seu lasciviae. 8
Quo aegra asperiorque victoria fuit, dum, uti mos subditis est, studio impune
peccandi remissa imperia promptius quam utilia defendant.

580 40 1 Igitur Constantio atque Armentario his succedentibus Severus Maximinusque
Illyricorum indigenae Caesares, prior Italiam posteriorque, in quae Iovius
obtinuerat, destinantur. 2 Quod tolerare nequiens Constantinus, cuius iam tum a puero
ingens potensque animus ardore imperitandi agitabatur, fugae commento, cum ad
frustrandos insequentibus publica iumenta, quaqua iter egerat, interficeret, in
Britanniam pervenit; nam is a Galerio religionis specie ad vicem obsidis tenebatur. 3
585 Et forte iisdem diebus ibidem Constantium patrem vel parentem vitae ultima urgebant.
4 Quo mortuo cunctis qui aderant, annitentibus imperium capit. 5 Interim Romae vulgus
turmaeque praetoriae Maxentium retractante diu patre Herculio imperatorem confirmant.
6 Quod ubi Armentarius accepit, Severum Caesarem, qui casu ad urbem erat, arma in
hostem ferre propere iubet. 7 Is circum muros cum ageret, desertus a suis, quos
590 praemiorum illecebris Maxentius traduxerat, fugiens obsessusque Ravennae obiit. 8 Hoc
acrior Galerius ascito in consilium Iovio Licinium vetere cognitum amicitia Augustum
creat; eoque ad munimentum Illyrici ac Thraciae relicto Romam contendit. 9 Ibi cum
obsidione distineretur, militibus eadem, qua superiores, via attentatis, metu ne
desereretur, Italia decessit; pauloque post vulnere pestilenti consumptus est, cum

595 agrum satis reipublicae commodantem caesis immanibus silvis atque emissio in Danubium
lacu Pelsone apud Pannonios fecisset. 10 Cuius gratia provinciam uxoris nomine
Valeriam appellavit. 11 Huic quinquennii imperium, Constantio annuum fuit, cum sane
uterque potentiam Caesarum annos tredecim gessissent. 12 Adeo miri naturae
600 beneficia, ut ea si a doctis pectoribus proficiscerentur neque insulsi-
tate offenderent, haud dubie praecipua haberentur. 13 Quare compertum est eruditionem
elegantiam comitatem praesertim principibus necessarias esse, cum sine his naturae
bona quasi incompta aut etiam horrida despectui sint, contraque ea Persarum regi Cyro
aeternam gloriam paraverint. 14 At memoria mea Constantinum, quamquam ceteris
promptum virtutibus, adusque astra votis omnium subvexere. 15 Qui profecto si
605 munificentiae atque ambitioni modum hisque artibus statuisset, quis praecipue adulta
ingenia gloriae studio progressa longius in contrarium labuntur, haud multum abesset
deo. 16 Is ubi vastari urbem atque Italiam comperit pulsosque seu redemptos exercitus
et imperatores duos, composita pace per Gallias Maxentium petit. 17 Ea tempestate
apud Poenos Alexander pro praefecto gerens dominatui stolidi incubuerat, cum ipse
610 debili aetate, agrestibus ac Pannonicis parentibus vecordior, milites tumultuarie
quaesiti, armorum vix medium haberetur. 18 Denique eum a tyranno missi paucissimis
cohortibus Rufius Volusianus praefectus praetorio ac militares duces levi certamine
confecere. 19 Quo victo Maxentius Carthaginem, terrarum decus, simul Africae
pulchriora vastari diripi incendique iusserat, ferus inhumanusque ac libidine multa
615 tetrior. 20 Adhuc pavidus et imbellis atque in desidia foede pronus, usque eo, ut
flagrante per Italiam belle fuisque apud Veronam suis nihilo segnius solita curaret
neque patris exitio moveretur. 21 Namque Herculus natura impotentior, simul filii
segnitiem metuens inconsulte imperium repetiverat. 22 Cumque specie officii dolis
compositis Constantinum generum tentaret acerbis, iure tandem interierat. 23 Sed
620 Maxentius atrocior in dies tandem urbe in Saxa rubra milia ferme novem aegerrime
progressus, cum caesa acie fugiens semet Romam reciperet, insidiis, quas hosti apud
pontem Milvium locaverat, in transgressu Tiberis interceptus est tyrannidis anno
sexto. 24 Huius nece incredibile quantum laetitia gaudioque senatus ac plebes
exultaverint; quos in tantum afflicta verat, uti praetorianis caedem vulgi quondam
625 annuerit primusque instituto pessimo munerum specie patres aratoresque pecuniam
conferre prodigenti sibi cogeret. 25 Quorum odio praetoriae legiones ac subsidia
factionibus aptiora quam urbi Romae sublata penitus, simul arma atque usus indumenti
militaris. 26 Adhuc cuncta opera, quae magnifice construxerat, urbis fanum atque
basilicam Flavii meritis patres sacrare. 27 A quo etiam post Circus maximus
630 excultus mirifice atque ad lavandum institutum opus ceteris haud multo dispar. 28
Statuae locis quam celeberrimis, quarum plures ex auro aut argenteae sunt; tum per
Africanum sacerdotum decretum Flaviae genti, Circaeque oppido, quod obsidione
Alexandri conderat, reposito exornatoque nomen Constantina inditum. 29 Adeo
acceptius praestantiusque tyrannorum depulsoribus nihil est, quorum gratia eo demum
635 auctior erit, si modesti atque abstinentes sint. 30 Quippe humanae mentes frustratae
boni spe asperius offenduntur, cum mutato rectore flagitioso aerumnarum vis manet.

41 1 Dum haec in Italia geruntur, Maximinus ad Orientem post biennii augustum
imperium fusus fugatusque a Licinio apud Tarsum perit. 2 Ita potestas orbis Romani
640 duobus quaesita, qui quamvis per Flavii sororem nuptam Licinio conexi inter se erant,
ob diverses mores tamen anxie triennium congruere quivere. 3 Namque illi praeter
tadmodum magna cetera, huic parsimonia et ea quidem agrestis tantummodo inerat. 4
Denique Constantinus cunctos hostes honore ac fortunis manentibus texit recepitque,
eo pius, ut etiam vetus teterrimumque supplicium patibulorum et cruribus
645 suffringendis primus removerit. 5 Hinc pro conditore seu deo habitus. Licinio ne
insontium quidem ac nobilium philosophorum servili more cruciatus adhibiti modum
fecere. 6 Quo sane variis proeliis pulso, cum eum prorsus opprimere arduum videretur,
simul affinitatis gratia refectum consortium ascitique imperio Caesarum communes
liberi Crispus Constantinusque Flavio geniti, Licinianus Licinio. 7 Quod equidem vix
650 diuturnum neque his, qui assumebantur, felix fore defectu solis foedato iisdem
mensibus die patefactum. 8 Itaque sexennio post rupta pace apud Thracas Licinius
pulsus Chalcedona concessit. 9 Ibi ad auxilium sui Martiniano in imperium cooptato
una oppressus est. 10 Eo modo respublica unius arbitrio geri coepit, liberis Caesarum
nomina diversa retentantibus: namque ea tempestate imperatori nostro Constantio
655 insigne Caesaris datum. 11 Quorum cum natu grandior, incertum qua causa, patris
iudicio occidisset, repente Caloceris magister pecoris camelorum Cyprum insulam
specie regni demens capessiverat. 12 Quo excruciato, ut fas erat, servili aut
latronum more, condenda urbe formandisque religionibus ingentem animum avocavit,
simul novando militiae ordine. 13 Et interea Gothorum Sarmatarumque stratae gentes,
660 filiusque cunctorum minor, Constans nomine, Caesar fit. 14 Cuius gratia reipublicae

permixtionem fore ostentorum mira prodidere; quippe ea nocte, quae commissi imperii diem sequebatur, igni continuo caeli facies coliflagravit. 15 Abhinc consumpto fere bieimio fratris filium, cui ex patre Dalmatio nomen fuit, Caesarem iussit obsistentibus valide militaribus. 16 Ita anno imperii tricesimo secundoque, cum totum orbem tredecim tenuisset, sexaginta natus atque amplius duo, in Persas tendens, a quis bellum erumpere occeperat, rure proximo Nicomediae – Achyronam vocant – excessit, cum id tetrum sidus regnis, quod crinitum vocant, portendisset. 17 Funus relatum in urbem sui nominis. Quod sane populus Romanus aegerrime tulit, quippe cuius armis legibus clementi imperio quasi novatam urbem Romam arbitraretur. 18 Pons per Danubium ductus; castra castellaque pluribus locis commode posita. 19 Remotae olei frumentique adventiciae praebitiones, quibus Tripolis ac Nicaea acerbiusangebantur. 20 Quorum superiores Severi imperio gratantes civi obtulerant, verteratque gratiam muneribus in perniciem posterorum dissimulatio. Alteros Marcus Boionius afflixerat multa, quod Hipparchum praestanti ingenio indigenam fuisse ignoravissent. Fiscales molestiae severius pressae, cunctaque divino ritui paria viderentur, ni parum dignis ad publica aditum concessisset. 21 Quae quamquam saepius accidere, tamen in summo ingenio atque optimis reipublicae moribus, quamvis parva vitia, elucent magis eoque notantur facile; quin etiam acrius saepe officiunt, cum ob auctoris decus in virtutes potissimum accipiuntur atque ad imitandum invitamento sunt. 22 Igitur confestim Dalmatius, incertum quo suasore, interficitur; statimque triennium post minimum maximumque fatali bello Constantinus cadit. 23 Qua Constans victoria tumidior, simul per aetatem cautus parum atque animi vehemens, adhuc ministrorum pravitate execrabilis atque praeceps in avaritiam despectumque militarium anno post triumphum decimo Magnentii scelere circumventus est externarum sane gentium compressis motibus. 24 Quarum obsides pretio quaesitos pueros venustiores quod cultius habuerat, libidine huiusmodi arsisse pro certo habetur. 25 Quae tamen vitia utinam mansissent! Namque Magnentii, utpote gentis barbarae, diro atrocique ingenio, simul his, quae post accidere, adeo extincta omnia sunt, ut illud imperium haud iniuria desideraretur; 26 tum quia Vetrano litterarum prorsus expertus et ingenio stolidior idcircoque agresti vecordia pessimus, cum per Illyrios peditum magisterio milites curaret, dominationem ortus Moesiae superioris locis squalidioribus improbe occupaverat.

42 1 Eum Constantius cis mensem decimum facundiae vi deiecit imperio in privatum otium removit. 2 Quae gloria post natum imperium soli processit eloquio clementiaque. 3 Nam cum magna parte utrimque exercitus convenissent, habita ad speciem iudicii contione, quod fere vix aut multo sanguine obtinendum erat, eloquentia patravit. 4 Quae res satis edocuit non modo domi, verum militiae quoque dicendi copiam praestare; qua demum vel ardua proclivius eo conficiuntur, si modestia atque integritate superet. 5 Quod maxime cognitum e nostro principe; quem tamen, quo minus statim in hostes alios ad Italiam contenderet, hiems aspera clausaeque Alpes tardavere. 6 Interim Romae corrupto vulgo, simul Magnentii odio Nepotianus, materna stirpe Flavio propinquus, caeso urbi praefecto armataque gladiatorum manu imperator fit. 7 Cuius stolidum ingenium adeo plebi Romanae patribusque exitio fuit, uti passim domus fora viae templaque cruore atque cadaveribus opplerentur bustorum modo. 8 Neque per eum tantum, verum etiam advolantibus Magnentianis, qui tricesimo die triduo minus hostem perculerant. 9 Sed iam antea cum externi motus suspectarentur, Magnentius fratri Decentio Gallias, Constantius Gallo, cuius nomen suo mutaverat, Orientem Caesaribus commiserant. 10 Ipsi inter se acrioribus proeliis per triennium congressi; ad extremum Constantius fugientem in Galliam persecutus vario ambos supplicio semet adegit interficere. 11 Et interea Iudaeorum seditio, qui Patricium nefarie in regni speciem sustulerant, oppressa. 12 Neque multo post ob saevitiam atque animum trucem Gallus Augusti iussu interiit. 13 Ita longo intervallo annum fere post septuagesimum relata ad unum cura reipublicae. 14 Quae recens quieta a civili trepidatione Silvano in imperium coacto tentari rursus occeperat. 15 Is namque Silvanus in Gallia ortus barbaris parentibus ordine militiae, simul a Magnentio ad Constantium transgressu pedestre ad magisterium adolescentior meruerat. 16 E quo cum altius per metum seu dementiam conscendisset, legionum, a quis praesidium speraverat, tumuitu octavum circa ac vicesimum diem trucidatus est. 17 Qua causa ne quid apud Gallos natura praecipites novaretur, praesertim Germanis pleraque earum partium populantibus Iulianum Caesarem cognatione acceptum sibi Transalpinis praefecit, isque nationes feras brevi subegit captis famosis regibus. 18 Quae quamquam vi eius, fortuna principis tamen et consilio accidere. 19 Quod adeo praestat, ut Tiberius Galeriusque subiecti aliis egregia pleraque, suo autem ductu atque auspicio minus paria experti sint. 20 At Iulius Constantius, annos tres atque viginti augustum imperium regens, cum externis motibus, modo civilibus exercetur, aegre ab armis abest. 21 Quis tyrannide tantorum depulsa sustentatoque interim Persarum impetu genti Sarmatarum

730 magno decore considens apud eos regem dedit. 22 Quod Gnaeum Pompeium in Tigrane
restituendo vixque paucos maiorum fecisse comperimus. 23 Placidus clemensque pro
negotio, litterarum ad elegantiam prudens atque orandi genere leni iocundoque;
laboris patiens ac destinandi sagittas mire promptus; cibi omnis libidinis atque
omnium cupidinum victor; cultu genitoris satis pius suique nimis custos; gnarus vita
bonorum principum reipublicae quietem regi. 24 Haec tanta tamque inclita tenue
studium probandis provinciarum ac militiae rectoribus, simul ministrorum parte maxima
absurdi mores, adhuc neglectus boni cuiusque foedavere. 25 Atque uti verum absolvam
735 brevi: ut imperatore ipso praeclarius, ita apparitorum plerisque magis atrox nihil.

SIXTH AURELII VICTORIS

BOOK OF THE CAESARIUS AURELII VICTORIS

740 ABBREVIATED HISTORY
from Augustus Octavianus, that is, from the end of Titus Livius, to the tenth
consulship of Constantius Augustus and the third of Julian Caesar.

745 34 1 But the soldiers of Claudius, whom the ruinous affairs almost against their
nature subject to right counsel, when they have seen all the afflictions, eagerly
approve and extol, men of patient labors and just and entirely devoted to the
republic,
2 since he renewed after a long interval the custom of the Decii.
3 For when he desired to drive out the Goths, whom long life had made exceedingly
750 strong and almost inhabited, it is revealed from the Sibylline books that the first
of the most extensive orders of victory was to be vowed.
4 And when he who seemed to be had offered himself, he showed that the office was
rather suited to himself, who was in reality the leader of the senate and of all.
5 Thus the barbarians were routed and driven out without any loss to the army, after
755 the emperor had given his life as a gift to the republic.
6 So much the safety of the citizens and a long memory of himself are dearer to the
good; which not only contribute to glory, but also to the happiness of posterity in a
certain way.
7 This indeed is why Constantius and Constantine and our emperors are more acceptable
760 to the soldiers than to their lust or to their hope of rewards.
8 Which made the victory more painful and harsh, since, as is the custom of subjects,
they are more eager to sin with impunity and defend their abandoned empires than to
defend their useful ones.

765 40 1 Therefore, when Constantius and Armentarius succeeded them, Severus and
Maximinus, the native Caesars of Illyricum, the former to Italy and the latter to the
lands which Jove had conquered.
2 Unable to tolerate this, Constantine, whose great and powerful mind had already
been stirred up by the ardor of command from his boyhood, devised a plan of flight,
770 and, in order to frustrate the pursuers, killed the public cattle wherever they had
gone, and reached Britain; For he was held by Galerius as a hostage under the pretext
of religion.
3 And it so happened that in the same days they were pressing Constantius' father or
relative to the last days of his life.
775 4 When he died, he seized power with the approval of all who were present.
5 Meanwhile, the populace and the praetorian troops in Rome confirmed Maxentius as
emperor, after his father Herculus had long since retracted.
6 When Armentarius heard this, he promptly ordered Severus Caesar, who happened to be
near the city, to take up arms against the enemy.
780 7 While he was marching around the walls, he was deserted by his men, whom Maxentius
had lured away with the lure of rewards, and, fleeing, he was besieged and died at
Ravenna.
8 Galerius, more furious at this, took counsel with Jovian, and created Licinius, an
old friend of his, Augustus; and leaving behind him the fortifications of Illyricum
785 and Thrace, he hastened to Rome.
9 There, while he was being separated from the siege, he departed for Italy, fearing
that he might be deserted by his soldiers, who had attacked the same road as his
superiors; and a little later he was consumed by a pestilential wound, when he had
made a land sufficiently suitable for the republic by cutting down immense forests
790 and by draining the lake Pelso into the Danube among the Pannonians.
10 In gratitude for which he called the province Valeria after his wife.
11 This man had a five-year reign, while Constantius had an annual one, although both

had indeed held the power of the Caesars for thirteen years.

795 12 Such were the benefits of a wonderful nature that if they proceeded from learned hearts and did not offend with insipidity, they would undoubtedly be considered the most important.

800 13 Wherefore it has been found that learning, elegance, and courtesy are especially necessary for princes, since without these the goods of nature are looked down upon as if they were unfit or even horrid, and in contrast to them they prepared eternal glory for Cyrus, king of the Persians.

14 But my memory has carried Constantine, although ready for other virtues, even to the stars, by the wishes of all.

805 15 And if he had set a limit to his generosity and ambition by these arts, especially since adult minds, having advanced in the pursuit of glory, would have fallen further into the opposite, he would not have been far from God.

16 When he found the city and Italy devastated, and the armies and two generals driven out or ransomed, he sought peace through Gaul for Maxentius.

810 17 At that time, Alexander, acting as prefect among the Carthaginians, had foolishly set his sights on domination, while he himself, being weak in age, more unkind than his rustic and Pannonian parents, had soldiers hastily recruited, and was scarcely able to hold a standard of arms.

18 Finally, Rufius Volusianus, the praetorian prefect sent by the tyrant with a very small number of cohorts, finished him off in a light fight with the military leaders.

815 19 After Maxentius had defeated him, he had ordered Carthage, the glory of the world, and at the same time the most beautiful city in Africa, to be laid waste and burned, a savage and inhuman man, and much more wicked in his lust.

820 20 Still fearful and weak-willed and foully inclined to idleness, he was so much the worse for weariness, that while his army was burning through Italy and scattered at Verona, he was no less careless in his usual pursuits, nor was he moved by the death of his father.

21 For Herculus, who was naturally more impotent, and at the same time feared the indolence of his son, had unwisely resumed the empire.

22 And when, under the guise of office, he bitterly tempted his son-in-law Constantine with cunning devices, he finally died justly.

825 23 But Maxentius, more cruel in nature, having advanced with great difficulty from the city to the red rock about nine thousand days, when, having been defeated in battle, he was fleeing and returning to Rome, he was intercepted by the ambushes which he had laid for the enemy at the Milvian Bridge, while crossing the Tiber in the sixth year of his tyranny.

830 24 At his death he was filled with incredible joy and gladness.

[?] born and the plebs rejoiced; whom he had so afflicted that he once agreed to the massacre of the common people by the praetorians, and was the first to force the fathers and the ploughmen to contribute money to the prodigal by the most wicked design of gifts.

835 25 In their hatred the praetorian legions and the aids more suitable to the factions than to the city of Rome were completely taken away, together with the arms and the use of military clothing.

26 Furthermore, all the works which he had magnificently constructed, the temple and basilica of the city, the fathers dedicated to the merits of Flavius.

840 27 By whom also afterwards the Circus Maximus was wonderfully decorated and the work established for washing was not much different from the others.

28 Statues in the most famous places, many of which are of gold or silver; then the priesthood was decreed throughout Africa to the Flavian race, and the town of Cirta, which had fallen during the siege of Alexander, was restored and adorned and given the name of Constantine.

845 29 Nothing is more acceptable to the expellers of tyrants, whose favor will ultimately be all the greater if they are modest and abstinent.

30 For human minds, frustrated by the hope of good, are more bitterly offended, when, after a change of the wicked ruler, the force of misfortunes remains.

850 41 1 While these things were taking place in Italy, Maximinus, after a two-year reign as Augustus, was driven to the East and perished at Tarsus by Licinius.

855 2 Thus the power of the Roman world was sought by two men, who, although they were connected to each other through Flavius' sister, who was married to Licinius, nevertheless, due to their different manners, were anxiously unable to agree for three years.

3 For in addition to his other great qualities, he possessed the thriftiness and that of a peasant only.

4 Finally, Constantine sheltered and received all his enemies while their honor and
860 fortunes remained, so pious that he was the first to abolish even the ancient and
most terrible punishment of the gallows and the breaking of the legs.
5 Hence he was regarded as a founder or a god. They did not even torture innocent and
noble philosophers in the servile manner.
6 Whom, indeed, having been driven out in various battles, since it seemed difficult
865 to completely overwhelm him, at the same time, out of kinship, a partnership was
renewed and the common empire of the Caesars was taken by the sons of Crispus and
Constantine, born to Flavius, and Licinianus to Licinius.
7 Which, indeed, would hardly last long, nor was it revealed to those who assumed it,
that it would be happy, by the failure of the sun, which was fouled in the same
870 months.
8 Therefore, six years later, when peace was broken with the Thracians, Licinius,
driven out, made way for Chalcedon.
9 There, having co-opted Martinianus into the empire to his aid, he was oppressed
together.
875 10 In this way the republic began to be governed by one will, the sons of the Caesars
retaining different names: for at that time our emperor Constantius was given the
insignia of Caesar.
11 When the eldest son, for some unknown reason, had killed them by his father's
judgment, Calocerus, the master of the camel herd, had suddenly seized the island of
880 Cyprus, mad with the appearance of a kingdom.
12 Having tortured him, as was fitting, in the manner of a servile or a robber, he
devoted his great spirit to the founding of a city and the formation of religions, at
the same time renewing the order of the army.
13 And in the meantime the nations of the Goths and Sarmatians were destroyed, and
885 the youngest son of all, named Constans, became Caesar.
14 By whose grace the republic was to be united in a strange way; for on the night
which followed the day of his assumption of power, the face of the sky was
immediately blazing with fire.
15 After this, having almost two-thirds of his brother's son, whom he named Dalmatia
890 after his father, was killed, he ordered Caesar, with the soldiers standing firm.
16 Thus in the thirty-second year of his reign, when he had held the whole world for
thirteen years, and was sixty-two years old, heading for the Persians, from whom he
had begun to break out into war, he departed for the country near Nicomedia (they
call it Achyrona), when that dreadful star which they call the Hairy Star had
895 foretold the kingdoms.
17 The funeral was carried to the city of his own name. Which indeed the Roman people
bore most painfully, since by whose arms and laws the city of Rome was thought to
have been renewed by the clement government.
18 A bridge across the Danube; camps and castles conveniently placed in several
900 places.
19 The extra supplies of oil and wheat, by which Tripoli and Nicaea were more
bitterly afflicted, were removed.
20 The citizens who had been grateful to the government of Severus had offered them,
and the dissimulation of their posterity had turned the gratitude with gifts into the
905 ruin of their posterity. Others Marcus Boionius had afflicted with fines, because
they had not known that Hipparchus was a native of the city, with his excellent
genius. Fiscal annoyances were more severely pressed, and all would have seemed equal
to the divine rite, had he not granted access to the public to those who were not
worthy.
910 21 Which, although they occur more frequently, nevertheless in the highest genius and
best morals of the republic, even though they are small faults, shine more brightly
and are therefore easily noted; nay, they often even more sharply offend, since, due
to the glory of the author, they are especially accepted as virtues and are an
invitation to be imitated.
915 22 Therefore Dalmatius was immediately killed, at whose instigation it is uncertain;
and immediately three years later Constantine fell in a fatal war, at least at the
greatest.
23 Constans, more proud of this victory, at the same time a little cautious in his
age and vehement in his spirit, still execrable by the wickedness of his ministers
920 and prone to avarice and contempt for the military, was surrounded by the crime of
Magnentius, in the tenth year after his triumph, and the movements of foreign nations
were suppressed.
24 Of these hostages, having been bought for a price, the more handsome boys than the
??

- 925 25 But if only these vices had remained! For Magnentius, as a barbarian nation, was
so completely destroyed by his terrible and cruel nature, and by what happened
afterwards, that that empire was not unjustly desired;
- 26 and because he was completely unlettered and more foolish than Vetranus, and
therefore the worst of the rustic follies, while he was leading soldiers as a foot
930 soldier through the Illyrians, he had wickedly seized the dominion of the upper
Moesia, which was born of the Illyrians.
- 42 1 Constantius, having thrown him out of power in the tenth month, removed him from
power into private leisure.
- 935 2 Which glory, after the birth of the empire, came only from his eloquence and
clemency.
- 3 For when a large part of the armies on both sides had assembled, he held a
semblance of a trial, which was to be obtained with almost no difficulty or much
blood, and he performed his eloquence.
- 940 4 Which event sufficiently taught him that he should not only at home but also in the
army be able to speak; which at last even steep slopes are made more difficult, if he
prevails with modesty and integrity.
- 5 This was most well known from our prince; whom, however, the harsh winter and the
closed Alps delayed, lest he should immediately rush to Italy against other enemies.
- 945 6 Meanwhile, in Rome, the common people being corrupted, and at the same time the
hatred of Magnentius, Nepotianus, a relative of Flavius on his mother's side, having
slain the prefect of the city and armed with the hand of gladiators, became emperor.
- 7 His foolish wit was such a ruin to the Roman people and patricians, that everywhere
houses, fora, streets and temples were filled with blood and corpses, in the manner
950 of busts.
- 8 And not only by him, but also by the arrival of the Magnentians, who on the
thirtieth day had beaten the enemy in less than three days.
- 9 But already before, when external movements were suspected, Magnentius had
entrusted Gaul to his brother Decentius, and Constantius to Gallus, whose name he had
955 changed to his own, had entrusted the East to the Caesars.
- 10 They fought each other in fierce battles for three years; At length Constantius,
pursuing the fugitive into Gaul, forced both men to put him to death by various
tortures.
- 11 And in the meantime the Jewish rebellion, which had wickedly raised Patricius to
the semblance of kingship, was suppressed.
- 960 12 Not long afterwards, the Gaul died by order of Augustus, for his cruelty and cruel
spirit.
- 13 Thus, after a long interval of about a year, after his seventieth year, the care
of the republic was brought back to one man.
- 965 14 Which, having recently calmed down from civil unrest, had begun to be tested again
by the imposition of Silvanus on the throne.
- 15 For Silvanus, born in Gaul of barbarian parents, had at the same time earned the
rank of general by passing from Magnentius to Constantius on foot as a youth.
- 16 From which, when he had ascended higher through fear or madness, he was massacred
970 about the twentieth day by a tumult of the legions from whom he had hoped for
protection.
- 17 For this reason, lest anything should be changed among the Gauls by nature,
especially the Germans, who were ravaging most of their parts, he appointed Julian
Caesar, whom he had adopted as his relative, as governor of Transalpine, and he
975 quickly subdued the savage nations, capturing famous kings.
- 18 Which, although it was due to his strength, nevertheless happened by the prince's
fortune and counsel.
- 19 Which is so remarkable that Tiberius and Galerius, his subjects, experienced many
excellent things in others, but less so under his own leadership and auspices.
- 980 20 But Julius Constantius, who had ruled the august empire for twenty-three years,
was exercised only by civil affairs, despite external disturbances, and was reluctant
to be absent from arms.
- 21 Who, having driven out the tyranny of so many and meanwhile sustained the
onslaught of the Persians, gave the nation of the Sarmatians a king with great
985 dignity, sitting among them.
- 22 Which we find that Gnaeus Pompey, in restoring Tigranes, did scarcely a few of his
predecessors do.
- 23 Placid and merciful in business, prudent in elegance of letters, and gentle and
pleasant in manner of oratory; patient in labor and wonderfully quick in aiming
990 arrows; conqueror of all lusts and desires; sufficiently pious in the worship of his

father and exceedingly devout in his own; knowing the life of good princes to rule the peace of the republic.

24 These great and illustrious efforts to prove the governors of the provinces and the army, together with the absurd manners of the majority of the ministers, have so far disgraced the good of each, neglected.

25 And as is true, I will briefly conclude: as for the emperor himself, nothing is more illustrious, so for most of his attendants nothing is more atrocious.

Biography of Johannes Apollonius Ort.

"Look, there you have a piece of Roman road".

"How do you see that"?

Explanation followed. About 25 years ago I got to know an archaeologist in the cavalry captain Ort during a horseback riding tour that we made in the vicinity of Breda, where we both worked as teachers - he also as head of education for the cavalry weapon - at the Royal Military Academy.

Some time later he gave me the opportunity to view his treasures - his urns, his crockery, his coins - in his house.

When I now venture, as a result of that closer acquaintance at that time, which continued in later years, and mainly also in response to the urging in this matter of his widow, to comply with the honourable request of the board of our Society, to write an obituary of the deceased Colonel Ort, then I must first confess that it is not possible for me, as a non-expert, to place his merits as an archaeological researcher in the true light. I will therefore limit myself to the statements and information, mainly provided to me by his widow and to a few notes concerning the writings published by him.

Johannes Apollonius Ort was born in Woudrichem on 2 May 1842 as the eldest son of the fairly large family of doctor W.F. Ort and Miss S.G. Hanegraaff. He received his first education there at the regular primary school until he was 12, enjoyed his further education at the then so favourably known boarding school of Mr. Kattenbusch in Gorinchem and then at the Royal Military Academy in Breda. On 22 June 1861, at the age of 19, he was appointed 2nd lieutenant in the 5th dragoon regiment. His clear intellect, his gift of communication, his more than usual cheerfulness, his independent, yet compliant character, his good military qualities - although at the time he could express his disapproval of existing conditions or measures taken in a rather noisy manner - soon made him stand out to his superiors as an officer who could and should be considered for special services. Thus, in 1870-1872 he was a teacher of military subjects at the main course of the cavalry in Haarlem; from 1874 to 1877, in which last year he was appointed captain, he held the position of 1st lieutenant-adjutant with the 2nd hussar regiment; in 1879 he was charged as captain-instructor with the training of horses and the education of recruits with his regiment; from 1880 to 1887 he was head of education in cavalry subjects and in horse riding at the Royal Military Academy.

As a senior officer he was later regularly appointed to take a seat on the committee for the officer examination of cadets; and when his turn came for a regimental command, and they wanted to retain the then instructor at the riding school, as particularly suitable for that, as a colonel in that position, the main board showed him the appreciation of his merits in his appointment as colonel, above the formation (on a lieutenant-colonel salary), a distinction that has not been granted to anyone since. After four years in command of the 1st Hussar Regiment in Deventer, he was retired in April 1899.

Already in his childhood he had shown his spirit of inquiry in diligent reading and collecting old objects. The course of study at the Academy at that time was not very suitable to keep that spirit alive; and the young, cheerful cavalry officer, who had broken free with so many others from the oppressive bonds with which the outdated educational system in Breda kept the cadets in line, initially found too much taste in the free social life, among jolly comrades, for him to have thought of devoting himself to study right away. In all respects to be the carefree - if necessary daring - cavalryman - his illusions did not go any further in those years. In 1870, when he became a teacher at the course in Haarlem, the books had to be brought out, and in 1874, again in garrison in Venlo, a military assignment, as it were, automatically indicated to him the direction in which he would further develop himself in the scientific field. In all garrisons, the officers had to make maps of the garrison town and its surroundings on a scale of 1/8000. Ort was to do this in Venlo. In

completing this task, his dormant spirit of inquiry revived. The terrain, which was already so familiar to him from his horseback rides, now had to be examined even more accurately. Inquiries had to be made with the inhabitants of the country and
1060 heathland; information was given to him about hills and old ramparts, which, by their regular construction, were already
had attracted his attention; finds were shown to him of old bronze objects, of old vessels or fragments thereof, of urns, of coins; old burial places were pointed out to him... His mind had found what - besides his military duties - would occupy and
1065 fascinate him for the rest of his life. The map was drawn, but the terrain remained his field of research. Wherever he went later - and cavalry officers often change garrisons - the perimeter was traversed, recorded with a searching eye, excavations were made there and everything he found and learned in the field of archaeology was finally carefully recorded.

At the beginning of his research in Venlo he met a foreman of the Venlo-Boxteler railway Frans Deserière, who seemed to know him so well that he suggested that they do research together from now on 1. The amount of help he must have had from this simple workman is best shown by the statement in one of his writings that Dr. W. Pleyte, the well-known curator (later director) of the National Museum of Antiquities
1075 in Leiden, testified in a report to his director about Deserière: "One of the subordinate persons, a foreman on the Venlo-Boxteler railway, is one of the most developed persons in the field of archaeological research in this region. He uses all his spare time for the investigation of the various antiquities and is very skilled and careful in excavating urns and other objects. It would be desirable if this
1080 person F.D. could be retained for such matters for the benefit of the ancient history of Limburg". With this "expert" Ort successively investigated the villages of Blerick, Grubbenvorst, Lottum, Tienraay, Meerloo, Baerlo, Kessel and many others, as well as the Jammerdaalsche heath near Venlo, where they were able to enjoy good results.

After his marriage in October 1876 to Helena Catharina Grobbee, she was often his faithful companion in his investigations. Completely sympathetic to her husband's amateur studies, she accompanied him on his walks and excursions, she was present at his excavations; while afterwards she followed his combinations or conclusions with regard to the information obtained and the discoveries made with participating
1090 attention, and co-considered them. When Ort was transferred to Deventer as a captain in 1877, he had already amassed a considerable collection of urns, jugs, coins, etc. in Limburg, in addition to the many with which he had enriched the museum in Leiden. In 1879 he came to Leiden in garrison. "There I was soon able to enjoy the friendship of Messrs. Dr. C. Leemans, director of and Dr. W. Pleyte, curator of the National
1095 Museum of Antiquities. They gave me the requested information with the most courtesy and also showed me the way to give a more scientific direction to the research that we continued. A large number of writings, including the Bonner Jahrbücher and the Publications du Limbourg, which I received for reading, explained to me many things that I had noticed but not thoroughly understood. I made notes during this study, as soon as it concerned locations in Limburg or near the Dutch borders and drew a map at
1100 1/50,000 of the region between Nijmegen, Birten, Aachen and Tongres, on which I placed the Roman roads and a coloured sign at each find location, to indicate to which period the found objects belonged, all this however only for my own use... it made me decide to prepare the notes and the map for the press. Dr. Leemans and Dr. Pleyte have considerably lightened my work through their help and I hereby openly
1105 express my sincere thanks to both gentlemen for this". He had opened up a new field of work. The investigations along fields and roads would be processed in the quiet study or in the living room. While Ort was working on this, his main work, his first little book saw the light of day in 1882: "Places in the municipality of Blerick (Limburg), where prehistoric, Germanic and Roman objects have
1110 been found 1". In the Publications de la Société d'archéologie dans le duché de Limbourg, Tome XVIII, the learned national archivist of Limburg Jos. Habets had described the Roman road from Tongeren to Nijmegen along the left bank of the Maas and the sites of
1115 Roman, Germanic and Frankish antiquities in the vicinity of that road. Among other things, it was mentioned that excavations had taken place at the Römerheide in Blerick at the time with the aim of searching for hidden treasures in that municipality, and that even officers from Venlo had participated in them. He had hardly read this when Ort took up his pen: "I consider myself called, but also
1120 qualified, to bring some more precise information about one thing and another, but mainly about that fact". And between the statements of the various finds and locations, he tells how in 1874 he found several people digging in different places

on the heath, who told him that they were looking for a treasure that was supposedly hidden in a beautiful, red, earthen pot with a lid; they knew this from a pastor.
1125 "There went on for me" (in connection with other circumstances) - he writes - "a light went on; the pastor of Ittervoort, who had searched in vain for the Roman settlement at Blerick, now hoped, without cost and effort, to find that settlement by having the farmers search for him; he had therefore given them the description of a Roman pot of terra sigillata. I brought this to the attention of those people, who
1130 immediately stopped searching". He concludes the booklet with the words: "I have hereby given the further information that I promised, and have cleared the Venlo garrison, as well as that good team leader Frans Deserière, of the blame cast upon them".

Two years later, in 1884, his above-mentioned work appeared: "Oude wegen en
1135 landwehren in Limburg en bureen gewesten", which can be regarded as a supplement to Pleyte's "Nederlandsche Oudheden van de Vroegste tijden tot op Karel den Groote", in which Limburg and Brabant are not discussed. In this work, the Roman and other old roads are described that are located north of the Rhine, between the Lippe and the Dutch borders, between the Rhine and the Maas and on the left bank of the Maas, as
1140 well as the landwehrs in those regions. The scientific manner of treatment is particularly evident from the preceding thirty pages of notes concerning: the Roman roads in general; distribution of roads to their destination; road construction; direction of roads; tracing of roads; road measurements in the Roman Empire; about the map of Peutinger and the travel book of Antoninus; course of the lower Rhine and the Waal in Roman times; canals and dikes. And it certainly benefits the work that a
1145 skilled military man chose this subject for treatment. Even more than the great highways, also built in our country on Napoleon's orders, the Roman roads are mainly military roads; and so the details, for example of direction and construction, will probably have been more accurately appreciated by an eye trained in military terms
1150 than those would have been noticed by a less expert.

Be that as it may, the work went out into the world with the following highly favourable preface by Leemans and Pleyte: 'A book like this needs no recommendation. Compiled diligently and with judgment from widely scattered data, supplemented by own
1155 research, the work is a first source for anyone who wants to continue this research and is interested in the history of his country. It is an introduction to the study of antiquity for the whole of the Netherlands, not yet treated from this point of view.

"May it receive the interest it deserves and which will make it possible for the second part with the designed archaeological map to appear".
1160 How many are there in the Netherlands who buy a work on Roman roads in Limburg? The answer to that question will also explain why the wish expressed in the last part of this preface could not be fulfilled. Ort had imagined that this first work would be followed by a second work, "consisting of an alphabetical glossary of the locations with a more or less accurate description of what was found and of the location
1165 itself" and later by an archaeological map, made at 1/50000, which has already been mentioned above. They have not appeared. This must have disappointed him, the Maatschappij der Nederlandsche Letterkunde offered him its membership shortly afterwards (1886), which must have been proof to him that his work had attracted more attention than the publisher thought he could establish.

1170 The previous year he had submitted a piece entitled: "Der Römerort Sablones" as a contribution to the work that Dr. Leemans, as an archaeologist, was offered on his 50th anniversary, which place according to him had to be sought on the Jammerdaalsche heath.

At the beginning of the nineties we find Major Ort in 's-Hertogenbosch. There too he
1175 would leave the traces of his tireless activity, of his ever more extensive research into everything that relates to the history of the Old Netherlands. In the winter of 1891/92 he arranged and catalogued the collection of antiquities in the museum of the Provincial Society of Arts and Sciences, for which the board of this society presented him with a certificate with a silver medal in recognition of services a
1180 coin minted in the name of the person offered as a gift.

The printed "Proceedings" of this society for the years 1891-93 still preserve a lecture by Ort, given at the general meeting of 10 November 1892 (or 1891?). He would have liked to have provided a critical review of the region we inhabit, with regard
1185 to the various peoples who were housed here in ancient times, in connection with the objects found from those times, the land defences that separated the tribes and their traffic routes.

"However, it has not been possible for me, as I was only in garrison here for a short time and the hours that my professional activities left me free to devote to

1190 antiquities were too few, to achieve such a result; but what is not yet the case, I hope will one day be the case". These last words are characteristic of the persistent amateur worker: what we cannot do today, we will do tomorrow. That evening he limited himself to showing the members of the society some antiquities from the museum, to describe them in all their details, and to investigate in connection with the finds and local conditions what conclusions could be drawn from them with regard to times
1195 long past.

Wherever he went to garrison, he continued his research, and in this way he gradually collected a wealth of data. One thing had to lead to another. "It is an introduction to the study of antiquity for the whole of the Netherlands", Leemans and Pleyte had said of his "Old roads and land defences in Limburg". In this way he had to come to
1200 that study of antiquity by himself; and so after his retirement in 1899 his "Architectural notes, mostly relating to the Netherlands and its inhabitants" were successively printed. In five larger and smaller episodes 1 were discussed in 340 pages:

I. a. The confluence of the Maas and Waal during Julius Caesar.

1205 b. Caesar's campaign against the Usipetes and Tencteri.

II. c. The Marsi and their land.

III. d. Oldenzaal during the Salian Franks.

e. Crhepstini 2.

IV. f. The Germanic God Mars.

1210 V. g. The Roman left-bank roads in the Batavian country.

Anyone who works through these studies will understand how much work and thought underlie them. For what is offered to us here is not copying. Far from it; the oldest sources are climbed. First the Greek and Roman writers are consulted, then it is
1215 investigated what well-known historians have thought they read from those stories, which leave so much to be desired in terms of clarity; and in the chaotic confusion, which will then have occurred to his mind more than once, light first comes to him in his walks, his astute observations in the terrain, to which the described actions or situations relate. There he lets the roads, the woods, the houses, the cemeteries,
1220 the old monuments, the stones speak to him, and he understands their language; there he listens with tense attention to the stories of the still undeveloped, superstitious country dwellers, preferably of the oldest among them, who tell him of the white women, of the cabauters, of the werewolves, of the gray foal, of 'the Gluininge' from whose eyes, nose and mouth fire spouts, and which they themselves
1225 have seen. All this is accurately recorded, carefully considered, linked together, checked on the oldest maps and only then is an own opinion developed, often deviating from what experts had hitherto accepted as the truth, or had copied from others.

Whoever works in this way has earned the right to be called an antiquarian.

A single example. In order to determine the place of residence of the Marsi, we begin
1230 with the communication of what Strabo and Tacitus have handed down to us about that people, "whom we know, under that name, only through the description of the campaigns of Germanicus, in the years 14, 15 and 16 AD". Then the opinion of some thirty German and Dutch historians is mentioned, whose statements about that place of residence vary between Texel and Holstein, between Friesland and the Lahn.

1235 Since "the attack of Germanicus in the autumn of 14 AD. teaches us that the Marsi must have lived in such a region that the Bructeri, Tubantes and Usipetes had the opportunity to gather in a short time between the Rhine and the Roman army that retreated from the Marsi country to that river", it is then considered necessary to first set up an investigation into the places of residence of these three tribes,
1240 'whereby the years in which this history took place should not be lost sight of'. And when the conclusion is then drawn: 'the only region where - according to my view - the Marsi could have lived and which meets all the requirements that the historical story of Tacitus can be stated, is the province of Overijssel' - then it is still 'to make this as clear as possible, necessary to examine not only this country itself,
1245 but also that between its southern borders and the Rhine, from an archaeological point of view'. In this way, the landwehrs and the old roads in those regions are examined on the map and on the terrain, after which the journey of Germanicus in the year 14 can be followed without any difficulty. As a further indication, it is then given: 'From all that has been stated above, it appears that the area of the Marsen

1250 must have been located north of the Hallerlandweer (municipality of Zelhem) and at about one day's march distance from it'. However, our researcher is not yet satisfied with this. At the beginning of his study, the assumption is made that the name Marsen could have been derived from the land they inhabited, from the marsen, low-lying places or hollows on the heath, which are filled with water and around which a narrow

1255 strip of grass grows, or from marschgrond, low-lying marshy and rich land, which in the Middle Ages was often called mersch; while in the story of Tacitus it appears that the highly venerated sanctuary (of) Tanfanae (in the Marsenland) was razed to the ground. He therefore believes that the soil name "Mars" and an old tradition about the place where the temple (of) Tanfanae stood, can provide further indications

1260 about the borders of the then Marsenland, and therefore mentions all the places in Overijssel and Drente in or where the word mars occurs, which is frequently the case there, in order to determine approximately the extent of the old Marsenland. He is not yet able to say with certainty where the temple (of) Tanfanae once stood. A legend places it on Tankenberg near Oldenzaal, certainly the oldest city in the

1265 Marsen and Tubantenland. He will discuss this in a subsequent note. The following note: "Oldenzaal during the Salian Franks and the old court places, names of farms and traditions in the Marken Berghuisen and de Lutte" (published in 1901), is the most extensive (200 pages) and gives, in the various walks along roads and neighbourhoods outside Oldenzaal, especially to a layman, a correct idea of the way

1270 in which an antiquarian is able to draw his conclusions from everything he encounters on his way, from the simple names of farms. Here too, a few selections. "Three kilometres south of Oldenzaal" - as we read on p. 153 - "the arterial road to Enschede is intersected by a stream, which rises approximately at the farm Ulenkotte, located to the east of that road, in the elfter lescap of the marke der Lutte".

1275 (p. 156) "The Ulenkotte is associated with the night owl. That bird has a predictive power; through its plaintive sound it indicates the approach of death, it is a bird of misfortune and in the wild hunt, which is led by Wodan or Holda, two owls sometimes fly in front". (p. 157) "From this circumstance I deduced that there had to be a burial ground at the Ulenkotte. I actually found burial mounds, a few

1280 hundred meters behind the Kotte, behind the nearby Christmas House...." As promised, the author returns in this note to the expression used by Tacitus: "templum quod Tanfanae vocabant", and gives an extensive explanation of why he does not, like Van der Aa and Weeling, Grimm and Van den Bergh, believe in a goddess Tanfanae, but is of the opinion that Tacitus should have written "Tancfanae", which would have the

1285 meaning of "sacred place of justice"; that furthermore the dolmens on Tancenberg (near Oldenzaal) together formed the templum Tancfanae, and that these dolmens were razed to the ground by the Romans in the year 14. In the following study "The Germanic God Mars" he is designated as the deity who represented the Right in the templum Tancfanae and also as the ancestor and legislator of the Marses, which means

1290 that a derivation of that popular name from marsch- or marsland must be dropped. In the fifth or last part of the notes (published in 1904), pending the necessary steps being taken by private individuals or the government, a preliminary investigation is conducted into the Roman left-bank roads in the Batavian country, about which we read the complaint at the beginning: "There has never been a regular investigation into

1295 the Roman roads in the Netherlands; I even doubt whether an attempt has been made to follow the trail that was found of them at Kesteren. - In Germany, both the public and the government are more interested in such matters, as has often been apparent to me personally". Ort has done his part to fill that gap. Before the appearance of this last part he had thought he could say a few words on an old controversial issue.

1300 must also speak. My learned friend Prof. Blok had given a lecture on the ancient history of the Academy City on 22 January 1903 at the first meeting of the Association "Oud-Leiden", and as a result of his research, he had stated, among other things, that the city had no right to call itself Lugdunum.

Ort had also been in garrison in Leiden, and of course - one might say - he had

1305 included this point of contention in the circle of his research. Already in March of that year his "Lugdunum" appeared in print, in which he, after an argument of 20 pages, concluded:

1. According to the road measurements given by the Roman geographers, there used to be a place called Lugdunum within the present city of Leiden.

1310 2. This place name means court place on a dune. 3. This courthouse, located on and near the Pieterskerkhof, was still in use in the Middle Ages for the count's court. The local organization of it and the place names there and there undoubtedly point back to the old Germanic situation.

Oud-Leiden can therefore be quiet, It was and remains Lugduno-heim'.

1315 An interesting battle between the professional historian and the amateur archaeologist!

In the first yearbook of Oud-Leiden (1904) Prof. Blok gave, as promised, the elaboration of his notes in a piece, with the heading 'Lugdunum Batavorum', in which he maintained his opinion, expressed in the lecture held earlier, against Ort's view,

1320 while an extract from Ort's brochure 'Lugdunum' followed as a second piece. The

grounds, put forward by the latter - mainly derived from the local location according to the Peutinger table and the travel book of Antoninus, as well as from the meaning of the word Lugdunum - were weighed in the first part and found wanting; attention was drawn to (alleged) errors; and finally - with somewhat too great certainty of being right - 'after this digression on the assertions and assumptions in the brochure of Mr. Ort, with gratitude for the good intention thereof, farewell'. But Ort was not the man to let himself or his brochure be farewelled in this way. If he had dared to enter the arena against a professor of history, it was because he had the firm conviction that his opinion was the correct one, and after he had previously examined the matter from all sides. In den Nederlandsche Spectator 1904 Nos. 10 and 16 he also provided the proof that his armour was more solid than his opponent had thought, and that it was not so easy to find its weak points. In that refutation especially Ort's solid knowledge, his originality, and even his personality come to the fore. Those who knew him hear him with the somewhat screeching voice that was sometimes characteristic of him, and putting the emphasis on every word, utter the sentence before he wrote it down: 'Do you understand now, Professor, why I want nothing to do with that god Lug 1 in my determination of Lugdunum?' He concluded his reply with the communication of a letter he had received from Mr. Espérandieu in Paris, dd. 15 August 1903, in which, among other things, 'Dans le prochain numéro de la Revue que je dirige 2, vous trouverez un petit compte rendu de la brochure Lugdunum. By the way, the conclusions are not sufficiently accepted by all the world: the language of the language is obscure, the opinions are based on the legal basis and the legal requirements, and the permissions are accepted. The new ideas are to express certain aspects of the beauty of the environment and to inform the reader.

Prof. Blok has left Ort the last word. I will wait to make a decision to whom the palm of victory should be awarded in this matter; but I believe that Ort's activity in the field of antiquity has been communicated in the above, insofar as he has given it expression to the outside world. His writings show evidence of sound study, a sharp ability to combine and above all of fresh originality. The writer follows his own path. He does take note of what others before him have said about the subject to be treated, but he does not let himself be led by any of them, and does not shy away from drawing conclusions that conflict with what renowned antiquities had proclaimed as established. It is therefore understandable that his insights will not be accepted by everyone as 'the truth', especially where it concerns actions and situations that have to be exposed from obscure stories from twenty centuries ago. However, he never lacks grounds for what he asserts; sometimes he is even overwhelming with them, which makes reading his writings somewhat tiresome, which certainly cannot be classified as light reading. But he did not intend to provide them either. And it was no light task for him to make that to collect. He had to first study Latin, Greek, yes even Celtic and old Germanic; he had to acquire knowledge of Roman, Greek and Norse theology and mythology; he appears to be familiar with old Germanic and old Dutch legends and traditions, with folklore. Only his sharp eye for the terrain is connected with his military, especially cavalry work, for which he was trained from an early age. He had to learn the rest himself, helped along by a few good friends, among whom especially Dr. M.E. Houck in Deventer; while he corresponded several times about Celtic expressions or obscurities with Messrs. Espérandieu in Paris and Mr. C.A. Serrure in Brussels, the latter (since deceased) came to visit him several times. Only friends and acquaintances know about his work in the field of numismatics. Both through his researches in the vicinity of his various garrison towns, and through his foreign journeys to Trier, Constantz, Badenweiler, etc., during which he naturally did not neglect to become acquainted with everything that was worth seeing in the field of antiquity, he gradually acquired an extensive collection not only of Roman and Germanic weapons, tools, urns, jars, jugs, etc., but also (both through finds and purchases) of mainly Roman consular and imperial coins to a number of ± 2000 varieties. He judiciously compiled a catalogue of these, following the classification of the well-known works of Cohen: "Description générale des monnaies de la république romaine, communément appelées médailles consulaires. Paris chez M. Rollin 1857", and "Historical description of coins struck under the Roman Empire, together with appeals for imperial medals. Paris chez M. Rollin 1859". The oldest of the collection are 3 coins from Campania (minted 268 BC); one of the most important is a denarius of P. Lucinius Stolo, minted 17 BC and originating from the collection of Dr. Phil. Paul Becker, Director of the Lyceum Richelieu in Odessa; of Vitellius there are 3 denarius and 2 medium bronze, one of the first found in Tiel - coins that are relatively rare, because that emperor reigned for less than eight months. There are several coins among them that have been found in our country, such as in Nijmegen, in the vicinity

- of Gorinchem, between Woudrichem and Almkerk, in Lusseike outside Venlo, in the Maas in Andel, etc. Three are listed in the catalogue, as found in Leiden: a medium bronze of Nero, a medium bronze of Trajan, and a large bronze of Marcus Aurelius. The entire collection - so an expert assured me - appears to have been put together with great knowledge and care. It will be sold in Amsterdam by Mr. Schulman. The collection of Germanic and Roman antiquities will remain together and will find its place in the antiquity room in Oldenzaal, founded by Mr. P.J. Gelderman, to whose establishment Ort largely gave the impetus, and whose expansion was always followed by him with interest. Until his death he continued to devote himself to his hobby studies. After his retirement, having settled in The Hague, he could not help but feel attracted to the association "die Haghe", of which he became a member and board member. He had intended to give a lecture at one of the meetings of that association, in order to prepare the excavations at Arendsburg under Voorburg (the old Forum Hadriani), and they would probably have started under his leadership in the spring; but a short illness suddenly ended his working life on 8 February 1908. Through his colleagues in the field of archaeology, but no less through his many friends and acquaintances, also from non-military circles, the warm-hearted, always cheerful former colonel will not soon be forgotten. What he was to his dearly loving wife, only she knows, and it will be her greatest comfort to continue to think back on that. His merits were recognized by the Government in his appointment as an officer in the Order of Orange-Nassau; while he was, besides our Society, also a member of the Frisian Society of History, Antiquity and Linguistics, of "Gelre", Association for the practice of Gelderland history, antiquity and law, of the Provincial Society of Arts and Sciences in North Brabant, of the Bonner Verein, as well as associate foreigner of the Société numismatique de la Belgique. G.J.W. Koolemans Beijnen. 1 The former foreman still lives in Blerick near Venlo. 1 From his introduction: Old roads and landwehrs in Limburg and adjacent regions. Leiden, E.J. Brill. 1884. 1 Roermond, J.J. Romen and Sons. 1882. 1 Published separately as an offprint in 1894 at 's-Hertogenbosch at the Gebroeders Muller.
- 1 The first appeared at Deventer at the Deventer book and lithography office, the others in The Hague at the Gebroeders van Cleef.
- 2 A word, occurring on the Dutch part of the Peutinger table or world map of Castorius, which is explained by Ort with 'tombstones'.
- 1 Prof. Blok thought he had to explain the word Lugdunum from Celtic, in which language according to some the word Lug would indicate a well-known deity. Ort explained the word from Germanic.
- 2 Revue épigraphique du midi de la France.
- ??? to be allowed to say, that it is a privilege for those who are interested in the dispute, that they were able to witness the battle between two such powerful champions.
- April 11, 1884 [...] TOOK OVER: From the captain of the cavalry J. A. ORT:
- Baked earth. Large urn, with wide belly, small bottom, wide opening; with burnt human bones and a piece of bronze wire. Height 33, medium 25 cm. Found between Rooth and Dubbroek, near Maasbree (Limburg).
- Small pot with flat bottom and wide opening, decorated with notches on the edge. Height 3.2, medium 6 cm.
- Urn, with upright wall and, slightly curved inwards, edge decorated with impressions. Height 18, medium 15.5 cm. From the heath of the Jammerdal near Venlo.
- Urn, with wide belly and opening. Height 21.5, medium 19 cm. Found as furrows. - Part of an urn, like the previous one, decorated with impressed circles. Found as furrows.
- Dish, smooth, shiny with flat bottom, having served as a lid for the previous pot. Height 7, medium 22 cm. Found as furrows.
- Urn, rough work, with flat bottom, very wide belly and narrow opening. Height 20.5, medium 16 cm. Found at Schandeloo on the Ossenbergh.
- Urn, rough work, with wide belly and upright edge. Partly filled with bones. Height 23, medium 18.5 cm. Found at the Reumer near St. Jan, under Blerick (Limburg).
- Very large urn with flat bottom, spherical belly, small, upright, edge decorated with nail impressions. Height 30, medium, 22 cm. Found on the Reumer near Blerick.
- Bowl of glossy black, with flat bottom and standing edge, having served as a lid for the urn. Height 9, medium 20 cm.
- Urn, with flat bottom and wide opening, two protrusions on the belly. Height 20, medium 18.5 cm. Found on the Reumer, near Blerick.
- Large urn glossy black, with small bottom, wide belly, wide opening and standing edge. Height 24, medium 20 cm. Found on the Heldensche heath (Limburg).

- Part of the edge and belly of a small jar with one ear, found in the previous urn.
- Two tapering jars, with narrow belly and wide opening, the edge decorated with nail impressions. Height 26 and 26, medium 22 and 21 cm. Found in Swolgen (Limburg).
- Urn, roughly worked, the hand-forming visible on the outside, the edge with nail impressions. Height 24, medium 20.5 cm. Found as furrows.
- Roughly worked and poorly baked urn, with burnt bones. Height 24, medium 22.5 cm. Found at the Wienkelder in Grubbenvorst (Limburg).
- Urn of finer earth and harder baking with small flat bolem, wide belly, wide opening and standing edge. Height 17, medium 20 cm. Found in Grubbenvorst (Limburg).
- Small compressed pot, with wide belly and wide opening. Height 6, medium 7 cm. Found in the previous urn. - Parts of the belly and edge of a very rough urn, the edge had notches. Medium 16 cm. Found south of Middelraai under Grubbenvorst.
- Pot, red. Height 8, medium 8 cm. Found in the Kaldenbroek in Grubbenvorst.
- Urn, shiny on the outside, with small flat bottom, wide opening and standing edge, with burnt bones. Height 18, medium 19 cm. Found on the old castle Rinkesfort under Baerlo (Limburg).
- Dish provided with a projection on the side; lid of the previous urn. Medium 22 cm.
- Pot with convex bottom and narrow opening. Height 3.5, medium 3 cm. Found in the previous urn
- Bronze - Part of a decoration with a needle (possibly a dress pin?) Width 2.8 cm. Found as furrows.
- Baked earth. Urn of rough baking. red-brown, the edge decorated with finger impressions, wide opening, flat bottom. Height 23, medium 22 cm. Found in Montfort near Genouwe (Limburg).
- Dish brown-black, with standing edge and flat bottom, as lid of previous urn. Height 9, medium 23 cm.
- Bowl, smooth brown, with standing edge, small flat bottom. Height 10, medium 21 cm. Found in Tienraai (Limburg).
- Urn, brown, with wide standing edge and small flat bottom, edge and belly decorated with impressed lines. Height 22, medium 17 cm. Found between Wanssum and Mierloo (Limburg).
- Urn, light red exterior smooth with spherical belly. Height 20, medium 19 cm. Found as furrows.
- Bronze. - Three burnt pieces of an ornament, found in previous urn.

Bishops and Saints at the time of Constantine

- 11. Bishop Šeri'a of Arbela (291-316)
- And following Aha d-Abuhi in the leadership of the people of the Lord was the diligent worker and true priest Šeri'a. This man was from Arbela, son of Christian parents, who loved Christ. And since his youth, he relied on the church and lived off holy service. Also in his time the church had a great victory, the church of God, o pious Pinhes. And after 300 years more or less that it was persecuted and weak and its fundamentals were shaken. They had quiet and victory over all of its enemies through Constantine
- 172. the victorious basileus
- 173. But before his time, around a few, Diocletian, the sacreligious Caesar, had tried to exterminate the name of Christendom
- 174. from the Earth, and for this he fervently strove night and day. And he gave an order, that the churches be destroyed and all Christians slain without mercy. Which fear and which panic won power over the entire world, as this order went out without mercy. And the weren't content with this, that they kill the Christians alone, but rather they killed them in droves or burned them, whereby they also did not have leadership prepared by a judge. And because of it, it was seen that the father was the butcher of his son, and the brother of his brother, and the enclosure of the natural love was ripped out of the midpoint. And as those roman Caesars were stricken with such sin, and as this lust to kill was enflamed in them, they were not once capable of governing the people, as they should rule. And as this was noticed by the grand king of the Persians, Hormizd
- 175. he took a large army and plundered many Roman cities
- 176. And as God saw all of this turpitude, "he rose up, and all of his enemies were dispersed, and his haters fled before him. The were dispersed like smoke and melted

away like wax".

1520 177. And he gave over to them torture without mercy. But He gave power over his
servants to Constantine. And He showed him the sign of the cross over the clouds of
lights, on which was written: "In this sign
178. you will be victorious". And he took this sign and gave it to all of his troops.
And with it they beat them, the soldiers of the gruesome demons, into scattering like
1525 flies. And the cross, which was formerly the sign of shame, became the sign of
victory for everyone, for the rich and for the poor, for the nobles and the
condemned, the learned and the simple people. In the East, Papa, the bishop of
Medinata, which we had mentioned, because he lived in the grand king's city
179. and other bishops required this due to his external business, had the desire,
1530 that he obtain the authority over all bishops, as if one bishop-general was needed,
which they had to have. And the priests of Medinata along with the people resisted
him. And they desired, that they clarify his deposition
180. And also Šem'on, his archdeacon
181, was enraged over these notions and gave notice to Miles of Šašan and to 'Aqeb
1535 Allaha of Karka de-Bet Selok. And Mar Papa became very afraid, because Šem'on's
parents were very close to the grand king and respected by all people. And he wrote
to the bishops of the West and especially to the bishop of Edessa, which had the name
Sa'da. And all the bishops answered him, and they promised him, that they would help
him through Basileus Constantine. Because they recognized, that case would be
1540 measured, if now the bishop of Medinata would become the patriarch
182. of all bishops in the East. And they wrote him a letter about this in their
name and the name of the basileus and the patriarchs of the West. And they wrote him,
that as in the West, which was under the rule of the Romans, there were many
patriarchs, the one from Antioch and from Rome and Alexandria and Constantinople, in
1545 the East, which stands under the rule of the Persians, it is necessary, that present
there should be nevertheless at least one patriarch. Now God, which ordered due to the
sins of Adam, that a savior should come into the world, which is his own son, he,
which through plagues of Egypt it was brought about, that there would be freedom for
the Benai Israel, he, which from thorns brought fruit and from the thorn bush let
1550 roses spring forth, he, which at all times is capable of evoking goodness from the
evil, allowed through his godly order and through his venerable providence, that the
notions of Papa achieve success. And he became adamant in this matter without his
knowledge as universal head of all bishops and all Christians in the land of the East
183. All bishops now consented to that which was ordered from the West, and they
1555 feared the bishops, which were there, that they not cause it, that they wedge
themselves between two powerful enemies, from the West the Christian Basileus of the
Romans, and from the East the grand king of the Persians. Šem'on, the archdeacon of
Papa, however, did not want at all to accept this new government, but rather wanted,
that through his parents they would be removed in the name of the grand king. Papa
1560 managed to reconcile with Šem'on's father, and promised him, that upon his death, he
will appoint him to be Patriarch after him.
At this time, in the border city
184. a god-fearing man, Jacob
185. became known for the miracles he worked like the apostles and powerful deeds of
1565 the prophets. This man spent often the entire night in prayer like his Lord, and his
vigils and fasting were known everywhere. And because truly he was a godly man, we
will especially handle the news about him later
186. And also our Šeri'a, because he glowed in zeal in the love of God, he went often
to him, that with it he visit him and became blessed through him. And both spoke to
1570 one another. And after great ado and countless adversities he died on a Friday in the
summer of the year 627 of Jaunaj 187. And he was buried in the church with great
celebration.

12. Bishop Johannan (Daniel Bar Marjam) of Arbela (316-345)
1575 And following him, Seri'a, was the vigilant and careful Johannan. This man, because
he so much loved Mariam
188. the bearer of the invigorator or the world and our rejuvenator, was named Bar
Mariam. He also taught many heathen people and the Ihudaj. And therefore they hated
him with deadly hate. And upon their prosecution they forced him from Arbela. And
1580 they sent foot-soldiers after him, which should kill him. But he hid himself and
saved himself from their snares and wandered a long time around in the hamlets and
mountains. But his love for God was enflamed more and more. And he strengthened it by
staying busy with work. And he succeeded in brining many lambs into the sheep pen of
Christ. In this time, as a Christian basileus ruled the world, and the matters of the

1585 church were eminent, Hades furthered its honor and let loose its stinking mouth and put out words, which stood in contradiction to the orthodox faith. And it found an unfaithful worker, which spread their teaching; the keen and astute Arius

189. the Wicked. He, who already did not recognize His grandeur and counted on the superfluoussness, that was happening, that if even the son of God the creator,

1590 returned for our salvation, he would deny the godliness of Christ and proclaim falsely, that Christ is not the savior, but a creation, and that his nature was not the son of God, but rather just pretend. And there was great uproar because of him in the entire known world. And the bishops gathered in order to impeach his lies in the city of Nicea.

1595 190. in all 318, and through the willingness of Basileus Constantine, whose memory is blessed. And these fathers execrated Arius and everyone who accepted his opinion. And they affirmed that the son, Christ, was of one nature with the father, and equal with him in being 191.

And at this time Šapur II, the grand king of the Persians, moved into the mountains, in order to annihilate the enemies, which were from the mountains near the sea, erupted, and decimated many hamlets. And his plan was, that he lay waste to many Roman cities. That, what also happened, we will see afterwards.

1600 And everyone could reckon that namely the time was near, that the church would be destroyed and the sanctuaries desecrated. But God, before whom everything arises, knows well, saw and silenced and delivered to us the scorching heat of his scorn. As

1605 namely it was seen by Šapur the second king, who ruled seventy years, more or less, from the year 620 of Jaunaj to the year 690 192, after the death of Constantine, the victorious basileus, who filled the world with fear of him, and after him the Roman Constantius

1610 193. his son, was made basileus of the lands of the East, who thought, that the time came for him, in which he can dare to take the leadership of the lands of the Christians without hindrance.

And he moved out and laid siege to Nisibis, the border city. He did not namely know, that it, the city, was not destroyed and stood "like a rose out of the thorns"

1615 194. only through the strong arm of the Lord, the King of Kings. Meanwhile God, which through Judith, a weak woman, threw down and destroyed the pride and the legions of Elparna

195. and through the prayers of Esther, a humble woman, and hung Haman, the evildoer, up on the gallows

1620 196. He, who through Šem'on slew thousands of Philistines, he distanced Šapur, the grand king, from the city through the prayers of the bishop, the pious and called Jacob

197. the famous. And as he, the people's father, saw it, that the children now became distraught after every page a laughter became for the impure demons "like Moses, the

1625 Lord's chosen one, he stood in the breach"

198. before them, he stepped up to the city wall and begun to bid the Lord, that either he kill him or save his people from the hand of the heathens and from death. And the Lord heard this. And see, an army of yellow insects

199. appeared from heaven. And it came and descended upon Šapur's army. And one of the swarms pushed into the nostrils of the horses and made them wild and robbed the men of visibility. And there was no time to do anything except to flee. They feared

1630 namely this unnatural blindness, and that the Roman army would suddenly fall on them and would annihilate them, while they were in this illness. And a few of them went and let Constantius know about that, which was. And they said praise and believed in God because of his grace, which he had poured over his servant Jacob. And he turned back to the grand king, in that he threatened him and he decided that the religion of the Romans would be weeded out of his lands. But Johannan, the bishop of our land, was then not among his sheep, but rather since the year 640 of Jaunaj

1635 200. he had moved to Medinata, he with other bishops, that with it they elect a man, a Christian and a sage, for the office of patriarch

1640 201. Empty was namely the seat of Seleucia's patriarch by the lamentable death of Mar Papa, which was taken too soon before. They say that he spent two years there in Medinata. And then he went to Bet Huzaje because of the affairs of the church. And he was there, as the merciless orders went out to the Mahupats of the land, in which it

1645 was ordered, that all Christians should be killed without sympathy and that their churches should be destroyed, and on the sixth of the month of Nisan, as the grand king was in Bet Huzaje, and in the thirtyfirst year

202. of this evil, which never had known in his life, what mercifulness is, the sword began to rule without sympathy. And everyone, who dared to say, that he was

1650 Christian, was slain. But Johannan, the bishop of Arbela, left thereupon Bet Huzaje

and came to his herd, that he pastured the lambs and the cattle, which were given into his hands, and that he watch them. But his heart was filled with joy, as he saw, that the sword, which was ready, that it should slay the Christians of the land, was still hidden in its sheath. Pagrasp

- 1655 203. namely, the Mauhapta of the land, was in agreement with the city elite, that he not kill the Christians outside of the month of Ilul {July?}
204. at the time of the vintage and the harvest. And it is said, that the grand king felt remorse over the fact that he gave this hard order of persecution and planned to lift it then.
- 1660 But the Ihudaj and the Manicheans, which are enemies of the name of Christ, pressed the Megušes and brought them in, that they not allow the king of kings to do it. And they explained to him, that all the Christians were spies of the Romans. And nothing happens in the kingdom, that they do not write to their brothers who are there. And they all were rich and found themselves in a comfortable life, while the king of
- 1665 kings is entwined in an excruciating life of war and battle. They, however, lead no war, and always live in peace. So the Megušes changed the mind of the grand king through their lying. And the king gave an order, that the head tax be doubled for all the Christians and strengthened his order that they be again killed without mercy.
205. We became thereupon the laughter of the heathens and the faithless. The Ihudaj
- 1670 mocked us and said: "Where is your god? Rising now should be your Christ, he, who was crucified in shame on Galgatha, and should destroy your persecutors. Has he not said to you: "See, I am with you until the end of the world?" But the Manicheans curse us more than the Ihudaj and they regard us as the scum of the people. "And the shepherd was slain and the herd was scattered".
- 1675 206. It was namely the time of darkness, and the light was hunted. It was the time, when the meek and perishable creatures were forced, that they are prayed for with violence instead of the creator. So the sun, which was made as a servant for the god of the people, sacrifices and gifts were brought to it. And the fire, which was made for the need of the children of Adam: one temple
- 1680 207. was made for the children of light, which they built. One fire-temple, namely they built for the demons, that with it, they bring the churches of the heavenly father into the land of the forgotten. Oh the godlessness! O the disobedience and the insurgency of the people! And as when a man, who wants to destroy a tree, to ruin his seeds and throw them away, and then rip out its roots and throw them away, so the
- 1685 Megušes and the heathens wanted to make and end of the bishops
208. and the metropolitans
209. And immediately Mar Šem'on Bar Sabba'e, who sat in the seat of the East, together with a large number of priests
210. and deacons
- 1690 211. were seized and brought to the grand king in Karka de-Ledan
212. And after much torture, as the powerful man of the Lord and his great patriarch were not sheltered from his menace for not being willing to pray to the sun, a creature, Šapur turned over the torture to his associates, who were in a number of
- 1695 102. However, they cut his head off, all those athletes of Christ. He strengthened them, all of them, and stood by them with courage in this battle for a short time. This happened on a high Good Friday. And from then until the Sunday of the White Garments
213. the sword did not stop throughout the East. And to the ends of heaven groups of Christians were tied up like a group of sheep being led to slaughter, with exception
- 1700 of them, who were killed right there in their homes. But in our land of Hedejjab, through the thoughtfulness of the mauhapta, the sympathetic Pagrasp, only a few, it was said, were killed, those whose names are unknown. But in the following year, as Pargasp
214. the mauhapta, died, after him they made Peroz Tamšabor his successor, the blood of the Christians began to flow in our land and flood the Earth, which was filled with injustice and evil due to the evil students of Satan, the cursed, who live off
- 1705 it.
- There he cleansed them through a flood of pure and innocent blood of all dross and of all vice, that with it they would be the bride in truth, which adorns and beautifies
- 1710 herself for the heavenly bridegroom
215. who through his cross and his dishonor wed them on the hilltop of Galgatha through torture and through agony, which is unspeakable, whereby it is said to all of his students and their successors after them and to all members of his church:
- "Blessed are you, when they taunt you and they persecute you and say against you
- 1715 every evil word against me in lies. Then be happy and rejoice, because your wage is great in heaven. Even so have they persecuted the prophets who were before you."

216. It is hence difficult for me, oh my beloved Pinhes, that I enumerate for you one after the other all of those, the names of the Christians, which were killed in the entire land of the East. Uncountable and even incalculable are the simple sheep, which through the butcher's knife were brought as living sacrifices for God and became worthy for the kingdom of heaven. If I only now count those, who saturated the dirt of our city and our country -because it is your request-, so that through this you know, which godly men truly have gone before you, and that you are able to follow their footsteps without difficulty. They truly were lieutenants for us and the leaders on the way to perfection, on which all of them are followed with joy. In the 35th year of Šapur
217. the grand king, Johannan, the bishop
218. with Jacob, his priest
219. were seized by order of Piroz Tamšabor. And the mauhaptas imprisoned them, without sympathy, first in Hesna da-Bedigar
220. And they remained in Hesna one year. And the heathens let loose many tortures which are not to be counted. And they suffered it, these brave warriors of Christ with patience, which cannot be described, whereby they were cheerful and overjoyed, that they were held as worthy, to suffer such for the sake of the love of Christ. And on this day
221. men and women and daughters of the alliance
222. of all classes were killed, flock among flock. And among them Narsai, the priest
223. and Hananja and Rehima, deacons of the church. And after all interrogations and adulatory convincing attempts, as Satan could not diminish their steadfastness, thereupon they were brought out of the house out of the city were crucified as the life-giver, their Lord. Their corpses, however, were taken away during the night by the Christians. And see, their bones are a fountain, which lets the godly grace flow for all, which took asylum in those of the errant children of Adam
224. And from that day until the end of the year the sword was drunk with blood without satiation. And the collected Megušes
225. were like butchers for our land, although they did not become fat. And like wild dogs they daily licked the coagulum of our blood, which like a bog colored red the markets and alleys of our city. And they rampaged out more and more and became rabid.
- 166 Line 15 has Radgan, and line 18 has 𐭪𐭣𐭥 𐭪 Dargan. They are undoubtedly the same person, yet it is unknown which is correct.
- 167 Is this some colloquial idiom?
- 168 Psalm 51:17;
- 170 Susa, the winter residence of the Persian king.
- 171 The first bishop of Seleucia-Ctesiphon was ordained in 291
- 172 Constantine I, the Great
- 175 Hormizd II (302-309)
- 176 A war between Hormizd II and Rome does not appear in any other source, including the Cambridge History of Iran.
- 177 Psalm 68:1 178 The Christian monogram Chi-Ro.
- 180 removal from office
- 182 this text implies he would be in addition to the patriarchs of Rome, Alexandria, Antioch, and New Rome (Constantinople).
- 183 His patriarchate included not only the Persian Empire, but also the Christians in southern India, the Christianized Turks of central Asia, and the emerging Christian populations in Mongolian China.
- 184 Nisibis
- 185 Jacob Episcopus, bishop of Nisibis (308-338)
- 186 If this was truly handled later, it might signify a missing part of the Chronicle, as it does not appear here.
- 187 Meant here is the Seleucidan era. 627 S.E.=316
- 188 Mary, the mother of Jesus.
- 189 Arius (260-336) was a priest in Alexandria, who taught that Jesus was not of the same body with God, but only his elegant creation, as he was begat by God and had therefore a beginning. His faith, Arianism, was so wide-spread that it reached from southern Ethiopia to the north with the Goths and Vandals.
- 190 The First Council of Nicea (19 June-25 August 325) was the first imperial synod. It was concerned with the Arian heresy, and actually only about 250 bishops took part.

Saint Alexandra of Rome (Ἀλεξάνδρα)

1805 – Christian martyr and saint, known from "Martyrdom of Saint George" as either Emperor Diocletian's wife or the wife of Dacian, a Roman Prefect. She is also sometimes mistaken with Priscilla or Prisca.
According to Frederick George Holweck Saint Alexandra was the reputed wife of the Emperor Diocletian and was secretly converted to Christianity. Jacobus de Voragine listing her name as "Alexandria" describes her as the wife of Dacian the Roman
1810 Prefect who persecuted Saint Caprasius of Agen and Saint Maginus. While Saint George was being tortured, Alexandra went to the arena, bowed before him and professed her faith openly. When she questioned whether she was worthy of paradise and of martyrdom without being baptized, Saint George told her "Do not fear, for your blood will baptize you". She was denounced a Christian and imprisoned on her husband's orders in
1815 Nicomedia, then sentenced to death.

Her husband was so outraged by her conversion that he is said to have uttered "What! Even thou hast fallen under their spell!". Alexandra quietly accepted her sentence and prayed as the guards walked her to the place of execution. She asked if she could rest for a moment. The guards allowed this. She rested by the place of Saint George's
1820 execution at Nicomedia's City Wall.

Her three servants Apollo, Isaac and Codratus went to prison with her, the first two died of hunger while the last was beheaded with her on April 21, 303. Her feast day is usually celebrated on April 23, when she is commemorated at the same time along
1825 for professing faith while witnessing George's martyrdom. The Coptic Church venerates her on April 8.

She is sometimes confused with Saint Prisca. Holweck believes that her story was fabricated, de Voragine presents it as legendary but not outright fiction. Prisca was either a Christian or lenient towards Christianity, but never rebelled towards her
1830 husband. When Diocletian retired to Spalatum in 305, Prisca stayed with her daughter, Galeria Valeria and son-in-law, Galerius in Thessalonica. When Galerius died in 311, Licinius was entrusted with the care of Prisca and her daughter Valeria. The two women, however, fled from Licinius to Maximinus Daia. After a short time, Valeria refused the marriage proposal of Maximinus, who arrested and confined her in Syria
1835 and confiscated her properties. At the death of Maximinus, Licinius had Prisca and her daughter killed in 315.

THE OLDEST BISHOPS OF TONGEREN-MAASTRICHT.

1840 1 januari 1934 The 7th volume of the Dictionnaire d'histoire et de géographie ecclésiastiques, commencé sous la direction de Mgr. A. Baudillart, recently appeared, in which E. de Moreau 1) extensively discusses Belgium. This precious Dictionnaire, a
1845 work of the highest order, is beyond the reach of most people, and therefore I would like to provide some excerpts from Moreau's account of the Christianization of Belgium, specifically of the region under Diocletian, Germania Inferior, later also called Civitas Tungrorum—because the oldest bishops of Tongeren-Maastricht are mentioned in it—and thus provide some information about it from this recent work by a highly competent author. Those interested can find the sources and literature
1850 consulted by Moreau in the Dictionnaire itself.

[original in French]

When did the new religion appear in the Maas Valley? A famous text by Saint Irenaeus speaks of Christian communities founded in Germany. The Bishop of Lyon is certainly,

- 1855 in this case, a primary witness. But even if we can deduce from this text, with Harnack, that organized churches, that is to say, churches with a bishop, must have existed at the time this Church Father was writing, around 185, in Cologne, Mainz, Strasbourg (and a fortiori, in Trier, Belgium [Germany!]), nothing similar can be said for Tongeren.
- 1860 Harnack, however, considers this city to have had a bishopric before Constantine. "In any case," he writes, "it has a bishop, shortly after Constantine, in the person of Servatius... and the fact that the Bishop of Cologne, Maternus, also appears as the first Bishop of Tongeren, can certainly be interpreted as meaning that the bishopric was founded under Maternus."
- 1865 The question of the origin of the Bishopric of Tongeren will have to be addressed specifically in connection with this entry. A legend, which appears to have been formed in a biography dating back probably to the first half of the 10th century, portrays Maternus as a subdeacon contemporary with Eucherius, Bishop, and Valerius, Deacon, who were supposedly sent by Saint Peter to Gaul and Germania. Maternus is said to have succeeded these figures in the episcopal see of Trier, which he is said to have occupied for forty years. From the second half of the 10th century onward, the episcopal list of Tongeren mentions Maternus as the first bishop of that city.
- 1870
- 1875 Saint Maternus, whom legend has made a contemporary of Saint Peter, actually lived much later. Historical documents mention him in 313 and 314 as Bishop of Cologne. It seems impossible, given the current state of research, to determine whether the Diocese of Tongeren was created before Saint Servatius.
- 1880 Saint Servatius certainly ruled the vast diocese corresponding to the Civitas Tungrorum, which initially comprised eastern Belgium, except for the tip of Luxembourg, and perhaps Toxandria, then parts of northern Brabant, Dutch Limburg, the Rhineland, and the Grand Duchy of Luxembourg. Little reliable historical information has been preserved concerning this first, and certainly authentic, bishop of ancient Belgium. Let us simply recall what little we have here. Saint Athanasius mentions, no later than 346, Servatius, undoubtedly Servatius of Tongeren, among the bishops who supported his cause at the Council of Sardica. The authenticity of the list on which Servatius appears can be accepted even if the Council of Cologne of 346 must be rejected. We also know from Athanasius, the great Bishop of Alexandria, that Servatius, along with another bishop, was sent as an ambassador by the usurper Magnentius to Emperor Constantius (350 or 351). Eight or nine years later, at the Council of Rimini (359), Servatius of Tongeren, along with Phebadius of Agen, was one of the most staunch defenders of Nicene orthodoxy, as represented by Saint Athanasius. Sulpicius Severus tells us the circumstances and extent to which they yielded to the threats of Prefect Taurus. Gregory of Tours, however, mentions Servatius twice. In his **Historia Francorum**, he recounts, based on oral tradition, that a bishop of Tongeren, Aravatus, to be identified with Servatius, foresaw the future invasion of the Huns, but failed to obtain from Saint Peter, during a pilgrimage to Rome, a promise that this calamity would be averted for his people. Finally, abandoning his episcopal city, he went to die in Maastricht. It is certain that he was buried there, as Gregory of Tours informs us in **Gloria confessorum**.
- 1895
- 1900 With the end of the 4th century, or the beginning of the 5th, a very dark period began for Belgium, lasting more than a century. It ended after the conquest of Gaul by Clovis. The evangelization of Belgium then had to be resumed, and, according to the common view among historians, as if nothing had been done in the 3rd and 4th centuries.
- 1905
- 1910 What was the size of the Christian population in the eastern part of Belgium in the early years of the 5th century? No literary text allows us to answer this question. Furthermore, archaeological discoveries have yielded very little information for the period in question.
- 1915 We are completely lacking in information about the religious history of Belgium in the 5th century. Only the episcopal list of Tongeren mentions seven names between Saint Servatius and Falco (before 533). But Hériger, who is the first to provide them, has no further details to add about them. One might even wonder if they are all the names of bishops of Tongeren.
- 1920 For the diocese of Tongeren, we begin again (after the invasions) to have reliable information about it, starting with Bishop Falco, to whom Saint Remigius addressed a letter. This document predates 533, the year of Saint Remigius's death. Falco's

successor, Domitian, is mentioned in connection with the councils of Clermont (535) and Orléans (549). The transfer of the residence from Tongeren to Maastricht is attributed to Monulf, who ascended the episcopal see after Domitian. However, this assertion rests on a misinterpreted text by Gregory of Tours. 2) There is every reason to believe that, Tongeren having been destroyed by the Vandal invasion of 406, the successors of Saint Servatius no longer resided there.

(Paganism persisted for a long time.) The literary sources, which delay the complete conversion of Belgium until around the end of the 7th or the beginning of the 8th century, are in agreement with the archaeological discoveries. It was only at the end of the 7th or the beginning of the 8th century that cross pattée, chains ending in small crosses, rings with Christian monograms, and belt buckles depicting, in a very crude manner, Daniel in the lions' den, began to appear, rather timidly, in funerary objects. But it must be added that in the majority of the oldest Merovingian necropolises, one finds no more pagan than Christian symbols.

In the 3rd and 4th centuries, the Roman gods, particularly Mercury, Mars, Apollo, Jupiter, and Hercules, had absorbed the ancient Gallic gods: Teutates, Esus, Belenus, Taran, and Ogmios. Some male deities of the Belgae resisted better, for example, Entarabus (Treveri). It was primarily the Celtic female deities whose names were preserved in the Roman period. It is undeniable that Venus, Diana, Minerva, Juno, and others were still highly venerated. However, alongside them, one often encounters in inscriptions and figurative monuments Sirona, companion of Belenus; Epona, goddess of horses; Rosmerta, associated with Mercury; and local goddesses such as Arduina, Vihansa (Tongres), and others. The Belgians showed a special devotion to the Matres, groups of goddesses of varying numbers who were believed to follow and protect their followers everywhere.

Among the imported Eastern cults, the most attested in ancient Belgium is that of the Phrygian gods, Cybele and Attis.

It seems that the paganism of the 6th and 7th centuries was an amalgamation of Germanic and Gallo-Roman idolatry. Roman gods and goddesses such as Jupiter, Mars, Mercury, Juno, Diana, and Venus appear to have remained more popular than Germanic gods.

The complete eradication of paganism in Belgium was partly the work of St. Amand, St. Lambert, and St. Hubertus, bishops of Maastricht; St. Amand for only three years, from 646 to 649.

J. BLONDEN.

1) E. de Moreau S.J., professor at the S.I. theological college in Louvain.

2) The complete texts are included in "De straatnamen van Maastricht" (The Street Names of Maastricht), by J. L. Blonden (Maastricht 1933), no. 208.

3) The seven names between Servatius and Falco are: Agricolaus, Ursicinus, Designatus, Renatus, Supplicius, Quirillus, and Eucharis.

4) Heringer, the most ancient historiographer of Belgium, died at the monastery of Lobbes, but he had been a monk in 990.

5) Eucharis is usually mentioned as Falco's immediate successor, before Domitian.

Maternus (c. 285–September 14, 315 AD), also known as Maternus II

was the first known bishop of Cologne, reportedly also the third bishop of Trier, and founder of the diocese of Tongeren. He is venerated as a saint in the Catholic and Eastern Orthodox churches. The Basilica of Saint Maternus in Walcourt, Belgium was allegedly founded by him.

Life

The Basilica of Saint Maternus in Walcourt, Belgium was founded by Maternus, according to legend.

According to Eusebius, Bishop Maternus was active during the period of the Donatist controversy. In May 313, Maternus and other bishops were summoned to Rome by Emperor Constantine to consult regarding the status of Bishop Caecilianus of Carthage. He also took part in the Synod of Arles in 314. While a legend grew in Trier concerning Maternus, a popular cult developed in Cologne.

The Bollandists and others date his Episcopate to the fourth century. He was the first Apostle of Alsace, and successfully promoted the spread of Christianity in that Province and in Western Germany.

1990 Until the discovery of the Frankfurt silver inscription, dated to between 230 and 270, Maternus' participation in the Synod of Rome in 313 was the earliest reliable evidence for Christianity north of the Alps.

Legend

1995 According to legend, he was a follower of Saint Eucharius, the first bishop of Trier. Eucharius was sent to Gaul by Saint Peter as bishop, together with the deacon Valerius and the subdeacon Maternus, to preach the Gospel. They came to the Rhine and to Ellelsum in Alsace, where Maternus died. His two companions hastened back to St. Peter and begged him to restore the dead man to life. St. Peter gave his pastoral staff to Eucharius, and, upon being touched with it, Maternus, who had been in his grave for forty days, returned to life. The Gentiles were then converted in large numbers. After founding many churches the three companions went to Trier where the work of evangelization progressed so rapidly that Eucharius chose that city for his episcopal residence.

2000 Maternus assisted Valerius for fifteen years and then succeeded him as bishop of Trier for the next forty years. While assisting Valerius, he had already founded the dioceses of Cologne and Tongeren. He also founded a church on the site of a Roman temple which later became Cologne Cathedral. The staff of Saint Peter, with which he had been raised to life, was preserved in Cologne till the end of the tenth century when the upper half was presented to Trier, and was afterwards taken to Prague by Emperor Charles IV.

2010 The legend is from the ninth century and appears to have been intended to attest to the ancient establishment of the see of Trier, and therefore seniority over other dioceses in Germany.

Frankfurt silver inscription

2015 The Frankfurt silver inscription is an early Christian silver amulet from the third century, originating from the Roman settlement of Nida. The amulet was discovered in 2018 during excavations at a Roman-period burial ground in Frankfurt-Praunheim and is now part of the collections of the Archaeological Museum Frankfurt am Main. In 2024, the rolled-up silver foil was digitally "unrolled" and deciphered with the help of

2020 computed tomography. The inscription is considered one of the earliest material testimonies of Christianity north of the Alps and provides valuable insights into early Christian devotional practices in the border regions of the Latin West. [...] Transcription and translation are difficult because the inscription is only accessible digitally via CT. This makes it difficult to identify the type and

2025 direction of the incisions, which are important for deciphering individual letters. In addition, the text has large gaps, especially at the beginning of lines, which are further complicated by the uneven size of the letters in Latin cursive.<[4]:29 Santiago Guijarro suggests the following reading of the text:[4]:38[4]:29-37[5][b]

The Life of the Blessed Emperor Constantine

2055

BOOK I.

CHAPTER I: Preface. - Of the Death of Constantine.

2060

ALREADY have all mankind united in celebrating with joyous festivities the completion of the second and third decennial period of this great emperor's reign; already have we ourselves received him as a triumphant conqueror in the assembly of God's ministers, and greeted him with the due mead of praise on the twentieth anniversary of his reign: and still more recently we have woven, as it were, garlands of words, wherewith we encircled his sacred head in his own palace on his thirtieth anniversary.

2065

But now, while I desire to give utterance to some of the customary sentiments, I stand perplexed and doubtful which way to turn, being wholly lost in wonder at the extraordinary spectacle before me. For to whatever quarter I direct my view, whether to the east, or to the west, or over the whole world, or toward heaven itself, everywhere and always I see the blessed one yet administering the self-same empire.

2070

On earth I behold his sons, like some new reflectors of his brightness, diffusing everywhere the luster of their father's character, and himself still living and powerful, and governing all the affairs of men more completely than ever before, being multiplied in the succession of his children. They had indeed previously the

2075

dignity of Caesars; but now, being invested with his very self, and graced by his accomplishments, for the excellence of their piety they are proclaimed by the titles of Sovereign, Augustus, Worshipful, and Emperor.

CHAPTER II: The Preface continued.

2080

AND I am indeed amazed, when I consider that he who was but lately visible and present with us in his mortal body, is still, even after death, when the natural thought disclaims everything superfluous as unsuitable, most marvelously endowed with the same imperial dwellings, and honors, and praises as heretofore. But farther, when I raise my thoughts even to the arch of heaven, and there contemplate his thrice-blessed soul in communion with God himself, freed from every mortal and earthly

2085

vesture, and shining in a refulgent robe of light, and when I perceive that it is no more connected with the fleeting periods and occupations of mortal life, but honored with an ever-blooming crown, and an immortality of endless and blessed existence, I stand as it were without power of speech or thought and unable to utter a single

2090

phrase, but condemning my own weakness, and imposing silence on myself, I resign the task of speaking his praises worthily to one who is better able, even to him who, being the immortal God and veritable Word, alone has power to confirm his own saying.

CHAPTER III: How God honors Pious Princes, but destroys Tyrants.

2095

HAVING given assurance that those who glorify and honor him will meet with an abundant recompense at his hands, while those who set themselves against him as enemies and adversaries will compass the ruin of their own souls, he has already established the truth of these his own declarations, having shown on the one hand the fearful end of those tyrants who denied and opposed him, and at the same time having made it manifest that even the death of his servant, as well as his life, is worthy of admiration and praise, and justly claims the memorial, not merely of perishable,

2100

but of immortal monuments.

Mankind, devising some consolation for the frail and precarious duration of human life, have thought by the erection of monuments to glorify the memories of their ancestors with immortal honors. Some have employed the vivid delineations and colors

2105

of painting; some have carved statues from lifeless blocks of wood; while others, by engraving their inscriptions deep on tablets and monuments, have thought to transmit the virtues of those whom they honored to perpetual remembrance. All these indeed are perishable, and consumed by the lapse of time, being representations of the corruptible body, and not expressing the image of the immortal soul. And yet these

2110

seemed sufficient to those who had no well-grounded hope of happiness after the termination of this mortal life. But God, that God, I say, who is the common Saviour of all, having treasured up with himself, for those who love godliness, greater blessings than human thought has conceived, gives the earnest and first-fruits of future rewards even here, assuring in some sort immortal hopes to mortal eyes. The

2115

ancient oracles of the prophets, delivered to us in the Scripture, declare this; the lives of pious men, who shone in old time with every virtue, bear witness to posterity of the same; and our own days prove it to be true, wherein Constantine, who alone of all that ever wielded the Roman power was the friend of God the Sovereign of all, has appeared to all mankind so clear an example of a godly life.

2120

CHAPTER IV: That God honored Constantine.

AND God himself, whom Constantine worshiped, has confirmed this truth by the clearest manifestations of his will, being present to aid him at the commencement, during the course, and at the end of his reign, and holding him up to the human race as an instructive example of godliness. Accordingly, by the manifold blessings he has conferred on him, he has distinguished him alone of all the sovereigns of whom we have ever heard as at once a mighty luminary and most clear-voiced herald of genuine piety.

2125

2130

CHAPTER V: That he reigned above Thirty Years, and lived above Sixty.

WITH respect to the duration of his reign, God honored him with three complete periods of ten years, and something more, extending the whole term of his mortal life to twice this number of years. And being pleased to make him a representative of his own sovereign power, he displayed him as the conqueror of the whole race of tyrants, and the destroyer of those God-defying giants of the earth who madly raised their impious arms against him, the supreme King of all. They appeared, so to speak, for an instant, and then disappeared: while the one and only true God, when he had enabled his servant, clad in heavenly panoply, to stand singly against many foes, and by his means had relieved mankind from the multitude of the ungodly, constituted him a teacher of his worship to all nations, to testify with a loud voice in the hearing of all that he acknowledged the true God, and turned with abhorrence from the error of them that are no gods.

2135

2140

2145

CHAPTER VI: That he was the Servant of God, and the Conqueror of Nations.

THUS, like a faithful and good servant, did he act and testify, openly declaring and confessing himself the obedient minister of the supreme King. And God forthwith rewarded him, by making him ruler and sovereign, and victorious to such a degree that he alone of all rulers pursued a continual course of conquest, unsubdued and invincible, and through his trophies a greater ruler than tradition records ever to have been before. So dear was he to God, and so blessed; so pious and so fortunate in all that he undertook, that with the greatest facility he obtained the authority over more nations than any who had preceded him, and yet retained his power, undisturbed, to the very close of his life.

2150

2155

CHAPTER VII: Comparison with Cyrus, King of the Persians and with Alexander of Macedon.

ANCIENT history describes Cyrus, king of the Persians, as by far the most illustrious of all kings up to his time. And yet if we regard the end of his days, we find it but little corresponded with his past prosperity, since he met with an inglorious and dishonorable death at the hands of a woman.

2160

Again, the sons of Greece celebrate Alexander the Macedonian as the conqueror of many and diverse nations; yet we find that he was removed by an early death, before he had reached maturity, being carried off by the effects of revelry and drunkenness. His whole life embraced but the space of thirty-two years, and his reign extended to no more than a third part of that period. Unsparing as the thunderbolt, he advanced through streams of blood and reduced entire nations and cities, young and old, to utter slavery. But when he had scarcely arrived at the maturity of life, and was lamenting the loss of youthful pleasures, death fell upon him with terrible stroke, and, that he might not longer outrage the human race, cut him off in a foreign and hostile land, childless, without successor, and homeless. His kingdom too was instantly dismembered, each of his officers taking away and appropriating a portion for himself. And yet this man is extolled for such deeds as these.

2165

2170

2175

CHAPTER VIII: That he conquered nearly the Whole World.

BUT our emperor began his reign at the time of life at which the Macedonian died, yet doubled the length of his life, and trebled the length of his reign. And instructing his army in the mild and sober precepts of godliness, he carried his arms as far as the Britons, and the nations that dwell in the very bosom of the Western ocean. He subdued likewise all Scythia, though situated in the remotest North, and divided into numberless diverse and barbarous tribes. He even pushed his conquests to the Blemmyans and Ethiopians, on the very confines of the South nor did he think the acquisition of the Eastern nations unworthy his care. In short, diffusing the effulgence of his holy light to the ends of the whole world, even to the most distant Indians, the nations dwelling on the extreme circumference of the inhabited earth, he received the submission of all the rulers, governors, and satraps of barbarous

2180

2185

nations, who cheerfully welcomed and saluted him, sending embassies and presents, and setting the highest value on his acquaintance and friendship; insomuch that they honored him with pictures and statues in their respective countries, and Constantine alone of all emperors was acknowledged and celebrated by all. Notwithstanding, even
 2190 among these distant nations, he proclaimed the name of his God in his royal edicts with all boldness.

CHAPTER IX: That he was the Son of a Pious Emperor, and bequeathed the Power to Royal Sons.

2195 NOR did he give this testimony in words merely, while exhibiting failure in his own practice, but pursued every path of virtue, and was rich in the varied fruits of godliness. He ensured the affection of his friends by magnificent proofs of liberality; and inasmuch as he governed on principles of humanity, he caused his rule to be but lightly felt and acceptable to all classes of his subjects; until at last,
 2200 after a long course of years, and when he was wearied by his divine labors, the God whom he honored crowned him with an immortal reward, and translated him from a transitory kingdom to that endless life which he has laid up in store for the souls of his saints, after he had raised him up three sons to succeed him in his power. As then the imperial throne had descended to him from his father, so, by the law of
 2205 nature, was it reserved for his children and their descendants, and perpetuated, like some paternal inheritance, to endless generations. And indeed God himself, who distinguished this blessed prince with divine honors while yet present with us, and who has adorned his death with choice blessings from his own hand, should be the writer of his actions; since he has recorded his labors and successes on heavenly
 2210 monuments.

CHAPTER X: Of the Need for this History, and its Value for Edification.

HOWEVER, hard as it is to speak worthily of this blessed character, and though silence were the safer and less perilous course, nevertheless it is incumbent on me,
 2215 if I would escape the charge of negligence and sloth, to trace as it were a verbal portraiture, by way of memorial of the pious prince, in imitation of the delineations of human art. For I should be ashamed of myself were I not to employ my best efforts, feeble though they be and of little value, in praise of one who honored God with such surpassing devotion. I think too that my work will be on other grounds both
 2220 instructive and necessary, since it will contain a description of those royal and noble actions which are pleasing to God, the Sovereign of all. For would it not be disgraceful that the memory of Nero, and other impious and godless tyrants far worse than he, should meet with diligent writers to embellish the relation of their
 2225 worthless deeds with elegant language, and record them in voluminous histories, and that I should be silent, to whom God himself has vouchsafed such an emperor as all history records not, and has permitted me to come into his presence, and enjoy his acquaintance and society?

Wherefore, if it is the duty of any one, it certainly is mine, to make an ample
 2230 proclamation of his virtues to all in whom the example of noble actions is capable of inspiring the love of God. For some who have written the lives of worthless characters, and the history of actions but little tending to the improvement of morals, from private motives, either love or enmity, and possibly in some cases with no better object than the display of their own learning, have exaggerated unduly their description of actions intrinsically base, by a refinement and elegance of
 2235 diction. And thus they have become to those who by the Divine favor had been kept apart from evil, teachers not of good, but of what should be silenced in oblivion and darkness. But my narrative, however unequal to the greatness of the deeds it has to describe, will yet derive luster even from the bare relation of noble actions. And surely the record of conduct that has been pleasing to God will afford a far from
 2240 unprofitable, indeed a most instructive study, to persons of well-disposed minds.

CHAPTER XI: That his Present Object is to record only the Pious Actions of Constantine.

IT is my intention, therefore, to pass over the greater part of the royal deeds of
 2245 this thrice-blessed prince; as, for example, his conflicts and engagements in the field, his personal valor, his victories and successes against the enemy, and the many triumphs he obtained: likewise his provisions for the interests of individuals, his legislative enactments for the social advantage of his subjects, and a multitude of other imperial labors which are fresh in the memory of all; the design of my
 2250 present undertaking being to speak and write of those circumstances only which have reference to his religious character.

And since these are themselves of almost infinite variety, I shall select from the facts which have come to my knowledge such as are most suitable, and worthy of lasting record, and endeavor to narrate them as briefly as possible. Henceforward, indeed, there is a full and opportunity for celebrating in every way the praises of this truly blessed prince, which hitherto we have been unable to do, on the ground that we are forbidden to judge any one blessed before his death, because of the uncertain vicissitudes of life. Let me implore then the help of God, and may the inspiring aid of the heavenly Word be with me, while I commence my history from the very earliest period of his life.

CHAPTER XII: That like Moses, he was reared in the Palaces of Kings. ANCIENT history relates that a cruel race of tyrants oppressed the Hebrew nation; and that God, who graciously regarded them in their affliction, provided that the prophet Moses, who was then an infant, should be brought up in the very palaces and bosoms of the oppressors, and instructed in all the wisdom they possessed. And when in the course of time he had arrived at manhood, and the time was come for Divine justice to avenge the wrongs of the afflicted people, then the prophet of God, in obedience to the will of a more powerful Lord, forsook the royal household, and, estranging himself in word and deed from the tyrants by whom he had been brought up, openly acknowledging his true brethren and kinsfolk. Then God, exalting him to be the leader of the whole nation, delivered the Hebrews from the bondage of their enemies, and inflicted Divine vengeance through his means on the tyrant race. This ancient story, though rejected by most as fabulous, has reached the ears of all. But now the same God has given to us to be eye-witnesses of miracles more wonderful than fables, and, from their recent appearance, more authentic than any report. For the tyrants of our day have ventured to war against the Supreme God, and have sorely afflicted His Church. And in the midst of these, Constantine, who was shortly to become their destroyer, but at that time of tender age, and blooming with the dawn of early youth, dwelt, as that other servant of God had done, in the very home of the tyrants, but young as he was did not share the manner of life of the ungodly: for from that early period his noble nature, under the leading of the Divine Spirit, inclined him to piety and a life acceptable to God. A desire, moreover, to emulate the example of his father had its influence in stimulating the son to a virtuous course of conduct. His father was Constantius (and we ought to revive his memory at this time), the most illustrious emperor of our age; of whose life it is necessary briefly to relate a few particulars, which tell to the honor of his son.

CHAPTER XIII: Of Constantius his Father, who refused to imitate Diocletian, Maximian, and Maxentius, in their Persecution of the Christians. AT a time when four emperors shared the administration of the Roman empire, Constantius alone, following a course of conduct different from that pursued by his colleagues, entered into the friendship of the Supreme God. For while they besieged and wasted the churches of God, leveling them to the ground, and obliterating the very foundations of the houses of prayer, he kept his hands pure from their abominable impiety, and never in any respect resembled them. They polluted their provinces by the indiscriminate slaughter of godly men and women; but he kept his soul free from the stain of this crime. The involved in the mazes of impious idolatry, enthralled first themselves, and then all under their authority, in bondage to the errors of evil demons, while he at the same time originated the profoundest peace throughout his dominions, and secured to his subjects the privilege of celebrating without hindrance the worship of God. In short, while his colleagues oppressed all men by the most grievous exactions, and rendered their lives intolerable, and even worse than death, Constantius alone governed his people with a mild and tranquil sway, and exhibited towards them a truly parental and fostering care. Numberless, indeed, are the other virtues of this man, which are the theme of praise to all; of these I will record one or two instances, as specimens of the quality of those which I must pass by in silence, and then I will proceed to the appointed order of my narrative.

CHAPTER XIV: How Constantius his Father, being reproached with Poverty by Diocletian, filled his Treasury, and afterwards restored the Money to those by whom it had been contributed. IN consequence of the many reports in circulation respecting this prince, describing his kindness and gentleness of character, and the extraordinary elevation of his piety, alleging too, that by reason of his extreme indulgence to his subjects, he had not even a supply of money laid up in his treasury; the emperor who at that time

occupied the place of supreme power sent to reprehend his neglect of the public weal, at the same time reproaching him with poverty, and alleging in proof of the charge the empty state of his treasury. On this he desired the messengers of the emperor to remain with him awhile, and, calling together the wealthiest of his subjects of all nations under his dominion, he informed them that he was in want of money, and that this was the time for them all to give a voluntary proof of their affection for their prince.

As soon as they heard this (as though they had long been desirous of an opportunity for showing the sincerity of their good will), with zealous alacrity they filled the treasury with gold and silver and other wealth; each eager to surpass the rest in the amount of his contribution: and this they did with cheerful and joyous countenances. And now Constantius desired the messengers of the great emperor personally to inspect his treasures, and directed them to give a faithful report of what they had seen; adding, that on the present occasion he had taken this money into his own hands, but that it had long been kept for his use in the custody of the owners, as securely as if under the charge of faithful treasurers. The ambassadors were overwhelmed with astonishment at what they had witnessed: and on their departure it is said that the truly generous prince sent for the owners of the property, and, after commending them severally for their obedience and true loyalty, restored it all, and bade them return to their homes.

This one circumstance, then, conveys a proof of the generosity of him whose character we are attempting to illustrate: another will contain the clearest testimony to his piety.

CHAPTER XV: Of the Persecution raised by his Colleagues.

BY command of the supreme authorities of the empire, the governors of the several provinces had set on foot a general persecution of the godly. Indeed, it was from the imperial courts themselves that the very first of the pious martyrs proceeded, who passed through those conflicts for the faith, and most readily endured both fire and sword, and the depths of the sea; every form of death, in short, so that in a brief time all the royal palaces were bereft of pious men. The result was, that the authors of this wickedness were entirely deprived of the protecting care of God, since by their persecution of his worshipers they at the same time silenced the prayers that were wont to be made on their own behalf.

CHAPTER XVI: How Constantius, feigning Idolatry, expelled those who consented to offer Sacrifice, but retained in his Palace all who were willing to confess Christ. ON the other hand, Constantius conceived an expedient full of sagacity, and did a thing which sounds paradoxical, but in fact was most admirable.

He made a proposal to all the officers of his court, including even those in the highest stations of authority, offering them the following alternative: either that they should offer sacrifice to demons, and thus be permitted to remain with him, and enjoy their usual honors; or, in case of refusal, that they should be shut out from all access to his person, and entirely disqualified from acquaintance and association with him. Accordingly, when they had individually made their choice, some one way and some the other; and the choice of each had been ascertained, then this admirable prince disclosed the secret meaning of his expedient, and condemned the cowardice and selfishness of the one party, while he highly commended the other for their conscientious devotion to God. He declared, too, that those who had been false to their God must be unworthy of the confidence of their prince; for how was it possible that they should preserve their fidelity to him, who had proved themselves faithless to a higher power? He determined, therefore, that such persons should be removed altogether from the imperial court, while, on the other hand, declaring that those men who, in bearing witness for the truth, had proved themselves to be worthy servants of God, would manifest the same fidelity to their king, he entrusted them with the guardianship of his person and empire, saying that he was bound to treat such persons with special regard as his nearest and most valued friends, and to esteem them far more highly than the richest treasures.

CHAPTER XVII: Of his Christian Manner of Life.

THE father of Constantine, then, is said to have possessed such a character as we have briefly described. And what kind of death was vouchsafed to him in consequence of such devotion to God, and how far he whom he honored made his lot to differ from that of his colleagues in the empire, may be known to any one who will give his attention to the circumstances of the case. For after he had for a long time given many proofs of royal virtue, in acknowledging the Supreme God alone, and condemning

- the polytheism of the ungodly, and had fortified his household by the prayers of holy men, he passed the remainder of his life in remarkable repose and tranquility, in the enjoyment of what is counted blessedness, - neither molesting others nor being molested ourselves.
- Accordingly, during the whole course of his quiet and peaceful reign, he dedicated his entire household, his children, his wife, and domestic attendants, to the One Supreme God: so that the company assembled within the walls of his palace differed in no respect from a church of God; wherein were also to be found his ministers, who offered continual supplications on behalf of their prince, and this at a time when, with most, it was not allowable to have any dealings with the worshipers of God, even so far as to exchange a word with them.
- CHAPTER XVIII: That after the Abdication of Diocletian and Maximian, Constantius became Chief Augustus, and was blessed with a Numerous Offspring. THE immediate consequence of this conduct was a recompense from the hand of God, insomuch that he came into the supreme authority of the empire. For the older emperors, for some unknown reason, resigned their power; and this sudden change took place in the first year after their persecution of the churches. From that time Constantius alone received the honors of chief Augustus, having been previously, indeed, distinguished by the diadem of the imperial Caesars, among whom he held the first rank; but after his worth had been proved in this capacity, he was invested with the highest dignity of the Roman empire, being named chief Augustus of the four who were afterwards elected to that honor. Moreover, he surpassed most of the emperors in regard to the number of his family, having gathered around him a very large circle of children both male and female. And, lastly, when he had attained to a happy old age, and was about to pay the common debt of nature, and exchange this life for another, God once more manifested His power in a special manner on his behalf, by providing that his eldest son Constantine should be present during his last moments, and ready to receive the imperial power from his hands.
- CHAPTER XIX: Of his Son Constantine, who in his Youth accompanied Diocletian into Palestine. THE latter had been with his father's imperial colleagues, and had passed his life among them, as we have said, like God's ancient prophet. And even in the very earliest period of his youth he was judged by them to be worthy of the highest honor. An instance of this we have ourselves seen, when he passed through Palestine with the senior emperor, at whose right hand he stood, and commanded the admiration of all who beheld him by the indications he gave even then of royal greatness. For no one was comparable to him for grace and beauty of person, or height of stature; and he so far surpassed his compeers in personal strength as to be a terror to them. He was, however, even more conspicuous for the excellence of his mental qualities than for his superior physical endowments; being gifted in the first place with a sound judgment, and having also reaped the advantages of a liberal education. He was also distinguished in no ordinary degree both by natural intelligence and divinely imparted wisdom.
- CHAPTER XX: Flight of Constantine to his Father because of the Plots of Diocletian. THE emperors then in power, observing his manly and vigorous figure and superior mind, were moved with feelings of jealousy and fear, and thenceforward carefully watched for an opportunity of inflicting some brand of disgrace on his character. But the young man, being aware of their designs, the details of which, through the providence of God, more than once came to him, sought safety in flight; in this respect again keeping up his resemblance to the great prophet Moses. Indeed, in every sense God was his helper; and he had before ordained that he should be present in readiness to succeed his father.
- CHAPTER XXI: Death of Constantius, who leaves his Son Constantine Emperor. IMMEDIATELY, therefore, on his escape from the plots which had been thus insidiously laid for him, he made his way with all haste to his father, and arrived at length at the very time that he was lying at the point of death. As soon as Constantius saw his son thus unexpectedly in his presence, he leaped from his couch, embraced him tenderly, and, declaring that the only anxiety which had troubled him in the prospect of death, namely, that caused by the absence of his son, was now removed, he rendered thanks to God, saying that he now thought death better than the longest life, and at once completed the arrangement of his private affairs. Then, taking a final leave of the circle of sons and daughters by whom he was surrounded, in his own palace, and on

- 2450 the imperial couch, he bequeathed the empire, according to the law of nature, to his eldest son, and breathed his last.
- CHAPTER XXII: How, after the Burial of Constantius, Constantine was proclaimed Augustus by the Army.
- 2455 NOR did the imperial throne remain long unoccupied: for Constantine invested himself with his father's purple, and proceeded from his father's palace, presenting to all a renewal, as it were, in his own person, of his father's life and reign. He then conducted the funeral procession in company with his father's friends, some preceding, others following the train, and performed the last offices for the pious
- 2460 deceased with an extraordinary degree of magnificence, and all united in honoring this thrice blessed prince with acclamations and praises, and while with one mind and voice, they glorified the rule of the son as a living again of him who was dead, they hastened at once to hail their new sovereign by the titles of Imperial and Worshipful Augustus, with joyful shouts. Thus the memory of the deceased emperor received honor
- 2465 from the praises bestowed upon his son, while the latter was pronounced blessed in being the successor of such a father. All the nations also under his dominion were filled with joy and inexpressible gladness at not being even for a moment deprived of the benefits of a well ordered government.
- 2470 In the instance of the Emperor Constantius, God has made manifest to our generation what the end of those is who in their lives have honored and loved him.
- CHAPTER XXIII: A Brief Notice of the Destruction of the Tyrants.
- 2475 WITH respect to the other princes, who made war against the churches of God, I have not thought it fit in the present work to give any account of their downfall, nor to stain the memory of the good by mentioning them in connection with those of an opposite character. The knowledge of the facts themselves will of itself suffice for the wholesome admonition of those who have witnessed or heard of the evils which severally befell them.
- 2480 CHAPTER XXIV: It was by the Will of God that Constantine became possessed of the Empire.
- THUS then the God of all, the Supreme Governor of the whole universe, by his own will appointed Constantine, the descendant of so renowned a parent, to be prince and sovereign: so that, while others have been raised to this distinction by the election
- 2485 of their fellow-men, he is the only one to whose elevation no mortal may boast of having contributed.
- CHAPTER XXV: Victories of Constantine over the and the Britons.
- 2490 AS soon then as he was established on the throne, he began to care for the interests of his paternal inheritance, and visited with much considerate kindness all those provinces which had previously been under his father's government. Some tribes of the barbarians who dwelt on the banks of the Rhine, and the shores of the Western ocean, having ventured to revolt, he reduced them all to obedience, and brought them from their savage state to one of gentleness. He contented himself with checking the
- 2495 inroads of others, and drove from his dominions, like untamed and savage beasts, those whom he perceived to be altogether incapable of the settled order of civilized life. Having disposed of these affairs to his satisfaction, he directed his attention to other quarters of the world, and first passed over to the British nations, which lie in the very bosom of the ocean. These he reduced to submission, and then
- 2500 proceeded to consider the state of the remaining portions of the empire, that he might be ready to tender his aid wherever circumstances might require it.
- CHAPTER XXVI: How he resolved to deliver Rome from Maxentius.
- 2505 WHILE, therefore, he regarded the entire world as one immense body, and perceived that the head of it all, the royal city of the Roman empire, was bowed down by the weight of a tyrannous oppression; at first he had left the task of liberation to those who governed the other divisions of the empire, as being his superiors in point of age. But when none of these proved able to afford relief, and those who had attempted it had experienced a disastrous termination of their enterprise, he said
- 2510 that life was without enjoyment to him as long as he saw the imperial city thus afflicted, and prepared himself for the overthrow of the tyranny.
- [Book I, 26-31]
- 2515 Εἶθ' ὥσπερ μέγα σῶμα, τὸ πᾶν τῆς οἰκουμένης ἐννοήσας στοιχεῖον, κάπειτα τὴν τοῦ παντὸς κεφαλὴν, τῆς Ῥωμαίων ἀρχῆς τὴν βασιλεύουσαν πόλιν, τυραννικῇ δουλείᾳ συνιδὼν

Ταῦτα παρ' ἑαυτῷ διακρίνας, εὗ τε λογισάμενος, ὡς οἱ μὲν πλήθει θεῶν ἐπιθαρρήσαντες, καὶ πλείοσιν ἐπιπεπτώκασιν ὀλέθροις, ὡς μὴδὲ
- 2535 γένος, μὴδὲ φυτὴν, μὴ ῥίζαν αὐτοῖς, μὴδ' ὄνομα, μὴδὲ μνήμην ἐν ἀνθρώποις ἀπολειφθῆναι, ὁ δὲ πατὴρ αὐτῷ θεὸς τῆς αὐτοῦ δυνάμεως ἐναργῆ καὶ ἀμύπολλα δείγματα εἰλη δεδωκώς τῷ αὐτοῦ πατρί· ἀλλὰ καὶ τοὺς ἤδη καταστρατεύσαντας πρότερον τοῦ τυράννου διασκεψάμενος, σὺν πλήθει μὲν θεῶν τὴν παράταξιν πεποιημένους, αἰσχροὺς δὲ τέλος ὑπομείναντας· ὁ μὲν γὰρ αὐτῶν σὺν αἰσχύνη τῆς συμβολῆς ἀπρακτοὺς ἀνεχώρει, ὁ δὲ καὶ μέσοις αὐτοῖς τοῖς
- 2540 στρατεύμασι κατασφαγεῖς, πάρεργον ἐγένετο θανάτου· ταῦτα οὖν πάντα συναγαγὼν τῇ διανοίᾳ, τὸ μὲν περὶ τοὺς μὴδὲν ὄντας θεοὺς ματαιάζειν, καὶ μετὰ τοσοῦτον ἔλεγχον ἀποπλανᾶσθαι, μωρίας ἔργον ὑπελάμβανε, τὸν δὲ πατῶν τιμῶν μόνον ᾤετο δεῖν θεόν.
- Ἀνεκαλεῖτο δὴτα ἐν εὐχαῖς τοῦτον ἀντιβολῶν καὶ ποτνιῶμενος, φῆναι αὐτῷ ἑαυτὸν ὅστις εἶη, καὶ τὴν ἑαυτοῦ δεξιὰν τοῖς προκειμένοις ἐπορέξει. Εὐχομένῳ δὲ ταῦτα καὶ λιπαρῶς ἱκετεύοντι τῷ βασιλεῖ, θεοσημεῖα τις ἐπιφαίνεται παραδοξοτάτη· ἦν τάχα μὲν ἄλλου λέγοντος, οὐ ῥᾶδιον ἦν ἀποδέξασθαι, αὐτοῦ δὲ τοῦ νικητοῦ βασιλέως, τοῖς τὴν γραφὴν διηγούμενοις ἡμῖν μακροῖς ὕστερον χρόνοις, ὅτε ἡξιώθημεν τῆς αὐτοῦ γνώσεώς τε καὶ ὁμιλίας, ἐξαγγείλαντος ὄρκους, τε πιστωσαμένου τὸν λόγον, τίς ἂν ἀμφιβάλῃ μὴ οὐχὶ
- 2550 πιστεῦσαι τῷ διηγήματι; μάλισθ' ὅτε καὶ ὁ μετὰ ταῦτα χρόνος ἀληθῆς τῷ λόγῳ παρέσχε τὴν μαρτυρίαν. Ἀμφὶ μεσημβρινὰς ἡλίου ὥρας, ἡδη τῆς ἡμέρας ἀποκλινούσης, αὐτοῖς ὀφθαλμοῖς ἰδεῖν ἔφη ἐν αὐτῷ οὐρανῷ ὑπερκείμενον τοῦ ἡλίου σταυροῦ τρόπαιον, ἐκ φωτὸς συνιστάμενον, γραφὴν τε αὐτῷ συνῆφθαι λέγουσαν· τούτῳ νίκα. Θάμβος δ' ἐπὶ τῷ θεάματι κρατῆσαι αὐτόν τε καὶ τὸ στρατιωτικὸν ἅπαν, ὃ δὴ στελλομένῳ ποι πορείαν συνείπετό τε
- 2555 καὶ θεωρὸν ἐγίνετο τοῦ θαύματος.
- Καὶ δὴ διαπορεῖν πρὸς ἑαυτὸν ἔλεγε, τί ποτε εἶη τὸ φάσμα. Ἐνθυμουμένῳ δ' αὐτῷ καὶ ἐπὶ πολὺ λογιζομένῳ νῦξ ἐπῆει καταλαβοῦσα· ἐνταῦθα δὴ ὑπνοῦντι αὐτῷ, τὸν Χριστὸν τοῦ θεοῦ σὺν τῷ φανέντι κατ' οὐρανὸν σημείῳ ὀφθῆναι τε καὶ παρακελεύεσθαι, μίμημα ποιησάμενον τοῦ κατ' οὐρανὸν ὀφθέντος σημείου, τούτῳ πρὸς τὰς τῶν πολεμίων συμβολὰς ἀλεξήματι χρῆσθαι.
- Ἄμα δ' ἡμέρᾳ διαναστὰς, τοῖς φίλοις ἐξηγόρευε τὸ ἀπόρρητον. Κάπειτα χρυσοῦ καὶ λίθων πολυτελῶν δημιουργοὺς συγκαλέσας, μέσος αὐτοὺς καθίζανει, καὶ τοῦ σημείου τὴν εἰκόνα φράζει, ἀπομιμεῖσθαι τε αὐτὴν χρυσῷ καὶ πολυτελέσι λίθοις διεκελεύετο· ὃ δὴ καὶ ἡμᾶς ὀφθαλμοῖς ποτε συνέβη παραλαβεῖν.
- Ἦν δὲ τοιῷδε σχήματι κατεσκευασμένον· ὑψηλὸν δόρυ χρυσῷ κατημφιεσμένον, κέρας εἶχεν ἐγκάρσιον, σταυροῦ σχήματι πεποιημένον· ἄνω δὲ πρὸς ἄκρῳ τοῦ παντὸς, στέφανος ἐκ λίθων πολυτελῶν καὶ χρυσοῦ συμπεπλεγμένους κατεστήρικτο, καθ' οὗ τῆς σωτηρίου ἐπηγορίας τὸ σύμβολον, δύο στοιχεῖα τὸ Χριστοῦ παραδηλοῦντα ὄνομα, διὰ τῶν πρώτων ὑπεσήμεαινον χαρακτῆρων, χιαζομένου τοῦ ρ κατὰ τὸ μεσαίτατον· ἃ δὴ καὶ κατὰ τοῦ κράνους φέρειν εἶωθε κὰν τοῖς μετὰ ταῦτα χρόνοις ὁ βασιλεὺς. Τοῦ δὲ πλαγίου κέρως, τοῦ κατὰ τὸ δόρυ πεπαρμένου, ὀθόνη τις ἐκκρεμῆς ἀπηώρητο, βασιλικὸν ὕφασμα ποικιλίᾳ
- 2570 συνημμένων πολυτελῶν λίθων, φωτὸς αὐγαῖς ἐξαστραπτόντων, καλυπτόμενον· σὺν πολλῷ τε καθυφασμένον χρυσῷ, ἀδιήγητόν τι χρῆμα τοῖς ὁρῶσι παρεῖχε τοῦ κάλλους. Τοῦτο μὲν οὖν τὸ φᾶρος τοῦ κέρως ἐξημμένον, σύμμετρον μήκους τε καὶ πλάτους περιγραφὴν ἀπελάμβανε, τὸ δ' ὀρθιον δόρυ, τῆς κάτω ἀρχῆς ἐπὶ πολὺ μηκυνόμενον, ἄνω μετέωρον ὑπὸ τῷ τοῦ σταυροῦ τροπαίῳ πρὸς αὐτοῖς ἄκροις τοῦ διαγραφέντος ὑφάσματος, τὴν τοῦ θεοφιλοῦς
- 2580 βασιλέως εἰκόνα χρυσῇν μέχρι στέρνων, τῶν τ' αὐτοῦ παίδων ὁμοίως ἔφερε. Τούτῳ μὲν οὖν τῷ σωτηρίῳ σημείῳ, πάσης ἀντικειμένης καὶ πολεμίας δυνάμεως ἀμυντηρίῳ διαπαντὸς

ἐχρήτο βασιλεύς, τῶν τε στρατοπέδων ἀπάντων ἡγεῖσθαι τοῦτου ὁμοιώματα, προσέτατεν.

2585 CHAPTER XXVII: That after reflecting on the Dawn fall of those who had worshiped Idols, he made Choice of Christianity.
BEING convinced, however, that he needed some more powerful aid than his military forces could afford him, on account of the wicked and magical enchantments which were so diligently practiced by the tyrant, he sought Divine assistance, deeming the possession of arms and a numerous soldiery of secondary importance, but believing the
2590 co-operating power of Deity invincible and not to be shaken. He considered, therefore, on what God he might rely for protection and assistance. While engaged in this inquiry, the thought occurred to him, that, of the many emperors who had preceded him, those who had rested their hopes in a multitude of gods, and served them with sacrifices and offerings, had in the first place been deceived by
2595 flattering predictions, and oracles which promised them all prosperity, and at last had met with an unhappy end, while not one of their gods had stood by to warn them of the impending wrath of heaven; while one alone who had pursued an entirely opposite course, who had condemned their error, and honored the one Supreme God during his whole life, had formal I him to be the Saviour and Protector of his empire, and the Giver of every good thing. Reflecting on this, and well weighing the fact that they
2600 who had trusted in many gods had also fallen by manifold forms of death, without leaving behind them either family or offspring, stock, name, or memorial among men: while the God of his father had given to him, on the other hand, manifestations of his power and very many tokens: and considering farther that those who had already
2605 taken arms against the tyrant, and had marched to the battle-field under the protection of a multitude of gods, had met with a dishonorable end (for one of them had shamefully retreated from the contest without ablow, and the other, being slain in the midst of his own troops, became, as it were, the mere sport of death); reviewing, I say, all these considerations, he judged it to be folly indeed to join
2610 in the idle worship of those who were no gods, and, after such convincing evidence, to err from the truth; and therefore felt it incumbent on him to honor his father's God alone.

CHAPTER XXVIII: How, while he was praying, God sent him a Vision of a Cross of Light
2615 in the Heavens at Mid-day, with an Inscription admonishing him to conquer by that. ACCORDINGLY he called on him with earnest prayer and supplications that he would reveal to him who he was, and stretch forth his right hand to help him in his present difficulties. And while he was thus praying with fervent entreaty, a most marvelous sign appeared to him from heaven, the account of which it might have been hard to
2620 believe had it been related by any other person. But since the victorious emperor himself long afterwards declared it to the writer of this history, when he was honored with his acquaintance and society, and confirmed his statement by an oath, who could hesitate to accredit the relation, especially since the testimony of after-
2625 time has established its truth? He said that about noon, when the day was already beginning to decline, he saw with his own eyes the trophy of a cross of light in the heavens, above the sun, and bearing the inscription, CONQUER BY THIS. At this sight he himself was struck with amazement, and his whole army also, which followed him on this expedition, and witnessed the miracle.

2630 CHAPTER XXIX: How the Christ of God appeared to him in his Sleep, and commanded him to use in his Wars a Standard made in the Form of the Cross.
HE said, moreover, that he doubted within himself what the import of this apparition could be. And while he continued to ponder and reason on its meaning, night suddenly came on; then in his sleep the Christ of God appeared to him with the same sign which
2635 he had seen in the heavens, and commanded him to make a likeness of that sign which he had seen in the heavens, and to use it as a safeguard in all engagements with his enemies.

CHAPTER XXX: The Making of the Standard of the Cross.
2640 AT dawn of day he arose, and communicated the marvel to his friends: and then, calling together the workers in gold and precious stones, he sat in the midst of them, and described to them the figure of the sign he had seen, bidding them represent it in gold and precious stones. And this representation I myself have had an opportunity of seeing.

2645 CHAPTER XXXI: A Description of the Standard of the Cross, which the Romans now call the Labarum.

NOW it was made in the following manner. A long spear, overlaid with gold, formed the figure of the cross by means of a transverse bar laid over it. On the top of the whole was fixed a wreath of gold and precious stones; and within this, the symbol of the Saviour's name, two letters indicating the name of Christ by means of its initial characters, the letter P being intersected by X in its centre: and these letters the emperor was in the habit of wearing on his helmet at a later period. From the cross-bar of the spear was suspended a cloth, a royal piece, covered with a profuse embroidery of most brilliant precious stones; and which, being also richly interlaced with gold, presented an indescribable degree of beauty to the beholder. This banner was of a square form, and the upright staff, whose lower section was of great length, bore a golden half-length portrait of the pious emperor and his children on its upper part, beneath the trophy of the cross, and immediately above the embroidered banner. The emperor constantly made use of this sign of salvation as a safeguard against every adverse and hostile power, and commanded that others similar to it should be carried at the head of all his armies.

CHAPTER XXXII: How Constantine received Instruction, and read the Sacred Scriptures. THESE things were done shortly afterwards. But at the time above specified, being struck with amazement at the extraordinary vision, and resolving to worship no other God save Him who had appeared to him, he sent for those who were acquainted with the mysteries of His doctrines, and inquired who that God was, and what was intended by the sign of the vision he had seen. They affirmed that He was God, the only begotten Son of the one and only God: that the sign which had appeared was the symbol of immortality, and the trophy of that victory over death which He had gained in time past when sojourning on earth. They taught him also the causes of His advent, and explained to him the true account of His incarnation. Thus he was instructed in these matters, and was impressed with wonder at the divine manifestation which had been presented to his sight. Comparing, therefore, the heavenly vision with the interpretation given, he found his judgment confirmed; and, in the persuasion that the knowledge of these things had been imparted to him by Divine teaching, he determined thenceforth to devote himself to the reading of the Inspired writings. Moreover, he made the priests of God his counselors, and deemed it incumbent on him to honor the God who had appeared to him with all devotion. And after this, being fortified by well-grounded hopes in Him, he hastened to quench the threatening fire of tyranny.

CHAPTER XXXIII: Of the Adulterous Conduct of Maxentius at Rome. FOR the who had tyrannically possessed himself of the imperial city, had proceeded to great lengths in impiety and wickedness, so as to venture without hesitation on every vile and impure action. For example: he would separate women from their husbands, and after a time send them back to them again, and these insults he offered not to men of mean or obscure condition, but to those who held the first places in the Roman senate. Moreover, though he shamefully dishonored almost numberless free women, he was unable to satisfy his ungoverned and intemperate desires. But when he assayed to corrupt Christian women also, he could no longer secure success to his designs, since they chose rather to submit their lives to death than yield their persons to be defiled by him.

CHAPTER XXXIV: How the Wife of a Prefect slew herself for Chastity's Sake. NOW a certain woman, wife of one of the senators who held the authority of prefect, when she understood that those who ministered to the tyrant in such matters were standing before her house (she was a Christian), and knew that her husband through fear had bidden them take her and lead her away, begged a short space of time for arraying herself in her usual dress, and entered her chamber. There, being left alone, she sheathed a sword in her own breast, and immediately expired, leaving indeed her dead body to the procurers, but declaring to all mankind, both to present and future generations, by an act which spoke louder than any words, that the chastity for which Christians are famed is the only thing which is invincible and indestructible. Such was the conduct displayed by this woman.

CHAPTER XXXV: Massacre of the Roman People by Maxentius. ALL men, therefore, both people and magistrates, whether of high or low degree, trembled through fear of him whose daring wickedness was such as I have described, and were oppressed by his grievous tyranny. Nay, though they submitted quietly, and endured this bitter servitude, still there was no escape from the tyrant's sanguinary

cruelty. For at one time, on some trifling pretense, he exposed the populace to be
 2715 slaughtered by his own body-guard; and countless multitudes of the Roman people were
 slain in the very midst of the city by the lances and weapons, not of Scythians or
 barbarians, but of their own fellow-citizens. And besides this, it is impossible to
 calculate the number of senators whose blood was shed with a view to the seizure of
 their respective estates, for at different times and on various fictitious charges,
 2720 multitudes of them suffered death.

CHAPTER XXXVI: Magic Arts of Maxentius against Constantine; and Famine at Rome.
 BUT the crowning point of the tyrant's wickedness was his having recourse to sorcery:
 sometimes for magic purposes ripping up women with child, at other times searching
 2725 into the bowels of new-born infants. He slew lions also, and practiced certain horrid
 arts for evoking demons, and averting the approaching war, hoping by these means to
 get the victory. In short, it is impossible to describe the manifold acts of
 oppression by which this tyrant of Rome enslaved his subjects: so that by this time
 they were reduced to the most extreme penury and want of necessary food, a scarcity
 2730 such as our contemporaries do not remember ever before to have existed at Rome.

CHAPTER XXXVII: Defeat of Maxentius's Armies in Italy.
 CONSTANTINE, however, filled with compassion on account of all these miseries, began
 to arm himself with all warlike preparation against the tyranny. Assuming therefore
 2735 the Supreme God as his patron, and invoking His Christ to be his preserver and aid,
 and setting the victorious trophy, the salutary symbol, in front of his soldiers and
 body-guard, he marched with his whole forces, trying to obtain again for the Romans
 the freedom they had inherited from their ancestors.
 And whereas, Maxentius, trusting more in his magic arts than in the affection of his
 2740 subjects, dared not even advance outside the city gates, but had guarded every place
 and district and city subject to his tyranny, with large bodies of soldiers, the
 emperor, confiding in the help of God, advanced against the first and second and
 third divisions of the tyrant's forces, defeated them all with ease at the first
 assault, and made his way into the very interior of Italy.

CHAPTER XXXVIII: Death of Maxentius on the Bridge of the Tiber.
 AND already he was approaching very near Rome itself, when, to save him from the
 necessity of fighting with all the Romans for the tyrant's sake, God himself drew the
 tyrant, as it were by secret cords, a long way outside the gates. And now those
 2750 miracles recorded in Holy Writ, which God of old wrought against the ungodly
 (discredited by most as fables, yet believed by the faithful), did he in every deed
 confirm to all alike, believers and unbelievers, who were eye-witnesses of the
 wonders. For as once in the days of Moses and the Hebrew nation, who were worshipers
 of God, "Pharaoh's chariots and his host hath he cast into the sea and his chosen
 2755 chariot-captains are drowned in the Red Sea," - so at this time Maxentius, and the
 soldiers and guards with him, "went down into the depths like stone," when, in his
 flight before the divinely-aided forces of Constantine, he essayed to cross the river
 which lay in his way, over which, making a strong bridge of boats, he had framed an
 engine of destruction, really against himself, but in the hope of ca-snaring thereby
 2760 him who was beloved by God. For his God stood by the one to protect him, while the
 other, godless, proved to be the miserable contriver of these secret devices to his
 own ruin. So that one might well say, "He hath made a pit, and digged it, and is
 fallen into the ditch which he made. His mischief shall return upon his own head, and
 his violence shall come down upon his own pate." Thus, in the present instance, under
 2765 divine direction, the machine erected on the bridge, with the ambuscade concealed
 therein, giving way unexpectedly before the appointed time, the bridge began to sink,
 and the boats with the men in them went bodily to the bottom. And first the wretch
 himself, then his armed attendants and guards, even as the sacred oracles had before
 described, "sank as lead in the mighty waters." So that they who thus obtained
 2770 victory from God might well, if not in the same words, yet in fact in the same spirit
 as the people of his great servant Moses, sing and speak as they did concerning the
 impious tyrant of old: "Let us sing unto the Lord, for he hath been glorified
 exceedingly: the horse and his rider hath he thrown into the sea. He is become my
 helper and my shield unto salvation." And again, "Who is like unto thee, O Lord,
 2775 among the gods? who is like thee, glorious in holiness, marvelous in praises, doing
 wonders?"

CHAPTER XXXIX: Constantine's Entry into Rome.
 HAVING then at this time sung these and suchlike praises to God, the Ruler of all and

- 2780 the Author of victory, after the example of his great servant Moses, Constantine entered the imperial city in triumph. And here the whole body of the senate, and others of rank and distinction in the city, freed as it were from the restraint of a prison, along with the whole Roman populace, their countenances expressive of the gladness of their hearts, received him with acclamations and abounding joy; men, 2785 women, and children, with countless multitudes of servants, greeting him as deliverer, preserver, and benefactor, with incessant shouts. But he, being possessed of inward piety toward God, was neither rendered arrogant by these plaudits, nor uplifted by the praises he heard: but, being sensible that he had received help from God, he immediately rendered a thanksgiving to him as the Author of his victory.
- 2790 CHAPTER XL: Of the Statue of Constantine holding a Cross, and its Inscription. MOREOVER, by loud proclamation and monumental inscriptions he made known to all men the salutary symbol, setting up this great trophy of victory over his enemies in the midst of the imperial city, and expressly causing it to be engraved in indelible 2795 characters, that the salutary symbol was the safeguard of the Roman government and of the entire empire. Accordingly, he immediately ordered a lofty spear in the figure of a cross to be placed beneath the hand of a statue representing himself, in the most frequented part of Rome, and the following inscription to be engraved on it in the Latin language: BY VIRTUE OF THIS SALUTARY SIGN, WHICH IS THE TRUE TEST OF VALOR, I 2800 HAVE PRESERVED AND LIBERATED YOUR CITY FROM THE YOKE OF TYRANNY. I HAVE ALSO SET AT LIBERTY THE ROMAN SENATE AND PEOPLE, AND RESTORED THEM TO THEIR ANCIENT DISTINCTION AND SPLENDOR.
- CHAPTER XLI: Rejoicings throughout the Provinces; and Constantine's Acts of Grace. 2805 THUS the pious emperor, glorying in the confession of the victorious cross, proclaimed the Son of God to the Romans with great boldness of testimony. And the inhabitants of the city, one and all, senate and people, reviving, as it were, from the pressure of a bitter and tyrannical domination, seemed to enjoy purer rays of light, and to be born again into a fresh and new life. All the nations, too, as far 2810 as the limit of the western ocean, being set free from the calamities which had heretofore beset them, and gladdened by joyous festivals, ceased not to praise him as the victorious, the pious, the common benefactor: all, indeed, with one voice and one mouth, declared that Constantine had appeared by the grace of God as a general blessing to mankind. The imperial edict also was everywhere published, whereby those 2815 who had been wrongfully deprived of their estates were permitted again to enjoy their own, while those who had unjustly suffered exile were recalled to their homes. Moreover, he freed from imprisonment, and from every kind of danger and fear, those who, by reason of the tyrant's cruelty, had been subject to these sufferings.
- 2820 CHAPTER XLII: The Honors conferred upon Bishops, and the Building of Churches. THE emperor also personally inviting the society of God's ministers, distinguished them with the highest possible respect and honor, showing them favor in deed and word as persons consecrated to the service of his God. Accordingly, they were admitted to his table, though mean in their attire and outward appearance; yet not so in his 2825 estimation, since he thought he saw not the man as seen by the vulgar eye, but the God in him. He made them also his companions in travel, believing that He whose servants they were would thus help him. Besides this, he gave from his own private resources costly benefactions to the churches of God, both enlarging and heightening the sacred edifices, and embellishing the august sanctuaries of the church with 2830 abundant offerings.
- CHAPTER XLIII: Constantine's Liberality to the Poor. HE likewise distributed money largely to those who were in need, and besides these showing himself philanthropist and benefactor even to the heathen, who had no claim 2835 on him; and even for the beggars in the forum, miserable and shiftless, he provided, not with money only, or necessary food, but also decent clothing. But in the case of those who had once been prosperous, and had experienced a reverse of circumstances, his aid was still more lavishly bestowed. On such persons, in a truly royal spirit, he conferred magnificent benefactions; giving grants of land to some, and honoring 2840 others with various dignities. Orphans of the unfortunate he cared for as a father, while he relieved the destitution of widows, and cared for them with special solicitude. Nay, he even gave virgins, left unprotected by their parents' death, in marriage to wealthy men with whom he was personally acquainted. But this he did after first bestowing on the brides such portions as it was fitting they should bring to 2845 the communion of marriage. In short, as the sun, when he rises upon the earth,

liberally imparts his rays of light to all, so did Constantine, proceeding at early dawn from the imperial palace, and rising as it were with the heavenly luminary, impart the rays of his own beneficence to all who came into his presence. It was scarcely possible to be near him without receiving some benefit, nor did it ever happen that any who had expected to obtain his assistance were disappointed in their hope.

CHAPTER XLIV: How he was present at the Synods of Bishops.

SUCH, then, was his general character towards all. But he exercised a peculiar care over the church of God: and whereas, in the several provinces there were some who differed from each other in judgment, he, like some general bishop constituted by God, convened synods of his ministers. Nor did he disdain to be present and sit with them in their assembly, but bore a share in their deliberations, ministering to all that pertained to the peace of God. He took his seat, too, in the midst of them, as an individual amongst many, dismissing his guards and soldiers, and all whose duty it was to defend his person; but protected by the fear of God, and surrounded by the guardianship of his faithful friends. Those whom he saw inclined to a sound judgment, and exhibiting a calm and conciliatory temper, received his high approbation, for he evidently delighted in a general harmony of sentiment; while he regarded the unyielding wills aversion.

CHAPTER XLV: His Forbearance with Unreasonable Men.

MOREOVER he endured with patience some who were exasperated against himself, directing them in mild and gentle terms to control themselves, and not be turbulent. And some of these respected his admonitions, and desisted; but as to those who proved incapable of sound judgment, he left them entirely at the disposal of God, and never himself desired harsh measures against any one. Hence it naturally happened that the disaffected in Africa reached such a pitch of violence as even to venture on overt acts of audacity; some evil spirit, as it seems probable, being jealous of the present great prosperity, and impelling these men to atrocious deeds, that he might excite the emperor's anger against them. He gained nothing, however, by this malicious conduct; for the emperor laughed at these proceedings, and declared their origin to be from the evil one; inasmuch as these were not the actions of sober persons, but of lunatics or demoniacs; who should be pitied rather than punished; since to punish madmen is as great folly as to sympathize with their condition is supreme philanthropy.

CHAPTER XLVI: Victories over the Barbarians.

THUS the emperor in all his actions honored God, the Controller of all things, and exercised an unwearied oversight over His churches. And God requited him, by subduing all barbarous nations under his feet, so that he was able everywhere to raise trophies over his enemies: and He proclaimed him as conqueror to all mankind, and made him a terror to his adversaries: not indeed that this was his natural character, since he was rather the meekest, and gentlest, and most benevolent of men.

CHAPTER XLVII: Death of Maximin, who had attempted a Conspiracy, and of Others whom Constantine detected by Divine Revelation.

WHILE he was thus engaged, the second of those who had resigned the throne, being detected in a treasonable conspiracy, suffered a most ignominious death. He was the first whose pictures, statues, and all similar marks of honor and distinction were everywhere destroyed, on the ground of his crimes and impiety. After him others also of the same family were discovered in the act of forming secret plots against the emperor; all their intentions being miraculously revealed by God through visions to His servant.

For he frequently vouchsafed to him manifestations of himself, the Divine presence appearing to him in a most marvelous manner, and according to him manifold intimations of future events. Indeed, it is impossible to express in words the indescribable wonders of Divine grace which God was pleased to vouchsafe to His servant. Surrounded by these, he passed the rest of his life in security, rejoicing in the affection of his subjects, rejoicing too because he saw all beneath his government leading contented lives; but above all delighted at the flourishing condition of the churches of God.

CHAPTER XLVIII: Celebration of Constantine's Decennalia.

WHILE he was thus circumstanced, he completed the tenth year of his reign. On this occasion he ordered the celebration of general festivals, and offered prayers of

thanksgiving to God, the King of all, as sacrifices without flame or smoke. And from this employment he derived much pleasure: not so from the tidings he received of the ravages committed in the Eastern provinces.

CHAPTER XLIX: How Licinius oppressed the East.

FOR he was informed that in that quarter a certain savage beast was besetting both the church of God and the other inhabitants of the provinces, owing, as it were, to the efforts of the evil spirit to produce effects quite contrary to the deeds of the pious emperor: so that the Roman empire, divided into two parts, seemed to all men to resemble night and day; since darkness overspread the provinces of the East, while the brightest day illumined the inhabitants of the other portion. And whereas the latter were receiving manifold blessings at the hand of God, the sight of these blessings proved intolerable to that envy which hates all good, as well as to the tyrant who afflicted the other division of the empire; and who, notwithstanding that his government was prospering, and he had been honored by a marriage connection with so great an emperor as Constantine, yet cared not to follow the steps of that pious prince, but strove rather to imitate the evil purposes and practice of the impious; and chose to adopt the course of those whose ignominious end he had seen with his own eyes, rather than to maintain amicable relations with him who was his superior.

CHAPTER L: How Licinius attempted a Conspiracy against Constantine.

ACCORDINGLY he engaged in an implacable war against his benefactor, altogether regardless of the laws of friendship, the obligation of oaths, the ties of kindred, and already existing treaties. For the most benignant emperor had given him a proof of sincere affection in bestowing on him the hand of his sister, thus granting him the privilege of a place in family relationship and his own ancient imperial descent, and investing him also with the rank and dignity of his colleague in the empire. But the other took the very opposite course, employing himself in machinations against his superior, and devising various means to repay his benefactor with injuries. At first, pretending friendship, he did all things by guile and treachery, expecting thus to succeed in concealing his designs; but God enabled his servant to detect the schemes thus devised in darkness. Being discovered, however, in his first attempts, he had recourse to fresh frauds; at one time pretending friendship, at another claiming the protection of solemn treaties. Then suddenly violating every engagement, and again beseeching pardon by embassies, yet after all shamefully violating his word, he at last declared open war, and with desperate infatuation resolved thenceforward to carry arms against God himself, whose worshiper he knew the emperor to be.

CHAPTER LI: Intrigues of Licinius against the Bishops, and his Prohibition of Synods.

AND at first he made secret inquiry respecting the ministers of God subject to his dominion, who had never, indeed, in any respect offended against his government, in order to bring false accusations against them. And when he found no ground of accusation, and had no real ground of objection against them, he next enacted a law, to the effect that the bishops should never on any account hold communication with each other, nor should any one of them absent himself on a visit to a neighboring church; nor, lastly, should the holding of synods, or councils for the consideration of affairs of common interest, be permitted. Now this was clearly a pretext for displaying his malice against us. For we were compelled either to violate the law, and thus be amenable to punishment, or else, by compliance with its injunctions, to nullify the statutes of the Church; inasmuch as it is impossible to bring important questions to a satisfactory adjustment, except by means of synods. In other cases also this God-hater, being determined to act contrary to the God-loving prince, enacted such things. For whereas the one assembled the priests of God in order to honor them, and to promote peace and unity of judgment; the other, whose object it was to destroy everything that was good, used all his endeavors to destroy the general harmony.

CHAPTER LII: Banishment of the Christians, and Confiscation of their Property.

AND whereas Constantine, the friend of God, had granted to His worshipers freedom of access to the imperial palaces; this enemy of God, in a spirit the very reverse of this, expelled thence all Christians subject to his authority. He banished those who had proved themselves his most faithful and devoted servants, and compelled others, on whom he had himself conferred honor and distinction as a reward for their former eminent services, to the performance of menial offices as slaves to others; and at length, being bent on seizing the property of all as a windfall for himself, he even

threatened with death those who professed the Saviour's name. Moreover being himself of a nature hopelessly debased by sensuality, and degraded by the continual practice of adultery and other shameless vices, he assumed his own worthless character as a specimen of human nature generally, and denied that the virtue of chastity and continence existed among men.

CHAPTER LIII: Edict that Women should not meet with the Men in the Churches. ACCORDINGLY he passed a second law, which enjoined that men should not appear in company with women in the houses of prayer, and forbade women to attend the sacred schools of virtue, or to receive instruction from the bishops, directing the appointment of women to be teachers of their own sex. These regulations being received with general ridicule, he devised other means for effecting the ruin of the churches. He ordered that the usual congregations of the people should be held in the open country outside the gates, alleging that the open air without the city was far more suitable for a multitude than the houses of prayer within the walls.

CHAPTER LIV: That those who refuse to sacrifice are to be dismissed from Military Service, and those in Prison not to be fed. FAILING, however, to obtain obedience in this respect also, at length he threw off the mask, and gave orders that those who held military commissions in the several cities of the empire should be deprived of their respective commands, in case of their refusal to offer sacrifices to the demons. Accordingly the forces of the authorities in every province suffered the loss of those who worshiped God; and he too who had decreed this order suffered loss, in that he thus deprived himself of the prayers of pious men. And why should I still further mention how he directed that no one should obey the dictates of common humanity by distributing food to those who were pining in prisons, or should even pity the captives who perished with hunger; in short, that no one should perform a virtuous action, and that those whose natural feelings impelled them to sympathize with their fellow-creatures should be prohibited from doing them a single kindness? Truly this was the most utterly shameless and scandalous of all laws, and one which surpassed the worst depravity of human nature: a law which inflicted on those who showed mercy the same penalties as on those who were the objects of their compassion, and visited the exercise of mere humanity with the severest punishments.

CHAPTER LV: The Lawless Conduct and Covetousness of Licinius. SUCH were the ordinances of Licinius. But why should I enumerate his innovations respecting marriage, or those concerning the dying, whereby he presumed to abrogate the ancient and wisely established laws of the Romans, and to introduce certain barbarous and cruel institutions in their stead, inventing a thousand pretenses for oppressing his subjects? Hence it was that he devised a new method of measuring land, by which he reckoned the smallest portion at more than its actual dimensions, from an insatiable desire of acquisition. Hence too he registered the names of country residents who were now no more, and had long been numbered with the dead, procuring to himself by this expedient a shameful gain. His meanness was unlimited and his rapacity insatiable. So that when he had filled all his treasuries with gold, and silver, and boundless wealth, he bitterly bewailed his poverty, and suffered as it were the torments of Tantalus. But why should I mention how many innocent persons he punished with exile; how much property he confiscated; how many men of noble birth and estimable character he imprisoned, whose wives he handed over to be basely insulted by his profligate slaves, and to how many married women and virgins he himself offered violence, though already feeling the infirmities of age? I need not enlarge on these subjects, since the enormity of his last actions causes the former to appear trifling and of little moment.

CHAPTER LVI: At length he undertakes to raise a Persecution. FOR the final efforts of his fury appeared in his open hostility to the churches, and he directed his attacks against the bishops themselves, whom he regarded as his worst adversaries, bearing special enmity to those men whom the great and pious emperor treated as his friends. Accordingly he spent on us the utmost of his fury, and, being transported beyond the bounds of reason, he paused not to reflect on the example of those who had persecuted the Christians before him, nor of those whom he himself had been raised up to punish and destroy for their impious deeds: nor did he heed the facts of which he had been himself a witness, though he had seen with his own eyes the chief originator of these our calamities (whoever he was), smitten by the stroke of the Divine scourge.

3045 CHAPTER LVII: That Maximian, brought Low by a Fistulous Ulcer with Worms, issued an
Edict in Favor of the Christians.
FOR whereas this man had commenced the attack on the churches, and had been the first
to pollute his soul with the blood of just and godly men, a judgment from God
3050 overtook him, which at first affected his body, but eventually extended itself to his
soul. For suddenly an abscess appeared in the secret parts of his person, followed by
a deeply seated fistulous ulcer; and these diseases fastened with incurable virulence
on the intestines, which swarmed with a vast multitude of worms, and emitted a
3055 pestilential odor. Besides, his entire person had become loaded, through gluttonous
excess, with an enormous quantity of fat, and this, being now in a putrescent state,
is said to have presented to all who approached him an intolerable and dreadful
spectacle. Having, therefore, to struggle against such sufferings, at length, though
late, he came to a realization of his past crimes against the Church; and, confessing
his sins before God, he put a stop to the persecution of the Christians, and hastened
to issue imperial edicts and rescripts for the rebuilding of their churches, at the
3060 same time enjoining them to perform their customary worship, and to offer up prayers
on his behalf.

CHAPTER LVIII: That Maximian, who had persecuted the Christians, was compelled to
fly, and conceal himself in the Disguise of a Slave.
3065 SUCH was the punishment which he underwent who had commenced the persecution. He,
however, of whom we are now speaking, who had been a witness of these things, and
known them by his own actual experience, all at once banished the remembrance of them
from his mind, and reflected neither on the punishment of the first, nor the divine
judgment which had been executed on the second persecutor. The latter had indeed
3070 endeavored to outstrip his predecessor in the career of crime, and prided himself on
the invention of new tortures for us. Fire nor sword, nor piercing with nails, nor
yet wild beasts or the depths of the sea sufficed him. In addition to all these, he
discovered a new mode of punishment, and issued an edict directing that their
eyesight should be destroyed. So that numbers, not of men only, but of women and
3075 children, after being deprived of the sight of their eyes, and the use of the joints
of their feet, by mutilation or cauterization, were consigned in this condition to
the painful labor of the mines. Hence it was that this tyrant also was overtaken not
long after by the righteous judgment of God, at a time when, confiding in the aid of
the demons whom he worshiped as gods, and relying on the countless multitudes of his
3080 troops, he had ventured to engage in battle. For, feeling himself on that occasion
destitute of all hope in God, he threw from him the imperial dress which so ill
became him, hid himself with unmanly timidity in the crowd around him, and sought
safety in flight.
He afterwards lurked about the fields and villages in the habit of a slave, hoping he
3085 should thus be effectually concealed. He had not, however, eluded the mighty and all-
searching eye of God: for even while he was expecting to pass the residue of his days
in security, he fell prostrate, smitten by God's fiery dart, and his whole body
consumed by the stroke of Divine vengeance; so that all trace of the original
lineaments of his person was lost, and nothing remained to him but dry bones and a
3090 skeleton-like appearance.

CHAPTER LIX: That Maximian, blinded by Disease, issued an Edict in Favor of the
Christians.
AND still the stroke of God continued heavy upon him, so that his eyes protruded and
3095 fell from their sockets, leaving him quite blind: and thus he suffered, by a most
righteous retribution, the very same punishment which he had been the first to devise
for the martyrs of God. At length, however, surviving even these sufferings, he too
implored pardon of the God of the Christians, and confessed his impious fighting
against God: he too recanted, as the former persecutor had done; and by laws and
3100 ordinances explicitly acknowledged his error in worshiping those whom he had
accounted gods, declaring that he now knew, by positive experience, that the God of
the Christians was the only true God. These were facts which Licinius had not merely
received on the testimony of others, but of which he had himself had personal
knowledge: and yet, as though his understanding had been obscured by some dark cloud
3105 of error, persisted in the same evil course.

BOOK II.

CHAPTER I: Secret Persecution by Licinius, who causes Same Bishops to be put to Death
at Amasia of Pontus.

3110 IN this manner, he of whom we have spoken continued to rush headlong towards that
destruction which awaits the enemies of God; and once more, with a fatal emulation of
their example whose ruin he had himself witnessed as the consequence of their impious
conduct, he re-kindled the persecution of the Christians, like a long-extinguished
3115 fire, and fanned the unhallowed flame to a fiercer height than any who had gone
before him.

At first, indeed, though breathing fury and threatenings against God, like some
savage beast of prey, or some crooked and wriggling serpent, he dared not, from fear
of Constantine, openly level his attacks against the churches of God subject to his
dominion; but dissembled the virulence of his malice, and endeavored by secret and
3120 limited measures to compass the death of the bishops, the most eminent of whom he
found means to remove, through charges laid against them by the governors of the
several provinces. And the manner in which they suffered had in it something strange,
and hitherto unheard of. At all events, the barbarities perpetrated at Amasia of
Pontus surpassed every known excess of cruelty.

3125 CHAPTER II: Demolition of Churches, and Butchery of the Bishops.
FOR in that city some of the churches, for the second time since the commencement of
the persecutions, were leveled with the ground, and others were closed by the
governors of the several districts, in order to prevent any who frequented them from
3130 assembling together, or rendering due worship to God. For he by whose orders these
outrages were committed was too conscious of his own crimes to expect that these
services were performed with any view to his benefit, and was convinced that all we
did, and all our endeavors to obtain the favor of God, were on Constantine's behalf.
These servile governors then, feeling assured that such a course would be pleasing to
3135 the impious tyrant, subjected the most distinguished prelates of the churches to
capital punishment. Accordingly, men who had been guilty of no crime were led away,
without cause punished like murderers: and some suffered a new kind of death, having
their bodies cut piecemeal; and, after this cruel punishment, more horrible than any
named in tragedy, being cast, as a food to fishes, into the depths of the sea. The
3140 result of these horrors was again, as before, the flight of pious men, and once more
the fields and deserts received the worshipers of God. The tyrant, having thus far
succeeded in his object, he farther determined to raise a general persecution of the
Christians: and he would have accomplished his purpose, nor could anything have
hindered him from carrying his resolution into effect, had not he who defends his own
3145 anticipated the coming evil, and by his special guidance conducted his servant
Constantine to this part of the empire, causing him to shine forth as a brilliant
light in the midst of the darkness and gloomy night.

3150 CHAPTER III: How Constantine was stirred in Behalf of the Christians thus in Danger
of Persecution.
HE perceiving the evils of which he had heard to be no longer tolerable, took wise
counsel, and tempering the natural clemency of his character with a certain measure
of severity, hastened to succor those who were thus grievously oppressed. For he
judged that it would rightly be deemed a pious and holy task to secure, by the
3155 removal of an individual, the safety of the greater part of the human race. He judged
too, that if he listened to the dictates of clemency only, and bestowed his pity on
one utterly unworthy of it, this would, on the one hand, confer no real benefit on a
man whom nothing would induce to abandon his evil practices, and whose fury against
his subjects would only be likely to increase; while, on the other hand, those who
3160 suffered from his oppression would thus be forever deprived of all hope of
deliverance.

Influenced by these reflections, the emperor resolved without farther delay to extend
a protecting hand to those who had fallen into such an extremity of distress. He
accordingly made the usual warlike preparations, and assembled his whole forces, both
3165 of horse and foot. But before them all was carried the standard which I have before
described, as the symbol of his full confidence in God.

CHAPTER IV: That Constantine prepared himself for the War by Prayer: Licinius by the
Practice of Divination.
3170 HE took with him also the priests of God, feeling well assured that now, if ever, he
stood in need of the efficacy of prayer, and thinking it right that they should
constantly be near and about his person, as most trusty guardians of the soul.
Now, as soon as the tyrant understood that Constantine's victories over his enemies
were secured to him by no other means than the co-operation of God, and that the
3175 persons above alluded to were continually with him and about his person; and besides

this, that the symbol of the salutary passion preceded both the emperor himself and his whole army; he regarded these precautions with ridicule (as might be expected), at the same time mocking and reviling the emperor with blasphemous words.

On the other hand, he gathered round himself Egyptian diviners and soothsayers, with sorcerers and enchanters, and the priests and prophets of those whom he imagined to be gods. He then, after offering the sacrifices which he thought the occasion demanded, inquired how far he might reckon on a successful termination of the war. They replied with one voice, that he would unquestionably be victorious over his enemies, and triumphant in the war: and the oracles everywhere held out to him the same prospect in copious and elegant verses. The soothsayers certified him of favorable omens from the flight of birds; the priests declared the same to be indicated by the motion of the entrails of their victims. Elevated, therefore, by these fallacious assurances, he boldly advanced at the head of his army, and prepared for battle.

CHAPTER V: What Licinius, while sacrificing in a Grove, said concerning Idols, and concerning Christ.

AND when he was now ready to engage, he desired the most approved of his body-guard and his most valued friends to meet him in one of the places which they consider sacred. It was a well-watered and shady grove, and in it were several marble statues of those whom he accounted to be gods. After lighting tapers and performing the usual sacrifices in honor of these, he is said to have delivered the following speech:

"Friends and fellow-soldiers! These are our country's gods, and these we honor with a worship derived from our remotest ancestors. But he who leads the army now opposed to us has proved false to the religion of his forefathers, and adopted atheistic sentiments, honoring in his infatuation some strange and unheard-of Deity, with whose despicable standard he now disgraces his army, and confiding in whose aid he has taken up arms, and is now advancing, not so much against us as against those very gods whom he has forsaken. However, the present occasion shall prove which of us is mistaken in his judgment, and shall decide between our gods and those whom our adversaries profess to honor. For either it will declare the victory to be ours, and so most justly evince that our gods are the true saviours and helpers; or else, if this God of Constantine's, who comes we know not whence, shall prove superior to our deities (who are many, and in point of numbers, at least, have the advantage), let no one henceforth doubt which god he ought to worship, but attach himself at once to the superior power, and ascribe to him the honors of the victory. Suppose, then, this strange God, whom we now regard with ridicule, should really prove victorious; then indeed we must acknowledge and give him honor, and so bid a long farewell to those for whom we light our tapers in vain. But if our own gods triumph (as they undoubtedly will), then, as soon as we have secured the present victory, let us prosecute the war without delay against these despisers of the gods."

Such were the words he addressed to those then present, as reported not long after to the writer of this history by some who heard them spoken. And as soon as he had concluded his speech, he gave orders to his forces to commence the attack.

CHAPTER VI: An Apparition seen in the Cities subject to Licinius, as of Constantine's Troops passing through them.

WHILE these things were taking place a supernatural appearance is said to have been observed in the cities subject to the tyrant's rule. Different detachments of Constantine's army seemed to present themselves to the view, marching at noonday through these cities, as though they had obtained the victory. In reality, not a single soldier was anywhere present at the time, and yet this appearance was seen through the agency of a divine and superior power, and foreshadowed what was shortly coming to pass. For as soon as the armies were ready to engage, he who had broken through the ties of friendly alliance was the first to commence the battle; on which Constantine, calling on the name of "God the Supreme Saviour," and giving this as the watchword to his soldiers, overcame him in this first conflict: and not long after in a second battle he gained a still more important and decisive victory, the salutary trophy preceding the ranks of his army.

CHAPTER VII: That Victory everywhere followed the Presence of the Standard of the Cross in Battle.

INDEED, wherever this appeared, the enemy soon fled before his victorious troops. And the emperor perceiving this, whenever he saw any part of his forces hard pressed, gave orders that the salutary trophy should be moved in that direction, like some triumphant charm against disasters: at which the combatants were divinely inspired,

as it were, with fresh strength and courage, and immediate victory was the result.

CHAPTER VIII: That Fifty Men were selected to carry the Cross.

3245 ACCORDINGLY, he selected those of his bodyguard who were most distinguished for
personal strength, valor, and piety, and intrusted them with the sole care and
defense of the standard. There were thus no less than fifty men whose only duty was
3250 to surround and vigilantly defend the standard, which they carried each in turn on
their shoulders. These circumstances were related to the writer of this narrative by
the emperor himself in his leisure moments, long after the occurrence of the events:
and he added another incident well worthy of being recorded.

CHAPTER IX: That One of the Cross-bearers, who fled from his Post, was slain: while
Another, who faithfully stood his Ground, was preserved.

3255 FOR he said that once, during the very heat of an engagement, a sudden tumult and
panic attacked his army, which threw the soldier who then bore the standard into an
agony of fear, so that he handed it over to another, in order to secure his own
escape from the battle. As soon, however, as his comrade had received it, and he had
withdrawn, and resigned all charge of the standard, he was struck in the belly by a
3260 dart, which took his life. Thus he paid the penalty of his cowardice and
unfaithfulness, and lay dead on the spot: but the other, who had taken his place as
the bearer of the salutary standard, found it to be the safeguard of his life. For
though he was assailed by a continual shower of darts, the bearer remained unhurt,
the staff of the standard receiving every weapon. It was indeed a truly marvelous
3265 circumstance, that the enemies' darts all fell within and remained in the slender
circumference of this spear, and thus saved the standard-bearer from death; so that
none of those engaged in this service ever received a wound.
This story is none of mine, but for this, too, I am indebted to the emperor's own
authority, who related it in my hearing along with other matters. And now, having
3270 thus through the power of God secured these first victories, he put his forces in
motion and continued his onward march.

CHAPTER X: Furious Battles, and Constantine's Victories.

3275 THE van, however, of the enemy, unable to resist the emperor's first assault, threw
down their arms, and prostrated themselves at his feet. All these he spared,
rejoicing to save human life. But there were others who still continued in arms, and
engaged in battle. These the emperor endeavored to conciliate by friendly overtures,
but when these were not accepted he ordered his army to commence the attack. On this
3280 they immediately turned and betook themselves to flight; and some were overtaken and
slain according to the laws of war, while others fell on each other in the confusion
of their flight, and perished by the swords of their comrades.

CHAPTER XI: Flight, and Magic Arts of Licinius.

3285 IN these circumstances their commander, finding himself bereft of the aid of his
followers, having lost his lately numerous array, both of regular and allied forces,
having proved, too, by experience, how vain his confidence had been in those whom he
thought to be gods, ignominiously took to flight, by which indeed he effected his
escape, and secured his personal safety, for the pious emperor had forbidden his
3290 soldiers to follow him too closely, and thus allowed him an opportunity for escape.
And this he did in the hope that he might hereafter, on conviction of the desperate
state of his affairs, be induced to abandon his insane and presumptuous ambition, and
return to sounder reason. So Constantine, in his excessive humanity, thought and was
willing patiently to bear past injuries, and extend his forgiveness to one who so ill
deserved it; but Licinius, far from renouncing his evil practices, still added crime
3295 to crime, and ventured on more daring atrocities than ever. Nay, once more tampering
with the detestable arts of magic, he again was presumptuous: so that it might well
be said of him, as it was of the Egyptian tyrant of old, that God had hardened his
heart.

3300 CHAPTER XII: How Constantine, after praying in his Tabernacle, obtained the Victory.
BUT while Licinius, giving himself up to these impieties, rushed blindly towards the
gulf of destruction, the emperor on the other hand, when he saw that he must meet his
enemies in a second battle, devoted the intervening time to his Saviour. He pitched
the tabernacle of the cross outside and at a distance from his camp, and there passed
3305 his time in a pure and holy manner, offering up prayers to God; following thus the
example of his ancient prophet, of whom the sacred oracles testify, that he pitched
the tabernacle without the camp. He was attended only by a few, whose faith and pious

devotion he highly esteemed. And this custom he continued to observe whenever he meditated an engagement with the enemy. For he was deliberate in his measures, the better to insure safety, and desired in everything to be directed by divine counsel. And making earnest supplications to God, he was always honored after a little with a manifestation of his presence. And then, as if moved by a divine impulse, he would rush from the tabernacle, and suddenly give orders to his army to move at once without delay, and on the instant to draw their swords. On this they would immediately commence the attack, fight vigorously, so as with incredible celerity to secure the victory, and raise trophies of victory over their enemies.

CHAPTER XIII: His Humane Treatment of Prisoners.

THUS the emperor and his army had long been accustomed to act, whenever there was a prospect of an engagement; for his God was ever present to his thoughts, and he desired to do everything according to his will, and conscientiously to avoid any wanton sacrifice of human life. He was anxious thus for the preservation not only of his own subjects, but even of his enemies. Accordingly he directed his victorious troops to spare the lives of their prisoners, admonishing them, as human beings, not to forget the claims of their common nature. And whenever he saw the passions of his soldiery excited beyond control, he repressed their fury by a largess of money, rewarding every man who saved the life of an enemy with a certain weight of gold. And the emperor's own sagacity led him to discover this inducement to spare human life, so that great numbers even of the barbarians were thus saved, and owed their lives to the emperor's gold.

CHAPTER XIV: A Farther Mention of his Prayers in the Tabernacle.

NOW these, and a thousand such acts as these, were familiarly and habitually done by the emperor. And on the present occasion he retired, as his custom was before battle, to the privacy of his tabernacle, and there employed his time in prayer to God. Meanwhile he strictly abstained from anything like ease, or luxurious living, and disciplined himself by fasting and bodily mortification, imploring the favor of God by supplication and prayer, that he might obtain his concurrence and aid, and be ready to execute whatever he might be pleased to suggest to his thoughts. In short, he exercised a vigilant care over all alike, and interceded with God as much for the safety of his enemies as for that of his own subjects.

CHAPTER XV: Treacherous Friendship, and Idolatrous Practices of Licinius.

AND inasmuch as he who had lately fled before him now dissembled his real sentiments, and again petitioned for a renewal of friendship and alliance, the emperor thought fit, on certain conditions, to grant his request, in the hope that such a measure might be expedient, and generally advantageous to the community. Licinius, however, while he pretended a ready submission to the terms prescribed, and attested his sincerity by oaths, at this very time was secretly engaged in collecting a military force, and again meditated war and strife, inviting even the barbarians to join his standard, and he began also to look about him for other gods, having been deceived by those in whom he had hitherto trusted. And, without bestowing a thought on what he had himself publicly spoken on the subject of false deities, or choosing to acknowledge that God who had fought on the side of Constantine, he made himself ridiculous by seeking for a multitude of new gods.

CHAPTER XVI: How Licinius counseled his Soldiers not to attack the Standard of the Cross.

HAVING now learned by experience the Divine and mysterious power which resided in the salutary trophy, by means of which Constantine's army had become habituated to victory, he admonished his soldiers never to direct their attack against this standard, nor even incautiously to allow their eyes to rest upon it; assuring them that it possessed a terrible power, and was especially hostile to him; so that they would do well carefully to avoid any collision with it. And now, having given these directions, he prepared for a decisive conflict with him whose humanity prompted him still to hesitate, and to postpone the fate which he foresaw awaited his adversary. The enemy, however, confident in the aid of a multitude of gods, advanced to the attack with a powerful array of military force, preceded by certain images of the dead, and lifeless statues, as their defense. On the other side, the emperor, secure in the armor of godliness, opposed to the numbers of the enemy the salutary and life-giving sign, as at once a terror to the foe, and a protection from every harm. And for a while he paused, and preserved at first the attitude of forbearance, from respect to the treaty of peace to which he had given his sanction, that he might not

be the first to commence the contest.

3375

CHAPTER XVII: Constantine's Victory.

BUT as soon as he perceived that his adversaries persisted in their resolution, and were already drawing their swords, he gave free scope to his indignation, and by a single charge overthrew in a moment the entire body of the enemy, thus triumphing at once over them and their gods.

3380

CHAPTER XVIII: Death of Licinius, and Celebration of the Event.

HE then proceeded to deal with this adversary of God and his followers according to the laws of war, and consign them to fitting punishment. Accordingly the tyrant himself, and they whose counsels had supported him in his impiety, were together subjected to the just punishment of death. After this, those who had so lately been deceived by their vain confidence in false deities, acknowledged with unfeigned sincerity the God of Constantine, and openly professed their belief in him as the true and only God.

3385

3390

CHAPTER XIX: Rejoicings and Festivities.

AND now, the impious being thus removed, the sun once more shone brightly after the gloomy cloud of tyrannic power. Each separate portion of the Roman dominion became blended with the rest; the Eastern nations united with those of the West, and the whole body of the Roman empire was graced as it were by its head in the person of a single and supreme ruler, whose sole authority pervaded the whole. Now too the bright rays of the light of godliness gladdened the days of those who had heretofore been sitting in darkness and the shadow of death. Past sorrows were no more remembered, for all united in celebrating the praises of the victorious prince, and avowed their recognition of his preserver as the only true God. Thus he whose character shone with all the virtues of piety, the emperor Victor, for he had himself adopted this name as a most fitting appellation to express the victory which God had granted him over all who hated or opposed him, assumed the dominion of the East, and thus singly governed the Roman empire, re-united, as in former times, under one head. Thus, as he was the first to proclaim to all the sole sovereignty of God, so he himself, as sole sovereign of the Roman world, extended his authority over the whole human race. Every apprehension of those evils under the pressure of which all had suffered was now removed; men whose heads had drooped in sorrow now regarded each other with smiling countenances, and looks expressive of their inward joy. With processions and hymns of praise they first of all, as they were told, ascribed the supreme sovereignty to God, as in truth the King of kings; and then with continued acclamations rendered honor to the victorious emperor, and the Caesars, his most discreet and pious sons. The former afflictions were forgotten, and all past impieties forgiven: while with the enjoyment of present happiness was mingled the expectation of continued blessings in the future.

3415

CHAPTER XX: Constantine's Enactments in Favor of the Confessors.

MOREOVER, the emperor's edicts, permeated with his humane spirit, were published among us also, as they had been among the inhabitants of the other division of the empire; and his laws, which breathed a spirit of piety toward God, gave promise of manifold blessings, since they secured many advantages to his provincial subjects in every nation, and at the same time prescribed measures suited to the exigencies of the churches of God. For first of all they recalled those who, in consequence of their refusal to join in idol worship, had been driven to exile, or ejected from their homes by the governors of their respective provinces. In the next place, they relieved from their burdens those who for the same reason had been adjudged to serve in the civil courts, and ordained restitution to be made to any who had been deprived of property. They too, who in the time of trial had signalized themselves by fortitude of soul in the cause of God, and had therefore been condemned to the painful labor of the mines, or consigned to the solitude of islands, or compelled to toil in the public works, all received an immediate release from these burdens; while others, whose religious constancy had cost them the forfeiture of their military rank, were vindicated by the emperor's generosity from this dishonor: for he granted them the alternative either of resuming their rank, and enjoying their former privileges, or, in the event of their preferring a more settled life, of perpetual exemption from all service. Lastly, all who had been compelled by way of disgrace and insult to serve in the employments of women, he likewise freed with the rest.

3420

3425

3430

3435

CHAPTER XXI: His Laws concerning Martyrs, and concerning Ecclesiastical Property.

3440 SUCH were the benefits secured by the emperor's written mandates to the persons of those who had thus suffered for the faith, and his laws made ample provision for their property also.

3445 With regard to those holy martyrs of God who had laid down their lives in the confession of His name, he directed that their estates should be enjoyed by their nearest kindred; and, in default of any of these, that the right of inheritance should be vested in the churches. Farther, whatever property had been consigned to other parties from the treasury, whether in the way of sale or gift, together with that retained in the treasury itself, the generous mandate of the emperor directed should be restored to the original owners. Such benefits did his bounty, thus widely
3450 diffused, confer on the Church of God.

CHAPTER XXII: How he won the Favor of the People.

BUT his munificence bestowed still further and more numerous favors on the heathen peoples and the other nations of his empire. So that the inhabitants of our [Eastern]
3455 regions, who had heard of the privileges experienced in the opposite portion of the empire, and had blessed the fortunate recipients of them, and longed for the enjoyment of a similar lot for themselves, now with one consent proclaimed their own happiness, when they saw themselves in possession of all these blessings; and confessed that the appearance of such a monarch to the human race was indeed a
3460 marvelous event, and such as the world's history had never yet recorded. Such were their sentiments.

CHAPTER XXIII: That he declared God to be the Author of his Prosperity: and concerning his Rescripts.

3465 AND now that, through the powerful aid of God his Saviour, all nations owned their subjection to the emperor's authority, he openly proclaimed to all the name of Him to whose bounty he owed all his blessings, and declared that He, and not himself, was the author of his past victories. This declaration, written both in the Latin and Greek languages, he caused to be transmitted through every province of the empire.
3470 Now the excellence of his style of expression may be known from a perusal of his letters themselves which were two in number; one addressed to the churches of God; the other to the heathen population in the several cities of the empire. The latter of these I think it well to insert here as connected with my present subject, in order on the one hand that a copy of this document may be recorded as matter of
3475 history, and thus preserved to posterity, and on the other that it may serve to confirm the truth of my present narrative. It is taken from an authentic copy of the imperial statute in my own possession and the signature in the emperor's own handwriting attaches as it were the impress of truth to the statement I have made.

3480 CHAPTER XXIV: Law of Constantine respecting Piety towards God, and the Christian Religion.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS to the inhabitants of the province of Palestine.

3485 "To all who entertain just and sound sentiments respecting the character of the Supreme Being, it has long been most clearly evident, and beyond the possibility of doubt, how vast a difference there has ever been between those who maintain a careful observance of the hallowed duties of the Christian religion, and those who treat this religion with hostility or contempt. But at this present time, we may see by still more manifest proofs, and still more decisive instances, both how unreasonable it
3490 were to question this truth, and how mighty is the power of the Supreme God: since it appears that they who faithfully observe His holy laws, and shrink from the transgression of His commandments, are rewarded with abundant blessings, and are endued with well-grounded hope as well as ample power for the accomplishment of their undertakings. On the other hand, they who have cherished impious sentiments have
3495 experienced results corresponding to their evil choice. For how is it to be expected that any blessing would be obtained by one who neither desired to acknowledge nor duly to worship that God who is the source of all blessing? Indeed, facts themselves are a confirmation of what I say.

3500 CHAPTER XXV: An Illustration from Ancient Times.

"FOR certainly any one who will mentally retrace the course of events from the earliest period down to the present time, and will reflect on what has occurred in past ages, will find that all who have made justice and probity the basis of their conduct, have not only carried their undertakings to a successful issue, but have
3505 gathered, as it were, a store of sweet fruit as the produce of this pleasant root.

Again, whoever observes the career of those who have been bold in the practice of oppression or injustice; who have either directed their senseless fury against God himself, or have conceived no kindly feelings towards their fellow-men, but have dared to afflict them with exile, disgrace, confiscation, massacre, or other miseries of the like kind, and all this without any sense of compunction, or wish to direct thoughts to a better course, will find that such men have received a recompense proportioned to their crimes. And these are results which might naturally and reasonably be expected to ensue?

CHAPTER XXVI: Of Persecuted and Persecutors.

"FOR whoever have addressed themselves with integrity of purpose to any course of action, keeping the fear of God continually before their thoughts, and preserving an unwavering faith in him, without allowing present fears or dangers to outweigh their hope of future blessings - such persons, though for a season they may have experienced painful trials, have borne their afflictions lightly, being supported by the belief of greater rewards in store for them; and their character has acquired a brighter luster in proportion to the severity of their past suffer-rags. With regard, on the other hand, to those who have either dishonorably slighted the principles of justice, or refused to acknowledge the Supreme God themselves, and yet have dared to subject others who have faithfully maintained his worship to the most cruel insults and punishments; who have failed equally to recognize their own wretchedness in oppressing others on such grounds, and the happiness and blessing of those who preserved their devotion to God even in the midst of such sufferings: with regard, I say, to such men, many a time have their armies been slaughtered, many a time have they been put to flight; and their warlike preparations have ended in total ruin and defeat.

CHAPTER XXVII: How the Persecution became the Occasion of Calamities to the Aggressors.

"FROM the causes I have described, grievous wars arose, and destructive devastations. Hence followed a scarcity of the common necessities of life, and a crowd of consequent miseries: hence, too, the authors of these impieties have either met a disastrous death of extreme suffering, or have dragged out an ignominious existence, and confessed it to be worse than death itself, thus receiving as it were a measure of punishment proportioned to the heinousness of their crimes. For each experienced a degree of calamity according to the blind fury with which he had been led to combat, and as he thought, defeat the Divine will: so that they not only felt the pressure of the ills of this present life, but were tormented also by a most lively apprehension of punishment in the future world.

CHAPTER XXVIII: That God chose Constantine to be the Minister of Blessing.

"AND now, with such a mass of impiety oppressing the human race, and the commonwealth in danger of being utterly destroyed, as if by the agency of some pestilential disease, and therefore needing powerful and effectual aid; what was the relief, and what the remedy which the Divinity devised for these evils? (And by Divinity is meant the one who is alone and truly God, the possessor of almighty and eternal power: and surely it cannot be deemed arrogance in one who has received benefits from God, to acknowledge them in the loftiest terms of praise.) I myself, then, was the instrument whose services He chose, and esteemed suited for the accomplishment of his will. Accordingly, beginning at the remote Britannic ocean, and the regions where, according to the law of nature, the sun sinks beneath the horizon, through the aid of divine power I banished and utterly removed every form of evil which prevailed, in the hope that the human race, enlightened through my instrumentality, might be recalled to a due observance of the holy laws of God, and at the same time our most blessed faith might prosper under the guidance of his almighty hand.

CHAPTER XXIX: Constantine's Expressions of Piety towards God; and Praise of the Confessors.

"I said, under the guidance of his hand; for I would desire never to be forgetful of the gratitude due to his grace. Believing, therefore, that this most excellent service had been confided to me as a special gift, I proceeded as far as the regions of the East, which, being under the pressure of severer calamities, seemed to demand still more effectual remedies at my hands. At the same time I am most certainly persuaded that I myself owe my life, my every breath, in short, my very inmost and secret thoughts, entirely to the favor of the Supreme God. Now I am well aware that they who are sincere in the pursuit of the heavenly hope, and have fixed this hope in

heaven itself as the peculiar and predominant principle of their lives, have no need to depend on human favor, but rather have enjoyed higher honors in proportion as they have separated themselves from the inferior and evil things of this earthly
 3575 existence. Nevertheless I deem it incumbent on me to remove at once and most completely from all such persons the hard necessities laid upon them for a season, and the unjust inflictions under which they have suffered, though free from any guilt or just liability. For it would be strange indeed, that the fortitude and constancy of soul displayed by such men should be fully apparent during the reign of those
 3580 whose first object it was to persecute them on account of their devotion to God, and yet that the glory of their character should not be more bright and blessed, under the administration of a prince who is His servant.

CHAPTER XXX: A Law granting Release from Exile, from Service in the Courts, and from the Confiscation of Property.

"LET all therefore who have exchanged their country for a foreign land, because they would not abandon that reverence and faith toward God to which they had devoted themselves with their whole hearts, and have in consequence at different times been subject to the cruel sentence of the courts; together with any who have been enrolled
 3590 in the registers of the public courts though in time past exempt from such office let these, I say, now render thanks to God the Liberator of all, in that they are restored to their hereditary property, and their wonted tranquility. Let those also who have been despoiled of their goods, and have hitherto passed a wretched
 3595 existence, mourning under the loss of all that they possessed, once more be restored to their former homes, their families, and estates, and receive with joy the bountiful kindness of God.

CHAPTER XXXI: Release likewise granted to Exiles in the Islands.

"FURTHERMORE, it is our command that all those who have been detained in the islands against their will should receive the benefit of this present provision; in order that they who rill now have been surrounded by rugged mountains and the encircling barrier of the ocean, being now set free from that gloomy and desolate solitude, may fulfill their fondest wish by revisiting their dearest friends. Those, too, who have prolonged a miserable life in the midst of abject and wretched squalor, welcoming
 3605 their restoration as an unlooked-for gain, and discarding henceforth all anxious thoughts, may pass their lives with us in freedom from all fear. For that any one could live in a state of fear under our government, when we boast and believe ourselves to be the servants of God, would surely be a thing most extraordinary even to hear of, and quite incredible; and our mission is to rectify the errors of the
 3610 others.

CHAPTER XXXII: And to those ignominiously employed in the Mines and Public Works.

"AGAIN, with regard to those who have been condemned either to the grievous labor of the mines, or to service in the public works, let them enjoy the sweets of leisure in place of these long-continued toils, and henceforth lead a far easier life, and more accordant with the wishes of their hearts, exchanging the incessant hardships of their tasks for quiet relaxation. And if any have forfeited the common privilege of liberty, or have unhappily suffered dishonor, let them hasten back every one to the country of his nativity, and resume with becoming joy their former positions in
 3620 society, from which they have been as it were separated by long residence abroad.

CHAPTER XXXIII: Concerning those Confessors engaged in Military Service.

"ONCE more, with respect to those who had previously been preferred to any military distinction, of which they were afterwards deprived, for the cruel and unjust reason that they chose rather to acknowledge their allegiance to God than to retain the rank they held; we leave them perfect liberty of choice, either to occupy their former stations, should they be content again to engage in military service, or after an honorable discharge, to live in undisturbed tranquility. For it is fair and
 3630 consistent that men who have displayed such magnanimity and fortitude in meeting the perils to which they have been exposed, should be allowed the choice either of enjoying peaceful leisure, or resuming their former rank.

CHAPTER XXXIV: The Liberation of Free Persons condemned to labor in the Women's Apartments, or to Servitude.

"LASTLY, if any have wrongfully been deprived of the privileges of noble lineage, and subjected to a judicial sentence which has consigned them to the women's apartments and to the linen making, there to undergo a cruel and miserable labor, or reduced

them to servitude for the benefit of the public treasury, without any exemption on the ground of superior birth; let such persons, resuming the honors they had previously enjoyed, and their proper dignities, henceforward exult in the blessings of liberty, and lead a glad life. Let the free man, too, by some injustice and inhumanity, or even madness, made a slave, who has felt the sudden transition from liberty to bondage, and oftentimes bewailed his unwonted labors, return to his family once more a free man in virtue of this our ordinance, and seek those employments which befit a state of freedom; and let him dismiss from his remembrance those services which he found so oppressive, and which so ill became his condition.

CHAPTER XXXV: Of the Inheritance of the Property of Martyrs and Confessors, also of those who had suffered Banishment or Confiscation of Property.

"NOR must we omit to notice those estates of which individuals have been deprived on various pretenses. For if any of those who have engaged with dauntless and resolute determination in the noble and divine conflict of martyrdom have also been stripped of their fortunes; or if the same has been the lot of the confessors, who have won for themselves the hope of eternal treasures; or if the loss of property has befallen those who were driven from their native land because they would not yield to the persecutors, and betray their faith; lastly, if any who have escaped the sentence of death have yet been despoiled of their worldly goods; we ordain that the inheritances of all such persons be transferred to their nearest kindred. And whereas the laws expressly assign this right to those most nearly related, it will be easy to ascertain to whom these inheritances severally belong. And it is evidently reasonable that the succession in these cases should belong to those who would have stood in the place of nearest affinity, had the deceased experienced a natural death.

CHAPTER XXXVI: The Church is declared Heir of those who leave no Kindred; and the Free Gifts of such Persons Confirmed.

"BUT should there be no surviving relation to succeed in due course to the property of those above-mentioned, I mean the martyrs, or confessors, or those who for some such cause have been banished from their native land; in such cases we ordain that the church locally nearest in each instance shall succeed to the inheritance. And surely it will be no wrong to the departed that that church should be their heir, for whose sake they have endured every extremity of suffering. We think it necessary to add this also, that in case any of the above-mentioned persons have donated any part of their property in the way of free gift, possession of such property shall be assured, as is reasonable, to those who have thus received it.

CHAPTER XXXVII: Lands, Gardens, or Houses, but not Actual Produce from them, are to be given back.

"AND that there may be no obscurity in this our ordinance, but every one may readily apprehend its requirements, let all men hereby know that if they are now maintaining themselves in possession of a piece of land, or a house, or garden, or anything else which had appertained to the before-mentioned persons, it will be good and advantageous for them to acknowledge the fact, and make restitution with the least possible delay. On the other hand, although it should appear that some individuals have reaped abundant profits from this unjust possession, we do not consider that justice demands the restitution of such profits. They must, however, declare explicitly what amount of benefit they have thus derived, and from what sources, and entreat our pardon for this offense; in order that their past covetousness may in some measure be atoned for, and that the Supreme God may accept this compensation as a token of contrition, and be pleased graciously to pardon the sin.

CHAPTER XXXVIII: In what Manner Requests should be made for these.

"BUT it is possible that those who have become masters of such property (if it be right or possible to allow them such a title) will assure us by way of apology for their conduct, that it was not in their power to abstain from this appropriation at a time when a spectacle of misery in all its forms everywhere met the view; when men were cruelly driven from their homes, slaughtered without mercy, thrust forth without remorse: when the confiscation of the property of innocent persons was a common thing, and when persecutions and property seizures were unceasing. If any defend their conduct by such reasons as these, and still persist in their avaricious temper, they shall be made sensible that such a course will bring punishment on themselves, and all the more because this correction of evil is the very characteristic of our service to the Supreme God. So that it will henceforth be dangerous to retain what dire necessity may in time past have compelled men to take; especially because it is

3705 in any case incumbent on us to discourage covetous desires, both by persuasion, and by warning examples.

CHAPTER XXXIX: The Treasury must restore Lands, Gardens, and Houses to the Churches. "NOR shall the treasury itself, should it have any of the things we have spoken of, be permitted to keep them; but, without venturing as it were to raise its voice
3710 against the holy churches, it shall justly relinquish in their favor what it has for a time unjustly retained. We ordain, therefore, that all things whatsoever which shall appear righteously to belong to the churches, whether the property consist of houses or fields and gardens, or whatever the nature of it may be, shall be restored in their full value and integrity, and with undiminished right of possession.

3715 CHAPTER XL: The Tombs of Martyrs and the Cemeteries to be transferred to the Possession of the Churches. "AGAIN, with respect to those places which are honored in being the depositories of the remains of martyrs, and continue to be memorials of their glorious departure; how
3720 can we doubt that they rightly belong to the churches, or refrain from issuing our injunction to that effect? For surely there can be no better liberality, no labor more pleasing or profitable, than to be thus employed under the guidance of the Divine Spirit, in order that those things which have been appropriated on false pretenses by unjust and wicked men, may be restored, as justice demands, and once
3725 more secured to the holy churches.

CHAPTER XLI: Those who have purchased Property belonging to the Church, or received it as a Gift, are to restore it. "AND since it would be wrong in a provision intended to include all cases, to pass
3730 over those who have either procured any such property by right of purchase from the treasury, or have retained it when conveyed to them in the form of a gift; let all who have thus rashly indulged their insatiable thirst of gain be assured that, although by daring to make such purchases they have done all in their power to alienate our clemency from themselves, they shall nevertheless not fail of obtaining
3735 it, so far as is possible and consistent with propriety in each case. So much then is determined.

