81205 Either no investigation took place, in which case the communication addressed to the Faculty contains an inaccuracy that must have given this body, which was asked for advice, a completely incorrect and unjustifiably unfavorable impression. Or, such an investigation did take place, in which case, however, an investigation would have been conducted into facts concerning my Museum management and the conduct of one of
81210 my deputy directors, without either myself or that deputy director being consulted, and without any of the other permanent officials present.
The testimony of the other deputy director was requested, even without our knowledge, and so secretly that even an official body appointed by the government to advise, the Faculty of Arts, could not be informed of the results, the facts that had become
81215 known.
It goes without saying that in both cases, both my museum management, that is, myself, and one of my officials have been compromised, and moreover, in an official document addressed to a faculty by a board of curators with authorization from the Minister of the Interior.
81220 Leiden, October 1913, Signature

[277] Leiden, April 21, 1913
To His Excellency the Minister of the Interior
Following the understandable wishes of his colleagues, the undersigned did not attend
81225 the Meeting of Arts and Philosophy in which your question regarding Dr. Holwerda was

discussed. However, he was able to take note of the Faculty's response to Your Excellency.

From that response, he now learns, for the first time in so many months, somewhat officially what objections are being raised against Dr. Holwerda himself.

81230 Regarding the comments on Dr. Holwerda's scientific work at Arentsburg, the undersigned will not comment on them. It is so obvious to the expert that only laypeople are speaking in the document concerning that work that this seems entirely superfluous to him.

81235 The other objection, that Dr. H. hinders the work of young scholars at the museum, also directly affects the museum management of the undersigned himself as Director. During Dr. Holwerda's time in office, only three younger scientific staff members were associated with the museum. None of these three were trained in the direction their museum work should take. So, if one wishes to call them "younger scholars," so be it. However, it should not be forgotten that they came to us as students. The 81240 issues of the Antiquity Reports and the catalogs clearly demonstrate how these young men, who collaborated with Dr. Holwerda as students, were immediately recognized as his collaborators in his publications by co-signing them. But above all, they demonstrate how Dr. Holwerda, as far as they were even remotely capable of their own work, himself helped these young men along, remaining in the background.

81245 The three young men, the only ones we can mention, were: Firstly, N. J. Krom, a gifted young man whom the undersigned, however, had considerable difficulty in guiding and keeping on track as director due to certain personal qualities. The Antiquity Reports now demonstrate how he collaborated with Dr. Holwerda and Professor Goossens in this area. He left us to be trained for a much 81250 more important position than he could ever have obtained at the museum. Was his stay too short for him to have achieved much independently?

Mr. M. A. Evelein, to be mentioned secondly, as is again evident from the Oudheidkundige Mededeelingen, first collaborated with Dr. Holwerda for a few years and co-signed his publications of that work. The excavations of Riethoven and 81255 Valkenswaard, where Dr. Holwerda was present for a time to help him achieve his goal, were further carried out independently by him and even published entirely as his own work at his instigation.

When Dr. Holwerda, through great effort, acquired the famous golden helmet of Deurne, he, because the publication of such a work is of great value to a young man, gave 81260 this publication, to which he naturally had the right through that acquisition, to his younger colleague, as can be seen again from the Oudheidkundige Mededeelingen. However, this was not the only reason. When Dr. Holwerda was personally asked by a foreign journal to publish this helmet, he also referred that foreigner to Dr. Evelein. I dare say that very few scholars would have so selflessly passed on such an 81265 important discovery to young people. When Dr. Evelein applied for his current position, he assured us that he naturally wanted it, but that if that didn't work out, he would be very happy to remain at our museum.

Thirdly, Mr. van Giffen might be mentioned, although from his arrival in 1912 onward, he has done almost nothing at the museum other than work on his natural history 81270 dissertation for months at a time, receiving considerable assistance from museum officials. Since I was unable to provide much funding for excavations last summer, Dr. Holwerda himself managed to secure private funding for them. About half of that money was now used to enable the Lord of Giffen to build a peat bridge in Drenthe to excavate. An excavation was also reserved for him in North Brabant, but Dr. Holwerda 81275 was kind enough to carry it out for him, at his request, to enable him to work undisturbed on his dissertation for two months, so that it would be ready. Then, in October 1912, when both months had passed—nine months after the initial appointment—the archaeological studies and the actual scientific work finally had to begin.

However, by then his attitude toward us had become such that even he himself realized that studying under our guidance and joint museum work were out of the question. 81280 These "young scholars" were not affiliated with the museum during Dr. H.'s time. Your Excellency will be aware of the accuracy of my words addressed to Your Excellency last December, stating that a shameful smear campaign against us had been launched. It is likely that the file mentioned in the correspondence with the Faculty of Arts 81285 also contains accusations of the same nature. However, neither the undersigned nor the deputy director has ever been heard on any of the accusations.

In order to prevent this possible damage to the institution, to which he selflessly devoted his care for 10 years and which is dear to him, to finally put an end to the state of uncertainty that undermines that institution, and to obtain the freedom to 81290 address the above defense to Your Excellency without his relationship with the deputy director invalidating his words, the undersigned has made his decision.

He has the honor to request Your Excellency to consider his application for resignation, submitted last September, as undone.
The conviction that he cannot act otherwise will give him the strength to continue fulfilling his duties.
W.g. A. E. J. Holwerda

April 30, 1913: Appointment of Curator

[146] The Hague, May 26, 1913.

Assuming that the documents recently received from you, containing judgments by German scholars on your person and your work, have not been sent to the Association [?] in confidence, thus under the seal of confidentiality, I inform you that I will act accordingly if I do not receive a counter-notification from you by Wednesday, May 28, at noon.

On behalf of ARENTSBURGH Association for Excavations in the Netherlands
Seerp Gratama, Chair.

[271] National Museum of Antiquities Leiden.

Leiden, November 4, 1913.

The long delay in appointing the curator compelled me, at the audience of November 1, to respectfully request His Excellency, the Minister of the Interior, to expedite the process. I then learned from His Excellency that he intended to retain Mr. van Giffen.

However, he would also hear me first.

It is clear that such a decision by the Minister would be highly questionable. I feel obligated to draw your attention to this.

1. Mr. van Giffen was on probation. He had the right to say that he did not like it, and he also indicated several times that he had not yet decided to apply for an appointment. Of course, I was equally entitled not to wish to continue working with him. He was entirely free not to apply for an appointment; I was entirely free not to nominate him. It seems to me that people sometimes forget that Mr. van Giffen has no position at the Museum, that the question isn't whether to oust him, but rather whether it's advisable to bring him in.

2.? Mr. van Giffen is a natural historian, out of place in an archaeological museum unless he also started working in archaeology. I drew up a study plan with him that he would follow as soon as he finished his dissertation. He was increasingly given free time for this. After the summer holidays of 1912, the archaeological program was supposed to begin, as agreed. However, he simply didn't keep his word. When he broke that word, I was eager to continue the experiment with him. It goes without saying that later, when he became so fiercely hostile to us, there was no question of providing training.

How could I use such a person in an archaeological museum?

3. That evening, without my knowledge, he and Mr. Martin, who was morally dependent on him, quietly compiled the notorious false accusation against Dr. Holwerda to the Arentsburg commission, using Dr. Holwerda's rough sketches, which he had entrusted to Mr. Martin in his official capacity. When Dr. Boeser and I asked Mr. Martin if he was aware that he had used such papers entrusted to him in his official capacity in such a way, he said, "Yes, but I did it on the orders of Mr. van Giffen." He was also his superior, he assured me later. Thus, a commission outside the museum was charged with such a gross violation of official duty against its own heads.

- What remains of the principle of authority when such individuals are supported?
- 81360 4. It is certain that Mr. van Giffen did not originally have these criticisms of Dr. Holwerda's work at Arentsburg. Only when I refused to nominate him did he feel obligated to warn the Arentsburg Association against Dr. Holwerda's so-called fraud.
- 81365 5. The Arentsburg commission lists numerous accusations by Mr. van Giffen, either unproven by him or refuted by Dr. Holwerda; these are therefore qualified as libel. Anyone who takes the time to familiarize themselves with the matter will have to see that this assessment is correct.
- 81370 6. Mr. van Giffen himself declares (see the well-known brochure, p. 7) that he cannot work with Dr. Holwerda. So now, as Director, I would like to appoint Dr. Dr. Holwerda must be ordered to cooperate with someone who himself says he cannot cooperate with him and who Dr. Holwerda is certain will slander him if it suits his agenda.
- 81375 7. Irrefutable facts prove that Dr. Holwerda has done everything he can to help Mr. van Giffen advance. The contrary assertion is a gross untruth, even if it has been believed.
- I hope that your board will find the means to avert the danger that threatens our institution.
- The Professor, Director
To the Curators of the State University of Leiden.

Prof. J. Verdam
81435 Leiden
- [146] Leiden, March 9, 14
Dear Sir
Although it is very unpleasant for me to discuss with you personally what others felt
81440 compelled to do to me last year, for whatever reason, and nothing would please me more than to do so without rancor, as I can happily be entirely honest with you, I am struck by the remark in your letter that the method followed thus far has led to misunderstandings and difficulties, and I believe I must permit myself to remark that the burden of proof for this assertion still rests with those who communicated it to
81445 you. [...]
The Highness J. P. Koolemans Beynen
- [273] MINISTRY OF THE INTERIOR.
No. 2661 Department of Physicians
81450 September 25, 1914.
Regarding Curator Dr. Van Giffen
Following your telegram of September 23, I interviewed the Amanuenses Bytel and Koene.
81455 From their testimony, it has become clear to me that recently, when Dr. Van Giffen was in the room occupied by the former amanuensis, you entered and ordered Dr. Van Giffen to leave. Your telegram therefore contradicts the aforementioned testimony. I further consider the manner in which you denied a Museum official access to the building highly offensive and certainly indefensible on the grounds, I believe, that Dr. Van Giffen was on vacation.
81460 In connection with the above, I have the honor to request that you offer Dr. Van Giffen your apology for the treatment he received and also send me a draft instruction properly regulating Dr. Van Giffen's scientific work. I look forward to receiving this draft, along with the confirmation that you have offered the aforementioned apology, within eight days.
81465 Coll.: W. v.d.L. THE MINISTER OF THE INTERIOR Cort vd Linden
To Prof. Dr. A.E.J. Holwerda, Professor-Director of the National Museum of Antiquities in Leiden
- [...] Not long after, a colleague from our faculty warned me that a smear campaign
81470 had been launched against us. A colleague from another faculty—he did not mention his name—had come to him to see if it would be possible [to get?] the Faculty of Arts to reconsider its very favorable recommendation regarding Dr. Holwerda. He and I were told all sorts of nasty things, the most important of which was that Dr. Holwerda had falsified scientific data. If this colleague from our faculty showed even the
81475 slightest inclination to cooperate, he would receive a visit from the President of the Curator regarding this matter. As I understand it, this same Professor also approached other members of the faculty with the same objective.
- [...] Then we also learned what the main accusation was, that of falsification, which
81480 had been brought to the Curators and spread by that Professor. It concerns Dr. Holwerda's maps of the excavation at Arentsburch from 1910 and 1911, of which copies had been submitted to prove that they did not match and had been put together by fraudsters. This accusation, however, was only possible because the accusers had omitted the words "provisional map" under the first map and had failed to mention
81485 that Dr. Holwerda had deliberately added this because he had deemed a further check of his map necessary in 1911, and that he had indeed carried out both of these.

[541] Mr. Dr. Z W. Sneller 23 Apr 17
Dear Sir

81490 I would like to discuss the matter frankly. In fact, your Encyclopedia was virtually
unknown beforehand. However, in our conversation, you mentioned a few names that made
me think I should investigate the matter more closely, and now it appears even less
so that I did not actually find a message that was not entirely correct. Indeed, they
81495 wanted to include my subjects from the beginning. Under the list of permanent
collaborators, I see the name of Dr. van Giffen. This young man, formerly my
assistant, has, in recent years, after I had to honestly admit I couldn't work with
him, been incredibly active in my work and intrigue, supported by several patrons.
Another of his friends is your co-editor, Mr. Niermeier. I understand just as well
81500 that I was passed over in compiling the list of collaborators as that, like both of
you, they couldn't get any work done from him. The question you presented to me
should therefore have been: the editors passed you over earlier, but they were fooled
by it. Do you now want to take that other person's place? I am convinced that neither
you, nor even Mr. Pulle, nor the publisher himself knew exactly what was going on. I
81505 don't think I'm easily offended, but you'll understand by now that I have no choice
but to refuse, especially since I'm convinced that if I were to take that position, I
would once again expose myself to all sorts of insinuations.
I deeply regret that you've gone to so much trouble for nothing.
Sincerely,
Yours sincerely,
81510 JH Holwerda

[541] 24/4 17

Dear Sir [Mr. Dr. Z W. Sneller]

81515 After our conversation, I felt the need ?? by mentioning it as a z? ? in our
conversation, the remarks that have arisen, and it appears to me through light
research, that the question posed in the past was not entirely correct.
My subjects were not classified under History in your Encyclopedia, but had an
independent editor from the very beginning. On the list of contributors, I read,
to my pleasure, the name of Dr. v. Giffen † who, supported by a few protectors, has
81520 since intrigued against me and my work in all sorts of ways.
Given the name of your co-editor, Niermeier, it is not at all surprising that further
investigation was conducted in the selection of his contributors.
If you now say, as and, that you cannot obtain any work in that field from the
aforementioned young man. Now, however... you will understand that it is not my place
81525 to fill that vacancy, although I am convinced that neither you nor anyone else on the
editorial staff knew exactly what was going on.
However, if you knew which of the most worthy gentlemen they and my personalities,
which ones have blindly... I also have no desire to go through that place... perhaps
as far as you... to expose the gentlemen who think they still have more material to
81530 offer...
I deeply regret that you did not make much effort.
Regards,

September 19, 1922, NETHERLANDS SCHOOL OF COMMERCE, ROTTERDAM.

81535 The outgoing Rector Magnificus, Professor F. de Vries, has submitted a report on the
University's events during the past academic year, pointed out that this year was not
characterized by expansion or significant changes in the organization of the
University [...] Polak, head of the State Audit Service in Rotterdam. Mr. Dr. G. M.
Verriijn Stuart, secretary of the board of the Rotterdam Bank Association, was
81540 appointed extraordinary professor of economics, particularly monetary, credit, and
banking. To fill the Posthumus vacancy, Dr. Z. W. Sneller, deputy director of the
Bureau of State Historical Publications, was appointed full professor of economic
history, particularly modern history. Dr. A. O. Holwerda, lecturer in statistics and
insurance science since 1917, was appointed extraordinary professor in these
81545 subjects. [...]

[420] January 11, 1922

81550 [...] Was there even more information about his written writing, but I don't wonder.
Finally, it is clear that Prof. v. B., since we have shown ourselves Schwiegersohn,
the man knows the intrigue and the revelation that he has for years, even if Zweifel
in his opinion will act and defend his innocence, so he is able to stand up for it.
[...]