CHAPTER XLII: An Earnest Exhortation to worship God. "AND now, since it appears by the clearest and most convincing evidence, that the
3740 miseries which ere while oppressed the entire human race are now banished from every part of the world, through the power of Almighty God, and at the same time the counsel and aid which he is pleased on many occasions to administer through our agency; it remains for all, both individually and unitedly, to observe and seriously consider how great this power and how efficacious this grace are, which have
3745 annihilated and utterly destroyed this generation, as I may call them, of most wicked and evil men; have restored joy to the good, and diffused it over all countries; and now guarantee the fullest authority both to honor the Divine law as it should be honored, with all reverence, and pay due observance to those who have dedicated themselves to the service of that law. These rising as from some dark abyss and, with
3750 an enlightened knowledge of the present course of events, will henceforward render to its precepts that becoming reverence and honor which are consistent with their pious character.
Let this ordinance be published in our Eastern provinces."

3755 CHAPTER XLIII: How the Enactments of Constantine were carried into Effect. SUCH were the injunctions contained in the first letter which the emperor addressed to us. And the provisions of this enactment were speedily carried into effect, everything being conducted in a manner quite different from the atrocities which had but lately been daringly perpetrated during the cruel ascendancy of the tyrants.
3760 Those persons also who were legally entitled to it, received the benefit of the emperor's liberality.

CHAPTER XLIV: That he promoted Christians to Offices of Government, and forbade Gentiles in Such Stations to offer Sacrifice.
3765 AFTER this the emperor continued to address himself to matters of high importance, and first he sent governors to the several provinces, mostly such as were devoted to the saving faith; and if any appeared inclined to adhere to Gentile worship, he forbade them to offer sacrifice. This law applied also to those who surpassed the provincial governors in rank and dignity, and even to those who occupied the highest

- 3770 station, and held the authority of the Praetorian Praefecture. If they were Christians, they were free to act consistently with their profession; if otherwise, the law required them to abstain from idolatrous sacrifices.
- 3775 CHAPTER XLV: Statutes which forbade Sacrifice, and enjoined the Building of Churches. SOON after this, two laws were promulgated about the same time; one of which was intended to restrain the idolatrous abominations which in time past had been practiced in every city and country; and it provided that no one should erect images, or practice divination and other false and foolish arts, or offer sacrifice in any way. The other statute commanded the heightening of the oratories, and the
- 3780 enlargement in length and breadth of the churches of God; as though it were expected that, now the madness of polytheism was wholly removed, pretty nearly all mankind would henceforth attach themselves to the service of God. His own personal piety induced the emperor to devise and write these instructions to the governors of the several provinces: and the law farther admonished them not to spare the expenditure
- 3785 of money, but to draw supplies from the imperial treasury itself. Similar instructions were written also to the bishops of the several churches; and the emperor was pleased to transmit the same to myself, being the first letter which he personally addressed to me.
- 3790 CHAPTER XLVI: Constantine's Letter to Eusebius and Other Bishops, respecting the Building of Churches, with Instructions to repair the Old, and erect New Ones on a Larger Scale, with the Aid of the Provincial Governors.
- "VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Eusebius.
- 3795 "Forasmuch as the unholy and willful rule of tyranny has persecuted the servants of our Saviour until this present time, I believe and have fully satisfied myself, best beloved brother, that the buildings belonging to all the churches have either become ruinous through actual neglect, or have received inadequate attention from the dread of the violent spirit of the times.
- "But now, that liberty is restored, and that serpent driven from the administration
- 3800 of public affairs by the providence of the Supreme God, and our instrumentality, we trust that all can see the efficacy of the Divine power, and that they who through fear of persecution or through unbelief have fallen into any errors, will now acknowledge the true God, and adopt in future that course of life which is according to truth and rectitude. With respect, therefore, to the churches over which you
- 3805 yourself preside, as well as the bishops, presbyters, and deacons of other churches with whom you are acquainted, do you admonish all to be zealous in their attention to the buildings of the churches, and either to repair or enlarge those which at present exist, or, in cases of necessity, to erect new ones.
- "We also empower you, and the others through you, to demand what is needful for the
- 3810 work, both from the provincial governors and from the Praetorian Praefect. For they have received instructions to be most diligent in obedience to your Holiness's orders. God preserve you, beloved brother." A copy of this charge was transmitted throughout all the provinces to the bishops of the several churches: the provincial governors received directions accordingly, and the imperial statute was speedily
- 3815 carried into effect.
- CHAPTER XLVII: That he wrote a Letter in Condemnation of Idolatry.
- MOREOVER, the emperor, who continually made progress in piety towards God, dispatched an admonitory letter to the inhabitants of every province, respecting the error of
- 3820 idolatry into which his predecessors in power had fallen, in which he eloquently exhorts his subjects to acknowledge the Supreme God, and openly to profess their allegiance to his Christ as their Saviour. This letter also, which is in his own handwriting, I have judged it necessary to translate from the Latin for the present work, in order that we may hear, as it were, the voice the emperor himself uttering
- 3825 these sentiments in the audience of all mankind.
- CHAPTER XLVIII: Constantine's Edict to the People of the Provinces concerning the Error of Polytheism, commencing with Some General Remarks on Virtue and Vice.
- "VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to the people of the Eastern provinces.
- 3830 "Whatever is comprehended under the sovereign laws of nature, seems to convey to all men an adequate idea of the forethought and intelligence of the divine order. Nor can any, whose minds are directed in the true path of knowledge to the attainment of that end, entertain a doubt that the just perceptions of sound reason, as well as those of the natural vision itself, through the sole influence of genuine virtue, lead to the
- 3835 knowledge of God. Accordingly no wise man will ever be surprised when he sees the

mass of mankind influenced by opposite sentiments. For the beauty of virtue would be useless and unperceived, did not vice display in contrast with it the course of perversity and folly. Hence it is that the one is crowned with reward, while the most high God is himself the administrator of judgment to the other.

3840 "And now I will endeavor to lay before you all as explicitly as possible, the nature of my own hopes of future happiness.

CHAPTER XLIX: Concerning Constantine's Pious Father, and the Persecutors Diocletian and Maximian.

3845 "THE former emperors I have been accustomed to regard as those with whom I could have no sympathy, on account of the savage cruelty of their character. Indeed, my father was the only one who uniformly practiced the duties of humanity, and with admirable piety called for the blessing of God the Father on all his actions, but the rest, unsound in mind, were more zealous of cruel than gentle measures; and this
3850 disposition they indulged without restraint, and thus persecuted the true doctrine during the whole period of their reign. Nay, so violent did their malicious fury become, that in the midst of a profound peace, as regards both the religious and ordinary interests of men, they kindled, as it were, the flames of a civil war.

3855 CHAPTER L: That the Persecution originated an Account of the Oracle of Apollo, who, it was said, could not give Oracles because of "the Righteous Men."

"ABOUT that time it is said that Apollo spoke from a deep and gloomy cavern, and through the medium of no human voice, and declared that the righteous men on earth were a bar to his speaking the truth, and accordingly that the oracles from the
3860 tripod were fallacious. Hence it was that he suffered his tresses to droop in token of grief, and mourned the evils which the loss of the oracular spirit would entail on mankind. But let us mark the consequences of this.

3865 CHAPTER LI: That Constantine, when a Youth, heard from him who wrote the Persecution Edict that "the Righteous Men" were the Christians.

"I call now on thee, most high God, to witness that, when young, I heard him who at that time was chief among the Roman emperors, unhappy, truly unhappy as he was, and laboring under mental delusion, make earnest inquiry of his attendants as to who these righteous ones on earth were, and that one of the Pagan priests then present
3870 replied that they were doubtless the Christians. This answer he eagerly received, like some honeyed draught, and unsheathed the sword which was ordained for the punishment of crime, against those whose holiness was beyond reproach. Immediately, therefore, he issued those sanguinary edicts, traced, if I may so express myself, with a sword's point dipped in blood; at the same time commanding his judges to tax
3875 their ingenuity for the invention of new and more terrible punishments.

CHAPTER LII: The Manifold Forms of Torture and Punishment practiced against the Christians.

3880 "THEN, indeed, one might see with what arrogance those venerable worshipers of God were daily exposed, with continued and relentless cruelty, to outrages of the most grievous kind, and how that modesty of character which no enemy had ever treated with disrespect, became the mere sport of their infuriated fellow-citizens. Is there any punishment by fire, are there any tortures or forms of torment, which were not applied to all, without distinction of age or sex? Then, it may be truly said, the
3885 earth shed tears, the all-encircling compass of heaven mourned because of the pollution of blood; and the very light of day itself was darkened in grief at the spectacle.

CHAPTER LIII: That the Barbarians kindly received the Christians.

3890 "BUT what is the consequence of this? Why, the barbarians themselves may boast now of the contrast their conduct presents to these creel deeds; for they received and kept in gentlest captivity those who then fled from amongst us, and secured to them not merely safety from danger, but also the free exercise of their holy religion. And now
3895 the Roman people bear that lasting stain which the Christians, at that time driven from the Roman world, and taking refuge with the barbarians, have branded on them.

CHAPTER LIV: What Vengeance overtook those who on Account of the Oracle raised the Persecution.

3900 "BUT why need I longer dwell on these lamentable events, and the general sorrow which in consequence pervaded the world? The perpetrators of this dreadful guilt are now no more: they have experienced a miserable end, and are consigned to unceasing

punishment in the depths of the lower world. They encountered each other in civil strife, and have left neither name nor race behind. And surely this calamity would never have befallen them, had not that impious deliverance of the Pythian oracle exercised a delusive power over them.

CHAPTER LV: Constantine gives Glory to God, makes Grateful Acknowledgment of the Sign of the Cross, and prays for the Churches and People.

"AND now I beseech thee, most mighty God, to be merciful and gracious to thine Eastern nations, to thy people in these provinces, worn as they are by protracted miseries; and grant them healing through thy servant. Not without cause, O holy God, do I prefer this prayer to thee, the Lord of all. Under thy guidance have I devised and accomplished measures fraught with blessings: preceded by thy sacred sign I have led thy armies to victory: and still, on each occasion of public danger, I follow the same symbol of thy perfections while advancing to meet the foe. Therefore have I dedicated to thy service a soul duly attuned by love and fear. For thy name I truly love, while I regard with reverence that power of which thou hast given abundant proofs, to the confirmation and increase of my faith. I hasten, then, to devote all my powers to the restoration of thy most holy dwelling-place, which those profane and impious men have defiled by the contamination of violence.

CHAPTER LVI: He prays that All may be Christians, but compels None.

"MY own desire is, for the common good of the world and the advantage of all mankind, that thy people should enjoy a life of peace and undisturbed concord. Let those, therefore, who still delight in error, be made welcome to the same degree of peace and tranquility which they have who believe. For it may be that this restoration of equal privileges to all will prevail to lead them into the straight path. Let no one molest another, but let every one do as his soul desires. Only let men of sound judgment be assured of this, that those only can live a life of holiness and purity, whom thou callest to a reliance on thy holy laws. With regard to those who will hold themselves aloof from us, let them have, if they please, their temples of lies: we have the glorious edifice of thy truth, which thou hast given us as our native home. We pray, however, that they too may receive the same blessing, and thus experience that heartfelt joy which unity of sentiment inspires.

CHAPTER LVII: He gives Glory to God, who has given Light by his Son to those who were in Error.

"And truly our worship is no new or recent thing, but one which thou hast ordained for thine own due honor, from the time when, as we believe, this system of the universe was first established. And, although mankind have deeply fallen, and have been seduced by manifold errors, yet hast thou revealed a pure light in the person of thy Son, that the power of evil should not utterly prevail, and hast thus given testimony to all men concerning thyself.

CHAPTER LVIII: He glorifies him again for his Government of the Universe.

"THE truth of this is assured to us by thy works. It is thy power which removes our guilt, and makes us faithful. The sun and the moon have their settled course. The stars move in no uncertain orbits round this terrestrial globe. The revolution of the seasons recurs according to unerring laws. The solid fabric of the earth was established by thy word: the winds receive their impulse at appointed times; and the course of the waters continues with ceaseless flow, the ocean is circumscribed by an immovable barrier, and whatever is comprehended within the compass of earth and sea, is all contrived for wondrous and important ends.

"Were it not so, were not all regulated by the determination of thy will, so great a diversity, so manifold a division of power, would unquestionably have brought ruin on the whole race and its affairs. For those agencies which have maintained a mutual strife would thus have carried to a more deadly length that hostility against the human race which they even now exercise, though unseen by mortal eyes.

CHAPTER LIX: He gives Glory to God, as the Constant Teacher of Good.

"ABUNDANT thanks, most mighty God, and Lord of all, be rendered to thee, that, by so much as our nature becomes known from the diversified pursuits of man, by so much the more are the precepts of thy divine doctrine confirmed to those whose thoughts are directed aright, and who are sincerely devoted to true virtue. As for those who will not allow themselves to be cured of their error, let them not attribute this to any but themselves. For that remedy which is of sovereign and healing virtue is openly placed within the reach of all. Only let not any one inflict an injury on that

religion which experience itself testifies to be pure and undefiled. Henceforward, therefore, let us all enjoy in common the privilege placed within our reach, I mean the blessing of peace, endeavoring to keep our conscience pure from all that is contrary.

CHAPTER LX: An Admonition at the Close of the Edict, that No One should trouble his Neighbor.

"ONCE more, let none use that to the detriment of another which he may himself have received on conviction of its truth; but let every, one, if it be possible, apply what he has understood and known to the benefit of his neighbor; if otherwise, let him relinquish the attempt. For it is one thing voluntarily to undertake the conflict for immortality, another to compel others to do so from the fear of punishment.

"These are our words; and we have enlarged on these topics more than our ordinary clemency would have dictated, because we were unwilling to dissemble or be false to the true faith; and the more so, since we understand there are some who say that the rites of the heathen temples, and the power of darkness, have been entirely removed. We should indeed have earnestly recommended such removal to all men, were it not that the rebellious spirit of those wicked errors still continues obstinately fixed in the minds of some, so as to discourage the hope of any general restoration of mankind to the ways of truth."

CHAPTER LXI: How Controversies originated at Alexandria through Matters relating to Arius.

IN this manner the emperor, like a powerful herald of God, addressed himself by his own letter to all the provinces, at the same time warning his subjects against superstitious error, and encouraging them in the pursuit of true godliness. But in the midst of his joyful anticipations of the success of this measure, he received tidings of a most serious disturbance which had invaded the peace of the Church. This intelligence he heard with deep concern, and at once endeavored to devise a remedy for the evil. The origin of this disturbance may be thus described. The people of God were in a truly flourishing state, and abounding in the practice of good works. No terror from without assailed them, but a bright and most profound peace, through the favor of God, encompassed his Church on every side. Meantime, however, the spirit of envy was watching to destroy our blessings, which at first crept in unperceived, but soon revelled in the midst of the assemblies of the saints. At length it reached the bishops themselves, and arrayed them in angry hostility against each other, on pretense of a jealous regard for the doctrines of Divine truth. Hence it was that a mighty fire was kindled as it were from a little spark, and which, originating in the first instance in the Alexandrian church, overspread the whole of Egypt and Libya, and the further Thebaid. Eventually it extended its ravages to the other provinces and cities of the empire; so that not only the prelates of the churches might be seen encountering each other in the strife of words, but the people themselves were completely divided, some adhering to one faction and others to another. Nay, so notorious did the scandal of these proceedings become, that the sacred matters of inspired teaching were exposed to the most shameful ridicule in the very theaters of the unbelievers.

CHAPTER LXII: Concerning the Same Arius, and the Melitians.

SOME thus at Alexandria maintained an obstinate conflict on the highest questions. Others throughout Egypt and the Upper Thebaid, were at variance on account of an earlier controversy: so that the churches were everywhere distracted by divisions. The body therefore being thus diseased, the whole of Libya caught the contagion; and the rest of the remoter provinces became affected with the same disorder. For the disputants at Alexandria sent emissaries to the bishops of the several provinces, who accordingly ranged themselves as partisans on either side, and shared in the same spirit of discord.

CHAPTER LXIII: How Constantine sent a Messenger and a Letter concerning Peace.

AS soon as the emperor was informed of these facts, which he heard with much sorrow of heart, considering them in the light of a calamity personally affecting himself, he forthwith selected from the Christians in his train one whom he well knew to be approved for the sobriety and genuineness of his faith, and who had before this time distinguished himself by the boldness of his religious profession, and sent him to negotiate peace between the dissentient parties at Alexandria. He also made him the bearer of a most needful and appropriate letter to the original movers of the strife: and this letter, as exhibiting a specimen of his watchful care over God's people, it

may be well to introduce into this our narrative of his life. Its purport was as follows.

CHAPTER LXIV: Constantine's Letter to Alexander the Bishop, and Arius the Presbyter.
"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Alexander and Arius.
"I call that God to witness, as well I may, who is the helper of my endeavors, and the Preserver of all men, that I had a twofold reason for undertaking that duty which I have now performed.

CHAPTER LXV: His Continual Anxiety for Peace.
"MY design then was, first, to bring the diverse judgments formed by all nations respecting the Deity to a condition, as it were, of settled uniformity; and, secondly, to restore to health the system of the world, then suffering under the malignant power of a grievous distemper. Keeping these objects in view, I sought to accomplish the one by the secret eye of thought, while the other I tried to rectify by the power of military authority. For I was aware that, if I should succeed in establishing, according to my hopes, a common harmony of sentiment among all the servants of God, the general course of affairs would also experience a change correspondent to the pious desires of them all.

CHAPTER LXVI: That he also adjusted the Controversies which had arisen in Africa.
"FINDING, then, that the whole of Africa was pervaded by an intolerable spirit of mad folly, through the influence of those who with heedless frivolity had presumed to rend the religion of the people into diverse sects; I was anxious to check this disorder, and could discover no other remedy equal to the occasion, except in sending some of yourselves to aid in restoring mutual harmony among the disputants, after I had removed that common enemy of mankind who had interposed his lawless sentence for the prohibition of your holy synods.

CHAPTER LXVII: That Religion began in the East.
"FOR since the power of Divine light, and the law of sacred worship, which, proceeding in the first instance, through the favor of God, from the bosom, as it were, of the East, have illumined the world, by their sacred radiance, I naturally believed that you would be the first to promote the salvation of other nations, and resolved with all energy of thought and diligence of inquiry to seek your aid. As soon, therefore, as I had secured my decisive victory and unquestionable triumph over my enemies, my first inquiry was concerning that object which I felt to be of paramount interest and importance.

CHAPTER LXVIII: Being grieved by the Dissension, he counsels Peace.
"BUT, O glorious Providence of God! how deep a wound did not my ears only, but my very heart receive in the report that divisions existed among yourselves more grievous still than those which continued in that country so that you, through whose aid I had hoped to procure a remedy for the errors of others, are in a state which needs healing even more than theirs. And yet, having made a careful inquiry into the origin and foundation of these differences, I find the cause to be of a truly insignificant character, and quite unworthy of such fierce contention. Feeling myself, therefore, compelled to address you in this letter, and to appeal at the same time to your unanimity and sagacity, I call on Divine Providence to assist me in the task, while I interrupt your dissension in the character of a minister of peace. And with reason: for if I might expect, with the help of a higher Power, to be able without difficulty, by a judicious appeal to the pious feelings of those who heard me, to recall them to a better spirit, even though the occasion of the disagreement were a greater one, how can I refrain from promising myself a far easier and more speedy adjustment of this difference, when the cause which hinders general harmony of sentiment is intrinsically trifling and of little moment?

CHAPTER LXIX: Origin of the Controversy between Alexander and Arius, and that these Questions ought not to have been discussed.

"I UNDERSTAND, then, that the origin of the present controversy is this. When you, Alexander, demanded of the presbyters what opinion they severally maintained respecting a certain passage in the Divine law, or rather, I should say, that you asked them something connected with an unprofitable question, then you, Arius, inconsiderately insisted on what ought never to have been conceived at all, or if conceived, should have been buried in profound silence. Hence it was that a dissension arose between you, fellowship was withdrawn, and the holy people, rent

4100 into diverse parties, no longer preserved the unity of the one body. Now, therefore,
do ye both exhibit an equal degree of forbearance, and receive the advice which your
fellow-servant righteously gives. What then is this advice? It was wrong in the first
instance to propose such questions as these, or to reply to them when propounded. For
4105 those points of discussion which are enjoined by the authority of no law, but rather
suggested by the contentious spirit which is fostered by misused leisure, even though
they may be intended merely as an intellectual exercise, ought certainly to be
confined to the region of our own thoughts, and not hastily produced in the popular
assemblies, nor unadvisedly intrusted to the general ear. For how very few are there
4110 able either accurately to comprehend, or adequately to explain subjects so sublime
and abstruse in their nature? Or, granting that one were fully competent for this,
how many people will he convince? Or, who, again, in dealing with questions of such
subtle nicety as these, can secure himself against a dangerous declension from the
truth? It is incumbent therefore on us in these cases to be sparing of our words,
lest, in case we ourselves are unable, through the feebleness of our natural
4115 faculties, to give a clear explanation of the subject before us, or, on the other
hand, in case the slowness of our hearers' understandings disables them from arriving
at an accurate apprehension of what we say, from one or other of these causes the
people be reduced to the alternative either of blasphemy or schism.

4120 CHAPTER LXX: An Exhortation to Unanimity.

"LET therefore both the unguarded question and the inconsiderate answer receive your
mutual forgiveness. For the cause of your difference has not been any of the leading
doctrines or precepts of the Divine law, nor has any new heresy respecting the
worship of God arisen among you. You are in truth of one and the same judgment: you
4125 may therefore well join in communion and fellowship.

CHAPTER LXXI: There should be no Contention in Matters which are in themselves of
Little Moment.

"FOR as long as you continue to contend about these small and very insignificant
4130 questions, it is not fitting that so large a portion of God's people should be under
the direction of your judgment, since you are thus divided between yourselves. I
believe it indeed to be not merely unbecoming, but positively evil, that such should
be the case. But I will refresh your minds by a little illustration, as follows. You
know that philosophers, though they all adhere to one system, are yet frequently at
4135 issue on certain points, and differ, perhaps, in their degree of knowledge: yet they
are recalled to harmony of sentiment by the uniting power of their common doctrines.
If this be true, is it not far more reasonable that you, who are the ministers of the
Supreme God, should be of one mind respecting the profession of the same religion?
But let us still more thoughtfully and with closer attention examine what I have
4140 said, and see whether it be right that, on the ground of some trifling and foolish
verbal difference between ourselves, brethren should assume towards each other the
attitude of enemies, and the august meeting of the Synod be rent by profane disunion,
because of you who wrangle together on points so trivial and altogether unessential?
This is vulgar, and rather characteristic of childish ignorance, than consistent I
4145 with the wisdom of priests and men of sense. Let us withdraw ourselves with a good
will from these temptations of the devil. Our great God and common Saviour of all has
granted the same light to us all. Permit me, who am his servant, to bring my task to
a successful issue, under the direction of his Providence, that I may be enabled,
through my exhortations, and diligence, and earnest admonition, to recall his people
4150 to communion and fellowship. For since you have, as I said, but one faith, and one
sentiment respecting our religion, and since the Divine commandment in all its parts
enjoins on us all the duty of maintaining a spirit of concord, let not the
circumstance which has led to a slight difference between you, since it does not
affect the validity of the whole, cause any division or schism among you. And this I
4155 say without in any way desiring to force you to entire unity of judgment in regard to
this truly idle question, whatever its real nature may be. For the dignity of your
synod may be preserved, and the communion of your whole body maintained unbroken,
however wide a difference may exist among you as to unimportant matters. For we are
not all of us like-minded on every subject, nor is there such a thing as one
4160 disposition and judgment common to all alike. As far, then, as regards the Divine
Providence, let there be one faith, and one understanding among you, one united
judgment in reference to God. But as to your subtle disputations on questions of
little or no significance, though you may be unable to harmonize in sentiment, such
differences should be consigned to the secret custody of your own minds and thoughts.
4165 And now, let the preciousness of common affection, let faith in the truth, let the

honor due to God and to the observance of his law continue immovably among you. Resume, then, your mutual feelings of friendship, love, and regard: restore to the people their wonted embracings; and do ye yourselves, having purified your souls, as it were, once more acknowledge one another. For it often happens that when a
 4170 reconciliation is effected by the removal of the causes of enmity, friendship becomes even sweeter than it was before.

CHAPTER LXXII: The Excess of his Pious Concern caused him to shed Tears; and his Intended Journey to the East was postponed because of These Things.
 4175 "RESTORE me then my quiet days, and untroubled nights, that the joy of undimmed light, the delight of a tranquil life, may henceforth be my portion. Else must I needs mourn, with constant tears, nor shall I be able to pass the residue of my days in peace. For while the people of God, whose fellow-servant I am, are thus divided amongst themselves by an unreasonable and pernicious spirit of contention, how is it
 4180 possible that I shall be able to maintain tranquility of mind? And I will give you a proof how great my sorrow has been on this behalf. Not long since I had visited Nicomedia, and intended forthwith to proceed from that city to the East. It was while I was hastening towards you, and had already accomplished the greater part of the distance, that the news of this matter reversed my plan, that I might not be
 4185 compelled to see with my own eyes that which I felt myself scarcely able even to hear. Open then for me henceforward by your unity of judgment that road to the regions of the East which your dissensions have closed against me, and permit me speedily to see yourselves and all other peoples rejoicing together, and render due acknowledgment to God in the language of praise and thanksgiving for the restoration
 4190 of general concord and liberty to all."

CHAPTER LXXIII: The Controversy continues without Abatement, even after the Receipt of This Letter.
 4195 IN this manner the pious emperor endeavored by means of the foregoing letter to promote the peace of the Church of God. And the excellent man to whom it was intrusted performed his part not merely by communicating the letter itself, but also by seconding the views of him who sent it; for he was, as I have said, in all respects a person of pious character. The evil, however, was greater than could be remedied by a single letter, insomuch that the acrimony of the contending parties
 4200 continually increased, and the effects of the mischief extended to all the Eastern provinces. These things jealousy and some evil spirit who looked with an envious eye on the prosperity of the Church, wrought.

BOOK III.

4205 CHAPTER I: A Comparison of Constantine's Piety with the Wickedness of the Persecutors.
 IN this manner that spirit who is the hater of good, actuated by envy at the blessing enjoyed by the Church, continued to raise against her the stormy troubles of intestine discord, in the midst of a period of peace and joy. Meanwhile, however, the
 4210 divinely-favored emperor did not slight the duties befitting him, but exhibited in his whole conduct a direct contrast to those atrocities of which the cruel tyrants had been lately guilty, and thus triumphed over every enemy that opposed him. For in the first place, the tyrants, being themselves alienated from the true God, had enforced by every compulsion the worship of false deities: Constantine convinced
 4215 mankind by actions as well as words, that these bad but an imaginary existence, and exhorted them to acknowledge the only true God. They had derided his Christ with words of blasphemy: he assumed that as his safeguard against which they directed their blasphemies, and gloried in the symbol of the Saviour's passion. They had persecuted and driven from house and home the servants of Christ: he recalled them
 4220 every one, and restored them to their native homes. They had covered them with dishonor: he made their condition honorable and enviable in the eyes of all. They had shamefully plundered and sold the goods of godly men: Constantine not only replaced this loss, but still further enriched them with abundant presents. They had circulated injurious calumnies, through their written ordinances, against the
 4225 prelates of the Church: he on the contrary, conferred dignity on these individuals by personal marks of honor, and by his edicts and statutes raised them to higher distinction than before. They had utterly demolished and razed to the ground the houses of prayer: he commanded that those which still existed should be enlarged, and that new ones should be raised on a magnificent scale at the expense of the imperial
 4230 treasury. They had ordered the inspired records to be burnt and utterly destroyed: he decreed that copies of them should be multiplied, and magnificently adorned at the

charge of the imperial treasury. They had strictly forbidden the prelates, anywhere or on any occasion, to convene synods; whereas he gathered them to his court from every province, received them into his palace, and even to his own private apartments and thought them worthy to share his home and table. They had honored the demons with offerings: Constantine exposed their error, and continually distributed the now useless materials for sacrifice, to those who would apply them to a better use. They had ordered the pagan temples to be sumptuously adorned: he razed to their foundations those of them which had been the chief objects of superstitious reverence. They had subjected God's servants to the most ignominious punishments: he took vengeance on the persecutors, and inflicted on them just chastisement in the name of God, while he held the memory of his holy martyrs in constant veneration. They had driven God's Worshipers from the imperial palaces: he placed full confidence in them at all times, and knowing them to be the better disposed and more faithful than any beside. They, the victims of avarice, voluntarily subjected themselves as it were to the pangs of Tantalus: he with royal magnificence unlocked all his treasures, and distributed his gifts with rich and high-souled liberality. They committed countless murders, that they might plunder or confiscate the wealth of their victims; while throughout the reign of Constantine the sword of justice hung idle everywhere, and both people and municipal magistrates in every province were governed rather by paternal authority than by any constraining. Surely it must seem to all who duly regard these facts, that a new and fresh era of existence had begun to appear, and a light heretofore unknown suddenly to dawn from the midst of darkness on the human race: and all must confess that these things were entirely the work of God, who raised up this pious emperor to withstand the multitude of the ungodly.

CHAPTER II: Father Remarks on Constantine's Piety, and his Open Testimony to the Sign of the Cross.

AND when we consider that their iniquities were without example, and the atrocities which they dared to perpetrate against the Church such as had never been heard of in any age of the world, well might God himself bring before us something entirely new, and work thereby effects such as had hitherto been never either recorded or observed. And what miracle was ever more marvelous than the virtues of this our emperor, whom the wisdom of God has vouchsafed as a gift to the human race? For truly he maintained a continual testimony to the Christ of God with all boldness, and before all men; and so far was he from shrinking from an open profession of the Christian name, that he rather desired to make it manifest to all that he regarded this as his highest honor, now impressing on his face the salutary sign, and now glorying in it as the trophy which led him on to victory.

CHAPTER III: Of his Picture surmounted by a Cross and having beneath it a Dragon. AND besides this, he caused to be painted on a lofty tablet, and set up in the front of the portico of his palace, so as to be visible to all, a representation of the salutary sign placed above his head, and below it that hateful and savage adversary of mankind, who by means of the tyranny of the ungodly had wasted the Church of God, falling headlong, under the form of a dragon, to the abyss of destruction. For the sacred oracles in the books of God's prophets have described him as a dragon and a crooked serpent; and for this reason the emperor thus publicly displayed a painted resemblance of the dragon beneath his own and his children's feet, stricken through with a dart, and cast headlong into the depths of the sea. In this manner he intended to represent the secret adversary of the human race, and to indicate that he was consigned to the gulf of perdition by virtue of the salutary trophy placed above his head. This allegory, then, was thus conveyed by means of the colors of a picture: and I am filled with wonder at the intellectual greatness of the emperor, who as if by divine inspiration thus expressed what the prophets had foretold concerning this monster, saying that "God would bring his great and strong and terrible sword against the dragon, the flying serpent; and would destroy the dragon that was in the sea." This it was of which the emperor gave a true and faithful representation in the picture above described.

CHAPTER IV: A Farther Notice of the Controversies raised in Egypt by Arius. IN such occupations as these he employed himself with pleasure: but the effects of that envious spirit which so troubled the peace of the churches of God in Alexandria, together with the Theban and Egyptian schism, continued to cause him no little disturbance of mind. For in fact, in every city bishops were engaged in obstinate conflict with bishops, and people rising against people; and almost like the fabled

Symplegades, coming into violent collision with each other. Nay, some were so far transported beyond the bounds of reason as to be guilty of reckless and outrageous conduct, and even to insult the statues of the emperor. This state of things had little power to excite his anger, but rather caused in him sorrow of spirit; for he deeply deplored the folly thus exhibited by deranged men.

CHAPTER V: Of the Disagreement respecting the Celebration of Easter.

BUT before this time another most virulent disorder had existed, and long afflicted the Church; I mean the difference respecting the salutary feast of Easter. For while one party asserted that the Jewish custom should be adhered to, the other affirmed that the exact recurrence of the period should be observed without following the authority of those who were in error, and strangers to gospel grace.

Accordingly, the people being thus in every place divided in respect of this, and the sacred observances of religion confounded for a long period (insomuch that the diversity of judgment in regard to the time for celebrating one and the same feast caused the greatest disagreement between those who kept it, some afflicting themselves with fastings and austerities, while others devoted their time to festive relaxation), no one appeared who was capable of devising a remedy for the evil, because the controversy continued equally balanced between both parties. To God alone, the Almighty, was the healing of these differences an easy task; and Constantine appeared to be the only one on earth capable of being his minister for this good end. For as soon as he was made acquainted with the facts which I have described, and perceived that his letter to the Alexandrian Christians had failed to produce its due effect, he at once aroused the energies of his mind, and declared that he must prosecute to the utmost this war also against the secret adversary who was disturbing the peace of the Church.

CHAPTER VI: How he ordered a Council to be held at Nicaea.

THEN as if to bring a divine array against this enemy, he convoked a general council, and invited the speedy attendance of bishops from all quarters, in letters expressive of the honorable estimation in which he held them. Nor was this merely the issuing of a bare command but the emperor's good will contributed much to its being carried into effect: for he allowed some the use of the public means of conveyance, while he afforded to others an ample supply of horses for their transport. The place, too, selected for the synod, the city Nicaea in Bithynia (named from "Victory"), was appropriate to the occasion. As soon then as the imperial injunction was generally made known, all with the utmost willingness hastened thither, as though they would outstrip one another in a race; for they were impelled by the anticipation of a happy result to the conference, by the hope of enjoying present peace, and the desire of beholding something new and strange in the person of so admirable an emperor. Now when they were all assembled, it appeared evident that the proceeding was the work of God, inasmuch as men who had been most widely separated, not merely in sentiment but also personally, and by difference of country, place, and nation, were here brought together, and comprised within the walls of a single city, forming as it were a vast garland of priests, composed of a variety of the choicest flowers.

CHAPTER VII: Of the General Council, at which Bishops from all Nations were Present.

IN effect, the most distinguished of God's ministers from all the churches which abounded in Europe, Lybia, and Asia were here assembled. And a single house of prayer, as though divinely enlarged, sufficed to contain at once Syrians and Cilicians, Phoenicians and Arabians, delegates from Palestine, and others from Egypt; Thebans and Libyans, with those who came from the region of Mesopotamia. A Persian bishop too was present at this conference, nor was even a Scythian found wanting to the number. Pontus, Galatia, and Pamphylia, Cappadocia, Asia, and Phrygia, furnished their most distinguished prelates; while those who dwelt in the remotest districts of Thrace and Macedonia, of Achaia and Epirus, were notwithstanding in attendance. Even from Spain itself, one whose fame was widely spread took his seat as an individual in the great assembly. The prelate of the imperial city was prevented from attending by extreme old age; but his presbyters were present, and supplied his place. Constantine is the first prince of any age who bound together such a garland as this with the bond of peace, and presented it to his Saviour as a thank-offering for the victories he had obtained over every foe, thus exhibiting in our own times a similitude of the apostolic company.

- 4365 CHAPTER VIII: That the Assembly was composed, as in the days of the Apostles, of
Individuals from Various Nations.
FOR it is said that in the Apostles' age, there were gathered "devout men from every
nation under heaven"; among whom were Parthians, and Medes, and Elamites, and the
4370 dwellers in Mesopotamia, in Judea, and Cappadocia, in Pontus and Asia, in Phrygia and
Pamphylia, in Egypt, and the parts of Libya about Cyrene; and sojourners from Rome,
both Jews and proselytes, Cretans and Arabians. But that assembly was less, in that
not all who composed it were ministers of God; but in the present company, the number
of bishops exceeded two hundred and fifty, while that of the presbyters and deacons
4375 in their train, and the crowd of acolytes and other attendants was altogether beyond
computation.
- CHAPTER IX: Of the Virtue and Age of the Two Hundred and Fifty Bishops.
OF these ministers of God, some were distinguished by wisdom and eloquence, others by
the gravity of their lives, and by patient fortitude of character, while others again
4380 united in themselves all these graces. There were among them men whose years demanded
veneration: others were younger, and in the prime of mental vigor; and some had but
recently entered on the course of their ministry. For the maintenance of all ample
provision was daily furnished by the emperor's command.
- 4385 CHAPTER X: Council in the Palace. Constantine, entering, took his Seat in the
Assembly.
NOW when the appointed day arrived on which the council met for the final solution of
the questions in dispute, each member was present for this in the central building of
the palace, which appeared to exceed the rest in magnitude. On each side of the
4390 interior of this were many seats disposed in order, which were occupied by those who
had been invited to attend, according to their rank. As soon, then, as the whole
assembly had seated themselves with becoming orderliness, a general silence
prevailed, in expectation of the emperor's arrival. And first of all, three of his
immediate family entered in succession, then others also preceded his approach, not
4395 of the soldiers or guards who usually accompanied him, but only friends in the faith.
And now, all rising at the signal which indicated the emperor's entrance, at last he
himself proceeded through the midst of the assembly, like some heavenly messenger of
God, clothed in raiment which glittered as it were with rays of light, reflecting the
glowing radiance of a purple robe, and adorned with the brilliant splendor of gold
4400 and precious stones. Such was the external appearance of his person; and with regard
to his mind, it was evident that he was distinguished by piety and godly fear. This
was indicated by his downcast eyes, the blush on his countenance, and his gait. For
the rest of his personal excellencies, he surpassed all present in height of stature
and beauty of form, as well as in majestic dignity of mien, and invincible strength
4405 and vigor. All these graces, united to a suavity of manner, and a serenity becoming
his imperial station, declared the excellence of his mental qualities to be above all
praise. As soon as he had advanced to the upper end of the seats, at first he
remained standing, and when a low chair of wrought gold had been set for him, he
waited until the bishops had beckoned to him, and then sat down, and after him the
4410 whole assembly did the same.
- CHAPTER XI: Silence of the Council, after Some Words by the Bishop Eusebius.
THE bishop who occupied the chief place in the right division of the assembly then
rose, and, addressing the emperor, delivered a concise speech, in a strain of
4415 thanksgiving to Almighty God on his behalf. When he had resumed his seat, silence
ensued, and all regarded the emperor with fixed attention; on which he looked
serenely round on the assembly with a cheerful aspect, and, having collected his
thoughts, in a calm and gentle tone gave utterance to the following words.
- 4420 CHAPTER XII: Constantine's Address to the Council concerning Peace.
"IT was once my chief desire, dearest friends, to enjoy the spectacle of your united
presence; and now that this desire is fulfilled, I feel myself bound to render thanks
to God the universal King, because, in addition to all his other benefits, he has
granted me a blessing higher than all the rest, in permitting me to see you not only
4425 all assembled together, but all united in a common harmony of sentiment. I pray
therefore that no malignant adversary may henceforth interfere to mar our happy
state; I pray that, now the impious hostility of the tyrants has been forever removed
by the power of God our Saviour, that spirit who delights in evil may devise no other
means for exposing the divine law to blasphemous calumny; for, in my judgment,

4430 intestine strife within the Church of God, is far more evil and dangerous than any
kind of war or conflict; and these our differences appear to me more grievous than
any outward trouble. Accordingly, when, by the will and with the co-operation of God,
I had been victorious over my enemies, I thought that nothing more remained but to
4435 render thanks to him, and sympathize in the joy of those whom he had restored to
freedom through my instrumentality; as soon as I heard that intelligence which I had
least expected to receive, I mean the news of your dissension, I judged it to be of
no secondary importance, but with the earnest desire that a remedy for this evil also
might be found through my means, I immediately sent to require your presence. And now
4440 I rejoice in beholding your assembly; but I feel that my desires will be most
completely fulfilled when I can see you all united in one judgment, and that common
spirit of peace and concord prevailing amongst you all, which it becomes you, as
consecrated to the service of God, to commend to others. Delay not, then, dear
4445 friends: delay not, ye ministers of God, and faithful servants of him who is our
common Lord and Saviour: begin from this moment to discard the causes of that
disunion which has existed among you, and remove the perplexities of controversy by
embracing the principles of peace. For by such conduct you will at the same time be
acting in a manner most pleasing to the supreme God, and you will confer an exceeding
favor on me who am your fellow-servant."

4450 CHAPTER XIII: How he led the Dissentient Bishops to Harmony of Sentiment.
AS soon as the emperor had spoken these words in the Latin tongue, which another
interpreted, he gave permission to those who presided in the council to deliver their
opinions. On this some began to accuse their neighbors, who defended themselves, and
recriminated in their turn. In this manner numberless assertions were put forth by
4455 each party, and a violent controversy arose at the very commencement. Notwithstanding
this, the emperor gave patient audience to all alike, and received every proposition
with steadfast attention, and by occasionally assisting the argument of each party in
turn, he gradually disposed even the most vehement disputants to a reconciliation. At
the same time, by the affability of his address to all, and his use of the Greek
4460 language, with which he was not altogether unacquainted, he appeared in a truly
attractive and amiable light, persuading some, convincing others by his reasonings,
praising those who spoke well, and urging all to unity of sentiment, until at last he
succeeded in bringing them to one mind and judgment respecting every disputed
question.

4465 CHAPTER XIV: Unanimous Declaration of the Council concerning Faith, and the
Celebration of Easter.
THE result was that they were not only united as concerning the faith, but that the
time for the celebration of the salutary feast of Easter was agreed on by all. Those
4470 points also which were sanctioned by the resolution of the whole body were committed
to writing, and received the signature of each several member. Then the emperor,
believing that he had thus obtained a second victory over the adversary of the
Church, proceeded to solemnize a triumphal festival in honor of God.

4475 CHAPTER XV: How Constantine entertained the Bishops on the Occasion of his
Vicennalia.
ABOUT this time he completed the twentieth year of his reign. On this occasion public
festivals were celebrated by the people of the provinces generally, but the emperor
himself invited and feasted with those ministers of God whom he had reconciled, and
4480 thus offered as it were through them a suitable sacrifice to God. Not one of the
bishops was wanting at the imperial banquet, the circumstances of which were splendid
beyond description. Detachments of the body-guard and other troops surrounded the
entrance of the palace with drawn swords, and through the midst of these the men of
God proceeded without fear into the innermost of the imperial apartments, in which
4485 some were the emperor's own companions at table, while others reclined on couches
arranged on either side. One might have thought that a picture of Christ's kingdom
was thus shadowed forth, and a dream rather than reality.

CHAPTER XVI: Presents to the Bishops, and Letters to the People generally.
4490 AFTER the celebration of this brilliant festival, the emperor courteously received
all his guests, and generously added to the favors he had already bestowed by
personally presenting gifts to each individual according to his rank. He also gave
information of the proceedings of the synod to those who had not been present, by a
letter in his own hand-writing. And this letter also I will inscribe as it were on
4495 some monument by inserting it in this my narrative of his life. It was as follows:

CHAPTER XVII: Constantine's Letter to the Churches respecting the Council at Nicaea.
 "CONSTANTINUS AUGUSTUS, to the Churches. "Having had full proof, in the general
 prosperity of the empire, how great the favor of God has been towards us, I have
 4500 judged that it ought to be the first object of my endeavors, that unity of faith,
 sincerity of love, and community of feeling in regard to the worship of Almighty God,
 might be preserved among the highly favored multitude who compose the Catholic
 Church. And, inasmuch as this object could not be effectually and certainly secured,
 4505 unless all, or at least the greater number of the bishops were to meet together, and
 a discussion of all particulars relating to our most holy religion to take place; for
 this reason as numerous an assembly as possible has been convened, at which I myself
 was present, as one among yourselves (and far be it from me to deny that which is my
 greatest joy, that I am your fellow-servant), and every question received due and
 full examination, until that judgment which God, who sees all things, could approve,
 4510 and which tended to unity and concord, was brought to light, so that no room was left
 for further discussion or controversy in relation to the faith.

CHAPTER XVIII: He speaks of their Unanimity respecting the Feast of Easter, and
 against the Practice of the Jews.
 4515 "AT this meeting the question concerning the most holy day of Easter was discussed,
 and it was resolved by the united judgment of all present, that this feast ought to
 be kept by all and in every place on one and the same day. For what can be more
 becoming or honorable to us than that this feast from which we date our hopes of
 immortality, should be observed unfailingly by all alike, according to one
 4520 ascertained order and arrangement? And first of all, it appeared an unworthy thing
 that in the celebration of this most holy feast we should follow the practice of the
 Jews, who have impiously defiled their hands with enormous sin, and are, therefore,
 deservedly afflicted with blindness of soul. For we have it in our power, if we
 abandon their custom, to prolong the due observance of this ordinance to future ages,
 4525 by a truer order, which we have preserved from the very day of the passion until the
 present time. Let us then have nothing in common with the detestable Jewish crowd;
 for we have received from our Saviour a different way. A course at once legitimate
 and honorable lies open to our most holy religion. Beloved brethren, let us with one
 consent adopt this course, and withdraw ourselves from all participation in their
 4530 baseness. For their boast is absurd indeed, that it is not in our power without
 instruction from them to observe these things. For how should they be capable of
 forming a sound judgment, who, since their parricidal guilt in slaying their Lord,
 have been subject to the direction, not of reason, but of ungoverned passion, and are
 swayed by every impulse of the mad spirit that is in them? Hence it is that on this
 4535 point as well as others they have no perception of the truth, so that, being
 altogether ignorant of the true adjustment of this question, they sometimes celebrate
 Easter twice in the same year. Why then should we follow those who are confessedly in
 grievous error? Surely we shall never consent to keep this feast a second time in the
 same year. But supposing these reasons were not of sufficient weight, still it would
 4540 be incumbent on your Sagacities to strive and pray continually that the purity of
 your souls may not seem in anything to be sullied by fellowship with the customs of
 these most wicked men. We must consider, too, that a discordant judgment in a case of
 such importance, and respecting such religious festival, is wrong. For our Saviour
 has left us one feast in commemoration of the day of our deliverance, I mean the day
 4545 of his most holy passion; and he has willed that his Catholic Church should be one,
 the members of which, however scattered in many and diverse places, are yet cherished
 by one pervading spirit, that is, by the will of God. And let your Holinesses'
 sagacity reflect how grievous and scandalous it is that on the self-same days some
 should be engaged in fasting, others in festive enjoyment; and again, that after the
 4550 days of Easter some should be present at banquets and amusements, while others are
 fulfilling the appointed fasts. It is, then, plainly the will of Divine Providence
 (as I suppose you all clearly see), that this usage should receive fitting
 correction, and be reduced to one uniform rule.

CHAPTER XIX: Exhortation to follow the Example of the Greater Part of the World.
 "SINCE, therefore, it was needful that this matter should be rectified, so that we
 might have nothing in common with that nation of parricides who slew their Lord: and
 since that arrangement is consistent with propriety which is observed by all the
 churches of the western, southern, and northern parts of the world, and by some of
 4560 the eastern also: for these reasons all are unanimous on this present occasion in
 thinking it worthy of adoption. And I myself have undertaken that this decision

should meet with the approval of your Sagacities, in the hope that your Wisdoms will gladly admit that practice which is observed at once in the city of Rome, and in Africa; throughout Italy, and in Egypt, in Spain, the Gauls, Britain, Libya, and the whole of Greece; in the dioceses of Asia and Pontus, and in Cilicia, with entire unity of judgment. And you will consider not only that the number of churches is far greater in the regions I have enumerated than in any other, but also that it is most fitting that all should unite in desiring that which sound reason appears to demand, and in avoiding all participation in the perjured conduct of the Jews. In fine, that I may express my meaning in as few words as possible, it has been determined by the common judgment of all, that the most holy feast of Easter should be kept on one and the same day. For on the one hand a discrepancy of opinion on so sacred a question is unbecoming, and on the other it is surely best to act on a decision which is free from strange folly and error.

CHAPTER XX: Exhortation to obey the Decrees of the Council.

"RECEIVE, then, with all willingness this truly Divine injunction, and regard it as in truth the gift of God. For whatever is determined in the holy assemblies of the bishops is to be regarded as indicative of the Divine will. As soon, therefore, as you have communicated these proceedings to all our beloved brethren, you are bound from that time forward to adopt for yourselves, and to enjoin on others the arrangement above mentioned, and the due observance of this most sacred day; that whenever I come into the presence of your love, which I have long desired, I may have it in my power to celebrate the holy feast with you on the same day, and may rejoice with you on all accounts, when I behold the cruel power of Satan removed by Divine aid through the agency of our endeavors, while your faith, and peace, and concord ever? where flourish. God preserve you, beloved brethren"

The emperor transmitted a faithful copy of this letter to every province, wherein they who read it might discern as in a mirror the pure sincerity of his thoughts, and of his piety toward God.

CHAPTER XXI: Recommendation to the Bishops, on their Departure, to Preserve Harmony. AND now, when the council was on the point of being finally dissolved, he summoned all the bishops to meet him on an appointed day, and on their arrival addressed them in a farewell speech, in which he recommended them to be diligent in the maintenance of peace, to avoid contentious disputations, amongst themselves and not to be jealous, if any one of their number should appear pre-eminent for wisdom and eloquence, but to esteem the excellence of one a blessing common to all. On the other hand he reminded them that the more gifted should forbear to exalt themselves to the prejudice of their humbler brethren, since it is God's prerogative to judge of real superiority. Rather should they considerately condescend to the weaker, remembering that absolute perfection in any case is a rare quality indeed. Each then, should be willing to accord indulgence to the other for slight offenses, to regard charitably and pass over mere human weaknesses; holding mutual harmony in the highest honor, that no occasion of mockery might be given by their dissensions to those who are ever ready to blaspheme the word of God: whom indeed we should do all in our power to save, and this cannot be unless our conduct seems to them attractive. But you are well aware of the fact that testimony is by no means productive of blessing to all, since some who hear are glad to secure the supply of their mere bodily necessities, while others court the patronage of their superiors; some fix their affection on those who treat them with hospitable kindness, others again, being honored with presents, love their benefactors in return; but few are they who really desire the word of testimony, and rare indeed is it to find a friend of truth. Hence the necessity of endeavoring to meet the case of all, and, physician-like, to administer to each that which may tend to the health of the soul, to the end that the saving doctrine may be fully honored by all. Of this kind was the former part of his exhortation; and in conclusion he enjoined them to offer diligent supplications to God on his behalf. Having thus taken leave of them, he gave them all permission to return to their respective countries; and this they did with joy, and thenceforward that unity of judgment at which they had arrived in the emperor's presence continued to prevail, and those who had long been divided were bound together as members of the same body.

CHAPTER XXII: How he dismissed Some, and wrote Letters to Others; also his Presents. FULL of joy therefore at this success, the emperor presented as it were pleasant fruits in the way of letters to those who had not been present at the council. He commanded also that ample gifts of money should be bestowed on all the people, both

in the country and the cities, being pleased thus to honor the festive occasion of the twentieth anniversary of his reign.

4630

CHAPTER XXIII: How he wrote to the Egyptians, exhorting them to Peace. AND now, when all else were at peace, among the Egyptians alone an implacable contention still raged, so as once more to disturb the emperor's tranquility, though not to excite his anger. For indeed he treated the contending parties with all respect, as fathers, nay rather, as prophets of God; and again he summoned them to his presence, and again patiently acted as mediator between them, and honored them with gifts, and communicated also the result of his arbitration by letter. He confirmed and sanctioned the decrees of the council, and called on them to strive earnestly for concord, and not to distract and rend the Church, but to keep before them the thought of God's judgment. And these injunctions the emperor sent by a letter written with his own hand.

4635

4640

CHAPTER XXIV: How he wrote Frequent Letters of a Religious Character to the Bishops and People.

4645

BUT besides these, his writings are very numerous on kindred subjects, and he was the author of a multitude of letters, some to the bishops, in which he laid injunctions on them tending to the advantage of the churches of God; and sometimes the thrice blessed one addressed the people of the churches generally, calling them his own brethren and fellow-servants. But perhaps we may hereafter find leisure to collect these dispatches in a separate form, in order that the integrity of our present history may not be impaired by their insertion.

4650

CHAPTER XXV: How he ordered the Erection of a Church at Jerusalem, in the Holy Place of our Saviour's Resurrection.

4655

AFTER these things, the pious emperor addressed himself to another work truly worthy of record, in the province of Palestine. What then was this work? He judged it incumbent on him to render the blessed locality of our Saviour's resurrection an object of attraction and veneration to all. He issued immediate injunctions, therefore, for the erection in that spot of a house of prayer: and this he did, not on the mere natural impulse of his own mind, but being moved in spirit by the Saviour himself.

4660

CHAPTER XXVI: That the Holy Sepulchre had been covered with Rubbish and with Idols by the Ungodly.

4665

FOR it had been in time past the endeavor of impious men (or rather let me say of the whole race of evil spirits through their means), to consign to the darkness of oblivion that divine monument of immortality to which the radiant angel had descended from heaven, and rolled away the stone for those who still had stony hearts, and who supposed that the living One still lay among the dead; and had declared glad tidings to the women also, and removed their stony-hearted unbelief by the conviction that he whom they sought was alive. This sacred cave, then, certain impious and godless persons had thought to remove entirely from the eyes of men, supposing in their folly that thus they should be able effectually to obscure the truth. Accordingly they brought a quantity of earth from a distance with much labor, and covered the entire spot; then, having raised this to a moderate height, they paved it with stone, concealing the holy cave beneath this massive mound. Then, as though their purpose had been effectually accomplished, they prepare on this foundation a truly dreadful sepulchre of souls, by building a gloomy shrine of lifeless idols to the impure spirit whom they call Venus, and offering detestable oblations therein on profane and accursed altars. For they supposed that their object could not otherwise be fully attained, than by thus burying the sacred cave beneath these foul pollutions. Unhappy men! they were unable to comprehend how impossible it was that their attempt should remain unknown to him who had been crowned with victory over death, any more than the blazing sun, when he rises above the earth, and holds his wonted course through the midst of heaven, is unseen by the whole race of mankind. Indeed, his saving power, shining with still greater brightness, and illumining, not the bodies, but the souls of men, was already filling the world with the effulgence of its own light.

4670

4675

4680

4685

4690

Nevertheless, these devices of impious and wicked men against the truth had prevailed for a long time, nor had any one of the governors, or military commanders, or even of the emperors themselves ever yet appeared, with ability to abolish these daring impieties, save only that one who enjoyed the favor of the King of kings. And now, acting as he did under the guidance of the divine Spirit, he could not consent to see the sacred spot of which we have spoken, thus buried, through the devices of the

adversaries, under every kind of impurity, and abandoned to forgetfulness and neglect; nor would he yield to the malice of those who had contracted this guilt, but calling on the divine aid, gave orders that the place should be thoroughly purified, thinking that the parts which had been most polluted by the enemy ought to receive special tokens, through his means, of the greatness of the divine favor. As soon, then, as his commands were issued, these engines of deceit were cast down from their proud eminence to the very ground, and the dwelling-places of error, with the statues and the evil spirits which they represented, were overthrown and utterly destroyed.

CHAPTER XXVII: How Constantine commanded the Materials of the Idol Temple, and the Soil itself, to be removed at a Distance.

NOR did the emperor's zeal stop here; but he gave further orders that the materials of what was thus destroyed, both stone and timber, should be removed and thrown as far from the spot as possible; and this command also was speedily executed. The emperor, however, was not satisfied with having proceeded thus far: once more, fired with holy ardor, he directed that the ground itself should be dug up to a considerable depth, and the soil which had been polluted by the foul impurities of demon worship transported to a far distant place.

CHAPTER XXVIII: Discovery of the Most Holy Sepulchre.

THIS also was accomplished without delay. But as soon as the original surface of the ground, beneath the covering of earth, appeared, immediately, and contrary to all expectation, the venerable and hollowed monument of our Saviour's resurrection was discovered. Then indeed did this most holy cave present a faithful similitude of his return to life, in that, after lying buried in darkness, it again emerged to light, and afforded to all who came to witness the sight, a clear and visible proof of the wonders of which that spot had once been the scene, a testimony to the resurrection of the Saviour clearer than any voice could give.

CHAPTER XXIX: How he wrote concerning the Erection of a Church, both to the Governors of the Provinces, and to the Bishop Macarius.

IMMEDIATELY after the transactions I have recorded, the emperor sent forth injunctions which breathed a truly pious spirit, at the same time granting ample supplies of money, and commanding that a house of prayer worthy of the worship of God should be erected near the Saviour's tomb on a scale of rich and royal greatness. This object he had indeed for some time kept in view, and had foreseen, as if by the aid of a superior intelligence, that which should afterwards come to pass. He laid his commands, therefore, on the governors of the Eastern provinces, that by an abundant and unsparing expenditure they should secure the completion of the work on a scale of noble and ample magnificence. He also dispatched the following letter to the bishop who at that time presided over the church at Jerusalem, in which he clearly asserted the saving doctrine of the faith, writing in these terms.

CHAPTER XXX: Constantine's Letter to Macarius respecting the Building of the Church of our Saviour.

"VICTOR CONSTANTIUS, MAXIMUS AUGUSTUS, to Macarius.

"Such is our Saviour's grace, that no power of language seems adequate to describe the wondrous circumstance to which I am about to refer. For, that the monument of his most holy Passion, so long ago buried beneath the ground, should have remained unknown for so long a series of years, until its reappearance to his servants now set free through the removal of him who was the common enemy of all, is a fact which truly surpasses all admiration. For if all who are accounted wise throughout the world were to unite in their endeavors to say somewhat worthy of this event, they would be unable to attain their object in the smallest degree. Indeed, the nature of this miracle as far transcends the capacity of human reason as heavenly things are superior to human affairs. For this cause it is ever my first, and indeed my only object, that, as the authority of the truth is evincing itself daily by fresh wonders, so our souls may all become more zealous, with all sobriety and earnest unanimity, for the honor of the Divine law. I desire, therefore, especially, that you should be persuaded of that which I suppose is evident to all beside, namely, that I have no greater care than how I may best adorn with a splendid structure that sacred spot, which, under Divine direction, I have disencumbered as it were of the heavy weight of foul idol worship; a spot which has been accounted holy from the beginning in God's judgment, but which now appears holier still, since it has brought to light a clear assurance of our Saviour's passion.

- 4760 CHAPTER XXXI: That the Building should surpass all the Churches in the World in the Beauty of its Walls, its Columns, and Marbles.
 "IT will be well, therefore, for your sagacity to make such arrangements and provision of all things needful for the work, that not only the church itself as a whole may surpass all others whatsoever in beauty, but that the details of the
- 4765 building may be of such a kind that the fairest structures in any city of the empire may be excelled by this. And with respect to the erection and decoration of the walls, this is to inform you that our friend Dracilianus, the deputy of the Praetorian Praefects, and the governor of the province, have received a charge from us. For our pious directions to them are to the effect that artificers and laborers, and whatever they shall understand from your sagacity to be needful for the
- 4770 advancement of the work, shall forthwith be furnished by their care. And as to the columns and marbles, whatever you shall judge, after actual inspection of the plan, to be especially precious and serviceable, be diligent to send information to us in writing, in order that whatever quantity or sort of materials we shall esteem from your letter to be needful, may be procured from every quarter, as required, for it is fitting that the most marvelous place in the world should be worthily decorated.
- CHAPTER XXXII: That he instructed the Governors concerning the Beautifying of the Roof; also concerning Workmen, and Materials.
- 4780 "WITH respect to the ceiling of the church, I wish to know from you whether in your judgment it should be panel-ceiled, or finished with any other kind of workmanship. If the panel ceiling be adopted, it may also be ornamented with gold. For the rest, your Holiness will give information as early as possible to the before-mentioned magistrates how many laborers and artificers, and what expenditure of money is
- 4785 required. You will also be careful to send us a report without delay, not only respecting the marbles and columns, but the paneled ceiling also, should this appear to you to be the most beautiful form. God preserve you, beloved brother!"
- CHAPTER XXXIII: How the Church of our Saviour, the New Jerusalem prophesied of in Scripture, was built.
- 4790 THIS was the emperor's letter; and his directions were at once carried into effect. Accordingly, on the very spot which witnessed the Saviour's sufferings, a new Jerusalem was constructed, over against the one so celebrated of old, which, since the foul stain of guilt brought on it by the murder of the Lord, had experienced the last extremity of desolation, the effect of Divine judgment on its impious people. It was opposite this city that the emperor now began to rear a monument to the Saviour's
- 4795 victory over death, with rich and lavish magnificence. And it may be that this was that second and new Jerusalem spoken of in the predictions of the prophets, concerning which such abundant testimony is given in the divinely inspired records.
- 4800 First of all, then, he adorned the sacred cave itself, as the chief part of the whole work, and the hallowed monument at which the angel radiant with light had once declared to all that regeneration which was first manifested in the Saviour's person.
- CHAPTER XXXIV: Description of the Structure of the Holy Sepulchre.
- 4805 THIS monument, therefore, first of all, as the chief part of the whole, the emperor's zealous magnificence beautified with rare columns, anti profusely enriched with the most splendid decorations of every kind.
- CHAPTER XXXV: Description of the Atrium and Porticos.
- 4810 THE next object of his attention was a space of ground of great extent, and open to the pure air of heaven. This he adorned with a pavement of finely polished stone, and enclosed it on three sides with porticos of great length.
- CHAPTER XXXVI: Description of the Walls, Roof, Decoration, and Gilding of the Body of the Church.
- 4815 FOR at the side opposite to the cave, which was the eastern side, the church itself was erected; a noble work rising to a vast height, and of great extent both in length and breadth. The interior of this structure was floored with marble slabs of various colors; while the external surface of the walls, which shone with polished stones
- 4820 exactly fitted together, exhibited a degree of splendor in no respect inferior to that of marble. With regard to the roof, it was covered on the outside with lead, as a protection against the rains of winter. But the inner part of the roof, which was finished with sculptured panel work, extended in a series of connected compartments, like a vast sea, over the whole church; and, being overlaid throughout with the
- 4825 purest gold, caused the entire building to glitter as it were with rays of light.

CHAPTER XXXVII: Description of the Double Porticos on Either Side, and of the Three Eastern Gates.

BESIDES this were two porticos on each side, with upper and lower ranges of pillars, corresponding in length with the church itself; and these also had their roofs ornamented with gold. Of these porticos, those which were exterior to the church were supported by columns of great size, while those within these rested on piles of stone beautifully adorned on the surface. Three gates, placed exactly east, were intended to receive the multitudes who entered the church.

CHAPTER XXXVIII: Description of the Hemisphere, the Twelve Columns, and their Bowls. OPPOSITE these gates the crowning part of the whole was the hemisphere, which rose to the very summit of the church. This was encircled by twelve columns (according to the number of the apostles of our Saviour), having their capitals embellished with silver bowls of great size, which the emperor himself presented as a splendid offering to his God.

CHAPTER XXXIX: Description of the Inner Court, the Arcades and Porches. IN the next place he enclosed the atrium which occupied the space leading to the entrances in front of the church. This comprehended, first the court, then the porticos on each side, and lastly the gates of the court. After these, in the midst of the open market-place, the general entrance-gates, which were of exquisite workmanship, afforded to passers-by on the outside a view of the interior which could not fail to inspire astonishment.

CHAPTER XL: Of the Number of his Offerings. THIS temple, then, the emperor erected as a conspicuous monument of the Saviour's resurrection, and embellished it throughout on an imperial scale of magnificence. He further enriched it with numberless offerings of inexpressible beauty and various materials, - gold, silver, and precious stones, the skillful and elaborate arrangement of which, in regard to their magnitude, number, and variety, we have not leisure at present to describe particularly.

CHAPTER XLI: Of the Erection of Churches in Bethlehem, and on the Mount of Olives. IN the same country he discovered other places, venerable as being the localities of two sacred caves: and these also he adorned with lavish magnificence. In the one case, he rendered due honor to that which had been the scene of the first manifestation of our Saviour's divine presence, when he submitted to be born in mortal flesh; while in the case of the second cavern he hallowed the remembrance of his ascension to heaven from the mountain top. And while he thus nobly testified his reverence for these places, he at the same time eternized the memory of his mother, who had been the instrument of conferring so valuable a benefit on mankind.

CHAPTER XLII: That the Empress Helena, Constantine's Mother, having visited this Locality for Devotional Purposes, built these Churches. FOR she, having resolved to discharge the duties of pious devotion to the God, the King of kings, and feeling it incumbent on her to render thanksgivings with prayers on behalf both of her own son, now so mighty an emperor, and of his sons, her own grandchildren, the divinely favored Caesars, though now advanced in years, yet gifted with no common degree of wisdom, had hastened with youthful alacrity to survey this venerable land; and at the same time to visit the eastern provinces, cities, and people, with a truly imperial solicitude. As soon, then, as she had rendered due reverence to the ground which the Saviour's feet had trodden, according to the prophetic word which says "Let us worship at the place whereon his feet have stood," she immediately bequeathed the fruit of her piety to future generations.

CHAPTER XLIII: A Farther Notice of the Churches at Bethlehem. FOR without delay she dedicated two churches to the God whom she adored, one at the grotto which had been the scene of the Saviour's birth; the other on the mount of his ascension. For he who was "God with us" had submitted to be born even in a cave of the earth, and the place of his nativity was called Bethlehem by the Hebrews. Accordingly the pious empress honored with rare memorials the scene of her travail who bore this heavenly child, and beautified the sacred cave with all possible splendor. The emperor himself soon after testified his reverence for the spot by princely offerings, and added to his mother's magnificence by costly presents of silver and gold, and embroidered hangings. And farther, the mother of the emperor

raised a stately structure on the Mount of Olives also, in memory of his ascent to heaven who is the Saviour of mankind, erecting a sacred church and temple on the very summit of the mount. And indeed authentic history informs us that in this very cave the Saviour imparted his secret revelations to his disciples. And here also the emperor testified his reverence for the King of kings, by diverse and costly offerings. Thus did Helena Augusta, the pious mother of a pious emperor, erect over the two mystic caverns these two noble and beautiful monuments of devotion, worthy of everlasting remembrance, to the honor of God her Saviour, and as proofs of her holy zeal, receiving from her son the aid of his imperial power. Nor was it long ere this aged woman reaped the due reward of her labors. After passing the whole period of her life, even to declining age, in the greatest prosperity, and exhibiting both in word and deed abundant fruits of obedience to the divine precepts, and having enjoyed in consequence an easy and tranquil existence, with unimpaired powers of body and mind, at length she obtained from God an end befitting her pious course, and a recompense of her good deeds even in this present life.

CHAPTER XLIV: Of Helena's Generosity and Beneficent Acts.

FOR on the occasion of a circuit which she made of the eastern provinces, in the splendor of imperial authority, she bestowed abundant proofs of her liberality as well on the inhabitants of the several cities collectively, as on individuals who approached her, at the same time that she scattered largesses among the soldiery with a liberal hand. But especially abundant were the gifts she bestowed on the naked and unprotected poor. To some she gave money, to others an ample supply of clothing: she liberated some from imprisonment, or from the bitter servitude of the mines; others she delivered from unjust oppression, and others again, she restored from exile.

CHAPTER XLV: Helena's Pious Conduct in the Churches.

WHILE, however, her character derived luster from such deeds as I have described, she was far from neglecting personal piety toward God. She might be seen continually frequenting his Church, while at the same time she adorned the houses of prayer with splendid offerings, not overlooking the churches of the smallest cities. In short, this admirable woman was to be seen, in simple and modest attire, mingling with the crowd of worshipers, and testifying her devotion to God by a uniform course of pious conduct.

CHAPTER XLVI: How she made her Will, and died at the Age of Eighty Years.

AND when at length at the close of a long life, she was called to inherit a happier lot, having arrived at the eightieth year of her age, and being very near the time of her departure, she prepared and executed her last will in favor of her only son, the emperor and sole monarch of the world, and her grandchildren, the Caesars his sons, to whom severally she bequeathed whatever property she possessed in any part of the world. Having thus made her will, this thrice blessed woman died in the presence of her illustrious son, who was in attendance at her side, caring for her and held her hands: so that, to those who rightly discerned the truth, the thrice blessed one seemed not to die, but to experience a real change and transition from an earthly to a heavenly existence, since her soul, remoulded as it were into an incorruptible and angelic essence, was received up into her Saviour's presence.

CHAPTER XLVII: How Constantine buried his Mother, and how he honored her during her Life.

HER body, too, was honored with special tokens of respect, being escorted on its way to the imperial city by a vast train of guards, and there deposited in a royal tomb. Such were the last days of our emperor's mother, a person worthy of being had in perpetual remembrance, both for her own practical piety, and because she had given birth to so extraordinary and admirable an offspring. And well may his character be styled blessed, for his filial piety as well as on other grounds. He rendered her through his influence so devout a worshiper of God, (though she had not previously been such,) that she seemed to have been instructed from the first by the Saviour of mankind: and besides this, he had honored her so fully with imperial dignities, that in every province, and in the very ranks of the soldiery, she was spoken of under the titles of Augusta and empress, and her likeness was impressed on golden coins. He had even granted her authority over the imperial treasures, to use and dispense them according to her own will and discretion in every case for this enviable distinction also she received at the hands of her son. Hence it is that among the qualities which shed a luster on his memory, we may rightly include that surpassing degree of filial affection whereby he rendered full obedience to the Divine precepts which enjoin due

honor from children to their parents. In this manner, then, the emperor executed in Palestine the noble works I have above described: and indeed in every province he raised new churches on a far more imposing scale than those which had existed before his time.

CHAPTER XLVIII: How he built Churches in Honor of Martyrs, and abolished Idolatry at Constantinople.

AND being fully resolved to distinguish the city which bore his name with especial honor, he embellished it with numerous sacred edifices, both memorials of martyrs on the largest scale, and other buildings of the most splendid kind, not only within the city itself, but in its vicinity: and thus at the same time he rendered honor to the memory of the martyrs, and consecrated his city to the martyrs' God. Being filled, too, with Divine wisdom, he determined to purge the city which was to be distinguished by his own name from idolatry of every kind, that henceforth no statues might be worshiped there in the temples of those falsely reputed to be gods, nor any altars defiled by the pollution of blood: that there might be no sacrifices consumed by fire, no demon festivals, nor any of the other ceremonies usually observed by the superstitious.

CHAPTER XLIX: Representation of the Cross in the Palace, and of Daniel at the Public Fountains.

ON the other hand one might see the fountains in the midst of the market place graced with figures representing the good Shepherd, well known to those who study the sacred oracles, and that of Daniel also with the lions, forged in brass, and resplendent with plates of gold. Indeed, so large a measure of Divine love possessed the emperor's soul, that in the principal apartment of the imperial palace itself, on a vast tablet displayed in the center of its gold-covered paneled ceiling, he caused the symbol of our Saviour's Passion to be fixed, composed of a variety of precious stones richly inwrought with gold. This symbol he seemed to have intended to be as it were the safeguard of the empire itself.

CHAPTER L: That he erected Churches in Nicomedia, and in Other Cities.

HAVING thus embellished the city which bore his name, he next distinguished the capital of Bithynia by the erection of a stately and magnificent church, being desirous of raising in this city also, in honor of his Saviour and at his own charges, a memorial of his victory over his own enemies and the adversaries of God. He also decorated the principal cities of the other provinces with sacred edifices of great beauty; as, for example, in the case of that metropolis of the East which derived its name from Antiochus, in which, as the head of that portion of the empire, he consecrated to the service of God a church of unparalleled size and beauty. The entire building was encompassed by an enclosure of great extent, within which the church itself rose to a vast elevation, being of an octagonal form, and surrounded on all sides by many chambers, courts, and upper and lower apartments; the whole richly adorned with a profusion of gold, brass, and other materials of the most costly kind.

CHAPTER LI: That he ordered a Church to be built at Mambre.

SUCH was the principal sacred edifices erected by the emperor's command. But having heard that the self-same Saviour who ere while had appeared on earth had in ages long since past afforded a manifestation of his Divine presence to holy men of Palestine near the oak of Mambre, he ordered that a house of prayer should be built there also in honor of the God who had thus appeared. Accordingly the imperial commission was transmitted to the provincial governors by letters addressed to them individually, enjoining a speedy completion of the appointed work. He sent moreover to the writer of this history an eloquent admonition, a copy of which I think it well to insert in the present work, in order to convey a just idea of his pious diligence and zeal. To express, then, his displeasure at the evil practices which he had heard were usual in the place just referred to, he addressed me in the following terms.

CHAPTER LII: Constantine's Letter to Eusebius concerning Mambre.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Macarius, and the rest of the bishops in Palestine.

"One benefit, and that of no ordinary importance, has been conferred on us by my truly pious mother-in-law, in that she has made known to us by letter that abandoned folly of impious men which has hitherto escaped detection by you: so that the criminal conduct thus overlooked may now through our means obtain fitting correction and remedy, necessary though tardy. For surely it is a grave impiety indeed, that

5025 holy places should be defiled by the stain of unhallowed impurities. What then is this, dearest brethren, which, though it has eluded your sagacity, she of whom I speak was impelled by a pious sense of duty to disclose?

CHAPTER LIIII: That the Saviour appeared in this Place to Abraham.

5030 "SHE assures me, then, that the place which takes its name from the oak of Mambre, where we find that Abraham dwelt, is defiled by certain of the slaves of superstition in every possible way. She declares that idols which should be utterly destroyed have been erected on the site of that tree; that an altar is near the spot; and that impure sacrifices are continually performed. Now since it is evident that these practices are equally inconsistent with the character of our times, and unworthy the sanctity of the place itself, I wish your Gravities to be informed that the illustrious Count Acacius, our friend, has received instructions by letter from me, to the effect that every idol which shall be found in the place above-mentioned shall immediately be consigned to the flames; that the altar be utterly demolished; and that if any one, after this our mandate, shall be guilty of impiety of any kind in this place, he shall be visited with condign punishment. The place itself we have directed to be adorned with an unpolluted structure, I mean a church; in order that it may become a fitting place of assembly for holy men. Meantime, should any breach of these our commands occur, it should be made known to our clemency without the least delay by letters from you, that we may direct the person detected to be dealt with, as a transgressor of the law, in the severest manner. For you are not ignorant that the Supreme God first appeared to Abraham, and conversed with him, in that place. There it was that the observance of the Divine law first began; there first the Saviour himself, with the two angels, vouchsafed to Abraham a manifestation of his presence; there God first appeared to men; there he gave promise to Abraham concerning his future seed, and straightway fulfilled that promise; there he foretold that he should be the father of a multitude of nations. For these reasons, it seems to me right that this place should not only be kept pure through your diligence from all defilement, but restored also to its pristine sanctity; that nothing hereafter may be done there except the performance of fitting service to him who is the Almighty God, and our Saviour, and Lord of all. And this service it is incumbent on you to care for with due attention, if your Gravities be willing (and of this I feel confident) to gratify my wishes, which are especially interested in the worship of God. May he preserve you, beloved brethren!"

5060 CHAPTER LIV: Destruction of Idol Temples and Images everywhere.

ALL these things the emperor diligently performed to the praise of the saving power of Christ, and thus made it his constant aim to glorify his Saviour God. On the other hand he used every means to rebuke the superstitious errors of the heathen. Hence the entrances of their temples in the several cities were left exposed to the weather, being stripped of their doors at his command; the tiling of others was removed, and their roofs destroyed. From others again the venerable statues of brass, of which the superstition of antiquity had boasted for a long series of years, were exposed to view in all the public places of the imperial city: so that here a Pythian, there a Sminthian Apollo, excited the contempt of the beholder: while the Delphic tripods were deposited in the hippodrome and the Muses of Helicon in the palace itself. In short, the city which bore his name was everywhere filled with brazen statues of the most exquisite workmanship, which had been dedicated in every province, and which the deluded victims of superstition had long vainly honored as gods with numberless victims and burnt sacrifices, though now at length they learned to renounce their error, when the emperor held up the very objects of their worship to be the ridicule and sport of all beholders. With regard to those images which were of gold, he dealt with them in a different manner. For as soon as he understood that the ignorant multitudes were inspired with a vain and childish dread of these bugbears of error, wrought in gold and silver, he judged it right to remove these also, like stumbling-stones thrown in the way of men walking in the dark, and henceforward to open a royal road, plain and unobstructed to all. Having formed this resolution, he considered no soldiers or military force of any sort needful for the suppression of the evil: a few of his own friends sufficed for this service, and these he sent by a simple expression of his will to visit each several province. Accordingly, sustained by confidence in the emperor's pious intentions and their own personal devotion to God, they passed through the midst of numberless tribes and nations, abolishing this ancient error in every city and country. They ordered the priests themselves, amidst general laughter and scorn, to bring their gods from their dark recesses to the light of day: they then stripped them of their ornaments, and exhibited to the gaze of all

- 5090 the unsightly reality which had been hidden beneath a painted exterior. Lastly, whatever part of the material appeared valuable they scraped off and melted in the fire to prove its worth, after which they secured and set apart whatever they judged needful for their purpose, leaving to the superstitious worshipers that which was altogether useless, as a memorial of their shame. Meanwhile our admirable prince was
- 5095 himself engaged in a work similar to what we have described. For at the same time that these costly images of the dead were stripped, as we have said, of their precious materials, he also attacked those composed of brass; causing those to be dragged from their places with ropes and as it were carried away captive, whom the dotage of mythology had esteemed as gods.
- 5100 CHAPTER LV: Overthrow of an Idol Temple, and Abolition of Licentious Practices, at Aphaca in Phoenicia.
- THE emperor's next care was to kindle, as it were, a brilliant torch, by the light of which he directed his imperial gaze around, to see if any hidden vestiges of error might still exist. And as the keen-sighted eagle in its heavenward flight is able to descry from its lofty height the most distant objects on the earth, so did he, while
- 5105 residing in the imperial palace of his own fair city, discover as from a watch-tower a hidden and fatal snare of souls in the province of Phoenicia. This was a grove and temple, not situated in the midst of any city, nor in any public place, as for splendor of effect is generally the case, but apart from the beaten and frequented road, at Aphaca, on part of the summit of Mount Lebanon, and dedicated to the foul demon known by the name of Venus. It was a school of wickedness for all the votaries of impurity, and such as destroyed their bodies with effeminacy. Here men undeserving of the name forgot the dignity of their sex, and propitiated the demon by their
- 5115 effeminate conduct; here too unlawful commerce of women and adulterous intercourse, with other horrible and infamous practices, were perpetrated in this temple as in a place beyond the scope and restraint of law. Meantime these evils remained unchecked by the presence of any observer, since no one of fair character ventured to visit such scenes. These proceedings, however, could not escape the vigilance of our august
- 5120 emperor, who, having himself inspected them with characteristic forethought, and judging that such a temple was unfit for the light of heaven, gave orders that the building with its offerings should be utterly destroyed. Accordingly, in obedience to the imperial command, these engines of an impure superstition were immediately abolished, and the hand of military force was made instrumental in purging the place.
- 5125 And now those who had heretofore lived without restraint learned self-control through the emperor's threat of punishment, as likewise those superstitious Gentiles wise in their own conceit, who now obtained experimental proof of their own folly.
- CHAPTER LVI: Destruction of the Temple of Aesculapius at Aegae.
- 5130 FOR since a wide-spread error of these pretenders to wisdom concerned the demon worshiped in Cilicia, whom thousands regarded with reverence as the possessor of saving and healing power, who sometimes appeared to those who passed the night in his temple, sometimes restored the diseased to health, though on the contrary he was a
- 5135 destroyer of souls, who drew his easily deluded worshipers from the true Saviour to involve them in impious error, the emperor, consistently with his practice, and desire to advance the worship of him who is at once a jealous God and the true Saviour, gave directions that this temple also should be razed to the ground. In prompt obedience to this command, a band of soldiers laid this building, the admiration of noble philosophers, prostrate in the dust, together with its unseen
- 5140 inmate, neither demon nor god, but rather a deceiver of souls, who had seduced mankind for so long a time through various ages. And thus he who had promised to others deliverance from misfortune and distress, could find no means for his own security, any more than when, as is told in myth, he was scorched by the lightning's stroke. Our emperor's pious deeds, however, had in them nothing fabulous or feigned; but by virtue of the manifested power of his Saviour, this temple as well as others
- 5145 was so utterly overthrown, that not a vestige of the former follies was left behind.
- CHAPTER LVII: How the Gentiles abandoned Idol Worship, and turned to the Knowledge of God.
- 5150 HENCE it was that, of those who had been the slaves of superstition, when they saw with their own eyes the exposure of their delusion, and beheld the actual ruin of the temples and images in every place, some applied themselves to the saving doctrine of Christ; while others, though they declined to take this step, yet reprobated the
- 5155 folly which they had received from their fathers, and laughed to scorn what they had so long been accustomed to regard as gods. Indeed, what other feelings could possess

their minds, when they witnessed the thorough uncleanness concealed beneath the fair exterior of the objects of their worship? Beneath this were found either the bones of dead men or dry skulls, fraudulently adorned by the arts of magicians, or filthy rags full of abominable impurity, or a bundle of hay or stubble. On seeing all these things heaped together within their lifeless images, they denounced their fathers' extreme folly and their own, especially when neither in the secret recesses of the temples nor in the statues themselves could any inmate be found; neither demon, nor utterer of oracles, neither god nor prophet, as they had heretofore supposed: nay, not even a dim and shadowy phantom could be seen. Accordingly, every gloomy cavern, every hidden recess, afforded easy access to the emperor's emissaries: the inaccessible and secret chambers, the innermost shrines of the temples, were trampled by the soldiers' feet; and thus the mental blindness which had prevailed for so many ages over the gentile world became clearly apparent to the eyes of all.

CHAPTER LVIII: How he destroyed the Temple of Venus at Heliopolis, and built the First Church in that City.

SUCH actions as I have described may well be reckoned among the emperor's noblest achievements, as also the wise arrangements which he made respecting each particular province. We may instance the Phoenician city Heliopolis, in which those who dignify licentious pleasure with a distinguishing title of honor, had permitted their wives and daughters to commit shameless fornication. But now a new statute, breathing the very spirit of modesty, proceeded from the emperor, which peremptorily forbade the continuance of former practices. And besides this he sent them also written exhortations, as though he had been especially ordained by God for this end, that he might instruct all men in the principles of chastity. Hence, he disdained not to communicate by letter even with these persons, urging them to seek diligently the knowledge of God. At the same time he followed up his words by corresponding deeds, and erected even in this city a church of great size and magnificence: so that an event unheard of before in any age, now for the first time came to pass, namely, that a city which had hitherto been wholly given up to superstition now obtained the privilege of a church of God, with presbyters and deacons, and its people were placed under the presiding care of a bishop consecrated to the service of the supreme God. And further, the emperor, being anxious that here also as many as possible might be won to the truth, bestowed abundant provision for the necessities of the poor, desiring even thus to invite them to seek the doctrines of salvation, as though he were almost adopting the words of him who said, "Whether in pretense, or in truth, let Christ be preached."

CHAPTER LIX: Of the Disturbance at Antioch by Eustathius.

IN the midst, however, of the general happiness occasioned by these events, and while the Church of God was every where and every way flourishing throughout the empire, once more that spirit of envy, who ever watches for the ruin of the good, prepared himself to combat the greatness of our prosperity, in the expectation, perhaps, that the emperor himself, provoked by our tumults and disorders, might eventually become estranged from us. Accordingly, he kindled a furious controversy at Antioch, and thereby involved the church in that place in a series of tragic calamities, which had well-nigh occasioned the total overthrow of the city. The members of the Church were divided into two opposite parties; while the people, including even the magistrates and soldiery, were roused to such a pitch, that the contest would have been decided by the sword, had not the watchful providence of God, as well as dread of the emperor's displeasure, controlled the fury of the multitude. On this occasion, too, the emperor, acting the part of a preserver and physician of souls, applied with much forbearance the remedy of persuasion to those who needed it. He gently pleaded, as it were by an embassy, with his people, sending among them one of the best approved and most faithful of those who were honored with the dignity of Count; at the same time that he exhorted them to a peaceable spirit by repeated letters, and instructed them in the practice of true godliness, Having prevailed by these remonstrances, he excused their conduct in his subsequent letters, alleging that he had himself heard the merits of the case from him on whose account the disturbance had arisen. And these letters of his, which are replete with learning and instruction of no ordinary kind, I should have inserted in this present work, were it not that they might affix a mark of dishonor to the character of the persons accused. I will therefore omit these, being unwilling to revive the memory of past grievances, and will only annex those to my present narrative which he wrote to testify his satisfaction at the re-establishment of peace and concord among the rest. In these letters, he cautioned them against any desire to claim the ruler of another district, through whose

intervention peace had been restored, as their own, and exhorted them, consistently with the usage of the Church, to choose him as their bishop, whom the common Saviour of all should point out as suited for the office. His letter, then, is addressed to the people and to the bishops, severally, in the following terms.

CHAPTER LX: Constantine's Letter to the Antiochians, directing them not to withdraw Eusebius from Caesarea, but to seek some one else.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to the people of Antioch.

"How pleasing to the wise and intelligent portion of mankind is the concord which exists among you! And I myself, brethren, am disposed to love you with an enduring affection, inspired both by religion, and by your own manner of life and zeal on my behalf. It is by the exercise of right understanding and sound discretion, that we are enabled really to enjoy our blessings. And what can become you so well as this discretion? No wonder, then, if I affirm that your maintenance of the truth has tended rather to promote your security than to draw on you the hatred of others. Indeed, amongst brethren, whom the selfsame disposition to walk in the ways of truth and righteousness promises, through the favor of God, to register among his pure and holy family, what can be more honorable than gladly to acquiesce in the prosperity of all men? Especially since the precepts of the divine law prescribe a better direction to your proposed intention, and we ourselves desire that your judgment should be confirmed by proper sanction. It may be that you are surprised, and at a loss to understand the meaning of this introduction to my present address. The cause of it I will not hesitate to explain without reserve. I confess, then, that on reading your records I perceived, by the highly eulogistic testimony which they bear to Eusebius, bishop of Caesarea, whom I have myself long well known and esteemed for his learning and moderation, that you are strongly attached to him, and desire to appropriate him as your own. What thoughts, then, do you suppose that I entertain on this subject, desirous as I am to seek for and act on the strict principles of right? What anxiety do you imagine this desire of yours has caused me? O holy faith, who givest us in our Saviour's words and precepts a model, as it were, of what our life should be, how hardly wouldst thou thyself resist the sins of men, were it not that thou refusest to subserve the purposes of gain! In my own judgment, he whose first object is the maintenance of peace, seems to be superior to Victory herself; and where a right and honorable course lies open to one's choice, surely no one would hesitate to adopt it. I ask then, brethren, why do we so decide as to inflict an injury on others by our choice? Why do we covet those objects which will destroy the credit of our own reputation? I myself highly esteem the individual whom ye judge worthy of your respect and affection: notwithstanding, it cannot be right that those principles should be entirely disregarded which should be authoritative and binding on all alike, so that each should not be content with his own circumstances, and all enjoy their proper privileges: nor can it be right, in considering the claims of rival candidates, to suppose but that not one only, but many, may appear worthy of comparison with this person. For as long as no violence or harshness are suffered to disturb the dignities of the church, they continue to be on an equal footing, and worthy of the same consideration everywhere. Nor is it reasonable that an inquiry into the qualifications of this one should be made to the detriment of others; since the judgment of all churches, whether reckoned of greater or less importance in themselves, is equally capable of receiving and maintaining the divine ordinances, so that one is in no way inferior to another, if we will but boldly declare the truth, in regard to that standard of practice which is common to all. If this be so, we must say that you will be chargeable, not with retaining this prelate, but with wrongfully removing him; your conduct will be characterized rather by violence than justice; and whatever may be generally thought by others, I dare clearly and boldly affirm that this measure will furnish ground of accusation against you, and will provoke factious disturbances of the most mischievous kind: for even timid flocks can show the use and power of their teeth, when the watchful care of their shepherd declines, and they find themselves bereft of his accustomed guidance. If this then be really so, if I am not deceived in my judgment, let this, brethren, be your first consideration, for many and important considerations will immediately present themselves, whether, should you persist in your intention, that mutual kindly feeling and affection which should subsist among you will suffer no diminution? In the next place, remember that he, who came among you for the purpose of offering disinterested counsel, now enjoys the reward which is due to him in the judgment of heaven; for he has received no ordinary recompense in the high testimony you have borne to his equitable conduct. Lastly, in accordance with your usual sound judgment, do ye exhibit a becoming diligence in selecting the person of whom you stand in need, carefully avoiding all

factionous and tumultuous clamor; for such clamor is always wrong, and from the collision of discordant elements both sparks and flame will arise. I protest, as I
 5290 desire to please God and you, and to enjoy a happiness commensurate with your kind wishes, that I love you, and the quiet haven of your gentleness, now that you have cast from you that which defiled, and received in its place at once sound morality and concord, firmly planting in the vessel the sacred standard, and guided, as one
 5295 on board that merchandise which is incorruptible, since, as it were, all bilge water has been drained from the vessel; and be careful henceforth so to secure the enjoyment of all your present blessing, that you may not seem at any future time either to have determined any measure on the impulse of inconsiderate or ill-directed zeal, or in the first instance rashly to have entered on an inexpedient course. May
 5300 God preserve you, beloved brethren!"

CHAPTER LXI: The Emperor's Letter to Eusebius praising him for refusing the Bishopric of Antioch.

THE Emperor's Letter to me on my refusing the Bishopric of Antioch.
 5305 "VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Eusebius.
 "I have most carefully perused your letter, and perceive that you have strictly conformed to the rule enjoined by the discipline of the Church. Now to abide by that which appears at the same time pleasing to God, and accordant with apostolical tradition, is a proof of true piety. You have reason to deem yourself happy on this
 5310 behalf, that you are counted worthy, in the judgment, I may say, of all the world, to have the oversight of any church. For the desire which all feel to claim you for their own, undoubtedly enhances your enviable fortune in this respect. Notwithstanding, your Prudence whose resolve it is to observe the ordinances of God and the apostolic canon of the Church, has done excellently well in declining the
 5315 bishopric of the church at Antioch, and desiring to continue in that church of which you first received the oversight by the will of God. I have written on this subject to the people of Antioch, and also to your colleagues in the ministry who had themselves consulted me in regard to this question; on reading which letters, your Holiness will easily discern, that, inasmuch as justice itself opposed their claims,
 5320 I have written to them under divine direction. It will be necessary that your Prudence should be present at their conference, in order that this decision may be ratified in the church at Antioch. God preserve you, beloved brother!"

CHAPTER LXII: Constantine's Letter to the Council, depreciating the Removal of Eusebius from Caesarea.

5325 "VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Theodotus, Theodorus, Narcissus, Aetius, Alpheus, and the rest of the bishops who are at Antioch.
 "I have perused the letters written by your Prudences, and highly approve of the wise resolution of your colleague in the ministry, Eusebius. Having, moreover, been
 5330 informed of the circumstances of the case, partly by your letters, partly by those of our illustrious counts, Acacius and Strategius, after sufficient investigation I have written to the people of Antioch, suggesting the course which will be at once pleasing to God and advantageous for the Church. A copy of this I have ordered to be subjoined to this present letter, in order that ye yourselves may know what I thought
 5335 fit, as an advocate of the cause of justice, to write to that people: since I find in your letter this proposal, that, in consonance with the choice of the people, sanctioned by your own desire, Eusebius the holy bishop of Caesarea should preside over and take the charge of the church at Antioch. Now the letters of Eusebius himself on this subject appeared to be strictly accordant with the order prescribed
 5340 by the Church. Nevertheless it is expedient that your Prudences should be made acquainted with my opinion also. For I am informed that Euphronius the presbyter, who is a citizen of Caesarea in Cappadocia, and George of Arethusa, likewise a presbyter, and appointed to that office by Alexander at Alexandria, are men of tried faith. It was right, therefore, to intimate to your Prudences, that in proposing these men and
 5345 any others whom you may deem worthy the episcopal dignity, you should decide this question in a manner conformable to the tradition of the apostles. For in that case, your Prudences will be able, according to the rule of the Church and apostolic tradition, to direct this election in the manner which true ecclesiastical discipline shall prescribe. God preserve you, beloved brethren!"

5350 CHAPTER LXIII: How he displayed his Zeal for the Extirpation of Heresies.
 SUCH were the exhortations to do all things to the honor of the divine religion which the emperor addressed to the rulers of the churches. Having by these means banished

dissension, and reduced the Church of God to a state of uniform harmony, he next
 5355 proceeded to a different duty, feeling it incumbent on him to extirpate another sort
 of impious persons, as pernicious enemies of the human race. These were pests of
 society, who ruined whole cities under the specious garb of religious decorum; men
 whom our Saviour's warning voice somewhere terms false prophets and ravenous wolves:
 5360 "Beware of false prophets, which will come to you in sheep's clothing, but inwardly
 are ravening wolves. By their fruits ye shall know them." Accordingly, by an order
 transmitted to the governors of the several provinces, he effectually banished all
 such offenders. In addition to this ordinance he addressed to them personally a
 severely awakening admonition, exhorting them to an earnest repentance, that they
 might still find a haven of safety in the true Church of God. Hear, then, in what
 5365 manner he addressed them in this letter.

CHAPTER LXIV: Constantine's Edict against the Heretics.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to the heretics.

"Understand now, by this present statute, ye Novatians, Valentinians, Marcionites,
 5370 Paulians, ye who are called Cataphrygians, and all ye who devise and support heresies
 by means of your private assemblies, with what a tissue of falsehood and vanity, with
 what destructive and venomous errors, your doctrines are inseparably interwoven; so
 that through you the healthy soul is stricken with disease, and the living becomes
 the prey of everlasting death. Ye haters and enemies of truth and life, in league
 5375 with destruction! All your counsels are opposed to the truth, but familiar with deeds
 of baseness; full of absurdities and fictions: and by these ye frame falsehoods,
 oppress the innocent, and withhold the light from them that believe. Ever trespassing
 under the mask of godliness, ye fill all things with defilement: ye pierce the pure
 and guileless conscience with deadly wounds, while ye withdraw, one may almost say,
 5380 the very light of day from the eyes of men. But why should I particularize, when to
 speak of your criminality as it deserves demands more time and leisure than I can
 give? For so long and unmeasured is the catalogue of your offenses, so hateful and
 altogether atrocious are they, that a single day would not suffice to recount them
 all. And, indeed, it is well to turn one's ears and eyes from such a subject, lest by
 5385 a description of each particular evil, the pure sincerity and freshness of one's own
 faith be impaired. Why then do I still bear with such abounding evil; especially
 since this protracted clemency is the cause that some who were sound are become
 tainted with this pestilent disease? Why not at once strike, as it were, at the root
 of so great a mischief by a public manifestation of displeasure?

CHAPTER LXV: The Heretics are deprived of their Meeting Places.

"FORASMUCH, then, as it is no longer possible to bear with your pernicious errors, we
 give warning by this present statute that none of you henceforth presume to assemble
 yourselves together. We have directed, accordingly, that you be deprived of all the
 5395 houses in which you are accustomed to hold your assemblies: and our care in this
 respect extends so far as to forbid the holding of your superstitious and senseless
 meetings, not in public merely, but in any private house or place whatsoever. Let
 those of you, therefore, who are desirous of embracing the true and pure religion,
 take the far better course of entering the catholic Church, and uniting with it in
 5400 holy fellowship, whereby you will be enabled to arrive at the knowledge of the truth.
 In any case, the delusions of your perverted understandings must entirely cease to
 mingle with and mar the felicity of our present times: I mean the impious and
 wretched double-mindedness of heretics and schismatics. For it is an object worthy of
 that prosperity which we enjoy through the favor of God, to endeavor to bring back
 5405 those who in time past were living in the hope of future blessing, from all
 irregularity and error to the right path, from darkness to light, from vanity to
 truth, from death to salvation. And in order that this remedy may be applied with
 effectual power, we have commanded, as before said, that you be positively deprived
 of every gathering point for your superstitious meetings, I mean all the houses of
 5410 prayer, if such be worthy of the name, which belong to heretics, and that these be
 made over without delay to the catholic Church; that any other places be confiscated
 to the public service, and no facility whatever be left for any future gathering; in
 order that from this day forward none of your unlawful assemblies may presume to
 appear in any public or private place. Let this edict be made public."

CHAPTER LXVI: How on the Discovery of Prohibited Books among the Heretics, Many of
 them return to the Catholic Church.

THUS were the lurking-places of the heretics broken up by the emperor's command, and
 the savage beasts they harbored (I mean the chief authors of their impious doctrines)

5420 driven to flight. Of those whom they had deceived, some, intimidated by the emperor's threats, disguising their real sentiments, crept secretly into the Church. For since the law directed that search should be made for their books, those of them who practiced evil and forbidden arts were detected, and, these were ready to secure their own safety by dissimulation of every kind. Others, however, there were, who 5425 voluntarily and with real sincerity embraced a better hope. Meantime the prelates of the several churches continued to make strict inquiry, utterly rejecting those who attempted an entrance under the specious disguise of false pretenses, while those who came with sincerity of purpose were proved for a time, and after sufficient trial numbered with the congregation. Such was the treatment of those who stood charged 5430 with rank heresy: those, however, who maintained no impious doctrine, but had been separated from the one body through the influence of schismatic advisers, were received without difficulty or delay. Accordingly, numbers thus revisited, as it were, their own country after an absence in a foreign land, and acknowledged the Church as a mother from whom they had wandered long, and to whom they now returned 5435 with joy and gladness. Thus the members of the entire body became united, and compacted in one harmonious whole; and the one catholic Church, at unity with itself, shone with full luster, while no heretical or schismatic body anywhere continued to exist. And the credit of having achieved this mighty work our Heaven-protected emperor alone, of all who had gone before him, was able to attribute to himself.

5440

BOOK IV.

CHAPTER I: How he honored Many by Presents and Promotions.
WHILE thus variously engaged in promoting Saviour's doctrine, the emperor was far from neglecting secular affairs; but in this respect also he was unwearied in 5445 bestowing benefits of every kind and in quick succession on the people of every province. On the one hand he manifested a paternal anxiety for the general welfare of his subjects; on the other he would distinguish individuals of his own acquaintance with various marks of honor; conferring his benefits in every instance in a truly noble spirit. No one could request a favor from the emperor, and fail of obtaining 5450 what he sought: no one expected a boon from him, and found that expectation vain. Some received presents in money, others in land; some obtained the Praetorian praefecture, others senatorial, others again consular rank: many were appointed provincial governors: others were made counts of the first, second, or third order: in numberless instances the title of Most Illustrious and many other distinctions 5455 were conferred; for the emperor devised new dignities, that he might invest a larger number with the tokens of his favor.

CHAPTER II: Remission of a Fourth Part of the Taxes.
THE extent to which he studied the general happiness and prosperity may be understood 5460 from a single instance most beneficial and universal in its application, and still gratefully remembered. He remitted a fourth part of the yearly tribute paid for land, and bestowed it on the owners of the soil; so that if we compute this yearly reduction, we shall find that the cultivators enjoyed their produce free of tribute every fourth year. This privilege being established by law, and secured for the time 5465 to come, has given occasion for the emperor's beneficence to be held, not merely by the then present generation, but by their children and descendants, in perpetual remembrance.

CHAPTER III: Equalization of the More Oppressive Taxes.
AND whereas some persons found fault with the surveys of land which had been made 5470 under former emperors, and complained that their property was unduly burdened; acting in this case also on the principles of justice, he sent commissioners to equalize the tribute, and to secure immunity to those who had made this appeal.

5475 CHAPTER IV: His Liberality, from his private Resources, to the Losers in Suits of a Pecuniary Nature.

IN cases of judicial arbitration, in order that the loser by his decision might not quit his presence less contented than the victorious litigant, he himself bestowed, and from his own private means in some cases lands, in other money, on the defeated 5480 party. In this manner he took care that the loser, as having appeared in his in his presence, should be as well satisfied as the gainer of the cause; for he considered that non one ought in any case to retire dejected and sorrowful from an interview with such a price. Thus it happened that both parties returned from the scene of trial with glad and cheerful countenances, while the emperor's noble-minded 5485 liberality excited universal admiration.

CHAPTER V: Conquest of the Scythians defeated through the Sign of Our Saviour. AND why should I relate even briefly and incidentally, how he subjected barbarous nations to the Roman power; how he was the first who subjugated the Scythian and Sarmatian tribes, which had never learned submission, and compelled them, how unwilling soever, to own the sovereignty of Rome? For the emperors who preceded him had actually rendered tribute to the Scythians: and Romans, by an annual payment, had confessed themselves servants to barbarians; an indignity which our emperor could no longer bear, nor think it consistent with his victorious career to continue the payment his predecessors had made. Accordingly, with full confidence in his Saviour's aid he raised his conquering standard against these enemies also, and soon reduced them all to obedience; coercing by military force those who fiercely resisted his authority, while, on the other hand, he conciliated the rest by wisely conducted embassies, and reclaimed them to a state of order and civilization from their lawless and savage life. Thus the Scythians at length learned to acknowledge subjection to the power of Rome.

CHAPTER VI: Conquest of the Sarmatians, consequent on the Rebellion of their Slaves. WITH respect to the Sarmatians, God himself brought them beneath the rule of Constantine, and subdued a nation swelling with barbaric pride in the following manner. Being attacked by the Scythians, they had entrusted their slaves with arms, in order to repel the enemy. These slaves first overcame the invaders and then, turning their weapons against their masters, drove them all from their native land. The expelled Sarmatians found that their only hope of safety was in Constantine's protection: and he, whose familiar habit it was to save men's lives, received them all within the confines of the Roman empire. Those who were capable of serving he incorporated with his own troops: to the rest he allotted lands to cultivate for their own support so that they themselves acknowledged that their past misfortune had produced a happy result in that they now enjoyed Roman liberty in place of savage barbarism. In this manner God added to his dominions many and various barbaric tribes.

CHAPTER VII: Ambassadors from Different Barbarous Nations receive Presents from the Emperor. INDEED, ambassadors were continually arriving from all nations, bringing for his acceptance their most precious gifts. So that I myself have sometimes stood near the entrance of the imperial palace, and observed a noticeable array of barbarians in attendance, differing from each other in costume and decorations, and equally unlike in the fashion of their hair and beard. Their aspect truculent and terrible, their bodily stature prodigious: some of a red complexion, others white as snow, others again of an intermediate color. For in the number of those I have referred to might be seen specimens of the Blemmyan tribes, of the Indians, and the Ethiopians, that widely-divided race, remotest of mankind. All these in due succession, like some painted pageant, presented to the emperor those gifts which their own nation held in most esteem; some offering crowns of goldments embroidered with gold and flowers: some appeared with horses, others with shields and long spears, with arrows and bows thereby offering their services and alliance for the emperors acceptance. These presents he separately received and carefully laid aside, acknowledging them in so munificent a manner as at once to enrich those who bore them. He also honored the noblest among them with Roman offices of dignity; so that many of them thenceforward preferred to continue their residence among us, and felt no desire to revisit their native land.

CHAPTER VIII: That he wrote also to the King of Persia who had sent him an Embassy, on Behalf of the Christians in his Realm. THE king of the Persians also having testified a desire to form an alliance with Constantine, by sending an embassy and presents as assurances of peace and friendship, the emperor, in negotiating this treaty, far surpassed the monarch who had first done him honor, in the magnificence with which he acknowledged his gifts. Having heard, too, that there were many churches of God in Persia, and that large numbers there were gathered into the fold of Christ, full of joy at this intelligence, he resolved to extend his anxiety for the general welfare to that country also, as one whose aim it was to care for all alike in every nation.

CHAPTER IX: Letter of Constantine Augustus to Sapor, King of the Persians, containing a truly Pious Confession of God and Christ.

COPY of his Letter to the King of Persia.

"By keeping the Divine faith, I am made a partaker of the light of truth: guided by the light of truth, I advance in the knowledge of the Divine faith. Hence it is that, as my actions themselves evince, I profess the most holy religion; and this worship I declare to be that which teaches me deeper acquaintance with the most holy God; aided by whose Divine power, beginning from the very borders of the ocean, I have aroused each nation of the world in succession to a well-grounded hope of security; so that those which, groaning in servitude to the most cruel tyrants and yielding to the pressure of their daily sufferings, had well nigh been utterly destroyed, have been restored through my agency to a far happier state. This God I confess that I hold in unceasing honor and remembrance; this God I delight to contemplate with pure and guileless thoughts in the height of his glory.

CHAPTER X: The Writer denounces Idols, and glorifies God.

"THIS God I invoke with bended knees, and recoil with horror from the blood of sacrifices from their foul and detestable odors, and from every earth-born magic fire: for the profane and impious superstitions which are defiled by these rites have cast down and consigned to perdition many, nay, whole nations of the Gentile world. For he who is Lord of all cannot endure that those blessings which, in his own loving-kindness and consideration of the wants of men he has revealed for the rise of all, should be perverted to serve the lusts of any. His only demand from man is purity of mind and an undefiled spirit; and by this standard he weighs the actions of virtue and godliness. For his pleasure is in works of moderation and gentleness: he loves the meek, and hates the turbulent spirit: delighting in faith, he chastises unbelief: by him all presumptuous power is broken down, and he avenges the insolence of the proud. While the arrogant and haughty are utterly overthrown, he requires the humble and forgiving with deserved rewards: even so does he highly honor and strengthen with his special help a kingdom justly governed, and maintains a prudent king in the tranquility of peace.

CHAPTER XI: Against the Tyrants and Persecutors; and on the Captivity of Valerian.

"I CANNOT, then, my brother believe that I err in acknowledging this one God, the author and parent of all things: whom many of my predecessors in power, led astray by the madness of error, have ventured to deny, but who were all visited with a retribution so terrible and so destructive, that all succeeding generations have held up their calamities as the most effectual warning to any who desire to follow in their steps. Of the number of these I believe him to have been, whom the lightning-stroke of Divine vengeance drove forth from hence, and banished to your dominions and whose disgrace contributed to the fame of your celebrated triumph.

CHAPTER XII: He declares that, having witnessed the Fall of the Persecutors, he now rejoices at the Peace enjoyed by the Christians.

"AND it is surely a happy circumstance that the punishment of such persons as I have described should have been publicly manifested in our own times. For I myself have witnessed the end of those who lately harassed the worshipers of God by their impious edict. And for this abundant thanksgivings are due to God that through his excellent Providence all men who observe his holy laws are gladdened by the renewed enjoyment of peace. Hence I am fully persuaded that everything is in the best and safest posture, since God is vouchsafing, through the influence of their pure and faithful religious service, and their unity of judgment respecting his Divine character, to gather all men to himself.

CHAPTER XIII: He bespeaks his Affectionate Interest for the Christians in his Country.

"IMAGINE, then, with what joy I heard tidings so accordant with my desire, that the fairest districts of Persia are filled with those men on whose behalf alone I am at present speaking, I mean the Christians. I pray, therefore, that both you and they may enjoy abundant prosperity, and that your blessings and theirs may be in equal measure; for thus you will experience the mercy and favor of that God who is the Lord and Father of all. And now, because your power is great, I commend these persons to your protection; because your piety is eminent, I commit them to your care. Cherish them with your wonted humanity and kindness; for by this proof of faith you will secure an immeasurable benefit both to yourself and us."

CHAPTER XIV: How the Zealous Prayers of Constantine procured Peace to the Christians. THUS, the nations of the world being everywhere guided in their course as it were by the skill of a single pilot, and acquiescing in the administration of him who

governed as the servant of God, the peace of the Roman empire continued undisturbed, and all classes of his subjects enjoyed a life of tranquility and repose. At the same time the emperor, who was convinced that the prayers of godly men contributed powerfully to the maintenance of the public welfare, felt himself constrained zealously to seek such prayers and not only himself implored the help and favor of God, but charged the prelates of the churches to offer supplications on his behalf.

CHAPTER XV: He causes himself to be represented on his Coins, and in his Portraits, in the Attitude of Prayer.
HOW deeply his soul was impressed by the power of divine faith may be understood from the circumstance that he directed his likeness to be stamped on the golden coin of the empire with the eyes uplifted as in the posture of prayer to God: and this money became current throughout the Roman world. His portrait also at full length was placed over the entrance gates of the palaces in some cities, the eyes upraised to heaven, and the hands outspread as if in prayer.

CHAPTER XVI: He forbids by Law the Plating his Likeness in Idol Temples.
IN this manner he represented himself, even through the medium of painting, as habitually engaged in prayer to God. At the same time he forbade, by an express enactment, the setting up of any resemblance of himself in any idol temple, that not even the mere lineaments of his person might receive contamination from the error of forbidden superstition.

CHAPTER XVII: Of his Prayers in the Palace, and his Reading the Holy Scriptures.
STILL nobler proofs of his piety might be discerned by those who marked how he modeled as it were his very palace into a church of God, and himself afforded a pattern of zeal to those assembled therein: how he took the sacred scriptures into his hands, and devoted himself to the study of those divinely inspired oracles; after which he would offer up regular prayers with all the members of his imperial court.

CHAPTER XVIII: He enjoins the General Observance of the Lord's Day, and the Day of Preparation.
HE ordained, too, that one day should be regarded as a special occasion for prayer: I mean that which is truly the first and chief of all, the day of our Lord and Saviour. The entire care of his household was entrusted to deacons and other ministers consecrated to the service of God, and distinguished by gravity of life and every other virtue: while his trusty body guard, strong in affection and fidelity to his person, found in their emperor an instructor in the practice of piety, and like him held the Lord's salutary day in honor and performed on that day the devotions which he loved. The same observance was recommended by this blessed prince to all classes of his subjects: his earnest desire being gradually to lead all mankind to the worship of God. Accordingly he enjoined on all the subjects of the Roman empire to observe the Lord's day, as a day of rest, and also to honor the day which precedes the Sabbath; in memory, I suppose, of what the Saviour of mankind is recorded to have achieved on that day. And since his desire was to teach his whole army zealously to honor the Saviour's day (which derives its name from light, and from the sun), he freely granted to those among them who were partakers of the divine faith, leisure for attendance on the services of the Church of God, in order that they might be able, without impediment, to perform their religious worship.

CHAPTER XIX: That he directed even his Pagan Soldiers to pray on the Lord's Day.
WITH regard to those who were as yet ignorant of divine truth, he provided by a second statute that they should appear on each Lord's day on an open plain near the city, and there, at a given signal, offer to God with one accord a prayer which they had previously learned. He admonished them that their confidence should not rest in their spears, or armor, or bodily strength, but that they should acknowledge the supreme God as the giver of every good, and of victory itself; to whom they were bound to offer their prayers with due regularity, uplifting on whom they should call as the Author of victory, their Preserver, Guardian, and Helper. The emperor himself prescribed the prayer to be used by all his troops, commanding them, to pronounce the following words in the Latin tongue:

CHAPTER XX: The Form of Prayer given by Constantine to his Soldiers.
"WE acknowledge thee the only God: we own thee, as our King and implore thy succor. By thy favor have we gotten the victory through thee are we mightier than our enemies. We render thanks for thy past benefits, and trust thee for future blessings.

- 5685 Together we pray to thee, and beseech thee long to preserve to us, safe and triumphant, our emperor Constantine and his pious sons." by his troops, and such the prayer they were instructed to offer up to God.
- CHAPTER XXI: He orders the Sign of the Saviour's Cross to be engraven on his Soldiers' Shields.
- 5690 AND not only so, but he also caused the sign of the salutary trophy to be impressed on the very shields of his soldiers; and commanded that his embattled forces should be preceded in their march, not by golden images, as heretofore, but only by the standard of the cross.
- 5695 CHAPTER XXII: Of his Zeal in Prayer, and the Honor he paid to the Feast of Easter. THE emperor himself, as a sharer in the holy mysteries of our religion, would seclude himself daily at a stated hour in the innermost chambers of his palace; and there in solitary converse with his God, would kneel in humble supplication, and entreat the blessings of which he stood in need. But especially at the salutary feast of Easter,
- 5700 his religious diligence was redoubled; he fulfilled as it were the duties of a hierophant with every energy of his mind and body, and outvied all others in the zealous celebration of this feast. He changed, too, the holy night vigil into a brightness like that of day, by causing waxen tapers of great length to be lighted throughout the city: besides which, torches everywhere diffused their light, so as to
- 5705 impart to this mystic vigil a brilliant splendor beyond that of day. As soon as day itself returned, in imitation of our Saviour's gracious acts, he opened a liberal hand to his subjects of every nation, province, and people, and lavished abundant bounties on all.
- 5710 CHAPTER XXIII: How he forbade Idolatrous Worship, but honored Martyrs and the Church Festivals. SUCH were his sacred ministrations in the service of his God. At the same time, his subjects, both civil and military, throughout the empire, found a barrier everywhere opposed against idol worship, and every kind of sacrifice forbidden. A statute was
- 5715 also passed, enjoining the due observance of the Lord's day, and transmitted to the governors of every province, who undertook, at the emperors command, to respect the days commemorative of martyrs, and duly to emperors entire satisfaction.
- CHAPTER XXIV: That he described himself to be a Bishop, in Charge of Affairs External to the Church.
- 5720 HENCE it was not without reason that once, on the occasion of his entertaining a company of bishops, he let fall the expression, "that he himself too was a bishop," addressing them in my heating in the following words: "You are bishops whose jurisdiction is within the Church: I also am a bishop, ordained by God to overlook
- 5725 whatever is external to the Church." And copal[?] care, and exhorted them as far as in him lay to follow a godly life.
- CHAPTER XXV: Prohibition of Sacrifices, of Mystic Rites, Combats of Gladiators, also the Licentious Worship of the Nile.
- 5730 CONSISTENTLY with this zeal he issued successive laws and ordinances, forbidding any to offer sacrifice to idols, to consult diviners, to erect images, or to pollute the cities with the sanguinary combats of gladiators. And inasmuch as the Egyptians, especially those of Alexandria, had been accustomed to honor their river through a priesthood composed of effeminate men, a further law was passed commanding the
- 5735 extermination of the whole class as vicious, that no one might thenceforward be found tainted with the like impurity. And whereas the superstitious inhabitants apprehended that the river would in consequence withhold its customary flood, God himself showed his approval of the emperor's law by ordering all things in a manner quite contrary to their expectation. For those who had defiled the cities by their vicious conduct
- 5740 were indeed seen no more; but the river, as if the country through rose higher than ever before, overflowed the country with its fertilizing streams: thus effectually admonishing the deluded people to turn from impure men, and ascribe their prosperity to him alone who is the Giver of all good.
- 5745 CHAPTER XXVI: Amendment of the Law in Force respecting Childless Persons, and of the Law of Wills. SO numerous, indeed, were the benefits of this kind conferred by the emperor on every province, as to afford ample materials to any who might desire to record them. Among these may be instanced those laws which he entirely remodelled, and established on a

5750 more equitable basis: the nature of which reform may be briefly and easily explained. The childless were punished under the old law with the forfeiture of their hereditary property a merciless stature, which dealt with them as positive criminals. The emperor annulled this, and decreed that those so circumstanced should inherit. He regulated the question on the principles of equity and justice, arguing willful transgressors should be chastised with the penalties their crimes deserve. But nature herself denies children to many, who long, perhaps, for a numerous offspring, but are disappointed of their hope by bodily infirmity. Others continue childless, not from any dislike of posterity, but because their ardent love of philosophy renders them averse to the conjugal union. Women, too, consecrated to the service of God, have maintained a pure and spotless virginity, and have devoted themselves, soul and body to a life of entire chastity and holiness. What then? Should this conduct be deemed worthy of punishment, or rather of admiration and praise; since to desire this state is in itself honorable, and to maintain it surpasses the power of unassisted nature? Surely those whose bodily infirmity destroys their hope of offspring are worthy of pity, not of punishment: and he who devotes himself to a higher object calls not for chastisement, but especial admiration. On such regard to the wills of dying persons, the old laws had ordained that they should be expressed, even at the latest breath, as it were, in certain definite words, and had prescribed the exact form and terms to be employed. This practice had occasioned many fraudulent attempts to hinder the intentions of the deceased from being carried into full effect. As soon as our emperor was aware of these abuses, he reformed this law likewise, declaring that a dying man ought to be permitted to indicate his last wishes in as few words as possible, and in whatever terms he pleased; and to set forth his will in any written form; or even by word of mouth, provided it were done in the presence of proper witnesses, who might be competent faithfully to discharge their trust.

CHAPTER XXVII: Among Other Enactments, he decrees that no Christian shall slave to a Jew, and affirms the Validity of the Decisions of Councils. HE also passed a law to the effect that no Christian should remain in servitude to a Jewish master, on the ground that it could not be right that those whom the Saviour had ransomed should be subjected to the yoke of slavery by a people who had slain the prophets and the Lord himself. If any were found hereafter in these circumstances, the slave was to be set at liberty, and the master punished by a fine. He likewise added the sanction of his authority to the decisions of bishops passed at their synods, and forbade the provincial governors to annul any of their decrees: for he rated the priests of God at a higher value than any judge whatever. These and a thousand similar provisions did he enact for the benefit of his subjects; but there is not time now to give a special description of them, such as might convey an accurate idea of his imperial wisdom in these respects: nor need I now relate at length, how, as a devoted servant of the Supreme God, he employed himself from morning until night in seeking objects for his beneficence, and how equally and universally kind he was to all.

CHAPTER XXVIII: His Gifts to the Churches, and Bounties to Virgins and to the Poor. His liberality, however, was most especially exercised on behalf of the churches of God. In some cases he granted lands, in others he issued supplies of food for the support of the poor, of orphan children, and widows; besides which, he evinced much care and forethought in fully providing the naked and destitute with clothing. He distinguished, however, with most special honor those who had devoted their lives to the practice of Divine philosophy. Hence his respect, little short of veneration, for God's most holy and ever virgin choir: for he felt assured that the God to whom such persons devoted themselves was himself an inmate of their souls.

CHAPTER XXIX: Of Constantine's Discourses and Declamations. FOR himself, he sometimes passed sleepless nights in furnishing his mind with Divine knowledge: and much of his time was spent in composing discourses, many of which he delivered in public; for he conceived it to be incumbent on him to govern his subjects by appealing to their reason, and to secure in all respects a rational obedience to his authority. Hence he would sometimes himself evoke an assembly, on which occasions vast multitudes attended, in the hope of hearing an emperor sustain the part of a philosopher. And if in the course of his speech any occasion offered of touching on sacred topics, he immediately stood erect, and with a grave aspect and subdued tone of voice seemed reverently to be initiating his auditors in the mysteries of the Divine doctrine: and when they greeted him with shouts of acclamation, he would direct them by his gestures to raise their eyes to heaven, and

reserve their admiration for the Supreme King alone, and honor him with adoration and praise. He usually divided the subjects of his address, first thoroughly exposing the error of polytheism, and proving the superstition of the Gentiles to be mere fraud, and a cloak for impiety. He then would assert the sole sovereignty of God: passing
 5820 thence to his Providence, both general and particular. Proceeding next to the dispensation of salvation, he would demonstrate its necessity, and adaptation to the nature of the case; entering next in order on the doctrine of the Divine judgment. And here especially he appealed most powerfully to the consciences of his hearers, while he denounced the rapacious and violent, and those who were slaves to an
 5825 inordinate thirst of gain. Nay, he caused some of his own acquaintance who were present to feel the severe lash of his words, and to stand with downcast eyes in the consciousness of guilt, while he testified against them in the clearest and most impressive terms that they would have an account to render of their deeds to God. He reminded them that God himself had given him the empire of the world, portions of
 5830 which he himself, acting on the same Divine principle, had intrusted to their government; but that all would in due time be alike summoned to give account of their actions to the Supreme Sovereign of all. Such was his constant testimony; such his admonition and instruction. And he himself both felt and uttered these sentiments in the genuine confidence of faith: but his hearers were little disposed to learn, and
 5835 deaf to sound advice; receiving his words indeed with loud applause, but induced by insatiable cupidity practically to disregard them.

CHAPTER XXX: That he marked out before a Covetous Man the Measure of a Grave, and so put him to Shame.

5840 ON one occasion he thus personally addressed one of his courtiers: "How far, my friend, are we to carry our inordinate desires?" Then drawing the dimensions of a human figure with a lance which he happened to have in his hand, he continued: "Though thou couldst obtain the whole wealth of this world, yea, the whole world
 5845 itself, thou wilt carry with thee at last no more than this little spot which I have marked out, if indeed even that be thine." Such were the words and actions of this blessed prince; and though at the time he failed to reclaim any from their evil ways, yet notwithstanding the course of events afforded evident proof that his admonitions were more like Divine prophecies than mere words.

5850 CHAPTER XXXI: That he was derided because of his Excessive Clemency.

MEANTIME, since there was no fear of capital punishment to deter from the commission of crime, for the emperor himself was uniformly inclined to clemency, and none of the provincial governors visited offenses with their proper penalties, this state of things drew with it no small degree of blame on the general administration of the
 5855 empire; whether justly or not, let every one form his own judgment: for myself, I only ask permission to record the fact.

CHAPTER XXXII: Of Constantine's Oration which he wrote to the Assembly of the Saints. THE emperor was in the habit of composing his orations in the Latin tongue, from
 5860 which they were translated into Greek by interpreters appointed for this special service. One of the discourses thus translated I intend to annex, by way of specimen, to this present work, that one, I mean, which he inscribed "To the assembly of the saints," and dedicated to the Church of God, that no one may have ground for deeming my testimony on this head mere empty praise.

5865 CHAPTER XXXIII: How he listened standing to Eusebius' Declamation in Honor of our Saviour's Sepulchre.

ONE act, however, I must by no means omit to record, which this admirable prince performed in my own presence. On one occasion, emboldened by the confident assurance
 5870 I entertained of his piety, I had begged permission to pronounce a discourse on the subject of our Saviour's sepulchre in his hearing. With this request he most readily complied, and in the midst of a large number of auditors, in the interior of the palace itself, he stood and listened with the rest. I entreated him, but in vain, to seat himself on the imperial throne which stood near: he continued with fixed
 5875 attention to weigh the topics of my discourse, and gave his own testimony to the truth of the theological doctrines it contained. After some time had passed, the oration being of considerable length, I was myself desirous of concluding; but this he would not permit, and exhorted me to proceed to the very end. On my again entreating him to sit, he in his turn was displeased and said that it was not right
 5880 to listen in a careless manner to the discussion of doctrines relating to God; and again, that this posture was good and profitable to himself, since it was reverent to

stand while listening to sacred truths. Having, therefore, concluded my discourse, I returned home, and resumed my usual occupations.

5885 CHAPTER XXXIV: That he wrote to Eusebius respecting Easter, and respecting Copies of the Holy Scriptures.

EVER careful for the welfare of the churches of God, the emperor addressed me personally in a letter on the means of providing copies of the inspired oracles, and also on the subject of the most holy feast of Easter. For I had myself dedicated to 5890 him an exposition of the mystical import of that feast; and the manner in which he honored me with a reply may be understood by any one who reads the following letter.

CHAPTER XXXV: Constantine's Letter to Eusebius, in praise of his Discourse concerning Easter.

5895 "VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Eusebius.

"It is indeed an arduous task, and beyond the power of language itself, worthily to treat of the mysteries of Christ, and to explain in a fitting manner the controversy respecting the feast of Easter, its origin as well as its precious and toilsome accomplishment. For it is not in the power even of those who are able to apprehend 5900 them, adequately to describe the things of God. I am, notwithstanding, filled with admiration of your learning and zeal, and have not only myself read your work with pleasure, but have given directions, according to your own desire, that it be communicated to many sincere followers of our holy religion. Seeing, then, with what pleasure we receive favors of this kind from your Sagacity, be pleased to gladden us 5905 more frequently with those compositions, to the practice of which, indeed, you confess yourself to have been trained from an early period, so that I am urging a willing man, as they say, in exhorting you to your customary pursuits. And certainly the high and confident judgment we entertain is a proof that the person who has translated your writings into the Latin tongue is in no respect incompetent to the 5910 task, impossible though it be that such version should fully equal the excellence of the works themselves. God preserve you, beloved brother." Such was his letter on this subject: and that which related to the providing of copies of the Scriptures for reading in the churches was to the following purport.

5915 CHAPTER XXXVI: Constantine' s Letter to Eusebius on the Preparation of Copies of the Holy Scriptures.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to Eusebius.

"It happens, through the favoring providence of God our Saviour, that great numbers have united themselves to the most holy church in the city which is called by my 5920 name. It seems, therefore, highly requisite, since that city is rapidly advancing in prosperity in all other respects, that the number of churches should also be increased. Do you, therefore, receive with all readiness my determination on this behalf. I have thought it expedient to instruct your Prudence to order fifty copies of the sacred Scriptures, the provision and use of which you know to be most needful 5925 for the instruction of the Church, to be written on prepared parchment in a legible manner, and in a convenient, portable form, by professional transcribers thoroughly practiced in their art. The catholicus of the diocese has also received instructions by letter from our Clemency to be careful to furnish all things necessary for the preparation of such copies; and it will be for you to take special care that they be 5930 completed with as little delay as possible. You have authority also, in virtue of this letter, to use two of the public carriages for their conveyance, by which arrangement the copies when fairly written will most easily be forwarded for my personal inspection; and one of the deacons of your church may be intrusted with this service, who, on his arrival here, shall experience my liberality. God preserve you, 5935 beloved brother!"

CHAPTER XXXVII: How the Copies were provided.

SUCH were the emperor's commands, which were followed by the immediate execution of the work itself, which we sent him in magnificent and elaborately bound volumes of a 5940 threefold and fourfold form. This fact is attested by another letter, which the emperor wrote in acknowledgment, in which, having heard that the city Constantia in our country, the inhabitants of which had been more than commonly devoted to superstition, had been impelled by a sense of religion to abandon their past idolatry, he testified his joy, and approval of their conduct.

5945 CHAPTER XXXVIII: How the Market-town of Gaza was made a City far its Profession of Christianity, and received the Name of Constantia.

FOR in fact the place now called Constantia, in the province of Palestine, having embraced the saving religion, was distinguished both by the favor of God, and by special honor from the emperor, being now for the first time raised to the rank of a city, and receiving the more honored name of his pious sister in exchange for its former appellation.

CHAPTER XXXIX: That a Place in Phoenicia also was made a City, and in Other Cities Idolatry was abolished, and Churches built.

A SIMILAR change was effected in several other cities; for instance, in that town of Phoenicia which received its name from that of the emperor, and the inhabitants of which committed their innumerable idols to the flames, and adopted in their stead the principles of the saving faith. Numbers, too, in the other provinces, both in the cities and the country, became willing inquirers after the saving knowledge of God; destroyed as worthless things the images of every kind which they had heretofore held most sacred; voluntarily demolished the lofty temples and shrines which contained them; and, renouncing their former sentiments, or rather errors, commenced and completed entirely new churches. But since it is not so much my province to give a circumstantial detail of the actions of this pious prince, as it is theirs who have been privileged to enjoy his society at all times, I shall content myself with briefly recording such facts as have come to my own personal knowledge, before I proceed to notice the last days of his life.

CHAPTER XL: That having conferred the Dignity of Caesars on his Three Sons at the Three Decennial Periods of his Reign, he dedicated the Church at Jerusalem.

BY this time the thirtieth year of his reign was completed. In the course of this period, his three sons had been admitted at different times as his colleagues in the empire. The first, Constantinus, who bore his father's name, obtained this distinction about the tenth year of his reign. Constantius, the second son, so called from his grandfather, was proclaimed Caesar about the twentieth, while Constans, the third, whose name expresses the firmness and stability of his character, was advanced to the same dignity at the thirtieth anniversary of his father's reign. Having thus reared a threefold offspring, a Trinity, as it were, of pious sons, and having received them severally at each decennial period to a participation in his imperial authority, he judged the festival of his Tricennalia to be a fit occasion for thanksgiving to the Sovereign Lord of all, at the same time believing that the dedication of the church which his zealous magnificence had erected at Jerusalem might advantageously be performed.

CHAPTER XLI: That in the meantime he ordered a Council to be convened at Tyre, because of Controversies raised in Egypt.

MEANWHILE that spirit of envy which is the enemy of all good, like a dark cloud intercepting the sun's brightest rays, endeavored to mar the joy of this festivity, by again raising contentions to disturb the tranquility of the Egyptian churches. Our divinely favored emperor, however, once more convened a synod composed of many bishops, and set them as it were in armed array, like the host of God, against this malignant spirit, having commanded their presence from the whole of Egypt and Libya, from Asia, and from Europe, in order, first, to decide the questions in dispute, and afterwards to perform the dedication of the sacred edifice above mentioned. He enjoined them, by the way, to adjust their differences at the capital city of Phoenicia, reminding them that they had no right, while harboring feelings of mutual animosity, to engage in the service of God, since his law expressly forbids those who are at variance to offer their gift until they have first become reconciled and mutually disposed to peace. Such were the salutary precepts which the emperor continually kept vividly before his own mind, and in accordance with which he admonished them to undertake their present duties in a spirit of perfect unanimity and concord, in a letter to the following purport.

CHAPTER XLII: Constantine's Letter to the Council at Tyre.

"VICTOR CONSTANTINUS, MAXIMUS AUGUSTUS, to the holy Council at Tyre.

"Surely it would best consist with and best become the prosperity of these our times, that the Catholic Church should be undivided, and the servants of Christ be at this present moment clear from all reproach. Since, however, there are those who, carried away by a baleful and furious spirit of contention (for I will not charge them with intentionally leading a life unworthy of their profession), are endeavoring to create that general confusion which, in my judgment, is the most pernicious of all evils; I exhort you, forward as you already are, to meet together and form a synod without

6015 delay: to defend those who need protection; to administer remedies to your brethren
 who are in peril; to recall the divided members to unity of judgment; to rectify
 errors while opportunity is yet allowed: that thus you may restore to so many
 provinces that due measure of concord which, strange and sad anomaly! the arrogance
 of a few individuals has destroyed. And I believed that all are alike persuaded that
 6020 this course is at the same time pleasing to Almighty God (as well as the highest
 object of my own desires), and will bring no small honor to yourselves, should you be
 successful in restoring peace. Delay not, then, but hasten with redoubled zeal to
 terminate the present dissensions in a manner becoming the occasion, by assembling
 together in that spirit of true sincerity and faith which the Saviour whom we serve
 especially demands from us, I may almost say with an audible voice, on all occasions.
 6025 No proof of pious zeal on my part shall be wanting. Already have I done all to which
 my attention was directed by your letters. I have sent to those bishops whose
 presence you desired, that they may share your counsels. I have dispatched Dionysius,
 a man of consular rank, who will both remind those prelates of their duty who are
 bound to attend the Council with you, and will himself be there to superintend the
 6030 proceedings, but especially to maintain good order. Meantime should any one, though I
 deem it most improbable, venture on this occasion to violate my command, and refuse
 his attendance, a messenger shall be dispatched forthwith to banish that person in
 virtue of an imperial edict, and to teach him that it does not become him to resist
 an emperor's decrees when issued in defense of truth. For the rest, it will be for
 6035 your Holinesses, unbiased either by enmity or favor, but consistently with
 ecclesiastical and apostolic order, to devise a fitting remedy whether it be for
 positive offenses or for unpremeditated errors; in order that you may at once free
 the Church from all reproach, relieve my anxiety, and, by restoring the blessings of
 peace to those who are now divided, procure the highest honor for yourselves. God
 6040 preserve you, beloved brethren!"

CHAPTER XLIII: Bishops from all the Provinces attended the Dedication of the Church
 at Jerusalem.

6045 NO sooner had these injunctions been carded into effect, than another emissary
 arrived with dispatches from the emperor, and an urgent admonition to the Council to
 hasten their journey to Jerusalem without delay. Accordingly they all took their
 departure from the province of Phoenicia, and proceeded to their destination,
 availing themselves of the public means of transport. Thus Jerusalem became the
 6050 gathering point for distinguished prelates from every province, and the whole city
 was thronged by a vast assemblage of the servants of God. The Macedonians had sent
 the bishop of their metropolis; the Pannonians and Moesians the fairest of God's
 youthful flock among them. A holy prelate from Persia too was there, deeply versed in
 the sacred oracles; while Bithynian and Thracian bishops graced the Council with
 their presence; nor were the most illustrious from Cilicia wanting, nor the chief of
 6055 the Cappadocians, distinguished above all for learning and eloquence. In short, the
 whole of Syria and Mesopotamia, Phoenicia and Arabia, Palestine, Egypt, and Libya,
 with the dwellers in the Thebaid, all contributed to swell the mighty concourse of
 God's ministers, followed as they were by vast numbers from every province. They were
 attended by an imperial escort, and officers of trust had also been sent from the
 6060 palace itself, with instructions to heighten the splendor of the festival at the
 emperor's expense.

CHAPTER XLIV: Of their Reception by the Notary Marianus; the Distribution of Money to
 the Poor; and Offerings to the Church.

6065 THE director and chief of these officers was a most useful servant of the emperor, a
 man eminent for faith and piety, and thoroughly acquainted with the Divine word, who
 had been honorably conspicuous by his profession of godliness during the time of the
 tyrants' power, and therefore was deservedly entrusted with the arrangement of the
 present proceedings. Accordingly, in faithful obedience to the emperor's commands, he
 6070 received the assembly with courteous hospitality, and entertained them with feasts
 and banquets on a scale of great splendor. He also distributed lavish supplies of
 money and clothing among the naked and destitute, and the multitudes of both sexes
 who suffered from want of food and the common necessities of life. Finally, he
 enriched and beautified the church itself throughout with offerings of imperial
 6075 magnificence, and thus fully accomplished the service he had been commissioned to
 perform.

CHAPTER XLV: Various Discourses by the Assembled Bishops; also by Eusebius, the
 Writer of this History.

6080 MEANTIME the festival derived additional luster both from the prayers and discourses
of the ministers of God, some of whom extolled the pious emperor's willing devotion
to the Saviour of mankind, and dilated on the magnificence of the edifice which he
had raised to his memory. Others afforded, as it were, an intellectual feast to the
6085 ears of all present, by public disquisitions on the sacred doctrines of our religion.
Others interpreted passages of holy Scripture, and unfolded their hidden meaning;
while such as were unequal to these efforts presented a bloodless sacrifice and
mystical service to God in the prayers which they offered for general peace, for the
Church of God, for the emperor himself as the instrumental cause of so many
6090 blessings, and for his pious sons. I myself too, unworthy as I was of such a
privilege, pronounced various public orations in honor of this solemnity, wherein I
partly explained by a written description the details of the imperial edifice, and
partly endeavored to gather from the prophetic visions apt illustrations of the
symbols it displayed. Thus joyfully was the festival of dedication celebrated in the
thirtieth year of our emperor's reign.

6095 CHAPTER XLVI: That Eusebius afterwards delivered his Description of the Church of the
Saviour, and a Tricennial Oration before Constantine himself.
THE structure of the church of our Saviour, the form of his sacred cave, the splendor
of the work itself, and the numberless offerings in gold, and silver, and precious
6100 stones, I have described to the best of my ability, and dedicated to the emperor in a
separate treatise, which on a fitting opportunity I shall append to this present
work. I shall add to it also that oration on his Tricennalia which shortly
afterwards, having traveled to the city which bears his name, I delivered in the
emperor's own presence. This was the second opportunity afforded me of glorifying the
6105 Supreme God in the imperial palace itself: and on this occasion my pious hearer
evinced the greatest joy, as he afterwards testified, when he entertained the bishops
then present, and loaded them with distinctions of every kind.

CHAPTER XLVII: That the Council at Nicaea was held in the Twentieth, the Dedication
6110 of the Church at Jerusalem in the Thirtieth, Year of Constantine's Reign.
THIS second synod the emperor convened at Jerusalem, being the greatest of which we
have any knowledge, next to the first which he had summoned at the famous Bithynian
city. That indeed was a triumphal assembly, held in the twentieth year of his reign,
an occasion of thanksgiving for victory over his enemies in the very city which bears
6115 the name of victory. The present meeting added luster to the thirtieth anniversary,
during which the emperor dedicated the church at the sepulchre of our Saviour, as a
peace-offering to God, the giver of all good.

CHAPTER XLVIII: That Constantine was displeased with one who praised him excessively.
6120 AND now that all these ceremonies were completed, and the divine qualities of the
emperor's character continued to be the theme of universal praise, one of God's
ministers presumed so far as in his own presence to pronounce him blessed, as having
been counted worthy to hold absolute and universal empire in this life, and as being
destined to share the empire of the Son of God in the world to come. These words,
6125 however, Constantine heard with indignation, and forbade the speaker to hold such
language, exhorting him rather to pray earnestly on his behalf, that whether in this
life or in that which is to come, he might be found worthy to be a servant of God.

CHAPTER XLIX: Marriage of his Son Constantius Caesar.
6130 ON the completion of the thirtieth year of his reign he solemnized the marriage of
his second son, having concluded that of his first-born long before. This was an
occasion of great joy and festivity, the emperor himself attending on his son at the
ceremony, and entertaining the guests of both sexes, the men and women in distinct
and separate companies, with sumptuous hospitality. Rich presents likewise were
6135 liberally distributed among the cities and people.

CHAPTER L: Embassy and Presents from the Indians.
ABOUT this time ambassadors from the Indians, who inhabit the distant regions of the
East, arrived with presents consisting of many varieties of brilliant precious
6140 stones, and animals differing in species from those known to us. These offerings they
presented to the emperor, thus allowing that his sovereignty extended even to the
Indian Ocean, and that the princes of their country, who rendered homage to him both
by paintings and statues, acknowledged his imperial and paramount authority. Thus the
Eastern Indians now submitted to his sway, as the Britons of the Western Ocean had
6145 done at the commencement of his reign.

CHAPTER LI: That Constantine divided the Empire between his Three Sons, whom he had instructed in Politics and Religion.

HAVING thus established his power in the opposite extremities of the world, he divided the whole extent of his dominions, as though he were allotting a patrimonial inheritance to the dearest objects of his regard, among his three sons. To the eldest he assigned his grandfather's portion; to the second, the empire of the East; to the third, the countries which lie between these two divisions. And being desirous of furnishing his children with an inheritance truly valuable and salutary to their souls, he had been careful to imbue them with true religious principles, being himself their guide to the knowledge of sacred things, and also appointing men of approved piety to be their instructors. At the same time he assigned them the most accomplished teachers of secular learning, by some of whom they were taught the arts of war, while they were trained by others in political, and by others again in legal science. To each moreover was granted a truly royal retinue, consisting of infantry, spearmen, and body guards, with every other kind of military force; commanded respectively by captains, tribunes, and generals of whose warlike skill and devotion to his sons the emperor had had previous experience.

CHAPTER LII: That after they had reached Man's Estate he was their Guide in Piety. AS long as the Caesars were of tender years, they were aided by suitable advisers in the management of public affairs; but on their arrival at the age of manhood their father's instructions alone sufficed. When present he proposed to them his own example, and admonished them to follow his pious course: in their absence he furnished them by letter with rules of conduct suited to their imperial station, the first and greatest of which was an exhortation to value the knowledge and worship of the Sovereign Lord of all more than wealth, nay, more than empire itself. At length he permitted them to direct the public administration of the empire without control, making it his first request that they would care for the interests of the Church of God, and boldly profess themselves disciples of Christ. Thus trained, and excited to obedience not so much by precept as by their own voluntary desire for virtue, his sons more than fulfilled the admonitions of their father, devoting their earnest attention to the service of God, and observing the ordinances of the Church even in the palace itself, with all the members of their households. For their father's forethought had provided that all the attendants of his son's should be Christians. And not only so, but the military officers of highest rank, and those who had the control of public business, were professors of the same faith: for the emperor placed confidence in the fidelity of men devoted to the service of God, as in a strong and sure defense. When our thrice blessed prince had completed these arrangements, and thus secured order and tranquility throughout the empire, God, the dispenser of all blessings, judged it to be the fitting time to translate him to a better inheritance, and summoned him to pay the debt of nature.

CHAPTER LIII: Having reigned about Thirty-two Years, and lived above Sixty, he still had a Sound Body.

HE completed the time of his reign in two and thirty years, wanting a few months and days, and his whole life extended to about twice that period. At this age he still possessed a sound and vigorous body, free from all blemish, and of more than youthful vivacity; a noble mien, and strength equal to any exertion; so that he was able to join in martial exercises, to fide, endure the fatigues of travel, engage in battle, and erect trophies over his conquered enemies, besides gaining those bloodless victories by which he was wont to triumph over those who opposed him.

CHAPTER LIV: Of those who abused his Extreme Benevolence for Avarice and Hypocrisy. IN like manner his mental qualities reached the highest point of human perfection. Indeed he was distinguished by every excellence of character, but especially by benevolence; a virtue, however, which subjected him to censure from many, in consequence of the baseness of wicked men, who ascribed their own crimes to the emperor's forbearance. In truth I can myself bear testimony to the grievous evils which prevailed during these times; I mean the violence of rapacious and unprincipled men, who preyed on all classes of society alike, and the scandalous hypocrisy of those who crept into the Church, and assumed the name and character of Christians. His own benevolence and goodness of heart, the genuineness of his own faith, and his truthfulness of character, induced the emperor to credit the profession of these reputed Christians, who craftily preserved the semblance of sincere affection for his person. The confidence he reposed in such men sometimes forced him into conduct

unworthy of himself, of which envy took advantage to cloud in this respect the luster of his character.

6215 CHAPTER LV: Constantine employed himself in Composition of Various Kinds to the Close of his Life.

THESE offenders, however, were soon overtaken by divine chastisement. To return to our emperor. He had so thoroughly trained his mind in the art of reasoning that he continued to the last to compose discourses on various subjects, to deliver frequent orations in public, and to instruct his hearers in the sacred doctrines of religion. He was also habitually engaged in legislating both on political and military questions; in short, in devising whatever might be conducive to the general welfare of the human race. It is well worthy of remark, that, very shortly before his departure, he pronounced a funeral oration before his usual auditory, in which he spoke at length on the immortality of the soul, the state of those who had persevered in a life of godliness, and the blessings which God has laid up in store for them that love him. On the other hand he made it appear by copious and conclusive arguments what the end of those will be who have pursued a contrary career, describing in vivid language the final ruin of the ungodly. His powerful testimony on these subjects seemed so far to touch the consciences of those around him, that one of the self-imagined philosophers, of whom he asked his opinion of what he had heard, bore testimony to the truth of his words, and accorded a real, though reluctant, tribute of praise to the arguments by which he had exposed the worship of a plurality of gods. By converse such as this with his friends before his death, the emperor seemed as it were to smooth and prepare the way for his transition to a happier life.

CHAPTER LVI: How he took Bishops with him on an Expedition against the Persians, and look with him a Tent in the Form of a Church.

6240 IT is also worthy of record that about the time of which I am at present writing, the emperor, having heard of an insurrection of some barbarians in the East, observed that the conquest of this enemy was still in store for him, and resolved on an expedition against the Persians. Accordingly he proceeded at once to put his forces in motion, at the same time communicating his intended march to the bishops who happened to be at his court, some of whom he judged it right to take with him as companions, and as needful coadjutors in the service of God. They, on the other hand, cheerfully declared their willingness to follow in his train, disclaiming any desire to leave him, and engaging to battle with and for him by supplication to God on his behalf. Full of joy at this answer to his request, he unfolded to them his projected line of march; after which he caused a tent of great splendor, representing in shape the figure of a church, to be prepared for his own use in the approaching war. In this he intended to unite with the bishops in offering prayers to the God from whom all victory proceeds.

6255 CHAPTER LVII: How he received an Embassy from the Persians and kept the Night Vigil with others at the Feast of Easter.

IN the meanwhile the Persians, hearing of the emperor's warlike preparations, and not a little terrified at the prospect of an engagement with his forces, dispatched an embassy to pray for conditions of peace. These overtures the emperor, himself a sincere lover of peace, at once accepted, and readily entered on friendly relations with that people. At this time, the great festival of Easter was at hand; on which occasion he rendered the tribute of his prayers to God, and passed the night in watching with the rest.

6265 CHAPTER LVIII: Concerning the Building of a Church in Honor of the Apostles at Constantinople.

AFTER this he proceeded to erect a church in memory of the apostles, in the city which bears his name. This building he carried to a vast height, and brilliantly decorated by encasing it from the foundation to the roof with marble slabs of various colors. He also formed the inner roof of finely fretted work, and overlaid it throughout with gold. The external covering, which protected the building from the rain, was of brass instead of tiles; and this too was splendidly and profusely adorned with gold, and reflected the sun's rays with a brilliancy which dazzled the distant beholder. The dome was entirely encompassed by a finely carved tracery, wrought in brass and gold.

6275 CHAPTER LIX: Farther Description of the same Church.

SUCH was the magnificence with which the emperor was pleased to beautify this church.

The building was surrounded by an open area of great extent, the four sides of which were terminated by porticos which enclosed the area and the church itself. Adjoining these porticos were ranges of stately chambers, with baths and promenades, and besides many apartments adapted to the use of those who had charge of the place.

CHAPTER LX: He also erected his own Sepulchral Monument in this Church.

ALL these edifices the emperor consecrated with the desire of perpetuating the memory of the apostles of our Saviour. He had, however, another object in erecting this building: an object at first unknown, but which afterwards became evident to all. He had in fact made choice of this spot in the prospect of his own death, anticipating with extraordinary fervor of faith that his body would share their title with the apostles themselves, and that he should thus even after death become the subject, with them, of the devotions which should be performed to their honor in this place. He accordingly caused twelve coffins to be set up in this church, like sacred pillars in honor and memory of the apostolic number, in the center of which his own was placed, having six of theirs on either side of it. Thus, as I said, he had provided with prudent foresight an honorable resting-place for his body after death, and, having long before secretly formed this resolution, he now consecrated this church to the apostles, believing that this tribute to their memory would be of no small advantage to his own soul. Nor did God disappoint him of that which he so ardently expected and desired. For after he had completed the first services of the feast of Easter, and had passed this sacred day of our Lord in a manner which made it an occasion of joy and gladness to himself and to all; the God through whose aid he performed all these acts, and whose zealous servant he continued to be even to the end of life, was pleased at a happy time to translate him to a better life.

CHAPTER LXI: His Sickness at Helenopolis, and Prayers respecting his Baptism.

AT first he experienced some slight bodily indisposition, which was soon followed by positive disease. In consequence of this he visited the hot baths of his own city; and thence proceeded to that which bore the name of his mother. Here he passed some time in the church of the martyrs, and offered up supplications and prayers to God. Being at length convinced that his life was drawing to a close, he felt the time was come at which he should seek purification from sins of his past career, firmly believing that whatever errors he had committed as a mortal man, his soul would be purified from them through the efficacy of the mystical words and the salutary waters of baptism. Impressed with these thoughts, he poured forth his supplications and confessions to God, kneeling on the pavement in the church itself, in which he also now for the first time received the imposition of hands with prayer. After this he proceeded as far as the suburbs of Nicomedia, and there, having summoned the bishops to meet him, addressed them in the following words.

CHAPTER LXII: Constantine's Appeal to the Bishops, requesting them to confer upon him the Rite of Baptism.

"THE time is arrived which I have long hoped for, with an earnest desire and prayer that I might obtain the salvation of God. The hour is come in which I too may have the blessing of that seal which confers immortality; the hour in which I may receive the seal of salvation. I had thought to do this in the waters of the river Jordan, wherein our Saviour, for our example, is recorded to have been baptized: but God, who knows what is expedient for us, is pleased that I should receive this blessing here. Be it so, then, without delay: for should it be his will who is Lord of life and death, that my existence here should be prolonged, and should I be destined henceforth to associate with the people of God, and unite with them in prayer as a member of his Church, I will prescribe to myself from this time such a course of life as befits his service." After he had thus spoken, the prelates performed the sacred ceremonies in the usual manner, and, having given him the necessary instructions, made him a partaker of the mystic ordinance. Thus was Constantine the first of all sovereigns who was regenerated and perfected in a church dedicated to the martyrs of Christ; thus gifted with the Divine seal of baptism, he rejoiced in spirit, was renewed, and filled with heavenly light: his soul was gladdened by reason of the fervency of his faith, and astonished at the manifestation of the power of God. At the conclusion of the ceremony he arrayed himself in shining imperial vestments, brilliant as the light, and reclined on a couch of the purest white, refusing to clothe himself with the purple any more.

CHAPTER LXIII: How after his Baptism he rendered Thanks God.

HE then lifted his voice and poured forth a strain of thanksgiving to God; after

which he added these words. "Now I know that I am truly blessed: now I feel assured that I am accounted worthy of immortality, and am made a partaker of Divine light." He further expressed his compassion for the unhappy condition of those who were strangers to such blessings as he enjoyed: and when the tribunes and generals of his army appeared in his presence with lamentations and tears at the prospect of their bereavement, and with prayers that his days might yet be prolonged, he assured them in reply that he was now in possession of true life; that none but himself could know the value of the blessings he had received; so that he was anxious rather to hasten than to defer his departure to God. He then proceeded to complete the needful arrangement of his affairs, bequeathing an annual donation to the Roman inhabitants of his imperial city; apportioning the inheritance of the empire, like a patrimonial estate, among his own children; in short, making every disposition according to his own pleasure.

CHAPTER LXIV: Constantinople's Death at Noon on the Feast of Pentecost.

ALL these events occurred during a most important festival, I mean the august and holy solemnity of Pentecost, which is distinguished by a period of seven weeks, and sealed with that one day on which the holy Scriptures attest, the ascension of our common Saviour into heaven, and the descent of the Holy Spirit among men. In the course of this feast the emperor received the privileges I have described; and on the last day of all, which one might justly call the feast of feasts, he was removed about mid-day to the presence of his God, leaving his mortal remains to his fellow mortals, and carrying into fellowship with God that part of his being which was capable of understanding and loving him. Such was the close of Constantine's mortal life. Let us now attend to the circumstances which followed this event.

CHAPTER LXV: Lamentations of the Soldiery and their Officers.

IMMEDIATELY the assembled spearmen and body-guard rent their garments, and prostrated themselves on the ground, striking their heads, and uttering lamentations and cries of sorrow, calling on their imperial lord and master, or rather, like true children, on their father, while their tribunes and centurions addressed him as their preserver, protector, and benefactor. The rest of the soldiery also came in respectful order to mourn as a flock the removal of their good shepherd. The people meanwhile ran wildly throughout the city, some expressing the inward sorrow of their hearts by loud cries, others appearing confounded with grief: each mourning the event as a calamity which had befallen himself, and bewailing his death as though they felt themselves bereft of a blessing common alike to all.

CHAPTER LXVI: Removal of the Body from Nicomedia to the Palace at Constantinople.

AFTER this the soldiers lifted the body from its couch, and laid it in a golden coffin, which they enveloped in a covering of purple, and removed to the city which was called by his own name. Here it was placed in an elevated position in the principal chamber of the imperial palace, and surrounded by candles burning in candlesticks of gold, presenting a marvelous spectacle, and such as no one under the light of the sun had ever seen on earth since the world itself began. For in the central apartment of the imperial palace, the body of the emperor lay in its elevated resting-place, arrayed in the symbols of sovereignty, the diadem and purple robe, and encircled by a numerous retinue of attendants, who watched around it incessantly night and day.

CHAPTER LXVII: He received the same Honors from the Counts and other Officers as before his Death.

THE military officers, too, of the highest rank, the counts, and the whole order of magistrates, who had been accustomed to do obeisance to their emperor before, continued to fulfill this duty without any change, even after his death entering the chamber at the appointed times, and saluting their coffined sovereign with bended knee, as though he were still alive. After them the senators appeared, and all who had been distinguished by any honorable office, and rendered the same homage. These were followed by multitudes of every rank, who came with their wives and children to witness the spectacle. These honors continued to be rendered for a considerable time, the soldiers having resolved thus to guard the body until his sons should arrive, and take on themselves the conduct of their father's funeral. No mortal had ever, like this blessed prince, continued to reign even after death, and to receive the same homage as during his life: he only, of all who have ever lived, obtained this reward from God: a suitable reward, since he alone of all sovereigns had in all his actions honored the Supreme God and his Christ, and God himself accordingly was pleased that

- 6410 even his mortal remains should still retain imperial authority among men; thus indicating to all who were not utterly devoid of understanding the immortal and endless empire which his soul was destined to enjoy. This was the course of events here.
- 6415 CHAPTER LXVIII: Resolution of the Army to confer thence-forward the Title of Augustus on his Sons.
MEANWHILE the tribunes selected from the troops under their command those officers whose fidelity and zeal had long been known to the emperor, and dispatched them to the Caesars with intelligence of the late event. This service they accordingly
- 6420 performed. As soon, however, as the soldiery throughout the provinces received the tidings of the emperor's decease, they all, as if by a supernatural impulse, resolved with one consent, as though their great emperor had been yet alive, to acknowledge none other than his sons as sovereigns of the Roman world: and these they soon after determined should no longer retain the name of Caesar, but should each be honored
- 6425 with the title of Augustus, a name which indicates the highest supremacy of imperial power. Such were the measures adopted by the army; and these resolutions they communicated to each other by letter, so that the unanimous desire of the legions became known at the same point of time throughout the whole extent of the empire.
- 6430 CHAPTER LXIX: Mourning for Constantine at Rome; and the Honor paid him there through Paintings after his Death.
ON the arrival of the news of the emperor's death in the imperial city, the Roman senate and people felt the announcement as the heaviest and most afflictive of all
- 6435 calamities, and gave themselves up to an excess of grief. The baths and markets were closed, the public spectacles, and all other recreations in which men of leisure are accustomed to indulge, were interrupted. Those who had ere while lived in luxurious ease, now walked the streets in gloomy sadness, while all united in blessing the name of the deceased, as the one who was dear to God, and truly worthy of the imperial dignity. Nor was their sorrow expressed only in words: they proceeded also to honor
- 6440 him, by the dedication of paintings to his memory, with the same respect as before his death. The design of these pictures embodied a representation of heaven itself, and depicted the emperor reposing in an ethereal mansion above the celestial vault. They too declared his sons alone to be emperors and Augusti, and begged with earnest entreaty that they might be permitted to receive the body of their emperor, and
- 6445 perform his obsequies in the imperial city.
- CHAPTER LXX: His Burial by his Son Constantius at Constantinople.
THUS did they there testify their respect for the memory of him who had been honored by God. The second of his sons, however, who had by this time arrived, proceeded to
- 6450 celebrate his father's funeral in the city which bears his name, himself heading the procession, which was preceded by detachments of soldiers in military array, and followed by vast multitudes, the body itself being surrounded by companies of spearmen and heavy armed infantry. On the arrival of the procession at the church dedicated to the apostles of our Saviour, the coffin was there entombed. Such honor
- 6455 did the youthful emperor Constantius render to his deceased parent, both by his presence, and by the due performance of this sacred ceremony.
- CHAPTER LXXI: Sacred Service in the Church of the Apostles on the Occasion of Constantine's Funeral.
AS soon as [Constantius] had withdrawn himself with the military train, the ministers of God came forward, with the multitude and the whole congregation of the faithful, and performed the rites of Divine worship with prayer. At the same time the tribute of their praises was given to the character of this blessed prince, whose body rested on a lofty and conspicuous monument, and the whole multitude united with the priests
- 6465 of God in offering prayers for his soul, not without tears, - nay, rather with much weeping; thus performing an office consonant with the desires of the pious deceased. In this respect also the favor of God was manifested to his servant, in that he not only bequeathed the succession of the empire to his own beloved sons, but that the earthly tabernacle of his thrice blessed soul, according to his own earnest wish, was
- 6470 permitted to share the monument of the apostles; was associated with the honor of their name, and with that of the people of God; was honored by the performance of the sacred ordinances and mystic service; and enjoyed a participation in the prayers of the saints. Thus, too, he continued to possess imperial power even after death, controlling, as though with renovated life, a universal dominion, and retaining in
- 6475 his own name, as Victor, Maximus, Augustus, the sovereignty of the Roman world.

CHAPTER LXXII: Of the Phoenix.

6480 WE cannot compare him with that bird of Egypt, the only one, as they say, of its
kind, which dies, self-sacrificed, in the midst of aromatic perfumes, and, rising
from its own ashes with new life, soars aloft in the same form which it had before.
Rather did he resemble his Saviour, who, as the sown corn which is multiplied from a
single grain, had yielded abundant increase through the blessing of God, and had
overspread the whole world with his fruit. Even so did our thrice blessed prince
become multiplied, as it were, through the succession of his sons. His statue was
6485 erected along with theirs in every province; and the name of Constantine was owned
and honored even after the close of his mortal life.

CHAPTER LXXIII: How Constantine is represented on Coins in the Act of ascending to
Heaven.

6490 A COINAGE was also struck which bore the following device. On one side appeared the
figure of our blessed prince, with the head closely veiled: the reverse exhibited him
sitting as a charioteer, drawn by four horses, with a hand stretched downward from
above to receive him up to heaven.

6495 CHAPTER LXXIV: The God whom he had honored deservedly honored him in Return.
SUCH are the proofs by which the Supreme God has made it manifest to us, in the
person of Constantine, who alone of all sovereigns had openly professed the Christian
faith, how great a difference he perceives between those whose privilege it is to
worship him and his Christ, and those who have chosen the contrary part, who provoked
6500 his enmity by daring to assail his Church, and whose calamitous end, in every
instance, afforded tokens of his displeasure, as manifestly as the death of
Constantine conveyed to all men an evident assurance of his Divine love.

CHAPTER LXXV: He surpassed all Preceding Emperors in Devotion to God.

6505 STANDING, as he did, alone and pre-eminent among the Roman emperors as a worshiper of
God; alone as the bold proclaimer to all men of the doctrine of Christ; having alone
rendered honor, as none before him had ever done, to his Church; having alone
abolished utterly the error of polytheism, and discountenanced idolatry in every
form: so, alone among them both during life and after death, was he accounted worthy
6510 of such honors as none can say have been attained to by any other; so that no one,
whether Greek or Barbarian, nay, of the ancient Romans themselves, has ever been
presented to us as worthy of comparison with him.

BÜYÜK CONSTANTINUS

OĞUZ TEKİN

- 6525 Tarihçiler tarafından Antikçağ'dan Ortaçağ'a geçi dönemini ifade etmek için kullanılan "Geç Antikçağ" belki en fazla Büyük Constantinus'un adıyla birlikte anılmaktadır. Onun döneminde Avrupa tarihini deşitiren iki büyük olay meydana geldi. Biri, Hristiyanlara gösterilen hogörü ve hatta imparatorun Hristiyan olması, diğeri de imparatorluğun geleneksel bakentinin Roma'dan Byzantion'a tainmasıydı.

CONSTANTINUS THE GREAT

OĞUZ TEKİN

- 6570 The term "Late Antiquity," used by historians to refer to the transition period from Antiquity to the Middle Ages, is perhaps most commonly associated with the name of Constantine the Great. Two major events that changed European history occurred during his reign. One was the tolerance shown to Christians and even the emperor's conversion to Christianity, and the other was the transfer of the empire's
- 6575 traditional capital from Rome to Byzantium.

- Flavius Valerius Constantinus, known in history as "Magnus the Great," was born in Naissus (modern-day Nicaea) in Upper Moesia on February 27, 273 CE, the son of Constantius I Chlorus (Fig. 1) and Helena (Fig. 2). When Emperor Diocletian
- 6580 established the tetrarchy system of government in 293 AD, Constantius sent his son Constantine to Diocletian's eastern palace, where he was raised. When Diocletian and Maximian abdicated in 305 AD, their Caesars, Galerius and Constantius I, took their places. Thus, Constantine, the subject of this article, took his place in history as the son of an emperor. When Constantius the Elder died on July 25, 306, at Eburacum
- 6585 in Britannia (present-day York), the soldiers proclaimed his son Constantine as Augustus. However, Galerius, Augustus of the East, rejected this title and instead granted him the title of Caesar; He also appointed Severus as Augustus of the West.

However, when Constantine later married Fausta, the daughter of ex-Augustus Maximianus (Fig. 3), Maximian accepted her title.

6590 The granting of the title (rank) of Caesar to Constantine was also announced through coins. The rank of Caesar was also noted on coins minted in Constantine's name between 306 and 309 AD. The obverse of a silver coin (argenteus) minted in Treveri (present-day Trier) bears the inscription CONSTANTINVS NOB C, with Constantine's head facing right and wearing a laurel wreath (Fig. 4). NOB C is an abbreviation for 6595 Nobilissimus Caesar (= noblest Caesar). The reverse of the coin depicts the four-battleship gate (porta praetoria). The inscription VIRTVS MILITVM around the perimeter means "virtue of the army." PTR, located at the bottom of the reverse, is the abbreviation of the mint where the coin was minted. The first letter, P, is the abbreviation of the Latin pecunia, meaning money, and TR is the abbreviation of 6600 Treveri (today Trier) (Fig. 1). Including mint names on Roman coins was a practice that began in the mid-3rd century AD.

In 309 AD, Constantine, along with Maximinus Daia, Caesar of the East, was granted the title Filius Augustorum (son of emperors).

6605 It was emphasized that Constantine was the son of Constantius Chlorus, Augustus of the West, and Maximinus Daia was the son of Galerius, Augustus of the East. In reality, Galerius was not Maximinus' father but adopted him in 305 AD. The fact that Constantine and Maximinus, while still holding the rank of Caesar, were children of Augusti, through coins, in a sense both preserved their existing status and declared them legitimate heirs to the Roman throne. The obverse of a gold coin (aureus) minted 6610 in Thessalonica (Thessaloniki) features Constantine's head facing right, wearing a laurel wreath, accompanied by the inscription CONSTANTINVS FIL AVGG (Fig. 5). FIL AVGG is the abbreviation of Filius Augustorum, and the two Gs at the end of the abbreviation refer to the two Augusti: Constantius Chlorus and Galerius. The reverse of the coin depicts Constantine standing to the left in consular garb, holding a 6615 scepter and a globe symbolizing power. The surrounding inscription reads CONSVL DD NN, where DD NN is the plural form of Dominus Noster (our lords). However, neither Constantinus nor Maximinus Daia wanted to remain simply Filius Augustorum any longer. About a year later, both declared themselves augustus. The obverse of a bronze coin minted in Londinium (now London) features the emperor's laurel-wreathed bust facing 6620 left, holding a scepter with an eagle's head (Fig. 6). The surrounding inscription reads CONSTANTINVS P F AVG, the emperor's name and titles. PF stands for Pius Felix, meaning "pious, successful, happy." AVG indicates that he now holds the title of augustus. Indeed, from 310 AD onward, Constantine's coins bear the abbreviation AVG (ustus) after the emperor's name. The standing female figure on the reverse of the 6625 coin is the personification of Concordia, the goddess of harmony. She holds a standard (signum) in each hand. This depiction was included to emphasize the absence of any conflict between the Roman armies and the harmony between the soldiers. At the time, Constantine was at war with other Roman claimants to the Roman throne, and peace between the Roman armies was of the utmost importance. We understand that the 6630 coin was minted in Londinium from the abbreviation PLN (= Pecunia Londinium) at the bottom.

After the death of Galerius, Augustus of the East, in 311 AD, Constantineegan 6635 fighting against Maxentius, Maximian's son. In 312 AD, Constantine crossed the Alps and marched against Maxentius in Rome. Maxentius left Rome and met Constantine's army outside the city. In the battle near the Milvian Bridge, Constantine defeated Maxentius' army (October 28, 312 AD); Maxentius died, and his memory was cursed. Before the battle, Constantine had dreamed that if his soldiers painted the monogram of Christ (khi and rho) on their shields, they would win the war. Therefore, he 6640 ordered his soldiers to paint this monogram on their shields. He believed this dream had played a role in his victory. After this victory, the Roman Senate confirmed Constantine's title as Augustus, granting him all imperial authority and power. A gold coin minted in Trier commemorates Constantine's victory over Maxentius (Fig. 7). The obverse features the emperor's head, name, and titles, while the reverse features 6645 the figure of Victoria, symbolizing victory, advancing to the left, holding a palm branch in one hand and a wreath in the other.

The surrounding inscription "VICTORIA CONSTANTINI AVG" alludes to the emperor's victory over Maxentius.

This gold coin is in the solidus denomination, which replaced the previous aureus. 6650 After the Milvian War, the Romans introduced a new gold coin. The aureus, worth 1/60th of a libra, was eventually withdrawn from circulation and replaced by the solidus, worth 1/72nd of a libra (Fig. 8). Thus, the gold coinage was lightened by 12%. Nevertheless, the aureus continued to be minted for over 50 years. Constantine

- also introduced a smaller coin worth 1.5 scripulum, the semissis, which was half the value of the solidus. Constantine also made some adjustments to the silver coinage. Silver coins called siliqua and miliarense were minted. The ratio of siliqua to gold was 1/24, and the ratio of miliaranse to gold was 1/18.
- 1 gold solidus = 2 gold semissis = 18 silver milliaranse = 24 silver siliqua
- While still holding the title of Caesar, Constantine reduced the weight of the bronze coin, the follis, minted at the mints of Londinum (London), Lugdunum (modern-day Lyon), and Treveri (modern-day Trier); When he assumed the title of augustus, he further reduced the weight of the follis. In 313 AD, Licinius married Constantine's half-sister, Constantia, in Milan, cementing the closeness between Constantine and Licinius. The two augusts, Constantine and Licinius, issued a decree of complete toleration for Christians (the Edict of Milan) in Milan (early 313 AD). Although the publication of the decree is a fact, the exact location of its publication in Milan is debatable due to the lack of conclusive evidence. However, relations between Constantine and Licinius soon soured, and war broke out between them. In the battles at Hadrianopolis (July 3, 324 AD) and Chrysopolis (September 18, 324 AD), Constantine triumphed over Licinius and became the sole ruler of the empire. We see that Constantine led successful campaigns against the Goths, Alamannians, and Sarmatians, and these victories were reflected on his coins (Fig. 9). The most significant event following Licinius's removal was undoubtedly the transfer of the empire's capital from Rome to Byzantium. The new capital was renamed Constantinople after the emperor. Many new structures were built in the city, and monuments were erected. The emperor's crowned statue was brought from Rome to Constantinople and placed atop the monumental column in the Forum of Constantine (today's Çemberlitaş). Constantine also established a mint in the new capital city to mint Roman coins. Therefore, by the time of Constantine the Great (326 AD), the name Constantinople had already begun to be used in its abbreviated form (CON) on coins to indicate the place of minting. With the official opening of the capital on May 11, 330 AD, coins minted in Constantinople now bore the inscription CONSTANTINOPOLIS on the obverse, in addition to the abbreviation CON. This inscription appeared not only on coins minted in Constantinople but also on coins minted at other mints throughout the empire. Therefore, it is clear that the name Constantinople was used while Emperor Constantine was still alive.
- The obverse of a silver coin minted in Constantinople to commemorate the opening of the new capital (330 AD) depicts the emperor with a jeweled diadem on his head (Fig. 10). The reverse of the coin depicts the Tyche of Constantinople seated on her throne, crowned with a fortification and holding a cornucopia. A ship's prow rests at her feet. The vertical inscription on either side of the Tyche reads D N CONSTANTINVS MAX TRIVMP AVG. The inscription can be translated into Turkish as "Our Lord Constantine, Most Victorious Augustus." Constantine the Great died in Nicomedia (Izmit) on May 22, 337, before he could carry out his planned campaign against the Sassanids; his body was brought to Constantinople and buried in the place where the Church of the Holy Apostles is located (Fatih Mosque); he left behind three sons (Constantinos II, II. Co. Constantius and Constans) remained.

The Carausian Revolt

6735 Marcus Aurelius Mausaeus Valerius Carausius (died 293) was a military commander of
the Roman Empire in the 3rd century. He was a Menapian from Belgic Gaul, who usurped
power in 286, during the Carausian Revolt, declaring himself emperor in Britain and
northern Gaul (Imperium Britanniarum). He did this only 13 years after the Gallic
6740 Empire of the Batavian Postumus was ended in 273. He held power for seven years,
fashioning the name "Emperor of the North" for himself, before being assassinated by
his finance minister Allectus.
Carausius was of humble origin, a Menapian who distinguished himself during
Maximian's campaign against the Bagaudae rebels in northern Gaul in 286. This
6745 success, and his former occupation as a pilot, led to his appointment to command the
Classis Britannica, a fleet based in the English Channel, with the responsibility of
eliminating Frankish and Saxon pirates who had been raiding the coasts of Armorica
and Belgica. He was suspected of keeping captured treasure for himself, and of
allowing pirates to carry out raids and enrich themselves before taking action
6750 against them, and Maximian ordered his execution. In late 286 or early 287 Carausius
learned of this sentence and responded by declaring himself Emperor in Britain and
northern Gaul. His forces comprised not only his fleet, augmented by new ships he had
built and the three legions stationed in Britain, but also a legion he had seized in
Gaul, a number of foreign auxiliary units, a levy of Gaulish merchant ships, and
6755 barbarian mercenaries attracted by the prospect of booty.
British historian and archaeologist Sheppard Frere wonders how Carausius was able to
win support from the army when his command had been sea-based, and speculates that he
had perhaps been involved in an unrecorded victory in Britain, connected with
Diocletian's assumption of the title Britannicus Maximus in 285, and signs of
6760 destruction in Romano-British towns at this time. The campaign against the Bagaudae,
however, was evidently land-based and may have been responsible for Carausius's
popularity with the army. Equally, if the accusations of larceny are true, he could
perhaps have afforded to buy their loyalty.
Maximian prepared an invasion of Britain in 288 or 289 to oust him, but it failed. A
6765 panegyric delivered to Constantius Chlorus attributes this failure to bad weather,
but notes that Carausius claimed a military victory. Eutropius says that hostilities
were in vain thanks to Carausius's military skill, and peace was agreed. Carausius
began to entertain visions of legitimacy and official recognition.
This situation continued until 293, when Constantius Chlorus (Constantius I), now the
6770 western Caesar, marched into Gaul and reclaimed it for the empire. He isolated
Carausius by besieging the port of Gesoriacum (Boulogne-sur-Mer) and invading Batavia
in the Rhine delta, securing his rear against Carausius's Frankish allies. He could
not yet mount an invasion of Britain until a suitable fleet could be built.
Nevertheless, Carausius's grip on power was fatally undermined. Allectus, whom he had
6775 put in charge of his treasury, assassinated him and assumed power himself. His reign
would last only three years, after which he was defeated and killed by Constantius'
subordinate Julius Asclepiodotus.
In April 2010 a large hoard containing over 52,500 Roman coins was unearthed in a
6780 field near Frome, Somerset. 766 coins were determined to have been produced during
Carausius' reign, of which only 5 were silver denarii. This find roughly equates to
four years' pay for a Roman legionary, but the presence of later coin issues suggests
that the group was not deposited until after Carausius' death.

6785 Allectus was treasurer to Carausius, a Menapian officer in the Roman navy who had
seized power in Britain and northern Gaul in 286. In 293 Carausius was isolated when
the western Caesar, Constantius Chlorus, retook some of his Gallic territories,
particularly the crucial port of Bononia (modern Boulogne), and defeated his Frankish
allies in Batavia. Allectus assassinated Carausius and assumed command himself.
His reign has left little record, although his coin issues display a similar
6790 distribution to those of Carausius. They are found in north western Gaul, indicating

that the recapture of Bononia did not spell the end of the rebel empire on that side of the English Channel.

6795 Constantius launched an invasion to depose him in September 296. His forces sailed in several divisions. Constantius led one division from Bononia, but seems to have been delayed by bad weather. Another division, under the praetorian prefect Asclepiodotus, took advantage of fog to avoid Allectus's ships stationed at the Isle of Wight, and landed near Southampton Water, where they burnt their ships. Allectus's forces were forced to retreat from the coast, but were cut off by another of Constantius's divisions and defeated. Allectus himself was killed in the battle, having removed all
6800 insignia in the hope that his body would not be identified. Archaeology suggests that Calleva Atrebatum (Silchester) was the site of his defeat or the area surrounding the town. A group of Roman troops, who had been separated from the main body by the fog during the channel crossing, caught up with the remnants of Allectus's men, mostly Franks, at Londinium (London), and massacred them. Constantius himself, it seems, did
6805 not reach Britain until it was all over, and his panegyrist claims he was welcomed by the Britons as a liberator.

Carausius had deliberately used his coinage for propaganda purposes, and some of his slogans, such as a claim to have restored 'liberty', were designed to appeal to British sentiment. Constantius answered such claims in a famous medal struck on the
6810 morrow of his victory, in which he described himself as redditor lucis aeternae, 'restorer of the eternal light (viz. of Rome).'

An antique Brexit?

6815 There is some controversy as to why Roman rule ended in Britain. The view first advocated by Wolfgang Mommsen was that Rome left Britain. This argument was substantiated over time, most recently by A.S. Esmonde-Cleary. According to this argument, internal turmoil in the Roman Empire and the need to withdraw troops to fight off barbarian armies led Rome to abandon Britain. It was the collapse of the imperial system that led to the end of imperial rule in Britain. However, Michael
6820 Jones has advanced an alternative thesis that argues that Rome did not leave Britain, but that Britain left Rome. He highlights the numerous usurpers who came from Britain in the late 4th and early 5th centuries, and points out that the supply of coinage to Britain had dried up by the early 5th century, so that administrators and troops were not getting paid. All of this, he argues, led the British people to rebel against
6825 Rome.

ROMAN AND SARMATIAN CAMPAIGNS

6830 of Constantine were fought by the Roman Emperor Constantine I against the neighbouring Germanic peoples, including the Franks, Alemanni and Goths, as well as the Sarmatian Iazyges, along the whole Roman northern defensive system to protect the empire's borders, between 306 and 336.

After becoming controller of the western provinces along the Rhine limes (in 306) following the death of his father Constantius Chlorus (Augustus of the west) in 306,
6835 Constantine initially concentrated his forces on defending this area of the frontier against the Franks and Alemanni, making Augusta Treverorum his first capital for this purpose. Having defeated the usurper Maxentius at the Battle of the Milvian Bridge in 312, all Italia passed under Constantine's control and he thus became the sole Augustus of the West.

6840 In February 313, Constantine (who had spent the winter in Rome) formed an alliance with the Emperor of the East, Licinius, reinforced by Licinius' marriage to Constantine's sister, Flavia Julia Constantia. However, this alliance survived for only a few years, before the two Augusti came into conflict in 316. Constantine defeated Licinius, who was forced to cede Illyricum to Constantine, but not Thrace.
6845 Constantine advanced ever further east with his territorial acquisitions, now having to defend the important strategic region of the limes sarmaticus (from 317).

In the following years, Constantine mostly occupied himself in the central section of the Danubian Limes, mostly fighting against the Sarmatians in Pannonia, residing at Sirmium almost continuously until 324 (when he moved against Licinius once more),
6850 making it his capital along with Serdica. At this time Constantine also demonstrated a very active military bent, travelling along the whole of the limites of his newly acquired territory. From 320 he appointed his eldest son, Crispus, Praetorian prefect, with military command of Gaul.

When he learnt that an army of Goths had crossed the Danube to raid Roman territory
6855 in Moesia Inferior and Thrace, which belonged to Emperor Licinius, he left his general headquarters in Thessalonica and marched against them (323). The fact that he

had trespassed into a part of the empire which was not under his control unleashed the final phase of the Civil wars of the Tetrarchy, which ended with the complete defeat of Licinius and the consecration of Constantine as the sole Roman Emperor. The final period of Constantine's reign, until his death (337), saw the Christian Emperor consolidate the entire defensive system on the Rhine and Danube, obtaining important military successes and reasserting control over a large part of the territory that the Romans had abandoned under Gallienus and Aurelian: the Agri Decumates from the Alemanni, the area south of the Tisza from the Sarmatians, as well as Oltenia and Wallachia from the Goths.

Historical context

With the death of Emperor Numerian in November 284 (who had been entrusted with Eastern Roman empire by his father Carus) and the refusal of the eastern troops to recognise Carus' eldest son Carinus as his successor, a proven general of Illyrian origins, Diocletian, was raised to the purple. At the end of the civil war which followed, Diocletian was victorious and in 285 he named Maximian as his deputy (or Caesar) and then a few months later elevated him to the rank of Augustus (1 April 286), thereby forming a diarchy, in which two emperors divided the government of the empire on geographic lines. This also entailed the division of responsibility for the defence of the northern frontier from Germanic and Sarmatian incursions. Given the increasing difficulty of containing the internal revolts and those along the borders, a further territorial division was executed in 293 to facilitate military operations: Diocletian named Galerius as his Caesar in the east, while Maximian chose Constantius Chlorus in the west. However, this tetrarchy fell into crisis only a year after the abdication of the two Augusti in 305, beginning a new Civil War (306-324), permitting new breaches along the Roman external border, with populations attempting to settle within Roman territory. It was only with Constantine's accession to the throne, becoming sole Augustus of the West after the Battle of the Milvian Bridge in 312 and later still defeating Licinius and reuniting the Empire under a single emperor (324) that the northern frontiers were adequately defended once more. It is no coincidence that Constantine is attributed the responsibility for perfecting the military reforms of Diocletian and also for the reconquest or vassalisation of all the territory which Trajan had controlled.

Background: the death of Constantius Chlorus

With the death of Constantius Chlorus at Eboracum (York) on 25 July 306, the Tetrarchy entered a crisis: the eldest son of the dead emperor, Constantine was proclaimed Augustus by the Alemanni general Chrocus and the army of Britannia. His election was in accordance with a dynastic principle rather than the meritocratic system of the Tetrarchy created by Diocletian. Only Lactantius maintains that Constantine was named Augustus by his father on his deathbed. Galerius was displeased by this act and offered the son of his deceased colleague the title of Caesar, which Constantine accepted, allowing Flavius Severus to succeed his father Constantius instead. A few months later, Maxentius son of the old Augustus Maximian was acclaimed Emperor by the Praetorian guard with the support of officials like Marcellianus, Marcellus and Lucianus (but not Abellius, vicar of the Praefectus urbi, who was killed), reaffirming the dynastic principle. It was in this period that Constantine began to achieve important military successes against the Alemanni and the Franks, along the stretch of the frontier attributed to him, as is recounted by Eutropius.

Forces in the field

Regarding the Roman forces garrisoned along the whole stretch of the northern limites from Britannia to Moesia, it is important to note that at this time there was a very important reform of the Roman army, a new Deployment of the Roman legions along the borders and an increase in the size of the Roman army. In fact, we know that, with Diocletian's Tetrarchy reforms, the total number of legions was brought to 55 or 56 in the year 300. Constantine's accession to the throne and the return of a dynastic monarchy brought about the final increase of the number of Roman legions to 62 or 64 around the year 330.

Barbarians

Along the Rhine limes the Franks and Saxons in particular pressed on Gaul and Britannia. The Alemanni also made some incursions in these regions, but the main goal of their attacks at this time was Northern Italy via Pannonia (the western part of

the Danubian Limes). The major clashes occurred along the Lower Danube in the Roman provinces of the Balkan region, where the Marcomanni, Quadi, Sarmatians and especially the Goths (divided into the Tervingi and the Greutungi) concentrated their attacks.

Phases of the conflict

First phase (306-316): defence of the Rhine limes

306

The twenty-one-year-old Constantine, unable to get permission to visit his ailing father Constantius Chlorus (Augustus of the west) from the Augustus of the East, Galerius, in whose court he had lived since the time of Diocletian, decided to escape in the spring of this year. He found his father at Gesoriacum (Boulogne-sur-Mer) about to cross the English Channel to Britannia and joined him in a successful military campaign against the Picts and Scotti to the north of Hadrian's wall. When his father died during the summer, Constantine was proclaimed Augustus of the West by his father's loyal troops at Eboracum on 25 July.

The young tetrarch however needed his election to the Imperial office to be recognised, particularly by Galerius, the most senior of the Augusti. Galerius preferred his friend and comrade in arms, Licinius, to Constantine. Confronted with a fait accompli and in the face of the "secession" of Gaul and Britannia, Galerius appealed to precedent and named the former Caesar, Flavius Severus as the new Augustus with control over Italy, Africa, and Spain and recognised Constantine only as a Caesar. Constantine voluntarily accepted this and in Autumn of the same year he returned to Augusta Treverorum (Trier) whence he could more easily monitor the Gallic frontier, which was being menaced by the Franks. He continued to defend this important stretch of the limes for the next six years, transferring his whole imperial court to Trier and transforming it into his capital (with circa 80000 inhabitants), constructing the imposing Aula Palatina in 310. During these years, not only did he reinforce the defences of this region against the continued incursions of the barbarians, but he also strengthened the forces under his control, augmenting his forces through the creation of new legions.

307

At the beginning of spring, Constantine planned a new campaign in German territory. He found it necessary to confront the Franks, Chamavi, Bructeri, Cherusci and Alemanni. The young emperor had been educated in the military training ground of the east by Diocletian and Galerius and, despite his youth, conducted the war with the sort of determination and energy which his father had not been able to muster in the preceding years. In the course of the military operations, he achieved important successes, managing to heavily wallop the Franks who had invaded the Roman territory east of the Rhine the previous year. It is reported that, while the Franks were planning to cross the Lower Rhine, Constantine quickly crossed the river in another location and surprised the enemy with an unexpected attack, which prevented a new invasion. Many of the Franks were killed, captured or enslaved - some of these were employed as gladiators. All their livestock was seized and their villages were burnt to the ground. As a result of these successes, Constantine was awarded the cognomen Germanicus Maximus at the end of the year. In the course of this campaign and those following it, Constantine may have used the legionary fortress of Castra Vetera as a base and the valley of the Lippe (as had been done in the time of Augustus and again fifty years later under Julian) as an invasion route by which to outflank the enemy, who were found to the north of this major river, and catch them from behind after devastating their territory.

308

Further successes were achieved by Constantine against the Bructeri over the whole year, for which he received the title of GERMANICUS MAXIMUS once again.

At the end of this new military campaign against the Franks, Constantine built the important "bridgehead" of Divitia (modern Deutz) in German territory opposite Colonia Agrippina (Cologne).

310

Once more Constantine achieved important military successes over the Alemanni and the Franks, whose king he is said to have captured and fed to the beasts in the amphitheatre. In the course of this campaign against the Franks, Constantine added a majestic bridge at Divitia, 420 metres long and 10 metres wide.

Meanwhile, however, Maximian had rebelled and Constantine had to cut his campaign

6990 against the Franks short, marching rapidly to southern Gaul where he captured Maximian and forced him to commit suicide.

311

6995 With the death of Galerius, the Tetrarchy became ever more unstable. Probably as a result of this, no campaigns against the Germans beyond the Rhine seem to have been undertaken this year. On the contrary, Constantine fortified the Rhine limes ever further with new construction (as at Haus Bürgel on the right bank of the river, 30 km north of Divitia, or along the roads leading from Colonia Agrippina (Cologne) to Augusta Treverorum (Trier) and with the strengthening of preexisting fortifications. Since the auxiliary fortress of Noviomagus Batavorum (Nijmegen) had, apparently, been 7000 abandoned at the end of the third century, Constantine constructed two new forts in the area: at Valkhof (on the banks of the river Waal) and another along the coast at Valkenburg (near Hook).

312

7005 Constantine gathered a massive army, including barbarians from the recent wars (Germanic peoples and Celts brought over from Britannia), and led it into Italy, defeating his rival Maxentius at Turin, Verona, and finally at the Milvian Bridge. Constantine thus became sole ruler of the West. The eastern half fell under the control of Licinius the following year, with whom Constantine entered into a marriage 7010 alliance.

313

7015 At this time Constantine conducted another military campaign against the Franks and the Alemanni in Gaul, which lasted until the end of summer. Pretending to cross the river, he followed his earlier course, marching against the Alemanni, but then turned back and attacked the Franks with a rapid fleet. He devastated their territories and captured one of their kings. Immediately afterwards he retraced his steps and devastated the territories of the Alemanni as well, a campaign commemorated on the coins of the year, which celebrate the GAVDIVM ROMANORVM ALAMANNIA. 7020

314-315

7025 Once again, Constantine made Augusta Treverorum (Trier) his general quarters for these two years, in order to stay more in control of the Rhine frontier, once again putting things in order against possible incursions of Franks and Alemanni and continuing his fortification works. In July of 315 he left the frontier in order to travel to Rome and celebrate his triumph for the Battle of the Milvian Bridge.

316-317

7030 Conflict arose between Licinius and Constantine, who defeated the former at Cibalae and Mardia. In the following peace agreement, Licinius was forced to cede Illyricum to Constantine. Constantine thereby extended his territory to the east and now had another important strategic sector to defend: the limes sarmaticus (or pannonicus), also called the Pannonian Limes, where he had earlier fought in 305, as an official of Galerius, managing to defeat a barbarian general in single combat. 7035

Second phase

317-319

7040 Following the events described above, Constantine fought against the Sarmatians on the Pannonian stretch of the limes, earning the victory title of SARMATICUS MAXIMUS for the first time, as seems to be demonstrated by an inscription found in Mauretania, indicating to Mócsy that he remained as Sirmium almost continuously until 324 (when his armies moved against Licinius), employing it as his capital. Horst too maintains that his preferred imperial residences in the period between 317 and 323 were Serdica and Sirmium.

7045 During this year, Constantine again showed an active interest in military activities, since he often travelled along the whole limes of the territories he had acquired with the peace of Serdica (March 317). He inspected the garrisons of Pannonia Inferior, overseeing their repair and the construction of new bridgeheads towards the plain of the Tisza River, to face the peril of the barbarians beyond Rome's borders 7050 (Iazygi and Goths). He strengthened the river fleets of the Danube, Sava, Drina, and Morava, as well as the maritime fleets of the Adriatic and Aegean Seas, reinforcing the ports of Aquileia, Pireus, and Thessalonica (formerly Galerius' capital) through the construction of arsenals, shipyards, and the construction of further naval squads. Clearly these reconstruction and strengthening works could be employed not

7055 only against the barbarians, but also, one day, against Licinius.

320

Constantine's eldest son, Crispus (now fifteen, and therefore aided by a Prefect), received the military command of Gaul and conducted military campaigns along the Rhine, achieving victories over the Franks and Alemanni within the year.

7060

322

Constantine managed to repulse a new invasion of Pannonia by the Sarmatians and the Iazygi. After this, Constantine may have begun the construction of a new stretch of border fortifications, the so-called Devil's Dykes, which consisted of a series of north-facing embankments starting by the Danube at Aquincum, heading to the Tisza, then turning south towards the river Mureş, crossing the Banat and reaching the Danube at Viminacium (it is possible that this construction resumed earlier work under Diocletian). Accordingly, the coinage of this year and the next declared SARMATIA DEVICTA ("Sarmatia vanquished") and name Constantine as "Sarmaticus Maximus" for the second time.

7070

323

Yet again Constantine was able to repel an invasion of Sarmatian Iazyges, as Zosimus seems to support, though he might have combined or confused the Sarmatian invasions of two separate years, which had unsuccessfully besieged a city of Pannonia Inferior, identifiable with Campona, a little south of the legionary fortress of Aquincum. The Sarmatians first attacked a city which had a constant garrison, where the part of the wall near the ground was built of stone and the upper parts in wood (which could be Campona). The Sarmatians thought they could easily conquer the city, if they could set the wooden part of the wall on fire, so they lit a fire and shot the people on the walls. But while these people returned fire with darts and arrows, Constantine attacked them from behind, taking them by surprise, killing many and taking numerous prisoners, while the survivors fled. – Zosimus, New History, 2.21.1–2. At the same time, the Goths of Rausimodus decided to cross the Danube (further downstream) too and tried to raid the Roman territory of Moesia Inferior and Thrace. Informed of this, Constantine left his general quarters in Thessalonica and marched against them. Hearing of the arrival of the Emperor, the Goths decided to retreat to Wallachia, but Constantine crossed the Ister, reached the Gothic invaders and massacred them in the battle which followed, managing to kill Rausimodus. Constantine crossed over the Ister and attacked him [i.e. Rausimodus] as he fled towards a thickly wooded hill. He killed many barbarians, including Rausimodus himself, and afterwards he captured many more. Taking this multitude, which instantly raised its hands in surrender, he returned with them to his general quarters. After posting them in the cities [especially at Bononia] he returned to Thessalonica. – Zosimus, New History, 2.21.3 & 22.1. The barbarians had requested peace and Constantine had nevertheless led an army into parts of the Empire which were not under his competency (i.e. Moesia), but that of the other Augustus, Licinius – thereby initiating a new civil war between Constantine and Licinius. Coinage continued to celebrate the Sarmatia devicta.