VOORBURG-ARENTSBURG: FORUM HADRIANI

81560 Architectural Communications, Part LII

See

https://repository.ubn.ru.nl/bitstream/handle/2066/26485/26485_.PDF?sequence=1

81565 Reuvens himself believed in 1829 that his excavation at Arentsburg probably related to Forum Hadriani, but notes he made in the National Museum of Antiquities in Leiden from 1832 show that he hesitated to interpret his finds "either as a Roman permanent camp, or as a Roman city center, or as an old Batavian city later decorated by the Romans." At the beginning of his excavation campaigns, Holwerda posed the problem of explaining Reuvens's finds very clearly, provided one disregards his notion that the

81570 Roman settlement of Arentsburg must have been called either Praetorium Agrippinae (and as such must have been a fortress) or Lugdunum (in case the place had been a town). If one is familiar with the many articles and contributions Holwerda wrote about Arentsburg, and is not content with simply reading his book, published in 1923, entirely devoted to Arentsburg, one has embarked on a fascinating, yet disappointing

81575 journey, led by the man who began his research in 1909 in "A Roman City near The Hague" and who in 1923 subtitled his book on Arentsburg: "A Roman Military Naval Station near Voorburg." Much, if not all, of what Holwerda wrote to explain the findings by Reuvens and himself is now unreliable or unacceptable.

81580 It is impossible to do justice to Holwerda's theories about "Arentsburg" in a short space, nor to discuss and refute them in detail. Therefore, it seems preferable to briefly summarize the main arguments that support identifying Roman Arentsburg with the civilian settlement of Forum Hadriani.

81585 a) In Holwerda's opinion, the Roman settlement at Voorburg-Arentsburg had a militaristic character.

It was a rectangular, elongated structure, extending from northwest to southeast, measuring approximately 400 by 200 meters. It was surrounded on three sides by a wall and two moats, and bordered on the fourth, the southern side, by the Fossa Corbulonis-Vliet.

81590 The complex consisted of two parts. The southern half was the harbor with the harbor quarter, while the northern half was believed to have been a castellum of a cohors quingenaria equitata. The floor plan of this castellum is quite peculiar. The space seems far too large for a cohors quingenaria equitata. Regarding the barracks for

81595 pedites and equites, which Holwerda would have found in the northwest, Part of the castellum, one must conclude that his explanations in this regard are far from convincing and that his floor plans of barracks are very difficult to compare with well-known Roman military buildings of this kind. The same applies to Holwerda's explanation of the buildings excavated by Reuvens, such as the praetorium (principia), the commander's villa (praetorium), etc.

81600 On the one hand, it is clear that different periods must be distinguished in the plan of Arentsburg; on the other hand, it is very strange that Reuvens—in the eastern part of the settlement—only found remains of stone buildings, while Holwerda, in contrast, only uncovered traces of wooden buildings. One gets the unmistakable impression that no traces of wooden buildings were seen in the section investigated by Reuvens, and

81605 that the plan of Holwerda's excavation results lacks any remains of stone buildings. One of the greatest mysteries this plan presents is the so-called separation between the castellum and the harbor area. This would have been a dry ditch (or moat) running from west to east, bordered on either side by a fence. This double fence would also have connected to the center of a double stone gate on the western side of the

81610 rampart, one of which would have provided access to the harbor, the other to the castellum. It is regrettable that the plan will remain a mystery in many respects. According to Holwerda, the main reason why Roman Arentsburg must have had a military character was the military roof-tile temples among the finds, the rampart wall, and the two moats. According to Holwerda, the idea that Arentsburg was a military naval

81615 station was based primarily on the discovered roof-tile stamps of the Classis Germanica Pia Fidelis, as well as on an old channel—within the surrounding walls, which on the south side would have served as a kind of harbor head—in which, moreover, traces of south-to-north channels or canals had been discovered, through which ships would have had access to the naval station located at Fossa Corbulonis.

81620 The old channel and the traces of canals were allegedly demonstrated by means of borings. These latter were conducted in 1911 by A. E. van Giffen, who, however,

rightly raised serious objections to Holwerda's interpretation of certain phenomena revealed by the borings. On this basis, Holwerda's view regarding the harbor and the canals cannot be maintained. [... on C.G.P.F. stamps]

81625 b) The "Roman military naval station," aside from the military tile stamps, has yielded remarkably few finds of a military nature. In this regard, one can only point to two altars, both consecrated by a centurion of the Legio I Minervia (P.F.), a fired clay cannonball, and some more or less questionable iron weapon fragments: a pilum, two pila fragments, some sword fragments, a spearhead, and two spearhead

81630 fragments.
c) Voorburg-Arentsburg is so far the only place in the area between the mouths of the Rhine and the Meuse where monumental civil inscriptions have been found, at least if one disregards the milestones of Monster/Naaldwijk and Rijswijk, which both must refer to the same "caput viae." These civil inscriptions contain, respectively, a

81635 dedication to Diana by a sevir Augustalis from Colonia Ulpia Traiana, and a dedication "genio collegi peregrinorum," i.e., by individuals who were not "cives" of Roman Voorburg, but as "incolae" only had "domicilium" there.
We also know of several limestone fragments from Arentsburg bearing one or more inscriptional letters. However, it is remarkable that one fragment of a monumental civil inscription, preserved in the National Museum of Antiquities in Leiden, was

81640 found during Holwerda's 1910 excavation campaign at Arentsburg and included without commentary in the report for the previous year in 1911 and without commentary in 1919, published in the report for the previous year, is not included in Holwerda's book on Arentsburg, nor in any corpus of inscriptions. Only two-line fragments of the

81645 original text remain. These read ---DEC·MVN---/---ANI·I (ofL)---. The inscription refers to a decurio municipii, in all likelihood [FORI HADRI]ANI. This city is then called Municipium Forum Hadriani here, rather than Municipium A. Cananefat(i)um, as its official name was.
d) According to Holwerda, all of Roman Arentsburg would have had an area of

81650 approximately 8 hectares. If, on the one hand, one does not believe in a military naval station at Arentsburg, then, on the other hand, it is difficult to assume that Forum Hadriani, the main town of the civitas of the Cananefates and also a municipium, would have been only 8 hectares in size. A weak point in Holwerda's

81655 argument is, among other things, his opinion regarding the course of the walls and moats on the eastern side of Arentsburg. Holwerda has not only changed his mind on this matter, but his most recent statements on the subject are more or less contradictory and therefore entirely unconvincing. Doubts regarding the correctness of Holwerda's view of the boundaries on the eastern side are entirely justified. East of the actual Arentsburg grounds lie, on the south side, a plot of land with allotments and on the north side, a meadow. Roman finds have repeatedly been made on

81660 the allotment grounds, and the most striking aspect of the meadow is that it lies approximately 1.25 meters lower than the level of the adjacent Arentsburg grounds. East of this former estate, the surface was apparently lowered in the post-Roman period, presumably due to sand extraction from the subsoil. This also applies to the

81665 grounds of the Deaconesses' Institution, which borders the allotments and the meadow to the east. In 1965, it was discovered that numerous traces of Roman habitation still exist on the latter site, albeit at a relatively low level; among other things, the lower remains of a wooden well in the shape of a barrel were found there. The conclusion may be that it is by no means certain that Holwerda correctly

81670 indicated the eastern boundary of Roman Arentsburg, and that there is every reason to assume that the Roman settlement, i.e., Forum Hadriani, extended even further east. The total area of this town could certainly have been 400 x 280 meters or more.

81675 e) When examining Holwerda's map of Arentsburg, it is striking that the stone buildings excavated by Reuvers are almost all situated in practically the same direction as the traces of wooden buildings found by Holwerda, dating from the time of his castellum. In this regard, however, it is a strange phenomenon that the enclosure wall (on the western and northern sides) not only forms a somewhat acute angle, but that none of its sides run parallel to any of the main directions of the buildings within it. Aside from the reason for this deviation (which, as far as the

81680 enclosure is concerned, may be due to local terrain conditions), it seems that the enclosure wall, the moats, and other outer defenses were constructed relatively late, and that for some reason they deviated from the normal course of the main directions of the existing buildings.