7075

7080

7085

7090

7095

7100

324

The civil war which followed saw the complete defeat of Licinius and Constantine's consecration as sole Augustus. Remembering the recent war with the Goths, Constantine decided to construct some stone bridges in order to frighten the Barbarians north of the Danube: One connecting Oescus to the new fort of Sucidava on the north bank of the Danube, another linking Transmarisca and the fort of Daphne which was also on the north bank of the Danube. We cannot, however, exclude the possibility that the construction of these new fortifications dates to the later Gothic campaigns of 326–329.

7105

7110

Third phase (324–337): the defence of the limes gothicus and the "reconquest" of Dacia

In this new phase, Constantine, now sole monarch of the Roman empire, not only managed to consolidate the entire defensive system along the Rhine and Danube, but also obtained important military successes and regained "control" over a good part of the territories which had been abandoned by Gallienus and Aurelian. This included the Agri decumates from the Alemanni, the plain south of the Tisza (Banat) from the Sarmatians and Oltenia & Wallachia from the Goths. These gains seem to be demonstrated by the coinage of the period and by new defensive constructions (Devil's

7115

7120

Dykes and Brazda lui Novac). Additionally, in this period, Constantine brought about a new series of reforms, completing those began some forty years earlier by Diocletian. This process was accomplished gradually over the last thirteen years of his reign (324-337, the year of his death).

324/325

In the course of these two years, new military campaigns were conducted against the federation of the Alemanni by Constantine's son Crispus, which were celebrated coinage inscribed "ALEMANNIA DEVICTA (Alemannia conquered)". From this time, Constantine began to use Nicomedia as well as Serdica and Sirmium as his preferred Imperial residences.

328-331/332

Once again, Constantine, along with his son Constantine II was forced to intervene on the Upper Rhine, to defeat the Alemanni who had attempted to invade Gallic territory. This war seems to have lasted many years, since the Emperor's sons were granted the title of ALAMANNICUS MAXIMUS only in 331/2.

328

In this year it seems that there were new clashes with Germans, Sarmatians and Goths on the central and lower Danube and that Constantine was forced to cross the Ister once more, constructed a fortified bridge (between Oescus and Sucidava) to take the war to Barbarian territory, such that the road leading to Romula was paved. He devastated the local territory and reduced them to slavery, according to the account of Theophanes the Confessor.

329

The next year, all along the Lower Danube, the Goths went on the offensive, managing to penetrate to Moesia Inferior and Thrace, where they wrecked devastation, but Constantine managed to repel the barbarian hordes, construct a new bridge in Scythia Minor and attack their territory, as is recorded in his titulature for these years and in Anonymus Valesianus. At the end of this campaign or that of the previous year, he seems to have received the title of GERMANICUS MAXIMUS for the fourth time and the title of GOTHICUS MAXIMUS for the first time.

331/332

The Visigoths, who had molested the allied Sarmatians, invading their territory and then the Balkan provinces of the Romans, were defeated near the modern city of Varna (Bulgaria), by Constantine and his sixteen-year-old Caesar, Constantine II.

Reportedly, cold, hunger, and battle took the lives of 100000 Goths. The survivors were forced to sue for peace with the Emperor, handing over hostages including the King's son Ariaric as a guarantee, as well as a contingent of auxiliaries, in exchange for seed and grain. Most importantly, a treaty was concluded with these people (foedus), under which the Goths (presumably the Visigoths) were employed to defend the Imperial border and provide 40000 soldiers. This peace endured until the time of Julian or even to 375/376. For these successes, he received the victory title of GOTHICUS MAXIMUS for the second time, as well as "DEBELLATOR GENTIUM BARBARARUM" ("Conqueror of barbarian peoples") and the coins of 332 and 333 named GOTHIA and SARMATIA as if they had become new Roman provinces. Immediately following these events, Emperor Constantine may have begun construction of a new stretch of border defences, the so-called Brazda lui Novac, which runs parallel to the north bank of the Danube from Drobeta, across the plain of eastern Wallachia to the Siret River, surrounding the newly "reconquered" territories. Not coincidentally, Aurelius Victor recounts that a bridge was built on the Danube (referring to the bridge built in 328) as well as numerous forts and bastions in diverse locations for protection of the borders.

334

Two years later, the same Sarmatians who had requested the "friendly" intervention of the Romans, created new problems for the Emperor, when they were riven by internal conflict between the Limigantes and the Argaragantes. It is said that the slaves (Limigantes) drove their masters (Argaragantes) from Banat, forcing Constantine to intervene militarily in order to settle an enormous mass of "refugees" (allegedly 300000 people) in Scythia Minor, Italia, Macedonia, Thrace, Moesia Superior and Pannonia Secunda. Some maintain instead that Constantine launched a new military campaign into the plain south of the Tisza to restore order among the warring

factions, at the end of which Constantine received the victory title of SARMATICUS MAXIMUS for the third time. There are, after all, archaeological hints that Constantine had occupied part of the Banat mountains, along the "old" Roman roads which led from Dierna and Lederata to Tibiscum seventeen years earlier.

circa 335

Jordanes recounts an episode datable to this period, in which the Vandals of Visimar, who inhabited the region between the Marisus and Danube rivers (perhaps a little northwest of Banat), clashed with the Goths of Geberic and were defeated. The survivors asked Constantine to be allowed into Roman territory, got permission and settled in Pannonia Inferior, where they remained in peace for around forty years, "obeying the laws of the Empire like the other inhabitants of the region".

336

Emperor Constantine achieved new successes beyond the Danube in the territories which had once been the Roman province of Dacia (abandoned by Aurelian), receiving the honorific title "DACICUS MAXIMUS". It cannot be coincidental that an inscription found near the former legionary fortress of Apulum (modern Alba Iulia) mentions a woman named Ulpia Constantia (reflecting connections to Trajan and Constantine). This could give serious support to Emperor Julian's claim that Constantine reconquered all the territories controlled by Trajan – which included Dacia.

The equilibrium along the lower course of the Danube, after all the campaigns of Constantine and his sons, remained almost unchanged until around 375. The focus of the Emperor turned to the east, where a series of preparations were made for an imminent military campaign against the Sassanids, which was never carried out by Constantine on account of his death in May 337. For twenty five years, the Roman armies of Constantius II and then Julian, fought against the Sassanid armies with varying success (337–363). However the Lower Danube and Eastern borders remained, for almost thirty years, practically unchanged.

XXI After these events, the Goths had already returned home when they were summoned at the request of the Emperor Maximian to aid the Romans against the Parthians. They fought for him faithfully, serving as auxiliaries. But after Caesar Maximian by their aid had routed Narseus, king of the Persians, the grandson of Sapor the Great, taking as spoil all his possessions, together with his wives and his sons, and when Diocletian had conquered Achilles in Alexandria and Maximianus Herculeus had broken the Quinquegentiani in Africa, thus winning peace for the empire, they began rather to neglect the Goths.

Now it had long been a hard matter for the Roman army to fight against any nations whatsoever without them. This is evident from the way in which the Goths were so frequently called upon. Thus they were summoned by Constantine to bear arms against his kinsman Licinius. Later, when he was vanquished and shut up Thessalonica and deprived of his power, they slew him with the sword of Constantine the victor. In like manner it was the aid of the Goths that enabled him to build the famous city that is named after him, the rival of Rome, inasmuch as they entered into a truce with the Emperor and furnished him forty thousand men to aid him against various peoples. This body of men, namely, the Allies, and the service they rendered in war are still spoken of in the land to this day. Now at that time they prospered under the rule of their kings Ariaric and Aoric. Upon their death Geberich appeared as successor to the throne, a man renowned for his valor and noble birth.

East Roman management of barbarians tribes in the Lower-Middle Danube frontier

zones, A.D. 332–610
by Alexander Sarantis

[...] Eastern Roman strategic aims

Eastern Roman emperors and their governments wanted to encourage and maintain the security of the Danube frontier and peaceful relations with barbarian groups beyond it. A politically divided barbarian world was preferable, consisting of numerous political groups, not powerful enough to seriously threaten the empire, and which could be played off against one another.

When these conditions prevailed, the Eastern Roman government found it easier to exploit barbarian tribes for their manpower resources; recruiting soldiers for its armies and farmers to settle in the Balkan provinces.

The Eastern Roman emperors achieved this balance of power along the Lower Danube

frontier for the major part of Late Antiquity. Between AD 284 and 332, the Tetrarchs' and Constantine's energetic management of the Lower and Middle Danube frontiers ensured that no major threats emerged.

The peace of AD 332 with the Tervingi provided the foundation for over three decades of peace along the Lower Danube before Valens' campaigns against this group in the 360s. Aggressive military campaigns against Sarmatian and Quadi tribes across the Middle Danube in the 350s and 370s kept this section of the frontier largely passive until the late fourth century. [...]

Eastern Roman 'barbarian management strategies'

To prevent the two crisis situations just discussed from occurring, the Eastern Roman governments needed to adopt a variety of time-honored diplomatic and military policies. These ensured that barbarian groups remained divided but stable and involved a balancing act between giving them what they wanted and concurrently intimidating them and limiting their power. Concessions included manpower in the form of returned prisoners or refugees, trading privileges, annual subsidies and military support against rival groups. In addition, Roman emperors could confirm Barbarians in their occupation of specific territories, even if these were outside the empire. These benefits were enjoyed by the Tervingi Goths in Wallachia following their treaty with the emperor Constantine I in AD 332. This seems to have included trading rights along the Lower Danube and some sort of regular payment. In return, these Goths served periodically in Roman armies and defended the Lower Danube against barbarian groups from further afield. [...] There is less that can be said about the fourth century because the empire enjoyed peace in the East from AD 298 to 332, and along the Lower Danube from AD 332 to 367, during which wars were fought against the Sassanian empire of Shapur II (especially in AD 337-351 and 359-363). Constantius II's Middle Danube campaign of AD 358 later coincided with peace on the eastern frontier. [...]

https://www.academia.edu/33845028/East_Roman_management_of_barbarians_tribes_in_the_Lower-Middle_Danube_frontier_zones_A.D._332-610?swp=rr-rw-wc-32358309

[Wikipedia] According to Jordanes, who does not mention the Tervingi, the Gothic ruler Ariaric was forced to sign a treaty with Constantine the Great in 332 after his son Constantine II decisively defeated the Goths. After that time, substantial numbers of valuable Roman gold medallions was distributed in Gothic territories from Netherlands to Ukraine, and have been discovered by archaeologists. They demonstrate the Roman influence among the Goths.

Roman coins discovered in East Java, Indonesia.

Studying extra regional trade networks in Antiquity can be considered a relatively popular field of research, but the intensity and patterns of such complex system still leave lot of questions, particularly in case of Rome's Far Eastern trade. There is still a trend to visualize a kind of globalized commercial activity between the Imperium and communities on the eastern edge of the Silk Road(s). However the facts provide us a more comprehensive picture. Due to the meticulous work of international joint research projects working in East and Southeast Asia followed by a raised interest in collecting ancient objects among local people, increasing number of Roman objects have been discovered in the region. These finds prove the significance of mediator cultures in transferring Roman artifacts beyond India - with their own imprints on forming evaluation/acceptance of these non-local goods by the receiving culture.

At the same time, one must keep in mind that Roman objects discovered in East and Southeast Asia have different backgrounds, and most cases - due to extensive looting - are lacking archaeologically secure context. Therefore, a careful approach towards these finds is essential along with re-evaluation of earlier discoveries. Detailed and objective report of Roman artifacts newly discovered in East and Southeast Asia - whatever their background may be - is a first step towards a more elaborative study. In the following pages, fourteen Roman and Byzantine coins along with eleven Chinese coins found in different locations in East Java will be studied.

Ariaric also known as Ariacus

was a 4th-century Thervingian Gothic pagan ruler (reiks, kindins).] He was succeeded by Geberic. In 328, Constantine the Great constructed a bridge across the Danube and built fortifications in the territory of Oltenia and Wallachia. This caused a migration of the Thervingi and Taifali to the west into Tisza Sarmatian controlled

7320 areas. The Sarmatians joined forces with Constantine, who appointed his son Constantine II to campaign against the Goths in late winter 332, reportedly resulting in the deaths of approximately one hundred thousand people due to the weather and lack of food. Ariaric was forced to sign a treaty or foedus with Constantine in 332. Yet some scholars dispute that this treaty was a foedus, but more like an act of submission.

7325 Ariaric's son Aoric was raised in Constantinople, where a statue was erected in his memory. Patrick J. Geary suggested that under Ariaric branches of the western Goths became increasingly integrated into the Roman empire and systems, providing troops for military campaigns against the Sassanid Empire. [from Wikipedia]

7330 **The Taifals or Tayfals (Latin: Taifali, Taifalae or Theifali)**

were a people group of Germanic or Sarmatian origin, first documented north of the lower Danube in the mid third century AD. They experienced an unsettled and fragmented history, for the most part in association with various Gothic peoples, and alternately fighting against or for the Romans. In the late fourth century some Taifali were settled within the Roman Empire, notably in western Gaul in the modern province of Poitou. They subsequently supplied mounted units to the Roman army and continued to be a significant source of cavalry for early Merovingian armies. By the sixth century their region of western Gaul had acquired a distinct identity as Thifalia.

7340 One of the earliest mentions of the Taifals puts them in the following of the Gothic king Cniva when he campaigned in Dacia and Moesia in 250 and the years following. They are sometimes classified as a Germanic tribe closely related to the Goths, although some believe they were related to the (non-Germanic) Sarmatians with whom they might have emigrated from the Pontic-Caspian steppe.

7345 In the late third century they settled on the Danube on both sides of the Carpathians, dividing the territory with the Goths, who maintained political authority over all of it. In Spring 291 they formed a special alliance with the Gothic Thervingi, forming a tribal confederation from this date until 376, and fought the Vandals and Gepids: Tervingi, pars alia Gothorum, adiuncta manu Taifalorum, adversum Vandalos Gipedesque concurrunt. Along with the Victufali, the Taifals and Thervingi were the tribes mentioned as having possessed the former Roman province of Dacia by 350 "at the very latest".

7355 Archaeological evidence suggests that the Gepids were contesting Transylvania, the region around the Someş River, with the Thervingi and Taifals. The Taifals were subsequently made foederati of the Romans, from whom they obtained the right to settle in Oltenia. They were at that time independent of the Goths.

In 328 Constantine the Great conquered Oltenia and the Taifals, probably taking this opportunity to resettle a large number in Phrygia, in the diocese of Nicholas of Myra. In 332 he sent his son Constantine II to attack the Thervingi, who were routed. According to Zosimus (ii.31.3), a 500-man Taifal cavalry regiment engaged the Romans in a "running fight", and there is no evidence that this campaign was a failure. Nonetheless, the Taifals largely fell into the hands of the Romans at this time. Around 336 they revolted against Constantine and were put down by the generals Herpyllion, Virius Nepotianus, and Ursus. By 358 the Taifals were independent foederati of Rome and Oltenia lay outside Roman control. They launched campaigns as allies of the Romans from their own Oltenic bases, against the Limigantes (358 and 359) and the Sarmatians (358). However, campaigns against the Thervingi by the emperor Valens in 367 and 368 were inhibited by the independence of Oltenia. It is possible, however, that the Taifals at this time were still fighting alongside the Goths. In 365 the emperor ordered the construction of defensive towers in Dacia Ripensis, but whether this was Oltenia is unclear. Archaeological evidence evidences no sedes Taifalorum (Taifal settlements) east of the Olt River.

- 7415 31 mei 311 Edict of Toleration (Galerius)
34 "Inter cetera quae pro rei publicae semper commodis atque utilitate disponimus, nos quidem volueramus antehac iuxta leges veteres et publicam disciplinam Romanorum cuncta corrigere atque id providere, ut etiam Christiani, qui parentum suorum
- 7425 reliquerant sectam, ad bonas mentes redirent, 2 siquidem quadam ratione tanta eosdem Christianos voluntas invasisset et tanta stulti tia occupasset, ut non illa veterum instituta sequerentur, quae forsitan primum parentas eorundem constituerant, sed pro arbitrio suo atque ut isdem erat libitum, ita sibimet leges facerent quas observarent, et per diversa varios populos congregarent. 3 Denique cum eiusmodi nostra iussio extitisset, ut ad veterum se instituta conferrent, multi periculo subiugati, multi etiam deturbati sunt. 4 Atque cum plurimi in proposito perseverarent ac videremus nec diis eosdem cultum ac religionem debitam exhibere nec Christianorum deum observare, contemplatione mitissimae nostrae clementiae intuentes et consuetudinem sempiternam, qua solemus cunctis hominibus veniam indulgere, promptissimam in his quoque indulgentiam nostram credidimus porrigendam. Ut denuo sint Chrsitiani et conventicula sua componant, ita ut ne quid contra disciplinam agent. 5 <Per> aliam autem epistolam iudicibus significaturi sumus quid debeant observare. Unde iuxta hanc indulgentiam nostram debebunt deum suum orare pro salute nostra et rei publicae ac sua, ut undique verum res publica praestetur incolumis et
- 7430 securi vivere in sedibus suis possint." 35 Hoc edictum proponitur NICOMEDIAE PRIDIE KALENDAS MAIAS IPSO OCTIES ET MAXIMINO ITERUM CONSULIBUS.
34 "Among other things that we always arrange for the public good and benefit, we indeed wished to correct everything according to the ancient laws and public discipline of the Romans and to provide for this, so that even Christians who had abandoned the sect of their parents might return to good minds, 2 since for some reason such a will had invaded the same Christians and such foolishness had taken possession of them that they did not follow those institutions of the ancients, which perhaps their parents had first established, but at their own discretion and as they pleased, they made laws for themselves to observe, and gathered various peoples
- 7445 together through various places. 3 Finally, when our command of this kind had been
- 7450

- issued, that they should conform to the institutions of the ancients, many were subjected to danger, many were also disturbed. 4 And since many persisted in their purpose and we saw that they neither paid due worship and religion to the gods nor observed the Christian gods, contemplating with contemplation our most gentle
- 7455 clemency and the everlasting custom by which we are accustomed to pardon all men to indulge, we believed that our most prompt indulgence should be extended to these also. That they may once again be Christians and arrange their assemblies, so that they do not do anything contrary to discipline. 5 <By> another letter we have indicated to the judges what they should observe. Wherefore, according to this
- 7460 indulgence of ours, they should pray to their god for our safety and that of the republic and their own, so that the republic may be preserved on all sides and they may live in safety and security in their seats." 35 This edict was proposed at NICOMEDIA on the third day of the Kalends of May to the Octius and Maximinus Consuls.
- 7465 312 CONSTANTINO A. II ET LICINIO II CONSS.
28 september 312 Aditus competens iudex considerato tutelae iudicio eam curabit ferre sententiam, quam agnitam legibus esse providerit. PP. IV KAL. SEPT. CONSTANTINO ET LICINIO AUGG. II CONSS.
- 7470 28 oktober 312 Constantine was directed in a dream to cause the heavenly sign to be delineated on the shields of his soldiers, and so to proceed to battle. He did as he had been commanded, and he marked on their shields the letter X, with a perpendicular line drawn through it and turned round thus at the top, being the cipher of Christ. Having this sign (XP), his troops stood to arms. The enemies advanced, but without
- 7475 their emperor, and they crossed the bridge. The armies met, and fought with the utmost exertions of valor, and firmly maintained their ground. In the meantime a sedition arose at Rome, and Maxentius was reviled as one who had abandoned all concern for the safety of the commonweal; and suddenly, while he exhibited the Circensian games on the anniversary of his reign, the people cried with one voice, Constantine cannot be overcome! Dismayed at this, Maxentius burst from the assembly, and having called some senators together, ordered the Sibylline books to be searched. In them it was found that: "On the same day the enemy of the Romans shall perish." Led by this response to the hopes of victory, he went to the field. The bridge in his
- 7480 rear was broken down. At sight of that the battle grew hotter. The hand of the Lord prevailed, and the forces of Maxentius were routed. He fled towards the broken bridge; but the multitude pressing on him, he was driven headlong into the Tiber.
- 7485 30 december 312 Imp. Constantinus a. ad Claudium Plotianum correctorem Lucaniae et Brittiorum. Si in negotio civili cognitis utrisque actionibus pronuntiaveris te ad nostram scientiam relaturum, consultationis exemplum litigatoribus intra decem dies edi aput acta iubeas, ut, si cui forte relatio tua minus plena vel contraria videatur, is refutatorias preces similiter tibi aput acta offerat intra dies quinque, quam illi exemplum consultationis tuae obtuleris. Iam dicationis tuae est omnia, quae aput te vel aput alios gesta fuerint in eo negotio, consultationi tuae cum
- 7490 refutatoriis litigantis adnectere, ita ut scias et decem dies, intra quos edi consultationem oportet, et quinque, intra quos preces refutatoriae offerendae sunt, continuos debere servari. Nam quinque diebus transactis nec offerentem preces refutatorias litigatorem debebis audire, sed sine his, quoniam intra statutum tempus oblatae non sunt, gesta omnia ad nostram referre scientiam. Et cetera. DAT. III KAL.

- 7700 314 VOLVSIANO ET ANNIANO CONSS.
Pace inter duos imperatores rupta 'bellum Cibalense fuit a. d. VIII id. Oct.', quo finito eodem anno vel certe proximo incipiente pacem restitutam esse iude confirmatur, quod a. 315 ambo imperatores simul consules processerunt. Deinde, ut ait auctor originis Constantianae 19, Constantinus reversus est Serdicam. Quae refragantur constitutiones infra relatae, secundum quae Constantinus a. 314 ab Octobri ad Decembrem Treviris fuit, videntur mendose traditiae.
- 7710 1 januari 314 Imp. Constantinus a. ad Maximum praefectum Urbi. pr. Si quis alicui maiestatis crimen intenderit, cum in huiusmodi re convictus minime quisquam privilegio dignitatis alicuius a strictiore inquisitione defendatur, sciat se quoque tormentis esse subdendum, si aliis manifestis indiciis accusationem suam non potuerit comprobare. Cum eo, qui huius esse temeritatis deprehenditur, illum quoque tormentis

- 7715 subdi oportet, cuius consilio atque instinctu ad accusationem accessisse videbitur, ut ab omnibus commissi consciis statuta vindicta possit reportari. In servis quoque vel libertis, qui dominos aut patronos accusare aut deferre temptaverint, professio tam atrocis audaciae statim in admissi ipsius exordio per sententiam iudicis comprimatur ac denegata audientia patibulo adfigatur. PROPOSITA KAL. IANUAR.
- 7720 VOLUSIANO ET ANNIANO CONSS.
- 30 januari 314 Imp. Constantinus a. Locrio Verino suo salutem. pr. Aput eos, quos superstites integris facultatibus esse pervideris vel quorum heredes incolumbia retinent patrimonia, sortes kalendarii perseverare debebunt, ita tamen, ut annuas usuras suis quibusque temporibus exolvant, cum simul et rei publicae utile sit retinere idoneos debitores et ipsis commodum cumulum debiti minime nutriri.
- 7725 1. Et quia nefas est obnoxiiis corporibus alienatis circumscribi civitates, placuit, si qui debitor rei publicae civitatis quippiam ex eo patrimonio, quod habuit, cum pecuniam rei publicae sumeret, donaverit vel distraxerit vel qualibet in alium ratione contulerit, qualitate rei alienatae perspecta atque omnibus debitoris facultatibus consideratis, quas habuit, cum ei pecunia crederetur, pro rata ab eo, qui ex debitoris facultatibus aliquid detinet, ex sorte atque usuris postulari. Itaque quotiens minus idoneum deprehenditur eius patrimonium, cuius nomen kalendario civitatis alicuius invenitur obnoxium, iudex omni quibus, e diligentiae sollicitudine
- 7735 debeat inquirere, ad quos ex qualibet condicione transierint debitoris facultates, ut singuli aequa aestimatione habita pro rata rerum quas possident conveniantur, personalem actionem contra eum habituri debitorem, qui ipsis solventibus liberatur. Ab eo autem, a quo constat fortunarum suarum partem maximam recessisse, etiam reliquam portionem quae aput eum resederit transferri ad idoneum oportebit.
- 7740 2. Quod si quispiam debitor rei publicae civitatis fisco nostro locum fecerit, emptores quidem, qui ex fisco nostro comparaverint, manifestum est secundum ius vetus et rescripta divorum constitutionesque nostras nullam debere molestiam sustinere, cum huiusmodi casibus rem publicam placuerit fortuita dispendia sustinere; qui vero aliquid ex eiusdem bonis principali liberalitate fuerint consecuti, iuxta legem latam
- 7745 obnoxii erunt rei publicae habita solidarum facultatum consideratione, quae fuerant debitoris, cum pecuniam rei publicae sumeret, ut pro rata corporis, quod ex largitate nostra retinent, competentem sortis atque usurarum partem exigantur.
3. Quod si quis debitor non comparuerit vel certe ita omnia sua consumpserit, ut nemo aliquam rem ex eius bonis possideat, id quoque debitum convenit ad dispendium rei
- 7750 publicae pertinere. Ideoque periculo curatoris kalendarii et magistratuum et creatorum aput idoneos vel dominos rusticorum praediorum pecunia collocanda est. PROPOSITA III KAL. FEB. VOLUSIANO ET ANNIANO CONSS.
- 30 January 314 Imp. Constantine a. Locrius Verinus his greetings. pr. Aput those, whom you foresee to be survivors with intact faculties or whose heirs retain their
- 7755 patrimony intact, the calendar lots should continue, so however, that they pay their annual interest at any time, since at the same time it is useful for the state to retain suitable debtors and for them the advantage of not having an accumulation of debt to be nurtured.
1. And because it is wrong to limit cities to liable alienated bodies, it was decided
- 7760 that if any debtor to the state of the city has donated or alienated anything from the patrimony that he had, when he took money from the state, or has transferred it to another in any way, the quality of the alienated thing is examined and all the faculties of the debtor, which he had, when the money was entrusted to him, should be demanded pro rata from the one who withholds something from the faculties of the
- 7765 debtor, according to the lot and interest. Therefore, whenever the patrimony of a person whose name is found to be subject to the calendar of some city is found to be less suitable, the judge, with due diligence, must inquire into all those to whom the debtor's assets have passed from whatever condition, so that each may be agreed upon, having taken a fair assessment in proportion to the things they possess, and that the
- 7770 debtor will have a personal action against him, who is released by the payers themselves. However, from the person from whom it is established that the greatest part of his fortunes have departed, the remaining portion which has remained with him must also be transferred to a suitable person.
2. But if any debtor of the public realm of the city makes room for our treasury, the
- 7775 buyers who have purchased from our treasury, it is clear that according to ancient law and the rewritten laws of the gods and our constitutions, they should not suffer any inconvenience, since in such cases it is the public interest to bear the incidental expenses; But those who have obtained something from the same property by the principal generosity, according to the law passed, will be liable to the state,
- 7780 having taken into account the solid resources that would have been the debtor's, when

he took the money of the state, so that they may be exacted a proper share of the lot and interest in proportion to the body that they retain from our generosity.

7785 3. But if any debtor does not appear or certainly has consumed all his property in such a way that no one possesses anything from his property, that debt also falls to the expense of the state. Therefore, at the risk of the curator calendar and the magistrates and the creators, the money is to be invested with suitable persons or owners of rural estates. PROPOSITS 3 KAL. FEB. VOLUSIANUS AND ANNIANUS CONSS.

7790 6 maart 314 IMP. CONSTANTINUS A. AD URSUM VICARIUM. Si quando quis rescriptum ad extraordinarium iudicem reportaverit, dilatio ei penitus neganda est. Illi autem, qui in iudicium vocatur, danda est ad probanda precum mendacia vel proferenda aliqua instrumenta vel testes, quoniam instructus esse non potuit, qui praeter spem ad alienum iudicem tradebatur. DAT. PRID. NON. MART. VOLUSIANO ET ANNIANO CONSS.

7795 Interpretatio. Quando ab aliquo principe praeceptio fuerit surrepta, ut ad alium iudicem quam cui commissus est, adversarium suum pertrahat audiendum, sicut ille, qui petitor est, indutias si petierit, accipere non debuit, ita illi, qui ad iudicium adducitur, dilatio debita non negetur, ut facilius aut per scripturam aut per testes probare valeat illum a quo pulsatus est falsa supplicatione meruisse, quod petiit.

7800 19 maart 314 Imp. Constantinus a. ad Volusianum. Si navicularius originalis levamentarius fuerit, nihilo minus apud eosdem, apud quos et parentes eius fuisse videntur, firmiter permanebit. DAT. XIV KAL. APRIL. VOLUSIANO ET ANNIANO CONSS.

7805 25 maart 314 MP. CONSTANTINUS A. ET C. Pro officio administrationis tutoris vel curatoris bona, si debitores existant, tamquam pignoris titulo obligata minores sibimet vindicare minime prohibentur. DAT. VII KAL. APRIL. TREVIRIS VOLUSIANO ET ANNIANO CONSS.

7810 Interpretatio. Quicumque tutor sive curator negligentia administrationis suae debitor minoribus comprobatur, noverit facultates suas ita obligatas, ut, si non satisfecerit, ratione deducta, bona sua a minoribus loco pignoris teneantur.

7815 1 april 314 Imp. Constantinus a. ad Probum. pr. Si quae mulieres liberae vel a servis vel a quolibet alio vim perpressae contra voluntatem suam servilis condicionis hominibus iunctae sint, competenti legum severitate vindictam consequantur.

1. Si qua autem mulier suae sit immemor honestatis, libertatem amittat atque eius filii servi sint domini, cuius se contubernio coniunxit. Quam legem et de praeterito custodiri oportet. PROPOSITA KAL. APRIL. VOLUSIANO ET ANNIANO CONSS.

7820 Interpretatio. Per vim contra voluntatem servo iuncta alieno et vindictam consequitur. Si vero sponte fit ancilla, et eius filii servi sunt.

7825 25 april 314 Imp. Constantinus a. ad Volusianum. Universi devotionis studio contendant, si quos ingenuis natalibus procreatos sub tyranno ingenuitatem amisisse aut propria contenti conscientia aut aliorum indiciis recognoscunt, natalibus suis restituere, nec exspectata iudicis interpellatione. Nam si quis contra conscientiam suam vel certissima testimonia plurimorum in eadem avaritiae tenacitate permanserit, severissima poena mulctabitur. Placet autem, etiam eos periculo subiugari, qui scientes ingenuos servitutis necessitatem per iniuriam sustinere dissimulant. PROP. VIII. KAL. MAI. ROMAE, VOLUSIANO ET ANNIANO CONSS.

7830 Interpretatio. Ingenui, qui tyranni temporibus addicti sunt servituti, ingenuitati reddantur. Quod si quis sciens hoc ordine addictum ingenuum in servitute tenuerit, noverit in se legibus vindicandum.

7835 28 oktober 314 IMP. CONSTANTINUS A. PALATINIS BENE MERITIS SUIS SALUTEM. A palatinis tam his, qui obsequiis nostris inculcata officia praebuerunt, quam illis, qui in scriniis nostris, id est memoriae epistularum libellorumque, versati sunt, procul universas cal(um)nias sive nominationes iubemus esse summotas, idque beneficium ad filios eorum atque nepotes ipso ordine sanguinis pervenire atque immunes eos a cunctis muneribus sordidis et personalibus permanere cum universis mobilibus et mancipiis urbanis, neque iniurias eis ab aliquibus inferri, ita ut, qui haec contempserit, indiscreta dignitate poenas debitas exigatur. DAT. IV KAL. NOV. TREVIRIS VOLUSIANO ET ANNIANO CONSS.

7845 3 november 314 Imp. Constantinus a. ad Catulinum. Post alia: minime fas est, ut in civili negotio libellis appellatoriis oblati aut carceris cruciatus aut cuiuslibet iniuriae genus seu tormenta vel etiam contumelias perferat appellator; absque his criminalibus causis, in tiamsi possunt provocare, eum tamen statum debent obtinere,

ut post provocationem in custodia perseverent. Ea custodita moderatione, ut eorum
provocationes recipiantur, qui easdem non a praeiudicio interposuisse noscuntur aut
etiam ante causam examinatum et determinatam, sed universo negotio peremptoria
7850 praescriptione finito vel per cuncta membra decurso, contra iudicem interpositae esse
noscantur etc. DAT. III. NON. NOV. TREVIRIS. ACC. XV KAL. MAI. HADRUMETO [Sousse],
VOLUSIANO ET ANNIANO CONSS.

Interpretatio. Ista lex hoc praecipit, non debere appellentem aut carceris custodia
aut cuiuslibet iniuriae afflictione constringi, exceptis tamen criminalibus causis,
7855 in quibus similis accusantem et accusatum condicio poenae custodiaeque constringit:
et eorum appellationes dicit debere recipi, sed ita, ut qui appellaverit, in custodia
teneatur, quo usque ad alium iudicem crimina obiecta perveniant, ut discussis ad
integrum omnibus, aut de absolutione aut de damnatione accipiat sententiam finitivam.

3 november 314 Imp. Constantinus a. ad Catulinum. Qui sententiam laturus est,
temperamentum hoc teneat, ut non prius capitalem in quempiam promat severamque
sententiam, quam in adulterii vel homicidii vel maleficii crimine aut sua confessione
aut certe omnium, qui tormentis vel interrogationibus fuerint dediti, in unum
conspirantem concordantemque rei finem convictus sit et sic in obiecto flagitio
7865 deprehensus, ut vix etiam ipse ea, quae commiserit, negare sufficiat. DAT. III. NON.
NOV. TREVIRIS. ACC. XV KAL. MAI. HADRUMETI [Sousse], VOLUSIANO ET ANNIANO CONSS.
Interpretatio. Iudex criminosum discutiens non ante sententiam proferat capitalem,
quam aut reus ipse fateatur, aut convictus aut per innocentem testes vel per consocios
criminis sui aut homicidium aut adulterium aut maleficium commisisse manifestius
7870 vincatur.

30 december 314 IMP. CONSTANTINUS A. IULIO ANTIOCHO PRAEFECTO VIGILUM.
Annotationes nostras sine rescriptione admitti non placet, id[eo]que officium
gravitatis tuae observet, sicut semper est custoditum, ut rescripta vel epistulas
7875 potius nostras quam adnotationes solas existimes audiendas. DAT. III K. IAN.
TREV(IRIS) VOLUSIANO ET ANNIANO CONSS.

EDICT OF CONSTANTINE I CONCERNING THE ACCUSATIONS (314-323)

Two chapters of this edict are preserved in CTh. 9, 5 and in CJ 9, 8, 3. Three copies
7880 of the edict on stone have been discovered: one somewhere in Asia Minor, before 1600,
but now lost; one in Lycia, also in Asia Minor, before 1902; one in Crete, reported
in 1889, which exhibits all of the surviving part of the edict. The date is doubtful,
for the superscription and the subscription preserved in the codes do not agree by an
interval of about a decade, but the codes and the stones all agree in the
7885 subscription, which is dated 314 A.D.

1) Copy of the sacred edict.

2) ... it has been proved that very many persons not only in respect to their
fortunes ... accusations ... sometimes ... by cases of this kind those who are
accused as well as those who are summoned for evidence are afflicted with very
7890 serious annoyances. Wherefore, taking counsel for the security of our provinces, we
provide remedies of this character, that an accuser indeed may not entirely be
repulsed from court, but whoever believes that he can add proofs to his charges may
have the free opportunity to approach a judge and may reveal the defendant by clear
evidence of the offenses, so that according to the nature of the deeds suitable
7895 punishment may be inflicted on the person who is convicted. But if he is not at all
able to establish those charges which he makes he shall know that he must be
subjected to a very severe sentence.

3) To be sure, if anyone charges someone with the crime of treason, since the
accusation of such a kind not at all protects anyone by the privilege of any high
rank from a very strict inquisition, he shall know that he also must be subject to
torture if he is not able to establish his accusation by other clear evidences and
proofs, since in the case of the person who is detected in this temerity this fact
properly shall be elicited also by torture, namely, by whose advice and instigation
it appears that he entered upon the accusation, so that punishment from all persons
7905 who are accessory to so great a deed can be exacted.

4) Moreover, it is known to all how often an opportunity also to approach a judge has
been denied to informers not only by the statutes of our parents, but also by our
ordinances, since a hearing must not be granted to persons of this kind, because
indeed they must be subjected to punishment in accordance with the daring of such
7910 great wickedness.

5) Also in the case of slaves or of freedmen who attempt to accuse or to report their
masters or their patrons we decree that the law according to the statute of the

- ancient law also must be observed, namely, that, to be sure, the declaration of such atrocious audacity shall be repressed immediately in the inception of its commission itself by the judge's decision, and, after a hearing has been denied, whoever
7915 proceeds to the desperate boldness of this kind shall offer, affixed to a gibbet, an example to all others, lest anyone of like audacity should appear in the future.
- 6) To be sure, that everywhere counsel may be taken for the security of innocent
7920 persons, it is our pleasure that defamatory informations shall not be accepted. And if anyone discovers these displayed anonymously, he shall be bound to remove them immediately and to tear them in pieces or to consume them by fire. And in these cases it shall be proper for the judges to take note of such a kind that, if perchance such information is brought to them, they shall direct it to be burned by fire, since a writing of such kind properly shall be removed completely from a judge's hearing, but
7925 an investigation shall remain against those persons who dare to display information of such a sort, that, when discovered, they shall be subjected to the due punishments of their temerity.
- 7) Accordingly, we have written about all these matters not only to our prefects but also to the governors and the treasurer and the master of our private estate, by
7930 whose other copy, when our edict has been published, it is declared most fully what kind of law and statute it contains.
- 8) Publicly posted January I in the consulship of Volusianus and Annianus.

- 315 CONSTANTINO A. IV ET LICINIO IV CONSS.
 22 januari 315 IMP. CONSTANTINUS A. AD CONSTANTIUM. Si quis iter faciens bovem
 8000 non cursui destinatum, sed aratris deditum duxerit abstrahendum, per stationarios et
 eos, qui cursui publico praesunt, debito vigore correptus aut iudici, si praesto
 fuerit, offeratur aut magistratibus municipalibus competenti censura tradatur
 eorumque obsequio transmittatur, aut si eius fuerit dignitatis, ut nequaquam in eum
 8005 deceat tali vigore consurgere, super eius nomine adnostram clementiam referatur. Qui
 enim explicaverit mansionem, si forte boves non habuerit, immorari debet, donec
 fuerint exhibiti ab his, qui cursus publici curam gerunt, nec culturae terrae
 inservientes abstrahere. ACC. XI KAL. FEB. CARALIS CONSTANTINO A. IV ET LICINIO IV
 CONSS.
- 22 January 315 EMP. CONSTANTINE A. TO CONSTANTIUM. If anyone, while traveling, takes
 8010 an ox not intended for the course, but used for the plow, to be taken away, he shall
 be reprimanded with due force by the stationers and those who are in charge of the
 public course, or he shall be presented to the judge, if he is available, or he shall
 be handed over to the competent municipal magistrates for censure and sent to their
 8015 attention, or if he is of such dignity that it is not fitting to rise up against him
 with such force, he shall be referred to our clemency on his behalf. For whoever has
 opened a mansion, if he does not have oxen, must delay until they have been presented
 by those who are in charge of the public course, nor shall he take away those who are
 in service to the cultivation of the land. ACC. XI KAL. FEB. CARALIS CONSTANTINUS A.
 IV AND LICINIUS IV CONSS.
- 8020 februari 315 Imperator Constantinus. Ad fiscum pertinentes causas rationalis
 decadat, omnibus concussionibus prohibendis. CONST. A. AD URSUM. D. NON. FEBR.
 CONSTANTINO A. IV ET LICINIO IV CONSS.
- February 315 Emperor Constantine. Let the rational causes pertaining to the treasury
 8025 decide, prohibiting all confiscations. CONST. A. TO URSUM. D. NON. FEBR. CONSTANTINUS
 A. IV AND LICINIUS IV CONSS.
- 25 februari 315 Idem a. ad Volusianum praefectum Urbi. Qui a praeiudicio
 appellaverit vel ab executoribus rerum antea statutarum atque alterius auditorii
 8030 praepropere iudicia poposcerit, XXX follium poena multetur, ita ut omnem causam ipse
 sine dilatione discingas, quippe cum et causam tuam videaris esse factururus, si per
 coniventiam huiusmodi appellationem admiseris. Si quas sane de omni causa
 interpositas esse provocaciones perspexeris, in earum disceptatione observare
 8035 debebis, quod iam pridem a nobis est evidentissime constitutum. PROPOSITA V KAL.
 MART. ROMAE CONSTANTINO A. IV ET LICINIO IV CONSS.
- February 25, 315 The same letter to Volusianus, prefect of the city. Whoever appeals
 from a prejudice or demands premature judgments from the executors of previously
 established matters and from another audience, shall be fined 30 folli, so that you
 8040 yourself may dismiss every case without delay, since you will also seem to be about
 to make your case if you admit such an appeal by agreement. If you see that any
 challenges have been filed about any case, you must observe in their discussion,
 which has long been clearly established by us. PROPOSED 5 KAL. MART. ROME CONSTANTINU
 A. IV AND LICINIUS IV CONSS.

- 8045 8 maart 315 IMP. CONSTANTINUS A. AD VERSENNIUM FORTUNATUM CONSULAREM AQUARUM. Promotionis ordo custodiendus est, ut primus in officio sit, qui prior fuerit in consequendo beneficio principali. DAT. VIII ID. MART. THESSAL(ONICA) CONSTANTINO A. IV ET LICINIO IV CONSS.
8 March 315 EMP. CONSTANTINE A. TO THE FORTUNATE CONSULAR OF AQUARUM.
- 8050 The order of promotion must be observed, so that the first in office is the one who has been the first to obtain the principal benefit. DATE. 8th March. THESSALONICA CONSTANTINUS A. IV AND LICINIUS IV CONSS.
- 8055 20 maart 315 Imp. Constantinus a. ad Mygdonium castrensem s. palatii. Si quis forte decesserit eorum, qui communi nomine donatum aliquid a nostra impetraverunt clementia, nec superstites dereliquerit successores, placet, non ad extraneam quamcumque personam, sed ad socium vel consortem pervenire portionem illius, qui intestatus aut sine liberis defunctus est. DAT. XII KAL. APRIL. ANTIOCHIA, CONSTANTINO A. IV ET LICINIO IV CONSS.
- 8060 Interpretatio. Si aliquis ex iis mortuus fuerit, ad quos nominatim munificentia nostra processit, et nec testamentum fecisse, nec filios reliquisse cognoscitur, placet, ut portionem eius is, cum quo pariter defunctus accepit, id est socius eius acquirat: merito enim socius praefertur, ubi filii nulla persona intervenisse cognoscitur.
- 8065 20 March 315 Imp. Constantine a. to Mygdonium castrensem s. palace. If anyone of those who have obtained something donated in common name from our clemency has died, and has not left any surviving successors, it is agreed that the portion of that person who has died intestate or without children should go not to any other person, but to the partner or consort. DAT. XII KAL. APRIL. ANTIOCH, CONSTANTINUS A. IV AND LICINIUS IV CONSS.
- 8070 Interpretation. If anyone of those who have died, to whom our munificence has proceeded by name, and it is not known that he has made a will, nor left children, it is agreed that the one with whom he received it when he died, that is, his partner, should acquire his portion: for the partner is rightly preferred, where it is known that no person intervened as a son.
- 8075 20 maart 315 Idem a. Eumelio. Si quis in ludum fuerit vel in metallum pro criminum deprehensorum qualitate damnatus, minime in eius facie scribatur, dum et in manibus et in suris possit poena damnationis una scriptione comprehendere, quo facies, quae ad similitudinem pulchritudinis caelestis est figurata, minime maculetur. DAT. XII KAL. APRIL. CAVILLUNO CONSTANTINO A. IV ET LICINIO IV CONSS.
- 8080 20 March 315 Ibid. by Eumelio. If anyone has been condemned to gambling or to metal for the quality of the crimes he has committed, let it not be written on his face, since the punishment of condemnation can be comprehended in one writing on both his hands and his shoulders, so that the face, which is shaped in the likeness of heavenly beauty, is not at all stained. DAT. XII KAL. APRIL. CAVILLUNO CONSTANTINUS A. IV ET LICINIUS IV CONSS.
- 8085 29 maart 315 Imp. Constantinus a. ad rationales. Quicumque thesaurum invenerit et ad fiscum sponte detulerit, medietatem consequatur inventi, alterum tantum fisci rationibus tradat, ita tamen, ut citra inquietudinem quaestionis omnis fiscalis calumnia conquiescat. Haberi enim fidem fas est his, qui sponte obtulerint quod invenerint. Si quis autem inventas opes offerre noluerit et aliqua ratione proditus fuerit, a supra dicta venia debet excludi. DAT. III KAL. APRIL. CONSTANTINO A. IV ET LICINIO IV CONSS.
- 8090 29 Maart 315 Imp. Constantine a. to rationals. Whoever finds treasure and voluntarily brings it to the treasury, let him receive half of what he finds, and only hand over the other half to the treasury for its accounts, so that, without disturbing the question, all fiscal calumny may be at rest. For it is right to have faith in those who voluntarily offer what they find. But if anyone refuses to offer the wealth he has found and is betrayed for some reason, he must be excluded from the above-mentioned pardon. DAT. III KAL. APRIL. CONSTANTINUS A. Quoniam iniquissime tyrannus constituit, ut, qui ex cohortali militia honestam missionem et vacationem rerum suarum meruerint, civilibus officiis et curiae necessitatibus inserviant, placet hac lege cessante eos, qui cohortali militia completis XX stipendiis discesserint, ad nulla deinceps civilia munera vel curiae devocari. Quam rem et circa officiales praesidium observari conveniet. DAT. IV KAL.
- 8110

MAI. CONSTANTINO AUG. IV ET LICINIO IV CONSS.

28 April 315 IMP. CONSTANTINE A. TO CONSTANTIUM PPAEFFECTUM PRAETORIO.

Since the tyrant most unjustly decreed that those who had earned an honorable mission and the release of their property from the cohortal militia should serve in civil offices and the needs of the curia, it is agreed that, with the lapse of this law, those who had left the cohortal militia after completing 20 stipends should no longer be called to any civil or curia duties. Which thing should also be observed regarding the officials of the praesidium DAT. IV KAL. MAI. CONSTANTINO AUG. IV AND LICINIO IV CONSS.

10 mei 315 IDEM A. EDICTO SUO AD AFROS. Stationariis primipilarum, quorum manifesta sunt loca, coram mandatum est, ut, si extra modum aliquid extorserint, sciant se capite puniendos: praeterea ne carcerem habeant neve quis personam pro manifesto crimine apud se habeat in custodia neve quis amplius quam duos agasones ex provincia secum habeat vel de Numidia sibi adiungat neve ex aliis provinciis agasonem habeat vel qui alicuius iam stationarii minister fuit. P(RO)P(OSITA) VI ID. MAI. KARTHAG(INE) CONSTANTINO A. IV ET LICINIO IV CONSS.

10 May 315 Idem A. BY HIS Edict TO AFROS. The stationers of the first-pillars, whose places are manifest, were commanded before, that, if they extort anything beyond the limit, they should know that they would be punished by the head: moreover, they should not have a prison, nor should anyone have a person with them in custody for a manifest crime, nor should anyone have more than two servants from the province with them or from Numidia attached to them, nor should anyone have a servant from other provinces, or who was already the minister of some stationer. P(RO)P(OSITA) 6 ID. MAY. CARTHAGE TO CONSTANTINE A. IV AND LICINIO IV CONSS.

13 mei 315 Imp. Constantinus a. ad Ablavium. Aereis tabulis vel cerussatis aut linteis mappis scripta per omnes civitates Italiae proponatur lex, quae parentum manus a parricidio arceat votumque vertat in melius. Officiumque tuum haec cura perstringat, ut, si quis parens adferat subolem, quam pro paupertate educare non possit, nec in alimentis nec in veste impertienda tardetur, cum educatio nascentis infantiae moras ferre non possit. Ad quam rem et fiscum nostrum et rem privatam indiscreta iussimas praebere obsequia. DAT. III ID. MAI. NAISSO CONSTANTINO A. IV ET LICINIO IV AA. CONSS.

1 juni 315 Idem a. Amabiliano praefecto annonae. Navicularios ad consortium pistorum urbicorum nominatos neque ulla hereditatis successione pistoribus obnoxios absolvi ab hoc munere oportebit. Quod si hereditario iure forsitan pistoribus teneantur, facultatem habeant, si forte maluerint, obventicias pistorum hereditates eidem corpori reddere aut quibuscumque proximis defuncti cedere, ut ipsi a pistorum consortio liberentur. Quod si hereditatem amplectantur, necesse est successionis ratione pistorii muneris societatem eos suscipere et ex propriis facultatibus onera navicularia sustinere, viro clarissimo praefecto urbi super hac re videlicet disceptante. DAT. KAL. IUN. TREVIRIS CONSTANTINO A. IV ET LICINIO IV CONSS.

Interpretatio. Quaecumque contra leges a principibus fuerint obtenta, non valeant. 1 June 315 The same to Amabilianus, the prefect of the food supply. The navigators appointed to the consortium of the city bakers and not liable to the bakers by any inheritance succession should be released from this duty. But if they are perhaps bound to the bakers by hereditary right, they have the right, if they perhaps prefer, to return the inheritances of the bakers to the same body or to cede them to any of their relatives upon their death, so that they themselves may be freed from the consortium of the bakers. But if they embrace the inheritance, it is necessary that they assume the partnership of the baker's office by reason of succession and bear the shipping burdens from their own resources, with the most illustrious man prefect of the city deliberating on this matter. DAT. KAL. IUN. TREVIRIS CONSTANTINO A. IV AND LICINIO IV CONSS.

Interpretation. Whatever has been obtained from the princes against the laws, shall be of no effect.

2 juni 315 IMP. CONSTANT(INUS) A. AD UNIVERSOS PROVINCIALES. Intercessores a rectoribus provinciarum dati ad exigenda debita ea, quae civiliter poscuntur, servos aratores aut boves aratorios pignoris causa de possessionibus abstrahunt, ex quo tributorum inlatio retardatur. Si quis igitur intercessor aut creditor vel praefectus pacis vel decurio in hac re fuerit detectus, a rectoribus provinciarum capitali sententia subiugetur. DAT. IV NON. IUN. SIRMIO CONSTANTINO A. IV ET LICINIO CONSS. Interpretatio. Multi pro fiscali debito servos cultores aut boves aratorios de

possessionibus causa pignoris auferre praesumunt, de quorum laboribus tributa redduntur, et ideo si quis creditor vel curator pacis vel curialis aut quicumque exactor hoc facere praesumpserit, a provinciae iudice puniatur.

8180 2 June 315 IMP. CONSTANT(INUS) A. TO ALL PROVINCIALS. Intercessors assigned by the
rectors of the provinces to collect debts that are civilly demanded, remove slave
farmers or oxen from their possessions as a pledge, from which the payment of taxes
is delayed. If therefore any intercessor or creditor or prefect of the peace or
8185 decurion is discovered in this matter, he shall be subjected to capital punishment by
the rectors of the provinces. DAT. IV NON. IUN. SIRMIO CONSTANTINO A. IV AND LICINIO
CONSS.

8190 Interpretation. Many presume to remove slave farmers or oxen from their possessions
as a pledge for a fiscal debt, from whose labors taxes are paid, and therefore if any
creditor or curator of the peace or curial or any exactor presumes to do this, let
him be punished by the provincial judge.

18 juni 315 Imp. Constantinus a. ad Proclianum. Praeter privatas res nostras et
ecclesias catholicas et domum clarissimae memoriae Eusebii exconsule et exmagistro
8195 equitum et peditum et Arsacis regis Armeniorum nemo ex nostra iussione praecipuis
emolumentis familiaris iuvetur substantiae. Datianus enim vir clarissimus patricius,
qui hanc olim gratiam fuerat consecutus, auferri sibi id cum tanta instantia
depoposcit, cum quanta alii poscere consuerunt. Ideoque omnes pensitare debebunt quae
manu nostra delegationibus adscribuntur, nihil amplius exigendi. Nam si qui vicarius
aut rector provinciae aliquid iam cuiquam crediderit remittendum, quod aliis
8200 remiserit de propriis dare facultatibus compelletur. DAT. XV KAL. IUL.
CONSTANTINOPOLI {?} CONSTANTINO A. IV ET LICINIO IV CONSS.

18 June 315 Imp. Constantine a. to Proclianum. Apart from our private properties and
Catholic churches and the house of the most illustrious memory Eusebius, ex-consul
and ex-master of horse and foot, and Arsaces, king of the Armenians, no one shall be
8205 granted special benefits of substance by our order. For Datianus, a most illustrious
patrician, who had once obtained this favor, demands that it be taken away from him
with as much insistence as others are accustomed to demand. Therefore, all shall
consider what is assigned to delegations by our hand, requiring nothing more. For if
any vicar or rector of a province has already entrusted anything to anyone to be
8210 remitted, what he has remitted to others shall be compelled to give from his own
means. DAT. 15 KAL. IUL. CONSTANTINOPLE {?} CONSTANTINE A. IV AND LICINIO IV CONSS.

25 juli 315 IDEM A. AD BASSUM. Placuit post completum vicesimum et quintum annum ex
eo, quo vicesimi et sexti anni dies inluserit, ad interponendum contestationem in
8215 urbe Roma usque ad anni tricesimi extremum diem spatia prorogari, et intra centesimum
urbis Romae militarium, si tamen ab his iudicibus, qui Romae sunt, fuerit iudicandum:
per omnem vero Italiam usque ad finem anni vicesimi et noni: in ceteris omnibus
provinciis usque ad completum annum vicesimum et octavum. Quo transacto tempore
manifesto omnes sciant legum sibi deinceps praesidia denegari quandoquidem
8220 contestationis necessitate. depulsa finiendas integri restitutionum decidendasque
causas certo genere clausurimus. Eandem autem custodiri temporum convenit rationem,
si forte quis beneficio nostro aetatis veniam fuerit consecutus, ex eo die, quo
indulgentia nostra in iudicio competenti fuerit intimata eique administratio rei
propriae reserata, ut ad persequendas in integrum restitutiones finiendasque causas
8225 iuge tempus habeat praestitutum. Si quando sane in minoris iura successerit minor,
minime prohibetur, cum quintum et vicesimum aetatis suae annum transierit, integri
restitutionis beneficio uti tempore inlibato. Quod si maioris fuerit minor iura
nactus, quantum ad eas pertinet actiones, quas ex persona maioris fuerit consecutus,
tantum temporis ad exponendas integri restitutiones decidendasque causas accipere
8230 debebit, quantum defuncto, cuius heres aut bonorum possessor docebitur extitisse,
relicum fuerat. Cum vero maior successionem fuerit adeptus minoris, siquidem civili
iure ab intestato vel ex testamento successerit, mox cum creta fuerit vel adita
hereditas, si vero honorario iure, ex quo bonorum possessio fuerit accepta,
examinando integri restitutionis negotio solida sine ulla deminutione tempora
8235 subputentur, quae non pro locis, regionibus atque provinciis, in quibus morantur qui
heredes aut bonorum possessores sunt, observari iubemus, sed in quibus defuncti
domicilia conlocaverant [collocaverant]. DAT. VIII KAL. AUG. NAISSE. PROP(OSITA)
ROM(AE) NON. OCTOB. CONSTANTINO A. IV ET LICINIO CONSS.

8240 Interpretatio. Iustum videtur, ut post xxv. annum, ubi xxvi. annus fuerit ingressus,
deposita apud iudicem contestatione petat, qui sibi voluerit ea, quae in annis
minoribus aut per se aut per tutores vel curatores vitio male acta sunt, salva et
integra pro aetatis infirmitate restitui. In his dumtaxat provinciis, usque ad

xxviii. annum, si contestatus fuerit, integra ei, salvo principali negotio, quae male amiserat, reformationem. Nam et qui serenitati nostrae pro venia aetatis crediderit supplicandum, hoc sibi noverit esse concessum, ut sine praeiudicio indulgentiae nostrae, quod in sequenti lege comprehensum est, usque ad constitutum superius tempus liberum habeat in rerum, quas male gesserat, proprietatem restitui. Quod si forsitan minor annis in illius hereditate successerit, qui et ipse in annis minoribus ab hac luce discessit, non prohibendus est, quum ad xxvi. annum pervenerit, ut sibi, unde illi competeat, reparationem agendarum rerum interposita contestatione requirat. Sin vero minor hereditatem illius, qui plena et integra aetate defecit, acceperit, mox in integrum fuerit restitutus, ea tempora in negotiis prosequatur, quae defuncto maiori legibus competeant. Quum autem maior minori seu ex testamento seu ex quocumque iure successerit, quum primum ad eum hereditas defuncti pervenerit, quicquid pupillo potuit pro integri restitutione competere, in illius transeat actionem: ita ut illius provinciae forum sequatur, in qua defunctus minor habitasse dignoscitur.

July 25, 315 Idem A. AD BASSUM. It was decided that after the twenty-fifth year has passed, from the day on which the twenty-sixth year dawned, the time for filing a complaint in the city of Rome should be extended until the last day of the thirtieth year, and within the hundredth year of the military year of the city of Rome, if it were to be judged by those judges who are in Rome: throughout all Italy until the end of the twenty-ninth year: in all the other provinces until the full twenty-eighth year. After which time has passed, let everyone know that the protection of the laws is denied to them henceforth, since the necessity of a complaint has been met. We have closed the cases of complete restitutions and the cases of deciding in a certain way. However, it is appropriate to observe the same time limit, if perhaps someone has obtained a pardon by virtue of our age, from the day on which our indulgence was communicated to him in a competent court and the administration of his own property was opened to him, so that he may have a constant time set aside for pursuing complete restitutions and concluding cases. If at any time a minor succeeds to the rights of a minor, it is not forbidden, when he has passed the twenty-fifth year of his age, to use the benefit of full restitution in the time allotted. But if an adult has acquired the rights of a minor, as far as those actions which he has obtained in the person of the adult concern, he must take as much time for explaining full restitutions and deciding the cases as was left to the deceased, whose heir or possessor of the goods is shown to have existed. But when an adult has acquired the succession of a minor, if he has succeeded by civil law from an intestate or by will, as soon as the inheritance has been created or accessed, but if by honorary law, from which possession of the goods was accepted, by examining the business of full restitution solid times are to be calculated without any diminution, which we order to be observed not for the places, regions and provinces in which those who are heirs or possessors of the goods reside, but in which the deceased had placed their domiciles. DAT. 8 KAL. AUG. NAISSO. PROP(OSITA) ROM(AE) NON. OCTOB. CONSTANTINE A. IV AND LICINIO CONSS.

Interpretation. It seems just that after the 25th year, when the 26th year has entered, a petition should be filed with a judge to request that those things which were wrongly done in younger years, either by themselves or by their guardians or curators, be restored to them, safe and sound, due to the infirmity of age. In these provinces only, up to the 28th year, if a petition has been filed, the things which they had wrongly lost should be restored to them, intact, with the main business preserved. For whoever believes that he should supplicate to our serenity for the pardon of his age, should know that this is granted to him, that without prejudice to our indulgence, which is included in the following law, he should have free rein until the time established above to have the property of the things which he had wrongly done restored. But if perhaps a younger person succeeds in the inheritance of one who also departed this world in younger years, he should not be prevented, since he has reached the 26th year. has reached the age of one year, so that he may, from which he was entitled, demand the restitution of the affairs of the estate by filing a contestation. But if the minor has received the inheritance of one who has failed at full and complete age, and has been restored to full age, he shall immediately proceed with the business for the periods which were applicable to the deceased major under the laws. But when the major succeeds the minor, whether by will or by any other right, when the deceased's inheritance first comes to him, whatever could have been applicable to the orphan for the restitution of full age, shall pass to his action: so that the court of that province in which the deceased minor is known to have resided shall follow.

- 8310 palatinis nostris aliquis ad agendas curas re[i] publicae vel alterius officii fuerit destinatus, m[i]nime ab eo repraesentatio postuletur equoru[m]. 8460 315 Augustine, C. Cres., 3.70.81 and Letter 88.4 Constantine
It had been discovered that the evidence used against Caecilian was based on a
forgery, and so Constantine summons the forger to appear before him and the Donatists
in Rome, so that once the evidence is presented, the schism can be healed.

8465 315 Optatus, De sch. Don., Appendix 6 Constantine
Constantine summons the catholic and Donatist representatives from North Africa to a
third hearing at Milan, where the new evidence can be examined before them all,
including Caecilian, whom he has summoned from North Africa.

8470 315 Optatus, De sch. Don., Appendix 8 Constantine
Constantine tells the prefect of Africa to have the churches prepare for his visit
(which never actually took place), when he would come deliver a verdict on the schism
and rule what type of worship is acceptable and bring uniformity back to the church.

- 316 SABINO ET RVFINO CONSS.
11 januari 316 IMP. CONSTANT(INUS) A. AD DOMITIUM CELSUM VICARIUM.
8540 Nemo iudex officialem ad eam domum, in qua materfamilias agit, cum aliquo praecepto aestimet esse mittendum, ut eandem in publicum protrahat, cum certum sit debita eius, quae intra domum considerato sexu semet contineat, domus eius vel cuiuscumque rei habita distractione publicis necessitatibus posse servari. Quod si quis in publicum matremfamilias posthac crediderit protrahendam, inter maximos reos citra ullam indulgentiam capitali poena vel exquisitis potius exitii suppliciis plectetur. DAT. III ID. IANUAR. TREV(IRIS) SABINO ET RVFINO CONSS.
- 8545 Interpretatio. Nullus iudicum matronam in domo sua residentem per quemcumque apparitorem ad publicum existimet protrahendam, sed circa eam, pro sexus reverentia, conventio honesta servetur: quum, si quid eam debere constiterit, constrictis eius auctoribus possit exsolvi. Nam si quis contra fecerit, summo supplicio se afficiendum esse cognoscat.
- 8550 30 januari 316 Idem a. Mecilio Hilariano correctori Lucaniae et Brittiorum. Universos decuriones volumus a tabellionum officiis temperare. Nemo autem ad decurionatum vocatus excusare se poterit eo, quod fuerit tabellio, cum et huiusmodi homines, si sint idonei, vocari ad decurionatum oporteat. Lex enim, quae decuriones a tabellionum officiis voluit submovere, ad decurionatum tabelliones vocari non prohibet. DAT. III KAL. FEB. SABINO ET RVFINO CONSS.
- 8560 2 februari 316? Item eodem corpore [Theodosiani]: imp. Constantinus a. ad Maximum praefect. Urb. (inter cetera et ad locum:) pactiones eas valere volumus, si cum legibus consentiant et reliqua. DAT. VI [?] NON. FEBR. ROMAE SABINO ET RVFINO CONSS.
- 8565 3 februari 316 IDEM A. AD MAXIMUM P(RAE)F(ECTUM) U(RBI). Posta alia: Minorum defensores, si per eos donationum condicio neglecta est, rei amissae periculum praestent. ET CETERA. DAT. III NON. FEB. ROM(AE) SABINO ET RVFINO CONSS. Interpretatio. Si in his, quae minoribus donari possunt, per tutoris negligentiam sive colludium donationis solennitas vel condicio impleta non fuerit, id, quod minori deperierit, de proprio cogitur exsolvere.
- 8570 3 februari 316 IMP. CONSTANTINUS A. AD MAXIMUM P(RAE)F(ECTUM) U(RBI). Donatio, sive directa sit sive mortis causa instituta, sive condicionibus faciendi ac non faciendi suspensa, sive ex aliquo notato tempore promissa, sive animo dantium accipientiumve sententiis, quantum ius sinit, cognominata, sub hac fieri debet

- observatione, ut quas leges indulgent actiones condiciones pactionesque contineat, hisque penitus cognitis vel recipiantur, si complacitae sunt, vel reiciantur, si sunt molestae; ita ut minorum defensores, si per eos donationum condicio neglecta est, rei amissae periculum praestent. In conscribendis autem donationibus nomen donatoris, ius ac rem notari oportet, neque id occulte aut per inperitos aut privatim, sed ut tabulae aut quodcumque aliud materiae tempus dabit vel ab ipso vel ab eo, quem sors ministraverit, scientibus plurimis perscribatur et corporalis traditio subsequatur ad excludendam vim adque inruptionem advocata vicinitate omnibusque arbitris adhibitis, quorum postea fide probabitur donatam rem, si est mobilis, ex voluntate traditam donatoris vel, si immobilis, abscessu donantis novo domino patefactam, actis etiam adnectendis, quae aput iudicem vel magistratus conficienda sunt. DAT. III NON. FEB. ROM(A) SABINO ET RUFINO CONSS.
- Interpretatio. Donatio aut directa est aut mortis causa conscribitur. Directa donatio est, ubi in praesenti res donata traditur. Mortis causa donatio est, ubi donator, dum advivit, rem, quam donat, sibi reservat, scribens: si prius mortuus fuero quam tu, res mea ad te perveniat, ut postea ad illum, cui donat, non ad heredes donatoris res donata perveniat. Quod si prius moriatur, cui res mortis causa donata est, res in iure permaneat donatoris. Est et alia donatio, ubi donator obligat illum, cui donat, ut aliquid faciat aut non faciat, id est, si aliquid iubeat fieri, quod impossibile iudicetur, aut quod honestati contrarium videatur; aut si id ordinet fieri, quod honestum est et possit impleri: quia tunc infirmatur donatio, quando condiciones honestatis possibilis impletae non fuerint. Nam si inhonestae et impossibiles condiciones ponantur, remotis condicionibus firma donatio est. Est item et alia, in qua sibi donator certum tempus possessionis reservat. Quae tamen omnes donationes superius comprehensae si modum excesserint lege conscriptum, unde possint certae personae de immodica donatione proponere, hoc est si quartam sibi facultatis suae donator non reservaverit, non valebunt. Sed praeterea illa donatio contra legem est, si quis rem in lite positam, quae repetitur, aut recto ordine donet aut condicionem contra bonos mores, hoc est causam cuiuslibet criminis, donator in donatione conscribat. Minoribus vero si quid fuerit per donationem a quocumque oblatum sive collatum, tutores vel curatores eorum debent studere, ne quid firmitati donationis desit. Quod si eorum negligentia donatio ad effectum perducta non fuerit, ad eorum dispendium pertinebit, ita ut quicquid minores de donatione perdiderint, curatores vel tutores illis de propria facultate restituant. In conscribendis autem donationibus hic ordo servandus est, ut donatio nomen prius contineat donatoris vel illius, cui donatur deinde res, quae donantur, sive in agris sive in mancipiis sive in quibuslibet rebus atque corporibus, nominatim in donatione conscribendae sunt, non occulte, sed publice, non privatim vel secrete, sed aut in tabulis aut in chartis aut ubicumque legatur facta donatio. Quam tamen donationem, si literas novit, donator ipse subscribat: si vero ignorat, praesentibus plurimis eligat, qui pro ipso subscribat: et hanc ipsam donationem gestorum solennitas et corporalis traditio subsequatur, ita ut, si mobilia donantur, praesentibus plurimis tradantur: si vero ager vel domus donatur, quod moveri non potest, ut inde donator abscedat et novo domino pateat res donata, si tamen sibi de his rebus usumfructum donator non reservaverit. Gesta vero donationum aut apud iudicem aut apud curiam alleganda sunt.
- 20 april 316 IDEM A. ACONIO CATULLINO PROCONS(ULI) AFRIC(AE). Si quis in emancipatum minorem, priusquam fari possit aut habere rei quae sibi donatur affectum Italicum sive stipendiarium fundum crediderit conferendum, omne ius compleat instrumentis ante praemissis et inductione corporaliter impleta. Quod propter adtestationem fidei per eum servum, quem idoneum esse constiterit, transigi placuit, qui eo usque in statu suo permanebit, donec is, cuius facultatibus cesserit, annos Laetoriae legis egressus legitimam compleverit aetatem, quo tunc demum, si eius integritas ac fides fuerit comprobata, si ita sederit possidentibus, libertatis praemium consequatur. DAT. XII KAL. MAI. SERDICA SABINO ET RUFINO CONSS.
- 1 mei 316 IDEM A. AD CASSIUM P(RAEFECTUM) U(RBI). Promulgatum dudum est donationes nullo alio modo firmas posse detineri, nisi apud actorum contestationem confectae fuerint. Sed quia multi aliena vel non pleno iure ad se pertinentia donantes extra patriam et provinciam, in qua possident, acta conficiunt, placet, ut nulli liceat extra provinciam laremque suum donationum instrumenta apud acta allegare, sed in quo domicilium habuerit adque possessiones constitutae sunt, aput suum ordinarium iudicem vel, si eum abesse contigerit, aput curatorem municipalesve eiusdem civitatis. Nam si hoc praetermissum fuerit, nullam firmitatem habere donationes sancimus. DAT. KAL. MAI. ROM(A) SABINO ET RUFINO CONSS.

- 6 mei 316 IMP. CONSTANT(INUS) A. IULIO VERO PRAESIDI TARRACONENSIS.
 8640 Cum semel negotium necessitate vel casu temporibus fuerit exemptum ac postea per indulgentiam clementiae nostrae redintegratio praestetur, intra quattuor menses iudicantis arbitrium, non ulterius, litigatoribus praeberi oportet, etiamsi per obreptionem aliquid a nobis iterata supplicatione meruerint. DAT. PRID. NON. MAI. VIENNAE SABINO ET RUFINO CONSS.
- 8645 Interpretatio. Quando aliqua causa, necessitate intercedente vel casu, promissum tempus excesserit, et principali beneficio eam litigator meruerit reparare, non amplius ad definiendum negotium iudices quam quattuor menses litigatoribus praestent. Quibus exactis, etiamsi aliud dominorum beneficio obtinuerint, nullatenus audiantur.
- 8650 14 mei 316 IDEM A. AD TITIANUM. Quoniam plerique nodosis et validissimis fustibus inter ipsa currendi primordia animalia publica cogunt quidquid virium habent absumere, placet, ut omnino nullus in agitando fuste utatur, sed aut virga aut certe flagro, cuius in cuspide infixus brevis aculeus pigrescentes artus innocuo titillo poterit admonere, non ut exigat tantum, quantum vires valere non possunt. Qui contra
 8655 hanc fecerit sanctionem promotus, regradationis humilitate plectetur: munifex poenam deportationis excipiat. DAT. PRID. ID. MAI. SABINO ET RUFINO CONSS.
- 6 juni 316 CI 1.13.1 Constantine
 8660 Constantine adds a fourth legal method for freeing slaves - one may now publicly free his slave in a church before the bishop.
- 28 juli 316 Imp. Constantinus a. Mechilio Hilariano correctori Lucaniae et Brittiorum. pr. Si quis decurio testamentum vel codicillos aut aliquam deficientis scripserit voluntatem, vel conscribendis publicis privatisque instrumentis praeberit officium, si falsi quaestio moveatur, decurionatus honore seposito, quaestioni, si ita poposcerit causa, subdatur. Sed non statim desinit esse decurio, qui in huius modi facto fuerit deprehensus. Quantum enim ad municipales pertinet necessitates, decurio permanet; quantum ad rem gestam et veritatem reserandam, uti decurionatus honore non poterit. Nec vero is, qui ante fuerit tabellio, ad eludendam quaestionem
 8670 super his, quae ante conscripsit, factus decurio defendi hac poterit dignitate, quoniam scripturae veritas, si res poposcerit, per ipsum debet probari auctorem. DAT. III. KAL. FEBR. ACC. KAL. AUG. SABINO ET RUFINO CONSS.
- 8675 Interpretatio. Si quis curialis voluntatem morientis aut quodlibet publicum documentum scripserit, et de falsitate accusatur, seposita primitus dignitate, si necesse fuerit, subdatur examini: qui si convincitur, a curia non expelletur, sed curiae dignitate privabitur, id est ut honoratus esse non possit. tabellio vero, qui amanuensis nunc vel cancellarius dicitur, etiamsi ad curiae pervenerit dignitatem, si de falsitate accusatus fuerit aut convictus, subdatur examini, ut per ipsum, per quem confecta est, scripturae veritas approbetur.
- 8680 13 augustus 316 Idem a. Petronio Probiano suo salutem. Ex illo tempore, quo in civilibus causis, quae inter privatos moventur, consulturum vel relaturum te esse promiseris vel appellationis a te interpositae sollemnia completa fuerint, nihil posthac tibi quodlibet speciale ac requisitum vel quibuscumque modis favoris gratiam praeferens audiendum est, sed observandum, ut iuxta priora statuta sollemnitatis more
 8685 expleto gesta ad comitatum omnia dirigantur. Et cetera. DAT. ID. AUG. ARELATO; PROPOSITA ID. OCTOB. THEVESTE SABINO ET RUFINO CONSS.
- 13 augustus 316 Idem a. Petronio Probiano suo salutem. Supplicare causa pendente non licet nisi forte ei, cui opinionis exemplum negatum est vel instructionis universae subpressa transmissio. Quo facto crimen iudici sacrilegii imminet, qui hoc commisso litigatori supplicandi necessitatem imponit: cui aliter supplicanti dimidia partis rei de qua agitur imponenda est multa, ut pro iudicis aestimatione fisco pretium inferat. Eo etiam, qui terminatam rescripto vel consultatione quaestionem exquisito
 8695 suffragio refricare conabitur, quoniam maius crimen admittit, in omnem litis aestimationem protinus condemnando et sub sacramenti observatione omni venia deneganda, si quis contra haec supplicare temptaverit. DAT. ID. AUG. ARELATO; PROPOSITA ID. OCTOB. THEVESTE SABINO ET RUFINO CONSS.
- 8700 3 december 316 IDEM A. SEPTIMIO BASSO P(RAEFECTO) U(RBI). Ubi rigorem iuris placare aut lenire specialiter exoramus, id observetur, ut rescripta ante edi[c]tum propositum impetrata suam habeant firmitatem, nec rescripto posteriore derogetur priori. Quae vero postea sunt elicita, nullum robur habeant, nisi consentanea sint legibus publicis; maxime cum inter aequitatem iusque interpositam interpretationem,

Qui in iudicio manifestam detegitur commisisse violentiam, non iam relegatione aut
- 8770

deportatione insulae plectatur, sed supplicium capitale excipiat, nec interposita provocatione sententiam, quae in eum fuerit dicta, suspendat, quoniam multa facinora sub uno violentiae nomine continentur, quum aliis vim inferre tentantibus, aliis cum indignatione repugnantibus verbera caedesque crebro deteguntur admissae. Unde placuit, si forte quis vel ex possidentis parte vel ex eius, qui possessionem temerare tentaverit, interemptus sit, in eum supplicium exseri, qui vim facere tentavit et alterutri parti causam malorum praebuilt. DAT. XV KAL. MAI. SERDICAЕ, GALLICANO ET BASSO CONSS.

Interpretatio. Convictus in iudicio de evidenti violentiae crimine capite puniatur, nec sententiam iudicis qui damnatus est qualibet appellatione suspendat: et si fortasse homicidia ab utraque parte commissa fuerint, in illum vindicetur, qui ut alium per caedem expelleret, violenter ingressus est.

23 mei 317-319 CT 9.16.3 Constantine

Magicians and such who use their art against the minds of men are guilty and shall be punished; however, to use this art for good, to seek favorable weather during harvest for example, is allowable under the law. [The date listed is 321-324; however, Bassus, the prefect to whom the law was issued, held office from 317-319.]

6 juni 317 Idem a. ad Bassum praefectum Urbi. Litigatoribus copia est etiam non conscriptis libellis ilico appellare voce, cum res poposcerit iudicata. DAT. VIII ID. IUN. SIRMIO GALLICANO ET BASSO CONSS.

21 juli 317 IDEM A. AD BITHYNOS. Primpilaribus post emeritam militiam perfectissimatus vel ducenae vel centenae vel egregiatus dari dignitas potest. DAT. XII KAL. AUG. GALLICANO ET BASSO CONSS.

21 juli 317 Imp. Constantinus a. ad Bithynos. Caesarianos in actu dumtaxat constitutos ad perfectissimatus vel ducenae vel centenae vel egregiatus dignitates non oportet admitti. Sed si inculpate compleverint suum officium et ab omni vacent ratione fiscali iudicio, datam huiusmodi dignitatem prodesse eis oportet. DAT. XII KAL. AUG. GALLICANO ET BASSO CONSS.

21 juli 317 Imp. Constantinus a. ad Bithynos. Monetarios in sua semper durare condicione oportet nec dignitates eis perfectissimatus tribui vel ducenae vel centenae vel egregiatus. DAT. XII KAL. AUG. GALLICANO ET BASSO CONSS.

21 juli 317 Idem a. ad Bithynos. Eos qui in palatio militarunt et eos quibus provinciae commissae sunt quique merito amplissimarum administrationum honorem perfectissimatus vel egregiatus adepti sunt, nec non et illos, qui decuriones vel principales constituti cuncta suae patriae munera impleverunt, frui oportet dignitate indulta. Si vero decurio suffragio comparato perfectissimatus vel ducenae vel centenae vel egregiatus meruerit dignitatem declinare suam curiam cupiens, codicillis amissis suae condiconi reddatur, ut omnium honorum et munerum civilium discussione perfunctus iuxta legem municipalem aliquam praerogativam obtineat. Eum quoque, qui originis gratia vel incolatus vel ex possidendi condicione vocatur ad curiam, perfectissimatus suffragio impetrati dignitas non defendit, qua remota tradi eum curiae oportebit. DAT. XII KAL. AUG. GALLICANO ET BASSO CONSS.

25 september 317 IDEM A. AD BASSUM. Decreta provincialium non prius ad comitatum perferri oportet, quam singuli quique iudicantes ea inspexerint atque probaverint suaeque adscriptione signaverint. Si quid fiat contrarium, competens ultio exerceatur. P(RO)P(OSITA) VIII K. OCT. CARALI GALLICANO ET BASSO CONSUL.

12 december 317 Imperator Constantinus. Quicumque non illustris, sed tantum clarissima dignitate praeditus virginem rapuerit vel fines aliquos invaserit vel in aliqua culpa seu crimine fuerit deprehensus, statim intra provinciam in qua facinus perpetravit publicis legibus subiugetur nec fori praescriptione utatur. Omnem enim huiusmodi honorem reatus excludit. CONST. A. AD OCTAVIANUM COM. HISPANIARUM. D. PRID. NON. DEC. SERDICAЕ. ACC. V NON. MART. CORDUBAE GALLICANO ET BASSO CONSS.

Interpretatio. Quicumque damnable vel puniendum legibus crimen admiserit, non se dicat in foro suo, id est in loco, ubi habitat, debere pulsari: sed ubi crimen admissum est, ab eius loci iudicibus vindicetur, nec de eius persona ad principem referatur.

 8910 CTh 9.15.1 Dorries p. 173
 Anyone who murders parent, sibling, or child will be executed by being sewn up alive in a sack with snakes and thrown into the sea or a pit.
- 319 CONSTANTINO A. V ET LICINIO C. CONSS.
 8915 13 januari 319 IDEM A. AD IANUARINUM. Quicumque ex eo die, quo reus fuerit in iudicio petitus, intra anni spatium noluerit adesse iudicio, res eius fisco vindicentur et si postea repertus nocens fuerit, deprehensus saeviori sententiae subiugetur. Sed et si argumentis evidentibus et probatione dilucida innocentiam suam purgare suffecerit, nihilo minus facultates eius penes fiscum remaneant. DAT. ID. IANUAR., ACC. V KAL.
 8920 AUG. CORINTHO CONSTANTINO A. V ET LICINIO CAES. CONSS.
- 1 februari 319 Imp. Constantinus a. ad Maximum. Nullus haruspex limen alterius accedat nec ob alteram causam, sed huiusmodi hominum quamvis vetus amicitia repellatur, concremando illo haruspice, qui ad domum alienam accesserit et illo, qui eum suasionibus vel praemiis evocaverit, post ademptionem bonorum in insulam detrudendo: superstitioni enim suae servire cupientes poterunt publice ritum proprium exercere. Accusatorem autem huius criminis non delatorem esse, sed dignum magis praemio arbitramur. PROPOSITA KAL. FEB. ROMAE CONSTANTINO A. V ET LICINIO CAES. CONSS.
 8925
 8930
- 4 februari 319 IMP. CONSTANT(INUS) A. AD SYMMACHUM. Si quando minoribus vel adultis inferenda lis erit vel ab ipsis minoribus vel adultis cuidam quaestio movenda sit, non alias cursus temporis incoetur, nisi ab universis, quos officii sollicitudo constringit, hoc est tutoribus, sive testamento sive decreto dati sunt, vel
 8935 curatoribus, per quos minores defenduntur, vel iisdem omnibus sollemni more lis fuerit intimata. Quod si divisum administrationis periculum per provincias sit, his tantum omnibus insinuari convenit et ab ipsis inferri litem, qui in ea provincia tutelae vel curae officium sustinent, ne de aliis provinciis defensores minorum ad iudicia perducantur. DAT. PRID. NON. FEBR. SIRMIO, ACCEPTA VIII ID. MART. CORINTHO
 8940 CONSTANTINO A. V ET LICINIO C. CONSS.
 Interpretatio. Si quis contra eos, qui in annis minoribus constituti sunt, litem forte commoverit, aut si a parte ipsorum reus aliquis arguatur, ex eo tempora computanda sunt, ex quo tutor sive curator minoris aut per iudicem aut per curiam intulerit seu exceperit actionem: ita tamen, ut si in diversis provinciis istius officii homines sunt, id est, curatores vel tutores, qui minorum causas tueantur, qui
 8945 in eadem provincia fuerint, ubi intentio nata probatur, ipsi aut ingerant aut excipiant actiones: quia nolumus, ut ad aliam provinciam defensores minorum pro audientiae necessitate ducantur. Hic de iure adiectum est.
- 10 februari 319 Idem a. profuturo praefecto annonae. Si quis iudicium duxerit esse referendum, nihil pronuntiet, sed magis super quo haesitandum putaverit, nostram consulat scientiam aut, si tulerit sententiam, minime postea, ne a se provocetur, relatione promissa terreat litigantes. DAT. IV ID. FEB. SIRMIO CONSTANTINO A. V ET
 8950 LICINIO C. CONSS.
 8955
- 16 februari 319 IMP. CONSTANTINUS A. AD OCTAVIANUM. Veteranorum liberos aptos militiae, quorum quidam ut desides recusant militarium munerum functionem, quidam adeo ignavi sunt, ut cum dispendio corporis militiae velint necessitatem evadere, iubemus, si ad militiam inutiles resectis digitis iudicentur, curialibus sine aliqua
 8960 ambiguitate muneribus atque obsequiis adgregari. DAT. XIV KAL. MART. SIRMIO, ACC(EPTA) VII ID. APRIL. REGIO CONSTANTINO A. V ET LICINIO C. CONSS.
- 11 maart 319 Idem a. ad Priscum rationalem. Ne principali liberalitate praeventa dominium quis rei alienae affectet, iubemus, quotiens iure suadente aliquorum bona ex
 8965 officio tuo fuerint occupata, breves eorum plenissimos ad virum perfectissimum comitem et amicum nostrum mitti, ne fraudibus caesarianorum inminuantur vel petentibus aliquid abiuretur; poena contra rationalem et officium eius proposita, si petitorem ante possidere permiserint id quod ei donatum est priusquam praedicti

- 8970 breves commeaverint. DAT. V ID. MAR. SIRMIO CONSTANTINO A. V ET LICINIO CAES. CONSS.
18 maart 319 Imp. Constantinus a. ad Verinum. Quicumque adulterina fecerit numismata, poenam pro discretionem sexus et condicionis suae diversitate sustineat, hoc est ut, si decurio vel decurionis sit filius, exterminatus genitali solo ad quamcumque in longinquo positam civitatem sub perpetui exilii condicione mittatur ac super facultatibus eius ad nostram scientiam referatur; si plebeius, ut rebus amissis perpetuae damnationi dedatur; si servilis condicionis, ultimo supplicio subiugetur. DAT. ET PP. XV KAL. APRIL. CONSTANTINO A. V ET LICINIO CAES. CONSS.
- 8975 26 maart 319 Imp. Constantinus a. ad Verinum vicarium Africae. Si quando famosi libelli reperiantur, nullas exinde calumnias patiantur hi, quorum de factis vel nominibus aliquid continebunt, sed scriptionis auctor potius requiratur et repertus cum omni vigore cogatur his de rebus, quas proponendas credidit, comprobare; nec tamen supplicio, etiamsi aliquid ostenderit, subtrahatur. PP. IV KAL. APRIL. KARTHAGINE, CONSTANTINO A. V ET LICINIO C. CONSS.
- 8980 Interpretatio. Qui famosam chartam ad cuiuscumque iniuriam et maculam conscripserit, in secreto aut in publico affixerit inveniendamque proiecerit, illi, contra quem proposita est chartula, non nocebit, nec famae eius aliquid derogabit. Sed si inveniri potuerit, qui huius modi chartulam fecit, constringatur, ut probet, quae conscripsit: qui si etiam, quae scripsit, probare potuerit, fustigetur, qui infamare maluit quam accusare.
- 8990 29 maart 319 Idem a. ad Bassum praefectum Urbi. Manente lege, qua praescriptum est, intra quot dies opinionis sive relationis exemplum privatis iudex debeat exhibere et refutatorii libelli intra quot dies rursum iudicibus offerendi sint, tam in privatis quam etiam in fiscalibus causis ex eo die, quo fuerit quaestio terminata vel ex quo relationem iudex per sententiam promiserit, intra vicensimum diem quaecumque ad instructionem pertinent causae, ad comitatum nostrum properantissime volumus adferri. Quod nisi factum fuerit, ab universo officio viginti transactis diebus, quos post latam sententiam placuit supputari, intra viginti alios dies qui sequuntur tantum fisco nostro praecipimus inferri, quanti per aestimationem rationalis emolumentum litis, cuius suppressa fuerat instructio, fidelissime potuerit aestimari. Cui capitale supplicium imminet, si rigorem legis quocumque modo mollire temptaverit. Eadem poena officio imminente, si quando appellatione vel consultatione pendente vel post decisas nostris responsionibus causas ei, quod ullo modo fuerit impetratum, damnabilem voluerit coniventiam commodare. Nam decreta nostra debet ingerere
- 8995 iudicanti ut ipso etiam dissimulante iudice reluctari et tamquam manibus iniectis eos de iudicio producere ac rationum officio traditos statuti prioris nexibus obligare, quorum desideriis violari nostras prospexerit sanctiones. PROPOSITA IV KAL. APRIL. ROMAE CONSTANTINO A. V ET LICINIO C. CONSS.
- 9000 13 april 319 IMP. CONSTANT(INUS) A. AD LUCRIUM VERINUM. Fratres uterini ab inofficiosis actionibus arceantur et germanis tantummodo fratribus adversus eos dumtaxat institutos heredes, quibus inustas constiterit esse notas detestabilis turpitudinis, agnatione durante sine auxilio praetoris petitionis aditus reseretur. DAT. ID. APRIL. SIRMIO CONSTANTINO A. V ET LICINIO C. CONSS.
- 9005 Interpretatio. Fratribus uterinis, id est diversis patribus et una matre natis, non liceat de inofficioso contra testamentum fratris agere. Sed germanis fratribus praetermissis, id est uno patre natis, si turpibus personis, id est infamibus fuerit hereditas derelicta, hoc est aut pro libidine meretricibus, aut pro inhonesto affectu naturalibus aut certe thymelicis, vel de libertis suis, agendi contra testamentum licentia reservatur: si tamen is ipse germanus non pro crimine suo exilio fuerit deputatus, aut per captivitatem fuerit servus effectus, aut per emancipationem successionis vel actionis iura perdidit.
- 9010 13 april 319 Imperator Constantinus. Fratres vel sorores uterini ab inofficiosi actione contra testamentum fratris vel sororis penitus arceantur: consanguinei autem durante vel non agnatione contra testamentum fratris sui vel sororis de inofficioso quaestionem movere possunt, si scripti heredes infamiae vel turpitudinis vel levis notae macula adsparguntur vel liberti, qui perperam et non bene merentes maximisque beneficiis suum patronum adsecuti instituti sunt, excepto servo necessario herede
- 9015 instituto. CONST. A. AD LUCRIUM VERINUM. D. ID. APRIL. SIRMIO CONSTANTINO A. V ET LICINIO C. CONSS.
- 9020 28 april 319 IDEM A. AD RUFINUM P(RAE)FECTUM P(RAE)TORIO. De cubiculis nostris vacatione donatos vel diversis obsequiis palatinis aut scriniis memoriae epistularum

- 9035 libellorumque vel officio largitionum comitatensium singularumve urbium, sed et officio admissionum ad legum nostrarum privilegia volumus pertinere, ut nec ipsi nec filii nec nepotes eorum ad curiam vel honores vel munera municipalia devocentur. Meritoque his iungimus largitionales urbium singularum, ne privilegio separentur quos dignitas propemodum similis copulavit, memorati namque palatinorum matriculis
- 9040 adtinentur, quique sub castrensi militant. Quibus omnibus condonamus, ne exactorum vel turmariorum, quos capitularios vocant, curam subeant vel obsequium temonariorum vel prototypiae. Nam beneficiis nostris ita digni sunt, ut etiamsi quis ad diversas administrationes post obsequia palatina pervenerit, isdem debeat uti privilegiis, quoniam maior dignitas nulli debet praeiudicium facere. Nemo igitur ex filiis
- 9045 praedictorum vel servis castrensi peculio conquisitis professionibus censualibus inseratur vel numero ad crescentium locove deficientium subrogetur, si non fuerit innexus voluminibus censualibus. Personalibus etiam et corporalibus muneribus liberentur, sive adhuc in palatio observant, sive optata quiete donati sunt. Quibus omnibus privilegiis coniungimus agentes in rebus, licet meritis militaribus videantur esse subnixi. DAT. V KAL. MAI. SIRMIO CONSTANTINO A. V ET LICINIO C. CONSS.
- 7 mei 319 Imp. Constantinus a. ad Proculum proconsulem Africae. Emphyteuticarii possessores, qui mansuetudinis nostrae beneficio ad extraordinaria minime devocentur, sicut ceteri provinciales obsequium suum muniendis itineribus impendant. Nulla enim
- 9055 ratione debent ab hoc, quod in commune omnibus profuturum est, esse seiuncti. PROPOSITA NON. MAI. KARTHAGINE CONSTANTINO A. V ET LICINIO CAES. CONSS.
- 11 mei 319 Imp. Constantinus a. ad Bassum. Si virgis aut loris servum dominus adflixerit aut custodiae causa in vincla coniecerit, dierum distinctione sive interpretatione depulsa nullum criminis metum mortuo servo sustineat. Nec vero
- 9060 inmoderate suo iure utatur, sed tunc reus homicidii sit, si voluntate eum vel ictu fustis aut lapidis occiderit vel certe telo usus letale vulnus inflixerit aut suspendi laqueo praeceperit vel iussione taetra praecipitandum esse mandaverit aut veneni virus infuderit vel dilaniaverit poenis publicis corpus, ferarum vestigiis
- 9065 latera persecando vel exurendo admotis ignibus membra aut tabescentes artus atro sanguine permixta sanie defluentes prope in ipsis adegerit cruciatibus vitam linquere saevitia immanium barbarorum. DAT. V ID. MAI. ROMAE CONSTANTINO A. V ET LICINIO C. CONSS.
- 9070 12 mei 319 IMP. CONSTANTINUS A. AD RUFINUM P(RAEFECTUM) P(RAETORI)O. Posta alia: Litigia sententiis vel tra[ns]actionibus terminata non sinimus restaurari. DAT. IV ID. MAI. IPSO A. V ET L[IC(INIO) C. CONSS.]
- 12 mei 319 IMP. CONSTANT(INUS) A. AD RUFINUM P(RAEFECTUM) P(RAETORI)O. Pater noster nullam voluit liberalitatem valere, si actis inserta non esset. Nos etiam inter sponsos quoque ac sponsas omnesque personas eam solam donationem ex promulgatae legis tempore valere sancimus, quam testificatio actorum secuta est. DAT. IV ID. MAI. SIRMIO CONSTANTINO A. V ET LICINIO C. CONSS.
- 9075 Interpretatio. Ante tempus legis istius donationes etiam sine gestorum testificatione valebant. Nunc vero post hanc legem nec nuptialis nec quaelibet alia inter quascumque personas donatio, de quibuscumque rebus, valere potest, si gestis non fuerit allegata.
- 9080 15 mei 319 Idem a. ad populum. Haruspices et sacerdotes et eos, qui huic ritui adsolent ministrare, ad privatam domum prohibemus accedere vel sub praetextu amicitiae limen alterius ingredi, poena contra eos proposita, si contempserint legem. Qui vero id vobis existimatis conducere, adite aras publicas adque delubra et consuetudinis vestrae celebrate sollemnia: nec enim prohibemus praeteritae usurpationis officia libera luce tractari. - 9090 CONSS.
- 15 mei 319 CT 9.16.2 Constantine
Even friendship with the owner of the house is no excuse for a soothsayer to enter a residence.
- 9095 16 mei 319 Imp. Constantinus a. ad Severum rationalem Africae. Posta alia: possessiones atque mancipia exempta fisci patrimonio quibusdam donavimus. Haec directo iure atque perpetuo absque omni quaestione volumus obtineri poena contra rationales et magistros privatae rei atque officiales proposita, si quid contra
- 9100 tentaverint etc. PP. XVI KAL. IUN. ROMAE IN FORO TRAIANI, CONSTANTINO A. V ET LICINIO

C. CONSS.

Interpretatio. Quicumque agri atque mancipia quibuscumque personis de fisci nostri iure donantur, apud eos, quibus donata sunt, sine suspicione aliqua volumus permanere: contra ordinatores domorum dominicarum poena proposita, si contra praeceptionem facere cognoscuntur.

28 mei 319 Idem a. Amabiliano praefecto annonae. pr. Si quis navicularius per obreptionem vel quacumque ratione immunitatem impetraverit, ad excusationem eum admitti nullo modo volumus. 1. Sed et si quis patrimonium naviculario muneri obnoxium possidet, licet altioris sit dignitatis, nihil ei honoris privilegia, in hac parte dumtaxat, opitulentur, sed sive pro solido sive pro portione huic muneri teneatur. Nec enim aequum est, ut patrimonio huic functioni obnoxio excusato commune onus non omnes pro virili sustineant portione. PROPOSITA V KAL. IUN. CONSTANTINOPOLI CONSTANTINO A. V ET LICINIO CAES. CONSS.

30 mei 319 Idem a. ad provinciales. Iustas etiam et quae locum habent fisci actiones praecipimus concremari ob hoc solum, quod suis temporibus prolatae non sunt. Iam calumniae privatorum eo saltem arceantur exemplo, quo iustas fisci lites silere praecipimus. DAT. III KAL. IUN. CONSTANTINO A. V ET LICINIO C. CONSS.

9 juni 319 IMP. CONSTANTINUS A. AD LEONTIUM. Dudum sanximus, ut nullus ad singula officia administranda ambitione perveniat, vel maxime ad tabularios, nisi qui ex ordine vel corpore officii uniuscuiusque est. Hos enim officia sibi iniuncta tamdiu agere iubemus, quoad idoneos esse manifestum est aut aetate non impediende complere id posse monstrantur, ut administratione aput unum iugiter permanente fides quoque eius appareat. Si quis ergo ex suffragio ambitionis ad officia fisco obnoxia accesserit, multae nomine denas lib(ras) auri exigatur. P(RO)P(OSITA) V ID. IUN. HIERAPOL(I) CONSTANTINO A. V ET LICINIO CAES. CONSS.

22 juni 319 Idem a. ad Severum vicarium. Ne causas, quae in nostram venerint scientiam, rursus transferri ad iudicia necesse sit, instructiones necessarias plene actis inseri praecipimus. Nam cogimur a proferenda sententia temperare, qui sanximus retractari rescripta nostra ad opiniones vel etiam relationes iudicum data non oportere, quoniam verendum est, ne lis incognito negotio dirimatur adempta copia conquerendi. Quare perennibus inuretur iudex notis, si cuncta, quae litigatores instructionis probationisque causa recitaverint, indita actis vel subiecta non potuerint inveniri. DAT. X KAL. IUL. AQUILEIAE CONSTANTINO A. V ET LICINIO C. CONSS.

1 juli 319 Imp. Constantinus a. ad Antonium Marcellinum praesidem provinciae Lugdunensis primae. Rei annonariae emolumenta tractantes, ut cognosceremus, quanta reliqua per singulas quasque provincias et per quae nomina ex huiusmodi pensitationibus resedissent, cognovimus hanc esse causam maxime reliquorum, quod nonnulli captantes aliquorum momentarias necessitates sub hac condicione fundos opimos comparent et electos, ut nec reliqua eorum fisco inferant et immunes eos possideant. Ideoque placuit, ut, si quem constiterit huiusmodi habuisse contractum atque hoc genere possessionem esse mercatum, tam pro solidis censibus fundi comparati quam pro reliquis universis eiusdem possessionis obnoxius teneatur. DAT. KAL. IUL. AGRIPPINAE CONSTANTINO A. V ET LICINIO C. CONSS.

1 juli 319 Idem a. Patroclo. Nulla praeditos dignitate ad sordida descendere conubia servularum etsi videtur indignum, minime tamen legibus prohibetur; sed neque conubium cum personis potest esse servilibus et ex huiusmodi contubernio servi nascuntur. Praecipimus itaque, ne decuriones in gremia potentissimarum domorum libidine ducente confugiant. Si enim decurio clam actoribus atque procuratoribus nescientibus alienae fuerit servae coniunctus, et mulierem in metallum trudi per sententiam iudicis iubemus et ipsum decurionem in insulam deportari, bonis eius mobilibus et urbanis mancipiis confiscandis, praediis vero et rusticis mancipiis civitati, cuius curialis fuerat, mancipandis, si patria potestate fuerit liberatus nullosque habeat liberos vel parentes vel etiam propinquos, qui secundum legum ordinem ad eius successionem vocantur. Quod si actores vel procuratores loci, in quo flagitium admissum est, fuerunt conscii vel compertum facinus prodere noluerunt, metallo eos convenit implicari. Si vero dominus hoc fieri permisit vel postea cognitum celavit, si quidem in agro id factum est, fundus cum mancipiis et pecoribus ceterisque rebus, quae cultui rustico sustinentur, fisci viribus vindicetur; si vero in civitate id factum est, dimidiam bonorum omnium partem praecipimus confiscari, poenam augentes, quoniam intra domesticos parietes scelus admissum est, quod noluit mox cognitum publicare.

Igitur si legis latae die repperietur quisquam patrimonium suum alienasse atque in dominum servulae contulisse, ordini liceat diligenter inquirere, ut ita rei publicae civitatis quod de facultatibus supra dicti fuerit deminutum, in pecunia sarciatur.

9170 DAT. KAL. IUL. AQUILEIAE CONSTANTINO A. V ET LICINIO C. CONSS.

15 juli 319 Imp. Constantinus a. ad Bassum. Si non a dominis libertas detur mancipio alieno, si quidem ab his iudicibus impetrabitur, quibus dandi ius est, sine ulla trepidatione poenae facilis dissolutio est. Si vero iubentibus nobis quicquam lege actum esse doceatur, et non dominus, ut alienum mancipium manumitteretur, petiisse, tunc eodem, qui in conspectu nostro libertatem monstrabitur consecutus, ei protinus, ad cuius proprietatem pertinet, restituto, is, qui mancipium alienum fallendo principis conscientiam manumisit, mancipia duo cogatur domino eius dare, cuiusmodi sexus, aetatis atque artis constiterit esse manumissum, et alia tria fisco eademque ratione similia. quae mulcta non semper imponitur, sed potius conquiescit, si forte manumissus inferentem sibi quaestionem status obiecta legitima praescriptione potuerit excludere; quum sibi amissi mancipii damna debeat imputare, qui in perniciem suam gesta taciturnitate firmaverit. PROP. ID. IUL. CONSTANTINO A. V ET LICINIO CAES. CONSS.

9185 Interpretatio. Si aliquis mancipium manumittere praesumpserit alienum et id sub praesentia principis vel in ecclesia fecerit, hac poena tenebitur, ut et manumissus a domino revocetur, et alia duo mancipia eiusdem aetatis aut sexus aut certe artificii, quod ille, qui est manumissus, scierit, dare cogatur. Si vero ille, qui manumissus dicitur, repetentem dominum sub hac praescriptione superaverit, ut iam firmitatem status sui temporibus tueatur, tunc ille, qui manumisit, non est constringendus ad poenam, dum ille, qui repetit, praeiudicium domini sui incurrerit aut taciturnitate nutrierit.

9195 18 juli 319 IMP. CONSTANTINUS A. CONSULIBUS, PRAETORIBUS, TRIBUNIS PLEBIS, SENATUI SALUTEM DICIT. Placuit salva reverentia et pietate sacris nominibus debita, ut potestas quidem et ius fruendi res liberorum suorum in sacris constitutorum in maternis dumtaxat facultatibus penes patres maneat, destituendorum autem liberorum eis licentia derogetur. Casset itaque in maternis dumtaxat successionibus commentum cretionis et res, quae ex matris successione fuerint ad filios devolutae, ita sint in parentum potestate adque dominio, ut fruendi pontificium habeant, alienandi eis licentia derogetur. Nam maternum patrimonium, quod filiis in potestate constitutis obvenit, cum patre mortuo sui iuris fuerint, praecipuum habere eos et sine cuiusquam consortio placuit. Quod si pater suum filium patremfamilias videre desiderans eum emancipaverit, repraesentare ei maternam debet substantiam, ita ut filius accepto munere libertatis reique suae dominus effectus, ne videatur ingratus, tertiam partem custoditae sibi rei muneris causa parenti offerat, aestimatione, si res dividi coeperint, bonorum virorum arbitrio permittenda, quam tertiam alienare quoque pater, si hoc maluerit, habebit liberam potestatem. Ante emancipationem autem parentes, penes quos maternarum rerum utendi fruendique potestas est, omnem debent tuendae rei diligentiam adhibere et quod iure filiis debetur in examine poscere et sumptus ex fructibus impigre facere et litem inferentibus resistere adque ita omnia agere, tamquam solidum perfectumque dominium et personam gerant legitimam, ita ut, si quando rem alienare voluerint, emptor vel is cui res donatur observet, ne quam partem earum rerum, quas alienari prohibitum est, sciens accipiat vel ignorans. Docere enim

9205 pater debet proprii iuris eam rem esse quam donat aut distrahit; et emptori, si velit, sponsorem aut fideiussorem licebit accipere, quia nullam poterit praescriptionem opponere filiis quandoque rem suam vindicantibus. DAT. XV KAL. AUG. AQUIL(EIAE), RECITATA APUT VETTIUM RUFINUM P(RAE)FECTUM) U(RBI) IN SENATU NON. SEPT. CONSTANTINO A. V ET LICINIO C. CONSS.

9220 Interpretatio. Legis istius reliqua pars in aliis legibus continetur: hoc tantum de reliquis legibus plus habet, ut patres, qui filiorum res gubernare iussi sunt, negotia eorum summo studio et integritate agere procurent, ut nihil per negligentiam eorum filiis pereat, sed fructus rerum maternarum sine aliqua negligentia redigi vel vendi faciant, ut ex tempore competenti, sicut lex novella dicit, portiones suas filii sine aliqua imminutione percipiant. Res filiorum patribus alienare non liceat, hoc est nec vendere nec donare. Quod si fortasse praesumpserint, emptor, vel qui donator accesserit, grandi se sollicitudine et cura custodiant, ne filiorum res a patre venditas aut donatas accipiant, aut scientes aut etiam nescientes: sed compellant patrem, qui venditor vel donator fuerit, et filiorum res in sua retinet potestate, ut probet suum esse, quod tradidit. Etiam ut suspicionem suam possit abstergere, fideiussorem a patre venditore percipiat, qui obligatione rerum suarum damnum emptori non faciat: quia defuncto patre licet filiis res suas a quibuscumque

9230

personis, sive venditae sive donatae a patre fuerint, in suum dominium revocare.

- 9235 July 18, 319 EMP. CONSTANTINE A. SAYS HOLINESS TO THE CONSULS, PRAETORS, TRIBUNES OF THE PEOPLE, THE SENATE.
It was decided, with due respect and piety to sacred names, that the power and right to enjoy the property of their children who have been ordained in the sacraments should remain with the fathers, solely in the maternal faculties, but that the
- 9240 permission to disinherit their children should be denied to them. Therefore, in maternal successions, solely in maternal successions, the concept of creatio is abolished, and the property that has been devolved to the sons from the mother's succession should be in the power and dominion of the parents, so that they have the pontifical right to enjoy it, and the permission to alienate it should be denied to
- 9245 them. For it was decided that the maternal patrimony, which has come to the sons who have been ordained in power, should be their own property when the father is dead, and they should be the first to have it, without any participation. But if a father, desiring to see his son as the head of the household, emancipates him, he must represent to him the maternal substance, so that the son, having accepted the gift of
- 9250 freedom and made the master of his property, may not seem ungrateful, offer the father a third part of the property entrusted to him for the sake of the gift, with an assessment to be allowed, if the property begins to be divided, at the discretion of good men, which the father will also have free power to alienate, if he so
- 9255 enjoys the maternal property, must exercise all diligence in protecting the property and demand what is rightfully due to their children in the examination and vigorously enforce the costs of the fruits and resist those who bring suit, and act in all matters as if they were solid and perfect ownership and legitimate person, so that, if they ever wish to alienate the property, the buyer or the person to whom the
- 9260 property is gifted must be careful not to knowingly or unknowingly take any part of those things that are forbidden to be alienated. For the father must teach that the property he gives or alienates is his own property; and the buyer, if he wishes, will be permitted to accept a sponsor or guarantor, because he will not be able to oppose any prescription to the children sometimes claiming their property. DAT. 15 KAL. AUG.
- 9265 AQUIL(EIAE), RECITATED APUT VETTIUM RUFINUM P(RAEFECTUM) U(RBI) IN THE SENATE NON. SEPT. CONSTANTINO A. V ET LICINIO C. CONSS.
Interpretation. The rest of this law is contained in other laws: this alone has more than the rest of the laws, that fathers, who are ordered to govern the property of their children, should ensure that they conduct their affairs with the utmost
- 9270 diligence and integrity, so that nothing is lost to their children through their negligence, but that they should cause the fruits of their maternal property to be reduced or sold without any negligence, so that from the appropriate time, as the new law says, the children may receive their portions without any diminution. It is not permitted for fathers to alienate the property of their children, that is, neither to
- 9275 sell nor to give it away. But if perhaps they presume to do so, the buyer or any donor who approaches should guard themselves with great solicitude and care, lest they accept the children's property sold or given by the father, either knowingly or even unknowingly: but they should compel the father, who was the seller or donor, and who retains the children's property in his power, to prove that what he has delivered is his. Also, in order to be able to remove his suspicion, he should obtain a
- 9280 guarantor from the father-seller, who will not cause the buyer any harm by the obligation of his property: because after the death of the father it is permissible for the children to recall their property from any persons whatsoever, whether it was sold or given by the father.
- 9285
- 25 juli 319 IMP. CONSTANT(INUS) A. AD SYMMACHUM VIC(ARIUM). Optimum duximus non ex eo die, quo se quisque admissum dolum didicisse memoraverit, neque intra anni utilis tempus, sed potius ex eo die, quo adseritur commissus dolum intra continuum tempus anni eis, quibus esse decertandi ius invenitur, eiusmodi actionem causa cognita
- 9290 deferri; ita ut, si forte is, contra quem res agitur, longius ullo genere discesserit, nec denuntiandi necessitate petitor oneretur nec eius qui aberit praesentia postuletur. Nec tamen adsistere, si velit, quisquam prohibeatur examini, contra quem decernenda intentio huiusmodi fuerit expetita: ita ut impetrata doli actione lis ad suum iudicem translata intra biennii spatia decidatur, ratione
- 9295 temporis custodita, cum legitime fuerit apud suum iudicem coepta, exemplo litium ceterarum. Perpetuo vero silentio conquiescat, nisi ex die, quo impetrata fuerit actio, intra continuum biennium quod sequitur, omnis lis fuerit decisa. Omnes igitur sciant neque incipiendae post biennium neque ante completum biennium coeptae, post

- 9300 biennium finiendae doli actionis concessam licentiam. DAT. VIII KAL. AUG. NAISSO
CONSTANTINO A. V ET LICINIO C. CONSS.
Interpretatio. Dolus malus est, quoties per aliquam scripturam vel fraudem ea, quae
definita sunt, per scripturae argumenta mutantur. Vel si quis per chartarum
suppositionem aut per surreptionem aliquam id, quod contra se futurum sit, ut
consentire videatur, inducitur, vel quum his similia discutiente iudice probantur
9305 admissa. Et ideo ille, qui queritur, dolo se fuisse gravatum, intra biennium suas et
incipiat et definiat actiones: ultra sibi nec ad inchoandum, nec ad definiendum
tempus noverit esse concessum. Nam si aut illum, qui dolum admisisse dicitur, aut
illum, qui pertulit, absentem esse contigerit, a tempore, quo apud iudicem agere
coeperit, biennium ad definiendam actionem sciatur sibi esse permissum.
- 9310 29 juli 319 Idem a. ad Festum praesidem Sardiniae. Quicumque coercitionem mereri ex
causis non gravibus videbuntur, in urbis Romae pistrina dedantur. Quod ubi tua
sinceritas coeperit observare, omnes sciant eos, qui, sicut dictum est, ex levioribus
causis huiusmodi meruerint subire sententiam, ergastulis vel pistrinis esse dedendos
9315 adque ad urbem Romam, id est ad praefectum annonae, sub idonea prosecutione
mittendos. DAT. IV KAL. AUG. CONSTANTINO A. V ET LICINIO CONSS.
- 9320 13 augustus 319 Idem Aureliae Sabinae sive Gaudiosae. Licet in potestate filii
degentes donationum effectum a patre sibi conlatarum mox consequi minime posse
videantur, tamen perseverantia voluntatis ad instar mortis causa donationis
huiusmodi liberalitatem redigi oportere retro principum rescriptis cognoscitur esse
concessum. Unde virum clarissimum praefectum urbi amicum nostrum, cuius notio est,
adire non prohiberis, qui omnibus rite consideratis, quae in precem tuam conferenda
tu duxisti, pro experientia sua recte iudicari curabit. D. IDIBUS AUGUSTIS ROMAE
9325 CONSTANTINO ET LICINIO AUGG. CONSS.
- 9330 13 augustus 319 Imp. Constantinus a. ad profuturum praefectum annonae.
Cunctis pistoribus intimari oportet, quod, si quis forte possessiones suas ideo
putaverit in alios transferendas, ut postea se, rebus in abdito collocatis, minus
idoneum adseveret, tamquam in locum eius alio subrogando, nihil ei haec astutia nec
detestabilia commenta profutura sunt, sed in obsequio pistrini sine ulla excusatione
durabit nec ad eius iura revocabuntur, si quas emptiones transcripserit. PROPOSITA
ID. AUG. CONSTANTINO A. V ET LICINIO CAES. CONSS.
- 9335 13 augustus 319 IMP. CONSTANT(INUS) A. AD PROFUTURUM P(RAE)F(ECTUM) ANNONAE.
Venditionis atque emptionis fidem nulla circumscriptionis violentia facta rumpi
minime decet. Nec enim sola pretii vilioris querella contractus sine ulla culpa
celebratus litigioso strepitu turbandus est. P(RO)P(OSITA) ID. AUG. CONSTANTINO A. V
ET LICINIO C. CONSS.
- 9340 Interpretatio. Quum inter ementem et vendentem res fuerit definito pretio comparata,
quamvis plus valeat, quam ad praesens venditur, hoc tantummodo requirendum est, si
nihil fraudis vel violentiae egit ille, qui comparasse probatur. Et si voluerit
revocare, qui vendidit, nullatenus permittatur.
- 9345 27 augustus 319 Imp. Constantinus a. ad Catullinum proconsulem Africae.
Patrimoniales fundos extraordinariis oneribus vel mediae aut tertiae portionis
obsequiis fatigari non convenit, cum eosdem et auri speciem et frumenti plurimum
modum constet persolvere, ita ut qui violare statuta temptaverit puniatur. PROPOSITA
VI KAL. SEP. KARTHAGINE CONSTANTINO A. V ET LICINIO CONSS.
- 9350 1 september 319 CT 9.16.1 Constantine
A soothsayer who approaches another's private residence for any reason is in
violation of the law. The "superstitions" of soothsayers are limited to public
ceremonies. [The date listed is February 1, but Pharr notes that Maximus, the prefect
9355 to whom the law was issued, assumed this office on September 1; thus, either
September 1 is accurate, or the date actually was February 1 of the year 320.
- 9360 7 september 319 IDEM A. IULIO SEVERO. Cum [Quum] ad patrem aliquid ex materna
successione interposita cretione pervenerit et ad liberos maternas rerum
successiones defluerint, ita eas haberi placet in parentum potestate, ut dominium
tantum possessionis usurpent, alienandi vero licentiam facultatemque non habeant, ut,
cum aetates legitima liberorum ad emancipationem parentes invitaverint et
patresfamilias videre liberos suos voluerint, tertiam partem maternarum bonorum eis
filii tamquam muneris causa offerant; quam suscipiendam patres putaverint, faciendae

- 9365 divisionis arbitrium permitti oportebit iustitiae bonorum virorum, per quos facta
divisione tertiam partem oblatam parentes ita accipien(t, ut alienandae quoque eius
par)tis habeant facultatem, s(i modo ullus potuerit inve)niri, cui placeat hanc
am(plecti licentiam, cum omni) modo filios conducat ad(niti, ut pio sedulitatis
affec)tu mereantur accipere eam, quam (atribus dederint), portionem. DAT. VII ID.
9370 SEPT. MED(IOLANO), ACC. NON. OCT. CONSTANTINO A. V ET LICINIO CAES. CONSS.
Interpretatio. Materna bona filiorum defuncta uxore pater ita possideat, ut
usumfructum de his habeat: sed quantum aut quam diu habeat, lex novella constituit:
distrahendi tamen aut donandi ex his nullam pater habeat potestatem. Sane si filium
9375 mortua matre emancipaverit, de bonis maternis, id est de emancipati filii portione
ipse filius muneris causa de maternis bonis tertiam offerat portionem: quae tamen in
ipsius proprietate mansura est ita, ut eam pater bonis viris dividendis
consequatur. Si tamen tantum patris nomen ad hoc adduci potuerit, ut rem filiorum
impia cupiditate suscipiat, aut aliis derelinquat: studere tamen filios decet, ut id,
quod parentibus causa emancipationis obtulerint, servitio et pietate recipiant.
- 9380 6 oktober 319 Idem a. ad Bassum Pf. U. Si quis ad se fundum vel quodcumque aliud
asserit pertinere, ac restitutionem sibi competere possessionis putat, civiliter
super possidendo agat, aut impleta solennitate iuris crimen violentiae opponat, non
ignarus, eam se sententiam subiturum, si crimen obiectum non potuerit comprobare,
9385 quam reus debet excipere. Quod si omnia interpellatione vim possidenti intulerit,
ante omnia violentiae causam examinari praecipimus, et in ea requiri, quis ad quem
venerit possidentem, ut ei, quem constiterit expulsum, amissae possessionis iura
reparentur, eademque protinus restituta violentus, poenae non immerito destinatus, in
totius litis terminum differatur, ut, agitato negotio principali, si contra eum
9390 fuerit iudicatum, in insulam deportetur, bonis omnibus abrogatis. Quod si pro eo,
quem claruerit esse violentum, sententia proferetur, omnium rerum, de quibus
litigatum est, media pars penes eum resideat, cetera fisci viribus vindicentur. PP.
PRID. NON. OCT. ROMAE, CONSTANTINO A. V ET LICINIO C. CONSS.
Interpretatio. Si quis adversarium suum ita apud iudicem crediderit accusandum, ut se
9395 asserat violentiam pertulisse, ad probationem rei eum convenit attineri: quod si
probare non potuerit, quem dixerat violentum, eandem poenam suscipiat, quam ille,
quem impetit, convictus potuisset excipere. De reliquo haec lex praetermittenda est,
quia in quarto libro sub titulo unde vi, quae tamen temporibus posterior inventa est,
habetur exposita.
- 9400 7 oktober 319 IDEM A. AD BASSUM P(RAEFECTUM) U(RBI). Iuxta divi Pii consultissimi
principis instituta valere donationes placet inter liberos et parentes in quocumque
solo et cuiuslibet rei liberalitas probabitur extitisse, licet neque mancipatio
dicatur neque traditio subsecuta, sed nuda tantum voluntas claruerit, quae non dubium
9405 consilium teneat nec incertum, sed iudicium animi tale proferat, ut nulla quaestio
voluntatis possit inrepere et conlata inter ceteras exceptas Cinciae legi personas
obtinere propriam firmitatem, sive mancipationis decursa fuerit sollemnitas vel certe
res tradita doceatur. Quam legem ad lites volumus pertinere, quaecumque tempore
iussionis nostrae inveniuntur esse suspensae et quae post futurae sunt, ne transacta
9410 negotia refricentur. DAT. NON. OCT. CONSTANTINO A. V ET LICINIO CAES. CONSS.
- 12 oktober 319 IMP. CONSTANT(INUS) A. ET C. AD BASSUM P(RAEFECTUM) U(RBI). In
universis litibus placet non prius puberem iustam habere personam, nisi interposito
decreto aut administrandi patrimonii gratia aut ad litem fuerit curator datus, ut
9415 iuxta praecedentia nostrae provisionis statuta legitime initiatae litis agitata in
iudiciis controversia finiatur. DAT. IV ID. OCTOB. AQUIL(EIAE) CONSTANT(INO) A. V ET
LICINIO C. CONSS.
Interpretatio. Si pupillis actio inferatur, quamvis adulti videantur, ad litem venire
non possunt, nisi forte aetas eorum curiae testificatione firmetur, aut certe
9420 provisos curator patrimonium pupilli vel negotium tueatur.
- 15 oktober 319 IDEM A. AD MAXIMUM P(RAEFECTUM) U(RBI). Cum veterum sententia
displiceat, quae donationes in sponsam nubtiis quoque non secutis decrevit valere,
ea, quae largiendi animo inter sponsores et sponsas celebrantur, redigi ad huiusmodi
9425 condiciones iubemus, ut, sive in potestate patris degere sive ullo modo proprii
videantur esse iuris et tamquam futuri causa matrimonii aliquid sibi ipsi vel
consensu parentum mutuo largiantur, si quidem sponte vir sortiri noluerit uxorem, id
quod ab eo donatum fuerit nec repetatur traditum et, si quid apud donatorem resedit,
ad sponsam submotis ambagibus transferatur. Quod si matrimonii non contrahendi causa
9430 ab sponsa, vel in cuius agit potestate, detegatur extitisse, tunc sponso eiusque

heredibus sine aliqua deminutione redhibeantur. Quae similiter observari oportet et si ex parte sponsae in sponsum donatio facta sit; nullis causis ulterius requirendis, ne forte mores aut origo dicatur, vel quidquam aliud opponatur, quod sibi quisquam non convenire existimat, cum longe ante, quam sponsalia contrahantur, haec cuncta
 9435 prospici debuerint. Sola igitur indagetur voluntas et mutata animi sententia ad restitutionem seu repetitionem rerum donatarum sufficiat, cum universis causationibus pulsus nihil amplius constare debeat, nisi ut appareat, qui sibi contrahendum matrimonium dixerit displicere. Et quoniam fieri potest, ut moriatur alter adhuc incolumi voluntate, priusquam nubtiae contrahantur, congruum duximus, eo, in quem
 9440 fuerat facta donatio, ante matrimonium diem functo, quae sponsaliorum titulo vel data vel ullo genere donata sunt, ad eum qui donaverat revocari: eo etiam qui donaverat ante nubtias mortuo mox infirmari donationem et ad eius heredes sine aliqua difficultate retrahi res donatas. Quod beneficium usque ad personam patris ac matris, filiorum etiam, si qui de priore matrimonio fuerint, stare decernimus, si quocumque
 9445 modo ex his persona aliqua defuncto successerit. Quod si ex his nulla persona defuncti heres erit, sed ex reliquis gradibus quisquam succedat, donationes convenit etiam non insecutis ex causa mortis nubtiis convalescere, quoniam illis tantum personis credimus consulendum. DAT. XVII KAL. NOVEMB. P(RO)P(OSITA) VI KAL. S(UPRA)S(CRIP)TAS ROM. CONSTANTINO A. V ET LICINIO CAES. CONSS.

9450 Interpretatio. Quoties inter sponsores et sponsas de futuris nuptiis specialiter fuerit definitum, et donationem sponsaliciae largitatis vir in sponsam suam aut ex consensu parentum aut ipse, si sui iuris est, propria voluntate conscripserit et omni eam scripturarum solennitate firmaverit, ita ut et gesta legitime facta doceantur, et introductio locorum vel rerum traditio subsequatur: quicquid tali et tam solenni
 9455 donatione ad ius dominiumque sponsae transierit, si vir sponte eam, quam depectus est factis supra scriptis solennibus chartis, accipere noluerit uxorem, omnia, quae sunt tradita, non reposcat. Et si quid de nominatis tam solenniter rebus et traditis apud se habere dignoscitur, ad sponsae dominium, quam accipere noluit, sine dilatione aliqua transferatur. Reliquum legis istius opus non fuit explanare, quia sequentibus
 9460 legibus vacuatur.

15 October 319 Idem A. TO THE MAXIMUM PREFECTUM URBI. Since the opinion of the ancients is displeasing, which decreed that gifts to a bride are valid even after marriages have not taken place, we order that those which are celebrated between
 9465 bridegrooms and brides with the intention of giving gifts be reduced to such conditions, that, whether they live in the power of their father or in any way seem to be their own right and as a future cause of marriage they give something to themselves or with the mutual consent of their parents, if indeed the husband does not voluntarily wish to part with his wife, that which was given by him is not
 9470 returned and is not handed over and, if anything remains with the donor, is transferred to the bride, with the removal of any ambiguities. But if it is discovered that the cause of not contracting the marriage was from the bride, or in whose power she acts, then it is returned to the bride and her heirs without any diminution. Which must be similarly observed if a gift has been made on the part of
 9475 the bride to the bride; no further reasons need to be sought, lest perhaps character or origin be mentioned, or anything else be opposed, which someone thinks does not suit him, since all these should have been foreseen long before the betrothal is contracted. Therefore, the will alone is to be sought and a changed mind is sufficient for the restitution or repetition of the things donated, since, after all
 9480 causations have been rejected, nothing more should be established, except that it should appear that the person who said that the marriage was to be contracted did not like it. And since it is possible that the other person dies without his will, before the marriage is contracted, we have deemed it appropriate that the person to whom the donation was made, before the day of the marriage has passed, the things that were
 9485 either given or given in any way under the title of betrothal, should be revoked to the person who had donated them: also, if the person who had donated them died before the marriage, the donation should be immediately invalidated and the things donated should be withdrawn to his heirs without any difficulty. We decree that this benefit should continue to apply to the person of the father and mother, and also to the
 9490 children, if any, from a previous marriage, if in any way any of these persons succeeded the deceased. But if none of these persons will be the heir of the deceased, but someone from the remaining degrees will succeed, it is fitting that donations should be valid even for those who have not followed up on the cause of death, since we believe that only those persons should be consulted. DAT. 17th KAL.
 9495 NOVEMB. PROPOSITA 6 KAL. SUPRA SCRIPTAS ROM. CONSTANTINE A. V AND LICINIO CAES. CONSS.

- Interpretation. Whenever a future marriage has been specifically defined between the bride and groom, and the man has written a gift of a dowry to his bride, either with the consent of his parents or himself, if he is independent, of his own free will, and has confirmed it with all the solemnity of writings, so that both the deeds legally done are taught, and the introduction of places or the delivery of things follows: whatever has passed to the right and ownership of the bride by such and such a solemn gift, if the husband voluntarily refuses to accept her as his wife, whom he has requested by the solemn documents written above, he shall not reclaim all that has been delivered. And if he is found to have any of the things so solemnly named and delivered with him, it shall be transferred to the ownership of the bride, whom she refused to accept, without any delay. The rest of this law was not necessary to explain, because it is voided by the following laws.
- 20 oktober 319 Imp. Constantinus a. Octaviano correctori Lucaniae et Brittiorum. Qui divino cultui ministeria religionis impendunt, id est hi, qui clerici appellantur, ab omnibus omnino muneribus excusentur, ne sacrilego livore quorundam a divinis obsequiis avocentur. DAT. XII KAL. NOV. CONSTANTINO A. V ET LICINIO C. CONSS. Interpretatio. Lex haec speciali ordinatione praecipit, ut de clericis non exactores, non allectos facere quicumque sacrilega ordinatione praesumat, quos liberos ab omni munere, id est ab omni officio omnique servitio iubet ecclesiae deservire.
- 23 oktober 319 IDEM A. AD FELICEM PRAESIDEM CORSICAE. Posta alia: Si petitores probaverint interpellantes se saepius esse dilatos atque ita labsum temporis incurrisse per negligentiam atque desidiam gravitate tua audientiam differente, indemnitas petitorum pro modo litis, quae in altercationem fuerit adducta, de tuis facultatibus sarcietur. DAT. IX KAL. NOVEMB. SIRM(IO) CONSTANTINO A. V ET LICINIO C. CONSS. Interpretatio. Si repetentem iudex per negligentiam usque eo distulerit, ut causam suam transactis legitimis temporibus perdat, omnia, quaecumque in illius iudicio iuste sibi potuit vindicare, ei de ipsius iudicis facultatibus, habita aestimatione, reddantur.
- 23 oktober 319 IDEM A. AD FELICEM PRAESIDEM CORSICAE. Cum sex menses transcurrerint, breves omnium negotiorum ab officio tuo descripti commeent ad scrinia eminentissimae praefecturae, ut his recensitis et ad scrinia nostra perlatis pandatur, quis iudicum et in quibus discingendis causis fidelem operam praestiterit, quo vel dignus praemium mereatur vel neglegens coercionem incurrat: adeundi tuum iudicium de negligentia vel avaritia tui officii data provincialibus facultate. De eo sane, qui pretio depravatus aut gratia perperam iudicaverit, ei vindicta quem laeserit non solum existimationis dispendiis, sed etiam litis discrimine praebeatur. DAT. IX K. NOV. Destituuntur negotia et temporibus sui[s] excidunt, dum advocati per multa officia et diversa secretaria rap[i]untur; ideoque censuimus, ne hi, qui semel protestati fuerint, quod ap[ud] te causas acturi sunt, apud alium iudicem agendi habeant potest[a]tem. P(ROPOSITA) K. NOV. SERDICAE CONST(ANTINO) A. V ET LICINIO C. CONSS.
- 17 november 319 Imp. Constantinus a. ad Verinum vicarium Africae. Si quis in parentis aut filii aut omnino affectionis eius, quae nuncupatione parricidii continetur, fata properaverit, sive clam sive palam id fuerit enisus, neque gladio, neque ignibus, neque ulla alia solenni poena subiugetur, sed insutus culeo et inter eius ferales angustias comprehensus serpentum contuberniis misceatur et, ut regionis qualitas tulerit, vel in vicinum mare vel in amnem proiciatur, ut omni elementorum usu vivus carere incipiat, ut ei coelum superstiti, terra mortuo auferatur. DAT. XVI KAL. DEC. LICINIO V ET CRISPO C. CONSS. ACC. PRID. ID. MART. KARTHAGINE, CONSTANTINO A. V ET LICINIO C. CONSS.
- Interpretatio. Si quis patrem matrem, fratrem sororem, filium filiam aut alios propinquos occiderit, remoto omnium aliorum genere tormentorum, facto de coriis sacco, qui culeus nominatur, in quo quum missus fuerit, cum ipso etiam serpentes

claudantur: et si mare vicinum non fuerit, in quolibet gurgite proiciatur, ut tali poena damnatus nullo tempore obtineat sepulturam.

9565

20 november 319 Idem a. ad Pacatianum vicarium Brittaniarum. Unusquisque decurio pro ea portione conveniatur, in qua vel ipse vel colonus vel tributarius eius convenitur et colligit; neque omnino pro alio decurione vel territorio conveniatur. Id enim prohibitum esse manifestum est et observandum deinceps, quo iuxta hanc nostram provisionem nullus pro alio patiatur iniuriam. DAT. XII KAL. DECEMB. CONSTANTINO A. ET LICINIO C. CONSS.

9570

27 november 319 Imp. Constantinus a. ad Ianuarinum Pf. U. Si post strepitum accusationis exortae abolitio postuletur, causa novae miseracionis debet inquiri, ut, si citra depectionem id fiat, postulata humanitas praebeatur; sin aliquid suspicionis exstiterit, quod manifestus reus depectione celebrata legibus subtrahatur, redemptae miseracionis vox minime admittatur, sed adversus nocentem reum, inquisitione facta, poena competens exseratur. DAT. VI KAL. DEC. SERDICA, CONSTANTINO A. V ET LICINIO C. CONSS.

9575

Interpretatio. Si quem poenituerit accusare criminaliter et inscriptionem fecisse de eo, quod probare non potuerit, si ei cum accusato innocente convenerit, invicem se absolvant. Si vero iudex eum, qui accusatus est, criminosum esse cognoverit et inter reum et accusatorem per corruptionem de absolutione reatus convenerit, is, qui reus probatur, remoto colludio, poenam excipiat legibus constitutam.

9580

9585

1 december 319 Imp. Constantinus a. Rufino Pf. P. Si decurio sine liberis intestatus diem vitae solverit, cui neque voluntas postrema legibus fulta, neque alio iure gradu proximo heres exstiterit, bona eius curiae suae commodis cedant, id est ordinis utilitati proficiant, cuius corpori fatali necessitate exemptus est, nulli praebenda licentia postulandi haec bona ut vacantia de nostra clementia, etiamsi revera et testamentum et successor deesse legitimus approbetur; omni etiam beneficio, si quod fuerit impetratum, protinus infirmando. DAT. KAL. DEC. SIRMIO, CONSTANTINO A. V ET LICINIO CAES. CONSS.

9590

Interpretatio. Si curialis intestatus moriens neque filios neque proximos derelinquat, curia, cuius ordini subducitur, quicquid reliquerit, vindicabit, ita ut nullus audeat ea quasi bona caduca a principibus postulare. Quod si fecerit, non valebit: nam testamentum faciendi curialibus lex ista tribuit potestatem.

9595

1 december 319 Imp. Constantinus a. ad populum. Comprimatur unum maximum humanae vitae malum, delatorum execranda perniciēs, et inter primos conatus in ipsis faucibus stranguletur, et amputata radicibus invidiae lingua vellatur, ita ut iudices nec calumniam nec vocem prorsus deferentis admittant; sed si qui delator exstiterit, capitali sententiae subiugetur. DAT. ET PP. IN FORO TRAIANI KAL. DEC., CONSTANTINO A. V ET LICINIO C. CONSS.

9600

Interpretatio. Delatores dicuntur, qui aut facultates prodiderint alienas aut caput impetierint alienum. Quicumque delator cuiuslibet rei exstiterit, in ipso prodicionis initio a iudice loci correptus continuo stranguletur, et ei incisa radicibus lingua tollatur, ut si quis proditor futurus est, nec calumnia nec vox illius audiat.

9605

13 december 319 Imp. IDEM A. CREPEREIO DONATIANO. Rescripta, quibus usi non fuerint qui in fata concedunt, heredes possunt allegare, ut congrue impetrata successoribus emolumenta adquirant. P(RO)P(OSITA) ID. DECEMB. CONSTANT(INO) A. V ET LICINIO C. CONSS.

9610

26 december 319 IDEM A. AD PROCULUM. Et publicae disciplinae interest et proconsulari convenit dignitati, ut publicarum exactionum ceterarumque rerum curam et notitiam ad tuam redigas potestatem, ita ut non officialium instructione et voce fraudulenta contentus sis, sed ipsorum iudicum curam responsionemque condiscas praefecti annonae et rationalium, si fidelis est ea instructio. Ita enim provincialibus contra iniquas exactiones poterit subveniri. DAT. VII K. IAN. CONSTANTINO A. V ET LICINIO CAES. CONSUL.

9615

9620

26 december 319 Imp. Constantinus a. ad Proculum. Preces et impetrata rescripta non placet admitti, si decisae semel causae fuerint iudiciali sententia, quam provocatio nulla suspendit, sed eos, qui tale rescriptum meruerint, etiam limine iudiciorum expelli. 9675 Defining the precise process for new motions.
- 320 CONSTANTINO A. VI ET CONSTANTINO C. CONSS.
31 januari 320 IMP. CONSTANTINUS A. AD POPULUM. Qui iure caelibes habebantur, imminentibus legum terroribus liberentur adque ita vivant, ac si numero maritorum matrimonii foedere fulcirentur, sitque omnibus aequa condicio capessendi quod quisque mereatur. Nec vero quisquam orbus habeatur: proposita huic nomini damna non noceant. Quam rem et circa feminas aestimamus earumque cervicibus inposita iuris imperia velut quaedam iuga solvimus promiscue omnibus. Verum huius beneficii maritis et uxoribus inter se usurpatio non patebit, quorum fallaces plerumque blanditiae vix etiam opposito iuris rigore cohibentur, sed maneat inter istas personas legum prisca auctorita[s]. DAT PRID. KAL. FEB. SERDICAЕ, P(RO)P(OSITA) KAL. APRIL. ROM(AE)
9685 CONSTANTINO A. VI ET CONSTANTINO. C. CONSS.
- 31 januari 320 CT 8.16.1 Constantine
9690 Laws passed in former times which punished celibacy and childlessness are now repealed. This applies to women as well.
- 1 februari 320 Idem a. ad populum. Nemo carcerem plumbatarumque verbera aut pondera aliaque ab insolentia iudicum repperta supplicia in debitorum solutionibus vel a perversis vel ab iratis iudicibus expavescat. Carcer poenaliū, carcer hominū

- 9695 noxiorum est officialium et cum denotatione eorum iudicum, quorum de officio
cohercitiones esse debebunt, qui contra hanc legem admiserint. Securi iuxta eam
transeant solutores: vel certe, si quis tam alienus ab humano sensu est, ut hac
indulgentia ad contumaciam abutatur, contineatur aperta et libera et in usus hominum
constituta custodia militari. Si in obdurata nequitia permanebit, ad res eius
9700 omnemque substantiam cives eius accedant, solutionis obsequio cum substantiae
proprietate suscepto. Qua facultate praebita omnes fore credimus proniores ad
solvenda ea, quae ad nostri usus exercitus pro communi salute poscuntur. DAT. KAL.
FEB. CONSTANTINO A. VI ET CONSTANTIO CAES. CONSS.
- 9705 20 februari 320 Idem a. ad edictum. Filios decurionum, qui decem et octo annorum
aetate vegetantur, per provinciam Karthaginem muneribus civicis adgregari
praecipimus. Neque enim opperendum est, ut solvantur familia et sacris explicentur,
cum voluntates patrum praeiudicare non debeant utilitatibus civitatum. PROPOSITA X
KAL. MART. CONSTANTINO A. VI ET CONSTANTIO C. CONSS.
- 9710 25 februari 320 Idem a. ad Aelianum proconsulem Africae. Licet servantur in officio
tuo et vicarii exemplaria libellorum, qui in Africa oblatis sunt, tamen eos quorum
nomina continent metu absolutos securitate perfrui sinas solumque moneas, ut ab omni
non solum crimine, sed etiam suspitione verisimili alieni esse festinent. nam qui
9715 accusandi fiduciam gerit, oportet comprobare, nec occultare quae scierit, quoniam
praedicabilis erit ad dicationem publicam merito perventurus. PROPOSITA V KAL. MAR.
CARTHAGINE CONSTANTINO A. VI ET CONSTANTINO C. CONSS.
- 9720 1 maart 320 IDEM A. cum introisset principia et salutatus esset a praefectis et
tribunis et viris eminentissimis, adclamatum est: Auguste Constantine, dii te nobis
servent: vestra salus nostra salus: vere dicimus, iurati dicimus. Adunati veterani
exclamaverunt: Constantine Aug, quo nos veteranos factos, si nullam indulgentiam
habemus? Constantinus A. dixit: Magis magisque conveteranis meis beatitudinem augere
debeo quam minuere. Victorinus veteranus dixit: muneribus et oneribus universis locis
9725 conveniri non sinamur. Constantinus A. dixit: Apertius indica; quae sunt maxime
munera, quae vos contumaciter gravant? Universi veterani dixerunt: ipse perspicis
scilicet. Constantinus A. dixit: iam nunc munificentia mea omnibus veteranis id esse
concessum perspicuum sit, ne quis eorum nullo munere civili neque in operibus
publicis conveniatur neque in nulla conlatione neque a magistratibus neque
9730 vectigalibus. In quibuscumque nundinis interfuerint, nulla proponenda dare debebunt.
Publicani quoque, ut solent agentibus super compellere, ab his veteranis amoveantur;
quiete post labores suos perenniter perfruantur. Fisco nostro quoque eadem epistula
interdiximus, ut nullum omnino ex his inquietaret, sed liceat eis emere et vendere,
ut integra beneficia eorum sub saeculi nostri otio et pace perfruantur et eorum
9735 senectus quiete pos[t] labores perfruatur. Filios quoque eorum defendant
decertationes, quae in patris persona fuerunt, quosque optamus florescere
sollicitius, ne si contumaces secundum eosdem veteranos comprobari potuerint,
decimentur his sententiis, cum praesidali officio adiungentur. Probabilius iussionem
meam curabunt ergo stationarii milites cuiusque loci cohortis, et parentes eorum
9740 desperationem, et ad sanctimoniam conspectus mei sine ulla deliberatione remittere,
ut sint salvi, cum senuas consecuntur poenas indulgentiae. DAT. KAL. MART. IN
CIVITATE VELOVOCORUM CONSTANTINO AUG. VI ET CONSTANTINO CAES. CONSS.
- 9745 1 March 320 The same A., when he had entered the palace and had been greeted by the
prefects and tribunes and most eminent men, was called out: Augustus Constantine, may
the gods preserve you to us: your health is our health: we say it truly, we say it as
sworn men. The assembled veterans exclaimed: Constantine Aug, how have we become
veterans, if we have no indulgence? Constantine A. said: I must increase the
happiness of my fellow veterans more and more than diminish it. Victorinus the
9750 veteran said: We are not allowed to be gathered together in all places with duties
and burdens. Constantine A. said: Tell me more clearly; what are the duties that most
stubbornly burden you? All the veterans said: You yourself see for yourself.
Constantine A. said: Now let it be clear that my munificence has been granted to all
veterans, that none of them may be gathered together in any civil duty or in public
9755 works or in any contribution, either by magistrates or taxes. In whatever fairs they
may attend, they must not give any offerings. The publicans, too, as they are wont to
compel those who act on their own, should be removed from these veterans; they should
enjoy their labors in peace forever. We have also forbidden our treasury by the same
letter, so that none of them should be disturbed at all, but that they may be
9760 permitted to buy and sell, so that they may enjoy their entire benefits under the

leisure and peace of our age and that their old age may be able to enjoy their labors in peace. Their sons should also be defended by the contests which were in the person of their father, whom we wish to flourish more anxiously, lest if they could be proved to be rebellious according to the same veterans, they should be decimated by these sentences when they are added to the presidential office. It is more likely that the stationary soldiers of each local cohort will take care of my order, and their parents will despond and send my presence to sanctity without any deliberation, so that they may be safe, since they are suffering the penalties of indulgence in old age. DATED. KAL. MART. IN THE CITY OF VELOVOCORUM CONSTANTINE AUG. VI AND CONSTANTINE CAES. CONSS.

9 maart 320 IMP. CONSTANTINUS A. AELIANO P(RAEFECTO) U(RBI). Religiosis vocibus [senat]us amplissimi persuasi decernimus, ut quaestor[es] ea praerogativa utantur, qua consules et praetor[es], ita ut, si quis intra annum sextum decimum nomin[at]us fuerit absens, cum editio muneris celebratur, condemnationis frumentariae nexibus minime teneatu[r,] quoniam memoratae aetati placet hoc privilegium suffragari. DAT. VII ID. MART. SIRMI CONSTANTINO A. VI ET CONSTANTIO CAES. CONSS.

1 april 320 Imp. Constantinus a. ad populum. pr. Si quis nihil cum parentibus puellae ante depectus invitam eam rapuerit vel volentem abduxerit, patrocinium ex eius responsione sperans, quam propter vitium levitatis et sexus mobilitatem atque consilii a postulationibus et testimoniis omnibusque rebus iudiciariis antiqui penitus arcuerunt, nihil ei secundum ius vetus prosit puellae responsio, sed ipsa puella potius societate criminis obligetur.

1. Et quoniam parentum saepe custodiae nutricum fabulis et pravis suasionibus deluduntur, his primum, quarum detestabile ministerium fuisse arguitur redemptique discursus, poena immineat, ut eis meatus oris et faucium, qui nefaria hortamenta protulerit, liquentis plumbi ingestione claudatur.

2. Et si voluntatis assensio detegitur in virgine, eadem, qua raptor, severitate plectatur, quum neque his impunitas praestanda sit, quae rapiuntur invitae, quum et domi se usque ad coniunctionis diem servare potuerint et, si fores raptoris frangerentur audacia, vicinorum opem clamoribus quaerere seque omnibus tueri conatibus. sed his poenam leviolem imponimus solamque eis parentum negari successionem praecipimus.

3. Raptor autem indubitate convictus si appellare voluerit, minime audiatur.

4. Si quis vero servus raptus facinus dissimulatione praeteritum aut pactione transmissum detulerit in publicum, Latinitate donetur, aut, si Latinus sit, civis fiat Romanus: parentibus, quorum maxime vindicta intererat, si patientiam praebuerint ac dolore compresserint, deportatione plectendis.

5. Participes etiam et ministros raptoris citra discretionem sexus eadem poena praecipimus subiugari, et si quis inter haec ministeria servilis condicionis fuerit deprehensus, citra sexus discretionem eum concremari iubemus. DAT. KAL. APRIL. AQUILEIA, CONSTANTINO A. VI ET CONSTANTINO C. CONSS.

Interpretatio. Si cum parentibus puellae nihil quisquam ante definiat, ut eam suo debeat coniugio sociare, et eam vel invitam rapuerit vel volentem, si raptori puella consentiat, pariter puniantur. Si quis vero ex amicis aut familia aut fortasse nutrices puellae consilium raptus dederint aut opportunitatem praebuerint rapiendi, liquefactum plumbum in ore et in faucibus suscipiant, ut merito illa pars corporis concludatur, de qua hortamenta sceleris ministrata noscuntur. Illae vero, quae rapiuntur invitae, quae non vocibus suis de raptore clamaverint, ut vicinorum vel parentum solatio adiutae liberari possent, parentum suorum eis successio denegetur. Raptori convicto appellare non liceat, sed statim inter ipsa discussionis initia a iudice puniatur. Quod si fortasse raptor cum parentibus puellae paciscatur, et raptus ultio parentum silentio fuerit praetermissa, si servus ista detulerit, Latinam percipiat libertatem, si Latinus fuerit, civis fiat Romanus. Parentes vero, qui raptori in ea parte consenserint, exsilio deputentur. Qui vero raptori solatia praebuerint, sive viri sive feminae sint, ignibus concrementur.

1 april 320 Imp. Constantine a. to the people. If anyone, having previously had nothing to do with the parents of a girl, abducts her against her will or takes her away willingly, hoping for protection from her response, which the ancients completely excluded from requests and testimonies and all judicial matters because of the vice of levity and mobility of sex and counsel, according to the ancient law the girl's response will not benefit him, but the girl herself will rather be bound by association with the crime.

1. And since the guardians of parents are often deceived by the fables and perverse persuasions of nurses, let the first of these, whose detestable ministry is argued to

have been and redeemed discourse, be threatened with punishment, so that the passages of the mouth and throat of those who uttered the nefarious exhortations will be closed by the ingestion of molten lead.

9830 2. And if the consent of the will is discovered in the virgin, he shall be punished with the same severity as the abductor, since impunity should not be granted to those who are abducted against their will, since they were able to keep themselves at home until the day of union and, if the doors of the abductor were broken down by the audacity of the abductor, to seek the help of their neighbors by shouting and to
9835 protect themselves by all means. But we impose a lighter punishment on these, and we order that only the succession of their parents be denied to them.

3. But if the abductor, convicted beyond doubt, wishes to appeal, he shall not be heard at all.

4. But if any abducted slave, by dissimulation, brings a crime that has passed or
9840 been passed on by agreement into public view, he shall be granted Latin citizenship, or, if he is a Latin, he shall be made a Roman citizen: the parents, whose revenge was most important, shall be punished with deportation, if they have shown patience and suppressed their pain.

5. We also order the accomplices and servants of the abductor to be subjected to the same punishment, regardless of their sex, and if anyone is caught in the act of servile service, we order him to be burned, regardless of his sex. DAT. KAL. APRIL. AQUILEIA, CONSTANTINO A. VI AND CONSTANTINO C. CONSS.

Interpretation. If anyone does not previously agree with the girl's parents that he should marry her, and he abducts her either against her will or willingly, if the
9850 girl consents to the abductor, they shall be punished in the same way. But if any of the girl's friends or family or perhaps the girl's nurses have advised the abduction or provided the opportunity for the abduction, they shall receive molten lead in their mouths and throats, so that that part of the body from which the exhortations to the crime are known to have been given may be deservedly closed. But those who are
9855 abducted against their will, who do not cry out with their voices about the abductor, so that they may be freed with the help of the consolation of their neighbors or parents, shall be denied the succession of their parents. A rapist convicted of a crime shall not be allowed to appeal, but shall be punished by the judge immediately at the very beginning of the trial. But if perhaps the rapist makes peace with the
9860 girl's parents, and the abductee's parents' revenge is passed over in silence, if the slave has brought these things, he shall receive Latin freedom, if he is a Latin, he shall become a Roman citizen. But the parents who have consented to the rapist in that matter shall be sent into exile. But those who have given the rapist comfort, whether they be men or women, shall be burned at the stake.

9865 4 april 320 Imp. Constantinus a. ad Bassum vicarium Italiae. Posta alia: ubi puellae ad annos adultae aetatis accesserint et adspirare ad nuptias coeperint, tutores necesse habeant comprobare, quod puellae sit intemerata virginitas, cuius coniunctio postulatur. Quod ne latius porrigatur, hic solus debet tutorem nexus adstringere, ut
9870 se ipsum probet ab iniuria laesi pudoris immunem. Quod ubi constiterit, omni metu liber optata coniunctione frui debeat; officio servaturo, ut, si violatae castitatis apud ipsum facinus haereat, deportatione plectatur, atque universae eius facultates fisci viribus vindicentur, quamvis eam poenam debuerit sustinere, quam raptori leges imponunt. DAT. PRID. NON. APRIL. AQUILEIA, CONSTANTINO A. VI ET CONSTANTINO C. CONSS.
9875 Interpretatio. Ubi primum puellae sub tutore viventes ad annos pervenerint nuptiales, et quicumque petitor accesserit, non prius puella iungatur, nisi virginitas illius, quod a tutore servata sit, fuerit approbata: nam si ab ipso tutore convincitur eius violata virginitas, statim exsilio deputetur, et res illius omnes fiscus usurpet.

9880 26 april 320 Idem a. ad Aelianum proconsulem Africae. Cum antehac lege de appellationibus data statutum sit, ne quis a praeiudicio vel ab executione interponeret provocationem neve huiusmodi appellatio ab his, qui vice nostra iudicant, admittatur, ne in perniciem plurimorum interpositis a praeiudicio appellationibus vel moratoriis quibusdam frustrationibus interiectis litigia
9885 protrahantur, tamen nunc poenam addi placuit, ut intellegant universi principalis negotii disceptatione causas suas munire debere et non ab ipsis quodammodo primae interlocutionis exordiis vel ab executionibus provocare, cum et illis, qui impatienter ab articulo appellandum putaverint, post cognitionem totius causae liceat appellare et his, qui sero ab executionibus provocant, facultas appellandi minime
9890 fuerit denegata. Si quis igitur tali usus appellatione fuerit in tuo iudicio deprehensus, ipsum quidem XXX follium poena multes, causam autem universam, eius dumtaxat, qui a praeiudicio vel ab executione temere appellaverit, sine ulla

- dilatione discingas, cum in nostro auditorio dari minime dilationem oporteat, interpositae appellationis tempore sufficiente litigatoribus ad perferendam
9895 instructionem plenissimam. PROPOSITA VI KAL. MAI. KARTHAGINE CONSTANTINO A. VII ET CONSTANTIO CAES. CONSS.
- 19 mei 320 Idem a. ad Dometium Dracontium magistrum privatae rei Africae. Cum fiscus litem patiaturs aut inferat, anni spatium ad determinandam causam spectari
9900 oportet, quia hoc ad instruendum satis est et diutius non oportet privatorum sive fisci emolumenta fatigari. DAT. XIV KAL. IUN. SERDICAE CONSTANTINO A. VI ET CONSTATE C. CONSS.
- 23 mei 320 IMP. CONSTANTINUS A. AD SEVERUM P(RAEFECTUM) U(RBI). Omnes pala(t)i nos, quos edicti nostri iam dudum certa privileg(ia) superfundunt, rem, si quam, dum in palatio nost(ro) morantur, vel parsimonia propria quaesiv(e)rint vel donis nostris fuerint consecuti, ut ca(stren)se peculium habere praecipimus. Quid enim tam (ex) castris est, quam quod nobis consciis ac prope (sub) conspectibus nostris acquiritur? Sed nec alieni su(nt) a pulvere et labore castrorum, qui signa nostra comitantur, qui praesto sunt semper actibus, quos intentos eruditis studiis itinerum prolixitas et expeditionum difficultas exercet. Ideoque palatini nostri, qui privilegiis edicti uti potuerint, peculia sua praecipua retineant, quae, dum in palatio constituti sunt, aut abore, ut dictum est, proprio aut dignatione nostra quaesiverint. P(RO)P(OSITA) X KAL. IUN. CONSTANTINO A. VI ET CONSTANTIO CAES. CONSS.
9915
- 26 mei 320? CT 16.2.10 Constantine
Clerics of the church are exempt from tax payments and menial compulsory public services, as are their wives, children, and servants. This applies even if they made the money by trade. This is an incentive to join the clergy. It is assumed their money will be used to help the poor, which is why it is not taxed. [The date given for this law is 353. But the consuls listed do not match those living in 353, and both Pharr and Coleman-Norton have chosen to put this law in 320.]
9920
- 30 juni 320 IMP. CONSTANTINUS A. AD FLORENTIUM RATIONALEM. In quacumque causa reo exhibito, sive accusator exsistat sive eum publicae sollicitudinis cura perduxerit, statim debet quaestio fieri, ut noxius puniatur, innocens absolvatur. Quod si accusator aberit ad tempus aut sociorum praesentia necessaria videatur, id quidem debet quam celerrime procurari. Interea vero exhibito non ferreas manicas et inhaerentes ossibus mitti oportet, sed prolixiores catenas, ut et cruciatio desit et permaneat fida custodia. Nec vero sedis intimae tenebras pati debet inclusus, sed usurpata luce vegetari et, ubi nox geminaverit custodiam, vestibulis carcerum et salubribus locis recipi ac revertente iterum die ad primum solis ortum ilico ad publicum lumen educi, ne poenis carceris perimatur, quod innocentibus miserum, noxiis non satis severum esse cognoscitur. Illud etiam observabitur, ut neque his qui stratorum funguntur officio neque ministris eorum liceat crudelitatem suam accusatoribus vendere et innocentes intra carcerum saepta leto dare aut subtractos audientiae longa tabe consumere. Non enim existimationis tantum, sed etiam periculi metus iudici imminebit, si aliquem ultra debitum tempus inedia aut quocumque modo aliquis stratorum exhausserit et non statim eum penes quem officium custodiae est adque eius ministros capitali poena subiecerit. DAT. PRID. CAL. IUL. SERDICAE

9935
9940 CONSTANTINO A. VI ET CONSTANTINO CAES. CONSS.
- 8 juli 320 Idem a. ad Crispinum. Si quis per absentiam nominatus ad provocationis auxilium cucurrerit, ex eo die interponendae appellationis duorum mensum tempora ei computanda sunt, ex quo contra se celebratam nominationem didicisse se monstraverit. Nam praesenti, qui factam nominationem cognovit et appellare voluerit, statim debet duorum mensum spatium computari. DAT. VIII ID. IUL. CONSTANTINO A. VI ET CONSTANTINO C. CONSS.
9945
- 8 July 320 The same a. to Crispinus. If anyone nominated in absentia runs to the aid of the challenge, the time for filing an appeal of two months is to be calculated for him from the day on which he shows that he learned of the nomination made against him. For a person present, who knows of the nomination made and wishes to appeal, the time for two months must immediately be calculated. DAT. 8 ID. IUL. CONSTANTINE A. VI AND CONSTANTINE C. CONSS.
9950
9955
- 18 juli 320 Idem a. ad Bassum praefectum praetorio. Cum constitutio emissa praecipiat nullum deinceps decurionem vel ex decurione progenitum vel etiam instructum idoneis facultatibus adque obeundis publicis muneribus opportunum ad

clericorum nomen obsequiumque confugere, sed eos de cetero in defunctorum dumtaxat
 9960 clericorum loca subrogari, qui fortuna tenues neque muneribus civilibus teneantur
 obstricti, cognovimus illos etiam inquietari, qui ante legis promulgationem
 clericorum se consortio sociaverint. Ideoque praecipimus his ab omni molestia
 liberatis illos, qui post legem latam obsequia publica declinantes ad clericorum
 9965 numerum confugerunt, procul ab eo corpore segregatos curiae ordinibusque restitui et
 civilibus obsequiis inservire. PROPOSITA XV KAL. AUG. CONSTANTINO A. VI ET CONSTANTIO
 CAES. CONSS.

18 juli 320? CT 16.2.3 Constantine

This law references a previous law, stating that no decurion or anyone else capable
 9970 of fulfilling compulsory public service should be admitted to the clergy, but only
 those from the poorer ranks should take ecclesiastical office. The previous law is
 either non extant, or a textual emendation is necessary (see note). This law
 clarifies that the restriction of decurions becoming clergy was not retroactive, and
 9975 so decurions who had joined the clergy before the promulgation of the first law did
 not have to leave their positions in the church. [Seek and Elliott change the year of
 this law and of 16.2.6 (listed on June 1, 320) to 329. According to their emendation,
 the previously mentioned law in 16.2.3 is actually 16.2.6, and the decurions were not
 restricted from the clergy until 329.]

28 juli 320 IMP. CONSTANT(INUS) A. FURIO FELICI. Advocatorum errores in competenti
 iudicio litigatoribus non praeiudicant. DAT. V KAL. AUG. CONSTANTINO A. VI ET
 9980 CONSTANTINO C. CONSS.

Interpretatio. Advocatus, si in suscepti causa aliquid in praeiudicium per errorem
 dixerit, praeiudicare ei, a quo adhibitus est, nullatenus debet: si continuo de ipso
 9985 errore fuerit reclamatum.

26 augustus 320 Idem a. ad populum. Cum ius vetus ingenuas fiscalium servorum
 contubernio coniunctas ad decoctionem natalium cogat nulla vel ignorantiae venia
 tributa vel aetati, placet coniunctionum quidem talium vincula vitari, sin vero
 9990 mulier ingenua vel ignara vel etiam volens cum servo fiscali convenerit, nullum eam
 ingenui status damnum sustinere, subolem vero, quae patre servo fiscali, matre
 nascetur ingenua, mediam tenere fortunam, ut servorum liberi et liberarum spurii
 latini sint, qui, licet servitutis necessitate solvantur, patroni tamen privilegio
 tenebuntur. Quod ius et in fiscalibus servis et in patrimoniorum fundorum originariis
 9995 et ad emphyteuticaria praedia et qui ad privatarum rerum nostrarum corpora pertinent
 servari volumus. Nihil enim rebus publicis ex antiquo iure detrahimus nec ad
 consortium huius legis copulamus urbium quarumcumque servitia; volumus ut civitates
 integram teneant nec [imminutam] interdicti veteris potestatem. Si vel error
 improvidus vel simplex ignorantia vel aetatis infirmiae lapsus in has contubernii
 10000 plagas depulerit, haec nostris sanctionibus sit excepta. DAT. VI KAL. SEPT. SERDICA
 CONSTANTINO A. VII ET CONSTANTIO CONSS.

Interpretatio. Ingenua, quae se fiscali servo iunxerit, sive sciens sive ignara, ipsa
 manebit libera, filii vero eius et Latini et spurii erunt, qui, quamvis liberi sint,
 iuri tamen obtingunt patronorum. Idem est et si servo emphyteuticario se sociarit
 10005 ingenua vel patrimoniali aut ex privata re principum excepto iure rei publicae, quod
 lex praesens voluit conservatum.

30 september 320 Imp. Constantinus a. ad Maximum rationalem Africae. Secandorum
 marmorum ex quibuscumque metallis volentibus tribuimus facultatem, ita ut, qui
 10010 caedere metallum atque ex eo facere quodcumque decreverint, etiam distrahendi habeant
 liberam potestatem. DAT. PRID. KAL. OCTOB. CONSTANTINO A. VI ET CONSTANTINO CAES.
 CONSS.

12 januari 321 Sane etiam ex eo querimoniae litigantium oriuntur, quod a vobis, qui imaginem principalis disceptationis accipitis, appellationum adminicula respuuntur. Quod inhiberi necesse est. Quid enim acerbius indigniusque est, quam

indulta quempiam potestate ita per iactantiam insolescere, ut despiciatur utilitas provocationis, opinionis editio denegatur, refutandi copia respuatur? Quasi vero appellatio ad contumeliam iudicis, non ad privilegium iurgantis inventa sit vel in hoc non aequitas iudicantis, sed litigantis debeat considerari utilitas. DAT. PRID. ID. IAN. SIRMIO CRISPO II ET CONSTANTINO II CC. CONSS.

12 januari 321 IMP. CONSTANT(INUS) A. AD MAXIMUM. Iudicantem oportet cuncta rimari et ordinem rerum plena inquisitione discutere, interrogandi ac proponendi adiciendique patientia praebita ab eo: ut, ubi actio partium limitata sit, contentiones non occursu iudicis, sed satietate altercantium metas compresserint, saepius requiratur et crebra interrogatione iudicis frequentetur, ne quid novi resideat, quod adnecti allegationibus in iudiciaria contentione conveniat, cum ad alterutrum hoc proficiat, sive definienda sit causa per iudicem sive ad nostram scientiam referenda. Nec ad nos mittatur aliquid, quod plena instructione indigeat. DAT. PRID. ID. IANUAR. SIRMIO CRISPO II ET CONSTANTINO II CC. CONSS.

Interpretatio. Iudex quum causam audire coeperit, litigatorum assertiones vel responsiones patienter accipiat et omnia plena discussione perquirat. Nec prius litigantibus sua sententia velit obviare, nisi quando ipsi peractis omnibus, iam nihil amplius in contentione habuerint, quod proponant: et tam diu actio ventiletur, quousque rei veritas invenitur. Frequenter interrogari oportet, ne aliquid praetermissum fortasse remaneat: quia si apud ipsum finienda causa est, totum debet agnoscere. Sin vero ita res exigit, ut ad principis notitiam deferatur, plena discussis omnibus data relatione debet esse suggestio etc.

20 januari 321 [IMP. C]ONSTANTINUS A. AD SEVERUM P(RAE)FECTUM U(RBI). Si quis iudicio nos[tr]o se adeptum codicillos adstruxerit et idem vel su[pe]rna codicillorum impressio vel scribura adstipuletur interior, tamen si ad hoc pecuniam constabit speratam, nihilominus reiectus in plebem, quo plus extorquere conatus est, abdicetur. Hos enim solos, qui intra [p]alatium versati sunt vel administrationibus functi, [ad] honores excipi oportebit ceteris cunctis exemptis et [cu]riis restitutis. Si qui tamen bonorum virorum suffra[gi]o nulla data pecunia vel provinciae legatione suscep[ta] nostris sunt obtutibus inlustrati, hi duumviratus, curas, [fla]monium provinciae lucrati cetera munerum publi[c]orum obire non abnuant. Qui vero coemptis procurationum administrationibus post lucra de fisco captata vacationem meruerunt, sive perfectissimi sunt sive inter egregiorum ordinem locumque constiterint, decuriones nominentur. Quibus illi quoque addendi sunt, qui neque ex administrationibus sunt et tamen ut perfectissimi delitescunt. DAT. X KAL. FEB. SIRMIO, ACC. NON. APRIL. CRISPO II ET CONSTANTINO II CC. CONSS.

6 februari 321 Imperator Constantinus. Liberi de inofficioso querellam contra testamentum parentum moventes probationes debent praestare, quod obsequium debitum iugiter, prout ipsius naturae religio flagitabat, parentibus adhibuerunt, nisi scripti heredes ostendere maluerint ingratos liberos contra parentes extitisse. 1. Sin autem mater contra filii testamentum inofficiosi actionem instituat, inquire diligenter iubemus, utrum filius nulla ex iusta causa laesus matrem novissima laeserit voluntate nec luctuosam ei et legitimam reliquerit portionem, ut testamento remoto matri successio deferatur. 2. Si tamen mater inhonestis factis atque indecentibus machinationibus filium forte obsedit insidiisque eum vel clandestinis vel manifestis appetiit vel inimicis eius suas amicitias copulavit atque in aliis sic versata est, ut inimica eius potius quam mater crederetur, ut hoc probato invita etiam adquiescat filii voluntati. CONST. A. AD CLAUDIUM PRAES. DACIAE. D. VIII ID. FEBR. SERDICA CRISPO II ET CONSTANTINO II CC. CONSS.

6 februari 321 IDEM A. AD CLAUDIUM PRAESIDEM DACIAE. Licet legum auctoritas filiorum potius quam matrum personis voluit laborem incumbere, ut de inofficioso agentes intra praefinita tempora doceant nullo suo vitio factum nec offensionem se parentibus praestitisse, sed iugiter obsecutos, ut naturae ipsius religio flagitabat, disciplinam inlaesam inoffensamque servasse, ut his probatis remove parentum valeant testamenta: tamen si mater contra filii testamentum inofficiosi actionem instituat, inquire diligenter iubemus, utrum filius nulla ex iusta causa laesus matrem novissima laeserit voluntate nec luctuosam ei et legitimam reliquerit portionem, ut testamento remoto matri successio deferatur, si tamen defuncto consanguinei agnati non sint superstites, an mater inhonestis factis atque indecentibus votis filium forte obsedit insidiisque eum vel clandestinis vel manifestis adpetiit vel inimicis eius suas amicitias copulavit atque in aliis sic

versata est, ut inimica eius potius quam mater crederetur, ut hoc probato invita etiam adquiescat filii voluntati. DAT. VIII ID. FEBRUAR. SERDIC(AE) CRISPO II ET CONSTANTINO II CC. CONSS.

10160 Interpretatio. Quamvis leges filiis, si praetermissi testamento fuerint, maiorem quam matribus agendi dederint potestatem, ut de inofficioso matris testamento proponant, id est, si quarta debitae portionis suae filio dimissa non fuerit: ita tamen, si probare potuerint, quod matris in nullo laeserint pietatem, sed se obsequium, ut decuit, praestitisse: sic testamentum matris, in quo praetermissi fuerint, non
10165 valebit. Nam si mater contra testamentum filii, quod inofficiosum dixerit, agat, debet diligenter requiri, si contra filium mater nihil egisse probatur, aut si nullis insidiis vel publice vel secrete eum laedere fortasse tentaverit: nec forsitan consilium adversus filium inimicis suis, quod impium est, auxiliumque praestiterit. Quod si factum non fuerit, potest remove praetermissa mater, quia ei quartam de
10170 rebus suis portionem filius non dimisit, quod filius fecerat testamentum: si tamen filio fratres consanguinei agnati, id est uno patre nati, aut eorum filii per virilem sexum non esse probantur. Nam si mater, ut superius dictum est, pro manifestis inimicitiiis suis praetermissa docebitur, invita adquiescat laesi filii voluntati.

10175 27 februari 321 Imp. Constantinus a. Petronio Probiano: pr. Res uxoris, quae vel successione qualibet vel emptione vel etiam largitione viri in eam ante reatum iure pervenerant, damnato marito, illibatas esse praecipio nec alieni criminis infortunio stringi uxorem, cum paternis maternisque ac propriis frui eam integro legum statu religiosum sit. Et donatio maritalis ante tempus criminis ac reatus collata in
10180 uxorem, quia pudicitiae praemio cessit, observanda est, tamquam si maritum eius natura, non poena subduxerit; capacitatis privilegio videlicet et modo inspecto, ut consideretur, quid capere potuit.
1. Si quid etiam in emancipatos liberos ante tempus criminis ac reatus patrem contulisse claruerit, integrum isdem et citra inquietudinem reservetur.
10185 2. Quod vero nec uxor nec emancipati liberi potuerint vindicare, captum et incorporatum ita ad me referri specialiter censeo, ut illud quoque addatur, utrum filios habeat qui damnatus est, simulque adiciatur, utrum iidem apud se ex causa donationis aliquid vindicarint.
3. Sed in his, qui fiscalibus actibus nexi sunt et pro ratiociniis proscribuntur et
10190 condemnantur, placuit, si quid proprium uxor habuit vel a marito datum, in quantum capere potuit, ante initum actum, ex quo origo fraudis ac vitii in iudicium deducta est, si quid deinde in emancipatos filios donatione collatum, antequam orto nexu suffugium potius quam munificentia frausque temptetur intemeratum aput accipientium iura persistere; nec quicquam fisco in qualibet causa teneatur obnoxium, nisi quod in
10195 dominio proprio, cum obligari ortus est, habuit vel quod agens tam suo quam uxoris vel filiorum vel cuiuscumque praeterea nomine comparavit.
4. Exceptis dumtaxat caesarianis, qui ab omni iuris beneficio excluduntur, nisi probata a me purgataque ratiocinia fuerint, ut quod innoxie habuerint transmittendi copiam habeant. DAT. III KAL. MART. SERDICAE CRISPO II ET CONSTANTINO II CC. CONSS.

10230 CONSS.
- 10235 9 april 321 IMP. CONSTANT(INUS) A. AD VERINUM. Omnes adulescentes, qui honestate
morum praediti paternam frugem vel maiorum patrimonia urbana vel rustica
conversatione rectius gubernare cupiunt et imperiali auxilio indigere coeperint, ita
demum aetatis veniam impetrare audeant, cum vicesimi anni clausae aetas adulescentiae
patefacere sibi ianuam coeperit ad firmissimae iuventutis ingressum: ita ut post
impetratam aetatis veniam iidem ipsi principale beneficium allegantes non solum
perscriptorum annorum numerum probent, sed etiam testibus advocatis honesta aut
simili aut potiore dignitate praeditis morum suorum instituta probitatemque animi
10240 testimonio vitae honestioris edoceant. Quod cum ea condicione effecerint, in
alienatione praediorum ius tantum legitimae aetatis optinebunt, quantum per annorum
dimensiones ac temporum leges et natura singulis quibusque deferre consuevit. Feminas
quoque, quarum aetas biennio viros non sera pubertate praecedit, servato etiam in hoc
temporis intervallo decem et octo annos egressas ius aetatis legitimae mereri posse
10245 sanximus: sed eas, quas morum honestas mentisque sollertia, quas certa fama
commendat. Has vero propter pudorem ac verecundiam in coetu publico demonstrari
testibus non cogimus, sed percepta aetatis venia annos tantum probare tabellis vel
testibus misso procuratore concedimus: ut etiam ipsae in omnibus contractibus tale
ius habeant, quale viros habere praescripsimus. Ita ut senatores apud gravitatis tuae
10250 officium de suis moribus et honestate perdoceant, perfectissimi apud vicariam
praefecturam, equites Romani et ceteri apud praefectum vigilum, navicularii apud
praefectum annonae. Cui aetati quoniam inter plenam perfectamque adulescentiam et
robustissimam iuventutem media est, firmatae aetatis appellationem inponimus, ut
prima aetas pueritiae sit, sequens adulescentiae, firmata haec tertia, quarta
10255 legitima, quinta senectus habeatur. In ipsis etiam contractibus hac appellatione
consignanda, ut non nudum nomen venditoris inseratur tabulis emptionum, sed ab illo,
qui firmatae aetatis sit et honestus vir habeatur, emisse illum significetur, et
venditorem esse firmatae aetatis: ita tamen, ut, quia spes adempta perfidiae est, et
in vendendis praediis diligentiores esse persistant qui beneficium meruerunt
10260 principale, nec praedia sine decreto alienent. DAT. V ID. APRIL. THESSAL(ONICA).
P(RO)P(OSITA) III KAL. IUN. ROM(AE) CRISPO II ET CONSTANTIO II CC. CONSS.
Interpretatio. Adolescentes, qui honestis moribus esse probantur et ad gubernandas
facultates suas idoneam cupiunt habere personam, oportet eos primum, antequam ad
legitimam aetatem perveniant, id est, ubi vir viginti annorum esse coeperit, auxilium
10265 principis implorare, et accepto huius rei beneficio, eo ordine apud testificationem
publicam allegare, ut probent, se viginti annorum impleisse curricula et honesta
conversatione transigere, et sic praedia sua in aliena iura cum decreti tamen
interpositione, transferre liberam habeant potestatem. Feminae vero, sicut biennio in
pubertate minores sunt, ita et transacto biennio, ubi ad xviii. annum pervenerint,
10270 eas tamen, quas morum et honestatis commendat opinio, non in publico annos probare
suos cogendae sunt, sed misso procuratore per scripturam annos eos, quos superius
diximus, se habere demonstrent et similem, quam viri in contractibus habeant
facultatem: ita ut qualis vel quam digna persona sit, apud talem iudicem haec, quae
dicta sunt, debeat approbare. Ergo quum fuerint post adulescentiam hac aetate
10275 firmati, in ipsis quoque scripturis vel venditionum instrumentis, honestos se et
firmatos aetate conscribant. Hoc tamen illis liceat, qui beneficium, ut diximus,
principis pro confirmanda aetate meruerint, ne praedia sua sine iussu iudicis vel
decreto, quod ex praecepto iudicum vel consensu curialium datur, alienare praesumant.
- 10280 11 april 321 Idem a. Menandro. Propter neglegentiam iudicum, qui imperialia
praecepta differunt, ad diversas provincias diversos misimus, qui ad scientiam
nostram referant, quae vel diligentia promota viderint vel desidia corrupta
culpaverint. Monendi autem iudices sunt, qui instaurare publica opera debent, ut de
effectis eis potius quam inchoatis ad nostram scientiam referant, nisi forte iusta
10285 ratione petendum sit aliquos, si forte defuerint, impensarum titulos provideri. De
rebus autem praecipuis maximisque, non de quibuscumque vilissimis nostrum debent
interpellare consilium. DAT. III ID. APRIL. SIRMI CRISPO II ET CONSTANTINO II CC.
CONSS.

- 10290 18 april 321 Imp. Constantinus a. ad Dometium Dracontium. Quotiens plures fundum patrimonialem possident, pro portionibus fieri a singulis non vetetur illatio. Quorundam enim probata industria ceterorum culpa poterit coherceri. DAT. XV KAL. MAI. SIRMI, ACCEPTA XV KAL. IUN. KARTHAGINE CRISPO II ET CONSTANTINO II CONSS.
- 10295 18 april 321 CT 4.7.1 Constantine
This law augments the law of June 8 316. Any slave freed before a bishop is automatically granted Roman citizenship. Clergy may free their slaves through their wills and it may be immediately enacted by a bishop.
- 10300 19 april 321 Imp. Constantinus a. Osio episcopo [HOSIO EP(ISCOP)O] Qui religiosa mente in ecclesiae gremio servulis suis meritam concesserint libertatem, eandem eodem iure donasse videantur, quo civitas Romana solennibus decursis dari consuevit. Sed hoc dumtaxat iis, qui sub adspectu antistitum dederint, placuit relaxari. Clericis autem amplius concedimus, ut, quum suis famulis tribuunt libertatem, non solum in conspectu ecclesiae ac religiosi populi plenum fructum libertatis concessisse dicantur, verum etiam quum postremo iudicio libertates dederint, seu quibuscumque verbis dari praeceperint ita ut ex die publicatae voluntatis, sine aliquo iuris teste vel interprete, competat directa libertas. DAT. XIV KAL. MAI. CRISPO II. ET CONSTANTINO II. CONSS.
- 10310 Interpretatio. Qui manumittendi in sacrosancta ecclesia habuerint voluntatem, tantum est, ut sub praesentia sacerdotum servos suos velit absolvere, noverit eos, suscepta libertate cives esse Romanos: nam si clerici suis mancipiis dare voluerint libertatem, etiamsi extra conspectum fecerint sacerdotum vel sine scriptura verbis fuerint absoluti, manebit, sicut civibus Romanis, integra et plena libertas.
- 10315 18 mei 321 Imp. Constantinus a. ad Constantino Pf. P. Matri ius liberorum non habenti, interveniente licet patruo ceterisque, inter quos agnationis incorrupta iura per ordinem porriguntur, et quicumque deinceps agnati erunt, a quibus consanguinitatis iure mater poterat excludi, placet omnium filii bonorum, quotiescumque ab intestato venit, deferri tertiam portionem etiam patruo eiusque filio et dumtaxat nepoti, agnatione minime durante (si forte per emancipationem cuiusquam fuerit consanguinitas diminuta), beneficio pari deferri tertiam portionem, licet habeat mater ius liberorum. Nec immerito, si quando supra dicto subnixa mater fuerit privilegio, agnatione dirempta ultra nepotis gradum nostrum beneficium minime placuit extendi, ne, multis personis vocatis, plus ablatum matri, minus additum videretur. Sive igitur unus exstiterit pluresve patru, eorumque filius aut etiam filii et nepotes neptesve, non amplius quam sola tertia universorum bonorum simul omnibus vel singulis pro suis quibusque gradibus deferenda est. Et eodem genere, si plures erunt, a quibus mater possit excludi, non plus quam tertia bonorum matri adversus omnes competere debet. Supra dictae ergo originis existentibus personis agnatis in infinitum, matri adversus omnes censuimus subveniendum, licet non omnibus adversus matrem, sed certis superius comprehensis personis hoc auxilium tribuatur; ita ut, nec petita bonorum possessione (quoniam huius legis, non praetoris est beneficium), illico, ut sibi delatae portionis dies exstiterit, aditione simplici, arrepto rerum quolibet corpore vel animi destinatione patefacta, plenum dominium delatae sibi portionis consequantur, facultate eis perpetua, dum advixerint, tribuenda in adeunda concessa sibi parte successionis. Nec enim ad eos, qui eorundem successores erunt, nisi ipsis prius, quos indulgentiae nostrae ratio complectitur, quaesita fuerit hereditas, transire quicquam iubemus, sed penes eos manere, apud quos ante istam legem residere potuisset. DAT. XIV KAL. IUN. SIRMII, CRISPO II. ET CONSTANTINO II. CAESS. CONSS.
- 10340 Interpretatio. Si mater ius liberorum non habeat, hoc est, si ingenua tres partus vivos et libertina quattuor non ediderit et unicum filium intestatum fortasse perdidit, et filius moriens patruum unum vel plures aut certe patru vel patruorum filios vel nepotes plures cum matre reliquerit, qui tamen emancipati non fuerint, mater in tertia portione in filii intestati hereditate succedat, et duas partes patruus, vel si plures patru fuerint, aut filii vel nepotes sibimet vindicabunt. Quod si mater liberorum ius habeat, et patruus vel patru cum matre superfuerint, etiamsi emancipati sunt, duas partes de bonis filii intestati morientis mater consequatur, quae ius liberorum habet, et tertiam patruus vel patru: qui si defuerint, filii patruorum, quanti fuerint, aequales sibi per capita faciant portiones. Quod si filii patruorum defuerint, simili etiam nepotes patruorum divisione succedant. Sed in hac successione sola constitutio praesens sufficit, ut inter matrem, patruos eorumque filios et nepotes bonorum possessio praesumatur; quae
- 10325 10330 10335 10345 10350

- 10355 si fortasse adita non fuerit hereditas, et hi, qui adire debuerant, moriuntur, heredes eorum a successione non aditae hereditatis excludit: quia evidenter haec lex constituit, ut non adita hereditas non transeat ad heredes. Hic de iure addendum est.
- 10360 19 mei 321 IDEM A. AD BASSUM P(RAEFECTUM) U(RBI). Altero ex litigatoribus in lite defuncto cursum temporis esse reparandum latis iam dudum legibus continetur. DAT. XIII KAL. IUN. SIRMIO CRISPO II ET CONSTANTINO II CC. CONSS.
Interpretatio. Si unus ex litigatoribus, sive pulsatus sive petitor, intra constitutum per scripturam tempus fortasse defecerit, tempora, quae fuerant statuta, successoribus renoventur.
- 10365 22 mei 321 Imp. Constantinus a. et c. ad Bassum Pf. P. Eorum est scientia punienda et severissimis merito legibus vindicanda, qui magicis accincti artibus aut contra hominum moliti salutem aut pudicos ad libidinem deflexisse animos deteguntur. Nullis vero criminationibus implicanda sunt remedia humanis quaesita corporibus aut in agrestibus locis, ne maturis vindemiis metuerebuntur imbres aut ruentis grandinis lapidatione quaterentur, innocenter adhibita suffragia, quibus non cuiusque salus aut existimatio laederetur, sed quorum proficerent actus, ne divina munera et labores hominum sternerentur. DAT. X KAL. IUN. AQUILEIA, CRISPO ET CONSTANTINO CAESS. CONSS.
Interpretatio. Malefici vel incantatores vel immissores tempestatum vel ii, qui per invocationem daemonum mentes hominum turbant, omni poenarum genere puniantur.
- 10370 1 juli 321 Imp. Constantinus a. ad Iunium Rufum consularem Aemiliae.
Penes illum vectigalia manere oportet, qui superior in licitatione exstiterit, ita ut non minus quam triennii fine locatio concludatur, nec ullo modo interrumpatur tempus exigendis vectigalibus praestitutum. Quo peracto tempore, licitationum iura conductionumque recreari oportet, ac simili modo aliis collocari; capitali sententia subiugando, quem plus aliquid, quam statutum est, a provincialibus exegisse constiterit. DAT. KAL. IUL. CRISPO II. ET CONSTANTINO II. CONSS.
Interpretatio. Vectigalia sunt, quae fisco vehiculorum subvectione praestantur, hoc est aut in litoreis locis navibus aut per diversa vehiculis merces deportant, cuius rei conductelam apud strenuas personas triennio esse praecipit, et continuo hanc exactionem aliis iterum permittendam, qui maiorem summam praestationis obtulerint. Ex qua conductione aut exactione, si quis plus, quam praeceptum fuerit, exigere tentaverit, ita ut mercatorem vel provincialem sub hac exactione gravare coeperit, periculo capitis se noverit esse damnandum.
- 10380 3 juli 321 IMP. CONSTANT(INUS) A. HELPIDIO. Sicut indignissimum videbatur diem solis veneratione sui celebrem altercantibus iurgiis et noxiis partium contentionibus occupari, ita gratum ac iucundum est eo die quae sunt maxime votiva compleri. Atque ideo emancipandi et super his rebus acta non prohibeantur. P(RO)P(OSITA) V NON. IUL. CARALIS CRISPO II ET CONSTANTINO II CC. CONSS.
Interpretatio. Quamvis sancto die dominico omnes lites ac repetitiones quiescere iusserimus, emancipare tamen ac manumittere minime prohibemus, et de his rebus gesta confici pari ordinatione permittimus.
- 10385 3 juli 321 Idem a. ad populum. Habeat unusquisque licentiam sanctissimo catholicae venerabilique concilio decedens honorum quod optavit relinquere. Non sint cassa iudicia. Nihil est, quod magis hominibus debetur, quam ut supremae voluntatis, post quam aliud iam velle non possunt, liber sit stilus et licens, quod iterum non reddit, arbitrium. PROPOSITA V NON. IUL. ROMAE CRISPO II ET CONSTANTINO II CAESS. CONSS.

Rusticanos usibus propriis vel culturae ruris necessaria revehentes vectigal exigi non sinimus: capitali poena proposita stationariis et urbanis militibus et tertiis augustanis, quorum avaritia id temptari firmatur. Pro ceteris autem rebus, quas quaestus gratia comparant vendituri, solitum eos oportet vectigal agnoscere. DAT. K. AUG. CRISPO II ET CONSTANTINO CONSS.
- 10440 28 augustus 321 IMP. CONSTANT(INUS) A. AD VERINUM. Cum dividundae res erunt, dubitari non potest ab heredibus suis consensum sine ulla controversia commodandum. Quod vero ad huiusmodi spectat scripturas, in quibustalis defunctorum fuisse mens invenitur, ut de testamento intellegatur tantummodo cogitatum, etsi repugnare ius videatur, huiusmodi quoque conscriptiones inter suos dumtaxat heredes valere oportet, quemadmodum valent scripturae simpliciter incoatae, quas nulla sollemnitis
- 10445 adminicula defendunt, solis nixae radicibus voluntatis. Licet enim sub testamenti vocabulo coeptae, cum perfectae non sint neque appellari aliter ullo modo possint, evanuisse videntur, tamen dispositiones ultimae coloratam iuris imaginem referentes iustius in se legum proclivem favorem debent provocare. Quam ob rem cum filiis ac nepotibus civili iure vel auxilio praetoris ut suis heredibus defuncti successio
- 10450 defertur, etiamsi coeptum neque inpletum testamentum esse memoretur, vel si ab utilitate verborum vel sollemnitate iuris inanis scriptura esse dicatur, considerari specialiter voluntatem placet et obsecundari protinus, cum res dividuntur, nec retineri amplius, quam quod singulorum personis detegetur adscriptum, ut et memoria defuncti non violetur parentis et occasiones litium dirimantur. DAT. IV KAL. SEPTEMB.
- 10455 CRISPO II ET CONSTANTINO II CONSS.
Interpretatio. Quando facultas patris inter filios vel nepotes dividitur, specialiter voluntas patris vel avi paterni debet in omnibus custodiri, cuius testamentum etiamsi non fuerit perfectum, aut si non legitimo numero testium subscribatur, nec gestis allegetur, tamen si agnoscitur defunctus, de quo supra dictum est, de facultate sua
- 10460 aliquid ordinasse, quicquid unumquemque de filiis ac nepotibus cuiuscumque sexus habere voluerit, hoc sibi sine consortis repetitione defendat: nec praesumat aliquis, quod alteri consorti auctor ille dimiserit. Sed hoc inter filios ac nepotes ex filiis masculis observetur, quod voluntate auctoris per quamcumque scripturam probabitur ordinatum.
- 10465 August 28, 321 IMP. CONSTANT(INUS) A. TO VERINUM. When things are to be divided, it cannot be doubted that the consent of their heirs must be given without any controversy. But as regards writings of this kind, in which it is found that the mind of the deceased was such that a will is understood to have been merely thought out, even if the law seems to contradict it, such writings must also be valid only among
- 10470 their heirs, just as writings that are simply begun are valid, which are defended by no support of solemnity, and are based solely on the roots of the will. For although those begun under the name of a will, since they are not perfect and cannot be called otherwise in any way, seem to have disappeared, nevertheless the final dispositions, bearing a colored image of the law, should more justly provoke the favor of the laws
- 10475 inclined towards them. For this reason, with the children and grandchildren, by civil law or by the help of the praetor, the succession of the deceased is transferred to his heirs, even if it is mentioned that the will was not begun and not completed, or if it is said that the writing is void from the utility of the words or the solemnity of the law, it is pleasing that the will be specially considered and obeyed
- 10480 immediately when the property is divided, and that no more is retained than what is disclosed to each person, so that both the memory of the deceased parent is not

violated and the occasions for lawsuits are eliminated. DAT. 4 KAL. SEPTEMB. CRISPUS II AND CONSTANTINE II CONSS.

Interpretation. When the father's property is divided among sons or grandchildren, the will of the father or paternal grandfather must be especially observed in all cases. Even if his will is not perfect, or if it is not signed by the lawful number of witnesses, nor is it alleged in deeds, nevertheless if the deceased, of whom it was said above, is acknowledged to have ordered something about his property, whatever he wished each of his sons and grandchildren of whatever sex to have, he should defend this to himself without repetition by the partner: nor should anyone presume that the author has left it to another partner. But this should be observed among the sons and grandchildren of the male sons, which will be proven to have been ordered by the author's will through some writing.

16 september 321? Imp. Constantinus a. ad Maximum pf. U. pr. In quaestione testamenti, quod deportati filius remeante patre fecisset, remotis Ulpiani atque pauli notis, Papiniani placet valere sententiam, ut in patris sit filius potestate, cui dignitas ac bona restituta sunt.

1. Ita tamen, ut gesta per filium, cuius consilia legitima aetas firmaverat, rata sint, eodem in potestatem patriam redeunte, ne eorum rescissio efficiat, quod est maxime absurdum, eodem tempore nec in patris nec in sua quemquam fuisse potestate. 2. Minores enim aetate iure quicquam agere prohibentur. Quibus si damnato patre tutor datus est, necesse est, ut ab officio recedat, regresso eo, quem non solum nomine redire, sed etiam officium suum nulla pravitae corruptum liberis praebere oportet, ut eorum bona tueatur et augeat. Nam si patria potestate ad corrumpendi atque effundendi patrimonii licentiam abutetur, ut furioso ac dementi, item prodigo, libidinum omnium vitiorumque servo non est eorum pecunia committenda: ab administratione fugiat: neque tutor esse desinat, omniaque minoris dispendia suis ipse damnis praestet. Sententia vero deportationis nullo patrem praeiudicio deminuat. Quem si comperta integritas ut natura, ita officio liberis restituerit, ei gubernacula rerum tradenda sunt, cuius, ad imitationem publici iuris, provisa custodia est. Quae nisi bonis patribus detur, luctuosior erit reditus quam discessus. 3. Ideoque tantum ad restitutionem indulgentia valeat, quantum ad correctionem sententia valuit. Utque deportationis ipsum per se nomen rerum omnium spoliatio est, ita indulgentia reditus bonorum ac dignitatis uno nomine amissionum omnium sit recuperatio. Et filii emancipationem a patribus officiis petant, ut libertatem non damnationis, sed lenitatis paternae testem habeant. DAT. XVIII. KAL. OCT. SIRMIO, CRISPO II. ET CONSTANTINO II. CAESS. CONSS.