81685 f) The way in which Holwerda attempted to connect his "military naval station" as a port for shipping to Britain with military events in Roman England is unacceptable. This was rightly objected to many years ago by the retired Dutch general F. Kroon in an article that, by its very nature, is highly curious. The intensive occupation of

- Arentsburg undoubtedly began only after 70 AD and continued until 260/270 AD. However, finds from the pre-Flavian period and the 4th century are also known.
- 81690 Regarding the dating of the smaller finds, Holwerda can generally continue to follow his lead. However, an important exception must be made for his dating of the roof-tile stamps of Legio I Minervia discovered at Arentsburg; these all belong to the Antoniniana types and therefore date from 212-222 AD, and not from the 2nd century AD, as Holwerda believed.
- 81695 Interesting, but equally unacceptable, is Holwerda's explanation for the considerable quantity of indigenous Roman, so-called Frisian-Batavian, sherds that seem to have been found primarily in the oldest "military barracks" of the "castellum." In order to support his theories regarding the character of Roman Arentsburg, Holwerda even went so far as to attribute these shards to Batavian cohorts. These
- 81700 Auxiliary troops "who performed such important military actions in Britain in 84" are said (after the Batavian revolt!) to have built the naval station at Arentsburg as a staging post for the voyage to Britain.
- The facts from the excavations at Arentsburg are by far best explained by assuming that an indigenous settlement of Cananefates existed there as early as the first half
- 81705 of the 1st century, just west of a tidal creek of the Rhine estuary, which became part of the Fossa Corbulonis in 47 or shortly thereafter. This settlement expanded considerably after the Batavian revolt and grew into the center of Cananefates' land, which Hadrian granted market rights in 120 or 121 and, as Forum Hadriani, was also elevated to the status of municipium shortly thereafter, at the latest in 162. Some
- 81710 of the stone buildings excavated by Reuvens may have been constructed as early as between 120 and 162, using, among other things, military bricks from the Exercitus Germanicus Inferior or its vexillarii, the Legio XXX Ulpia Victrix, and the Classis Germanica Pia Fidelis.
- 81715 Due to a lack of data, it is impossible to say when the walls and moats were built, but one might think of the end of the 3rd century or the first decades of the 3rd century, around the time of Septimius Severus, Caracalla, and Elagabalus. The last datable roof-tile stamps are those already mentioned from the Legio I Minervia Antoniniana from 212-222.

- [455] 462 [A. W. Nieuwenhuis, Rector]
December 3, 1923
My dear friend!
- I would like to return briefly to our conversation yesterday, the subject of which concerns me more. I would not like you and other members of the faculty, whose friendly feelings I value, to view the matter differently than it is.
- 81730 We spoke about the many intrigues to which I have been exposed in the past, and in which many professors also diligently participated at the time, denigrating me and my work in the ugliest manner, in order to achieve a specific goal. Those attempts failed, the tide has turned, but I feel very well that that history has left a mark on the minds of quite a few, especially in Leiden circles, which makes dealing with
- 81735 it unpleasant for me, and which has also caused my private life to take a certain turn, one in which, ultimately, I feel quite comfortable.
- We also discussed the difficult position of a museum director in general—as evidenced by all my predecessors, not least the eminent Reuvens—in Leiden's professorial
- 81740 circle, most of whom were actually unaware of the value of a museum as a cultural institution in itself and therefore of the significance of the work of good museum management.
- You told me that, regarding the former, I should let those old stories rest, that new people had arrived with better ideas in the latter respect as well. You told me that I should not, by stubbornly clinging to the past, stand in the way of a good
- 81745 relationship, a collegial collaboration between education and museums, such as that which your faculty would now demand.
- I can refer you to a letter from me dated October 28, 1920, addressed to the faculty, in which I took a first step towards better cooperation for the benefit of academic education. I received a haughty reply to this letter, which cut off further
- 81750 deliberation.
- Since then, a young colleague in archaeology has taken action; I have shared with you some examples of what he has previously done against me and my work. His written actions against me, the much older colleague who also believes he is entitled to some

81755 distinction because of what I have achieved in the scientific field, have attracted-
to use no other word-general attention throughout the country and already demonstrate
very little desire for collaboration. Even before he had delivered his inaugural
address, he attempted, in a letter to the curators, in which he acknowledged that he
had been helpfully met by me. He attempted, through this college, to intervene in the
81760 museum's management, over the director's head. At the same time, the incomprehensible
demonstration of another of your colleagues occurred, who fled from the "unusable"
lecture hall, the use of which your faculty now so fervently desires, only to return
there of his own accord after a few weeks. Naturally, such an attempt was bound to
come to nothing. Since then, complaints against me have been filed repeatedly with
the curators, which, by their very nature, are equally unsuccessful, but nevertheless
81765 raise the question of whether this is the way forward.
to achieve amicable cooperation.

You now tell me that the aforementioned younger colleague himself also realizes that
he went too far, that his attitude was not the right one. After everything that has
happened, I would surely expect to hear this from him himself, that he himself
81770 declared that he wanted to abandon the aggressive attitude he adopted immediately
upon taking office and, where he sets certain requirements for himself and his
teaching, that he also wants to respect the museum board and its views, its rights
and obligations.

And if the purpose of your mission was not to push a specific wish on me, against my
81775 honest and established convictions, but to establish a lasting, good, and preferably
amicable cooperation between lecturers at the State University on the one hand and
the management of the Rijksmuseum on the other, then I refer you once again to my
aforementioned letter to the faculty. I hereby repeat my question posed therein, and
the faculty then only has to retract its answer given at that time. If anyone asks me
81780 how I envision such a collaboration, I believe I can provide an answer. After the
past has truly been buried, personal contact will be established first and foremost
in all matters pertaining to archaeological interests, between the museum management
on the one hand and the faculty-not just a single one of its members-on the other.
Perhaps it was the unconscious need for this, which manifested itself in the, in my
81785 opinion, highly unfortunate combination of a professorship and directorship, both
positions requiring a complete person and, in many respects, very different
aptitudes. With a genuine desire for improvement, a different, better approach can
certainly be found. Once such lasting, regular, personal contact is established, it
will soon become apparent that the devil is not as black as he is portrayed; that
81790 various things that seem unnecessary or incorrect from the outside actually have very
sound reasons; that within numerous theoretical concepts, a voice from the field can
sometimes truly open up entirely different insights; and most certainly, that the
Museum's usefulness for academic education need not be an empty pretense.

I thought it wise to explain my views in writing again before you discuss this matter
81795 with your colleagues.

Whatever you may have against letters, scripta manent.

Sincerely,

The High Honourable Professor Dr. A.W. Nieuwenhuis

LEIDEN.

81800

June 2, 1973 Roman Canals in Nijmegen

"ARCHAEOLOGISTS are puzzlers," says Prof. Dr. J. E. Bogaers of the Institute for
Ancient History and Archaeology, Department of Provincial Roman Archaeology at
Nijmegen University. Together with Dr. J. K. Haalebos, he has been conducting
81805 excavations since April 2nd on the sites of two villas slated for demolition on Berg
en Dalseweg in the eastern part of Nijmegen. M. P. M. Daniëls dug in the same area in
1916.

The renowned archaeologist J. H. Holwerda conducted excavations between 1917 and
1921, which led him to claim that he had determined the perimeter of the camp of the
81810 Tenth Roman Legion Gemina - a total of 29 hectares. The Legio X Gemina, a double
legion, was stationed at the investigated site from approximately 70 AD to 104 AD.
After the last World War, knowledge about the castra's terrain expanded considerably,
thanks to extensive research conducted by Professor H. Brunsting until 1967.

During the most recent investigation, in addition to two ditches from the Flavian
81815 period, traces of two wooden barracks dating from the early Flavian period were also
discovered. The most important discovery is that the late Flavian ditch appears to
have been filled in during the Roman period, and that a rectangular stone building
measuring at least 12 x 18 meters was built over it. From this, and from other
previously known data, the conclusion can be drawn that the castra from the period

- 81820 after 70 AD underwent a unique change of direction. Initially, the front most likely faced (north)west, towards Batavodurum-Ulpia Noviomagus. In the first half of the 2nd century—presumably under Hadrian, when the Legio IX Hispana was stationed in Nijmegen—the fortress was rotated 90 degrees, and the front was directed north(east) towards the steep slope of the Hunerberg, towards the Waal and Rhine rivers.
- 81825 During the final phase of the fortifications, the eastern part of the former castra was extended south(west) to the other side of the Berg en Dalseweg.

B.de Jong Herv. pred.
- 81900 [163] Telegram Received in Roermond, June 20, 1910, at 8 am. 12 m.
- [163] Report on the discovery in the peat at Meijel.-
Following exchanged telegrams, I decided to go to Meijel on Monday, June 20th. Mayor Truijen accompanied me to the house of Smolenaars, a peat worker, in Meijel. He had found some objects at work in the peat approximately 1.75 meters below the ground surface, roughly where gray or top peat and black or bottom peat were separated: The following objects are better described by drawings than by description. The helmet and the plates were on leather, which is now in the possession of the director of the Helenaveen Company (Forest in Helenaveen). Because the finder and others pulled this off, the helmet has suffered and lies in the pieces from which it appears to have originally been assembled. The plates are thin, e.g., 3/4 millimeter. The comb is thicker; at the edges, they have been bent around the leather. The spur was still attached to a kind of heavy shoe, which is still with the leatherwork. The cloth from a veil is also still with that leatherwork. The helmet and jewelry are still in Meyel with Smolenaars, and the leather with Mr. Bos.
- 81915 Later, I was told that another worker had found a side plate.
One, another a pin. The mayor of Deurne immediately had a guard posted at the site to prevent further digging.
Mr. Truyen, former member of the First Chamber, the mayor of Meijel, Mr. Bos, and the director of Helenaveen are happy to provide information. I pointed out to the owner that if anyone from the lords of Leyden were to arrive, they would be required to show everything, but not to others for the time being. It was found where a sand ridge runs through the peat. Mr. Bos also found a spearhead and a bow, all between Helenaveen and Meijel in the Deurne Peel. ?? -----
- 81925 I believe I've done everything in this brief report to provide a good overview. I didn't answer the question of its value, which the uninitiated naturally exaggerate. The distance from Roermond to Meijel is four hours, from Stat. Griendtsveen to Meijel 2 1/2 hours. I would like the drawings back after copying, as I don't have any.
Roermond, June 20, 1910
- 81930 AF van Beurden
1st Secretary "Limburg"
Surveyor of the Land Registry
- 81935 If the necessary expenses incurred during the trip can be reimbursed, I would be grateful. If not, I will pay them myself out of interest.
Telegram 0.58 guilders
Postage 0.12 ½ guilders
Travel expenses 2.-
2.80 ½ guilders
- 81940 [631, p. 411] 331 ???
Thank you very much for your "first" information. The find seems to me to have considerable value (also financially). Gratama? I will come and take a look when I have the opportunity. Would you be most helpful in showing me the various items for the helmet? I would like to send them to the National Museum of Antiquities (? to my personal address). I will then examine them and send the value to the finder. You would be very obliging. In any case, the shipping costs are also at our expense. After examining them, I will let you know what I think of the matter.
Sincerely (?) JHHp;werda
- 81950 B. de Jong, Pastor, Helenaveen

[310] Helenaveen, June 21, 1910

Dear Sir!

81955 I thank you kindly for your letter, which I received this morning. Unfortunately, I cannot send you the objects.

81960 Some items were found on the border between the upper peat, which was sold to a company for excavation, and the black peat, which belongs to the Municipality of Deurne. The company and the Municipality of Deurne both now claim rights to the objects. As a result, items considered of inferior quality are now in Helenaveen, while the coins, the so-called helmet, etc., are in Meyel, about an hour from here. The finder entrusted them to the Mayor of Meyel, who will certainly be happy to show them to you on the spot if you announce your arrival. I wouldn't dare say how long they will remain there, however, as I fear the dispute over ownership might lead to a lawsuit.

81965 You can make the journey from Helenaveen station to the village of Helenaveen, near which the discovery was made. From there, the objects can be viewed by bicycle or carriage to Meyel.

Because the objects have been in unskilled hands until now, they have not improved. I felt I should share this with you.

81970 Sincerely,

Yours sincerely,

B. de Jong.

Discoveries near Deurne

Notice from the Mayor

81985 Long before the Mayor of Deurne informed the Government of the discovery in his municipality, we had already been informed of it by our agents. We possess images of these objects; there is no danger of them crossing the border, and we hope, in due course, to bring the matter to a successful conclusion in consultation with the Director of the Royal Print Room. Should I require the Government's assistance in this regard, I will contact them; otherwise, I will handle this matter as I always

81990 handle such matters, in accordance with the Government's view. I trust that the Government agrees with this.

81995 It is certainly commendable that the aforementioned Mayor has contacted the Government. Apparently, he was unaware of the Ministerial Order of May 2, 1887, No. 878; Dept. K W, otherwise he would have addressed that communication to me. Following the reports from our agents, we also requested information from that Mayor a few days ago.

The Professor and Director of the National Museum of Antiquities

A. E. J. Holwerda.

82000

His Excellency the Minister of Internal Affairs

Dutch Affairs

82005 [283] Rolduc, July 4, 1910

[...] You have certainly heard of the interesting discovery at Meyel. At first, I thought it was a fabrication, but later I learned from a reliable source that it was indeed an important archaeological event. I hope you will be successful in purchasing the pieces.

82010 [...] W. Goossens

[229] DEURNE, July 7, 1910

Your Honor!

82015 In response to your letter yesterday, I inform you that the Roman objects found by a certain Smolenaars in Meijel—in the peat belonging to the municipality, the top layer of which (the gray) is leased to the firm Terwindt and Arntz and exploited by the firm Steegh and Esser—are still located at the Smolenaars' house. I will now try to

Naspeuringen van Paul Theelen: Constantinus Imperator

- 82020 get the objects, which are in a glass cabinet, here next Saturday, so that your Deputy Director doesn't have to make the trip to Meyel (a three-hour journey), unless HE would like to make the trip anyway, considering some objects (mostly leather footwear and other items) that are in the possession of Mr. A. Bos, Director of the Helenaveen Mine.
- 82025 As long as the issue of co-ownership between Steegh and the Municipality remains, the finder will not release the objects. Apparently, antique dealers have already offered money. A sum of 1000 guilders has already been mentioned for the helmet alone.
- 82030 The finder cannot or will not yet sell. I believe Mr. van Beurden, Surveyor of the Land Registry in Roermond, has provided you with the information you requested in your letter dated June 23rd, no. 339.
- Sincerely, Yours sincerely, ??? Burg
- 82035 [573] Helden July 1910
Very dear Sir
A very beautiful discovery was made here, two hours from Helden: 43 coins from the year 512-521 and a Roman plech armor of silver gilt or gold. The goods were found in the Peel with peat pits 2.5 meters deep. It seems this may have belonged to a knight.
- 82040 I don't know if it's still for sale from the worker. I'll come and see them as soon as possible, so I can discuss them with you and after them.
Sincerely,
Lou Ueberbach
Here's another message from the Courant.