Interpretatio. Si quis pater in exsilium missus filium in maiore aetate reliquerit, quaecumque de bonis propriis gessit filius, iuxta sententiam papiniani rata et firma permaneant, nec contra aut testamentum aut transactionem filii reversus pater venire permittitur. Sane quum redierit pater, si filium vivum invenerit, filium in ius suum paterna potestate recipiet. Ceterum quod de rebus propriis absente patre filius gessit, reversus pater revocare non poterit. Quicquid vero filii in annis minoribus constituti fecerint, penitus non valebit: qui tamen si pro aetate vel absentia patris aut tutores aut curatores acceperint, reversus pater filios, repulsis curatoribus vel tutoribus, cum omni facultate recipiet: ea tamen condicione, ut rem filiorum ita administret ac regat, ut non solum detrimenta non sentiant, sed studio patris res et facultas proficiat filiorum. Quod si pater aut prodigus aut negligens aut evorsor aut libidini deditus esse convincetur, et filiorum res impie ac dementer vastare ac dilapidare cognoscetur, filii talis patris, tanquam eo mortuo, sub tutore aut curatore consistant: quia sicut aequum est, ut bonus et utilis pater rem filiorum regendam administrandamque recipiat, ita iniquum est, ut in damnum filiorum reversus facultates a tutoribus curatoribusve reservatas dementi subversione dilaceret.

28 september 321 IMP. CONSTANTINUS A. AD MAXIMUM P(RAEFECTUM) U(RBI). Perpetuas prudentium contentiones eruere cupientes Ulpiani ac Pauli in Papinianum notas, qui, dum ingenii laudem sectantur, non tam corrigere eum, quam depravare maluerunt, aboleri praecipimus. DAT. IV K. OCT. CRISPO ET CONSTANTINO CONSS.

28 September 321 IMP. CONSTANTINE A. TO THE MAXIMUM P(RAEFECTUM) U(RBI). Wishing to extinguish the perpetual contentions of the wise, we order that the notes of Ulpianus and Paulus against Papinianus, who, while pursuing the praise of his genius, preferred not to correct him so much as to corrupt him, be abolished. DAT. IV K. OCT. CRISPUS AND CONSTANTINE CONSS.

Quod quidam ita interpretati sunt, ut contractis in litem omnibus et adsertionibus iam ordinatis et profligatis exactisque paene iudiciis, si cui earum personarum, quae in quaestione sunt, partus accidisset, quasi accessione absentiae necessariae spectataeque personae novari tempora iuris esse adfirment. Sed cum aliud sit abesse, aliud necdum natum esse, placuit eos qui nascuntur matrum condicionibus et iure uti, quarum mox visceribus exponuntur, neque ideo, quod natus quidam est, tempora iudicii renovari. ante litem vero nati suo omnes nomine in quaestionem vocentur, quoniam hos solos, qui in lite nati erunt, omnem
- 10730 fortunam matrum complecti oportet et aut iustis tradi dominis aut libertate frui cum lucis auctoribus, cum eorum nulla propria veriorve possit esse defensio quam matrum. DAT. PRID. ID. IUN. SIRMIO PROBIANO ET IULIANO CONSS.
- 10735 12 June 322 Imp. Constantine a. to the Prefect of the City. ... had lived, their all judgment would be sufficient. Which some have interpreted in such a way that, after all the claims had been brought into litigation and the claims had already been ordered and exhausted and the judgments almost exacted, if any of those persons who are in question had been born, they affirm that the times of the law are renewed as if by the accession of the absence of the necessary and considered person. But since it is one thing to be absent, another to be not yet born, it was decided that those
- 10740 who are born should use the conditions and law of their mothers, whose wombs are soon exposed, and not because someone has been born, the times of the judgment should be renewed. Before the lawsuit, however, all those born in their own name should be called into question, since these alone, who will be born in litigation, must embrace all the fortune of their mothers and either be handed over to just masters or enjoy
- 10745 freedom with the authors of light, since they can have no true or proper defense other than their mothers. DAT. PRID. ID. IUN. SIRMIO PROBIANO ET JULIANO CONSS.
- 10750 6 juli 322 Idem a. Menandro. Provinciales egestate victus atque alimoniae inopia laborantes liberos suos vendere vel obpignorare cognovimus. Quisquis igitur huiusmodi repperietur, qui nulla rei familiaris substantia fultus est quique liberos suos aegre

ac difficile sustentet, per fiscum nostrum, antequam fiat calamitati obnoxius, adiuvetur, ita ut proconsules praesidesque et rationales per universam africanam habeant potestatem et universis, quos adverterint in egestate miserabili constitutos, stipem necessariam largiantur atque ex horreis substantiam protinus tribuant competentem. Abhorret enim nostris moribus, ut quemquam fame confici vel ad indignum facinus prorumpere concedamus. DAT. PRID. NON. IUL. ROMAE PROBIANO ET IULIANO CONSS.

20 juli 322 Imp. Constantinus a. ad Maximum Pf. U. Si quis libertate utentes eiusque compotes inopinatos in discrimen ingenuitatis adducat, si eos forte assertio defecerit, circumductio praebeatur, assertorem quaeri titulo per literas indicante; ne causa per silentium ignoretur vel absurde etiam proclametur: ut, qui comperissent, vellent asserere, vel cunctantes etiam cogerentur; neu, si assertor defuerit, vincti, multis eos scientibus liberos, a dominis ducantur.

1. Ideoque sancimus: si quis assertoris inops atque ignotus, circumlustratis provinciae populis, desertus tradatur ei, qui servum dixerit, non infracta, sed dilata libertate, assertore invento vires recolligat, et suis renovatis defensionibus resistat in iudicio, possessoris iure privilegiisque subnixus, quamquam de domo illius processerit. Neque enim illa possessio est in tempus accepti, sed exspectatio assertoris in tempore non reperti; ita ut, si instaurata lite restitutisque in sua iura partibus, pro libertate fuerit lata sententia, iniuriae impudentiaeque causa adversarius pari numero servorum mulctetur, quotquot erunt, qui in servitutem petiti sunt: iis vero non condemnatur, qui in ipsa fuerint lite progeniti.

2. Quod si quis ante assertorem repertum vel ante sententiam fuerit mortuus, heredibus causam status probantibus mulctatius servus tradetur: et heredes eius, qui libertatem temerabat, si implacabilem animum indicant, eadem maneat Mancipiorum lex atque condicio; si liberos sinent, quos clausos repererint, occidunt cum personis delicta.

3. Minorum defensores eadem manebit Mancipiorum mulcta: ac iudicio his, quos defenderant, reposcentibus, rei male gestae dabitur aestimatio.

4. Quum id proprio periculo fecerit assertor, ut rem salvam fore promittit, ita satis accipiat de mulctae redhibitione.

5. Libertatem victis hostibus victorum dominatio abstulit; leges vero iniuriosos poena afficiunt et fama spoliant, dictumque in iurgio in adversarium immodestius iactatum petulantiusque fuscum poenam subire cogitur: atque non erit impunita labefactatio atque oppugnatio libertatis, quae in convictis quoque punitur. iniustum est autem, alienum ad servum recepisce, et alterius servi abductione condemnatur. DAT. XIII KAL. AUG. SIRMIO, PROBIANO ET IULIANO CONSS.

Interpretatio. Si aliquis in libertate positum ad servitium conetur addicere, iubet pulsatum ex ordinatione iudicis per populos et per publicum duci, ut defensorem sui status inveniatur et inventum assertorem per chartam petat a iudice, ne silentio ingenuitas opprimatur. Quod si aut ipse sibi adesse aut assertorem non potuerit invenire, tradatur domino repetenti ad servitium, non ad poenale supplicium: ita ut non per hanc traditionem ex integro spes libertatis amittat, nisi quum habuerit locum, invento assertore libertatis suae statum asserat legibus audiendus. Quod si tali ordine reparata lite, qui pulsantur, ingenuos se esse docuerint, tunc ille, a quo ingenuitas iniuste fuerat appetita, tot Mancipia his, quos ad servitutem vocabat, eius aetatis et sexus dare cogatur, illis in condemnatione non annumerandis his, qui, dum causa protrahitur, in lite nati esse probantur. Quod si ex his, qui ad servitutem vocantur, dum per assertorem requirendum aut alia occasione causa protrahitur, aliqui moriantur, et heredes eorum statum ingenuitatis obtinuerint, pro illius persona, quae in lite mortua est, heredibus suis eius compensatio, sicut et pro vivis, a pulsante reddenda est. Si vero ille moriatur, qui liberos conabatur addicere, et filios aut heredes dimittat, si persequi voluerint causam, quam pater aut auctor inchoaverat, et victi fuerint, ad supra scriptam satisfactionem tenendi sunt, ut alia tot Mancipia male pulsatis satisfaciant. Si vero agere noluerint, nec persequi eos tentaverint, sed etiam in custodiam ab auctore redactos absolverint, erunt a mulctae condemnatione securi, quia non in auctoris sui vitio perstiterunt. Quod si forte minores sint, et tutor eorum vel curator causas eorum adversus ingenuitatem prosequi velit, et fuerit superatus, ipse de propria facultate ad satisfactionem tenendus est. Si vero post secundam reparationem assertor inventus periculo suo addicti causam crediderit replicandam, ut, si vincatur, peculium aut servitia susceptorum vel ipsos reddere debeat: similiter et ille, qui pulsatur, dato fideiussore promittat se praedictum numerum vel meritum Mancipiorum, vel quod ab his in peculio reposcit, satisfacere, quum fuerit superatus.

26 juli 322 IMP. CONSTANT(INUS) A. AD LUSITANOS. Si qua posthac edicta sive

- 10840 18 februari 323 Idem a. ad Maximum Pf. U. Libertati a maioribus tantum impensum est, ut patribus, quibus ius vitae in liberos necisque potestas permissa est, eripere libertatem non liceret.
- 10845 1. Si quisquam minor venundatus actum maior administravit, quoniam minoris emptio scientiam non obligat, eum ad libertatem venientem emptionis actusque a maiore administrati praescriptio non tenebit:
- 10850 2. Nec vero ille, qui apud quempiam pro servo educatur, ac maior effectus vendenti veluti domino acquievit actuque administrato iam paene extremam relegit libertatem, (quoniam neque maior effectus originem suam noverat, neque eam, quam ignoraverat, venditionem patiens deseruisse iudicandus est) minori similis, eadem emptionis atque actus administrati praescriptione non alligabitur, sed utrique dabitur assertio.
- 10855 3. Paria etiam in libertinis erunt, qui quaestu quodam in eandem rursus servitutem relabuntur. Sed eorum hac exceptione causa distinguenda est, ut, qui impuberes intra annum quartum decimum manumissi ac deinceps in servitio retenti ignorata libertate non utantur, maioresque venundati actum gerant, ab assertione non arceantur: quum illi aetati tributae libertatis ignoratio aut oblivio concessa est. Qui vero memoria firma venditioni post factae non nescius innectitur, huius legis beneficio carebit.
- 10860 4. Et quoniam vicissim etiam ipsis, qui his rem commiserunt, medendum est, si quisquam omnium, qui supra comprehensi sunt, in libertatem proclamaverit, id, quod apud se esse eius, qui se dominum dicit, profitebitur, quoniam de eo non dubitatur, reddi ac referri iudex protinus pronuntiabit.
- 10865 5. Quod vero petitur, si id fuerit negotiatione controversum, per cautionem assertoris, ut alia lege comprehensum est, conservabitur, ac petitio differetur, ut, si fuerit approbata propria libertas, gestarum rerum ab eodem ratio atque omne, quod debebitur, reposcatur, ut servitute depulsus, qui pro domino quondam fuerat, habeat, quod ut servo domini iure largitus est, et quae ex earum rerum quaestu ac fructibus conciliata sunt, et quae de furtivis compendiis obscure capta ac parta sunt, quum liberum esse non oporteat, quod apud servum dominus peculii nomine collocaverat.
- 10870 6. Ea vero, quae testamento aut donatione quaesita sunt, aut quae ex earum rerum emolumentis empta confectaque sunt, eidem ingenuo deputentur.
- 10875 7. Quae tamen universa exacto libertatis iudicio, quo a supra dictis rebus discernuntur, in sequestri esse oportet, ut, his ab utroque deductis atque in medio iure locatis, ad eorum proprietatem uterque contendat. DAT. XV KAL. MART. THESSALONICA, SEVERO ET RUFINO CONSS.
- 10880 Interpretatio. Minor venditus, si post viginti et quinque aetatis suae annos iam maior effectus servierit aut in rebus emptoris actor aut cuiuslibet rei ordinator fuerit constitutus, quum de ingenuitate sua proclamaverit, sine praeiudicio servitii, quod gesserit, audiatur, nec hoc ei praeiudicium generet, quod eius, a quo emptus est, domum aut utilitates in annis maioribus positus visus est ordinasse. Hoc etiam de libertis lex haec praecepit custodiri, ut, qui intra quattuordecim annos fuerint manumissi et actum in maiore aetate positi gesserint patronorum, libertati eorum actus non praeiudicet servitutis, sed quum voluerint, suas aut de ingenuitate aut de libertinitate, intra tempora legibus constituta, proferant actiones. Sic etiam, si quis minor ingenuus a quolibet fuerit educatus et, liberum se esse nesciens, fuerit a

- 10885 nutritore distractus et actum vel utilitatem illius, a quo emptus est, ut servus gesserit, priusquam triginta annorum praeiudicio teneatur, potestatem habeat reclamandi, et quasi minor is, priusquam tempora suppleantur, amissam recipiat libertatem. Quicquid vero eis ille, a quo empti sunt, vel tradidit vel donavit vel quaecumque ex rei suae administratione profecit, totum retinendi ac revocandi habeat potestatem. Si vero huiusmodi personis aliquid a quibuscumque aliis aut testamento aut donatione collatum est, id solum sibi iam liberi vindicent: nam quod de re patroni libertus vel emptoris ingenuus, dum serviret, profecit, libertati redditus libertus patrono, ingenuus emptori restituat. Hi vero, qui in annis maioribus constituti sunt, scientes se esse ingenuos vel libertinos, si vendi acquieverint, in ea, ad quam scientes sua voluntate transeunt, servitute permaneant.

- 22 mei 325 IDEM A. SEVERO P(RAE)FECTO U(RBI). Quotiens rescripto nostro praeiudicium vel moratoria praescriptio remittitur, aditus supplicandi pandatur: quod autem totius negotii cognitionem tollit et vires principalis negotii exhaurit, sine gravi partis alterius dispendio convelli non potest. Nec praescriptionis igitur peremptoriae relaxatio petatur, nec contra edictum supplicetur. DAT X KAL. IUN. NICIAE PAULINO ET IULIANO CONSS.
- 11125
- 17 juni 325 IDEM A. ad Maximum praefectum Urbi. pr. Comitatus et ripenses milites atque protectores suum caput, patris ac matris et uxoris, si tamen eos superstites habeant, omnes excusent, si censibus inditi habeantur. Quod si aliquam ex his personis non habuerint vel nullam habuerint, tantum pro suo debent peculio excusare, quantum pro iisdem, si non deessent, excusare potuissent, ita tamen, ut non pactione cum alteris facta simulato dominio rem alienam excusent, sed vere proprias facultates.
- 11130
1. Veteranos autem post emeritae missionis epistulas tam suum quam uxoris caput excusare sancimus aut, si honestam missionem meruerint, suum caput tantummodo excusare ceteros. Omnes veteranos de quocumque exercitu una cum uxore sua unius capitis frui excusatione praecipimus.
- 11135
2. Ripensis autem veteranus, qui ex priore lege post viginti quattuor stipendia honesta missione impetrata unius excusatione capitis fruebatur, etiam si viginti stipendiis completis honestam missionem meruerit, ad exemplum comitatensium militum unum caput excuset. Intra viginti etiam stipendia dimissus, quoniam inbecilli et debiles censibus non dedicantur, eodem beneficio utatur.
- 11140
3. Alares autem et cohortales dum militant, propria capita excusent, veteranis quoque eadem excusationis solacia habituris. Qui quocumque tempore in quibuscumque partibus
- 11145

- meruerint missionem, si ex comitatensi militia senectutis vel debilitatis causa dimissi fuerint, indiscreto stipendiorum numero duo capita excusaturis, id est suum adque uxoris; et ripensibus indiscrete idem privilegium habituris, si se ob belli vulnera dimissos probaverint: ita ut, si quis eorum post quindecim stipendia intra
- 11150 viginti et quattuor annos ex militia decesserit, sui tantum capitis excusatione fruatur; uxorem enim ripensis, si militia decesserit post viginti et quattuor annos, excusari oportet. PROPOSITA XV KAL. IUL. ANTIOCHIAE PAULINO ET IULIANO CONSS.
17 June 325 Idem A. to the Maximum prefect of the city.
- 11155 The soldiers and protectors of the counties and ripens are to excuse all their heads, of their father and mother and of their wife, if they have them still alive, if they are found to be included in the censuses. But if they do not have any of these persons or have none, they must excuse only for their own savings, as much as they could have excused for the same, if they were not lacking, so that they do not excuse
- 11160 someone else's property by pretending to have dominion by agreement with others, but truly their own faculties.
1. We sanction veterans, however, after letters of merited mission, to excuse both their own heads and those of their wives, or, if they have earned an honorable mission, to excuse only their heads from the rest. We order all veterans from any
- 11165 army to enjoy the excuse of one head together with their wives.
2. A retired veteran, who, according to the previous law, enjoyed the exemption of one head after twenty-four pay periods after obtaining an honorable discharge, even if he has earned an honorable discharge after completing twenty pay periods, shall, following the example of the county soldiers, exempt one head. Even those discharged
- 11170 within twenty pay periods, since the weak and feeble are not dedicated to the census, shall enjoy the same benefit.
3. Winged and cohortal soldiers, while they are serving, shall exempt their own heads, and veterans shall also have the same exemption benefits. Those who have earned a discharge at any time in any part, if they have been discharged from the
- 11175 county service on account of old age or infirmity, shall exempt two heads, that is, their own and their wife's, regardless of the number of pay periods; and retired veterans shall have the same privilege regardless of the number of pay periods, if they have proved that they were discharged due to wounds of war: so that, if any of them dies from the service after fifteen pay periods within twenty-four years, he
- 11180 shall enjoy the exemption of only his own head; for retired veterans, if their wife dies from the service after twenty-four years, must be excused. PROPOSITIONS XV KAL. JULY ANTIOCH CONSULTATION OF PAULIN AND JULIAN.
- 5 juli 325? Unde ex corpore Theodosiani: imp. Constantinus a. et Iulianus caes. ad Taurum pp. (ad locum:) multabuntur iudices, qui rescripta contempserint aut distulerint. DAT. III NON. IUL. CONSTANTINO A. VII ET IULIANO CONSS.
- 11185 11 juli 325 IDEM A. ad Maximum. Quoniam diversis praestitimus, ut legionibus vel cohortibus deputentur vel militiae restituantur, quisquis huiusmodi beneficium proferat, requiratur, utrum ex genere decurionum sit vel ante nominatus ad curiam, ut, si quid tale probetur, curiae suae et civitati reddatur. Quam formam circa omnes, qui iam dudum probati in militaribus officiis agunt vel restituti militiae sacramento muniuntur vel postea per suffragia probabuntur, observari conveniet. PROPOSITA V ID IUL. ANTIOCHIAE PAULINO ET IULIANO CONSS.
- 11190 11 juli 325 IDEM A. ad Eufrasium rationalem trium provinciarum. pr. Post alia: pro multis etiam et in diversis locis constitutis liceat simul auri pondus inferre, ita ut pro omnibus fundis securitas emissis cautionibus detur, ne separatim ab unoquoque auro exacto multis et adsiduis incrementis provincialium utilitas fatigetur. Hoc quoque addimus, ut unusquisque quod debet intra anni metas, quo tempore voluerit, inferat et per tabularium apparitorem illatio cognoscatur absque omni mora auro suscipiendo, ne quis in aliena civitate sumptus faciat vel, quod est gravius, legem commissi frustratus incurrat. Nam si solvere volens a suscipiente fuerit contemptus, testibus adhibitis contestationem debebit proponere, ut hoc probato et ipse
- 11200 securitatem debitam commissi nexu liberatus cum emolumentis accipiat et qui suscipere neglexerit, eius ponderis quod debebatur duplum fisci rationibus per vigorem officii tui inferre cogatur. DAT. XIV KAL. AUG. PAULINO ET IULIANO CONSS.
- 11205 19 juli 325 IMP. CONSTANTINUS A. ad Eufrasium rationalem trium provinciarum. Si qui solidos appendere voluerit, auri cocti septem solidos quaternorum scripulorum nostris vultibus figuratos adpendat pro singulis unciis, XIV vero pro duabus, iuxta hanc formam omnem summam debiti illaturus. Eadem ratione servanda, et si materiam
- 11210

- quis inferat, ut solidos dedisse videatur. Aurum vero quod infertur aequa lance et libramentis paribus suscipiatur, scilicet ut duobus digitis summitas lini retineatur, tres reliqui liberi ad susceptorem emineant nec pondera deprimant nullo examinis libramento servato, nec aequis ac paribus suspenso statere momentis. Et cetera. PROPOSITA XIV KAL. AUG. PAULINO ET IULIANO CONSS.
- 30 juli 325 IDEM A. AD SEVERUM P(RAEFECTUM) U(RBI). Nulli prorsus audientia praebeatur, qui causae continentiam dividit et ex beneficii praerogativa id, quod in uno eodemque iudicio poterat terminari, apud diversos iudices voluerit ventilare: poena proposita, si quis contra hanc supplicaverit sanctionem atque alium super possessione alium super principali quaestione iudicem postulaverit, ut, rei quae petebatur integra aestimatione subducta, quintam portionem rei publicae eius civitatis inferat, in cuius finibus res de qua agitur constituta est. P(RO)P(OSITA) III KAL. AUG. PAULINO ET IULIANO CONSS.
- Interpretatio. Nullus penitus audiatur, qui unius causae propositionem apud duos iudices partiri voluerit, ut apud unum de negotio principali proponat, et ab alio sibi momenti beneficio rem postulet consignari. Quod si quis hoc facere fortasse praesumpserit, eiusmodi poena se noverit condemnandum, ut nec illud, quod repetit, ulla ratione recipiat, et quintam portionem facultatum suarum, de quantum ibi possederit, reipublicae civitatis illius cedat, in cuius finibus res, de qua agitur, fuerit constituta.
- 29 augustus 325 IMP. CONSTANTINUS A. AD CONSTANTIUM P(RAEFECTUM) P(RAETORIO). DAT. IV K. SEPT. ANTIOCHIAE PAULINO ET IULIANO CONSS.
- 17 september 325 IMP. CONSTANTINUS A. Aurelio Helladio. IDEM A. AD UNIVERSOS PROVINCIALES. Si quis est cuiuscumque loci ordinis dignitatis, qui se in quemcumque iudicum comitum amicorum vel palatinorum meorum aliquid veraciter et manifeste probare posse confidit, quod non integre adque iuste gessisse videatur, intrepidus et securus accedat, interpellet me: ipse audiam omnia, ipse cognoscam et si fuerit conprobatum, ipse me vindicabo. Dicat, securus et bene sibi conscius dicat: si probaverit, ut dixi, ipse me vindicabo de eo, qui me usque ad hoc tempus simulata integritate deceperit, illum autem, qui hoc prodiderit et comprobaverit, et dignitatibus et rebus augebo. Ita mihi summa divinitas semper propitia sit et me incolumem praestet, ut cupio, felicissima et florente re publica. P(RO)P(OSITA) XV KAL. OCTOB. NICOMED(IAE) PAULINO ET IULIANO CONSS.
- 17 september 325 IMP. CONSTANTINUS A. Aurelio Helladio. Etsi veteris iuris definitio et retro principum rescripta in iudicio petitori eius rei quam petit necessitatem probationis dederunt, tamen nos aequitate et iustitia moti iubemus, ut, si quando talis emergerit causa, in primordio iuxta regulam iuris petitor debeat probare, unde res ad ipsum pertineat; sed si deficiat pars eius in probationibus, tunc demum possessori necessitas imponatur probandi, unde possideat vel quo iure teneat, ut sic veritas examinetur. DAT. NAISSO XV KAL. OCTOB. PAULINO ET IULIANO CONSS.
- 1 oktober 325 IMP. CONSTANTINUS A. Maximo praefecto praetorio. Cruenta spectacula in otio civili et domestica quiete non placent. Quapropter, qui omnino gladiatores esse prohibemus eos, qui forte delictorum causa hanc condicionem adque sententiam mereri consueverant, metallo magis facies inservire, ut sine sanguine suorum scelerum poenas agnoscant. PROPOSITA BERYTO KAL. OCTOB. PAULINO ET IULIANO CONSS.
- 7 oktober 325 IDEM A. ad Constantium praefectum praetorio. Quoniam relictis curiis nonnulli ad militiae praesidia confugiunt, omnes, qui nondum primipilo inveniuntur obnoxii, solutos militia ad eandem curiam reverti praecipimus: his solis in militia permansuris, qui pro loco atque ordine iam pastui adtinentur. DAT. NON. OCTOB. PAULINO ET IULIANO CONSS.
- 25 december 325 IDEM A. ad Maximum vicarium Orientis. Si qui vel ex maiore vel ex minore civitate originem ducit, si eandem evitare studens ad alienam se civitatem incolatus occasione contulerit, et super hoc vel preces dare tentaverit vel qualibet fraude niti, ut originem propriae civitatis eludat, duarum civitatum decurionatus onera sustineat, in una voluntatis, in una originis gratia. PP. VIII. KAL. IAN. PAULINO ET IULIANO COSS.

- 11280 Interpretatio. Si quicumque curialis de ea, in qua natus est, civitate ad aliam transire voluerit, condicionem curiae debitam nullatenus possit evadere, nec si hoc ipsum mereri interposita supplicatione tentaverit, nec ullo argumento necessitates aut servitia civitatis suae pro eo, quod habitationem mutare voluit, possit evadere. Nam quicumque hoc fecerit et se in aliam civitatem transtulerit, hoc iubet, ut in utraque serviat civitate, id est in una pro condicione nascendi et in alia pro habitandi voluntate deserviat.
- 11285
- 1 oktober 325 CT 15.12.1 Constantine
Since gladiatorial games are eliminated, those criminals who formerly would have been made gladiators as punishment, are now to be sent to the mines.
- 11290
- 325 Constantine
Constantine is on record as having addressed the council at Nicaea three times. The first time he discouraged the bishops from accusing one another, and then burned the accusations. The second, he expressed his desire that the schism caused by the Arians be healed. Third, he dismissed the council and encouraged the use of the Nicene Creed.
- 11295
- 325 Gelasius, H.e. 3, appendix 1 Constantine
Constantine explains to the congregation at Nicomedia why he exiled their bishop Eusebius. Eusebius had been the leading proponent of Arianism, and had encouraged Arians from Egypt even after the Council of Nicaea. He warns them not to defend him, or they too will be punished. [Within a few years, Eusebius of Nicomedia had regained the emperor's favor. He was eventually made bishop of Constantinople and baptized Constantine on his deathbed.]
- 11300
- 11305 325 Gelasius, H.e. 3, appendix 2 Constantine
Constantine warns a certain Theodotus that if he does not support and uphold the ruling of the Council of Nicaea, he will be banished as other bishops already have.
- 11310 325 Eusebius, VC 3.17-20 Constantine
Constantine encourages all churches throughout the empire to celebrate Easter according to the ruling of the Council of Nicaea. There is no penalty for disobedience, however.
- 11315 325 Socrates, H.e. 1.9 Constantine
Constantine exhorts the Alexandrians to follow the Nicene faith, which he praises, and to disavow Arius, whom he condemns. The council is to be regarded as the will of God.
- 11320 [laws] Nicene Creed of 325
Πιστεύομεν εἰς ἕνα Θεὸν Πατέρα παντοκράτορα, πάντων ὁρατῶν τε καὶ ἀοράτων ποιητὴν·
We believe in one God, the Father Almighty, Maker of all things visible and invisible.
καὶ εἰς ἕνα Κύριον Ἰησοῦν Χριστόν τὸν Υἱὸν τοῦ Θεοῦ, γεννηθέντα ἐκ τοῦ Πατρὸς [μονογενῆ, τοὔτέστιν ἐκ τῆς οὐσίας τοῦ Πατρός, Θεὸν ἐκ Θεοῦ,] Φῶς ἐκ Φωτός, Θεὸν ἀληθινὸν ἐκ Θεοῦ ἀληθινοῦ, γεννηθέντα, οὐ ποιηθέντα, ὁμοούσιον τῷ Πατρί,
And in one Lord Jesus Christ, the Son of God, begotten of the Father [the only-begotten; that is, of the essence of the Father, God of God,] Light of Light, very God of very God, begotten, not made, being of one substance with the Father;
11325 δι' οὗ τὰ πάντα ἐγένετο, [τά τε ἐν τῷ οὐρανῷ καὶ τὰ ἐν τῇ γῇ,]
By whom all things were made [both in heaven and on earth];
τὸν δι' ἡμᾶς τοὺς ἀνθρώπους καὶ διὰ τὴν ἡμετέραν σωτηρίαν κατελθόντα καὶ σαρκωθέντα καὶ ἐνανθρωπήσαντα,
Who for us men, and for our salvation, came down and was incarnate and was made man;
11335 παθόντα, καὶ ἀναστάντα τῇ τρίτῃ ἡμέρᾳ, ἀνελθόντα εἰς τοὺς οὐρανοὺς,
He suffered, and the third day he rose again, ascended into heaven;
ἐρχόμενον κρῖναι ζῶντας καὶ νεκρούς.
From thence he shall come to judge the quick and the dead.
Καὶ εἰς τὸ Ἅγιον Πνεῦμα.
And in the Holy Ghost.
11340 [Τοὺς δὲ λέγοντας, Ἦν ποτε ὅτε οὐκ ἦν, καὶ Πρὶν γεννηθῆναι οὐκ ἦν, καὶ ὅτι Ἐξ οὐκ ὄντων ἐγένετο, ἢ Ἐξ ἐτέρας ὑποστάσεως ἢ οὐσίας φάσκοντας εἶναι, ἢ κτιστόν, ἢ τρεπτόν, ἢ ἀλλοιωτὸν τὸν Υἱὸν τοῦ Θεοῦ, τούτους ἀναθεματίζει ἡ ἀγία καθολικὴ καὶ ἀποστολικὴ ἐκκλησία].

11345 [But those who say: 'There was a time when he was not;' and 'He was not before he was made;' and 'He was made out of nothing', or 'He is of another substance' or 'essence', or 'The Son of God is created', or 'changeable', or 'alterable'— they are condemned by the holy catholic and apostolic Church.]

11350

Canon XII van Nicaea

XII. Quicumque vocati per gratiam, primum quidem ardorem fidemve suam ostenderunt, et cingulum militiae deposuerunt, postea vero ut canes ad suum vomitum reversi sunt, ita ut aliqui et pecuniam darent, et beneficiis militiam repeterent, hi decem annis jaceant, post triennii auditionis tempus. In his autem omnibus observare oportet propositum et modum poenitentiae. Quicumque enim et timore, et lacrymis, et patientia, et bonis operibus conversionem absque simulatione demonstrant, hi definitum tempus auditionis implentes, tum demum orationibus communicabunt, et postea licebit episcopo, de his aliquid humanius cogitare. Quicumque vero indifferenter tulerunt, et habitum Ecclesiam introeundi sibi arbitrati sunt ad conversionem sufficere, hi definitum tempus omnino impleant.

https://www.earlychurchtexts.com/main/nicaea/canons_of_nicaea_02.shtml

Canon XII.

11365

As many as were called by grace, and displayed the first zeal, having cast aside their military girdles, but afterwards returned, like dogs, to their own vomit, (so that some spent money and by means of gifts regained their military stations); let these, after they have passed the space of three years as hearers, be for ten years prostrators. But in all these cases it is necessary to examine well into their purpose and what their repentance appears to be like. For as many as give evidence of their conversions by deeds, and not pretence, with fear, and tears, and perseverance, and good works, when they have fulfilled their appointed time as hearers, may properly communicate in prayers; and after that the bishop may determine yet more favourably concerning them. But those who take [the matter] with indifference, and who think the form of [not] entering the Church is sufficient for their conversion, must fulfil the whole time.

11375

Notes. ANCIENT EPITOME OF CANON XII.

Those who endured violence and were seen to have resisted, but who afterwards yielded to wickedness, and returned to the army, shall be excommunicated for ten years. But in every case the way in which they do their penance must be scrutinized. And if anyone who is doing penance shews himself zealous in its performance, the bishop shall treat him more leniently than had he been cold and indifferent.

11380

LAMBERT. The abuse of this power, namely, of granting under certain circumstances a relaxation in the penitential exercises enjoined by the canons—led, in later times, to the practice of commuting such exercises for money payments, etc.

11385

HEFELE. In his last contests with Constantine, Licinius had made himself the representative of heathenism; so that the final issue of the war would not be the mere triumph of one of the two competitors, but the triumph or fall of Christianity or heathenism. Accordingly, a Christian who had in this war supported the cause of Licinius and of heathenism might be considered as a lapsus, even if he did not formally fall away. With much more reason might those Christians be treated as lapsi who, having conscientiously given up military service (this is meant by the soldier's belt), afterwards retracted their resolution, and went so far as to give money and presents for the sake of readmission, on account of the numerous advantages which military service then afforded. It must not be forgotten that Licinius, as Zonaras and Eusebius relate, required from his soldiers a formal apostasy; compelled them, for example, to take part in the heathen sacrifices which were held in the camps, and dismissed from his service those who would not apostatize.

11395

BRIGHT. This canon (which in the Prisca and the Isidorian version stands as part of canon 11) deals, like it, with cases which had arisen under the Eastern reign of Licinius, who having resolved to "purge his army of all ardent Christians" (Mason, Persec. of Diocl. p. 308), ordered his Christian officers to sacrifice to the gods on pain of being cashiered (compare Euseb. H. E. x. 8; Vit. Con. i. 54). It is to be observed here that military life as such was not deemed unchristian. The case of Cornelius was borne in mind. "We serve in your armies," says Tertullian, Apol. 42 (although later, as a Montanist, he took a rigorist and fanatical view, De Cor. 11), and compare the fact which underlies the tale of the "Thundering Legion,"—the presence of Christians in the army of Marcus Aurelius. It was the heathenish adjuncts to their calling which often brought Christian soldiers to a stand (see Routh. Scr.

11405

11410

Opusc. i. 410), as when Marinus' succession to a centurionship was challenged on the ground that he could not sacrifice to the gods (Euseb. H. E. vii. 15). Sometimes, indeed, individual Christians thought like Maximilian in the Martyrology, who absolutely refused to enlist, and on being told by the proconsul that there were Christian soldiers in the imperial service, answered, "Ipsi sciunt quod ipsis expediat" (Ruinart, Act. Sanc. p. 341). But, says Bingham (Antiq. xi. 5, 10), "the ancient canons did not condemn the military life as a vocation simply unlawful... I believe there is no instance of any man being refused baptism merely because he was a soldier, unless some unlawful circumstance, such as idolatry, or the like, made the vocation sinful". After the victory of Constantine in the West, the Council of Arles excommunicated those who in time of peace "threw away their arms" (can. 2). In the case before us, some Christian officers had at first stood firm under the trial imposed on them by Licinius. They had been "called by grace" to an act of self-sacrifice (the phrase is one which St. Augustine might have used); and had shown "their eagerness at the outset" ("primum suum ardorem," Dionysius; Philo and Evarestus more laxly, "primordia bona;" compare τὴν ἀγάπην σου τὴν πρώτην, Rev. ii. 4). Observe here how beautifully the ideas of grace and free will are harmonized. These men had responded to a Divine impulse: it might seem that they had committed themselves to a noble course: they had cast aside the "belts" which were their badge of office (compare the cases of Valentinian and Valens, Soc. iii. 13, and of Benevolus throwing down his belt at the feet of Justina, Soz. vii. 13). They had done, in fact, just what Auxentius, one of Licinius' notaries, had done when, according to the graphic anecdote of Philostorgius (Fragm. 5), his master bade him place a bunch of grapes before a statue of Bacchus in the palace-court; but their zeal, unlike his, proved to be too impulsive - they reconsidered their position, and illustrated the maxim that in morals second thoughts are not best (Butler, Sermon. 7), by making unworthy attempts - in some cases by bribery - to recover what they had worthily resigned. (Observe the Grecised Latinism βενεφικίους and compare the Latinisms of St. Mark, and others in Euseb. iii. 20, vi. 40, x. 5.) This the Council describes in proverbial language, probably borrowed from 2 Pet. ii. 22, but, it is needless to say, without intending to censure enlistment as such. They now desired to be received to penance: accordingly they were ordered to spend three years as Hearers, during which time "their purpose, and the nature (εἶδος) of their repentance" were to be carefully "examined". Again we see the earnest resolution of the Council to make discipline a moral reality, and to prevent it from being turned into a formal routine; to secure, as Rufinus' abridgment expresses it, a repentance "fructuosam et attentam". If the penitents were found to have "manifested their conversion by deeds, and not in outward show (σχῆματι), by awe, and tears, and patience, and good works" (such, for instance, Zonaras comments, as almsgiving according to ability), "it would be then reasonable to admit them to a participation in the prayers," to the position of Consistentes, "with permission also to the bishop to come to a yet more indulgent resolution concerning them," by admitting them to full communion. This discretionary power of the bishop to dispense with part of a penance-time is recognized in the fifth canon of Ancyra and the sixteenth of Chalcedon, and mentioned by Basil, Epist. 217, c. 74. It was the basis of "indulgences" in their original form (Bingham, xviii. 4, 9). But it was too possible that some at least of these lapsi might take the whole affair lightly, "with indifference" ἄδιαφόρως - not seriously enough, as Hervetas renders - just as if, in common parlance, it did not signify: the fourth Ancyrene canon speaks of lapsi who partook of the idol-feast ἄδιαφόρως as if it involved them in no sin (see below on Eph. 5, Chalc. 4). It was possible that they might "deem" the outward form of "entering the church" to stand in the narthex among the Hearers (here, as in c. 8, 19, σχῆμα denotes an external visible fact) sufficient to entitle them to the character of converted penitents, while their conduct out of church was utterly lacking in seriousness and self-humiliation. In that case there could be no question of shortening their penance time, for they were not in a state to benefit by indulgence: it would be, as the Roman Presbyters wrote to Cyprian, and as he himself wrote to his own church, a "mere covering over of the wound" (Epist. 30, 3), an "injury" rather than "a kindness" (De Lapsis, 16); they must therefore "by all means" go through ten years as Kneelers, before they can become Consistentes. There is great difficulty about the last phrase and Gelasius of Cyzicus, the Prisca, Dionysius Exiguus, the pseudo-Isidore, Zonaras and most others have considered the "not" an interpolation. I do not see how dropping the "not" makes the meaning materially clearer.

11475

Canon 12 Readmission for those who returned to the military

As for those who were called by grace and at first zealously threw away their military uniforms, but then later returned like dogs to their own vomit (so that some regained their military positions through bribes and gifts), let these spend three years as hearers and ten years as prostrators. But in all such cases it is necessary to carefully examine their intentions and their repentance. If they give evidence of their conversions by their actions (and not mere pretence), with fear, tears, perseverance, and good works, then they may properly join the assembly in prayers once they have fulfilled their appointed time as hearers. Beyond that, the bishop may make an even more lenient (philanthropion) decision concerning them. But those who take the matter with indifference, and who think the prescribed form of entering the church is sufficient for their readmission, must fulfill the whole time.

Imperial Decrees of Constantine

from Ecclesiastical History, Book 10, Ch. 5

As we long since perceived that religious liberty should not be denied, but that it should be granted to the opinion and wishes of each one to perform divine duties according to his own determination, we had given orders, that each one, and the Christians among the rest, have the liberty to observe the religion of his choice, and his peculiar mode of worship. And as there plainly appeared to be many and different sects added in that edict, in which this privilege was granted them, some of them perhaps, after a little while, on this account shrunk from this kind of attention and observance. Wherefore as I, Constantine and Augustus, and I, Licinius Augustus, came under favorable auspices to Milan, and took under consideration all affairs that pertained to the public benefit and welfare, these things among the rest appeared to us to be most advantageous and profitable to all. We have resolved among the first thing to ordain those matters by which reverence and worship to the Deity might be exhibited; that is, how we may grant likewise to the Christians, and to all, the free choice to follow that mode of worship which they may wish, that whatsoever divinity and celestial power may exist, may be propitious to us and to all that live under our government. Therefore, we have decreed the following ordinance, as our will, with a salutary and most correct intention, that no freedom at all shall be refused to Christians, to follow or to keep their observances or worship; but that to each one power be granted to devote his mind to that worship which he may think adapted to himself, that the Deity may in all things exhibit to us his accustomed favour and kindness. It was just and consistent that we should write that this was our pleasure, that all exceptions respecting the Christians being completely removed, which were contained in the former epistle, that we sent to your fidelity, and whatever measures were wholly sinister and foreign to our mildness, that these should be altogether annulled; and now that each one of the Christians may freely and without molestation, pursue and follow that course of worship which he has proposed to himself: which, indeed, we have resolved to communicate most fully to your care and diligence, that you may know we have granted liberty and full freedom to the Christians, to observe their own mode of worship; which as your fidelity understands absolutely granted to them by us, the privilege is also granted to others to pursue that worship and religion they wish, which it is obvious is consistent with the peace and tranquility of our times; that each may have the privilege to select and to worship whatsoever divinity he pleases. But this has been done by us, that we might not appear in any manner to detract any thing from any manner of religion, or any mode of worship. And this we further decree, with respect to the Christians, that the places in which they were formerly accustomed to assemble, concerning which we also formerly wrote to your fidelity, in a different form, that if any persons have purchased these, either from our treasury or from any other one, these shall restore them to the Christians, without money and without demanding any price, without any superadded value, or augmentation, without delay, or hesitancy. And if any have happened to receive these places as presents, that they shall restore them as soon as possible to the Christians, so that if either those that purchased or those that received them as presents, have any thing to request of our munificence, they may go to the provincial governor, as the judge, that provision may also be made for them by our clemency; all which, it will be necessary to be delivered up to the body of Christians, by your care, without any delay.

And since the Christians themselves are known to have had not only those places where they were accustomed to meet, but other places also, belonging not to individuals among them, but to the right of the whole body of Christians, you will also command all these, by virtue of the law before mentioned, without any hesitancy, to be restored to these same Christians, that is to their body, and to each conventicle respectively; the aforesaid consideration, to wit, being observed; namely, that they

- who as we have said restore them without valuation and price, may expect their indemnity from our munificence and liberality. In all which it will be incumbent on you, to manifest your exertions as much as possible, to the aforesaid body of Christians, that our orders may be most speedily accomplished, that likewise in this, provision may be made by our clemency, for the preservation of the common and public tranquility. For by these means, as before said, the divine favour with regard to us, which we have already experienced in many affairs, will continue firm and permanent at all times. But that the purpose of this our ordinance and liberality may be extended to the knowledge of all, it is expected that these things written by us, should be proposed and published to the knowledge of all, that this act of our liberality and kindness may remain unknown to none.
- Copy of another Ordinance which was issued by the Emperors, indicating that the benefit was conferred solely on the catholic (universal) church. Hail, our most esteemed Anulinus. This is the course of our benevolence; that we wish those things that belong justly to others, should not only remain unmolested, but should also when necessary be restored, most esteemed Anulinus. Whence it is our will, that when thou shalt receive this epistle, if any of those things belonging to the catholic church of the Christians in the several cities or other places, are now possessed either by the decurions, or any others, these thou shalt cause immediately to be restored to their churches. Since we have previously determined, that whatsoever these same churches before possessed, shall be restored to their right. When, therefore, your fidelity has understood this decree of our orders to be most evident and plain, make all haste to restore, as soon as possible, all that belongs to the churches, whether gardens or houses, or any thing else, that we may learn thou hast attended to, and most carefully observe this our decree. Farewell, most esteemed and beloved Anulinus.
- Copy of the Emperor's Epistle, in which he ordains a council of bishops to be held at Rome, for the unity and peace of the church. Constantine Augustus to Miltiades bishop of Rome, and to Marcus. As many communications of this kind have been sent to me from Anulinus, the most illustrious proconsul of Africa, in which it is contained that Cæcilianus, the bishop of Carthage, was accused, in many respects, by his colleagues in Africa; and as this appears to be grievous, that in those provinces which Divine Providence has freely entrusted to my fidelity, and in which there is a vast population, the multitude are found inclining to deteriorate, and in a manner divided into two parties, and among others, that the bishops were at variance; I have resolved that the same Cæcilianus, together with ten bishops, who appear to accuse him, and ten others, whom he himself may consider necessary for his cause, shall sail to Rome; that you, being present there, as also Reticius, Maternus, and Marinus, your colleagues, whom I have commanded to hasten to Rome for this purpose, may be heard, as you may understand most consistent with the most sacred law. And, that you may have the most perfect knowledge of these matters, I have subjoined to my own epistle copies of the writings sent to me by Anulinus, and sent them to your aforesaid colleagues; in which your gravity will read and consider in what way the aforesaid cause may be most accurately investigated and justly decided; since it neither escapes your diligence, that I show such regard for the holy catholic church, that I wish you, upon the whole, to leave no room for schism or division. May the power of the great God preserve you many years, most esteemed.
- Copy of the Epistle in which the Emperor commanded another council to be held, for the purpose of removing all the dissensions of the bishops. Constantine Augustus to Chrestus bishop of Syracuse. As there were some before who perversely and wickedly began to waver in the holy religion and celestial virtue, and to abandon the doctrine of the catholic (universal) church, desirous, therefore, of preventing such disputes among them, I had thus written, that this subject, which appeared to be agitated among them, might be rectified, by delegating certain bishops from Gaul, and summoning others of the opposite parties from Africa, who are pertinaciously and incessantly contending with one another, that by a careful examination of the matter in their presence, it might thus be decided. But since, as it happens, some, forgetful of their own salvation, and the reverence due to our most holy religion, even now do not cease to protract their own enmity, being unwilling to conform to the decision already promulgated, and asserting that they were very few that advanced their sentiments and opinions, or else that all points which ought to have been first fully discussed not being first examined, they proceeded with too

- much haste and precipitancy to give publicity to the decision. Hence it has happened,
 11610 that those very persons who ought to exhibit a brotherly and peaceful unanimity, are
 disgracefully and detestably at variance with one another, and thus give this
 occasion of derision to those that are without, and whose minds are averse to our
 most holy religion. Hence it has appeared necessary to me to provide that this
 matter, which ought to have ceased after the decision was issued by their own
 11615 voluntary agreement, now, at length, should be fully terminated by the intervention
 of many.
 Since, therefore, we have commanded many bishops to meet together from different and
 remote places, in the city of Arles, towards the calends of August, I have also
 thought proper to write to thee, that taking a public vehicle from the most
 11620 illustrious Latronianus, corrector of Sicily, and taking with thee two others of the
 second rank, which thou mayest select, also three servants to afford you services on
 the way; I would have you meet them within the same day at the aforesaid place. That
 by the weight of your authority, and the prudence and unanimity of the rest that
 assemble, this dispute, which has disgracefully continued until the present time, in
 11625 consequence of certain disgraceful contentions, may be discussed, by hearing all that
 shall be alleged by those who are now at variance, whom we have also commanded to be
 present, and thus the controversy be reduced, though slowly, to that faith, and
 observance of religion, and fraternal concord, which ought to prevail. May Almighty
 God preserve thee in safety many years.

PUB Silli 27; Dorries p. 127-128
Thankfully accepting the poems dedicated to him and offering his own opinions on poetry.
- 11700 326 CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
Huius anni annique 320 leges perturbatas tradi supra monimus. - Ex Thracia, ibi fuit mense Februario (nam nae leges utpote in Oriente datae non possunt transferri ad a. 320, ut omnino ad eum annum transferendae sunt Serdicensis et Sirmienses) per Aquileiam et Mediolanum Constantinus venit Romam, ubi eum celebrasse vicennalia die primo anni vicesimi primi scilicet die Iul. 25, multis testibus constat. Etiam adventus adscriptus in fastia Philocalianis editis a. 354 ad diem Iul. 28 vel 21 et profectio divi adnotata. Ibidem ad Sept. 27 non sine probilitate relata sunt ad hanc Constantini in urbe moram. - Hiemem a. 326/7 Constantinus ubi exegerit, parum constat; set videtur ex urbe rediisse Mediolanum (ubi eum collocat subscriptio Oct 23. cum laterculo praefectorum consentiens) et inde in Illyricum se contulisse.
- 11705 27 januari 326 IMP. CONSTANT(INUS) A. ET C. AD MAXIMUM P(RAE)FECTUM U(RBI).
Si is, qui dignitate Romanae civitatis amissa Latinus fuerit effectus, in eodem statu munere lucis excesserit, omne peculium eius a patrono vel a patroni filiis sive nepotibus, qui nequaquam ius agnationis amiserint, vindicetur. Nec ad disceptationem veluti hereditariae controversiae filiis liceat accedere, cum eius potissimum status ratio tractanda sit, non quem beneficio libertatis indultae sortitus acceperit, sed is, in quo munere lucis excesserit. DAT. III KAL. FEB. SERDIC(AE) IPSO A. VII ET C. CONSS.
- 11715 Interpretatio. Si quis civis Romanus libertus, intercedente culpa, Latinus libertus fuerit effectus, si in eadem Latinitate, sine reparatione prioris status, ab hac luce discesserit, facultates illius patronus vel patroni filii vel nepotes, qui tamen per virilem lineam descendunt et emancipati non fuerint, sibimet vindicabunt. Nec si filios, quos civis Romanus generavit, fortasse dimiserit, aliquid de eius hereditate praesumant: quia non quaerendum est, in qua libertate nati fuerint, sed in qua pater eorum positus condicione defecerit.
- 11720 28 januari 326 IMP. CONSTANT(INUS) A. AD POPULUM. Quoniam inter alias captiones praecipue commissoriae legis crescit asperitas, placet infirmari eam et in posterum omnem eius memoriam aboleri. Si quis igitur tali contractu laborat, hac sanctione respiret, quae cum praeteritis praesentia quoque depellit et futura prohibet. Creditores enim re amissa iubemus recipere quod dederunt. DAT. PRID. KAL. FEBR. SERDIC(AE) CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
- 11730 Interpretatio. Commissoriae cautiones dicuntur, in quibus debitor creditori suo rem, ipsi oppignoratam ad tempus, vendere per necessitatem conscripta cautione promittit: quod factum lex ista revocat et fieri penitus prohibet: ita ut, si quis creditor rem debitoris sub tali occasione visus fuerit comparare, non sibi de instrumentis blandiatur, sed quum primum voluerit ille, qui oppressus debito vendidit, pecuniam reddat et possessionem suam recipiat.
- 11735 11740

- 3 februari 326 Idem a. ad Evagrium. Si quis in ea culpa vel crimine fuerit deprehensus, quod dignum claustris carceris et custodiae squalore videtur, auditus aput acta, cum de admissio constiterit, poenam carceris sustineat atque ita postmodum
11745 eductus aput acta audiatur. Ita enim quasi sub publico testimonio commemoratio admissi criminis fiet, ut iudicibus inmodice saevientibus freni quidam ac temperies adhibita videatur. DAT. III NON. FEB. HERACLEAE CONSTANTINO A. VII ET CONSTANTIO CAES. CONSS.
- 3 februari 326 Imp. Constantinus a. Africano v. c. Quae adulterium commisit, utrum domina cauponae an ministra fuerit, requiri debet, et ita obsequio famulata servili, ut plerumque ipsa intemperantiae vina praebuerit; ut, si domina tabernae fuerit, non sit a vinculis iuris excepta, si vero potantibus ministerium praebuit, pro vilitate eius, quae in reatum deducitur, accusatione exclusa, liberi, qui
11750 accusantur, abscedant, quum ab his feminis pudicitiae ratio requiratur, quae iuris nexibus detinentur, hae autem immunes a iudiciaria severitate praestentur, quas vilitas vitae dignas legum observatione non credidit. DAT. III. NON. FEBR. HERACLEAE, CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
- Interpretatio. Tabernae domina, hoc est uxor tabernarii, si inventa fuerit in adulterio, accusari potest: si vero eius ancilla vel quae ministerium tabernae praebuit, in adulterio fuerit deprehensa, pro vilitate dimittetur. Sed et ipsa tabernarii uxor, si tam vilis ministerii officium egerit et in adulterio fuerit deprehensa, accusari non potest a marito.
11760 It should be ascertained whether the woman who committed adultery was the owner of the inn, or only a servant; and if, by employing herself in servile duties (which frequently happens), she gave occasion for intemperance, since if she were the mistress of the inn, she will not be exempt from liability under the law. Where, however, she served liquor to the men who were drinking, she would not be liable to accusation as having committed the offense, on account of her inferior
11765 rank, and any freemen who have been accused shall be discharged, as the same degree of modesty is required of these women as of those who are legally married, and bear the name of mothers of families. Those, also, are not subject to judicial severity who are guilty of fornication or adultery, and the vileness of whose lives does not render them worthy of the
11770 attention of the law.
- 15 februari 326 IDEM A. AD ACINDYNUM P(RAEFECTUM) P(RAETORI)O. Praesidibus et rationalibus ceterisque, quibus propterea res publica et annonas et alimenta pecoribus subministrat, usurpandi agminalis seu paraveredi licentia derogetur. Quibus
11780 illud quoque licere non patimur, ne quid de provincialibus citra ordinem poscant nisi hi tantum, quorum fides cognita est, cum usus necessitatis exegerit. Vestrae vero gravitatis ubi ratio exegerit, cursus publicus praesto est, quibus si a publico itinere aliqua militari via devertendum fuerit, ubi evectio non erit, publicis utemini agminalibus, sed modice et temperate tantum ad usum proprium necessariis.
- Quae res si neglecta fuerit, vobis aestimationis vestrae notam incurrentibus praesides periculum sustinebunt, cum super hac re exploratores iam missi sint. Quae enim mala provincialibus inferantur, conici ex eo etiam potest, quod nostris itineribus, quos publica utilitas movet, magna atque anxia dispositione vix vicenorum agminalium numerus subministrari queat. 11800 VII ET CONSTANTIO CAES. CONSS.

- 8 maart 326 IMP. CONSTANT(INUS) A. AD BASSUM P(RAEFECTUM) U(RBI). Advocatos, qui consceleratis depectionibus suae opis egentes spoliant atque nudant, non iure causae, sed fundorum, pecorum et manicipiorum qualitate rationeque tractata, dum eorum
11810 praecipua poscunt coacta sibi pactione transcribi, ab honestorum coetu iudiciorumque conspectu segregari praecipimus. DATA VIII ID. MART. CONSTANT(INO)P(OLI) CONSTANT(INO) A. VIII ET CONSTANTIO CONSS.
Interpretatio. Advocati, id est causas agentes, qui per iniquam cupiditatem susceptos, quorum causas acturi sunt, prius cogunt de rebus suis taliter scriptura
11815 intercedente pacisci, ut omnia, quae meliora sunt in agris aut in mancipiis aut in pecoribus, ad eos sub promissa defensione perveniant, et ideo qui tam scelerati in eos, quibus patrocinium promittunt, fuerint deprehensi, et a conventu honestorum virorum et iudiciorum communione praecipimus segregari.
- 15 maart 326 IMP. CONSTANT(INUS) A. AD POPULUM. In integrum restitutione minoribus adversus commenticias venditiones et adversus tutorum insidias sanctionum praesidio cautum esse non dubium est: ac si quid forte iidem de suo in fraudem tutelae alienasse docerentur, fraudatorio interdicto prospectum esse minoribus declaratur.
11820 DAT. ID. MART. SIRMIO. IPSO A. VII ET CAES. CONSS.
11825 Interpretatio. In annis minoribus constitutis multum legibus constat esse prospectum. Et ideo adversus tutorum fraudes vel venditiones, quas minoribus aliquibus commentis extorserint, aut quicquid sub tutelae nomine iniuste egerint, noverint legis beneficio revocandum.
- 15 maart 326 IDEM A. AD POPULUM. Lex, quae tutores curatoresque necessitate adstrinxit, ut aurum argentum gemmas vestes ceteraque mobilia pretiosa, urbana etiam mancipia, domos balnea horrea atque omnia intra civitates venderent omniaque ad nummos redigerent praeter praedia et mancipia rustica, multum minorum utilitati adversa est. Praecipimus itaque, ut haec omnia nulli tutorum curatorumve liceat
11835 vendere, nisi hac forte necessitate et lege, qua rusticum praedium atque mancipium vendere vel pignorare vel in dotem dare in praeteritum licebat, scilicet per inquisitionem iudicis, probationem causae, interpositionem decreti, ut fraudi locus non sit. Ante omnia igitur urbana mancipia, quia totius supellectilis notitiam derunt, semper in hereditate et in domo retineant; nam boni servi fraudem fieri
11840 prohibebunt, mali, si res exegerit, sub quaestione positi poterunt prodere veritatem. Atque ita omnia observabunt, ut nec inventaria minuere nec mutare vel subtrahere aliquid tutor valeat: quod in veste margaritis gemmis et in vasculis ceteraque supellectili necessarium est. Et tolerabilius est, si ita contigerit, servos mori
11845 suis dominis quam servire extraneis: quorum fuga potius tutori adscribitur, sive negligentia dissolutam patiatur esse disciplinam sive duritia vel indeia at verberibus eos adficiat. Nec enim dominos execrantur, sed magis diligunt, ita ut haec lex per hoc quoque melior antiqua sit: tunc enim remota servorum custodia etiam vita minorum saepius prodebatur. Nec vero domum vendere liceat, in qua defecit pater, minor crevit, in qua maiorum imagines aut videre fixas aut revulsas non videre satis
11850 est lugubre. Ergo et domus et cetera omnia immobilia in patrimonio minorum permaneant nullumque aedificii genus, quod integrum hereditas dabit, conlapsum tutoris fraude depereat. Sed et si parens vel cuiuscumque heres est minor reliquerit deformatum aedificium, tutor testificatione operis ipsius et multorum fide id reficere cogetur: ita enim annui redditus plus minoribus conferent quam per fraudes pretia deminuta.
11855 Servi etiam, qui aliqua sunt arte praediti, operas suas commodo minoris inferent, et reliqui, qui in usum minoris domini esse non poterunt quibusque ars nulla est, partim labore suo, partim alimoniarum taxatione pascantur. Lex enim non solum contra tutores, sed etiam contra feminas immoderatas atque intemperantes prospexit minoribus, quae plerumque novis maritis non solum res filiorum, sed etiam vitam
11860 addicunt. Huic accedit, quod ipsius pecuniae, in qua robur omne patrimoniorum veteres posuerunt, fenerandi usus vix diuturnus, vix continuus et stabilis est: quo facto saepe intercedente pecunia ad nihilum minorum patrimonium deducuntur. Iam ergo venditio tutoris nulla sit sine interpositione decreti: exceptis his dumtaxat vestibis, quae detritae usu aut corruptae servando servari non poterint.] vel
11865 curatore sollicito, ut easdem inspiciat frequenti re[cogni]tione incolumes. Animalia quoque supervacua minorum veneant, non vetamus. DAT. ID. MART. SIR(MIO) CONSTANTINO (A. VII E)T CONSTANTIO C. CONSS.
- 25 maart 326 Imp. Constantinus a. ad Maximum praefectum Urbi. pr. Cum in praeterito is mos in iudiciis servaretur, ut prolatis instrumentis, si ea falsa quis diceret, a sententia iudex civilis controversiae temperaret eoque contingeret, ut imminens accusatio nullis clausa temporibus petito rem possessoremve deluderet, commodum

- duximus, ut, etsi alteruter litigantium falsi strepitum intulisset, petitori tamen
 11875 possessorive momentum prolatorum instrumentorum conferret auctoritas, ut tunc civili
 iurgio terminato secunda falsi actio subderetur.
1. Volumus itaque, ut primum cesset inscriptio. Sed ubi falsi examen inciderit, tunc
 ad morem pristinum quaestione civili per sententiam terminata acerrima fiat indago
 argumentis testibus scripturarum collatione aliisque vestigiis veritatis. Nec
 11880 accusatori tantum quaestio incumbat nec probationis ei tota necessitas indicatur, sed
 inter utramque personam sit iudex medius nec ulla quae sentiat interlocutione
 divulgat, sed tamquam ad imitationem relationis, quae solum audiendi mandat officium,
 praebeat notionem, postrema sententia quid sibi liqueat proditurus.
2. Ultimum autem finem strepitus criminalis, quem litigantem disceptantemque fas non
 sit excedere, anni spatio limitamus, cuius exordium testatae aput iudicem competentem
 11885 actionis nascetur auspiciu: capitali post probationem supplicio, si id exigat
 magnitudo commissi, vel deportatione ei qui falsum commiserit imminente. PROPOSITA
 VIII KAL. APRIL. IN FORO TRAIANI CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
- 30 maart 326 IDEM A. AD SEVERUM. Veteranorum filios propter privilegia parentibus
 11890 eorum indulta vacare non patimur, sed programme per omnes civitates proposito
 diligenter quaesitos ad alterutrum compelli iubemus, ut aut decurionatus muneribus
 obtemperent aut militent, observaturo devotionis tuae officio, ut qui probantur ab
 annis viginti usque ad viginti et quinque annos aetatem agant. Si autem veteranorum
 filii, qui equestrem militiam toleraverunt, inter equites probari voluerint, habeant
 11895 facultatem, ita ut cum singulis equis idoneis praedicto adgregentur obsequio. Quod si
 quis duos equos habeat vel unum idoneum et servum unum, cum circitoria militet
 dignitate et binas annonas accipiat, qui gradus praebetur aliis post laborem.
 Singularum autem civitatum decurionibus intimetur, ut veteranorum filios, qui
 praedictae aetatis sunt, si militare noluerint vel minus inveniantur idonei, ad
 11900 curialia vocare non morentur obsequia, si tamen patrimoniis idonei esse noscuntur. Ex
 his autem, qui militare voluerint, si qui minus apti sunt equestri militiae id
 efficiente calamitate membrorum et legionariae congrui esse noscuntur, deducendi ad
 nos protectori qui ob hoc missus est consignentur. DAT. III KAL. AUG. AQUILEIA
 11905 CONSTANTINO A. VII ET CONSTANTIO CAES. CONSS.
- 11 april 326 Idem a. Lucio Verino. In arbitrio suo possessor habeat, ne suario
 pecuniam solvat, quod ideo permissum est, ne in aestimando porcorum pondere licentia
 suariis praebeatur. Quod si iuste porcos suarius aestimaverit, huic pecuniam
 possessor, cui pensationis utriusque copia est indulta, numerabit. Ne autem suario
 11910 in suscipienda pecunia detrimentis aliquid adferatur, singulis quibusque annis ea
 pretia porcinae possessor adnumeret, quae usus publicae conversationis adtulerit. Et
 quoniam non semper nec in omnibus locis una est forma pretiorum, pro diversitate
 locorum et temporum in specie pretia danda sunt, nisi ipsa porcina praestetur.
 Iudices autem regionum monendi sunt, ut per singulos annos ad scientiam tuam
 11915 referant, quae in quibus locis sunt pretia porcinae, ut instructione hac a tua
 gravitate perpensa tunc demum suarii per diversa proficiscantur et pretia suscipiant,
 quae in his regionibus versari cognoveris. Queri enim suarii non poterunt, quia nihil
 interest, carius an vilius comparent, cum, quantum pretium daturi sunt, a possessore
 accipiant; et possessores erunt moderati in specie distrahenda, cum se sciant, quanto
 11920 maiora pretia pro carne poposcerint, tanto plus suariis soluturos. DAT. III ID.
 APRIL. CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
- 19 april 326 Imp. Constantinus a. Maximiliano Macrobio... Quoties verbera dominorum
 talis casus servorum comitabitur, ut moriantur, culpa nudi sunt, qui, dum pessima
 11925 corrigunt, meliora suis acquirere vernulis voluerunt. Nec requiri in huius modi facto
 volumus, in quo interest domini incolume iuris proprii habere mancipium, utrum
 voluntate occidendi hominis an vero simpliciter facta castigatio videatur. Toties
 etenim dominum non placet morte servi reum homicidii pronuntiari, quoties simplicibus
 quaestionibus domesticam exercent potestatem. Si quando igitur servi plagarum
 11930 correctione, imminente fatali necessitate, rebus humanis excedunt, nullam metuant
 domini quaestionem. DAT. XIV KAL. MAI. SIRMIO, CONSTANTINO A. VII ET CONSTANTIO C.
 CONSS.
- Interpretatio. Si servus, dum culpam dominus vindicat, mortuus fuerit, dominus culpa
 homicidii non tenetur, quia tunc homicidii reus est, si occidere voluisse
 11935 convincitur. nam emendatio non vocatur ad crimen.
- 26 april 326 Idem a. ad Evagrium Pf. P. Quamvis adulterii crimen inter publica
 referatur, quorum delatio in commune omnibus sine aliqua legis interpretatione

- conceditur, tamen, ne volentibus temere liceat foedare connubia, proximis
 11940 necessariisque personis solummodo placet deferri copiam accusandi, hoc est patri vel consobрино et consanguineo maxime fratri, quos verus dolor ad accusationem impellit. Sed et his personis legem imponimus, ut crimen abolitione compescant. In primis maritum genialis tori vindicem esse oportet, cui quidem ex suspicione etiam ream coniugem facere, nec intra certa tempora inscriptionis vinculo contineri, veteres
 11945 retro principes annuerunt. Extraneos autem procul arceri ab hac accusatione censemus. Nam etsi omne genus accusationis necessitas inscriptionis adstringat, nonnulli tamen proterve id faciunt et falsis contumeliis matrimonia deformant. PP. NICOMEDIAE VII KAL. MAI., CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
 Interpretatio. In adulterio extraneam mulierem nullus accuset, sed propinqui, ad
 11950 quorum notam pertinet, hoc est frater germanus, frater patruelis, patruus et consobrinus, qui tamen ante inscriptionem, si accusata acquieverit, possunt per satisfactionem veniam promereri. Reliqui ab accusatione prohibentur. Maritis sane etiam ex suspicione accusare permissum est.
 Although the crime of adultery is included among public offenses, the accusation of
 11955 which is granted to all persons without distinction, still, in order that those who inconsiderately wish to cause discord in households may not be allowed to do so, it is hereby decreed that only the nearest relatives of the guilty party shall have the power to bring the accusation; that is to say, the father, the brother, and the paternal and maternal uncles, whom genuine grief may impel to prosecute. We, however,
 11960 also give the said persons permission to revoke the accusation, by withdrawing it, if they should so desire.
 The husband, above all others, should be considered the avenger of the marriage bed, for he is permitted to accuse his wife on suspicion, and he is not forbidden to retain her, if he only suspects her; nor will he be liable if he files a written
 11965 accusation when he accuses her as her husband, a privilege which was established by former Emperors.
- 17 mei 326 Idem a. ad Evagrium praefectum praetorio. Quoniam curias desolari cognovimus his, qui per originem obnoxii sunt, militiam sibi per supplicationem
 11970 poscentibus et ad legiones vel diversa officia currentibus, iubemus omnes curias admoneri, ut, quos intra XX stipendia in officiis deprehenderint vel originem defugisse vel sprete nominatione militiae se inseruisse, hos ad curiam retrahant et de cetero sciant esse servandum, ut qui derelicta curia militaverit, revocetur ad curiam, non solum si originalis sit, sed et si substantiam muneribus aptam possidens
 11975 ad militiam confugerit vel beneficio nostro fuerit liberatus. DAT. XVI KAL. IUN. CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
- 20 mei 326 Idem a. ad Rufinum praefectum praetorio. Archiatri omnes et ex archiatri ab universis muneribus curialium, senatorum et comitum perfectissimorumque muneribus
 11980 et obsequiis, quae administratione perfunctis saepe mandantur, a praestationibus quoque publicis liberi immunesque permaneant nec ad ullam auri et argenti et equorum praestationem vocentur, quae forte praedictis ordinibus aut dignitatibus adscribuntur. Huius autem indulgentiam sanctionis ad filios quoque eorum statuimus pervenire. DAT. XII KAL. IUN. CONSTANTINO A. VII ET CONSTANTIO CAES. CONSS.
- 21 mei 326 IDEM A. AD MAXIMUM P(RAE)FECTUM U(RBI). Quodam tempore admissum est, ut
 non subscriptio, sed professio criminis uno sermone ex ore fugiens tam accusatorem
 quam reum sub experiendi periculo de patria, de liberis, de fortunis, de vita denique
 11990 dimicare cogeret. Ideoque volumus, ut remota professionis licentia ac temeritate ad subscriptionis morem ordinemque criminatio referatur, ut iure veteri in criminibus deferendis omnes utantur, id est ut sopita ira et per haec spatia mentis tranquillitate recepta ad supremam actionem cum ratione veniant atque consilio. DAT. XI KAL. IUN. SIRMIO, ACC. ROMAE CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
 Interpretatio. Si quis iratus crimen aliquod temere cuilibet obiecerit, convicium non
 11995 est pro accusatione habendum, sed permissio tractandi spatio, id quod iratus dixit, per scripturam se probaturum esse fateatur. Quod si fortasse resipiscens post iracundiam, quae dixit, iterare aut scribere fortasse noluerit, non ut reus criminis teneatur.
- 29 mei 326 Imp. Constantinus a. ad populum. pr. Si qua cum servo occulte rem
 12000 habere detegitur, capitali sententiae subiugetur, tradendo ignibus verberone, sitque omnibus facultas crimen publicum arguendi, sit officio copia nuntiandi, sit etiam servo licentia deferendi, cui probato criminelibertas dabitur, quum falsae accusationi poena immineat.

- 12005 1. Ante legem nupta tali consortio segregetur, non solum domo, verum etiam provinciae communione privata, amati abscessum defleat relegati.
2. Filii etiam, quos ex hac coniunctione habuerit, exuti omnibus dignitatis insignibus, in nuda maneant libertate, neque per se neque per interpositam personam quolibet titulo voluntatis accepturi aliquid ex facultatibus mulieris.
- 12010 3. Successio autem mulieris ab intestato vel filiis, si erunt legitimi, vel proximis cognatisque deferatur vel ei, quem ratio iuris admittit, ita ut et quod ille, qui quondam amatus est, et quod ex eo suscepti filii quolibet casu in sua videntur habuisse substantia, dominio mulieris sociatum a memoratis successoribus vindicetur.
4. His ita omnibus observandis, et si ante legem decessit mulier vel amatus, quoniam
- 12015 vel unus auctor vitii censurae occurrit.
5. Sin vero iam uterque decessit, soboli parcimus, ne defunctorum parentum vitiis praegravetur; sint filii, sint potiores fratribus, proximis atque cognatis, sint relictæ successionis heredes.
6. Post legem enim hoc committentes morte punimus. qui vero ex lege disiuncti clam
- 12020 denuo convenerint, congressus vetitos renovantes, hi servorum indicio vel speculantis officii vel etiam proximorum delatione convicti poenam similem sustinebunt.
DAT. IV KAL. IUN. SERDICAЕ, CONSTANTINO A. VII ET CONSTANTIO C. CONSS.
Interpretatio. Si qua ingenua mulier servo proprio se occulte miscuerit, capitaliter puniatur. Servus etiam, qui in adulterio dominae convictus fuerit, ignibus exuratur.
- 12025 In potestate habeat huius modi crimen quicumque voluerit accusare. Servi etiam aut ancillae, si de hoc crimine accusationem detulerint, audiantur: ea tamen ratione, ut si probaverint, libertatem consequantur, si fefellerint, puniantur. Hereditas mulieris, quae se tali crimine maculaverit, vel filiis, si sunt ex marito suscepti, vel propinquis ex lege venientibus tribuatur.
- 12030 May 29, 326 Imp. Constantine a. to the people. If any one is discovered to have a secret affair with a slave, he shall be subjected to the capital sentence, by being delivered to the stake and beaten, and there shall be the opportunity for all to accuse him of a public crime, there shall be ample opportunity for reporting, and there shall also be permission for the slave to be brought before the court, who, if
- 12035 the crime is proven, shall be given freedom, since the penalty for false accusation is imminent.
1. Before the law, a married woman shall be separated from such a union, not only from her house, but also from the private communion of the province, and shall mourn the departure of her beloved, exiled.
- 12040 2. The children also, whom she has from this union, shall be stripped of all the insignia of dignity, and shall remain in bare liberty, neither by herself nor through an interposed person, by any title of will, to receive anything from the woman's faculties.
3. But the succession of a woman from the intestate or to the children, if they are legitimate, or to the nearest relatives and kinsmen, or to him whom the reason of the law admits, so that both the one who was once loved, and the children born from him, in each case, seem to have had substance in their own right, are claimed by the
- 12045 aforementioned successors in the ownership of the woman.
4. All these things being thus observed, and if the woman or the beloved died before the law, since at least one author of the censure defect occurs.
- 12050 5. But if both have already died, we spare the offspring, lest they be burdened with the defects of the deceased parents; let them be sons, let them be preferred to brothers, nearest and kinsmen, let them be heirs of the inheritance left.
6. For after the law we punish those who commit this with death. But those who, having been separated by law, secretly meet again, renewing forbidden meetings, these, having been convicted by the evidence of slaves or by the office of a spy or even by the denunciation of their neighbors, will suffer a similar punishment.
- 12055 DAT. IV KAL. IUN. SERDICAЕ, CONSTANTINO A. VII AND CONSTANTIO C. CONSS.
Interpretation. If any free woman has secretly mixed with her own slave, she shall be punished with capital punishment. A slave who has been convicted of adultery with his mistress shall also be burned at the stake. Whoever wishes to accuse such a crime shall have the power to accuse. Even slaves or maidservants, if they bring an accusation of this crime, shall be heard: however, in such a way that if they prove it, they shall obtain freedom, if they are false, they shall be punished. The
- 12060 inheritance of a woman who has stained herself with such a crime shall be given either to her children, if they are adopted by her husband, or to her relatives who come by law.
- 12065

- nec temere et citra modum populi clericis conectantur, sed cum defunctus fuerit clericus, ad vicem defuncti alius allegetur, cui nulla ex municipibus prosapia fuerit neque ea est opulentia facultatum, quae publicas functiones facillime queat tolerare, ita ut, si inter civitatem et clericos super alicuius nomine dubitetur, si eum
- 12075 aequitas ad publica trahat obsequia et progenie municeps vel patrimonio idoneus dinoscetur, exemptus clericis civitati tradatur. Opulentos enim saeculi subire necessitates oportet, pauperes ecclesiarum divitiis sustentari. PROPOSITA KAL. IUN. CONSTANTINO A. VII ET CONSTANTIO CAES. CONSS.
- 12080 1 juni 326 CT 16.2.6 Constantine
This is a repetition and qualification of a law from July 18, 320. While the clergy are granted exemption from compulsory public services, exemption cannot be given indiscriminately to everyone who claims to be part of the clergy, because the wealthy are not supposed to be clergy. Also, the roles of the clergy cannot be expanded in
- 12085 order to help exempt more people from public services. When a clergyman dies, his successor should not be chosen from the wealthy, for the wealthy should assume secular obligations. [Seeck and Elliot (listed) emend both this law and the law 16.2.3, listed on July 18th, 320. They move both of these laws to 329, thus reversing their order. In that case, this law would be the original restriction on clergy
- 12090 exemptions, and 16.2.3 would be a qualification released a month later.]

Rescript of Constantine I on Hispellum (326-337)
 Although Constantine recognized Christianity as one of the religions of the State in 313 A.D. and perhaps embraced it himself at that time, probably for reasons of policy he continued to serve as pontifex maximus of the old Roman State religion. It is the opinion of Alföldi that he took this course to propitiate the conservative elements in the Empire and particularly the nobility, which was still predominantly pagan. In the inscription translated here the town of Hispellum in Umbria, Italy, where the marble tablet containing the rescript was found in 1733, had requested the right to build a temple to the Gens Flavia, to which Constantine's family belonged, to celebrate games there instead of at Volsinii, as had previously been the custom, and to rename the town in honor of the emperor's family. All there requests were granted with the proviso, however, that the celebrations at Volsinii must also continue to be held.

12420 Copy of the sacred rescript.

Emperor Caesar Flavius Constantine Maximus Germanicus Sarmaticus Maximus Gothicus Victor Triumphator Augustus and Flavius Constantine and Flavius Julius Constantius and Flavius Constans.

We encompass with our untiring attention and care everything, indeed, that benefits human society; but this is the greatest task for our forethought: that all the cities whose splendid appearance and beauty distinguish them in the eyes of all provinces and of all regions not only shall keep their former dignity, but also shall be promoted to a still greater esteem by the grant of our Beneficence.

Since, indeed, you aver that you have been annexed to Tuscia in such a way that by the established practice of ancient custom priests are created every other year in turn by you and by the aforesaid people of Tuscia, who exhibit stage plays and a gladiatorial show at Volsinii, a City of Tuscia; but that, because of the steepness of the mountains and the difficulties of the paths through the forests thither, you most earnestly request that permission shall be granted to your priest to abandon the necessity of going to Volsinii to celebrate the exhibition; and that we shall give a name from our cognomen to the community, which now has the name Hispellum and which you state is contiguous to and lying along the Flaminian Way and in which a temple of the Flavian Family is being built, of truly magnificent workmanship worthy of the greatness of its name; and that there that priest, whom Umbria selects annually, shall exhibit a festival of both stage plays and gladiatorial shows; and that this custom shall remain as regards Tuscia: that the priest created at Volsinii shall celebrate, as has been his wont, the observation of the aforesaid exhibitions at that place: our assent is gladly granted to your prayer and desire.

For from our own name we vouchsafe to the community of Hispellum an eternal designation, an appellation to be venerated, so that hereafter the aforesaid city shall be called Flavia Constans; and in its center we wish, as you desire, the temple of our Flavian Family to be completed of magnificent workmanship, but with this regulation added: that no temple dedicated in our name shall be defiled by the deceptions of any contagious and unreasonable religious belief; and so we also permit you to stage exhibitions in the aforesaid community, although in such manner that, as has been said, the celebration of Volsinii also shall not fall into disuse through the ages, but that there the aforesaid celebration also must be staged by priests chosen from Tuscia.

Thus, indeed, it will not appear that our actions especially derogate anything from old customs; and you, who are suppliants to us for the aforesaid causes, will rejoice that you have gained those things for which you have earnestly asked.

Rescript of Constantine I on Usucapion (326-333)

Acquisition of ownership by usucapion in the provinces was possible after ten years if the possessor lived in the same province as the other claimants, or twenty years if he did not, and if the usucaptor could furnish a legal title, such as gift, informal sale, etc., and had undisturbed possession during the period. Constantine kept the old rule, but did not require proof of title after possession for forty years. The rescript is on a papyrus published in 1937.

Imp. Constantinus Aug. et Constantinus et Constantius Nobb. Caess. Agrippino senatori: Et diutinae possessionis hactenus placuit ut haberetur ratio, ne ab iis si constat (rem) de qua est quaestio quadraginta annos possessam esse, possessionis

- titulus requireretur. Placuit etiam, iusto titulo ad annorum decem uel uiginti praescriptionem pertinente (?), possessorem adiuuari, et cetera.
- Our Lords Constantine Augustus and the most noble Caesars Constantine and Constantius to the Senator Agrippinus. It is our pleasure that the rule of long-time possession shall be observed thus far: that in the case of those persons who can prove possession for forty years, a title to their possession shall not be required. It is also our pleasure that the possessor for ten or twenty years with a legal title of prescription shall be confirmed in his possession, etc.
- 326 Eusebius, VC 3.30-32 Constantine
Constantine orders a church to be built over the holy sepulcher and commands the local government officials to assist.

- 21 januari 327 IDEM A. AD MAXIMUM P(RAEFECTUM) P(RAETORI)O. Qui de statutis praesidalibus conqueruntur, cum ea in detrimentum legum prolata arbitrantur, ad tuae auctoritatis iudicium pervenire faciant, ut fractis atque convulsis quae perperam inpressa sunt ne nomen quidem sententiae possint retinere. DAT. XII K. FEB. CONSTANTIO ET MAXIMO CONSS.
- 27 februari 327 Idem a. Acacio comiti Macedoniae. Mancipia adscripta censibus intra provinciae terminos distrahantur et qui emptione dominium nancti fuerint, inspiciendum sibi esse cognoscant. Id quod in possessione quoque servari rationis est: sublatis pactionibus eorundem onera ac pensitationes publicae ad eorum sollicitudinem spectent, ad quorum dominium possessiones eaedem migraverunt. DAT. III KAL. MART. THESSALONICAE CONSTANTIO ET MAXIMO CONSS.
- 21 april 327 Idem a. ad Annium Tiberianum comitem. Universis provinciarum rectoribus intimato nostram clementiam statuuisse veteranorum filios curialibus muniis innectendos; ita ut et ii, qui perfectissimatus sibi honore blandiuntur, trusi in curiam necessariis officiis publicis inserviant. PROPOSITA XI KAL. MAI. KARTHAGINE CONSTANTIO ET MAXIMO CONSS.
- 17 mei 327 Imp. Constantinus a. ad Afros. Quoniam succlamatione vestra merito postulastis, ne qua his, qui praestationes fiscales differunt, reliquorum laxitas proveniret, specialiter praecipimus observari, ut res eorum, qui fiscalibus debitis per contumaciam satisfacere differunt, distrahantur: comparatoribus data firmitate perpetua possidendi etc. DAT. XV KAL. IUN. SERDICAЕ, CONSTANTINO ET MAXIMO CONSS. Interpretatio. Quicumque agrorum suorum tributa implere contemnent, agri eius, qui tributa sua contemnet exsolvere, ab exactore vendantur, et qui comparaverint, firmissimo iure hoc ordine empta possideant.
- 3 juni 327 IDEM A. AD CONSTANTIIUM P(RAEFECTUM) P(RAETORI)O. Nulli quidem de bonis usurpandis vivorum nec dividundis contra bonos mores concessa licentia est: sed si praecipiente matre bona eius inter se liberi diviserunt, placuit omnifariam nobis huiusmodi divisionem durare, si modo usque ad extremum eius vivendi spatium voluntas eadem perseverasse doceatur. DAT. III ID. IUN. CONSTANTIO ET MAXIMO CONSS. Interpretatio. Licet vivorum bona, ut dividantur, iniustum sit, tamen si mater vivens facultates suas filiis praeceperit et permiserit dividendas, et usque ad exitum vitae suae in eadem voluntate perstiterit, divisio inter filios facta perduret.
- 19 juli 327 IDEM A. AD IULIANUM P(RAEFECTUM) U(RBI). Petendae in integrum restitutionis temporibus, ut iam constitutum est, observatis si dilatio ab actore petatur, quae intra metas lege comprehensas valeat artari, eandem quocumque flagitante causis cognitis tribui oportebit: sin vero eiusmodi postulentur curricula, quae intra spatium lege receptum angustari non queunt, quippe si in confinio praedicti temporis petuntur et eius terminos prorogabunt, dilationem petitori denegari conveniet; in eius enim arbitrio fuerat tunc inferre litigium, cum petitaе dilationis mora spatio superstite posset includi. Quod si defensio possidentium dilationis suffragia postulaverit, eandem adserta causa citra obstaculum temporis deferri sancimus, quia nequaquam in ipsius steterat potestate, quando litigio pulseratur. Dari igitur debet, etsi impetrata dimensio sese ultra constitutionis regulam proferat. Qua dilatione, si a possessore impetretur, etiam petitor in requirendis probationibus uti minime prohibetur. DAT. XIV KAL AUG.; P(RO)P(OSITA)

ROMAE CONSTANTIO ET MAXIMO CONSS.

12535 Interpretatio. Liqueat quattuor mensibus constitutum, ut petentibus pro requirenda omni instructione indutiae concedantur. Unde si illud spatium requiratur, quod indultum est, id est, quod quattuor menses non possit excedere, praestari conveniet. Si vero tales petantur indutiae, quae tempus lege constitutum excedant, petitori debet dilatio denegari, qui scire debuit actionem suam constituto tempore finiendam. Quod si ille spatium, qui rem possidet, fortasse petierit, dari sine impedimento

12540 temporis, quod petentibus datum est, omnino debebit: quia scire non potuit, quando ab adversario provocaretur ad causam, et quando possessor spatium, ut respondere possit, acceperit, etiam petitor suis partibus poterit necessaria providere.

12545 31 juli 327 Idem a. Victori rationali urbis Romae. Quoniam nonnulli fisci debitores, cum iussi fuerint debitam summam exsolvere, interposito provocationis auxilio vim executionis eludunt nec iam opinionis exemplum nec refutatorias preces curant petere vel offerre, placuit, ut, si intra dies complendis sollempnitatibus praestitos ad facienda haec appellatoris cura defuerit, deserta ab eo provocatio aestimetur moxque debitum exigatur. DAT. PRID. KAL. AUG. CONSTANTIO ET MAXIMO CONSS.

12550 27 september 327 IDEM A. AD MAXIMUM P(RAEFECTUM) P(RAETORIO). Universa, quae scriptura Pauli continentur, recepta auctoritate firmanda sunt et omni veneratione celebranda. Ideoque sententiarum libros plenissima luce et perfectissima elocutione et iustissima iuris ratione succinctos in iudiciis prolatos valere minime dubitatur.

12555 DAT. V K. OCT. TREV(IRIS) CONSTANTIO ET MAXIMO CONSS.

- 12730 330 GALLICANO ET SYMMACHO CONSS.
Hoc a. Febr. 22 Constantinus videtur constituisse Bessapaae ex Serdica proficiscens in Thraciam, ubi die Mai. 11 Constantinopolis dedicata est et ab ea inde die (primum 330 Iul. 16) Constantinoplis comparet in subscriptionibus; mendas inesse probabile est etiam ob alias causa in constitutionibus secundu codices anterioribus, in quibus

- Constantinopolis invenitur. Aliquanto ante dedicationem aedificationem coepisse, fortasse devicto Licinio a. 323?, adeoque nomen Cons(tantinopolis) reperiri in nummis Crispi et Faustae interfectorum a. 326 quamquam nuper intellectum est, nihilo minus probabile est sedem eo Constantinum non transtulisse ante dedicationem. Eo anno ibi post eam imperator resedit. Notabile est, cum per annos praecedentes passim leges novas ad praefectos urbis Romae direxerit, inde a dedicata Constantinopli similes non reperiri praefectosque quos enumerat laterculus praefectorum inde a. die 329 Iun. 19 ad mortem usque imperatoris in constitutionibus non nominari.
- 12735 5 februari 330 Idem a. Valentino consulari Numidiae. Lectores divinorum apicum et hypodiaconi ceterique clerici, qui per iniuriam haereticorum ad curiam devocati sunt, absolvantur et de cetero ad similitudinem orientis minime ad curias devocentur, sed immunitate plenissima potiantur. DAT. NON. FEB. SERDICA GALLICANO ET SYMMACHO CONSS.
- 12740 5 februari 330 CT 16.2.7 Constantine
Lectors, subdeacons, and other clergy shall not have to serve as local senators. Given to the consular of Numidia.
- 12750 22 februari 330 IMP. CONSTANTINUS A. AD TERTULLIANUM V(IRUM) P(ERFECTISSIMUM) COMITEM DIOECESIOS ASIANAE. Si quis super invasis sui iuris locis prior detulerit querimoniam, quae finali cohaeret cum proprietate controversiae, prius super possessione quaestio finiatur et tunc agrimensior ire praecipiat ad loca, ut patefacta veritate huiusmodi litigium terminetur. Quod si altera pars locorum adepta dominium subterfugiendo moras attulerit, ne possit controversia definiri locorum ordine, electus agrimensior dirigatur ad loca, ut, si fidelis inspectio tenentis locum esse probaverit, petitor victus abscedat; at si controversia eius claruerit, qui primo iudiciis detulerit causam, ut invasor ille poena teneatur edicti, si tamen vi ea loca eundem invasisse constiterit. Nam si per errorem aut incuriam domini loca ab aliis possessa sunt, ipsis solis cedere debent. DAT. VIII K. MART. BESSI GALLICANO ET SYMMACHO CONSS.
- 12755 30 april 330 IDEM A. VALERIANO AGENTI VICARIAM P(RAE)F(ECTURAM). Quamvis in lucro nec feminis (ius ignora)ntibus subveniri soleat, contra aetatem adhuc imperfectam (locum) hoc non habere retro principum statuta declarant. Ne igi(tur so)luta matrimonii caritate inhumanum aliquid statuatur, (cense)mus, si futuris coniugibus tempore nubtiarum intra aeta(tem c)onstitutis res fuerint donatae et traditae, non ideo eas (posse) revocari, quia actis consignare donationem quondam (marit)us noluit. DAT. III K. MAI. GALLICANO ET SYMMACHO CONSS.
- 12760 Interpretatio. Quamquam et feminis, quae per fragilitatem interdum excusari possunt, in aliquibus causis, si negligentes fuerint, lex subvenire noluerit, hic tamen specialiter voluit esse consultum, ut, si qua in pupillaribus annis marito fuerit copulata, et sponsaliciam largitatem per negligentiam actis non allegaverit, huius legis beneficio, etsi gesta desint, inviolabilem in suo dominio donationem noverit permanere.
- 12775 18 mei 330 Imp. Constantinus a. ad Maximilianum consularem aquarum. Possessores, per quorum fines formarum meatus transeunt, ab extraordinariis oneribus volumus esse immunes, ut eorum opera aquarum ductus sordibus obpleti mudentur, nec ad aliud superindictae rei onus isdem possessoribus adtinendis, ne circa res alias occupati repurgium formarum facere non occurrant. Quod si neglexerint, amissione possessionum multabuntur: nam fiscus eius praedium obtinebit, cuius negligentia perniciem formae congesserit. Praeterea scire eos oportet, per quorum praedia ductus commeat, ut dextra laevaque de ipsis formis quindecim pedibus intermissis arbores habeant; observante tuo officio, ut, si quo tempore pullulaverint, excidantur, ne earum radices fabricam formae conrumpant. DAT. XV KAL. IUN. GALLICANO ET SYMMACHO CONSS.
- 12780 21 juni 330 IDEM A. AD BASSUM P(RAE)F(ECTUM) U(RBI). Si constiterit eum, qui finalem detulerit quaestionem, priusquam aliquid sententia determinetur, rem sibi alienam usurpare voluisse, non solum id quod male petebat amittat, sed quo magis unusquisque contentus suo rem non expetat iuris alieni, is, qui inreptor agrorum fuerit, in lite superatus tantum agri modum, quantum diripere temptavit, amittat. LECTA APUD ACTA XII KAL. IUL. GALLICANO ET SYMMACHO CONSS.
- 12790 Interpretatio. Si quis pervasor finium fuerit approbatus, eo quod, priusquam aliquid iudicio finiretur, id, quod alter tenuerat, invasisset, non solum illud, quod male praesumpsit, amittat, sed ut non unusquisque rem alienam occupet, quum fuerit in causa devictus pervasor iuris alieni, tantum spatii restituat, quantum praesumpsit
- 12795

invadere.

- 12800 26 juli 330 Imp. Constantinus a. Leontio Pf. P. Omnes solidi, in quibus nostri vultus ac veneratio una est, uno pretio aestimandi sunt atque vendendi, quamquam diversa formae mensura sit. Nec enim qui maiore habitu faciei extenditur, maioris est pretii, aut qui angustiore expressione concluditur, minoris valere credendus est, quum pondus idem exsistat. Quod si quis aliter fecerit, aut capite puniri debet, aut flammis tradi, vel alia poena mortifera. Quod ille etiam patietur, qui mensuram circuli exterioris arroserit, ut ponderis minuat quantitatem, vel figuratum solidum adultera imitatione in vendendo subiecerit. DAT. VII KAL. AUG. GALLICANO ET BASSO CONSS.
- 12805 Interpretatio. Quicumque solidum circumciderit aut adulterum supposuerit aut falsam monetam fecerit, capite puniatur.
- 12810 29 november 330 CT 16.8.2 Constantine
Jewish elders shall be exempt from compulsory public service. If such men are currently decurions, they are exempt from travel.

VC 3.61 Silli 37; Dorries p. 93-94

Praising him for turning down the bishopric of Antioch.

12890 330-331 Letter to Theodotus, Theodore, Narcissus, Aetius, Alpheius, and the other bishops who are in Antioch

VC 3.62 Silli 38; Dorries p. 92-93

Denouncing the attempt to make Eusebius bishop of Antioch.

12895 331 BASSO ET ABLAVIO CONSS.

Constantinum hoc quoque anno apparet mansisse Constantinopoli.

331 IMP. CONSTANT(INUS) A. AD ABLAVIUM P(RAEFECTUM) P(RAETORI)O. Placet mulieri non licere propter suas pravas cupiditates marito repudium mittere exquisita causa, velut ebrioso aut aleatori aut mulierculario, nec vero maritis per quascumque occasiones uxores suas dimittere, sed in repudio mittendo a femina haec sola crimina inquire, si homicidam vel medicamentarium vel sepulchrorum dissolutorem maritum suum esse probaverit, ut ita demum laudata omnem suam dotem recipiat. Nam si praeter haec tria crimina repudium marito miserit, oportet eam usque ad acuculam capitis in domo mariti deponere et pro tam magna sui confidentia in insulam deportari. In masculis etiam, si repudium mittant, haec tria crimina inquire conveniet, si moecham vel medicamentariam vel conciliatricem repudiare voluerint. Nam si ab his criminibus liberam eiecerit, omnem dotem restituere debet et aliam non ducere. Quod si fecerit, priori coniugi facultas dabitur domum eius invadere et omnem dotem posterioris uxoris ad semet ipsam transferre pro iniuria sibi inflata [illata]. DAT ... BASSO ET ABLAVIO CONSS.

12905 Interpretatio. Certis rebus et probatis causis, inter uxorem et maritum repudiandi locus patet; nam levi obiectione matrimonium solvere prohibentur. Quod si forte mulier dicat maritum suum aut ebriosum aut luxuriae deditum, non propterea repudiandus est, nisi forte eum aut homicidam aut maleficum aut sepulcri violatorem esse docuerit, quibus criminibus convictus sine culpa mulieris merito videtur excludi, et mulier recepta dote discedit: nam si haec crimina mulier non potuerit approbare, hac poena mulctatur, ut et dotem, quam dederat vel pro ipsa data fuerat, et donationem, quam percepit, amittat atque etiam exsilii relegatione teneatur. Quod si a viro mulier repellatur, nec ipse, nisi certis criminibus ream docuerit, pro levi, ut assolet, iurgio repudiare non permittitur, nisi fortasse adulteram aut maleficam aut conciliatricem eam probare sufficiat. Quod si docere non potuerit, dotem mulieri restituat et aliam ducere non praesumat uxorem. Quod si forte tentaverit, habebit mulier liberam facultatem, quae innocens eiecta est, domum mariti sui atque omnem eius substantiam sibimet vindicare. Quod dignoscitur ordinatum, ut

12925 etiam secundae uxoris dotem repudiata iniuste mulier iubeatur acquirere.

1 maart 331 Idem a. ad Bassum Pf. P. Legis promulgatio, quae per sedecim annos bona fide in libertate durantes contra eos, qui inquietant, praescriptione defendit, non

- opitulatur his, qui ex ancillis matribus et ingenuis patribus orti per id tempus in libertatis affectu cum parentibus perdurarint, quandoquidem, nullo praecedente iusto legitimae possessionis initio, usurpatio libertatis nuda iactetur, quum neque redemptio a servitute neque vicarii traditio servuli vel peculii assignatio valeat demonstrari; qui tituli possint famulatus nexibus liberare eum, qui convenitur, si quo ex iis genere usus in libertate esset per annos sedecim demoratus. Iure enim
12930
12935 communi maternam condicionem natum sequi necesse est, ita ut, etsi herilem lectulum ancilla ascenderit, non liberorum domino, sed servorum partum suscipiat. DAT. PRID. KAL. MART. BASSO ET ABLAVIO CONSS.
Interpretatio. Lex aliquando fuerat promulgata, ut, si quis sedecim annos sine ulla molestia, nullo repetente vel pulsante, vixisset, et postea in servitium non veniret.
12940 Sed hoc illis prodesse non poterit, quos de ingenuis patribus et colonis mulieribus vel ancillis constiterit procreatos, nisi forte patres eorum pro filiorum capite dominis, quorum ancillas in consortio habent, aut vicaria mancipia cum peculiiis aut redemptionem status eorum solverint. Si vero patres hoc se persolverisse non doceant, non poterunt matrum condicionem mutare, aut mancipia dominis deperire, etiamsi de propriis dominis nascantur, nisi per manumissionem servuli condicione carere non possunt. Si quis in libertate positus ancillam sibi copulaverit in coniugium, si filii ex ipsis nati fuerint, origo matrem sequatur: simili modo, si liberta servum duxerit maritum, agnatio servum sequatur, quia ad inferiorem personam vadit origo.
12945
12950 18 april 331 Imp. Constantinus a. ad Ablavium Pf. P. Quicumque puerum vel puellam proiectam de domo, patris vel domini voluntate scientiaque, collegerit ac suis alimentis ad robur provexerit, eundem retineat sub eodem statu, quem apud se collectum voluerit agitare, hoc est sive filium sive servum eum esse maluerit: omni repetitionis inquietudine penitus summovenda eorum, qui servos aut liberos scientes
12955 propria voluntate domo recens natos abiecerint. DAT. XV KAL. MAI. CONSTANTINOPOLI, BASSO ET ABLAVIO CONSS.
Interpretatio. Quicumque expositum recenti partu, sciente patre vel matre vel domino, collegerit ac suo labore educaverit, in illius, a quo collectus est, potestate consistat, seu ingenuum seu servum, quem nutrit, esse voluerit, et si adoptare
12960 voluerit in filium vel libertum aut in servitium permanere, propria utatur potestate.
1 juli 331 IDEM A. Ne ii, qui procul ab officio sublimitatis tuae sunt, nullum meritum per sedulitatem vel obsequia praeferentes locum possint laborantibus debitum inrepere, exceptores placet pro loco et ordine suo ad commentarios accedere et eorum
12965 administrationi subrogari ceteris propulsatis, ita ut inter exceptores, prout quisque locum tempore adipisci meruerit, ordine et merito consequatur. DAT. KAL. IUL. TREVIRIS BASSO ET ABLAVIO CONSS.
1 augustus 331 Idem a. ad universos provinciales. A proconsulibus et comitibus et his qui vice praefectorum cognoscunt, sive ex appellatione sive ex delegato sive ex ordine iudicaverint, provocari permittimus, ita ut appellanti iudex praebeat
12970 opinionis exemplum et acta cum refutatoriis partium suisque litteris ad nos dirigat. A praefectis autem praetorio, qui soli vice sacra cognoscere vere dicendi sunt, provocari non sinimus, ne iam nostra contingi veneratio videatur. Quod si victus oblatam nec receptam a iudice appellationem adfirmet, praefectos adeat, ut aput eos
12975 de integro litiget tamquam appellatione suscepta. Superatus enim si iniuste appellasse videbitur, lite perdita notatus abscedet, aut, si vicerit, contra eum iudicem, qui appellationem non receperat, ad nos referri necesse est, ut digno supplicio puniatur. DAT. KAL. AUG. PROPOSITA KAL. SEPT. CONSTANTINOPOLI BASSO ET
12980 ABLAVIO CONSS.
1 augustus 331 Idem a. ad universos provinciales. Qui licitam provocationem omiserit, perpetuo silere debet nec a nobis impudens petere per supplicationem auxilium. Quod si fecerit, deportationis poena plectendus est. DAT. KAL. AUG.
12985 PROPOSITA KAL. SEPT. BASSO ET ABLAVIO CONSS.
1 augustus 331 IDEM A. AD UNIVERSOS PROVINCIALES. Posta alia: Si finalis controversia fuerit, tum demum arbiter non negetur, cum intra quinque pedes locum, de quo agitur apud praesidem, esse constiterit; cum de maiore spatio causa, quoniam non finalis, sed proprietatis est, apud ipsum praesidem debeat terminari. Et si socius quid petat a socio, ante praeses iudicet, an praestari aliquid oporteat et tunc demum illud per arbitros restituatur, quod constiterit esse solvendum. DAT. K. AUG. BASSO ET ABLAVIO CONSS.

- 12995 1 augustus 331 [IDEM A. AD] UNIVERSOS PROVINCIALES. Posta alia: Minorum defensores, [hoc es]t tutores vel curatores, si participes rei, quae lite posci[tur, it]a, ut iussum est, edere detractaverint eosdemque contra ve[rum] nominaverint, quoniam pupillo nihil vel adulto perire opor[tet, in] quolibet litis eventu tantum de proprio pecuniae fisco infe[rant, q]uantum aestimatione habita ex tertia parte colligitur.
- 13000 Quod[si paul]peres sint, capitis deminutione plectantur et desinant cives [esse R]omani, ita ut ius integrum ipsis minoribus reservetur. ET CE[TERA. D]AT. K. AUG. BASSO ET ABLABIO CONSS.
- 13005 1 augustus 331 Imp. Constantinus a. ad provinciales. Post alia: lite pendente illud, quod in controversiam devocatur, in coniunctam personam vel extraneam donationibus vel emptionibus vel quibuslibet aliis contractibus minime transferri oportet, tanquam nihil factum sit lite nihilominus peragenda. Quod si tutelae causa vertitur, post examen iudicis in supplementum pronuntiationis dentur arbitri, qui non iam arbitri, sed exsecutores putandi sunt etc. DAT. KAL. AUG. BASSO ET ABLAVIO CONSS.
- 13010 Interpretatio. Res, quae proposita actione repetitur, transferri a possidente ad alterum nullis contractibus potest; neque inde aliqua fieri scriptura permittitur, nisi prius lis, de qua agitur, fuerit iudicio definita.
- 13015 1 augustus 331 Imp. Constantinus a. ad universos provinciales. In insulam deportandi sunt cum amissione omnium facultatum, quae fisco addicendae sunt, ii, qui provocatione omissa litem reparare temptaverint contra comitum ceterorumque sententias qui vice nostra iudicaverint, firmantes se per metum appellationis omisisse auxilium. In qua re vel nostrum vel praefectorum praetorio ex nostra erit iussione iudicium. DAT. KAL. AUG. PROPOSITA KAL. SEPT. BASSO ET ABLAVIO CONSS.
- 13020 4 augustus 331 IDEM A. AD EVAGRIUM. Ii, qui ex officialibus quorumcumque officiorum geniti sunt, sive eorundem parentes adhuc sacramento tenetur sive iam dimissi erunt, in parentum locum procedant. DAT. PRID. NON AUG. BASSO ET ABLAVIO CONSS.
- 13025 4 augustus 331 Idem a. ad Evagrium pf. p. Quoniam nonnulli diversarum civitatum curiales intemperanter minores, quibus publica tutela debetur, ad curiae consortium devocarunt, ut septem vel octo annorum constitutos nonnullos nominasse firmentur, decernimus, ut omnino nullus in curiam nominationibus devocetur, nec functionum obsequia subire cogatur, nisi qui decimum et octavum annum aetatis fuerit ingressus.
- 13030 Quod et in futurum arceri volumus, et eos eximi, qui infra eius aetatis terminos constituti iam nominati sunt, curialibus et vinculis absolvantur. Quum enim decimum et octavum annum aetatis intraverint, si militiae nomen inserere iuxta legem datam non potuerint vel supersederint, municipali poterunt dari obsequio. DAT. PRID. NON AUG. BASSO ET ABLAVIO CONSS.
- 13035 Interpretatio. Minores decem et octo annorum aetate curiales nec nominari a quibuscumque nec ad servitia applicari debere: quia hoc lex sufficere credit, ut a decem et octo annis necessitati publicae, si necesse fuerit, applicentur, ita ut, si qui infra hanc aetatem ante nominati iam fuerint, absolvantur.
- 13040 12 augustus 331 Idem a. ad Evagrium pf. p. Nullus decurionum ad procuraciones vel curas civitatum accedat, nisi omnibus omnino muneribus satisfecerit patriae vel aetate vel meritis. Qui vero per suffragium ad hoc pervenerit administrare desiderans, non modo ab expetito officio repellatur, sed epistola quoque vel codicilli ab eo protinus auferantur, et ad comitatum destinantur. DAT. PRID. ID. AUG.
- 13045 BASSO ET ABLAVIO CONSS.
Interpretatio. Ista lex hoc praecipit, nullum curialem, nisi omnibus curiae officiis per ordinem actis, aut curatoris aut defensoris officium debere suscipere, nisi omnibus, ut dictum est, ante muneribus satisfecerit, quae patriae ordine debentur. Nam si praefatus contra hanc praeceptionem quolibet suffragio aut sub quocumque obtentu honoris se munire voluerit, et obtentis careat et, ubi rerum domini fuerint, dirigatur.
- 13050 6 oktober 331 Idem a. Quaecumque mulierum post hanc legem servi contubernio se miscuerit, et non conventa per denuntiationes, sicut ius statuebat antiquum, statum libertatis amittat. DAT. PRID. NON. OCT. BASSO ET ABLABIO CONSS.
- 13060 18 oktober 331 IDEM A. AD BASSUM P(RAEFECTUM) P(RAETORI)O. Super his, qui a praeside vel a quolibet alio iudice sententiam dictam infirmari deposcunt, sub eo fine sublimitatis tuae succedat examen, ut, si internis negotii usquequaque decursis ex evidenti claruerit sententiam a iure iustitiaque discedere, ea penitus explosa

controversia de aequitate terminum capiat. Quod si consentanea sit legibus iam prompta sententia, eius pronuntiationis improbus oppugnator, si patrimonio circumfluit, biennio in insulam relegatione plectatur eiusque bonorum media portio fiscalibus compendiis addicta cedat: quod si agrestis vitae sit aut egentis, ad biennii tempus in metallum detrudendus est. Quam legem in annotationibus quoque nostris de iterando post sententiam iudicio custodire debebis. DAT. XIV K. NOVEMB. BASSO ET ABLAVIO CONSS.

Interpretatio. Quicumque causa dicta discussoque negotio a quocumque fuerit superatus et hanc ipsam litem postea reparare tentaverit, si pro ipso, qui antea addictus est, fuerit legibus lata sententia, prius iudicium non valebit. Nam si et apud alium iudicem fuerit superatus, si digna idoneaque persona est, biennio in exsilium deputetur, et medietatem facultatum suarum fiscus acquirat. Si vero indigna et pauperior persona est, in metallum biennio deputetur.

1 november 331 IDEM A. AD PROVINCIALES. Praesides publicas notiones exercent frequentatis per examina tribunalibus, nec civiles controversias audituri secretariis sese abscondant, ut iurgaturus conveniendi eos nisi pretio facultatem impetrare non possit, et cum negotiis omnibus, quae ad se delata fuerint, exhibuerint audientiam et frequens praeconis, ut adsolet fieri, inclamatio nullum, qui postulare voluerit, deprehenderit, expletis omnibus actibus publicis privatisque sese recipiant. Iustissimos autem et vigilantissimos iudices publicis adclamationibus conlaudandi damus omnibus potestatem, ut honoris eis auctiores proferamus processus, e contrario iniustis et maleficis querellarum vocibus accusandis, ut censurae nostrae vigor eos absumat; nam si verae voces sunt nec ad libidinem per clientelas effusae, diligenter investigabimus, praefectis praetorio et comitibus, qui per provincias constituti sunt, provincialium nostrorum voces ad nostrum scientiam referentibus. P(RO)P(OSITIA) K. NOV. CONSTANTINOPOLI BASSO ET ABLAVIO CONSUL.

1 november 331 IDEM A. AD PROVINCIALES. Cessent iam nunc rapaces officialium manus, cessent, inquam: nam nisi moniti cessaverint, gladiis praeceduntur. Non sit venale iudicis velum, non ingressus redempti, non infame licitationibus secretarium, non visio ipsa praediis cum pretio. Aequae aures iudicantis pauperrimis ac divitibus reserentur. Absit ab inducendo eius qui officii princeps dicitur depraedatio; nullas litigatoribus adiutores eorundem officii principum concussiones adhibeant; centurionum aliorumque officialium parva magnaue poscentium intolerandi inpetus oblidantur eorumque, qui iurgantibus acta restituunt, inexplata aviditas temperetur. Semper invigilet industria praesidialis, ne quicquam a praedictis generibus hominum de litigatore sumatur. Qui si de civilibus causis quidquam putaverint esse poscendum, aderit armata censura, quae nefariorum capita cervicesque detruncet, data copia universis qui concussi fuerint, ut praesidium instruant notionem. Qui si dissimulaverint, super eodem conquerendi vocem omnibus aperimus apud comites provinciarum, aut apud praefectos praetorio, si magis fuerint in vicino, ut his referentibus edocti super talibus latrociniis supplicia proferamus. DAT. KAL. NOVEMB. CONSTANT(INO)P(OLI) BASSO ET ABLAVIO CONSS.

Interpretatio. Officiales omnium iudicum venales esse non audeant, neque pretium de introitu occurrentium aut litigantium vel egressu requirant. Sed interpellantes tam divites, quam sine ullo praemio pauperes audiantur. Quod si rapaces esse voluerint, gladio puniantur, aut certe de eorum rapacitate dominicis auribus referatur.

1 december 331 Idem a. hiereis et archisynagogis et patribus synagogarum et ceteris, qui in eodem loco deserviunt. Hiereos et archisynagogos et patres synagogarum et ceteros, qui synagogis deserviunt, ab omni corporali munere liberos esse praecipimus. DAT. KAL. DEC. CONSTANTINOPOLI BASSO ET ABLAVIO CONSS.

13135 CJ 1.40.3 Dorries p. 196
Public acclamation is introduced into the court process.

331 Law 120: To Ablavius, the praetorian prefect
CTh 3.16.1 Dorries p. 196-197
13140 Limiting lawful grounds for divorcing a man to murder, witchcraft, and graverobbing and divorcing a woman to adultery, witchcraft, and prostitution.

332 PACATIANO ET HILARIANO CONSS.
11 april 332 IDEM A. AD LEONTIUM P(RAEFECTUM) P(RAETORI)O. Iam dudum sanximus, veteranorum filii, qui post sedecim annos militiae munus subire non possunt vel armis gerendis habiles non extiterint, curiis mancipientur. DAT. III ID. APRIL. PACATIANO ET HILARIANO CONSS.

12 april 332 [IDEM] A. PACATIANO P(RAEFECTO) P(RAETORI)O Si is, qui puellam suis nubtiis pactus est, (intra) biennium exsequi nubtias supersederit eiusque spatii fine (decur)so in alterius postea coniunctionem puella pervene(rit, ni)hil fraudis ei sit, quae nubtias maturando vota sua diut(ius lu)di non passa est. DAT. PRID. ID. APRIL. MARCIAN(O)P(OLI) PACATI[ANO] ET HILARIANO CONSS.

12 april 332 (IDEM A.) AD PACATIANUM P(RAEFECTUM) P(RAETORI)O. Patri puellae aut tutori aut curatori aut cui(libet) eius adfini non liceat, cum prius militi puellam despon(deri)t, eandem alii in matrimonium tradere. Quod si intra bi(enni)um, ut perfidiae reus in insulam relegetur. Quod si pac(tis n)ubtiis transcurso biennio qui puellam desponderit al(teri) eandem sociaverit, in culpam sponsi potius quam puel(lae r)eferatur, nec quicquam noceat ei, qui post biennium pu(ella)m marito alteri tradidit. DAT. PRID. ID. APRIL. MARCIAN(O)P(OLI) (PACATIANO E)T HILARIANO CONSS.

Interpretatio. Si quis aut privatus aut militans, postquam sponderit, cum patre, tutore vel curatore puellae vel propinquis de puellae coniunctione definierit, debet post definitionem intra biennium nuptias celebrare. Quod si tarditate aut negligentia sponsi biennii tempus excesserit, et alio viro se puella coniunxerit, absoluta erit a calumnia, vel ipsa, vel quicumque suorum eam tradiderit: quia culpa est illius, qui differendo coniunctionem suam alteri nubendi locum patefecit. Nam si intra biennium data fuerit, quid observetur, evidentius sequente lege cognoscetur.

27 juli 332 Imp. Constantinus a. ad concilium Byzacenorum. Libertis ingratis in tantum iura adversa sunt, ut, si quadam iactantia vel contumacia cervices erexerint ut levis offensae contraxerint culpam, a patronis rursus sub imperia dicionemque mittantur. DAT. VI KAL. AUG. COLONIAE AGRIPPINAE, PACATIANO ET HILARIANO CONSS.

Interpretatio. Quaecumque persona servilis a domino suo fuerit consecuta libertatem, si postea superbire coeperit aut patronum, id est manumissorem suum laeserit, amissa libertate, quam meruit, in servitium revocetur.

27 juli 332 IDEM A. AD CONCILIUM BYZACENORUM. Servus necessarius heres instituendus est, quia non magis patrimonium quam infamiam consequi videtur. Unde claret actionem inofficiosi fratribus relaxatam, cum infamiae aspergitur vitiis qui heres extitit, omniaque fratribus tradi, quae per turpitudinem aut aliquam levem notam capere non potest institutus. Ita in hac quoque parte, si quando libertis heredibus institutis fratres fuerint alieni, inofficiosi actione proposita praevaleant in omnibus occupandis facultatibus defuncti, quas ille perperam ad libertos voluerat pertinere.

DAT. VI KAL. AUG. COLONIAE AGRIPPINAE PACATIANO ET HILARIANO CONSS.

Interpretatio. Si servo pro necessitate debiti a domino cum libertate hereditas fuerit dimissa, quia huiusmodi persona videtur infamis, germanis fratribus, qui praetermissi sunt, agendi contra testamentum datur facultas: ut remota infami persona, salva tamen, quam meruit, libertate, hereditatem germani fratres ad se debeant revocare. Nam et si praetermissis fratribus liberti per testamentum heredes fuerint instituti, simili modo germani defuncti eos a bonis fraternae hereditatis excludent, sibi que omnia, quae reliquerit, vindicabunt.

- 13195 26 oktober 332 ...Si post adsertionem defensionemque ordinatam alius in iudicium acciri petiverit, adsertio quidem et defensio inter omnes ordinetur, ipse vero tot mancipia, quot petebat, fisco cogatur inferre. quod si adsertor defecerit, vel praedictam multam agnoscat vel, si per inopiam id implere non possit, in metallum detrudetur: eadem circa minorum defensores, cum liberalis causa agitur, forma servanda. Et cetera. DAT. VII K. NOVEMB. CONSTANTINOPOLI PACATIANO ET HILARIANO CONSS.
- 13200 Interpretatio. Si post adsertionem defensionemque dispositam alius in iudicium qui se dominum dicit petierit exhiberi, inter omnes quidem ordinabitur adsertio, sed ipse ad certam poenam tenebitur. Idem est in adsertore vel defensoribus minorum.
- 13205 29 oktober 332 Imp. Constantinus a. ad provinciales. Apud quemcumque colonus iuris lienii fuerit inventus, is non solum eundem origini suae restituat, verum super eodem capitationem temporis agnoscat. 1. Ipsos etiam colonos, qui fugam meditantur, in servilem condicionem ferro ligari conveniet, ut officia, quae liberis congruunt, merito servilis condemnationis compellantur implere. DAT. III. KAL. NOV. PACATIANO ET
- 13210 HILARIANO CONSS.
Interpretatio. Si quis alienum colonum sciens in domo sua retinuerit, ipsum prius domino restituat et tributa eius, quam diu apud eum fuerit, cogatur exsolvere: ipse vero, qui noluit esse, quod natus est, in servitium redigatur.

8 maart 334 Imp. Constantinus a. ad Pacatianum praefectum praetorio. Quoniam suariorum corpus ad paucos devenit, iubemus eos adstante populo Romano dicere, quibus excusatio sit delata, quibus provenerit onus, ut his in medium publicae rationis eductis exemplum rei naviculariae proponatur. Itaque dinoscant facultates proprias
- 13345 suariorum esse obnoxias muneris ac de duobus alterum eligant; aut retineant bona quae suariae functioni destricta sunt ipsique suario teneantur obsequio aut idoneos quos volunt nominent, qui necessitati idem satisfaciant. Nullum enim vacare ab huius rei munere patimur, sed sive honoribus evecti sive quolibet versutiae genere fugerunt, revocari eos iubemus idque ipsum teste et audiente populo Romano compleri ac nos
- 13350 super his consuli, ut animadvertamus in eos, qui hactertergiversatione usi sint; de reliquo functionis huius vacatione nulli penitus tribuenda, sed eo qui subripere potuerit post beneficium infirmatum, salutis etiam periculum subituro. DAT. VIII ID. MART. ROMAE OPTATO ET PAULINO CONSS.
- 13355 30 maart 334 Idem a. ad Severum comitem Hispaniarum
Insinuaturn est quosdam patres principalis coniugii copulatione destitutos in perniciem filiorum ultra misericordiam sanguinis properare et receptis deinceps aliis matrimoniis maiorem sibi in rebus filiorum vindicare personam: qui quoniam in his usufructuarii remansisse videntur, usurpare ea ac pervertere confidunt, ut per hoc
- 13360 his, qui in orbitate remanserunt, nulla nec possidendi nec litigandi tribuatur occasio. Ideoque placet, ne quis pater receptis deinceps matrimoniis earum rerum, quae prioris coniugis fuerunt, sibi ius defendendum existimet nisi tutelae vice, donec minores probata aetate esse videantur. His autem moderatio nostra cuncta iubet servari adque restitui. PROPOSITA III KAL. APRIL. CONSTANTINOPOLI OPTATO ET PAULINO
- 13365 CONSS.
- 30 april 334 IMP. CONSTANT(INUS) A. GERULO RATIONALI TRIUM PROVINCICIARUM.
In Sardinia fundis patrimonialibus vel enfyteuticariis per diversos nunc dominos distributis oportuit sic possessionum fieri divisiones, ut integra apud possessorem unumquemque servorum agnatio permaneret. Quis enim ferat liberos a parentibus, a fratribus sorores, a viris coniuges segregari? Igitur qui dissociata in ius diversum mancipia traxerunt, in unum redigere eadem cogantur: ac si cui propter redintegrationem necessitudinum servi cesserint, vicaria per eum qui eosdem suscepit mancipia reddantur et invigila, ne per provinciam aliqua posthac querella
- 13375 super divisis mancipiorum affectibus perseveret. DAT. III. KAL. MAI. PROCULO ET PAULINO CONSS.
- Interpretatio. In divisione patrimoniorum seu fiscalium domorum sive privatorum observari specialiter debet, ut, quia iniustum est, filios a parentibus vel uxores a maritis, quum ad quemcumque possessio pervenerit, sequestrari, mancipia, quae permixta fuerint, id est uxor cum filiis et marito suo, datis vicariis, ad unum debeant pertinere, cui necesse fuerit commutare, quod sollicitudo ordinantium debet specialiter custodire, ut separatio fieri omnino non possit.
- 13380 19 mei 334 IDEM A. AD VERONICIANUM VIC(ARI)UM ASIAE. Vorax et fraudulentum numerariorum propositum, qui diversis rectoribus obsequuntur, ita inhibendum est, ut et antea sanximus et nunc itidem sancimus, condicioni eos subdi tormentorum et eculeis adque lacerationibus subiacere nec ultra biennium hoc fungi obsequio. ET CETERA. DAT. XIV KAL. IUN. OPTATO ET PAULINO CONSS.
- 13390 19 mei 334 Imp. Constantinus a. ad Veronicianum vicarium Asiae.

- Post alia: damus provincialibus facultatem, ut, quicumque sibi a numerariis, qui diversis rectoribus obsequuntur, conquesti fuerint aliquas venditiones extortas, irritas inanesque efficiant, et male vendita ad venditoris dominium revertantur, amissione etiam pretii illicitis ac detestandis emptoribus puniendis. DAT. XIV KAL. IUN. OPTATO ET PAULINO CONSS.
- 13395 Haec lex expositione non indiget.
- 18 juni 334 IDEM A. ANDRONICO. Si contra pupillos, viduas vel morbo fatigatos ebiles impetratum fuerit lenitatis nostrae iudicium, memorati a nullo nostrorum iudicum compellantur comitatu nostro sui copiam facere. Quin immo intra provinciam, in qua litigator et testes vel instrumenta sunt, experiantur iurgandi fortunam atque omni cautela servetur, ne terminos provinciarum suarum cogantur excedere. Quod si pupilli vel viduae alique fortunae iniuria miserabiles iudicium nostrae serenitatis oraverint, praesertim cum alicuius potentiam perhorrescunt, cogantur eorum adversarii examini nostro sui copiam facere. DAT. XV KAL. IUL. CONSTANT(INO)P(OLI) OPTATO ET PAULINO CONSS.
- 13400 Interpretatio. Quicumque adversus pupillos, viduas et aegrotos nostra praecepta meruerit, eos de locis suis commovendi vel extra provinciam suam usquam penitus protrahendi licentiam summovemus, ut ibi causam suam dicant, ubi instructiores esse et testimonia possint facilius invenire. Sane si ipsi, quorum fatigationi consulimus, nos crediderint expetendos, huic voluntati eorum veniendi aditum non negamus; ita ut adversarii eorum sub praesentia principis adesse per rectorem provinciae compellantur.
- 13405 5 juli 334 Idem a. ad Pacatianum praefectum praetorio. Etsi potior aput nos privatorum causa est quam fisci tutela, praecipimustamen, si a nobis plures defensacula fisci meruerint, eum praeponi ceteris, qui melior innocentia, potior litteris, pollentior reliquis examinata fide esse noscetur, etiamsi post alios hoc beneficium a nostra clementia reportavit. DAT. III NON. IUL. SINGIDUNO OPTATO ET PAULINO CONSS.
- 13420 24 augustus 334 Idem a. ad Iulianum praesidem. Iurisiurandi religione testes prius, quam perhibeant testimonium, iam dudum arctari praecepimus, et ut honestioribus potius fides testibus habeatur. Simili more sanximus, ut unius testimonium nemo iudicum in quacumque causa facile patiatur admitti. Et nunc manifeste sancimus, ut unius omnino testis responsio non audiatur, etiamsi praeclarae curiae honore praefulgeat. DAT. VIII. KAL. SEPT. NAISSO, OPTATO ET PAULINO CONSS.
- 13425 Interpretatio. Testes priusquam de causa interrogentur, sacramento debere constringi, ut iurent, se nihil falsi esse dicturos. Hoc etiam dicit, ut honestioribus magis quam vilioribus testibus fides potius admittatur. unius autem testimonium, quamlibet splendida et idonea videatur esse persona, nullatenus audiendum.
- 13430 26 augustus 334 Imp. Constantinus a. ad Felicem. Architectis quam plurimis opus est; sed quia non sunt, sublimitas tua in provinciis Africanis ad hoc studium eos impellat, qui ad annos ferme duodeviginti nati liberales litteras degustaverint. Quibus ut hoc gratum sit, tam ipsos quam eorum parentes ab his, quae personis iniungi solent, volumus esse immunes ipsisque qui discent salarium competens statui. PROPOSITA VI KAL. SEPT. KARTHAGINE OPTATO ET PAULINO CONSS.
- 13435 7 september 334 Idem a. ad Felicem. Commoda nobis visa est ea dispositio, quae expresse navicularios in hunc ordinem formavit, ut non promiscue, sed per vicissitudines rite servatas iuges cursus agnoscerent et exiguos implerent, quo ita levamentis alternantis auxilii cunctorum fortunae et tenuiorum potissimum confirmarentur nec necessitas fieret aliquos semper longiora lustrare ac plerisque obnoxios casibus fieri. Quod ne ulterius possit accidere, labor omnibus par et iustus adiunctus sit et subsidia pari ratione deferantur nec tenuiores in querellas infructuosae complorationis incurrant. PROPOSITA VII ID. SEPT. KARTHAGINE OPTATO ET PAULINO CONSS.
- 13445 1 december 334 Idem a. naviculariis Orientis. Pro commoditate urbis, quam aeterno nomine iubente deo donavimus, haec vobis privilegia credidimus deferenda, ut navicularii omnes a civilibus muneribus et oneribus et obsequiis habeantur immunes et ne honores quidem civicos, ex quibus aliquod incommodum sentiant, subire cogantur. Ab administratione etiam tutelae, sive legitimae sive eius, quam magistratus aut provinciae rectores iniungunt, habeantur immunes. Et vacatione legis Iuliae et Papiae potiantur, ut etiam nullis intervenientibus liberis et viri ex testamento uxorum
- 13450
- 13455

- solidum capiant et ad uxores integra voluntas perveniat maritorum. De proprietate etiam vel hereditate vel qualibet alia civili causa pulsati ne ex rescripto quidem nostro ad extraordinarium iudicium evocentur, sed agentibus in suo foro respondeant.
- 13460 Et ad exemplum Alexandrini stoli quaternas in frumento centesimas consequantur ac praeterea per singula milia singulos solidos, ut his omnibus animati et nihil paene de suis facultatibus expendentes cura sua frequentent maritimos commeatus. ACCEPTA KAL. DEC. OPTATO ET PAULINO CONSS.
- 13465 334 Athanasius, Apol. sec. 68 Constantine
Constantine, hearing that Arsenius is alive, has found all the charges against Athanasius to be false, the results of wicked plots against him. He condemns the recent disturbances in the streets of Alexandria. He instructs Athanasius to take this letter with him and read it publicly often. He promises to personally look into
- 13470 any future allegations or disturbances against Athanasius, and punish anyone bringing false accusations or stirring up trouble.
- 334 Athanasius, Apol. sec. 70 Constantine
In a letter, Constantine rebukes the Alexandrians for causing trouble and encourages them all to accept Athanasius, whom he has cleared of all charges against him.
- 13475 334 Athanasius, Apol. sec. 70 Constantine
Constantine praises John Archaph, a former leader of the Meletians, for uniting with Athanasius. He summons him to his court by means of public transportation.

After the death of Emperor Diocletian, there were as many as six emperors simultaneously over the Roman Empire. In reality, any general commanding an army was a candidate for the imperial throne. One allowed oneself to be proclaimed emperor by one's troops, and if one were lucky enough to maintain one's position, one became emperor for a shorter or longer period. Constantine was the fortunate victor over his rivals and therefore could wield the scepter supremely over the vast Roman Empire. Few rulers have been judged so differently. If we listen to Christian historians, the liberator of the church is attributed all the qualities of a hero, even of a saint. In contrast, others portray him as one of the most hideous tyrants, who, through their softness and vice, dishonored the imperial purple. It seems that nature had endowed him with the most fortunate gifts. In his youth, he managed to preserve his strength by living a moderate and restrained life. Brave in war, he was adored by his soldiers, but his unbridled ambition knew no bounds. Had he fallen prematurely in one of the many battles, he would have been recorded in history as an excellent general who promised much for the future, but he is also one of the many examples that prove how power completely corrupts a person. What a completely different person the Constantine of youth is than that of old age! Cruel, bloodthirsty, and consumed by ambition, no means were low enough, as long as it offered a chance to bring him to his goal. A calm historian like Gibbon says that we "may regard him as a hero, who inspired love in his subjects and terror in his enemies, but who degenerated into a cruel and dissolute monarch, corrupted by fortune or by conquest, driven to dissimulation beyond necessity." To form a faint impression of him, it suffices to cite the following as examples from his life: he had a father-in-law whom he forced to hang himself; he had a brother-in-law whom he strangled; he had a nephew aged 12 or 13 whom he had killed; he had an eldest son whom he beheaded; he had a wife whom he suffocated with hot water in a bath. After such a description of undisputed facts, it is legitimate to weigh whether we have before us a beast or a human being. And such a man, who trampled on all Christian virtues, is exalted to the skies by Christians, simply because he was baptized as a Christian and thus, after many persecutions, brought victory to the Christian church over the pagans. One can commit all kinds of crimes, one can run a household like a beast, one can trample all the laws of morality—no problem, as long as one bestows great boons upon the church, then one is portrayed as a model human being, whose sins, though red as blood, are made as white as wool. "Shining sins" are then called those things that others label as crimes.

Knowing how he hunted a band of Franks living in those regions on the banks of the Rhine, and when he captured their princes, he fed them to the wild beasts for his own amusement—to expect humanity from such a man is more than can reasonably be expected. His father was in England, where he had assumed the title of emperor for a few months. He requested permission from Emperor Galerius, with whom he was then staying in Asia Minor, to visit his sick father, and he made the journey with the imperial posthorses. However, being a posthorse was just as dangerous as being a member of Constantine's family, for he had their kneecaps cut after they had served, fearing he would be recalled. He found his father dying and had himself proclaimed emperor by the Roman troops in England. The Senate in Rome was not satisfied with this but proclaimed Maxentius emperor. Christian historians call him a tyrant and usurper because fortune did not favor him. For had he remained victorious, Constantine would have been known as a tyrant. His policy led him to side with the Christians, and Christian historians recount how he supposedly saw in the sky the great sign of the emperors, called the Labarum, bearing a cross and the words: "By this you shall conquer." 1)

Strange that Eusebius, in his Life of Constantine, recounts that the emperor told him this 55 years later in a confidential conversation and confirmed it under oath! And this while the entire army had seen that sign in the sky just as clearly as he had! Maxentius was drowned.

And so Constantine got rid of this troublesome rival, but when one reads that, despite such a clear sign in the heavens, he supposedly celebrated his victory in Rome with all the usual forms of pagan worship, the whole story becomes questionable. The Senate, which had previously refused him, now paid him every tribute, even going so far as to erect a golden statue for him, something they did only for the gods. He accepted all this, including the title of high priest, which he retained for life, despite the rumored preference for Christianity. He knew how to derive as much benefit from both paganism and Christianity as possible for himself.

He did not seem to see clearly at the time which side would be most advantageous for him, and therefore he wavered between hope and fear, as is evident from two decrees he issued that same year: the first prescribed the solemn observance of Sunday—note that he called the Lord's Day the Day of the Sun, again to please Christians and not offend pagans—and the second to prescribe the regular consultation of the Aurespices (pagan priests). Now he had only one rival left, namely Licinius, but his power was not yet great enough to immediately dismiss him. Therefore, he allied with him, and in the Edict of Milan, these two granted their subjects the freedom to follow the religion they most strongly held. After the defeat of Licinius, whom he had murdered despite his oath to spare him, he exhorted his subjects to follow their emperor's example and "embrace the divine truth of Christianity." One historian recounts that the pagan priests refused to absolve him of guilt after he had murdered his son, nephew, and wife, and that he therefore adopted the more lenient faith of the Christians, for the Christian priests offered him no obstacles. They were thus far inferior to their pagan colleagues. Although this is questioned, we nevertheless believe it quite possible that there is some truth to this story. In any case, it is a fact that the Christians were somewhat pleased that the emperor, a murderer of women and children, opened and attended the famous Council of Nicaea, proof that he was eagerly accepted into the Christian community. It is certain that only political motives moved the base hypocrite to join forces with the Christians, and that no conviction whatsoever was involved.

Moreover, the bloodthirsty beast never knew anything resembling conviction. Mosheim, the historian, quite rightly says: the emperor had enough sense to see that Christianity possessed a great deal of power, and idolatry had no purpose whatsoever in strengthening public authority and binding citizens to "their duty." Gibbon also recognized this when he says: "The emperor's throne would be established on a firm and lasting foundation if all his subjects, by embracing the Christian religion, would learn to suffer and obey." He needed docile and obedient subjects above all, and the religion that could provide them was, in his eyes, the best.

The best part is that, although high priest of the pagans, he presided over a Christian church council, and that the Christians tolerated this proves how much they had deteriorated in character and dignity.

He postponed his baptism until the last moment because he feared he would not be absolved from the sins he would subsequently commit. When the emperor showed such strong inclinations toward Christianity, the courtiers naturally followed suit, but he who used religion as a political instrument of government made of it what he wished, and the priests submitted to his will. His son Constantius is said to have once said: "What I will must be the law of the church." The same was true of Constantine. Therefore, no one had more influence on the formation of the Christian church than this emperor. He was an unmitigated ruler in both political and ecclesiastical matters. The last vestiges of the ancient Roman republican essence disappeared completely under him!

Indeed, by transferring the seat of government to Byzantium, which he renamed Constantinopolis (city of Constantine), he effectively dealt the final blow to the Roman Empire, as everything was now modeled on Persian principles.

In his time, those systematic persecutions for unbelief and heresy began, which are a peculiar characteristic of dogmatic Christianity. It is a sad truth that the Christian displayed far greater cruelty towards each other for disagreeing than the unbelievers ever showed towards them. Constantine incorporated the principle of persecution for the sake of faith into Roman law. Renan rightly says: "We will search in vain through all Roman law before Constantine to find a single provision against freedom of thought, and the history of imperial government provides no evidence of persecution for adhering to an abstract doctrine." Thus, Constantine opened a new era of spiritual slavery, laid the foundation of the Inquisition, which later flourished so much, and favored tyranny.

From that time on, as Draper rightly says, Christianity took a direction that marked its entire future course and became a stumbling block on the path of European spiritual progress for more than 1,000 years. Constantine wanted to be in charge of everything, in both the church and the state. He was seen summoning more than 300 bishops to his palace, and appearing at the meeting wearing his diadem and adorned with precious stones, he decreed that Jesus would be equal to God (homo-oesios), and all who disagreed, the Arians, were cursed and persecuted. And soon, when his interests led him to side with the Arians, Jesus became equal (homoï-oesios), and the persecutions began in reverse.

From oppressed, the Christians became oppressors, who pronounced death sentences on anyone who dared to differ with the dominant faction.

13925 Finally, when the villain felt his end approaching and, burdened by his baseness and crimes, feared death, he was baptized, because the Christian priests had convinced him that he could then lay down his head in peace and free from sin. He toyed with religions, since none of them actually mattered to him. Politics drove him into the arms of the Christian church, and out of politics, he stopped at nothing. Without principles and driven by an insatiable ambition, he subordinated everything to his interests. He committed almost no baseness; he proved capable of no crime. But he had made sure to have the priests on his side, and they stopped at nothing. After all, he was buried in a Christian church, and the faithful paid divine honors to his name and his image, calling him a saint, equal to the apostles. And the clergy, knowing that he had committed the most heinous crimes during his lifetime, went so far as to declare that God, out of special grace, had endowed his tomb and his statue with miraculous power, so that anyone who touched them was healed of all ailments and infirmities. Superstitious and hypocritical, cruel and inhuman, untrustworthy in word and capable of the lowest in deed, this moral monster, because he donned a Christian mantle for self-interest, is praised as a hero, a model prince. And it is such an unprincipled man who can be declared the founder of the Christian church, because he stamped the imprint of his ignorant mind, under the guidance of the priests, on the Nicene Creed, which provides the strongest proof of the perversion of reason and the absurdity of faith. Spiritual slavery alongside social slavery was the condition through which such a character could reign supreme as a tyrant.

13945 1) While Constantine invoked his cross in the air, his colleague Licinius was even more fortunate, for when he once fought against the pagan Emperor Maximian, an angel appeared to him and taught him a whole prayer. Licinius had it written down, recited it three times to his army, and then achieved a complete victory. Had Licinius later defeated Constantine instead of the other way around, the angel's story would have been told.

CONSTANTINE THE GREAT AND THE EDICT OF MILAN

BY Dr. JOS. SCHRIJNEN

13955 EXEMPTORY PROFESSOR AT THE STATE UNIVERSITY OF UTRECHT
 FEBULARY OF THE APOLOGY OF THE PETRUS CANISIUS ASSOCIATION
 WED. J. R. VAN ROSSUM UTRECHT.
 C. N. TEULINGS 'S-HERTOGENBOSCH.

1913

13960

I.

"To God above all things our thanks, to the All-Governing and All-Director, and abundant thanks also to the Savior and Redeemer of our souls, Jesus Christ, through whom we pray at all times to preserve the blessings of peace steadfast and intact in all external dangers and spiritual necessities!"

13965

Thus, jubilant from an expanded and grateful heart, resounds the joyful song of Eusebius at the beginning of the tenth book of his Church History.

13970

And he continues: "Henceforth a clear and brilliant day dawned, veiled by no cloud, which let its rays of heavenly light descend upon the entire earth upon the churches of Christ".

13975

Lactantius also concurs with these tones of joy. "We must give thanks to God's eternal mercy," he exults, "who has finally looked upon the earth, that He has deigned to raise and gather His flock, partly torn by ravenous wolves and partly scattered, and to exterminate the wild beasts that trample the pastures of the divine flock, whom they had driven from their lair... Let us therefore celebrate God's triumph with joy, let us glorify the Lord's victory with praise, praying day and night that He may confirm forever the peace restored to His people after ten years".

13980

The hour of liberation had struck. The Christians finally breathed a sigh of relief from the long, bloody reign of terror. The day on which Eusebius sinned would not, however, remain unglomy. Black clouds loomed on the horizon, heavy thunderclaps rolled in with a distant dullness, ominous harbingers of approaching storms. Julian's reaction would not only remove the "Galileans" from high office, but also ignite a schoolwar for the first time. The young Church would still be reeling from the blows of the Barbarians, would be internally torn by rampant heresies; perhaps the most disastrous would be the Gnostic attempts to reconcile Christianity and paganism.

13985

Yes, even more: the edict guaranteeing legal equality, which soon became a privileged state, would cause pagans, especially those closest to the throne, to storm into the Church in droves, tainted only with a veneer of Christianity. Then weeds and thorns flourish among the wheat in the field of Christianity. Conviction remains distant, favoritism and ambition become the driving force. Disbelief, pagan customs, and pagan practices penetrate the Church of God, and morality becomes more skewed among the vast majority who practice or are supposed to practice the moral laws. Christianity on the throne degenerates into Caesaropapism, "in

13990

reality a humiliation, a lowering of higher principles into the sphere of lower interests". 1) Yet, Eusebius was fully justified in raising a hymn of praise. For herein lay the great significance of the edict that forced paganism to admit its defeat and impotence. Despite all

13995

persecutions, Christianity had triumphed over the Roman state and Roman paganism. Neither the wild passion of Nero and Domitian, nor the principled persecution of Trajan, nor the systematic actions of Maximinus the Thracian, nor the organized massacres of Decius and Valerian, nor the reign of terror of Diocletian, were able to destroy the Christian community. What gave Christianity this silent strength was a certain analogous spiritual direction, not

14000

to mention, first and foremost, the grace and omnipotent decree of God, which also granted the blood witnesses and confessors that heroism and contempt for death that mocks any naturalistic explanation. But Christianity, thanks to its exalted character, also stood strong by maintaining its own nature, by recreating and Christianizing the old culture, demonstrating a remarkable adaptability, and by reforming the deeply degraded Roman society. It purified and

14005

ennobled ancient Hellenistic civilization, infusing it with a new and higher life.

14010

The Edict of Milan concludes the Early Christian cultural period, which I have elsewhere characterized as the period of ethical revival. It crowns the civilizing work of the young Church, until then confined to a limited circle, now extending across the entire cultural world. It signifies the triumph over the violence of pagan rule. Constantine the Great understood, and this is to his credit, that he could only expect a rebirth for the world from a cultural power like Christianity.

14015

Roman society as a whole could look forward to it with confidence. The edict bears his name above all; but the indispensable relationships that gave rise to the edict, the foundation on which it rests, are not the work of Constantine, but of Christianity.

14020

Since then, sixteen centuries have completed its epic journey. Heavy storms have raged over the Church, and it has endured tremendous schisms and turmoil within itself. In keeping with its universalistic character, it has turned to ever new peoples and nations, has extended its activities to new continents, has transferred its cultural work to other domains, and adapted it to new conditions and relationships. But at all turning points in history, it has proven itself to be the cultural power par excellence, strong through its divine origins, radiant in unfading youth, drawing its life force from sources that never dry up. Firmly grounded on earth, she has never lost sight of heavenly ideals. And so she still stands today, on the sixteenth century tide of Church Peace, amidst the rising and disappearing generations and peoples, the Holy Roman, Catholic, Apostolic Church, as the only enduring cultural power amid the changing times, ever victorious under the sign of the Cross.

14025

II.

The Christian community, freed from eschatological expectations, having outgrown its Primitive Christian enthusiasm, and yet without damage to the inspiration instilled by its divine Founder, we encounter on the threshold of the 21st century, at its entrance into the Greco-Roman cultural world.

There, a grand, comprehensive task awaited Christianity. First, self-defense, a task forced upon Christianity by the hostile attitude of the pagan masses, which attitude was the main factor and driving force behind the first persecutions of Christians. Then, maintenance of one's own independence; rowing against the powerful current of Hellenization, of secularization, which threatened the young Church with certain downfall by attempting to tear it away from its supernatural foundation. Finally, self-development by following the direction of universalist currents, one's own inherent, unquestionably active pursuit, conquering the cultural world, permeating all aspects of civilization with the spirit of one's Founder. It is beyond the scope of this celebratory publication to enumerate what the lauded army of Early Christian Apologists accomplished in this titanic struggle, both when it came to confronting the brutal violence of persecution and in that other phase, when the struggle shifted from politics to the realm of the spiritual.¹⁾ I will point out only a few points. It is well known that during the first period of Christian persecution, popular hatred was the real driving factor. This popular hatred, fueled by the Jews, sometimes flared up to a furious incandescence. The first imperial rebuke, that of Trajan to Pliny the Younger, Governor of Bithynia (112 or 113), bears only the character of a repressive measure regarding Christian trials. The investigation of Christians and the acceptance of anonymous complaints against them were prohibited; On condition of invoking the Roman gods, the past will not be taken into account. Even more favorable were the rescripts of Antoninus Pius and Marcus Aurelius. But the extent to which popular anger was unleashed in those times can be seen from the martyrdom of the elderly Bishop Polycarp of Smyrna (23 February 155). The events of this torture were brought to the attention of the whole of Christendom by the community of Smyrna, and the freshness and warmth of the account already exclude all suspicion of falsification. This account, the Martyrium 5 of Polycarp, relates that a large crowd of Jews had gathered in the stadium; so tremendous was their shouting and clamoring that they were deafening. When the herald publicly proclaimed that Polycarp had confessed to being a Christian, the entire crowd shouted with undisguised rage: "There is the teacher of Asia, the father of the Christians, the destroyer of our gods, who urges many neither to sacrifice nor to worship". They then demanded that the Asiar Philip release a lion against him. When Philip refused, they demanded that Polycarp be burned alive, which was done.

We will remain silent about the reason for this popular anger; it is, in a sense, understandable. Christianity was, and had to be, exclusivist; it opposed all deities and all the ceremonies customary in the Roman Empire; it braced itself against the imperial cult, which had eventually become the true imperial religion. More than that, it was felt that Christianity cut through the roots of so many cultural institutions that were connected with paganism and the pagan.

The spirit of the people had, as it were, coalesced. We wish only to point out the very remarkable phenomenon that during the second period of persecution, which began with the massacres of Decius (249), popular anger increasingly disappeared from the scene of its somber activity. From then on, state power was the sole factor; one no longer needed to suppress popular anger, one had to fan it. Fanatical outbursts of grim hatred were no longer observed; and towards the end of this period, in the last great days of persecution, the constant murder and bloodshed were not only unsympathetic to the people, but the people even loudly expressed their sincere feeling of pity and compassion for so many bloody demonstrations of loyalty to religious conviction. But the strongest evidence is what Eusebius testifies of Maxentius: that he initially showed tolerance, "to please and flatter the Romans" ¹⁾. Why this remarkable change? Franz Görres is certainly right when he locates the main cause in the increasing familiarity with the lofty principles of Christian morality, in the fading of prejudices and accusations circulating against Christians. ³ But even more powerful, as Sdrarek rightly observes, was the force emanating from the heroism of Christian charity. ¹⁾ The Roman Empire was repeatedly ravaged by the plague, most severely from 252 to 254. Social ties dissolved, even blood ties weakened; the stricken, unburied and unmourned, lay uncared for in the streets and squares. Everyone was only concerned with self-preservation, and those who could tried to save their lives by fleeing. But it was precisely in such times that Christian charity unfolded in its most exuberant splendor. Then a certain Cyprian gathered the Christian community and spoke to them about the virtue of mercy: in such times, the Lord only wanted to ascertain "whether the healthy would help the sick, whether members of the same family would show each other loving service, whether masters felt pity for their slaves" ¹⁾. Effective aid was immediately provided according to their position and ability; and those who could not pay due to poverty performed personal services more valuable than gold.

A similar scene was witnessed by the crowds when Alexandria was ravaged by the plague in 259. We read in Eusebius how many who took the bodies of their Christian brothers in their arms or laps, closed their eyes and mouths, and buried them with all due care, soon followed them into death. "The best among the brethren," writes Bishop Dionysius, "priests, deacons, and eminent laymen, ended their lives thus; their death, because of their heroic witness of charity and faith, resembled a martyrdom". ¹⁾ And such a display of love was not reserved for Christians alone: those of other faiths also embraced their compassion and piety. This was the case during a similar popular disaster in the time of Maximinus Daza. "One must surely realize," writes Harnack, "that such a fool, as Eusebius also said, might have a profound impact on the

non-Christians and mightily promoted propaganda". 5)

Their spirit of forgiveness was also heroic. It is an archaeological fact that, during the long period of persecution, Christianity left no trace of mourning, no sign of hurt, no expression of vengefulness. "If I am not entirely mistaken," says Raoul Rochette, "observing this fact casts ancient Christianity in a light that, more than any other feature of its history, than all other monuments of the spirit it breathed, demands our reverence and love". 1)

This heroic practice of charity, however, constitutes only one of the many facets of the glorious jewel in the crown of glory of the early Christians: the harmony that existed between their actions and their teachings. They were not fond of mere rhetoric about love, mortification, and morality; their teaching, "was not merely a language: it was strength and deed". 2) This harmony struck even a mocker like Lucian. Like Tacitus, he had no understanding of the world-shaking significance of Christianity. He considered it one of the many follies of his time. He considered Christians blind and misguided. But what he lacked in the philosophers, he found in the Christians, and he candidly presents the results of his findings. 3) How wonderfully fitting are Justin's words to this testimony: "Those who are not found to live as He taught, prove by this that they are not true Christians, even if they profess the teaching of Christ with their mouths; for not to those who merely profess, but to those who also practice works, has He promised salvation". 1)

Christianity has also managed to maintain its own religious independence. It cannot be denied that with the entry of the Gospel into the orbit of the Hellenistic-Roman cultural world, a psychological process took place, leading to an exchange between ancient worldviews and younger Christian ideas. But this should not be called a Hellenization of Christianity or a secularization of the Gospel. If one wishes to use a powerful word at all costs, it is more accurate to speak of a Christianization of Hellenism. It was agreed that pagan philosophy, besides countless errors, also contained many precious elements of truth. It provided a highly valued form, but never penetrated the essential content of the Christian faith. In other ways as well, mutual influence occurred. With many Christian concepts, the monotheistic current, so remarkable in the syncretism of the third century, penetrated paganism; in any case, such a current was fostered by Christianity. On the other hand, countless pagan institutions were spared; useful pagan customs and concepts were either deliberately purified, Christianized, or adopted by the people, gradually accepted by the Church. And thus one explains the fact that "many ancient elements can be found in its festival circle, which ennobled the popular festival, in its legends, which purified the popular spirit, in its customs and concepts, its mysticism, its liturgy, which lifted the multitude from the cesspool of impurity to the luminous heights of morality and truth". 1) But the treasure of doctrinal truths remained untouched. Christianity, in particular, has managed to maintain its independence against the coaxing and allure of Gnosticism, the Modernism of Antiquity. The Hellenic spirit, taken by storm by the firmness of Christian conviction and the purity of Christian life, sought irresistibly to win over Christian practice to its enchanting theories. But the Christian apologists proved steadfast in the battle against this false doctrine: Irenaeus, Clement of Alexandria, Tertullian, Origen, Theophilus, and others. They pointed to the rationality and necessity of faith, to the harmony between faith and intellectual knowledge, to the concrete manifestation of Christianity in the Catholic and Apostolic Church: the Church of the Logos, the form instituted by God himself. And it is precisely this staunch resistance, precisely this decisive rejection of the tempting Gnostic advances, that must be credited to Christianity in this regard.

Hand in hand with this twofold apologetic activity went the conquest of the cultural world, the permeation of all socio-psychological factors with the spirit of Christ. The religious development of the people by no means discarded all ancient forms, but those forms henceforth breathed spirit and truth. On the soil of private life, morality flourished into a supreme morality, the institution of the family, whose distortion and elevation began with the natural-rational component of pagan culture, was completed and ennobled: marital fidelity, parental and filial love, respect for the rights and dignity of women and children, the distortion of the essence of slavery—these are the noble fruits, ripened in the sun's warmth of Christianity. The Early Christian community also demonstrated its high ethical standards in fulfilling the duties and exercising the rights guaranteed by the state; in bridging the gap between social classes through the doctrine of property rights, by valuing labor, and by the virtues of self-denial and selfless charity. Christianity also left its mark on the Veronica canvas of art. It reformed, though not by leaps and bounds, but in alignment with existing practices in time and space. It knew how to create new directions and open new paths, including in the field of literature. But above all, it knew how to elevate literature and art to higher ethical ideals through novelty of subject matter and sublimity of conception. Philosophy has already been discussed. In exchange for the gratefully accepted services offered, particularly by Neoplatonism, Christianity offered the gold coin of its principles. One should think especially of the appreciation of the full concept of duty, which pagan antiquity had never attained. The foundation of a theological science was also laid by the merging of rational and revelatory reasoning, by developing the truths of faith on the solid foundation of Revelation; this occurred in the School of Catechetics, or rather, in the Theological University of Alexandria. Add to this the transformation and suppression of the vernacular, without it losing its distinctive character. Thus, it seems that Christianity, connecting with the national character (folk religion, vernacular, folk art, etc.), as every true high culture must do, fertilized every cultural area with new ideas, indeed imprinted its own distinctive mark on the entire pre-Constantinian period, by endowing it with a decidedly

14175 ethical-religious character. 1 This dominant influence did not suddenly break through: mixed
 feelings, gross dissociations, rigorism, and hyper-ascetic tendencies of all kinds
 characterized the course of the 11th century. With Tertullian and Hippolytus, extreme rigorism
 crossed the threshold of the 11th century. But Pope Callixtus steadfastly maintained the
 milder view, taking into account reality and the fragility of human nature, and also showed
 14180 himself a decided advocate of milder penitential discipline. In the same spirit, Popes Pontian
 and Cornelius, as well as Cyprian, the bishop of Carthage, strove, with the result that by the
 end of the eleventh century, "Cathar" Novatianism had only a few adherents. Perhaps the
 reconciliation of Pontian and Hippolytus in Sardinia could be considered the prelude to
 victory, and the resistance of Heraclius under Pope Eusebius²) an echo from the times of
 14185 dissonance. Some dissidents chose monastic life in the desert.
 The barriers have now fallen. The Christian idea can now expand freely and frankly to form a
 new intellectual and emotional life, to implement a higher view of life in all branches of
 civilization.

One can say that the Church at the end of the eleventh century has completed its universalist
 14190 organization, but also that its triumph over the entire breadth of culture is an accomplished
 fact³). She awaits only the grace of the times to share herself with the entirety of Roman
 society, with "the whole world," as the expression of the time 1).

For at the beginning of the 4th century, Christians constituted less than a tenth of the
 population. They formed only a relatively limited, yet enclosed cultural community. The
 14195 sharply contrasting pagan worldviews were bound to lead to a certain isolation. Yet, that
 community maintained sufficient contact with national pagan beliefs and traditions to give
 rise to a powerful interaction between Christian and pagan concepts; yet the Christians were
 sufficiently Roman in their dealings and conduct, yet they maintained sufficient contact with
 their fellow citizens to be able to exert a salutary influence on them and their culture, and
 14200 above all, to be able to prepare for the full, all-encompassing impact of the future. The
 writer of the letter to Diognetus says: "Christians differ from other people neither in place
 of residence, nor in language, nor in customs. For they do not inhabit separate cities, speak
 no unusual language, and lead no distinct way of life". 1) This also shows that one should not
 imagine the Christians of the Roman center of faith and culture during those first centuries
 14205 constantly hiding in the catacombs, as it were living underground in those gloomy tuff
 quarries, to withdraw from the light and life that played and roared in the bustling
 atmosphere above them. The first Christians certainly did not live under, but above ground.
 The catacombs were therefore primarily burial places; and when, towards the end of the second
 century, the Church organized itself as a kind of burial guild, it was even officially
 14210 recognized as its owner and also received the right to perform religious ceremonies there that
 were considered burial ceremonies by the state. Here the Church simply stood on the basis of
 established law. It exercised this right, in or above the catacombs, for burials on the
 anniversaries of the next of kin, especially on the feasts (natalitia) of martyrs; however,
 regular religious services were also celebrated in private homes during the persecution
 14215 periods. From the 3rd century onward, the catacombs also became places of refuge, which had
 previously been the case only exceptionally. In 257, Emperor Valerian banned Christian
 cemeteries, actually more as gathering places; but through a restitution order issued by
 Gallienus (260), the Church was restored to possession of the holy places. Finally, through
 Diocletian's edict of persecution, the catacombs were confiscated.

14220

III.

What the Christians had already achieved before Constantine, thanks to their activities
 outlined above, is evident from their condition at the beginning of the 3rd century. The four
 edicts of Diocletian from the years 303 and 304 offer a system of persecution so gruesomely
 14225 radical that, humanly speaking, they would certainly have resulted in the destruction of
 Christianity, had it not been too late. But it was too late. The resistance of the Christians
 could no longer be broken. 1). When Diocletian and Maximian resigned their positions on May 1,
 305, the persecution was essentially limited to the East, until in 311, the oldest of the
 reigning principals, Galerius, issued an edict in the face of death that was merely a thinly
 14230 veiled confession of his own inability 1), in which he requested the Christians' prayers for
 his salvation and for the prosperity of the Roman Empire! This edict was co-signed by
 Licinius, a personal friend of Galerius, who had been appointed Augustus by Galerius in 307
 with Diocletian's support, and by Constantinus, who had also held the title of Supreme Emperor
 since the Congress of Carnuntum. Constantine was nineteen years old when his father,
 14235 Constantius Chlorus, was appointed Caesar by Diocletian over Spain and Gaul, and also over
 Britain, if he succeeded in taming the rebellious Britons. This appointment dissolved
 Constantius's family. He broke off marriage with Constantine's mother, Helena, a native of
 Naissus in Serbia, to enter into a political marriage with the stepdaughter of the Supreme
 Emperor Maximian, with whom Diocletian had shared the burdens and pleasures of imperial
 14240 government. As for Constantine, he departed for Nicomedia, to Diocletian's court, ostensibly
 to complete his military career under the watchful eye of Augustus and Caesar, indeed to be
 held as a hostage for his father's loyalty.
 But from those early years, Constantine had brought with him a favorable disposition toward
 Christians. It is true, we can hardly attach any value to the account of Theodoret, that his
 mother Helena gave him the first food of piety. More credible is Eusebius's assertion that
 14245 Constantine so instilled in his mother a fear of God, a fear she had not previously shown,
 that it seemed as if she had become a disciple of Christ from the very beginning. 5) Most
 likely, she did not embrace Christianity before 313. But certainly, the image of his excellent

14250 father, who had never been able to agree with the persecutory policy of his fellow emperors
and protected Christians as much as possible, accompanied him on his life's path. Eusebius
praises him lavishly and expressly testifies that Constantine proved himself a zealous
14255 follower of his father's goodwill toward the Christian religion. 3) In Trier and York, several
of his courtiers were Christians; indeed, it is said that the Holy Mysteries were celebrated
daily in his palace. And this in spite of his fellow emperors? "A man, from whom England was
even liberated "He who had won again," says Zahn, "had kept a close watch on the constantly
14260 driven Rhine border and was rightly honored by his subordinates as a true father of the land,
dared to venture anything". 4) Without a doubt, the Christians hoped that the son of their
sole protector would ascend the imperial throne.
There is something else. Monotheistic movements were not uncommon during the imperial period,
14265 the result of religious syncretism, especially in the 3rd century. Perhaps no pagan religion
has achieved such a relatively high level of monotheism as the worship of Mithras in the form
it took in the Roman Empire. 5) The Sol Invictus, the "Unconquered Sun," was considered by
many to be the highest deity or even the deity. Monotheism, which emerged from the soil of
philosophy, also experienced a certain heyday. entered. Now, as already mentioned, it is a
14270 fact that it was precisely the young Christianity that largely engendered or promoted this
monotheistic trend,² and, on the other hand, that philosophers like Celsus and Lucian were
among the most vehement opponents of the Church; finally, that the cult of Mithras became the
most formidable rival to the Christian religion. But can't this bitter hostility be explained
by the fact that the transition from Mithras to Christ was so relatively easy and gradual?
14275 Grupp rightly calls the Mithraic Sun worship "similarly a means of annihilation,
understanding, and transition for many to Christianity".³ Now, not only Emperor Commodus was a
zealous Mithras worshipper, but also Constantius; and it is not unlikely that the monotheism
of his father, however vague, had a considerable influence on Constantine's conversion was
effective. For he did not suddenly come to Christianity, not struck by a lightning-struck
14280 death blow like Paul on the road to Damascus. Despite their great differences, the conversions
of Constantine and Augustine have this in common: both were led to the truth by divine grace,
carried and lulled by the currents of the times: the latter by Neoplatonic philosophy, which
helped him overcome his worldly-adherence, the latter by the survival of theistic [?]. the
inclinations of the family circle in which he was raised. This also explains the fact that the
14285 Sun God later occupied a place in Constantine's somewhat syncretistic Christianity. While he
had visited the famous sanctuary of Apollo at Augustodunum in 311 and received a rich gift,
coins minted after 313 repeatedly bear the inscription: Soli Invicto Comiti, "To the Sun God,
the Guide". 1).
Finally, and this is, in our opinion, the most important, in Nicomedia, Constantine had
14290 learned to appreciate Christianity in its full strength. When the persecution broke out in
303, he could see "with what fortitude the select group of pious people daily endured the most
exquisite abuses". 2). The pity and good opinion of Christians, which he had inherited from
his father, were here heightened into firm sympathy and admiration; And with this sympathy,
his monotheistic worldview and philosophy of life grew. But not only was he struck by the
14295 invincible energies of Christianity, which proved ineradicable despite all the violence of
persecution, but he also came to know and appreciate the religion as a cultural force that had
already exerted such a beneficial influence on the society of the East at that time. He now
knew where true strength resided, from which elements reformative power could emanate.
These elements were present in large numbers in the army, and it was precisely with the army,
14300 as a social group, as part of the state complex, that this reformation first came into the
light of public view. "The world-historical transformation from heathenism to Christianity
has... been absorbed by the Lord. From here the public recognition of the Christian religion
has taken its beginning". Diocletian had believed he could still avert the danger by launching
his persecution with a so-called purge of the soldiery; "he believed, after he had first
14305 conquered them, that he would then easily be able to overpower the rest" 2). The result was
only that he freed the Church and Christian society from the half-hearted and weak. The
majority remained faithful to the God of Christians; and when, during the campaign against
Maxentius, the monogram of Christ was raised as a military standard and adorned shields, this
was the first act not only of interpretation, but even of privileging the Christian faith and
14310 cultural community. The Church showed itself grateful for this by imposing the penalty of
excommunication, already at the Synod of Arles (314), for the previously so frequent practice
of desertion 3).

IV.

14310 Towards the end of his life, Constantius summoned his son: it was his unquestionable right. On
July 25, 306, he died in Eburacum (York); and now the soldiers proclaimed Constantine
Imperator Augustus. This, of course, was in direct conflict with the Diocletian principle of
imperial succession. But Galerius saw no way to effectively oppose the army's demand and even
sent Constantine a purple robe. He only requested that the youngest member of the ruling
14315 college be content with the title of Caesar, leaving the office of Augustus II to Severus.
But this was not the end of the story. What had happened in the army at Eburacum resonated
with the imperial guard in Rome. What one emperor's son had achieved, it was believed, should
not be unattainable for another either; And so, on October 28 of the same year, a group of
praetorians invested Maxentius, the son of Maximinian, with the purple and proclaimed him
14320 Augustus. Insignificant, indeed repulsive in stature, puffed up with foolish arrogance, cruel,
lustful, and superstitious, incapable of governing, Maxentius had nothing to show for himself
except his high birth, however little that might have been considered within the existing

system. This title, however, seemed sufficient to the dissatisfied faction to elevate him to the throne; but as a title alone, it naturally seemed worthless to Galerius, who therefore immediately ordered Severus to march against Rome to stifle the mutiny in the blood of the troublemakers.

But Maxentius, along with his father Maximian, who resumed the relinquished title of Augustus, succeeded in holding his own against Severus and Galerius, and even in gaining Constantine's recognition. Whether Maximian was qualified to resume power is debatable; but the Senate, whose electoral authority remained legally intact, had offered him the crown again, and it would have been least fitting for Constantine to refuse recognition to the old man who had elevated his father to the throne. In gratitude, Maximian granted him the hand of his daughter Fausta along with the title of Augustus. But a rift with Maxentius developed; and when Constantine's elevation and marriage to Fausta were celebrated in Trier in 307, and the orators refused to even mention the name of Maxentius. In the same year, the congress took place at Carnuntum, attended by the elderly Diocletian, Galerius, and Maximian, who probably also negotiated on behalf of Constantine. Diocletian was to resolve the matter. It was decided that Maximian would withdraw, while, in accordance with the original principle of succession, two Augusti with two Caesars would defend the empire. Galerius and Maximinus Daza would retain their positions as Augustus and Caesar, respectively. In the West, Licinius, an old friend and comrade-in-arms of Galerius, was appointed Augustus in place of the murdered Severus; however, Constantine would have to content himself with the title of Caesar. He could not accept this provision, even if he had wanted to. "If his troops, in their turn to victory, had become notorious for mocking their entire power," says Otto Seeck, "the title of Augustus would fall, which, in his victory saga, had been so heavily scorned that it had twice been given to the side".¹⁾ Maximinus Daza also claimed the title of Augustus, so that in reality the empire was divided into four parts.

But the beginning of the denouement soon followed. After having attacked his son-in-law for the second time, Maximinus was hanged in a palace room shortly after the capture of Marseille, not surprisingly on Constantine's orders (310). A year later, the persecutor of the Church, Galerius, died after a long illness,¹ a victim of the most severe tortures.

Galerius's estate was divided between Licinius and Maximinus Daza. Only Constantine considered no expansion of his territory, but honestly sought to combine the unity of the empire with multi-rule. This was evidenced, among other things, by his successful negotiations with Licinius, who became engaged to Constantia, the sister of the powerful ruler of Gaul. However, the course of events would ultimately force sole power upon him. The greatest difficulty in maintaining or restoring the unity of the empire, besides the fragility of the principle itself, lay with the counter-emperor Maxentius, the usurper of Italy, Spain, and Africa—the fierce champion of languishing paganism, yet challenging it to a decisive struggle. Now, religion was precisely "the pivot around which the governing policies of all successive emperors revolved," says Professor v. Gelder.)• If ever, then here it became clear that religion is the social factor par excellence. After all, the struggle between Constantine and Maxentius would become not only a struggle for power, a struggle for the right to property, but also a war of faith, even more so, a struggle for a new world order.

Constantine had gradually come to this conviction, while meanwhile his belief in one God matured in the sun of grace of Christianity. While his father had already shown himself benevolent toward Christians, he himself favored them even more generously. He had also become accustomed to considering the success of his undertakings as a blessing, as a reward from heaven, and this view was confirmed by the disastrous end of the persecutors of the church, Maximian, Severus, and Galerius, whose efforts, moreover, had proved completely fruitless. Their Persecution had only led to the weakening of the state. These considerations are also expressed repeatedly in his letters. Yet, he could still hesitate. The Christians, as already mentioned, were far outnumbered, and then, paganism had grown so intimately with the state system. But there Maxentius sets himself up as champion of the pagans in the West. x) Now his decision is made. "It is Constantine's merit," says Professor van Gelder again, "to have averted this turn of events, unfavorable for him and for Christianity, through brilliant fortitude". 1)

Relying on the power of the God of the Christians, Constantine invaded Italy from France in the spring of 312. If Maxentius had the pagan gods as allies, well, then he would seek help from the God of the oppressed but never suppressed sect, whose paladin he had become. To that God his thoughts and expectations go. His prayer, a true prayer. For "however much motivated by self-interest and the desire for self-preservation, it contains a humble confession of his misery and weakness; the desire for truth is mixed with selfishness, but it is a true desire" 3).

When the enemy still believed him to be on the Rhine, he was already at the gates of Susa. Soon the fortress was taken, and the army displayed miracles of discipline and self-control. As if in triumph, they now marched through the cities of Upper Italy. Verona was forced to surrender to the impetuous Emperor. Finally, on October 28, the decisive battle was fought just beneath the walls of Rome at the Milvian bridge delivered 1). To bring his large force into contact more quickly with the enemy, who was advancing along the Flaminian road, Maxentius had hastily constructed a pontoon bridge next to the stone bridge. However, a lateral maneuver by his opponent paralyzed the action of a large part of his troops. Nevertheless, the forces not trapped between the mountain and the Tiber still constituted a considerable superiority; but even this left wing would prove his undoing. The last ranks stood close to the Tiber and, with every retreat, no matter how momentarily necessary, had to be forced into the river.

High on horseback and adorned with the insignia of his imperial dignity, Constantine charged into the dense enemy throngs. The very first clash caused terrible confusion among Maxentius' troops. The praetorians fought for their emperor with the courage of desperation, but in vain.

14400 The vast crowd rushed madly toward the bridges; the stones held, but the pontoon bridge buckled under the load. The right wing was now utterly powerless and had only the choice between surrender and utter destruction. Among those struggling with death in the waves of the Tiber was Maxentius. He lost crown and life, and with his champion ended the armed supremacy of paganism. Amid the exuberant cheers of the crowd, Constantine, as Christian Emperor, now

14405 made his triumphant entry into the city. What had happened? How had this victory been achieved? From a purely human perspective, the denouement of the course of events is particularly puzzling. Constantine's campaign against Rome, even after the victories in Northern Italy, seems a hopeless plan. With 10,000 men, under favorable circumstances, and with military genius and discipline compensating for the

14410 lack of strength, one might perhaps defeat 100,000 men in a single battle; but when such a force lies within a fortified city, any attempt at attack is madness. That Maxentius would risk a battle outside the city gates was highly implausible. But suppose he did, and lost half his army on the battlefield; as soon as he could retreat to Rome with the other half, he would still be far superior, and the situation would remain as before. But the expedition against

14415 Rome was also completely unnecessary. For the sea supply of food had been cut off, and one day Rome's granaries would run out anyway; then hunger would force Maxentius to venture far from his base of operations in northern Italy. The only reasonable military plan Constantine could have followed was to wait and remain where he was. If he, the sharp-sighted and calm general, failed to do this, and charged madly toward a goal that was almost unattainable, then this is

14420 proof that he was guided by calculations other than ordinary human calculations. 2) Moreover, the whole world regarded as something superhuman the fact that within two months Rome and all of Italy, the islands, and Africa, lay before the conqueror's feet like a morning gift from heaven. Pagan panegyrists explicitly express their conviction that Maxentius was blinded by the highest deity, who granted its servant Constantine wisdom, courage, and

14425 strength. Christians and non-Christians agreed, and even today one cannot fail to acknowledge that something extraordinary had taken place. That the Christian historians of this period presented the events of the campaign against Rome in the halo of glorification can hardly be denied; Yes, it would be an extraordinary exception if events of such far-reaching significance as the victory at the Milvian Bridge had escaped

14430 the common fate of weighty historical events. Caution is therefore advised. Lactantius 1) recounts a dream vision in which Constantine was admonished to have the "heavenly sign of God" placed on his soldiers' shields and thus to risk battle; which he did. Armed with the sign of the cross, the army went into battle. Now, this account in itself is not entirely reliable, for the same historian recounts that Licinius, during the battle with

14435 Maximinus, also had a dream vision in which an angel taught him a certain prayer, which he had distributed among the soldiers before the battle. But besides this is the report of Eusebius both in his Church History (IX, 9) and in the Life of Constantine (1, 40), according to which the conqueror immediately after his victory gave orders to erect a statue in Rome, which would represent him with the salvific sign of the cross in his hand, and below this the inscription:

14440 "By this salvific sign, the true badge of recognition of bravery, I have delivered the city from the yoke of the tyrant. *1 The report in the Church History is all the more valuable to us now, since the author in this writing knows nothing of the help provided by the sign of the cross; he only mentions a prayer to Jesus Christ. The erection of this statue, as far as I know, is also doubted by anyone. 2)

14445 Divine intervention is further evident from the inscription on the triumphal arch, which the Senate and the Roman people had erected in honor of the victory over Maxentius (312-315). The immediate proximity of the Colosseum with its somber-glorious memories gives this syncretistic memorial a peculiar, higher consecration. The reliefs, mostly from an Arch of Trajan, also give the striking impression of belonging to the spolia gentium, the "spoils taken from the

14450 heathen". The whole, however, testifies more to feverish haste and impetuous thanksgiving than to high-mindedness. art, and this largely excuses the relative crudeness of the sculpture. The most valuable thing for us in this monument, along with its depiction of the popular vote, is the inscription:

14455 "The Emperor and Caesar Flavius Constantinus, the Great, the Fortunate, the Exalted, the Senate and People of Rome, because, at the inspiration of the Deity, through the loftiness of his spirit, he and his army simultaneously avenged the state with just force of arms against both the Tyrant and his partisans, have dedicated this triumphal arch to the Senate and People of Rome".

Instinctu Divinitatis: "on the inspiration, at the instigation of the Deity". It has been

14460 claimed that the original reading Nutu /. O. M. was "at the beckoning of the highest and best Jupiter" 1). This is definitely untrue. The expression is somewhat vague, but the Senate, which at that time still consisted largely of pagans existed. The core meaning, however, escapes no one and is further reinforced by expressions such as that of the pagan rhetorician Eumenius, who, as early as the middle of 313, speaks of a promissi divinitus Victoria, a

14465 "victory promised by the Deity," and of the emperor's immediate intercourse with the Deity. We are therefore faced with this fact: on his campaign against Maxentius, Constantine, under greater pressure, made a pact with Christianity, and the seal on this pact was the cross. This is also the essence of that other story by Eusebius in his Life of Constantine, that the emperor saw a flaming sign of the cross above the sun in the afternoon with the words TOTTXI

14470 NIKΑ, "Conquer with this"; and that the following night Christ appeared to him with this same

sign and also with the instruction to have a standard made according to it. 1) It is certainly surprising that this appearance of the cross, which was nevertheless the "whole army" was considered to be unknown to Lactantius and, what is more, to Eusebius himself at the time he wrote his Church History³). To this must be added the character of the Vita Constantini. "Less easily than church history do the... writings on Kaiser Konstantin take the false position of the Thoseselves in protection against the often-existing accusation. Obviously, Eusebius is not a historical writer here either than a much more beautiful or overly reliant Lobredner 1). But Eusebius relies decisively on Constantine, even on his oath, so I find no reason to consider this story, along with O. Seeck, as "naturally erroneous". 1) While the time interval between events and the story may have somewhat altered the accurate presentation of the facts, the vision with the cross as a sign of salvation remains the historical core of the various accounts, true and in any case.

What Eusebius and others were able to recount regarding this event ultimately goes back in its entirety to the person of Constantine, and reveals to us his convictions, his spiritual life, his state of mind at that important time. And this, as L. von Ranke rightly notes in a remarkable study on this subject, "reputed "...by a longer hand, in the depths of the soul, a quiet religious superstition, which, in the midst of the crisis, held up the upper hand". 3). The complex of facts as it lies before us: the course of events, the monuments, the reports of historians—all of this, taken as a whole, testifies to the fact that Constantine was not only convinced of the truth of his vision, but also that he had complete confidence in the sign of the cross.

That Constantine, and even more so his soldiers, may have used the cross for superstitious purposes, can, in my opinion, be readily accepted. 1). But this does not detract from the purity of his insights regarding the sign of the cross. Incidentally, there is no distinction between the terms "magic" and "defense," "antidote," as a magic wand, but as a symbol of the higher power, whose help he accepted—of the higher, transcendental power.

The emperor considered the sign of the cross in connection with the doctrine to which he leaned and which he would profess. I have shown how Constantine had gradually come closer to Christianity. The cross, too, would not have remained unfamiliar to him. Fully compelled by the events, he had declared himself a defender of the Christians and embarked on his campaign as such. But then the God of the Christians could not refuse him His protection. This conviction grew during the march. He had advanced against the advice of the pagan high priests; he wanted to test whether the pagan gods could also do anything against the God of the Christians. But then this God would also visibly demonstrate his protection and testify to his approval with a sign. Then follows the vision of the sign of the cross. Soon it adorns the emperor's helmet and the soldiers' shields; after all, the victory of Christianity would proceed from the army. Later, it adorned imperial coins. Above all, however, it rested on the crossbar of the imperial war standard: the labarum.

The form displayed by the Constantine Cross is that of the monogram of Christ. This belongs to the group of so-called cruces dissimulatae, i.e., symbolic forms that had some connection with the cross and were therefore used to conceal it; for example, the Buddhist Svas\\tika cross, which can be seen on the tunic of the fossor, the catacomb-digger, Diogenes. The cross did not appear without any covering before the 5th century, which is related to the fact that the first scene of the crucifixion also dates from that century, namely one of the reliefs on the wooden door of St. Sabina. Now, we do find the Christ-monogram repeatedly in inscriptions before Constantine, but almost exclusively not in isolation, but only as an abbreviation of the name of Christ. For example, "Pax Domini et cum Faustino".

The letters I H or I H C were also used to abbreviate the name Jesus. Only towards the end of the 1st century did the monogram begin to be used independently as a sign of Christ. However, a second form is found, namely [namely] ... During the course of the fourth century, the form of the Christogram was repeatedly modified; towards the end of that century, the apocalyptic letters A Cf were often associated with it. Let me add here that after Constantine, the formulas tovtu vhtx; hoe vince, in hoe vinces, in hoe signo vinces, hoe signo victor eris, etc., also appear in Christian epigraphy and coinage, albeit rather late.

Now, it is certainly true that symbols strikingly resembling the Christogram appear on the coins of Asian rulers, specifically as field and victory signs; for example, on the coins of the Syrian king Alexander Bala (146 AD), of the Bactrian dynast Hermaeus (138-120 AD), etc. But how can we explain that Constantine suddenly adopted these Asian symbols and wore them on his helmet? At most, pagan symbolism may have contributed to paving the way for Christian symbolism. "The explanation of the symbols of Attic and Ptolemaic coins can be overridden by the knowledge of the coins," Keim believes, "because the main point is that between your coins and Constantine, there is no such connection".

VI.

With Constantine, religion, which for almost three centuries had been considered incompatible with the well-being of the state and persecuted with fire and sword, had ascended the throne. After all, the emperor had declared himself in favor of Christianity. The immediate consequence of this far-reaching fact had to be: the cessation of persecution, the political interpretation of Christianity. This indeed happened through the Edict of Milan. In early 313, Constantine traveled from Rome to Milan to celebrate the marriage of his sister Constantia to Licinius. The negotiations went smoothly; and the edict was soon issued.

But, says Otto Seeck, the Edict of Milan does not exist. Christians did not obtain religious freedom until 313, but already in 311, specifically through the decree of Galerius. A certain document, communicated to us by Eusebius and Lactantius, does indeed go by the name "Edict of

14545 Milan"; but this is, firstly, not an edict; secondly, not issued in Milan; thirdly, not from Constantine; and fourthly, it does not grant legal tolerance throughout the empire. 1) What can be said of this?

In itself, it is difficult to assume that the historians of antiquity, who were contemporaries or practically contemporaries, would have glorified with the most exuberant praise an edict that never existed. But indeed, if its sole purpose were to abolish the preposterous provisions of Maximinus Daza, then it is nothing more than a local regulation issued by Licinius in Nicomedia, after he, with Constantine's support, had defeated Maximinus' troops, who soon died of overexertion in Tarsus. But this is a mere assumption, based on insignificant details, while some formal deviations can already be explained by the fact that we are dealing here, as Lactantius explicitly states, with a letter-form edict, addressed by Licinius to the magistrates of the East at the beginning of June. It is also not impossible that the readings in Lactantius and Eusebius are based on two varying texts 1). But this does not alter the fact that we readily side with Gaston Boissier, when he says that the Edict of Milan is one of those documents of ancient history whose integrity remains the best preserved. 3).

14550 But above all: this edict of ours cannot in any way be equated with the toleration edict of Galerius, if only because every concession on the part of the victor at the Ponte Molle is cast in a completely different light by the fact of his victory and his openly siding with Christianity. Speaking of this edict, Paul Allard says: "These dispositions were not for a prince who was amouindri like Gallien, who was movable like Galere, or contested like Maxence, but for a sovereign who was a victim whose palates were also recognized as some divine choice to yield to the incontest master of the Occident, and who was then to make a show of wronging the Empire".³

This is how things stood: in the territory of Maxentius, the Christians had initially experienced a certain goodwill 1), but generally speaking, they had never been granted legal tolerance. Furthermore, the onerous conditions on which the Galere edict made tolerance dependent gave rise to great difficulties everywhere; locally, it was even completely ignored. It was therefore essential to provide adequate benefit and assistance and to regulate the situation. To this end, Constantine first proposed the concept of religious freedom, a concept decidedly alien to antiquity. State religion in the modern sense was, of course, out of the question in ancient times. But the imperial cult constituted a personal element in ancient religion, closely linked to the state; sacredness also belonged to the foundations of the state. For full and fair equality, the state had to completely abandon the concept of state religion. And this happened. The passage in question in the edict reads:

"We have decided to grant both Christians and all others the freedom to follow whatever religion they choose, so that the Deity and the Heavenly Being, whatever it may be, may be favorable and gracious to us and all our subjects. It therefore seemed to us a salutary and most prudent policy to determine that absolutely no one should be denied the freedom to choose and follow the worship of Christians, but that everyone should be permitted to adhere to the faith that seems most suitable to them; so that the Deity may continue to grant us its usual favor and goodwill in all circumstances".

14585 As can be seen, we are here at the very foundation, not of Christianity, but of monotheism. However, it should not be forgotten that Licinius helped issue the edict, and that pagans were still by far in the majority. How strange even the concept of equal treatment of religions before the law must have seemed to them is evident from the fact that it is repeated five times, in almost identical terms: "that Christians, like all others, are permitted to practice their religion in complete freedom".

Subsequently, Christianity is no longer considered a tolerated religion, a religio hcita, but rather a form of religion for a legally recognized group of citizens who were granted legal personality as Christians, no longer as constituting a burial guild: the corpus Christianorum (the Christian body), the legal entity of Christians, is repeatedly mentioned.

14595 Another provision, which indeed demonstrates boldness, should not be underestimated: restitution will take place not only of the meeting places, i.e., churches and church grounds—something similar had already happened once before—but also of all church property that had been taken from Christians during the persecution; restitution, not only by the state, but also by or all private individuals endowed with church property; however, the temporary owners were promised compensation from the state.

The edict concludes with the decree to the civil service that it should be stamped everywhere and made known. As mentioned, it was promulgated in the East by Emperor Licinius in June of the same year. Since then, following the death of Maximinus, it applied to the entire Roman Empire, from the Atlantic Ocean to the Euphrates and Tigris.

14605 However, it would not end there. "The Religion of the Cross had to resist tribulation to the equal treatment of the heathen," writes Dr. Faulhaber, "and with its own strength, it consciously strives for truth from equal justice to sole justice" (1). Indeed, privilege grew out of equality. Constantine certainly anticipated, probably desired, and actually prepared and promoted this gradual development. The clergy was exempted from all public service, the Church obtained the right to accept legacies, Sunday became a public day of worship with mandatory Sunday rest, and considerable state funds were allocated to the churches of Africa. Indeed, this privilege kept pace with the development of Constantine's autocracy: more than ever before, politics was now guided by religion. Licinius had already been defeated twice in 314 and forced to relinquish almost all of his European possessions. Under him, the Christians once again suffered hard times for a time: many were deprived of property and freedom, synods were banned, the celebration of the Holy Mysteries was hampered, Christians were expelled from the court and, what's more, even from the army; in some places, blood was even shed. But these

14610

14615

14620 were the last gasps of paganism. In the battles at Adrianople, Callipolis, and Chrysopolis, Licinius lost his empire and a year later his life: by the end of 324, Constantine was sole ruler.

14625 Gradually, the higher positions in government were filled by Christians; magnificent Christian churches sprang up everywhere; the spread of the true religion was even promoted in imperial manifestos. The Roman Empire increasingly displayed a specifically Christian character. This Christian empire also had to have a Christian center. For this purpose, Rome, which, incidentally, lay too far to the west, with its still distinctly pagan character, seemed unsuitable to the emperor. He founded Constantinople by transforming the old Byzantium into a truly Christian city, and established his imperial residence there (330).

14630 Let us also take a cursory look at the Christian social and economic character of the new legislation. The provisions of the Julia and Papia Poppaea laws, directed against celibacy and childlessness, were repealed, and not only, as Funk rightly observes, for the benefit of the Church, which was particularly affected by these provisions: "The full Church with its 800-year-old legal position finds a satisfactory explanation, but one could write otherwise than one's original Christian thought" 1). Some of his decrees were directed against divorce and cohabitation, or aimed to protect defenseless innocence and threatened infanticide with the most severe penalties. His actions against slavery deserve special mention; Constantine took a decidedly Christian stand on this point. He accepted slavery as a social institution. He did not want a social upheaval, the consequences of which would have been incalculable. Christianity fundamentally reformed the institution of slavery by cutting off its roots, rejecting the inferiority of the slave under natural law, and proclaiming the theory of inner freedom. Now the yoke was bearable, because a different spirit had been instilled in the organism. Within the framework of the old legal system, a new ethical and social formation was created. And that Constantine embraced this spirit is demonstrated by his validating ecclesiastical manumissions and demarcating the boundaries between just punishment and punishable abuse. He declared the deliberate killing of a slave to be murder. Anyone who would accuse Constantine of a certain transaction with slavery demonstrates gross ignorance. In 325, he banned gladiatorial combat in the East. He established various charitable institutions, such as burial funds and grain foundations for the needy. 1)

14645 Constantine's laws form an impressive series that commands respect and gratitude. 1) Elaborating further on the governing actions of the first Christian emperor is beyond the scope of this festival. The above also serves only to better equip us to form a general judgment about Constantine's intentions and disposition in issuing the Edict of Milan. From Gibbon to Burckhardt, this act has been regarded only as a consequence of shrewdly calculated policy. Burckhardt, in particular, dipped his pen in bile and hatred. He found better appreciation in Keim; Otto Seeck initiated a de facto rehabilitation¹⁾. Meanwhile, how should we assess a relatively moderate statement like Brieger's: "It is entirely... undeniably true that Constantine the Great did not, because of Christianity, receive tolerance and state favor, because he inwardly espouses the truth of this religion, because he personally was a Christ"? 1). So, it was not as a Christian that Constantine accomplished what he accomplished; In any case, "he presents himself with his external religious beliefs until the end as a broader, more comprehensive solution and seeks no solution to the confusion". Then, indeed, only one way out remains: "to consider his world-historical truth as an outlet for his policy".³⁾

14665 We strongly protest against this: Thus Constantine's Christianity becomes a lie, thus he himself becomes an actor and a hypocrite, while sincerity and honesty are evident in all his actions and statements. Funk is spot on when he says: "Those things speak for themselves. May a few of them, in themselves, be considered a blushing escape from politics, for the sake of the whole, this interpretation is crucial" 4); and Gaston Boissier expresses his conviction: "Christianity can be both material and substantial, but whatever we say, it has been since" 1). Among the deeds that speak of the emperor's sincerity are the aforementioned imperial decrees, and the declarations made on more than one occasion. When the Donatists appealed to his judgment after the second synod, he responded with this key word: "They demand my judgment, while I await the judgment of Christ". Among these deeds we especially consider the two decrees that Constantine addressed to his new subjects after the victory over Licinius and the establishment of the autocracy,¹ and whose authenticity is beyond doubt: they bear brilliant and irrefutable testimony to the emperor's Christian disposition.

14675 Constantine was no hypocrite! From the moment he took up the fight against Maxentius, he considered himself a divinely called, chosen instrument, and he increasingly embraced that thought, that calling. Choosing his side was not only a matter of the heart; it was also a matter of conviction—indeed, I would say, more of reason than of heart. And thus one of the motives that led the prince to the Edict of Milan is established: the consciousness of fulfilling a mission imposed upon him by the God of the Christians, the satisfaction of a wounded sense of justice, and the reparation of a grievous injustice, endured for so many years. Faith in the truth of Christianity was thus the primary motive for his actions.

14685 A second motive undoubtedly lies in his sincere gratitude for the divine favor he had enjoyed in such momentous circumstances. According to the text of the edict, he also wishes to preserve this favor and grace in the future for the good of the kingdom. This motive also played a significant role in his conversion to Christianity itself, and thus this conversion, as Professor Geurts rightly observes in one of his fine articles, becomes a striking parallel to the conversion of Clovis.

14690 But there is a third motive. If one wishes to call this political, so be it; But then one should also call it a sound policy, not only justified by the circumstances, but entirely

necessary. Constantine was deeply convinced that persecution achieved nothing but a continuous weakening of the state. Christianity proved ineradicable; like the pelican, it continued to nourish its offspring with its blood. Moreover, as mentioned, Constantine had come to recognize Christians as the most excellent elements with whom he could venture to inaugurate a new imperial arena, from whom he could confidently anticipate a rebirth of society. Add to this that circumstances confirmed his ideas and the Christianized army led him to victory: should not the natural consequence then be a public act, which guaranteed the Christians equality, at least for the time being, perhaps giving them decisive dominance in the foreseeable future, and that in relation to the well-understood interests of the empire? In my opinion, one has... The Edict of Milan is often viewed too one-sidedly, as an isolated fact, the fruit of the emperor's personal conversion and the victory over Maxentius. This view doesn't touch the reality of the facts and circumstances. Constantine was no *deus ex machina*, granting unexpected freedom after centuries of fruitless striving. The edict owed much more to the Christians, or rather to Christianity itself, than to the favor of the Christian emperor. It is nothing but the official recognition of an already existing situation. The Christians themselves, thanks to the grace of God and the vital force of their teachings, had slowly, but unconsciously, prepared for this triumph, so that the edict of freedom seemed to them a sudden liberation. In truth, however, only the last barrier had fallen at the Milvian Bridge. That liberation was primarily the fruit of their striving, their blood, their patience, their ethical excellence, their social dominance.