Secret Cabinet Secret
not copied for the time being
- 82050 [229] DEURNE, 27 Aug 1910
Dear Sir!
In response to your letter, I inform you that it has always been Smolenaars' plan to transfer the helmet to the Rijksmuseum in September. The Municipality would also prefer to see the museum acquire the find.
- 82055 S., however, would like to know before then how much the museum could spend. I doubt that, knowing the price, he would abuse it by selling everything to a Franck or Gildemeester, at least if the State values the find.
Since S. does not wish to go to L. alone, I will probably accompany him.
- 82060 Sincerely, Yours sincerely, Dr. ??? Burg
- [229] DEURNE, 25 Oct 1910
The Director of the Museum of Antiquities Leiden.
Received your inquiry by telegram with a paid reply this morning. I will keep the latter in my possession so that I can communicate it as soon as a decision is made.
- 82065 The purpose of my last letter was to inquire whether a request of 1,000 guilders, plus any legal costs, would be well received by you or the State. After all, if the Council requests such an amount, and the State offers the amount of 800 guilders you first mentioned, we will have to hold another council meeting later. Council meetings
- 82070 are not held here often because some council members live two and a half hours from the Town Hall. If you could quickly inform me whether the B. and W.'s proposal is accepted by you, I will hold a meeting for that purpose as soon as possible. The meeting would have already been held if we had not postponed it in view of the discussion of the budget, accounts, municipal bylaws, and other matters.
- 82075 Sincerely, The Mayor of Deurne ???
- [229] 8/11/1910 [telegram]
DEURNE 9 29 8/11 12:34 =
- 82080 IN VIEW OF THE BUDGET DEALING THIS DAY, DECISION. THEN AUTHORIZATION FOR SALE OF STATES. NO CONCERNS, MUNICIPALITY NEGOTIATES OR SELLS OTHERS. ALLEGED OFFER IS BEING APPROVED = MAYOR +

- 82085 [229] DEURNE, November 25, 1910
No. 4B
Dear Sir!
In response to your letter of yesterday, no. 599, I have the honor to inform you that the Council's decision will be submitted for approval within a few days.
- 82090 It is very regrettable that part of the helmet (cheek piece) is missing. I very much doubt that piece was stolen. Several people searched for and found objects after Smolenaars. I don't know whether all the finds are still together. At the time, someone also owned a piece (probably a cheek piece).
82095 I'll inquire whether he added it to the finds Smolenaars made. If not, I'll try to sell it for less than what's required, at a fairly high price.
- to purchase. For the time being, I would not make any announcement with a promise of reward.
Sincerely, always at your service
82100 Yours truly, ??? Burg
- [363] December 10, 1910
Increase in the annual salary of J. Koene, amanuensis; L. van der Meer and F. van der Meer, clerks; H.S. Groen, clerk
- 82105 [229] DEURNE, December 13, 1910
Dear Sir!
I hereby have the honor to send you the decision of the Council of this Municipality to sell the Roman objects found by millers in the Peel region. Since approval from
82110 the Provincial Council, according to their letter, is not necessary, the transfer can be effected by contract.
When and where would this be most suitable?
Sincerely,
The Mayor of Deurne ca. ???
- 82115 [229] DEURNE, December 18, 1910
To the Administrator of the National Museum of Antiquities in Leiden
Herewith your draft contract, to which we agree. We will be pleased if everything can be completed before January 1st, especially since the current Secretary, Janssens,
82120 was honorably discharged as such on the 15th of this month at his own request, effective January 1, 1911, and will therefore still have to appear in court according to this draft.
Sincerely,
The Mayor of Deurne, ca. ???
- 82125 [229] DEURNE, December 21, 1910
With your letter of the 20th of this month, we received a banknote for 1000 guilders (BD10), as well as the purchase agreement in duplicate for the antiquities found here in the peat bog, the latter document being returned here after being signed by us.

- 82155 Well, Ed Heer,
I am in possession of a beautiful, intact Roman helmet. The reason I haven't informed you about it yet is that Mr. Kam is interested in purchasing it. If he buys it, it will remain in our country. Although it is still little known that I have this helmet, even the Gildemeester doesn't know about it yet. I'm surprised that you
- 82160 already know this. Although I already received an offer from Germany last week, if you come to Nijmegen one of these days, you can see it.
November 4, 1910 Sincerely, Yours sincerely. GrandJean(?)
Placing the collar over the helmet is for breaking the sword blow on the helmet this helmet is hammered from heavy bronze and weighs approximately 3½ pounds
- 82165 Completely intact, beautiful Bronze Helmet
A bronze semicircle of 0. ½ Ned placed over the helmet from the front. centimeters in thickness and 0.2 centimeters in width
B ring for hanging the helmet

N3134 K.W.
Letter from His Majesty the German Emperor regarding the discovery in Deurne.
- 82190 3. I would very much have liked to reply immediately to Your Excellency's letter of 20 October 1910, No. 2791, Dept. K.W.
However, I was completely unsure. Just about this, however, I received a telegram from which it appears to me that the Deurne finds have become State property. The helmet, however, is broken into pieces, and other objects are in a completely
- 82195 dilapidated condition. Proper restoration will take a long time. It would be an honor for us to have everything prepared for His Majesty the Emperor of Germany as soon as it is at all possible. The documents sent to me by Your Excellency are returned herewith. The Professor and Director of the National Museum of Antiquities (signed) A. E. J. Holwerda
- 82200 His Excellency the Minister of the Interior, The Hague

[163] Roermond, 30 November 1910.
Higgel. Sir,
I am very pleased that the helmet, etc., has been found. I was very worried at the
- 82205 time. It is an interesting piece, do you know the shrill?/Uz?? Now, what the inscription means? That interests me very much. Hereby the stone knife [...] [van Beurden]
- 82210 [163] Roermond, December 4, 1910.
Wlzig Heer,
I am very pleased that the find from the Peel region is in the Museum. I was otherwise afraid that it wouldn't end up there. Could you tell me what it says? I am very curious about it? Is the find being restored? [van Beurden]
- 82215 [163] Well? G. Heer,

May I politely inquire if you have managed to read the inscription on the back plate of the helmet found in Meijel? What does it mean? [...]
Roermond, December 13 [van Beurden]

82220 [202] Appointment as assistant from January 1 to December 31, 1911 J. Briedé

[632] January 30 11

Verehrter Herr Professor,

82225 In the Leiden Museum you will find a Roman helmet in Constantinischer Zeit, with the Nackenschirm an inscription is a single one? tat, there is only one photographic photograph here that can be found. Although the man cannot be entziffern. We asked ourselves in connection with Herrn Prof. Dragendorf, we can turn to you. Also, I can write my inscription with the bits that I would like to read and read in writing.

82230 In addition, you can read about Helmrande in Kapitalschrift Stablesia ♥ VI ♥, which you can see on the Equites Stablesiani, which you can see in the Not. Dign. More than one thing was reported and also, so they fell, with two inscriptions forkommen (C.I.L. V, 4376, VIII, 8990). Vielleicht kann dieses Stablesia Ihnen bei der Lesung der nicht entzifferten Inschrift nützlich seien.

82235 Even though they were not known, they were not a problem when they were published. If they were useful, they would not be welded, but they would also be required to do so. Ihren Ergebenen M.A. Evelein Curator.

- Herrn Prof. Dr. O. Bohn

Berlin-Steglitz

Kurfürstenstr. 3.

82240 [632] Feb 7 11

Verehrter Herr Professor,

Thank you very much for your help, which I really responded to, although the desired photography was not helpful.

82245 The Helmet was founded in Summer 1910 in Deurne (N. Brabant). There is a napkin, cheek claps and a nackenschirm. There were demands with a source of reward for Silberblech. Der Überzug is now erhalten; of the claimants are happy with their own small claims. Also, I can take care of the weight of the heavy loads, and also take care of the diet, so I can have it with the silver restauriert. Der restaurierte Überzug wiegt ohne Wangenkloppen und Nackenschirm 282.50 Gr. For the restoration we will spend 45.- Gr. Silver. The initial weight of the excess weight and also was more than 282.50-45.-=237.50 Gr. signal.

82250 The nails have a weight of 32.50 Gr., the cheek claps of 2x17.10 Gr., and now the links are there. Since you are a Helmet, you will be able to enjoy the benefits of rewarded Silberblech. They are visible on the leather bands that celebrate those cheek slaps on the helmet rim, ihren Platz. The cribs are 0.70 Gr.

82255 For the time being, let the inspection take place, also -L. Here are the photos of Stablesia VI, and the attention to detail of the photographs, which is not the only retouch with negative or positive effects. They are the ones who are born in the Netherlands and who are the first photographers.

82260 With kind regards,

Hochachtungsvoll Your Excellency M.A. Evelein

- Prof. Dr. O. Bohn

Steglitz-Berlin

82265 Kurfürst.str. 3

[632, p. 336] 92 14 February 11 301/447
from Deurne

82270 The helmet found near Deurne in June 1910, about which I wrote to Your Excellency in my letter of July 14, 1910, No. 389, is currently on display in the Museum. It is the property of Mr. C. H. Krantz, a manufacturer in Leiden.

82275 After much effort, Deputy Director Dr. J. H. Holwerda succeeded in obtaining this piece. For a time, there was a danger that it would be lost to our country. It is undoubtedly the most beautiful antique piece ever found in our soil. It was purchased for 3,000 guilders. Mr. Krantz made it possible to acquire the helmet so we could purchase it at his expense.

His sole intention, however, was to facilitate the acquisition of this art treasure for the State. He is returning the helmet to the State for exactly what it cost him, 3,000 guilders.

82280 This amount of 3,000 guilders is precisely what Your Excellency, in a letter dated July 19, 1910, No. 1965, Department of Commerce, W.W., made available for that

purpose.

82285 I would appreciate receiving your reply with further details of the budget item to which the invoice should be charged to Mr. Krantz. The attempts to acquire the piece for less, no matter how strenuously they were tried, were bound to fail. The value, if it were purchased, for example, in a market where foreign museums could bid, would be at least double. Professor and Director of the National Museum of Antiquities, A. E. J. Holwerda

82290 Your Excellency, Minister
van [...]enlandsche Zaken te 's Gravenhaage.

[632] February 17, 11

Dear Professor,

82295 I consider your reading of the inscription to be correct, even though the symbols ? for ? and ? for ? remain confusing. Regarding the interpretation, however, I have the following to offer. If I had to choose between your two interpretations, I would vote for the first... Tit(ii) Valon(is) Urs(i). For surely the owner of our golden helmet was not himself a captain? But is a third interpretation not possible? The weight refers to the covering, but how could the wearer of the helmet know the weight of the covering? It was impossible to know without removing the covering from the iron cap. In my opinion, the weight of the covering could only have been determined at the factory and set there on the neck guard. One could therefore think of a manufacturer. Since our helmets, as correctly assumed, were manufactured in imperial arms factories, I would like to consider a verifier who requested the weight of the gold.

82305 His name would therefore be Titus Valonius Ursus. The first symbol, which I also do not consider to be the question mark, could then perhaps be a symbol for auctoritate (C. XIII, 2, 100 30 00) or something similar. Your opinion on this interpretation would be very valuable to me, and I hope you would share your judgment with me again.

82310 I completely agree with your addition (vexillatio) Stablesia(na), all the more so because the equites Stablesiani are considered to be among the Vexillationes Comitatus Africae und Britanniorum in the Not. Dign. (Oce VI, 34, 82. VII, 180, 182203. Ed. Seech).

82315 I will be happy to send you the supplements for the corpus.
Thank you very much for your detailed explanations.

Sincerely

Your devotee

M.A. Evelein

August 21, 1911 As assistant in the Nederlandsche afdeeling of the Rijksmuseum van Oudheden te Leiden is benoemd Mr Hermann Martin aldaar.

82350

[176] Helenaveen 9 Dec. 1911 [...] letter from A. Bos
[See elsewhere]

February 2, 1912 Belangrijke vondsten.

82355

Op een stuk land, toebehoorende aan den Heer A. Honigman en situated on the Lindeweg te Heerlen, heeft men naar de "Nieuwe Limb. Koerier" mededeelt, naast various other concerns zaken a gedeelte uitgegraven van een Romeinschen pottenbakkersoven, die volgens een oppervlakkige Beschouwing afkomstig moet zijn uit het midden the first eeuw tot het begin der tweede eeuw na Christus.

82360

This is the first Romeinsche oven in Limburg, the zoo is absolutely something. The large area in the area is considered to be cut from the Romans and the men are hoopted and have several concerns from the most important ones.

82365

Door de arbeiders, who were on the ground werkzaam, zijn volgens hun zeggen four van dergelijke ovens ontgraven. In a daarvan vond men still heel wat Romeinsch aardewerk en wel op de plaats, what was baked in the oven. The aardewerk has the gemeente a gedeelte overgenomen, terwijl de rest is aangekocht door the Rijksmuseum van Oudheden te Leiden.

82370

Door the army H. Martin, assistant at the genoemd museum, was de verdere werkzaamheden geleid.

The wall direction recorded in 1910 was incorrect in relation to the points where the ground traces of the buildings were recorded.

82375

In Fig. ..., the building traces belonging to the same buildings as those measured in 1910 and 1911 are drawn, and it appears from this that on the Provisional Map of 1910, the wall was drawn in the direction AAA, while the control measurement in 1911 established that this direction should have been drawn according to the direction BBB.

82380

The subsequent measurements left no doubt and were therefore drawn in their correct context.

82410

Esteemed, Highly Learned Sir,

On the advice of Mr. Verzondert (Dr. in Classics), who was present at the time during excavations conducted under your direction, I take the liberty of contacting you with a request. A collection that will soon be auctioned includes several objects that may be of some value to an archaeological museum.

I have therefore taken the liberty of attaching a list of these objects compiled by

Dr. Verzondert.

82415 Perhaps you would be interested in purchasing them, or if not, we would be very obliged if you would state their value.

Thanking you in advance.

Sincerely, M. Haffmans Wibaut

[279] The Hague, March 22, 1918

Your Honorable Director of the National Museum of Antiquities in Leiden

Your Honorable Sir,

82440 Mr. G. Smolenaars of Meyel has contacted me with the complaint that in 1910 he found a gilded He unearthed a silver helmet, which was donated to your museum, but for which he would not have received half the value due to him as the finder, but only 1200 guilders. While the municipality of Deurne, as landowner, had received 1/4 1000 guilders from the Steegh company, as tenant, also 1000 guilders for its quarter.
82445 Smolenaars was reportedly offered 300 guilders for the coins and other additional finds, which he, however, did not receive.

Could I ask you to inform me somewhat about this history? I thank you in advance for the effort you have made.

Sincerely,

82450 Your Honor, Henri van Groenendael
Member of the Second Chamber of Meyel

[279] March 26, 1918

The Most Honorable Mr. Dr. H.A.G. van Groenendael The Hague

82455 Your Honorable Sir,

I am happy to provide you with the requested information.

82460 In June 1910, during a dig in the Helenaveen, the pieces of a gilded silver helmet were found by the worker G. Smolenaars. Smolenaars took the pieces to his house. They were safe because the Mayor of Deurne fully understood that this piece, found on our soil, could not be moved to a foreign museum. The municipality of Deurne, as owner of the Helenaveen, was co-owner of the find.

Suddenly, however, a third claimant appeared, the firm Steeg & van Essen of Nijmegen, under which the excavation work had been carried out. They initiated legal action, served a writ on their former worker, Smolenaars, and hoped to obtain the pieces in
82465 this way.