That official privilege could not be obtained all at once; that Christian culture had to have time to expand and conquer at the risk of losing its own purity—Constantine was too great a statesman not to understand this, and I cannot see how it is possible to reproach him for it. Besides, pagan religion was too deeply ingrained, had grown too deeply into the consciousness of ancient humanity through centuries of development, to be eradicated in one go. "Religions die slowly," says Dr. Faulhaber, and he continues: "Kaiser Konstantin sought to suppress pagan cult, without allowing the decree to force religious development out of Eight, which required a massive push forward". 1) And with this agrees Prof. Van Gelder, when he writes: "Knowing what was to come, and probably wishing it too, he nevertheless did not want to rush things, he held back as much as he could, like a wise statesman who feared shocks and sharp shifts". 2) The question is whether Constantine acted well by continuing to support certain pagan institutions or practices more or less firmly. It is certain that he not only demonstrated himself to be entirely Christian in legislation and privileging benevolence, but that he also suppressed more than one pagan institution. Private sacrificial oblations, as well as various sacrificial ceremonies and some immoral religions in Syria and Egypt, were banned, temples closed, and idols torn down. 2) But on the other hand, it is certain that he remained deeply superstitious. Nor did he renounce the title of Supreme Priest; he remained Pontifex Maximus, and had himself depicted as such with a veiled head: "he does not manifest by any public act his intention of renouncing being the supreme head of a religion to which he does not appear more," says Boissier. 2 One can interpret this favorably and argue that he did not want to relinquish supervision of the pagan cult. Subsequent emperors also bore this title until Gratian, who renounced it in 375. Had bearing the title become a mere formality, there would have been no objection; but I somewhat doubt whether this was already the case with Constantine. It seems to me that he continued to fulfill some of the obligations attached to the title, for example, by occasionally practicing divination for state interests. In Codex Theodosianus IX, paragraph 16, and XVI, paragraph 10, we find, moreover, quite a few regulations concerning pagan cult. The pagan historian Zosimus even claims that he offered pagan sacrifices until the year 326; this report is highly improbable, but must contain a grain of truth, since he appears as High Priest on coins and in inscriptions until 328. In the last year of his life, as appears from an authentic inscription, he gave permission to the Italian town of Spello to build a temple for his family, the gens Flavia; however, no sacrifices were allowed to be offered there. Now, with particular reference to the coins: as already mentioned, they continue to show pagan emblems for quite some time. This certainly need not be regarded as proof of a clearly expressed sun worship; Besides the Sun God, Jupiter, Mars, Mercury, Isis, the Genius (Guardian Spirit) of the Roman people, etc. also appear. a. But "there is no doubt", explains Grisar, "there is a strong, symbolic, undiluted presence here that is based on Helios in the religious Manifestations of the Christian Kaisers, which is the only reason for the reigns of 313 to 324, and is not visible anymore, but perhaps the sun god on the coins symbolized the emperor himself as Roi Soleil. It is certainly unlawful to conclude from this and similar data with Keim that the emperor was also at that time "neither bis auf a Punkt ein Heide"2). But in my opinion a certain religious syncretism is unacceptable. not to be denied, or, if this expression is too strong, his Christianity was somewhat Syncretistic in tone. Such was the situation with several of his contemporaries. Konstantin certainly saw Christianity as the religion God intended, and himself as the perfect instrument for its spread. In this role, as we have already mentioned, he increasingly and seriously immersed himself in his thoughts. Yet, the highest value and significance of Christianity remained hidden from him, and therefore he never dared to fully implement Christian state policy. Nor did he ever adopt full Christian morality: too much blood clings to his memory. Despite the sincerity of his convictions and the purity of his intentions, despite his great service to the Church of God, one must admit with Ehrhard: "He has... not inherited the religious nature of Christianity in its deepest foundations and most sacred souls, and much less taken his physical ideal for the unconditional guidance of his actions. Constantine was no saint!" 1).

Shouldn't one also see confirmation of this in the postponement of his Holy Baptism until his

deathbed? After all, Constantine was not yet a Christian in the ordinary sense of the word. Even if he held Christianity in high esteem and declared himself the God of the Christians, he remained a pagan until the end of his life. We know that the report of his baptism in Rome by Pope Sylvester and of the cleansing from his leprosy is a fable. When he felt his end approaching in 337 at the castle of Achyron near Nicomedia, he was baptized by Eusebius, the bishop of that city. It is certainly true that baptism was often postponed until old age or even until the end of life. The great Cappadocian saints Basil and Gregory of Nazianzus, as well as Saint Chrysostom, were not baptized until around the age of thirty. However, this view and practice was most widely held in the time of Tertullian, when he spoke of a pondus baptismi: a "burden of baptism," either out of excessive fear of defiling baptismal grace or because people were repelled by the heavy burden of penance. This changed significantly with the more lenient penitential discipline of the third century. People will also grant me that the main reason can hardly be found in the expectation of one day receiving baptism in the waters of the Jordan. Perhaps Constantine himself offered the explanation on his deathbed. "If the Lord of life and death should wish to grant us a longer life here on earth," he said, "... it is determined once and for all, to give my life such laws as are worthy of God". 1) Constantine is not confessing here to having violated God's law, but to having not yet chosen God's law as the guideline for his life and actions. A dying mouth does not lie. This testimony expresses true respect for Christianity, but also perfect honesty, self-knowledge, and self-esteem. When the emperor had put on the white baptismal robe, he no longer wanted to touch the purple. Did he perhaps, like Tertullian, consider the exercise of the Principate in its full scope incompatible with the dignity of a Christian?

VII.

With the promulgation of the Edict of Milan, the Church casts off its mourning veil and, unhindered by fetters, walks the path of light, leading to the highest, the sovereign cultural goal, which radiates its beams of light across the entire field of human civilization. Suffering and strife are forgotten; jubilant hymns of peace resound through the free lands; indeed, the Christian hosts now feel more closely united with their triumphant brothers in better regions: they are no longer the militant, but the triumphant Church on earth. The worship due to God is rendered freely and unhindered. Churches are rising everywhere, and Christian architecture reveals itself in a wealth of forms and novelty of creations: as a triumph of conquered paganism, basilicas and domed churches arise; and in the new house of God and the new cycle of figures, Christian art bestows aesthetic pleasure with an ethically and religiously purer and more exalted purpose. The historical element breaks through everywhere. The catacombs are abandoned, or rather, change their purpose and henceforth serve almost exclusively as places of pilgrimage for the veneration of the sacred martyrdoms: Pope Damasus will better arrange and adorn them for this purpose with his artistic inscriptions. Henceforth, the Christian family may manifest itself in freedom, for the Princeps is the zealous protector of its sanctity and inviolability; wife and child find their defender on the throne. The slave, too, is confirmed and strengthened in the awakened sense of self-worth and moral responsibility. The barriers to full participation in government fall an ever more complete elimination of religious objections to the exercise of government office. For the Christian economy, a period of theoretical and practical appreciation begins, along with an increased scientific striving to develop sound principles, which led to "the economic ethics of St. Augustine, the most complete publication of the teachings of the Gospel under Father over the right, godly evaluation of Irish goods". 1). With Augustine, the Christian philosophy of antiquity also celebrated its finest triumphs; with the hymn compositions of Ambrose and Prudentius, literature offers the ripest fruit of the assimilation process of ancient formal civilization with the spirit of Christianity. Thus, the ethical revival found its crowning achievement in the Edict of Milan; thus, it could safely develop in the shadow of the throne. Christian art has been able to symbolize this world-famous triumph in a striking way. The Agnus Dei begins with the Peace of the Church, especially in the magnificent mosaics of that period. On a mountain stands Christ as the "Lamb of God" with a halo or cross or the monogram of Christ; and from that mountain flow four rivers of paradise, while Jews and pagans rush to drink from the fresh waters. On either side rise palm trees, the apocopes of paradise. Elsewhere, in fresco paintings, on gold glassware and sarcophagi, the Lamb of God is surrounded by a flock of lambs, the symbol of the faithful. They indeed represent the now triumphant Church. For the lambs carry wreaths or palm branches, while several figures invite them to enter the gates of heavenly Eden. The triumph of the Church is still depicted by the so-called Maiestas. Domini, the image of Christ, enthroned in all his glory and splendor. As King, He holds court among His Apostles. He is also the supreme Lawgiver and Teacher. It is a scene that could only be born in the splendor of the temples; it is no longer adorned by the mysterious light of cemeteries, but richly bathed in the jubilee sunshine of the basilicas.

VIII.

"It is necessary to ask, above the church, whether the victory was to be fought without Constantine," says Harnack. "In the meantime, Constantine must have fought, only if it had become lighter from year to year, than Constantine would have been". 1) Is this a reason to dispute the nickname Constantine, which posterity deemed him worthy of? Not at all! That name remains His inalienable property. He certainly does not belong to those

personalities who fascinate the historian solely for the facts associated with their name, and certainly not for the strength of their intimate conviction. 2) On the contrary. He was a robust, self-confident personality, who had the courage not only to express in words, but to embody in deeds, what he had come to know as truth. And that he dared, by acting in this way, to break with a centuries-old system that seemed intertwined with the essence and well-being of the state, that he dared to inaugurate a new arena and face the far-reaching consequences of his actions, undoubtedly testifies to unusual energy and power of command.

But also to a masterful genius. Constantine was not a caricature, as those who, shutting themselves in the narrow confines of their prejudices, failed to grasp the great struggle of ideas during the Constantine period have tried to reduce him to. He was the first to understand that Christianity belonged to the future and what Christianity meant for the revival of Roman society as a whole. And that he did not proceed with haste in the intended reformation, but gradually, also testifies to a wise moderation, not always the property of those of superior intelligence. Nowhere has any resistance from paganism to this privileging of Christianity been observed. Furthermore, great is his fame as a commander, as a patron of the arts and sciences; and although his theological insight may have been deficient, he cannot be denied the praise for having striven with rare spiritual strength to keep the Church free from error, to eliminate schisms, to maintain and confirm unity. Constantine may therefore rightly receive a name from the hand of history, which it has and will continue to hold for Diocletian.

Nevertheless, the full measure of greatness belongs to Constantine, because His name is forever associated with the liberation, and later with the enthronement, of Christianity. His gigantic figure rises at one of the most important turning points in world and church history: the period when Christianity, after bloody insults, achieved recognition and equality, when Christians, despite their number, The elite minority felt definitively in possession of the majority of their power. The Edict of Milan depicts the triumph of the Cross, not through the favor of a sovereign, not as a result of shrewd calculation or statesmanlike wisdom, but thanks to the transcendent character of religion, whose world-conquering and world-reforming power radiates so gloriously in this letter of freedom from the Church of God.

Christianity had triumphed, then. Why not paganism, with its formidable armed forces and legions of influential patrons? Why not, in particular, the worship of Mithras, which seemingly offered so much more, which so harmonized with the imperial cult, and which, as evidenced by the monuments, could boast such a vast extent? Clönp, Harnack, and Dietrich have listed several causes: the Mithras cult remained too Asiatic, it was too flexible, too transient, it did not accept women for propagation, it was not supported by sacred literature, it could not forge an alliance with Hellenism... Certainly, all of this may offer some explanation. But is this the last word of history? Then the triumph of Christianity breaks the historical law, which demands proportionality between means and ends, which demands that every significant historical phenomenon be the result of various forces proportional to the consequences. And in humble adoration we bow our heads before the higher power that led Christianity to victory. But also with grateful hearts and unwavering trust: for we know that the God who led Constantine to victory and who caused the sun of glory to rise on the day of Milan's liberation still remains with his Church today and will know how to guide his faithful to the lands of light through storm and darkness.

- Constantine the Great**
1. Augustine on Constantine
- 15020 In the fourth and fifth books of *De civitate dei*, Augustine deals with the question on what grounds one may call Roman emperors happy, felices. In the penultimate capita of the fifth book, which was published with the fourth at the end of 415, he gives the following extensive argument, which culminates in the image he had formed of Constantine the Great, and which at the same time expresses a profound problem in
- 15025 world history. Augustine writes (*De civitate dei V* 24, 25):
"We do not call certain Christian emperors felices because they reigned long or died quietly, leaving the government to their sons², or subdued the enemies of the commonwealth, or subdued and subdued internal enemies who rose up against them. These and other favors and consolations in this difficult life have also been
- 15030 experienced by some servants of idols, who do not belong to the kingdom of God like the former; and this has happened through the mercy of the same God, to make sure that those who believe in Him would not desire those things from Him as the highest good. But we call them felices if they rule justly.
- 15035 Augustine continues: "if under the words of those who honor them very highly, and the obeisances of those who greet them humbly, they do not exalt themselves (exceedingly), but consider that they are (only) men; if they use their power in the service of the majesty of God to exalt His worship as highly as possible; if they fear, love, and honor God; if they love that kingdom most where they have no rivals
- 15040 to fear; if they are slow to punish, and easy to forgive; if they use their power of punishment (only) where it is necessary for the government and protection of the commonwealth, not to gratify their anger against enemies, and if they use that forgiveness not for impunity for evil, but in the hope of amendment; if they meet the severe decrees, which they are often forced to make, with compassion and charity; if they abstain from luxury as it is more easily attainable to them; if they prefer to subdue (their own) evil desires than other peoples, and if they do all this not from their burning desire for vain glory, but from love of eternal felicitas; if they do not fail to offer to God for their sins the sacrifice of humility, submission, and prayer. Such Christian emperors we call felices, for the time being in hope, later in
- 15050 reality, when what we expect shall have come. (25) "For the good God, in order that men who believe that they must worship Him for eternal life, should not think that no one can obtain these earthly favors and kingdoms except by praying to idols - since these spirits have great power in such things - (the good God) has filled the emperor Constantine, who did not pray to idols but honored Him, the true God, with so many
- 15055 earthly gifts as no one would dare ask. He has allowed him to found a civitas next to the Roman empire as a daughter of Rome, but without any temple or image of the demons. He has reigned for a long time, as the only Augustus he has held and defended

the entire Roman world; in organizing and waging wars he has won the greatest victories, in suppressing tyrants (usurpers) he has been successful in all respects; in old age he died from illness and old age, leaving his sons as emperors. But again, in order that no emperor should be a Christian in order to obtain the felicitas of Constantine, since every one for the sake of eternal life must be a Christian, (God) took away Jovian much more quickly than Julian (Apostata); and suffered Gratian to be killed by the tyrannical sword, though much more gently than the great Pompey, who worshipped the so-called Roman gods. For Pompey could not be avenged by Cato, to whom he had, so to speak, bequeathed the civil war as a legacy. Yet Gratian, although pious souls do not ask for such consolations, was avenged by Theodosius, whom he had taken into his government as a partner, although he had a little brother, because he preferred a faithful ally to too great a (domestic) power".

The last chapter of the fifth book is then devoted to Theodosius as a Christian emperor.

The moral image that Augustine draws of the Felix Imperator here is prepared in the preceding book (IV 23), where he asked the question why the Romans, if Felicitas is a goddess, did not worship her independently, since she was nevertheless able to give everything and to make (man) happy in the shortest way.

"Why did Romulus himself, who wanted a happy state to found, did not erect a temple for her, and, for whatever, did not implore the other gods, since he lacked nothing if she only assisted him?" Powers of other gods were worshipped and when Felicitas finally came along, the republic did not go so well at all, perhaps, Augustine mocks, because Felicitas had come so late (2). Jupiter's kingdom also depends on Felicitas and "potior est felicitas regno", happiness is worth more than kingship. One easily finds a person who dreads becoming king; "nullus autem invenitur qui se nolit esse felicem", but there is no one who does not want to be Felix (3). Besides Felicitas, the other gods are in principle superfluous, from her alone one asks happiness, and no more from the others. What more could one wish for? But - and now the reasoning is reversed - "if Felicitas is not a goddess but - what she really is - is a gift from God, then one must seek that God who can give happiness and let go of the harmful troop of false gods who follow the stupid masses, make the gifts of God into gods for themselves and thereby offend Him Himself, whose gifts they are, through the resistance of their proud self-will. For one cannot escape infelicitas - misfortune - if one worships Felicitas as a goddess and abandons God, who is the giver of felicitas, any more than one can escape hunger if one licks a painted loaf of bread and does not ask it of the one who has one" (4).

Augustine was concerned with making known, in contrast to polytheism, the unknown God from whom felicitas comes, with whom man finds felicitas. He believed he could conclude that the Romans themselves believed that felicitas was given by a god whom they did not know (25).

The distinction is that between material happiness and windfalls on the one hand, entirely within the framework of this visible world, and which Augustine then lets coincide with what the Romans expect from their gods, and moral action on the other hand, through which emperors also show that they participate in the other world, now still in hope, one day in reality. It now lies undisturbed in this world. The difference between the two worlds would can be seen as the quality of existence.

Augustine is meanwhile critical enough not only to acknowledge that one can experience earthly happiness outside the kingdom of God, but also that one should not serve God in order to obtain the incomparable happiness that Constantine had - "as much good as no one would dare ask". It must be for eternal life, i.e. to do the kingdom of God. Earthly gifts are not the yardstick of God's favor. Augustine ends this entire period about the Christian emperors thus: All other honors or riches of this life God gives as He gives the whole world the light, the air, the earth, the water, the fruits, and the soul and body of man himself, his senses, spirit and life, to the good and to the evil; to this also belongs the greatness of the kingdom, which He awards with a view to the government that falls in time (in quibus est etiam

quaelibet imperii magnitudo, quam pro temporum gubernatione dispensat). We think here of Mt. 5:45, where it says that God makes his sun rise on the evil and on the good. This word makes it clear that it is extremely difficult to derive a judgment about someone's true felicitas from visible things. Here, as I referred to at the beginning, an important problem for our judgment about the leadership in world history comes to light. Augustine says that a person's felicitas depends on his participation in the vita aeterna, which is another way of saying the civitas dei. However, he also says that it does not help much to strive for it in a certain way, for example by imitating someone else; that is looking at it too narrowly. "Do from

des" does not apply here. Felicitas is not grasped, it is essentially a gift. God intended it for Constantine.

2. Julianus Apostata on Constantine

Half a century earlier, Julianus Apostata had written the satire *Symposion of Caesares* (361, in Constantinople), in which a number of emperors were allowed to unburden their consciences before the assembled gods to find a patron among them and then to see who of them would receive the prize of honor. Last up is Constantine, who is presented as a good warrior but otherwise as highly addicted to pleasure. While he recounts his heroic deeds to the gods, he keeps his gaze furtively fixed on Tryphe, the demon of luxury. Silenus asks him if he does not have any Adonis flowers with him, which bloom briefly and quickly wither, whereupon Constantine blushes in the realization that this might indeed be the case with his work. He admits that he wanted to raise money to satisfy the desires of himself and his friends. "Then you should have become a banker", Silenus mocked, "but you have lived like a pastry chef and a hairdresser, your hair and your delicious smell prove it". Constantine also no longer wore a beard like his predecessors and Julian, for whom the beard was the symbol of his philosophical pretensions, which makes one think of Horace: "sapientem pascere barbam". Of course, Constantine could not find support from any of the gods and so he sought his solace in Tryphe and Asotia, the debauchery, and there he also found Jesus, who called to him all who were seducers, murderers, sacrileges and rascals, with the promise to wash them clean immediately with this water - the baptismal water. "And if anyone is guilty of the same thing again, I will cleanse him again if he strikes his breast and forehead". Constantine went to him with his sons in good spirits, but the gods nevertheless punished them for their impiety and the bloodshed of their kinsmen, until Zeus granted them mercy for the sake of Claudius Gothicus (268-270) - from whom Constantine derived his descent - and of his father Constantius Chlorus.

The historical authority of Julian is entirely doubtful. To write a satire is everyone's right, but to give in it the representation of Constantine's flight to Christianity in 326 instead of 312 is unforgivable for a member of the dynasty himself, who could have known all about it. Nor is it easy to swallow what Julian wrote in his panegyrics on Constantius in 355 before he left for Gaul, and when he was there. In the extermination of the members of the dynasty - two uncles, seven nephews and some of the highest officials - Constantius, to whom Julian in his letter to the Athenians of 6 years later attributed all this, had spared him and his half-brother Gallus, from whom the title of Caesar was taken away. That Constantius did not trust Julian in the least, however, was evident from the limited military assignment that he was given to Gaul. That Julian was terribly afraid of Emperor Constantius is particularly evident from the same letter. He had always spared the great ruler in every respect and therefore, when he was proclaimed emperor by the soldiers themselves in Paris, he hesitated to accept this election. He asked Zeus for a sign, then modestly agreed: *ὡς ἰσάσιν οἱ θεοί, στένων της καρδίας*, and continued to call himself Caesar in his correspondence. Thus reality developed, but in the oration mentioned of 355, i.e. 18 years after the massacres of 337, he had still exuberantly praised the education of Constantius - although he was Christian - and his character: "it seemed as if Constantine himself was still present, in the government of his son" and of the son himself he said: *ἀρχὼν πρῶτος καὶ φιλανθρώπως* while his *δικαιοσύνης* was praised. Julianus found it praiseworthy that Constantius himself also praised his father. The fact that one is dealing here with only a panegyric cannot take away the fact that Julianus spoke against his conscience, and on top of that said that Constantius tried to imitate the divine nature on earth. He expressly added to this that he would not tell a lie instead of the truth, but the reader wonders how he could have gotten all this out of his pen. Julian then permits himself in another connection to call the church historian Eusebius a worthless author and to disparage Christianity with the worn-out terms *ἄθεότης* and *ἀποστασία*, "a malicious invention of the Galileans", while he himself adheres to the Hellenic tradition, the traditional order. Julian's criticism of Christianity in *Κατὰ Γαλιλαίων* is not impressive; it remains the judgment of an outsider and is partly not original either. The mocking description in *Caesares* of Jesus' constant readiness to forgive sins and cleanse the most impure people is reminiscent of the corresponding mockery in Celsus's *Λόγος ἀληθής*, two centuries earlier. In the sarcastic *Misopogon*, addressed to the Antiochenes, who had little time for him, Julianus proved himself unfit for the emperorship only with his reconstructed Hellenism, although he had managed to bring his own military deeds into the light. He had enough humour to ascribe to himself

- 15190 οὐδέν καλόν θέαμα, not a pretty sight in public (364D). Boissier's verdict on Julianus raisonnements was: subtils, obscurs, dialectiques, enseignement secret pour les privilégiés and on similar grounds Toynbee explains the failure of Julianus' artificial intellectual undertakings. The biographer Julianus is certainly not convincing.
- 15195
- 15200 Julian was the first of the pagan historians or cultural critics to express the view that with Constantine's conversion to Christianity the great turning point in the history of the Roman Empire had begun, which was taken over by Ammianus Marcellinus, while the writers who came after them, Eutropius, Aurelius Victor, the Anonymus Valesianus and the author of the Epitome, seem to underestimate the Christian conversion as a historical phenomenon. Zosimus called the murders and the subsequent conversion of Constantine the beginning of impiety (ἀρχήν της άσεβείας). He took over this motif for the downfall of the Roman empire, and the image of Constantine as created by Julian, in his Historia nova a century later, called him someone who had surrendered his life to Tryphe, and connected Constantine's conversion with his remorse over the death of Crispus, his eldest son from his first marriage, and of his second wife Fausta; the death of Licinius Jr. is not mentioned. The chronological confusion in the sloppy story, the importance of which F. Paschoud recently attempted to demonstrate, is almost inextricable. It comes down to this: Constantine could find no help for atonement for his crimes from pagan priests, but an Egyptian from Spain, who had managed to get through to the ladies of the court, told him that the doctrine of the Christians could wipe away all crime and that the evildoer who accepted it was immediately freed from all sin (άμαρτία) (II 29, 3-5). Constantine then took the decisive step, took no further part in the sacrifice for Jupiter on the Capitoline, and thereby immediately incurred the hatred of the Senate and the people of Rome. The confusion lies in the fact that Zosimus places Constantine's conversion in 326, while the military ceremony in Rome should be placed in 312, after Constantine's victory over Maxentius. Everyone could have known that Constantine had accepted Christianity long before 326, and also that he had been welcomed with jubilation as a liberator in Rome in 312. Yet this story, as appears from the Church History of Sozomenus, who wrote half a century before Zosimus (439-450), was more or less the usual version of Constantine's conversion in pagan circles. According to Photius, Bibl. cod. 98, Zosimus had read Eunapius of Sardis, who wrote even earlier, around 400, and who may have borrowed Roman data from the Annals of Nicomachus Flavianus. If so, these were bad or he made bad use of them. Sozomenus tells the story differently again. Constantine is said to have heard from the philosopher Sopatros, who was his friend at the time, that there was no reconciliation possible for crimes such as his. A chance meeting with bishops then brought the emperor to Christianity. But Sozomenus himself did not believe this. It seems to me, he says, that this has been invented by those who wish to slander the Christian religion, and he continues: "even if we assume that the emperor spoke to Sopatros or inquired of him by letter about his desire (for reconciliation), it is certainly still very improbable that the philosopher would not have known that Hercules, son of Alcmene, was purified at Athens by the mysteries of Demeter, after the slaughter of his children and after the murder of Iphitos, whom he killed in spite of all justice while he was his host and friend. Since, then, the Greeks had to offer purifications for sins of this kind, this is sufficient to expose the lie of those who have invented that Sopatros would have said the opposite; for I, for my part, would not dare to assert that the man who was then the most famous among the Greeks for his knowledge, did not know these things." To make the confusion even greater, Zosimus also links to his story the statement that Constantine showed his impiety by suspecting and prohibiting the μαντική, the haruspicium, because it could be used in a hostile way against him (II 29, 4). We know, however, that the provisions against the haruspicina date back to 319 and 320. According to Zosimus, Constantine took part in the parade in awe of his soldiers at Rome, but, warned by the "Egyptian" that a φάσμα, an apparition, disapproved of the ascent of the Capitol, he was able to withdraw in time from further participation in the sacrifice. Paschoud calls the whole story "une construction mensongère élaborée avec des renseignements exacts". We can do little with it, but we do learn from it how the pagan world in the fourth centuries later thought of Emperor Constantine: not the "abstentissimus imperator" of the panegyricus Nazarius forty years earlier (Panegy. X (4), XXXIV), but: an unstable and immoral man, a murderer, for whom no reconciliation was conceivable and who therefore converted to Christianity. For the sake of comparison I add the picture that Aurelius Victor gives of Constantine. "From his youth his powerful mind burned with desire to rule" (Caes. 40, 2). He was incredibly fond of praise. He adorned his princely

garments with precious stones and his head always with the diadem. But in many things he acted excellently: with very strict laws he restrained slander, he promoted the bonae artes, especially the study of letters, he wrote laws himself and thought about them, responded to legations and complaints from the provinces. A mocker rather than a flatterer. The common people called him Trachala (thick-necked): during the first 10 years of his life excellent, the next 12 years a robber (latro = usurper?), the last 10 years childish and so called because of his excessive waste (Epitome 41, 11-16). Aurelius Victor has not a word to say about religion. It is remarkable that so soon after the event, the chronology of Constantine's transition was so little established. Zosimus mentions as an intermediary in the transition an Egyptian (or someone called Aegyptios), from Spain. Cardinal Baronius in his Annales ecclesiastici in the year 324 has assumed for certain that this must have been Ossius or Hosius, bishop of Cordova. The great importance of this adviser of Constantine in ecclesiastical affairs - who has been compared with the "imperial minister in charge of ecclesiastical affairs" and with the cardinal secretary of state - is well known and his American biographer De Clercq also assumes this in the conversion of Constantine, before or in 312, to be precise, but he cannot do anything with the designation. Constantine himself, Eusebius and Lactantius do not mention him in this connection.

3. Constantine's conversion to Christianity

We have essentially the two stories of Constantine's conversion, one as he himself is said to have told it to Eusebius, who included it in his Vita Constantini, I 27-29, the other in Lactantius' De morte persecutorum. Under oath, but long after the fact, Constantine told Eusebius how, before he went to fight Maxentius for Rome, he had deliberated which god he would choose as an ally. His polytheistic predecessors had usually been disappointed, but his father, who had chosen the opposite path, had found a true protector in the one true God. (28) He therefore humbly prayed to this God to reveal to him who He was and to help him, and then, in the afternoon, he saw in the sky a luminous cross (σταυρου τρόπαιον ἐκ φωτός συνιστάμενον above the sun, with the words: τοῦτω νικά. The army with which he was marching also observed the phenomenon. (29) He did not understand it, but the following night Christ, the Son of God, appeared to him in a dream with the same sign that he had seen in the sky, who commanded him to copy it and to use it as ἄλμα, protection, when confronting the enemy. (30) The next morning he orders his goldsmiths and jewelers to prepare this. Eusebius connects this (31) with the description of the λάβαρον which consisted of a cross-shaped lance with the Christ monogram in a wreath at the top, a banner on the crossbar and the images of the emperor and his sons; all made very expensively. Especially from this last we see that Eusebius is also confused with history, because Constantine did not yet have sons in 312; he apparently saw a much later copy of the labarum, after 325. The whole story seems distorted and we do not know from which time it is. In his book De morte persecutorum (On the death of the persecutors), which was certainly written before 321, possibly 318/9, Lactantius describes the event more briefly and without mentioning an informant. His text reads: "The anniversary of Maxentius' reign was at hand, namely October 27 [312], on which the five years were completed. In his sleep Constantine was admonished to apply the heavenly sign of God to the shields and thus to fight. He does as he is commanded and with the letter X, crossed out with [sign] of which the upper end was bent over, he indicates Christ on the shields. Protected by this sign the army takes up arms". Ranke gave a different interpretation, namely that Constantine allowed his soldiers to put the monogram on their shields - if it was the monogram at all. Both stories differ from each other and show similarities. The main thing is that the story in Eusebius begins with the cross and that Constantine did not understand the meaning of this, while Lactantius speaks directly of the monogram of Christ. The main similarity is the dream. In his addition Eusebius also comes to speak about the monogram. We feel that we are on shaky ground here. Especially because Eusebius in his Historia ecclesiastica, which appeared in several editions, the last in 325, does not mention the vision, while there is room for it, and it would even have been necessary, especially where he compares the nature of Constantine's victory over Maxentius with the passage of the people of Israel through the Red Sea with God's help (IX 8, 4-8). The panegyrici of 312 and 321 do not mention it either. The highly critical Belgian Byzantinologist Henri Grégoire - who rejected the entire Vita Constantini as the work of Eusebius - sought the origin of the legend in the VIIe Panegyrie. This was pronounced in Trier in 310 after the downfall of Maximianus, Constantine's father-in-law, who had been guilty of foolish policy and treason. Gibbon could not contradict this last point, but did note that it would have

been more humane of Constantine not to have let it get that far. "But the actions of Constantine were guided by reason and not by resentment". Constantine visited a temple of Apollo at Autun (Autessiodorum) and saw the god himself there, who, accompanied by Victoria, offered him laurel wreaths, each a sign of thirty years, so-called "vota publica", as they appear on coins and medals. Lactantius is said to have given this a Christian meaning and Constantine himself accepted the way in which the X - ten years - was applied to the shields as a symbol that the Christians were welcome without in the least deterring the Pagans. This resembles the interpretation of Ranke mentioned above. Grégoire was very sure of himself; according to him, religion had nothing to do with the struggle between Constantine and Maxentius. "Tout est dit sur la victoire couronnante de Saxa Rubra ou du Pont Milvius. Tout est dit, sauf peut-être la vérité". This "verity" indeed includes the fact that the panegyrics do not mention the vision. The IXth, from 313, after the event, pronounced at Trier, says: "Habes profecto aliquod cum illa mente divina, Constantine, secretum, quae delegata nostri diis minoribus cura uni se tibi dignatur ostendere", you, Constantine, certainly have some secret communication with the divine spirit, who leaves the care of us to the lower deities and deigns to reveal himself to you alone, a statement that from a distance might remind one of Augustine's argument about the felicitas. But there is nothing Christian in this panegyric. That of Nazarius from 321, would lead one to expect something different, because this orator himself came into contact with Christianity. He is at length about the military deeds of Constantine, likes to play with the past, lets the Dioscuri (XV 4), Fortuna (XXVII), Fama and Victoria (XXXII 4) play their part, on the other hand knows a caelestis favor (II 6), a divinitas (XIII 5), caelestis exercitus (XXIX 1 2), who support the emperor as a general, but whom the human eye does not see. The religious value of the following passage VII 3-4 is difficult to determine precisely: "From on high God looks down on us as judge and, although the human mind has its depths in which it hides its thoughts, the divinitas nevertheless penetrates there to search them out completely and it is impossible that the divine power, which gives us the spirit by which we live and so many good gifts with which we nourish ourselves, should withdraw itself from the cares of the world and make no distinction between the behavior of the people whose lives it provides for". And so on. Perhaps there is something Christian in these words: "dubitare quisquam potest te per omnia subnixum deo vadere?" (X 18,4), can anyone doubt that you advance in all circumstances trusting in God? Who that God is, is not specified. When he describes in detail the battle against Maxentius, Nazarius - in 321, that is - appears to know nothing of the vision of Christ; he speaks only of the military skill of Constantine and the fighting power of his army. "Fulget nobilis galea et corusca luce gemmarum divinum verticem monstrat. Auro clipeus, auro arma collucet" (XXIX 5): Your noble helmet shines and with the flickering light of precious stones it adorns your divine head. Your shield gleams with gold, your weapons flash with gold. Not a word about the cross or the monogram of Christ. With the panegyrici we do not get any further than this neutral transitional thought and language. With the Christian authors the vision occurs late or not at all.

That Constantine believed to have won the victory over Maxentius under the protection or through the power of the cross on 27 October 312 and to have brought Rome under his power and liberated it, is confirmed in the meantime by the report of Eusebius about the statue of the emperor, which with "the victory sign of the saving suffering", that is, the cross, in the right hand, was placed on the most crowded place in Rome. Constantine had this inscription put on it: "By this saving sign, the proof of true courage, I have liberated your city, torn from the yoke of the tyrant, and with this freedom I have also restored the Senate and the people of Rome to their old glory and splendor". In the Vita Constantini (I 40) it is worded somewhat differently: In the middle of the imperial city he had this sign of victory (τρόπαιον) over his enemies erected and expressly engraved in it with indelible letters: this salutary sign as protection (φυλακτήριον) of the Roman empire and the entire empire. He immediately had a long lance in the form of a cross (σταυρου σχήματι) placed in the hand of his own statue in the most crowded place in Rome and ordered this inscription to be engraved in it in his own words in Latin: these are literally the same words. Eusebius wanted to tell us that Constantine had the salutary sign of the cross placed in many places, of which the statue in Rome is the most important example. In the Laus Constantini (IX 40) this general frame of thought returns, specified in this later developed sense, that he taught the people with it that not military power but God is the giver of all good and in particular of victory. The inscription is missing here. We find this in the Latin translation of Eusebius' church history by Rufinus as follows: "quia in hoc singulari signo, quod

est verae virtutis insigne (badge), urbem Romam senatumque et populum Romanum iugo tyrannicae dominationis ereptam pristinae libertati nobilitatique restitui". The difference with the Greek text is that Rufinus speaks of the sign of true bravery and Eusebius of the true sign of bravery; Rufinus will probably have the correct text. The statue with the cross as an attribute signified Constantine's recognition of the God who had given him victory, the first statue of an emperor holding a standard himself, according to Alföldi. Eusebius tells us that Constantine, thanks to his innate piety (ἐμπυτος εὐσεβεία) was not at all so keen on the applause of the people and was not at all haughty because of it, but rather was grateful to the giver of the victory (h.e. IX 9, 10; V.C. I 39,3, Heikel I, p. 26, 11-15), hence the statue in this form.

On the occasion of the Decennalia, which Constantine celebrated in Rome in 315, the triumphal arch, still in its original state, was consecrated to him by the Senate, the second important monument. The inscription reads: "IMP. CAES. FL. CONSTANTINO MAXIMO P. F. AUGUSTO SPQR QUOD INSTINCTU DIVINITATIS MENTIS MAGNITUDE CUM EXERCITU SUO TAM DE TYRANNO QUAM DE OMNI EIUS FACTIONE UNO TEMPORE JUSTIS REMPUBLICAM ULTUS EST ARMIS ARCUM TRIUMPHIS INSIGNEM DICAUIT" (C.LL. VI, 1139). The tyrant refers to Maxentius, who must have had a significant following (factio). Constantine's arms restored a better legal situation (iustis armis). And that happened "instinctu divinitatis mentis magnitudine", at the inspiration of the deity and thanks to his greatness of mind. We cannot say what influence Constantine himself exercised on the wording of the inscription. The words "instinctu divinitatis" may be his. A. Alföldi compares in the Vita Constantini III 12, 3, the emperor's opening speech to the Synod of Nicaea, 325. In it the emperor recalls his victories over the enemies thanks to the beck (will) and assistance of the Almighty (νευμάτων καὶ συνεργεία του κρείττονος, Heikel, p. 82, 27). This is then, ten years later, still a corresponding, one might almost say lasting terminology, which leaves open the possibility of thinking of divinitas or ὁ κρείττων (or τό θεῖον), although nameless, as the God of the Christians. More specificity cannot be extracted from it. According to L'Orange, the "dei militares", under whose protection Constantine's army had marched against Maxentius, were Sol Invictus and Victoria: this pair of gods is depicted three times on the frieze and pedestal reliefs of the arch. In the eastern passage, the bust of Sol Invictus is located directly opposite Constantine. L'Orange then wants to interpret the abstract "divinitas" of the large inscription on the basis of these concrete representations. The inscription can only mean that divinitas which the reliefs of the arch really present to us. The "Sol Invictus Aeternus Augustus" - as he also appears on coins - reveals himself in the emperor. In the form and with the gesture of the Sun God, the raised right hand, he stands before the viewer. L'Orange believes that these images of the cosmic powers Sol (and Luna) fit "reibunglos" into the new, beginning Christian world of thought, the end of which is the metamorphosis of the entire ancient world, under the rising of a new sun, namely the Sol Iustitiae above the Sol Invictus.

4. The consolidation of Constantine's transition
With all this in mind, we must not imagine that after the conquest of Rome by Constantine under the sign of Christ, cross or monogram, everything in the entire imperial and religious life and thought was immediately set on hairs and strings. There is a single, increasingly firmly working starting point, but otherwise we observe a kind of tolerant or liberal, sometimes almost neutral policy. This fixed starting point is the acceptance by Constantine of Christ as his patron god in the field. We shall have to accept this historical form, even if it costs us some effort. Around that also the whole style of the panegyrici with their big words, their glorying in bloody victories, no more persecutions of Christians, but cruel punishments - the disgusting messing about with the head of Maxentius, which reminds us of the same with the head of Gaspard de Coligny - magnificent animal games and then again clemency towards the vanquished, all that seems as pagan as possible. The statues and the triumphal arch are Roman and not evangelical. The only change is that complete religious tolerance now prevails in the empire. Between the two inscriptions of 312 and 315 falls the decision for tolerance of 313. We know it from two texts, by Eusebius and by Lactantius in the form of executive decrees, which go back to discussions between Constantine and Licinius, Augustus of the East, which were held in Milan in February 313, where Licinius married Constantine's stepsister, Constantia. The starting point is complete freedom of religion for Christians and all others, without any disturbance or molestia, and indeed so that the "summa divinitas, whose religio - veneration - we serve in

spiritual freedom, may grant us her favor and goodwill in everything". This "summa divinitas" had been described as broadly and vaguely as possible a few lines earlier as "quidquid est divinitatis in se de caelesti", whatever divinity is enthroned in heaven. Now in April 311 Galerius, as Augustus of the second tetrarchy, had already issued a toleration edict a few days before his death, also in the name of Constantine, which allowed everyone to be Christians again and to restore the church buildings "provided that they would do nothing against good order". The Christians were ordered "to pray to their God for our salvation and that of the state and of themselves, so that the state may prosper in every respect and they may live safely in their own places". With this palinodia [=withdrawal] an end had already been put to the last great persecutions, which Galerius had instigated Emperor Diocletian, but which had failed in their effect. "Their own God" (τοὺς ἑαυτῶν θεόν) is actually more clearly defined in this text than in that of 313, which speaks of the summa divinitas or whatever lives in heaven. It seems to indicate an attempt to create as gradual a transition as possible from Roman to Christian concepts in the new text of 313. No explicit contrast, where it can still be avoided.

This can also be read from the money that was put into circulation. The small change often reflects the political situation. At the beginning of our period, the coins of Constantius Chlorus and Constantine often show Mars as a Gallic deity and later, apparently as a personal choice of Constantine, Sol Invictus. Around 319, however, the gods slowly begin to disappear from the special productions. Licinius mints a coin for the last time with an emperor making a sacrifice. A cautious line is maintained, only in certain editions do Christian elements penetrate, which only become dominant towards the end of Constantine's life. According to von Schoenebeck, while A. Alföldi already starts the Christian symbolism, in particular the Christ monogram, earlier. He explains the star on the emperor's helmet that appears on a silver coin from Trier, 312/313, as a simplified Christ monogram. From 315 dates a silver penny from Ticinum (Pavia), which clearly shows the monogram XP on the emperor's helmet and above the left shoulder the scepter, i.e. a cross with the globe on it. From 320 onwards the vexillum appears and from 326 dates a special edition that shows the labarum, as Eusebius describes it, with the legend urn: "spes publica". The conclusion is that the money was only gradually Christianized, if one may express it that way. It should not be imagined that the coin dies could be changed from one day to the next. The emperor did, however, concern himself with many large and small coins in various cities; the official images of the "sacra vestis" were very important. Here, a two-sidedness, promoted by the loss of content and meaning of the old religious symbols, can be repeatedly observed; they were, so to speak, harmless. From Sirmium, the capital of Illyricum, a Constantine solidus is known, in which Constantine is depicted with the labarum and protected by the Sun God. Syncretism in Constantine's thinking certainly does not mean this. It is one of those unimportant but understandable phenomena, which did not disturb his cautious policy.

A similar picture is provided by Constantine's legislation. Admiring contemporaries declare that the exceptionally gifted emperor personally collaborated on the formulation. Until the end of his life Constantine did not issue an absolute ban on the adherence to and practice of pagan religions, although Eusebius does speak of the demolition of temples. The first law is from his son Constantius, 341 (Cod. Theod. XVI 10, 2), with the bold words: "cesset superstitio, sacrificiorum aboleatur insania". He was convinced that he was acting in accordance with the "lex divi principis parentis nostri". Now we do not know of such a formal law of Constantine himself, so that the words must have been those of the compilers of the Codex Theodosianus. But it may be assumed with certainty that for them and for Constantius this law of 341 was the inevitable realization of Constantine's unspoken wishes. All the more interesting in this later light is the cautious development in the very frequent legislative work of Constantine. A few examples from the larger whole must suffice. In 313 Constantine began to grant privileges, such as exemption from "munera civilia", to clerics of the Catholic Church, who were placed on an equal footing with state priests and officials. He did not grant this freedom to clerics of the Donatist schism, only to "Catholics" and, moreover, in the long run he took measures against the profiting from these commercial, and not for personal advantage, privileges (Cod. Theod. XVI 2, 1, of 313, October 31; cf. Eusebius, h.e. X 7, 1.2; X 6, 1-5; Cod. Theod. XVI 2, 2, of 319, October 21; XVI 2, 3, of 320, July 18; XVI 2, 4, of 321, July 3; XVI 2, 6, of 326, June 1; XVI 2, 7, of 330, February 5 4 • In 315 the sentence to participate in the gladiatorial games was still a punishment (Cod. Theod. IX 18, 1) and games in general continued to exist under certain restrictions (XV 12,1, of 325, October 1), gladiatorial games were later completely forbidden,

15520 although even then without sufficient effect: for Valentinian I and Valens again forbade condemning Christians to the games (IX 40, 8, of 365, January 15). In 316 the first law appeared, which made the manumissio of slaves possible before the clergy and church community, followed by further extension in accordance with the increasing public authority of the clergy (IV 8, 1a, of 316, June 8, cf. 1, of 321, April 18 and

15525 Cod. Just. VII 1, 4). Of even more far-reaching importance is the regulation of the "episcopalis audientia", the decision of which was "pro sanctis habeatur", i.e. episcopal jurisdiction without appeal, to which each party could force the other in civil cases even against their will (Cod. Theod. I 27, of 318, June 23; Const. Sirm. of 333, May 5). This jurisdiction, according to Dörries, paved a way out of the

15530 snares of 1001 legal provisions and promoted the finding of the truth with the authority of religion, the "superna potentia", which the "secreta pectoris" knows how to discover. With this correct point of view, Dörries somewhat weakens his own starting point, that this jurisdiction was not so much intended to combat corruption: it was. The two arguments are difficult to separate. The "episcopalis audientia"

15535 already existed before Constantine. That the constitution in question may be regarded as an important testimony to the personal religious attitude of the emperor, one can agree with Dörries. The first Sunday laws, which prescribed rest at courts, because there was fighting there, and for the craftsmen - because they seemed to make so much noise - are from 321 (Cod. Theod. II 8, 1a and) and speak of the "venerabilis dies solis", the day to which "veneratio" is due, i.e. the Christian Sunday. It is also called the day of salvation, day of light and day of the sun (V.C. IV 18, 3, Heikel p. 124, 19) and as late as 409 it occurs:

15540 Dominica die, quam vulgo solis appellant (Cod. Theod. I 8, 25). Farmers remained free to harvest if necessary, in view of the weather conditions. Conversion from Judaism was welcomed (Cod. Theod. XVI 8, 1, of 315, October 18; Const. Sirm. IV, of 336, October 21); the terminology is that the convert opens himself "ianuam vitae perpetuae". Favourable provisions were made for full-time patriarchae vel presbyteri of synagogues so that they could properly perform their office; the Jewish religion was recognised as a "lex" and permitted, but renegotiation from Christianity to

15550 Judaism was not. The strongest prohibition was the haruspicinia, which was a "praeterita usurpatio" (Cod. Theod. IX 16, 1.2.3. of 321 or 324 and 319; XVI of 10, 1 of 320 or 321, December 17). An exception was only made for the investigation following lightning strikes in the palace or other public buildings; this was considered an old

15555 consuetudo, a "mos veteris observantiae". A good illustration of the paganism that still dominated in the army can be found in the acclamation of "praefecti, tribuni et viri eminentissimi" to the emperor: "Auguste Constantine, dii te nobis servant: vestra salus nostra salus: vere dicimus, iurati dicimus". Unfortunately, this text cannot be dated; the years 326 and 320, but also 316 or earlier are mentioned;

15560 certainly after 312. Constantine will not have made too much objection to this polytheistic acclamation; in the Codex Justinianus it is nevertheless Christianized and reads there: "deus te nobis servet". More important is that the emperor uses these words in a provision with which he facilitates the rapprochement with himself: may the "summa divinitas" always be gracious to me and preserve me unharmed, as I

15565 desire, while the state is in a happy and flourishing condition (Cod. Theod. IX 1, 4, of 325, September 14). This text is from 325, the year of the Council of Nicaea, which dealt with pointed theological questions, in which the emperor himself chose a certain position. The term: "summa divinitas" as a general designation of God with the omission of a name, therefore, as has already been noted, does not occur only in

15570 the earliest or in the pre-Christian period of Constantine. In a constitution already mentioned, which forbade making things difficult for a Jew who converted to Christianity, these words appear: we trust that everyone through love for the deity, "divinitatis affectu", will be safe in the entire Roman empire, while the honour due to us remains assured (Const. Sirm. IV, of 336, October 21). This text, which renews

15575 an older one, is from the last year of Constantine's life. He gave protection to both a free Christian and a pagan slave, without discrimination. Dörries considers it characteristic of Constantine's way of thinking that a prospective Christian thus enjoys God's protection within the framework of the state order, of which the recognition or veneration of the emperor is the main pillar. The remark is important,

15580 but we doubt whether a different way of thinking and practice would have been possible for the Roman statesman who had become or was becoming a Christian. This need not be understood as a personal, excessive desire for power, self-overestimation or ὑβρις. It is rather an expression of Constantine's sense of calling. However conscious he was of this, he at the same time sets limits to imperial absolutism:

15585 decisions once established are not arbitrarily replaced by others (Cod. Theod. IV

(17), 1 Mommsen IV 16, 1, of 319, December 26). Policy, method and a good feeling for living tradition show themselves again and again. "Consuetudo" and "usus longaevus" are attributed "non vilis auctoritas" (Cod. Theod. V 27, 1, of 319, April 24). Again, we cannot say which words here are explicitly Constantine's own. The general train of thought in the legislation remains thoroughly Roman. There is, if we cannot now keep our own standards of feeling out of the judgment, a certain degree of Christian humanization and moralization in the legislation to be recognized, but there are also hard elements in it, as we have already noticed in the panegyrics, and which we should not criticize with modern sentiment. The total picture is that of a profound change of thinking, which, however, does not disturb the forms where preservation is still possible. With this limitation, one can agree with Carl Andresen's judgment that after the victory over Maxentius all political measures were imperatively prescribed by the situation. Because the unity of the empire was the emperor's great aspiration, he also acted accordingly with the new religion. He had gained an understanding of another world.

5. Controlled policy

That is a characteristic of Constantine's government. The great and unassailable place occupied by the church in it is clearly shown by the application of the complete tolerance which had been granted to Christendom - the great theme of Eusebius' jubilation in the tenth book of his Church History -; secondly, by Constantine's attitude towards Donatism in Africa; and thirdly, by his conduct in the Melitian and the strife caused by Arius, both in Egypt. As for complete tolerance, this term seems too weak in the case of an emperor who personally chose for the church. But it is appropriate because he was the Augustus of the pagan Roman empire. Thus he decided that the church should recover all its possessions, and that the servants of the church should have exemption from munera civilia in order to be able to perform their ecclesiastical service without hindrance. Christianity takes its place in the political whole, insofar as worship is public and even promoted, but without the church playing a role as a political instrument; it remains under its own order. Instrument, and indeed in God's hand, Constantine feels himself, between state and church. When Donatism appears in the province of Africa, calls for the emperor's intervention against the Catholic authority in the church and the emperor responds, he regulates, organizes and orders the procedure, but this takes place entirely according to ecclesiastical order. When the Donatists do not like the course of events and they appeal to the emperor himself, the latter answers to the council of Arles (314): "They demand my judgment while I myself await the judgment of Christ", by which Constantine meant the pronouncement of the council. How deep ecclesiastical disputes tend to be, because they simply have religious roots, Constantine has underestimated in the matter of Donatism, but also in the matter of the third point, especially the Arian struggle. In all cases he cared about the unity of those who provided the worship recognized as lawful. Public worship was a central issue in Constantine's Roman Christianity. He did not dominate the church. From the beginning we repeatedly find the term ὁ συνθεράπων ὑμῶν, your fellow servant, as he positions himself next to, not above, the bishops. It sounds modest, and it is, and should in no way give the impression that the emperor, who was still a catechumen and unbaptized, fulfills a function in the church comparable to that of the bishops; fellow servant means less than this. With the words θεράπων γνήσιος one should not think of the church but of God: Your true servant. When one quotes Constantine's famous statement to the bishops: ἀλλ' ὑμεῖς μὲν εἰσὼ τῆς ἐκκλησίας, ἐγὼ δὲ τῶν ἔκτος ὑπο θεοῦ καθεσταμένους ἐπίσκοπος ἂν εἶην you are bishop over those within, I am appointed by God as bishop over those outside the Church, then the word "bishop", overseer, is clearly used the second time in a figure of speech, nothing more. In no case is it meant that the real bishops were entitled to the government of the church, and the non-real bishop, the emperor, only to the management of the goods of the church, as was previously thought. A serious underestimation of the theological problems - which can hardly be attributed to Ossius as Constantine's ecclesiastical advisor - is already apparent from the first imperial letter to Alexander, bishop of Alexandria and Arius from words such as: not at all worthy of such great hostility, small and insignificant cause, useless analysis, etc. Constantine found in his annoyance at this that insufficient thought had been given; questions such as those now being raised should have been postponed and not answered, certainly not in public. The council of Nicaea was then convened by the emperor to discuss these controversial issues. It cannot be said that he dominated this, but it can be said that the church listened to him - until he himself later came under the influence of the Arians. His aim was to do εὐταξία, ἔνωσις and ὁμόνεια, πίστις εἰρήνη. If

necessary, the emperor threatened police intervention against ἀταξία. His impulsive character often led him to use harsh insults in his letters, as one encounters everywhere in the polemics of that time. But the demand to obey his ὅροι is then again essentially specified: ἀκολουθῶς τῷ ἐκκλησιαστικῷ καὶ ἀποστολικῷ κἀνόνι, in accordance with the ecclesiastical and apostolic rule. In summary, Seeck has rightly said that Constantine could have seized power over the church, but did not do so and did not want to. In the church he encountered that other world, which no people, not even the emperor, have at their disposal.

6. Attempt at interpretation

So far some generally known facts from many. Now the theory - if it can be found. In his famous commentary on the adage: Dulce bellum inexpertis Erasmus makes the simple and lucid remark: "mundus habebat su as leges antequam exoriretur euangelium", the world had its own laws before the Gospel appeared. Herein were rooted the difficulties of the encounter between world and Gospel, between the Roman Empire and Christianity. With these words it is also explained as simply as clearly how one should weigh the task to which Constantine felt called. One can also extend them to the idea that world and Gospel both have and keep their own laws. In his Apologeticum Tertullian said around 195 that Pontius Pilate was a Christian in his heart and reported everything about Christ to the emperor. To this unhistorical statement, which already occurs in Justin Martyr, he links the remark: even the emperors would have believed in Christ, if they were not necessary to the world or if they could have been emperor and Christian at the same time. This is the main problem that will occupy us now. "Nothing is so foreign to us as politics". With the Christianization of the Roman Empire, begun by Constantine the Great, the validity of this statement of Tertullian seems to end. Unless one argues that Constantine's conversion to Christianity and Christianization also became the downfall of the Roman Empire, as Julian the Apostate and Zosimus taught. Gibbon argued at the end of chapter 14 of The Decline and Fall of the Roman Empire that the wars, accompanying the autocracy of Constantine, did much to weaken the empire by the great cost in blood and money and the constant increase in military burdens. He spoke of a revolution, of which the foundation of Constantinople and the establishment of the Christian religion were the immediate and memorable consequences, the causes of the fall of the Roman Empire. What really happened and what was going on in Constantine himself? People have often tried to penetrate into the religious life of Constantine and to form a picture of the probable phases in his religious conviction, wrote Jakob Burckhardt at the beginning of the last chapter of Die Zeit Konstantins des Grossen (1852). "This is a completely superfluous Mühe", he continues: "in a man of genius, to whom ambition and lust for power grant not an hour of rest, there can be no question of Christianity or paganism, of conscious religious or irreligious disposition: such a person is essentially completely irreligious, even if he imagines himself to be in the midst of a church community. He knows the sacred only as a vague memory or superstitious temptation". After having once again rejected Eusebius as a reliable source for the knowledge of Constantine, Burckhardt then speaks in a great paradox of: "the moronic egoists, who demand the great merit, understand Christianity as a world power and then treat it as such". Otto Seeck - antipode of Burckhardt, as Stähelin says - (1921) has in his Geschichte des Untergangs der antiken Welt a very critical chapter on Christianity as a doctrine, a particularly bad caricature, but nevertheless draws a highly plausible picture of Constantine as a Christian and explains his historical position with this principle: "Whoever has the sow for the master, is always anxious and must be, because otherwise his profession is to be revealed". H.-I. Marrou recently stated that the historian would like to be able to make clear the connection between Constantine's very important political decisions, his personal convictions and his inner development. Unfortunately, he says, it is easier to formulate hypotheses in this regard than to state precise and established facts. It is from Constantine's sense of calling that one must, I think, start, acknowledge it, let it be in its place and apply it in order to understand him in his career. Whatever forms it took in practice, in any case there lay the gateway of the other world into his life and thought. He himself repeatedly gave expression to it. A letter to Bishop Alexander and Arius begins as follows: In the first place, it was my endeavor to unite the conception of God of all peoples into one form, in the second place to restore and harmonize the entire oikoumene, which lay prostrate as if in a serious illness. These things I endeavored to achieve, one with the inner eye of insight, the other to bring about by the power of the army, in the knowledge that, if I could bring about unanimity for all God's servants according to my wishes (εὐχαίς), the state would also be as the fruit thereof would reap a change in keeping with all

pious insights. He saw himself as an instrument (ἡμετέρα ὑπηρεσία) and regarded this service (δῶρον) as a gift entrusted to him (δωρον). He was not and did not see himself as God on earth, but as his servant. It is perhaps not out of place to think of the lines: "But God shall govern me as a good instrument". Or of the wise saying of Augustine, that the just man who seems to command, in reality serves (De civ. dei XIX 14). This is an evaluation completely contrary to the coarseness of Voltaire: "Si l'on pense, que Constantin fit tout servir à ce qu'il crut son intérêt, on ne se trompera pas". In truth, ecclesiastical politics was an indispensable or separable element in, and inspiration for, his politics, and this complex whole was a divine assignment for him. Among German-writing church historians, this difficult-to-analyze structure has given rise to speak of "reichskatholische Kirche", "reichskatholische Theologie". The objection to this is that these terms can give the impression that the empire or the state constitutes the norm of the church and determines theology. That was precisely not the case under Constantine. A rendering of the German terminology that does not cause misunderstanding in Dutch is not easy to find; one must resort to a description: the church and theology recognized (or accepted) by the emperor and the empire, perhaps one can briefly say: the public or official church and theology, which is not pretty, however, and is too reminiscent of the position of the Reformed Church during the Republic of the United Netherlands. Only Justinian treated the Christian faith as the "empire ideology" more than Constantine and even more than Theodosius, not fundamentally different, but with rare consistency and this must always be clear in the words that we use for the different periods. That consequence certainly changed what Constantine did. In fact, it was not a linear, evolving consequence, but new, uncontrolled elements of power had entered into it. Constantine, who always showed that he wanted to respect tradition and maintain continuity, governed with a controlled policy. But he governed firmly. It has been said that he never lost a battle. What Emperor Valens said to the bishops at the Synod of Milan in 355: ὅπερ ἐγὼ βουλομαι τοῦτο κανὼν, ἔλεγε νομιζεσθῶ, you must regard my will as ecclesiastical law, was never said by Constantine, that was not his theory. As an emperor, however, he was irresistible. To quote Seeck again, whose critical judgment no one will underestimate: autocracy was more forced upon Constantine than he pursued it, "the Sultanism, which the man he accuses has, lays his nature all the way far". Eusebius sketches certain features of Constantine's character in the words: το στερρον του τρόπου τη συμφύτω φιλανθρωπία κερασόμενος "he mixed an inflexible sternness with an innate humanity, and with an understanding of the psychological problem of religious change. Since the κοινωνία was so precious to him, the emperor did not want anyone to make it difficult for his neighbor. "Everyone keeps what his soul desires, and let him live accordingly." But Constantine also prays that these may have the θυμηδίων, the inner joy may be received. And then literally in the long letter to the provinces against polytheism: "No one may harm another by what he has accepted with conviction. What one has learned and understood, he may serve the other if possible; if it is impossible, he shall refrain from it. For it is one thing to fight for immortality voluntarily, another to force it by punishment. That is my opinion, I have explained it more fully than I intended, because I did not want to hide my belief in the truth, especially since some, as I hear, say that the customs of the temples and the power of darkness are now over. I would like to wish that for all people. If only the great resistance of the evil error had not, to the detriment of the common good, become immeasurably fixed in the hearts of some".

All these and many more varied expressions - and actions - of Constantine are only nuances in his policy. This shows no real hesitations, rather a firm conviction, but also the admirable insight into, or at least feeling of Constantine for, what he could do as emperor and where the limits of the possible were set by the hard reality.

We have already heard from Gibbon that Constantine's actions were governed more by reason than by resentment. The serious reproaches that were made to the statesman and the Christian Constantine at all times, concern in the first place his warfare, or, more precisely, the use he made of the cross, of the monogram of Christ, which was shown on the armor and carried as labarum (λάβραρον) by a very distinguished standard guard before the troops. Here lies for many the fall of Christianity, it is the sting of the unnatural combination of Gospel and world in the dominant form of the Roman Empire. Historically it happened that way, the texts do not allow us to argue about it. On the contrary: in the Vita Eusebius describes that the emperor surrounded himself with clerics and that he had a separate tent outside the camp - comparable to the tabernacle of Israel on the desert journey - where he often withdrew to pray and deliberate. There he sometimes had a divine appearance and with this inspiration he

15785 would rush out of the tent and order his soldiers to immediately break camp and draw
 their swords. They attacked immediately and struck the enemy in such a way that the
 victory was soon won and they could erect the trophies - *τρόπαια*. This played a role,
 if we may trust Eusebius, still in 324, during the battle against Licinius, that is,
 12 years after the story of the vision of the cross. We must try all the more to
 understand this as a factor in Constantine's thinking, however much there might be to
 15790 say about the problem of military service in the first centuries of Christianity.
 The data are complicated. Tertullian says that Christians, as loyal citizens of the
 Roman state, not only pray for "fortes exercitus", but even that Christians are to be
 found everywhere in social life: "vobiscum militamus"; on the other hand, however, he
 also declares: "how can anyone serve in war, or even be a soldier in peacetime,
 15795 without a sword, because the Lord has taken it from them? Even if soldiers have come
 to John [the Baptist] and accepted his precepts, even if the centurion has come to
 the faith, every soldier has later ungirded the Lord by disarming Peter". This also
 has to do with idololatry, which was inseparable from the military essence.
 Conversely, canon III of the Council of Arles, convened by Constantine in 314 for
 quite different reasons (namely Donatism), stated that those who threw away their
 weapons in peacetime were excommunicated. At the court of Diocletian there were many
 Christians among the officials and staff - the large church was opposite the palace -
 but there were few soldiers. Lactantius goes particularly far when he declares that
 all deaths - and that was actually the main point - not only in games, but also in
 15805 war and even as a result of a judicial sentence, are forbidden by God: there is no
 exception to this.
 In contrast to this exaggeration there is an important policy provision of Emperor
 Constantine, namely that ex-soldiers who had been wrongfully dismissed because they
 had allowed their Christian confession to prevail over their function, were now free
 15810 either to return to military service and their former rank, or to request an
 honourable discharge. For, it was added, it is fair and fitting that he who has shown
 such great courage and steadfastness in the danger that befell him, may now enjoy
 rest or an honourable position of his own choosing. It is therefore not at all
 questionable whether there were Christian soldiers in service. But it is also certain
 15815 that Constantine did not demand the Christian confession from any of them. Coercion
 did not occur here either. Constantine remained true to the good Roman conviction,
 formulated by Tertullian: *sed nec religionis est cogere religionem*. There is mention
 of soldiers who go to church with the emperor and those who do not go to church; for
 the latter there is a formula prayer that they had to pray on Sunday in the open
 15820 field outside the city, nothing more. H. Grégoire believes that the text of this
 comes from Licinius, and from his struggle with Maximinus, and was attributed to
 Constantine by Eusebius in his *Vita* in another context - one of Grégoire's arguments
 for the unreliability of Eusebius. Although there seems to be much to be said for
 Grégoire's textual criticism, the report about Constantine's tolerant ecclesiastical
 policy towards his soldiers remains unaffected by it. It would go too far to go into
 15825 the historical reliability of the *Vita Constantini* in more detail here. It may be
 recalled that this has been strongly confirmed by the identification of the papyrus
 London 878 by A. H. M. Jones (of the Dept. of Mss., British Museum) in 1954.
 Equally or even more serious reproaches which historians are wont to bring against
 15830 Constantine's government policy concern four executions. The death of Maximian in 310
 at Marseilles, probably suicide, has already been mentioned. The high treason of
 Maximian, who after his abdication continually sought the recapture of the purple, is
 certain. He is called ambitious and untrustworthy (*ἀμίστος*). It is not right to
 approach a political verdict of Constantine at the beginning of the fourth century
 15835 with the standard of modern humanism, as Gibbon did, while one often forgets the
 numerous judicial murders of which Licinius was guilty. The execution of Licinius
 himself must certainly be attributed to his attempts, after being defeated by
 Constantine and after Constantine's promise to his sister, wife of Licinius, to spare
 him, to come into military contact with enemies of the empire again. Zosimus
 15840 considers it a breach of promise by Constantine, according to his custom (*ὅτι γὰρ
 τοῦτο οὕτω σύνηθες*), but this is a meaningless traditional judgment. Much more
 heavily on Constantine's conscience seems to be the death of Crispus and Fausta,
 which Julianus Apostate brings so strongly to the fore. Crispus was the eldest son
 (307) of Constantine and his first - legal or not - wife Minervina, gifted and
 15845 beloved by the army, who became governor of Gaul at the age of 17 and made a rapid,
 brilliant military career. He was then suspected and accused of having taken part in
 a conspiracy. Before or during the vicennalia, which Constantine celebrated in Rome,
 he was unexpectedly brought before a closed court and put to death at Pola in Istria.
 Someone has suggested that during the vicennalia he may have reminded his father in a

15850 very tactless manner of the agreed 20-year period of the first tetrarchy. The fact
that the son of Licinius was also killed at that time may suggest that a political
game was indeed being played, in which Fausta wanted to clear the way to the thrones
for her own sons. In tradition, however, the reason is considered to be that Crispus,
15855 20 years old and already a father himself, had an affair with Fausta, then about 28
years old. Helena, Constantine's mother - who had converted to Christianity with him
- deeply upset about the death of her beloved grandson, is said to have convinced
Constantine that not Crispus, but Fausta was the culprit, like the wife of Potiphar
(Genesis 39, 11-20), whereupon Constantine knew no other solution than to have Fausta
15860 killed in an overheated bath. "Es steht fest, zegt Seeck, dass Untreue der Grund war"
and Helena has retained her reputation as "magna femina", for example in Ambrosius.
Burckhardt's verdict is that anyone who acts in this way is not a Christian: "The
Christian Church has nothing to lose from these fearful, but politically large-scale
people, just as the Paganism has nothing to gain from them". Neither Eusebius nor any
other writer who should have known about it mentions a word about it; the matter was
15865 deliberately concealed and was apparently obscure to the contemporaries themselves.
The damnatio memoriae of Crispus - and of Fausta -, which can be found on various
monuments, was never undone by the father, from which it can be concluded that he was
not able to convince himself of his son's innocence even later. No historian has ever
considered for long what these executions must have cost Constantine personally. In
15870 the absence of historical texts, everyone seems to think that he got away with all
this easily, and then judges accordingly. In the literature on Constantine the Great,
the work of Jakob Burckhardt will never lose its classical place, even though the
historical judgment of both the emperor and his eulogist Eusebius Pamphili, bishop of
Caesarea Palestinae, has now been greatly changed by many, it has a quality that
15875 makes it difficult to dismiss as outdated, even with changed insight and more
knowledge of the subject. Anyone who concerns himself with Constantine will, if
necessary without speaking about it, feel the need to test himself against Burckhardt
and to justify himself to him, certainly on certain points. Also in comparison with
Eusebius' Vita Constantini, rightly characterized as ἐγκωμιαστική τετραβιβλος, eulogy
15880 in four books by Photius, Bibl. cod. 127. Renewed study of the Vita gave me cause to
revise the judgment I pronounced on it during the Academy Days IV in 1951 in
Middelburg (pp. 31-49) and therefore to make a different use of it now for the
history of Constantine than I did at the time. My image of Constantine himself has
hardly changed in the meantime. The Vita is a biography that proclaims the praise of
15885 its hero, but on the basis of facts and with the help of documents, and without
sinking into rhetoric. Eduard Schwartz recalls with good reason that Burckhardt, who
did not understand its language and had no insight into the literary form of the
Vita, passed the harshest judgment on it. "He who, however, is not out to judge but
to understand, will not appreciate the historical value of this period that emerged
15890 from living history," he says. To interpret Constantine's attitude towards
Christianity is more difficult but more useful than to moralize about the "court
bishop". Eusebius believed in the blessing of the union of the emperor and the
church. Even if that were a wicked error, one may not condemn him because he believed
what all his colleagues believed and according to which they also acted". The West
15895 only gave Constantine cause for praise on festive occasions, but the Greek world has
given him a biographer who, despite the praise to which he was forced by the
prescribed style, did not forget that he was a historian, according to Hans
Lietzmann. He continues: this man was Eusebius of Caesarea, who in a certain sense
may be regarded as the spiritual representative of the time of Constantine. In his
15900 life's work - the Church History and the Life of Constantine - the turning point of
the times is faithfully reflected, his words resound with the joy of victory that
people enjoyed and the hope with which they looked to the future. This is the
situation that must be taken as a starting point if one wants to judge Eusebius
correctly. "Then one easily avoids the temptation to follow the example of a
15905 brilliant but not impartial judge "den ersten durch und durch unredlichen
Geschichtschreiber des Altertums". No greater injustice can be done to the honest
man". Felix Stähelin has given us extensive information about the creation and
history of Die Zeit Konstantins des Grossen in the second volume of the Jakob
Burckhardt Gesamtausgabe (Berlin and Leipzig 1929) in the introduction to the reprint
15910 of the second edition. In connection with this, my friend H. Schulte Nordholt once
again pointed out to me the conversation between the Byzantinologist Heinrich Gelzer
and Burckhardt mentioned there. To Friedrich von Preen, who insisted on a reprint of
the book published in 1852, Burckhardt wrote (31 May 1874) that he greatly
appreciated that he still showed so much interest in "meinen alten vergessenen
15915 Constantin". In this connection, Stähelin also quotes Gelzer. His article on

Burckhardt begins with the beautiful words: "Während fünf Semestern I am an experienced student with a clear understanding of the truth, with Jakob Burckhardt being able to listen to the history of the whole body of knowledge and a new version of the originality, and the human beings ranges in my view, who are present in my life schwächlichen Epigonenzeitalter immer seltener zijn". Gelzer and Burckhardt talked a lot about Constantine. The former stated that he had come to serious Byzantine study through Burckhardt's book. Burckhardt laughed and replied: "Mein guter Konstantin! Who was I, yet green, if I was the writer. Was wollen Sie? Das Buch is a long time ago!" Yet Gelzer noticed that Burckhardt still liked to talk about it. It is his only work, of which the great man single-handedly and with great care prepared the second edition (1874). They did not agree on the content, and Geiser saw in it the continuation of Burckhardt's aversion to Christianity; the first two years he had studied theology but then turned to history. Gottfried Kinkel then played a major role in the thinking of the young Burckhardt. In this way he arrived at a, according to Geiser, harsh and unjustified judgment of Eusebius and other churchmen (p. 340), after which Geiser concludes by - more strongly than Stähelin does - recalling the influence of Gibbon, Voltaire and the encyclopedists on Burckhardt. "So konstruierte er einen Konstantin à la Pompadour, Tanucci or Kaunitz, von dem der historische Konstantin natürlich toto coelo versredet ist" (p. 355).

7. The "Constantinian period"

Before coming to a conclusion, a few words about a concept that is not so much used by church historians as by politicizing theologians today. It is said that we are experiencing "the end of the Constantinian era" in our time. A decade ago, W. Kahle (Marburg) criticized this use of words in an article. The criticism begins with the simple observation that, strictly speaking, the Constantinian period lasted from 306 until his death in 337 and that therefore, when it is said that we are now experiencing its end, Constantine is thought of as the one symbolic figure for relations between state and church that lasted more than 16 centuries. The impression is thus created that these relations have remained the same throughout all that time, generally speaking. It is evident that this is not the case. Already from Constantine to Theodosius, and to Justinian, such significant developments occur that even then one can no longer speak of agreement. Throughout the centuries, in the East and in our West, and especially since the national churches came into being through the Reformation, all possible forms in the relations between states and churches, including the state church, have been seen and can still be seen. The separation of church and state in the French Revolution has become a new starting point in this area. Kahle rightly says that the slogan: "das Ende des konstantinischen Zeitalters" is not a church-historical observation, but that there is a program in it. That program amounts to this, that everything must be done to destroy the existing relations between church and state, between church and people, between church and social structure. Only then would a new freedom, a clearer understanding of, and better possibilities for the service of the church to the world arise. In 1974, W. Schneemelcher, church historian in Bonn, was equally critical of the slogan. In our country, too, this theme has been of special interest, and has been since 1946 due to H. Berkhof's book, *The Church and the Emperor*, which has also attracted much attention in a Swiss edition. This historical study, stimulated by the war experiences, devotes its first four chapters to the period before and after Constantine, after which the book crosses this boundary and concerns itself primarily with the difference in the historical position of the church in the East and the West, Byzantinism and theocracy. The reduction of the problem that lies in these terms has rightly aroused criticism from the German church historian K. Aland (Münster). However, the book is separate from the activist modern formulation of the problem and could still have a remedial influence on it now because it is fundamental in a historical sense. The difference between the two methods of approach, the politicized and the historical, is well indicated by a modern writer, who declared that just as "the Constantinian period" did not begin until 313, neither does it end in 1960 (or whenever). But then it would be better not to call it that. Moreover, it remains difficult to understand what convinced Christians see as the importance of a dechristianized public life.

8. Conclusion

After having indicated this confusing phenomenon, it may perhaps be permissible in conclusion to test the general question of the relationship between church and state, between Christianity and the world, to which Constantine gave a first answer for his time, against the judgment of Augustine, born three quarters of a century after him,

a Western theologian, who spoke wisely about it in De civitate dei. His "mirror of princes" was already recalled at the beginning, and the expression "the quality of existence" was used (p. 7). The historical portrait of Constantine has not received much drawing from it, Augustine was apparently not aware of the facts in detail. For him, Constantine and Theodosius were but examples in his grand distinction between civitas dei and civitas terrena. These are two different worlds, each with its own reality, in which man lives, but between which he must choose. Both worlds are mixed: "perplexae sunt istae duae civitates in hoc saeculo invicemque permixtae, donec ultimo iudicio dirimantur", these two states are confused and mixed with each other in this world until they are separated in the last judgment (De civ. dei I 35). This therefore applies for the entire duration of history: "ab initio usque in finem permixtae", and all that time both civitates enjoy the temporal goods equally but "in different faith, different hope and different love" (XVIII 54). Although mixed, they are thus qualitatively clearly distinguished. In the general phenomena of life, meanwhile, hardly anything of this can be observed externally: "temporalia bona et mala utrisque Deus voluit esse communia". He rules over the evil and the good, as we have already heard. "Quamdiu permixtae sunt ambae civitates utimur et nos pace Babylonis" (XIX 26), as long as both states are still mixed, we too enjoy the peace of Babylon. This applies to ordinary believers, but what about the emperor, who is responsible for the world and for that peace of Babylon, for the felicitas terrena? Augustine does not diminish his task and its weight, his responsibility. Is the "Tertullianische Zeitalter" with the experimental doctrine that the Roman emperor could not be a Christian, over for him? History has spoken, and differently than Tertullian could ever have thought. But Augustine does not become the theoretician of the Christian empire. The true God alone gives the power to rule to the pious and the ungodly "as it pleases Him in whom nothing wrongly pleases" (V 21). It matters little to a mortal man under whose empire he lives, as long as those who rule over him do not force him to commit impieties and injustices (V 17). The law of gloria, honor and imperium is virtus, and he therefore applauds the fact that the ancient Romans possessed temples to Virtus and Honor (V 12, 3). Judging and accepting in such relative terms, the civitas dei, who makes a pilgrimage on earth, obeys the laws of the state without hesitation (XIX 17), and, insofar as this is in keeping with pietas and religio, takes up the cause of the state and adapts itself (XIX 18). It can even use the strong arm of the state when the "suadibilis doctrina", the convincing consultation, remains without prospect; then "terribilis disciplina" may be unavoidable (XVIII 57). These and similar points were not foreign to Constantine. We have also heard how Augustine praised Theodosius for his positive, very just and merciful legislation in favour of the toiling church (laboranti ecclesiae, V 26). Augustine's own experiences with the stubborn Donatists had strengthened him in this line of thought.

Nevertheless, Constantine the Great and Augustine are far apart in many respects. The concepts of civitas terrena and civitas dei did not yet exist for Constantine and he also did not possess the view of the duality as expressed by Augustine in these terms. For Eusebius, Constantine had messianic significance and he was chosen by God to realise what was potentially given with the theophany - which in Eusebius takes the place of the incarnation. This does not allow for dualism. For Constantine himself, it was still different. A certain reserve with regard to church and theology was a clear characteristic of his imperial policy, which incidentally makes an absolutist impression. Not everything he wanted, believed and thought he could realize, reality simply did not lend itself to that, and he recognized that. He did say of himself: "I am that man who has dedicated his thinking with pure faith to God, man of God", *ὁ τοῦ θεοῦ ἄνθρωπος* for I am Your man", *ἔγω γὰρ ὁ σοῦ ἄνθρωπος*, Yours in short. As *θεράπευτης τοῦ κρείττονος*, servant of the Highest, his task was to establish peace in the world, there he was alone ruler for a pax comparable to the pax Romana but with a great new element in it. He wanted that in the *οἰκουμένη* that pax would be based partly on the worship of the one true God. He tried to achieve it in ecclesiastical matters, which were hardly ever in the air, by *προσφώνησις* and *νουθεσία*, persuasion, which can be compared with the "suadibilis doctrina" in Augustine. The strong arm was also available if necessary to promote unity in the church within the home as an example and interest of the first order for the world. "One should not abandon erring ones to error". Fear of divine wrath in case of negligence made him intervene. It is simply not possible to always indicate the boundary in a modern way between cool government responsibility and - let us say - missionary consciousness in a great man like Constantine. "All too often that which essentially belongs to the higher level turns out to be a task of the emperor, and then unmistakably in a pre-Christian form", according to Dörries. One can adopt

Seeck's judgment that Constantine did not sin in one way or another more than was inevitable for an emperor. To put it in Augustinian terminology: both civitates are perplexae and permixtae, and that has its consequences, in a personal sense, for those who are called to rule.

Constantine was not the Christian emperor, whose image the early Middle Ages had formed, even before Charlemagne from Augustine's *De civitate dei*, the *rex iustus*, who creates the "aetas aurea", the *imperator felix*, whom we already got to know at the beginning. It is known from the *Vita Caroli Einhard* that Charlemagne liked to have Augustine, and in particular *De civitate dei*, read to him. Ernst Bernheim devoted an important book to the development of the medieval conception of the "imperator felix" in 1918, which was heavily contested, among others by W. Kamlah, who seems to destroy the entire historical theory of Charlemagne's ideology based on Augustine.

Kamlah's work is entitled *Christentum und Geschichtlichkeit* and raises the question of whether and how Christianity, which is a religion, can take on historical form. If we assume that he translates the concept of "civitas dei" not as "Gottesstaat" but as "Bürgerschaft Gottes", it is clear from the outset that we will no longer get out of the dialectical train of thought. And, I believe, unavoidably; but the extensive discussion on the entire subject cannot be discussed here in more detail.

Kamlah also deals with the Constantine period. To begin with, he calls Eusebius the first Byzantine court theologian - which is not correct, one can at most call this ecclesiastical archivist a forerunner of the Byzantine court theologians - and says that Augustine does not follow in his footsteps, insofar as he is reserved about the possibility of identifying *imperium romanum* and church by Constantine and Theodosius. This is, however, too much said, it was not so with Constantine, in distinction from Theodosius. But leaving this aside, Kamlah means by this what has already been noted, namely that it matters less by whom one is governed, provided that no matters are required that conflict with religion. Not only was the church, according to Kamlah, already prepared for Constantine, the Roman state had also already come a long way towards the church. A "profane" state without any political cult was unthinkable in the fourth century. "Roma aeterna" was a confession of faith. The experiment of Heliogabalus with the Syrian Baal and that of Aurelian with the *Deus Sol Invictus* had failed. The Christian experiment of Constantine, however, succeeded in the shortest possible time, in which Christianity was abused as a state religion - says Kamlah - in a role that did not originate from Christian, but from pagan-Roman tradition.

This view, which also occurs in others, is much too general and does not do Constantine justice. Of course Constantine did not stand outside the framework of thought of his time, and the emperor was also strongly framed in his function. But we have repeatedly seen how he spared the church's own authority. He knew in the church, or rather in what the church, which was a new and unheard-of well-organized element in Roman society, advocated, that is, in the Christian religion, that he was dealing with a greatness that went far beyond and above all his own imperial thinking and power. Constantine did not manipulate the church. Kamlah maintains that the court theologian Eusebius, following in the footsteps of Origen, built up a theology of the Christian Roman polis and that he saw the Old Testament promise of peace for all peoples already fulfilled in the *pax romana*, and therefore all the more in the *pax constantiniana*. It is important to note here, what is often overlooked

it is seen that there is a great difference whether one hears Constantine speaking about himself or Eusebius speaking about Constantine. This is actually what Kamlah starts from and he devotes a separate paragraph to it under the title "Augustins Absage an die eusebianische Reichstheologie". He explains that for Augustine, in contrast to Origen and the early apologists, it is unthinkable that the *civitas* of the Romans would transform itself into the *civitas dei*. "But it would be conceivable, if necessary, a polis that abolishes its bond with the gods and replaces it with the bond with Christ. In this spirit, Constantine and his successors have caused the altars of the gods to fall and granted privileges of them to the churches. In this way a Christian empire had come into being insofar as public worship had become the service of Christ. But even a Christian state in this sense is not known or acknowledged by Augustine, at least not in *De civitate dei*". So much for Kamlah.

After the *capita* on the *felices imperatores*, with which I began above, and in which Constantine and Theodosius were the great examples, Augustine does not arrive at a doctrine of Christian emperorship and he only acknowledges the possibility that God's grace from time to time gives the world a Christian emperor. God sometimes entrusts earthly rule to a pious, then again to an unpius prince according to His good pleasure. These were alternately Marius, Caesar, Augustus, also Nero, the *Vespasiani*, *suavissimi imperatores*, the terrible Domitian, the Christian Constantine and the

apostate Julian. From these changes Christians must learn that a Christian government
 16115 belongs to the temporal goods that one can do without if one realizes that one is
 only in a foreign land on earth. Augustine is, however, not always entirely
 consistent in this terminology. Although he does not and cannot acknowledge a
 "Konstantinian Turn" according to the relativizing principles developed here, he
 nevertheless uses, especially in the apologetic chapters of *De civitate dei*, the
 16120 expression "christiana tempora". He makes it clear, for example, that it was thanks
 to christiana tempora, to the Christian character of the times that were then
 experienced, that the destruction of Rome in 410 by Alaric had not gone much further.
 This term also occurs in Ambrose. We now live in Christian times, said the Milanese
 bishop, and therefore the *ara Victoriae* must leave the curia and the Roman cult can
 16125 no longer claim state subsidies. Although there seems to be a strong consolidation in
 this, Ambrose nevertheless, dialectically, also had an eye, thanks to certain
 experiences, for the other side. In his funeral oration *De obitu Valentiniani* he let
 slip: "it is better that emperors persecute bishops than that they love them". It
 remains that paradoxical. Thus Augustine cannot have meant a solid "christianum
 16130 imperium" with "christiana tempora". *Civitas terrena* and *civitas dei* cannot merge or
 merge into each other, the Middle Ages did not interpret Augustine rightly in this
 respect. Augustine did not agree with the *Historia adversus paganos* of his pupil and
 friend Orosius. But that does not yet interpret Constantine the Great. Constantine
 accepted Christianity instead of the *religio romana* and gave it its place. That had
 16135 great consequences. That he saw the perspective of a Christianized Roman empire
 cannot be denied on the basis of his own words, but he did not have a theory about
 it. In vain will one search in his history for a word such as Alcuin addressed to
 Charlemagne in certain circumstances: *ecce in te sola salus ecclesiarum Christi*
recumbit, on you indeed rests the entire welfare of Christ's churches. He was in a
 16140 duality of thought because he was emperor and Christian. The fact of his late
 baptism, namely on his deathbed, proves this. He did not postpone baptism for
 convenience, but precisely because he believed in it and took this sacrament
 completely seriously. He lived in an enormous problematic, and this makes the image
 of the first Christian emperor in his majestic figure and with his incomparable
 16145 powers and merits so approachable.

Two other answers to the great question: what to think of the Christian faith of
 Constantine, what to think of Christianity that obtained its great public place in
 the Roman Empire under his reign, may find a place here.
 16150 It is necessary for the historian to try to adapt his thinking to that of the first
 half of the fourth century. But therein lies the great difficulty, which makes him
 feel constantly uncertain. A good start was made in our time by the American church
 historian K. Scott Latourette in his original *History of the Expansion of*
Christianity. He breaks open the problem by thi
 16155 ch to ask whether Christianity would have achieved victory without Constantine.
 Although no one can give an answer to this, he states that any reasonable ruler would
 have had to see that the persecutions had failed and that whoever had the hope and
 ambition to bring the empire - or a significant part of it - under his authority, had
 in any case to try to come to an agreement with the church, which, despite all
 16160 pressure, had become a new and highly important, clear and strong organization in
 society. It is therefore obvious to assume that, if Constantine had not come to power
 or had acted less positively towards it, another would soon have arisen who would
 have made Christianity the public religion. In response to the further, more specific
 question of how the Christian religion achieved spiritual victory, Latourette
 16165 proposes ten points of view for consideration, which I will briefly summarize here.
 The victory of Christianity came about:
 Thanks to the support of Constantine...
 As a result of the increasing disintegration of society...
 Thanks to the excellently developed organization of the church...
 16170 By the "inclusiveness" of Christianity that embraced all classes and races... Thanks
 to the intransigence as well as the flexibility of Christianity...
 Because Christianity provided what the Greco-Roman world expected and desired from
 religion and philosophy, and did this better than its competitors...
 Thanks to its ancient Jewish origins and its revered Scriptures...
 16175 By the belief in miracles...
 Thanks to its high moral quality.
 And finally, by the creative force behind all this, which brought about a revolution
 in the lives of all who opened themselves to it: Jesus.
 Here Latourette has approached the limit at which the historian is inclined to stop.

16180 Yet "the uniqueness of Jesus", which Latourette thus mentions by name, cannot be
sidelined, if one does not want to remain at a level where only apparently rationally
verifiable motives apply, which have their inspiration from nowhere and therefore
remain essentially unexplained. The historian of religion or church must dare to
cross that boundary here. This becomes apparent if one places, for example, the
16185 argument of Arnold Toynbee next to that of Latourette.
Religiously, philosophically and politically, says Toynbee, the times had changed
since Heliogabalus and Aurelian. The religious vacuum in the hearts of the subjects
had to be filled by a living, not a constructed, religion. This was there, not
imposed from above, but revealed in the social underclass, and Constantine had
16190 understood this: the service of the almighty God was set against the tame and
impotent Sol invictus, who was truly strong and could not be trifled with
(intractable). No God who, although formally the emperor's patron, was in reality
only his puppet, unable to win the hearts of the emperor's subjects. There remained
only one alternative: the imperial authority itself had to place itself under the
16195 aegis of a living religion, which had its own independent existence and was not
critically examined by the subjects because it had been put together by the
authorities for its *raison d'état*. These conditions were fulfilled in the Roman
empire by Christianity, whose spiritual independence from all politics had been
proven by a long history of martyrdom, at the beginning of which stood the cross of
16200 the Founder. The step that Constantine took was revolutionary, especially in this
respect, that he bought the new religious sanction of the empire at the price of his
subjection to the spiritual authority of the church - the form in which Christianity
was visible and tangible - which was not under government supervision, on the
contrary, had hitherto shown itself to be unmanageable. In this way the emperor-
16205 convert made himself dependent on the grace of the church. That became a permanent
decision. The inability of a subsequent emperor to dethrone the thus officially
established higher religion has been demonstrated by the failure of Julian.
Toynbee works with the terms: religions and higher religions, and he contrasts "the
old order and the new gospel", of which he says that in this case new and old are
16210 irreconcilable. He also uses the gospel words: I have not come to bring peace but a
sword (Mt. 10:34) and: woe to you when men speak well of you! For that is what their
fathers did of the false prophets (Luke 6:26). The problem of the relationship of the
higher religions to the old order, he says, is simple, as long as the old order
prohibits and persecutes them; it becomes complicated and difficult when the old
16215 order proves willing to negotiate. Then the dangers of weakening and the consequences
of mass conversions threaten - and that is what happened. All the means to share a
concordat with institutions that embody and maintain something of "the old order" is
as much as to blunt the edge of the sword that the higher religion - the church -
needs precisely to fulfill its own spiritual mission. And so it can be diverted from
16220 its mission, even channeled back into the service of the old establishment.
These observations, the last of which take on a more general character, are
consistent with what church historians have been saying for so long about the history
of the fourth century. If we now compare Toynbee's views with those of Latourette,
they agree above all in that both observe a religious vacuum in which there was room
16225 for, perhaps we may say: that called for fulfillment. The difference is that Toynbee
speaks of a new living religion that had come to light in the social underclass,
without saying from what source or inspiration, while Latourette explicitly names the
"uniqueness of Jesus" as the source, as the actual explanation, behind the many
phenomena that can be observed in the great change. In my opinion, the church
16230 historian may well supplement the cultural historian in this way. Even further, the
Berlin church historian Karl Holl at the time went into the question of why
Christianity had won over the religions in the old world, in which he also in fact
put the actual religious problem more sharply. Unlike Latourette and Toynbee and so
many others, he assumed that the old religions were not at all so empty, meaningless
16235 and dead, but alive and still possessed power, as Joh. Geffcken depicted them. Not
through flexibility, syncretistic adaptation and absorption did Christianity rise
above all others, but through its most essential depth, which Celsus and Julian could
only mock, but which struck those who opened themselves up to it in the heart and
renewed them: the forgiveness of sins. Harnack, who himself, as a historian, had
16240 always followed a somewhat different path to explanation, has called Holl's brilliant
examination of this great religious-historical problem from late antiquity the best
that had been said about it for a long time. Although this was half a century ago, it
is still just as valid.
Let us return to Constantine himself. In the Roman Empire, Christianity acquired the
16245 place of recognized religion under his leadership. This did not happen without the

inner conviction of the emperor himself; and this conviction was not an opinion that he had formed for himself or to which a realistic policy had led him, but an effect that had taken possession of him, to which he first submitted and which he then vigorously advocated in all situations. From the documents in Eusebius one can follow this development. It is more adequately expressed than with the quoted words of Seeck that, once begun, the following phases were prescribed to him in a compelling manner. Although it may have looked rather remarkable in the beginning, and on the many battlefields, according to our strongly evolved feelings and concepts, we must realize that the Christianization of the Roman Empire in the hands of the emperor could hardly have begun otherwise than with cultic and legal forms, and had to work from outside, one might even say, inward. Without institutions, Christianity does not come to fruition either. That was the case in the culture of Roman society in any case. Tolerance on both sides did not guarantee that everything would proceed without shocks, but it did guarantee that the goal would be approached. Of Constantine, the central figure, it can at least be said that he had a sense of the other world - which Augustine would call the *civitas dei* - and, according to a happy saying, from *crédule* to *croyant* appears to have become. Eusebius knew something of the emperor's inner, unspoken feelings.

On the occasion of his emperor's tricennalis, Eusebius delivered the festive speech, the *Triakontaeterikos*, which we quote as *Laus Constantini*. It begins thus: "This is the feast day of the great king... Great I call the truly great king. Him I mean - the emperor present here will not take it amiss but will agree with the (that is: our speaking about God) - who stands above the universe, the highest of all, the most exalted, the most great, whose throne is the vault of heaven and the earth is the footstool of his feet" (Ps. 110, 1). Who does not think here of the first words of the funeral oration of Massillon in the Sainte Chapelle at the bier of Louis XIV in 1715: "God himself is great, my brothers, and in these last moments above all, or presides over the death of the kings of the earth: the more their glory and their power have shone forth and then perish, the more do they pay homage to His greatness. God proves to be all that He is, and man nothing more of all that he is? It meant to be". But this was the beginning of a funeral oration, the words of Eusebius were spoken in the presence of a living jubilant prince, who himself agreed with them. And the orator - wrongly belittled by church historians as a court theologian - said something more. He praised Constantine's personal qualities: elevated above material things, controlling his desires and lusts, not controlled by passion and anger, in every respect a true ???, one who is master of himself. But then it follows that precisely such a person is able to see the brevity of ruling over people in this mortal and temporary life, which is not worth much more than what a goatherd or cowherd has to do. That brings us back to Augustine, who reminds us that man is only called to rule over unreasonable creatures: *non hominem homini sed hominem pecori*, and that therefore there have been just shepherds rather than kings. The acclamations, thus Eusebius, he found the people and the voices of the flatterers rather troublesome than a pleasure, thanks to his strict reasonableness and the true civility of his mind. Constantine was apparently able to judge his own position from a distance and objectively, even at an enormous celebration. On another occasion he himself spoke of a *ἀπλούς βίος*, a life in simplicity and honesty, without a double bottom and which does not hide its anger behind beautiful hypocrisy. It remains undesirable to use the slogan: end of the Constantinian period. It creates the greatest historical confusion. It is better to return to the simple classical formula of Eusebius: "*pax ecclesiae*", because to have achieved this was first and foremost Constantine's revolutionary, creative act in history. And nothing more. Constantine is not the creator of Byzantinism. With the panegyric of Nazarius (321) we therefore say, not in a negative but in an appreciative sense: "*unademum Constantini oblivio est humani generis occasus*", Constantine will not be forgotten until the whole of humanity perishes.

Constantine's Bridge

5 juli 328 **Constantine's Bridge** (Bulgarian: **Константинов мост**, **Konstantinov most**; Romanian: **Podul lui Constantin cel Mare**) was a Roman bridge over the Danube. It was completed or rebuilt in 328 and remained in use for no more than four decades. It was officially opened on 5 July, 328 in the presence of the emperor Constantine the Great. With an overall length of 2437 m, 1137 m of which spanned the Danube's riverbed, Constantine's Bridge is considered the longest ancient river bridge and one

of the longest of all time.

It was a construction with masonry piers and wooden arch bridge and with wooden superstructure. It was constructed between Sucidava (present-day Corabia, Olt County, Romania) and Oescus (modern Gigen, Pleven Province, Bulgaria), by Constantine the Great. The bridge was apparently used until the mid-4th century, the main reason for this assumption being that Valens had to cross the Danube using a bridge of boats at Constantiana Daphne during his campaign against the Goths in 367. The length of the bridge was 2437 m with a wooden deck with a width of 5.70 m at 10 meters above the water. The bridge had two abutment piers at each end, serving as gates for the bridge.

[https://en.wikipedia.org/wiki/Constantine%27s_Bridge_\(Danube\)](https://en.wikipedia.org/wiki/Constantine%27s_Bridge_(Danube))

Константиновият мост е пътен мост над река Дунав, съществувал в Късната античност и свързващ Улпия Ескус (край днешното село Гиген в България) със Сукидава (край днешния град Корабия в Румъния).

Мостът е с дървена връхна конструкция и зидани каменни стълбове. Разкрити са останки от крайните му опори, които са използвани и като порти, и няколко от междинните опори, намиращи се под водите на река Дунав. Общата дължина на моста е 2434 m, предполага се, че ширината му е била 5,70 m при височина над водата около 10 m. Константиновият мост е построен или обновен през 328 г., когато е официално открит от император Константин Велики. Предполага се, че мостът вече не функционира през 367 г., когато император Валент прехвърля войските си през Дунав по понтонен мост по-надолу по течението на реката.

The bridge was constructed between Sucidava (present-day Corabia, Romania) and Oescus (modern Gigen, Bulgaria), during the reign of Constantine the Great, being inaugurated on 5 July 328.

The construction was certainly inspired, in technique and dimensions, by the famous Trajan's bridge, built by Apollodorus of Damascus. It is not at all excluded that the architect of this bridge was also a renowned builder, perhaps the mysterious Theophilus Patricius, proconsul, quaestor and then praefectus Urbi in the new capital of the Empire.

The inauguration of the bridge was commemorated by the minting of a gold medallion in the mint of Rome in 328, with the obvious purpose of immortalizing the great technical achievement. Today only two bronze copies of a lost original are known.

The obverse of the medallion with a diameter of 37.6 mm shows the cuirassed, draped bust of Emperor Constantine to the right; the emperor wears a diadem decorated with rosettes, and around the effigy is the legend CONSTANTI - NVS MAX AVG. On the reverse is a stone bridge with three arches and a watch tower at one end.

The bridge proved to be essential in the transfer of troops, equipment and supplies north of the Danube for the implementation of the imperial strategy north of the river. The resumption of control over the Lower Danube (ripa Gothica), included the raising of the bridge, the strengthening of the Sucidava fortress, the restoration of the strategic road towards Romula and the implantation of a new bridgehead on the left bank of the river, from where it could control the Romanian Plain - Constantiniana Daphne (still unlocated in the field).

The bridge was apparently used until the mid-4th century, the main reason for this assumption being that Valens had to cross the Danube using a bridge of boats at Constantiana Daphne during his campaign against the Goths in 367.

In any case, the decommissioning of the bridge has most likely occurred before the floods of 376, when the Goths crossed the Danube. The dramatic events in which many barbarians drown, swallowed by the waters of the Fuvius, are chronicled by Ammianus Marcellinus, without the bridge being mentioned in any way (XXXI, 4.5).

Ancient and medieval sources

The first mention of the bridge is from the fourth century, in Liber de Caesaribus, by Sextus Aurelius Victor. Later, it was mentioned by chronographers during the 7th - 9th centuries (Chronicon Pascale and Theophanes Confessor in Chronographia) and in the 11th century in the chronicle compiled by the Byzantine monk Georgios Kedrenos, Synopsis historion.

The construction is called "the brass bridge" by the locals on both sides of the river, as the popular belief was that its legs were cast from metal.

According to local legends, the Lord of Dew ("Domnul de Rouă") walked on the bridge during the night, heading to the court of Emperor Ler (Ler Împărat), located in the former Roman castra from Romula.

Research

- 16380 The bridge was subsequently mentioned in the end of the 17th century, in the Index Geographicus Celsissimi Principatus Wallachiae, the map of Wallachia made by Romanian historian Constantin Cantacuzino. Shortly after that, the Italian Anton Maria Del Chiaro, mentions the construction in the Istoria delle moderne rivoluzioni della Valachia (1718, Venice).
- 16385 The construction is mentioned several times in the 18th-19th centuries by various historians or philologists, who overwhelmingly attribute it to emperor Trajan, perpetuating the erroneous information attributed to Anton Maria del Chiaro. While Luigi Ferdinando Marsigli attempted to locate the bridge in the 17th century and Alexandru Popovici and Cezar Bolliac continued this search in the 19th century,
- 16390 the first real scientific discoveries were performed by Grigore Tocilescu and Pamfil Polonic in 1902. In 1934 Dumitru Tudor published the first complete work regarding the bridge, and other systematic work on the north bank of the Danube was performed in 1968 by Octavian Toropu and in 2002 by Lucian Amon and Petre Gherghe. Later, in the area was carried out a bathymetry in 2017 and a magnetometric survey in October
- 16395 2022.

The Memorial of the Apostle and the Constantinian Basilica

by Jose Ruysschaert

- 16400 The history of the tomb of the Apostle Peter at the Vatican has been enriched during the last thirty-five years since Pius XII, who at the very beginning of his pontificate, decided to extend archaeological investigations throughout the entire lower sections of the Vatican crypts and also under the papal altar. These
- 16405 investigations had been begun by chance at the site chosen for the burial of his predecessor, Pius XI. Little by little, as the encrusted legends and learned theories were stripped away, the Memoria of Peter began to reappear in a more exact light, thus making possible a comparison of the monuments with ancient texts. This is the history we would like to relate, starting with the present Basilica and going back through the course of the centuries to the Basilica of Constantine, to the ancient 2nd-century necropolis and the small burial monument marking the site of Peter's tomb, and finally to the archaeological setting of the 1st century which offers a starting point.
- 16410 The paradoxical character of this history stems from the fact that the small burial monument which, since the middle of the 2nd century, has never ceased to be the evidence on which this history is based, has stayed in place, despite successive raisings of the level of the ground, both in the first Basilica, built during the pontificate of Sylvester and the reign of Constantine, probably between 320 and 333, and in the present Basilica as well, built under eighteen popes from Julius II to Paul V, from 1506 to 1615. But, as is often the case, the contradiction is only an apparent one, as we shall see. The presence of the tomb has never ceased throughout the centuries to be the center of this history and its only justification.
- 16415 This presence is that of a small burial monument built in the 2nd-century necropolis. It is made up of two superimposed niches forming part of a wall seven m long. The niches were made in the middle of the wall at the time of its construction, about the year 150. Originally a marble plaque supported by two small columns separated the two niches. In front of this small monument there was an enclosure measuring seven m by four. Some family monuments of the necropolis bordered part of it. That was how Peter's tomb appeared in the middle of the second century. It is easy enough to
- 16430 locate this modest set of constructions in the present Basilica. In fact, at the side of the small chapel called the Niche of the Palliums, under the papal altar, the small monument with niches and small columns has been discovered substantially intact, while some remains of the enclosure were discovered during excavations directly underneath the open area called the Confession which, protected by a
- 16435 balustrade, gives access to the Niche of the Palliums. The tomb's first architectural setting, moreover, is now right before the eyes of visitors who descend from the Basilica into the crypts and pass through the archaeological area below those just mentioned. Thus taken suddenly from the present era into the 2nd century, the visitor walks along narrow paths hemmed in by the high family burial chambers of an ancient Roman necropolis. Having recovered from the surprise, the visitor realizes that he is walking on what was the slope of a hill. After a short climb to the north, he finds himself on the narrow main path which rises gradually towards the west in the direction of the papal altar, following the
- 16440

principal axis of the Basilica. As he moves on, the visitor gradually realizes that
16445 the family monuments he is passing have been demolished, more and more extensively,
so that where the path ends, immediately under the papal altar, the last of the
monuments consists only of a pavement and part of a wall.
Such a visit enables the visitor to form a good idea of the problems facing the
architects of Constantine's time who were given the task of constructing the first
16450 Vatican Basilica. On the side of a hill where an important necropolis was located and
which at that time was still being used, they managed to create an artificial
plateau, by building imposing walls of substructure and by filling in the area with
earth. The plateau was extended considerably beyond the site of the future Basilica.
The level of the plateau was planned in such a way as to keep the small monument with
16455 niches intact and isolated at the focal point of the new structure, located directly
in front of the apse. A simple burial monument in a necropolis, now closed by
imperial authority, thus became the reason for the construction of a Basilica and the
transformation of an entire area of what was then open country. Placed in the
contemporary context of the martyria-basilicas, the way in which the Vatican Basilica
16460 was constructed is explained solely by the fact that the monument with niches was
considered by the Christian community of Rome to be Peter's tomb. And without a doubt
the most important result of the Vatican excavations is that it has been possible to
recognize even in terms of the construction of the first Vatican Basilica the
archaeological and historical proof for a community belief which was beyond dispute:
16465 if it is a palaeo-Christian Basilica built ad corpus, that is, to serve as a martyr's
tomb, then it is clearly the one built at the Vatican according to Constantine's
wishes.
Significant in the construction of the Basilica, the small monument is no less
unusual in the 2nd century necropolis. In the first place, it is an individual
16470 building constructed in the middle of a large number of family monuments.
Furthermore, it also interrupts the straight line which the others follow. In fact,
the closest monuments are built around the enclosure with the small building in the
center, as if it were an obstacle. Moreover, among these buildings two contemporary
staircases were put in to provide access to the revered enclosure. Finally, the soil
16475 of the enclosure seems to be partly a built-up mound resting against the family
monuments. The height of the mound is dictated by the height of the small monument
built at a particularly steep point on the slope.
In the midst of these family monuments, therefore, the enclosure and the small
building seem to answer to the desire that an already existing tomb should be
16480 preserved and integrated within the new necropolis then being developed. During the
second half of the 3rd century, other plans attest to an identical wish. Two marble
decorations and small walls were added to the small building, flanking it on each
side. At the same time, the earth of the enclosure where, in the meantime, numerous
ground burials had taken place, was covered over with a mosaic pavement. In addition,
16485 the paths to the two stairways were closed by gates.
An archaeological continuity is thus attested to, from the middle of the 2nd century
when the small building was constructed up to the beginning of the 4th century which
marks the start of the Basilica's construction: the Petrine identity of the small
building at the beginning of the 4th century can thus be traced back historically to
16490 the middle of the 2nd century. The Vatican excavations have once again placed before
our eyes the tomb as it was marked by the small building with niches before the
construction of the Basilica.
These excavations have also allowed us to have a more precise idea of what visitors
to the first Basilica saw, for they clarify and confirm the descriptions given by
16495 ancient texts and by a reliquary of the 5th century found at Samagher and now
preserved in Venice. Isolated from the razed monuments and walls of the necropolis,
the small Petrine building was located in front of the apse, in the center of the
transept.
After the sides had been altered to correct irregularities in shape inherited from
16500 the 3rd century modifications, it was covered with marble decorations similar to
those covering the apse. Its façade was divided into two parts. A golden cross
bearing the names of Constantine and his mother Helena was placed in the upper part,
and the lower section was closed with a double door. This door opened into a small
area where, at least by the end of the 4th century, an opening in the floor was made,
16505 enabling visitors to lower objects on to the earth inside the small cavity below.
This design, which still exists in the present Niche of the Palliums and is typical
of the veneration practiced at the tombs of martyrs, is an extremely significant
element of the tradition intimately linking the small monument to the site,
immediately below, of Peter's tomb.

- 16510 Gregory of Tours gives us a picture of a pilgrim lowering into the small shaft a cloth which would touch the Apostle's tomb and thus become a relic of it. The mediaeval liturgy placed a censer there for the whole year from 29 June to 29 June. The temporary placing of the Palliums in the niche, a custom still observed, is a further indication of the respect in which this spot was held.
- 16515 Around the monument of Peter, four spiraling columns of sculpted marble connected with the balustrades, likewise of marble, formed the supports for a baldacchino crowned by architraves and arches. Two other spiraling columns at the angle of the apse were connected to the other four by two architraves. But the six columns of the baldacchino were not alone in stressing the importance of the monument of Peter in
- 16520 the Basilica. The plan of the Basilica itself also marks its importance. The architectural works just described are not only in front of the apse but also at the center of the transept.
- This architectural fact is in itself unusual. Churches with transepts "in the form of a cross" may be familiar to us, but the historian notes that, among all the martyria-basilicas of the Near East and of Rome in Constantine's time, the Vatican is the only Basilica which has this design, a design later to be spread by the Carolingian renaissance. In the Vatican Basilica the transept was, in fact, the martyrion, the structure centered above the martyr's tomb and reserved for liturgical functions, as opposed to the five aisles reserved for the assembly of the faithful. The martyrion
- 16530 was a huge rectangle, 87 m by 18, separated from the aisles at the time by a large central triumphal arch decorated with a mosaic showing Constantine offering the building to the Saviour, and by four arch-shaped openings on the sides. Taken together, the naves were 91 m long and 64 m wide. Besides the six columns of the baldacchino, 100 simpler columns taken from a variety of ancient monuments (as was
- 16535 much other material for the Basilica), in groups of 22, separated the aisles, or were placed at the lateral arch-shaped openings to the transept and at both ends of the transept. The entrance of the Basilica, a portico 12 m wide, was preceded by a quadriportico 62 m by 46, reached by 35 steps.
- 16540 We have roughly sketched out what was by the will of Constantine the new architectural setting for the tomb of Peter. The Basilica, demolished by the Renaissance on the pretext that it was in danger of collapse, and precisely on the spot where it rested on the highest substructures, had certainly been damaged, but just as certainly it had been improved. Canons of the Vatican, architects and artists
- 16545 have fortunately left numerous testimonies which opportunely complete the information furnished by the recent excavations. We hesitate to stop here: certain stages of these changes, the first ones and the last, are essential to our subject matter. The solution which Constantine's architects decided upon was the best - if not the simplest - which could have been chosen for a cemetery-basilica ad corpus, which was
- 16550 both a grandiose burial monument built around a tomb and a cemetery set aside to receive the bodies of the dead who wished to be placed near a saint's tomb, as was done in the catacombs. This burial characteristic is certainly a primary one for the Vatican Basilica. The solution of Constantine's architects nevertheless presented a serious inconvenience, since even then the influx of pilgrims made evident the need
- 16555 for regular liturgical functions. The monument and its baldacchino took up too much space in the middle of the transept. To his credit, Gregory the Great solved this problem with an architectural device which respected the monument as ingeniously as had that of Constantine's architects.
- The problem was to establish a permanent altar at the center of the transept, easily accessible and perfectly visible, without touching the monument. The area immediately
- 16560 surrounding the Petrine monument, apse included, was raised about one and a half m, while the top of the monument was transformed into an altar, without doubt the first permanent altar of the Petrine tomb. Four small columns placed on the altar allowed for the construction of a baldacchino. Nevertheless, the monument of Peter remained
- 16565 accessible, as before. Not only was it still completely visible from the central nave, separated from it only by the six columns of the ancient baldacchino now placed in a single row and crowned by an architrave, but also two stairways permitted direct descent from the new presbyterium. In addition, under the presbyterium an original architectural contrivance had been built. Extending along the interior of the apse
- 16570 wall, an almost circular corridor, reached from the transept by two doors, led to a chapel, likewise underground, built directly behind the small monument and for that reason called ad corpus in some mediaeval texts. About two m high (thus it was a little lower than the height of Constantine's construction), the new design, properly called the "Confession", gave a completely new appearance to the Memoria Petri. The
- 16575 ancient Basilica underwent only secondary changes. Under Gregory III, a second row of

six spiraling columns of sculpted marble in the same style as the others was placed parallel to them. Under Calixtus II a new altar was constructed above that of Gregory the Great.

We noted above that the design of the Basilica with transept created at the Vatican by Constantine's architects spread throughout religious architecture from the Carolingian renaissance onwards. The architectural contrivance of Gregory, consisting of an altar-tomb and a presbyterium-crypt, imposed on the Vatican by liturgical needs and the requirements of a burial monument which was not intended to be touched, became almost instantaneously the model for builders of churches where the body of a saint was venerated, even if they did not have the problem of a pre-existing tomb in the edifice under construction. We may add that, from its time of construction onwards, the "uncovered Confession" which was to be built under Clement VIII and Paul V would become a prototype for similar constructions, imposed, and most often wrongly, on some altars in Roman Basilicas, including in the 19th century the altar of the Basilica of St. Paul-Outside-the-Walls. But it seems to be beyond our purpose to stress the different manifestations of the attraction which Peter's place of pilgrimage has had on religious architecture.

What we have hitherto described of the history of Peter's tomb at the Vatican shows that this history was dominated architecturally by a desire to keep the tomb intact. It is very tempting to state that this concern was equally dominant in the most delicate phase of this history - the construction of the present Basilica. The first measure taken at that time was dramatically of a preservative nature. In 1507, temporary walls joined to the apse wall permitted the setting up of a small construction which protected the papal altar until 1592. It was only under the pontificate of Clement VIII that the first part of the present architectural contrivance was constructed. The floor of the new Basilica, raised 3.20 m above the previous floor level, required a corresponding raising of the 13th century papal altar. A new altar, the present one, was superimposed over the altar of Callixtus II. At the same time, the "uncovered Confession" with stairways maintaining direct access to the Niche of the Palliums was also constructed. Paul V added little to its present appearance. But Clement VIII did not limit himself to external modifications of the Petrine Memoria.

Preserving the underground contrivance of Gregory the Great, he adapted it. On the outside of the almost circular corridor of Gregory, parallel to it and bordering the outside of the wall of Constantine's apse, a new circular corridor was built. Access was still assured from the crypts previously added according to the plans of Michelangelo between the floors of the two Basilicas. This new corridor, an essential element of what is called the new crypts, preserved access to the chapel ad corpus of Gregory which, since his time, had been enlarged a little and given the name "Clementine Chapel". It is in this small chapel, at the end of which still stands the small 7th century altar ad caput, as it is called, and in the two adjacent areas that the small burial building of the middle of the 2nd century presents for our reflection and devotion the first architectural testimonies preserved for us by a history which, until the recent excavations, had been concealed, as well as preserved, by the Niche of the Palliums.

Following the changes made by Clement VIII, a final architectural note needs to be made so that we can place in the new and prestigious setting of the present Basilica the ancient Memoria, which is somewhat lost in the immense space of the new edifice even while remaining its center.

Urban VIII's authority and Bernini's art carried out this final stage, through the construction of the bronze baldacchino of the altar which bids the onlooker to unite inseparably in his vision Michelangelo's dome with Peter's tomb. Eight spiraling columns which surrounded that same tomb in the ancient Basilica are included in the four pillars which support the dome and these columns, surrounding the baldacchino of bronze which was inspired by them, remain a witness to the continuity which we are striving to bring out.

It has been described above how the history of the Vatican Memoria of Peter is dominated by the constant desire to keep it intact. No less abiding is the wish to keep it visible and to ensure direct access to it. These aims seemed particularly evident in the Constantinian Basilica, both at the time of construction and during the changes of Gregory, but these desires were already asserted, as we have seen, in the middle of the 2nd century when the small burial monument with niches and columns was built. Let us now add that these same imperatives were, at the price of a whole series of projects and plans, the final determining elements for the construction of the present Basilica.

An architectural tradition thus permits us to go back as far as the middle of the 2nd

century; it is centered on a burial monument considered without interruption to be the one built above Peter's tomb. Yet our aim would remain unachieved if we did not present, in the light of the excavations made under and near the Basilica, the essential points of the record which could be described as the archaeological setting of the site of Peter's tomb in the first two centuries.

To begin with, it should be observed that, in giving a strict explanation, it would be better to talk here about the location of the tomb rather than about the tomb itself. In fact, the excavations did not discover the remains of Peter's body as it was buried after his martyrdom. Moreover, no archaeological element retrieved from the small cavity next to and below the Niche of the Palliums can be considered as belonging to a burial monument, however modest, of the 1st century. Yet it would be wrong to conclude that the recent archaeological investigations have added nothing to the history of the first decades of the tomb.

First of all, the investigations established that the 2nd century necropolis had been built beside a secondary road running directly along the northern border of the Circus of Caligula and Nero. It is equally clear that the family monuments which were part of it were built in an area already in use as a burial place. In the immediate surroundings of the Petrine monument there have been found piles of bones taken from previous tombs. These remains had been gathered together by the 2nd century masons, who did not take great pains to respect the material arrangements of the tombs in question. They seemed to be acting according to the customs prescribed by law. But this fact, hitherto hardly noticed, throws some light on what may have happened to the Petrine tomb at the moment of the construction of the small monument with niches. Under that monument only the remains of the body of the Apostle-martyr would have been collected. Did they remain there until the time of the construction of Constantine's Basilica? Had they already been moved in the middle of the 3rd century, when the monument underwent important changes? Our present purpose does not include answers to these questions.

On the other hand, it is important to stress that although this Vatican area was imperial property in the 1st century, it was then lined with roads beside which other burial grounds have been discovered. In particular, a small part of the most important one was unearthed in Vatican City at the time of the construction of a garage. It remained in use during the first four centuries and was located beside the ancient Triumphal Way. It included, in particular, two tombs which according to their inscriptions date from the reign of Nero. Further excavations have led to the discovery of some burial monuments of the Flavian age on the south side of the Circus.

But in Rome it is without doubt along the Ostian Way that the true archaeological and architectural parallel to the history we have been tracing is found: the tomb of the Apostle Paul and his two Basilicas. Concerning the second Basilica, built at the end of the 4th century and destroyed by fire at the beginning of the 19th, the reconstruction which respected the essence of its design gives us a precise enough picture. Concerning the first, built by Constantine, the excavations carried out at the time of the reconstruction tell us that it was of modest proportions. There, too, Gregory the Great raised the presbyterium and designed a crypt, limited this time to a chapel ad corpus located behind the altar and reached through a door. And, as at the Vatican, the tomb is situated in the middle of a pagan necropolis, but this time it is inside a family monument. We are obliged to end these pages dedicated to Peter's tomb by a visit to Paul's, since the true Roman pilgrimage ad limina has never consisted of anything other than a visit to the two tombs of the Apostles, "at the Vatican" and "along the Ostian Way". This was expressed at the end of the 2nd century by the priest Gaius, and at the beginning of the 5th century by the Spanish poet Prudentius - Gaius to justify a point of Roman ecclesiastical discipline and Prudentius to present the two Apostles as the guarantors of the faith of Rome. Thus the history of the two tombs has been, through nineteen centuries, a matter of parallel faithfulness to those who, by their common presence, their common preaching and their common martyrdom, "laid the foundations" of the Roman Church in the faith of Christ.

On the vault of the Constantinian apse, did not the mosaic erected by Pope Liberius exalt the divinity of Christ, as the bordering inscription indicates, and are not Peter and Paul standing together on either side of Christ in order to be the first ones in Rome to proclaim his divinity?

Now let us go down, step by step, to see what is under the altar. And as we go down, it is easy to see that we are also going back through the centuries. Under the present altar, which belongs to the time of Clement VIII (1592-1605), is the altar of Callistus II (1119-1124); lower still, that of Gregory the Great (590-

604). Next we find the monument built in honor of St. Peter by the Emperor Constantine after his victory near the Milvian Bridge (October 28, 312) and the establishment of peace with the Church by the Edict of Milan (313 AD). The date of this monument cannot be fixed with absolute certainty, but there are good reasons to think that it preceded the construction of the basilica (begun about 322) and perhaps it is no later than 315; that is, the year in which great holiday were held in Rome to exalt Constantine and his victory; the year in which Rome dedicated the famous Arch of Triumph which still rises majestically from its soil. Constantine's monument to Peter contained within its rich marble construction an earlier chapel (or, more literally, shrine) which has been brought to light by excavations. This chapel indicates, evidently, the place sacred to the Apostle, the place that Constantine considered so important and worthy of honor that he did not hesitate to build on it first his precious monument and later - at the cost of incalculable expense and enormous labor - the great basilica. The characteristic chapel rises from the level of the ancient necropolis already described. It stands in a little open area, a sort of small square in the middle of various tombs. (See Plate III.) This little area which, in relation to the modern basilica, is directly under the Confession, was called "Field P" by the excavators. It is rectangular in form (about seven meters from north to south, about four from east to west), and it lies in a place where the terrain rises quite rapidly from the south to the north, i.e. toward the Apostolic Palaces, and more gradually from the east to the west, i.e., toward the Vatican Gardens. Field P is bounded on the west by a wall called "Red" because of the red color of the plaster (now largely fallen off) which was used to cover it; on the south by a tomb which the excavators call S; on the east, but only in the southern half of the east section, by another tomb called O (this tomb was owned by the Matuccii and is sometimes called by their name). The northern boundary of the eastern side and all the northern boundary of the eastern side and all the northern boundary cannot be traced today, but there are good reasons for believing that there were once structures there which have been mostly destroyed. Behind the Red Wall ran a small street (the so-called clivus) which slopes up from the south to north and includes some sets of stairs (Fig. 24). On the other side of this clivus are the remains of two other tombs, called R and R1 by the excavators. The clivus gave access to the Tomb R1 and to a tomb called Q which lies behind the Red Wall with the Red Wall itself used for its eastern wall. Under the clivus runs a little gutter used for drainage and covered with a line of tiles, five of which, fortunately, bear a mark by which they can be dated. The mark mentions Aurelius Caesar (the future Emperor Marcus Aurelius) and his wife Faustina as proprietors of the furnace in which the tiles were made.¹ The tiles can therefore be dated between about 146 and 161 AD. It was about 146 when Faustina, wife of the future Emperor Marcus Aurelius, received the title of Augusta, and in 161 Aurelius Caesar, having succeeded Antonius Pius, abandoned the name of Aurelius Caesar and took that of Marcus Aurelius. The essential purpose of the Red Wall seems to have been to fix the boundaries of the various burial places in the area. From this fact, it can be considered contemporary with the gutter I have mentioned, and therefore it can be dated between about 146 and 161 AD. In round numbers, and wishing to take the latest possible date, we can say that it was built by about 160 AD. The most ancient of the tombs surrounding Field P is certainly Tomb O, which, as can be seen from the marble tablet over the entrance, belonged to the Matuccii family. This tomb, in which the rite of cremation was practiced, can be dated about 130, and is certainly later than 123, since a brick was found in one of its walls with a seal dating from that year. The Tomb S, which bounds all the southern flank of Field P, contains traces of cremation urns and of repositories for inhumation. Later than Tomb O, Tomb S is still earlier than the Red Wall, since the wall leans on it, thus barring access to Field P from the south. Therefore Tomb S can be assigned a date somewhere between 130 and 150.

THE REMAINS OF PETER

One of the surprises of the excavations carried out between 1940 and 1949 under the Confession of the Vatican Basilica was the discovery - beneath the papal altar - of the site of Peter's original tomb empty and in disarray. The Apostle's remains were strangely missing. After his martyrdom in Nero's Circus (autumn of 64), Peter was buried a short distance away, beyond the road (Via Cornelia?) which bordered the Circus, in a place

16775 where tombs already existed. That place corresponds to the area which archaeologists today call Area P. In the course of the centuries, various monuments were placed over the modest grave of the Apostle: the so-called "Trophy of Gaius" (about the middle of the 2nd century), the monument of Constantine (after 313), the altar of Gregory the Great (590-604), the altar of Calixtus II (1119-1124), and the altar of Clement VIII (1592-1605), which is the present altar. All these monuments were built (or so it seemed at first) over an empty tomb.

16780 At the western edge of Area P there were found remains of human bones, remains to which some people attributed a certain importance. It was subsequently shown that in fact these remains had nothing to do with Peter, differing as they did with regard to both age and sex.

16785 But the excavations inside Constantine's monument had also revealed a characteristic loculus which had been deliberately hollowed out of an already existing wall (the wall which archaeologists today call "Wall G"), included within the Constantinian construction. Wall G is built against the back wall of the Trophy of Gaius, that is the wall which - on account of the vivid red colour of its plaster - came to be called the "Red Wall". Wall G, therefore, is later than the Red Wall, but earlier than the monument of Constantine in which it was enclosed. On the whole, Wall G can be dated to about the mid-3rd century. Inside this wall, as I have said, a secret hiding-place (the loculus) was discovered. It measured 0.77 m long by 0.29 m wide and

16790 0.315 m high, and was lined with slabs of Greek marble.

16795 Wall G and its hiding-place are at the center of extraordinary events, due in part to the somewhat abnormal situation in which the 1940-1949 excavations took place. The first opening made in the northern side of the Constantinian monument brought to light the north section of Wall G, covered with Christian graffiti, and, below it, the opening of the famous loculus. No detailed study of these graffiti was made either then or during the entire period of the excavations. They were deciphered and commented upon at a later time by myself, and in fact they proved to be a wonderful page of Christian spirituality in which the names of Christ, Mary and Peter are particularly prominent and their victory is acclaimed. As for the loculus, the excavators had immediately noticed that it was about half filled with plaster rubble which had fallen from above, that is from the inside of Wall G itself, and from the side, that is from a section of the adjacent Red Wall. For various reasons a systematic emptying of the loculus was not carried out immediately. However, it happened that a certain moment someone noticed that there were bone fragments mixed in with the plaster rubble inside the hiding-place, and arranged for these bones to be gathered up, put in a wooden box and placed in a nearby spot in the Vatican Grottoes, where they remained forgotten for a long time.

16800 In the meantime, the scholars working on the excavations returned to the loculus of Wall G and naturally found it empty, except for "some remains of organic material and bone fragments mixed with earth" (these are their own words) which had remained at the bottom. It was easily perceived that the hiding-place had been made during the building of the Constantinian monument, and from this perception there sprang the theory that it had been intended for the bones of Peter. This theory was admitted, in fact, by various scholars: Father Antonio Ferrua (1952), Jerome Carcopino (1953), Father Engelbert Kirschbaum (1957) and Pasquale Testini (1957). But for the moment the theory remained only a theory. The essential element of proof was missing: the box which had been placed in the nearby spot in the Vatican Grottoes and forgotten. Since the excavators were unaware of the existence of the box, and on the other hand wished to give some explanation for the riddle of Wall G, the idea was put forward and gained increasing credence that the hiding-place had been opened during the Middle Ages on the eastern side, and that through this opening the remains of the Apostle had been taken away.

16805 The wooden box containing the material removed from the hiding-place was found by me only in 1953. Besides bones, it also contained earth, flakes of red plaster, small pieces of rich fabric and two marble fragments. A note, written by a Sampietrino who took part in the first excavations and read by me clearly and in its entirety, stated that the material had been taken from the loculus of Wall G. The flakes of red plaster belonged to the adjacent section of the Red Wall (as can be easily understood). The fragments of marble were shown by a chemical analysis to originate from the front slab of the lining of the loculus. Both the plaster and the marble fragments clearly confirmed the statement in the note.

16810 The idea accredited by the excavators and then generally accepted that the loculus had been broken into during the Middle Ages meant that at that time I myself did not attribute to these remains the importance due to them. But the elementary duty of serious scientific inquiry led me to transfer them to a dry place and to the making

16815 16820 16825 16830 16835 16840

of provisions for their systematic examination by a qualified specialist. The specialist chosen was Prof. Venerando Correnti, who then held the chair of anthropology at the University of Palermo and today holds the same chair at the University of Rome.

Prof. Correnti was therefore asked in 1956 to begin his work. But before anything else he had to make a long and careful study of the skeletal remains, found in the earth on the western edge of Area P, to which (as I have stated above) a certain importance had hitherto been attributed. The anthropological examination showed in fact that the bones belonged to four different individuals, none of whom could be taken into consideration in connection with the problem of Peter's remains. Only in October 1962 was Prof. Correnti able to devote himself to the examination of the bones found in the loculus of Wall G. This work lasted until the end of June 1963. Briefly, the result was the following: bones of a single individual, of male sex, sturdy build and advanced age (between 60 and 70 years old), encrusted with earth.

This result corresponded with the historical and archaeological data. In the only loculus of Peter's monument-tomb there was in fact to be expected the presence of bones with these characteristics. And this precisely is what had happened. Furthermore, it had to be kept in mind that among the remains from the loculus were small fragments of rich fabric. These indicated that these bones really were the mortal remains of Peter.

There remained a single doubt in my mind: that of the alleged opening of the loculus from the east during the Middle Ages. But it quickly vanished when a minute examination of the interior of the loculus, carried out at my request by the best specialists in Roman wall-construction, proved that the loculus had never been broken into from the time of Constantine until the moment when the excavators of the 1940-49 period had made the first breach of the Constantinian wall.

Experimental analyses of the remains of fabric and of earth were also carried out. All of these tests yielded positive results. The gold was genuine; the cloth was dyed with purple made from murex; the earth matched that of the area.

At this point it seemed reasonable to draw the following conclusions: at the time of Constantine, after the peace of the Church (313), when it was decided to arrange definitively the site of Peter's tomb, the bones lying in the earth under the Trophy of Gaius were collected, wrapped in a precious cloth of purple interwoven with gold and placed in a loculus specially made inside a wall (Wall G) already existing beside the Trophy. In front of this wall, enriched by the precious material inserted, another wall was built which was to be partially broken down only by the excavations begun in 1940. It can be added that the reason for the transfer of Peter's relics from the earth tomb to the loculus in Wall G was probably the well-founded fear that the dampness of the earth, which is notoriously very considerable in the Vatican area, would rapidly damage the venerable remains which had once been entrusted to it. At this point, it would seem appropriate to sum up, for the sake of clarity, the chief elements which have permitted the present writer to proceed to the identification of the bones in the loculus of Wall G as those of the Apostle:

1. The Constantinian monument was considered, in Constantine's day, to be the tomb of the martyr.

2. Inside the monument-sepulchre there exists a loculus, and one only: the loculus of Wall G.

3. This loculus was carved out of Wall G and lined with marble at the time of Constantine.

4. The loculus was never broken into from the age of Constantine until the time of the excavations (about 1941).

5. From this loculus come the bones which were removed at the beginning of the excavations, kept without interruption in a nearby spot in the Vatican Grottoes and recovered from this spot in 1953.

6. These bones, therefore, are the ones which were verified at the time of Constantine as the bones of Peter and place in the loculus of Wall G, inside the monument-sepulchre.

7. The cloth of purple interwoven with gold-thread in which the bones were wrapped at that time confirms the highest dignity then attributed to the remains. The royal purple harmonizes perfectly in fact with the royal porphyry which decorates the outside of the monument.

8. The anthropological examination of the bones - belonging to a single individual - showed that they conform perfectly to what, by tradition, we can imagine was Peter's physical appearance at the time of his martyrdom. Apart from the obvious fact that they belong to a male, the bones indicate a sturdy build and an age somewhere between

60 and 70.

9. The earth encrusted on the bones indicates that the bones themselves originally lay in an earth-grave, and we know that Peter's first burial was in the earth.

10. The characteristics of the earth, shown by the scientific examination, match those of the place where the original tomb was dug (marly sand), while in other parts of the Vatican area the earth is different (blue clay or yellow sand).

11. The place of the earth-burial under the Trophy was found empty. This is in harmony with the presence of the bones, transferred about two metres higher up, in the loculus in the monument of Constantine.

From this concise exposition it can be seen that the above elements constitute the links of a chain, joined to one another, and that chain leads to a conclusion: the bones of Peter have been identified.

Constantine's Basilica

Constantine the Great brought about the triumph of Christianity in making it the religion of the State. The subversive, oppressed, underground creed had been raised out of obscurity to a height of authority of which no third-century pope could have dreamed. What the Faith owes to this extraordinary layman cannot be assessed in terms of ordinary human gratitude. Constantine was a soldier and dictator, a ruthless and ambitious ruler, whose worldly interests played a prominent, but not a predominant part in his determination to advance the banner of Jesus Christ. He was helped and exhorted in the role of supreme protagonist of Christianity by Pope Sylvester. The reigns of popes are not usually long. The longest in history has been that of Pius IX, which was thirty-two years. Before his death in 1878, no pope had covered more than twenty-five years, the presumed limit of St Peter's spiritual sovereignty in Rome; and until Pius reached his quarter of a century of tradition always maintained that it would never be exceeded. Pope Sylvester did not reach twenty-five years, yet he reigned twenty-two, which was a record not to be broken before the death in 795 of Adrian I who surpassed it by one year. Very little is known about Sylvester's character or life beyond the legend that he baptized Constantine and cured him of leprosy in the process. He clearly laboured diligently to promote the Faith and encouraged the emperor's pious reinstatement of martyrs' remains and erection of magnificent churches over their tombs. That he was a saintly, disinterested bishop we guess from his achievements. We may surmise that he was also a man of immense tact and diplomacy to have worked in partnership and apparent harmony from 314 until 335 with an autocrat of Constantine's passion, violence and unpredictability.

The munificent emperor founded, in addition to St Peter's and St John Lateran, the original basilicas of S. Croce in Gerusalemme (in which to deposit the sacred relic of the cross brought to Rome by St Helena his mother), S. Agnese, St Paul and S. Lorenzo, (five of them over the remains of the titular saints and only St John's and S. Croce within the city walls,) the churches of the Nativity at Bethlehem and the Holy Sepulchre in Jerusalem, besides lesser churches outside Rome and in other parts of the ancient world of which no vestiges now remain. No pagan emperor Constantine had raised so many temples to the old gods within so short a space of years; and it is exceedingly doubtful if before his reign a single Christian assembly room had ever been built specifically for a Christian congregation. That the Church had downed property in the third century we already know from the fact that the Emperor Gallienus, a tolerant predecessor, restored it after the Decian persecutions. And by property land, and not churches, is meant. There was no church architecture before Constantine's day, even if some private houses were used more or less exclusively for worship, and had been given decoration of a religious character. Architecturally, such places would be indistinguishable from dwellings, for which purpose they had been erected. From the earliest times the houses of rich Christians may have contained small oratories set aside for prayer, and nothing else. With Constantine all was changed. There was no longer any need for the worshippers of Christ to assemble behind closed doors. Christianity was adopted as the state religion and came into the open. Artists appeared whose talents were in sudden demand. The emperor's churches glowed with rich decoration and treasure. An appreciative contemporary describes the 'paints of every colour' of church exteriors, 'reflecting their gold, which the water blends with green reflections in the ornamental pools,' made for ablutions in the courtyard. He rhapsodizes over the interiors and their 'ceilings with gilded beams that make the whole chamber seem like a sunrise. And in the windows glowing stained glass, so that they look like fields studded with gorgeous flowers'. We shall only be dealing with one of Constantine's basilicas, and that the greatest in the Christian world. In precisely which year St Peter's was begun is not known. Certainly not at the beginning of the emperor's reign. Whereas the endowments for the

earlier Lateran basilica came from Italian sources, those for St Peter's were financed by the eastern provinces which only fell to the emperor in 324. The year 322 has been suggested for the foundation date by Toynbee and Perkins. They believe that Constantine may have anticipated the colonial riches which were shortly to come to him. By his death in 337 at least the structure of St Peter's was completed.

The Site

The first questions which present themselves to us are these. Why was the particular site on the Vatican Hill chosen by the emperor for his church? And did a previous building associated with St Peter exist upon it? These questions, which have been examined and thrashed out by many eminent past and present-day scholars with the most scrupulous attention, I shall endeavour to summarize. For a start, let us consider the history of the site in ancient times.

The Mons Vaticanus, or Vatican Hill, derives its name from the worship of Cybele, whose fertility rites associated with her youthful lover Attis were performed here, ex vaticinatione archigalli - that is to say in accordance with the prophecies of the goddess' high priest. On this hill of prophecy the annual spring festival was held. A pine tree, the phallic symbol of Attis, was reared outside the temple in preparation for the Day of Blood. The events that took place on this occasion were to commemorate the self-castration of the youth at the instance of Cybele, whose motives were to prevent him marrying another. In Asia Minor, whence the Cybele cult was brought to Rome, Attis was called Papas, or Zeus Papas. By certain ancient writers his myth has been confused with that of Apollo and, like the great god of perennial youth and beauty, he was supposed to have been slaughtered by a wild boar. But Attis was rather a god of vegetation and propagation, and the spring festival coincided with his death and resurrection. The hill to which the worshippers resorted at the festivals being outside the city walls was indeed until medieval times at the mercy of enemy assaults. This was a cogent reason why the earliest popes preferred not to reside in the Vatican but in the comparative safety of the Lateran Palace. The elder Pliny clearly thought the hill a barren and unattractive spot. He referred to it as infamis Vaticanis locis, an area infested with mosquitoes, which in the summer of 69 decimated the troops of Vitellius posted there. Few people lived on it apart from some fabricators of cooking utensils and wine jars. Worse still, the hill produced a horrible wine. 'If you drink Vatican wine', wrote the satirist poet Martial, 'you are drinking poison: if you like vinegar you will like Vatican wine: Vatican wine is perfidious.' From time to time members of the imperial family attempted to improve the soil. Agrippina senior, Nero's grandmother, drained it, digging channels to take the water down the sticky clay slopes, altering the contours and constructing terraced gardens, and even a covered way to the Tiber. When Nero inherited or appropriated the gardens after murdering his mother, Agrippina junior, in AD 59 they were flourishing. He built a bridge over the river near where the Santo Spirito hospital now stands. So whenever he wished to dally in his grandmother's pleasures or to disport himself in the circus which his predecessor Caligula had made on the lower ground, he could go there at a moment's notice.

The whereabouts of Caligula's Circus was until only a few years ago a puzzle. Most historians were of the opinion that the south wall of Constantine's basilica had been built on the foundations of the northern boundary of the circus. The misapprehension was caused by a belief that the famous Egyptian obelisk, which had been brought from Heliopolis by Caligula, was set up on the central point of the low wall, called the spina, dividing lengthwise the new circus around which the emperor raced his chariots; and that, until its re-erection by Pope Sixtus V in the present piazza in 1586 it had never been moved from its original setting. This was on a spot fairly close to the south side of the medieval St Peter's, and midway between the east and west ends. Yet the excavations which Pope Pius XII put in train in 1940 have proved conclusively that Constantine did not build his basilica over the northern boundary of Caligula's Circus.

So contemporary historians now suggest that the great needle must have been shifted after Caligula's and before Sixtus's time. But when, and by whom? Did Constantine in discontinuing the use of the circus need the site for some buildings ancillary to his basilica, and finding the obelisk in his way move it closer to his new south wall? This question will be considered when we come to the story of Pope Sixtus V's removal of the obelisk in a later chapter.

At all events Nero made his predecessor's racecourse his favourite playground. Here on every possible occasion of popular holiday he would take the reins and drive frenziedly round and round, his egregious vanity tickled by the obligatory plaudits

of his embarrassed subjects. Here too after the Fire of Rome, in order to distract the minds of the miserable citizens from their plight and the whispered allegations of his reckless responsibility for the disaster, he organized in AD 67 spectacles of ineffable carnage and brutality at the expense of the Christians. We may therefore assume, until archaeological or literary evidence to the contrary is forthcoming, that St Peter met his death by crucifixion in the field of blood, Caligula's Circus.

Why then did Constantine not select the circus terrain for the foundations of his huge basilica? As the presumed site of the Apostle martyrdom and as a relatively level space at the foot of the Mons Vaticanus, it offered sentimental as well as physical advantages apparent to the least percipient builder.

On the contrary, Constantine did a very extraordinary thing. He chose to erect the great basilica in honor of the Apostle Peter on the steep slope of the Vatican Hill and right on top of an existing cemetery. We shall come to the difficulties he encountered from geographical causes in due course. First of all, there were distinct legal and moral ones involved in the total destruction of a burial ground in full use. The profanation of a Roman cemetery (*violatio sepulchri*) was in Roman law a criminal offence. Not even the highest officials of the land dared do such a thing without risking prosecution and the direst penalties. And here was the emperor himself razing tombs and sepulchers in order to build over the rubble to which they were reduced. That he could flout public opinion and the law in this flagrant manner is an indication of the height of power the emperor had now attained. The Vatican cemetery was not a very old one. It had developed within a comparatively short period. The large majority of its tombs date from AD 125-200. Pope Pius XII's excavators have established that it was not a particularly high-class cemetery. Few persons belonging to the old Roman families were buried in it. Some of the deceased had been freeborn, many not. Most were of Greek-speaking origin. Nearly all came from the lower clerical and administrative grades of the civil service. As the place became a more and more popular burial ground - remember it was outside the city walls - speculators began buying up plots which they resold for the building of family tombs. The process continued on somewhat haphazard lines and showed little advanced planning. Several of the excavated tombs are, in spite of their middle-class ownership, objects of much beauty as well as interest. Those which escaped total pulverization by Constantine lie below the western half of the old basilica where the land slopes steeply away to the south. The emperor left their roofs intact, merely filling the interiors with rubble to make a firm foundation. The rubble has lately been dug away. The tombs below the eastern half of Constantine's church, which unlike the western half was not built over a crypt, were absolutely razed and cannot for reasons of safety to the present fabric be investigated.

The most notable of the surviving tombs are those facing south across a very narrow street. The fronts, which were of course originally above ground, are more finished than the side and back walls, which were thrust into the northern slope. They present a long line of carefully coursed and jointed brick, washed with thin coats of crimson. They have doorways of travertine and windows and relief panels of terra cotta. The surrounds and lintels of the windows are sharply cut. The perspective reliefs of receding arcades and the figures of quails and other birds are delicately moulded. The street façade is as functional and satisfying as that of a late Georgian London street - which it somewhat resembles only in miniature - where exceedingly plain surfaces are broken by an economy of classical detail in door and window features. The interiors on the other hand are exuberant and aglow with colour and decoration. The barrel-vaulted roods are either paneled with stucco squares and hexagons, framing little rosettes, or painted with arabesques and figures. The walls which provided for the urns or sarcophagi are pierced with shell-headed niches stuccoed in allegorical reliefs, with recesses in lunettes and simple pigeon-hole boxes. In between are crude divisions framing birds and animals finely painted in tempera. The marble sarcophagi are sculptured. Some bear scenes in relief; others are strigilated (that is to say channeled in the familiar Roman S scrolls), flanking a single maenad, a naked Dionysus, or perhaps a bust of the deceased in relief. The second century saw a gradual supercession of cremation by burial, since the Christians favoured the latter way of disposal of their dead, regarding the former as essentially pagan. In the third-century tombs of the Vatican cemetery more definite proof of Christian burial is supplied by some of the inscriptions. Familiar phrases like *Dormit in pace* are taking the place of the old pagan ejaculations such as 'I am ash, ash is earth, earth is divine; therefore I am not dead', or that moving epitaph to a dead boy: 'I pray that his ashes may become violets and roses, and that the earth, whose child he now is, rest light upon him, as he in life weighed heavy on no

17105 man.' Paganism was obsessed by speculations on the hereafter.

There are even earlier hints of Christian burial in the mosaic decorations on vault and wall of at least one of the Vatican tombs, namely that of the Julii family. These fragments are the oldest Christian mosaics so far discovered. They date from the late
 17110 second century. On the east wall Jonah is depicted falling feet foremost from board ship into the whale's jaws. A matrix, deprived of the tiny cubes, shows what looks like St Peter casting his net into the sea. On the west wall the Good Shepherd carries a sheep on his shoulders. Again, on the ceiling vault appears the earliest discovered representation of Christ. Surrounded by spreading vines, in three tones of
 17115 vivid green, the beardless figure wearing a tunic, his cloak flying in the wind, stands driving a chariot of which one wheel and two white horses in scarlet harness are intact. From his head nimbus rays shoot upwards and sideways. In his left hand he carries a globe. The mosaic is known as the Christ-Helios and illustrates the syncretism of Christianity with the pagan sun-worship instituted at the winter
 17120 solstice by Emperor Marcus Aurelius at the end of the second century. Lastly, in the tomb of the Valerii the excavators revealed what they believe to be the head of St Peter drawn in faded red lead, with an inscription, 'Peter, pray Christ Jesus for the holy Christian men buried near your body.' Several experts have claimed that the drawing and inscription date from before the basilica was built.
 17125 Toynbee and Perkins on the other hand conclude that they were roughly daubed by one of Constantine's workmen at the start of the emperor's building operations. There is no reason to regret the later date. On the contrary, it affords striking corroboration of the motives which were behind the whole gigantic enterprise. The sketch and inscription are important evidence of the emperor's own belief. They go a
 17130 long way to answer the question raised earlier why Constantine chose the awkward site of an existing cemetery on the slopes of a hill for the foundation of his great basilica. He was convinced that the remains of St Peter lay buried there. And he was determined, no matter what the cost, to raise the most central, sacred part of his basilica right above the Apostle's resting place.
 17135 Clearly then Constantine made a distinction between the site of St Peter's martyrdom and that of his burial. If, as all the records suggest, Peter met his death among hundreds, and perhaps thousands of other victims in the circus, it would have been difficult for his disciples, after the carnage was over, to identify the precise spot. Moreover, did it greatly matter? They will have had a delicate enough task
 17140 secretly gathering together, probably by night, the cherished remains, of which a reverent interment was their chief concern.

Even the manner of the Apostle's death is conjectural.

The first written reference to it comes in the Acts of Peter, supposedly compiled by
 17145 the Gnostic Pseudo-Linus in the second or third century. He stated that the Apostle was crucified 'ad locum qui vocatur Naumachiae iuxta obeliscum Neronis in monten' in the place called Naumachia [i.e. the artificial lake where sea battles amongst other diversions were staged] close to Nero's obelisk and on the hill. The artificial lake could only have been made on level ground, with the rising stone seats of the circus
 17150 acting as a bank to the waters. Eusebius writing a little later than the author of the Acts asserted that the crucifixion took place head downwards, and that the body was buried in the Vatican 'field'. Did he mean by 'field' the pagan cemetery nearby? And was this understood to be the case by all Christians in the centuries intervening between the martyrdom and the building of the first basilica? Eusebius evidently
 17155 thought so, for he went on, '...his memory among the Romans is still alive than the memory of all those who had lived before him'. It is true that men born Greeks and even slaves have their tombs in the Vatican cemetery, but before their death they had presumably become Roman citizens, who observed Roman customs and rites. St Paul, who suffered an ignominious death similar
 17160 to St Peter's, was buried in a pagan cemetery. But unlike Peter he had from birth been a citizen in spite of his Jewish descent. There can be little doubt that during or just after the Neronian pogrom the less attention drawn to Peter's burial the better. The Acts of Peter maintains that the body was placed in the tomb of a senator, named Marcellus, presumably a Christian convert and follower, a kind of
 17165 Joseph of Aramathea. But it does not state where the tomb was. Constantine had absolutely no doubts in his mind where the Apostle lay buried. In order to get the centre of the apse of his basilica over what he believed to be the grave he was obliged to cut deeply into the rock of the Vatican Hill which rose in a northerly direction. To extend the level platform to the south, an equally formidable
 17170 operation had to be undertaken. This was the raising of massive foundations by means

of artificial terraces over the descending hillside to a height of Thirty-five feet above the bottom of the southern slope. Into the space tons of earth and rock scooped from the northern slope and debris from the desecrated cemetery were shoveled, then packed with concrete and faced with brick and tufa stone.

What exactly the emperor found over the Apostle's grave before he began to build will be discussed shortly, and can in the light of the recent excavations be assessed fairly accurately. What, if anything, he found within it is still open to conjecture. Let us deal first with the last query. This involves taking into account the claims of another resting place, or grave of the Apostle Peter. Pope Damasus (366-84) left an inscription in verse (long ago destroyed) to the effect that Peter and Paul 'once dwelt' on the site now covered by the Church of St Sebastian, likewise built by Constantine, three miles outside Rome along the Appian Way. Gregory the Great (590-604) recorded that the two saints' remains were taken there immediately after their deaths and before their final resting places were prepared for them. It is not impossible that during the lull that followed the Neronian persecution Peter's body, after being hidden at St Sebastian's, was transported to the Vatican cemetery, and Paul's to the Ostian Way.

Be this as it may, early documents and a plethora of tradition claim that for a second time the bodies returned to the catacomb of St Sebastian in the year 258 when the persecutions under Valerian were impending, and that they remained there until Constantine's basilicas were ready to receive them. I see no reason to dispute the likelihood of these precautions having been taken. After all, a similar situation arose more than thirteen hundred years later. When Sir Francis Drake threatened to sack the tomb of St James at Santiago de Compostella, the archbishop and three clerics hastily removed the body to a safe place. They died and when the danger lifted no one knew where the body had been hidden. Not until 1879 was it rediscovered. The St Sebastian tradition is given credence by the discovery under the church of over two hundred graffiti scratched on plaster by pious pilgrims invoking the intercession of Peter and Paul. The date of the graffiti is late third century. Why, if the bodies were not in the locality, should these prayers have been addressed to the saints?

The Shrine

Whether the remains of St Peter were in the tomb on the Vatican Hill when Constantine began to build, or whether the emperor brought them back again from St Sebastian's we may never know. We can only be sure that a monument or shrine to Peter of some kind already existed in the Roman cemetery. Apart from the recent archaeological discoveries, there is written evidence. First of all, the Liber Pontificalis tells us that St Anacletus (AD 79-91), the second pope after Peter, who had ordained him, erected a memorial 'in the vicinity of the Neronian Circus beside the Vatican', to mark the spot where the Apostle's remains were buried after his crucifixion; and that Linus, Peter's immediate successor, had been 'buried there beside Peter's body'. Unfortunately, the Liber Pontificalis is not an invariably trustworthy guide and, as we are about to see, the recent excavations throw doubts upon this early claim. A more revealing quotation is the well-known extract from a letter by a certain Roman priest, named Gaius, written some time between the years 199 and 217. This is what he, an eyewitness, tells his correspondent. 'If you go to the Vatican or to the Ostian Way [where St Paul's outside the Walls is] there you will find the trophies [tropaea, for he writes in Greek] of those who founded this church.' Now the meaning of the Greek word tropaion is neither place of martyrdom, nor indeed place of burial, but monument, to be exact triumphal monument, in this context signifying the victory of the winged soul over darkness. In early Christian years before the cult of relics and the morbid lamentation over death had become common, the glory rather than the suffering of martyrs was recorded. Shrines were erected over their graves where commemorative celebrations were held from time to time by jubilant - not mourning - friends and admirers. In the same spirit, early Christian art represented Christ by a variety of cheerful symbols, like the fish, loaf of bread and vine, but never depicted him hanging in agony on the cross.

The extract from the letter of the priest Gaius need not be questioned. It affords very important written evidence. The evidence of the Liber Pontificalis compiled several centuries later, although probably taken from earlier testimony, is, as I have suggested, less reliable. It is not, however, necessarily a fabrication. Pius XII's excavators incline, on the archaeological data revealed to them, to believe that the name Anacletus, the second pope after Peter, was a mistake made by the scribe of the Liber Pontificalis for Anicetus, a pope in office from AD 155-66. Tiles discovered by them in a drain close to the site are stamped with the name of the

Emperor Marcus Aurelius whose reign coincided with that of Pope Anicetus. In their view, the remains of the shrine, or tropaion, which Gaius knew and saw are of the same date as the tiles, that is to say about AD 160, only four years after the death of Polycarp, who had been the pupil of St John!

The long and exciting story of the investigations of the Apostle's grave and monument beneath the basilica has been most skillfully and impartially recorded in Professor Jocelyn Toynbee and Mr John Ward Perkins's exciting book, *The Shrine of St Peter and the Vatican Excavations*, 1956. It would be redundant to go over their ground in detail. I will just summarize very briefly indeed what the excavators' discoveries amounted to. They found immediately below the central chord of the apse of Constantine's basilica sufficient remains of an aedicular shrine for a conjectural sketch to be made of what the structure looked like in A. D. 160. Somewhat similar aedicular shrines to this one have been found intact in other Roman cemeteries in Italy. The St Peter's shrine, a fairly straightforward and simple affair, was built against and into a wall of the same date, called by the excavators the Red Wall because it is lined with a red plaster - which runs from south to north. The so-called Red Wall was built in order to form a division in the cemetery between certain tombs on the west and an uncovered space, or court, on the east. The shrine within the court and facing east consisted of two superimposed niches, originally visible above ground. The upper niche was round headed and was contained within a little tabernacle under a pediment. The little tabernacle rested on a projecting ledge like a table - only slightly higher from the ground than an ordinary table would be - supported in its turn by two advanced columns. Under the ledge and in front of the lower niche were found the remains of a carefully fitted, moveable slab. The odd thing about the slab is that it was not set flush with the shrine and the Red Wall, but asymmetrically at an angle of ten degree to the north. The irregular setting of the slab at first gave rise to much conjecture until it was found that two very deep graves on either side of the shrine were orientated at precisely the same angle. These graves have been dated from the first century, one of them, again owing to a sealed tile, from Vespasian's reign of AD 69-79. The inference to be drawn from the irregularly set slab and the first-century graves parallel to it is that a previous shrine existed on the site of the A. D. 160 one, but flush with the slab. Other graves dating from the next century were found grouped around the foundations of the shrine, not at the same angle but, as it were, radiating from them. A statement in the *Liber Pontificalis* that Linus, the first pope after Peter, who died in 79, and the next eleven popes were buried round the remains of St Peter may then be borne out by these first - and second-century graves. The fact that the graves are inhumation, not cremation, resting places and were all humble ones, compared with the richly decorated tombs in other parts of the cemetery, contributes to the likelihood that Christian bodies reposed in them.

(In 1626 when the deep foundations for Bernini's baldacchino were being dug the workmen came upon a number of Christian corpses clad in linen, their heads turned towards a central point beneath the high altar. There is no means now of telling the date of the burials.)

And what did the excavators find directly beneath the second-century shrine? Below the lower niche, under the floor level, and hacked out of the foundations of the Red Wall, a third niche or arch, the purpose of which can only have been to avoid disturbing a grave below it. On the south side of the lowest niche, and below the foundations of the Red Wall were traces of a short projecting wall parallel with the first-century graves and the moveable slab already referred to. Clearly this deep wall had been built to form on the slope of the hillside a revetment to a grave above it. On examination, the grave proved to be shorter than it originally had been. One third, which lay on the west side of the Red Wall, had at the time of the wall's building been filled in. In the recess which the remainder of the grave formed, on the east side of the wall, was found a pile of human bones without a head. Heaped together the bones were obviously not in the position of their original burial, and the area showed distinct signs of subsequent looting and desecration. Scientific tests have certified that the bones are the remains of a person of the male sex, of advanced age and powerful physique. Tradition has always maintained that Peter's head was removed for safety in 846, when the threat of Saracen invasion reached Rome, to the Lateran church, where it still remains. Of the many sacks of Rome by barbarian tribes and Christian potentates, the only one which did not spare the tomb of Peter was the Saracens'. Whereas the Nordic invaders of Rome had all been Christians of a sort, the infidel Saracens alone were in no awe of the Faith's most sacred shrine in the west. Contemporary writers mention that they destroyed the altar over the grave,

committing unmentionable wickednesses around it. The excavators are satisfied that they went further than this in smashing and looting what they found within the tomb itself. Toynbee and Perkins sum up their synopsis of the long official report made by Pope Pius's excavators with these words: 'Although it is not certain that the aedicula marks the site of an earlier grave, the hypothesis that it did so explains much that is otherwise obscure; and although there is nothing to prove that this grave was that of St Peter, nothing in the archaeological evidence is inconsistent with such an identification.' To which we may merely add that the second-century builders of the aedicula, or shrine, must have had sounder reasons for putting it where they did than any which we of the twentieth century are likely to discover. The excavations carried out by a group of highly-trained and skilled archaeologists in most difficult circumstances, chief of which was the abiding threat of danger to the great fabric of the present-day St Peter's above ground, have not then established once and for all, as so ardently hoped, that the Apostle's body rests beneath the heart of the basilica. On the other hand, they have enabled the experts to draw a picture of what Constantine the Great saw when he decided to raise a vast basilica in Peter's honour on the slopes of the Vatican Hill. After crossing the Tiber by Nero's bridge, the emperor would leave on his right hand the great drum of Hadrian's Mausoleum, (now the Castle S. Angelo) which dominated the river where it loops sharply to the south. He would then ride, or be driven, along a narrow straight road to where the southern arm of the present colonnade now claws at the entrance of St Peter's Piazza. Ahead of him no sharp cliff of papal palace buildings so familiar to us today, but a steepish slope of poorly cultivated vine terraces. At this spot his road would incline to the west. On his left, on the low ground stretched the oval expanse of Caligula's Circus, punctuated in the centre perhaps by the sharp needle brought from Heliopolis and now gracing the piazza. On his right, reaching to the very edge of the road, the rows of the cemetery tombs, looking like little garden pavilions, spruce and compact and huddled closely together. Dismounting, the emperor would walk through an entrance gate up a narrow path paved with rough concrete, the Red Wall of brick coated with washed plaster to his right, and some grandiose family mausoleums to his left. Skirting the Red Wall, he would emerge into the small courtyard by an entrance in either its northern or eastern enclosure. He then found himself in an altogether humbler quarter of the cemetery. Rising above the unpaved earthen floor a few headstones, or twin slabs of stone leaning together in the form of a tent marked the inhumation graves of St Peter's spiritual heirs. Only against the west wall of the court stood the more prominent aedicula, or shrine, which we have already described as open to the skies. This was the object which the emperor sought to make the central feature of the most ambitious church yet projected by a member of the new Christian faith. As he stopped to gaze upon it and then turned to survey the extremely awkward and steep contours of the surrounding land, which sloped to south and east, he must have pondered the immense task confronting him as well as the odium to be incurred in the total destruction of the cemetery crowded with sepulchres and graves of rich and poor alike.

The Liber Pontificalis states quite categorically that the emperor's first action was to put the Saint's remains, which he either found below the shrine or brought back from St Sebastian's, in a new coffin of cypress wood; this in turn he enclosed within a sarcophagus of bronze. Over the sarcophagus fecit crucem ex auro purissimo - he laid a cross made of purest gold, on which an inscription recorded that it was his and his mother, Helena's gift. This statement has given rise to what in the light of the excavation discoveries must be a fable, namely that the gold cross was seen in 1594.

The Church

Constantine's next move was the leveling of a great space at least 250 m long and 150 m broad to accommodate his projected basilica and atrium. That the emperor regarded the whole enterprise as an act of piety is suggested by the tradition that he carried on his imperial shoulders the first twelve basketfuls of earth for the foundations. Then came the orientation of the church. At St Peter's the setting is the reverse of the later, general custom of having the sanctuary at the east end of the axis. Here the entrance is at the east end and the sanctuary, upon which the body of the church is focused, at the west. This arrangement, not unusual in Constantinian churches, was to enable the rays of the rising sun to fall on the celebrant as he stood before the high altar facing the congregation at Mass. In fact at the vernal equinox the great doors of the porch and those of the church were thrown open at dawn to allow the first beams to illuminate the Apostle's shrine, while the choir and congregation burst into a paean of

thanksgiving. The setting is compatible with Constantine's youthful predilection for sun worship and the Roman Christians' tendency to identify Christ with the god of the rising sun.

Just as many pagan traditions of ritual were adapted to the requirements of the new Faith, so too was pagan architecture largely copied in the building of churches by the early Christians. The plan of Constantine's several churches deliberately followed the conventional plan of the Roman hall of justice, called the Basilica. This law court was habitually rectangular, divided by rows of columns into nave and aisles. At one end, steps led to a platform within a semi-circular apse, in the middle of which sat the chief judge on an armed chair, or throne, made of marble. On either side of him assistant judges perched on curved benches of marble, or stone. A rail or low screen would separate the judges from the populace in the hall below. Before either end of the arc of the apse, and in the body of the hall, stood a box, called the 'ambo', from which counsel and witnesses could address the court. In the middle of the chord of the apse there was often an altar dedicated to Minerva, goddess of wisdom, to whom sacrifice might be made before the legal proceedings began.

Out of these various conventional features the Christian basilica derived. The chief judge's throne was turned into the bishop's throne. The assistant judges' benches became those of the presbyters. The two 'ambos' the pulpits from which the Gospel and Epistle were read. The altar of Minerva gave way to that of the Christian Lord. In execution the chief difference between old St Peter's and a basilica like that of Maxentius lay in the roofing. Whereas Maxentius's basilica had elaborate coffered vaults carried on stout piers in the classical manner admired and followed by the Renaissance, the Christian basilica was roofed in a simple wooden construction which was to be widely imitated by early church builders in Italy. The effect was less remarkable as architecture but more aspirant spiritually. The open timber roofs of most Gothic churches were filled in by later ages contemptuous of this primitive form of carpentry. S. Sabina on the Aventine Hill, dating from about 425 and owing much to St Peter's model, has a flat boarded ceiling inserted beneath the timbers. This church, or nave and two aisles separated by arcades in place of architrave, is in other respects the perfect example of an early medieval Roman basilica, its ample width savouring of serenity and peace.

When St Peter's Basilica was built, the second-century shrine was not buried beneath an altar. On the contrary, it was purposely allowed to stand above the pavement level, but encased in a lavish, contemporary framework befitting so precious a relic. Everything else formerly around it in the old pagan cemetery had been flattened. It alone was made the focal point to which all eyes in the church were to be turned. We may refer once again to the Liber Pontificalis to learn precisely what Constantine did. 'Et exornavit supra,' we read, 'ex columnis purphyreticis et alias columnas vitineas quas de Graecia perduxit.' The little, old-fashioned and rude shrine he enclosed with corner columns, or to be accurate, with pilasters of porphyry. The 'other vine-clad columns', specially brought from Greece, formed part of a new screen across the apse and the canopy over the shrine. This is the earliest reference to six of the strange barley sugar columns of translucent white marble, wreathed with vine tendrils, which still remain in the present St Peter's. Each column, capital, shaft and base is a single block, carved probably around the year 200. Their provenance is not known, and the legend that they came from Solomon's Temple is worth no more than the name of solomónica, which they have given to those ubiquitous twisted columns copied on altars and reredoses in innumerable Spanish renaissance churches. Presumably their pagan significance was Dionysiac, which conveniently became translated by the Christians into the vintage of the Lord. For two centuries and a half the Constantinian setting of the shrine survived. A fifth-century ivory casket, unearthed in 1906 at Samagher, bears in relief a faithful outline of what the canopy looked like. Curved ribs from the corners of four of the columns meet in a boss from which is suspended a lamp shaped like a crown, another gift to St Peter's from the emperor. Between each rear column of the canopy and a pair of separate columns placed at the corners of the apse curtains are hanging. Two priests officiate at the shrine while four more with hands upraised in blessing face the congregation from the sides. Shortly before the Constantinian arrangement was altered a certain deacon, called Agiulf, gave a description of the shrine and the strange antics that took place at it. For anyone wishing to pay particular reverence to the Apostle's tomb, the doors, probably at the rear of the shrine, were unlocked and a small window was opened. The pious person thrust his head inside and was sure to be granted whatever he asked for, provided of course that it was meritorious. Then, having weighed a piece of cloth he

17435 might have brought with him, he dropped it on the end of a string into the tomb
below. After fervently praying, fasting and waiting, he drew up the cloth. If he was
a person of worth, the cloth on being weighed again would prove to be appreciably
heavier than before on account of the special virtue with which it had become
17440 impregnated while in contact with the holy remains. Agiulf spoke of the 'snow-white
columns of wondrous elegance, four in number' of the canopy, as did his contemporary
Gregory of Tours in almost the same phraseology - *mirae elegantiae, candore niveo*.
About 594, however, Gregory the Great thought fit to raise the presbytery some four
and a half feet above the level of the rest of the church. The platform contrived was
17445 approached by steps leading to a central throne and benches fitted into the apse. In
consequence of this alteration, the shrine was left below the presbytery pavement and
must henceforth be looked at through a grill from the lower level. A new canopy with
different supports was provided for an altar which was now built over the sunken
shrine. The six twisted columns were advanced to form a screen to the sanctuary. By
these means, a primitive sort of confession was formed. It was entered from the sides
17450 at the base of the platform and gave access to the shrine by a passage running round
the apse. Thus was established a precedent to be widely followed in Italy and France
in early medieval church building. The first purpose of St. Gregory's alterations was
to protect from barbarian incursions - alas, he did not forestall that of the
Saracens! - the shrine now enriched with the treasure of successive donors. This had
17455 been accumulating for over two centuries. Emperors and popes competed with one
another in making splendid gifts to the Apostle in earnest of their devotion. Pope
Pelagius II, St Gregory's predecessor, had, according to the *Liber Pontificalis*,
'enclosed the body of Blessed Peter, the Apostle, in plates of gilded silver', which
will mean that he had started to redecorate the shrine. Gregory's second purpose was
17460 to form out of the two upper of the three niches of the shrine - all now submerged
below the raised presbytery level - one high and narrow niche to contain the historic
pallia. The pallium is a circular band of white material, marked with six purple
crosses, having pendants on the front and back, to be worn on the shoulders over the
chasuble. It is solely the Pope's right to grant the pallium to archbishops in
17465 symbolism of the plenitude of the pontifical office. The coveted garment is made from
the wool of lambs blessed on St Agnes's Day in the church of S. Agnese fuori le Mura,
and before being dispatched to each recipient rests for a night in front of St
Peter's tomb. In the course of forming the single Niche of the Pallia, the axis of
the shrine was shifted some ten to twelve centimeters to the south.
17470

Gold Finger Rings with the Inscription CONSTANTINO FIDEM

- 17475 The first compilations and discussions of such finger rings can be found in Mowat 1889, Marshall 1907, and Henkel 1913. The items listed here, Nos. 1-16, are from the corresponding list in Noll 1974b, 241-243; Nos. 17-18 have been added. The following list includes only additions (primarily from more recent literature) and corrections to Noll's information, along with the date of discovery, location where they were found, and weight.
- 17480 Four rings with a location of discovery (Nos. 2-5), whose subsequent fate after their discovery is unknown, are contrasted with two rings of unknown origin (Nos. 14-15). It is no longer possible to determine which rings from the two groups are identical due to the lack of or insufficient quality of images of rings Nos. 2-5.
- 17485
- 17490 The following list includes only additions (primarily from more recent literature) and corrections to Noll's information, along with the date of discovery, location where they were found, and weight. No. 1 AMIENS (Somme department) Date of discovery: 1884 (Mowat 1889) Current location: Fitzwilliam Museum, Department of Antiquities, Cambridge (purchased 1975; until 1937 Guilhou Collection, Paris, No. 418) Weight: 10.925 g (courtesy of L. Burn, Cambridge) Literature: Noll 1974b, No. 1 = No. 16; D. Bayard/J.L. Massy, Amiens romain (Heilly 1983) 257, Fig. 130; Ogden 1992, Fig. 3; Entwistle 1994, 27 (No. 3) with illustration
- 17495 No. 2 near TOUL (Meurthe-et-Moselle department), in the Moselle River Date of discovery: before 1906 Current location: "Mus. Toul". (Noll 1974b); an inquiry dated September 23, 1993, to the Musée Municipal in Toul remained unanswered. Weight: unknown. Literature: Noll 1974b, No. 2
- 17500 No. 3 CONTRÉXEVILLE (départ. Vosges) or Solosse (départ. Vosges). Date of discovery: 1873. Location: "Musée Beauvais". (Henkel 1913; Noll 1974b). According to letters from R. Schüler, Musée Départ. Beauvais, dated October 5, 1993, and June 22, 1994, the ring is not listed in the inventories and presumably never entered the museum's collection.
- 17505 Weight: unknown. Literature: Noll 1974b, No. 3
- No. 4 Near Kleve (or Nijmegen?) Date found: 1850. Current location: unknown. Weight: unknown. Literature: Noll 1974b, No. 4
- 17510 No. 5 Qualburg (3 km south of Kleve). Date found: 1905. Current location: unknown. Weight: unknown. Literature: Noll 1974b, No. 5
- 17515 No. 6 Luisendorf (Geldern). Date found: 1836. Current location: British Museum, London. Weight: 10.81 g (Henkel 1913); 10.95 g (Marshall 1907, No. 649). Literature: Noll 1974b, No. 6; Cat. London 1977, 27 (No. 17) with illustration; Noll 1986 with illustration. Johansen 1994, Fig. 3
- 17520 No. 7 at ZERF (17 km south of Trier) Date of discovery: 1882 Location: Rheinisches Landesmuseum, Trier Weight: 10.82 g (Henkel 1913) Literature: Noll 1974b,
- No. 7; Trier, Imperial Residence and Bishopric. Exhibition catalog Trier 1984 (Mainz 1984) 115 (No. 33a) with illustration
- 17525 No. 8 STROMBERG (10 km west of Bingen) Date found: 1879 Current location: Cronberg, Friedrichshof Castle (Henkel 1913) Weight: 11.21 g (Henkel 1913) Literature: Noll 1974b, No. 8
- 17530 No. 9 AUGSBURG (Fig. 1) Date found: 1876 Current location: State Collection of Antiquities, Munich Weight: 10.55 g (Henkel 1913) Literature: Noll 1974b, No. 9; Munich 1989 cat., pp. 73f. (No. 12) with illustration; Biers 1989/90, Fig. 5; Cat. Munich 1998, 173 (No. 228) with illustration; Cat. Rosenheim 2000, 387 (No. 147a)
- 17535 No. 10 OBERWINTERTHUR, City of Winterthur. Date of discovery: 1935. Current location: Swiss National Museum, Zurich. Weight: 10.14 g (courtesy of L. Flutsch, formerly Zurich). Literature: Noll 1974b, No. 10; Noll 1986 with illustration; B. Hedinger, in: Archaeology in the Canton of Zurich 1997-1998. Reports of the Cantonal Archives of Zurich 15 (Zurich/Egg 2000) 312, Fig. 28

Naspeuringen van Paul Theelen: Constantinus Imperator

- 17540 No. 11 "HUNGARY". Date of discovery: before 1913 Location: Kunsthistorisches Museum, Vienna (Collection of Classical Antiquities) Weight: 10.7 g (Noll 1974b) Literature: Noll 1974b, No. 11; Noll 1986 with illustration
- 17545 No. 12 SREMSKE MITROVICA (Sirmium) Date of discovery: before 1825 Location: Magyar Nemzeti Múzeum, Budapest Weight: 10.66 g (courtesy of E. Tóth, Budapest) Literature: Noll 1974b, No. 12; Toth 1979, Fig. 5; Noll 1986 with illustration
- 17550 No. 13 BELA PALANKA (40 km south of Niš) Date of discovery: unknown Location: British Museum, London Weight: 7.90 g (!) Literature: Noll 1974b, No. 13; Jovanovic 1978, 20 (No. 22); 110. According to Henkel 1913, 17 with Fig. 6, this ring is said to be "somewhat differently shaped in form." Marshall 1907, 109 notes that the ring is made of light gold and "either it should be angular." However, based on the illustrations in Henkel (ibid., Fig. 6) and Marshall (ibid., Plate 17, No. 650) according to Martin, Constantino Fidem 261, the ring appears to be heavily worn, and the band in the middle section is only about half as wide as at its base on both sides of the (worn and heavily rounded) plate, on which the initial and final letters of the word FIDEM are apparently no longer legible. This wear is confirmed by the much lower weight, which is not taken into account in our table, Fig. 3.
- 17555 [The text abruptly ends here, so the translation stops as well.] No. 14 Location unknown Date of discovery unknown Current location: Pforzheim Jewelry Museum (purchased in 1954 from the Battke Collection) Weight: 10.7 g (courtesy of the museum) Literature: Noll 1974b, No. 14
- 17560 No. 15 Location unknown (Fig. 2)

- 17605 Lot 122: Roman Gold Military 'FIDEM CONSTANTINO' Ring
4th century AD. A gold finger ring with raised rectangular plaque, inscribed in
serifed capitals 'CONSTANTINO FIDEM' (faithful to Constantine"). Cf. Spier, J.,
Treasures of the Ferrell Collection, Wiesbaden, 2010, no. 42 and p. 8 for another
example and discussion on this series of allegiance rings; another example found at
17610 Amiens, France, and acquired by the Fitzwilliam Museum, Cambridge, acquisition no.
GR.1.1975; another acquired by the British Museum, reference 1917, 10.56 g, 25.88 mm
overall, 23.33 mm internal diameter.
Property of an East Anglian collector; formerly acquired on the European art market
in the 1990s; this lot has been checked against the Interpol Database of stolen works
17615 of art and is accompanied by AIAD certificate number no.158308-10027. Search rings,
declaring allegiance and loyalty to the emperor were presented to high-ranking
military officers as part of their annual bonus payments, a practice that commenced
under Constantine I, the Great; the inclusion of the chi-rho confirms that this
occurred after the conversion to Christianity. After his death in 337 AD, his sons
17620 Constantius II, Constantine II, and Constans ruled the empire together, and the
practice, from very rare surviving examples, is known to have continued until the
reign of Magentius (350-353 AD). A video of this lot can be viewed on the Timeline
Auctions website.
- 17625 June 14-16, 2000 CONSTANTINO FIDEM Loyalty Rings
[...] First, the unusual provenance of our rings should be mentioned: Normally,
objects made of precious metal, which are not discarded even when damaged, are
preserved either as grave goods or as belonging to a hidden, often unrecovered,
burial site in the ground, usually containing other valuables. Many of the
17630 CONSTANTINO FIDEM rings were found before The rings were discovered in 1900 without
regard to the circumstances of their discovery. Nevertheless, it is striking that
none of the rings are listed as having been found in a grave or hoard, a fact that
would hardly have gone unnoticed or unmentioned. One ring (List 1, No. 2) was
recovered from the Moselle River, three more (Nos. 5, 6, and 10) were discovered
17635 during fieldwork, and a fifth (No. 8) was found "all alone and only about half a foot
in the ground." The CONSTANT(I) FIDES ring from near Venta Icenorum (Fig. 6) was also
"ploughed up in a field." If, in fact, neither of the usual methods of transmission
for precious metal objects played a role for either of these rings, one might surmise
that they were once issued and worn in unusually large numbers, of which relatively
17640 few were lost—as genuine losses, which of course never entirely ceased—and never
recovered. The wearers of the rings are described as... One can only imagine members
of the male sex, most likely officers and civil servants.
- 17645 These rings were awarded as decorations or "loyalty rewards"; among the military
wearers, there were likely quite a few of Germanic origin. It is probably no
coincidence that the CONSTANTINO FIDEM rings found in the west have surfaced both
near the imperial residence of Trier and in its surrounding area, from the upper
reaches of the Moselle to Bingen on the Rhine (4x; List 1, Nos. 2, 3, 7 and 8), and
along the imperial border on the Lower Rhine (3x; List 1, Nos. 4-6). However, they
17650 are still absent from the interior of Gaul, with the exception of the single example
from Amiens (List 1, No. I). While one could, in principle, imagine enthusiastic
supporters and partisans of the young Constantine having oath rings made from two
"old" aurei on their own initiative, as already mentioned, more compelling arguments
speak against a "private" production and in favor of an official, centrally directed
17655 manufacture of the rings. This can presumably also be assumed for the loyalty rings
of Constantius Chlorus, especially since here it is not the ring or its wearer who
pledges loyalty and trusts the person named, but rather the emperor's fides (faith),
and presumably also addressed to the emperor, is expressed on an object that the
wearer received from the one to whom he pledged loyalty and trusts. On the FIDES
17660 rings, Constantius Chlorus himself apparently grants the wearer loyalty or protection
and, in turn, counts on the wearer's loyalty. The ingenious formula of his son,
which, with the phrase CONSTANTINO FIDEM, makes the wearer of the ring the speaker,
standing in loyalty to Constantine and simultaneously trusting him, is an
intensification of the idea of connecting fides with a (personal) finger ring. It
17665 creates a closer, almost tangible relationship between the person named on the ring
and its wearer. By placing the oath of loyalty on a ring, the decision to remain
loyal to Constantine and to trust him becomes directly personal and is related to the
wearer and owner. The underlying propaganda is personalized; the oath of allegiance
is not sworn to the state or an institution, but ad personam, to the individual.
17670 According to a later account by Constantine Porphyrogenitus, Byzantine emperor from

945 to 959, Constantine the Great is said to have presented the inhabitants of Chersonesus (in Thracian or Taurian territory?) with, among other things, gold finger rings bearing his image, so that he could recognize the messages and petitions they addressed to him by the seal.

17675

Liste I: Fingerringe aus Gold mit Inschrift CONSTANTINO FIDEM

- Erste Zusammenstellungen und Besprechungen derartiger Fingerringe finden sich bei Mowat 1889, Marshall 1907 und Henkel 1913. Die hier angegebenen Nrn. 1-16
- 17680 entsprechender Liste bei Noll 1974b, 241-243; neu kommen hinzu Nrn. 17-18. Im folgenden werden - nebst Funddatum, Aufbewahrungsort und Gewicht - nur Zusätze (v.a. neuere Literatur) und Korrekturen zu Nolls Angaben angeführt.
- Vier Ringen mit Fundortangabe (Nrn. 2-5), deren weiteres Schicksal nach der Auffindung nicht bekannt ist, stehen zwei Ringe unbekannter Herkunft (Nrn.14-15)
- 17685 gegenüber. Welche Ringe beider Gruppen mit einander identisch sind, läßt sich wegen fehlender oder qualitativ unzureichender Abbildungen der Ringe Nrn. 2-5 nicht mehr ausmachen.
- Nr. 1 AMIENS (départ. Somme) Funddatum: 1884 (Mowat 1889) Aufbewahrungsort: Fitzwilliam Museum, Departement of Antiquities, Cambridge (Ankauf 1975; bis 1937 Sammlung Guilhou, Paris, Nr. 418) Gewicht: 10,925 g (frdl. Mitt. L. Burn, Cambridge)
- 17690 Literatur: Noll 1974b, Nr. 1=Nr. 16; D. Bayard/J.L. Massy, Amiens romain (Heilly 1983) 257, Abb. 130; Ogden 1992, Abb. 3; Entwistle 1994, 27 (Nr. 3) mit Abb.
- 17695 Nr. 2 bei TOUL (départ. Meurthe-et-Moselle), in der Mosel Funddatum: vor 1906 Aufbewahrungsort: "Mus. Toul". (Noll 1974b); eine Anfrage vom 23.9.1993 an das Musée municipal in Toul blieb unbeantwortet Gewicht: unbekannt Literatur: Noll 1974b, Nr. 2
- Nr. 3 CONTRÉXEVILLE (départ. Vosges) bzw. Solosse (dep. Vosges) Funddatum: 1873
- 17700 Aufbewahrungsort: "Museum Beauvais". (Henkel 1913; Noll 1974b). Laut Schreiben von R. Schüler, Musée départemental Beauvais, vom 5.10.1993 und 22.6.1994 ist der Ring nicht in den Inventaren verzeichnet und vermutlich nie ins Museum gelangt. Gewicht: unbekannt Literatur: Noll 1974b, Nr. 3
- 17705 Nr. 4 Umgebung von KLEVE (oder Nijmegen?) Funddatum: 1850 Aufbewahrungsort: unbekannt Gewicht: unbekannt Literatur: Noll 1974b, Nr. 4

- 17800 Lot 122: Roman Gold Military 'FIDEM CONSTANTINO' Ring [See above]
- 14-16 juni 2000 **CONSTANTINO FIDEM Treueringe**
[...] Zunächst ist noch die ungewöhnliche Fundüberlieferung unserer Ringe

anzusprechen: Normalerweise sind uns Gegenstände aus Edelmetall, die bekanntlich auch bei Beschädigung nicht weg geworfen werden, entweder durch ihre Mitgabe ins Grab oder infolge Zugehörigkeit zu einem meistens weitere Wertobjekte enthaltenden, nicht mehr wieder geborgenen Versteckort im Boden überliefert. Zwar sind viele der CONSTANTINO FIDEM-Ringe vor 1900 und ohne Beachtung der Fundumstände entdeckt worden. Dennoch ist es auffällig, daß für keinen Ring die Kategorie Grab- bzw. Versteckfund bezeugt wird, was doch kaum unbeachtet oder unerwähnt geblieben wäre. Ein Ring (Liste 1, Nr. 2) wurde aus der Mosel geborgen, drei weitere (Nrn. 5, 6 und 10) bei Feldarbeiten entdeckt, ein fünfter (Nr. 8) "ganz allein und nur etwa 1/2 Fuß in der Erde"; auch der CONSTANT(I) FIDES-Ring aus der Nähe von Venta Icenorum (Abb. 6) "was ploughed up in a field". Sollte tatsächlich beiden Treueringen weder die eine noch die andere der für Edelmetallobjekte üblichen Überlieferungsformen eine Rolle gespielt haben, so darf man vielleicht vermuten, es seien die Ringe einst in ungewöhnlich großer Zahl ausgegeben und getragen worden, wovon dann eben relativ wenige - als echte Verlustfunde, die natürlich zu keinen Zeiten ganz ausblieben - verloren gegangen und nicht wieder auf gefunden worden wären. Als Träger der Treueringe wird man sich ausschließlich Angehörige des männlichen Geschlechts, am ehesten Offiziere und Beamte, vorstellen müssen, die diese Ringe als Auszeichnungen oder "Treueprämien für Loyalität" erhielten; unter den militärischen Trägern dürften nicht wenige germanischer Herkunft gewesen sein. Vermutlich nicht zufällig sind die im Westen gefundenen CONSTANTINO FIDEM-Ringe einerseits bei der Kaiserresidenz Trier und in ihrem weiteren Umland, vom Oberlauf der Mosel bis nach Bingen am Rhein (4x; Liste 1, Nrn. 2, 3, 7 und 8), andererseits entlang der Reichsgrenze am Niederrhein (3x; Liste 1, Nrn. 4-6) zum Vorschein gekommen, fehlen hingegen bislang im Innern Galliens, bis auf den einen Beleg aus Amiens (Liste 1, Nr. I). Zwar könnte man sich im Prinzip auch begeisterte Anhänger und Parteigänger des jungen Konstantin vorstellen, die sich aus eigenem Antrieb aus jeweils zwei "alten" Aurei Treueringe hätten anfertigen lassen, doch sprechen, wie schon erwähnt, gewichtigere Argumente gegen eine "private" und für eine offizielle, zentral gelenkte Herstellung der Ringe. Dies wird man vermutlich auch für die Treueringe des Constantius Chlorus annehmen dürfen, zumal hier nicht der Ring bzw. Träger dem mit Namen Genannten Treue gelobt und ihm vertraut, sondern die Fides des Kaisers, aber wohl auch zum Kaiser an-und ausgesprochen wird auf einem Gegenstand, den der Träger von dem erhalten hat, dem er Treue gelobt und vertraut. Auf den FIDES Ringen gewährt anscheinend Constantius Chlorus selbst dem Träger Treue bzw. Schutz und zählt seinerseits auf dessen Treue. Die geniale Formel des Sohnes, die mit der Wendung CONSTANTINO FIDEM den Träger des Ringes zum Sprechenden macht, der in Treue zu Konstantin steht und ihm zugleich vertraut, ist eine Steigerung der Idee, Fides mit einem (personengebundenen) Fingerring zu verbinden. Sie schafft eine engere, gleichsam mit Händen zugreifende Beziehung zwischen der auf dem Ring genannten Person und dessen Träger. Mit der Platzierung des Treuegelöbnisses auf einem Ring wird der Entschluß, Konstantin die Treue zu halten und ihm zu vertrauen, unmittelbar persönlich und ist auf den Träger und Besitzer bezogen. Die dahinter stehende Propaganda wird personalisiert, der Treue schwur nicht dem Staat oder einer Institution, sondern ad personam, der Person geleistet. Nach einer späten Nachricht des Konstantinos Porphyrogenetos, byzantinischer Kaiser von 945 bis 959, soll Konstantin d. Gr. Bewohnern des (thrakischen oder taurischen?) Chersones unter anderem goldene Fingerringe, auf denen sein Bildnis wiedergegeben war, geschenkt haben, damit er Berichte und Bitten, die sie an ihn richteten, am Siegel erkennen könne.

Crispus

Crispus was the oldest son of the emperor Constantine I and played a fairly important role in the political and military events of the early fourth century. The regular form of his full name is Flavius Iulius Crispus, although the forms Flavius Claudius Crispus and Flavius Valerius Crispus also occur. His mother was a woman named Minervina, with whom Constantine had a relationship, probably illegitimate, before he married Fausta in 307. When Minervina died or when Constantine put her aside we do not know. Nor do we know when she gave birth to Crispus; we may assume, of course, that it was before 307. Some modern authorities, on good grounds, think that it was in 305. Crispus' place of birth must have been somewhere in the East, and it is not known when he was brought to Gaul and when, where, or under what circumstances he was separated from his mother. Constantine entrusted the education of his son to the distinguished Christian scholar Lactantius, thereby giving a clear sign of his commitment to Christianity. We are not told when Lactantius assumed his duties, but a

17870 date before 317 seems likely. Nor do we know how successful he was in instilling Christian beliefs and values in his imperial pupil. No later than January of 322 Crispus must have married a woman named Helena -- not to be confused with Constantine's mother or daughter by the same name-- and this woman bore him a child in October of 322. Constantine, we learn, was pleased.

17875 Crispus' official career began at an early age and is well documented. On March 1 of 317, at Serdica (modern Sofia), his father appointed him Caesar. The consulship was his three times, in 318, 321, and 324. While nominally in charge of Gaul, with a prefect at his side, he successfully undertook military operations against the Franks and Alamanni in 320 and 323. In 324, during the second war between Constantine and 17880 Licinius, he excelled as commander of Constantine's fleet in the waters of the Hellespont, the Propontis, and the Bosporus, thus making a significant contribution to the outcome of that war. The high points of his career are amply reflected in the imperial coinage. In addition to coins, we have his portrait, with varying degrees of certainty, in a number of sculptures, mosaics, cameos, etc. Contemporary authors heap 17885 praises upon him. Thus the panegyrist Nazarius speaks of Crispus' "magnificent deeds," and Eusebius calls him "an emperor most dear to God and in all regards comparable to his father."

Crispus' end was as tragic as his career had been brilliant. His own father ordered 17890 him to be put to death. We know the year of this sad event, 326, from the Consularia Constantinopolitana, and the place, Pola in Istria, from Ammianus Marcellinus. The circumstances, however, are less clear. Zosimus (6th c.) and Zonaras (12th c.) both report that Crispus and his stepmother Fausta were involved in an illicit 17895 relationship. There may be as much gossip as fact in their reports, but it is certain that at some time during the same year the emperor ordered the death of his own wife as well, and the two cases must be considered together. That Crispus and Fausta plotted treason is reported by Gregory of Tours, but not very believable. We must 17900 resolutely reject the claim of Zosimus that it was Constantine's sense of guilt over these deeds which caused him to accept Christianity, as it alone promised him forgiveness for his sins. A similar claim had already been made by Julian the 17905 Apostate. We must also, I think, reject the suggestion of Guthrie that the emperor acted in the interest of "dynastic legitimacy," that is, that he removed his illegitimate first-born son in order to secure the succession for his three legitimate younger sons. But Crispus must have committed, or at least must have been 17905 suspected of having committed, some especially shocking offense to earn him a sentence of death from his own father. He also suffered *damnatio memoriae*, his honor was never restored, and history has not recorded the fate of his wife and his child (or children).

Nazarius

(4th century CE), was a Roman and a Latin rhetorician and panegyrist. He was, 17915 according to Ausonius, a professor of rhetoric at Burdigala (Bordeaux). The extant speech of which he is undoubtedly the author (in R.A.B. Mynors, XII Panegyrici Latini, Oxford 1964, No. 4; English translation in C.E.V. Nixon/Barbara 17920 Rodgers, In Praise of Later Roman Emperors (Berkeley 1994) was delivered in 321 CE to celebrate the fifteenth anniversary of the accession of Constantine the Great, and the fifth of his son Constantine's admission to the rank of Caesar. The preceding speech (No. 12), celebrating the victory of Constantine over Maxentius, delivered in 313 CE at Augusta Treverorum (Trier), has often been attributed to Nazarius, but the 17925 difference in style and vocabulary, and the more distinctly Christian coloring of Nazarius's speech, are against this.

Nazarius was an orator who lived in the fourth century AD. Virtually nothing is known about his life. The only information we have is that he delivered at least two 17930 speeches in 321 in honor of Emperor Constantine and his two sons, Crispus and Constantinus. Of the two speeches Nazarius delivered, only one is known. He is also said to have had a daughter who was a renowned orator.

Sources

Nazarius is known only through three written sources. First, there is the panegyric (eulogy) he left behind. This was delivered in Rome before the Senate in 321. The

17935 occasion for this was the fifteenth anniversary of Constantine's reign and the
 quinquennalia of his two sons, Crispus and Constantinus. The speech celebrates
 Constantine's victory over Maxentius after the Battle of the Milvian Bridge in 312
 and was likely delivered in Constantine's absence. It is striking that Nazarius makes
 almost no further references to the events after the battle. He also mentions nothing
 17940 about himself, his whereabouts, his origins, or his position. This may indicate that
 he deemed this unnecessary due to the fame he enjoyed at the time.[1] The twelfth
 panegyric is sometimes also attributed to Nazarius, but according to Wilhelm Kroll,
 there are insufficient elements to support this claim.[2]
 A second written source comes from Jerome of Stridon (best known for his translation
 17945 of the Bible into Latin).[3] Nazarius appears twice in his chronicles. In the year
 324, Jerome writes: "Nazarius, rethor insignis habitur." Nazarius was therefore a
 renowned orator in his time. In the year 336, Hieronymus mentions the daughter of
 Nazarius: 'Nazarii rethoris filia in eloquentia patri coaequatur.' Apparently,
 Nazarius' daughter had as much rhetorical talent as her father. Finally, Nazarius is
 17950 mentioned in Ausonius's "Commemoratio Professorum Burdigalensium." Deci(m)us Magnus
 Ausonius (c. 310 – c. 393) was a celebrated Latin poet from Bordeaux, where he taught
 grammar and eloquence. Ausonius writes that Agricus held a chair previously held by
 Nazarius and Patera. This passage has led to much speculation about whether Nazarius
 actually came from Bordeaux. However, this remains highly uncertain. If Nazarius were
 17955 indeed from Bordeaux, Ausonius would undoubtedly have devoted more texts to him.
 Moreover, it is also unclear whether the chair Agricus took in Nazarius's place was
 actually located in Bordeaux. According to some researchers, it was located in Rome.

Contents of the panegyric

17960 As mentioned earlier, the panegyric was addressed to the Senate on the occasion of
 the fifteenth anniversary of Constantine's reign and the quinquennalia of Crispus and
 Constantine, the two sons of Constantine. Constantine himself was probably not
 present during the speech. The speech is primarily a slimy ode to the emperor.
 According to Nazarius, Constantine surpasses all previous emperors.[10] The military
 17965 skills of the emperor and his sons are praised, and he describes Constantine's
 campaign against Maxentius. It was Maxentius's cruelties that forced him into battle.
 Constantine was urged to fight by his deceased father, Constantius. Constantine is
 praised as a peacemaker, and strangely enough, Nazarius does not dwell on the tense
 situation that arose after the victory in 312 between Constantine and Licinius, who
 17970 was still co-emperor in the eastern Roman Empire in 321.

Style

Nazarius writes in baroque prose in Gaulish Latin, overloaded with every conceivable
 stylistic device. Nixon and Rodgers compare his style to that of a student eagerly
 17975 displaying all his rhetorical skills. Nazarius's style betrays a passion for
 obscurity, which was typical of this period. This obscurity is particularly evident
 in the description of Constantine. Nazarius is a master of his classics, and the
 speech is full of allusions to Cicero, Sallust, and Virgil.

Historical Significance

17980 Nazarius's speech contains very little historical information about Constantine.
 Especially from the period after Constantine's victory over Maxentius, almost nothing
 is mentioned. This may be due to the fact that Licinius was still co-emperor in 321.
 The atmosphere between Constantine and Licinius (who was not a Christian) was
 17985 particularly tense at that time.
 It is important to note that Nazarius, along with Eusebius, Lactantius, and the
 unknown author of the twelfth panegyric, are the only contemporaries to have written
 an account of the Battle of the Milvian Bridge (just outside Rome). This battle,
 where Constantine defeated Maxentius, is still often considered a milestone in the
 17990 history of Christianity. Constantine is said to have a dream or vision during the
 battle, which led him to victory and subsequent conversion to Christianity. However,
 the accounts of Nazarius, Lactantius, Eusebius, and the unknown author of Panegyric
 12 differ significantly. Moreover, both Eusebius and Nazarius testify in his "Church
 History" that divine intervention occurred just before the start of the Italian
 17995 campaign against Maxentius, and not immediately before the famous battle at the
 Melvian Bridge. According to Lactantius, Constantine had already converted before the
 start of his Italian campaign. According to the primary sources, there is absolutely
 no evidence of Constantine converting to Christianity during the battle.
 From a religious perspective, Nazarius's speech is particularly interesting. Unlike
 18000 Eusebius and Lactantius, Nazarius was clearly not a Christian. Together with the

unknown author of Panegyric 12, Nazarius has handed down to us a pagan version of the battle at the Melvian Bridge. It is particularly difficult to grasp Nazarius's religious convictions. His speech contains many pagan elements. He refers to Mars, among other things, and praises Constantine's immortality (something a Christian author would never do). Yet, there are undoubtedly Christian elements as well. Nazarius's choice of words clearly demonstrates his familiarity with monotheism. Heavenly troops that had aided Constantine in his victory were commanded by his deceased father, Divus Constantius. Nazarius doesn't mention a dream or vision, as Eusebius or Lactantius do, but he does speak of armies sent by heaven to fight for Constantine. This heavenly intervention was a reward for Constantine's piety. It seems highly likely that Nazarius did not dare to take a position between paganism and Christianity. This can be explained by the uncertain political and religious situation in the Roman Empire at the time of his speech. Some researchers, such as T. Barnes, believe that Nazarius was indeed a Christian. Wilhelm Kroll correctly points out the Christian meaning of the name Nazarius.

The archaeology of the cuneiform inscriptions

18020 Preface

The first six chapters which follow, embody the Rhind Lectures in Archaeology which I delivered at Edinburgh in October 1906. The seventh chapter appeared as an article in the Contemporary Review for August 1905, and is here reprinted by the courtesy of the Editor to whom I render my thanks. The book is the first attempt to deal with what I would call the archaeology of cuneiform decipherment, and like all pioneering work consequently claims the indulgence of the reader. For the sake of clearness I have been forced to repeat myself in a few instances, more especially in the sixth chapter, but what has thereby been lost in literary finish will, I hope, be compensated by an increase of clearness in the argument.

18030 If what I have written serves no other purpose, I shall be content if it draws attention to the miserably defective state of our archaeological knowledge of Babylonia and Assyria, and to the necessity of scientific excavations being carried on there similar to those inaugurated by Mr. Rhind in Egypt. We have abundance of epigraphic material; it is the more purely archaeological material that is still wanting.

18035 The need of it is every year becoming more urgent with the ever-growing revelation of the important and far-reaching part played by Babylonian culture in the ancient East. Excavation is just commencing in Asia Minor, and there are many indications that it has startling discoveries and surprises in store for us. Even while my manuscript was in the printer's hands, Professor Winckler has been examining the cuneiform tablets found by him last spring at Boghaz Keui, on the site of the old Hittite capital in Cappadocia, and reading in them the records of the Hittite kings, Khattu-sil, Sapaluliuma, Mur-sila and Muttallu. Most of the tablets, though written in cuneiform characters, are in the native language of the country, but among them is a version in the Babylonian language of the treaty between the "great king of the Hittites" and Riya-masesa Mai or Ramses II, the Egyptian copy of which has long been known to us. The two Arzawan letters in the Tel el-Amarna collection no longer stand alone; the Boghaz Keui tablets show that an active correspondence was carried on between Egypt and Cappadocia. We must revise our old ideas about an absence of intercourse between different parts of the ancient Oriental world: there was quite as much intercommunication as there is today.

18040 Elam and Babylonia, Assyria and Asia Minor, Palestine and Egypt, all were linked together by the ties of a common culture; there were no exclusive religions to raise barriers between nation and nation, and the pottery of the Hittites was not only carried to the south of Canaan, but the civilization of Babylonia made its way through Hittite lands to the shores and islands of Greece. On the south, the Egean became a highway from Asia Minor to Europe, while northward the Troad formed a bridge which carried the culture of Cappadocia to the Balkans and the Danube.

CHAPTER I THE DECIPHERMENT OF THE CUNEIFORM INSCRIPTIONS

[by Rev. A. H. SAYCE PROFESSOR OF ASSYRIOLOGY, OXFORD]

18065 The decipherment of the cuneiform inscriptions was the archaeological romance of the nineteenth century.

There was no Rosetta stone to offer a clue to their meaning; the very names of the

Assyrian kings and of the gods they worshipped had been lost and forgotten; and the characters themselves were but conventional groups of wedges, not pictures of objects and ideas like the hieroglyphs of Egypt. The decipherment started with the guess of a classical scholar who knew no Oriental languages and had never travelled in the East. And yet it is upon this guess that the vast superstructure of cuneiform decipherment has been slowly reared, with its ever-increasing mass of literature in numerous languages, the very existence of some of which had been previously unknown, and with its revelation of a civilized world that had faded out of sight before Greek history began.

The ancient East has risen, as it were, from the dead, with its politics and its wars, its law and its trade, its art, its industries and its science. And this revelation of a new world, this resurrection of a dead past, has started from a successful guess. But the guess had been made in accordance with scientific method and had scientific reasons behind it, and it has proved to be the fruitful seed of an overspreading tree.

Seventy years ago a single small case was sufficient to hold all the Assyrian and Babylonian antiquities possessed by the British Museum. They had been collected by Rich, to whom we owe the first accurate plans of the sites of Babylon and Nineveh. But the cuneiform characters found on the seals and clay cylinders of Babylonia were not the only characters of the kind that were known.

Similar characters had been noticed by travellers on the walls of the ruined palaces of Persepolis in Persia. As far back as 1621 the Italian traveller Pietro della Valle had copied two or three of these, which he reproduced in the account of his travels - some thirty years later. One of the first acts of the newly-founded Royal Society of Great Britain was to ask in their Philosophical Transactions (p. 420) whether some draughtsman could not be found to copy the bas-reliefs and inscriptions which had thus been observed at Persepolis, though the only result of the inquiry was that a few years afterwards (in June 1693) two lines of cuneiform were published in the Transactions from the papers of a Mr. Samuel Flower, who had been the agent of the East India Company in Persia. The editor of the Transactions correctly concluded that the inscriptions were to be read from left to right. The cuneiform characters which were printed in the Transactions were, however, not the first specimens of cuneiform script that had been published in England. Thomas Herbert, in the fourth edition of his Travels, which appeared in 1677, had already given three lines of characters taken indifferently from the three classes of inscriptions engraved on the Persian monuments; these were afterwards annexed by an Italian named Careri, who published them as his own. But the earliest inscription to be reproduced in full was a short one inscribed by Darius I over the windows of his palace, which had been copied by Sir John Chardin during one of his two visits to Persepolis (in 1665 and 1673). Chardin was the son of a Huguenot jeweller in Paris, and after returning from his travels settled in London, where he became a great favourite of Charles II., and was made a Fellow of the Royal Society. The inscription he had copied, however, was not printed in the earlier edition of his Travels, and had to wait until 1735 before it saw the light.¹

The existence of the cuneiform script thus became known in Europe, and that was all. It was not until Carsten Niebuhr, the father of the better-known historian, had been sent by the Danish Government on an exploring mission to the East that fairly complete and accurate copies of the inscriptions of Persepolis were at last put into the hands of European scholars.

Niebuhr, who sacrificed his sight to the work, returned to Denmark in 1767, and seven years later the first of the three volumes in which the scientific results of his travels were embodied was published at Copenhagen.

With the publication of the second volume, which contained his description of the Persepolitan monuments, the attempt to decipher the cuneiform characters began. He himself had noticed that in the first of the three classes or systems of cuneiform writing of which every inscription consisted, only forty-two characters were employed, and he therefore concluded that the system was alphabetic. Another Dane, Bishop Munter, discovered that the words in it were divided from one another by an oblique wedge,¹ and further showed that the monuments must belong to the age of Cyrus and his successors.² One word, which occurs without any variation towards the beginning of each inscription, he correctly inferred to signify "king"; but beyond this he was unable to advance.

Meanwhile, Anquetil-Duperron, with self-sacrificing enthusiasm, had rediscovered the Zend of the later Zoroastrian faith, and de Sacy, with the help of it, had deciphered the Pehlevi inscriptions of the Sassanid kings. It was only the older Persian of the Achaemenian cuneiform inscriptions that still awaited interpretation; and a bridge

had been built between it and modern Persian by means of the Zendic texts. In 1802 the guess was made which opened the way to the decipherment of the mysterious wedge-shaped signs. The inspired genius was Grotefend, an accomplished Latinist and a school-master at Frankfort-on-the-Main. He knew no Oriental languages, but his mother-wit and common-sense more than made up for the deficiency. It was clear to him that the three systems of cuneiform represented three different languages, the Persian kings being like a Turkish pasha of to-day, who, when he wishes an edict to be understood, writes it in Turkish and Arabic. It was also clear to him that the first system must be the script of the Persian kings themselves, of which the other two were translations. The preparatory work for reading this had already been done by Munter; what Grotefend now had to do was to identify and read the names to which the word for "king" was attached.

On comparing the inscriptions together he found that while the word for "king" remained unchanged, the word which accompanied it at the beginning of an inscription varied on different monuments. There were, in fact, two wholly different words, one of which was peculiar to one set of monuments, the other to another set. But he also found that the first of these words followed the other on the second set of monuments, though with a different termination from that which belonged to it when it took the place of the first word. Hence he conjectured that the two words represented the names of two Persian kings, one of whom was the son of the other, the termination of the second name when it followed the first being that of the genitive. It was now necessary to discover who the kings were whose names had thus been found.

Fortunately the Achsemenian dynasty was not a long one, and the number of royal names in it was not large. And of these names, Cyrus was too short and Artaxerxes too long for either of the two names which Grotefend had detected. There only remained Darius and Xerxes, and as Xerxes was the son of Darius, the name which characterized the first set of monuments must be Darius.

Grotefend's next task was to ascertain the old Persian pronunciation of the name of Darius. This had been given by Strabo, while the Persian pronunciation of Xerxes was indicated in the Old Testament. With this assistance Grotefend was able to assign alphabetic values to the cuneiform characters which composed the two names, and a corner of the veil which had so long covered the cuneiform records was lifted at last. A comparison of the names which he had thus read gave the needful verification of the correctness of his method. In the names of Darius and Xerxes the same letters occur, but in different places; a and r in Darius occupy the second and third places, in Xerxes the fourth and fifth, while sk> which is the last letter in Darius, would be the second and sixth in Xerxes. And such was actually the case.

Grotefend was therefore justified in concluding that his guesses were correct, and that the right values had been assigned to the cuneiform characters. A beginning had been made in cuneiform decipherment, and in this instance the beginning was half the whole.

Grotefend's Memoir was presented to the Gottingen Academy on September 4, 1802. By a curious accident it was at the same meeting that Heyne described the first attempts that had been made towards deciphering the Egyptian hieroglyphs. But the learned world looked askance at the discoveries of the young Latinist. The science of archaeology was still unborn, and Oriental philologists were unable even to understand the inductive method of the decipherer. The Academy of Gottingen refused to print his communications, and it was not until 1815 that they appeared in the first volume of the History of his friend Heeren, who, being untrammelled by the prejudices of Oriental learning, had been one of the earliest to accept his conclusions.¹ For a whole generation the work of decipherment was allowed to sleep. It is unfortunately true that after his initial success Grotefend's ignorance of Oriental languages really did stand in his way. He assumed that the language of the inscriptions and that of the Zend-Avesta were one and the same, and accordingly went to the newly-found Zend dictionary for the readings of the cuneiform names and words. Vishtaspa, the name of the father of Darius, was thus read Goshtasp, the word for "king" became khsheh instead of khshayathiya, and that which Grotefend had correctly divined to signify "great," eghre instead of vazraka. It is not wonderful, therefore, that he was never able to follow up the beginning he had made.

The revival of interest in Grotefend's work was due to the fact that Champollion, after the decipherment of the Egyptian hieroglyphs, found the name of Xerxes on an alabaster vase at Paris on which, according to Grotefend's system, the same name was written in Persian cuneiform. This led the Abbe Saint-Martin, who was a recognized Orientalist, to adopt and follow up Grotefend's discovery in a Memoir which he read before the French Academy in 1822, and Saint-Martin's work attracted the attention of Rask and Burnouf.

18200 To do this was reserved for the Zendic scholars of a later generation. Rask the Dane in 1826 determined the true form of the genitive plural, and thereby identified the character for which gave him the names of the supreme god Auramazda and of Achaemenes the forefather of Cyrus.¹ But the great step forward was made by the eminent French scholar, Emile Burnouf, in 1836.² The first of the inscriptions published by Niebuhr he discovered to contain a list of the satrapies of Darius. With this clue in his

18205 hand the reading of the names and the subsequent identification of the letters which composed them could be a question only of patience and time. For this Burnouf was well equipped by his philological knowledge and training, and the result was an alphabet of thirty letters, the greater part of which had been correctly deciphered. Burnouf's Memoir on the subject was published in June 1836. In the preceding month

18210 his friend and pupil, Professor Lassen of Bonn, had also published a work on "The Old Persian Cuneiform Inscriptions of Persepolis."³ He and Burnouf had been in frequent correspondence, and his claim to have independently detected the names of the satrapies, and thereby to have fixed the values of the Persian characters, was in consequence fiercely attacked. To the attacks made upon him, however, Lassen never

18215 vouchsafed a reply. Whatever his obligations to Burnouf may have been, his own contributions to the decipherment of the inscriptions were numerous and important. He succeeded in fixing the true values of nearly all the letters in the Persian alphabet, in translating the texts, and in proving that the language of them was not Zend, but stood to both Zend

18220 and Sanskrit in the relation of a sister. Meanwhile another scholar, armed with fresh and important material, had entered the field. A young English officer in the East India Company's service, Major Rawlinson by name, was attached to the British Mission in Persia. A happy inspiration led him to attempt the decipherment of the cuneiform inscriptions. It was in 1835, when he

18225 was twenty-five years old, that he first began his work. All that he knew was that Grotefend had discovered in the texts of Persepolis the names of Darius, of Xerxes and of Hystaspes, but cut off as he was in his official position at Kirmanshah on the western frontier of Persia from European libraries, he was unable to procure either the Memoir of the German scholar or the articles to which it had given rise. Like

18230 Burnouf, he set himself to decipher the two inscriptions of Hamadan, which he had himself copied with great care. He soon recognized in them the names that had been read by Grotefend, and thus obtained a working alphabet. But his position in Persia soon gave him an advantage which was denied to his fellow-workers in Europe. It was not long before he found an opportunity of copying the

18235 great inscription on the sacred rock of Behistun, which had never been copied before. It was by far the longest cuneiform inscription yet discovered, and was filled with proper names, including those of the Persian satrapies. The copying of it, however, cost much time and labour, and was accomplished at actual risk of life, as Major Rawlinson, better known by his later title of Sir Henry Rawlinson, had to be lowered

18240 in a basket from the top of the cliff in order to ascertain the exact forms of certain characters. In the following year (1836) Rawlinson moved to Teheran, and there received from Edwin Norris, the Secretary of the Royal Asiatic Society, the Memoirs of Grotefend and Saint-Martin. In 1837 he finished his copy of the Behistun inscription, and sent

18245 a translation of its opening paragraphs to the Royal Asiatic Society. Before, however, his Paper could be published, the works of Lassen and Burnouf reached him, necessitating a revision of his Paper and the postponement of its publication. Then came other causes of delay. He was called away to Afghanistan to perform the onerous and responsible duties of British Agent at Kandahar, and it was not until 1843 that

18250 he was once more free to resume his cuneiform studies. A year later he was visited by the Danish Professor, Westergaard, who placed at his disposal the copies he had just made of the inscription on the tomb of Darius at Naksh-i-Rustam and of some shorter inscriptions from Persepolis, and Rawlinson's Memoir was accordingly finished at last and sent to England. Here Norris subjected it to a careful revision, and at his suggestion Rawlinson once

18255 more visited Behistun, where he took squeezes and re-examined doubtful characters. In 1847 the first part of the Memoir was published, though the second part, containing the analysis and commentary on the text, did not appear till 1849.¹ The work, however, was well worthy of the time and care that had been bestowed upon it.

18260 The task of deciphering the Persian cuneiform texts was virtually accomplished, and the guesses of Grotefend had developed into the discovery of a new alphabet and a new language. The capstone was put to the work by the discovery of Hincks, an Irish clergyman, that the alphabet was not a true one in the modern sense of the word, a vowel-sound being attached in pronunciation to each of the consonants represented in

- 18265 it.
- The mystery of the Persian cuneiform texts was thus solved after nearly fifty years of endeavour. A harder task still remained. The Persian texts were accompanied by two other cuneiform transcripts, which, as Grotefend had perceived, must have represented the other two principal languages that were spoken in the Persian Empire. That the
- 18270 third transcript was Babylonian seemed evident from the resemblance of the characters contained in it to those on the bricks and seal-cylinders of Babylonia. Grotefend had already written upon the subject, and had even divined the name of Nebuchadrezzar on certain Babylonian bricks.
- But this third species of writing, which we must henceforth term Babylonian or
- 18275 Assyrian, presented extraordinary difficulties. Instead of an alphabet of forty-two letters, the decipherer was confronted by an enormous number of different characters, while no indication was given of the separation of one word from another. Moreover the forms of the characters as found on the Persepolitan monuments differed considerably from those found on the Babylonian monuments, which again differed
- 18280 greatly from each other. On the seal-cylinders, more especially, they assumed the most complicated shapes, between which and the Persepolitan forms it was often impossible to trace any likeness whatever.
- Suddenly a discovery was made which furnished an abundance of new material and incited the decipherer to fresh efforts. In 1842 Botta was sent to Mossul as French
- 18285 Consul, and at Mohl's instigation began to excavate on the site of Nineveh. His first essays there not proving very successful, he transferred his workmen further north, to the mound of Khorsabad, and there laid bare the ruins of a large and splendid palace which subsequently turned out to be that of Sargon. In the autumn of 1845 the excavations of Botta were succeeded by those of Layard, first at Nimrud (the ancient
- 18290 Calah), and then at Kuyunjik or Nineveh, the result being to fill the British Museum with bas-reliefs covered with cuneiform writing and with other relics of Assyrian civilization.
- The inscriptions brought to light by Botta were copied and published by him in 1846-50.1 The sumptuous work which was dedicated to them was followed by a smaller and
- 18295 cheaper edition, and the author gave further help to the student by classifying the characters, which amounted to as many as 642.2 His work proved conclusively the identity of the script used at Nineveh with that of the third transcripts on the Persian monuments, as well as the substantial agreement of the groups of characters occurring in each.
- The Irish scholar Dr. Hincks — one of the most remarkable and acute decipherers that have ever lived — was already at work on the newly-found texts. In 1847 he published a long article on "The Three Kinds of Persepolitan Writing,"1 and, two years later, another "On the Khorsabad Inscriptions."2 In 1850 he read a Paper before the British
- 18300 Association,3 summing up his conclusions and announcing the important discovery that the Assyrian characters were syllabic and not alphabetic, as had hitherto been supposed. With this discovery the scientific decipherment of the Assyrian
- 18305 inscriptions actually begins.
- The proper names contained in the Persian texts furnished the clue to the reading of the Babylonian transcripts. The values thus obtained for the Babylonian characters made it possible to read many of the words, the meaning of which was fixed by a comparison with the Persian original. It then became clear that Assyrian was a
- 18310 Semitic language, standing in much the same relation to Hebrew that the Old Persian stood to Zend.
- Its Semitic origin was proved to demonstration by the French scholar de Saulcy in
- 18315 1849. Another French scholar, de Longperier, had already discovered the name of Sargon in the Khorsabad inscriptions4 — the first royal Assyrian name that had yet been read.
- De Saulcy himself subjected the Babylonian transcript of the trilingual inscription of Elwend to a minute analysis, and so carefully was the work performed, and so
- 18320 secure were the foundations upon which it rested, that the translation needs but little revision even today.1 The old belief in the alphabetic nature of the characters, however, still possessed the mind of the decipherer, although in one passage he goes so far as to say, "I am tempted to believe" that the signs are
- 18325 syllabic. But he did not go beyond the temptation to believe, and the discovery was reserved for Hincks.
- Rawlinson was now at Bagdad. De Saulcy sent him his Memoirs, and the British scholar had the immense advantage of having in his hands the Babylonian version of the great Behistun inscription, of knowing the country in which the monuments were found, and of possessing copies of inscriptions which had not yet made their way to Europe.
- 18330 Nevertheless, it is amazing with what rapidity and perspicacity he forced his way

through the thick jungle of cuneiform script. In his Memoir on the Persian texts, published in 1847, he already maps out with marvellous fulness and exactitude the different varieties of cuneiform writing. It is his second Memoir, however, which excites in the Assyriologist of to-day the profoundest feelings of surprise and

admiration. This consists of notes on the inscriptions of Assyria and Babylonia, and was communicated to the Royal Asiatic Society at the beginning of the year 1850.² One of the inscriptions he has translated in full – the annals of Shalmaneser II., on an obelisk of black marble discovered at Nimrud and now in the British Museum. The text is a long one, and for the first time the European reader had placed before him a contemporaneous account of the campaigns of an Assyrian monarch in the ninth century before our era.

The translation is substantially correct; it is only in the proper names that Rawlinson has gone much astray.

The values of many of the characters were still uncertain or unknown, and he was under the domination of the belief that they represented alphabetic letters. He was, moreover, mistaken as to the age of the monument itself, which he assigned to too early an epoch. It was Dr. Hincks who again settled the question, by reading upon it the names of Hazael of Damascus and Jehu of Israel.¹ This was one of the first-fruits of his discovery of the syllabic character of the Assyrian signs. Another was the discovery of the name of Sennacherib,² as well as those of Hezekiah and Jerusalem.⁸

Shortly before this Hincks had made another discovery of importance. He had deciphered the names of Nebuchadrezzar and his father on the bricks of Babylon, ⁴ and had further shown that a cylinder of Nebuchadrezzar brought from Babylon by Sir Robert Ker-Porter, and written in the cuneiform characters met with on the Persian monuments, contained the same text as another cylinder obtained by Sir Harford Jones, and inscribed with characters of the most complex kind. A comparison of the two texts gave him the values of the latter characters, which we now know to represent the archaic Babylonian forms of the cuneiform signs.

But the decipherment of the Assyro-Babylonian script was not yet complete. In 1851 Rawlinson's long-promised Memoir on the Babylonian version of the inscription of Behistun was given to the world,¹ and consisted of the cuneiform text, with translation, grammar and commentary, besides a list of 242 characters. It announced, moreover, two facts about these characters, one of which had already been recognized, while the second was received by the Orientalists with shouts of incredulity. The first fact was that the characters, besides having phonetic values, could also be used ideographically to denote objects and ideas.

The second fact was that they were polyphonous, each character possessing more than one phonetic value.

For once the sceptics seemed to have common-sense upon their side. How, it was asked, could a system of writing be read the symbols of which might be pronounced sometimes in one way, sometimes in another? Anything could be made out of anything upon such principles, and a method of interpretation which ended in such a result was pronounced to be self-condemned. Hincks, however, once more entered the field and demonstrated that Rawlinson was right.²

Hincks was an Egyptologist, and consequently the polyphony of the cuneiform characters was not to him a new and startling phenomenon. It merely showed that they must once have been pictorial – as, indeed, their ideographic use also indicated – and in a picture-writing each picture could necessarily be represented by more than one word, and therefore by more than one phonetic value, when the pronunciation of the word came to be employed phonetically. The picture of a foot, for instance, would denote not only a "foot," but also such ideas as "go," "run," "walk," each of which would become one of its phonetic values with the development of the picture into a conventional syllabic sign.

Excavation was still proceeding on the site of Nineveh. Mr. Hormuzd Rassam, himself a native of Mossul and the active assistant of Layard, was sent in 1852 by the British Museum to complete the work from which Layard had now been called away by diplomatic duties.¹ In 1853 he made a discovery which proved to be of momentous importance for Assyrian decipherment, and without which, in fact, it could never have advanced very far. He discovered the library of Nineveh with its multitudes of closely-written clay tablets, many of them containing long lists of characters, dictionaries and grammars, which have served at once to verify and to extend the knowledge of the script and language that the early decipherers had obtained. Meanwhile a careful survey of the whole country was made at the expense of the East India Company,¹ and the French Government sent out an exploring and excavating expedition to Babylonia under a young

and brilliant scholar, Jules Oppert. The results of the mission, which lasted from 1851 to 1854, were embodied in two learned volumes, the first of which appeared in 1863.² In these Oppert showed, what Hincks and Rawlinson had already pointed out, that the peculiarities of the Assyrian syllabary were due not only to its pictorial origin but also to the fact that it had been invented by a non-Semitic people. This primitive population of Babylonia, called Akkadian by Hincks, Sumerian by Oppert, had spoken an agglutinative language similar to that of the Turks or Finns, and had been the founders of Babylonian civilization. For these views Oppert found support in the tablets of the library of Nineveh, a large part of which consists of translations from the older language into Semitic Assyrian, as well as of comparative grammars, vocabularies and reading-books in the two languages.

Once more the Semitic scholars protested. There was no end to the extravagant fantasies of the Assyriologists! The learned world was comfortably convinced that none but a Semitic or Aryan people could have been the originators of civilization, and to assert that the Semites had borrowed their culture from a race which seemed to have affinities with Mongols or Tatars was an outrage upon established prejudices. The Semitic philologist was more certain than ever that Assyrian decipherment was the folly of a few "untrained" amateurs, and could safely be disregarded.

But the little band of Assyriologists pursued their labours undisturbed. In 1855-6 Hincks published a most remarkable series of articles in the *Journal of Sacred Literature*, in which the various forms of the Assyrian verb were analyzed and given once for all.

The work has never had to be repeated, and the foundations of Assyrian grammar were solidly laid.

A few years later (in 1860) a complete grammar of the language was published by Oppert. The initial stage of Assyrian decipherment was thus at an end.

We must now turn back to the second transcript of the Persian inscriptions, which, thanks to its greater simplicity, had been deciphered before the Assyro-Babylonian.

The way was opened in 1844 by the Danish scholar Westergaard.¹ With the help of the proper names he fixed the values of many of the characters and made a tentative endeavour to read the texts. But the language he brought to light was of so strange a nature as to throw doubt on the correctness of his method. Turkish, Arabic, Indian and even Keltic elements seemed alike to be mingled in it. It was not, therefore, till his readings had been subjected to revision by Hincks in 1846² and de Saulcy in 1850³ that any confidence was reposed in it, and the results made available for the decipherment of the Babylonian transcripts, the characters of which frequently had the same forms. It must be remembered, however, that Westergaard worked from defective materials. Rawlinson had not yet published his copy of the Behistun inscription, which he eventually placed in the hands of Edwin Norris, who, in 1853, edited the text along with a syllabary, grammar and vocabulary, as well as translations and commentary.¹ This edition was a splendid piece of work, and with it the decipherment of the second transcript of the Persian inscriptions may be said to have been accomplished. Oppert's *Peuple et Langage des Mésopotamiens*, which appeared in 1879, did but revise, supplement and systematize the work of Norris.

The new language which had thus been brought to light was agglutinative. Westergaard had seen in it the language of the Medes, and, like Rawlinson, had connected it with a hypothetical "Scythian" family of speech. The term "Scythian" was retained by Norris, who, however, attempted to show that it was really related to the Finnish dialects. But the excavations made at Susa by Loftus in 1851 put another face on the matter. In 1874, and again more fully in 1883,² I pointed out that the inscriptions found at Susa and other ancient Elamite sites were in an older form of the same language as that of the second Achaemenian transcripts, and furthermore that certain inscriptions discovered by Layard in the plain of Mai-Amir eastward of Susa were in practically the same script and dialect. At the same time I fixed the values of the characters in the Mai-Amir texts and gave provisional translations of them, with a vocabulary and commentary. Oppert and myself had already been working at the reading of the older Susian inscriptions, a task in which we were followed by Weissbach with a greater measure of success.

But the same cause which had retarded the decipherment of the second transcript of the Persian inscriptions – a want of materials – militated against any great advance being made in the decipherment of the older Susian, and it is only since 1897, when the excavations of M. de Morgan at Susa were begun, that the student has been at last provided with the necessary means. Thanks to the brilliant penetration of the French Assyriologist, Dr. Scheil, the outlines of the language of the ancient kingdom of Elam can now be sketched with a fair amount of completeness and accuracy.¹ The name of Neo-Susian has by common consent been conferred upon the language of the second

18465 Achaemenian transcripts; perhaps Neo-Elamite would be better. At all events it represents the language of the second capital of the Persian Empire as it was spoken in the age of Darius and his successors, and is a lineal descendant of the old agglutinative language of Elam.

18470 The three systems of cuneiform script, which a hundred years ago seemed so impenetrable in their mystery, have thus, one by one, been forced to yield their secrets. But as each in turn has been deciphered, fresh forms of cuneiform writing and new languages expressed in cuneiform characters have come to light. The first to emerge was that agglutinative language of primitive Chaldaea which so scandalized the philological world and excited such strong distrust of the Assyriologists. The question of the name by which it should be called has been set at rest by the discovery of tablets in which its native designation is made known to us. Some years ago Bezold published a bilingual text in which it is termed "the language of Sumer,"¹ and more recently Messerschmidt has edited a bilingual inscription of the Babylonian king Samsu-ditana in which the Semitic "translation" is described as "Akkadien."² Oppert is thus shown to have been right in the name which he proposed to give to the language of the inventors of the cuneiform script.

18480 The first analysis of Sumerian grammar was made by myself in 1870, when the general outlines of the language were fixed and the verbal forms read and explained.³ Three years later Lenormant threw the materials I had collected into a connected and systematic form, one result of which was a controversy started by the Orientalist, Joseph Hale?, who maintained that Sumerian was not a language at all, but a cryptograph or secret writing. The answers made by the Assyriologists to this curious theory obliged its author constantly to shift his ground, but at the same time it also obliged them to examine their materials more carefully and to revise conclusions which had been arrived at on insufficient evidence. An important discovery was now made by Haupt, who had already given the first scientific translation of a Sumerian text; he demonstrated the existence of two dialects, one of which is marked by all the phenomena of phonetic decay.² This was naturally supposed to indicate a difference of age in the two dialects, the one being the older and the other the later form of the language. Subsequent research, however, has gone to show that the two dialects were really used contemporaneously, the decayed state of that which was called "the woman's language" by the Babylonians being due to the fact that it was spoken in Akkad or Northern Babylonia, where the Semitic element became predominant at a much earlier period than in Sumer or Southern Babylonia.

18495 Up to this time the study of Sumerian had been almost entirely confined to the bilingual texts, of which a very large number existed in the library of Nineveh, and in which a Semitic translation was attached to the Sumerian original. Now, however, the French excavations at Tello in Southern Babylonia began to furnish European scholars with monuments of the pre-Semitic period, and to these the decipherers, among whom Amiaud and Thureau Dangin hold the first place, accordingly turned their attention. Texts composed in days when Sumerian princes still governed the country, and written by scribes who were unacquainted with a Semitic language, were successfully attacked with the assistance of the bilingual tablets of Nineveh. But it was soon found that between these genuine examples of Sumerian composition and the Sumerian which was written and explained by Semitic scribes there was a good deal of difference. The Semites had derived their culture from their Sumerian predecessors, and a considerable part of the religious and legal literature that had been handed on to them was in the older language. This older language long continued to be that of both religion and law, the two conservative forces in society, Sumerian becoming to the Semitic Babylonians what Latin was to mediaeval Europe. The inevitable result followed: Semitic idioms and modes of thought were clothed in a Sumerian dress, and the ignorance of the scribe produced not infrequently the equivalent of the dog-Latin of a modern school-boy. The gradual changes that took place in the cuneiform system of writing, and the adaptation of it to the requirements of Semitic speech, contributed to the creation of an artificial and quite unclassical Sumerian, and the lexical tablets became filled with uses and combinations of characters which were

18500 professedly Sumerian but really Semitic in origin. All this renders the decipherment of a Sumerian text even now a difficult affair, and many years must elapse before we can say that the stage of decipherment is definitely passed and that the scholar may content himself with a purely philological treatment of the language.

18505 But Sumerian was not the only new language outside the circle recognized by the Persian monarchs which the decipherment of the cuneiform characters has revealed to us. Even before the discovery of Sumerian, cuneiform inscriptions had been copied on the rocks and quarried stones of Armenia, which, when the characters composing them came to be read, proved to belong to a language as novel and as apparently unrelated

18510

18515

18520

18525

to any other as Sumerian itself. As far back as 1826 a young scholar of the name of Schulz had been sent by the French Government to Van in Armenia, where, according to Armenian writers, Semiramis, the fabled queen of Assyria, had once left her monuments. Here Schulz actually found that the cliff on which the ancient fortress of the city stood was covered with lines of cuneiform characters, and similar inscriptions soon came to light in other parts of the country. Before Schulz, however, could return to Europe he was murdered (in 1829) by a Kurdish chief, whose guest he had been. But his papers were recovered, and the copies of the inscriptions he had made were published in 1840 in the Journal Asiatique. The first to attempt to read them was Dr. Hincks, whom no problem in decipherment ever seemed to baffle.¹ The characters, he showed, were practically identical with those found in the Assyrian texts, the values of many of which had now been ascertained; but Hincks, with his usual acuteness, went on to use the Armenian or Vannic inscriptions for settling the values of other Assyrian characters which had not as yet been determined. In 1848 he was already able to read the names of the Vannic kings and fix their succession, to make out the sense of several passages in the texts, and to indicate the nominative and accusative suffixes of the noun.

Here Vannic decipherment rested for many years. There was no difficulty in reading the inscriptions phonetically, for they were written in a very simplified form of the Assyrian syllabary; but the language which was thus revealed stood isolated and alone, without linguistic kindred either ancient or modern.

The various attempts made to decipher it were all failures. So things remained until 1882-3, when I published my Memoir on "The Decipherment of the Vannic Inscriptions" in the Journal of the Royal Asiatic Society. Here for the first time translations were given of the inscriptions, together with a commentary, grammar and vocabulary. At the same time I settled the chronological place of the Vannic kings, which had hitherto been uncertain, as well as the geography of the country over which they ruled, and analyzed the ancient religion of the people as made known to us by the decipherment of the texts. In revising and supplementing Schulz's copies of the inscriptions I had obtained the help of squeezes taken by Layard and Rassam. The task of decipherment was, after all, not so hard a matter as the absence of a bilingual text might make it appear. The want of a bilingual was compensated by the numerous ideographs and "determinatives" scattered through the inscriptions, which indicated their general meaning, pointed out to the decipherer the names of countries, cities, individuals and the like, and gave him the signification of the phonetically-written words which in parallel passages often replaced them. Moreover, the French Assyriologist, Stanislas Guyard, and myself had independently made the discovery that a clause which frequently comes at the end of a Vannic inscription corresponds with the imprecatory formula of the Assyrians, while the decipherment of the inscriptions led to the further discovery that not only had the characters employed in them been borrowed from the Assyrians in the time of the Assyrian conqueror, Assur-natsir-pal, but that many of the phrases used in Assur-natsir-pal's texts had been borrowed at the same time.

Other scholars soon appeared to pursue and extend my work, more especially Drs. Belck and Lehmann, whose expedition to Armenia in 1898 has placed at our disposal a large store of fresh material. Amongst this fresh material are two long bilingual inscriptions, in Vannic and Assyrian, one of which had been discovered by de Morgan in 1890. These have verified my system of decipherment, have increased our knowledge of the Vannic vocabulary, have corrected a few errors, and, I am bound to add, have in one or two cases justified renderings of mine to which exception had been taken. A historical Vannic text can now be read with almost as much certainty as an Assyrian one.

With the discovery of the language spoken in Armenia before the arrival of the modern Armenians the list of lost languages and dialects brought to light by the decipherment of the cuneiform script is by no means exhausted. Among the tablets found in 1887 at Tel el-Amarna in Upper Egypt was a long letter from the king of Mitanni or Northern Mesopotamia in the native language of his country, which has been partially deciphered by Messerschmidt, Jensen and myself.¹ The language turns out to be distantly related to the Vannic, but is of a much more complicated description. Two of the other letters in the same collection were in yet another previously unknown language, which the contents of one of them showed to be that of a kingdom in Asia Minor called Arzawa. Since then tablets have been found at Boghaz Keui in Cappadocia, on the site of the ancient capital of the Hittites, which are in the same dialect and form of cuneiform writing, and prove that in them we have discovered at last actual relics of the Hittite tongue. Thanks to the light thrown upon them by a tablet from the same locality, which I obtained last year, it is now possible to

18595 raise the veil which has hitherto concealed the Hittite language, and in a Paper
which will shortly be printed I have succeeded in partially translating the texts and
sketching the outlines of their grammar. But any detailed account of these
discoveries must be reserved for a future chapter; at present I can do no more than
refer briefly to these latest problems in cuneiform decipherment.
18600 That other problems still await us cannot be doubted. The number of different
languages which the decipherment of the cuneiform script has thus far revealed to us
is an assurance that, as excavation and research proceed, fresh languages will come
to light which have employed the cuneiform syllabary as a means of expression. Indeed,
18605 we already know that it was used by the Kossaeans, wild mountaineers who skirted the
eastern frontiers of Babylonia, and a list of whose words has been preserved in a
cuneiform tablet,¹ and also that there was a time, before the introduction of the
Phoenician alphabet, when "the language of Canaan" – better known as Hebrew – was
written in cuneiform characters. Canaanite glosses are found in the Tel el-Amarna
tablets, and two Sidonian seals exist in which the cuneiform syllabary is employed to
18610 represent the sounds of Canaanitish speech.²
And the key to all this varied literature, this medley of languages, the very names
of which had perished, was a simple guess! But it was a scientific guess, made in
accordance with scientific method, and based upon sound scientific reasoning. It is
true that it needed the slow and patient work of generations of scholars before the
18615 guess could ripen into maturity; the discovery of the value of a single letter in the
Old Persian alphabet was sometimes the labour of a lifetime; but, like the seed of
the mustard tree, the guess contained within itself all the promise of its future
growth. On the day when Grotefend identified the names of Darius and Xerxes, the
decipherment of the cuneiform inscriptions, and therewith of the history, the
18620 theology and the civilization of the ancient Oriental world, was potentially
accomplished.

1 In this year an elaborate edition of his work was brought out under the title of *Voyages du
Chevalier Chardin en Perse, et autres Lieux de l'Orient, Enrichis de Figures en Taillédouce,*
18625 *qui representent les Antiquités et les Choses remarquables du Pais* (Amsterdam), two pages (167–
8) in vol. ii. being devoted to the inscriptions, the cuneiform being printed on plate lxix.

CHAPTER II THE ARCHAEOLOGICAL MATERIALS; THE EXCAVATIONS AT SUSAN AND THE ORIGIN OF BRONZE

18685 The modern science of archaeology has been derisively called "the study of pots." As a matter of fact, the study of ancient pottery occupies a prominent place in it, and we cannot turn over the pages of a standard archaeological work without constantly coming across photographs and illustrations of the ceramic art or reading descriptions of vases and bowls, of coloured ware and fragmentary sherds.

18690 Questions of date and origin are made to turn on the presence or absence of some particular form of pottery on a given site, and fierce controversies have arisen over a single fragment of a vessel of clay. A knowledge of ancient pottery is a primary requisite in the scientific excavator and archaeologist of to-day.

18695 The reason of this is obvious. Archaeology is an inductive science; its conclusions, therefore, are drawn from the comparison and co-ordination of objects which can be seen and handled, as well as tested by all competent observers. It is built upon what our German friends would call objective facts, and the method it employs is that carefully-disciplined and experimentally-guarded application of the ordinary logic of life which can alone give us scientific results.

18700 The method is one which the purely literary mind seems often curiously incapable of comprehending; the literary student is accustomed to deal so exclusively with matters of merely individual taste and theory that he is as little able to understand what is meant by scientific evidence and probability as the scholar who is not a

18705 mathematician is able to follow the reasoning of Lord Kelvin. This is a fact which has to be borne in mind more especially in archaeological science, for the questions with which archaeology is concerned so frequently invade the domain of literature or appear so closely connected with questions that are more or less literary, that the purely literary scholar is apt to think himself just as well qualified to discuss them as "the man in the street" is apt to think himself qualified to discuss the etymology of a word. To all such the archaeologist would say, "Go and study your pots."

For pottery is practically indestructible. Like the fossils on which the geologist has built up the past history of life upon the earth, it is an enduring evidence, when rightly interpreted, of the past history of man.

18715 Like the fossils, moreover, it exhibits a multitudinous variety of types and forms. But in all these types and forms there is an underlying unity. The primitive needs of man are everywhere the same, and the powers of mind called in to supply them are the same also.

18720 The dish and bowl, the vase and its handles, meet us again and again wherever we go; and the same materials for making them meet us also. The hands of man, guided by the brain of man, found clay wherewith to manufacture the vessels that he needed, and to harden it afterwards in the sun or fire.

Where or how the first pottery was made we do not know, we probably shall never know. When palaeolithic man first makes his appearance in Europe he seems not yet to have been acquainted with it; but it is difficult to prove a negative in archaeology as in other sciences, and the absence of palaeolithic pottery may be due only to the imperfection of the record. At any rate, as we descend the ladder of chronology the existence of man is marked more and more by the fragments of pottery he has left behind him; at Rome a whole mountain of it grew up in the space of a few centuries, and the huge mounds that encircled Cairo a hundred years ago were mainly formed of mediaeval sherds. When excavating on an Egyptian site I have sometimes been tempted to think that the people who once lived there must have spent their whole time in breaking their household ware.

18735 Now not only are the primitive needs of man much the same throughout the world and at all periods of time, the nature of man is much the same also; and a distinguishing feature in his nature is love of variety.

The same variety which we see in the forms of life and in the outward appearance and mental aptitudes of man himself is reflected in the products of his skill.

18740 Yet along with this love of variety goes a strong conservative or imitative instinct – an instinct which finds, too, its counterpart in nature, "so careful of the type." On the one hand, fashions change; on the other, a fashion once introduced spreads rapidly and maintains itself to the exclusion of all others for a determinate period of time throughout a determinate area. And to nothing does this apply with more truth than to pottery. Observation has shown that not only are different tribes or

18745 countries distinguished by a difference in their pottery, but that in each tribe or country similar differences distinguish successive periods of time. When to this is added the practical indestructibility of the potsherd, it will easily be seen what a criterion is afforded by it for fixing the age and character of ancient remains, and their relation to other monuments of the past. It is not surprising that a study of

18750 pottery has become the sheet-anchor of archaeological chronology, and that the first object of the scientific excavator is to determine the relative succession of the ceramic remains he discovers and their connection with similar remains found elsewhere.

18755 Scientific excavation means, before all things else, careful observation and record of every piece of pottery, however apparently worthless, which the excavator disinters.

But now, unfortunately, I have to make an admission. We have, as yet, no ceramic record in either Babylonia or Assyria. Until very recently there has been no attempt in either country at scientific excavation. The pioneers, Layard and Botta and

18760 Loftus, lived and worked before it was known or thought of, and we cannot, therefore, be too thankful to Layard for having nevertheless given us so full and accurate an account of what he found, and the conditions under which he found it. The excavations controlled by the British Museum have, I am sorry to say, been for the most part destructive rather than scientific; such objects as were wanted by the Museum were

18765 alone sought after; little or no record has been kept of their discovery, and they have been mixed with objects bought from natives, of whose origin nothing was known. At one spot, Carchemish, the old Hittite capital, which, though not strictly in Assyria, formed part of the Assyrian Empire, and was the seat of an Assyrian governor, the so-called excavations conducted by the Museum in 1880 were simply a

18770 scandal, which Dr. Hayes Ward, who visited the spot shortly afterwards, has characterized as "wicked." The archaeological evidence there, which would have thrown so much light on the Hittite problem, has been irretrievably lost.

Matters are better now, and if I may judge from the work done by Mr. H. R. Hall at Der el-Bahari in Egypt for the Egypt Exploration Fund, his colleague, Mr. L. W. King,

18775 who has recently been excavating for the British Museum in Assyria, will have done something to retrieve the archaeological good name of our British excavators in the East. M. de Sarzec's excavations at Tello in Southern Babylonia were also conducted with some consideration for archaeological method, at all events on the architectural side, and in the capable hands of M. Heuzey the works of art found there have been

18780 made to yield valuable results.

Moreover, the history of Tello may be said to be comprised in a single epoch of archaic Babylonia, and all objects discovered on the site may consequently be regarded as belonging to one age and phase of Babylonian civilization. Of the

18785 American excavations at Niffer it is difficult to speak at present. The work there has been careful and patient, and has extended over a long series of years. The architectural facts have been accurately recorded, at all events in the case of the great temple of Bel, and about the sequence of the inscribed monuments there is little room for doubt. But accusations of carelessness have lately been brought by the excavators one against the other, and when we find the sharpest critic among them

18790 unable to substantiate his own account of the discovery of a library and implicitly endorsing the assignment of a Parthian palace to the "Mykenaeen" age, it is impossible to put much faith in their descriptions of archaeological details. Some years ago the Germans explored a cemetery at El-Hibba with considerable care and thoroughness, and thus revealed to us pretty much all we know at present about

18795 Babylonian funereal customs; yet here again too little attention was paid to the pottery, and the actual date of the cemetery is still uncertain. It may belong to the Babylonian period, but it may also not be older than the Persian or even Parthian age.

The Germans are once more working in the lands of the Euphrates and Tigris, but in

18800 Babylonia their labours have been mainly confined to the Babylon of Nebuchadrezzar, where comparatively little has been discovered. Since 1904, however, the chief strength of the expedition has been directed upon Qal'at Shiiqat, where Assur, the primitive capital of Assyria, formerly stood, and here we may expect that

18805 archaeological results of first-class importance will at last be obtained. But the work there has not yet advanced far enough for more to be done than the mapping out of the old city, the ascertainment of certain architectural facts, and the recovery of inscriptions of great historical value.

18810 It will be seen, therefore, that the reproach brought against excavations in Egypt by Mr. Rhind in 1862 still holds good of excavations in Babylonia and Assyria. The first stage in their history is only just passing away. The idea that excavation is a trade which any one can take up without previous training, and that all the excavator need think about is the discovery of objects for a museum, is only beginning to disappear. In 1862 Rhind could write of Egyptian tombs: "I am not aware that there can be found the contents of a single sepulchre duly authenticated with satisfactory precision as to what objects were present, and as to the relative positions all these occupied when deposited by contemporary hands.

18815 Indeed, for many of the Egyptian sepulchral antiquities scattered over Europe there exists no record to determine even the part of the country where they were exhumed.... There have thus been swept away unrecorded into the past illustrative facts of very great interest, which cannot now, according to any reasonable probability, be replaced, at all events in the degree which there are grounds to believe were then possible."1 Happily, Mr. Rhind's words are no longer true of Egypt, where he himself set the first example of showing how scientific exploration ought to be carried on, and the result is that the ancient civilization and culture of Egypt

18825 are now known to us even better than those of classical Greece or Rome. But what was true in 1862 of Egypt is still very largely true of Assyria and Babylonia. We are beginning to know something about the history of Assyro-Babylonian architecture; we know a little about the early work of the Babylonians in metal and stone; but the history of Assyro-Babylonian pottery is still, speaking broadly, a blank. For most of his knowledge of the ancient Euphratean civilizations the

18830 archaeologist has to turn to the inscriptions and written literature of which such vast quantities have survived, and hence, besides being an archaeologist in the strict sense, he must be also a decipherer and a philologist. He is still precluded from appealing to the evidence which can be handled and felt.

18835 From the point of view of the archaeologist written evidence is usually unsatisfactory because it admits of more than one interpretation. A translation which seems certain to one scholar may be questioned by another; an inference drawn from the words of a text by one student may be denied by another.

18840 The statements in the texts themselves may be contradictory, or their imperfection may lead to wrong conclusions. Above all, the evidence may come to the archaeologist from a philologist whose bent of mind is literary rather than scientific, and who will therefore be unable either to appreciate or to understand scientific testimony. Nothing is more common than to come across literary critics who cannot be made to understand the nature of inductive proof.

18845 On the other hand, the decipherer of a lost language must necessarily be an archaeologist as well. The clues he follows will be largely archaeological, and he has to appeal to archaeology at every step. The method he must pursue is the method of archaeology and of other inductive sciences, and the materials he uses are in part the materials of archaeology also.

18850 The philologist who knows nothing of history and geography, who is unable to follow a scientific argument and appreciate scientific reasoning, can never decipher; he may take the materials given him by the decipherer and work them into philological shape, but that is all. We must listen to him on questions of grammar and vocabulary; on questions of archaeology his opinions are worth no more than those of the ordinary

18855 man.

18860 I have insisted on this point because it is a very important one in a study like Assyriology. The public naturally thinks that in all Assyriological matters the opinion of one Assyriologist is as good as that of another. We might just as well suppose that in all matters which come under the head of astronomy the opinions of every class of astronomer are equally authoritative. But in astronomy there are questions which are purely mathematical, and there are other questions which are more or less chemical, and the astronomer who has devoted his attention to the spectrum analysis is contented to leave to his mathematical colleague abstruse calculations in advanced mathematics. The Assyriologist who is a grammarian pure and simple is just

18865 as little an authority on the archaeological side of his study as any one else who is

ignorant of archaeology, and the materials he provides must be dealt with by the archaeologist like the literary materials provided for him by the classical philologist; the materials in both cases stand on the same footing.

18870 At the same time, there is a difference between them. In the first place, the literary materials with which the Assyriologist deals are in a very large number of instances autographs. They are the actual documents of the writers whose names they bear or to whose age they belong. And there is all the difference in the world between the letters of a Plato or a Cicero which have come down to us through numerous copyists and the letters of Khammu-rabi of Babylon, the originals of which
18875 are now in our hands. The inscriptions in which Nebuchadrezzar describes his building operations or the contemporaneous annals of the Assyrian kings are, from the historical point of view, of far more value than the books written about them at a later date, however admirable the latter may be as works of literature; in other words, they are first-hand sources, and, as such, objective facts of much the same character as ancient pottery or stone implements.

18880 Then, in the second place, the documents have to be deciphered before they can be treated philologically; and, as I have already said, the task of decipherment is in itself an archaeological pursuit. If carried out on correct lines it is itself an instance of the application of the inductive method, and it is, moreover, constantly
18885 compelled to call archaeology or history to its aid. Assyriology is thus primarily an archaeological study, using the methods of archaeological science and demanding the help of the archaeologist, even though there are Assyriologists who are not archaeologists themselves.

18890 But for the present our archaeological facts have to be taken mainly from the results of the decipherment of the inscriptions. They are for the most part epigraphical; the excavator has not yet supplemented them, as in Egypt or prehistoric Greece, on what I would term the ceramic side. This, at least, is the case in Babylonia and Assyria. It is no longer the case, however, throughout the ancient Assyro-Babylonian world. There is one exception to the charge brought by modern archaeology against the excavators
18895 in the lands of the Tigris and Euphrates. M. de Morgan has been working for the last ten years on the site of Susa, the capital of Elam, and he has brought to his labours the knowledge and experience of an excavator who has been trained in modern methods and is fully awake to the requirements of modern science. At last, at Susa, we have an archaeological record of the history of culture, based not only on written
18900 monuments, but also on the more tangible evidence of scientifically-observed strata of human remains. It is true that Elam is not Babylonia; but one of the surprises of M. de Morgan's discoveries is that in the early days of Babylonian history Elam was a Babylonian province, and Susa the seat of a Babylonian governor.

18905 The same culture extended from Sippara on the Euphrates to Susa in Elam, and this culture was Babylonian. Hence, in default of materials from Babylonia itself, we may see in the history of cultural development at Susa a counterpart of that in Babylonia, at any rate during the period when Elam and Babylonia were alike under Semitic rule.¹

18910 At Susa the line of division between the prehistoric or neolithic age and the historical epoch is very clearly marked. The prehistoric stratum lies twenty-five metres below the surface of the mounds, and is divided by M. de Morgan and his fellow-workers into two periods. The first is distinguished by a fine thin pottery, with yellow paste, which is already made upon a wheel. It does not exceed from two to seven millimetres in thickness; it is polished, and decorated with black bands and
18915 various patterns in a brown colour produced by oxide of iron. The designs are not only geometric, but also represent animal and vegetable forms. Among them are rows of ostriches identical with those found on the painted prehistoric pottery of Egypt. Indeed, the explorers were especially struck by the resemblance of the pottery as a whole to that of Egypt in the prehistoric age, though it is difficult to see what connection there can have been between the two countries at so remote a date, and the
18920 curious similarity between the rows of birds depicted on the vases must remain for the present an archaeological puzzle. There is also a certain amount of resemblance between the geometric pottery and that disinterred by M. Chantre at the early Assyrian colony at Kara Eyuk in Cappadocia, which will be discussed more fully in a
18925 later chapter.¹

Among the geometrical patterns of the Susian ware spherical forms are common; the herring-bone pattern is also met with, as well as a pattern like the Greek sigma. The under-part of the vases is often decorated, so also is the inside. A form of vase frequently found is the water-jar with a rounded foot; the goblet is another common
18930 shape. Sometimes the vases are supplied with four handles for suspension. This fine yellow pottery occurs not only at Susa, but also throughout Elam, but

- practically none of it has hitherto been discovered in Babylonia. 1 One cause of this is doubtless that in the alluvial plain of Babylonia a purely neolithic stratum, if it existed at all, would lie below the water-level. Maritime shells are met with as far north as the site of Babylon, showing that the Persian Gulf once extended thus far, and the water of the Euphrates still infiltrates through the soil.
- 18935 The period of the fine thin pottery in Elam comes suddenly to an end, and the people of the second prehistoric period seem to have been intruders who were less civilized than their predecessors and un-acquainted with the art of making the older ware.
- 18940 Their pottery is coarse and porous, and the geometric designs upon it are traced with the pen, not freely painted as in the case of the earlier ceramic. The animal and vegetable designs of the older ware have disappeared, and the zones, triangles and other geometric figures which take their place are traced in black or maroon-red upon a yellow clay. The resemblance between this pottery and that of Kara Eyuk is even greater than in the case of the pottery of the first period. Thick cylindrical vases are common, as well as bowls with a flat bottom and broad sides. Some of the vases resemble the bulbous vases of the Egyptian Twelfth dynasty; there are others with flat bottoms and angular sides which are also like Egyptian water-jars of the same Twelfth-dynasty period. Along with these more characteristic forms of pottery many small, unpainted cups have been found, as well as a few finer wheel-made vases of ovoid shape and yellow or reddish colour. It should be added that coarse, red, hand-made pottery abounds in both the prehistoric periods, as indeed it does also in the later historic epoch.
- 18950 As the second prehistoric epoch drew to a close at Susa, many indications of an advance in culture began to show themselves. Vases and flat-bottomed cups of soft stone were introduced, among them being a few of alabaster; the bricks began to be burnt in a kiln, and even seals with a species of writing upon them made their appearance. Nevertheless, the neolithic age does not pass into the age of metal through any transitional stages.
- 18955 The earliest stratum which marks the historic age yields for the first time clay tablets with inscriptions, the characters of which are already developing out of pictures into the cursive cuneiform. The inscribed cylinder-seals of Babylonia naturally appear along with them; alabaster vases, cups and bowls become common, and some of them are cut into the forms of animals. Comparatively little pottery has been found in this stratum; but this is probably an accident.
- 18960 The next stratum brings us to the period of Babylonian supremacy, when the viceroys of the Babylonian king ruled at Susa, and Semitic influence was already predominant in the Babylonian plain. It is the age of Sargon of Akkad, and its commencement may approximately be placed about BC 4000.
- 18970 The pottery still consists of a yellow paste, though there are also many specimens of a coarse black clay decorated with incrustations in white. The yellow ware is occasionally ornamented with mouldings of trees and other natural objects. A typical vase of the period is one of globular shape and small rim, and with a moulded or incised rope-pattern running round the centre and lower part of the rim. Another type is one which looks like an inverted vase, with a series of rope-patterns encircling it, while another seems to have been copied from the pile of cylindrical vases into which, as into a drain, the body of the dead Babylonian was inserted. These types of vase appear to have lasted, with little variation, down to the end of the Persian period, though, unfortunately, the disturbance of the ground and the consequent mixture of objects under the temple of In-Susinak, where the excavations were carried on, makes certainty on the point unattainable. Immense quantities of bronze votive offerings, of all kinds and sorts, were, however, found here, along with fragments of glass, and, as inscriptions show that they must all have been buried on the spot before the tenth century BC, we have a time-limit for dating the forms of the bronze weapons and tools.
- 18985 The archaeological evidence obtained at Susa has been supplemented by excavations made some ninety miles to the west of it, at a place called Mussian, on the eastern bank of the river Tib. Here there are graves, as well as the remains of a temple and houses with vaults, columns and walls of burnt brick. Where the strata have allowed a section to be cut down to the virgin soil the results are found to agree with those revealed by the excavations at Susa. The earliest layer belongs to the neolithic age, flint and obsidian, as at Susa, being the materials employed for tools and weapons. The pottery is thick and hand-made, the paste being either yellow or red in colour, and the surface is often polished, while many of the vases are furnished with holes for suspension.
- 18990 This layer seems older than anything discovered at Susa. It is followed by a second layer, in which the pottery is wheel-made, and is decorated with animal and vegetable

figures in black or red, like the first prehistoric ware of the Susa mounds. Among the animal figures are those of men, and one fragment of yellow ware is ornamented with the so-called swastika.

In the upper part of the layer a few fragments of copper have been met with, indicating that the neolithic age was beginning to pass into that of copper. Above this layer is a third, characterized by a fine ware, usually yellow but sometimes greenish in colour, and decorated with designs in lustrous black. In the fine specimens the decoration has been laid on before firing, in other cases after firing. The pottery as a whole has a general resemblance to that of prehistoric Egypt. The culture represented by this layer was still neolithic, but objects of copper were making their appearance, and the flint instruments of the past were beginning to be superseded by metal, a knowledge of which appears to have come from abroad. With the introduction of copper the Elamite or historical epoch may be said to have begun. It was now that the temple was first built of crude bricks, reeds taking the place of wood, and so pointing to the influence of Babylonia, where reeds were plentiful and wood was scarce.

Another proof of Babylonian influence must be seen not only in ware of Babylonian origin, but also in the figures of a nude goddess with the hands placed upon the breasts, which originally represented the divinity called Istar by the Semitic Babylonians.

Indeed, from the fact that the goddess was represented in human form we may infer that the figures, though first met with in the Sumerian age, were of Semitic derivation, and show that Sumerian culture was already being affected by the influence of Semitic religious ideas.¹ The pottery found along with the figures is of a very varied description, including coarse red and fine yellow ware. Among the fine yellow ware are goblets with a tall cup supported on a foot.

A typical form of the yellow ware is the vase with angular sides; this, together with vases of more bulbous shape and terra-cotta stands, is remarkably like some of the Egyptian Twelfth-dynasty pottery in form. The stands, more especially, remind us of Twelfth-dynasty Egypt. There is also a black ware decorated with incised lines which are filled in with white. This black ware is also found in Egypt, where Professor Petrie is now inclined to associate it with the Hyksos. At all events it is absent there during the interval that elapsed between the prehistoric period and the epoch of the Twelfth dynasty, and it characterizes the Hyksos sites of the Delta, while its foreign and non-Egyptian character has been recognized from the first. A few fragments of the same class of pottery have been brought to light at Tello in Babylonia, where they would appear to belong to the age of Gudea (BC 2700). One of these formed part of a cylindrical vase or pyxis, identical in shape with the black incised pyxides found at Susa at a depth of from five to ten metres below the surface.

On another fragment are spirited drawings of a water-bird, a fish seized by a gull, a four-footed animal, and a boat with reeds growing behind it, each in a separate panel.¹ Similar ware has been discovered in Southern Palestine, on the eastern coast of Cyprus, in Spain and in the Greek islands. At Syros, for instance, where it goes back to the neolithic age, it is associated with alabaster vases, just as it is at Mussian.

Here the bowls and vases of alabaster are strikingly Egyptian in form.

The clay figures of the Babylonian goddess testify to the same extension of culture in the copper age of Western Asia as do the black incised vases with their white fillings. M. Chantre has found them at Kara Eyuk in Cappadocia, on the borders of the Hittite region, though in these the arms are no longer folded across the breast. Further west I have lately shown² that the so-called figure of Niobe on Mount Sipylus in Lydia is a Hittite modification of them, and Dr. Schliemann discovered one of them, of lead, in the ruins of the Second (prehistoric) city at Troy.¹ At Troy, however, the type was more usually modified in the Hittite direction, as it was also in the islands of the Egean, where marble figures of the goddess are plentiful.² In Egypt clay figures closely resembling those of Babylonia and Elam, but with the arms outstretched, have been met with from time to time at Karnak, and supposed to be dolls of the Roman period; but since the discovery by M. Legrain of remains which prove that the history of Karnak reaches back to the prehistoric or early dynastic period, there is no longer any reason for not connecting them with their analogues elsewhere. And the discoveries recently made by Professor Pumpelly in the tumuli near Askabad, west of Khiva and Herat, go far towards supporting the identification. Here the explorers have brought to light two periods of neo-lithic culture, in the earlier of which no animals were as yet domesticated, and the pottery was of the rudest description. During the second period the domesticated animals were introduced,

including the horse and camel. Then came an age of copper, accompanied by figurines representing the Babylonian goddess, sometimes with the arms outstretched, sometimes with them lying against the sides, as in Cappadocia. The figurines are evidence that the art of working copper was derived from Babylonia, a conclusion which is confirmed by M. Henri de Morgan's excavations in the tumuli of Talish in Gilan, on the south-western shore of the Caspian. 1

As far back as our knowledge of Babylonian history extends the inhabitants of the country were acquainted with copper, and its use lasted century after century into quite recent times. Of a stone age, as I have already said, there is no clear trace. It is true that Captain Cros has sunk shafts at Tello, and reached the virgin soil at a depth of seventeen metres, finding there mace-heads of alabaster and hard stone similar to those of primitive Egypt, as well as other stone objects; but no flint flakes were met with, and the pottery was similar to that of the higher strata.² On the other hand, objects of copper, great and small, including helmets and a colossal spear dedicated by a king of Kis, have been disinterred, though nothing of bronze has been discovered among the earlier remains. It was the same at Muqayyar, the ancient Ur, as well as on the site of Eridu, where Taylor found only copper bowls and the like in the graves, even in those of so late a date as to contain objects of iron and an Egyptian scarab.¹ At Nififer, moreover, the ancient Nippur, American excavation has the same tale to tell. According to Dr. Peters,² though iron knives, hatchets, spear-heads and arrow-heads have been exhumed, the date of which is said to be between 2000 and 1000 BC, there is no trace of bronze, the multitudinous objects, which further west would have been of bronze, being here of copper.

As at Ur, the copper age lasts down to the very end of the Babylonian kingdom. Hilprecht, on the authority of Haynes, does indeed say³ that in the very lowest strata of the temple mound, far below the pavements of Sargon and Naram-Sin (BC 3750), "fragments of copper, bronze and terra-cotta vessels" were disinterred. But no attempt seems to have been made to analyze the so-called "bronze," which may have been a natural alloy of copper with a small percentage of lead or antimony, and the age ascribed to the fragments is rendered doubtful by the accompanying statement, that "fragments of red and black lacquered pottery" were discovered in the same place which were indistinguishable from the red and black pottery of classical Greece. As yet, therefore, excavation in Babylonian lands has failed to tell us when the art of mixing tin with the copper was discovered and copper was superseded by bronze. This, however, had taken place before the commencement of the Assyrian age. The bronze scimitar of Hadad-nirari I (BC 1330) x finds an exact copy in a scimitar discovered by Mr. Macalister at Gezer in Palestine,² and the tools and weapons exhumed at Nineveh are of bronze and not copper. Analysis shows that the bronze usually consisted of about one part of tin to ten of copper, though for special objects like bells the amount of tin was considerably increased.³ When was it that the tin was first imported and intentionally mixed with the copper in order to harden the metal?

In default of archaeological evidence, the only possibility there is of discovering an answer to this question lies in an examination of the primitive pictures out of which the cuneiform characters eventually developed. Here we are at once struck by a curious fact. The "determinative" attached to ideographs signifying "knife," "weapon" and the like is not an ideograph which expresses the name of a metal; nor is it an ideograph denoting "stone," but one which means "wood." That is to say, the material of which cutting instruments were made at the time when the picture-writing of Babylonia came into existence was neither metal nor stone, but wood. That it should not have been stone is explained by the geology of the Babylonian plain, which consists of alluvial soil devoid of stones. That it should not have been of metal can only mean that the inventors of the pictorial script were not yet acquainted with the use of copper, bronze or iron. In default of metal and stone they had to content themselves with hard wood.

On the other hand, copper, as well as gold and silver, had become known to them when the primitive pictographs were still in process of formation, and long before they had passed into cursive cuneiform. Copper was represented by the picture of an ingot or square plate of the metal with a handle attached to it, showing that it was already in a fused and worked state when it was imported into Babylonia.

Gold seems to have originally been denoted by the picture of a collar or necklace, which signified "shining," and was afterwards employed before the names of the precious metals. I have, however, never found this collar actually used to signify "gold"; in the earliest texts yet discovered the phonetic syllable gi is attached to it when "gold" is denoted, the Sumerian word for "gold" being azag-gi. "Silver" was

19130 "the white precious metal," the symbol for "white" being attached to the picture of the collar, and so forming a compound ideograph. This implies that silver became known to the inventors of the hieroglyphs at a later period than gold, though still before what I will call the cuneiform age. Even iron was known to them at the same early epoch, and was expressed by ideographs which literally mean "stone of heaven,"¹

19135 an indication that meteoric iron must be referred to. But now comes a fact which is difficult to explain, so contrary is it to the archaeological evidence. As we have seen, no traces of bronze have been found in the Assyro-Babylonian region before the beginning of the Assyrian age – let us say about BC 2000.

19140 Nevertheless, by the side of the simple ideograph which denotes the Sumerian *tirudu*, "copper" – *er* in Semitic Babylonian – we find a compound ideograph signifying "bronze," called *zabar* in Sumerian, from which the Semites borrowed their *'siparrn*. It is true that it is a compound ideograph, but it occurs in the cuneiform texts, not only in the era of Gudea (BC 2700), but even before the age of Sargon of Akkad (BC

19145 3800). And an analysis of its earliest form seems to indicate that it really must have meant bronze from the first, and that consequently there was no transference of signification in later days. Literally it means "white copper," the word for "copper" being phonetically written *ka-mas*, with which the Semitic Babylonian *kemassu* is closely connected. Lead cannot be intended, as that was denoted by a different word and different ideographs, and I do not see what else "white copper" can be in

19150 contradistinction to red copper except bronze. Polished copper could be termed "bright," but hardly "white."¹ The possibility remains that tin might have been the metal originally denoted by the compound ideograph. If so, both the ideograph and the words expressed by it had lost

19155 all reference to tin before the beginning of the Assyrian period, and neither the Assyrian word for "tin" nor the Sumerian word, if any existed, is now known. Tin, moreover, was archaeologically late in making its appearance. The earliest examples of pure tin of which I know are of the time of the Eighteenth Egyptian dynasty. On the other hand, bronze first appears in Egypt in the age of the Twelfth dynasty, ²

19160 though it does not become common until the Hyksos predecessors of the Eighteenth dynasty had made themselves masters of the valley of the Nile. From about BC 1600 onwards, enormous quantities of it were employed in the eastern basin of the Mediterranean and the adjoining lands, necessitating an equally large supply of tin. What the source of this tin may have been it is not my present purpose to inquire.

19165 But the persistence of the copper age in Babylonia, as well as in the tumuli of Askabad, east of the Caspian, indicates that the manufacture of bronze must have migrated from the north-west to the Babylonian plain. We find it first in Assyria, not in Babylonia, and it may well be that the Assyrians derived it from Armenia and the population of Cappadocia, where, as I shall show in a subsequent chapter, they

19170 had established colonies at an early period. At all events, the earliest examples of bronze yet met with were discovered by Dr. Schliemann in the Second prehistoric city at Troy. It was to this region that classical tradition referred the origin of working in iron. An analysis of the gold of the first six Egyptian dynasties submitted to Dr. Gladstone by Professor Petrie proved that it was mixed with silver, and hence must have been derived from Asia Minor.¹ Egyptian legend made "the followers of Horus," who founded dynastic Egypt, metallurgists and smiths whose metal weapons enabled them to subdue the older neolithic population. The story as it has come down to us declares the smiths to have been workers in iron; iron, however, must be the

19180 substitute of the later version of the story for some other metal, since, though Vyse claims to have discovered an iron clamp in the great pyramid of Giza,¹ and Petrie has found a mass of iron in a Sixth-dynasty deposit in the temple of Osiris at Abydos,² ironsmiths can hardly have existed in the pre-dynastic age. It is probable, therefore, that copper was the metal which the dynastic Egyptians introduced into their new home, and which was already in use in Babylonia. But the intercourse with Asia Minor, which the gold of the First dynasty indicates must even then have been going on, makes it possible that it was from this quarter of the world that the earliest knowledge of the manufacture of bronze was brought to the valley of the Nile. Even in the time of the Twelfth dynasty, however, the tools found by Professor

19190 Petrie in the workmen's huts at Kahun are of copper rather than of bronze.³ The colossal statue of King Pepi of the Sixth dynasty, discovered at Hierakonpolis, is of hammered copper, and we have to wait for the advent of the Eighteenth dynasty before bronze becomes the predominant metal. That such was the case points to the Hyksos period as that in which bronze succeeded in superseding the older copper. It may be that the Hyksos brought the extended use

19195

of it with them from Syria.

In Southern Palestine, Mr. Macalister's excavations at Gezer have shown that bronze rather than copper was largely employed throughout the so-called Amorite period, which went back to an earlier age than that of the Twelfth dynasty, and it is just here that in the time of the Eighteenth dynasty bronze itself began to make way for iron. Mr. J. L. Myres has recently traced the polychrome pottery of Southern Canaan to the Hittite lands of Cappadocia, 1 where the red ochre was found by which it was characterized, and a knowledge of bronze may have travelled along the same road. But these are speculations which may or may not be verified by future research. For the present we must be content with the fact that, in spite of the philological evidence to the contrary, copper, and not bronze, was the metal which preceded the use of iron in Babylonia, whereas in the northern kingdom of Assyria bronze was already known at a comparatively early date. So far as the existing evidence can carry us, it seems to indicate that Babylonia was the primitive home of the copper industry, while bronze, on the other hand, made its way eastward from Asia Minor and the north of Syria. Where bronze was first invented is still unknown to us; all that seems certain is that it must have been in a land where copper and tin are found together.

NOTE

According to the mineralogists, in the western part of the northern hemisphere tin is found only in Britain, Spain and the neighbourhood of Askabad, the scanty surface-tin of Saxony, France and Tuscany being too poor and insignificant to have attracted attention in antiquity (see de Morgan, *Mission Scientifique au Caucase*, ii. pp. 16-28). The American excavations at Askabad under Professor Pumpelly appear to have made it clear that bronze was not invented in that part of the world, or indeed used in early days, and we are thus thrown back on Britain and Spain. It is quite certain, however, that bronze made its way to the west of Europe from the east, and the Hon. John Abercromby has proved {*Journal of the Anthropological Institute*, xxxii. pp. 375-94, and *Proceedings of Society of Antiquaries of Scotland*, 1903-4, pp. 323-410) that the bronze culture came to this country from the valley of the central Rhine where it cuts the river at Mayence. On the other hand, the bronze-age civilization of the Danube valley, the Balkan peninsula and Italy forms a whole with that of the south-eastern basin of the Mediterranean, which again is closely connected with the bronze-age culture of the Egean, Asia Minor and Egypt, while the civilization of the Danube valley leads on to that of Central Europe and, to a less extent, of Scandinavia and Northern Germany. Montelius {*Journal of the Anthropological Institute*, 1900, pp. 89 sqq.) has pointed out that the early bronze culture of Northern Italy was carried to Scandinavia along the route of the amber trade as far back as the close of the neolithic age in Sweden, and the numerous objects of Irish gold found in Scandinavia – though, it is true, of somewhat later date – show that commercial relations must have existed between the British Islands and the Scandinavian peninsula. Tin might have followed the gold route until it met the amber route, by which it would have been carried southward to Central Europe and the Adriatic.

In Western Europe the sword, like the socketed celt, is first met with in the third and last period into which the bronze age has been divided. The earliest examples of the sword, in fact, are those discovered at Mykenae, which belong to the age of the Eighteenth Egyptian dynasty. Schliemann found only the dirk at Troy, and, so far as our present evidence goes, the dirk alone was used by the Hittites and Proto-Armenians down to the seventh century BC. The scimitar, however, was known in Assyria and at Gezer at least as early as the fourteenth century BC (see p. 57 above), and in Cyprus the sword makes its appearance along with the knife and fibula in the later bronze age after the close of the age of copper.

Similarly in Krete it was only in tombs of the Late Mykenesean (or Late Minoan) period that the cemetery of Knossos yielded swords of bronze {*Annual of the British School at Athens*, x. p. 4). The dirk of the copper age was stanged as at Troy and in the Danube valley, the Cyprian and Hungarian forms being practically identical. From the Danube valley the stanged spear-head passed to Western Europe during the second period of the bronze age. The fibula is not found at Troy, where the early bronze age will have corresponded with the copper age of Cyprus.

All this goes to show (1) that the scimitar – the harpe of the Perseus myth – was a Semitic invention, while the long sword was of European origin; (2) that at Troy, and possibly also in Southern Palestine, to which Hittite polychrome pottery was carried at an early date, bronze was known at a time when only copper was used in Cyprus and Egypt; and (3) that the characteristic weapon of this primitive bronze age was the dirk, which continued to characterize Asia Minor long after the sword and scimitar

had been invented elsewhere. Taken in connection with the fact that the pottery and decorative designs of Asia Minor can be linked with those of the Balkan peninsula and the valley of the Danube, we may provisionally conclude that Northern Asia Minor was the home of the invention of bronze. Against this is the fact that no tin has hitherto been found there, and we should accordingly have to explain the origin of bronze by the theory that after the discovery of various processes for hardening copper, further experiments were made with imported tin. Unfortunately, neither the south of Cornwall nor Asia Minor, with the exception of the Troad, has as yet been scientifically explored from an archaeological point of view. But it deserves mention that the curious needles with a double head of twisted wire, which are met with among the remains of the bronze age in Britain, are characteristic of the copper age in Cyprus and of the early bronze age at Troy.

- 1 The yellow and red wheel-made ware, some of it inscribed with characters of the age of Gudea, which has been disinterred at Tello, is quite different. This class of pottery, by the way, seems to have been preceded by a grey coarse ware, made with the hand. One fragment of fine polished yellow ware with traces of black ornamentation has recently been reported from Tello by Captain Cros (*Revue d'Assyriologie*, 1905, p. 59), but the isolated character of the discovery makes it probable that it was an importation from Elam.
- 1 Copper figurines of the goddess, with hands pressed under the breasts, found in one of the earliest substructures of Tello (circa BC 4000), are published by M. Heuzey in the *Revue d'Assyriologie*, 1899, p. 44.
- 2 Proceedings of the Society of Biblical Archaeology, 1905, p. 28.
- 1 Heuzey, in the *Revue d'Assyriologie*, 1905, pp. 59 sqq. and plate iii. Von Lichtenberg (*Mitteilungen der Vorderasiatischen Gesellschaft*, 1906) has lately pointed out that the black incised pottery with white fillings is identical in Cyprus, Troy, the Laibach bog and the Mondsee, and that the ornamentation which characterizes it is found in the valley of the Danube and the pile-dwellings of Switzerland. His attempt to derive it from Cyprus, however, cannot be sustained in view of its occurrence in Elam.
- 1 Th'os, p. 337. Schliemann called it the Third city. Dorpfeld's subsequent excavations, however, have shown that it really was the Second city, whose history fell into three periods, 2 Some of these represent the goddess with the arms folded, and not pressed against the breasts. See, for example, the photograph of one found at Naxos in the *Comptes rendus du Congrès International d'Archéologie*, 1905, p. 221. For Trojan examples, see *Ilios*, pp. 331-6.

- 1 ANA-BAR. Bar is given as the Sumerian pronunciation of the word for "stone" (*Syllabary* 5, iv. 11, in Delitzsch's *Assyrische Lesestücke*, 3rd edition). In Old Egyptian "iron" was similarly ba-n-pet, "stone of heaven," while "silver" was "white gold," "gold" being symbolized by a collar. We may compare the Indo-European "white" metal as a name of "silver." The Sumerian azaggi, "gold," was a form of azagga^ "precious," more especially "precious metal"; the more specific word for "gold" was guskin, with which the Armenian oski must be connected. "Silver" was bdbara, the "bright metal," nagga being "lead," the Armenian anag. The identity of the Armenian and Sumerian words for "gold" and "lead," coupled with the Armenian origin of the vine, and the fact that the mountain on which the ark of the Babylonian Noah rested was Jebel Judi, south of Lake Van, raises an interesting question as to the origin of Sumerian civilization.
- 1 It must be remembered, however, that, according to Aristotle, the copper of the Mossynceci in Northern Asia Minor was brilliant and white, owing to its mixture with a species of earth, the exact nature of which was kept a secret. The Babylonian ideograph for "bronze," therefore, may have been a similar kind of hardened copper, which was transferred to denote "bronze" when the alloy of copper and tin became known.
- 2 See Garstang, *El-Ardabah*, p. 10. Dr. Gladstone, however, after giving the results of his analysis of the Sixth-dynasty copper discovered by Professor Petrie at Dendera, suggests that the small amount of tin observable in it (about one per cent.) may have been added to it artificially (Denderah, p. 61). Bronze was "the normal metal" of the Amorite period at Gezer (Mac-alister, *Quarterly Statement of the Palestine Exploration Fund*, April 1904, p. 1 19), and the three cities which represent this period go back beyond the age of the Twelfth Egyptian

- 19335 dynasty, to at least BC 2900 (see Quarterly Statement, January 1905, pp. 28-9).
At Troy also Schliemann found numerous bronze weapons in the Second (prehistoric) city (Ilios, pp. 475-9). In Krete bronze daggers of the Early Minoan period (coeval with the Middle Empire of Egypt) have been found at Patema and Agia Triada (Annual of the British School at Athens, x. p. 198), and the pottery of the Middle Minoan period (BC 2000-1500) was associated at
- 19340 Palaikastro with a bronze button, two miniature bronze sickles, and a pair of bronze tweezers (ibid, p. 202). As for the Caucasus, bronze was not known there till a late date. Wilke (Zeitschrift für Ethnologie, 1904, pp. 39-104) has shown that the bronze culture of the Caucasus was derived from the valley of the Danube, and made its way eastward along the northern coast of Pontus; see also Rossler, Zeitschrift für Ethnologie, 1905, p. 118.
- 19345 1 Denderah (Egypt Exploration Fund), p. 62, for the gold of the Sixth dynasty; The Royal Tombs of the Earliest Dynasties, pp. 39-4? for that of the First dynasty.
1 Vyse, Pyramids of Gizeh, i. p. 276. The clamp was actually found by his assistant Hill, after blasting away the two outer stones behind which it had been placed.
2 Abydos, part ii. p. 33. An iron pin of the age of the Eighteenth dynasty was found by
- 19350 Garstang at Abydos (El-Arabah, p. 30).
3 Illahun, Kahun and Curob, p. 12. Dr. Gladstone's analyses give only about 2 parts of tin to 96*35 of copper. The bronze of the Eighteenth dynasty found at Gurob yielded a less proportion of tin (about 7 parts to 90 of copper) than the bronze of the Second Assyrian Empire. A ring of pure tin, however, was also discovered at Gurob.

CHAPTER III THE SUMERIANS

- Among the first results of the decipherment of the Assyrian cuneiform inscriptions was one which was so unexpected and revolutionary, that it was received with
- 19360 incredulity and employed to pour discredit on the fact of the decipherment itself. European scholars had long been nursing the comfortable belief that the white race primarily, and the natives of Europe secondarily, were ipso facto superior to the rest of mankind, and that to them belonged of right the origin and development of civilization. The discovery of the common parentage of the Indo-European languages
- 19365 had come to strengthen the belief; the notion grew up that in Sanskrit we had found, if not the primeval language, at all events a language that was very near to it, and idyllic pictures were painted of the primitive Aryan community living in its Asiatic home and already possessed of the elements of its later culture. Outside and beyond it were the barbarians, races yellow and brown and black, with oblique eyes and
- 19370 narrow foreheads, whose intelligence was not much above that of the brute beasts. Such culture as some of them may have had was derived from the white race, and perhaps spoilt in the borrowing. The idea of the rise of a civilization outside the limits of the white race was regarded as a paradox.
- It was just this paradox to which the first decipherers of Assyrian cuneiform found
- 19375 themselves forced. And another paradox was added to it. Not only had the civilization of the Euphrates and Tigris originated amongst a race that spoke an agglutinative language, and therefore was neither Aryan nor Semitic, the civilization of the Semitic Babylonians and Assyrians was borrowed from this older civilization along with the cuneiform system of writing. It seemed impossible
- 19380 that so revolutionary a doctrine could be true, and Semitic philologists naturally denounced it. For centuries Hebrew had been supposed to have been the language of Paradise, and the old belief which made the Semitic Adam the first civilized man still unconsciously affected the Semitic scholars of the nineteenth century. It was hard to part with the prejudices of early education, especially when they were called
- 19385 upon to do so by a small group of men whose method of decipherment was an enigma to the ordinary grammarian, and who were introducing new and dangerous principles into the study of the extinct Semitic tongues.
- The method of decipherment was nevertheless a sound one, and the result, which seemed so incredible and impossible when first announced, is now one of the assured facts of
- 19390 science. The first civilized occupants of the alluvial plain of Babylonia were neither Semites nor Aryans, but the speakers of an agglutinative language, and to them were due all the elements of the Babylonian culture of later days. It was they who first drained the marshes, and regulated the course of the rivers by canals, thereby transforming what had been a pestiferous swamp into the most fertile of
- 19395 lands; it was they who founded the great cities of the country, and invented the pictorial characters, the cursive forms of which became what we term cuneiform. The theology and law of later Babylonia went back to them, and long after Semitic Babylonian had become the language of the country, legal judgments were still written in the old language and the theological literature was still studied in it.
- 19400 The Church and the Law were as loth to give up the dead language of Sumer as they were in modern Europe to give up the use of Latin. This dead agglutinative language has been called sometimes Akkadian, sometimes Sumerian, but Sumerian is the name which has been finally selected.

19405 In fact, this was the name applied to it by the Semitic Babylonians themselves, who included in the term the two dialects – or rather the two forms of the language at different periods of its development – which have been preserved to us in the cuneiform tablets. Strictly speaking, the dialect which had been most affected by contact with the Semites, and had in consequence suffered most from phonetic decay, was known as the language of Akkad, but this was because Akkad represented Northern

19410 Babylonia, which had become Semitic at an earlier date than the south and had been the seat of the first great Semitic Empire.¹ Both names, Akkadian and Sumerian, are correct as applied to the primitive language of Chaldaea, but of the two Sumerian is preferable, not only because it was used by the Babylonian scribes themselves, but also because it denoted the oldest and purest form of the language before it had

19415 passed under foreign influence. This, then, was the great archaeological fact which resulted from the decipherment of the Assyro-Babylonian texts. The earliest civilized inhabitants of Babylonia did not speak a Semitic language, and therefore presumably they were not Semites. It is perfectly true that language and race are not synonymous terms, and that we are seldom justified in arguing from the one to the other. But the Sumerian language is one of the exceptions which proves the rule. Those who spoke it were the first

19420 civilizers of Western Asia, the inventors and perfecters of a system of writing which was destined to be one of the chief humanizing agents of the ancient world, the authors of the irrigation engineering of the Babylonian plain, and the builders of its many cities. The language they spoke, accordingly, could not have been forced upon them by conquerors who have otherwise left no trace behind them, and they certainly would not have exchanged it of their own accord for their native tongue. The Semitic languages have always been conspicuous for the tenacity with which they have held their own, and the conservatism with which they have resisted change. We

19425 may still hear in the Egyptian Arabic of to-day the very words which were written by Semitic Babylonian scribes upon their tablets some four or five thousand years ago. A Semitic people would have been the last to borrow the language of its less-civilized neighbours without any assignable reason. The fact, consequently, that the pioneers of Babylonian culture spoke an agglutinative language fully justifies us in

19430 concluding that they belonged to a race that was not Semitic. Sumerian, however, was not the only language in the neighbourhood of the Babylonian plain which was agglutinative. Further to the east, in the highlands of Elam, other agglutinative languages were spoken, monuments of one or more of which have been preserved to us. Whether or not the agglutinative languages of Elam were related to

19440 the Sumerian of Babylonia, I cannot tell; so far as our materials go at present they do not warrant us in saying more than that, like Sumerian, they were of the agglutinative type. It is only rarely that the scientific philologist is able to separate some of the multitudinous languages of the globe into genealogically related groups; for the most part they stand isolated and apart from one another, and,

19445 however much we may wish to group them together, it is seldom that we find such proofs of a common descent as will satisfy the requirements of science. Families of speech – or at all events such as can be scientifically proved to be so – are the exception and not the rule. Eastward of Sumer the type of language was thus agglutinative, as it was in Sumer itself. And in the days when civilization first grew up there, there is no sign or trace of the languages we call inflectional.

19450 The speakers of Aryan dialects, whom we find in classical times in Media or Persia or North-Western India, belong to a later epoch; the old belief in the Asiatic cradle of the Aryan tongues has long since been given up by the anthropologist and comparative philologist, ¹ and it is recognized that if we are to look for it anywhere it must be in Eastern Europe. The Semitic languages are equally absent; the tide of Semitic speech which eventually overflowed Babylonia, surged northward and eastward into Assyria and Elam, but never succeeded in passing Susiana, and was finally driven again from the ground it had once gained there. The home of the Semite lay to the

19455 west and not to the east of the Babylonian plain. Babylonian culture owed its origin to a race whose type of language was that of the Finn, of the Magyar or the Japanese. The physical characteristics of this race cannot as yet be fully determined. The oldest sculptures yielded by Babylonian excavation belong to a time when the Semite

19465 was already in the land. It might be supposed that the early monuments of Tello, which were erected by Sumerian princes and go back to Sumerian times, would give us the necessary materials; but not only are they too rude and infantile to be of scientific use, they also indicate the existence of two ethnological types, one heavily bearded, the other beardless, with oblique eyes and negrito-like face. It is

19470 not until we come to the age of Semitic domination that sculpture is sufficiently realistic for exact anthropological purposes. At the same time, there was to the last a marked contrast of both form and feature in the artistic representation of the Babylonian and his more purely Semitic Assyrian neighbour. The squat, thick figure, the full, well-shaven cheeks, the large, almond-shaped eyes and round head of King

19475 Merodach-nadin-akhi in the twelfth century BC still reproduce the characteristic form and features of the statues found in the palace of Gudea, the Sumerian high-priest of Lagas, who lived more than a thousand years before. The aquiline or hooked nose, the thick lips and muscular limbs which distinguished the Assyrian are generally wanting in Babylonia. And, on the other hand, there is a likeness between the Babylonian as he is portrayed on the monuments and the Elamite adversaries of Assur-bani-pal, some of whom, it is noticeable, are depicted with beards, though the excavations of Dieulafoy and de Morgan at Susa have shown (according to Quatrefages and Hamy) that a beardless and short-nosed negrito type with round heads was aboriginal in Elam. The same type is reproduced in one of the heads found at Tello, and M. de Morgan has

19485 pointed out that similar brachycephalic and beardless negritos are represented on the monuments of Naram-Sin as serving in the army of Akkad. 1 We may conclude, therefore, that they still formed a part of the population of Northern Babylonia even in the age when it had passed completely under Semitic rule. Indeed, Dr. Pinches has shown that the pure Semitic type is not depicted in Babylonian art, outside the kingdom of Akkad, "before the time of the First dynasty of Babylon, which began to reign about BC 2300."

It has often been maintained that the Sumerians themselves were an immigrant people, who had descended from the mountains of Elam. There is nothing unreasonable in the supposition; it was always difficult to prevent the mountaineers of Elam from making

19495 raids in Babylonia, and one of their tribes succeeded in settling in the country and establishing at Babylon one of the longest-lived of its dynasties. But the supposition mainly rests upon two facts. The pictorial hieroglyphs out of which the cuneiform characters have developed had no special sign for "river," while the same character represented both "mountain" and "country." It would seem, therefore, that the land in which the cuneiform system of writing was first invented was just the converse of the Babylonian plain, being at once mountainous and riverless. That the same character means both "mountain" and "country" is no doubt a strong argument in favour of the Elamite origin of Babylonian civilization. That the use of the primitive hieroglyphs should have survived in Elam while it was lost in Babylonia, as

19505 M. de Morgan's discoveries have shown to be the case, is also another fact which may perhaps be claimed on the same side; at any rate it indicates that they were known to the Elamites before the cursive cuneiform had developed out of them. But the want of a special character for "river" is not so decisive as it appears at first sight to be. The word "river" is represented by two ideographic signs which literally signify "the watery deep," and so point to the fact that those who originally invented them lived not in the highlands of the East, but on the shores of that Persian Gulf which the Babylonians of the historic period still called "the deep." As it was also known as "the salt river," it is not difficult to understand how, to those whose experience of navigable water had been confined to the Persian Gulf, the Tigris and Euphrates

19510 would have seemed but repetitions of the Gulf on a smaller scale.¹ The rise of Sumerian culture on the shores of the Persian Gulf is in accordance with Babylonian tradition. Babylonian myths told how Oannes or Ea, the god of culture, had risen each morning out of his palace in "the deep," bringing with him the elements of civilization which he communicated to mankind.

19520 Letters, science and art had all been his gifts. He had instructed the wild tribes of the coast to build houses and erect temples; he had compiled for them the first law-book, and had instructed them in the mysteries of agriculture. Babylonian civilization was sea-born. The system of cosmology which finally won its way to acceptance with the priesthood and philosophers of Babylonia was one which had been first conceived at Eridu, the site of which is now more than a hundred miles distant from the sea, but in the early days of Babylonian history, before the silting up of the shore, had been its sea-port. Here the first man Adam ¹ was supposed to have lived, and to have spent his time fishing in the waters of the Gulf. The whole earth was believed to have grown out of a primeval deep like the mudflats which the

19525 inhabitants of Eridu saw slowly emerging from the retreating sea. Philosophy and cosmology, with the theology with which they were associated, looked back upon Eridu and the Babylonian coast as their primeval home.² In fact the physical conditions of the Babylonian plain rendered it impossible for the first culture of the country to have sprung up in it. Before it was reclaimed by engineering skill and labour the larger part of it had been a pestiferous marsh. The

19535

science needed for making it habitable, at least by civilized man, must have arisen outside its boundaries. Only when he was already armed with a civilization which enabled him to dig canals, to mould bricks, and pile his houses and temples on artificial foundations could the Sumerian have settled in the Babylonian plain and there developed it still further. The cities of the plain grew up each round its sanctuary, which became a centre of civilization and progress, of agriculture and trade. But the builders of the sanctuaries must have brought their culture with them from elsewhere.

Of these sanctuaries the most venerable was that of Bel the Elder at Nippur. It has been systematically excavated by the Americans down to its foundations, and the successive strata of its history laid bare.

Inscribed objects have been found in all the strata, carrying the history of the cuneiform system of writing back to the days when the temple was originally built. But it is still the cuneiform system of writing as far back as we can go, that is to say the characters are the cursive forms of earlier hieroglyphic pictures, the features of which are in most cases scarcely traceable.

Here and there, it is true, the primitive pictorial form has been preserved, but this is the exception and not the rule. As a rule the earliest writing found at Nippur, and coeval with the foundation of its temple, is already the degenerated and cursive hand which we call cuneiform.

The fact is very noteworthy. The cuneiform characters have assumed the shapes which give them their name owing to their having been inscribed on clay by a stylus of wood or metal, which obliged the writer to substitute a series of wedge-like indentations for curves and straight lines. As time went on, the number of the wedges was reduced, the forms of the characters were simplified, and the resemblance to the pictures they were once intended to represent became more and more indistinct. The cuneiform script is, in short, a running hand, like the hieratic of Egypt.

But whereas in Egypt the hieratic running hand does not come into common use until long after the beginning of the monumental period, while the pictorial hieroglyphs continued to be employed to the last, in Babylonia the cuneiform running hand has superseded the primeval pictures as far back as our records carry us. When the temple of Nippur was built – and it was probably one of the first, if not the first, to be built in the Babylonian plain – the clay tablet was already in use for writing purposes, and the cursive cuneiform had taken the place of the older hieroglyphs.

The Babylonian plain was called by its Sumerian inhabitants the Edin, or "Plain," a name which was borrowed by the Semites and has been made familiar to us by the book of Genesis. Originally it had meant all the uncultivated flats on either side of the Euphrates, but it soon acquired the sense of the country as opposed to the city, and so of the cultivated plain itself. Most of the important Babylonian cities were built in it between the Euphrates on the west and the Tigris on the east. A few only lay beyond it on the western bank of the Euphrates. One of these was Eridu, another was Ur, a third was Borsippa.

Of Eridu I have already spoken. Some six or eight thousand years ago it was the sea-port of primitive Babylonia. 1 Ur, which stood close to it, seems to have been a colony of Nippur, and therefore of comparatively late origin. 2 Borsippa was a small and unimportant town, which eventually became a suburb of Babylon, and Babylon, on the eastern bank of the Euphrates, was itself a colony of Eridu. 3

Hence of the cities which stood outside the Edin of Babylonia, and may therefore belong to an age when Babylonian civilization was still in its infancy, Eridu alone is of account. And the priority even of Eridu was contested. Traditionally Sippara, which is expressly stated to have been in "the Edin," claimed to be the oldest of Babylonian cities; one quarter of it bore the name of "Sippara that is from everlasting," and like Eridu, it believed itself to have been the abode of the first man. 1 Thus far, however, the monuments have given us nothing to substantiate the claim; the culture-god of Babylonia was Ea of Eridu, not the Sun-god of Sippara, and for the present, therefore, we must look to the shore of the Persian Gulf, rather than to the "land of Eden" for the cradle of Babylonian civilization.

At any rate, both Sippara and Eridu were of Sumerian foundation, as indeed were nearly all the great cities of Babylonia. Eridu was a later form of the older Eridugga, "the good city," a name which seems to have been the starting-point of more than one legend. The growth of the coast to the south of it gives us some idea as to the age to which its foundation must reach back.

It was, as I have said, the primitive sea-port of Babylonia, and its legend of the first man Adamu made him a fisherman in the Persian Gulf. Its site is now rather more than a hundred miles distant from the present line of coast. The progress of alluvial deposit brought down by the Euphrates and Tigris can be estimated by the fact that

forty-seven miles of it have been formed since Spasinus Charax, the modern Mohammerah, was built in the age of Alexander the Great, and was for a time the port of Chaldsea.

- 19605 During the last 2000 years, accordingly, the rate of deposit would seem to have been about 115 feet a year. This, however, does not agree with the observations of Loftus, who made the rate not more than a mile in every seventy years,¹ while on the other hand Sir Henry Rawlinson adduced reasons for believing it to have been more rapid in the past than it is to-day, and that consequently the rate must once have been as much as a mile in thirty years.² It is desirable that some competent geologist should study the question on the spot. Taking, however, as a basis of calculation, the one known fact of the rate of growth since the foundation of Spasinus Charax, and bearing in mind that before the junction of the Tigris and Euphrates the rate of advance must have been comparatively slow, we should have to go back to about BC 5000 as the latest date at which Eridu could still have been the sea-port of the country.
- 19610 Was it here that the system of writing which was so closely entwined with the origin of Babylonian civilization was first invented? Babylonian tradition in later days certainly believed that such was the case, and the fact that Ea of Eridu was the culture-god of Babylonia is strongly in its favour. But there are difficulties in the way. Eridu was the home of the "white witchcraft" of early Chaldaea; it was here that the charms and incantations were composed which gave the priesthood of Eridu its influence, and made the god they worshipped the impersonation of wisdom. The belief that he was the originator of Babylonian culture may have had its source in the system of magic which was associated with his name.
- 19615 Eridu was built on the Semitic side of the Euphrates, and the Semitic tribes who received their letters and their civilization from the Sumerians of Eridu would naturally have looked upon the city of their teachers as the primeval home of Sumerian culture. The traditions that made Eridu the starting-point of Sumerian civilization could thus be explained away, and we should be left free to settle the question of its origin upon purely archaeological evidence.
- 19620 Unfortunately the site of Eridu has not yet been systematically excavated. Once again the archaeological materials for settling an archaeological question are not at hand, and we are thrown back upon an examination of the picture-writing from which the cuneiform characters are derived. Here the evidence on the whole may be said to be in favour of tradition.
- 19635 It is true that there is no special ideograph for "river," but there is one for "the deep," and "the spirit of the deep" must have been a chief object of worship at the time when the primitive hieroglyphs were first formed. The "ship," too, played a prominent part in the life of their inventors, and the picture of it represented it as moved not by oars but by a sail.¹ The flowering reed was equally prominent, and was even used to symbolize what stood firm and established.² Houses, fortresses, temples, and cities were built of brick, and vases were moulded out of clay.³ The tablet, rectangular or square, was already employed for the purpose of writing, but as it was provided with a handle or a couple of rings at the top,¹ I think it was more probably of wood than of clay. The sheep, goat and ox were domesticated,¹ and so also probably was the ass,² and corn was cultivated in the fields.
- 19640 The symbol of the "earth" appears to have been the picture of an island of circular or elliptical form. Among trees the cedar was well known.
- 19645 All this points to the sea-coast of Babylonia as the district in which its civilization first arose. But on the other hand, there is the fact that "country" and "mountain" are alike represented by the picture of a mountainous land. There is also the fact that the land in which the inventors of the hieroglyphs lived was one in which copper, gold and silver were procurable – perhaps also meteoric iron; and the further fact that hard wood was sufficiently plentiful for tools or weapons to have been made of it before the employment of metal. That they should have been made of wood, however, and not of stone, is a strong argument in favour of the Babylonian coast.
- 19650 It is on wood, moreover, that the first hieroglyphs must have been painted or cut. Many of them represented round objects or were formed of curved lines, which were transformed into a series of wedge-like indentations when imprinted by a stylus upon clay.
- 19655 We know, therefore, that clay was not the original writing material; its use as such, in fact, is coeval with the rise of that cursive script which, in the case of the Egyptian hieroglyphics, is called hieratic, but in Assyro-Babylonian is known as cuneiform. It was the attempt to reproduce the old pictures upon clay that created the cuneiform characters. As metal is not likely to have been employed by the
- 19665

primitive scribes of Chaldaea, and there is no trace of stone having been used – even the stone cylinder of later days being called a *dup-sar* or "written tablet" – we are left to choose between wood and papyrus. In favour of papyrus is the fact that the circular forms of so many of the pictures suggest that they were originally painted rather than engraved; on the other hand, it is doubtful whether the papyrus grows in the Babylonian rivers, or at any rate did so in the prehistoric age. And the pictograph of a "written document" is not a strip or roll of papyrus, as in Egypt, but a tablet with a handle or loop. It is true that the primeval picture which denoted "copper" has much the same form, but as even cutting instruments had the determinative of "wood" attached to them in the early picture writing, it is clear that the original tablet could not have been of metal, whatever might have been the case with its later successors.

The picture, moreover, of the "tablet" is distinguished from that of a "plate of bronze" by the addition of a string which is tied to the handle. On the whole, therefore, the only archaeological evidence available at present is on the side of the tradition which made Babylonian culture move north-ward from the coast. The only fact against it of which I know is that, as I have already stated, the word for land was symbolized by the picture of a triple mountain. But this fact is not insuperable.

Before the silting up of the shore, the old coast-line of Babylonia would have stretched away north-eastward of Eridu towards the mountains of Elam. Whether the mountains that fringed what would then have been the eastern coast of the Persian Gulf are visible from the site of Eridu, I do not know; if the clear light of Upper Egypt exists there they would be so.

Nor do I know whether on the western side there are mountain ranges visible in Arabia; these are points which can be cleared up only when the country has been thoroughly explored.

Eridu lay five miles southward of Ur, 1 that "Ur of the Chaldees" from which Hebrew history affirmed the ancestor of the nation had come. Ur was never a maritime port like Eridu; it stood on the Arabian plateau and looked towards the west. Its face was turned to the Semitic rather than to the Sumerian world. From the first, therefore, it must have been in touch with Semitic tribes. And a curious reminiscence of the fact survived in the western Semitic languages.

Ur or Uru signifies "the city"; it was a Sumerian word, another form of which was *eri*. The word was borrowed by the Semites, and in the Hebrew of the Old Testament, accordingly, the idea of "city" is expressed by *ir*. The Assyrians of the north, whose vocabulary was otherwise so full of Sumerian loan-words, preferred the native *dlu*, "a tent," to which the meaning of "city" was assigned when Sumerian culture had been passed on to the Semitic race and the tent had been exchanged for the city. The history of the word is a history of early culture as well.

But I am far from saying that it was through Ur that the civilization of Sumer came to be handed on to its Semitic neighbours. On the contrary, such facts as there are point in a different direction. Western Semites, whom linguistically we may call Arabs or Aramaeans, or Canaanites or Hebrews, doubtless mingled with the Sumerian population of Ur, and adopted more or less of its manners and civilization, but it was further north, in the Babylonian Eden itself, that the Semite first came under the influence of the higher culture, and soon outstripped his masters in the arts of life.

The entrance of the Semitic element into Babylonia is at present one of the most obscure of problems.

All we can be sure of are certain main facts. First of all, as we have seen, the early culture of Babylonia, including so integral a part of it as the script, was of Sumerian origin. So, too, were the great cities and sanctuaries of the country, as well as the system of irrigation engineering which first made it habitable. Sumerian long continued to be the language of theology and law; indeed a large part of the Babylonian pantheon of later days was frankly non-Semitic.

As was inevitable under such conditions, the Assyrian language contained an immense number of words – many of them compound – which were borrowed from the older language, and its idioms and grammar equally showed signs of Sumerian influence. I have sometimes been tempted, from a scientific point of view, to speak of Semitic Babylonian as a mixed language.

On the other hand, if the elements of Babylonian civilization were Sumerian, the superstructure was Semitic. When the Semites entered into the heritage of Sumerian culture, the cuneiform script must have still been in a very inchoate and immature state. Its pictorial ancestry must still have been clear, and no scruples were felt about altering or adding to the characters. The phonetic application of the

characters, which was still in its initial stage in the Sumerian period, was developed and carried to perfection by the Semitic scribes, and a very considerable proportion of their values and ideographic meanings is of Semitic derivation. The theological system was transformed, and a new literature and a new art came into existence. As Sumerian words had been borrowed by the Semites, so, too, Semitic words were borrowed by the Sumerians, and it is possible that examples of them may occur in some of the oldest Sumerian texts known to us.¹ The Babylonians of history, in short, were a mixed people; and their culture and language were mixed like our own. This, then, is one main fact. A second is that the Semitic element first comes to the front in the northern part of Babylonia. It is in Akkad, and not in Sumer, that the first Semitic Empire – that of Sargon the Elder, BC 3800 – had its seat, and old as that empire is, it presupposes a long preceding period of Semitic settlement and advance in power and civilization. The cuneiform system of writing is already complete and has ceased to be Sumerian, archive-chambers of Semitic literature are founded, and Semitic authority is firmly established from Susa in the east to the Mediterranean in the west. Art is no longer Sumerian, and in the hands of the Semitic subjects of Sargon and his son Naram-Sin has reached a perfection which in certain directions was never afterwards surpassed. The engraved seal-cylinders of the period are the finest that we possess. Naturally the Semitic language has superseded the Sumerian in official documents, and the physical type as represented on the monuments is also distinctly Semitic.

At the beginning of the fourth millennium before our era, the civilization and culture of Northern Babylonia have thus ceased to be Sumerian, and the sceptre has fallen into the hands of a Semitic race. But there is a third fact. The displacement of the Sumerian by the Semite was the case only in Northern Babylonia. In the south, in the land of Sumer, the older population continued to be dominant. Sumerian dynasties continued to rule there from time to time, and the old agglutinative language continued to be spoken. When a West-Semitic dynasty governed the country about BC 2200, state proclamations and similar official documents had still to be drawn up in the two languages, Semitic Babylonian and Sumerian.

Sumerian did not become extinct till a later day. Indeed, after the fall of the empire of Sargon of Akkad there seems to have been a Sumerian reaction. While Susa was lost to the Semites and became the capital of a non-Semitic people who spoke an agglutinative language, the power of the Sumerian princes in Southern Babylonia appears to have revived. At all events even the dynasty which followed that of the West-Semites bore Sumerian names. ¹ It was only under the foreign domination of the Kassites, apparently, who governed Babylonia for nearly 600 years, that the Sumerian element finally became merged in the Semitic and the Babylonian of later history was born.

The last fact is that while what we call Assyrian is Semitic Babylonian with a few dialectal variations, it stands apart from the other Semitic languages. A scientific comparison of its grammar with those of the sister-tongues leads us to believe that it represents one of the two primeval dialects of the Semitic family of speech, the other dialect being that which subsequently split up into the varying dialects of Canaanite or Hebrew, Arabic, South-Arabic and Aramaean – or, adopting the genealogical form of linguistic relationship, Assyro-Babylonian would have been one daughter of the primitive parent-speech, while the other daughter comprised the remaining Semitic languages. ² There are two conclusions to be drawn from this; one is that the Babylonian Semites must have separated from their kinsfolk and come under Sumerian influence at a very early period, the other that they moved northward, along the banks of the Tigris into Assyria.

With these two inferences we have to be content. Upon the first home of the Semitic race or its affinities with other branches of the white race, Babylonia can naturally throw no light. The earliest glimpses we catch of the Semites of Babylonia are those of a people who have already come under the influences of Sumerian civilization, who are mingling with their teachers and helping with them to build up the stately edifice of historical Babylonia. There were ruder Semitic tribes, it is true, who continued to live their own nomad life on the western bank of the Euphrates or in the marshes that bordered the Persian Gulf. But like the Bedawin of to-day on the outskirts of Egypt they were little, if at all, affected by the civilization at their sides. They remained the same wild savages of the desert as their descendants who encamp in the swamps of modern Babylonia; they neither traded nor tilled the ground, and the language they spoke was not the same as that of their Babylonian kindred. They served, however, as the herdsmen and shepherds of their Babylonian neighbours, and the vast flocks whose wool was so important an article of Babylonian trade, were

entrusted to their care. But Bedawin they were born, and Bedawin they continued to be.

Even the Aramaean tribes of the coast-land kept apart from the Babylonians, whether Sumerian or Semitic, until the day when one of their tribes, the Kalda or Chaldeans, made themselves masters of Babylon under their prince Merodach-baladan, and from henceforward became an integral factor in the Babylonian population. They must have settled on the borders of Babylonia at a comparatively late date, when Semitic Babylonian had definitely marked itself off from its sister-tongues and the Babylonian Semite had acquired distinctive characteristics of his own. The West-Semitic elements in the population of Babylonia could have entered the country only long after the mixture of Sumerian and Semite had produced the Babylonian of history. The Babylonian of history came to forget that he had ever had another fatherland than the Babylonian plain, the Eden of the Old Testament, the land whose southern border was formed by "the salt river" or Persian Gulf of early Sumerian geography, with its four branches which were themselves "heads." Here the first man Adamu x had been created in Eridu, "the good city," and here therefore the Babylonian Semite placed the home of the first ancestor of his race. But it was a borrowed belief, borrowed along with the other elements of Babylonian culture, and no argument can be drawn from it as to the actual cradle of the Semitic race. Like the story of the deluge, it was part of the Sumerian heritage into which the Semite had entered.

The Semitic tradition which made the first man a tiller of the ground may also have been borrowed from the earlier inhabitants of Babylonia. At all events it is significant that the garden in which he was placed was in the land of Eden, and that the picture of a garden or plantation is one of the primitive hieroglyphs of Sumer. The beginnings of Babylonian civilization were bound up with the cultivation of the Babylonian soil; the reclamation of the great alluvial plain was at once the effect and the cause of Sumerian culture. Sumerian culture, in fact, was at the outset essentially that of an agricultural people.

Trade would have come later, when Eridu had become a seaport, and ships ventured on the waters of the Persian Gulf. It grew up under the shelter of the great sanctuaries. Supported at first by the labour of their serfs, the priests in time came to exchange their surplus revenues – the wool of their sheep, the wheat and sesame of their fields, or the wine yielded by their palms – for other commodities, and the temples themselves formed safe and capacious store-houses in which such goods could be kept. In the historical period Babylonia is already a great trading community, and as the centuries passed trade absorbed more and more the energies of its population, agriculture fell into the background, and the Babylonia conquered by Cyrus could be described with truth as "a nation of shopkeepers." Even the crown prince was a merchant who dealt in wool.¹

The increasing preponderance of trade goes along with the increasing preponderance of the Semitic element in the country, and it is tempting to suppose that there was a connection between the two.

At present, however, there is no positive evidence that such was the case. Nor is there any positive evidence that the Semites who settled in Babylonia were not already agriculturists. The circumstances in which a people lives are mainly responsible for its being agricultural or pastoral, and the fact that the Bedawin neighbours of the Babylonians on the western side of the Euphrates remained a pastoral race does not exclude the possibility that there were other branches of the Semitic family who had already passed out of the pastoral into the agricultural stage before coming into contact with the Sumerians. On the other hand, it is at least noticeable that in Semitic Babylonian the usual word for "city" continued to be one which properly meant a "tent" – the home of the pastoral nomad – and that no Semitic traditions have come down to us of the beginnings of agricultural life outside the limits of the Babylonian "Plain." The title of "Shepherd," moreover, was at times given to the Babylonian kings in days subsequent to the Semitic Empire of Sargon of Akkad. So far as our materials allow us to judge, city-life was the gift of the Sumerian to the primitive Semitic nomad.¹

To the Semite, however, I believe I have shown in my Lectures on Babylonian religion, 2 we must ascribe an important theological conception. In historical Babylonia the gods were conceived of in the form of man. Man was created in the image of God because the gods themselves were men. But the conception cannot be traced back further than the age when the Sumerians and Semites came into contact with one another. In pre-Semitic Sumer there are no anthropomorphic gods. We hear, instead, of the *zi* or "spirit," a word properly signifying "life" which manifested itself in the power of motion. All things that moved were possessed of life, and there was accordingly a "life" or "spirit" of the water as well as of man or beast. In place of

the divine "lord of heaven" whom the Semites adored there was "a spirit of heaven"; in place of Ea, the later Babylonian god of the deep, there was "a spirit of the abyss." Sumerian theology, in fact, was still on the level of animism, and the inventors of the script represented the idea of "god" by the picture of a star.

19870 Vestiges of the old animism can still be detected even in the later cult: by the side of the human gods an Assyrian prayer invokes the mountains, the rivers and the winds, and from time to time we come across a worship of deified towns. It was the town itself that was divine, not the deity to whom its chief temple was dedicated. So, again, the god or goddess continued to be symbolized by some sacred animal or object

19875 whose figure appears upon seals and boundary-stones, and in some cases we learn that the Sumerian prototypes of the later Babylonian divinities bore such names as "the gazelle," "the antelope" or "the bull."

With the advent of the Semite all is changed.

The gods have become men and women with intensified powers and the gift of

19880 immortality, but in all other respects they live and act like the men and women of this nether world. Like them, too, they are born and married, and the court of the early prince finds its counterpart in the divine court of the supreme Bel, or "Lord." The Semitic god of Babylon was "lord of gods" and men, of heaven and earth; Assur of Assyria was "king of the gods" and lord of "the heavenly hosts."

19885 It was natural that, corresponding with this lord of the heavenly hosts, there should be a lord of the hosts of earth, and that as the divine king was clothed in the attributes of man, the human king should take upon him the divine nature. Like the Pharaohs of Egypt or the emperors of Rome, the early kings of Semitic Babylonia were deified. And the deification took place during their life-time, - in fact, so far as

19890 we can judge, upon their accession to the throne. In the eyes of their subjects they were incarnate deities, and in their inscriptions they give themselves the title of god. One of them is even called "the god" of Akkad, his capital.¹

Here, then, in the conception of the divine, we have a clear dividing line between the Semite and his non-Semitic predecessor. So far back as the cuneiform monuments

19895 allow us to carry his history, the Semite is anthropomorphic. As a consequence, the gods he worships conform to the social conditions under which he lives. In the desert the sacred stone becomes "the temple of the god"; in the organized monarchy of Babylonia each deity takes his appointed place in an imperial court. Under the one supreme ruler there are princes and sub-princes, vice-regents and generals, while

19900 angel-messengers carry the commands of Bel to his subjects on earth, like the messengers who carried the letters of the Babylonian king along the high-roads of the empire. On the other hand, the earthly king receives his power and attributes from the god whose adopted son and representative he claims to be. Nowhere has "the divine right of kings" been more fully insisted on than in ancient Babylonia. The laws of

19905 the monarch had to be obeyed, foreign nations had to become his vassals, because he was a god on earth as the supreme Bel was god in heaven.

But the reflection of the divine upon the human brought with it not only the exaltation of sovereignty, but also the rise of a priesthood. There were priests of a sort in Sumer of whom many different classes are enumerated. But when we examine the

19910 signification of the names attached to them we find that they were not priests in the true sense of the word. They were rather magicians, sorcerers, wizards, masters of charms.

They do not develop into priests until after the Semite has entered upon the scene. The god and the priest make their appearance together.

19915 I do not think, however, that we are justified in concluding that the elaborate hierarchy of Babylonia was of purely Semitic origin. On the contrary, like the theological system with which it was associated, it was a composite product. Behind the gods and god-desses of Semitic Babylonia lay the primitive "spirits" and fetishes of Sumer; its mythology and cosmological theories rested on Sumerian foundations; and

19920 in the same way the priestly hierarchy was the result of a racial amalgamation in which the Semitic element had adopted and adapted the ideas and institutions of the older people. We do not find the theology and priesthood of Babylonia among other Semitic populations, except where they had been borrowed from the Babylonians (as in Assyria); in the form in which we know them they were peculiarly and distinctively

19925 Babylonian. Like the language of Semitic Babylonia, which is permeated with Sumerian elements, or the script, which is a Semitic adaptation of the Sumerian system of writing, they presuppose a mixture of race.

The priesthood eventually proved irreconcilable with "the divine right" of the monarch, though both alike had the same origin. The priests prevailed over the king, and as in England the doctrine of divine right was unable to survive the accession of

19930 a German line of princes, so in Babylonia the accession of a foreign, non-Semitic

dynasty (that of the Kassites) dealt a death-blow to the belief in a deified king. The king became merely the representative and deputy of the divine "Lord" of heaven, deriving his right to rule from his adoption by the god as a son; Bel-Merodach came to be regarded as the true ruler of Babylonia, lord of the earth as well as of the heavens, and a theocratic state affords but little room for a secular king. The priests of Bel decided whom their god should recognize or not, and little by little the controlling power of the state passed into their hands. It was in a sense a triumph for the non-Semitic element in the population. While the deification of the sovereign may be said to have been purely Semitic in its origin, the necessary corollary of an anthropomorphic conception of the deity, the supernatural powers supposed to be inherent in the priesthood went back to Sumerian times. It was because he had once been a master of spells that the priest of the anthropomorphic god could influence the spiritual world.

The final triumph of the theocratic principle in Babylonia, where the Semite had been so long dominant, showed that the old racial element was still strong, and ready to reassert itself when the favourable moment arrived. Such, indeed, is generally the history of a mixed people: the conquering or immigrant race may seem to have suppressed or absorbed the earlier population of the country, but as generations pass the foreign element becomes weaker, and the nation in greater or less degree reverts to the older type.

NOTE

So far as the primitive culture of Sumer may be recovered from such of the primitive pictographs as can be at present identified, it may be described as follows. The inventors of them lived on the sea-coast within sight of mountains, but in a marshy district where reeds abounded. Trees also grew there, and the cedar was known. Stone was scarce, but was already cut into blocks and seals. Tablets were used for writing purposes, and copper, gold and silver were worked by the smith. Daggers with metal blades and wooden handles were worn, and copper was hammered into plates, while necklaces or collars were made of gold. Brick was the ordinary building material, and with it cities, forts, temples and houses were constructed. The city was provided with towers and stood on an artificial platform; the house also had a tower-like appearance. It was provided with a door which turned on a hinge, and could be opened with a sort of key; the city gate was on a larger scale, and seems to have been double.

By the side of the house was an enclosed garden planted with trees and other plants; wheat and probably other cereals were sown in the fields, and the shaduf was already employed for the purpose of irrigation.

Plants were also grown in pots or vases. That floods took place is evident from the existence of a pictograph denoting "inundation," and representing a fish left stranded above the foliage of a tree. Canals or aqueducts had already been dug. The sheep, goat, ox and probably ass had been domesticated, the ox being used for draught, and woollen clothing as well as rugs were made from the wool or hair of the two first.

A feathered head-dress was worn on the head. Beds, stools and chairs were used, with carved legs resembling those of an ox. There were fire-places and fire-altars, and apparently chimneys also. Pottery was very plentiful, and the forms of the vases, bowls and dishes were manifold; there were special jars for honey, butter, oil and wine, which was probably made from dates, and one form of vase had a spout protruding from its side. Some of the vases had pointed feet, and stood on stands with crossed legs; others were flat-bottomed, and were set on square or rectangular frames of wood. The oil-jars – and probably others also – were sealed with clay, precisely as in early Egypt. Vases and dishes of stone were made in imitation of those of clay, and baskets were woven of reeds or formed of leather. Knives, drills, wedges and an instrument which looks like a saw were all known, while bows, arrows and daggers (but not swords nor, probably, spears) were employed in war. Time was reckoned in lunar months. Sacred cakes were offered to the gods, whose images were symbolized sometimes by a bearded human head with a feather crown, sometimes by a two-legged table of offerings on which stand two vases (of incense ?). Demons were feared who had wings like a bird, and the foundation stones – or rather bricks – of a house were consecrated by certain objects that were deposited under them. A "year" was denoted by the branch of a tree, as in Egypt, and a "name" by a bird placed over the sacred table of offerings. The country was full of snakes and other creeping things, and wild beasts lurked in the jungle. The pictographs were read from left to right, and various expedients were devised for making them express ideas. Thus mud, "to beget," was denoted by the picture of a bird dropping an egg. At other times the pictograph

was used to express an idea, the pronunciation of which was the same as that of the object which it represented. The bent knee, for example, was used to express dug or tuk, "to have," since it represented a "knee," which was called dug in Sumerian.

1 The two dialects were called eme-K.XJ (i.e. enie-lakhkha, W.A.I, iii. 4,31, 32), "the language of the enchanter," and eme-SAL, "the woman's language," which are rendered in Semitic Babylonian, lisan Sumeri and (lisa?i)Akkadi, "the language of Sumer" and "the language of Akkad." In a tablet (81, 7-27, 130, 6, 7) they are said to be "like" one another. Other dialects were termed "the language of the sacrificer" and "the language of the anointer," as being used by these two classes of priests.

They differed, perhaps, from the standard dialects in intonation or the use of technical words. We hear also of "a carter's language" in which anbarri – which, it is noticeable, is a Sumerian word – meant "yoke and reins," i.e. "harness" {Zeitschrift für Assyriologie, ix. p. 164}.

1 Fick, however, is an exception (Beitrage zur Kunde der indogermanischen Sprachen, xxix. pp. 229-247).

1 Memoires de la Delegation en Perse, i. pp. 152-3. Photographs of the two types – Sumerian and Semitic – represented on the early monuments of Babylonia are given by Dr. Pinches in an interesting Paper in the Journal of the Royal Asiatic Society; January 1900, pp. 87-93.

1 It is noticeable that the script of the other people whose civilization grew up on the banks of a river, the Egyptians namely, contains no special ideograph for "river." The word is expressed by the phonetically-written atur, with the determinative of "water" or "irrigation basin." As in the primitive hieroglyphs of Babylonia, "the sea" was a "circle."

1 For proof of this reading see Expository Times, xvii. p. 416 and note infra, p. 91.

2 See my Religions of Ancient Egypt and Babylonia, pp. 373-84.

1 Taylor found quantities of sea-shells in its ruins {Journal of the Royal Asiatic Society, xv. p. 412}. At the time of its foundation an arm of the sea probably ran up to it from the south-east, though the myth of Adamu describes him as fishing each day in the waters of the actual Gulf, rather than in an arm of it.

2 The Moon-god of Ur was a "son" of El-lil, the god of Nippur.

3 For proof of this see my Religion of the Ancient Babylonians p. 105.

1 A tablet obtained by Dr. Hayes Ward divides Sippara into four quarters, "Sippara of Eden," "Sippara that is from everlasting," "Sippara of the Sun-god," and "Sippara," which may be the "Sippara of Anunit" or "Sippara of Aruru," the creatress of man, of other inscriptions. Amelon or Amelu, "man," who corresponds with the Enos of Scripture, is said in the fragments of Berossus to have belonged to Pantibibla, or "Book-town," and since Euedoranchus of Pantibibla, the counterpart of the Biblical Enoch, is the monumental Enme-dhur-anki of Sippara, it is clear that Pantibibla is a play on the supposed signification of Sippara (from sipru, "a writing" or "book"). The claim to immemorial antiquity made on behalf of Sippara may be due to the fact that Akkad, the seat of the first Semitic empire, was either in the immediate neighbourhood of Sippara or another name of one of the four quarters of Sippara itself.

1 Chaldaea and Susiana, p. 282.

2 Journal of the Royal Geographical Society, xxvii. p. 1 86. Rawlinson calculated the rate of advance from that made by the Babylonian Delta between 1793 and 1833. In the age of Strabo and Arrian the Tigris and Euphrates were not yet united, while in the time of Nearchus (BC 335) the mouth of the Euphrates was 345 miles from Babylon. De Morgan calculates that between the age of Nearchus and that of Sennacherib, when the Euphrates had not yet joined the more rapid Tigris, the rate of increase must have been much slower than it is to-day and have not exceeded eighty metres a year. In the age of Sennacherib Eridu was already seventy miles distant from the coast (de Morgan, Memoires de la Delegation en Perse, i. pp. 5-23).

The distance from the Shatt el-Arab (the united stream of the Tigris and Euphrates) to the end of the alluvium in the Persian Gulf is 277 kilometres, or 172 miles. Some idea of the appearance of the coast in the Abrahamic age may be gained from the map of the world drawn by a Babylonian tourist in the time of Khammu-rabi which I have published in the Expository Times, November 1906.

1 There is a striking resemblance between the primitive Babylonian picture of a boat and the sailing boat depicted on the prehistoric pottery of Egypt, for which last see Capart, Les Debuts de l'Art en Egypte, p. 1 16.

2 Perhaps, however, this was really due to the accidental similarity of sound between gz, "a reed," and gin, "to be firm."

3 The various forms of vases represented in the early pictography are given by de Morgan in a very instructive article, "Sur les procedes techniques en usage chez les scribes babyloniens," in the Recueil des Travaux relatifs a la Philologie et a l'Archeologie egyptiennes et assyriennes, xxvii. 3, 4 (1905).

Among special vases were those for oil, wine and honey. The butter or oil jar was closed with a clay sealing exactly like those of early Egypt. Vases with spouts were also used.

1 The American excavations at Askabad have shown that the domestication of animals, including the camel, took place during the neolithic age, the goat being one of the last to be tamed.

2 This, however, is not absolutely certain, since the ideograph which denotes an "ass" originally signified merely "a yoked beast."

1 Peters, Nippur, ii. p. 299.

1 Thus in the great historical inscription of Entemena, King of Lagas (BC 4000), M. Thureau Dangin is probably right in seeing in datn-kha-ra (col. i. 26) a Semitic word. In fact where a word is written syllabically, that is to say phonetically, in a Sumerian text there is an a

priori probability that it is a loan-word.

1 This may of course have been only a literary archaism. But if the kings were really of Semitic origin, it is difficult to understand why they should have been ashamed of being called by their native Semitic names.

2 See Hommel, *Grundriss der Geographie und Geschichte des Alten Orients*, i. pp. 79-82.

1 Hitherto read A-da-pa. But the character PA had the value of mu when it signified "man," according to a tablet quoted by Fossey, *Contribution au Dictionnaire Sumirien-assyrienne*, No. 2656, and in writing early Babylonian names or words the characters with the requisite

phonetic values were selected which harmonized ideographically with the sense of the words. Thus out of the various characters which had the phonetic value of mu that was chosen which denoted "man" when the name of the first man was needed to be written. The Semitic Adamu, which M. Thureau Dangin has found used as a proper name in tablets from Tello of the age of Sargon of Akkad, was borrowed from the Sumerian adatu, which signified "animal," and then, more specifically "man." Thus in the bilingual story of the creation we have (1. 9) uru nu-dim adam nu-mun-ya, "a city was not built, a man was not made to stand upright," and a list of slaves published by Dr. Scheil (*Recueil de Travaux*, etc., xx. p. 65) is dated in "the year when Rim-Anum the king (conquered) the land of bi and its inhabitants" (adam-bi). See above, p. 76.

1 *Records of the Past*, New Series, iii. pp. 124-7.

1 Erech was one of the earliest of the Semitic settlements in the Babylonian plain, and Erech was known later as 'supuru, "the sheepfold," as is shown by its ideographic equivalent.

2 *The Religions of Ancient Egypt and Babylonia*, pp. 276-80.

CHAPTER IV THE RELATION OF BABYLONIAN TO EGYPTIAN CIVILIZATION

In dealing with the question of origins, science is constantly confronted with the problem of unity or polygeneity. Has language one origin or many; are the various races of mankind traceable to one ancestor or to several? Do the older civilizations presuppose the same primeval starting-point, or were there independent centres of culture which grew up unknown to one another in different parts of the world?

Under the influences of theology the belief long prevailed that they were all sprung from the same source; of late the tendency has been in an opposite direction. While the biologist has inclined to a belief in the unity of species, the anthropologist has seen reason to maintain the diversity of origin in culture.

The two earliest civilizations with which we are acquainted were those of Babylonia and Egypt. To a certain extent the conditions under which they both arose were similar. They grew up alike on the banks of great rivers and in a warm, though not tropical, climate. They rested, moreover, on organized systems of agriculture, which again had been made possible by irrigation engineering. In Babylonia the first settlers had found a plain which was little more than a swamp, over which the swollen streams of the Euphrates and Tigris wandered at will during the annual period of inundation, and which needed engineering works on a large scale before it could be made habitable. The rivers had to be confined within their channels by means of embankments, and canals had to be cut in order to draw off the surplus supply of water and regulate its distribution to the land. While the swamp was thus being made possible for habitation, the population must have lived on the edge of the desert plateau which bordered it, and have there developed a civilization which not only produced the engineers and their science, but also the concentrated authority which enabled the science to be utilized.

In Egypt it was the banks and delta of the Nile which took the place of the Babylonian plain. Recent discoveries have shown that in the prehistoric age, when the natives still lived in the desert and led a pastoral life, all this was a morass, the haunt of beasts of prey and venomous reptiles. But here again the swamp was rendered habitable by engineering works similar to those of primeval Babylonia. The swamp was transformed into fertile fields, the annual flood of the river was regulated, and an elaborate network of canals and embankments spread over the country.

The pastoral nomads of the neolithic age became agriculturists, or were employed in constructing and repairing the works of irrigation, or in erecting monumental buildings for their rulers. There is evidence of the same centralized government, the same directing brain and organizing force that there is in primitive Babylonia.

Is it possible that two systems of engineering science, so similar in their objects, their methods and their results, should have been invented independently in two different countries? There are scholars who answer in the negative. But the

possibility cannot be denied, since an even more elaborate system of irrigation was invented in China without any suggestion, as far as we know, from outside. The geographical conditions of Babylonia and Egypt, moreover, resemble one another, and the question of draining the swamps and regulating the overflow of the rivers once raised, the answer to it seems fairly obvious. By itself, therefore, the fact that the cultures of ancient Babylonia and Egypt alike rested on a similar system of

irrigation engineering would be no proof of their common origin.

In some respects the problem which the Babylonian engineers were called upon to solve was more difficult than that which faced the Egyptians. The Nile is fed by the rains and melting snows of Abyssinia and Central Africa, and its annual inundation takes place in the later summer months. The Euphrates and Tigris flow from the north, from the highlands of Armenia, and are at their fullest in the spring. Their overflow accordingly comes just before the summer heats, when agriculture is difficult or impossible, whereas in Egypt the period of inundation ushers in the most favourable time of the year for the growth of the crops. What the Babylonian engineers had to do was not only to drain off the overflow, but also to store it for use at least six months later. With them it was a question of storage as well as of regulation. Those then, who believe that the engineering sciences of the Babylonians and Egyptians were no independent inventions are bound to see in Babylonia their original home. It would have been here that the great problems were solved, the practical application of which to the needs of Egypt would have been a comparatively simple matter. On the chronological side there would be no difficulties in such a view. Old as was the civilization of Egypt, the excavations in Babylonia have made it clear that the civilization of Babylonia was at least equally old. At Nippur the American excavators claim to have found inscribed remains which reach back for nearly ten thousand years, and though the data upon which this calculation is based may be disputable, it is certain that the earliest monuments met with are of immense age. And it must be remembered that they belong to a time when the early pictorial writing had already passed into a cursive script, and the plain of Babylonia had been a land of cultivated fields for unnumbered generations.

But by itself, I repeat, the practical identity of engineering science in primeval Babylonia and Egypt is no proof that it had been learnt by the one from the other. If we are to fall back on the old belief which brought the civilized population of Egypt from the plain of Shinar, it must be for reasons which are supported by archaeological facts. If such archaeological facts exist, the parallel systems of irrigation engineering will be additional evidence; alone, they prove nothing. At the outset we are met by a fact which personally I find it hard to explain away. The hieroglyphic script of Egypt has little in common with the primitive pictorial characters of Babylonia. Objects and ideas like "the sun," "man," "number one," will be represented by the same pictures or symbols all the world over, and consequently the fact that in both Babylonian and Egyptian writing the sun is denoted by a circle and the moon by a crescent is of no significance whatsoever. But when we turn to less obvious symbols there is comparatively little similarity between the two forms of script. The ideograph of "god," for example, is a star in Babylonia, a stone axe and its shaft in Egypt; "life" is represented by a flowering reed in the one case, by a knotted girdle in the other. It is true that Professor Hommel and others have pointed to a few coincidences like those between the Egyptian symbol for "foreign land" and the Babylonian ideograph of "country," or between the Egyptian and Babylonian signs for "city," "place," but such coincidences are rare.¹ As a rule, as soon as we leave the more obvious conventions of pictorial writing little or no connection can be traced between the pictorial characters of Egypt and those of Babylonia. As a whole the two graphic systems stand apart.

Nevertheless I am bound to add that it is only as a whole that they do so. With all the general unlikeness there is a curious similarity in a few – a very few – instances which it is difficult to interpret as merely the result of accident. The round circle with lines inside it which denotes "a city" in Egyptian might be explained from the circular villages which still characterize Central Africa; but then how is it that the ideograph for "place" in the pictorial script of Babylonia had precisely the same form? That the word for "country" should be denoted in the Babylonian script by the picture of three mountain peaks may be due to the fact that to the Babylonian "country" and "mountain" were the same; but such an explanation fails us in the case of the Egyptian hieroglyph of "foreign land," where the three peaks appear again, since the hieroglyph for "mountain" in Egyptian has but two. The picture of a seat, and a seat, too, of peculiar shape, represents "place" in Egyptian; in Babylonian the same picture represents "city," thus inverting the ideographic signification of the picture which in Egyptian and Babylonian has respectively the meanings of "city" and "place."

Between the primitive Babylonian picture of a "ship" and the boats depicted in the prehistoric pottery of Egypt, again, the resemblance is very exact, and Professor Hommel has pointed out to me a curious likeness between the original form of the Babylonian ideograph for "a personal name" and the ka-sign with the Horus-hawk above it within which the names of the earliest Pharaohs are inscribed. ¹ Indeed the

learned and ingenious Munich Professor has made out a list of even more striking coincidences, where the characters agree not only in sense but also in the phonetic values attached to them.¹

Here, however, we trench on another question, the philological position of the Egyptian language.

Egyptian scholars to-day are practically unanimous in believing it to belong, more or less remotely, to the Semitic family of speech. The Berlin school of Egyptologists, who under the guidance of Professor Erman have made Egyptian grammar a special subject of investigation, are largely responsible for the dominance of this belief. I ought to be the last person in the world to protest against it, seeing that I maintained it years ago when the patronage of the Berlin Egyptologists had not yet made it fashionable.

At the same time I confess that I cannot follow the Berlin philologists to the extent to which they would have us go. For them the old Egyptian language is not related to the Semitic family of speech "more or less remotely," but very closely indeed. Indeed in their hands it becomes itself a Semitic language, and as a logical consequence the Egyptian script is metamorphosed into one of purely Semitic invention.

But while admitting that Egyptian grammar is Semitic in the sense in which English grammar is Teutonic, the comparative philologist is bound to add that it contains much which cannot be reduced to a Semitic pattern. The structure, moreover, is not on the whole Semitic, neither is a large part of its vocabulary. And among the words in the lexicon which have Semitic affinities there are a good many which are better explained as the result of borrowing than as belonging to the original stratum of the language. In some cases they are demonstrably words which have been introduced into the Egyptian language at a late date; in other cases it seems possible to regard them as loan-words from Semitic Babylonian which entered the language at a "pre-dynastic" epoch. Thus, *qemku*, "the wheaten loaf" which was used for offerings, is the Hebrew *qemakh*, the Babylonian *qimu* and may have been brought into Egypt along with the wheat which was first cultivated in Babylonia and still grows wild on the banks of the Euphrates. To what an early period the importation of the cereal must be referred is shown by its occurrence in the prehistoric graves of Upper Egypt.¹

When all allowances are made, however, the fact remains that the Egyptian language as we know it was related to the Semitic family of speech. It stood to the latter as an elder sister, or rather as the sister of the parent-language which the existing Semitic dialects presuppose. It was not like the so-called Hamitic dialects of Eastern Africa, which are African languages Semitized, but it was itself of the same stock as Hebrew or Semitic Babylonian. It represents, however, a form of language at an earlier stage of development than any of those which we call Semitic, and it has, moreover, been largely influenced and modified by foreign languages, which we may term African. So extensive has this influence been that the Semitic element has been even more disguised in it than the Teutonic element is disguised in modern English. In leaving the soil of Asia the language of Egypt took upon it an African dress.

Now though language can prove but little as regards race, it can prove a great deal as regards history. A mixed language means a mixed history, and indicates an intimate contact between the populations who spoke the languages which are represented in it. Egyptian grammar would not have been Semitic if those who imposed it upon the natives of the Nile had not been of Semitic descent, or at all events had not come from a region where the language was Semitic. Nor would this grammar have been modified by foreign admixture if a part of those who learned to use it had not previously been accustomed to some other form of speech. And since we know of no Semitic languages in Africa which were not brought from Asia, we are justified in concluding that the Semitic element in the Egyptian language was of Asiatic origin.

But we can go yet a step further. Where two languages are brought into close contact, the general rule is that that of the stronger race prevails. The conqueror is less likely to learn the language of the conquered than the conquered are to learn the language of their masters. On the other hand, the negro slave in America became English-speaking, whereas the English emigrant wherever he goes preserves the language of his fathers. It is only where a conquering caste brings no women with it that it is likely to lose its language.

When, therefore, we find that Old Egyptian is an Africanized Semitic language, we have every right to infer that it is because invaders brought it with them from Asia who were Semites either by race or by language. In other words, Egypt must have been occupied in prehistoric days by a people who came from the Semitic area in Asia. The days were prehistoric, but of the invasion itself history preserved a tradition. On the walls of the temple of Edfu it is recounted how the followers of Horus, the

totem guide and patron deity of the first kings of Upper Egypt, made their way across the eastern desert to the banks of the Nile, and there, with the help of their weapons of metal, subjugated the older inhabitants of the valley. Battle after battle was fought as the invaders slowly pushed their way down the Nile to the Delta, establishing a forge and a sanctuary of Horus on every spot where a victory had been gained.¹ The story has come down to us under a disguise of euhemeristic mythology, but the tradition it embodies has been strikingly confirmed by modern discovery. The "dynastic" Egyptians, the Egyptians, that is to say, who founded the Egyptian monarchy and to whom we owe the great monuments of Egypt, were immigrants from the east.

The culture of these "dynastic" Egyptians was built up on two solid foundations, the engineering skill which made Egypt a land of agriculture, and a system of writing which made the organization of the government possible. The culture was at once agricultural and literary, and this alone marked it off from the culture of neolithic (or "prehistoric") Egypt, which belonged to the desert rather than to the banks and delta of the river, and which knew nothing of writing. Now we have seen that there was one other country in the world in which a similar form of culture had come into existence. In Babylonia too we have a civilization which has as its basis the training of rivers for the purpose of irrigation and the use of a pictorial script. The civilization of Babylonia was, it is true, Sumerian at its outset, but in time it became Semitic, and expressed itself in a Semitic tongue. It is difficult to avoid the conclusion that the Semitic-speaking people who brought the science of irrigation and the art of writing to the banks of the Nile came, like the wheat they cultivated, from the Babylonian plain.

There are two archaeological facts connected with the early culture of "dynastic" Egypt which seem to me to prove at any rate some kind of intercourse with Babylonia. No building-stone exists in the Babylonian plain; it was therefore the natural home of the art of building in brick, and since every pebble was of value it was also the natural birthplace of the gem-cutter. Nowhere else could the use of clay as a writing material have suggested itself, or that of the inscribed stone cylinder which left its impression behind it when rolled over the clay. Wherever we have the clay tablet and the seal-cylinder we have evidence of Babylonian influence.

Now recent discoveries have shown that the culture of the early dynastic period of Egypt is distinguished from that of later times by the employment of clay and the stone seal-cylinder. Neither the one nor the other could have originated in the country itself, for Upper Egypt (where all authenticated discoveries of early seal-cylinders have been made) is a land of stone, and the river-silt, which is mixed with sand, is altogether unsuited for the purpose of writing. When the Egyptians of the Eighteenth dynasty corresponded in Babylonian cuneiform with their subjects and allies in Asia, the clay upon which they wrote was brought from a distance. Moreover, the stone seal-cylinder of the early dynasties is an exact reproduction of the early seal-cylinder of Babylonia. Substitute cuneiform characters for the hieroglyphs and there is practically no difference between them in many cases. It is difficult to believe that such an identity of form is the result of accident, more especially when we find that, as Egyptian civilization advanced, the seal-cylinder became less and less like its Babylonian original, and finally disappeared from use altogether. That is to say, as the culture of the people was further removed from its first starting-point, and therefore more national, an object which never had any natural basis in the physical conditions of the country grew more and more of an anomaly, and was eventually superseded, first by the "button-seal" and then by the scarab. I see no other explanation of this than that it was originally introduced from Babylonia, and maintained itself so long in an alien atmosphere only because it was bound up with a culture which had come from the same region of the world. The seal-cylinder of the early Egyptian dynasties seems to me, apart from everything else, to prove the existence of some kind of "prehistoric" intercourse between the civilizations of the Euphrates and the Nile. And in this intercourse the influences came from Babylonia to Egypt, not from Egypt to Babylonia.

The use of brick in early Egypt points in the same direction. While Babylonia was a land of clay, Upper Egypt was a land of stone, and it was as unnatural to invent the art of brick-making in the latter country as it was natural to do so in the former. To this day the Nubians build their cottages of stone; so too do the Bedawin squatters on the east bank of the Nile; it is only where the population is Egyptian and the influence of the old Egyptian civilization is still dominant that brick is employed.

Under the Old Empire the Egyptian Pharaohs built even the temples of the gods of brick; it was but gradually that the brick was superseded by stone.

It was the same also in Assyria; here too, in a land of stone, brick was at first the sole building material, and even the great brick platforms which the marshy soil of Babylonia had necessitated continued to be laid. But Assyrian culture was confessedly Babylonian in origin, and the brick edifice was therefore a characteristic of it. It was only by degrees that Assyrian architecture emancipated itself from its early traditions, and at first timidly, then more boldly, superseded the brick by stone.

The example of Assyria throws light on that of Egypt, and as the Assyrian employment of brick was due to the Babylonian origin of its civilization, it is permissible to infer that the Egyptian employment of brick was also due to the same cause. Once more we may repeat that there was early intercourse between Egypt and Babylonia – the land of the brick-maker – and that in this intercourse the prevailing influences came from the east.

Such, then, is the conclusion to which the most recent research leads us. The "dynastic" Egyptians, the Egyptians of history, spoke a language which is related to those of the Semitic family; their first kingdoms, so far as we know, were in Upper Egypt, and tradition brought them across the eastern desert to the banks of the Nile. The culture which they possessed was characterized by Babylonian features, and was therefore due either wholly or in part to intercourse with Babylonia. The fact that the use of the seal-cylinder – which, by the way, bore the Semitic name of khetem – should have lingered in the valley of the Nile to the very beginnings of the Middle Empire, is an indication that the period of its introduction could not have been very remote. The earliest historical monuments which have been revealed to us by modern excavation may not, after all, be many centuries later than the time when the culture of Babylonia found its way to the Nile.

Indeed, there is a fact which indicates that this is the case, and that the literary culture of Babylonia had been imported into the valley of the Nile at a time when Egypt was divided into independent kingdoms. At an early epoch an ingenious system of official chronology had been invented in Babylonia. The years were named there after the chief events that had occurred in each of them, among these the accession or death of a king being naturally prominent. At the death of a king a list was drawn up of his regnal years, with their characteristic events, and such lists were from time to time combined into longer chronicles. The Babylonians were preeminently a commercial people, and for purposes of trade it was necessary that contracts and other legal documents should be dated accurately, and that in case of a dispute the date should be easily ascertained.

Now an exactly similar system of dating had been adopted in Egypt before the age of the First historical dynasty. A pre-Menic monument dated in this way has been discovered at Hierakonpolis in Upper Egypt, and the same method of reckoning time is found on ivory tablets that have been disinterred at Abydos.

The method lasted down to the age of the Fifth dynasty, since the Museum of Palermo contains the fragment of a stone from Heliopolis, on which the chronology of the Egyptian kings is given from Menes onward, each year being named after the event or events from which it had received its official title. The successive reigns are divided from one another as in the Babylonian lists, and the height of the Nile in each year is further added – a note which naturally is of Egyptian origin. It is, therefore, interesting to observe that it is added as a note, independent of the event which gave its name to the year. Nothing could prove more clearly the foreign origin of the whole system of chronology, since, had it been of native invention, the height of the Nile, on which the prosperity of the country depended, would have been the first event to be recorded. After the fall of the Old Empire this ancient Babylonian method of dating seems to have passed out of use like the Babylonian seal-cylinder; at all events we find no further traces of it. It was, in short, an exotic which never took kindly to Egyptian soil.

Did the "dynastic" Egyptians bring this method of dating with them, or did they borrow it after their settlement in Egypt? The second supposition is very difficult to entertain, for intimate trade relations between Babylonia and Upper (or Lower) Egypt in the pre-Menic age appear to be out of the question, and are unsupported by any known facts. And literary correspondence, such as was carried on in the time of the Eighteenth dynasty, seems equally out of the question. How, then, did the Egyptians come to learn the peculiar Babylonian system of chronology unless the founders of the culture of which it formed a portion had originally brought it with them from the east?

The same question is raised by the existence in early Egypt of an artistic motif which had its origin in Babylonia. This is what is usually known as the heraldic position of the figures of men and animals.

An example of it is found on the famous "palette" of Nar-Buzau discovered by Mr.

20405 Ouibell at Hierakonpolis, 1 where the hybrid monsters whose necks form the centre of the slate are heraldically arranged. In this case the design is known to be Babylonian, since M. Heuzey has pointed out a Babylonian seal-cylinder on which the two monsters recur. Nar-Buzau is made the immediate predecessor of Menes by Professor Petrie on grounds to which every

20410 archaeologist must assent; but an even better example of the heraldic design is met with on a great isolated rock of sandstone near El-Kab which was quarried in the time of the Old Empire. Here the ownership and opening of the quarry are denoted by an elaborate sculpture of the Pharaoh, who is duplicated, his two forms being figured as seated back to back, with a column between them, while the winged solar disk of Edfu, with the royal uraei on either side of the orb, spreads its wings above them. Each of

20415 the royal forms holds a sceptre, but that on the left has no head-dress, whereas that on the right wears a skull-cap, above which is the solar orb with the uraeus serpent issuing from it.² In front of the latter is an altar consisting of a bowl on a stand, loaves of bread and a cup and jar of wine (with the customary handles for suspension) being engraved above the bowl along with a series of perpendicular lines which in this instance cannot (as has been suggested) represent the fringes of a mat. In front of the figure on the left is another altar, of different shape, the place of the bowl being taken by a flat top, above which are six upright lines and a fiat cake. Precisely the same altar with the same objects above it are engraved on a broken

20425 seal-cylinder of ivory found by Dr. Reisner at Naga' ed-Der, which I understand from the discoverer to be of the age of the First dynasty. When, therefore, was it that the heraldic design in art was introduced into Egypt from its Babylonian birthplace? In any case it would seem to have been before the foundation of the united monarchy. In Babylonia itself, as we have seen, tradition looked seaward, towards the Persian Gulf, for the elements of its civilization. At any rate the seaport of Eridu was the gateway through which the culture of Babylonia was believed to have passed. Here on the shores of the sea the culture-god of Sumer had his home; here trade sprang up, and the sailors and merchants of Eridu came into contact with men of other lands and other habits. Is it possible to discover a connection between Eridu and primeval

20435 Egypt?

I believe that it is, though in making the attempt we are of course treading upon precarious ground. There are certain curious coincidences, one of which, since it goes to the heart of Sumerian and Egyptian religion, is necessarily of considerable weight. But they are all, it must be remembered, more in the nature of indications and possibilities than of ascertained facts.

20440 Eridu meant in Sumerian "the good city." Memphis (Men-nofer), "the good place," the name of the first capital of united Egypt, had the same signification. In the case of Eridu the name had something to do with the fact that the city was the seat of Ea, the god of beneficent spells and incantations, who had given the arts and sciences to man, and was ever ready to heal those that were sick. The son and vice-gerent of Ea, who carried his commands to earth and spent his time in curing diseases and raising

20445 "the dead to life," was Asari, "the prince," who was usually entitled Mulu-dugga, "the good" or "beneficent one." The character and attributes of Asari are thus the same as those of the Egyptian Osiris, who was also known as Ati, "the prince," and was commonly addressed as Un-nofer, "the good being."

20450 Unlike most of the Egyptian deities, Osiris had the same human form as Asari of Eridu, and the resemblance between the names of Asari and Osiris – Asar in Egyptian – is rendered more striking by the remarkable fact that they are both represented by two ideographs or hieroglyphs of precisely the same shape and signification.¹ It does not appear possible to ascribe such a threefold identity to mere coincidence. And the theory of coincidence becomes still more improbable when we remember that while the story of Osiris centres in his death and resurrection, one of the chief offices of the Sumerian Asari was to "raise the dead to life." Nowhere else in Babylonian literature, whether Sumerian or Semitic, do we find any reference to a resurrection; the Semitic Babylonians, indeed, did not look forward to a future life at all, or if they did, it was to a shadowy existence in a subterranean land of darkness "where all things are forgotten." It is only in connection with Asari that we hear of a possibility that the dead may live again.

Other resemblances between the theologies of Eridu and primitive Egypt have been

20465 pointed out.

Professor Hommel believes that in the Egyptian deity Nun, the heavenly ocean, we must see a Sumerian god Nun, who also represented the celestial abyss. However this may be, an old formula, torn from its context, which has been introduced into the Pyramid texts of the Pharaoh Pepi I., takes us back not only to the cosmology of Eridu but to the literary form in which it had been expressed. Pepi, it is said, "was born of his

20470

father Turn. At that time the heaven was not, the earth was not, men did not exist, the gods were not born, there was no death." The words are almost a repetition of those with which the Babylonian epic of the creation begins: "At that time the heaven above was not known by name, the earth beneath was not named ... at that time the gods had not appeared, any one of them"; and they are also a distant echo of the commencement of the cosmological legend of Sumerian Eridu: "At that time no holy house, no house of the gods in a holy place had been built, no reed had grown, no tree had been planted." x

The testimony of philological archaeology, if I may use such a term, is supplemented by that of archaeological discovery. Sumerian Babylonia and early dynastic Egypt are alike characterized by vases of hard stone, many of which have the same forms. Examples of some of them will be found in de Morgan's *Recherches sur les Origines de l'Egypte*, ii. p. 257, where J?quier observes that analogues to the Egyptian vases have been disinterred by de Sarzec at Tello in Southern Babylonia, "the shape and execution of which are exactly like" those discovered in Egypt, "the only difference being that the one are ornamented with hieroglyphics, and the others with a cuneiform inscription; apart from this they are identical in make." The most remarkable instance of identity, however, is the design on the palette of the pre-Menic Pharaoh Nar-Buzau to which attention was first called by Professor Heuzey.¹ On this we have a representation of two lions set face to face in the Babylonian fashion, and with long serpentine necks which are interlaced so as to enclose a circle. Precisely the same representation is met with on an early Babylonian seal-cylinder from Tello.

Years ago I noticed the general likeness presented by the seated statues of Tello to those of the Third Egyptian dynasty,² and suggested that both belonged to the same school of sculpture. A little earlier Professor Flinders Petrie had demonstrated that the standard of measurement marked upon the plan of the city which one of the Tello figures holds in his lap is the same as the standard of measurement of the Egyptian pyramid-builders, the cubit, namely, of 20*63, which is quite different from the later Assyro-Babylonian cubit of 22*6.1 Still more convincing, perhaps, is the Babylonian division of the year into twelve months of thirty days each, which was already known in Egypt in the age of the early dynasties. The Babylonian week of five and ten days reappears in the Egyptian week of ten days, while the division of the day into twelve "double hours," six belonging to the day and six to the night, has its counterpart in the Egyptian day of twenty-four hours, twelve of which were reckoned to the day and the other twelve to the night. Since a list of the thirty-six decans or zodiacal stars has recently been found on a coffin of the time of the Twelfth Dynasty² it is possible that this distinctively Babylonian invention may also go back to the age of the first Egyptian dynasties. At all events one of the chief stars in the Pyramid texts is "the Bull of heaven," a translation of the Sumerian Gudi-bir, or "Bull of Light," the name given to the planet Jupiter in its relation to the ecliptic. In primitive Babylonian astronomy the zodiacal sign of the Bull ushered in the year.

It may be that some of these evidences of Babylonian influence are referable to contact between Babylonia and Egypt in the age that immediately preceded the foundation of the united Egyptian monarchy rather than to that still earlier age when the "dynastic" settlers first settled in the valley of the Nile. But at present we do not know how such a contact could have taken place. Upper Egypt and not the Delta was the seat of the first Pharaohs with their Horus-hawk totem, and at the remote period when the future civilization of the country was being developed under their fostering care it is difficult to believe that Babylonian soldiers or traders had made their way to the shores of the Mediterranean, much less to the deserts of the Sayyid. For the present, at all events, where we have clear proof of the dependence of early Egyptian culture upon that of the Babylonians we have no alternative but to ascribe it to the Semitic emigrants or invaders to whom the historical civilization of Egypt was primarily due.¹ This civilization, like that of Babylonia, implied a knowledge of metal. It was a civilization of the copper age, and thus stood in sharp contrast to the neolithic culture, such as it was, of "prehistoric" Egypt. Egyptian tradition, it is true, believed that the metal weapons with which the followers of Horus had overcome the stone-defended natives of the country were of iron, but this was because the compilers of the story in its existing form projected the knowledge and usages of their own time back into the past. There is incontrovertible proof that in Egypt, as in Europe, the ages of copper and bronze preceded that of iron. But the tradition was doubtless right in laying stress upon the fact that the invaders were forgers and blacksmiths. It would have been by reason of the superiority of their arms that they succeeded in subduing the valley of the Nile and reducing its inhabitants to serfdom. They were, too, "the followers of Horus," under the leadership of a single prince who

was himself a Horus, that is to say, an incarnate god. Here, again, we find ourselves in the presence of a conception and doctrine of Semitic Babylonia. There, too, as we have seen, the kings were incarnate gods, not only the sons of a divinity, but themselves divine. In Egypt, apart from the Osirian circle, the gods were not men, but animals, and so deeply rooted was this beast-worship in the hearts of the indigenous population that even the "dynastic" civilization, with all its unifying and absorbing power, never succeeded in doing more than in uniting the head of the beast with the body of the man. Even the human Pharaoh was forced to picture himself as a hawk. In Semitic Babylonia on the other hand, as we have seen, the deification of the king flowed naturally from the anthropomorphic conception of the deity; where man was made in the image of God, it was easy to see in him a god on earth. Like the use of copper, therefore, the deification of the king which characterized dynastic Egypt points back to Babylonia.

It must not be supposed, however, that because certain elements and leading characteristics in the civilization of historical Egypt indicate that the Semitic-speaking race to whom it was mainly due came originally from Babylonia, there are no elements in it which can be derived from elsewhere. On the contrary, there is much that is native to Egypt itself.

Even the script shows but comparatively few traces of a Babylonian origin. If the "dynastic" Egyptians came from Babylonia, they must have very considerably modified and developed the seeds of culture which they brought with them. And in Egypt they found a neolithic culture which had already made considerable progress. The indigenous population possessed the same artistic sense as the palaeolithic European of the Solutrian and Magdalenian epochs, with whom perhaps it was contemporaneous, and under the direction of its dynastic conquerors this sense was trained and educated until the Egyptians of history became one of the most artistic peoples of the old world.

But it is noticeable that throughout the historical period whenever the civilizations of Egypt and Babylonia came into contact, it was Egypt that was influenced rather than Asia. The tradition of the earliest ages was thus carried on; the stream of influence flowed from the east, and Herodotus was justified in assigning Egypt to Asia rather than to Africa. It was, in fact, Asia with an African colouring.

In the days of the Eighteenth dynasty, when Egypt for the first and last time possessed an Asiatic empire, the eastern influence is very marked. The script itself became Babylonian, the correspondence of the Government with its own officials in Canaan was conducted in the Babylonian language and the Babylonian syllabary, and there are indications that even the official memoranda of the campaigns of Thothmes III. were drawn up in cuneiform characters.

The clay tablets of Babylonia were imitated in Upper Egypt, where hieroglyphic and hieratic characters were somewhat awkwardly impressed upon them, and the language was filled with Semitic loan-words. The fashionable author of the age of the Nineteenth dynasty interlarded his style not only with Semitic words, but even with Semitic phrases. It is true that the Semitic words and phrases are Canaanite; but Canaan had long been a province of Babylonia, and it was because it was permeated with Babylonian culture and used the Babylonian script, that the foreign words and phrases were introduced into the literary language of Egypt.

On the other hand, so far as we can judge, there was no reflex action of Egypt upon Babylonia. The seal-cylinder was never superseded there by the scarab; indeed the only scarabs yet found in the Mesopotamian region are memorials of the Egyptian conquests of the Eighteenth dynasty. Neither the hieroglyphs nor the hieratic of Egypt made their way eastward into Asia, a fact which is somewhat remarkable when we remember over how wide an area the more complicated cuneiform spread. It was Europe that was affected by Egypt rather than Asia.

Before Egypt laid claim to Palestine, Babylonian culture had already taken too firm a hold of Western Asia to be dislodged, and in Babylonia itself Egyptian influences are hard to find. In the age of Khammu-rabi, we meet with a few proper names which may contain the name of the Sun-god Ra, as well as with the name of Anupum or Anubis on a stone cylinder, and the hieroglyphic character nefer, "good," is affixed to a legal document.¹ But this merely proves that in a period when the Babylonian Empire reached to the confines of Egypt, there were Egyptians settled in Babylon for the purpose of trade. A more curious example of possible Egyptian influence is one to which I have drawn attention in my lectures on the Religions of Ancient Egypt and Babylonia?

Thoth, the Egyptian god of literature, was accompanied by four apes, who sang hymns to the rising and setting sun. Travellers have described the dancing and screaming of troops of apes at daybreak when the sun first lights up the earth, and the origin of these companions of Thoth has been cleared up by an inscription in a tomb at Assuan.

Here we learn that in the age of the Old Empire, expeditions were sent by the Pharaohs into the Sudan – the home of the apes of Thoth – in order to bring back from "the land of the gods" Danga dwarfs who could "dance the dances of the gods." In the eyes of the Egyptians, it would seem, there was little difference between the ape and the Danga dwarf; the one was a dwarf-like ape, the other an ape-like man. But they alone could perform correctly the dances that were held in honour of certain gods, and which are already depicted on the prehistoric vases of Egypt.¹ Closely allied to the Danga dwarfs and the apes of Thoth are the Khnumu or Pataeki of Memphis, the followers of Ptah, who were also dwarfs with bowed legs. Now dwarfs of precisely the same form are found on early Babylonian seal-cylinders where they are associated sometimes with the goddess Istar, sometimes with an ape and the god Sin.² The Babylonian name of the dwarf was the Sumerian Nu-gid-da, an indication that his association with the deity went back to Sumerian times. We may conclude that, like the Danga dwarf of Egypt, he, too, performed dances in honour of the gods. The extraordinary resemblance of form between the Egyptian and Babylonian sacred dwarfs, as represented in art, raises the question whether the Babylonian dwarf was not an importation from Egypt, since the ape with which he was confounded was a native of the Sudan. This was the view to which I was long inclined, but there are certain considerations which make it difficult to be accepted. The Khnumu of Memphis were not the only dwarfs who were represented by the Egyptian artists. Still better known was Bes, who became a special favourite in the Roman period, when he was made a sort of patron of childbirth. But Bes, it was remembered, had come to Egypt from the southern lands of Somali and Arabia, like the goddess Hathor or the god Horus. Hathor is, I believe, the Babylonian Istar, who has passed to Egypt through her South Arabian name of Athtar; however this may be, Ptah of Memphis, whose followers were the Khnumu dwarfs, bears a Semitic name, and must therefore be of Semitic derivation. He belongs, that is to say, to the Egyptians of the dynastic stock, and is accordingly one of the few Egyptian divinities who is depicted in human form. On the other hand, the Sumerian dwarf Nu-gid-da is the companion of Istar. On the Egyptian side, therefore, the dwarfs of Ptah are associated with a god who has come from Asia, while the dwarf Bes was confessedly of foreign extraction. On the Babylonian side the dwarf Nu-gid-da was the associate of Istar, the counterpart of Hathor, and of Sin, the Moon-god, who was adopted by the people of Southern Arabia, and whose name was carried as far as Mount Sinai on the borders of Egypt. All this suggests that the sacred dwarf came to the valley of the Nile from Babylonia and Arabia like the name of Ptah, the creator of the world. In this case it would have come with the dynastic Egyptians before the age of history begins. But, on the other hand, there is the ape, and the ape is figured along with the dwarf on the Babylonian seals. It is true that the ape is equally foreign to Egypt and Babylonia, but the Sudan is nearer Egypt than Southern Arabia is to Babylonia. The actual date and path of migration, therefore, of the sacred dwarf must be left undecided. Whether he was brought to Egypt at the dawn of history, or whether he travelled to Babylonia in the historical age remains doubtful. All we can be sure of is that the sacred dwarfs of Babylonia and Egypt were originally one and the same, and that they testify to an intercourse between the two countries of which all literary record has been lost.¹ The same verdict must be given in the case of another point, not only of resemblance, but of identity, between ancient Egypt and Babylonia. This is the shaduf or contrivance for drawing water from a falling river for the sake of irrigation. The shaduf, which is still used in Upper Egypt, can be traced back pictorially to the time of the Eighteenth dynasty, but the basin system of irrigation with which it was connected was already of immemorial antiquity. It is a simple yet most effective invention, and on that account perhaps the less likely to have been independently invented, for it is always the obvious which remains longest unnoticed. In the modern shaduf a long pole is laid across a beam which is supported at either end upon other poles or on pillars of brick or mud; it is kept in place by thongs and is heavily weighted at one end, while at the other end a bucket or skin is attached to it by means of a rope. The shaduf of the Eighteenth dynasty was supported sometimes, as to-day, on a cross-beam, sometimes on a column of mud, and the bucket was of triangular form with two handles to which the rope was tied. Representations of it from Theban tombs will be found in Maspero's Dawn of Civilization, p. 764, and Sir Gardner Wilkinson's Ancient Egyptians, plates 38 and 356. Precisely the same machine is represented on a bas-relief found by Layard in the palace of Kuyunjik at Nineveh,¹ the only difference being that the shaduf-worker stands upon a platform of brick instead of on the bank itself, and that the pillar

upon which the pole is supported seems to be built of bricks rather than of mud. The machine, however, is identical in both its Egyptian and its Assyrian form. That the bas-relief should have been found in Assyria and not in Babylonia is a mere accident. Like almost everything else in Assyrian culture, the invention was of Babylonian origin, and, in fact, formed part of the system of irrigation which made the plain of Babylonia habitable. Herodotus, who calls the machine a *??cavelov*, describes it as being used as in Egypt, and for the same reason, since the river did not rise to the actual level of the cultivated ground, which, like that of Egypt, was divided into a number of basins.²

The palace of Kuyunjik belongs to the last age of Assyrian history. But the shaduf in Babylonia went back to the Sumerian period, as we know from the references to it in the lexical tablets. It was called *duldtum* in Semitic Babylonian, the pole or poles being *kakritum*, and the bucket *zirqu* or *zirqatum* (Sumerian *sd*),¹ and an old Sumerian collection of agricultural precepts describes how the irrigator "fixes up the shaduf, hangs up the bucket and draws water."²

The "irrigator" was naturally an important personage in early Babylonia, and legend averred that the famous Sargon of Akkad, the founder of the first Semitic Empire, had been rescued as a child from a watery grave, and brought up by one. In both Babylonia and Egypt the shaduf was closely associated with a system of irrigation which went back to the dawn of their several histories.

What explanation must we give of its identity in the two countries? There are three possibilities. In the first place, it may have been invented independently on the banks of both the Euphrates and the Nile.

Similar conditions tend to produce similar results.

But against this is the fact that the shaduf was not the only kind of irrigating machine that was suggested by the nature of the two rivers and the lands through which they flowed. In modern Egypt, besides the shaduf there are the *saqia*, or water-wheel, and an irrigating contrivance which is in use in the Delta.

The water-wheel, we know, was a Babylonian invention which was imported into Egypt in comparatively recent times; the irrigating contrivance of the Delta, which consists of a bucket suspended on a rope swung by two men who stand facing each other, is a primitive instrument which might have been invented anywhere.

Its survival is due to the fact that in the flat marshes of the Delta, the shaduf, though saving labour, is not necessary, and it therefore continued to be employed there after the shaduf was known. But this implies that the shaduf was not the oldest instrument for raising the water of the Nile.

Then there is the second possibility that the shaduf was borrowed by Egypt from Babylonia or by Babylonia from Egypt in historical times. In Babylonia, however, we can trace its history back to the Sumerian epoch, and in both countries it was intimately connected with a system of irrigation the origin of which must be sought in the prehistoric age, and which was probably carried from the valley of the Euphrates to that of the Nile. There remains the third possibility that it came to Egypt along with the system of irrigation itself.

It is always easier to ask questions than to answer them, in archaeology as in other things. There are many details connected with the early relationship between the civilizations of Babylonia and Egypt which must be left to future research to discover.

But of that relationship there can now be little question in the minds of those who are accustomed to deal with inductive evidence. There was intercourse in the prehistoric age between the two countries, and the civilizing influences, like the wheat and the language, came from the lands which bordered on the Euphrates. Civilized man made his way from the east, and dwelt in primeval days "in the land of Shinar." x

¹ In Egyptian, however, the bird stands over a door, while in Babylonian it is over the two-legged stool on which two vases of offerings are set when it is used to denote the image of a god.

The Sumerian pictograph for "(divine) lord" or "lady" (*nin*) is the representation of a similar vase on a mat, and thus has the same form as the Egyptian *hotep*. The Egyptian *nefer*, "good," finds its exact counterpart in the Babylonian pictograph of "ornament" (*me-te*). The Babylonian "house," too, is given the same tower-like shape as the Egyptian (*aha*).

² If, however, the Sumerian pictograph for "city" represents a tower on a mound, as seems to be the case, the identity in form of the Egyptian hieroglyph cannot be an accident, since both the tower and the artificial platform were essentially Babylonian.

In the cursive cuneiform two separate pictographs have coalesced, one representing a seat, the other what appears to be a tower on a mound.

¹ In a short Paper entitled *Lexicalische Belege zu meinen Vortrag über die sprachliche Striking des Altegyptischen* (1895), in which he has attempted to draw up a list of phonetic

equivalences between Egyptian and Sumerian. In this, however, I am unable to follow him, as his comparisons of Egyptian and Sumerian words are not convincing.

20740 1 See de Morgan, *Recherches sur les Origines de l'Egypte*, pp. 94, 95. According to Schweinfurth, barley, which is also found in the prehistoric graves of Egypt, must originally have come from Babylonia like the wheat. Qemku is found in the Pyramid texts (Maspero, *Recueil de Travaux relatifs de la Philologie et de l'Archeologie egyptiennes et assyriennes*, v. p.10). Boti, whence the Coptic boti and the battawa or "durra cake" of modern Egyptian Arabic, was "durra," not "wheat."

20745 1 See Maspero, *Etudes de Mythologie*, ii. pp. 313 sqq.
1 I have put "Lower" between parentheses since it is very questionable whether this particular system of registering time was known in the Delta until it was introduced from Upper Egypt. On the Palermo stone a list of the early kings of Lower Egypt is given, but without any dates, which make their appearance along with the kings of the First dynasty, who belonged to Upper Egypt. It is interesting to observe that the ideograph for "year" is denoted in exactly the same way in both the Babylonian and the Egyptian hieroglyphs by the branch of a (palm) tree. Such a curious symbol for the idea can hardly have been invented independently Professor Hommel further draws attention to the fact that while the literal translation of a common ideographic mode of representing "year" in Babylonian is "name of heaven," that of the two syllables of the Egyptian word renpet) "year," would also be "name of heaven."

20755 1 Hierakonpolis, part i. plate xxix. The name of the king is usually (but erroneously) written Nar-Mer.

20760 2 As the royal figures wear no crowns, they can hardly depict the king in his double office of king of Upper and Lower Egypt, and the duplication of the Pharaoh must consequently have a purely artistic origin. That this artistic origin is closely connected with the origin of the seal-cylinders is shown by the fact that the figures correspond with one of the most common designs on the latter, in which the ka of the person to whom the cylinder belonged is seated on a chair similar to that of the El-Kab king, an altar with offerings of bread being set before him.

20765 1 The eye and the ideograph of city or place. Since the eye here has the phonetic value of eriox art, the ideograph of "city," which is eri in Sumerian, must have the Egyptian value of as.

20775 2 Daressy, "Le Cercueil d'Emsah," in the *Annales du Service des Antiquites de l'Egypte*, 1899, i. pp. 79-90.

1 I have called Upper Egypt the seat of the first Pharaohs, not only because the earliest dynastic monuments we possess come from thence, but also because it was of Upper Egypt and its ruling caste that the hawk-god Horus was the guardian deity.

20780 From Upper Egypt he was carried to Lower Egypt and its nomes, presumably through conquest, as is monumentally attested by the "palette" of Nar-Buzau discovered at Hierakonpolis (Capart, *Debuts de PAit en Egypte*, p. 236). So, too, the anthropomorphic Osiris – the duplicate of Anhur – made his way from the south to the north. That Southern Arabia should have been the connecting-link between Babylonia and Egypt was the result of its being the source of the

20785 incense which was imported for religious use into both countries alike at the very beginning of their histories. That this foreign product should have been considered an indispensable adjunct of the religions of the two civilizations is one of the best proofs we have of their connection with one another. Dr. Schweinfurth has shown that the sacred trees of Egypt – the sycamore and the persea – which needed artificial cultivation for their preservation there, came from Southern Arabia, where he found them growing wild under the names of Kkanes, Burra and Lebakh (*Verhandlungen der Gesellschaft für Erdkunde zu Berlin*, July 1889, No. 7).

1 In the possession of Lord Amherst of Hackney. On an early Babylonian seal-cylinder, bought by Dr. Scheil at Mossul and figured in the *Recueil de Travaux relatifs de la Philologie et d'Archeologie egyptiennes et assyriennes*, xix. 1, 2, No. 7 of the plate, we have: "Ili-su-bani son of Aminanum, servant of the gods Bel and Anupum." Aminanum may be a Semitized form of the Egyptian Amen. 2 pp. 133, 139 485.

1 De Morgan, *Recherches sur les Origines de l'Egypte*, p. 65.

20800 2 Scheil, *Recueil de Travaux relatifs de la Philologie et d'Archeologie egyptiennes et assyrie/mes*, xix. pp. 50, 54; Sayce, *Religions of Ancient Egypt and Babylonia*, p. 485. The dwarf is represented as dancing before the god Sin on an early Babylonian seal-cylinder published by Scheil in the *Recueil*, xix. 1, 2, No. 16 of the plate.

1 It is worth notice that the dwarf-god Bes, who is called "God of Punt" in inscriptions of the Ptolemaic age, appears on Arab coins of the Roman period (Schweinfurth, *Verhandlungen der Gesellschaft für Erdkunde* 1889, No. 7).

2 Herodotus, i. 193.

1 The rope appears to have been makutum; see IV. A. I. v. 26, 61. i K. 56, ii. 14.

1 For other evidences of contact between primitive Babylonia and early Egypt, see Heuzey in the *Revue d'Assyriologie*, 1899, v. 2, pp. 53-6. He there enumerates (1) the resemblance between the stone mace-heads of the two countries in "prehistoric times," as well as between

the flat dishes of veined and ribboned onyx marble, hollowed and rounded by the hand; (2) between the lion-heads of stone, the onyx stone of one of which is stated in an inscription to have come from Magan; (3) the extraordinary likeness in the delineation of animal forms, which extends to conventional details "like the two concentric curves artificially arranged so as to allow the two corners of the profile to be visible at the same time"; (4) the use of a razor and the custom of completely shaving the face, and even the skull; and (5) the ceremonial form of libation by means of a vase of peculiar shape, with a long curved spout and without a handle.

This libation vase was practically the same in both countries, in spite of its peculiar and somewhat complicated form. Of later introduction into Egypt was the inscribed cone of terra-cotta, which was of early Babylonian origin, but is not met with in Egypt before the age of the Twelfth dynasty. At any rate, the first specimens of it hitherto found there were discovered by myself at Ed-Der, opposite Esna, in 1905 (*Annates du Service des Antiquites de l'Egypte*, 1905, pp. 164-5).

CHAPTER V BABYLONIA AND PALESTINE

A very few years ago Palestine was still archaeologically an unknown land. Its history subsequent to the Israelitish conquest could be gathered from the Old Testament, and Egyptian papyri of the age of the Nineteenth dynasty had told us something about its condition immediately prior to that event.

Thanks to the Palestine Exploration Fund, the country had been carefully surveyed, and the monuments still existing on its surface had been noted and registered. But the earlier history of the people, their races and origin, their social and religious life, and their relation to the rest of the world, were still a blank. Of the Canaan invaded by the children of Israel we knew nothing from an archaeological point of view, and very little even of the Palestine that was governed by Israelitish judges and Jewish kings.

The veil has at last been lifted which so long lay over the face of Palestine. Cuneiform texts have come to clear up its civil history, while the spade of the excavator has supplemented their evidence on the more purely archaeological side. The history of Palestine can now be followed back not only into the neolithic, but even into the palaeolithic age, and the source and character of Canaanite civilization have been in large measure revealed to us.

First and foremost among the materials which have made this possible are the cuneiform tablets of Tel el-Amarna in Upper Egypt, which were discovered in 1887. Tel el-Amarna, about midway between Minia and Assiut, is the site of a city which sprang, like a meteor, into a brief but glorious existence under the so-called "heretic king" Amon-hotep IV, about BC 1400. Amon-hotep, under the guidance of his mother, had endeavoured to suppress the old state religion of Egypt, and to substitute for it a pantheistic monotheism. In spite of persecution, however, the adherents of the old faith proved too strong for the king; he was forced to leave Thebes, the capital of his fathers, and to build a new capital further north, where he changed his name to that of Khu-n-Aten, and called artists from the islands of the Mediterranean to adorn his palace. When moving from Thebes he naturally transferred to the new seat of government both the Foreign Office and its records in so far as they covered the reign of his father Amon-hotep III. and his own. For reasons unknown to us they do not extend further back.

They were all in the cuneiform script, and for the most part in the Babylonian language. The fact came upon the historian with a shock of surprise, and had far-reaching consequences, historical as well as archaeological. In the first place, they proved what had already been suspected, that under the Eighteenth dynasty Egypt possessed an Asiatic empire which stretched to the banks of the Euphrates. Then, secondly, they showed that Western Asia was at the time intersected by high-roads along which merchants and couriers were constantly passing, and an active literary correspondence was carried on. Thirdly – and this was the greatest surprise of all – they made it clear that this correspondence was in the script and language of Babylonia, and that it was shared in by writers of various nationalities and languages, of all classes of society and of both sexes. The Hittite and Cappadocian kings wrote to the Pharaoh in cuneiform characters, just as did the kings of Babylonia and Assyria. Arab shekhs and Hittite condottieri joined in the correspondence, and politically-minded ladies did the same. Even the Egyptian Government was compelled to suppress all feelings of national vanity, and to conduct the whole of its correspondence with its own governors and vassals in Palestine or Syria in the foreign language and syllabary. There is no trace anywhere of the use of either the Egyptian language or the Egyptian mode of writing.

From these facts other facts follow. The age of the Eighteenth Egyptian dynasty must have been quite as literary as the age of our own eighteenth century, and international correspondence must have been quite as easy, if not easier. Education,

moreover, must have been very widely spread; all the civilized world was writing and reading; and the system of writing was a most complicated one, demanding years of study and memory. In spite of this it was known not only to a professional class of scribes and the officials of the Government, but also to the shekhs of petty Canaanitish towns and even to Bedawin chiefs. And along with the system of writing went a knowledge of the foreign language of Babylonia – the French of Western Asia – including some slight acquaintance with the extinct language of the Sumerians. All this presupposes libraries and archive-chambers where books and dispatches could be stored, as well as schools where the Babylonian script and language could be taught and learned.

Such libraries and schools had existed in Babylonia from a very early age. Every great city had its library, every great temple its muniment-room. Here the clay books were numbered and arranged on shelves, catalogues being provided which gave their titles. The system under which the longer literary or semi-scientific works were arranged and catalogued was at once ingenious and complete. By the side of the library was naturally the school. Here every effort was made to facilitate the progress of the scholars, more especially in the study of the Sumerian language and texts. The characters of the syllabary were classified and named; comparative grammars, dictionaries and reading-books of Sumerian and Semitic Babylonian were compiled, lists of Semitic synonyms were drawn up, explanatory commentaries were written on older works, and interlinear translations provided for the Sumerian texts.

But with all this the cuneiform system of writing must have been hard even for the native Babylonian to learn, and in the case of the foreigner its difficulties were multiplied. It may be doubted whether the average boy of to-day, who finds the spelling of his own English almost too much for him, would have had the memory and patience, to learn the cuneiform characters. Even in Sumerian times the difficulty of the task was realized, for there is a Sumerian proverb that "he who would excel in the school of the scribes must rise with the dawn." x It says much for the educational zeal of the Oriental world in the century before the Exodus that it was just this difficult and complicated script which it chose as its medium for correspondence.

The fact, however, points unmistakably to its cause. The reason why the Babylonian language and syllabary were thus in use throughout Western Asia, and why even the Egyptian Government was obliged to employ them in its communications with its Asiatic subjects, can only have been because Babylonian culture was too deeply rooted there to be superseded by any other. Before Egypt appeared upon the scene under the conquerors of the Eighteenth dynasty, Western Asia, as far as the Mediterranean, must have been for centuries under the direct influence and domination of Babylonia. I say domination as well as influence", for in the ancient East military conquest was needed to enforce an alien language and literature, theology and system of law upon another people. And even military conquest was not always sufficient, as witness the Assyrian and Persian conquests of Egypt, or the Roman conquest of Syria.

We now have monumental testimony that such domination there actually was. As far back as BC 3800, Sargon of Akkad had founded a Semitic empire which had its centre in Babylon, and which stretched across Asia to the shores of the Mediterranean. We learn from his annals that three campaigns were needed to subdue "the land of the Amorites," as Syria and Palestine were called, and that at last, after three years of warfare, all the coast-lands of "the sea of the setting sun" acknowledged his sway. He set up an image of himself on the Syrian coast in commemoration of his victories, and moulded his conquests "into one" great empire. His son and successor, Naram-Sin, extended his conquests into the Sinaitic peninsula, and a seal-cylinder, on which he is adored as a god, has been found in Cyprus. But Sargon was a patron of literature as well as a conqueror; his court was filled with learned men, and one of the standard works of Babylonian literature is said to have been compiled during his reign. The extension of Babylonian rule, therefore, to Western Asia meant the extension of Babylonian civilization, an integral part of which was its script.

Here, then, is an explanation of the archaeological fact that the graves of the copper and early bronze age in Cyprus, which mark the beginning of civilization in the country, contain numerous seal-cylinders made in imitation of those of Babylonia. 1 Examples of the seal-cylinders from which they were copied have also been discovered there. Among them is the cylinder on which Naram-Sin is adored as a god, another is an extremely fine specimen of the style that was current in the age of Sargon of Akkad. 2 Along with the seal-cylinder it is probable that the clay tablet was also introduced to the people of the West. Though the clay tablets found by Dr. Evans and others in Krete may not go back to so remote a date, the linear Kretan characters belong to the same system of writing as the Cypriote syllabary, and an

20945 inscription in the letters of this syllabary on a seal-cylinder from the early
copper-age cemetery of Paraskevi near Nikosia has recently been published by myself.¹
We may infer that the prototypes of the tablets of Knossos or Phaestos once existed
in Cyprus and Syria, though in the damp climate of the Mediterranean the unbaked clay
of which they were made has long since returned to its original dust.

20950 A few centuries after the age of Sargon of Akkad we find Gudea, a Sumerian prince in
Southern Babylonia, bringing limestone from "the land of the Amorites," blocks of
alabaster from the Lebanon, and beams of cedar from Mount Amanus, for his buildings
in the city of Lagas. Gold-dust and acacia wood were at the same time imported from
the "salt" desert which lay between Palestine and Egypt, and stones from the

20955 mountains of the Taurus, to the north-east of the Gulf of Antioch, were floated down
the Euphrates on rafts.² At a later date we hear of the kings of the Babylonian
dynasty which had its capital at Ur, conducting military expeditions to the district
of the Lebanon.

20960 About BC 2100 Northern Babylonia was occupied by a dynasty of kings, whose names show
that they belonged to the Western division of the Semitic family. The language of
Canaan – better known to us as Hebrew – and that of Southern and North- eastern
Arabia, were at the time substantially one and the same, and as the same deities were
worshipped and the same ancestors were claimed throughout this portion of the Semitic
world, Assyriologists are not agreed as to whether the dynasty in question should be

20965 regarded as coming from Canaan or from Southern Arabia. The Babylonians them-selves
called the names Amorite, so it is possible that they would have pronounced the kings
to have been Amorite also. The point, however, is of little moment; the fact remains
that Northern Babylonia passed under the rule of sovereigns who belonged to the
Western and not to the Babylonian branch of the Semitic race, and who made Babylon

20970 their capital.
The contract tablets and other legal documents of this period show that Babylonia was
at the time full of Amorite, that is Canaanite, settlers, most of whom had come there
for the sake of trade. At Sippara there was a district called "the field of the
Amorites," over which, therefore, they must have had full legal rights. Indeed, it

20975 would seem that in the eyes of the law the Amorite settlers were on a complete
footing of equality with the natives of the country.
This fact, so little in harmony with our ordinary idea of the exclusiveness of the
ancient East, is largely explained by the further fact that Canaan and Syria were now
acknowledged portions of the Babylonian Empire. When Babylonia was conquered by the

20980 Elamites, and the West Semitic king of Babylon allowed to retain his crown as an
Elamite vassal, his claim to rule over "the land of the Amorites" passed naturally to
his suzerain. Accordingly we find Chedor-laomer of Elam in the Book of Genesis
marching to Canaan to put down a local rebellion there, while Eri-Aku, or Arioch, of
Larsa, at the same date describes an Elamite prince as "governor of the land of the

20985 Amorites." When Khammu-rabi, or Amraphel, the king of Babylon, at last succeeded in
shaking off the Elamite yoke and making himself monarch of a free and united
Babylonia, "the land of the Amorites" followed the fortunes of Babylonia as a matter
of course. On a monument discovered at Diarbekir, in Northern Mesopotamia, the only
title taken by the Babylonian sovereign is that of "king of the land of the

20990 Amorites." And the same title is borne by one at least of his successors in the
dynasty.
For more than two thousand years, therefore, Western Asia was more or less closely
attached to Babylonia. At times it was as much a part of the dominions of the
Babylonian king as the cities of Babylonia itself, and it is consequently not

20995 surprising that it should have become thoroughly interpenetrated with Babylonian
culture. There was an excellent postal service connecting Canaan with Babylonia which
went back to the days of Naram-Sin, and some of the clay bulla which served as stamps
for the official correspondence at that period are now in the Museum of the Louvre.¹
On the other hand, a clay docket has been found in the Lebanon, dated in the reign of

21000 the son of Khammu-rabi, which contains one of the notices sent by the Babylonian
Government to its officials at the beginning of each year, in order that they might
know what was its official title and date.¹
When this close connection between Babylonia and its Syrian provinces was broken off
we do not as yet know. Perhaps it did not take place until the conquest of Babylonia

21005 by a horde of half-civilized mountaineers from Elam about BC 1800. At any rate, from
this time forward, though the influence of Babylonian culture continued, Babylonian
rule in the West was at an end. From the Tel el-Amarna correspondence we learn that
the Babylonian Government was still inclined to intrigue in Palestine; the memories
of its ancient empire were not altogether obliterated, and just as the English

21010 sovereigns called themselves kings of France long after they had ceased to possess an

inch of French ground, so the Babylonian kings doubtless persuaded themselves that they were still by right the rulers of Canaan.

The wild mountaineers from the Kossaeen high-lands who had conquered Babylon soon passed under the spell of Babylonian culture, and became themselves Babylonian in habits, if not in name. They founded a dynasty which lasted for five hundred and seventy-six years and nine months. It is a curious coincidence that Egypt also was governed about the same time by foreign conquerors, whose primitive wildness had been tamed by the influences of Egyptian civilization, which they had adopted as the Kossaeen mountaineers adopted that of Babylonia, and whose rule also lasted for more than five hundred years. The Hyksos who conquered Egypt have been convincingly shown by recent discoveries to have been Semites, speaking a language of the West Semitic type.¹ They came from Canaan, and their conquest of Egypt made of it a dependency of Canaan. Hence they fixed their head-quarters in the northern part of their Egyptian territories, where they could easily keep up communication with Asia.

The excavations undertaken by the Palestine Exploration Fund at Lachish, Gezer and other sites in Southern Canaan have made it clear that throughout the Hyksos period Egypt and that part of Palestine were closely connected with one another. How much further eastward the government or influence of the Hyksos may have extended we do not know; the figure of a lion inscribed with the name of a Hyksos Pharaoh has been discovered in Babylonia, but this may have been brought from elsewhere. At any rate, so far as Palestine is concerned, we may say that the Hyksos period in Egypt coincides with the disappearance of Babylonian rule in Canaan. From that time onward Canaan looks towards Egypt, and not towards Babylonia.

But even before the beginning of the Hyksos period Canaan – or at all events Southern Canaan – is Egyptian rather than Babylonian. That has been abundantly proved by Mr. Macalister's excavations at Gezer. Objects of the age of the Twelfth dynasty have been disinterred there, and of such a character as to make it evident that the country was already subject to Egyptian influence long before the appearance of the Hyksos. An Egyptian of that age was buried within the precincts of the consecrated "high place," and a stela commemorating him erected on the spot.

Both at Gezer and at Lachish it has been possible to trace the archaeological chronology of the sites by the successive cities which arose upon them. Gezer was the older settlement of the two; its history goes back to the neolithic age, when it was inhabited by a race of short stature who lived in caves and burned their dead, and whose pottery was of the roughest description. Some of it was ornamented with streaks of red or black on a yellow or red wash, like coarse pottery of the age of the Third Egyptian dynasty which I have found in so-called "prehistoric" graves at El-Kab. Two settlements of the neolithic population can be made out, one resting upon the other; in the second there was a distinct advance in civilization, and the place became a town surrounded by a wall. The neolithic race was succeeded by a taller race with Semitic characteristics, to whom the name of Amorite has been given; they buried the dead in a contracted position, and were acquainted with the use of copper and later of bronze. The city was now defended by a solid wall of stone, intersected with brick towers; as Mr. Macalister observes, in a country where stone is the natural building material the employment of brick must be due to foreign influence. He thinks the influence was Egyptian; this is very possible; but considering that building with brick was a salient feature in Babylonian civilization, the influence may have come rather from the side of Babylonia.

The first "Amorite" city at Gezer was coeval with the earliest city at Lachish – the modern Tel el-Hesi, where the Amorite settlers had no neolithic predecessors. At Gezer their sanctuary has been discovered. It was a "high place" formed of nine great monoliths running from north to south, and surrounded by a platform of large stones. The second monolith, polished with the kisses of the worshippers, was possibly the central object of veneration, the bcetylos or beth-el, as it was termed.¹ This beth-el, or "house of God," takes us back to Semitic Babylonia. The veneration of isolated stones was common to all branches of the Semitic race; it may have come down to them from the days when their ancestors wandered over the desert plains of Arabia, where the solitary rocks assumed fantastic shapes that appealed to their imagination and excited feelings of awe, while their shadows offered a welcome retreat in the heat of noon-day. In the historical age, however, it was not the rock itself that was adored, but the divinity whose home it had become by consecration with oil. The brick-built temple was called by the Babylonians a bit-ili, beth-el, or "house of God," and the name was easily transferred to the consecrated stones, the worship of which was coeval with the beginnings of Semitic history. But though the worship of stones was primitive, the belief that the stone was not a fetish, but the shrine of divinity, belonged to an age of reflection and points to a Babylonian source.

The first Amorite city at Gezer was succeeded by a second, in which the high place underwent enlargement and was provided with a temenos. Under its pavement have been found memorials of the grim rites performed in honour of its Baal – the bones of children and even adults who had been sacrificed and sometimes burnt and then deposited in jars. Similar sacrifices, it would seem, were offered when a new building was erected, since children's bones have been disinterred from under the foundations of houses, both at Gezer and at Taanach and Megiddo. The bones were placed in jars along with lamps and bowls, which, it has been suggested, were intended to receive the blood of the victim. The old sacred cave of the neolithic race was now brought into connection with the high place of the "Amorite" settlers, and the skeleton of a child has been found in it resting on a flat stone. This fourth city at Gezer – the second since the Semites first settled there – has yielded objects which enable us to assign to it an approximate date. These objects are Egyptian, and belong to the age of the Twelfth dynasty. Many of them are scarabs, but there is also the tombstone of the Egyptian who was buried under the shadow of the Amorite sanctuary.

Fragments of diorite and alabaster vases also occur, telling of trade with Egypt, and in the upper and later part of the stratum painted pottery makes its appearance similar to that met with in the corresponding stratum at Lachish. I shall have more to say about this painted pottery in the next chapter here it is sufficient to state that it is related to the early painted pottery of the Egean, but is itself of Hittite origin, and can be traced back to the Hittite centre in Cappadocia.

The fourth city had a long existence. It lasted from the period of the Twelfth Egyptian dynasty to the middle of the Eighteenth. Then it was ruined by an enemy and its old wall partially destroyed – doubtless by Thothmes III. when he conquered Palestine (about BC 1480). Upon its ruins rose another Amorite town. A new city wall was built of larger circumference and greater strength; it measured fourteen feet in thickness, and the stones of which it was composed were large and well shaped. The houses erected on the debris of the brick towers belonging to the old wall were rilled with scarabs, beads, fragments of pottery and other objects contemporary with the reign of Amon-hotep III. (BC 1400). At Lachish the ruins of the third city were full of similar objects, and among them was a cuneiform tablet in which reference is made to the governor of Lachish mentioned in the Tel el-Amarna correspondence. At Taanach the Austrian excavators discovered an archive-chamber, the contents of which were of the same age. Taanach was merely a third-rate or fourth-rate town, but its shekh possessed a fortified residence, in a subterranean chamber of which his official records and private correspondence were kept in a coffer of terra-cotta. They were all in the Babylonian language and script. Among them is a list of the number of men each landowner (?) was required to furnish for the local militia, and there are also the letters which passed between the shekh and his friends about their private affairs. How little of an official character is to be found in these letters may be gathered from the following translation of one of them: "To Istar-yisur (writes) Guli-Hadad. – Live happily! May the gods grant health to yourself, your house and your sons! You have written to me about the money ... and behold I will give fifty pieces of silver, since this has not (yet) been done. – Again: Why have you sent your salutation here afresh? All you have heard there I have (already) learned through Bel-ram. – Again: If the finger of the goddess Asherat appears, let them announce (the omen) and observe (it), and you shall describe to me both the sign and the fact.

As to your daughter, we know the one, Salmisa, who is in the city of Rabbah, and if she grows up, you must give her to the prince; she is in truth fit for a lord."¹ These Taanach letters are a final proof, if any were needed, of the completely Babylonian nature of Canaanitish civilization in the century before the Exodus. When we find the petty shekhs of obscure Canaanite towns corresponding with one another on the trivial matters of every-day life in the foreign language and syllabary of Babylonia, it is evident that Babylonian influence was still as strong in Palestine as it had been in the days when "the land of the Amorites" was a Babylonian province. It is also evident that there must have been plenty of schools in which the foreign language and syllabary could be taught and studied, and that the clay literature of Babylonia had been carried to the West.

Indeed the Tel el-Amarna collection contains proof of this latter fact. Along with the letters are fragments of Babylonian literary works, one of which has been interpunctuated in order to facilitate its reading by the Egyptian scholar.

On the other hand, apart from the cuneiform tablets the more strictly archaeological evidence of Babylonian influence upon Canaan is extraordinarily scanty. Naturally we should discover no traces of "the goodly Babylonish garments" which, as we learn from

the Book of Joshua, were imported into the country, the climate of Palestine not being favourable to their preservation; but it is certainly strange that so few seal-cylinders or similar objects have been disinterred, either at Gezer and Lachish in the south, or at Taanach and Megiddo in the north. What makes it the stranger is that Mr. Macalister has opened a long series of graves, beginning with the neolithic race and coming down to Graeco-Roman times, and that while the influence of Egypt is sufficiently visible in them, that of Babylonia is almost entirely absent. It is true that a few seal-cylinders have been met with in the excavations on the city sites, but with the exception of one found at Taanach¹ I do not know of any that can be said to be of purely Babylonian manufacture; most of them are of Syrian make, and represent a Syrian modification of the Babylonian type. And yet there are seal-cylinders from the Lebanon, now in the Ashmolean Museum at Oxford, which are purely Babylonian in origin, and belong to the period of Khammu-rabi. 2 There are also two seal-cylinders of later pattern in M. de Clercq's collection, on which are representations of the Egyptian gods Set and Horus – similar to those found on scarabs from the Delta of the time of the Eighteenth and Nineteenth dynasties – as well as of the Canaanite god Reshef, accompanied by cuneiform inscriptions which on palaeographic grounds must be assigned to the age of the Tel el-Amarna tablets. As the inscriptions record the names of Hadad-sum and his son Anniy, "citizens of Sidon, the crown of the gods," we know that they have come from the Phoenician coast.³ Like the cuneiform tablets, they bear witness to the long-continued influence of Babylonian culture in Canaan on its literary side.

When we turn to theology and law, the same influence is recognizable. The deities of Canaan were to a large extent Babylonian, with Babylonian names. The Babylonian gods Ana, Nebo, Rimmon (Ramman), Hadad and Dagon meet us in the names of places and persons, and Ashtoreth, who shared with Baal the devotion of the inhabitants of Palestine, is the Babylonian Istar with the suffix of the feminine attached to her name. Even Asherah, in whom Semitic scholars were long inclined to see a genuinely Canaanitish goddess, turns out to have been of Babylonian origin, and to be the feminine counter-part of Asir, or Asur, the national god of Assyria. The recently-discovered legal code of Khammu-rabi has shown that such glimpses as we have in the Book of Genesis of the laws and legal customs of Canaan in the patriarchal age all presuppose Babylonian law. From time to time usages are referred to and laws implied which have no parallel in the Mosaic code, and are therefore presumably pre-Israelite.

But though they have no parallel in the Mosaic code, we have now learnt that they were all provided for in the code of Khammu-rabi. Thus Abram's adoption of his slave and house-steward Eliezer is in strict accordance with the provisions of the old Babylonian law. Adoption, indeed, which was practically unknown among the Israelites, was a leading feature in Babylonian life, and the childless man was empowered to adopt an heir, even from among his slaves, to whom he left his name and his property. So, again, Sarai's conduct in regard to Hagar, or Rachel's conduct in regard to Bilhah, is explained by the Babylonian enactment which allowed the wife to present her husband with a concubine; while we can now understand why Hagar was not sold after her quarrel with Sarai, for the Babylonian law laid down that "if a man has married a wife, and she has given a concubine to her husband by whom he has had a child, should the concubine afterwards have a dispute with her mistress because she has borne children, her mistress cannot sell her; she can only lay a task upon her and make her live with the other slaves."

In the account of Isaac's marriage with Rebekah it is again a provision of the old Babylonian code with which we meet. There we hear of the bride receiving a dowry from the father of the bridegroom, and of other presents being made to her mother in conformity with Babylonian usage. So, too, the infliction of death by burning with which Judah threatened his daughter-in-law Tamar, on the supposition that she was a widow, has its explanation in the legislation of Khammu-rabi, where the same punishment is enacted against a nun who has been unfaithful to her vows of virginity or widowhood. The story of the purchase of the cave of Machpelah, moreover, has long been recognized by Assyriologists as presupposing an acquaintance with the legal forms of a Babylonian sale of land in the Khammu-rabi age.

With all this heritage of Babylonian culture, therefore, it is curious that the excavators in Palestine have come across so few material evidences of intercourse with Babylonia. Mr. Macalister is inclined to believe that it must belong to a period anterior to the Twelfth Egyptian dynasty. But this raises a chronological question of some difficulty. We have seen that the earlier and inner city wall of Gezer served as the defence of three successive settlements, and that it was partially destroyed along with the city it protected about BC 1480. Now the outer and more massive wall

which superseded it also served to protect three cities, the latest of which was deserted during the Maccabean period, about BC 100. Hence, Mr. Macalister argues, "if we may assume the rate of growth to have been fairly uniform, we are led back to BC 2900 as the (latest) date" for the foundation of the first wall. During this long period of time twenty-eight feet of debris accumulated; below this are as much as twelve feet of neolithic accumulation.¹

The conquests of Sargon of Akkad would accordingly have fallen within the neolithic epoch. But in this case it is strange that the use of copper, with which Babylonia had long been acquainted, was not communicated to its Western province, and that it should have needed a new race and the lapse of nearly a thousand years for its introduction. Moreover, specific evidences of Babylonian civilization are quite as much wanting in the remains of the first Amorite city as they are in those of the second.

And unless we adopt a date for the Twelfth Egyptian dynasty, which on other grounds seems out of the question, it is hard to see how the Khammu-rabi dynasty can be placed before it. What little evidence we possess at present goes to indicate that the Khammu-rabi dynasty was contemporaneous with the earlier Hyksos kings or their immediate predecessors. And yet not only do we know that the Khammu-rabi dynasty ruled in Palestine, but the adoption of the cuneiform script, which was at least as old as the age of that dynasty, as well as the testimony of theology and law, proves that its rule must have exercised a profound and permanent influence upon the people of Canaan. How is it, then, that while the excavations have brought to light so many evidences of Egyptian domination, there is so little in the way of material objects to show that Palestine was once and for several centuries a Babylonian province?¹ Perhaps the excavations which are still proceeding at Megiddo may throw some light upon the problem.

Meanwhile, we may remember that thus far the greater part of the objects that have been found belong to the less wealthy and educated part of the population. The annals of Thothmes III. prove that, so far as the upper classes were concerned, the picture of Canaanitish luxury presented in the Old Testament had a foundation of fact. Among the spoils taken from the princes of Canaan we hear of tables, chairs and staves of cedar and ebony inlaid or gilded with gold, of a golden plough and sceptre, of richly-embroidered stuffs similar to those depicted on the walls of the Egyptian monuments, of chariots chased with silver, of iron tent-poles studded with precious stones, and of "bowls with goats heads on them, and one with a lion's head, the workmanship of the land of the Zahi," that is to say, of the Canaanitish coast.

These latter were doubtless imitations of the gold and silver cups with double handles and animals' heads imported from Krete, which were also received as tribute from the Canaanitish princes by the Egyptian king. Other gifts comprised chariots plated with gold, iron armour with gold inlay, a helmet of gold inlaid with lapis-lazuli, the tusks of elephants, rings of gold and silver that were used as money, copper and lead, as well as jars of wine, oil and balsam. Of all these articles, the copper and lead excepted, it is needless to say next to nothing has been discovered by the excavators. The most valuable work of art yet met with is a bronze sword of precisely the same shape as one found in Assyria, which bears upon it the name of Hadad-nirari I (BC 1330).¹

On the palaeographical side the forms of the cuneiform characters used in Canaan go back to the script of the age of Khammu-rabi and his predecessors. From a purely Assyriological point of view, no regard being had to other considerations, I should date their introduction into Palestine about BC 2300. The chronology that would best harmonize the historical facts would thus be one which made the dominance of Egypt in Palestine under the Twelfth dynasty precede the Babylonian rule of the Khammu-rabi period. Against it is the negative evidence of archaeological discovery, so few traces of this rule having been discovered in the course of the excavations. But neither in archseology nor in anything else is negative evidence of much value. At any rate, thanks to the decipherment of the cuneiform inscriptions, the main facts are clear. Canaan was once a province of the Babylonian Empire, and during the long period of time that this was the case it became permeated with the literary culture of Babylonia. The civilization which was partially destroyed by the Israelitish invasion had its roots in the valley of the Euphrates.

Gezer, it is true, was one of the cities in which no visible break with the past was made by the irruption of the desert tribes. It escaped capture by the invaders, and it was only in the reign of Solomon, when the Israelites had already entered into the heritage of the old Canaanitish culture, that it was handed over by the king of Egypt to his Jewish son-in-law.

But at Lachish the marks of the destruction of the town by Joshua are still visible.

21275 Above the ruins of the Amorite cities is a bed of ashes left by the charcoal-burners who squatted on the site before it was again rebuilt. Above the stratum of ashes all must be Israelitish, and the objects found in the remains of the cities that stand upon it testify accordingly to a complete change. No more cuneiform tablets are met with, and but few Egyptian scarabs; the pottery is different, and the "high place"

21280 has disappeared. The bowl and lamp, indeed, are still buried under the walls of the newly-built house, but the bones of sacrificed children which they once contained are replaced by sand. As the Israelitish power increased the old Babylonian influence necessarily lessened. When the cuneiform syllabary finally made way for the so-called Phoenician alphabet is still uncertain, but it was at all events before the days of

21285 Solomon. Already in the Amorite period the characters of the Kretan linear script discovered by Dr. Evans are found scratched on fragments of pottery, indicating that besides the cuneiform another form of writing was known; it may be that the Israelitish conquest, by destroying the centres of Canaanitish civilization and the schools of the scribes, gave a first blow to the tradition of Babylonian learning, and that the work of destruction was subsequently completed by the Philistine wars.

1 Proceedings of the Society of Biblical Archaeology, November 1905, plate No. 11.

21300 2 A cadastral survey, which was drawn up at this period under Uru-malik, or Urimelech, "the governor of the land of the Amorites," would, if perfect, have given us an interesting description of Syria and Palestine in the third millennium before our era; see Thureau Dangin in the Revue Semitique, Avril 1897.

1 See Heuzey, in the Revue de l'Assyriologie, 1897, pp. 1-12.

21305 1 This was "the year when Samsu-iluna the king gave Merodach a shining mace of gold and silver, the glory of the temple; it made E-Saggil (the temple of Bel-Merodach at Babylon) shine like the stars of heaven." The title of the year was derived from the chief event, or events, that characterized it. See Dr. Pinches, in the Quarterly Statement of the Palestine Exploration Fund, April and July 1900, pp. 269-73.

21310 1 See my analysis of some of the Hyksos names in the Proceedings of the Society of Biblical Archaeology, 1901, pp. 95-8. Since the publication of the Paper other names of the same type, like Rabu and Sakti, have come to light. The characteristic names of the Hyksos princes recur among the "Amorite" names found in the contract tablets of the Khammu-rabi period, but not later. The abbreviated forms of the names met with on the Egyptian scarabs are also found in the tablets. Indeed, the contracted form of Ya'qub-el, that is to say, Yakubu, with k instead

21315 of q, must have been transcribed from a cuneiform original.

1 Macalister, Quarterly Statement of the Palestine Exploration Fund, January 1903, p. 28. It is the seventh stone, however, which alone has been brought from a distance – the neighbourhood of Jerusalem – all the others being of local origin {Quarterly Statement, July 1904, pp. 194-5}.

1 Quarterly Statement of the Palestine Exploration Fund, January 1905, pp. 28, 29.

21325 1 The chronological difficulty, however, would be partially solved if the date recently proposed by Professor Petrie {Researches in Sinai, ch. xii.} for the Twelfth dynasty – BC 3459-3250 – be adopted. The Twelfth dynasty would in this case have reigned a thousand years before the dynasty of Khammu-rabi, whose domination in Palestine would have been an interlude in the history of the Hyksos period, while the conquest of Canaan by Sargon and Naram-Sin

21330 would have coincided with the supersession of the neolithic population by the "Amorites," who brought with them the copper and the culture of Babylonia.

1 Unless we except the gold and silver ornaments found on the body of a woman in a deserted house at Taanach, which, as Dr. Sellin says, are by themselves sufficient to remove all grounds for doubting such accounts as those in Joshua vii. 21, and Judges viii. 26 {Eine Nachlese auf dem Tell Tafannek [Taanek?]}.

21335

CHAPTER VI ASIA MINOR

If it has been a surprise to learn that Palestine was once within the circle of Babylonian culture, it has been equally a surprise to learn that Asia Minor was so

21340 too. It is true that Herodotus traced the Herakleid dynasty of Lydian kings to the gods of Nineveh and Babylon, that Strabo knew of a "mound of Semiramis" in Cappadocia, and that in the Book of Genesis Lud is called the son of Shem. But historians had long agreed that all such beliefs were creations of a later day, and rested on no substratum of fact. The northern limits of Babylonian or Assyrian

21345 influence, it was held, were fixed by the Taurus and the mountains of Kurdistan.

The discovery of cuneiform inscriptions on the stones and rocks of Armenia made the first breach in this conclusion. Their existence was known even before Botta and Layard had opened up Nineveh. In 1826 Schulz had been sent by the French Government at the instance of M. Mohl to copy the mysterious characters which had already excited the attention of Oriental writers. Schulz was unexpectedly successful in his quest. The number of inscriptions he discovered was far larger than had been imagined, and his copies of them, as we now know, were remarkably accurate. But the explorer himself never lived to return to Europe. He was murdered by a Kurdish chief, Nurallah Bey, in 1829, while engaged in the work of exploration; his papers, however, were eventually recovered, and the inscriptions he had copied were published in 1840 in the *Journal of the Societe Asiatique*. One of them was a trilingual inscription of Xerxes, the Persian transcript of which was just beginning to be deciphered; the rest were still a closed book.

Then came the discovery of Nineveh and the first essays at the interpretation of the Assyro-Babylonian texts. Layard himself made an expedition to Armenia, and besides recopying Schulz's texts and correcting certain inaccuracies in them, added considerably to the collection. Dr. Hincks, with his usual genius for decipherment, perceived that the syllabary in which they were written was the same as that used at Nineveh, and utilized them for determining the values of some of the Assyrian characters. He succeeded in reading most of the proper names, in assigning the inscriptions to a group of kings whose order he was able to fix, and in pointing out that many of them contain an account of military campaigns and of the amount of booty which had been carried off. But it was also clear that the inscriptions were not in a Semitic language, and as the nominative and accusative of the noun seemed to terminate in -s and -n, while the patronymic was expressed by the suffix -khinis, the decipherer assumed that the language was Indo-European. The most important texts had been found in or near Van, which had apparently been the capital of the kings by whose orders they had been engraved, and the name of Vannic, accordingly, was given to both texts and language.

It was soon recognized that Dr. Hincks had been in error in suggesting that the Vannic language was Indo-European. It was, it is true, inflectional, but with this any resemblance to the languages of the Indo-European family ceased. Nor was there any other language or group of languages to which it appeared to be related, and all attempts failed to advance the decipherment much beyond the point at which it had been left by Hincks. Thanks to the "determinatives," which indicate proper names and the like, and the ideographs, which are fairly plentiful, the general sense of many of the inscriptions could be made out; but beyond that it seemed impossible to go. Lenormant, indeed, following Hincks, showed that the suffix -bi denoted the first person singular of the verb, and indicated Georgian as possibly a related language; but in the hands of other would-be decipherers, like Robert and Mordtmann, there was retrogression instead of advance.

So matters remained until 1882, when Stanislas Guyard pointed out the parallelism between a formula which occurs at the end of many Vannic inscriptions and the imprecatory formula of the Assyrian texts.

I had already been struck by the same fact, and was at the time preparing a Memoir on the decipherment and translation of the inscriptions, which shortly afterwards appeared in the *Journal of the Royal Asiatic Society*. In this I had made use of Layard's copies, which had never been published; other copies also, including photographs, squeezes and casts, had been placed at my disposal, and in 1882 I was able to lay before cuneiform scholars a grammar and vocabulary of the Vannic language, together with translations and analyses of all the known texts.¹ These have been subsequently corrected and extended by other Assyriologists – Guyard, D. H. Muller, Nikolsky, Scheil, Belck and Lehmann, as well as by myself. An ordinary Vannic text can now be translated with nearly as much completeness and certainty as an Assyrian text, and the number of them known to us has been greatly enlarged by the archaeological explorations of Belck and Lehmann.

In the decipherment of the Vannic inscriptions the ideographs and determinatives which are scattered through them took the place for me of a bilingual text. The determinatives told me what was the nature of the words which followed or preceded them, and so explained the general sense of the passages in which they occurred, while from time to time a phonetically-written word would be replaced in a parallel passage by an ideograph the signification of which was known.

I soon found, moreover, that the cuneiform syllabary must have been brought from Nineveh to Van in the age of Assur-natsir-pal II. (BC 884-859), and that the actual phrases met with in the inscriptions of that monarch are sometimes reproduced in a Vannic dress.

The Vannic language, however, still remains isolated, though the majority of those who have studied it incline to Lenormant's view that its nearest living representative is Georgian. Not being a Georgian scholar myself, this is a point upon
21415 which I can express no opinion. Instead of "Vannic," it has been proposed to call the language "Khaldian." The chief god of the people whospoke the language was Khaldis, and in the inscriptions we find the people themselves described as "the children of Khaldis." Derivatives from the name are found employed in a geographical sense northward of the region to which the
21420 inscriptions belong. Thus the Khaldi "in the neighbourhood of Colchis" are said to have been also called Khaldaei; "Khaldees" are frequently referred to by Armenian writers as living between Trapezont and Batum, and a Turkish inscription at Sumela shows that as late as the beginning of the fifteenth century Lazistan was still known as Khaldia. That the name was ever applied, however, to the kingdom which had its
21425 chief seat at Van is not proved, and it is therefore best to adhere to the term "Vannic," which commits those who use it to no theory.²

The decipherment of the Vannic texts has not only led to the discovery of a new language, it has also thrown a flood of light on the early history, geography and religion of the Armenian plateau. The military campaigns of the Assyrian kings had
21430 brought it into contact with Assyrian civilization, and in the ninth century before our era a dynasty arose which adopted the literary culture and art of Assyria, and founded a powerful kingdom which extended its sway from Urumia on the east to Malatia on the west, and from the slopes of Ararat and the shores of Lake Erivan to the northern frontiers of Assyria.

The main fact which has thus been disclosed is that the Armenians of history – the Aryan tribes, that is to say, who spoke an Indo-European language – did not enter the country and establish themselves in the place of itsolder rulers before the end of the seventh century before our era. The fall of the Vannic monarchy seems to have
21440 coincided with the fall of the Assyrian Empire, with which it had once contended on almost equal terms, and in each case the invasion of the so-called Scythian hordes from the plains of Eastern Europe had much to do with the result. The founders of Armenian civilization and of the cities of the Armenian plateau had no connection with the Indo-European family. Their type of language corresponded with that which distinguishes most of the actual languages of the Caucasus, though no genetic
21445 relationship is traceable between them. The break with the past, however, occasioned by the irruption of the Indo-European invaders, was so great that not only did the older language become extinct and forgotten, but even the tradition of the older civilization was also lost. Like the recovery of the Sumerian language and the culture it represented, the recovery of the Vannic language and culture is the
21450 revelation of a new world.

At the head of the pantheon was a trinity consisting of Khaldis, the supreme god of the race; Teisbas, the god of the air; and the Sun-god Ardinis. Temples were erected in their honour, and shields and spears dedicated to their service. The vine, which grows wild in Armenia, was the sacred tree of the people, and there are inscriptions
21455 which commemorate its planting and consecration, and describe the endowments that were set apart for its maintenance. Wine was naturally offered to the gods along with the domestic animals and prisoners of war. Dr. Belck has discovered burial-places which go back to the neolithic age, but the majority of the monuments scattered over the Vannic area belong to the bronze age, and testify to a native adaptation of
21460 Assyrian art and culture. Iron also makes its appearance, but scantily. The pottery of the age of the inscriptions is related on the one side to the Assyrian pottery of the same period, and on the other to the pottery of Asia Minor. The polished red ware more especially points to the west.

The existence of a language of the Caucasian type in Armenia, and its association with a powerful king-dom and an advanced culture, is not the only revelation of the kind that we owe to cuneiform decipherment. We have learned that at a much earlier epoch Northern Mesopotamia was occupied by a people who spoke a language of similar type but of far more complicated form; and that here, too, the language in question was accompanied by a high civilization, a powerful monarchy, and the use of the
21470 cuneiform syllabary. The monarchy was that of Mitanni, and its culture and script had been borrowed from Babylonia in the age of Khammu-rabi, instead of from Assyria in the age of Assur-natsir-pal. But it is interesting to observe that in borrowing the script the people of Mitanni had adapted and simplified it in precisely the same way as did the people of Van in after days. Superfluous characters were discarded, a
21475 single phonetic value only assigned to each character, and large use made of those which expressed vowels. In fact, in both Mitannian and Vannic the system of writing begins to approach the alphabetic.

Whether this similarity in adaptation was due to a similarity of phonetic structure in the two languages or to conscious imitation on the part of the Vannic scribes it is difficult to say; it is a point, however, which cannot be passed over.

The name of Mitanni meets us on the Egyptian monuments of the Eighteenth and Nineteenth dynasties. The kingdom played a considerable part at that period of time in the politics of Western Asia, and the daughters of its kings were married to the Egyptian Pharaohs. The boundaries of the Egyptian Empire were coterminous with those of Mitanni, and we gather from the Tel el-Amarna correspondence that the Mitannian forces had more than once made their way into Palestine, perhaps as far south as Jerusalem, and that Mitannian intrigue was active in that portion of the Pharaoh's dominions. Among the Canaanitish governors are some who bear Mitannian names, and testify to the continuance of a Mitannian element in that common meeting-place of nationalities.

Several letters from the Mitannian king have been found among the Tel el-Amarna tablets. Most of them are written in the Babylonian language, but one – and fortunately an exceptionally long one – though in cuneiform characters, is in the native language of the country. A comparison of it with its companion letters, assisted by the determinatives and ideographs which are employed in it from time to time, has enabled Jensen, Leopold Messerschmidt and myself to decipher a very considerable part of the letter, and so to compile a grammar and vocabulary of the Mitannian language. That it is distantly related to Vannic seems to admit of little doubt, but it comes before us in a much more developed form; indeed, its system of suffixes is so elaborate and ponderous as to remind us of the polysynthetic languages of America.

A legal document found in Babylonia and dated in the epoch of Khammu-rabi contains a number of proper names which are of Mitannian or allied origin, and show that persons of that race were already settled in Babylonia.¹ As the Mitannian form of cuneiform script must have been borrowed about the same time, we may infer that the advanced guard of the northern race had already made its way as far south as Mesopotamia, and there established its power in the midst of a Semitic population. From that time forward a constant struggle went on between the two races, the Semitic race striving to push back the northern intruders and planting its own colonies in the very heart of the northern area, while the northerners pressed ever more and more to the southward, and at one time even seemed likely to possess themselves of the heritage of the Babylonian Empire in Western Asia. Like Armenia, Northern Mesopotamia was occupied by a people of Caucasian and Asianic affinities, whose armies had crossed the Euphrates and won territory in Syria and Palestine.

On the west, however, the Mitannians found themselves confronted by another northern population, the Hittites, whose first home was in Cappadocia. The Hittites also had passed under the spell of Babylonian culture, and the cuneiform script had been carried to them at an early date. Thanks to recent discoveries, we can now trace in some measure the earlier fortunes of a race who made a profound impression, not only on the future history of Asia Minor and its relations with Greece, but also on the history of Palestine.

As far back as about BC 2000, Babylonian or Assyrian troops had already made their way along the northern banks of the Tigris and Euphrates to the borders of Cappadocia and the neighbourhood of the Halys. I say Babylonian or Assyrian, for Assyria was at the time a province of Babylonia, though as the colonies which settled in the track of the invaders were distinctively Assyrian in their municipal customs and the names of their inhabitants, the troops were probably drafted from Assyria.¹ The mineral wealth of Cappadocia was doubtless the attraction which led them to such distant and semi-barbarous lands; Dr. Gladstone's analysis of the gold of the Sixth Egyptian dynasty, with its admixture of silver, has shown that it was imported from the north of Asia Minor,¹ and the silver itself was probably already worked. Further south, in the Taurus, were mines of copper.

However this may be, the remains of one of these early Assyro-Babylonian colonies has been partially excavated a few miles (twenty-three kilometres) to the north-east of Kaisariyeh.² The site is now known as Kara Eyuk, "the Black Mound," and numerous cuneiform tablets have come from it. It has obtained its present name from the marks of fire which are every-where visible upon it, and bear eloquent testimony to its final fate. Established as an outpost of the Assyrian Empire in the distant west, a time came when, deserted by the Government at home, its strong walls were battered down by the besieging foe and the Assyrian settlers massacred among the ruins of their burning town. According to M. Chantre, its excavator (who, however, believes that it was destroyed by a volcanic eruption), the whole mound is a mass of charred and burnt remains.

21545 The construction of the walls, as well as the pottery found within them, marks it off with great distinctness from the ruins of the Hittite or native Cappadocian cities in its neighbourhood. While in their case the city wall is made of unmortared blocks of stone, the walls of Kara Eyuk are built of brick, and where stones are used they are of small size and cemented with mortar. The pottery differs considerably from that of the Hittite capital at Boghaz Keui. Some of it is of black ware, especially

21550 characterized by the vases with long spouts, which are also found in Phrygia and the Troad. Some of it, again, is of the dark-red lustrous ware which has been met with at Toprak Kaleh, near Van, and Boz Eyuk in Phrygia, while the yellow ware with geometrical patterns in black and maroon-red which has been discovered in Phrygia occurs in large quantities. This latter ware is of the class known as "Mykenaeen."

21555 The cuneiform tablets which have come from the site are known as "Cappadocian," and were first noticed by Dr. Pinches. The forms of the characters resemble those of the early Babylonian script, which was still used in Assyria in the age of Khammu-rabi. Many of the proper names, moreover, seem to be distinctive of that period. On the other hand, a large proportion of them contain the name of Asur – often in its

21560 primitive form of Asir – or are otherwise characteristic of Assyria. The tablets are further dated by the archons who gave their names to the years, a system of chronology which was peculiar to Assyria and unknown in Babylonia, while the month was divided into "weeks" of five days each. The language of the tablets also, which is full of dialectic mispronunciations and strange words, points to Assyria rather

21565 than to the southern kingdom, and we may therefore conclude that the colonists were Assyrians, even though the colony may have been founded when Assyria was still a Babylonian province.

There are indications in the Assyrian inscriptions themselves that the road to Cappadocia was known to the Assyrian princes at an early epoch. The earliest Assyrian

21570 kings whose annals have come down to us are Hadad-nirari I and his son Shalmaneser I (BC 1300). Hadad-nirari tells us that his great-grandfather, Assur-yuballidh, whose letters form part of the Tel el-Amarna correspondence, had subdued "the wide-spread" province of Subari, which lay near the sources of the Euphrates, and in which Kara Eyuk was perhaps included, while he himself restored the cities of the same province

21575 which had fallen into ruin. Later, Shalmaneser I conducted campaign after campaign towards the same region. In his second year he overthrew the king of Malatia, and the combined forces of the other "Hittite" states, who had come to his assistance: "all were conquered," from the borders of Cappadocia to the Hittite stronghold of Carchemish.

21580 A military colony was settled at the head waters of the Tigris which secured the high-road to Asia Minor.

Two centuries later we learn from Tiglath-pileser I that Moschians and Hittites had overrun part of this Assyrian territory, and occupied some of the Assyrian

21585 settlements. Once more, therefore, the Assyrian troops marched to the north-west; the provinces which lay in the valley of the Murad-chai were recovered, and the old province of Subari cleared of intruders. Soon afterwards Tiglath-pileser forced his way into Southern Cappadocia and the valley of the Sarus, making Comana tributary, razing to the ground the fortresses that had resisted him, and erecting on their site chambers of brick, with bronze tablets on which his conquests were recorded. Eastern

21590 Cilicia was known at the time to the Assyrians as Muzri, or "the Marchland," a clear proof that it had long formed a borderland and debatable territory between the Assyrian Empire and the nations of Asia Minor.

It is thus evident that even before the rise of the Assyrian monarchy, the road that led to the mining districts of Cappadocia, along the valleys of the Upper Tigris,

21595 Euphrates and Tokhma Su, was not only known to the Assyro-Babylonians, but had actually constituted Assyrian territory, which was colonized by Assyrian garrisons and paid tribute to Nineveh whenever Assyria was strong enough to enforce its authority. At the eastern extremity of the road stood the city of unknown name, now represented by "the Burnt Mound" of Kara Eyuk, whose existence as an Assyro-

21600 Babylonian city probably dates back to the age of Khammu-rabi.

It was the outpost of Babylonian culture in Asia Minor. Babylonian art, and, above all, the Babylonian system of writing, were brought by it into the heart of the Hittite region, and the archaeological objects found there consequently become

21605 important for chronological dating. Not far off, on the other side of the Halys, rose the Hittite capital, now known as Boghaz Keui, the centre from which, as Professor Ramsay has shown, 1 the early roads of Asia Minor radiated in all directions. Boghaz Keui is being excavated at the present moment. Hundreds of clay tablets have already been found there, inscribed with cuneiform characters, the majority of which are in the native Hittite language, though many are in Semitic Babylonian, including

- 21610 a copy of the famous treaty between Ramses I 1, and the Hittite king. So far as the tablets have been examined, they show that the Hittite empire extended from the west of Asia Minor to the Egyptian frontier, and that the cuneiform characters were used in ordinary life.
- 21615 By one of those coincidences which sometimes happen in archaeological research, the discovery fits with another fact which had long been in the possession of the Assyriologist, though the full meaning of it was unknown to him. Among the Tel el-Amarna letters are two in a language unlike any with which we are acquainted. One of them is from a Hittite leader of condottieri,² who has left us two other letters which are in the Assyrian language, and who came from a town in the neighbourhood of Cilicia. The second letter was written to the king of Arzawa by one of the foreign secretaries of the Egyptian Government. But the situation of Arzawa was wholly uncertain; as the king bore the Hittite name of Tarkhundaraba, I suggested that it lay in the Hittite territory, and that consequently in the language of the letter we had a fragment of the Hittite language. For many years, however, this remained a mere conjecture, without any definite proofs.
- 21620 When the fragmentary tablets from Boghaz Keui came to be copied, it was at once perceived that they were in a language which resembled that of the Arzawa letters, but it was not until the new tablet from Constantinople had been cleaned and copied by Dr. Pinches and myself that the actual facts became clear. The Arzawa and Boghaz Keui texts agree in the forms given to the characters, in grammar and in vocabulary. Arzawa, therefore, must have been the Hittite kingdom which had its centre at Boghaz Keui, and already in the age of the Eighteenth Egyptian dynasty it was employing a form of the cuneiform script which implied a long preceding period of use and adaptation. A new realm has thus to be added to the domain of the cuneiform system of writing; in Syria the Hittite king of Kadesh wrote to the Pharaoh in Babylonian, but in his old home in the north, though the Babylonian syllabary had been adopted, the language it served to express was that of the Hittites themselves.
- 21635 A certain amount of this Hittite language of Arzawa can be deciphered, thanks to those same determinatives and ideographs which have assisted so materially towards the decipherment of the Vannic texts, and more especially to the recurrence in the two Tel el-Amarna letters of phrases that are common to the whole correspondence. The new tablet, however, is more than usually helpful, since it contains Assyrian words and grammatical forms which in parallel passages of the same text are replaced by native equivalents. In this way a sketch of Arzawan grammar can now be made, as well as a list of Arzawan words. The language which is thus disclosed is of an Asianic type, with features that remind us of Lycian on the one side, and of Mitannian and Vannic on the other. But in what may be termed the fundamentals of grammar it agrees with Mitannian and Vannic.
- 21640 At the same time, certain of these same fundamentals have a curious but superficial resemblance to what we have hitherto been accustomed to regard as characteristics of Indo-European grammar. The nominative and accusative of the noun, for example, are distinguished by the suffixes -s and -n, the plural nominative and accusative often terminate in -s, and the possessive pronouns of Arzawan are mis, "mine"; ti-s, "thine"; and sais, "his"; while si is "(to) her."
- 21655 The third person of the present tense ends in -t; es-tu, is "may it be"; es-mi, "may I be." Yet with all these remarkable coincidences, I can assure the comparative philologist that Arzawan is certainly not an Indo-European language, and I must leave him to explain them as best he may.
- 21660 We have, however, learnt a good deal more about the Hittite populations of Asia Minor from the Tel el-Amaraa tablets than the nature of the language which they spoke. In the closing days of the Eighteenth Egyptian dynasty we find them on the southern side of the Taurus, sending forth bands of adventurers, who hired their services to the king of Egypt and to the rival governors and princes of Palestine, and from time to time carved out principalities of their own with the sword. We are even able to follow the fortunes of some of the leaders of the condottieri, who had no scruple in transferring their allegiance from one vassal prince to another when tempted by the prospect of better pay, or in murdering their employer when the opportunity arose, and plundering or occupying his city. They had, it is true, a wholesome awe of Egyptian power and of the Egyptian army, and some of the letters they wrote to the Egyptian court are amusing examples of the excuses they offered for their misdeeds. But they never hesitated about seizing the Pharaoh's property when they thought they could do so with impunity, while they were all the time professing to be his devoted slaves. A considerable number of the vassal princes of Canaan kept these mercenaries in their pay, and in many cases the Egyptian Foreign Office thought it wisest to confirm one of their leaders in the government of a district, however doubtful might
- 21675

have been the means by which it had come into his hands. So long as the tribute was paid, and the imperial authority acknowledged, no further questions were asked. The mercenaries were useful at times to the imperial forces, and the mutual jealousies and quarrels of the local governors were perhaps not altogether displeasing to the home Government.¹

In this way bands of Hittite mercenaries came to be settled in various parts of Palestine, even in the extreme south. The sons of Arzawaya, "the Arzawan," established themselves in the neighbourhood of Jerusalem, whose king, by the way, seems to bear a Mitannian name. The statement in the Book of Genesis that Heth was the son of Canaan receives a new signification from the Tel el-Amarna tablets. But Hittite influence in Southern Palestine goes back to an earlier epoch than the age of the tablets.

The painted pottery found in the "Amorite" strata of Lachish and Gezer shows remarkable affinities to the pottery discovered by Chantre at Boghaz Keui, and Mr. J. L. Myres has succeeded in tracing it in a fairly continuous line to the region north of the Halys.² Here was found the red ochre – or sandarake, as it was called – which was used in the decoration of the pottery, and after the introduction of two other colours still remained the principal feature in the system of ornamentation. This Hittite or Cappadocian pottery was carried westward along the road which led from Boghaz Keui towards the Troad, and south-eastwards across the Taurus into Syria. It was probably the ultimate origin of the painted Minoan or "Kamares" pottery of Krete. The introduction of Hittite pottery into Canaan where it tended to supersede the native ware, was doubtless the result of trade. But in ancient Asia the trader and the soldier were very apt to march side by side. The soldier opened the way for the trader and kept it for him, quite as much as the trader opened it for the soldier. Hence it is not surprising that the Assyrian monuments should furnish incidental evidence of the Hittite occupation of Palestine at an early date. In the inscriptions of Babylonia, as we have seen, Palestine and Syria are "the land of the Amorites"; the name went back to an immemorial antiquity, and indicates that at the time it was first given the Amorites were the ruling population in the West. But in the Assyrian inscriptions the place of the Amorites is taken by the Hittites. For the Assyrians, Syria is "the land of the Hittites," and in the later historical texts even the Israelites and Philistines are classed as "Hittite."¹

Canaan, however, was already well known to the Assyrians in the age of the Tel el-Amarna correspondence, when the ambassadors of the Assyrian king carried letters and presents through it to the Pharaoh. It must, therefore, have been at a still earlier period that they first became acquainted with it, and at this period Hittite influence must have been so predominant as to cause them to discard the name of Amorite, consecrated though it was by the long-continued usage of Babylonian literature, and to employ instead of it the name of Hittite. But it was in the direction of the Greek seas that Hittite influence was most powerful. Through Asia Minor Babylonian culture penetrated to the West.

A native imitation of the Babylonian seal-cylinder was found by Dr. Schliemann in the ruins of Hissarlik,¹ and the so-called "heraldic" position of the lions at Mykenae can be traced back through Asia Minor to the designs of the Babylonian gem-cutters. The winged horse, Pegasus, is found on Hittite seals, and, like the double-headed eagle of Eyuk and other composite figures, is derived from Babylonian proto-types.² They represented the first attempts of the creative power, as conceived of by Babylonian cosmology, and an old Babylonian legend of the creation accordingly describes the monsters suckled by Tiamat as "warriors with the bodies of birds, men with the faces of ravens."³ The fantastic monsters of "Minoan" art, which have been brought to light by the excavations in Krete, claim an intimate connection with the similar composite beings which are a characteristic of Hittite art.⁴

The early Hittite art of Asia Minor, as I pointed out many years ago, is dependent on that of Babylonia, and has little in common with the art of Assyria.¹

It is not until we come to the later Hittite monuments of Cilicia and Syria that the influence of Assyrian art makes itself visible. Hence was derived the partiality of the Hittite artist for the composite animals that adorn the seal-cylinders of Babylonia, and which consequently became known wherever the seal-cylinder and the literary culture it accompanied had made their way. As I have already stated, though Subari was an Assyrian province and Kara Eyuk an Assyrian colony, the form of the cuneiform script that was used in Cappadocia was of Babylonian origin.

The writing material of "Minoan" Krete, we now know, consisted of clay tablets. The fact is a proof that the influence of Babylonian culture had extended thus far. But it was an indirect influence only.

Though the clay tablet was employed, the characters impressed upon it were the native

Kretan. This in itself, however, demonstrates how strong the influence must have been, for the Kretan characters, whether hieroglyphic or linear, were less easy to inscribe on clay than the cuneiform. Krete, moreover, is a land of rock and stone rather than of clay. We may infer, therefore, from the use of the Babylonian material that the first impulse to write was inspired by the civilization of Babylonia. How it was brought to Krete we do not know. It may have passed over from the shores of Canaan; it may have come from Cyprus or Asia Minor. A seal-cylinder, which I have lately published, and which was found in the early copper-age cemetery of Agia Paraskevi in Cyprus, shows that the so-called Cypriote syllabary was already in use in the island at a remote date, 1 and this syllabary is closely connected with the linear characters of Krete. Inscriptions in the same form of script have been found on the site of Troy, and the pre-Israelitish pottery of Southern Palestine is marked with signs which seem to be derived from it. So, too, is certain Egyptian pottery of the age of the Eighteenth dynasty, and even of the age of the Twelfth.² It is possible that Krete was the birthplace of the picture writing which developed into the linear script of Knossos and the Cypriote syllabary; it is possible that it was rather Cyprus. I do not think, as I once did, that it comes from Asia Minor, for Asia Minor had its own pictographic system, which we see represented in the Hittite inscriptions, and an increased knowledge of this system tends to dissociate it from the pictographs and syllabaries of Krete and Cyprus. Wherever it arose, however, it was associated with the Babylonian writing material and the Babylonian seal-cylinder. So far as our present knowledge goes, Cyprus is more likely than any other part of the world to have been the meeting-point of Babylonian culture and the nascent civilization of the West. The numerous seal-cylinders which characterize the early copper age of the island are native imitations of Babylonian seal-cylinders of the epoch of Sargon of Akkad, when the boundaries of the Babylonian Empire were pushed to the coasts of the Mediterranean, if not into Cyprus itself, and the great eastern plain of Cyprus was better fitted to provide clay for the tablet than any other Mediterranean district with which I am acquainted. That no written tablets have been found by the excavators in Cyprus is not surprising. In an island climate where heavy rains occur the unbaked tablet soon becomes hardly distinguishable from the earth in which it is embedded. It was almost by accident that even the practised eye of Dr. A. J. Evans was first led to notice the clay tablets of Knossos. The Greek term *8eA.ro?*, which was borrowed from the language of Canaan, is evidence that the tablet was once known to the Greeks. For the letters of the Phoenician and Greek alphabet rolls of papyrus or leather were needed; the fact that the writing material was a tablet and not a roll refers us back to Babylonia. With the introduction of the Phoenician letters the word *SeAros* necessarily changed its meaning, and became synonymous with a wooden board. But it is possible that a reminiscence of its original signification is preserved in a famous passage of the Iliad (vi. 169), where the later "board" has been substituted for the earlier "tablet." Here we are told how Bellerophon carried with him to Lycia "baleful signs" — which may have been the pictographs of Krete or the Hittites, or even cuneiform characters — written upon "a folded board." The expression would have most naturally originated in the folded clay tablet of early Babylonia, the inner tablet being enclosed in an envelope on which the address or a description of the contents of the document is written. On the literary side, however, this is the utmost contribution that we can claim for Babylonia to have made to historical Greece. In the sphere of religion it is possible that the anthropomorphism of Greece was influenced by the anthropomorphism of Babylonia through Asia Minor, where the rock sculptures of Boghaz Keui show how the primitive Hittite fetishes had become human deities like those of Chaldaea; in the sphere of philosophy Thales and Anaximander clothed in a Greek dress the cosmological theories of the Babylonians; and in the domain of art the heraldry and composite monsters of Babylonia made their way to Europe, while the Ionic artists of Ephesus carved ivories into forms so Oriental in character that similar figures found in the palace of Sargon have been pronounced to be the work of Phoenicians. But the literary culture of historical Greece did not begin until the tide of Babylonian influence had already rolled back from Western Asia, when the Phoenician alphabet had taken the place of the cuneiform syllabary in Syria, and the Hittite populations of Asia Minor had returned to their clumsy hieroglyphs. It is, however, remarkable how very nearly the cuneiform script became what the Phoenician alphabet has been called, "the mother of the alphabets of the world." At one time it covered nearly the whole area of the civilized globe. A seal-cylinder

- with a cuneiform inscription in an unknown language has been discovered on the hills near Herat; x in the west its use extended as far as Cappadocia, perhaps further. Northward it made its home in Armenia; southward it obliged even the Egyptian Foreign Office to employ it for correspondence, while military scribes wrote in it their memoranda of the Pharaoh's campaigns. In both Mitanni and Van the syllabary was on the high-road to becoming an alphabet; in Persia it actually became one. But this final evolution came too late. A simpler script had already entered the field, and won its way in lands where clay was scarce and other writing materials more easily procurable. Indeed, it is probable that the presence or absence of clay suitable for writing purposes had quite as much to do with the spread of the cuneiform script as the political events which transformed the map of Western Asia. Canaan still continued to write in cuneiform characters after the empire of Babylonia had been exchanged for that of Egypt, while the use of the script never penetrated far into the limestone regions of the Mediterranean. It was probably the geological formation of Europe more than anything else which saved us to-day from having to learn the latest modification of the cursive writing of the Babylonian plain. But it had been a potent instrument of civilization in its day, perhaps more potent even than the Phoenician alphabet, for its sway lasted for thousands of years. It was at once the symbol and the inspiring spirit of a culture whose roots go back to the very beginnings of human civilization, and to which we still owe part of our own heritage of civilized life. Babylonia was the mother-land of astronomy and irrigation; from thence a knowledge of copper seems to have spread through Western Asia; it was there that the laws and regulations of trade were first formulated, and the earliest legal code, so far as we know, was compiled. Babylonian theology and cosmology left their impress upon beliefs and views of the world which have passed through Judaea to Europe, and the astrology and magic which played so active a part in the mental history of the Middle Ages were Babylonian creations. It is not a little remarkable that an Etruscan model of the liver in bronze (discovered at Piacenza), divided and inscribed for the purposes of haruspicy, finds its counterpart and probably also its prototype in the clay copy of a liver, similarly divided and inscribed, which was found in Babylonia.¹ We are children of our fathers, and amongst our spiritual fathers must be reckoned the Babylonians.

8 The Vannic kings always call themselves kings, not of the Khaldians, but of Biainas or Bianas, the Byana of Ptolemy, the Van of to-day.
1 See more especially Belck's comparison of the Vannic pottery with that of the Assyrian colony of Kara Eyuk, near Kaisariyeh, in the Verhandlungen der Berliner anthropologischen Gesellschaft, December 1901, p. 493. Besides the highly-polished lustrous red ware, he found at Kara Eyuk fragments of the same wheel-made wine-jars, "of gigantic size," which characterized Toprak Kaleh, near Van. Similar jars, as well as lustrous red pottery, were discovered by Schliemann in the "prehistoric" strata at Troy. The animals' heads in terra-cotta found at Kara Eyuk are stated by Dr. Belck to be similar to those of the Digalla Tepe, near Urumiya. For further details see infra.
- 1 See Pinches in the Journal of the Royal Asiatic Society, 1897, pp. 589-613; and myself in the Proceedings of the Society of Biblical Archaeology, 1897, p. 286.
1 Thus we find from the Cappadocian cuneiform tablets discovered at Kara Eyuk, north-east of Kaisariyeh, that time was reckoned by the annual succession of officers called livuni as in Assyria.

2 Chantre, Mission en Cappadoce, pp. 71-91.
1 See Belck, Verhandlungen der Berliner anthropologischen Gesellschaft, December 1901, p. 493; and the admirable plates, iii., vii.-xiv., in Chantre, Mission en Cappadoce. As has been already mentioned (supra, p. 166), Dr. Belck noticed at Kara Eyuk coarse sherds of great thickness coming from wine-jars similar to those of Toprak Kaleh. The black vases with long spouts have been found at Yortan and Boz Eyuk in Phrygia; long-spouted vases of yellow ware with geometrical patterns in maroon-red on the site of Gordium. Chantre discovered numerous spindle-whorls in the ruins similar to those discovered at Troy. He also found terra-cotta figurines, among which the ram is the most plentiful, as well as covers and handles of vases in the shape of animals heads, and some curious hut-urns not unlike those of Latium. Few bronze objects were met with, but among them were five flanged axe-heads of the incurved Egyptian Hyksos type, totally unlike the straight bronze axe-heads from Troy and Angora (of Egyptian I-XII dynasty form), with which M. Chantre compares them. The obsidian implements and stone celts were of the ordinary Asianic pattern. M. Chantre notes that whereas at Troy the terra-cotta figurines represented the heads of oxen or cows, at Kara Eyuk they were the heads of sheep, horses, and perhaps dogs.

- 21900 2 Professor Petrie finds similar marks on Egyptian pottery of the prehistoric and early dynastic age; see his table of "signs in The Royal Tombs of the First Dynasty (Egypt Exploration Fund), i. p. 32.
1 *Journal of the Asiatic Society of Bengal*, xi. pp. 316 sqq. The cylinder was bought by Major Pottinger, but afterwards lost. The inscription seems to read: AN Nin(?) - zi-in Su-luM(?) - me-am-el Khi-ti-sa ARAD-na - "To the god Nin(?) - zin, Sulukh- ammel (?) son of Khiti, his servant."
- 21905 1 The Etruscan monument is described by Deecke, *Das Temp htm von Piacetiza* (Etruskische Forschungen, iv. 1880) and *Etruskische Forschungen imd Studien*, part ii. (1882). For the Babylonian prototype, see Boissier, *Note sur un Monument babylonien se rapportant & Fextispicine* (1899).
- 21910 CHAPTER VII CANAAN IN THE CENTURY BEFORE THE EXODUS
It is now nearly twenty years ago since the archaeological world was startled, not to say revolutionized, by the discovery of the cuneiform tablets of Tel el-Amarna in Upper Egypt. Nor was it the archaeological world only which the discovery affected. The historian and the theologian have equally had to modify and forsake their old ideas and assumptions, and the criticism of the Old Testament writings has entered upon a new and altogether unexpected stage. The archaeologist, the historian and the Biblical critic alike can never again return to the point of view which was dominant before 1887, or regard the ancient world of the East with the unbelieving eyes of a Grote or a Cornewall Lewis. A single archaeological discovery has upset mountains of learned discussion, of ingenious theory and sceptical demonstration.
At the risk of repeating a well-worn tale, I will describe briefly the nature of the discovery. In the ruins of a city and palace which, like the palace of Aladdin, rose out of the desert sands into gorgeous magnificence for a short thirty years and then perished utterly, some 300 clay tablets were found, inscribed, not with the hieroglyphics of Egypt, but with the cuneiform characters of Babylonia. They were, in fact, the contents of the Foreign Office of Amon-hotep IV., the "Heretic King" of Egyptian history, who endeavoured to reform the old religion of Egypt and to substitute for it a pantheistic monotheism. This was about 1400 years before the birth of Christ, and a full century before the Israelitish Exodus. The attempt failed in spite of the fanatical efforts of its royal patron to force it upon his people, and of his introduction of religious persecution for the first time into the world. The Eighteenth dynasty, to which he belonged, and which had conquered Western Asia, went down in civil and religious war; the Asiatic Empire of Egypt was lost, and a new dynasty sat on the throne of Thebes.
The archives in the Foreign Office included not only the foreign correspondence of Amon-hotep's own reign, but the foreign correspondence also of his father, which he had carried with him from Thebes when he founded his new capital at Tel el-Amarna.
And the scope and character of it are astounding. There are letters from the kings of Babylonia and Assyria, of Mesopotamia and the Hittites, of Cilicia and Cappadocia, besides letters and communications of all sorts from the Egyptian governors and vassal princes in Canaan and Syria. Most of the correspondence is in the language of Babylonia; it is only in a few rare instances that the cuneiform characters embody the actual language of the people from whom the letters were sent. It is difficult to imagine anything more subversive of the ideas about the ancient history of the East, which were current twenty years ago, than the conclusions to be drawn from this

correspondence. It proved that, so far as literary culture is concerned, the civilized Oriental world in the Mosaic age was quite as civilized as our own. There were schools and libraries all over it, in which a foreign language and a complicated foreign system of writing formed an essential part of education. It proved that this education was widely spread: there are letters from Bedawin shekhs as well as from a lady who was much interested in politics. It showed that this correspondence was active and regular, that those who took part in it wrote to each other on the trivial topics of the day, and that the high-roads and postal service were alike well organized. We learned that the nations of the Orient were no isolated units cut off from one another except when one of them made war with the other, but that, on the contrary, their mutual relations were as close and intimate as those of modern Europe. The Babylonian king in his distant capital on the Euphrates sent to condole with the Egyptian Pharaoh on his father's death like a modern potentate, and was every whit as anxious to protect and encourage the trade of his country as Mr. Chamberlain. Indeed, the privileges of the merchant and the sacredness of his person had long been a matter of international law.

In one respect the advocates of international harmony and arbitration were better off in the Mosaic age than they are in the Europe of to-day. There was no difficulty about diversities of language and the danger of being misunderstood. The language of diplomacy, of education and trade was everywhere the same, and was understood, read and written by all educated persons. Even the Egyptian lord of Western Asia had to swallow his pride and write in the language and script of Babylonia when he corresponded with his own subjects in Canaan. Indeed, like English officials in Egypt, who are supposed to write to one another on official business in French, his own Egyptian envoys and commissioners sent their official communications in the foreign tongue. The Oriental world in the century before the Exodus thus anticipated the Roman Empire.

Canaan was the centre and focus of the correspondence. It was the battle-ground and meeting-place of the great powers of the Eastern world. It had long been a province of Babylonia, and, like the rest of the Babylonian Empire, subject to Babylonian law and permeated by Babylonian literary culture. It was during these centuries of Babylonian government that it had come to adopt as its own the script and language of its rulers; the deities of Babylonia were worshipped on the high places of Palestine, and Babylonian legends and traditions were taught in its schools. Out of Canaan had marched the Hyksos who conquered Egypt. The names of their kings found on the monuments that have survived to us are distinctively Canaanite of the patriarchal period; among them is Jacob-el, or Jacob, whom the Alexandrine Jews seem to have identified with their own ancestor. While the Hyksos Pharaohs reigned, Egypt was but a dependency of Canaan; the source of Hyksos power lay in Canaan, and their Egyptian capital was accordingly placed close to the Canaanitish frontier.

When, after five generations of warfare, the native princes of Thebes succeeded at last in expelling the Hyksos conquerors from the valley of the Nile and in founding the Eighteenth dynasty, they perceived that their best hope of preventing a second Asiatic conquest lay in possessing themselves of the land which was, as it were, the key to their own. The Hyksos conquest, in fact, had shown that Canaan was at once a link between Asia and Africa, and the open gate which let the invader into the fertile fields of Egypt. The war, therefore, that had ended by driving the Asiatic out of Egypt was now carried into his own home. Campaign after campaign finally crushed Canaanitish resistance, and the Egyptian standards were planted on the banks of the Euphrates. Palestine and Syria were transformed into Egyptian provinces; in the language of the tenth chapter of Genesis, they became the brothers of Mizraim.

The Tel el-Amarna letters tell us how the new provinces were organized. The most important cities were placed under Egyptian governors, many of whom, however, were natives. But they were carefully watched by Egyptian commissioners, to whom the control of the military forces was entrusted, as well as by special high-commissioners sent from time to time by the imperial Government. Local jealousies and rivalries, moreover, among the governors prevented union among them against the central power, and up to a certain point were not discouraged by the Egyptian Foreign Office. The Tel el-Amarna letters offer us a curious picture of the extent to which their mutual animosities were carried in the days when the Egyptian Empire was growing feeble. All the governors protest their devotion to the court, and all like are accused by their rivals of intriguing and even fighting against it. Besides the states which were thus directly under Egyptian rule, there were also protected states. Here the representative of the old line of kings was allowed to

retain a titular authority, though in reality his power was not greater than that of the governors in other states. But, whether governor or protected prince his duty to the imperial Government was clearly marked out for him. He had to levy the taxes and send a fixed amount of tribute to the Egyptian Treasury, to provide a certain number of militia, and to send official reports to the king. He had further to see that the troops of the army of occupation were duly provided with pay and maintenance.

The army of occupation in the reign of Amonhotep IV. does not seem to have been large. The imperial forces were needed at home to enforce the new faith upon the Egyptian people, and to put down the discontent that was growing there. We hear, however, of "the household troops," who belonged to the standing army of Egypt and formed the nucleus of the permanent garrison. How many of them were native Egyptians it is impossible to say; as we hear of Kushites or Ethiopians among them, it is probable that the Sudanese were at least as largely employed on foreign service as the Egyptians themselves. The Egyptian has never been fond of military service, whereas, we all now know, the Sudanese is essentially a fighting animal.

Both sides of the Jordan were included in the Egyptian administration. One of the Tel el-Amarna letters, for example, is from a governor of "the field of Bashan." It is characteristic of the whole series, and shows what the relations were between the army of occupation and the native levies. I cannot do better than quote it in full: "To the king, my lord, thus says Artamanya, the governor of the Field of Bashan, thy servant: at the feet of the king, my lord, seven times seven do I fall. Behold, thou hast written to me to join the household troops, and how could I be a dog (of the king) and not go ? Behold, I and my soldiers and my chariots will join the house-hold troops in whatever place the king my lord orders."

The name of Artamanya is not Semitic; neither is it Egyptian. The fact brings us to one of the most interesting and unexpected results of the decipherment of the Tel el-Amarna correspondence. And this is that the ruling caste in the Palestine of the Mosaic age was largely of Hittite origin, or had come from those countries of the north whose population was related in blood and language to the Hittites of Asia Minor.

In Northern Mesopotamia was a kingdom which ranked with those of Egypt and Babylonia as regarded power and influence. Its native name was Mitanni; the Hebrews, like the Egyptians, called it the kingdom of Aram Naharaim. It stretched from Assyria to the Orontes, and contended with the Hittites of Carchemish for the possession of the fords of the Euphrates.

Its rulers had descended upon it from the highlands of Armenia and the Caucasus, and had reduced the native Aramaean population to servitude. There are frequent references in the Tel el-Amarna tablets to Mitannian intrigues in Canaan. Mitannian armies had from time to time marched against the Canaanitish cities, and although there was now a nominal alliance between Mitanni and Egypt, and the royal families of the two countries were united by marriage, the Mitannian court never lost an opportunity of sending secret support to the disaffected princes of Canaan or of encouraging them in their revolts from the Egyptian Government. In many parts of the country the ruling family continued to be Mitannian, and accordingly we find more than one governor who bears a Mitannian name. Thus one of them, as we see, was governor of Bashan, and there was another who had his seat near the Sea of Galilee.

Mitannian influence, however, was chiefly confined to the northern part of Palestine. It was otherwise with the Hittites, whose marauding bands penetrated as far south as the frontiers of Egypt. The important part they played in the early history of Canaan and the substantial element they must have contributed to the future population of the country has but lately been disclosed to us by the advance that has been made in the interpretation of the Tel el-Amarna texts.

We have at last obtained an explanation of the fact that whereas in the older Babylonian period Canaan was known as "the land of the Amorites," it was called by the Assyrians "the land of the Hittites." The Assyrian kings even speak of Judah and Moab as "Hittite," and the town of Ashdod is described by Sargon as a "Hittite" state. What this must mean has indeed long been recognized by the Assyriologists. When the Assyrians first became acquainted with Palestine the Hittites must have been there the dominant power. But how and when this came about we have but just begun to learn, and it is the story of the Hittite occupation of Canaan, as a better knowledge of the Tel el-Amarna tablets is making possible, that I now propose to describe.

The Hittite race was of Cappadocian origin. Professor Ramsay has pointed out that the hieroglyphic characters which they used in their inscriptions must have been invented on the treeless plateau of Central Asia Minor, and that their capital, whose ruins now strew the ground at Boghaz Keui, north of the Halys, was the centre towards which all the early high-roads of Asia Minor converge. But they extended on both sides of

22080 the Taurus Mountains, and at an early date had planted themselves in Northern Syria. I have lately succeeded in deciphering their inscriptions, which have so long baffled our attempts to read them, and one result of my decipherment is the discovery of an unexpected fact. I find that the name of Hittite was confined to that portion of the race which lived eastward and southward of the Taurus. In Asia Minor itself, their

22085 first cradle and home, they called themselves Kas or Kasians; it was the kingdom of Kas over which the Hittite lords of Boghaz Keui claimed to rule, and it is still as kings of Kas that they are entitled on the monuments of Carchemish, though here they also acknowledge the name of Hittite.

22090 The name of Kas is met with in the Tel el-Amarna tablets, where it has hitherto been misunderstood.

The kings of the Hittites, of Mitanni and of Kas are associated together as supporting the enemies of the Egyptian Pharaoh or attacking his cities in Syria. Hitherto we have supposed that Kas signified Babylonia, though the supposition had but little in its favour, and a different name is given to Babylonia in passages

22095 where there is no doubt as to what country is meant. Now, however, all becomes clear: in the age of the tablets there were still four Hittite kingdoms in the north: Kas in Asia Minor, the Hittites proper, east and south of the Taurus, Mitanni in Mesopotamia, and Naharaim on the Orontes. Shortly afterwards they were all swallowed up in the empire of the "great king" of the Hittites, whose southern capital was at

22100 Kadesh. Some Kasians had found their way to Jerusalem, where the king Ebed-Kheba – whose name is compounded with that of a Mitannian deity – writes to the Egyptian Government to excuse his conduct in regard to them. They had been accused of plundering the Pharaoh's territory and murdering his servants; he assures the court that nothing of the sort is true. They are still in his house, where it would seem

22105 they formed his body-guard. But, on the other hand, there were other Hittites in the neighbourhood of Jerusalem who were really enemies to the king and threatened Jerusalem itself. These he calls Khabiri, or "Confederates," a name in which, despite history and probability, certain writers have insisted upon seeing the Hebrews of the Old Testament. But Dr. Knudtzon's fresh collation of the Tel el-Amarna texts has at

22110 last dispelled the mystery. The Khabiri turn out to have been bands of Hittite condottieri, who sold their military services to the highest bidder and carved out principalities for themselves in the south of Canaan. The Egyptian Government found them useful in escorting and protecting the trading caravans to Asia Minor and the Taurus region, and as long as their leaders professed themselves the devoted servants

22115 of the Pharaoh it was quite willing to overlook such little accidents as their capture and sack of a Canaanitish town or the murder of a Canaanitish prince. One of these Hittite leaders, Aita-gama by name, had possessed himself of the city of Kadesh on the Orontes, which in the following century was to become the capital of a Hittite empire. In a letter to the Egyptian court he has the audacity to assert that

22120 he was merely claiming his patrimony, the whole district having belonged to his father. If there is any truth in this it can only mean that his father had already led a troop of Hittite raiders into this portion of the Egyptian territory. Along with Aita-gama two other Hittite chieftains had marched, Teuwatti, whose name appears in the native texts under the form of Tuates, and Arzawaya.

22125 Arzawaya means "a man of Arzawa," the country whose language has been revealed to us in one of the Tel el-Amarna letters, and which proves to be the same as the Hittite dialect found in the cuneiform tablets of Boghaz Keui. We are told that he came from a city which was in the neighbourhood of the Karmalas, in Southern Cappadocia. Arzawaya helped Teuwatti to conquer Damascus and then led his followers further

22130 south. Here he acted as a free-lance, hiring himself and his mercenaries to the rival Canaanitish princes and professing himself to be all the while a faithful servant of the Egyptian king. It is amusing to read one of his letters to the Egyptian court: "To my lord the king thus writes Arzawaya, of Rukhiza. At the feet of my lord I prostrate myself. My lord the king wrote that I should join the household troops of

22135 the king my lord and his numerous officers." Here follow four words of Hittite which are accompanied by the translation: "I am a servant of the king my lord." Then the letter proceeds: "I will join the household troops of the king my lord and his officers; and I will send everything after them and march wherever there is rebellion against the king my lord. And we will deliver his enemies into the hand of the king

22140 our lord." Doubtless Arzawaya expected to be well paid for his help. There is another letter from Arzawaya to the Pharaoh in which he calls himself "the dust of his feet and the ground on which he treads." But in this letter he has to explain away the share he took in entering the town of Gezer along with Labbawa, another Hittite leader, and there infringing the royal prerogative by summoning a

22145 levy of the militia. In the eyes of the home Government this was a much more serious

matter than merely plundering or killing a few of its Canaanitish subjects, as it was equivalent to usurping the functions of the imperial power.

Labbawa also had to write and ask for forgiveness, and assure the Pharaoh that he is his "devoted slave," who does "not withhold his tribute" or disobey the "requests" of the Egyptian commissioners. In fact, he concludes his letter with declaring that "if the king should write to me: Run a sword of bronze into your heart and die, I would not fail to execute the king's command." All the same, however, he had established himself securely on Mount Shechem, from whence, like Joshua in after days, he was able to make raids on the surrounding Canaanitish towns.¹

Labbawa, or Labawa, is written Labbaya in the letter which is in the Arzawan language.

In the north we hear of him at Shunem and Gath-Rimmon, where he first appeared upon the scene in the train of the Egyptian army at a time when Amonhotep III. was suppressing an insurrection in that part of Palestine. It is probable that he had just arrived with his band of condottieri, attracted by the pay and the chance of plunder that the Egyptian Pharaoh offered the free-lance. By a curious fatality it was also in this same locality that he afterwards met his death at the hands of the people of Gina – the Cana of Galilee, probably, of St. John's Gospel.

Labbawa cast envious eyes on the important city of Megiddo, and its governor – who, by the way, is mentioned in one of the cuneiform tablets found three years ago by the Austrian excavators on the site of Taanach – sent piteous appeals for assistance against him to the Egyptian Government. The beleaguered governor declared that so closely invested was he by the Hittite free-lances that he could not venture outside the gates of his town. The peasantry were afraid even to bring vegetables into it, and unless help were forthcoming from Egypt, Megiddo was doomed.

After all, however, Labbawa was not only unable to possess himself of the Canaanitish stronghold, but was taken prisoner and confined in the very place he had hoped to capture. But fortune befriended him. He managed to bribe the governor of Acre, and the latter, on the pretext that he was going to send Labbawa by sea to Egypt, took him out of prison and set him free.

Labbawa now turned his attention to the south of Palestine – the future territory of Judah. Here he entered into alliance with the king of Jerusalem, or, to speak more precisely, was taken into his pay, and the two together waged war on the neighbouring states. One of the Egyptian governors complains that they had robbed him of Keilah, and he had to wait for Labbawa's death before he could recover his city.

One of the two letters in the Tel el-Amarna collection which are in the Arzawan or Hittite language was written by Labbawa, as we have lately learned from Dr. Knudtzon's revised copy of it. In this he calls himself a native of the Hittite district of Uan, near Aleppo, and refers to "the Hittite king," though our knowledge of the language is too imperfect to allow us to understand the meaning of the reference.

The letter is addressed simply "to my lord," and we do not know, therefore, whether it was intended for Hittite or Egyptian eyes. After his settlement in Palestine, however, Labbawa adopted the official language of the country; his letters to the Pharaoh are in Babylonian, and his son bore the characteristically Semitic name of Mut-Baal. The fact is an interesting example of the rapid way in which the Hittite settlers in Palestine were Semitized. They brought no women with them, and their wives accordingly were natives of Canaan.

Labbawa left two sons behind him, who, in spite of their Semitic education, followed in their father's footsteps and continued to lead his company of Hittite mercenaries. Mut-Baal, moreover, made himself useful to the Government by escorting the trading caravans to Cappadocia, a fact which proves that he still maintained relations with the country of his origin.

The alliance between Ebed-Kheba of Jerusalem and his father, however, had come to an end; Ebed-Kheba now had the Hittites of Kas in his pay, and no longer needed the services of the sons of Labbawa. They therefore transferred themselves to his rivals, together with the sons of Arzawaya, who, like Labbawa, was now dead, and Ebed-Kheba soon found himself in difficulties. The result was letter after letter from him to the Egyptian court, begging for help against his enemies, and declaring that if no help came the king's territory would be lost. These appeals seem to have met with no response; the Egyptian Government was by no means assured of Ebed-Kheba's loyalty, and knew that if the territory of Jerusalem were to pass into the hands of the Hittite chieftain it would make but little difference to the imperial power.

The tribute would still be paid, the Egyptian commissioner would still be respected, and the new rulers of the district would profess themselves the faithful subjects of the Pharaoh. There would merely be a change of governors, and nothing more. The

Hittite mercenaries were formidable only in the petty struggles which took place between the rival Canaanitish governors; when it came to dealing with the regular army of Egypt they were numerically too few to be of account.

22215 Ebed-Kheba calls the followers of Labbawa and Arzawaya "Khabiri." I have long ago pointed out that the word is found elsewhere in the Assyrian texts in the sense of "Confederates," and that its identification with the Hebrews of the Old Testament, though phonetically possible, is historically impossible. Now that we know the nationality of Labbawa and Arzawaya the question is finally settled, and we can explain a hitherto puzzling passage in one of Ebed-Kheba's letters, in which he says that "when ships were on the sea the arm of the mighty king seized Naharaim and Kas, but now the Khabiri have seized the cities of the king." Naharaim lay southward of the gulf of Antioch, while Kas extended to the Cilician coast, and they were thus, both of them, within reach of a maritime Power; they were, moreover, both of them Hittite regions, Naharaim being the district afterwards called Khattina, "the Hittite land," by the Assyrians, while Kas was the Hittite kingdom of Cappadocia. Ebed-Kheba, therefore, is drawing a comparison between the power of "the mighty king" in the days when an Egyptian fleet controlled the sea and the present time when Hittite marauders are seizing without let or hindrance the king's cities on the very borders of Egypt. Even Lachish and Ashkelon had joined the enemy. Perhaps the most important of the King of Jerusalem's letters is one which has hitherto been misunderstood, partly owing to its being broken in half and the relation of the two halves to one another not being recognized, partly to the imperfections of the published copy. Now that a complete and accurate text of it lies before us, its meaning has ceased to be a riddle, and I will therefore give here the first translation that has been made of the completed text:

"To the king my lord thus says Ebed-Kheba thy servant: at the feet of my lord the king seven times seven I prostrate myself. Behold, Malchiel has not separated himself from the sons of Labbawa and the sons of Arzawaya so as to claim the king's land for them. A governor who commits such an act, why has not the king questioned him (about it)? Behold, Malchiel and Tagi have committed such an act by seizing the city of Rabbah. And now as to Jerusalem, if this land belongs to the king, why is it that Gaza has been appointed for the (residence of the) king ('s commissioner)? Behold the land of Gath-Carmel is in the power of Tagi, and the men of Gath are (his) bodyguard. He is (now) in Beth-Sannah. But (nevertheless) we will act. Malchiel wrote to Tagi that they should give Labbawa and Mount Shechem to the district of the Khabiri, and he took some boys as slaves. They granted all their demands to the people of Keilah. But we will rescue Jerusalem. The garrison which you sent by Khaya the son of Meri-Ra has been taken by Hadad-mikhir and stationed in his house at Gaza. [I have sent messengers] to Egypt, [and may] the king [listen to me], ... There is no garrison of the king [here]. Verily by the life of the king Pa-ur has gone down to Egypt; he has left me and is in Gaza. But let the king entrust to him a garrison for the defence of the land. All the land of the king has revolted. Send Yenkhamu and let him take charge of the king's land.

22270 "(Postscript): To the secretary of the king says Ebed-Kheba your servant: [bring] what I say clearly before the king. Kindest regards to you! I am your servant."

The references in this letter are explained in other letters from the same correspondent. Malchiel was the native governor of the Hebron district, and had married the daughter of Tagi, whose name does not sound Semitic. The Hittite mercenaries of Labbawa from Shechem and of Arzawaya, who does not seem to have established himself in any special district of the country, were now in the pay of

Malchiel, while Ebed-Kheba, as we have seen, had secured the services of another body of Hittites from Kas. He had been accused at the Egyptian court of seeking by their means to make himself independent, and more than one of his letters is occupied with defending himself and bringing a counter-charge against Malchiel. Malchiel, however, secured the support of the royal commissioner, Yenkhamu, who agreed to his employment of the Hittite condottieri. With their assistance Keilah had been recovered from the hands of Ebed-Kheba, who, at an earlier date, had got Labbawa to seize it for him, but after Labbawa's death the tables were turned, and his sons had offered their services to the rival party, doubtless for the sake of better pay. It was now that Malchiel summoned the militia of Gezer, Gath-Carmel and Keilah, and made himself master of Rabbah, a small place north-west of Keilah and Hebron, which Ebed-Kheba asserted belonged to his territory. The tide was beginning to turn against the King of Jerusalem: his enemies were in greater favour at court than he was himself, and they had the support of the Hittite bands. It was in vain that he appealed to the Egyptian Government for aid and declared that not only had his rivals given Mount Shechem to the Hittite free-lances, but that by their action against himself they were delivering the whole of Southern Palestine into Hittite hands. "The king," he writes, "no longer has any territory, the Khabiri have wasted all the lands of the king. If the royal troops come this year, the country will remain my lord the king's, but if no troops come, the territory of the king my lord is lost".

At this point the story breaks off abruptly. The Tel el-Amarna correspondence comes to an end and the fate of Jerusalem and the surrounding districts is unknown to us. Soon afterwards religious troubles at home forced the Egyptian Government to withdraw its troops from Canaan altogether, and for awhile the Egyptian empire in Asia ceased to exist. It was restored, however, by Seti I and his son, Ramses II., at the beginning of the Nineteenth dynasty, and among the cities whose conquest is celebrated by Ramses on the walls of the Ramesseum at Thebes is Shalem or Jerusalem. But this second Egyptian empire in Asia did not last long, and when the Israelitish Exodus took place it was already passing away. When some years later the Israelitish invaders planted themselves in Labbawa's old stronghold on Mount Shechem, the Egyptian occupation of Canaan belonged to the history of the past.

Like the Saxons in England, however, the Hittite chieftains must have founded principalities for them-selves in the south of Canaan, as we know from the evidence of the Tel el-Amarna tablets and the Egyptian monuments that they did in the north. Ezekiel, in fact, tells us that the mother of Jerusalem was a Hittite, and the Jebusites, from whom Jerusalem took its name in the age of the Israelitish conquest, were probably the descendants of the followers of the Hittite Arzawaya. They had, moreover, found a Hittite population already settled in the country, descendants of older bands who had made their way from the highlands of Asia Minor to the frontiers of Egypt in days when as yet Abraham was unborn.

At the very commencement of the Egyptian twelfth dynasty we hear of the Pharaohs destroying "the palaces of the Hittites" in Southern Palestine,¹ and archaeology has recently shown that the painted pottery discovered in the earlier strata of Lachish and Gezer by English excavators had its original home in Northern Cappadocia and is an enduring evidence of Hittite culture and trade.

The Hittites had been preceded in their occupation of Canaan by the Amorites, as we have learnt from the Babylonian inscriptions. But in the Tel el-Amarna age the specifically Amoritish territory was in the north, eastward of Tyre and Gebal. Here Ebed-Asherah and his son Aziru had their seat and from hence they led their forces northwards towards Aleppo to resist "the king of the Hittites" on behalf of the Egyptian Government, or attacked the Phoenician cities on their own account. In the north, in fact, they played much the same part as the Hittite mercenaries did in the south, with the additional advantage of being able to secure secret assistance when it was needed from Mitanni. Between Amorites and Hittites the Canaanites must have had a somewhat unhappy time, like the Britons after the departure of the Roman legions, who found themselves the alternate prey of Saxons and Scots. But we can now understand and appreciate the ethnological notice in the Book of Numbers (xiii. 29), which tells us that "the Hittites and the Jebusites and the Amorites dwell in the mountains, and the Canaanites dwell by the sea and by the coast of Jordan."

The Amorite princes, however, were more formidable to the Egyptian Government than the Hittite chieftains, or else must have played their cards a little too openly, for we find Aziru receiving a scolding such as the Egyptian court seldom had the courage or energy to give. The letter from the Egyptian Foreign Office, which is a long one, is worth translating in full:

"To the governor of the land of the Amorites [thus] says the king your lord. The governor of Gebal, thy brother, whom his brother has driven from the gate (of the

city) has said: 'Take me and bring me back into my city, [and] I will then give you money, [for] I have nothing [of value] with me now.' So he spoke to you. "Behold, you write to the king your lord saying: I am your servant like all the loyal governors who are each in his city. Yet you have acted wrongly in taking a governor whom his brother had driven from the gate of his city, and being in Sidon you handed him over to the governors (there) at your own discretion, as if you did not know that they were rebellious.

"If you are really a servant of the king why have you not seen that he should go up to the presence of the king your lord instead of thinking, 'This governor wrote to me saying, "Take me to thyself and restore me to my city"'?

"But if you have acted loyally and nothing that I write is correct, the king has devised a lie in saying that nothing which you declare is true.

"But it happens that one has heard that you have made a treaty with the (Hittite) prince of Kadesh to deliver food and drink to one another, and it is true. Why have you acted thus? Why have you made a treaty with a governor with whom another governor is at enmity? For if you act with loyalty to him and observe your and his engagements you cannot look after (our) interests as you have undertaken to do long ago. Whatever be your conduct in the matter you are not on the side of the king your lord.

"Now as for these men to whom you want to turn, they are seeking to get you into the fire and to burn (you) and all you most love. Whereas if you submit yourself to the king your lord, what is there which the king cannot do for you? If in anything you love to act wickedly and if you lay up wickedness, even thoughts of rebellion, in your heart, then you will die by the axe of the king along with all your family. Submit therefore to the king your lord, and you shall live, for you know that the king has no wish to be angry with all the land of Canaan.

"And since you write: 'Let the king excuse me this year and I will go next year to the court of the king my lord, my son not being with me,' the king your lord accordingly will excuse you this year as you have asked. Go yourself instead of sending your son, and you shall see the king in the sight of whom all the world lives, and do not say: let me be excused this year also from going to the court of the king your lord; and do not send your son to the king your lord; he must not go in your place.

"And now the king your lord has heard that you wrote to the king saying, 'Let the king my lord permit Khanni the messenger of the king to come to me for the second time, and I will deliver the enemies of the king into his hand.' Now he will go to you as you have asked; do you therefore deliver them (to him) and do not let a single one of them escape. Now the king your lord sends you the names of the king's enemies in this letter by the hand of Khanni the king's messenger; so deliver them to the king your lord and let not a single one of them escape, but put fetters of bronze upon their feet. Behold, the men you are to send to the king your lord are Sarru with all his sons, Tuia, Liya with all his sons, Yisyari with all his sons, (and) the son-in-law of Manya with his sons and wives. The treasurer of Khanni is the official who will read the dispatch. Dasirti, Paluwa and Nimmakhi have gone [to collect taxes?] into the country of the Amorites.

"And know that the king, the Sun-god in heaven, is well; his soldiers and chariots are many; from the upper country to the lower country, from the rising of the sun [to] the setting of the sun all is peace."

We hear again of one of the rebels mentioned in this letter in the tablet discovered at Lachish in Palestine by Mr. Bliss. Yisyari is there described as inciting the governor of Lachish to revolt and promising assistance if he would call out the militia of his city against the king. That an Amorite of the north should thus have been able to interfere in the politics of a city in the south of Palestine is an interesting illustration of what I may call the solidarity of Syria and Canaan in the pre-Mosaic period. They had not yet been broken up into a series of isolated States; like the Hittites, the Amorites still claimed to be a power in the future territory of Judah as well as in the neighbourhood of Sidon or Hamath.

It is possible that a well-known but somewhat mysterious personage of the Old Testament was one of the Hittite leaders who succeeded in carving out a principality for himself: I mean Balaam the son of Beor. He is said to have come from the Hittite town of Pethor near Carchemish, and besides being a seer and a prophet he was also a soldier who fell in the ranks of the Midianites in a war against Israel.

But Balaam the son of Beor was not only a native of Pethor; we hear of him again in the Book of Genesis, and here he appears as the first king of Edom, his name heading the list of Edomite kings extracted from the state annals of Edom and probably brought to Jerusalem when David conquered the country. In the light of what we have

- 22410 learnt from the tablets of Tel el-Amarna it is perhaps not going too far to suppose that in Balaam we have one of those Hittite chieftains who, after playing the part of prophet, made himself leader of a band of Hittite free-lances and established a kingdom for himself in Edom, finally falling in battle by the side of his Midianite allies.
- 22415 However this may be, the important place occupied by the Hittites in creating the Canaan which the Israelites invaded is now clear. While the larger bands of Hittite raiders settled in the north, where they prepared the way for the Hittite king himself with his regular army, and where Hittite power became so firmly established that even the great Ramses could not dislodge it, smaller companies of condottieri
- 22420 made their way to the extreme south of Palestine, hiring their services to the rival governors and princes and seizing a town or district for themselves when the opportunity offered. So long as the tribute was paid, and its subjects were not too troublesome, the Egyptian Government looked on with equanimity while the states of Canaan were practically ruled by the leaders of foreign mercenaries who transferred their services from one paymaster to another with the most perfect impartiality. What is most curious is that the Imperial Government recognized the legal position not only of the Hittite or Amorite mercenaries, but even of organized bands of Bedawin and outlaws. As for the Bedawin, it had companies of them in its own pay, like the Egyptian Government in more recent times, and the governor of Gebal
- 22430 complains that the Egyptian commissioner Pa-Hor had sent some of the latter to murder his garrison of Serdani or Sardinians, who were themselves mercenaries in the Egyptian army. That bodies of outlaws should have been subsidized by the native princes with the permission, or at least the connivance, of the Egyptian court may seem surprising.
- 22435 But after all it is only what we find happening in later times when the king of Gath similarly enrolled David and his band of outlaws into his bodyguard without any remonstrance on the part of the other Philistine "lords." Still it is startling to find one of the Pharaoh's governors coolly announcing that he and his soldiers and chariots, together with his brothers, his "cut-throats" and his Bedawin, are ready to
- 22440 join the royal troops, at the very time when another governor is piteously begging the great king to "save" him "out of the hands of the cut-throats and Bedawin." Here is a strange picture of Canaanitish life in the days when as yet the Israelite was not in the land. Th fact is, the Canaanites were an unwarlike people. Inland, they were
- 22445 agriculturists; on the sea coast they were traders. And, like other trading communities, they were disinclined to fight, preferring to entrust the protection of themselves and their property to a paid soldiery, while at the same time their wealth made them a tempting prize to the assailant. It is true that they maintained a native militia, as we have learned from one of the cuneiform tablets discovered at Taanach, but it was upon a small scale, and apparently so long as the person on the roll could
- 22450 produce the one or two men for whom he was responsible he was not himself obliged to serve. It was again a case of paying others to fight instead of themselves. The fighting population of Canaan, in short, were the foreigners, and these it was who gradually made themselves its practical masters. The leaders of the mercenaries
- 22455 became the rulers of the Canaan ite states, which thus passed into the hands of a dominant military caste. When the Israelites entered the country it was with this military upper class that they had principally to deal; where the Canaanite had not its protection he trusted for his defence to his iron chariots and the strong and lofty walls of his towns. It is instructive to read the long list of unconquered cities and districts given by the Hebrew historian in the first chapter of the Book of Judges; among them are the Jebusites of Jerusalem, while we are told that "the Amorites forced the children of Dan into the mountain, for they would not suffer them to come down to the valley."
- 22460 Canaan, it will probably be thought, was a somewhat insecure country in which to live in the days of the Egyptian Empire. There seem to have been constant turmoil and confusion, governor attacking governor and bribing bands of foreign mercenaries to help him. But the turmoil and confusion were mainly on the surface. When a town is taken from one governor by another we do not hear of its population or their possessions suffering materially; they soon appear upon the scene again as prosperous
- 22470 as before. It is merely the governor and his immediate surroundings who suffer; the capture of the town was probably an affair amicably arranged between the condottieri who were attacking it and the condottieri who were its defenders. The Egyptian commissioners go up and down the country, hearing complaints and settling disputes, and no one ventures even to protest against their decisions, while a few Egyptian troops are
- 22475

stationed in places where the Government was not quite sure of the fidelity of its subjects. Caravans of merchants passed through Canaan going from Egypt to the north, and the traders of Babylonia and Asia Minor travelled along its high roads under the escort of Hittite and other chieftains who were subsidized for the purpose by the Egyptian court.

Even in the days when the Egyptian Government was breaking up, the constant fighting among the foreign mercenaries and their employers seems to have affected the mass of the population little, if at all.

What happened when the strong hand and controlling power of the Egyptian Pharaoh were removed we do not yet know. We must look for information to the systematic excavations that are at last being made on the sites of the old Canaanitish towns. Already cuneiform tablets have been found on them, and though these belong to the Egyptian period we may hope that before long others may be discovered of later date.

We have still to bridge over the age which elapsed between the final withdrawal of Egyptian domination and the conquest of the country by Philistines and Israelites. When that age begins the script and official language of Canaan are still Babylonian; when it closes the cuneiform characters have been superseded by the letters of the Phoenician alphabet, and the language of the inscriptions engraved in them is the language no longer of Babylonia or of Hittite lands, but of Canaan itself.

1 A copy of the text (Louvre, C i) is given by Professor Breasted in the American Journal of Semitic Languages and Literature, xxi. 3 (1905). The determinative attached to the name is not that of "country" but of "going," showing that the scribe supposed the name to be connected with some otherwise unknown word that signified "to go," just as in Gen. xxiii.

"The sons of Heth" are supposed by the Hebrew writer to derive their name from the Hebrew khath t "terror."

DÉCOUVERTES D'ANTIQUITÉS DANS LE DUCHÉ DE LIMBOURG

7 augustus 1866 Découverts d'antiquités dans le Limbourg.

22510 Grâce à l'impulsion bienfaisante donnée par la *Société d'Archéologie dans le duché de Limbourg*, d'importantes découvertes d'antiquités se poursuivent dans notre province. Toutes les trouvailles, qui autrefois passaient inaperçues, sont main tenant consciencieusement visitées et décrites. Depuis les quatre années que la Société existe et travaille, on a fait plus pour l'archéologie proprement dite que par tout le passé. Trente-deux cimetières anciens et douze substructions belgo-romaines ont
22515 été reconnues et inventoriés. Parmi les cimetières régulièrement fouillés, nous nommons ceux de Bergh-Terblyt et celui de Broekhem, près de Fauquemont [=Valkenburg]. Les établissements belgo-romains, trouvés depuis peu de temps, sont ceux de Rondenbosch, à Houthem-St-Gerlach, les deux villas de Meerssen et des substructions fort étendues à Heerlen, dans un lieu nommé *Dodelager*. Toutes ces découvertes se
22520 trouvent le long de la route romaine de Maestricht à Juilliers, par Coriovallum. Cette route même a été retrouvée et sondée en plusieurs lieux. Parmi les établissements qui ont été régulièrement explorés, avec le concours de la Société, nous nommons le Rondenbosch, à Houthem, et le Herkenbergh, sous Meerssen.

Sur la route de Tongres [Tongeren] à Nymègue [=Nijmegen] on a découvert un
22525 établissement romain à Heel, près de Ruremonde [Roermond], et un autre à Mulhem, entre Eysden et Lanklaer. Ce dernier, dont nous devons la connaissance à M. Duchateau, curé à Eysden, est appelé à fixer la situation de la station romaine de *Feresne*, restée inconnue jusqu'à ce jour.

La direction de la route de Coriovallum à Teudurum est restée une hypothèse jusqu'à
22530 ce jour. On la cherchait soit entre le Ravensbosch et Tudderren, soit entre Heerlen et ce lieu. Depuis les belles découvertes faites à Meerssen, ce village commence à entrer en lutte et aura le plus de chance de se revendiquer le nom de *Coriovallum*.

Ce qui confirme admirablement l'hypothèse de placer Coriovallum à Meerssen, c'est d'abord sa situation en ligne directe entre Tongres et Tudderren, et ensuite la
22535 découverte faite, il y a peu de jours, d'un emplacement belgo-romain à Geverick, hameau de la commune de Beek, qui se trouve sur la même ligne. Cet établissement est situé à cent pas de l'ancienne route menant de Sittard à Maestricht. Cette route, que l'on nommé encore actuellement Heerstraet, passé par Geleen, Beek, Vleeck et Meerssen. Nous devons l'intéressante découverte de Geverick à l'obligeance de M.

22540 Stassen, vicaire à Ulestraten. Notons en finissant que toutes les découvertes faites dans le duché de Limbourg, seront décrites et éditées dans les *Publications de la Société d'Archéologie, à Maestricht*. On est donc prié de signaler les découvertes qui pourraient se faire, à l'attention du comité directeur de cette Société.

22545 **Discoveries of Antiquities in Limburg.**

Thanks to the beneficial impetus given by the Archaeological Society in the Duchy of Limburg, important discoveries of antiquities continue to be made in our province. All finds, which once went unnoticed, are now being conscientiously examined and
22550 described. In the four years since the Society's existence and activity began, more has been done for archaeology proper than in all of the previous generations. Thirty-two ancient cemeteries and twelve Gallo-Roman foundations have been identified and cataloged. Among the cemeteries regularly excavated, we mention those of Berg-Terblijt and Broekhem, near Valkenburg. The recently discovered Roman settlements are
22555 those of Rondenbosch, at Houthem-St. Gerlach, the two villas at Meerssen, and extensive foundations at Heerlen, in a place called Dodelager. All these discoveries are located along the Roman road from Maastricht to Juilliards, via Coriovallum. This road itself has been rediscovered and explored in several places. Among the settlements that have been regularly investigated, with the assistance of the
22560 Society, we mention Rondenbosch, at Houthem, and Herkenbergh, near Meerssen. On the road from Tongeren to Nijmegen, a Roman settlement was discovered at Heel, near Roermond, and another at Mülhem, between Eysden and Lanklaar. The latter, whose knowledge we owe to Mr. Duchateau, parish priest of Eysden, is called upon to determine the location of the Roman station at Feresne, which has remained unknown
22565 until now.

The direction of the road from Coriovallum to Teudurum has remained a hypothesis until now. It was sought either between Ravensbosch and Tudderren, or between Heerlen and this location. Since the significant discoveries made at Meerssen, this village

22570 is beginning to assert its claim and will have the best chance of asserting the name of Coriovallum.

What admirably confirms the hypothesis of placing Coriovallum at Meerssen is, firstly, its location on a direct line between Tongeren and Tudderan, and secondly, the recent discovery of a Belgo-Roman site at Geverick, a hamlet in the municipality of Beek, which lies on the same line. This settlement is located a hundred paces from the old road leading from Sittard to Maastricht. This road, still known today as Heerstraat, passed through Geleen, Beek, Vleek, and Meerssen. We owe the interesting discovery at Geverick to the kindness of Mr. Stassen, vicar of Ulestraten.

22575 Finally, we note that all discoveries made in the Duchy of Limburg will be described and published in the Publications of the Archaeological Society in Maastricht.

22580 Therefore, we are asked to report any discoveries that may be made to the Society's board of directors.

17 november 1866 Les membres de la Société d'Archéologie dans le duché de Limbourg viennent de recevoir les 2 premières livraisons du tome III de ses publications, formant 224 pages. En voici le contenu:

22585 1. Opkomst en voortgang der stad Maastricht, met geschiedkundige aanmerkingen, door M. J. Habets. Vervolg.

2. Inventaire chronologique des chartes et documents de l'église de St-Servais à Maestricht, par M. M. Willemsen. Suite.

22590 3. Etude sur les anciens Séminaires du diocèse de Liège, avec quelques documents inédits, par M. A. K.

4. L'église de Mesch, par M. C. Caumartin.

5. Notice sur quelques découvertes d'antiquités dans le duché du Limbourg, par M. J. Habets.

22595 6. Titres de documents concernant la commune et la ville de Maestricht et le comté de Vroenhof, par M. A. S.

Le volume est orné de 3 planches. Ajoutons que la Société a la satisfaction de voir ses travaux favorablement accueillis, comme le prouvent non seulement les nouveaux membres qui se présentent, mais encore l'article élogieux que lui consacre la Revue Catholique de Louvain.

22600

DÉCOUVERTES D'ANTIQUITÉS
DANS
LE DUCHÉ DE LIMBOURG
PAR
JOS. HABETS,

vicaire à Bergh-Terblyt et président de la Société d'histoire et d'archéologie dans le Duché de Limbourg.

22610 TOME I.

Routes romaines, tombeaux, cimetières francs et
romains, substructions, objets d'arts etc.
RUREMONDE,
TYPOGRAPHIE DE J. J. ROMEN.

22615 -
1871.

<https://www.delpher.nl/nl/boeken1/gview?query=%22decouvertes+d%27antiquites%22+habets+tome&coll=boeken1&identifieer=L81SAAAACAAJ&rowid=1>

22620 Members of the Archaeological Society of the Duchy of Limburg have just received the first two installments of Volume III of its publications, comprising 224 pages. The contents are as follows:

1. The Origin and Development of the City of Maastricht, with Historical Remarks, by J. Habets. Continued.

22625 2. Chronological Inventory of the Charters and Documents of the Church of St. Servatius in Maastricht, by M. Willemsen. Continued.

3. A Study of the Former Seminaries of the Diocese of Liège [Dutch: Luik], with Some Unpublished Documents, by A. K.

22630 4. The Church of Mesch, by C. Caumartin.

5. Report on Some Discoveries of Antiquities in the Duchy of Limburg, by J. Habets.

6. Titles of documents concerning the commune and city of Maastricht and the county of Vroenhof, by A. S.

The volume is illustrated with 3 plates. We should add that the Society is pleased to

22635 see its work favorably received, as evidenced not only by the new members who have joined, but also by the laudatory article devoted to it in the Revue Catholique de Louvain.

DISCOVERIES OF ANTIQUITIES IN THE DUCHY OF LIMBURGH BY JOS. HABETS
vicar at Berg-Terblijt and president of the Society of History and Archaeology in the
22640 Duchy of Limburg.

VOLUME I. Roman roads, tombs, Frankish and Roman cemeteries, substructures, works of art, etc.

RUREMONDE, PRINTED BY J. J. ROMEN. 1871.

22645 TABLES DES MATIERES.

Introduction

I. Routes romaines.

II. Exploration d'un cimetière Belgo-roman à Bergh-Terblyt

22650 III. Notice archéologique sur un cimetière Belgo-romain à Broeckhem près de Fauquemont

IV. Notes sur quelques objets funéraires, d'origine Franque trouvés à Heerlen

V. Exploration d'une villa Belgo-romaine au Rondenbosch à Houthem-Saint-Gerlach

VI. Notice archéologique sur un cachet d'oculiste romain trouvé à Heerlen

VII. Découverte d'un autel romain à Kessel près de Ruremonde

22655 VIII. Exploration d'une villa Belgo-romain au Herkenbergh à Meerssen

Delphi in the newspapers

22660 1 August 1854 SOME TREASURES OF THE GLASS PALACE OF SYDENHAM.

The glass palace at Sydenham, of whose external appearance we have before spoken, contains also within itself many productions of art which are well worth seeing.

Entering through the door of the great transept, the eye is at once attracted by the famous works of sculpture which adorn this part of the palace. At the entrance is a

22665 copy of the Greek monument known as the Lantern of Demosthenes or Monument of Lysicrates. It is the only one of its kind which has escaped general destruction.

Close by are the well-known groups of the horses of Monte Cavallo, which are to be seen in Rome in the Quirinal, and are attributed to Phidias and Praxiteles, without having any other proof than that their names are engraved on the marble. There is

22670 also the famous Toro Farnese, found in the baths of Caracalla in Rome and now in the museum of Naples. Pliny attributes this group to Apollonius of Rhodes.

Directly opposite, in the other half of the transept, to make room for the groups of the Quirinal, other statues have been placed, such as: of Castor and Pollux, on horseback, by San Giorgio of Milan, the original pieces of which are made of bronze.

22675 In the middle is the equestrian statue of Coleoni, by Andre Verrocchio, the original of which, also in bronze, is in Venice and is considered one of the most beautiful products of the Renaissance style.

But, after having cast this general glance at the transept, one must return to the most interesting part of the palace, namely, to the halls of the fine arts, which are furnished in the style of the various periods to which they belong. The Egyptian

22680 halls deserve a first mention. Here one cannot say: Ab Jove principium, for Jupiter resembles the youngest of the family among these Gods and Kings, to whom the ancient Egyptian temples are dedicated. One finds oneself here opposite the oldest sculpture

22685 in the world, and what must above all cause astonishment is, that Egyptian art, the oldest and the father of all others, has reached in one leap a height which has

remained the same in later years; the two first monuments of the world, the pyramids, are still the largest.

Egyptian art, which is the oldest known, has also left behind the most remains. The Egyptians built for immortality, and in this they have succeeded, in every way. By

22690 following the rules, which art bound in their strict bonds, they united the highest comprehension with an eminently beautiful execution. They have not only produced

everything that has been produced after them, but even surpassed it. In all other nations art passes through the same phases; from its birth it rises rapidly to a high

22695 degree of perfection, but then slowly descends again. But in Egypt this is by no means the case. The further back one goes in the course of time, the more perfect is

the art; its birth and its zenith are unknown. In the most perfect temples that have been discovered, there are found in the walls stones laid with hieroglyphs on the

inside, which are finer and more beautiful in execution than modern art can achieve. Egyptian sculpture was regulated by the religious laws of this exceptional people,

22700 and has remained unshaken in its general forms for several centuries.

The Egyptian part of the building is reached by an avenue formed by eight large sleeping lions, which are taken from those in the British Museum. The facade, which looks out over the nave, is a portico of the Ptolemaic period; on the frieze is placed a hieroglyphic inscription in honour of Queen Victoria and Prince Albert. It reads as follows: "In the seventeenth year of the reign of Her Majesty, the mistress of the waves, the daughter of the Kings - Victoria, most illustrious Queen, the directors, architects, painters, sculptors have laid out this palace and these gardens, to serve as an instruction to the men and women of all countries, of all nations." Most of the temples and colonnades in this part of the palace, are not reproductions of existing monuments; they are a collection of the various orders of architecture, borrowed from various sources, and of which a whole has been formed at will, although good taste has not been lost sight of. Copies of Egyptian monuments were of course out of the question, the temple of the palace of Karnac alone was larger than the entire glass palace! All the monuments of this museum are therefore only models on a very reduced scale.

In this way has been composed the first column facade, a model of that order of the Ptolemies, about three hundred years before Christ, when the Greek influence had already brought a certain looseness of style into the massive and, so to speak, priestly order of the times of the Sesostris and Pharaohs. The colour is taken from that of the ruins. On entering the first room, one sees on the walls paintings of battles and processions, taken from a temple of Ramses, situated near Thebes. It is to this same temple, the Memnonium, that the second of the facades present here belongs; it consists of eight columns, in front of each of which is a colossal statue of King Rhamses. These statues originally had a height of thirty feet.

It is this facade that has been used as a transition to the well-known gallery of columns at Karnac. It is especially in this gigantic monument that the system adopted by the English artists gives ample play to criticism. The Egyptian architecture and sculpture are so astonishingly colossal in size, that models of natural dimensions can only give a false idea of the whole. A reproduction on a small scale, which in itself would not resemble the reality, can give a truer idea of the real monument than a picture in which one can move. The colonnade of Karnac in the glass palace, with however much care it may be executed, can therefore give no idea of the original.

This famous temple, the product of Ramses II, the most powerful of the Egyptian kings, who lived about the year 1170 before Jesus Christ, was connected to the almost equally famous temple of Luxor by means of an avenue of sphinxes of more than 2000 ells in length. A hall of it has been preserved, which is more than 1200 feet long and 360 feet wide. Another avenue led to a portal 360 feet long, 148 feet high, with a great gate 64 feet high, which led into a hall 58,000 square feet in size. In this hall stood, with folded arms, statues with shoulders 25 feet broad, whose face was 7, the nose 21, the beard 51, the headdress 14 feet long. These statues were 72 feet high; they could be seen at a distance of 12 miles. In this hall of columns, restored in the glass palace, were 134 columns, of which in the middle 12 were 66 feet high and 12 feet in diameter, the others 42 feet high and 9 in diameter.

The ambition of the Egyptian kings seems therefore to have consisted exclusively in building immortal tombs; for this purpose they piled one temple and one mountain on top of the other. The two great pyramids are tombs. The smallest covers at its foot an area of 11 acres of ground and its four corners converge at a height of 460 feet to one point. The other is 40 feet higher and 40 feet wider at the lower part. At its foot sits the great sphinx, a lion with a human head; it has a length of 80 feet. This pyramid is the largest monument and the sphinx at the same time the largest statue that has ever been made.

Continuing the road along this side, one first comes to the facade of the old temple of Aboo-Simbel, hewn in the rock about the year 1565 before Christ. This facade was 117 feet long and 100 feet high. The seated statues represent Ramses the Great, his mother, his wife and his daughter; they are found in their original size of 65 feet in another part of the palace. The model of this monument is taken at the 1/10 part of the original.

Turning to the left, one finds the portico of the temple of Philae, situated on an island in the middle of the sacred river of Egypt, the Nile; then passing through the hall of Amenophis, one comes to the tomb of Beni-Hassan, the oldest of the monuments, of which a model was provided in the Glass Palace; it dates from the year 1660 before Christ. The paintings inside represent the domestic life of the Egyptians. In the Egyptian museum one also finds copies of the Bull [Stone!] of Rosetta, which was found by a French engineer on the occasion of the expedition to Egypt. On this basalt stone, which dates from the year 196 before the birth of Jesus Christ, there was an

inscription in hieroglyphs or sacred letters, in common Egyptian and in Greek. It is thanks to this Egyptian translation that the key to the language of the hieroglyphs has been found.

22770 Of all these curiosities of the most remote antiquity it can rightly be said that the ancient master builders were really great men. They could not borrow anything from anyone. Their own genius alone was their source of information and this made them produce things as great as they have ever been seen. They discovered many rules, which constitute the sublime of art and were far superior to useless ornamentation.

22775 They felt all the weight of their calling. The last Egyptian temples, copied from their models, have given the world an idea of the greatness of their architectural order.

In chronological order, after Egypt comes Greece. Entering the nave of the building, one finds oneself before a facade in Doric style, followed by a temple of Jupiter at Nemea, 400 years before Christ. The frieze is decorated with inscriptions and with the names of the principal cities of Greece. In front of the facade are placed groups of wrestlers, of Silenus and Bacchus, of Bacchus and the Fauns. The central door leads to the great hall; this is square, surrounded by porticos and represents the agora of the Greeks, or the forum of the Romans, that is to say a place intended for public meetings. It is of Doric order and the names placed on the frieze are those of poets, philosophers and artists of Greece. The paintings, which will decorate the walls (and which are still being worked on) are illustrations from Greek theology; they are executed under the supervision and according to the sketches of G. Scharf and represent: 1°. Olympus; 2°. the capture of Troy; 3°. the realm of the underworld;

22780 4°. the period of Pericles and Phidias.

In this room one finds collected the masterpieces of ancient sculpture, with which everyone is familiar. In the middle, as the finest stone of this diadem, stands the most beautiful woman in the world, the Venus de Milo, found by Mr. Marcellus in the year 1820 and which now decorates the Louvre in Paris. This is the Venus Victrix.

22795 Next to her stands the Venus of Capua, almost identical to the first, and of which the original is in the Museum of Naples. Furthermore, the wrestler from the Louvre in Paris; the Juno Farnese from Naples, the Naiad from the Louvre, the Faunus from the Vatican; the Faunus from the Capitol, the Minerva Farnese from Naples, the Medicea from Rome, the sleeping Ariadne, which is found in one of the halls of the Vatican, and the Laocoon found in the ruins of the palace of Titus in the year 1506, and which is considered a masterpiece of ancient art.

Continuing along this road, one comes to a covered gallery, where a place has been given to another order of architecture. The square pilasters which support this gallery were found at Eleusis. The ceiling, which is executed with equal talent and taste, is the work of Owen Jones, who is of the opinion that the Greeks painted their monuments and monumental sculpture; and in the copies of the friezes and reliefs of the Parthenon, he has had some parts painted, to serve as a standard of comparison with the rest.

22805

The principal ornament of the bas-reliefs is an imitation of one of the facades of the Parthenon, the most beautiful of all the temples in the world. It is taken to about one-fourth the ordinary size, and this is the largest representation of it ever made. It is here that the value of the remark previously made, concerning the reproduction on a reduced scale of the Egyptian monuments, may be estimated. In the case of the Greek monuments, copies of ordinary size can give a true idea of the original, because the beauty of Greek art lies less in size than in the harmony of proportions. The Parthenon was at its highest point only 64 feet high; it was 228 feet long and 100 feet wide; the columns were 34 feet high and 6 feet in diameter. This famous temple, as is known, was dedicated to Minerva, the patron goddess of Athens. In the cella, in the middle of the temple, was the statue of this goddess, in gold and ivory, a masterpiece by Phidias. It was under the supervision of this artist that the work on the temple was done, of which Ictinus and Callicrates were the master builders. The Parthenon dates from the most beautiful period of art, that of Pericles, 444 years before Jesus Christ.

22810

The first drawings that are in possession of the Parthenon are from the year 1674 and were made by a French artist, Jacobus Carrey, while the Marquis de Nointel was at Athens. These drawings are still in the collection at Paris and remain the most accurate ones that have been in our possession since then, since the Parthenon has suffered new and numerous destructions, both by the ravages of time and by the hand of man. When Carrey made his sketches, the temple of Minerva was a Christian church, and the statues had been removed from one of the pediments to replace them with a peddler. A few years later, in 1687, the Venetians shelled Athens, and the Parthenon, which had been turned into a powder magazine, was badly damaged by an explosion that

22825

22830

destroyed the central part of the building, and shattered several statues. It is known that the Turks used the columns of the Parthenon to make plaster, that
22835 travellers carried off pieces for their collections, and that Lord Elgin finally brought back the most beautiful remains of the work of Phidias in England. These incomparably beautiful remains, which now adorn the British Museum in London, have been restored to the glass palace. The frieze, representing the feasts of Minerva, extends the whole length of the gallery; part of it, as we have said, is painted;
22840 another is white on a blue ground; another is entirely white, so that comparisons may be made. There are also the famous statues brought by Lord Elgin, which have preserved his name. It is believed that the Parthenon contained 44 statues; of these, 13 fragments are now left in London and 2 in Athens; this is all that remains of those beautiful works. The Glass Palace also possesses here a copy of Theseus, which
22845 is considered the most perfect of the known fragments; furthermore copies of Ceres and Proserpina, of a head of the horse of the chariot of the night, and of the Fates. On the opposite side of the Parthenon is placed the well-known group of Niobe, found in the year 1580 at the gate of St. John in Rome, and now in Florence. In the halls of the Glass Palace, devoted to Greek works of art, there are more than 200 statues, the description of which would naturally take us too far, so we have confined
22850 ourselves to the most important. The Roman halls differ little from the Greek; there is no Roman art, properly speaking. The conquerors of the world made the conquered peoples work for them. Among the Romans the first artists were the Etrurians, and then the Greeks.
22855 It is known that the Etrurians, now the Tuscans, were a people who were particularly fond of art; but it was not only in this that they excelled; they were also a very industrious people and already carried on a very extensive trade when Rome was still in its birth. The Romans produced great, especially useful works, such as the construction of roads and water pipes. They also built great temples, but the
22860 Etrurians made the statues and images of gods, either in earth or in bronze. One of the oldest Etrurian fragments is the she-wolf of the Capitol. After the defeat of Pyrrhus (275 years before Christ), and the conquest of Sicily, the Romans brought their victorious arms to Greece, and Paulus Emilius, the conqueror of Perseus, King of Macedonia, returned to Rome in triumph with the booty taken in
22865 Greece. He loaded no less than 250 wagons with it, 167 years before the birth of Christ. Twenty years later, in 146, Mummius completed the conquest of Greece; he gave everything up to plunder and took with him a great number of masterpieces, many of which, however, broke or were badly damaged during transport. What the Romans destroyed during their invasions and during the time of their rule over the Greek
22870 provinces, is incalculable. But at the same time a multitude of Greek artists came to settle in Rome, and a new era of art dawned for them as well as for the Romans, – an era of wealth and elegance of production, but also of decline. The simple and ideal beauty of pure Greek art gave place to something more sensual, which worked less on the feeling than on the
22875 passions. Under the first Roman Emperors, people were content with an imitation of the Greek masterpieces; and this explains why they often made different specimens of the same heaths. For the beautification of his palace, Nero had five hundred statues brought from Delphi. On the site where this palace stood, Titus had his baths built, and it is there that some famous pieces were later found, such as the Laocoon. The
22880 Forum is due to Trajan, and also bears his name; likewise the column, a picture of which will also enrich the glass palace, is from him. The period of Hadrian was the most flourishing; under his reign it seems to have reached a high perfection. It was during the reign of the Antonines that the engraved stones and cameos, which served for many portraits, were made.
22885 In the fourth century, when the seat of the Empire was transferred to Constantinople, the arts, the artists, and the collection of fine arts followed the same path, and were followed by the masterpieces already brought from Greece. But the arrival of the barbarian tribes, who sought only gold, silver and bronze, was a deadly blow to the beautiful collection. Thus the works of Phidias, Polycletus, Lysippus disappeared
22890 long before the fall of the Greek empire. Entering the Roman halls through the nave, one finds oneself opposite a facade, borrowed from the ground floor of the Colisseum in Rome. It is the first time in the history of ancient architecture that one hears mention of the arch style. The Greeks never made use of it. It was therefore thought that the first use of it was made
22895 under the Roman rule; but the latest discoveries made in Assyria have proven that the arch dated back to a much earlier age and that it was used extensively at Nineveh, that it was brought from there to Asia Minor, from where the Etrurians introduced it to Italy. In the Roman halls of the glass palace a model and relief of the Coliseum

22900 will be placed, which is however not yet completely finished. The great hall is entirely covered and decorated with stones, which imitate the porphyry, malachite and rare marbles, of which the Romans made ample use in their palaces. The Venus of the Capitol, which is found here, is preferred by many masters to the Venus of Medici, because it is wrought in a purer and more exalted style; furthermore, there is the Venus Genitrix, the Venus of the sea and the Venus of

22905 Arles, all from the Louvre. Around the Venus Callipygos of Naples, the Bacchus of the Louvre. Around the hall are arranged in chronological order, the busts of the Roman Kings and Emperors. Here is also placed a relief of the forum at Rome, one of the most interesting for study; the mountain of the Capitol, the ruins of the temple of Concord, the arch of Septimius Severus, the column of Phocas, the temples of Antonius and Faustina, the temple of peace, the arch of Constantine, the Coliseum, the arch of

22910 Titus.

On the other side of the main hall are several rooms, of which Roman baths have been made. These baths are furnished entirely according to the original. They have been decorated with beautiful statues; there is the hall of Apollo and the hall of Diana. The Apollo is the one that one sees on the Belvedere in the Vatican, and which has

22915 given rise to so many conjectures. The Diana is the one of the Louvre and the Goddess of the hunt.

August 14, 1854 SOME ART TREASURES FROM THE GLASS PALACE OF SYDENHAM.

22920 The glass palace at Sydenham, whose external appearance we have previously discussed, also contains many works of art within its interior that are well worth seeing. Entering through the door of the great transept, the eye is immediately drawn to the famous works of sculpture that adorn this part of the palace. At the entrance, one encounters a copy of the Greek monument known as the Lantern of Demosthenes or

22925 Monument of Lysicrates. It is the only one of its kind to have escaped general destruction. Nearby are the well-known groups of horses from Monte Cavallo, which can be seen in Rome on the Quirinal Hill and are attributed to Phidias and Praxiteles, without any other evidence than the fact that their names are inscribed on the marble. There is also the famous Farnese Tower, found in the baths of Caracalla in

22930 Rome and now displayed in the Naples Museum. Pliny attributes this group to Apollonius of Rhodes.

Directly opposite, in the other half of the transept, to make room for the Quirinal groups, other statues have been placed, such as: Castor and Pollux, on horseback, by San Giorgio of Milan, whose originals are made of bronze. In the center is the

22935 equestrian statue of Coleoni, by André Verrocchio, the original of which, also in bronze, is in Venice and is considered one of the most beautiful works of the Renaissance style. But after this general glance at the transept, one must return to the most interesting part of the palace, namely the halls of the fine arts, which are decorated in the style of the various periods to which they belong. The Egyptian

22940 halls deserve first mention. Here one cannot say: Ab Jove principium, for Jupiter resembles the youngest of the family among these gods and kings to whom the ancient Egyptian temples are dedicated. Here one finds oneself before the oldest sculpture in the world, and what must be especially astonishing is that Egyptian art, the oldest and father of all others, reached a height in one leap that has remained unchanged in

22945 later years; the two first monuments of the world, the pyramids, are still the largest.

Egyptian art, the oldest known, has also left behind the most remains. The Egyptians built for immortality, and in this they certainly succeeded. By following the precepts that bound art within them, they combined the highest comprehension with an

22950 exceptionally beautiful execution. They not only created everything that came after them, but even surpassed it. In all other nations, art passes through the same phases; from its birth, it rapidly ascends to a high level of perfection, only to then slowly descend again. But in Egypt this is by no means the case. The further back one goes in time, the more perfect the art; its birth and culmination are

22955 unknown. In the most perfect temples discovered, one finds stones set into the walls with hieroglyphs on the inside, which are finer and more beautiful in execution than modern art can achieve. Egyptian sculpture was regulated by the religious laws of this exceptional people and has remained unwavering in its general forms for several centuries. The Egyptian section of the building is reached via an avenue formed by

22960 eight large sleeping lions, modeled after those in the British Museum. The facade, which faces the nave, is a portico from the Ptolemaic period; on the frieze is a hieroglyphic inscription honoring Queen Victoria and Prince Albert. It reads: "In the seventeenth year of the reign of Her Majesty, Mistress of the Waves, Daughter of Kings—Victoria, Most Illustrious Queen—the directors, architects, painters, and

sculptors have created this palace and these gardens for the instruction of the men and women of all lands, of all nations." Most of the temples and colonnades in this part of the palace are not replicas of existing monuments; they are a collection of different architectural orders, borrowed from various sources, and assembled arbitrarily, though good taste has not been lost sight of. Copies of Egyptian monuments were, of course, out of the question; the temple of the palace of Karnac alone was larger than the entire glass palace! All the monuments in this museum are therefore merely models on a very reduced scale. This is how the first column-shaped structure was constructed. A model of the Ptolemaic architectural order, approximately three hundred years before Christ, when Greek influence had already introduced a certain looseness of style into the massive and, so to speak, priestly architectural order from the times of Sesostris and the Pharaohs. The color is based on that of the ruins. Upon entering the first hall, one sees paintings of battles and processions on the walls, taken from a temple of Ramses, located near Thebes. The second of the facades here belongs to this same temple, the Memnonium; it consists of eight columns, each with a colossal statue of King Rhamses. These statues originally measured thirty feet in height. It is this facade that served as a transition to the famous colonnade of Karnac. It is especially in the case of this gigantic monument that the system adopted by English artists is given ample opportunity for criticism. Egyptian architecture and sculpture are so astonishingly colossal in scale that life-size models can only give a false impression of the whole. Reproducing them on a small scale, which in itself would not resemble the real thing, can give a more faithful idea of the actual monument than a static image. The colonnade of Karnac in the glass palace, however carefully executed, can therefore offer no idea of the original. This famous temple, the creation of Rhamses II, the most powerful of the Egyptian kings, who lived around 1170 BC, was connected to the almost equally famous temple of Luxor by an avenue of sphinxes over 2,000 cubits long. A hall has survived, measuring over 1,200 feet long and 360 feet wide. Another avenue led to a portal 360 feet long and 148 feet high, with a large gate 64 feet wide, leading to a hall measuring 58,000 square feet. In this hall, with folded arms, stood statues with shoulders 25 feet wide, whose faces measured 7 feet, their noses 21 feet, their beards 51 feet, and their headdresses 14 feet long. These statues were 72 feet high; they could be seen from a distance of 12 miles. In this hall of columns, restored in the glass palace, were 134 columns, 12 of which were 66 feet high and 12 feet in diameter in the center, while the others were 42 feet high and 9 feet in diameter. The ambition of the Egyptian kings, therefore, seems to have consisted solely in building immortal tombs; For this purpose, they piled one temple and one mountain on top of the other. The two large pyramids are tombs. The smaller one covers an area at its base equal to 11 acres of land, and its four corners converge at a height of 460 feet. The other is 40 feet higher and 40 feet wider at its base. At its foot sits the great sphinx, a lion with a human head; it is 80 feet long. This pyramid is the largest monument, and the sphinx is also the largest statue ever made. Continuing the road along this side, one first comes to the facade of the ancient temple of Abu Simbel, carved into the rock around 1565 BC. This facade was 117 feet long and 100 feet high. The seated statues represent Rhamses the Great, his mother, his wife, and his daughter; they can be found in their original size of 65 feet in another part of the palace. The model of this memorial was taken at one-tenth the size of the original. Turning left, one finds the portico of the temple of Philae, situated on an island in the middle of Egypt's sacred river, the Nile. Then, passing through the Hall of Amenophis, one arrives at the tomb of Beni-Hassan, the oldest of the memorials, a model of which was provided in the Glass Palace; it dates from 1660 BC. The paintings inside depict the domestic life of the Egyptians. The Egyptian Museum also houses copies of the Rosetta Bull (Stone!), which was discovered by a French engineer during the expedition to Egypt. On this basalt stone, dating from the year 196 before the birth of Jesus Christ, was an inscription in hieroglyphs, or sacred letters, in common Egyptian and Greek. It is thanks to this Egyptian translation that the key to the language of hieroglyphs has been discovered. Of all these curiosities of the most remote antiquity, it can rightly be said that the ancient architects were truly great men. They could not borrow anything from anyone. Their own genius alone was their source of inspiration, and this led them to produce works as grand as any they have ever seen. They discovered many rules that... They were considered essential elements of art and were far superior to useless ornamentation. They fully grasped the importance of their calling. The last Egyptian

temples, copied from their models, have given the world an idea of the greatness of their architecture.

Chronologically, after Egypt comes Greece. Entering the nave of the building, one finds oneself before a Doric-style facade, followed by a temple of Jupiter at Nemea, 400 BC. The frieze is decorated with inscriptions and the names of the principal cities of Greece. Groups of wrestlers, Silenus and Bacchus, Bacchus and the Fauns are placed in front of the facade. The central door leads to the great hall; this is square, surrounded by porticos, and represents the agora of the Greeks, or the forum of the Romans—that is, a place intended for public meetings. It is of Doric architecture, and the names placed on the frieze are those of poets, philosophers, and artists of Greece. The paintings that will adorn the walls (and which are still in progress) are illustrations from Greek theology; they are being executed under the supervision and according to the sketches of G. Scharf and depict: 1st. Olympus; 2nd. the capture of Troy; 3rd. the realm of the underworld; 4th. the era of Pericles and Phidias.

In this room, one finds the masterpieces of ancient sculpture, familiar to everyone. In the center, like the finest stone of this diadem, stands the most beautiful woman in the world, the Venus de Milo, discovered by Mr. Marcellus in 1820 and which now adorns the Louvre in Paris. This is the Venus Victrix. Next to her stands the Venus of Capua, almost identical to the former, the original of which can be found in the Museum of Naples. Furthermore, there is the wrestler from the Louvre in Paris. the Juno Farnese from Naples, the Naiad from the Louvre, the Faunus from the Vatican; the Faunus from the Capitol, the Minerva Farnese from Naples, the Medicea from Rome, the Sleeping Ariadne, which is found in one of the Vatican halls, and the Laocoon discovered in the ruins of Titus's palace in 1506 and considered a masterpiece of ancient art.

Continuing along this path, one arrives at a covered gallery, where a different architectural style is given a place. The square pilasters supporting this gallery were found at Eleusis. The ceiling, executed with equal talent and taste, is the work of Owen Jones, who believes that the Greeks painted their monuments and monumental sculpture; and in the copies of the friezes and reliefs of the Parthenon, he had some sections painted to serve as a benchmark for comparison.

The principal adornment of the bas-reliefs is a replica of one of the facades of the Parthenon, the most beautiful of all temples in the world. It is painted at approximately one-quarter of the usual size, and this is the largest representation of it ever made. It is here that one can appreciate the value of the earlier observation regarding the reproduction of Egyptian monuments on a reduced scale. For Greek monuments, copies of normal size can give a faithful idea of the original, because the beauty of Greek art lies less in size than in the harmony of proportions. At its highest point, the Parthenon was only 64 feet high; it was 228 feet long and 100 feet wide; the columns were 34 feet high and 6 feet in diameter. This famous temple, as is well known, was dedicated to Minerva, the patron goddess of Athena. In the cella, in the center of the temple, stood the statue of this goddess, in gold and ivory, a masterpiece by Phidias. It was under the supervision of this artist that the work on the temple, built by Ictinus and Callicrates, took place. The Parthenon dates from the most beautiful age of art, that of Pericles, 444 years before Jesus Christ. The first drawings of the Parthenon that exist date from 1674 and were made by a French artist, Jacobus Carrey, while the Marquis de Nointel was in Athens. These drawings are still in the Paris collection and remain the most accurate ones in existence today, as since then the Parthenon has suffered new and numerous destructions, both by the ravages of time and by human hands. When Carrey made his sketches, the Temple of Minerva served as a Christian church, and the statues had been removed from one of the pediments to replace them with a peddler. A few years later, in 1687, the Venetians shelled Athens, and the Parthenon, which had been converted into a powder magazine, was severely damaged by an explosion that destroyed the central section of the building and shattered several statues. It is known that the Turks used the columns of the Parthenon to make plaster, that travelers took pieces for their collections, and that Lord Elgin finally brought back the finest remains of Phidias's work in England. These incomparably beautiful remains, which now adorn the British Museum in London, have been returned to the Glass Palace. The frieze, depicting the Feasts of Minerva, extends the entire length of the gallery; as we have mentioned, a section is painted; another is white on a blue ground; yet another is completely white, so that comparisons can be made. There you will also find the famous statues brought back by Lord Elgin, which have preserved his name. It is believed that the Parthenon contained 44 statues; of these, 13 fragments are now

left in London and 2 in Athens. This is all that remains of these beautiful works. The Glass Palace also possesses a copy of Theseus, considered the most perfect of the known fragments; furthermore, copies of Ceres and Proserpina, a head of the horse of the chariot of the night, and of the Fates. On the opposite side of the Parthenon is the famous group of Niobe, found in 1580 at the gate of St. John in Rome and now in Florence. In the halls of the Glass Palace dedicated to Greek works of art, there are more than 200 statues, the description of which would naturally take us too far afield, so we have limited ourselves to the most important.

The Roman halls differ little from the Greek ones; there is no such thing as Roman art. The conquerors of the world made the conquered peoples work for them. Among the Romans, the first artists were the Etrurians and then the Greeks. It is known that the Etrurians, now the Tuscans, were a people particularly fond of art; but it was not only in this that they excelled; they were also a very industrious people and already engaged in extensive trade when Rome was still in its infancy. The Romans produced large, primarily useful works, such as the construction of roads and aqueducts. They also built great temples, but the Etrurians sculpted statues and images of gods, whether in earth or bronze. One of the oldest Etrurian fragments is the she-wolf from the Capitol.

After the defeat of Pyrrhus (275 BC) and the conquest of Sicily, the Romans brought their victorious weapons to Greece, and Paulus Emilius, the victor over Perseus, King of Macedonia, returned to Rome in triumph with the spoils captured in Greece. He loaded no fewer than 250 wagons with it (167 years before the birth of Christ). Twenty years later, in 146, Mummius completed the conquest of Greece; he abandoned everything to plunder and took with him a great number of masterpieces, many of which, however, broke or were severely damaged during transport. The destruction of the Romans during their invasions and during their rule over the Greek provinces is incalculable.

But at the same time, a multitude of Greek artists settled in Rome, and a new era of art dawned for them as well as for the Romans—an era of wealth and elegance of production, but also of decline. The simple and ideal beauty of pure Greek art gave way to something more sensuous, which appealed less to the senses than to the passions. Under the first Roman Emperors, people were content with imitating Greek masterpieces; and this explains why they often produced several copies of the same kind. To embellish his palace, Nero commissioned five hundred statues from Delphi. Titus had his baths built on the site where this palace stood, and it was there that some famous pieces were later discovered, such as the Laocoon. The Forum is owed to Trajan and bears his name; likewise, the column, a depiction of which will also enrich the Glass Palace, is his. The era of Hadrian was the most flourishing; during his reign, art seems to have reached a high level of perfection. It was during the reign of the Antonines that the engraved stones and cameos, which served for many portraits, were produced.

In the fourth century, when the seat of the Empire was transferred to Constantinople, the arts, artists, and the collection of fine arts followed the same path, followed by the masterpieces already brought from Greece. But the arrival of Barbarian tribes, who sought only gold, silver, and bronze, was a mortal blow to the finest collections. Thus disappeared the works of Phidias, Polycletus, and Lysippus, long before the fall of the Greek Empire.

Entering the Roman halls through the nave, one finds oneself facing a facade borrowed from the ground floor of the Coliseum in Rome. This is the first time in the history of ancient architecture that one hears mention of the arch style. The Greeks never used it. It was therefore believed that its first use occurred under Roman rule; however, recent discoveries made in Assyria have proven that the arch dated back to a much earlier age and was widely used in Nineveh, and that it was brought from there to Asia Minor, from where the Etrurians introduced it to Italy. A model and relief of the Coliseum, although not yet fully completed, will be placed in the Roman halls of the glass palace. The large hall is entirely clad and decorated with stones imitating the porphyry, malachite, and rare marbles that the Romans used extensively in their palaces.

The Venus of the Capitol, which can be found here, is preferred by many masters to the Venus de Medici, as it is wrought in a purer and more exalted style; also found here are the Venus Genitrix, the Venus of the Sea, and the Venus of Arles, all from the Louvre. Around it, the Venus Callipygos of Naples, the Bacchus of the Louvre. Arranged in chronological order around the hall are the busts of Roman kings and emperors. A relief of the Forum in Rome, one of the most interesting for study, has also been placed here. The Capitoline Hill, the ruins of the Temple of Concord, the Arch of Septimius Severus, the Column of Phocas, the Temples of Antonius and

Faustina, the Temple of Peace, the Arch of Constantine, the Coliseum, and the Arch of Titus.

On the other side of the main hall are several rooms, which have been converted into Roman baths. These baths are furnished entirely in accordance with the original. They are decorated with beautiful statues; there is the Hall of Apollo and the Hall of Diana. Apollo is the one seen on the Belvedere in the Vatican, which has given rise to so many conjectures. Diana is the one from the Louvre and the goddess of the hunt.

August 23, 1896 Archaeological Discoveries in Greece.
(Delphi.)
III.

While excavations at Olympia have been halted for some time, or at least are no longer being continued continuously, scholars of the "French school" in Athens are still constantly at work at Delphi, where they are also continually making more or less important discoveries, including, very recently, that bearded bronze charioteer, one of the most important metal works of art of antiquity, whose excavation has been widely reported. The fact is that excavations at Delphi have only been underway for a few years.

Before excavation began, there was a Pelasgian wall, fragments of walls from the sacred precincts of Delphi, the spring of Castalia, fragments of statues and sculptures embedded, as had been done elsewhere, in the walls of the miserable huts in the surrounding area: this is all that remained of one of the most famous and magnificent metropolises of the ancient world. Founded on a terrace on the southern slope of Parnassus, in this land of Krisoa and Phoki, on the blue Gulf of Corinth, protected on two sides by mighty rock walls, Delphi had for centuries been the most magnificent sanctuary of antiquity. Not only the Greeks, but also the Barbarians had sent envoys to inquire of the oracle of the blind god of light. And gradually, unprecedented treasures, magnificent works of art, were gathered in its treasuries. Pausanias also holds great value compared to Delphi: the Temple of Apollo alone, he said, contains four thousand statues of gold, bronze, and ironwood; then countless shields, tripods, animal images, votive offerings of all kinds, gifts from kings, commonwealths, corporations, and private individuals. But the time came when these treasures were carried away. Nero brought 500 bronze statues from Delphi to Rome, the sanctuary gradually lost its significance, the oracle was opposed by the Church Fathers, and finally, in 390, it was Theodesius who finally closed the door for good. The holy city subsequently fell into ruin, caused by nature and malice, and soon, throughout the Middle Ages, the shepherds of the village of Kastri, now built on its remains, tended their sheep and goats, where the highest wisdom had once spoken. The success the Germans had enjoyed with their excavation of Olympia encouraged the French to attempt similar work at Delphi: in 1881, the French Chamber donated 500,000 francs, and in October 1892, work began, initially encountering strong resistance from the pastoral population of Kastri. And, although not nearly as extensive as at Olympia, the excavations at Delphi have yielded a greater harvest of important artifacts: inscriptions, statues, bas-reliefs, foundations of more than seven buildings, bronzes, vases, etc.

The first major discovery was the Athenian treasury located on the Sacred Way: a small building of Penthellic marble of Darian style, whose walls were literally covered with inscriptions. Destroyed by an earthquake, it had suffered relatively little damage. Pausanias also helped explain the discovery here: the sanctuary of the Athenians, erected in memory of Marathon, the spoils of the Persians. If its walls already constitute a veritable historical library, where an important "Hymn to Apollo" has also been found, which explains so much about the music of the ancients, perhaps even more important are the metopes of this small sanctuary. Thirty of them, all damaged, depict the "Labors of Hercules and Theseus." As sculptures, they are even more valuable than the famous metopes of the Parthenon, unlawfully brought to England by Lord Elgin.

But not only are works from the heyday of Hellenic sculpture found; important works of archaic art have also been discovered, statues of Apollo, in that rigid, hard style reminiscent of the oldest wooden sculptures.

Of the famous treasury of Apollo, of which so many ancient writers recount wonders, nothing more than insignificant fragments remained. It had been systematically destroyed. They were more fortunate with the treasury of the inhabitants of the island of Siphnos, reputed to be the most beautiful and richest at Delphi. The excavations have restored it in its entirety: a work of the 6th century BC, and of admirable architectural execution. A frieze—horsemen, chariots, quadrigas, battle scenes—runs around the four walls of the small temple. It is a truly unique

- 23230 sculptural ensemble, despite being a century older than the aforementioned Elgin marbles of the Parthenon. A significant franton has also been recovered from this sanctuary, important though it is, apparently by another artist, of much less beautiful quality than the frieze. Traces of the colors are still very clear in some of these; the background always blue, the horses red, the armor green, the chariots red, blue, and green.
- 23235 Two exedras, the stoa of the Athenians, a Greco-Roman tomb, houses, an aqueduct, ruins that have not yet been explained—these are some of the remains found at Delphi. But even before these, a few sculptures deserve mention: a very large Sphinx, among others, a gift from the inhabitants of Naxos. Among the most beautiful sculptures found there are three dancing coriatis, surrounded by leaves and flowers. And now, a
- 23240 good year ago, an Antinous was unearthed, a worthy counterpart to the Olympian Hermes. A work of Roman origin, apparently, but of purely Greek beauty. Several important bronzes were also found, including that male statue, which was only recently returned to light a few weeks ago. Such is the case with the excavations at Delphi, which are still ongoing and have proven to be of the utmost importance for
- 23245 the history of Greek art. Besides having yielded valuable clues regarding Greek music, it is hoped that remnants will also be discovered that will reveal the art of painting. To what extent this expectation will be confirmed is difficult to say at this time, but what has already been discovered is of the utmost importance and encourages further exploration.
- 23250 1 juli 1920 DELPHI, MONUMENTS OF THE THESSALIAN PRINCES
[p. 291] It is impossible to prescribe the limits of development for a genius like Lysippus, of whose 1,500 famous bronze statues only a fraction is preserved to-day, not in the originals, but in more or less successful marble copies. That, in spite of
- 23255 all divergences, there are common features connecting the Agias and the Apoxyomenos, has rightly been emphasized by good judges in recent times. 1) The artistic career of Lysippus begins for our inquiries with the year 372 BC, when he executed the statue of a man who had won the chariot-race at Olympia "both with full-grown horses and with colts." The base of the statue was found in the German excavations, and shows characters of writing agreeing well with this date. 2) The monument of Daochus, as shown above, was erected soon after 340 BC; but the original Agias statue at Pharsalus is older, and may well have been produced some years before, in the beginning or middle of the forties.
- 23260 There is no reason to date it still earlier, for we must start with the assumption that Lysippus was not taken up by the Thessalian nobles, but that they only placed orders with him when his fame was assured and his style well known. Pliny gives a far later date, 328 BC, as the culminating-point of his art, probably the time when he executed his most famous portrait, that of Alexander. Even after 320
- 23270 BC, Lysippus is active, and executes a great bronze group at Delphi, the lion-hunt of Alexander and Craterus, which was ordered by Craterus, son-in-law of the Macedonian Viceroy Antipater and one of Alexander's old companions in arms, in memory of the fact that during the Asiatic expedition in a hunt he felled a lion which threatened the life of the great king. In gratitude for the escape of both, the group was dedicated to Apollo at Delphi; but as Craterus died in 321 BC, it was his newly-born
- 23275 son who erected the group in his father's name, exactly as was the case with Hieron's group, erected at Olympia by his son, Deinomene. Pliny names this among the most famous works of Lysippus; Plutarch says it had two authors, Lysippus and Leochares. 3) The base of the group has been discovered at Delphi in a chamber to right of the staircase, which north of the temple leads up to the theatre (fig. 150), and the metrical inscription reports that the group was vowed by Craterus, friend of the great Alexander, but only his son performed the vow and dedicated it in memory of the fight with the lion which his father courageously carried through when he followed
- 23280 King Alexander on his Asiatic expedition; he laid the lion low on the borders of the Nomad Syrians.
- 23285 In consideration of the son's tender age, it was assumed that the group was erected long after 320, about 300 BC, but against that are the other dates of the two artists engaged, and there is nothing to prevent us from thinking of the group as erected in the name of the infant son. 1) Anyhow, it is a long life for an artist, of whose outlines we thus catch glimpses, and the Apoxyomenos probably belongs only to its latest period, the twenties of the fourth century.
- 23290 In any case Lysippus, at the time when he executed the Agias, was strongly influenced by the art of Scopas, and only in advanced years seems to have experienced the artistic transformation of which the Apoxyomenos bears witness. This is the

23295 importance of the Delphic find, that it reveals to us how late this master "found his
nature" as Aristotle would say. 1) In this respect he reminds us of a modern sculptor
like Meunier, who only at the age of fifty-five became the Meunier the world knows
and admires. Homolle conjectures that other figures from the Daochus monument are
23300 copies of Lysippus' originals, and the latest found Agelaus figure (fig. 133) might
point to that. But so long as most of the figures are headless, all appreciation of
them is out of the question, for at this stage of his development Lysippus, like
Scopas, showed more individuality in characterizing heads than bodies. Twenty years
later, on the threshold of old age, he is a different man. A torso, contemporary with
and stylistically akin to the Apoxyomenos, we should without difficulty recognize as
23305 his work. 2)

1 Amelung, in Helbig's Führer, 3rd ed., n. 23; Studniczka, Das Bildnis Menanders, Leipzig, 1918, 20.

2 Pausanias, vi. 1,4.; Loewy, Inschriften griech. Bildhauer, 76.

23310 3 Pliny, Nat. Hist., xxxiv. 64; Plutarch, Alexander, 40.

1 Perdrizet, Bull. de con. hell., xxii, 1898, 566.

1 Lysippus was also the author of the bronze group of the Sun-god on his car founded by the
Rhodians, the base inscription of which Pontow thought he had found in Delphi; Dittenberger,
Sylloge, 441; Pliny, Nat. Hist., xxxiv. 63. This is, however, incorrect; the lettering is
23315 characteristic of the end of the third century, so a century later than Lysippus; Bourguet,
Bull. de corr. hell., xxxiv, 191 1, 458, and Revue arch., 1918, i. 220.

2 In my description of the Thessalians I have omitted to use the judgment Theopompus passes on
them {Athenaeus, xii. 527a): "They play away their time with dancing women and flute-players,
others spend whole days in dice-playing, drinking, or other excesses, and they take more care
23320 about filling their board with all manner of meats than in leading an honourable life. But the
Pharsalians are the laziest and the most pitiful of them all." Further, he describes how one
can win the friendship of the Thessalians by drinking matches with them and by joining in
their debaucheries (op. cit., vi. 260b). But Theopompus passes similar judgments on the
Etruscans, the people of Methymna and other Greek towns, and on Philip of Macedon (Athenaeus,
23325 xii. 507, d, e; x. 442/ -44, a; iv. 166/-167e); so he seems to have been a specialist in
chroniques scandaleuses.

January 1, 1924 DELPHI

23330 BY DR. J. W. VAN ROOIJEN.

If one wants to reach Delphi by land from Athens, this isn't the easiest route. By
train, one can only travel as far as Brailo, a station on the railway to Salonika.
From there, a bus—a grand name for a truck with some benches—runs to Amphissa.

23335 However, if, like us, you're lucky enough that the bus doesn't even wait for the
express train from Athens, good advice is expensive. The nearest village (I've
forgotten the name) is a few hours away. The helpful stationmaster, however, had some
advice. We were able to rent a couple of mules, and so, packed and ready, we set off.
A car was reportedly available in the village in question.

23340 However, upon arrival, it turned out that the car had to come from Amphissa. It
didn't arrive until evening. We've rarely experienced more frightening moments than
during that car ride. Imagine being driven at breakneck speed up a mountain as high
as Parnassus, in a car driven by the most reckless driver in the world, who takes
corners so sharply that at any moment you think you're going to plunge, car and all,
into the abyss that constantly gapes at you on the right, while you sometimes whizz
23345 past cars going uphill at the speed of an express train. Then you'll understand how
happy we were to finally have arrived in Amphissa.

We don't have any pleasant memories of this last place; the Xenodokeion (hotel),
which was the best in the town, didn't even meet the most modest standards of
cleanliness; we were therefore very glad to be able to leave this inhospitable place
23350 as early as possible.

From Amphissa, however, to Delphi is quite a climb; Cars are unavailable here, so we,
forced by necessity, had to resort again to our driver from the previous evening, who
brought us up without incident.

23355 Delphi, also called Pytho in ancient times, lies between high rocks on a gently
sloping terrain. Where the rocky plateau meets the mountain, rise the so-called
Phaedriades, the shining rocks, so named because the sunlight reflects brilliantly
from the bare limestone. The two rocks form an obtuse angle and are separated only by
a narrow abyss. From the eastern rock rises the spring Kastalia, whose water flows
along the rocks to Pieistos, a quarter of an hour away.

23360 The Delphic oracle was ancient. According to a Delphic legend, the vapors that rose
from a gorge and sent the Pythia into a kind of ecstasy were said to have been
discovered by a goat herder. He had... He noticed that his goats, when they
approached the chasm in question, made strange leaps and uttered unusual sounds; when

he himself approached the chasm, he fell into a kind of ecstasy and began to
23365 prophesy.
Before Apollo established his oracle here, Gaia, the Earth, was the first possessor
of the oracle; her daughter Themis succeeded her; the oracle's pronouncements were
called themistes (laws). Themis voluntarily ceded the place to Phoebe, who then gave
23370 the oracle to her grandson Phoibos Apollo. He traveled from Delos, the island where
he was born, accompanied by the Athenians, who boasted of being the first to pave the
sacred road to Delphi, to Delphi, where the people and King Delphos received him with
joy.
According to another legend, Apollo did not acquire the oracle so peacefully. Shortly
after his birth, Apollo is said to have set out to seek an oracle. He took a liking
23375 to the Valley of Delphi and decided to establish an oracle there. However, the
serpent Python, who lived here near the Delphic spring, prevented him from entering.
The young god engaged the serpent in battle and killed it with his arrows.
There, for the first time, the paeon, the joyful song of victory, resounded from the
mouth of the god and the choir of Delphic young women; in remembrance of this
23380 victory, the Pythian Games were established forever. As penance for the death of the
Python, Apollo was then forced to flee and perform eight years of slave labor. He
went to King Admetus in Thessaly and was purified in the Valley of Tempe, to return
to Delphi as Phoibos, the bright and radiant one.
This penance and purification were symbolically represented at the festivals, which
23385 occurred every eight years; a boy, supposed to represent Apollo, set fire to a hut,
the hut of Python, in front of the temple: then he hastily fled. Accompanied by a
procession, he passed through Locris, Doris, over the Oeta, to Tempe, and here, like
Apollo before him, he was purified. According to legend, Apollo appointed Cretans,
whom he had brought here by sea, as priests. When the leader of these men looked at
23390 the bare rocky plain and asked the god what they were supposed to be made of here.
The god replied, "Everyone must hold the sacrificial knife ready in their right hand
and continually slaughter sacrificial animals, which the people will bring to me in
countless numbers." And so it was done.
People came from all sides to consult the god and have their sacrificial animals
23395 slaughtered; precious gifts were also presented to the god, so that the temple
acquired a great wealth of precious metals and works of art. Homer (Iliad, book 9)
already speaks of "the great riches that the stone threshold of Pytho encloses
within." Not only Greeks consulted the oracle, but also foreign peoples. Don't we
read in "tus" that the king of Lydia, Croesus, consulted the oracle when he wanted to
23400 march against Cyrus, the king of Persia?
A league of so-called Amphictyons, consisting of peoples from Central and Northern
Greece, had united to protect the sanctuary and celebrate the festivals at their
shared expense. The Dorians, in particular, had established close ties with the
oracle when they lived near Parnassus and Oeta, and they maintained these ties even
23405 after settling in the Peloponnese.
In the centuries between Lycurgus and the Persian Wars, Delphi became both the
religious and political center of Greece. Nothing of importance was undertaken by
individuals or states without first seeking the advice of the Delphic god.
At the beginning of the Persian Wars, the oracle was uncertain and gave equivocal
23410 answers. After the Battle of Salamis (480 BC) was the first to take up Greece's
national cause again. The fact that the temple had been spared by the Persians
(probably because of their worship of the god of light) raised the oracle's prestige.
Trophies from the spoils taken from the Persians were erected at Delphi, and the
Amphictyones issued decrees in honor of those who had remained loyal to their
23415 homeland.
However, a reaction gradually set in. In the so-called holy wars, the oracle's power
diminished; at one point, the Phoenicians even seized the temples' immense treasures
and used them to finance the war they waged. Admittedly, the oracle still enjoyed
23420 some prestige during the time of Emperor Hadrian (117-138 AD), but only in private
matters. When Emperor Julian the Apostate, before his expedition to Persia in 362 AD,
C. had the oracle questioned, and he received the answer: "Tell the king that the
cunningly made dwelling is covered with dust, Phoibos has no more shelter, no
prophetic laurel, nor a bubbling spring; "The beautiful water has ceased to flow."
23425 Finally, in 390 AD, the oracle was closed forever by Emperor Theodosius.
The actual sacred space, formerly enclosed by walls, was approximately 130 meters
wide and 180 m long. The main entrance was located in the southeast, and from here
the sacred road, with two bends, led to the Temple of Apollo. Along this entire road
stood statues and votive offerings in great numbers. Emperor Nero had approximately

- 23430 500 statues removed, yet the number of those remaining was estimated at 3,000. The number of statues at the entrance was exceptionally large. On the right side stood the statue of a bull, dedicated by the Kerkyraeans in 500 BC; opposite this stood the monument built by the Athenians in memory of the Battle of Marathon.
- 23435 To the west of this stood the wooden horse of the Argives, dedicated in 414 BC. C. dedicated. This was followed by a triumphal monument of the Arcadians, which they had erected there to commemorate their liberation of Sparta. On the left were the Seven Against Thebes, with the chariot of Amphiaraus, a memorial of the Argives to their victory at Oenoe.
- 23440 If one continued along the sacred road, one would pass more than a dozen treasuries, built by various cities and states of Greece. Among these, the Siphnian treasury, which we will discuss in more detail below, was well preserved; it resembles an Ionic templum in antis, with caryatides instead of columns. The Doric treasury of the Athenians is also well preserved; it has been rebuilt in its entirety.
- 23445 Following this was a large building, where one can see the bouleuterion, while behind it the terrain has been left in its original rocky state. This is probably the rock on which the Sibyl Herophyle first gave her oracles. A tall Ionic column, built by the Naxians The temple, on which the famous Sphinx stood, towered over the entire site. A little further on, one reached the circular festival site, the Halos (threshing floor), where the aforementioned symbolic depiction of the slaying of the
- 23450 Python took place. Immediately behind the Naxians' column rises the wall of the temple terraces; it was covered with inscriptions containing decrees of the Amphictyones, lists of victors, and charters and the release of slaves. Between this wall and the Halos stood the Athenian Stoa, with columns, built in the Ionic style. This stoa was probably built
- 23455 in gratitude for the victory achieved at Salamis in 480 BC; later (428 BC), Phormion added trophies from captured ships. Next to the southwest corner stood a Nike of Paionios, probably a copy of the one found at Olympia.
- 23460 Several monuments also stood on the east side of the temple terrace, among which the Plataean Tripod is particularly noteworthy. It rested on a base that has been recovered. The central support formed the famous serpent column, and at the top was a golden basin, stolen during the Sacred War. Later, the tripod was taken to Constantinople and can still be seen there in the so-called AT-Meidan. Of the Doric temple of Apollo, which was naturally the principal sanctuary, only the foundations
- 23465 remain; yet, thanks to the Greek writer Pausanias, we know what this temple looked like in ancient times. The sanctuary had been rebuilt, or rebuilt, several times. The oldest temple, according to legend, was formed of laurel trees; the branches of these stemmed from the sacred laurel in Tempe. Next came a temple built by bees from wax. Apollo replaced it with a copper temple; however, this melted in a fire and sank into
- 23470 the earth's fissure. After this, a fourth temple, made of stone, was erected by the master builders Trophonios and Agamedes. After they had completed their work, they asked the god for a reward, which he promised them by the seventh day. When that day arrived, they died the following night. This temple, however, burned down in 548 BC: money was collected
- 23475 from all the Greeks for a new one; even the Egyptian king contributed. The Alcmaeonides, expelled from Athens, undertook the construction for the sum of 300 talents. They built it more expensively than the contract required, but naturally won the favor of the priests of Delphi; the architect was Spintharus of Corinth.
- 23480 In front of the temple was the great altar of burnt offering, and nearby was the statue of a wolf, the animal dedicated to Apollo. On its head, the Delphians had the decree engraved, granting the Spartans who had assisted them the right of promanteia (to consult the oracle on behalf of others). Pericles, however, had the same decree engraved on the back, in favor of the Athenians. Entering the pronaos (forehall), one
- 23485 first saw the golden inscriptions: Gnóthi Seauton (Know Thyself) and Mēden Agaan (Nothing Too Much), both sayings of the Seven Sages; beside these inscriptions stood the image of Homer. The temple cella was 100 feet long and decorated with Doric columns on the outside and Ionic columns on the inside. Here stood the statue of Apollo, and before it the Hestia (hearth) where the eternal fire was maintained by a widow; this hearth was considered the common center of all, and also the center of
- 23490 the entire Greek world. Zeus, in order to discover the center of the earth, had once sent two eagles flying towards each other from east to west, and they had met at this spot.
- 23495 Near the hestia stood the iron chair of Pindar, on which the pious singer had praised Apollo with his hymns. For he was accustomed to offering hymns to the god instead of sacrifices. Moreover, the cella contained a statue of Poseidon, the statues of two

Moiragios (the Fates), along with those of Zeus Moiragetes and Apollo Moiragates (the leader of fate).

Behind the cella was a room intended as a waiting room for those who wished to consult the oracle. This was followed by the Holy of Holies, the adyton, where the cleft of the earth was located, from which the familiar vapors arose. A colossal tripod, made of wood and plated with gold, was erected there, and above it was a seat.

After observing the omens, the Pythia, having first drunk water from the Kastalia spring and taken a laurel leaf in her mouth, proceeded to the adyton and sat on the tripod. The vapors rising from the earth caused her to enter a kind of ecstasy and emit incoherent sounds. These words were then written down in hexameter form by so-called prophets; however, these verses, too, were not easy for the interrogator to understand. Therefore, they went to the professional interpreters to find out from them what the meaning of the oracle was.

The large terrace, which extended along the entire south wall of the temple, contained the much-sung laurel and myrtle forest; in the center of this we also find the the ancient sanctuary of Gaia, who, as we saw, was the first to possess the oracle. To the southeast probably rose the mast with three golden stars, which the Aeginites had dedicated here after the Battle of Salamis; further along stood the pedestal where Perseus of Macedonia intended to place his statue. Aemilius, however, who had defeated him, had his own placed there. The temple's great altar was a foundation of the inhabitants of Chios, erected around 520 BC. A little to the north stood an elegant acanthus column depicting dancing maidens. Golden tripods, which Gelo of Syracuse and his brothers had dedicated after the victory at Himera (480 BC), were also located here. The well-known bronze charioteer also originally stood here.

North of these Sicilian votive offerings, the Thessalian Daochos had nine statues of himself and his ancestors erected. Opposite the northwestern corner of the temple is a room where Craterus had his famous lion hunt, during which he saved Alexander the Great's life, immortalized by Leochares and Lysippos. The theater is located behind this. The space intended for the spectators remains in relatively good condition, although the stage has been destroyed. In the very northern part of the peribolus was the Lesche of the Cnidians, a kind of lounge. On the right-hand wall, according to Pausanias, there was a depiction of the destruction of Troy, painted by Polygnotus, and on the left-hand wall, an image of the Underworld.

Not far from the main entrance is the Kastalia spring. Its water springs from the rock face, which has been carved into a large, square basin. Below it is a large niche, in which a small chapel of Saint John has now been built. In the Kastalia basin, all who wished to enter the temple had to purify themselves by bathing. Even today, the water from the spring, though it has lost its reputation for holiness, is still held in high esteem. Every afternoon, one can still see the mules, hung on both sides with barrels and driven by boys and girls, making their way to the spring to fetch the wonderful, cool water so precious in these arid regions.

It is a picturesque sight to see these groups gather at the spring, especially in the evening, when the sun is already setting behind the mountains and from the heights of Parnassus one sees a magnificent panorama before one, one that one will not forget for the rest of one's life. This spot of land, chosen by the Greeks as the dwelling place of their light god Apollo, who knew how to banish the darkness of the future with his light and to whom people came from far and wide to hear the pronouncements of his oracle, is truly beautiful. We would now like to take a short stroll through the Museum, which is located near the excavations. The building, constructed through the generosity of Syngros, consists of a main building and two wings.

In front of the entrance stands a marble sarcophagus depicting the Calydonian hunt. Entering the main hall, we first see the relatively well-preserved bronze statue of the Charioteer, which was found near the temple. Along with it were a portion of a horse and an arm. All of this belonged to the votive offering that Polyzalos had erected in gratitude for a victory won in a chariot race. It is believed that this Polyzalos was the brother of Gelo and Hiero of Syracuse.

The charioteer stands before us at full length; the folds of his garment are not unlike the fluting of a column; probably some of these folds, which appear somewhat monotonous, were covered by the chariot's body. The bronze workmanship is very fine; the face with its full chin, the expressive eyes, and the hair—all these elements lend the work a high value.

The next room is known as "The Treasury of the Athenians." The metopes that once stood on the outside of this treasury are attached to the walls. They depict the deeds of Hercules and Theseus. Five metopes depict the theft of Geryones' cattle; a

sixth shows a centaur fallen against an opponent (Hercules), who places his foot on his neck. A seventh depiction shows the battle with the Nemean lion, while an eighth metope depicts the capture of the bull.

- 23565 The rest all seem to depict deeds of Theseus, primarily his battle against the Amazons. In one depiction, we see the young Theseus, wearing a helmet, fighting an Amazon; On the other side, the defeat of the Minotaur and the bull of Marathon is depicted. In the center of the hall, one sees Amazons on horseback, the acroteria of the top of the sanctuary.
- 23570 On the right wing is the Greco-Roman hall, or the Monument of Pydna. The monument commemorates the defeat of King Perseus of Macedonia (168 BC); inscriptions appear on all four sides and are decorated with a frieze in relief. Opposite the Macedonians, recognizable by their beautifully decorated shields, are barbarians, almost completely naked; they represent the allies of the Roman people. The Romans themselves are not visible, but their cavalry is. In front of this monument are the Three Dancing Maidens (Karyatides); the support on which they are placed is decorated with acanthus leaves; they form a beautiful base for a tripod or other votive offering. The clothing of these maidens and the garlands of palm leaves have identified them as the Dancers of Karyae, from which the name Caryatides derives,
- 23580 which are also known to be found at the Erechtheion in Athens. We now return to the entrance and reach the hall of the Temple of Apollo. On the right, we find a large relief depicting a youth with outstretched arms; a boy stands beside him. The first figure is usually interpreted as a depiction of Apollo; however, it is probably Apoxyomenos, with an attendant.
- 23585 Fragments of marble statues from the temple of the Alcmaeonides depict lions tearing bulls; two female figures are also seen, each holding her dress in her left hand; on the left wall are depicted scenes from the battle between Athena and the giant Enceladus. Five reliefs were also placed in this hall. On the first, we see the ship Argo; round shields, on the outside, represent the warriors on board; to the side stand two figures playing a lyre, one of whom is probably Orpheus. At each end stands a horseman, apparently Castor and Pollux. In a second relief, Pollux, Idas, and Castor drive the stolen Arcadian ox before them; the division of this ox was the cause of the disagreement between them. Each figure holds two spears in their left hand and a third in their right. The third relief depicts the abduction of Europa on the bull; the story of the Calydonian boar is the subject of the fourth relief; in the image, the remains of a dog can be seen beneath the wild animal. The last relief is severely damaged; it is suspected that it represents the ram on which Phrixus and Helle were seated when they fled the ambushes of their stepmother Ino.
- 23600 East of the temple, a large Omphalos, the stone we mentioned earlier, was found; on it were depicted woolen ribbons; however, this was probably not the original omphalos, as it was covered with real woolen ribbons. Between this and the next room stand the statues of two youths from the Archaic period. On the pedestal of the best-preserved statue, an inscription tells us that the sculptor was an Argive. They
- 23605 closely resemble the well-known Apollo statues, with their round, slightly smiling faces. They probably date from the 7th century BC. It is believed that these statues represent Cleobis and Biton, whom "Tus tells us about" in his history. He relates (1:31) that Solon, the Athenian philosopher, once visited Croesus, the king of the Lydians. One day, the king, who was known for his wealth, had Solon led through all his treasuries. Then he asked him who he considered the happiest man in the world. Solon awarded the first prize to a certain Tellus, an Athenian, and the second to the young men Cleobis and Biton, from Argos. One day, their mother had to be brought to the temple of the goddess Hera, but the oxen were not present in time. The young men then themselves drew their mother to the temple, a distance of 45 stadia (a stadium is approximately 182 meters). The celebrants praised the mother. They were fortunate to have such fine sons. The mother then prayed to the goddess to grant them that which is happiest for mankind. After this prayer, they lay down to sleep in the temple and never rose again. By this, the goddess had shown that death is happiest for mankind. The Argives subsequently had statues made of them and dedicated them at
- 23620 Delphi.

- We have now approached the last room of the museum, that of the Treasury of the Cnidians, or, according to some, Pomtiov, the Siphnians. The sculptures on the facades of the completely destroyed building have been recovered so completely that it has
- 23625 been possible to reconstruct it in its entirety. As we have already seen, the building was in the form of a templum in antis; instead of the usual columns, the roof of the vestibule is supported by the statues of two girls. They remind us of the

priestesses of the Acropolis and are perhaps the precursors of the Caryatides of the Erechtheion. Along the entire building frieze opens. On the north side, it depicts the Gigantomachy; first, we see a man, slightly stooped, holding an object in his hand that resembles a bag. This is Aeolus, the god of the winds, who sets his storms in motion against the giants. Next, two goddesses are engaged in battle with giants. The giants are depicted in normal human form. In the background, we see Hercules, with a lion's skin wrapped around his neck and arms; he is battling a giant with his lance. Dionysus, wearing a long robe and a panther skin, rides into the fray with his chariot, drawn by lions. A little further on, Apollo and Diana stand with their bows. Ephialtes lies dead at their feet; another giant is about to flee, while three others approach in close column. Then Hermes appears, fighting with a sword and recognizable by his conical headdress; the other figures are no longer identifiable.

On the other side, one sees the remains of the eastern frieze; this depicts the battle between Menelaus and a Trojan hero (perhaps Hector) for the body of Euphorbos, while Meriones assists the former and Aeneas the latter. The names of these figures can be determined from the inscriptions. The left half is occupied by an assembly of the gods. The second half shows a battle scene.

It is also worth mentioning the depiction that adorned the western façade, the enigmatic battle over the tripod between Apollo and Hermes; Athena, positioned in the center, seems to separate the combatants; it is said that the Dorians once attempted to place their hero, Heracles, in place of the Ionian Apollo; this could explain the depiction. In the same room is also the aforementioned Column of the Naxians, upon which the Sphinx was placed.

We have now completed our tour; a visit to Delphi will leave an unforgettable impression on anyone.

12 March 1856 MISCELLANEOUS. From Constantinople it is reported that some French soldiers, whose barracks are situated not far from the Atmeidan (the old racecourse from the time of the Emperors), have recently dug up the serpent column buried under the mud there. This column is one of the most remarkable of the few ancient monuments preserved in the capital of the Turkish empire. It consists of three bronze serpents, twisted together, about 25 feet high, and ends at the top in three superbly worked massive serpent heads. These latter were all knocked off by the iconoclastic Turks at the capture of the city, and indeed, as the historians report, the first by Mohammed the conqueror himself. That head is still preserved in the small museum of the former Irene church. Eusebius and Sozomenus relate that this work of art was brought from Delphi to Constantinople by Constantine the Great, and that this column is the same which was placed by the united Greeks, after the battle of Plataea, as the pedestal of a golden tripod made from the booty, in the temple of Apollo at Delphi. The classical writers Herodotus, Thucydides and Pausanias speak several times of this serpent or dragon column. Pausanias, King of Sparta, sought to appropriate to himself the fame of the victory at Plataea by having a two-line verse, in which he was celebrated as the hero of Plataea, engraved on this column. The Amphictyones, however, incensed at the unjustness of this boast, gave orders to blot out the words, and decreed that in their stead the names of all the Greek peoples who had taken part in the war against the Persians should be chiselled on the column. The rubbish which had accumulated on this spot for fifteen centuries has up to the present day covered the lower part of this monument, which has suffered greatly through time. It has now been discovered, however, that on one side of the lower twelve serpentine coils a multitude of Greek national names can be read, partly in very ancient script, among which are the names of the inhabitants of Ambracia, Lepreae, Tenos, and Corinth. It is remarkable that up to now no trace has been found of the names of the Athenians and Spartans; they have probably become illegible through the rust with which they are covered. A few young German philologists are busily engaged in the complete decipherment of this remarkable inscription, which dates from the most brilliant period of Greece's heroic age.

(When one compares what Petrus Gyllius in his work: the Topographia Constantinopoleos cap. XII, says about that column or pillar, one will be cautious, with waiting for further reports about this discovery.)

5 February 1882 From Athens it is reported that the archaeological society has decided to have the temple of Apollo at Delphi excavated, provided that the Government compensates the owners of the plots above it.

29 March 1887 Greece and France have concluded an agreement concerning the

- 23695 excavations at Delphi. All the excavated objects remain in Greece, but the French Government reserves the exclusive right to publish the inscriptions and photographs for a certain period.
- 23700 9 May 1887 Between the Greek and German governments a treaty was concluded at the time for the excavations in Olympia that serves as an example of the treaty that the Greek and French governments are currently concluding for the excavations in Delphi. According to this last treaty, the French government would have the right to do excavations in Delphi for five years, but everything that is brought to light would become the property of Greece. The only thing against this is that the French government would have the right to multiply finds by casts and to depict them in scientific writings. The Greek House of Representatives will now have to decide whether or not this treaty will be concluded.
- 23710 1 August 1887 At the latest session of the archaeological society in Berlin, Mr. Ponikoff gave an extensive report of his research to determine the topography of ancient Delphi, so world-famous at the time because of the oracle of Apollo. He found a large number of inscriptions during his excavations and has now made them public. He was also able to praise the fidelity of the description given by Pausanias. This research and the excavations took place in May last and later extensive reports on the remains of the world-famous temple and its surroundings will appear in the light.
- 23715 7 March 1888 It has long been known that in ancient times among the Romans and also in many parts of Greece no one was allowed to sell without being supported by a surety who guaranteed to the buyer that the seller was indeed trading his property and not goods on which his ownership rights could be contested. Such a surety was called by the Romans auctor secundus, by the Greeks bebaioter or proapodotas. An inscription of the demos sypaleitos has now been discovered, from which it appears that in ancient Attica too the buyer had recourse to such a surety, if the surrender of the thing sold was contested by others who could claim a right to it. Here too, at least until the fifth century, the rule seems to have applied that sale and surrender of the thing sold to the buyer was impossible unless in the presence of a third person, who guaranteed that the seller was disposing of his property and not of foreign goods. But in Attica after that time the seller himself was the person responsible to the buyer. In other Greek states, on the other hand, it remained necessary for a long time to call in the intervention of the surety, of the confirmer of the right of ownership, since no other proof of ownership could be produced. As late as the second century, for example, the old institution of a bebaioter was still used in Delphi.
- 23735 11 November 1889 Eduard Engel writes from Greece about "Delphi" to the "N. R. Ct.": A walk within the perimeter of the old sanctuaries leaves one completely unsatisfied. The excavations that have been carried out up to now have certainly aroused desire, but they have brought to light almost nothing that can flatter the artistic sense of even a non-archaeologist. The museum – a room like a stable – possesses, apart from a few insignificant inscriptions, nothing that is worth seeing. And yet it is my firm conviction, to which I want to give the strongest possible expression here, that there is perhaps nowhere in Greece a soil where an excavation undertaken on a large scale will yield such surprising results as at Delphi. And with much smaller resources than were used at Olympia at the time. Here one need not clear away the thousand-year-old stone dust of two riverbeds at a depth of dozens of m; here one has not much more to do than to expropriate the village of Kastri, as it stands there, and then to take up the axe and the spade under every house, in every garden and on every vineyard, in order to come across discoveries of the highest value for science as well as for art, perhaps day after day. The Greek Government and the Archaeological Society at Athens connected with it are aware of the necessity of such an excavation on a large scale, and also of that of the expropriation of Kastri, completely convinced. But with the best will they cannot find the means for it. Americans, swimming in money, have offered to undertake the excavations and to buy the whole of the new Delphi in advance; in this case everything found would come into the possession of Americans and the archaeological treasures would be transferred to America. On that point the small Greek kingdom from top to bottom understands no joke. Anyone who provides the necessary guarantees for a sensible enterprise is allowed to do excavations. In the past Germany received the permit for Olympia, and Germany has contented itself with the certainly not small honor of having dug up a treasure for science and art from the mountain-high rubble of thousands of years. But

- 23760 Greece knowingly gives away nothing of the treasures of its great past, just as all export of that kind is strictly forbidden. For the rest the offer of the Americans is nothing less than generous; for if even a single well-preserved statue from the best period were to be unearthed under the houses of Kastri, that discovery alone would be able to offset the expenses.
- 23765 The Greek Government, in conjunction with the German Archaeological Institute in Athens, has had an investigation made into the costs of the excavations at Delphi, and it estimates the costs of expropriating the Kartriotes at only 3/4 million drachmas (f300,000). Once the houses, mostly miserable cottages, have been pulled down, the work can begin wherever one wants. One would think that somewhere in the
- 23770 world there was a millionaire who, if only out of vanity, would throw a few million drachmas on the table to help bring about such a work, for which one would reap eternal gratitude. And if there is no such millionaire, then the German government, Greece's "sister-in-law", as it is now called in the vernacular of the Hellenes, will eventually develop for Delphi the same selfless activity as it showed for Olympia. It
- 23775 does not really matter for art and science who excavates ancient Delphi, but for German hearts it would be more desirable that Germany were not outdone by France, which is pursuing the same plan. The Greeks, even the simple folk here in the village, are convinced that help will come from Germany. It is a pleasure to see with what confidence people in this eastern corner of Europe have turned their eyes to
- 23780 Germany. Smoke rises from the Kastalian source. I have to smile: I involuntarily think of the tripod of the oracle, from which swirling clouds of smoke and so much wisdom arose. And now I have to laugh out loud. There are two tripods before me, not by the bubbling water from the rock cleft, nor is there a Pythian virgin sitting above the tripod, but there are sturdy black kettles on top, and in them boils the
- 23785 washing of the Delphic men, women and children, and suspended high the women of Kastri splash so bravely in the water that the foam splashes away. On a boulder in the cleft, around which grazing lambs and goats hop, sits a black-eyed rascal of 12 years, the village shepherd, crouched down and blowing on his stick pipe. He suddenly stopped blowing, astonished, when he saw a stranger approaching with a cup in his
- 23790 hand to draw a drink of Kastalian water from the spring that springs from the rock cleft.
- 23795 20 February 1891 – A heated debate was held in the French Chamber about a credit application of fr. 480,000 for the excavations at Delphi. This enterprise is the work of Frenchmen residing in Athens, and important discoveries are expected, which would benefit the French museums. Mr. Le Chevalier raised his voice against the proposal, calling it untimely, now that Versailles and other palaces in France are almost falling into ruins; the money could be better used to maintain these and other State domains. Mr. Dupuy, who defended the proposal, said he could not believe that French
- 23800 legislation would grant the countrymen of Mac Kinley the fame of having excavated the Temple of Apollo. Finally, the proposal was adopted by 341 votes to 61.
- 23805 10 November 1893 A discovery at Delphi!
– During the excavations at the site where the famous temple of Delphi once stood, a discovery has been made which is of the utmost importance for the knowledge of ancient Greek literature and music. For instance, a stone slab was found, in which a hymn of praise to Apollo is engraved, and above each syllable, the notes in which the song was sung are mentioned. It is believed that we now have the key to ancient Greek music, which was sought in vain for so long. The music is by the composer
- 23810 Aristoxenes, a pupil of Aristotle, and dates from the 2nd century BC. According to the convention between Greece and France, the latter country has the right to publish the hymn. A second hymn was found, but this one was not provided with notes.
- 23815 3 April 1894 A most remarkable musical performance took place on Thursday in Athens. In the French school of antiquity a two thousand year old "hymn to Apollo" was performed, the text of which with the notes had recently been found at Delphi. The two tablets on which the hymn is engraved were found during the excavation of a building, which was situated, close to the place which was dedicated to the old
- 23820 oracle. One of the tablets was unfortunately defective, but the other was still almost intact. This discovery was of special importance, because the fragments of old music which had been found up to now, are not complete enough to give a correct idea of the characteristic of a whole composition.
- 23825 Reinach in Paris had set this old music to new notes. The hymn was performed by a quartet of male voices: it made an exceptionally pleasant, though strange effect, and in many respects reminded one of the most beautiful German chorales, the performance

was attended by the king and queen, two princes and princesses, many persons of the court, members of the cabinet and the diplomatic corps. The hymn was so well received that it was repeated at the request of the queen.

23830 25 May 1894 The French archaeologists at Delphi have now also discovered during their excavations the treasury of the ancient inhabitants of the island of Siphnos, which was famous in ancient times for its gold and silver mines. The building is well preserved and remarkably beautiful. It would be of great service to the French, as a reporter from The Standard notes, if they, like the Germans in their excavations in
23835 Greece, would obtain the help of a few architects.

30 May 1894 Among the latest discoveries at Delphi are a horse's head in marble, which probably belonged to the frieze of the Temple of Apollo, six metopes from the treasury of the Athenians, representing fighting Amazons; Theseus wrestling with the Minotaur and other bas-reliefs, which must have belonged to the treasury of Siphnos. The score of a hymn has also been excavated, although it is rather incomplete.
23840

5 June 1894 Among the latest discoveries at Delphi is a very large statue of Apollo, from an early period of Greek art, and the lower part of an altar erected by Gelon of Syracuse, with an inscription in which the victory of the Tyrant over the Carthaginians at Himera (480 BC) is glorified.
23845

19 June 1894 At Delphi a column has been excavated, which bears en relief the images of three women, in the spirit of the column in the temple of Ephesus. The drapery of the three well-preserved statues gives an excellent impression that they are in rapid motion. This discovery is considered to be of great value.
23850

3 October 1894 The Apollo hymn
23855 On the second Apollo hymn, excavated by Homolle at Delphi, not only the notes of the song but also the accompaniment with instruments must have been noted. Since the Greeks used a different and older notation for their instruments than for singing, it is not likely that Homolle would have been mistaken. This discovery may therefore provide an answer to the question of how harmony was among the Greeks. The passages in Aristotle and Plutarch, which until now were the only sources for the knowledge of
23860 harmony among the Greeks, are so obscure that scholars do not agree with each other at all. One claims that the Greeks only knew primes and octaves, the other believes that the Greeks did keep singing homophonous, but that the instruments were allowed to accompany the singing in fifths, fourths or thirds. The hymn that has now been discovered will probably settle that dispute.

23865 As for the text, it is almost identical to that of the first hymn; Apollo's birth on Delos and his battle with the Pytho are sung in it. What is new is that the hymn is concluded with a prayer for Athens and Rome. The poem probably dates from after Christ's birth, and Homolle assumes that it was composed in the second century after Christ. The hymn is engraved in two columns on a single marble slab, which has been
23870 preserved fairly well.

19 January 1895 In an extensive hemisphere, walled in by high and wild rocks, offshoots of Parnassus, on the right bank of the Kephalo-Vrysi, which rises from the source of Oastalis and, forming many waterfalls, makes its way through a forest of
23875 olives and laurels until it falls into the dried-up bed of the Xero-Potamo, there are three or four white houses: that is the village of Castri, which by a miraculous twist of fate has risen on the site of Delphi, the opulent holy city, the great gods servile centre of the civilization of the ancients.

For a long time the learned have wondered whether a city so famously renowned could in reality have disappeared so completely, without leaving anything behind it but a few fragments of marble scattered over the ground, and a few mutilated sculptures set aside under the shade of the olive trees in the gardens; whether the Phocidian
23880 plunderers, the centurions of Sulla and Nero, the Gauls under Brennus, the warriors of Constantine could thus have doomed to nothing that immense city, consisting of
23885 nothing but temples and sanctuaries, peopled by thousands of statues. At the beginning of the year 1891, when the Minister of Education in France put that very old question to Mr. Homolle, the present director of the "Ecole française d'Athènes," the latter did not hesitate to answer that he was convinced that the soil of the village of Castri contained the most precious monuments, and he supported his opinion
23890 by mentioning the efforts made by Ottfried Müller, Wescher, Foucart, Haussoulier and Pomtow, and by the observations which he himself had been allowed to make in the

region of the Delphic valley.

It is to the last parliament's unfading honor to have accepted his assurance and to have granted a considerable sum for this disinterested undertaking, for none of the excavated works will leave the soil of Greece.

A whole year was spent in expropriating the cottages of the farmers, which had been built on the very spot where the principal buildings were formerly located, around the sanctuary of Apollo.

This was accompanied by many difficulties: although 280,000 francs, intended to indemnify the farmers, had immediately been deposited in the Bank of Athens, they would not allow the work to begin until they had the money in their hands. "Here is my field, here is my hand," said an old woman to the director; lay drachmas on that hand, and I will give that land to you." Those poor people did not want to believe that a signature could have any monetary value and in their simplicity imagined that, after having turned the terrain upside down, they would start to dispute the extent of the possessions that they had bought off. Several times Mr. Homolle wanted to persevere, but the farmers demolished the sheds in a riot and it was a close call that a bloody encounter had taken place: they had to exercise patience.

In the month of October of the year 1892, the first ditches were opened and the narrow-gauge railway was laid, with which the excavated soil was carried away. The result of the investigations was not very satisfactory at first. At the site of the temple of Apollo, where it was mainly thought that valuable sculptures would be found, nothing or almost nothing was found, as if — in the expression of Mr. Homolle — the removal of the statues had been carried out according to a specific plan and regulation had taken place. In the year 1893, at the highest point of the sacred road, which intersected the entire city, admirable remains were uncovered, one after the other, the first indemnities of two years of fruitless labor: pedestals of ex-votos, marble horses, female figures, male torsos, and also terra-cottas, bronzes, and inscriptions, among which were fragments of the accounts of the sanctuary, dating from the 4th century before the Christian era.

Then followed the discovery of the Hymn to Apollo, which enabled Mr. Salomon Reinach to revive a tone poem that had been lost for 2000 years. And finally, the results of the campaign of the past year have gloriously rewarded the sacrifices which our budget had made, as well as the diligence of Mr. Homolle and his collaborators, Messrs. Convert, Bourguet, Perdrizet, Millet, Conve, Jonguet-Blot and Tournaire. The workmen have excavated a crossroads, at which four buildings were situated: one of which formerly housed the treasure of the offerings made to the Delphic god by the people of Athens; another the treasure of the Syphnians, a third the treasure of the Beotians. True, they have not been able to lay hands on the talents, the golden drinking vessels, the precious gems which had been in it, and which had once seized the covetousness of the invaders, but masterpieces have been found which have an entirely different value for the knowledge of antiquity. They are, in the treasury of the Athenians, a series of column decorations of a wonderful art, representing the story of Theseus; then not far from there an archaic Apollo, the work of an archaic master, corresponding in all respects with another figure discovered last year; in the treasury of the Syphnians, the construction of which has been entirely restored, bas-reliefs, representing sacred events, besides warriors fighting, horses that have the same noble and impressive bearing, the same fiery and supple movements, as those famous horses of Phidias, which decorated the Parthenon (now belonging to the so-called Elgin Marbles preserved in the British Museum): yet they were carved a century before those of the Athenian master and differ from it only by the frizzy hair of tail and mane, a remnant of the old tradition. Side by side, moreover, there are works of art, which then bear the stamp of that ideal grace, which for us is the highest revelation of art, and others whose artless stiffness, yet not devoid of greatness, seems to date from more distant centuries.

Yet there is no doubt that they were all made at the same time, but the old masters, attached to the old traditions, worked at the same time as the younger ones, whose conception was broader and newer; this contains an important lesson for criticism, which is too anxious to assign to each school its own narrowly limited date.

Among the very latest discoveries, a torso, outstanding in grace and strength, probably the remains of a statue erected for an athlete who had been victorious in the Pythian games, deserves attention, and above all an Antinous in marble, from which nothing but the arms is missing, and which is particularly noble and sober in execution. The casts and photograms of most of these beautiful objects have recently been exhibited at the Ecole des Beaux-Arts. Later they will be transferred to the Louvre, where they will form a separate collection, which will be enlarged according to the progress of the discoveries.

The excavations are still being continued, and Mr. Homolle is about to return to Greece to resume their direction. Convinced that he has not been going wild since the excavation of the principal sanctuaries, whose names he has been able to establish on the basis of the indications given us by Pausanias, he is fully convinced that he will soon be able to hand over to antiquity and art a new and abundant harvest of monuments. Will he find again one of those wonderful statues whose azure tint excited the admiration of the Roman emperors? That would be a more precious discovery than even that of the fabulous offerings, destined by their richness to fall prey to the desire of the peoples and which were piled up in that city of treasures: the golden bricks dedicated by Croesus, the drinking cups of King Gyges, the throne of Midas, the silver dish which fell to Homer in a contest of poets, the golden statue of the beautiful Phryné. Little can be said of it in advance, but the French Ecole d'Athènes, some of whose members are now even making the rarest discoveries on the island of Delos, has the right to be proud of the work it has done at Delphi: it has once again given France the very true and very noble fame of enriching the entire world.

(ANDRÉ SAGLIO.)

2 June 1895 – As has been repeatedly reported, the French are busy excavating the site where the famous temple at Delphi in Greece once stood. Recently, important antiquities have again been brought to light, among other things from the theater that belonged to the temple and where the competitions were held. Beautiful sculptures have been unearthed, with representations from the Iliad and the Odyssey. A large number of inscriptions were found on the walls of the theater.

24 October 1895 – The excavations at Delphi, carried out at the expense of the French government, have yielded particularly favorable results this year, especially by the uncovering of the two treasuries of the Athenians and the Siphnians. Thirty largely damaged, but still partly well-preserved marble reliefs have come to light, made to glorify the battle of Marathon. Designed in Archaic style, Zeus, Hera, Athena, Dionysus, Apollo and Heracles appear here as conquerors of the giants, six representations of the labors of Heracles, Amazon fights, etc. All these works of art belong to the period between 480 and 470 BC, when the Archaic character began to disappear. Of the original 28 m long frieze more than 20 m have been saved, containing the deification of Heracles, the race of Pelops, the battle for the body of Sarpedon and the Gigantomachy. Artists of the old and the new direction seem to have worked on this work, partly polychromed.

4 January 1896 The French excavations at Delphi have produced a second find of ancient Greek music in the form of a hymn to Apollo, written on stone tablets. The fragments were dug up in the building, described by Pausanias as the treasury of the Athenians: they form a more or less complete whole with ten of the fourteen pieces, which were discovered in 1893. The remaining four formed a separate hymn, which has already been translated and published. Henri Weil and Theodor Reinach will be charged with the decipherment of the new hymn, which is certainly not older than 146 BC, the year of the conquest of Corinth by the Roman general Mummius.

30 May 1896 A new inscription has been discovered at Delphi, which provides special information concerning the training system for the participants in the Olympic Games of antiquity.

12 June 1896 The excavations at Delphi. At the beginning of May, during the excavations at Delphi, near the ruins of the theatre, a remarkable find was made, a bronze statue, of which the head and the upper body were missing. They continued digging and then found the pedestal, as well as an excellently preserved chest piece with a head, of which the eyes were still intact, and finally an arm, whose fingers closed around metal reins. They had discovered the statue of a victor of the Olympic Games; here and there they found pieces of the horse and of the triumphal chariot. The statue is 1 m 80 high and represents a young man. It is a masterpiece of Greek casting, which was undoubtedly made between the years 470 and 460 BC. There are no exact indications about the artist who created it, but it is suspected that he was a teacher of Phidias, called Ageladas.

2 July 1896 Olympic Games. Reuter reports from Athens that an inscription has been dug up at Delphi, in which it is described in detail how the competitors for the Olympic Games in antiquity trained. Could the inscription have been buried on the

occasion of the last Olympiad, last month?

24025

23 August 1896 The archaeological finds in Greece.
(Delphi.)
III.

24030

While the excavations at Olympia have been stopped for some time, or at least are no longer being continued continuously, the scholars of the "French school" at Athens are still constantly busy at Delphi, where they are also constantly making more or less important finds, among others now very recently that bearded charioteer of bronze, which is one of the most important metal works of art of antiquity, whose excavation has been reported everywhere. The fact is that they have only been digging at Delphi for a few years. Before the work of excavation began, there was a Pelasgian wall, fragments of the sacred precincts of Delphi, the fountain of Castalia, fragments of statues and sculptures built into the walls, as had been done elsewhere, in the wretched huts of the neighbourhood: this was all that remained of one of the most famous and glorious metropolises of the ancient world. Founded on a terrace of the southern slope of Parnassus, in this land of Krisoa and Phoki, on the blue Gulf of Corinth, protected on two sides by mighty rock walls, Delphi had been for centuries and centuries the most glorious sanctuary of antiquity. Not only the Greeks, but also the Barbarians had sent ambassadors to inquire of the oracle of the blind god of light. And gradually unknown treasures, splendid works of art, were gathered together in its treasuries. Pausanias is also of great value in relation to Delphi: the temple of Apollo alone, he said, contains four thousand statues of gold, bronze, iron wood; then the countless shields, tripods, images of animals, ex-votos of all kinds, gifts from kings, commonwealths, corporations and private individuals. But the time came when these treasures were carried away. Nero brought 500 bronze statues from Delphi to Rome, the sanctuary gradually lost its significance, the oracle was opposed by the church fathers and finally it was here too Theodesius, who, in 390, slammed the door shut for good. The holy city then became a ruin caused by nature and by wilfulness and soon, throughout the Middle Ages, the shepherds of the village Kastri, meanwhile built on its remains, tended their sheep and goats, where once the highest wisdom had spoken.

24035

24040

24045

24050

24055

The success that the Germans had had with their excavation of Olympia was an encouragement for the French to attempt similar work at Delphi: in 1881 the French Chamber donated a sum of frs. 500,000 and in October 1892 the work began, which at first met with great resistance from the pastoral population of Kastri. And, although not nearly as extensive as at Olympia, the excavations at Delphi have yielded a greater harvest of important objects: in writings, statues, bas-reliefs, foundations of more than seven buildings, bronzes, vases, etc.

24060

The first important discovery was the treasury of the Athenians on the Sacred Highway: a small building of Penthellic marble of the Aryan order of architecture, whose walls were literally covered with inscriptions. Smashed down by an earthquake, it had suffered relatively little. Pausanias also helped explain the find here: the sanctuary of the Athenians, erected in memory of Marathon, of the spoils of the Persians. If its walls already form a true historical library, on which one has also found important "Hymn to Apollo", which explains so much of the music of the ancients, perhaps even greater importance are the metopes of this small sanctuary. There are thirty of them in number, all damaged, and they represent the "labors of Hercules and Theseus". As sculpture they have even greater value than the famous metopes of the Parthenon, brought to England by Lord Elgin in an unlawful manner. But not only do one find works from the heyday of Hellenic sculpture; also important works of archaic art have been found, statues of Apollo, in that stiff, hard style, which remind one of the oldest statues of wood. Of the famous treasury of Apollo, of which so many ancient writers have told wonders, nothing more than insignificant fragments appeared to be left. It had been systematically destroyed. They were happier with the treasury of the inhabitants of the island of Siphnos, known as the most beautiful and the richest of Delphi. The excavations have brought it back in its entirety: a work of the 6th century before Christ, and of admirable architectural execution. Around the four walls of the little temple runs a frieze – horsemen, chariots, quadrigas, battles – which is a completely unique complex of sculpture, despite the fact that it is a century older than the aforementioned Elgin marbles of the Parthenon. An important franton has also been found from this sanctuary, important although it is, apparently by another hand, a much less beautiful art than the frieze. In one and another the traces of the colours are still very clear; the background is always blue, the horses red, the armour green, the chariots red, blue and green. Two exedras, the stoa of the Athenians, a Greco-Roman tomb, houses, an

24065

24070

24075

24080

24085

- 24090 aqueduct, ruins that have not yet been explained, that is what has been found at Delphi. But before these, some sculptures deserve to be mentioned: a very large Sphinx, among others, a gift from the inhabitants of Naxos. One of the most beautiful sculptures that were found there, are three dancing coriatis, surrounded by leaves and flowers. And now, a good year ago, an Antinous was excavated, which is a worthy counterpart of the Olympian Hermes. A work of Roman origin apparently, but of purely Greek beauty.
- 24095 Some important bronzes were also found, among others that male statue, which has only been brought back to light a few weeks ago.
- 24100 Such are the excavations of Delphi, which are still continuing and appear to be of the greatest importance for the history of Greek art. Besides the fact that they have yielded valuable indications with respect to the music of Greece, it is hoped that further remains will be found which will reveal the art of painting. To what extent this expectation will be confirmed is difficult to say at present, but what has already been found is of the utmost importance and encourages us to continue.
- 24105 17 February 1897 Important discovery at Delphi.
- Mr. Svaronos, director of the coin cabinet in Athens, has expressed the assumption that the bronze statue found by French discoverers is not Hiero, Tyrant of Syracuse, but one of the kings of Cyrene. He bases his opinion, according to the correspondent of the Standard, on the comparative study of Pausanias on the coins of Cyrene, the ancient province of Africa. According to him, the statue is by the hand of the sculptor Amphion, of Gnossus on Crete. Pausanias already stated that this statue was erected at Delphi by Archesilaus, the king of Cyrene. The poet Pindar, who sang about his reign, also composed the verses that are engraved on the pedestal.
- 24110 Mr. Homulle, director of the French archaeological school, disputes the statement of Mr. Svaronos, whose guesses have aroused great interest. The statue, which is of the greatest artistic value, is equated with the magnificent statue of Mercury by Praxiteles, which was found at Olympia.
- 24115 5 December 1898 COMMUNICATIONS OF VARIOUS NATURE.
- REPORT by Dr. A. E. J. Holwerda, concerning the scientific journey to Italy and Greece. To His Excellency the Minister of Internal Affairs.
- 24125 [...] The way in which the Greek collections are made available for study is, in a word, exemplary and it is therefore very regrettable that, for example, in Delphi, which was excavated by the École Française, the Greek Museum Board, headed by the well-known General ephoros P. Kabbadias, cannot yet act with full authority. Understandably, the French stipulated the right of first publication of what was found there, but for a very long time, a decade, and with a ban on all foreigners not only from drawing and photographing, but even from making notes. Every visitor is therefore closely followed by a soldier.
- 24130 [...]
- From Olympia we went to Patras. From there by steamboat to the beautiful island of Ithaca, from Ithaca to Itea Delphi's harbour. It is probably located almost on the site of the old Cirrha. The road to Delphi first leads through a slowly rising plain, covered with olive groves. You see the Delphic mountain country before you, with the white peak of Parnassos protruding above it. On the left you come along the road that leads to the old Amphissa. Soon, however, you climb along slender mountain roads; one then passes through the village of Chryso, which probably lies on or near the site of the old Krisa. Then one reaches the village of Kastri, the old Delphi. A village of that name was located on the site of the old sanctuary. This was demolished by the French school and rebuilt a little further on. The temple area lies on a fairly steep slope, artificially levelled, against the almost vertically rising Phaedriades. It has now been completely excavated. Opposite the great sanctuary lies the temple of Athena Pronoia, of which Aeschylus speaks in the beginning of his Eumenides; when that will be uncovered, the French excavations will be at an end. The sun-house of the Kastalian spring was completely destroyed early on; the water now springs up elsewhere; yet the place where it stood, a few steps beyond the great sanctuary, is still very well recognisable. Our company left us very soon; we stayed a few days longer. On the site of the excavations one obtains a very clear idea of the entire ground plan of this so extensive sanctuary and as in Olympia the buildings mentioned by Pausanias and others could be found almost. It is a pity that not so much of the upright parts of the buildings has remained. The sculpture that was found and only partly published, is of the highest importance for the history of art. Almost intact
- 24155 a charioteer has come to light, of extraordinary artistic value, certainly the most

- excellently preserved bronze statue from antiquity. In its artistic style the work is from around 470 before Christ. Pieces of horses and a chariot and of one or two more human figures have been found with it and a limestone slab with an inscription belonging to a pedestal, which must have been that of this votive offering; the one
- 24160 who dedicated it was, according to the inscription, Polyzalos, brother of the Syracusan tyrant Gelo. This discovery means for the excavations of Delphi what that of the Hermes of Praxiteles meant for those of Olympia. The epigraphic discoveries are also extremely important. It is very much to be desired that all the inscriptions found will soon be published. From Delphi we went to Athens, where we stayed a few
- 24165 more days. From Athens we sailed to Constantinople. There we wanted to study the two Museums, especially the new one with its famous Sidonian and Klassomenan sarcophagi. The magnificent Aja Sophia was also carefully examined. Of course we also tried to form a good idea of the city and its location. We went home via Vienna. On 4 May 1898 we returned to Leiden. I have more than achieved with this journey what I had
- 24170 imagined of it. I hope and expect that my teaching will prove to have gained much from it and that in general the study of classical antiquity at our university will benefit from it. The new material I brought back for study is not unimportant. I brought together a collection of photographs of about 700. These carefully arranged and provided with an accompanying description now form an excellent aid for study.
- 24175
- 28 March 1899 – After the Egyptian cemeteries have given rise to a new Aristotle, the Delphic stones now also speak. Among a number of inscriptions that the French have found in Delphi in recent years and of which hardly a tenth, 382 texts, has been made known, there is also a small fragment in Stoichedon script, with
- 24180 13 partly very mutilated lines. The French scholar Homolle has deciphered the content of this with great acumen; it is a eulogy to Aristotle and his cousin Kalisthenes in gratitude for having arranged the lists of the victors at the Pythian games. This work, which was important not only for the Delphic, but for the entire ancient Greek calendar, is lost to us except for a few clues. Now we have not only recovered the
- 24185 original certificate for that writing, but we may even hope that during further excavations the rest of the lists may also be found. In that inscription the treasurer is ordered to have the list of the victors hewn in stone and placed in the sanctuary of Apollo.
- 24190
- 1 September 1901 Excavations. In Greece.
- The great excavations at Delphi by the French are almost finished. The last great work was the excavation of the Stadion, the great Pythian racecourse, which is about 178 m long and 25 to 28 m wide. Since the entire sacred area of Delphi consists only
- 24195 of large rock surfaces, it was far from easy to build a racecourse there, at the foot of Parnass. A just idea of the great difficulties with which this undertaking was to be contended is given us by the old documents, which mention in particular the expenses of each subdivision of the work: of raising the ground, levelling the ground, removing all weeds, and sprinkling it with white sand; furthermore, of
- 24200 providing spectators' seats, the lower rows of which were hewn out of the rock, and of the construction of a wooden grandstand, which was also intended for musical performances and plays. Of particular interest to the sportsman are the practical arrangements for the starting line. In order to regulate the starting line properly, two steps were hewn out of the rock for the feet of the runner; he stood on one of
- 24205 these with each foot until the signal was given. Such starting places were provided for eighteen competitors. That these had to take their duty seriously and enter the racecourse soberly, has been nicely proven in an inscription dating from around the fifth century before Christ. It reads:
- "Wine shall not be brought into the sanctuary of Eudromos; if it happens, the one who
- 24210 mixed the wine shall offer an atonement to the deity and atone for his guilt with five drachmas; he who informs the authorities of the crime shall receive half of that."
- This inscription is engraved on a stone block in one of the annexes of the Stadium. According to some, it proves that immediately next to the racecourse, where a large
- 24215 triumphal tower stood for a festive entrance of the runners, there was a sanctuary dedicated to the hitherto unknown deity of the runners: Eudromos.
- 1 January 1906 DELPHI.
- In a corner of the valley, which resembled a rocky gorge along the southern slopes of Parnassus, lay Homer's Pytho, the later Delphi. Three entrances connected this sacred
- 24220 place with the outside world. One led eastward to Boeotia, the second northwestward

to Amphissa, and the third southwestward to Crisa and Cirrha. Delphi was not so isolated as one often imagines. It was precisely at the time when it had reached its highest fame, namely shortly before the Persian wars, that the full stream of Greek life bubbled along Parnassus.

The landscape around Delphi has been painted many times: it is incomparable in its impressive beauty. Whether one came from the East or the West, a bend in the road always hid the overwhelming view until one was very near it. In the foreground, deep below, one saw the gorge in which the little river Pleistus rushed to the sea at Cirrha, – further north, at the increasingly longer, increasingly steeply rising foot of the mountain, the simple dwellings of the Delphians, – in the middle of the city the world-famous sanctuary, with its dependencies (treasuries, monuments, etc.) forming a kind of fortress, – and, finally, embracing the whole as in a proud frame, the Castalia gorge, pressed in between terribly steeply rising rock walls, which sends its foaming waves to the Pleistus. The modern tourist, who has arrived here and witnessed the many changes to which the weather is subject here, can form an idea (albeit only a faint one) of the sensations that the pilgrims of antiquity experienced here.

A little less than twenty years ago, on the spot where Delphi once stood, one found the village of Castri. The French scholars, who at that time wanted to do excavations on a large scale, were forced to buy all the huts that made up the tiny village. And that was not enough: new houses had to be built for the inhabitants first, a good distance further on. Only after this complete removal could the French diggers begin their work, – a work that has only recently been completed, and which has been crowned by the completion of a simple museum.

I flatter myself with the hope that many a reader who has never set foot on Delphi's sacred soil will be pleased to know that to follow in thought through the scene of the French discoveries, the full weight of which we shall not gauge until the inscriptions and many other details have been made known to the world.

I now ask you to follow me on my way from the East, as do the pilgrims coming from Boeotia. At the crossroads where, according to tradition, Edipus killed his father, things are still not right, according to the people, who believe in the ghosts of a robber captain killed there. At a pretty village, called Arachowa, we descend into the valley of the Pleistus. Rock tombs and sarcophagi (or rather remains of them) betray to us that we are passing the last resting place of many an ancient Delphian. Another minute or so, and we will have the terraces of what once was Delphi in sight.

First we must pass through the Marmaria, which is a wild field of fragments, where once a kind of suburb seems to have stood, and where an ancient boundary stone announces to us in the Delphic dialect that we are in the quarter of Athene Ergane, i.e. the goddess, in her quality of protector of weaving and similar handicrafts. It is indeed remarkable that the above-mentioned village of Arachowa still flourishes through an industry of a similar nature, namely the manufacture of coarse carpets, horse-cloths, etc., crude fabrics with garish colours and gaudy motley, but nevertheless not entirely unworthy of Athene Ergane.

If we now return to the Marmaria, our attention is soon attracted by not unimportant remains of a subsidiary temple, dedicated to Athene, namely, according to Pausanias, Athene Pronaa (i.e. the Pre-temple-Athens). The relation of this to the actual temple standing nearby is uncertain; but it is certain that this last (a round building) must have been a work of the first rank. One can form a fairly good idea of this from the blocks of stone that lie on the spot, and from the upright parts that can be seen in the above-mentioned Museum. From the attentive consideration of all this it appears that this temple could compete in grandeur and symmetry with the best buildings of the fifth century BC. However, from the connection of Doric outer and Corinthian inner columns I gather that the whole is of a somewhat later date. The round wall (if I may call the main part so) is of light-coloured marble and rests on a solid floor of a black stone, which projects tastefully outwards.

The Marmaria leads us to a somewhat lower "gymnasion", of which enough has been preserved to give us an idea of the furnishings. We find there unmistakable remains of courtyards with annexed rooms, of a swimming place and showers, once fed by the crystal clear Castalia, and, to crown all this, a long portico. Young people, gathered from far and wide, will have trained themselves here many times, to participate with profit in the Pythian games.

A newly constructed road leads us to the Castalia, where there is an opportunity to take a drink from the world-famous water. A glance into the deep rock pool betrays in niches etc. the traces of ancient tributes to the fountain nymph, to which we do not pay much attention, however, because we burn with desire to approach Pytho's ancient

sanctuary.

It does not take long before we are there. A spacious, gracefully paved forecourt immediately attracts our attention. There the processions must have been arranged before entering the sanctuary, with the "laurel bearer" at the head, who represented Phoebus Apollo.

We cross the spot where the main gate must once have stood; and we enter "the Holy Way", still clearly recognizable by numerous broad paving stones.

1) According to Otto Schroeder, in the Preuszische Jahrbücher of September 1905

On both sides of this broad highway the pedestals of disappeared statues crowd together. "Crowding" is the true word here: they often block each other's view, now standing in long rows, then again forming a separate group in a semicircle. Finally the statues stop; and now a number of remains of buildings begin, which are known under the name of "treasuries", but are actually very mysterious. By far the most striking of these largely disappeared buildings is that which is (perhaps wrongly) called "the Cnidian House". Of this, two caryatides, a large part of the front facade and the entire foundations have been preserved. This building is of such importance that a detailed description is justified here, for which in the Museum many a piece of half-raised sculpture and a plaster model of probably the entire decoration of the front facade enable us to do quite well.

One must read the relevant statements carefully in order to be able to get the right understanding. After all, the separate fragments had often become widely separated in the course of the centuries, and were then discovered in very heterogeneous company. The most interesting part is formed by the friezes, a marble sculpture that is well worth a closer look. Let us begin with the part that was first visible from the large access road, and which now rests in the Museum. It is the eastern frieze,

representing the battle of Greek heroes for the body of Euphorbus: gods and goddesses sitting on chairs, are spectators. The names of those present (including the gods) were once noted in colour print next to each; but, although they seem to have been quite clearly visible during the excavation a few years ago, one must assume that they have become unrecognisable through neglect. Today we read names in many places, later added in pencil; but these apparently do not deserve unqualified confidence everywhere. The northern frieze once formed a magnificent ornament of the front facade. It represents an enormous battle, which once took place between giants and gods. On a blue background a magnificent, half-raised, in many places red or yellow coloured statue shows the Giants, in the form of warriors, armed with helmet and armour. The gods fighting against them are, in order, AEolus, Dionysus (in a panther skin and on a team of lions), Heracles, Hermes, Athena, and (walking next to each other) the twins Apollo and Artemis. All these figures are represented with a liveliness of movement, which leaves nothing to be desired.

The southern frieze crowned the backside centuries ago. It represents an episode from a subject that was also much later favoured in the visual arts, the tradition of the persecution of Castor and Pollux by Idas and Lynceus, all four on horseback. The western frieze finally is badly damaged. On the right and left one sees a goddess, drawn by a winged team. One of these goddesses will probably represent Athena, behind whose chariot Hermes appears. Between the two vehicles a figure with a thick stick appears, perhaps Heracles.

Now still over the gable field. This adorns with the representation of a myth, the exact origin of which is unknown, but which seems to be connected with the great Dorian emigration and with disagreements between Apollo and Heracles. The latter is represented here with a tripod hanging over his shoulder, which Apollo tries to wrest from him with both hands. Between the two stands Athena, who, although her head has been lost, was apparently depicted as a giantess. Her left hand is also missing; but the attitude she assumes towards Apollo leaves no doubt as to the intention that she acts as a peacemaker. Less clear is the artist's intention with a fourth figure, who seems to represent Artemis. This character stands behind Apollo, whom she seems to want to stop.

All the above details apply to the main of the three preserved buildings, which are known as "treasuries". The first (the so-called Cnidian House) seems to have been built not long before the year 500 BC, the second (called the Sicyonian House) is probably of an earlier date. Presumably some pieces of relief sculpture found here come from an even older building with the same purpose; at least those pieces betray a not yet very developed technique by their exaggerated detail. One of them represents Castor, Pollux and Idas, while they are going to fetch cattle that were stolen in common.

The largest and youngest of the three preserved treasuries is known as the Athenian

- 24355 House. The word "youngest" is however to be understood very relative here; for the building is in any case older than the battle of Marathon. The anatomical precision, as it were, with which the French excavators have gone to work here, has revealed that the foundations come from an even older building. The Athenian House has its remarkable location above the Cnidian and Sicyonian, which I have discussed above. It
- 24360 is located at the impressive point where the Sacred Road suddenly bends northwards, to wind in a zigzag up the mountain; and the striking scene is made even more striking by the fact that the building is situated on a terrace that rises above the level of the road.
- 24365 Of the many buildings and sculptures that this "treasure chamber" once yielded, the French gentlemen have managed to collect so much that a reconstruction is worth considering. The walls have already been rebuilt up to half their height, with newly inserted plaster pieces.
- In front of it rise two Doric columns, which, in a similar manner to the two caryatids in the Cnidian House, support the roof of the front part, where a portal is
- 24370 added here, resting on two pillars. Quite a lot of the sculptural decorations have been preserved and can be found in the Museum. These include a riding Amazon, from the ridge, and a large part of the front decorations, representing the heroic feats of Heracles and Theseus (e.g. the Nemean lion, the Minotaur, etc.). The artistic value of this relief work is nevertheless not particularly great. Close to the
- 24375 building, on the south side, we find a pedestal, which bears the inscription: "Athenians to Apollo, as Median booty from the battle at Marathon". It seems, however, that this is not the original inscription, but a renewal from the time shortly after Alexander the Great. The booty souvenirs, which used to lie on the pedestal, or were attached to it, have disappeared without a trace. Moreover, neither
- 24380 booty nor pedestal has anything to do with the so-called treasury. Among the ruins of the latter building a few stones have also come to light, which are very important for the history of ancient music, namely two smooth, flat stones, on which are little songs with accompanying music. Now these hymn notes, the decipherment of which is hardly open to doubt, cannot lay claim to a melodiousness which would make them
- 24385 popular at modern concerts; but for music as a science, and for the knowledge of ancient Greek worship, these finds are certainly of the highest importance. In other places, in Delphi, a few other songs, but without the notes, have been dug up. One of them is by Philodamus, the Scarphian, and is dedicated to Bacchus. It has suffered much through time; but with patience and a little ingenuity one can get something
- 24390 like this out of it:
- "In honor of Bacchus,
Whom Semele bore,
And Zeus had for a son!
When he was born,
Then the gods danced,
And here they rejoiced."
- 24395
- We continue, past the so-called Sibyl rock, behind which a fallen Sphinx has been found, namely the votive offering of the Naxians, which once rested on a high column. Having passed over a circular dancing place (orchestra), we reach another foundation
- 24400 of the Athenians, namely the ruins of a simple memorial building of theirs, which seems to be of very ancient date. The very ancient inscription reads: "Athenians have dedicated this building and the weapons and the ..., which they had captured from the enemies, [to Apollo]." Which enemies are meant is unknown. It seems that it cannot be the Persians, but older ones. On the preserved narrow, widely spaced columns a wooden roof seems to have rested. On one side this small building does not stand alone, but leans against a wall, which surrounds the temple terraces, and on which decrees for the freeing of slaves were once announced.
- 24405 At a corner of this wall a steep path leads to the temple height. On the right one found the substructure of the serpent column, which was the bearer of the golden tripod, the magnificent victory symbol of Plataea. Some visitors will remember this column from Constantinople, where it served as a turning post in the racecourse. On the column, as it now adorns the Turkish capital, one can still read the names of the principal Greek cities that defeated the Persians at Plataea. From ?tus and
- 24410 Thucydides we know that on the long-vanished gem on the top of the column there was originally a brazen inscription by Pausanias, "the Greek general". A very short distance further up, and we stand, next to the altar of the citizens of Chios, right in front of the once world-famous temple. Anyone who, following in the footsteps of that other Pausanias, might imagine that he would see the old Alcmaeonides sanctuary revived, — would not be a little disappointed. There is absolutely no question of an
- 24415 impressive whole. The foundations of the walls and a fairly large number of widely
- 24420

scattered small column fragments, – that is all. A kind of consolation can be drawn, however, from the fact that these insignificant remains do not even originate from the real, old temple, but from the Roman imperial period.

24425 The oldest temple building at Delphi dates from the sixth century BC. It was the work of Attic exiles, who had committed themselves to providing a sandstone facade; but, in order to win Apollo's special favor, they gave one of marble. That temple formed a grand whole, especially when the following century had added so many votive offerings to it. When that temple had fallen to pieces, a new one was built in the fourth century: that was the temple in which Pausanias found the facade statues he described (Apollo with mother and sister, the Muses, etc.). That temple too was later replaced by another; and what was subjected to the French excavations initially promised very little.

24435 At a time, that was not so bad. More and more important finds came to light. People were particularly rightly taken with a series of (although fragmentary) finely polychrome marble figures, which together seem to have belonged to the façade of the oldest temple: a deer and a bull, both seized by a lion, horses before two-horse chariots, each with a charioteer, finally some standing women, replicas of some votive figures on the Athenian acropolis.

24440 The leader of the French excavations, Mr. Homolle, has, after long and careful research, come to the conclusion that the aforementioned sculpture most probably once filled the largest part of the eastern façade in the Alcmaeonides temple, and that the missing central piece will have consisted of a representation of the same tripod robbery, which also (as I have already discussed) adorns the so-called Cnidian House. 24445 Other important excavations betray the same technique, but are made of tuff. They represent: Athena in lively motion, a fallen Giant, fragments of vehicles, and a part of a beast of prey (belonging to a corner of a gable field). From these data, it seems, a battle of the Giants must be deduced, in which Athena and perhaps Dionysus on the other side take part, while Zeus sits in the middle. That, however, is partly very uncertain; but it is almost certain that the tuff and marble fragments referred to here belonged to the statues of the oldest of the three temples.

As for the widely renowned earth-navel or world-navel, which in antiquity was often, and sometimes still in our days, regarded as a symbolic, domed tomb of the dragon Python, – that so-called Navel will in any case have been a kind of fetish, like for 24455 example the "Eros-stone" in Thespiae. In the eastern part of the Delphic temple a strange, more or less acorn-shaped object (wrapped with wool) has recently been excavated, which may not be the sacred object itself, but may be a later imitation. The north side of the temple seems to have suffered greatly from earthquakes or other natural disasters; so that much that is now to be found outside the sanctuary 24460 originally stood inside. As an example of this I draw attention to a couple of historically important pedestals, which once supported tripods. The inscriptions come from two famous Syracusan brothers. The first has been completely preserved, and reads as follows:

24465 »Gelo, son of Deinomenes, from Syracuse dedicated this to Apollo. The tripod and the goddess of victory were made by Bion, son of Diodorus, from Miletus«. Of the second pedestal one can still read: "Hiero, son of Deinomenes, has dedicated ..." All the rest has become illegible over time.

Most probably this refers to an epigram attributed to Simonides, which mentions four such votive offerings (also from the two other brothers). In fact, remains of a third 24470 have been found near the two pedestals mentioned. The epigram in question, freely translated, reads as follows:

24475 "Gelo, Hiero, his brother,
Polyzelus, Thrasybulus,
Sons of Deinomenes,
Each dedicated his own tripod
To the temple of Apollo,
In memory of the victory,
Which they with their brave hosts
Over Carthage's power achieved,
24480 Which our people wanted to oppress.
Hellas breathed freely again." 1)

Not far from these Syracusan memorials, a narrow column has been found, which in the museum (most likely rightly) has acquired the hall of the Hellenistic centuries as a residence. This small hall is telescope-shaped and divided into five sections 24485 separated by Acanthus foliage. On the top of these Acanthus rings rise three pretty statues, representing dancers. A tripod seems to have been attached to it as the

crown of the monument.

Of the many things that have come to light here, I will discuss very little in this short overview. In the first place I mention an excellent marble statue of the beautiful Antinous, of which, incidentally, the only thing to say here is that it has been excellently preserved. I cannot be so brief about the second statue that I still wish to discuss, if only because of the much writing that has been provoked by it. I have in mind here the remains of the nine marble statues of the so-called Thessalian votive offering. Among these was a statue in the Museum, representing a beautifully executed athletic man, and bearing an inscription, a duplicate of which has been found in or near Pharsalus, where it is to be read on a statue that was evidently the model of the Delphic one: only it is not of marble, but of metal. Strange is an apparently insignificant difference in the weather silken inscriptions, of which the Pharsalian gives "five Nemean, three Pythian, five Isthmian victories", while the Delphic differs from them in so far that "five Pythian" can be read on it. Another point of difference is that the former mentions the name of the artist (the famous Lysippus), and the Delphic is silent about it. Apparently the Delphic inscription is an improvement on the other, as regards the above-mentioned number "three". On the Delphic statue one reads, moreover, that it was sent by "Daochus, Thessalian Tetrarch, delegate of the Amphictyones", probably shortly before the reign of Alexander the Great.

In the best of times, many statues of bronze or copper stood on either side of the "Holy Way", which later aroused the greed of Roman and other temple robbers, and therefore (or for other reasons) disappeared. Only one exception to this rule has been traced so far, namely the magnificent statue known as "The Charioteer", which probably owes its preservation only to the fact that it was buried under a thick layer of rubble. What a pity that the accompanying quadriga has disappeared, with the exception of a few broken pieces and the stone pedestal of the horses! The inscription has been so badly damaged that the guess that the votive offering is considered a second monument of the Himera victory is quite daring.

Let us now consider this masterpiece of bronze work a little more closely! High above the racing chariot, the impressive figure of the proud, muscular charioteer looks out at us. He wears a kind of tabard, which protects him from the hurling of the rushing horses, and prevents a possible obstructive play of the wind by girdling the upper body. This girdling particularly beautifully highlights the athletic shoulders, connected by a no less muscular neck to a head from which not only physical strength, but also high development of the mind gazes at the admiring spectator. A silver headband wreathes the temples. Both feet are slightly forward, especially the right one, — from which some scholars infer that there may have been another figure on the currus. A goddess of Victory perhaps? or the great Syracusan Gelo? Such suppositions are very daring; but what is in any case indisputable is the high artistic value of this extremely beautiful work. I think I cannot conclude this very brief survey of the French activities in and around Delphi (more methodical than those on the island of Delos) better than by expressing my homage to Mr. Homolle and his faithful phalanx. What a pity that our similar work in the vicinity of Olympia has turned out so much less successful! Not only have at least four masterpieces of sculpture been disinterred from the earth's surface; but now at least a general picture has emerged of that world-famous terrain. Truly, those ten years have been well spent. May the French enterprise find its most beautiful laurel in the unfeigned homage of the entire learned world!

1) The name of Carthage is not mentioned in the original. The victory referred to here is the victory won by Syracusans and other Greeks over the Punics in the year 480 (near the river Himera in the north of Sicily). (Trans.)

5 November 1906 The excavation of ancient Delphi.

The most famous place of worship in ancient Greece, to which people went from all parts of the Greek world to ask advice from the priestess inspired by Apollo, was Delphi. The Pythians in Delphi were also distinguished by their wit in their divination. When Croesus crosses the Halys, a great empire will be destroyed. Whether this was his own empire or that of the king of Persia, Cyrus, Croesus himself could decide. In any case, the oracle had predicted it. Nevertheless, that ancient place was venerated for centuries, and the priests of the Phytian Apollo were known far beyond the borders of Greece.

The temple buildings in Delphi were particularly beautiful. No fewer than six temples stood together. Many of these buildings have been preserved to us, and the French have brought the entire temple surface to light again.

The wealth of the Pythian priests, who were well paid for their oracles, was

- 24555 proverbial. Of the temples, only the foundations of one, the oldest, remain. Of the second, which dates from the sixth century before Christ, one can form a better idea. A magnificent building was the fourth temple, which had the shape of a circus. The roof of that temple is supported by twenty columns in the richest Doric style. The temple was richly decorated, but nothing of the rich sculpture has remained intact. The fifth temple must also have made a magnificent impression. It was built of blue
- 24560 marble. From the surviving pieces one can best make out the plan of the temple. The archaeologists suspect that it was the Athena temple mentioned by Paussanias. The construction shows a harmonious mixture of Doric and Ionic styles.
- 8 December 1912 The goddess of Victory.
- 24565 A few weeks ago, on the day of the declaration of war by Greece, a perfect statue was found at Delphi on the site "Marmaria" (so called because of the large amount of marble found there). People thought they recognized the goddess of victory Nike in it and blessed the find at that very moment. How great was the disillusionment when the French archaeologist Dr. Courby, who is continuing the excavations that were started
- 24570 at the time by the French Archaeological Institute at Delphi, called the statue a facade figure, with which houses and temples used to be decorated. The characteristic wings are missing from the statue. Yet some magazines maintain that even if the statue does not represent Nike herself, it is her daughter, the goddess of fame.
- 24575 1 July 1920 DELPHI, MONUMENTS OF THE THESSALIAN PRINCES [p. 291]
It is impossible to prescribe the limits of development for a genius like Lysippus, of whose 1,500 famous bronze statues only a fraction is preserved to-day, not in the originals, but in more or less successful marble copies, That, in spite of all
- 24580 divergences, there are common features connecting the Agias and the Apoxyomenos, has rightly been emphasized by good judges in recent times. 1) The artistic career of Lysippus begins for our inquiries with the year 372 BC, when he executed the statue of a man who had won the chariot-race at Olympia "both with full-grown horses and with colts." The base of the statue was found in the German excavations, and shows characters of writing agreeing well with this date. 2) The monument of Daochus, as
- 24585 shown above, was erected soon after 340 BC; but the original Agias statue at Pharsalus is older, and may well have been produced some years before, in the beginning or middle of the forties.
There is no reason to date it still earlier, for we must start with the assumption that Lysippus was not taken up by the Thessalian nobles, but that they only placed
- 24590 orders with him when his fame was assured and his style well known. Pliny gives a far later date, 328 BC, as the culminating point of his art, probably the time when he executed his most famous portrait, that of Alexander. Just after 320 BC, Lysippus is active, and executes a great bronze group at Delphi, the lion-hunt of Alexander and Craterus, which was ordered by Craterus, son-in-law of the Macedonian
- 24595 Viceroy Antipater and one of Alexander's old companions in arms, in memory of the fact that during the Asiatic expedition in a hunt he fell a lion which threatened the life of the great king. In gratitude for the escape of both, the group was dedicated to Apollo at Delphi; but as Craterus died in 321 BC, it was his newly-born son who erected the group in his father's name, exactly as was the case with Hieron's group,
- 24600 erected at Olympia by his son, Deinomenes. Pliny names this among the most famous works of Lysippus; Plutarch says it had two authors, Lysippus and Leochares. 3) The base of the group has been discovered at Delphi in a chamber to right of the staircase, which north of the temple leads up to the theater (fig. 150), and the metrical inscription reports that the group was vowed
- 24605 by Craterus, friend of the great Alexander, but only his son performed the vow and dedicated it in memory of the fight with the lion which his father courageously carried through when he followed King Alexander on his Asiatic expedition; he laid the lion low on the borders of the Nomad Syrians.
In consideration of the son's tender age, it was assumed that the group was erected
- 24610 long after 320, about 300 BC, but against that are the other dates of the two artists engaged, and there is nothing to prevent us from thinking of the group as erected in the name of the infant son. 1) Anyhow, it is a long life for an artist, of whose outlines we thus catch glimpses, and the Apoxyomenos probably belongs only to its latest period, the twenties of the fourth century.
- 24615 In any case Lysippus, at the time when he executed the Agias, was strongly influenced by the art of Scopas, and only in advanced years seems to have experienced the artistic transformation of which the Apoxyomenos bears witness. This is the importance of the Delphic find, that it reveals to us how late this master "found his nature" as Aristotle would say. 1) In this respect he reminds us of a modern sculptor

- 24620 like Meunier, who only at the age of fifty-five became the Meunier the world knows and admires. Homolle conjectures that other figures from the Daochus monument are copies of Lysippus' originals, and the latest found Agelaus figure (fig. 133) might point to that so long as most of the figures are headless, all appreciation of them is out of the question, for at this stage of his development Lysippus, like Scopas,
- 24625 showed more individuality in characterizing heads than bodies. Twenty years later, on the threshold of old age, he is a different man. A torso, contemporary with and stylistically akin to the Apoxyomenos, we should recognize without difficulty as his work. 2)
- 24630 1 Amelung, in Helbig's Führer, 3rd ed., n. 23; Studniczka, Das Bildnis Menanders, Leipzig, 1918, 20. 2 Pausanias, vi. 1.4.; Loewy, Inscriptions griech. Bildhauer, 76. 3 Pliny, Nat. Hist., xxxiv. 64; Plutarch, Alexander, 40. 1 Perdrizet, Bull. the con. hell., xxii, 1898, 566. 1
- 24635 Lysippus was also the author of the bronze group of the Sun-god on his car founded by the Rhodians, the base inscription of which Pomtow thought he had found in Delphi; Dittenberger, Sylloge, 441; Pliny, Nat. Hist., xxxiv. 63. This is, however, incorrect; the lettering is characteristic of the end of the third century, so a century later than Lysippus; Bourguet, Bull. the correct hell., xxxiv,
- 24640 191 1, 458, and Revue arch., 1918, i. 220. 2 In my description of the Thessalians I have omitted to use the judgment Theopompus passed on them {Athenaeus, xii. 527a): "They play away their time with dancing women and flute-players, others spend whole days in dice-playing, drinking, or other excesses, and they take more care about filling their board with all manner of meats than in leading an honorable life. But
- 24645 the Pharsalians are the laziest and the most pitiful of them all." Further, he describes how one can win the friendship of the Thessalians by drinking matches with them and by joining in their debaucheries (op. cit., vi. 260b). But Theopompus passes similar judgments on the Etruscans, the people of Methymna and other Greek towns, and on Philip of Macedon (Athenaeus, xii. 507, d, e; x. 442/ -44, a; iv. i66/-i67e) ; so
- 24650 he seems to have been a specialist in chronicles scandaleuses.
<https://archive.org/details/delhipoulsen00poul>
- 1 April 1921 From the School of the Spade. XXII.
[...] At that time, women's bodies were painted white, as men's were painted brown-red. Perhaps Artemis stood next to Apollo, as Hermes in Heracles.
- 24655 So it was represented in life-size, brightly colored as an impressionistic painting – the bare parts of the male body bright brick red, those of the female chalk white, the clothes with colorful borders – how Heracles as one would have guessed from a comparison with several Greek vases may suggest that he is defending his prey, a
- 24660 sacred hind, with a raised club, against the god of Delphi, who is striding towards him resolutely, perhaps with the gruesome bow in his left hand. Spectators are Hermes, often the leader of a daring man, and Artemis, who in courage was not inferior to her brother.
- It seems that this entire group was a votive offering, which was placed either before or in the temple by a worshipper of the god.
- 24665 That the original location was outside, one would be inclined to conclude from the fact that in the pointed cap of Mercury there are small holes, which could have supported a "meniscus". A meniscus, one should know, is a metal plate, which the Greeks often placed above the heads of their statues to prevent – forgive the
- 24670 unsubtle detail – birds from defiling them. But the evidence is not conclusive; a temple has openings along the roof; so sometimes birds come in and you understand me....
- Where the group stood, is just as impossible to determine as what the donor thought about it. The myth is known to us only from vases and reliefs. [...]
- 24675 12 September 1921 [...] Prof. Vollgraff also made a statement "On the Delphic hymn to Dionysus"
- The hymn in honor of Dionysus must be considered one of the most important finds which the French excavations at Delphi brought to light. The hymn was inscribed on a
- 24680 large slab of limestone, and consisted of twelve lyrical stanzas, eight of which have been partially preserved. It was composed by Philodamus of Skarpheia, in the spring of the year 335 BC. In the first part the poet relates in his own way the usual legend of the birth of Dionysus and his travels and wanderings on earth. In the second part he mentions various feasts and sacrifices, which are part of the worship
- 24685 of Dionysus at Delphi or are connected with it. Two things strike us especially: the poet consciously places himself on the standpoint of the mystical teachings of the

Orphics, and he announces an important extension of the cult of Bacchus. Thus, even at the Pythian festivals, formerly dedicated exclusively to Apollo, Dionysus will henceforth be honored with sacrifices and choral dances, and an image of him, resplendent as the sun, will be set up, standing on a chariot drawn by golden lions. This corresponds to the representation of Dionysus as a sun god, which is found in Macedonia and Thrace, and in the Orphic religion. The most remarkable passage in the hymn is that in which King Alexander the Great himself, under the name of son of Dionysus, is designated as the one who gives that increased splendor to the cult of Bacchus.

We know Alexander as an independent ruler and a socially ordering prince, and as a deeply religious nature. The Delphic hymn teaches us that he was a worshipper of Dionysus, the national god of his people, and a confessor of the Orphic doctrine, which also belonged above all in Macedonia and Thrace. The Orphics taught concerning God that he is one. They did not have the rigid monotheism of the Semites, who said that there is one God, and that all other gods are idols. Their henotheism was such that they recognized and respected the gods who enjoyed worship from men, but regarded them all as expressions of the same divine spirit. And should not the policy in religious matters, which Alexander and his successors followed in the East, be regarded as inspired by their own religious views? That policy can be indicated by the one word "syncretism"; that is to say, they have made it their business to equate every foreign deity with a Greek god or goddess, and to merge them with it in worship. Hellenistic syncretism is thus the result of the much older Orphic theokrasý.

22 December 1923 [...] In 340 before Christ, the chief architect of the temple area of Delphi received an unheard-of amount, four drachmas a day. This almost unbelievably high payment for a state official coincided with a period of important construction. Then the priests seem to have understood how important such a post was. Even greedy Delos gives its architect three drachmas a day instead of two in such cases! Yet Delphi lagged far behind. Delphi calculated with Aeginetic currency, which was one and a half times higher than the Attic, so that the four drachmas from there would have been worth six on Delos. After 300 BC, a rapid and continuous decline in wages can be observed on Delos. A typical example, which touches on the material itself from which we draw all these data, is that of the stonemason who made the temple inscriptions. For a very long time this certainly not very stupid workman stipulated and received one drachma per hundred letters. That price was still paid in 302 to a certain Hermodikos, but later on he was increasingly cut back. In the same year 302 the same Hermodikos had to deliver 130 letters, five years later even 300! Around 250 we reach the lowest wage level. Then the temple lords pay for an inscription - of 354 lines with 42,000 letters the sum of 120 drachmas, that is to say one drachma for every 350 letters. But now the bow was apparently too tense. The inscriptions were so shamefully rushed that the principals began to feel ashamed of it. They apparently thought of their good name with posterity and therefore, probably with a bleeding heart, took the brave decision to return to the previous payment. [...]

1 January 1924 DELPHI
BY DR. J. W. VAN ROOIJEN.

If one wants to reach Delphi from Athens by land, this is not the easiest way. By train one can only travel to Brailo, a station on the railway to Saloniki. From there a bus, a grand name for a lorry, in which some benches have been installed, goes to Amphissa. However, if you are lucky, like us, that the bus does not even wait for the express train from Athens, then good advice is expensive. The nearest village (I have forgotten the name) is a few hours away. However, the helpful station master knew what to do. We were able to hire a couple of mules and so, packed and ready, we set off. In the village in question, it was said, a car could be obtained. When we arrived there, it turned out that the car had to come from Amphissa. It did not appear until the evening. We have seldom experienced more anxious moments than during that car journey. Just imagine being driven at breakneck speed up a mountain as high as Parnassus in a car driven by the most reckless driver in the world, who takes the corners so sharply that at any moment you think you are going to plunge car and all into the abyss that is always staring at you on the right side of the road, while you sometimes whizz past wagons going uphill at the speed of an express train, then you will understand that we were glad to have finally arrived in Amphissa. We have no pleasant memories of this last place; the Xenodokeion (hotel), which was the best in the town, did not even meet the most moderate requirements of

cleanliness; we were therefore very glad when we were able to leave this inhospitable place as early as possible.

24755 From Amphissa to Delphi, however, there is still quite a climb; wagons are not to be had, so that, forced by necessity, we had to resort again to our driver of the previous evening, who brought us up without accident.

24760 Delphi, in ancient times also called Pytho, lies between high rocks on a terrain that slopes gently upwards. There, where the rock plateau joins the mountain, rise the so-called Phaedriades, the brilliant rocks, so called because the sunlight radiates brilliantly from the naked limestone. The two rocks form an obtuse angle and are separated from each other only by a narrow abyss. From the eastern rock rises the spring Kastalia, whose water flows along the rocks to Pieistos, a quarter of an hour away.

24765 The Delphic oracle was very old. According to a Delphic legend, the vapours that rose from a gorge and brought the Pythia into a kind of ecstasy were discovered by a goatherd. He had namely noticed that his goats, when they came to the chasm in question, made strange leaps and uttered unusual sounds; when he himself now approached the chasm, he fell into a kind of ecstasy and began to prophesy.

24770 Before Apollo founded his oracle here, Gaia, the Earth, was the first possessor of the oracle; her daughter Themis followed her; the pronouncements of the oracle were called themistes (laws). Themis voluntarily gave the place to Phoebe, who gave the oracle to her grandson Phoibos Apollo. He went from Delos, the island on which he was born, under the guidance of the Athenians, who boasted of having been the first to pave the sacred road to Delphi, where the people and King Delphos received him with joy.

24780 According to another legend, Apollo did not acquire the oracle in such a peaceful manner. Shortly after his birth, Apollo is said to have set out to seek an oracle. The valley of Delphi pleased him and he decided to establish an oracle here. However, the snake Python, who lived here at the spring Delphusa, prevented him from entering. The young god fought the snake and killed it with his arrows.

24785 There, for the first time, the paeon, the joyful song of victory, resounded from the mouth of the god and the choir of the young Delphic women; as a reminder of this victory, the Pythian games were established forever. As penance for the death of the Python, Apollo had to flee and perform 8 years of slave service. He went to King Admetus in Thessaly and was purified in the valley of Tempe, in order to return to Delphi as Phoibos, the bright, shining one.

24790 This penance and purification was symbolically represented at the festivals, which returned every 8 years; a boy, who was supposed to represent Apollo, set fire to a hut, the hut of Python, in front of the temple: then he fled quickly; accompanied by a procession he passed through Locris, Doris, over the Oeta, to Tempe, and here, like Apollo before him, he was purified. According to the legend, Apollo appointed Cretans as priests, whom he had brought here over the sea. When the leader of these men looked at the bare rocky plain and asked the god what they would live on here, the god replied: "Every one must hold the sacrificial knife ready in his right hand and continually slaughter sacrificial animals, which the people will bring me in immeasurable numbers." And so it happened.

24800 From all sides the people came to ask the god for advice and had their sacrificial animals slaughtered; at the same time valuable gifts were offered to the god, so that the temple came to possess a great wealth of precious metals and works of art. Homer (Iliad, 9th book) already speaks of "the great wealth that the stone threshold of Pytho encloses within". Not only Greeks consulted the oracle, but also foreign peoples. Do we not read in "tus" that the king of Lydia, Croesus, had the oracle consulted when he wanted to march against Cyrus, the king in Persia?

24805 A league of so-called Amphictyones, consisting of peoples from Central and Northern Greece, had united to protect the sanctuary and to celebrate the festivals at common expense. The Dorians in particular, when they lived near Parnassus and Oeta, had established close connections with the oracle and also after they had settled in the Peloponnesus, they had maintained these relations.

24810 In the centuries between Lycurgus and the Persian wars, Delphi became both the religious and political centre of Greece. Nothing of importance was taken up by individuals and states without first seeking the advice of the Delphic god.

24815 At the beginning of the Persian wars the oracle was uncertain and gave doubtful answers. After the battle of Salamis (480 BC) was the first to take up the national cause of Greece. The fact that the temple had been spared by the Persians (probably because of their worship of the god of light) raised the prestige of the oracle again. Trophies from the Persians, were established in Delphi and the Amphictyones issued decrees in honor of those who had remained loyal to the fatherland.

24820 Gradually, however, a reaction set in. In the so-called holy wars the power of the oracle diminished; at one time the Phoenicians even seized the incalculable treasures of the temples and paid for the war they waged from them. It is true that the oracle still enjoyed some prestige in the time of Emperor Hadrian (117-138 AD), but only in private matters. When Emperor Julian the Apostate had the oracle questioned before his journey to Persia in 362, he received the answer: "Tell the king that the

24825 artfully made dwelling is covered with dust, Phoibos has no more shelter and no prophetic laurel, or a babbling spring; the beautiful water has ceased to flow". Finally, in 390, the oracle was closed forever by Emperor Theodosius. The actual sacred space, formerly enclosed by walls, was about 130 m wide and 180 m long. The main entrance was located in the SE and here the sacred road led, with two

24830 bends, to the temple of Apollo. Along this entire road stood statues and votive offerings in great numbers. Emperor Nero had about 500 statues removed and yet the number of those that remained was estimated at 3000. The number of statues at the entrance was exceptionally large. On the right side was the statue of a bull, consecrated in 500 BC by the Kerkyraeans, opposite which rose the monument that the

24835 Athenians had built in memory of the battle of Marathon. To the west of this rose the wooden horse of the Argives, consecrated in 414 BC. This was followed by a triumphal monument of the Arcadians, which they had erected there to commemorate their liberation from Sparta. On the left followed the Seven against Thebes, with the chariot of Amphiaraus, a memorial of the Argives to their victory at Oenoe.

24840 If one walked further along the sacred road, one came across more than a dozen treasuries, which had been built by various cities and states of Greece. Among these, that of the Siphnians, of which we shall speak more fully below, was well preserved; it resembles an Ionic templum in antis, with caryatides instead of columns. The Doric

24845 treasury of the Athenians is also well preserved, it has been possible to rebuild it in its entirety. This was followed by a large building, in which one may see the bouleuterion, while behind it the terrain has been left in its original rocky state. This is probably the rock on which the Sibyl Herophyle first gave her oracles. A high Ionic column, erected by the Naxians, on which stood the well-known Sphinx, towered above the

24850 entire area. A little further on one reached the round festival place, the Halos, (threshing floor), where the already mentioned symbolic representation of the killing of the Python took place. Immediately behind the column of the Naxians rises the wall of the temple terraces; it was covered with inscriptions, which contained decrees of the Amphictyones, lists

24855 of victors and certificates of the release of slaves. Between this wall and the Halos was the Stoa of the Athenians, with columns, built in the Ionic style; this stoa was probably built in gratitude for the victory in 480 BC won at Salamis; later (428 BC) Phormion added trophies of captured ships. Next to the S.W. corner stood a Nike of Paionios, probably the example of the one found at Olympia. Also on the east side of the temple terrace stood several monuments, among these the Tripod of the Plataeans is especially worth mentioning; this rested on a base, which has been found. The middle support formed the famous serpent column, at the top was a golden basin, which was stolen in the Holy War. Later the tripod was taken to Constantinople and can

24860 still be seen there in the so-called AT-Meidan. Of the Doric temple of Apollo, which was of course the most important sanctuary, only the foundations remain; yet we know from the Greek writer Pausanias, how this temple looked in ancient times. The sanctuary was rebuilt or rebuilt several times. The oldest temple was, according to legend, formed from laurel trees; the branches of

24870 these descended from the sacred laurel in Tempe. This was followed by a temple built by bees, from wax. Apollo put a copper temple in its place; this however melted in a fire and sank into the cleft of the earth. After this a fourth temple, of stone, was built by the master builders Trophonios and Agamedes. After they had finished their work, they asked the god for a reward. He

24875 promised them this by the seventh day. When this had come, they died the following night. This temple however burned down in 548 BC: for a new building money was collected among all the Greeks; even the Egyptian king contributed to this. The family of the Alcmaeonidae, expelled from Athens, undertook the construction for the sum of 300

24880 talents. They built it, however, more expensively than the contract required them to do, but naturally won the favor of the priests of Delphi; the architect was Spintharus of Corinth. In front of the temple was the great altar of burnt offering and close to it the statue of a wolf, the animal dedicated to Apollo. On its head the Delphians had the

24885 decree engraved, by which the Spartans who had helped them were granted the right of
promanteia (to be allowed to consult the oracle for others). Pericles, however, had
the same decree engraved on the back, in favor of the Athenians. Entering the pronaos
(forehall), one first saw the golden-lettered sayings: Gnóthi Seauton (Learn to Know
Yourself) and: Mēden Agaán (Nothing too much), both sayings of the Seven Sages; by
24890 these sayings stood the image of Homer. The cella of the temple was 100 feet long and
decorated on the outside with Doric columns, on the inside with Ionic ones. Here was
the statue of Apollo and in front of it the Hestia (hearth) on which the eternal fire
was maintained by a widow; this hearth was considered the common one for all and also
the center of the entire Greek world. Zeus had once, in order to find out the center
24895 of the earth, let two eagles fly towards each other from the East to the West and
they had come together at this place.
Near the hestia stood the iron chair of Pindarus, on which the pious singer had
praised Apollo with his hymns. For he was accustomed to offer hymns to the god
instead of sacrifices. Moreover, in the cella there was a statue of Poseidon, the
24900 statues of two Moira (Goddesses of Fates) with those of Zeus Moiragetes and Apollo
Moiragates (the leader of fate).
Behind the cella was a room, which was intended as a waiting room for those who
wished to consult the oracle. This was followed by the holy of holies, the adyton,
where the cleft of the earth was located, from which the well-known vapours arose;
24905 there a colossal tripod had been erected, made of wood and covered with gold; above
this a seat had been placed.
After the omens had first been observed, the Pythia, after having first drunk water
from the spring Kastalia, and taken a laurel leaf in her mouth, went to the adyton
and sat down on the tripod; through the vapours that rose from the earth, she fell
24910 into a kind of ecstasy and uttered incoherent sounds. These words were then written
down in the form of hexameters by so-called prophets; these verses, however, were not
easy for the interrogator to understand. Therefore they went to the professional
interpreters, to find out from them what the meaning of the oracle was.
The large terrace, which extended along the entire south wall of the temple,
24915 contained the much-sung laurel and myrtle forest; in the middle of this we also have
to look for the old sanctuary of Gaia, who, as we saw, was the first to possess the
oracle. To the south-east probably rose the mast with three golden stars, which the
Aeginetes, after the battle of Salamis, had dedicated here; furthermore here was the
pedestal on which Perseus of Macedonia wanted to place his statue. Aemilius, who had
24920 defeated him, had his own placed there. The great altar of the temple was a
foundation of the inhabitants of Chios, erected about 520 BC. A little to the north
rose an elegant acanthus column, on which dancing girls were depicted. Golden
tripods, which Gelo of Syracuse and his brothers, after the victory at Himera, (480
BC) had dedicated, were located here. The well-known bronze charioteer also
24925 originally stood here.
To the north of these Sicilian votive offerings the Thessalian Daochos had nine
statues of himself and his ancestors erected.
Opposite the N. West corner of the temple is a room, where Craterus had his famous
lion hunt, in which he had saved the life of Alexander the Great, immortalized by
24930 Leochares and Lysippus. The theater is located behind this. The space intended for
the spectators has remained in a fairly good state, the stage has been destroyed. In
the very northern part of the peribolos was the Lesche of the Knidians, a kind of
conversation building. On the wall on the right side, according to Pausanias, there
was a representation of the destruction of Troy, painted by Polygnotus, on the left
24935 wall a picture of the Underworld.
Not far from the main entrance is the source Kastalia. The water of this spring
springs from the rock face, which has been hewn out into a large, square basin. Below
it is a large niche, in which one can now a small chapel of Saint John. In the basin
of the Kastalia all who wished to enter the temple had to cleanse themselves by
24940 taking a bath. Even today the water of the spring, although it has lost its
reputation of holiness, is still held in high esteem. Every afternoon one can still
see the mules, hung on both sides with barrels and driven by boys and girls, going to
the spring to fetch the delicious, cool water that is so precious in these arid
regions.
24945 It is a picturesque sight when one sees these groups gathering at the spring,
especially towards evening, when the sun is already sinking behind the mountains and
from the high Parnassus one sees a splendid panorama before one, which one will not
forget for the rest of one's life. How beautiful is this piece of land, which the
Greeks had chosen as a dwelling place for their god of light Apollo, who knew how to
24950 sweep away the darkness of the future with his light and to whom people came from far

and wide to hear the pronouncements of his oracle.

We would now like to take a walk through the Museum, which is located near the excavations. The building, which was built through the generosity of Syngros, consists of a main building and two wings.

24955 In front of the entrance is a marble sarcophagus, on which the Calydonian hunt is depicted. When we enter the large hall, we see first of all the bronze statue of the Charioteer, fairly well preserved, which was found near the temple. With it were a part of a Horse and an arm. All this belonged to the votive offering that Polyzalos had set up in gratitude for a victory in a race with his chariot. It is supposed that

24960 this Polyzalos was the brother of Gelo and Hiero of Syracuse. The charioteer stands before us at his full length; the folds of his garment are not unlike the cannelures of a column; probably a part of these folds, which appear somewhat monotonous, were covered by the body of the chariot. The workmanship of the bronze is very fine; the face with the full chin, the eyes full of expression, the

24965 workmanship of the hair, all these things lend the work a high value. The next room is known as that of "The Treasury of the Athenians", on the walls are attached the metopes that were on the outside of the said treasury. They represent the deeds of Hercules and Theseus. Five metopes represent the robbery of the cattle of Geryones; a sixth shows us a Centaur, who has fallen against an opponent

24970 (Hercules); he places his foot on his neck. A seventh image shows the fight with the Nemean lion, while an eighth metope represents the capture of the bull.

The rest all seem to represent deeds of Theseus, and in particular his fight against the Amazons. In one image we see the young Theseus, provided with a helmet, fighting an Amazon; on the other side the defeat of the Minotaur and the bull of Marathon is represented. In the middle of the hall one sees Amazons on horseback, the acroteria

24975 of the top of the sanctuary. On the right wing is the Greco-Roman hall, or the Monument of Pydna. The monument records the defeat of King Perseus of Macedonia (168 BC); on all four sides there are inscriptions and it is decorated with a frieze, in relief. Opposite the Macedonians, who can be recognized by their beautifully decorated shields, one sees barbarians, who are almost completely naked; they represent the allies of the Roman people; the Romans themselves are not seen, but their cavalry. In front of this monument are placed the Three Dancing Girls (Karyatides); the support on which they are placed is decorated with acanthus leaves; they form a beautiful base for a tripod, or another votive offering. The clothing of these girls and the garlands of palm leaves have identified them as Dancers of Karyae, from which the name Karyatides is derived, who, as is known, also occur at the Erechtheion in Athens.

We now return to the entrance and reach the hall of the Temple of Apollo; on the right we find a large relief, representing a youth, with outstretched arms; a boy

24990 stands next to him. The first figure is usually taken as an image of Apollo; it is perhaps an Apoxyomenos, with a servant. Fragments of marble statues from the temple of the Alcmaeonides represent lions tearing bulls; one can also see two female figures, who hold her dress with their left hand; on the left wall are depicted scenes from the battle between Athena and the giant Enceladus.

24995 In this room five reliefs were also placed; on the first one one sees the ship Argo; round shields, on the outside, represent the warriors on board; to the side are two people, who play on a lyre, one of these is probably Orpheus. At each end stands a horseman, apparently Castor and Pollux. On a second relief Pollux, Idas and Castor drive the stolen cattle from Arcadia before them; the division of these was the cause of the quarrel between them. Each figure holds two spears in his left hand, a third spear in his right. The third relief shows us the abduction of Europa on the bull; the story of the Calydonian boar is the subject of the fourth relief; in the image we see the remains of a dog under the wild animal. The last relief is much damaged; it is supposed that it represents the ram on which Phrixus and Helle were seated, when they fled the ambushes of their stepmother Ino.

25000 East of the temple was found a large Omphalos, the stone of which we have already spoken; on it were placed images of woolen bands; probably this was not the original omphalos, as it was covered with real woollen bands.

25010 Between this and the next room stand the statues of two youths from the archaic period. On the pedestal of the best preserved statue an inscription tells us that the sculptor was an Argive. They look a lot like the well-known Apollostatues, with the round, somewhat smiling face. They probably date from the 7th century BC. It is believed that these statues represent Cleobis and Biton, about whom "between us"

25015 tells us in his history. He relates (1,31) that Solon, the Athenian philosopher, once visited Croesus, the king of the Lydians. One day the king, who was known for his

wealth, had Solon led through all his treasuries. Then he asked him who he considered the happiest man in the world. Solon awarded the first prize to a certain Tellus, an Athenian, the second to the young men Cleobis and Biton, from Argos. One day their mother had to be brought to the temple of the goddess Hera, but the oxen were not present in time. Then the young men themselves pulled their mother to the temple, a distance of 45 stadia (a stadium is ± 182 m). The partygoers praised the mother happy to have such good sons. Then the mother prayed to the goddess to give them that which is happiest for man. After that prayer they lay down to sleep in the temple and did not get up again. By this the goddess had shown that death is happiest for man. The Argives had statues made of them afterwards and consecrated them in Delphi.

We have now approached the last room of the museum, that of the Treasury of the Cnidians, according to Pomtov, the Siphnians. The sculptures of the facade pieces of the completely destroyed building have been found so completely that it could be reconstructed in its entirety. As we have already seen, the building had the form of a templum in antis; instead of the usual columns the roof of the vestibule is supported by the statues of two girls. They remind us of the priestesses of the Acropolis and are perhaps the forerunners of the Caryatides of the Erechtheion. A frieze runs along the entire building. On the north side it represents the Gigantomachy; first we see a man, in a somewhat bent position, holding an object in his hand that looks like a bag. This is Aeolus, the god of the winds, who sets his storms in motion against the giants. Then follow two goddesses, who are engaged in battle with giants. The giants are depicted in ordinary human form. In the background we discover Hercules, with the lion's skin wrapped around his neck and arms; he fights with his lance against a giant. Dionysus, with a long robe and a panther's skin, rides into the fray with his chariot, drawn by lions. A little further on are Apollo and Diana with their bows. Ephialtes lies dead at their feet; another giant is about to take flight, while three others are approaching in close column. Then Hermes appears, he fights with a sword and can be recognized by his conical headdress; the other figures can no longer be identified.

On the other side one sees the remains of the Eastern frieze; this represents the fight between Menelaus and a Trojan hero (perhaps Hector), for the body of Euphorbos, while Meriones assists the former and Aeneas the latter. The names of these persons can be determined from the inscriptions. The left half is occupied by an assembly of the gods. The second half shows a battle scene.

Also to be mentioned is the image that decorated the Western façade, the mysterious fight for the tripod between Apollo and Hermes; Athena, who is in the middle, seems to separate the combatants; it is said that the Dorians once tried to put their hero Heracles in the place of the Ionian Apollo; in this way the image could be explained.

In the same hall is also the already mentioned Column of the Naxians, on which the Sphinx was placed.

We have now completed our tour; a visit to Delphi will leave an unforgettable impression on everyone.

10 July 1925 From a Travel Diary.

XXIV. Delphi.

From a Travel Diary. XXIV. Delphi.

A mighty, severe god was the prophet Apollo, in dark oracles communicating his wisdom to those of the people who understood him. Realizing this with awe, the Greeks only came closer to him to hear his voice there, where Greek nature unfolds in its greatest majesty, in harmony with the being of the great seer. One of those places is Delos, amidst the deserted beauty of cliffs and sea. Another, even grander and more impressive, is Delphi, in a gorge of one of the mightiest mountain massifs of Greece, Parnassus. In that environment I now want to try to understand something of the great veneration of the Greeks for Apollo, of his influence on their religious and political life.

But my journey does not go directly to Delphi: Thebes lies on my way, the cradle of many legends, immortalized by Greek tragedy.

It is a beautiful journey, in the early morning, to Thebes. First through the fresh green Attic land, between the Pentelicon and the Parnes. Then bending along the Parnes to the well-cultivated plain of Thebes, with a beautiful view, to the east, where the sea appears between the mountains, while above it the still snow-capped peaks of Euboea protrude. In Thebes I do not expect to see any important antiquities; there is a museum in a Fraukian tower with many interesting inscriptions, including the decree in which Nero granted the Greek countries freedom at the Isthmian games in 67 AD. But furthermore, in and around the present city, which occupies the place of the Acropolis of the former, only scarce ruins, one finds barely noticeable traces of

ancient walls. Thebes is more interesting because of the lovely nature of its surroundings, intersected by the brooks Ismenos and Dirke, while in the west the horizon is closed by the grey Muses mountain, the Helikon. To many places in the vicinity, which the modern visitor still tries to determine accurately, the memory of the tremendous dramas of the saga, which must once have taken place here, is bound. The history of Kadmos' unhappy royal family comes to life for him, the tragedies "The Seven Against Thebes" by Aichylos, "King Oedipus" and "Antigone" by Sophocles, "The Bacchantes" by Euripides appear to him in a new form. Modern Thebes is a small, rather poor town on top of a hill: A straight road, the Epammondasstraat, cuts through it in its entire length. Between the heavy trees on either side of the houses, under the still fresh green spring foliage, people practice many crafts in the open air. On one of these trees I read on a notice board that the space at its foot is rented for the practice of a craft. The free space is occupied by the chairs for the small cafés.

In the evening, walking through one of the suburbs, I am struck by a fresh and colorful scene, such as one only finds in small villages. There on the bank of the Dirke is a large fountain, fed by water that, brought over a high viaduct, first runs over a huge wooden water wheel. At more than thirty stone wells stand the women of the village, in their brightly colored clothes, their bare feet in the water, washing their linen. Clear laughter and song sound from their midst. A beautiful village idyll...

The next day I continue my train journey, between the cotton fields of the drained Lake Kopais, past Livadia and Chaeronea, where on the left against a row of cypresses I discover the eight-meter-high gray stone lion with pedestal, which was erected here by the Thebans after the battle of Chaeronea in 338. In a N.W. direction the train now follows the high spurs of the mighty Parnassus on our left to Bralo, where I get off. We have now circumnavigated the Parnassus in the N.E., now I drive it further from the N.W. side by car, along the beautiful road through the mountains, which was constructed here by the French during the war. The weather is gloomy. The mountains rise in pitch-black behind the small red-brown plain that we first speed through. Then it immediately goes up into a ravine between two mountains. We soon have the clouds under us, and above us, around the peaks, up to the winding road, the snow lies on the slopes. Before a snow shower, accompanied by an icy cold wind, we dive deeper into our coats. Finally, we go down the slopes for a long time with the engine turned off, into the valley that is enclosed between Parnassus in the E. and the high mountains of Doris in the W.

In a pouring rain we reach we, after driving 44 km, Amphissa, situated on a green, wooded slope, under a large old castle. In the streets we meet a troop of camels, a relic from the time of the Turks, which maintains the connection with Itea. From here it is still 22 km to Delphi, and because of the pouring rain I am forced to take the car even further. We descend quickly into a fertile plain, occupied by dense olive groves, the old fields of Kirrha and Krisa, – now Chryso – which the Delphic Amphictyony, as its richest possession, has had to defend so often in fierce "holy" wars against its neighbors. Then we go up to the East and the valley of the Pleistos. As we climb, we get a wider view.

In the village of Kastri I get out. Five minutes further on the road bends around a rock, provided with tombs from all times. There lies Delphi before me. On a theatre-shaped sloping terrain, enclosed by vertical rock walls, and on the low side by the ravine of the Pleistos, lies the Temenos of Apollo, rising in terraces. Within this space lies the museum and behind it, diagonally above the excavations, the house of the French school. It is already getting dark, so I first go and look for shelter, to explore the surroundings further the next day. On the balcony of my room I wait for the twilight to fall over this magnificent nature. The gloomy rain clouds have been torn apart. Here and there a piece of the sky comes through. When it has become dark for a moment, in the far East, above the long silent valley of the Pleistos, the moon rises above the mountains, silvering a few clouds that descended deep into the great mountain gorge. A soft light now shines in the depths; the valley is lovely. But the mountain walls on both sides, shrouded in shadow, are now terribly threatening, gloomy black. Oppressively high they embrace the light below. I begin to understand that here the Greeks thought they could hear the voice of their god...

The next morning, armed with "Les ruines de Delphes" by E. Bourquet, I begin the visit to the excavations, too extensive for me to attempt to give more than a single impression of them here.

Already in ancient times this place, thanks to the sulphurous vapour rising from the crevices in the rocks, was dedicated to the worship of the gods of the underworld; it was then called Pytho, and had, near a cave, inhabited by a snake Python, symbol of

the underworld, an oracle, whose service was exercised by Pythia. In later times, sailors introduced the cult of Apollo Delphimos, worshipped in the form of a dolphin. Since this god, under the name of Apollon Pythios, "took possession" of this oracle, the name Pytho was changed to Delphi.

Doubt

But there is still room for doubt, and Prag himself provides arguments for it: "They say he looks like me! I don't see it that way myself, but the head, fully made up, stood here in the room for a while and my assistant who was working at a table opposite, got the fright of her life every time she looked up! We had to take him away."

But Prag derives much confidence from a small ivory statue of the deceased that was in his grave. It belongs to the cabaret, which in Greece long before official art depicted people as they were. The resemblance to the reconstruction is striking. Neave naturally does not claim a complete likeness. Although he himself is sometimes impressed by what the method used can achieve. "I've done Egyptians, police cases, but before and after that of course also control experiments, with corpses of which I only saw the photos afterwards. I once had an assistant here reconstruct the face of an Australian aborigine man, who were quite different. He didn't know that and therefore didn't trust what came out of his hands. He did it four times before he came to me: I can't do it any other way. He was very angry that I hadn't said anything all that time. But I couldn't help it: I wanted to prove something to myself."

Despite all the scientific guarantees, he realizes that he is working on the border between science and art. "You have so much freedom with lips, the nose, the position of the eyes. There are rules of thumb for it, but afterwards you still look at it with the feeling of the artist, changing minute details. Until you get the feeling: that's how it must have been, that's how it looks like a person who really existed."

2 October 1987 'I spy with my little eye' is not just a child's game Medgessy has actually read letters

By R.A. Tybout

The front page of NRC Handelsblad recently reported that Canadian art historian Rolph Medgessy has discovered microscopic signatures by Goya on numerous paintings and drawings that were previously attributed to his most illustrious predecessors. Leonardo da Vinci, Michelangelo, Titiaan, Rubens, Rembrandt and Velazquez: they would all have to cede the claim to some of their best-known works to their younger colleague, who would thereby be branded as a forger.

If even a part of Medgessy's observations were correct, it would mean a true revolution in art history. Now revolutions, even when they take place entirely on paper, should be strongly distrusted. The reaction from professional circles was therefore predominantly negative: the signatures "in unusual places, such as nostrils, earlobes, corners of the eyes and eyebrows" are not visible to others and, what is sufficient, a pre-Goyan past can be demonstrated for some works.

The psychological aspect is interesting about this true history: the scholar who 'after twenty years of research' is the only one who believes he can read twelve signatures by Goya on the Venus with the Mirror attributed to Velazquez. Prof. E. van de Wetering already addressed this: "it is a kind of delusion that you as an art historian often encounter in practice. You see something in fly droppings, paint flakes and surface dirt and you recognize scribbles in it".

It can be added that you will read what you expect to find. Tampering with almost invisible signatures, spectacular forgeries: that is really something for the author of a work entitled 'The Secret Life of Goya' - a rich subject, with which several more books could be filled if desired.

Talking stones

That the imagination noted by Van de Wetering can take on considerably stronger forms is proven by a tragicomic affair that recently took place in another scientific field: that of Greek epigraphy. The epigraphician is concerned with deciphering and interpreting texts, usually carved on marble or stone blocks. These 'talking stones' are excavated after an underground stay of usually more than two thousand years. They can also be reused as building material, for example for a threshold in a modern Greek or Turkish home. Moisture, cracks, wear and tear or the shuffling of countless soles often damaged the once clearly legible letters. The epigraphician is then tasked with determining what was or could have been written on the stone. Sometimes he is helped by literary sources, which can contain historical data with the help of

- 25215 which the text of an inscription can be approximately reconstructed. The ideal situation is of course one in which effortlessly legible inscriptions confirm the data already known from the literary tradition. Anyone who, with his new text, finally gets a stagnated discussion out of the doldrums has climbed epigraphic Olympus.
- 25220 Sanctuary of Apollo
- Incidentally, our story takes place in Delphi, in the famous sanctuary of Apollo. Pausanias visited this in the second century AD and noted in his Guide to Greece: "at the entrance to the sanctuary one sees a bronze bull, made by Theopropos of Aegina, consecrated by the inhabitants of Corcyra (...). Then follow consecrations of the inhabitants of Tegea consisting of what they took from the Spartans (...). On the opposite side are votive offerings of the Spartans from the booty taken from the Athenians".
- 25225 The precise location of the three monuments is unclear: what is on the left and what on the right side of the Sacred Way? The modern visitor sees a considerable number of foundations on loose blocks in the intended area. But which of these correspond to the monuments mentioned by Pausanias?
- In 1981 Claude Vatin, a scholar of hitherto undisputed scientific conduct, published numerous interesting inscriptions, which seemed to solve the problems outlined once and for all. He read all these texts on blocks that had been excavated towards the end of the previous century. No one had ever noticed that they were written on. Just as Schliemann was guided by Homer in the excavation of Troy, so our scholar must have had his Pausanias in his pocket. He began, as Pausanias, at the entrance to the Apollo sanctuary. Immediately to the right there stands a limestone block. Could this
- 25230 not very well be the pedestal of the bull of the Korkyraioi mentioned by Pausanias? After long observation, Vatin began to distinguish letters on the heavily weathered stone surface. And what did he read? "Korkyraioi"! Not just in one single version, but five times, with which Vatin clearly lags behind the giant scores of Medgessy.
- 25245 Triumph
- The confirmation of his suspicions must have been a triumph for him. Encouraged by this, he read on the same block: "Theopropos the Aeginetian made this monument". The original signature, and in the Aeginetic alphabet! But that was not all. Pausanias also mentions that the Korkyraioi dedicated the bull to Apollo as a 'tenth' of an abundant tuna catch. What Vatin read more can now be read by anyone honorary reader guess: "As a tenth because of the lucky tuna catch, to Apollo".
- 25250 According to Pausanias, next to the bull stood a monument for the victory of the Tegeates over the Spartans. From Xenophon's Greek History we know that it concerns the attack on a Spartan naval station in 370-369 BC. Armed with this information, Vatin went to the ruins of the colonnade next to the supposed bull pedestal. On a block of the stylobate that was also heavily weathered, he found two inscriptions carved on top of each other: "The Tegeates from Arcadia dedicate the sails captured from the Spartans to Apollo as a tenth" and a ditto text in which 'weapons' takes the place of 'sails'.
- 25255 As if this were not enough, Vatin read fragments of seven (!) almost identical texts on other parts of the building. There was now no doubt about Pausanias' Spartan trophies from the battle against the Athenians, which were situated 'on the other side': they were of course placed opposite the colonnade.
- Vatin also went to work further on in the sanctuary. According to Pausanias, the statue of an ox stood on the square in front of the Temple of Apollo, dedicated to the deity by the inhabitants of Plataiai in memory of their victory over the Persian troops in 479 BC, achieved together with the other Greeks. In this famous battle, the Greeks finally freed themselves from the Persian threat. Who wouldn't like to find a contemporary document that records their victory?
- 25260 Now, in the place indicated by Pausanias, there is a block with a clearly legible signature on one side of the sculptor Theopropos, mentioned earlier. It has been thought that this block contains the pedestal of the bull of the Korkyraioi, which must have been dragged from its original location to the square in front of the Apollo temple after the demolition of the monument in times of decay.
- 25275 But what did Vatin manage to extract from the uneven top of the block? Nothing less than the following dedication: "The Plataeans dedicate this to Apollo, booty taken as revenge from the Persians". For the concept of revenge, Vatin refers to Aeschylus and thus makes his inscription into a paragraph in Greek intellectual history.
- Not a single letter of any of these texts is visible on the photographs published by
- 25280 Vatin. That is why he helps his reader with sketches he made himself on which his

lectures can be seen.

These images have not been able to convince other Delphi experts. Scholars from the French School in Athens have subjected the blocks studied by Vatin to a new investigation, with all the technical aids available to the epigraphician. Their unanimous conclusion: "il n'y a rien, ce sont des illusions". In order to prevent further proliferation of the phantom texts, they shared their findings with a number of other prominent scholars.

For C. Habicht, this warning apparently came too late. Perhaps that was just as well. In 1985, he published a very readable book: Pausanias' guide to ancient Greece. His main thesis is that Pausanias is a much more reliable informant than we always thought. No wonder he gratefully made use of what Vatin offered him, because: "How does Pausanias come out of this? With flying colors"! And with that, the circle is complete.

Projections

As is well known, our powers of perception function extremely selectively. It shows us what we want to see, even our own projections. The good faith of Medgessy and Vatin need not be doubted for a moment: they really read their letters. Unlike most visions, however, their illusion has not crystallized into fleeting images, but into concrete and constantly reread texts. That shows once again how much the human brain is capable of. 'I see, I see what you do not see!' No, that is not child's play.

The author is co-editor of the Supplementum Epigraphicum Graecum and works at the Department of Ancient History at Leiden University.

7 January 1988 A discovery in Delphi: Etruscan inscriptions in a Greek sanctuary? Claude Vatin and the benefit of the doubt

By J.A.K.E. de Waele

Anyone who has ever entered the hospitable home of Claude Vatin in one of the picturesque villages near Aix-en-Provence knows that in one of his study rooms there is an impressive series of shelves along all the walls. On these shelves the French scholar has stored the harvest of almost 25 years of epigraphic research in Delphi. In recent years he has 'abgeklatscht' thousands of stones scattered here and there in the sanctuary, a process in which blotting paper is placed on a stone and then moistened. The blotting paper dries in all the irregularities, scratches and cracks of the stone. In negative, on the underside of the blotting sheet to see all traces. In this way, ancient inscriptions engraved in the stone can also be deciphered in the study. In an article on the Opinion page of NRC Handelsblad, R.A. Tybout recently sided with unnamed scholars of the French school, who declared that Vatin's lectures were based on fantasy. Here an attempt is made to make clear how spectacular Vatin's discoveries are and how accurate his working methods are. One must have examined the stones themselves for a long time and studied the Abklatsche if one wants to criticize Vatin's results.

After the French school in Athens had previously uncovered monuments in Delphi, the large-scale excavations were decided upon in 1892 by the French parliament in an atmosphere of animosity with the German Empire. After the reparations that France was forced to make after the Franco-German war of 1870-1871, the German Empire had large amounts of gold in its coffers. This was used to finance the excavations at Olympia 1875-1881, a form of development work avant la lettre. The decision of the French National Assembly to beat the Germans to Delphi must also be seen as an attempt to make up for the damaged glory of the fatherland, at least in science.

The German archaeologists watched with dismay as this important excavation at Delphi, where they had already done the necessary preparatory work, passed them by. The sanctuary was uncovered by French scientists in record time. This was not always done very accurately, but at a time when wages were still low, an immense area was explored. This sacred area is now one of the tourist attractions of the Greek world. One is impressed by the imposing scenery of the steep pink-grey rocks, between which the ruins are nestled. Apollo once spoke here through his famous Oracle, to which the entire Greek world listened. The discussions between the digging French and the Germans on the sidelines frequently flared up. In a time of positivist criticism, in which every ancient text was arbitrarily changed if it did not seem to match archaeological observations, polemics were conducted that sometimes seemed to be a direct continuation of the armed Franco-German conflict. Pomtow, a German archaeologist and historian who has been occupied with Delphi all his life, has

summarized his life's work in an encyclopedia article of 120 densely printed pages of text. He turned against the "French method, particularly beloved in Delphi, of 'ignoring' stones and facts that do not suit them".

Justification

The French response was inevitable; in a youthful work, the French Nestor of epigraphy at Delphi seeks a justification for the attitude of 'ignoring' the various arguments of the German researcher. However, many controversial questions are still unresolved and it may be called a favourable development that now some young German archaeologists are making sensational discoveries thanks to sensitive photography. As a result, one of the greatest controversies seems to be resolved soon, which means that the ancient writers – and the French archaeologists – are once again proven right.

Knowledge of this background is essential to understand the situation in which Vatin finds himself. With a sharp eye he has examined stones and Abklatsche and has overturned many established ideas. One of the sacred houses that is threatened concerns the statues of two archaic young men who have been identified with Cleobis and Biton since the discovery site. According to the story, these had pulled their mother, priestess of the goddess Hera, to the sanctuary in her chariot at "tos" – six km in the burning sun! When they had succumbed to exhaustion, their fellow citizens set up their statues in Delphi.

In 1893, a group of statues of two young men was excavated in Delphi. The inscription on the base was read as if it were Cleobis and Biton. However, Vatin believes that he can see the two Dioscuri, Castor and Pollux, in the group. This is not believed by many colleagues. Nevertheless, the inscription on the base of the statues has never been read in such a way that all scholars came to a unanimous interpretation.

Pausanias

The reading of the stones with which Vatin makes the reconstruction that is so criticized by Tybout is no different. It must be stated in advance that Vatin's reading is based on a text by Pausanias, which Pomtow changed with the approval of all scholars because the text did not seem to correspond with the situation in the field. This ancient writer Pausanias, who in the second century AD compiled a 'Baedeker' of ancient Greece, was vilified at the end of the previous century as a scholar who, sitting at his desk, frantically copied earlier authors without actually doing so.

He ever saw the places he describes. Fortunately, this picture has changed radically in modern times. The ancient historian Christian Habicht, who teaches at the Institute for Advanced Study in Princeton, has contributed greatly to this rehabilitation of Pausanias, because he has shown how much Pausanias became the personal enemy of a German classicist and his school. But that is another story. The polemic flared up again when Vatin discovered a bilingual inscription in Etruscan and Greek from Delphi. The editors of the journal where he offered his article refused to publish it. Vatin then announced his data at an Etruscan conference in Italy. The majority of the colleagues present there received this message as a sensational discovery. The document will certainly receive special attention from ancient historians and Etruscanologists in the coming years. The historical importance of the inscription in particular must be investigated.

The correctness of Vatin's observation is not doubted in these circles. She testifies to a method by which the French scholar comes into the limelight in a completely different light than he was previously portrayed in this magazine. Perhaps the French colleagues working in Delphi feel a slight irritation that stones that have been known for so long still appear to contain important epigraphic data. Do they experience it as a disgrace to the national research that has been taking place in Delphi for more than a century? The fact that French epigraphers also have a razor-sharp pen and a great deal of power quickly makes an underdog hopeless and despondent.

But great discoverers in archaeology have already been greeted with derision by their colleagues: the merits of Schliemann are now almost universally recognized. He was also lucky that the weight of the gold he found tipped the scales in his favor. That he has given Greece back a piece of history is now clear to everyone. And when Marinatos offered an article to a magazine in which he identified Thera with Atlantis, the editors disclaimed all responsibility in a note. Fortunately, the Greek archaeologist would once again be able to test his theory in practice through the spectacular finds.

Weathered

25415 A rectangular stone from Delphi has long been known on which the following can be read: "(a tenth of the booty?) have dedicated to Apollo the Tyrrhenians, i.e. the Etruscans". What exactly the Etruscans dedicated is unknown because the upper part of the stone is damaged. The same name was also previously written under the last word 'Tyrrhenians', but it has weathered so much over the years that it has been

25420 reapplied. To his great surprise, Vatin also read a few more letters from the older, heavily weathered inscription, of which 'Kymaion helontes' (= conquered from the inhabitants of Kyme) was the most important. He concluded that this stone had been dedicated after a victory by the Etruscans over Kyme, a Greek city north of Naples, where one of the earliest Greek colonies was located.

25425 Whether this dedication was set up by the Etruscans in a Greek sanctuary will have to be investigated further. Two conflicts between Kyme and the Etruscans are known from historical sources. Both times the Greeks were victorious. The first time the Etruscans were defeated in about 524 by the tyrant Aristodemos. A few decades later the Syrakusan tyrant Hieron drilled the Etruscan fleet into the ground in the

25430 roadstead of Kyme. Helmets that the Syrakusan set up in Olympia still remain from the last victory. It is not clear what reason the Etruscans saw to place a dedication or booty at Delphi. Perhaps the naval battle was not so clearly decided in the Greeks' favour after all.

Bilingual

25435 This discovery prompted Vatin to take another good look at the sides of the stone. What he found there exceeded all expectations. He found a bilingual dedication in Greek and Etruscan. The Greek text reads in translation: "This tripod was consecrated by the Velthanes (?) as a gift from the spoils taken from the Chalkidians at Kyme". Too good to be true. The older inscription on the stone can be found attached to the

25440 side!

Encouraged by this discovery, Vatin continued his search for traces of Etruscans in Delphi. Now, traditionally, a treasury - a temple-like building in which the precious consecrations were placed - had been attributed to an Etruscan city. It concerns a foundation behind the rebuilt treasury of the Athenians in Delphi. It is built of an

25445 unusually dark (tuff?) stone that was assumed to have been brought from Etruria by sea and assembled in Delphi. In itself, this is not unusual; in other sanctuaries, entire buildings were also brought to Greece from Sicily, for example.

However, Vatin was initially very sceptical about the attribution. However, when he carefully examined all the blocks, he found an inscription written in Greek, local

25450 Delphic alphabet: "To Apollo of Delphi the Velthanes have brought a consecration". Furthermore, on another side of the treasury the inscription could be read: "The Tyrrhenians achieved on the inhabitants of Kyme".

Velthanes

25455 This inscription was written in a later period than the one mentioned earlier. Apparently, the inscription was also renewed here in the second instance. This time, however, it no longer refers to 'Velthanes' but to 'Tyrrhenians'. According to the first inscription, a treasury of the Velthanes was built here in the fifth century BC. The inscription was renewed again afterwards, this time in the name of the

25460 Tyrrhenians, probably because the older text mentioning the Velthanes was less deeply engraved and had become difficult to read. From the ancient sources it appears that there were treasuries of the Etruscan cities of Agylla and Spina in Delphi.

Who these Velthanes were has not yet been investigated. Two possibilities present themselves. Either it concerns a consecration of the league of cities that met

25465 annually in the sanctuary of Volsinii (= Velthanes?) near present-day Bolsena, or a connection must be sought with the Etruscan name of Bologna, 'Felsina'.

Geographically, this last city is closer to Spina, but then it remains a mystery how and when these Etruscans waged war with the inhabitants of the Greek Kyme.

This gives ancient historians and Etruscanologists a new bone to chew on. How

25470 incredible do Vatin's observations sound! But also unbelievable? Those who know him will be inclined to take him seriously for his careful working methods and scientific seriousness as a scholar and epigrapher. Despite the criticism of his colleagues, Vatin still deserves the benefit of the doubt. The author is an extraordinary

25475 professor of classical archaeology at the Catholic University of Nijmegen.

25480

16 February 1988 Etruscanologist Pallottino also doubts the working methods of the French scholar

Vatin's observation deserves scepticism

By R.A. Tybout

25485

Claude Vatin believes he has discovered Etruscan inscriptions in a sanctuary at Delphi. Nonsense? According to the Dutch archaeologist De Waele (last month on the Opinion page) he should be given the benefit of the doubt. That does not alter the fact that the French scholar sees inscriptions that have remained invisible to others. Some time ago it was reported that Rolph Medgessy had read numerous

25490

microscopic signatures by Goya on important paintings by several old masters. The straw fire of this news was quickly extinguished by the fact that none of his colleagues appeared to be able to see what Medgessy saw. On the Opinion page of NRC Handelsblad I then pointed out a similar affair in the field of Greek epigraphy: Claude Vatin published a series of interesting texts, which he claims to read on the

25495

weathered surface of various blocks in the Apollo sanctuary at Delphi. In this case too, colleagues reacted extremely sceptically. Not so J.A. de Waele, who on this page broke a lance for Vatin. It would have been relevant if he had published a photo of a stone or Abklatsch from which it would appear that there are indeed letters present. 'Abklatschen' is a procedure in which blotting paper is placed on a stone and moistened. The negative of the dried sheet then shows the irregularities and cracks (and possible letters) in the stone.

25500

Abklatsche are an 'instrument de travail'. Every epigraphician in the field documents his findings with this prepared blotting paper, among other things. Later, in the peace of his study, he can arrive at a text constitution, whether or not justified.

25505

Furthermore, De Waele attempts to explain why Vatin's lectures encounter resistance. Not facts, but feelings of unease from his fellow 'Delphiens' are said to be

25510

responsible for this. It is an old song: the brilliant loner who, because he would pose a threat to the established scientific order, would be ignored or marginalized by it. An attempt is made to reverse the burden of proof and to arouse the sympathy of the general public for the 'underdog'. All this is only interesting as a psychological mechanism, but has no value for disciplines other than psychology.

Verifiable

25515

But back to the bare facts! Anyone who thinks he can report something of importance publishes his findings in a professional journal. Vatin did the same. Anyone who also wants to gain approval from colleagues should ensure that at least his factual material is verifiable. Vatin did not do so. Note: this does not apply to all his work, but it does apply to a large part of the articles on Delphic inscriptions included in various magazines since 1981, including the texts I mentioned in NRC Handelsblad. On the photographs of stones or Abklatsche that Vatin provides in some cases, not a single letter is visible. This circumstance is, to put it euphemistically, unique.

25520

It does happen that letters on photographs in comparable publications are illegible, or that the weathered stone surface allows for more readings of certain letters:

25525

for example, on the pedestals of the statues of 'Kleobis and Biton' mentioned by De Waele. However, there has never been any doubt that these pedestals bear inscriptions. The precise reading of these visible letters is open to dispute. A

25530

different kind of problem arises with the texts that I quoted in translation: no one except Vatin has been able to observe a single letter. The latter applies to a large number of other Delphic inscriptions that Vatin thinks he reads. These texts show the same profile, with somewhat suspicious contours: they are extremely interesting, groundbreaking in many vexed questions and almost always in perfect agreement with what we know from the literary sources. They are often said to be on stones that also contain an inscription that is visible to everyone. Another characteristic is that

25535

Vatin usually does not leave it at one new inscription, but that he gives a series of often engraved identical versions (up to seven!) of a text. All this in a script that, according to Vatin himself, is barely perceptible. For example, on the pedestal of the famous 'Danseuses de Delphes' (in the museum at Delphi), he reads, in addition to the already known fragmentary inscription of the oath, eight new texts (some identical), which provide answers to all the questions that this group of statues has raised among generations of scholars: the occasion and date of the dedication

25540

('victory of Athens over Sparta'; '375-374 BC'), the identity of the dedicators ('The Athenians and their allies'), of the artist (none other than 'Praxiteles'!) and of a later restorer ('Philodemos', 'second century BC'). Can it be more beautiful? "Too

25545 good to be true", writes De Waele in response to another cookie from Vatin's dough. One should be warned not to take this Greek-Etruscan pastry without a few grains of salt.

Now it could be that all appearances are wrongly against Vatin. Therefore, De Waele is right when he says that verification of Vatin's proposals should ultimately be

25550 done on site in Delphi and after thorough study by Abklatsche of the stones in question. Well, that was done, with the result mentioned. And by epigraphists of various persuasions. At the time, I spared the readers of NRC Handelsblad their names. There are indeed 'Delphiens' among them from the French school in Athens. Their secretary J.-Y. Empereur informed the editors of the Supplementum Epigraphicum Graecum (a publication in book form that organizes and makes accessible the annual

25555 harvest of Greek inscriptions) of their findings in writing. But perhaps none of them could discover a letter because they were collectively cross-eyed with jealousy. My quote "il n'y a rien, ce sont des illusions" however comes from a similar written warning from a scholar who is out of reach of any possible bad vapours of the Delphic

25560 Pythia: O. Masson, a French 'epigraphist without party' of undisputed reputation. De Waele is silent about a few extremely relevant professional publications in this matter. Who is actually "ignoring" whom? Are supposed enemies ignoring Vatin or is De Waele ignoring the fictitious company of conspirators? These publications show that Vatin is by no means being ignored silently and that he is not at all hostile a

25565 priori.

For example, there is the Crete expert P. Faure (also not a 'Delphien'), who, like Vatin, examined the texts on the pedestals of 'Kleobis and Biton' (L'Antiquité Classique 54, 1985, pp. 56-65). The nice thing is that Vatin is right about his

25570 reading of these visible texts as a dedication to the Dioscuri. So there is no trace of partiality; it is very possible that 'Cleobis and Biton' should be relegated to the realm of fable. But about a number of never-observed texts that Vatin also reads here and there on the images, he writes: "I am obliged, but it may be that my eyes are not good enough, to say that I see nothing of it." And neither on the original, nor on plaster casts, nor on Abklatsche, nor on colour and black and white photos.

25575

Pallottino

These negative findings are not limited to the French borders. Vatin's bilingual Greek-Etruscan text also stirred up Italian pens. For example, the Etruscanologist M. Cristofan concluded after studying stone and Abklatsche: "I have not seen a single

25580 sign that could be interpreted with certainty as belonging to an alphabet" (Xenia 8, 1984, p. 13). What does De Waele tell the reader when he speaks about the reception of Vatin's findings among Etruscans? "The correctness of Vatin's observation is not doubted in these circles."

No doubt? There is another person from 'these circles' who shed light on the matter:

25585 none other than the doyen of Etruscans, Massimo Pallottino, wrote a nuanced, but again sceptical, consideration of Vatin's bilingual text under the title De cippus van Delphi en het 'casualt Vatin' (Studi Etruschi 53, 1987, pp. 7-14). Pallottino operates as cautiously as possible and makes every effort to give Vatin the 'benefit of the doubt' – ultimately without positive results. He looks at the matter from

25590 three points of view. First, the technical-epigraphical side: are there indeed letters on the stone in question? Here Pallottino can do little more than establish that no one except Vatin has been able to perceive even a single letter of the disputed texts. He himself has studied some of Vatin's Abklatsche. For the sake of completeness he mentions that "with much good will" two irregularities could be

25595 interpreted as letter signs, but he adds: "There is nothing else to see than this, which could just as well be pure illusion and then explain how it is possible that illusory readings (of letters) are born from unintentional scratches on the stone, wear or irregularities in the surface."

25600

Aplu

Second, Pallottino provides a linguistic analysis of the Etruscan part of Vatin's text. He notes that it is internally consistent and corresponds word for word with Vatin's Greek counterpart text. Of course, that says nothing about the authenticity of either version: either a late archaic Etruscan or Vatin has translated the Greek

25605 into neat Etruscan – except for one detail, "fairly decisive," according to Pallottino. In the archaic period, from which the inscription is said to originate based on its content, one would not expect the syncopated form Aplu instead of Apulu as the name of the god Apollo. Then follows a cautious phrase: "One would truly say that the author of a hypothetical, learned, and ingenious Etruscan version of a Greek

25610 text inspired by the Delphic vowel inscription would have made a rather serious

mistake here through inattention."

Pallottino's third consideration concerns "the personal and psychological profile" of some of the statements that Vatin added to the publication of his inscriptions. He notes that they are sincere, but that they do show an unmistakably apologetic slant: Vatin writes that one must have experience and patience to be able to read his texts, that he does not act out of a desire for fame, nor because there is anything suggestive about finding an Etruscan text, which to his own surprise gradually became apparent to him.

Pallottino's final conclusion: "illusory or not, we have no other material evidence of Vatin's readings than his own explanation. We can, if we wish, give credence to that explanation. But unfortunately science does not base itself on professions of faith."

Whatever one may think of this remarkable history (I still consider it plausible that Vatin 'projected' entirely in good faith into the numerous fissures and cracks of the rough stone letters that are not there): a strong doubt about the reliability of Vatin's observations is certainly justified.

The author is co-editor of the *Supplementum Epigraphicum Graecum* and works at the Department of Ancient History at Leiden University.

Photos The Etruscan scholar Massimo Pallottino is sceptical about Vatin's discovery. Also: the Delphic twins: Dioscuri or 'Kleobis and Biton'?

4 July 1989 Pausanias' travel guide to Greece restored to its former glory after a hundred years

Jos de Waele

Dr. J. de Waele is professor of classical archaeology at the Catholic University of Nijmegen.

The Greek writer Pausanias, who wrote his 'Description of Greece' around 150 AD, is not exactly among the top ten of ancient literature. Little is known about his life. He lived during the Roman imperial period and came from the vicinity of Smyrna in Asia Minor. He deals with the Greek mainland in a dry manner, which he describes as smaller than the present-day Balkan state. As a child of his time, Pausanias looks back as far as we do to the heyday of Gothic cathedrals in classical Greece. His interest lies in the cities and monuments of classical Hellas, which still attract many tourists as ruins.

However, one should not expect Pausanias to provide the detailed descriptions of a Baedeker, Guide bleu or Cantecler guide. His text is not intended as a manual on the spot, but as reading material in the study of the educated intellectual of the imperial period. That is why Pausanias alternates the descriptions of the places with long excursions into mythological and historical background information.

The value of Pausanias was recognized early on by archaeologists in the field. After the liberation from the Turks in 1832, many travelers traveled through Greece with Pausanias in their hands. Many archaeological sites have been found and excavated in this way. In the major tourist attractions of Olympia or Delphi, many buildings would not be identifiable without Pausanias' text. That he did his work thoroughly is evident in Olympia, where he lists more than 200 gifts with inscriptions. Of the 115 bases found, 34 inscriptions are also given by Pausanias. In the agora of Athens, during the American excavations in the 1930s, several crucial monuments were also identified, which allows the entire walk of Pausanias to be reconstructed in broad outline.

Nevertheless, the ancient Baedeker has not always been so highly valued in the scientific literature. In the previous century, the Berlin school, led by the famous Greek Ulrich von Wilamowitz-Möllendorff, severely damaged the reputation of the ancient author. Pausanias was said to have been a 'miserable compiler' and an 'Erzkonfusionar', who copied most of his text from others at home without having travelled much himself.

Although archaeologists immediately came forward with good arguments for Pausanias, the attacks of the Berlin professor and his pupils were merciless. The latter cut down their victims like true epigones, so that many suspicions remained despite all the good services that the 'old Baedeker' had rendered to the archaeologists.

Recently, however, it became clear to what Pausanias owed this. On 18 April 1873, a German travel party left Olympia and headed for Arcadia. Among these grand tourists were hereditary princes and country squires from the Prussian nobility. Due to his knowledge of ancient Greek, Von Wilamowitz was in charge. As reading material, he had a Pausanias text in his pocket. Due to an incorrect interpretation – he did not realise that he was following Pausanias in the opposite direction – he took the wrong

path and after a few hours he had to admit that he was hopelessly lost. The young scholar then became the butt of the ridicule of his fellow travellers. Shortly afterwards the first publications appeared in which Von Wilamowitz tried to show that Pausanias was completely unreliable: "The whole rat-king of contradictions and errors... can only be explained by the fact that Pausanias thoughtlessly copies an earlier description, sometimes weaving his own memories into it and more often supplementing it with quotations from other authors; over all this he hangs a rococo mantle of sophistic absent-mindedness and infantile erodotus imitation." Only recently has Christian Habicht, a former historian at the Institute for Advanced Study in Princeton, found the reason for this trauma: in Von Wilamowitz's wounded pride. Only now can the full rehabilitation of an author be initiated, of whom the famous British historian of religion Sir James Frazer once wrote: "Pausanias could never have foreseen how 1700 years later severe professors would condemn him. Had he seen this coming, he might never have written his entire description of Greece and we would have to regret the loss of one of the most curious and valuable documents that Antiquity has left us."

30 April 1993 The mysterious farmers of the Iron Age
In search of the Celts in the Netherlands
by Pieter Stein

The Netherlands has never had much time for the Celts, even though they were here once. Even the exhibition that the Allard Pierson Museum dedicates to them ends with a question mark: The Celts in the Netherlands? They have not left many traces and the little that there is seems very Roman to the layman. But appearances can be deceptive. "No Roman would dream of building a temple in the countryside."

Generations of grammar school students and readers of the adventures of Asterix can dream of them: the famous opening sentences of Caesar's Notes on the Gallic War. 'Gaul is divided into three parts', the Roman conqueror teaches, and then names the native inhabitants as Belgae (in the North), Aquitani (in the South) and 'people who in their own language are called Celtae but in ours Galli.' The Belgae are the furthest removed from the civilizing influence of the provincia (the Romanized Provence), and are constantly at war with the wild Germans from across the Rhine. That is why, Caesar concludes, they are the bravest of all the Gallic peoples. Caesar knew what he was talking about. When he published his Notes in 51 BC, formerly all of Gaul had been occupied, but in the area between the Rhine and the Marne it had cost him a lot of effort and manpower. For five years he had fought a bloody war there with various Belgian tribes, and especially with the Eburones under their chief Ambiorix. After losing an entire legion in 54, he opted for drastic measures. The enemy was systematically massacred, his lands ransacked, his places of residence wiped off the map. The Eburones disappeared from history. They suffered the fate of the other Celtic tribes on the mainland to an extreme extent: once defeated by the legions, they were absorbed into the Imperium Romanum and transformed into decent 'Gallo-Romans'.

Two thousand years after Julius Caesar, the Celts are making their comeback in historiography. Interest in civilisations from the Iron Age (700-50 BC) is growing and exhibitions of Celtic gold and silver attract full museums. In addition, the importance of the Celts for European culture is increasingly valued; at the time of the great Celt exhibition, two years ago in Venice, they were even proclaimed by some scholars as the real pioneers of a united Europe. That the hundreds of different Celtic tribes in Europe had no central government and at most a Celtic dialect in common was conveniently forgotten in the euphoria. More has been fantasized about the ancient Celts. This is not surprising, because unlike their conquerors, the Romans, they have left no written sources. What we know about them comes from the books of classical historians and ethnographers. They regarded the 'Keltoi' (also called 'Galli' or 'Galatae') as unspoiled savages, who from the sixth century BC had swarmed out from the Alps all over Europe and had plundered Rome and Delphi, among other places. The tall barbarians wore trousers, bracciae, wore thick golden neck rings, torques, washed their hair in a lime bath, and were known for their fearlessness. The story of the meeting between Alexander the Great and a Celtic embassy on the Danube is famous. Alexander asked what the Celts feared most, and expected the answer to be 'You, sir.' But the envoys declared that they were only afraid of one thing, namely that the sky would fall on their heads. Their answer would surprise the Greeks and Romans for centuries to come, and is still one of the running gags of the Asterix comics today.

Fighting and partying

25745 Just like in the rest of Europe, there seems to be more attention in the Netherlands recently for pre-Roman culture, for the forgotten tribes that lived between the Rhine and the Scheldt [Schelde] before (but also after) the beginning of our era. At the end of 1992, the A.G. Foundation van Hamel for Celtic Studies, organised a campaign to raise awareness of the pre-Roman culture. A symposium was held at which the Celts in the Netherlands were discussed. This coming autumn, the exhibition 'Fighting and

25750 partying among the Celts' will take place in Utrecht. And at the moment, a modest exhibition of Celtic art and utensils can be seen in the Allard Pierson Museum in Amsterdam – as part of the manifestation 'Celtica Nederland' with which Dutch Celtic studies wants to introduce itself to a broad audience. The Netherlands has never had much time for its Celtic past. Ambiorix may have been widely regarded as the Arminius of the Low Countries, but he was first and foremost a Belgian hero, with a statue in Tongeren. And the Eburones may have lived deep in the Dutch river area, but their ancestral homeland was in Belgian Limburg. In Dutch history books, the Gauls or Belgae were not mentioned as distant ancestors, but the Batavians: a – according to

25760 Roman historians – Germanic tribe that descended the Rhine after Caesar's conquests and settled in the Betuwe. The fact that the Celts appeal so little to the imagination in the Netherlands is undoubtedly because they have left few traces. From abroad you sometimes hear that a Celtic gold treasure has been excavated or a hill fort (oppidum) has been exposed. The British Museum is famous for its display cases full of torques and weapons from the Iron Age, and in the East of Southern France

25765 every medium-sized provincial town has a Gallo-Roman museum. But in the Netherlands no well-known Celtic remains come to mind at first. "That's not so strange," says Celticologist Laurant Toorians, a month before the opening of the exhibition in the Allard Pierson Museum that he helped put together. "The south of the Netherlands was on the edge of the Celtic cultural area, and was also influenced by the Germans from the northeast. There was no 'pure' or rich Celtic culture here, and large oppida such as at Kessel-Lo or on the Kemmelberg in Flanders have not been found. Many special examples of Celtic culture in the Netherlands also date from the Roman period, and then they are soon seen as more Roman than Gallic."

25770

I went to Toorians to find out what remains of the Celts in the Netherlands. The list is manageable: a few artefacts in the large archaeological museums, a small hill fort at the Sint Pietersberg (on the Belgian side), and the remains of two Gallo-Roman sanctuaries under the church of Elst and on the Maas near Empel. When I say that the latter surprises me – I have heard of those temples, but weren't they built by the Batavians, and not by the Celts? – Toorians explains that the Batavians are now often

25780 counted among the Celtic tribes: the Romans called them Germans because they came from across the Rhine, but it seems unlikely that they actually spoke Germanic.

Grave field

25785 Before I go looking for the remains of Celtic Netherlands, I call Dr Nico Roymans. He is an Iron Age specialist affiliated with the Institute for Pre- and Protohistory of the University of Amsterdam, and was one of the excavators of the indigenous Roman 'temple of Empel' in 1990. Roymans is even more cautious than Toorians. He would rather not talk about Celts at all ("As an archaeologist I don't work with those kinds of language-based macro-concepts"), but he invites me to take a look at the only Iron Age excavation that is currently being worked on: the burial ground of Mierlo-Hout, near Helmond. We agree to meet in two weeks' time.

25790

In the meantime I immerse myself in the Celts. I read the standard work by the Belgian S.J. De Laet, Prehistorische culturen in het zuid der Lage Landen (Wetteren 1979), and visit two archaeological museums with an Iron Age collection. The National Museum of Antiquities turns out not to be worth the trip to Leiden: the Netherlands

25795 department is being reorganised and even the world-famous 'disc of Helden', a gilded-silver hunting scene from the Late Iron Age, is not on display to the public. I have better luck in Museum Kam in Nijmegen (once the Celtic Novio-magus, 'Nieuw-markt'). There is renovation work going on, but fortunately almost all the Celtic masterpieces

25800 are on display on the ground floor: an iron sword with bronze scabbard dredged from the Waal (1st century BC); the melted remains of the 'Wagon Grave of Nijmegen', the final resting place of a local nobleman from the fourth century BC; and a beautiful bronze mirror inlaid with red enamel – the only one of its kind found on the European mainland.

25805 Not far from Nijmegen, in the Over-Betuwe, lies Elst. The town between the Lower Rhine and the Waal, a small Batavian settlement in early Roman times, was badly damaged in the Battle of Arnhem, but gained an archaeological monument during the restoration of the Gothic Werenfridus Church. The remains of two Gallo-Roman stone

25810 temples were found under the burnt-out nave. The first was built around 50 AD and destroyed twenty years later during the Batavian uprising against the Romans. The second, six times as large (31 by 23), was built at the end of the first century – fourteen m high and with a spacious colonnade all around. With an old-fashioned pointer, the church sexton explains the mini-exhibition that is set up in a side aisle. The objects on display look unremarkable and above all Roman: a few pieces of
25815 stone, an orange roof tile, and the skull remains of a suovetaurilia, a Roman purification offering consisting of a pig (sus), a sheep (ovis) and a bull (taurus). More interesting are the temple remains in the large crawl space under the church, a maze of walls, pillars and stone stacks in which, with some help, the various building layers and styles can be discovered. Of Temple II, the foundations of the
25820 actual sanctuary (the cella) can be seen and a piece of the colonnade wall. Of Temple I, not much remains than a floor of lime mortar with a large hole in it. But no matter how closely you look, to the layman's eye everything looks Roman. Elst offers precious little Celtic.

25825 Misty
"Appearances can be deceiving," says Nico Roymans, when I tell him about my disappointing visit to the Betuwe a week later at a misty Helmond-'t Hout station. "Just like the temple of Empel, the one in Elst is typically indigenous. Of course, the building techniques were Roman and the materials were imported. But no Roman
25830 would dream of building a temple in the countryside. That, plus the fact that Roman temples never have a four-sided colonnade, is an indication: Elst and Empel were indigenous sanctuaries, built by the Batavian elite on sites where gods were already worshipped in the Iron Age."
We walk through a spacious new housing estate to the site of the Iron Age urn field
25835 that was recently uncovered. An emergency operation, Roymans emphasizes: "We are digging ahead of the bulldozers, in a few months there will be luxury villas on these sandy soils." In an iron construction shed, which serves as headquarters and coffee house for four frozen architects, geologists, Roymans explains the excavation using topographic maps. On either side of the shed is a burial ground of 100 by 500 m
25840 where, in the periods 650-450 BC and 25-400 AD, two hundred and fifty people were buried after being cremated. An estimated three to five families lived around the burial ground, in wooden thatched roof farms of the so-called 'house type': unlike abroad, people and cattle slept under one roof in the Netherlands.
It all sounds rather unspectacular, and it isn't. The excavation is one of the 'for
25845 enthusiasts' category. In the Iron Age, this may have been an idyllic landscape with a few hundred hills, now it is a messy piece of land that is being laboriously prepared for construction. Circles and rectangles are visible in wide, bulldozed trenches – discolorations that indicate where the graves and the associated ditches once lay. No major finds have been made. Roymans: "The people who lived here had a poor burial ritual, but that does not mean that their culture was poorly developed; after all, we also only bury our dead in a suit. From richer excavations on the sandy
25850 soils of Brabant we have at least been able to conclude that there were contacts between the local elites and the Celtic world of Central Europe."
Back in the coffee shop, Roymans wants to say a bit more about what he calls the Celt question. "The discussion about Celts and Germans in the South of the Netherlands is complicated by the fact that scientists from different disciplines talk past each other. Linguists say: someone is a Celt if he speaks Celtic. Unfortunately, little Celtic has been handed down in these regions – a handful of names that could just as well have been borrowed – so try to draw a sensible conclusion. Archaeologists base
25860 themselves on the material culture and prefer not to stick an ethnic label on the farmers from the Iron Age. We do not speak of Celts, but at most of 'Celticized tribes'. Our research focuses on cultural influence.
"The entire discussion goes back to Caesar. He wanted to go down in history as the conqueror of all of Gaul. Because he could not go on forever, he declared the Rhine the ethnic border between the wild Celts and the even wilder Germanic hordes. But if
25865 you had asked an inhabitant of an Iron Age settlement on the Rhine whether he was a Celt or a German, he would have stared at you incredulously. 'I am Jansen van Pietersen,' he would say, or, if he were very open-minded, perhaps: 'I am an Eburone.'

25870 Punitive expedition
That afternoon I travel on to Maastricht, in a last attempt to get in touch with the spirit of the Celts, or at least that of the Eburones. After a short visit to the Bonnefanten Museum – the archaeology department is being reorganized and the famous

25875 Gallic 'cock of Buchten' is not on display – I cycle on a rented Batavus past the Sint Pietersberg and the Eerste Nederlandse Cement Industrie. Just across the Belgian border, a wooded plateau rises on the right side of the road. On top of it, at Kanne-Caster, there is supposed to be a fort from the Gallic War, uncovered in the 1970s. Some scholars believe it was a small oppidum of the Eburones; according to others, it was the legendary Aduatuca, the place where Ambiorix slaughtered six thousand Romans in 54 BC, and from where Caesar later organised his punitive expedition against the Eburones.

25880 After a steep climb along a zigzag path, I expect all sorts of things: cobblestone walls, post holes, defensive ditches – whether or not covered with grass and bushes. But there is nothing archaeological to be seen, not even an information sign. Looking out over the rolling ridge, with a canal low in the distance and a meadow with white cows behind me, it dawns on me that the excavations here were of course of the same nature as those at Helmond. The research has been done, the trenches have been filled in again, and there is nothing left to remind us of the Eburones. When I cycle back over the Sint Pietersberg, I realise how thoroughly Caesar went about his work. However brave the Belgae were, there is depressingly little left of them in the Netherlands.

25895 The exhibition 'Celts in the Netherlands?' in the Allard Pierson Museum can be seen until 11 June. Amsterdam, Oude Turfmarkt 129. Tue. to Fri. 10am-5pm, Sat. and Sun. 1pm-5pm. Information about the manifestation 'Celtica Nederland' at the Stichting A.G. van Hamel, Postbus 1427, 3500 BK Utrecht.

THE NETHERLANDS AROUND THE BEGINNING OF OUR CENTURY

Card: NRC Handelsblad/Willum Morsch, 30.04.93

WHY THE PYTHIA DOES NOT NOW GIVE ORACLES IN VERSE

I. Basilocles – Philinus.

THE SPEAKERS BASILOCLÉS, a citizen of Delphi.

25910 PHILINUS, a friend, perhaps also of Delphi.

Bas. "You have made it late in the evening, Philinus, by escorting your guest about amongst the dedicated things: I lost all patience in waiting for you both."

25915 Phil. "Yes, Basilocles, we strolled along slowly – sowing words as we went, and forthwith 'reaping words with strife', that sprung up and emerged along our path, like the crop of the Dragon's Teeth, spiteful and contentious words."

Bas. "Will it then be necessary to ask one of those who were there at the time, or are you willing yourself to oblige us and repeat your conversation? and tell us who were the speakers?"

25920 Phil. "That task, it seems, is mine, for you won't find the others easily; I saw most of them going up again to the Corcium and the Lycoreia, in company with the visitor."

Bas. "How fond our visitor is of seeing the sites, and how extravagantly fond of hearing stories!"

25925 Phil. "Rather, fond of history, and willing to learn; and not so much to be admired for these two qualities, as for gentleness combined with elegance of manner, and then an incredulity and a fondness for disputation – the result of intelligence – with nothing in it ill-tempered or stubborn: so that after being a little while in his company you exclaim, 'The child of a good father!' [Plato Republic 368a] You are surely acquainted with Diogenianus, that best of men?"

25930 Bas. "I have not seen him; but I have met many who greatly approve of his conversation and character, and say just the same things of him as you do of the youth. But what was the occasion of this discussion of yours?"

II. Philinus narrates their conversation.

25935 THE SPEAKERS PHILINUS

DIOGENIANUS, a young visitor from Pergamum, son of Diogenianus.

THEON, a literary friend.

SERAPION, Athenian poet.

BOETHUS, a geometrician, nearly a converted Epicurean.

25940 TWO GUIDES to the Temple of Delphi.

Phil. "The guides were going through their regular spiel, paying no heed to our entreaties that they cut short their long stories and their reading of every single inscription, whatever its interest. The appearance and artistic merit of the statues did not so much attract the notice of the visitor, who had no doubt seen many fine things of the sort elsewhere. But he admired the color of the bronze, which was not like dirt nor like verdigris, but shone with a dark blue dye, so as to contribute considerably to the effect of the statues of the admirals (for there he had begun his tour), standing as they did, sea-like in color, and truly men of the ocean deep. Was there, he asked, some special mode of alloying and preparing the bronze used by the ancient artificers, like the tempering of swords, on the loss of which skill, bronze was exempted from the uses of war? For we know," he continued, "that Corinthian bronze acquired its beauty of color not through any art, but through accident, when a fire consumed a house containing a little gold and silver and a great quantity of bronze; all which being mixed and melted together; and the whole thing took its name from bronze, the preponderating metal."

Theon broke in: "We have heard a different story, with a bit of mischief in it. A Corinthian bronze-worker found a chest containing a hoard of gold. Fearing detection, he chipped it off little by little, quietly mixing the bits with bronze; the result was a marvellous blend, which he sold at a high price, as people were delighted with its color and beauty. However, the one story is as mythical as the other; what we may suppose is that some method was known of mixing and preparing, much as now they alloy gold with silver, producing a peculiar and rare, and to my mind a sickly and pallid effect, a perversion with no beauty in it."

III. Diog. "What then has been the cause, do you think, of the color of these bronzes?"

Theon "Here is a case in which, of the first and primal elements of Nature – namely, Fire, Earth, Air Water – none comes near to, or has to do with, bronze, except only air: clearly then, air is the agent; from its constant presence and contact the bronze gets its exceptional quality, or perhaps τοῦτ' ἤδη πρὶν Θεόγνωιν γεγονέναι. Thus much you knew before Theognis was, as the comic poet has it. But what you want to learn, Diogenianus, is perhaps the nature of the air, and the property in virtue of which repeated contact has thus colored the bronze?" Diogenianus said that it was; "And I too," continued Theon; "my young friend, let us continue our quest together; and first, if you will agree, ask why olive oil produces a more copious rust on the metal than other liquids. It does not, of course, actually make the deposit, because it is pure and uncontaminated when applied."

Diog. "Certainly not; the real cause appears to me to be something different; the oil is fine, pure, and transparent, so the rust when it meets it is specially evident, whereas with other liquids rust becomes invisible."

Theon "Excellent, my young friend, that is prettily put. But consider also, if you please, the cause given by Aristotle."

Diog. "I do please. Aristotle says that rust, when it comes into contact with other liquids, passes invisibly through and is dispersed, because the particles are irregular and fine; whereas in dense oil it is held together and permanently condensed. If, then, we can come to some such hypothesis ourselves, we shall not be entirely at a loss for a spell to charm away this difficulty."

IV. We encouraged him and agreed, and Theon went on to say that the air of Delphi is thick and close of texture, with a tenseness caused by reflection from the hills and their resistance, but is also fine and biting, as seems to be proved by the facts of digestion of food. The tenuity allows it to enter bronze, and to scrape up from it much solid rust, which rust again is held up and compressed, because the density of the air does not allow it a passage through; but the deposit breaks out, because it is so copious, and takes on a bright rich hue at the surface. This we applauded, but the visitor remarked that either hypothesis was sufficient for the argument.

Diog. "The fineness will be found to be in contradiction to the density you speak of, but there is no necessity to assume it. The bronze, as it ages, exhales or throws off rust by its own inherent action; the density holds together and solidifies the rust, and makes it apparent because of its quantity."

Theon broke in, "What is to prevent the same thing being both fine and dense, as silks or fine linen stuffs, of which Homer says καίροσέων δ' ὀθωνῶν ἀπολείβεται ὕγρον ἔλαιον."

And from the close-spun weft the trickling oil will fall, [Od. 7.107: *] where he indicates the minute and delicate workmanship of the fabric by the fact that the oil

would not remain, but trickled or glided off, the fineness at once and the density refusing it passage. And again, the scraping up of the rust is not the only purpose served by the tenuity of the air; it also makes the color itself pleasanter to the eye and brighter, mingling lustre with the azure of the blue."

V. Here there was an interval of silence; the guides were getting back to their routine speeches. A certain oracle given in verse was mentioned – I think it was one about the reign of Aegon the Argive – when Diogenianus observed that he had often been surprised at the badness and common quality of the verse in which oracles are delivered. yet the God is Choirmaster of the Muses, and eloquent language is no less his function than beauty of ode for tune, and he should have a voice far above that of Homer and Hesiod in verse. And yet we have the greater part of the oracles a tissue of bad taste, both in diction and in metre. Then Serapion the poet of Athens, said Serap. "Then do we really believe that these verses are the God's, yet venture to say that they fall behind Homer and Hesiod in beauty? Shall we not rather take them as the best and most beautiful in poetry, and revise our judgement of them, as prejudiced by familiarity with a bad standard?"

At this point Boethus the geometer – you know him, already well on his way into the Epicurean camp – broke in.

Boeth. "Have you ever heard the story of Pauson the painter?"

Serap. "No, I have not."

Boeth. "Well, it's certainly worth hearing. It seems that he had contracted to paint a horse rolling, and not galloping. The buyer was indignant; so Pauson laughed and turned the canvas upside down, with the result that the lower parts became the upper, and there was the horse rolling, not galloping. So it is, Bion tells us, with certain syllogisms when converted. Thus some will tell us not that the oracles are quite beautiful because they are the God's, but that they are not the God's because they are bad! That point may be left unsettled. But that the verses used in the oracles are bad poetry," he continued, "is made clear also in your judgement, my dear Serapion, isn't it so? For you write poems which are severe and philosophical in subject, but in force, grace, and diction are more like the work of Homer and Hesiod than like the utterances of the Pythia!"

VI. Serap. "Yes, we are sick, Boethus, sick in ear, and sick in eye. Luxury and softness have accustomed us to think things beautiful as they are more sweet, and call them so. Soon we shall actually be finding fault with the Pythia because she does not speak with a more thrilling voice than Glaucé the singing-girl, or use costly ointments, or put on purple robes to go down into the sanctuary, or burn on her censor cassia, mastic, and frankincense, rather than her own barley and bay leaves. Do you not see," he went on, "what grace the songs of Sappho have, how they charm and soothe the hearers, while the Sibyl 'with raving mouth,' as Heraclitus says, 'utters words with no laughter, no adornment, no perfumes,' yet makes her voice carry to ten thousand years, because of the God. And Pindar tells us that Cadmus heard from the God 'right music', not sweet music, or delicate music, or twittering music. What is passionless and pure gives no admission to pleasure; she was cast out in this very place, together with pain; and the most of her has dribbled away, it seems, into the ears of men."

VII. When Serapion had done, Theon smiled.

Theon "Serapion has paid his usual tribute to his own proclivities, making capital out of the turn which the conversation had taken about pain and pleasure! But for us, Boethus, even if these verses are inferior to Homer, let us never suppose that the God has composed them; he only gives the initial impulse according to the capacity of each prophetess. Why, suppose the answers had to be written, not spoken. I do not think we should suppose that the letters were made by God, and find fault with the calligraphy as below royal standard. The strain is not the God's, but the woman's, and so with the voice and the phrasing and the metre; he only provides the fantasies, and puts light into her soul to illuminate the future; for that is what inspiration is. To put it plainly, there is no escaping you prophets of Epicurus – yes, you too, Boethus, are drifting that way – you blame those old prophetesses because they used bad poetry, and you also blame those of today because they use no poetry, and speak the first words which come, that they may not be assailed for delivering headless, hollow, crop-tailed lines."

Diog. "Do not jest, in Heaven's name, no! but help us to solve the problem, which interests us all. There is no one who is not in search of a rational account of the fact that the oracle has ceased to use metre and poetry."

- Theon "But right now, my young friend, we seemed to be doing a shabby turn by the guides, keeping them from their proper duties. Suffer them first to do their office; afterwards we shall discuss in peace whatever you wish."
- VIII. Our round had now brought us in front of the statue of Hiero the tyrant. Most of the stories the foreign visitor knew well, but he good-naturedly lent his ear to them. But at last, when he heard that a certain bronze pillar given by Hiero, which had been standing upright, fell of its own accord on the very day when Hiero died at Syracuse, he showed surprise. I set myself to remember similar instances, such as the notable one of Hiero the Spartan, how before his death at Leuctra the eyes fell out of his statue, and the gold stars disappeared which Lysander had dedicated after the naval battle of Aegospotami. And then the stone statue of Lysander himself broke out into such a growth of weeds and grass that the face was hidden. At the time of the Athenian disaster in Syracuse, the golden berries kept dropping off from the palm trees, and crows chipped the shield on the figure of Pallas. Again, the crown of the Cnidians, which Philomelus, tyrant of Phocis, had given to Pharsalia the dancing girl, caused her death, as she was playing near the temple of Apollo in Metapontum, after she had removed from Greece into Italy: for young men made a rush for the crown and in their struggle with one another for the gold, they tore her limb from limb. Now Aristotle used to say that Homer is the only poet who made "words which stir, because of their energy." But I would say that there have been votive offerings sent here which have movement in a high degree, and help the God's foreknowledge to signify things; that none of them is void or without feeling, but all are full of Divinity.
- Boeth. "Very good! So it is not enough to shut the God into a mortal body once every month. We will also knead him into every morsel of stone and brass, to show that we do not choose to hold Fortune, or Spontaneity, a sufficient author of such occurrences."
- Phil. "Then in your opinion," I said, "each of the occurrences looks like Fortune or Spontaneity; and it seems probable to you that the atoms glided forth, and were dispersed, and swerved, not sooner and not later, but at the precise moment when each of the dedicators was to fare worse or better. Epicurus helps you now by what he said or wrote three hundred years ago; but the God, unless he take and shut himself up in all things, and be mingled with all, cannot, you think, initiate movement, or cause change of condition in anything which is."
- IX. Such was my answer to Boethus, and to the same effect about the Sibyl and her utterances. For when we stood near the rock by the Council Chamber, on which the first Sibyl is said to have been seated on her arrival from Helicon, where she had been brought up by the Muses (though others says that she came from the Maleans, and was the daughter of Lamia the daughter of Poseidon), Serapion remembered the verses in which she hymned herself; how she will never cease from prophesying, even after death, but will herself go round in the moon, being turned into what we call the "bright face", while her breath is mingled with the air and borne about in rumours and voices for ever and ever; and her body within the earth is transformed, so that from it spring grass and weeds, the pasture of sacred cattle, which have in their inward parts all the colours, shapes and qualities by which men obtain forecasts of future things. Here Boethus made his derision still more evident.
- The foreign visitor observed that, although these things have a mythical appearance, yet the prophecies are attested by many uprootings and removals of Greek cities, inroads of barbarian hordes, and the overthrow of dynasties.
- Diog. "These still recent troubles at Cumae and Dicæarchia, I were they not long ago foretold in the songs of the Sibyl; so that Time was only discharging his debts in the fires which have burst out of mountains, the boiling seas, the masses of burning rocks tossed aloft by the winds, the ruin of cities many and great, so that if you visit them in broad daylight you cannot get a clear idea of the site, the ground being covered with confused ruins? It is hard to believe that such things have happened at all, let alone that they were predicted long ago – unless with divine assistance."
- X. Boeth. "My good Sir; what does happen in Nature which is not Time paying his debts? Of all the strange, unexpected things, by land or sea, among cities and men, is there any which some one might not foretell, and then, after it has happened, find himself right? Yet this is hardly foretelling at all; it is telling, rather it is tossing or scattering words into the infinite, with no principle in them. They wander about, and sometimes Fortune meets them and falls in with them; but it is all chance."

26140 It is one thing, I think, when what has been foretold happens, and quite another when
 26145 what will happen is foretold. Any statement made about things then non-existent
 contains intrinsic error; it has no right to await the confirmation which comes from
 accident; nor is it any true proof of having foretold with knowledge that the thing
 happened after it was foretold; for Infinity will bring all things. No, the 'good
 26150 guesser', whom the proverb 2 has announced to be the best prophet, is like a man who
 hunts on the tail of the future, by the help of the plausible. These Sibyls and
 Bacises threw into the sea, that is, into time, without having any real clue, nouns
 and verbs about troubles and occurrences of every description. Some of these
 prophecies came about, but they were lies; and what is now pronounced is a lie like
 them, even if, later on, it should happen to turn out true."

26155 XI. When Boethus had finished, Serapion spoke.
 Serap. "The case is quite fairly put by Boethus against prophecies so indefinitely
 worded as those he mentions, with no basis of circumstance: 'If victory has been
 foretold to a general, he has conquered; If the destruction of a city, it is
 26160 overthrown.' But where not only the thing which is to happen is stated, but also the
 how, the when, after what event, with whose help, then it is not a guess at things
 which will perhaps be, but a clear prediction of things which will certainly be. Here
 are the lines with reference to the lameness of Agesilaus: 3
 Sure though thy feet, proud Sparta, have a care,
 26165 A lame king's reign may see thee trip – Beware!
 Troubles unlooked for long shall vex thy shore,
 And rolling Time his tide of carnage pour.
 "And then again those about the island 4 which the sea threw up off Thera and
 Therasia, and upon the war between Philip and the Romans:
 26170 When Trojan race the victory shall win
 From Punic foe, lo! wonders shall begin;
 Unearthly fires from out the sea shall flash,
 Whirlwinds toss stones aloft, and thunder crash,
 An isle unnamed, unknown, shall stand upright,
 26175 The weak shall beat the stronger in the fight.
 "What happened within a short time – that the Romans mastered the Carthaginians, and
 brought the war with Philip to a finish, that Philip met the Aetolians and Romans in
 battle and was defeated, and lastly, that an island rose out of the depths of the
 sea, with much fire and boiling waves – could not all be set down to chance and
 26180 spontaneous occurrence. Why, the order emphasizes the foreknowledge, and so does the
 time predicted to the Romans, some five hundred years before the event, as that in
 which they were to be at war with all the races at once, which meant the war with the
 slaves after their revolt. In all this nothing is unascertainable, the story is not
 left in dim light to be groped out with reference to Fortune 'in Infinity', it gives
 26185 many securities, and is open to trial, it points the road which the destined event is
 to tread. For I do not think that any one will say that the agreement with the
 details as foretold was accidental. Otherwise, what prevents some one else from
 saying that Epicurus did not write his Leading Principles for our use, Boethus, but
 that the letters fell together by chance and just spontaneously, and so the book was
 finished off?"

XII. While we were talking thus, we were moving forward.
 In the store-house of the Corinthians we were looking at the golden palm tree, the
 only remnant of their offerings, when the frogs and water-snakes embossed round the
 26190 roots caused much surprise to Diogenianus, and for the matter of that, to us. For the
 palm tree is not, like many others, a marshy or water-loving plant, nor have frogs
 anything specially to do with the Corinthians. Thus they must be a symbolical or
 canting device of that city, just as the men of Selinus are said to have dedicated a
 golden plant of parsley (σέλινον), and those of Tenedos the axe, because of the crabs
 26195 found round the place which they call Asterium, the only ones, it appears, with the
 brand of an axe on the shell. Yet the God himself is supposed to have a partiality
 for crows and swans and wolves and hawks, for anything rather than beasts like crabs.
 Serapion observed that the artist intended a veiled hint at the sun drawing his
 aliment and origin from exhalations out of moist plants, whether he had it from
 26200 Homer,
 ἥελιος δ' ἀπόρουσε λιπῶν περικαλλέα λίμνην
 Leaving the beauteous lake, the great sun scaled the brazen sky or whether he had
 seen the sun painted by the Egyptians as a new-born child seated on a lotus. I
 laughed:

- 26205 Phil. "Where have you got to again, my good Sir, thrusting the Stoa in here, and quietly slipping into our discussion their 'Conflagrations' and 'Exhalations'? Thessalian women fetch the sun and the moon down to us, but you are assuming that they are first born and then watered out of earth and its waters. Plato dubbed man a 'heavenly plant', 5 rearing himself up from a root on high, namely his head; but you
- 26210 laugh down Empedocles when he tells us how the sun, having been brought into being by reflection of heavenly light around the earth,
ἀνταυγεῖν πρὸς Ὀλυμπὸν ἀταρβήτοισι προσώποις
Beams back upon Olympus undismayed!
- 26215 Yet, on your own showing, the sun is a creature or plant of the marshes, naturalized by you in the country of frogs or water-snakes. However, all this may be reserved for the Stoics and their tragedies; here we have the incidental works of the artists, and let us examine them incidentally. In many respects they are clever people, but they have not in all cases avoided coldness and elaboration. Just as the man who designed Apollo with the cock in his hand meant to suggest the early morning hour when dawn is
- 26220 coming, so here the frogs may be taken for a symbol of the spring season when the sun begins to have power over the air and to break up winter; always supposing that, with you, we are to reckon Apollo and the sun one God, not two."
- Serap. "What? do you not agree? do you hold the sun to be different from Apollo?"
- 26225 Phil. "As different as the moon from the sun; only she does not hide the sun often or from all the world, whereas the sun has made, we may almost say, all the world ignorant of Apollo, diverting thought by sensation, to the apparition from the real."
- XIII. Next Serapion asked the guide the real reason why they call the chamber not after Cypselus, the Dedicator, but after the Corinthians. When they were silent, being, as I privately believe, at a loss for reason, I laughed, and said "What can these men possibly know or remember, utterly dazed as they must be by our high celestial talk? Why, it was only just now that we heard them saying that, after the tyranny was overthrown, the Corinthians wished to inscribe the golden statue at Pisa, and also this treasure-house, with the name of the city. So the Delphians granted it
- 26230 as a right, and agreed; but the Corinthians passed a vote to exclude the Eleians, who had shown jealousy of them, from the Isthmian meetings, and from that time to this there has been no competitor from Elis. The murder of the Molionidæ by Hercules near Cleonæ has nothing to do with the exclusion of the Eleians, though some think that it has. On the contrary, it would have been for them to exclude the Corinthians if that had been the cause of the conflict." Such were my remarks.
- 26235 XIV. When we passed the chamber of the Acanthians and Brasidas, the guide showed us a place where iron obelisks to Rhodopis the courtesan once used to stand. Diogenianus showed annoyance.
- 26245 Diog. "So it was felt to be the duty of the same state both to find a place for Rhodopis to deposit the tithes of her earnings and to put Aesop, her fellow slave, to death!"
- Serap. "Bless you, friend; why so vexed at that? Carry your eyes upwards, and behold among the generals and kings the golden Mnesarete, which Crates called a standing
- 26250 trophy of the lewdness of the Greeks."
- Diog. "Was it then about Phryne that Crates said that?"
- Serap. "Yes it was; her name was Mnesarete, but she took on that of Phryne [toad] as a nickname because of her yellow skin. Many names, it would seem, are concealed by nicknames. There was Polyxena, mother of Alexander, afterwards said to have been
- 26255 called Myrtale and Olympias and Stratonice. Then Eumetis of Rhodes is to this day called by most people Cleobuline, after her father; and Herophile of Erythræ, when she showed a prophetic gift, was addressed as Sibylla. You will hear the grammarians telling us that Leda was named Mnesinoe, and Orestes Achæus. But how do you propose," he continued, looking hard at Theon, "to get rid of the charge as to Phryne?"
- 26260 XV. Theon smiled quietly: "In this way: a counter-charge against you for raking up the pettiest of the Greek misdoings. For as Socrates, 6 when entertained in the house of Callias, makes war upon the ointment only, but looks on all the dancing and tumbling and kisses and buffoonery, and holds his tongue, so you, it seems to me,
- 26265 want to exclude from the temple a poor woman who made an unworthy use of her charms; but when you see the God encompassed by first-fruits and tithes of murder, war, and rapine, and his temple loaded with Greek spoils and booty, you show no disgust; you have no pity for the Greeks when you read on the beautiful offerings such deeply disgraceful inscriptions as 'Brasidas and the Acanthians from the Athenians',
- 26270 'Athenians from Corinthians', 'Phocians from Thessalians', 'Orneatans from

Sicyonians', and 'Amphictyones from Phocians'. So Praxiteles, it seems, was one person who offended Crates by finding room for his mistress to stand here, whereas Crates ought to have commended him for placing beside those golden kings a golden courtesan, a strong rebuke to wealth as having nothing wonderful or worshipful about it. It would be good if kings and rulers were to set up in the God's house offerings to Justice, to Temperance and Magnanimity, not to golden and delicate Abundance, in which even the very foulest lives have their share."

XVI. "You forget to mention," said one of our guides, "how Cræsus had sculpted a golden figure of his baker-woman and dedicated it here." Theon "Yes; but that was not to flout the temple with his luxury of wealth, but for a good and righteous cause. The story is that Alyattes, father of Cræsus, married a second wife and brought up a second family. This woman fomented a plot against Cræsus, giving poison to the baker and telling her to knead a loaf with it and serve it to Cræsus. The baker told Cræsus in secret and set the loaf before the second wife's children. And so, when Cræsus became king, he requited the baker-woman's service in away which made the God a witness, and moreover did a good turn to him. Hence, it is quite proper to honour and love any such offering from cities as that from the Opuntians. When the Phocian tyrants had melted up many of the gold and silver offerings and struck coined money, which they distributed among the cities, the Opuntians collected all the silver they could find, and sent a large jar to be consecrated here to the God. I commend the Myrinæans also, and the Apollonians, who sent hither sheaves of gold, and even more highly the Eretrians and Magnesians, who endowed the God with firstfruits of men, as being the giver of crops and also ancestral, the god of their fathers; racial, the creator of men; and the friend of man. Whereas I blame the Megarians, because they were almost alone in setting up the God holding a lance; this was after the battle in which they defeated and expelled the Athenians who were holding their city, after the Persian wars. Later on, however, they offered to him a golden plectrum, referring it, as it appears, to Scythinus, who says of the lyre:

ἦν ἄρμόζεται
Ζηνὸς εὐειδῆς Ἀπόλλων, πᾶσαν ἀρχὴν καὶ τέλος
συλλαβλῶν: ἔχει δὲ παμπὸν πλῆκτρον ἡλίου φάος
which the son of Zeus

Wears, the comely God Apollo, gathering first and last in one,
And he holds a golden harp-quill flashing as the very sun.

XVII. Serapion wanted to put in some further remark on this, when the stranger said: Dion. "It is delightful to listen to such speeches as we have heard, but I feel myself obliged to claim fulfillment of the original promise, that we should hear the cause which has made the Pythia cease to prophesy in epic or other verse. So, if it be your pleasure, let us leave to another time the remainder of the sights, sit down where we are, and hear about that. For it is this more than anything else which militates against the credibility of the oracle; for it must be one of two things: either the Pythia does not get near the spot where the Divinity is, or the current is altogether exhausted, and the power has failed."

Accordingly we went round and seated ourselves on the southern plinth of the temple, in view of the temple of Earth and the spring of water, which made Boethus at once observe that the very place where the problem was raised lent itself to the stranger's case. For here was a temple of the Muses where the exhalation rises from the fountain; from which fountain they drew the water used for the lustrations, as Simonides has it:

ἐνθα χερίβεσσιν ἀπύνεται τὸ Μουσᾶν
καλλικόμων ὑπένρθεν ἀγνὸν ὕδωρ.
Whence is drawn for holy washings
Water of the Muses bright.

And again, in a rather more affected strain, the same poet addresses Clio:

ἀγνᾶν ἐπίσκοπον χερνίβων
Chaste guardian of our lustrations
and goes on to say
πολύλιστον ἀρυόντεσσιν
ἀχρυσόπεπλον ...

εὐῶδες ἀμβροσίῳ ἐκ μυχῶν
ἐρανὸν ὕδωρ λαβεῖν.

Goddess sought in many a vow
By no golden robe encumbered, hear thy servants drawing now

Water, fragrant and delightful, from ambrosial depths below.

So Eudoxus was wrong in believing those who have made out that this was called 'Water of Styx'. But they installed the Muses as guardians of prophecy and wardens of the place, by the fountain and the temple of Earth where the oracle used to be, some say, because the responses were given in metre and in lyric strains. And some say further that here the heroic metre was first heard:

συνφέρετε πρὸς τ', οἴωνοις, κηρόν τε, μέλισσαι.

Bring in your feathers, ye birds; ye bees, bring wax at his bidding.

Later Earth became inferior to the God and lost her august position. 8

XVIII. Serapion responded, "More reasonable, that, Boethus, and more in tune with the Muses. For we ought not to fight against the God, nor to remove, along with his prophecy, his Providence and Godhead also, but rather to seek fresh solutions for apparent contradictions, and never to surrender the reverent belief of our fathers." Phil. "Excellent Serapion! you are right. We are not abandoning Philosophy, as cleared out of the way and done for, because once upon a time philosophers put out their dogmas and theories in verse, as Orpheus, Hesiod, Parmenides, Empedocles, Thales, whereas later on they gave it up, and have now all given it up – except you! In your hands Poetry is returning home to Philosophy, and clear and noble is the strain in which she rallies our young people. Astronomy again: she was not lowered in the hands of Aristarchus, Timocharis, Aristyllus, Hipparchus, all writing in prose, whereas Eudoxus, Hesiod, and Thales used metre, if we assume that Thales really wrote the Astronomy attributed to him. And Pindar himself confesses that he is quite at a loss about the neglect of verse in his own day, and is astonished 9 It is neither out of the way nor absurd for us to seek out the causes of such changes; but to dismiss any of the arts and sciences altogether, because there is some alteration or variation in their details or delivery, is totally unfair."

XIX. Theon "And yet those instances have involved really great variations and novelties, whereas of the oracles given here we know many in prose even in old days, and those on no trifling matters. When the Lacedæmonians consulted the God after their war with the Athenians, as Thucydides tells us, 10 he promised them victory and mastery, and that "he himself will help them, invited or uninvited". And again, that if they did not restore Pleistonax, they should plough with a silver share. 11 When the Athenians consulted the God about their expedition in Sicily, he directed them to bring the priestess of Erythræ to Athens; now the woman's name was 'Quiet'. When Deinomenes of Sicily inquired about his sons, the answer was that all three should reign as tyrants. 'And the worse for them,' rejoined Deinomenes. 'That too,' added the God, and added it to the response. You know that Gelo had the dropsy and Hiero the stone, while they reigned; Thrasybulus, the third son, was involved in revolutions and wars and soon lost his throne. Then Procles, tyrant of Epidaurus, after putting many others to death in cruel and unlawful ways, at last killed Timarchus, who had come to him from Athens with money, after receiving him with hospitality and kindness; he thrust his body into a basket and threw it into the sea. This he did by the hands of Cleander of Aegina, and no one else knew about it. Afterwards, when he was in sore trouble, he sent his brother Cleotimus to consult the oracle secretly about his own flight and retirement to another land. The God answered that he granted exile to Procles, and retirement either to the place where he had ordered his Aeginetan friend to lodge the basket, or to where the stag sheds his horn. The tyrant understood the God to bid him fling himself into the sea, or to buy himself underground (for the stag buries his horn deep out of sight when it falls off). He waited a short time, but when his affairs became desperate he sought exile. But the friends of Timarchus caught him and slew him, casting the corpse into the sea.

"Now comes the strongest instance: the statutes by which Lycurgus regulated the Lacedæmonian constitution were given to him in prose. So Alyrius, Herodotus, Philochorus, and Ister, the men who most zealously set about collecting metrical prophecies, have written down oracular responses which were not in metre; and Theopompus, who was exceptionally interested in the oracle, administered a vigorous rebuke to those who held that the Pythia did not prophesy in metre in those days; yet, when he wanted to prove the point, he found an exceedingly small number of such answers, which shows that the others, even at that early time, were put forth in prose.

XX. "Some oracles, however, still give their answers in metre; and one of them has become famous. There is in Phocis a temple of Hercules Woman-Hater, where

- the practice is for the consecrated priest not to associate with a woman during his year of office. So they appoint comparatively old men to the priesthood. However, not
26405 very long ago, the office was accepted by a young man of good character, but ambitious, and in love with a young woman. At first he restrained himself and avoided her; but one day, when he was resting after wine and dancing, she burst in and he yielded. Then, in his fear and confusion, he fled to the oracle, and proceeded to ask the God about his offence, and whether it admitted of excuse or expiation. He
26410 received his reply:
ἀπαντα ἀναγκαῖα συγχωρεῖ θεός.
All needful business doth the God allow.
All the same, if it be granted that nothing is prophesied in our own day, otherwise than in metre, the difficulty will be so much greater about the ancients, who
26415 sometimes employed metre for the responses, sometimes not. There is nothing strange, my young friend, in either one or the other, so long as we hold sound, pure views about the God, and do not suppose that it is himself who formerly used to compose the verses, or who now speaks through the Pythia, giving answers as it were through a mask.
26420
XXI. "However, it is worth our while to pursue this inquiry at greater length another time. For the present, let us remember our results, which are briefly these: Body uses ;many instruments, soul uses body and parts, soul has been brought into being as the instrument of God. The excellence of an instrument is to imitate most closely the
26425 power which uses it, with all its own natural power, and to reproduce the effect of his essential thought, but to exhibit it, not pure and passionless and free from error, as it was in the creative artist, but with a large admixture of foreign element. For in itself it is invisible to us, but appearing 'other' and through another medium it is saturated with the nature of that medium. I pass over wax and
26430 gold and silver and copper, and all other varieties of moulded substance, which take on one common form of impressed likeness, but add to the copy each its distinct specialty. I pass over the myriad distortions of images and reflections from a single form in mirrors, plane, hollow, or convex. For nothing seems better to reproduce the type, no instrument more obediently to use its own nature, than the moon. Yet taking from the sun his bright and fiery rays, she does not transmit them so to us: mingled with herself they change colour and also take on a different power; the heat wholly disappeared, and the light fails from weakness before it reaches us. I think you know the saying found in Heraclitus, that 'the sovereign whose seat is at Delphi, speaks not, nor conceals, but signifies'. Take and add then to what is here so well said,
26440 the conception that the God of this place employs the Pythia for the hearing as the sun employs the moon for the seeing. He shows and reveals his own thoughts, but shows them mingled in their passage through a mortal body, and a soul which cannot remain at rest or present itself to the exciting power unexcited and inwardly composed, but which boils and surges and is involved in the stirrings and troublesome passions from within. As whirlpools do not keep a steady hold on bodies borne round and round, and also downwards, since an outer force carries them round, but they sink down of their own nature, so that there is a compound spiral movement, of a confused and distorted kind, even so what we call inspiration seems to be a mixture of two impulses, and the soul is stirred by two forces, one of which it is a passive recipient, one form its
26450 own nature. We see that inanimate and stationary bodies cannot be used or forced contrary to their own nature, that a cylinder cannot be moved as if it were a sphere or a cube, that a lyre cannot be played like a flute or a trumpet like a harp, but that the artistic use of a thing is no other than the natural use. Is it possible, then, that the animate and self-moving, which has both impulse and reason, can be
26455 treated in any other way than is agreeable to the habit, force or natural condition which is already existent within it? Can an unmusical mind be excited like a musical, or an unlettered mind be moved by literature, a mind untrained in reasoning, whether speculative or disciplinary, by logic? It is not to be spoken of.
26460
XXII. "Again, Homer is my witness: he assumes 12 that nothing, so to speak, is brought about without a God; he does not, however, describe the God as using all things for all ends, but according to the art or faculty which each possesses. For do you not see, dear Diogenianus, that Athena, when she wants to persuade the Achæans, calls in Odysseus; 13 when to wreck th truce, she looks for Pandarus; 14 when to rout the Trojans, she approaches Diomedes? 15 Why? because Diomedes is a sturdy man and a fighter, Pandarus an archer and a food, Odysseus a clever speaker and a sensible man. For Homer was not of the same mind as Pindar, 16 if it was Pindar who wrote Sail on a crate, if God so choose 'twill swim.

26470 He knew that different faculties and natural gifts are appointed for different ends; each is moved in its own way, even if the moving force be one for all. As then the force cannot move that which walks so as to make it fly, nor that which lisps to speak clearly, nor the thin voice to be melodious – why, Battus himself was sent as colonist of Libya to get his voice, because he lisped and had a thin voice, but
26475 withal was a kingly, statesmanlike, prudent man – even so, it is impossible for one who has no letters and knows no verse to talk like a poet. And so she who now serves the God has been born as respectably as any man here, and has lived as good and orderly a life; but having been reared in the house of small farmer folk, she brings nothing with her from art or from practice or faculty whatsoever, as she goes down into the sanctuary. As Xenophon thinks that the bride should step into her husband's
26480 home having seen as little as may be, and heard as little, so she, ignorant and untried in almost all things, and a true virgin in soul, is associated with the God. Yet we, who think that the God, when he 'signifies', uses the cries of herons and wrens and ravens, and never ask that they, as the messengers and heralds of the God, should put things into clear rational phrases, do nevertheless ask that the Pythia
26485 should use a voice and style as though from the Thymele, not unembellished and plain, but with metre and elevation, and trills, and verbal metaphors, and a flute accompaniment!

26490 XXIII. "What shall we say then about her older predecessors? Not one thing, I think, but several. In the first place, as has been already said, they, too, for the most part, used to give the responses in prose. In the second place, those times produced temperaments and natural conditions which offered an easy and convenient channel for the stream of poetry, to which were at once superadded, in one and another, an eagerness, an impulse, a preparation of soul, all resulting in a readiness which
26495 needed but a slight initial movement from without to give the imagination a turn. So it was that not only were astronomers and philosophers drawn, as Philinus says, in their several directions, but also, when men were mellow with wine and sentiment, some undercurrent of pity or joy would come, and they would glide into a song-like voice; drinking parties were filled with amorous strains and songs, books with poems in writing. When Euripides wrote 17:
26500 ποιητῆν ἄρα
Ἔρως διδάσκει, κἄν ἄμουσος ᾖ τὸ πρῖν
Love can teach, he makes
A poet of a stranger to the Muse.
26505 he did not mean that Love implants a faculty for poetry or music; the faculty is there already, but Love stirs and warms what was latent and idle. Or are we to say, Sir Stranger, that no one now loves, that Love has gone by the heels, because there is no who, to quote Pindar, 18
26510 ῥίμφα παιδείους
τοξεύει μελιγάρυας ὕμνους
Scatters with easy grace
The vocal shafts of love and joy?

26515 That is absurd. Loves there are and many of them, and they master men; but when they associate with souls which have no natural turn for music, they drop the flute and the lyre, yet are vocal still and fiery through and through, as much as of old. It is an unhallowed thing to say, and an unfair, that the Academy was loveless, or the choir of Socrates and Plato; yet, while we have their love dialogues to read, they have left no poems. Why not declare at once that Sappho was the only woman who ever
26520 loved, if you are to say that Sibylla alone had the gift of prophecy, or Aristonica, and the others who delivered themselves in verse? As Chæremon used to say,
ὁ μὲν γὰρ οἶνος τοῖς τρόποις κεράννυται
Wine mingles with the moods of them that drink,
and the prophetic inspiration, like that of love, uses the faculty which is subjected
26525 to it, and stirs its recipients according to the nature of each.

26530 XXIV. "Not but that, if we look also into the subject of the God and his foreknowledge, we shall see that the change has taken place for the better. For the use of language is like exchange in coined money. Here also it is familiarity which gives currency, the purchasing power varies with the times. There was a day when metres, tunes, odes were the coins of language in us; all History and Philosophy, in a word, every feeling and action which called for a more solemn utterance, were drawn to poetry and music. It is not only that now but few understand, and they with effort, whereas then all the world were listeners, and all felt pleasure in what was

26535 sung,
μηλοβόται τ' ἄρόται τ' ὄρνιχολόχοι τε
who fats his flock
Who ploughs the soil, who snares the winged game,
as Pindar 19 has it. More than that, there was an aptitude for poetry, most men used
26540 the lyre and the ode to rebuke, to encourage, to frame myths and proverbs; also hymns
to the Gods, prayers, thanksgivings, were composed in metre and song, as genius or
practice enabled them to do. And so it was with prophecy; the God did not grudge it
ornament and grace, or drive from hence into disgrace the honoured Muse of the
tripod; he rather led her on, awakening and welcoming poetic natures; he gave them
26545 visions from himself, he lent his aid to draw out pomp and eloquence as being fitting
and admirable things. Then there was a change in human life, affecting men both in
fortune and in genius. Expediency banished what was superfluous, top-knots of gold
were dropped, rich robes discarded; probably too clustering curls were shorn off, and
the buskin discontinued. It was not a bad training, to set the beauty of frugality
26550 against that of profusion, to account what was plain and simple, a better ornament
than the pompous and elaborate. So it was with language: it changed with the times,
and shared the general break-up. History got down from its coach, and dropped metre.
Truth was best sifted out from Myth in prose; Philosophy welcomed clearness, and
found it better to instruct than to astonish, so she pursued her inquiry in plain
26555 language. The God made the Pythia leave off calling her own fellow townsmen 'fire-
burners', the Spartans 'serpent-eaters', men 'mountaineers', rivers 'mountain-
drainers'. He cleared the oracle of epic verses, unusual words, circumlocutions, and
vagueness, and so prepared the way to converse with his consultants just as law
converse with states, as kings address subjects, as disciples hear their masters
26560 speak, so framing language as to be intelligible and convincing.

XXV. "For it should be clearly understood that the God is, in the words of Sophocles,
σοφοῖς μὲν αἰνικτιῆρα θεσφάτων ἀεί,
σκαίοις δὲ φαῦλον κἄν βραχεῖ διδάσκαλον
26565 Unto the wise a riddling prophet aye,
to silly souls a teacher plain and brief.

The same turn of things which brought clearness brought also a new standard of
belief; it shared the general change. Whereas of old that which was not familiar or
26570 common, but, in plain words, contorted and over-phrased, was ascribed by the many to
an implied Divinity, and received with awe and reverence; in later times men were
content to learn things clearly and easily with no pomp or artifice; they began to
find fault with the poetical setting of the oracles, not only as a hindrance to the
perception of truth, because it mingled indistinctions and shadow with the meaning,
26575 but also because by this time they were getting to mistrust metaphors, riddles, and
ambiguities, as so many holes or hiding-places provided for him who should trip in
his prophecy, that he might step into them and secure his retreat. You might have
heard it told by many, how certain persons with a turn for poetry still sit about the
place of oracles, waiting to catch the utterances, and then weaving verses, metres,
26580 rhythms, according to occasion, as a sort of vehicle. As to your Onomacrituses, and
Herodotuses, and Cinæthons, and the censures which they brought upon the oracles, by
importing tragedy and pomp where they were out of place, I let the charge pass and
won't join in the attack on them. Most, however, of the discredit which attached so
copiously to poetry came from the gang of soothsayers and scamps who strolled around
26585 the ceremonies of the Great Mother and of Serapis, with their mummeries and tricks,
turning verses out of their own heads, or taking them at random from handbooks, for
servant boys and silly girls, and such as are best attracted by metre and a poetic
cast of words; from all which causes poetry seemed to put herself at the service of
cheats and jugglers and lying prophets, and was lost to truth and to the tripod.

26590 XXVI. "Thus I should not be surprised to find that the old people sometimes required
a certain ambiguity, circumlocution, indistinctness. For it was not then a case of
'A' approaching the oracle with a question, if you please, about the purchase of a
slave, or 'B' about business; powerful states, haughty kings and tyrants would
26595 consult the God on public affairs, men whom it did not answer the officials of his
temple to vex and provoke by letting them hear what they did not wish to hear. For
the God does not obey Euripides, 20 who sets up as a lawgiver with
Φοῖβον ἀνθρώποις μόνον
χρῆν θεσπιῶδεῖν
26600 Phoebus, none but he,

May give men prophecies.

He uses mortal men as ministers and prophets, whom it is his duty to make his care, and to protect, lest they perish at the hands of the bad while serving him. He does not then choose to conceal the truth; what he used to do was to give a twist to its manifestation, which, like a beam of light, is refracted more than once in its passage, and is parted into many rays as it becomes poetry, and so to remove whatever in it was harsh and hard. Tyrants might thus be left in ignorance, and enemies not forewarned. For them he threw a veil in the innuendoes and ambiguities which hid the meaning from others, but he did not elude the intelligence of the actual consultants who gave their whole mind to the answers. Hence, now that things have changed, it is sheer folly to criticize and find fault with the God because he thinks right to give his aid no longer in the same manner but in another.

XXVII. "Another thing is this: Language receives no greater advantage from a poetical form than this, that a meaning which is wrapped and bound in metre is more easily remembered and grasped. Now in those days much memory was required. Many things used to be explained orally; local indications, the times when things were to be done, rites of Gods across the seas, secret burying-places of heroes, hard to be discovered by those setting off for lands far from Greece. You know about Chius and Cretinus, and Nesichus, and Phalanthus, and many other leaders of expeditions, how many clues they needed to find the proper place appointed to each for settlement, while some of them missed the way, as did Battus. 21 He thought that he would be turned out, not understanding what the place was to which he had been sent; then he came a second time loudly complaining. Then the God answered:

αἰ τὺ ἔμεῦ Λιβύαν μαλοτρόφον οἷσθας ἄρειον,
μὴ ἐλθὼν ἐλθόντιος, ἄγαν ἀγαμαί σοφίην σευ
Thou that hast never been there, if thou know'st Libya the sheepland
Better than I that have been, then wonderful wise is thy wisdom.
And thus he sent him out again.

Then Lysander 22 entirely failed to make out the hill Orchalides, otherwise called Alopecus, and the river Hoplites,
γῆς τε δράκονθ' ὑπὸν δόλιον κατόπισθεν ἰόντα
Also the dragon, earthborn, in craftiness coming behind thee.

and was defeated in battle and slain in those very spots by Neochorus, a man of Haliartus, who bore on his shield the device of a serpent. There are many such answers given to the old people, all hard to grasp and remember, which I need not give you at length, since you know them.

XXVIII. "Our present settled condition, out of which the questions now put to the God arise, I welcome and accept. There is great peace and tranquility, war has been made to cease, there are no wanderings in exile, no revolutions, no tyrannies, no other plagues or ills in Greece asking for potent and extraordinary remedies. But when there is nothing complicated or mysterious, or dangerous, only questions on petty popular matters, like school themes, 'whether I should marry', 'whether I should sail', 'whether I should lend', and the most serious responses given to states concern harvests and cattle-breeding and public health; in such circumstances, to clothe the answers in metre, or to devise circumlocutions, to introduce strange words on questions calling for a plain, concise answer, is what an ambitious sophist might do, bedizening the oracle for his glory. But the Pythia is a lady in herself, and when she descends thither and is in the presence of the God, she cares for truth rather than for glory, or for the praise or blame of men.

XXIX. "So perhaps ought we too to feel. As it is, in a sort of agony of fear, lest the place should lose its reputation of three thousand years, and a few persons should think lightly of it and cease to visit the oracle, for all the world as if it were a sophist's school, we apologize, and make up reasons and theories about things which we neither know now ought to know. We smooth the critic down, and try to persuade him, whereas we ought to bid him be gone –

αὐτῷ γὰρ οἱ πρῶτον ἀνιηρότερον ἔσται

He shall first suffer in a loss not light 23 –

if that is the view which he takes of the God; for if we welcome and admire what the Wise Men of old days have written up: 'Know Thyself' and 'Nothing too much', not least because of the brevity which includes in a small compass a close hammer-beaten sense, we cannot blame the oracles because they mostly use concise, plain, direct phrases. It is with sayings like those of the Wise Men as with streams compressed into a narrow channel; there is no distinctness or transparency to the eye of the

- mind, but if you look into what has been written or said about them ;by those who have wished to learn the full meaning of each, you will not easily find longer treaties elsewhere. The language of the Pythia illustrates what mathematicians mean by calling a straight line the shortest between the same points; it makes no bending, or curve, or doubling or ambiguity; it lies straight towards truth; it takes risks, its good faith is open to examination, and it has never yet been found wrong; it has filled the shrine with offerings from Barbarians and Greeks, and has beautified it with noble buildings and Amphictyonic fittings. Why, you see for yourselves many buildings added which were not here formerly, many restored which were ruinous or destroyed. As new trees spring up by the side of those in vigorous bearing, so the Pylæa flourishes together with Delphi and is fed upon the same meat; the plenty of the one causes the other to take on shapeliness and figure and a beauty of temples, and halls of meeting and fountains of water, such as it never had in the thousand years before. Now those who dwell about Galaxius in Boeotia felt the manifest presence of the God in the abundance and more than abundance of milk:
- προβάτων γάρ ἐκ πάντων κελάρυξεν,
ὥς ἀπὸ κρηνῶν φέρτατον ὕδωρ,
θηλᾶν γάλα· τοῖ δ' ἐπίμπλεν ἐσσύμενοι πίθους·
ἄσκος δ' οὐδέ τις ἀμφορεὺς ἐλίνυσεν δόμοις,
πέλλαι γὰρ ξύλιναι πίθοι τε πλησθεν ἅπαντες·
From all the kine and every flock,
Plenteous as water from the rock,
Came welling, gurgling on its way
The milk that day.
Hot foot they hied them to the task,
To fill the pail, to fill the cask;
No pot or pan had holiday;
Wine-skin or flagon, none might stay
Within, that day.
But to us he gives tokens bright and stronger and more evident than these, in having, after the days of drought, of desertion and poverty, brought us plenty, splendour, and reputation. True, I am well pleased with myself for anything which my own zeal or service may have contributed to this result in support of Polycrates and Petraeus, well pleased too with him who has been our leader in this policy, to whose thought and planning most of the improvements are due; but it is wholly impossible that so great, so vast a change could have been effected in this short time by merely human care, with no God present here or lending his Divinity to the place of the oracle.
- XXX. "But as in those days there were some who found fault with the responses for obliquity and want of clearness, so now there are those who criticize them as too simple, which is childishness indeed and rank stupidity! For as children show more glee and satisfaction at the sight of rainbows or haloes or comets than in that of the sun or of the moon, so do these people regret the riddles, allegories, and metaphors which are so many modes of refraction of prophetic art in a mortal and fanciful medium. And if they do not fully inquire into the cause of the change, they go away having passed judgement against the God, rather than against ourselves or themselves, for having a power of thought which is too feeble to attain to his counsels."
- NOTES
* Note that the English translation of this passage at Perseus is misnumbered; the translation of line 107 in fact occurs on the previous page and not on the page that says it begins with 1. 107.
1. Alluding to the eruption of Vesuvius in 79. "Dicæarchia" = Puteoli.
2. Euripides; as quoted by Plutarch himself in "De defectu oraculorum", μάντις δ' ἄριστος ὅστις εἰκάζει καλῶς
3. Quoted also in Life of Agesilaus, c.3 (597c).
4. Palæa Kaumene, a volcanic island ejected in 196 BC
5. Tim. 90.
6. Xen. Sympos. c.2.3.
7. Herod. 1.51.
8. This passage from the Loeb edition. The text is defective at this point; Prickard reads "The God was in need, and dignity was waived"; King "... [On its] becoming necessary to the god ... to cast away his gravity."
9. The text is defective at this point, and we unfortunately do not know the cause of Pindar's astonishment.
10. Thucydides I, 118.
11. Ibid. V, 16 (from which words have been supplied in the defective text of Plutarch, which

- 26735 additionally reads "Pausanias" for "Pleistonax"). "Silver share" turned out to mean that their crops would be inadequate and they would have to buy grain.
 12. Od. 2.372.
 13. Il. 2.169.
 14. Il. 4.86.
- 26740 15. Il. 5.1.
 16. The MSS. have "Pandarus". Plutarch probably did not suppose Pindar was the author of the line. It is quoted by Aristophanes, Peace 699, in connexion with the stinginess of Sophocles or Simonides, and the scholiast quotes from Pindar a censure of that vice in poets; so some confusion is possible.
- 26745 17. In the Stheneboea.
 18. Isthm. 2.3.
 19. Isthm. 1.69.
 20. Phoen. 958.
 21. Herod. 4.155; Pindar Pyth. 4.
- 26750 22. See Lysander 450 BC
 23. Od. 2.190.

Note on the text: This text follows the translation of Prickard (1918) with occasional departures where I felt his English was too quirky or ugly or where it departs substantially from other translations I felt to be more acceptable. (You may judge from what is left exactly how quirky and ugly his translation is at times.) The text covers pages 394d to 409e; page numbers are accessible via local links in the html (for instance, "plutarchVerses.html#395f" will take you [approximately] to the appropriate passage). Chapter numbers I-XXX are similarly linked (e.g., "plutarchVerses.html#XXV"). The Greek, where supplied, is mostly from the Loeb edition.

- DESCRIPTION OF THE TURKISH EMPIRE
 ACCORDING TO ITS PRESENT STATE AND RELIGION IN THE LAST HALF OF THE EIGHTEENTH
 CENTURY, WITH MAPS AND PLATES, BY CHRISTOPH: WILH: LUDEKE,
 Teacher of Theology, first Preacher of the German Congregation, Chairman of the
 Consistory in Stockholm, and Supervisor of the schools;
 according to the High German second edition translated under the motto:
 ALTISSIMO ANNUENTE VIRIBUS MEIS.
 FIRST PART.
 In LEYDEN, By A. and J. HONKOOP, Booksellers
 M D C C L X X X I I.
- 26990
- PREVIOUS NOTE TO THE READERS.
- In the year 1770 I have made my credible reports of the Turkish Empire common through the press. The ecclesiastical duties which I had to attend to in the Levant from the year 1759 to 1768 demanded of me, in a certain respect, a visible account; and the war which afterwards broke out between the Russian and Turkish Empires did not render these published reports concerning the latter Empire superfluous. By so many books, either contradictory, or out-of-date, or in all countries not very well known, which otherwise treat of Turkey, I judged it my duty, not to relate any, of which I, as my own eye-witness, had the most certain and perfect knowledge: especially since,
- 26995
- 27000

besides several journeys made in Turkey, and a long stay at Constantinople and Smyrna, I had attended the Audiences of the Sultan, Grand Vizier, Captain Pasha, and the Mullahs, as well as paid visits myself to the Eastern Patriarchs and Bishops. I must confess, that such reports, far above my expectation, have been received; and the judgments of so many learned Men in the Newspapers of Leipzig, Jena, Gottingen, Helmstad, Halle, Berlin, etc., were, in every respect, favourable concerning them. Since I promised besides that, to improve such a work, when I received any remarkable additions of importance, and to communicate them in an enlarged edition; so I have now wanted to fulfill this promise, by the present issue of the description of the Turkish Empire according to its political and religious constitution. I have, beforehand, given this description into the hands of those who had also stayed many years in the Levant, partly in Constantinople, partly in Smyrna. They have tested it, and compared it with the matters recorded therein, as if on the spot; and thus the work has come into being in the form in which it is at present, and is offered. I deemed the enclosed maps and plates necessary, in order to understand it still better, at various places. The first is the Archipelago, with a special representation of the Channel between the Dardanelles, as it was directly followed from a very accurate sea chart, which, by express order of the King of France for the mariners of the Levant, was cut by Mr. Berthelot at Marseilles. The second provides a View of Constantinople, to form in general a peculiar idea of the excellence of the layout of that city. It is borrowed from the general History, the ground of the Seraglio alone, for the greater accuracy, being covered with many Cypresses. Then follows the Plan of Constantinople itself, which was made from the plate of the famous Imperial Engineer van Reben, as it came to light by Homann in the year 1764, only that which does not belong to Constantinople itself being omitted. The further Tables or Lists, concerning the various Sects among the Mohammedans and their Monastic Orders, I have made from my own reports, and subsequently also by comparing Herbelot with Ricaut and Businello; furthermore I have sent them to Turkey, and had them examined there. An Efendy has tested them, approved them, and after a few, but no remarkable changes, even declared them more complete than they were hardly known among many Mohammedans there. Finally, after the completion of this task set to me in the first and a part of the second part, I will still leave in this last Historical reports of the government, customs and habits of the Ottoman Monarchy, as they were written down by the late Mr. Pet. Businello. Who these were, and what I have observed concerning this his essay in particular, my short Preface to it will show there. This I will only mention here, that the Author, in his Life, gave me complete freedom, to be allowed to publish it in our language. And, because I found it excellent in its kind, in every way suitable either for the elucidation, or to prove my presented matters, I have, about that, wanted to make use of it, and, as I trust, just where it might apply, given it a place. For the rest, let this my work be provided for your use, as well as for your pleasure and amusement.

Stockholm, April 24, 1778. *The Author.*

27045	CONTENTS OF THE FIRST PART.
	FIRST PART, containing a general INTRODUCTION.
	Page
	§. I. Concise Geographical knowledge of the Turkish Empire. 1
	II. Historical knowledge of the Turkish Empire. 45
27050	III. Various peoples in the Turkish Empire. 55
	IV. Physical observations on Turkey, especially the region of Smyrna. 74
	§. V. Of the cities in general, which are treated of in the Revelation of John, Chapters II and III, and of Smyrna in particular. 112
27055	VI. Of Constantinople. 121
	VII. Of the Europeans in Turkey. 160
	VIII. Of the Audiences of the European Ambassadors and Consuls to the Turks. 167
	SECTION TWO. The condition of the Christian religion in Turkey.
27060	§. IX. Of the religious freedom of Christians in Turkey in general. 184
	X. Of the condition of Christians in the Turkish Empire. 195
	XI. The ignorance and uncivilization of various Christian denominations. 201
	XII. The admirable preservation of the Christian religion in Turkey. 206
27065	THIRD PART. Of the GREEKS.
	§. XIII. Of the Greek Church, and its condition. 209

- XIV. The distinction of the Greek Church from other Christians. 220
 XV. Religious customs of the Greeks. 234
 XVI. Of the Holy places, and the worship of the Greeks. 248
 27070 XVII. Character and domestic disposition of the Greeks, as well as other things pertaining thereto. 256
- FOURTH SECTION. Of the ARMENIANS.
 XVIII. Of the Armenian Church and its disposition. 278
 27075 XIX. The beliefs of the Armenians, and their distinction from other Christians. 284
 XX. Religious customs and ecclesiastical circumstances of the Armenians. 292
 \$. XXI. National Character of the Armenians, and other things pertaining thereto. 299
- FIFTH SECTION. Of other Christian denominations in Turkey.
 27080 \$. XXII. Of the Roman Church. 304
 XXIII. Of the Monophyte and Nestorian Church. 308
 XXIV. Of the Western Christian denominations that arose after the Reformation. 310
- SIXTH DIVISION. Of the Turks.
 27085 \$. XXV. Of Muhammad. 313
 XXVI. Of the Koran. 323
 XXVII. Of the various Sects among the Mohammedans. 344
 XXVIII. Principal contents of the Mohammedan Religion. 347
 XXIX. Religious customs of the Mohammedans. 356
 27090 \$. XXX. The Holy Places of the Mohammedans. 375

 XXXVIII. Of the Political Condition of the Turkish Empire, with Relation to Other
 27100 Countries. 473
 XXXIX. Of the Military State of the Turks. 485
 XL. Of the Scholarship of the Turks. 507
 XLI. Of the Civil Condition and Other Things Pertaining Thereto. 520
 \$. XLII. Of the Domestic Condition of the Turks. 530
 27105 XLIII. National Character of the Turks, and Other Things Pertaining Thereto. 553
 XLIV. Internal Condition of the Turkish Empire. 563
- \$. II. The Historical Knowledge of the Turkish Empire.
 27110 Nothing is more difficult than to trace the genealogical registers of the Courts and Families of such remote times. The ancients did not think of making genealogical tables for such things; and the Person of Jesus Christ alone has the privilege of having a genealogical list in the sacred pages, with regard to the great importance of his descent. It should not surprise us that the origin of the Ottoman House is subject to so many difficulties and variations. - The Turkish Historians, to whom one
 27115 may naturally rely more than upon foreigners, testify unanimously, that among the Scythians, who, after the time of Genghiskans, advanced from great Tartary to little Asia, and were divided into many tribes, one tribe, namely the Ogusians, particularly excelled. Of these, a certain Dusalpes, called by the Turks Kya Aleb, was born, and because of his excellent qualities was elected Chief. His son and successor,
 27120 Ogusalpes, is the same, whom the Turks call Soliman Schach. His son, Ertogrul, was, on account of his deeds, also famous, and bred Osman. Just as the former, was accepted by a certain Sultan Aladin at Icony, first as General, and afterwards as Co-regent; thus, after his death, the latter came to the same Honour, and, when Aladdin was deceased, even became the only Sultan. And, when the Great with the Army, about
 27125 the year 1300, acknowledged him as a Sovereign, and he exercised the rights of Majesty; then he gave his subjects, instead of the name Ogusians or Turks, as they had hitherto borne, that of Osman, and became the progenitor of the present Imperial Line. - According to the thoughts of the Turks, two principal lines have sprung from the Ogusian tribe. The first is the Osman, (Ali-Osman, that is, descendants of
 27130 Osman,) which rules the Turkish Empire; the second is the Dschengiskansche, (Ali-Genghizkane, that is, descendants of Dschengiskan,) who reigns in small Tartary. The latter has, after the extinction of the male line of the first Line, (for the female

is not considered,) the certain expectation and right of the Turkish Throne. The name of the grandnephew of the last, who seized small Tartary, was Dscherai, (Geraï) after whom the successors put the Title by their name: for example Kaplan or Ibrahim Dscherai, just as the Roman Emperors by theirs, Augustus.

To deal more definitely with the Ottoman Line; Osman, besides the possession of the Iconian Empire, took from the Greeks much in Asia Minor, among others also the old Prustum, in which his son and successor, Orchan, who had conquered it, established his seat in the year 1326. From him come most of the customs and laws in the Turkish Empire. He made a better arrangement concerning the soldiers; crossed the channel at the Dardanelles, and thus came to Europe, where he took Gallipoli, extended the Mohammedan religion everywhere, by cunning and violence, and first of all erected mosques and dschamis, and lastly schools and hospitals. His son, Amurat I, came to the throne in 1360; took, among several cities, Adrianople and Philippopolis; conquered Serbia, invaded Macedonia and Albania, and founded the Janistas. His Son, Bajazet I, in 1390, performed many heroic deeds, and prescribed conditions to the Greek Emperor at Constantinople, which he wanted, among other things, to build a Dschami (Temple) there, and to establish a Mechkeme (Town House); but was defeated by the so famous Tamerlan, and taken prisoner. Bajazet's Sons, Soliman and Musa, governed the Empire in unrest and division; the Turks regard this time as an intermediate Empire. And it is a special arrangement of God, that the Greeks, at that time, made no end of the Turkish Empire. The third brother, Mahomet I, finally, in the year 1413, seized the whole Empire, and, besides many great deeds, he made Wallachia culpable. His son, Amurat II, who came to the government in 1422, was uncommonly successful against his enemies in Asia, Hungary, Greece, and Albania, and twice resigned the government, although circumstances pressed him to resume it. His son, Mahomet II, in 1451, was the most successful and powerful of all Turkish emperors, who in the year 1453 conquered the city of Constantinople, and all the possessions of the Greek empire, likewise Bosnia, Negroponte, the Archipelago, the Trapezium empire, little Tartary, etc. In the possession of the latter he placed the Line of Dschevay, which still reigns at the present time. His Son, Bajazet II, after he had previously made the Pilgrimage to Mecca, ascended the Throne in the year 1481. He was in Moldavia, and against the Circuses uncommonly successful, and subdued the rest of Bosnia and Croatia. His mutinous Brother, at his instigation, was put to death by a Renegade at Naples; although he was, in a certain respect, at last compelled to leave the Throne to his Son Selim. He, the first of that name, ascended it in the year 1512. Two of his brothers, Achmet and Corkud, were strangled. He humbled the Persians, subdued Diarbekir, and transformed Syria, Palestine, and Egypt into Turkish Provinces. When he was at Cairo, the Sherif of Mecca delivered to him the keys of his city. After his secret death, his Son, Soliman I, was brought from Asia, and in the year 1520, proclaimed Emperor. He took Belgrade; conquered the island of Rhodes, Hungary, and Opeu, besieged Vienna; Moldavia became culpable to him; gained great advantages over the Persians, and subdued Gurgistan. In Naples he suffered himself to be plundered, and conquered a part of Arabia. He made an alliance with France, and gave the King, because of a misunderstanding, as if a certain French Lady, who came to the Seraglio, a daughter of a King of France, the title Padischach, (great Prince,) and the French Ambassadors and Consuls the rank above the other Christians. As formidable as he made himself on land, so formidable was he also at sea. His death was kept secret until his Son arrived. Selim II, (that was his name,) began the reign in the year 1566, and followed, but not with the same success, the conquests of his father. He clipped the wings of the mutinous Arabs, conquered the island of Cyprus, and assisted the Moors against the Spaniards, but lost the famous naval battle of Lepanto. His son, Amurat III, reigned from 1575, and had the upper hand in the long and bloody war with the Persians, but died at the beginning of a war against Hungary. His son, Mahomet III, succeeded him, after he had put nineteen brothers to death on his accession to the throne in 1595, gaining considerable advantages. He was succeeded by Achmet I, 1603, who was unfortunate in the war against the Persians. His brother, Mustapha I, was indeed his successor in 1618; but was also deposed in the same year, and in his place, Achmet's Son, Osman II, declared Emperor; but, after a successful war with Poland, 1622, was deprived of Life by the Janistas, and Mustapha again raised to the Throne, but, shortly afterwards, in a mocking manner, dethroned, and Amurat IV, a Son, of Achmet, 1622, placed thereon. He weakened the Persians exceedingly, even depriving them of Bagdad. Of all Emperors he is marked in History for his drunkenness, and was cruel and bloodthirsty. His brother, Ibrahim I, reigned from 1639, beginning his reign by taking Asof. He did not end the war with the Venetians for the island of Kandi. This was preserved for his son, Mahomet IV, who from 1649 ruled the empire, which the Cossacks subjected of

their own accord, and who, by taking Kaminiek, humiliated the Poles as much as he pleased. But from 1673 onwards his military fortunes were against him, just as, from that time on, the Turkish empire has steadily and more diminished. For the Poles broke the peace, and negotiated a better one; with the Russians it did not go well either, and the siege of Vienna failed so much that half of Hungary, as well as Oseu, was lost; and the Venetians obtained no less advantages over him. All this resulted in his formal deposition, and his brother, Soliman II, was appointed in the year 1688. This had, at first, much to do with the Rebels, and was, in his war against the Germans, so long unhappy, that he made Kuprogli Grand Vizier, under whom even Belgrade, conquered by them, was taken again. But the Venetians remained Master at sea and in Morea. That Grand Vizier was the cause, that the Brother, Achmet II, 1691, came to the government, who likewise waged war with the Austrian House and the Venetians, so, that through the hindrance of France, peace was not concluded, although the Turks spun little side in that war. Mustapha II, a son of Mahomet IV, followed him from the beginning of his advent to the throne, that is, from the year 1695. The Russians and Venetians did no small things against the Turks; but the most important was done by Prince Eugenius with the German army at the Theisse, where the Sultan with a part of his soldiers, a few cannons and baggage, barely reached the other side of that river, but when he had to see that the remainder, consisting of the select troops and Janistaries, after they had risen up against the Grand Vizier and the Pasha, whom they considered traitors, and had killed them all, was cut to pieces by the Emperors. This caused such a fright, that in the year 1699, the Karlowitz peace followed with the German Emperor, Russia, Poland and Venice. Because he hereupon resigned himself from the government, and gave himself up to his pleasures, a general murmur arose against him, which, after the beheading of the Grand Vizier, broke out in such a revolt, that the Emperor himself, in order to prevent a violent deposition, and even an assassination, greeted his brother, Achmet III, desired by the mutinous, as Emperor, in 1703, and the government was overthrown. He gradually had the rebels put to death, and had, because of Charles XII, King of Sweden, a double war with the Russians, in which the Turks were tolerably successful; as also the Venetians were deprived of their previous advantages, and especially the remainder of Kandy, as well as the whole of Morea; being, on the other hand, forced by the Germans, after a heavy loss, to the peace of Passarowitz. The disadvantages which he suffered in the war with the Persians made him hated by the people, and in a riot which arose on account of it, Mahmud, (*) the son of his brother Mustapha II, was put in his place in the year 1730. As badly as the Persian war ended, so good luck served him against the House of Austria, as Serbia and Belgrade were taken from them. He governed with an unusual policy, but with very great severity. Under him trade and commerce, and all the arts flourished, so that his government was considered a golden age, especially by the Europeans. Osman III, his Brother, and from the year 1754 also his successor, enjoyed, in his reign, a time of peace, and Mustapha III, a Son of Achmet III, who became Sultan in the year 1757, also so long, until, in 1768, he got into a heavy and fierce war with Russia, of which he did not live to see the end, because, by death, he made way for his brother, Abdul Hamed, under the name of Achmet IV, in 1774. In that same year, peace was concluded, indeed to a great glory, and to the advantage of Russia, but to an almost unbelievable disadvantage of the Turkish Empire.

(*) The European historians call Mahmud, quite wrongly, Mahomed V. He never wrote himself so, and is therefore the first of that name.

§. III. Of the various peoples in the Turkish Empire. Among the Christian peoples in Turkey the Greeks are the most numerous, and of these will be dealt with separately in the IIIrd Section. Among such one may conveniently reckon the Wallachians, Moldavians, as well as the Bulgarians, who, although they have a different origin, nevertheless, by reason of religion and continued intermingling, have intercourse with them; however, they are more eager for war, and on horseback most skilled in the handling of the sabre. Among them belong the Mayonnais, descendants of the ancient Lacedemonians, whom, as their ancestors, they also equal in everything. They have received this name from the Greek word, μῶνια, (rage), because they attack their enemies in a furious and mad manner. They inhabit the southern part of Morea, especially its mountainous regions from Cape Matapan to Cape St. Angelo. The Sultans have never thought it worth the trouble to subdue them, noting that to subdue them much blood would be shed in the inaccessible mountains, and that the robbers of the neighbouring places might soon nest there again. They are dangerous pirates in the waters there. In their common and small

vessels they spy at night on the ships that are not on their guard, seize them on board, murder the crew, plunder everything, and then sink the ships; wherefore the Europeans, when they come so far, are very watchful, and keep their big and small artillery loaded. Their priests also go out on the plunder; for these robbers, in their unscrupulousness, still want to hear masses and fast. They may amount to about 12 or 14,000 armed men. Even the Venetians could do nothing against them, when they possessed the Morea.

The Copts are descendants of the true Egyptians. Although the old sacred language of Egypt, which is found on the Pyramids and other monuments, is no longer understood; the old common Coptic, though generally with an Arabic translation, is nevertheless still in their Missals and other Church books. In them also they still observe their worship; but read it exceedingly seldom: nay, most priests learn the liturgy by heart, and only mumble it. The public religion is modelled on the Greek. Their Patriarch is chosen from the unmarried monks; has his See at New Cairo, supplying not only Egypt, but also Abyssinia, with Bishops and Priests; for the religion of the Abyssinians is the same as that of the Copts. The Coptic books are only manuscripts. The Egyptian Mohammedans employ the Copts as accountants and stewards; wherefore, in a certain respect, they cannot do without them. By this means the Christian religion is still maintained. Otherwise they are lazy and idle people, like all Egyptians. In their worship they are, except their feasts and fasts, very careless and lukewarm. They spend the nights before the Sundays and feasts in church, listening to their long liturgy, without understanding it, but those days themselves in idleness. They are Monophysites, and come quite close to the Armenians, but otherwise, they have most customs in common with the Greeks. Their ignorance is of such a great extent, and very seldom is the people given instruction in a sermon. They content themselves with reading the History of the Saints, and the parts of the Bible in the Coptic and Arabic languages, on the holy days.

The Armenians will be spoken of in the fourth section. The Maronites come very close to them in stature and manners. These, although they acknowledge the Pope as their Supreme Head, nevertheless retain their particular feelings and religious customs, for instance, to perform the worship in their mother tongue, namely the Arabic, and to distribute the Lord's Supper under both so-called forms. They live among the Druses, and possess many monasteries on Mount Lebanon. Their clergy are famous for a regular way of life and a very stately conduct. Their Patriarch, who wants to present himself as a successor of Peter, as the first Bishop of Antioch, has his seat at Kannobin, a monastery on the aforementioned mountain. He is elected by the Maronite Bishops and Archbishops, but confirmed for the present by the Pope. In another monastery, Deir Hannah Schwoyer, they have a printing house. At what places the Europeans have factories for trade, will be indicated in §. VII.

Among the unbelieving peoples in Turkey, mention must first be made of the Turks, as the ruling nation of this country. But here only their origin and name will be considered. They have not their name from the Land of Turkistan, whereas the Turkmen come from there, who are mistakenly mixed up with the Turks by many writers; but descended from the Ogusian Tartars, and adopted, already in the 10th century, the Mohammedan religion. That name has been in use long before Osman, signifying in general Scythian hordes from great Tartary, who followed Gengitzkhan, and spread everywhere in Persia and Asia Minor. But they received the name Turks from the Persians, because of their white face and black eyes and eyebrows; whereupon it came, that, when Soliman, the grandfather of Osman, wanted to follow in the footsteps of Gengitzkhan, and penetrated with his strong army to Aleppo, but the rumour of these new warriors reached Persia, the poets compared the ugliness of the Scythians with their countrymen, and did not call them mocking Turks, that is, handsome ones, so that the first honourable origin now became a name of abuse. When after that invasion of Genghis Khan many of the Commanders of the Provinces of the far-extended Persian Empire became rebellious; among them was also a certain Aladdin, Sultan of Iconia: but he was overcome by the Scythians, and had to take flight to the Greek Emperor at Constantinople. His Son, Melekschach, first came into possession of his native country, disarmed the Scythians, mixed them with the country people, accustomed them to agriculture, and called them Turks, yes, instead of a Sultan of Iconia, he assumed the Title of a Sultan of the Turks. The above-mentioned Soliman lost his Life in the Euphrates, and his Son, Ertogrul, was appointed General by that Aladdin, and at the death of the latter his Son, Osman, came in his place. Aladdin being subsequently deceased, Osman was unanimously proclaimed Emperor. He changed the name of Turks into Osmans; he himself called himself an Emperor of them, and the Turks, to this day, will not tolerate the name of the Turkish Court, but desire, expressly, the name of Osman Porte; and the people themselves do not like to be called Turks, but

Mussulmans, because they attach to the word Turkish an idea of clumsiness, but to the word Osman, that of graceful and handsome; and have retained only the manner of speaking, the Turkish language. The Arnauts, (among whom there are still some who have adopted the Christian religion,) are the ancient Albanians of the western part of Macedonia, and part of Epirus. They are by nature rough, warlike, brave and indefatigable. They are robbers, and not on land what the Mayots are at sea. After the death of Skanderbeg they were brought under the Turkish yoke, and after Amurat II, by a violent circumcision, nearly all forced to the Mohammedan religion. Many thousands of them are always in the military, and are considered, especially in the rifle, the best soldiers of the Turkish Empire. Besides their mother tongue, which is a corrupt Slavonic, they also use a bad Greek and Turkish dialect. The Arabians form one of those nations which, as to the antiquity of their ancestors, have most maintained themselves. They are a very extensive people. The Turks even include the Moors of the barbarous coasts. Not to speak of great empires in Arabia proper, of which they are the possessors and inhabitants, very numerous hordes, of which we here properly speak, are found in the states of the Great Lord, especially in Egypt and Syria, Palestine also included. These are called Skenites, from the tents under which they dwell, which are of an elongated shape, and Beduins, which signifies inhabitants of the deserts. Their manner of life, in all respects, still savours of the simplicity of the Patriarchs, which they can retain all the more, as they do not enter into any close alliance with other peoples, and even keep themselves separate from the Turks. Their stature is medium, and their countenance falls in the brown. They are, as a rule, of a lasting health, and live under tents, which they change, generally, according to the seasons, as well as the pastures for their cattle. The Chiefs of the several Hordes bear the name of Emirs, which denotes Lords or Princes, and which must be distinguished from those Emirs, who, as descendants of Muhammed, will be spoken of subsequently, although they pretend to be descended from him; but the lesser commanders are called Scheiks, which expresses old and aged persons. Of arts, except those which serve them to provide a livelihood, and of sciences they know little, and seldom can any one of them read or write. They seldom use our firearm, but hold the sabre with bows and arrows more suitable for the people. Cattle breeding is their main occupation. The covering of women, and the jealousy of men, is, among these Arabs, perhaps even greater, than among the Turks; although the unjustly so called Arab women, who are actually African, go naked, and, for their ugliness, also can go. - They are indeed subjects of the Sultan, but are uncommonly spared, even drunk, only to keep them in dependence on the Porte, from which they could easily escape, if they were of one mind among themselves. Their religion is Mohammedan, but with great freedom, because they know almost no external ceremonies. They have no Mosques, but perform their worship in the tent, or under the open sky. They have no Imams, (Priests), but the Chief of the fathers of the household, and the wisest among them, occupy, by solemn prayers, their place. Circumcision, Ramasan and Beiram they observe, and strive to live as naturally honourable people. The plundering of travellers and caravans is their handiwork, making an exception of their natural decency, although they do not readily resort to murdering the plundered. Whoever has once been recommended to their hospitality, or has obtained it, finds in them true friends and protectors; and the Christians living among them are much better treated than by the Turks. Both races, like heathens or vagabonds, devote themselves to fortune-telling.

The Druses are inhabitants of the Anti-Lebanon, and special friends of the Mohammedans, holding themselves, as they are under their obedience, as such, and imitating everything, even if it is that they melt Mohammed and his religion into their hearts, and express this, in conversations with Christians, without any reservation. - Their head is, after birth, pressed in length, and affords a fixed distinguishing mark from other nations. They are, from an early age, rudely and strictly brought up. Their various tribes obey various Princes. They are courageous and warlike people, who are well skilled in the handling of the harquebus and the sabre, and apply themselves to robbery and plunder. Where they can, they provide protectors for the Christians, just as they permit them to use bells in their territory. They uniformly derive their origin from certain Franks, under the leadership of a certain Count of Dreux, who, at the time of the Crusades in the Holy Land, were abandoned by others, and through lack of Teachers, had gradually lost the Christian religion. - The jealousy of women goes, among them, even further than among the Turks. Their articles of faith they keep as secret, as the free masons their principal tenets. They go, when they live among Christians, into their churches, just as among the Mohammedans into their mosques. They have no proper priests, although a kind of them they call wise men, who among the Mohammedans neither eat nor drink,

because they consider all the possessions of the Turks to be plundered, and therefore sinful, and unjustly obtained goods; but among the Christians, and especially the Europeans, they eat and drink. Their supreme Prince has his usual Seat in that part of Mount Lebanon which is called Kefrevan; in their Books, which are more esteemed and destroyed by the Turks than the forbidden Books by the Romanists, Muhammad is much calumniated, and the indifference of Religion, the outward assimilation to the prevailing Religious Party of a Country, and a sort of transmigration of souls taught; wherefore they have no public Worship for themselves, but observe that which is customary in the Country where they dwell. It is certain, that they have certain idolatrous, and extravagant Religious Customs in their Houses and in Secret, though it is not exactly known what they really consist in. The Mohammedans bear them a deadly hatred, as they do them, in occasional disputes, in places where they may venture, attack, and even kill.

The Turkmen, who have their origin in Turkistan, and over whom, as far as they live in the Turkish territory, the Porte sets a Chief, who is called Turkman-Agafzi, are wandering Hordes of two hundred or more Families, who, in a certain respect, form a middle sort between the Arabs and Turks, but at the same time hate both, because of the oppressions they have to endure from them: but this nation is not strong, but loves its liberty exceedingly. It is a swift people, of which the men occupy themselves with cattle breeding, especially with horses, but the female sex with spinning, making coarse blankets, etc. The oriental jealousy of women finds no place among them; for they go and travel with a bare face. They stay in uncultivated regions, live under round tents, erected like towers, conducting a large trade in cattle. In the winter they move to warmer regions, and in the spring they return to the previous ones. In the meantime they move with their families, cattle and other goods, often from one place to another. The men ride on horseback, and are with lances and other weapons of their kind provided; but the goods, children, and tender women are loaded on camels: the others go on foot, doing various works with singing and shouting, for example, winding wool, etc. Their cattle go, each according to its kind, in divided heaps, under their conduct. They lead, in a certain respect, the old patriarchal way of life, which, for the rest, is very simple and moderate. They also have among them a kind of patriarchal government, of which the chief collects the tribute for the Sultan. The Pachas and Agas, in whose territory they stay, or through which they pass, they must, for their freedom, give reasonable presents. Although they are not open highway robbers, and plunder by force; they are accustomed, however, to take with them whatever they find on their way, and for this reason the inhabitants of such regions are very much on their guard during their journeys. They have little religion, except that they betray a certain adherence to the Mohammedan language, but in a fairly free manner. Napoli and Syria are their principal places of residence. They speak corrupted Turkish, and also most closely resemble the Turks in their customs. Amurath IV forced some of these Hordes to march to Europe, near Mount Haemus, where they gradually changed their character. The Kjurds, descendants of the Chaldeans, (for Kjurdistan is the old Chaldea,) are of a hard and strong nature; generally wilder and more cruel than the Arabs; but as to language, customs, and mode of life, they are distinct from each other. They make many sorties into the neighbouring countries, fleeing, when they meet with little resistance, to their principal residence on the Amanian mountains. Their corn-granaries are generally under the ground, and so artfully covered, that it is difficult to find them.

The Jesiddes, as to nation, are also Kurds. Formerly they were Sophys, that is, a certain kind of Mohammedan fanatics, in the first century of Mohammedanism; now they are neither Mohammedans, nor Christians, nor Jews, nor Pagans. They inhabit the Caucasus mountain, and are strong people, content with little, who, in spite of the Turks, drink wine, and eat the flesh of pigs. They shun circumcision in the utmost, and therefore do not mention Satan, because he is a creature of God, and could indeed be received into grace again. The black garments, by which they also swear, serve only for their kind of clergy, but the white for the people. They have no proper buildings for worship; for the beard they have a superstitious reverence; they can neither read nor write, and therefore live in a far-reaching ignorance. They worship God at the rising of the sun, but in their nature and way of life they equal the evil Being, which they will not reject. Square or oblong tents, made of black goats' hair, provide them with dwellings, and they live together in hordes.

The Jews are, in a numerous multitude, scattered throughout Turkey. The greater part of those expelled from Spain and Portugal have fled thither, and they also speak a corrupted Spanish language. Everywhere they enjoy, on condition of paying a poll tax (Charatz), the freedom of religion, although the erection and maintenance of their synagogues requires great expense. They have their Rabbins or Chachams, and worldly

Primates. They do not apply themselves to learning. Their poll tax is the same as
 27465 that which Christians have to pay, but they are treated much more severely by the
 Turks than they are. In matters of commerce they are the brokers between the
 Europeans and the Turks. By the indolence of the latter they have attracted a great
 trade to themselves. They part with the Armenians, to carry out the affairs of the
 27470 Viziers, Pachas and other Grand Men. Then they are admitted to their Secrets, and
 take care of their household, especially their financial affairs. They are the
 Physicians and Interpreters of many great Turks. Many of them are unusually rich,
 concealing this outwardly, but living luxuriously and magnificently in their houses.
 In addition, they are also the money-changers and money-grabbers, and one will not
 easily find a toll where they are not employed. They must wear a different dress from
 that of the Turks and the Christians of the country, and the blue colour is
 27475 prescribed for them in their clothing and shoes. They cure themselves with crafts and
 things, to which both of the aforementioned do not want or cannot apply themselves;
 wherefore they are glaziers, stainers, bookbinders, and especially sellers of old and
 new goods. The Jew women wear, as an ornament, one or more strings of silver or gold
 coins around their necks. These have access to the Turkish women in their Harim,
 27480 where they sell haberdashery, or are matchmakers in courtships, and play fortune-
 tellers. The Jews are in demand by the Turks, and for this reason they are accustomed
 to make use of their dancing and conjuring. Otherwise they remain firmly and
 obstinately with their religion and old customs. The pilgrimage to Jerusalem is a