That was a difficult position for the man.

How could one hold their own against such a firm?

82470 The deputy director, who had gone to Meyel in this matter, then, at his own risk, bought Smolenaars' right to the found documents for 1200 guilders and awaited the outcome of the lawsuit. Smolenaars was then able to refer the gentlemen to the other rightful claimant. This other claimant actually obtained the firm's lawyer. The lawyers he consulted did not consider the firm's chances of winning the lawsuit high, but the legal basis for initiating legal proceedings was available. We considered it fortunate that the worker was not involved in the case.

82475 The firm's lawyer was also not entirely sure of himself, and so, to avoid a lawsuit, a settlement was reached, whereby the deputy director acquired the firm's true or alleged rights for 800 guilders and the municipality of Deurne's for 1000 guilders. He was therefore the owner of the helmet, i.e., the State became the owner for the 3000 guilders the government had allocated for it.

- 82480 Regarding the 300 guilders, I am sending you a copy of part of a letter from Smolenaars himself. As any visitor to the museum can see, it was not possible to restore the leather found in its entirety. Therefore, there is no question of Smolenaars still claiming that money.
- 82485 So, Smolenaars has not been wronged. He has been helped out of his predicament. Now the poor man has been talked out of it. The piece is supposedly worth half a million. That is absurd. He submitted a request to Her Majesty the Queen in the spring of 1917 and is now turning to you.
- With this, I consider the matter sufficiently cleared up.
- Sincerely,
- 82490 For signed. A.E.J. Holwerda
- Sittard, March 20, 1918
- The Most Learned Mr. A.E.J. Holwerda, Professor at Leiden. Esteemed Sir,
- 82495 I hereby have the honor to kindly thank you for your detailed letter of the 26th of this month regarding the discovery of G. Smolenaars in Meyel. I advised him to let the matter rest for now and to be satisfied with what I received. - Please accept my sincere thanks for your efforts.
- Sincerely, Yours sincerely, HenrivanGroenendael, Member of the Second Chamber.
- 82500 [374] Leiden 27/7 18
- [381] 21 November 1922
- Esteemed Sir!
- 82505 The enclosed postcard, still addressed to my father, was sent to me. And my father has ever told me that you helped German scientific institutions in their difficulties and that he acted as a mediator in this regard, but I don't know exactly what he did in this regard, nor how far you intend to go. If you wish to continue this and I can be of assistance, please do so.
- 82510 Therefore, I am sending you this postcard for your perusal. - I am also enclosing a circular letter I recently received for distribution from the well-known magazine "Bonner Jahrbücher." It would, of course, be a great pity if this magazine were to cease operations.
- Yours faithfully,
- The Honourable Mr. C.H. Krantz

332. Krantz, Cornelis Hendrik, of Warmond, born in Leiden, December 20, 1853.
- 82525 December 27, 1915. By deed executed on December 21, 1915, before the undersigned notary, a general partnership was established between Mr. Cornelis Hendrik Krantz, manufacturer, residing in Warmond, Mr. Boudewijn Franciscus Krantz, manufacturer, residing in Leiden, and Mr. Leonard Pieter Krantz, manufacturer, residing in Warmond, to continue the business conducted by the former under the name J. J. Krantz & Zoon, consisting of the manufacture and trading of sheets and other woolen fabrics. The
- 82530 partnership is operated under the name J. J. Krantz & Zoon and is located in Leiden. It was entered into for an indefinite period and commenced on January 1, 1915. The partners are all authorized to sign the partnership agreement and are generally authorized to act in the name of the partnership, to issue and receive funds, and to bind the partnership to third parties and third parties to the partnership, provided,
- 82535 however, that the cooperation of all partners is required: a. to buy, sell, exchange, rent, lease, lend, mortgage, or encumber with other real rights the partnership's real estate; b. to enter into all obligations in general whose subject exceeds the value of ten thousand guilders; c. to lend funds or property to the partnership, to borrow funds or provide security for borrowed funds, or otherwise commit themselves
- 82540 to obligations of third parties; d. to enter into settlements, to conduct proceedings, both as plaintiff and defendant, and to assign disputes to s
- umpires. However, Mr. Cornelis Hendrik Krantz is authorized to perform all the acts mentioned in this article alone and therefore without the cooperation of one or both other partners. (6100) H. M. A. COEBERGH, Notary.
- 82545

December 15, 1923 C. H. Krantz †.

After a short illness, Mr. C. H. Krantz, the oldest partner of the well-known firm J. J. Krantz and Sons in Leiden, passed away at his country estate in Warmond, aged 70. This cloth factory, founded in Leiden during the reign of Louis Napoleon, had a worldwide reputation. Although he was most interested in the technology of his business, so that he continued to perfect cloth manufacturing, he also contributed significantly to the advancement of the people. He co-founded the first school for manual labor in The Hague and, as early as 1897, established a public bathhouse in Leiden, one of the first in the Netherlands. Furthermore, various social institutions had his support and cooperation.

December 11, 1922 Prof. Dr. O. Bohn Berlin-Steglitz, Kurfürstsenstrasse 3

[303] Helmond, July 10, 1918.

Your Honor,

I have intended several times to draw your attention to a remarkable piece of land located in Deurne, which, as a lover of history and archaeology, continues to fascinate me every time I pass it.

It is a piece of arable land in the middle of the heath, close to the former Germanic cemetery (all the burial mounds of which are still clearly visible), rising about one to two meters above the surrounding area. Traces of a ditch or canal can be discovered around it. This piece of land, consisting of raised sand, is popularly known as "de Braok." I've found larger and smaller potsherds there several times, but never paid much attention to them, because I attributed their presence to the thrown manure [?], in which they had been lost.

Recently, however, when a local farmer was digging to take some sand home, he came across several objects, which he tried to keep as intact as possible. But because none of them were still intact, he thought they were "no good." So much was smashed. Four, however, have been preserved, but none of them complete.

I saw them myself, at the home of the farmer who found them.

They are:

1. A beautiful, large bearded man, approximately 40 cm high, made of very hard material, brown on the outside, gray on the inside.
 2. A small jug, approximately 12 to 15 cm high, with three medieval Christ figures around them, the instruments of torture, also made of very hard material.
 3. A soft cloth bowl, glazed on the inside.
 4. A stone plate decorated with yellow lines according to the accompanying sketch.
- At the site where these objects were found, hundreds of shards, green, yellow, and brown, still lie.

I took some of them with me. I also found a piece of woollen cloth there, which had also been excavated. I took that along as well. Should these finds be important enough to warrant a trip to North Brabant, I would be happy to give you all the information and accompany you to the excavation sites. I have said that the finder will under no circumstances part with the objects before I have spoken to him about them again.

I hope to receive an answer from you.

Sincerely, J. Heerens

MUSEUM OF GERMANY, ETHIOPIAN AND MARITIME MUSEUM "PRINCE HENDRIK" ROTTERDAM.

The Director of the National Museum of Antiquities in Leiden

Your Honorable Sir:

From your letter of June 5, I learned to my relief that you have received my letter addressed to Professor E.E.J. Holwerda, Director of the National Museum of Antiquities in Leiden, would like to consider this as addressed to you, and also offer you my sincere apologies for the mistake I made. - This mistake would not have occurred if I had received your personal message at the time regarding my letter addressed to you - sentence of the family name - dated March 2nd. - If you [...]

[283] November 1, 1920

[...] I would also like to inform you of the following:

You are aware that Mr. Kam has given his museum in Nijmegen to the State and that a contract was drawn up entirely without my knowledge. I now hear that they also want to appoint a museum director and offer him a full salary, and that the candidate for this position is [crossed out and typed over]?. vrooi nr/m eioesiu?e?

played at our museum is known to you. On the one hand, I want to try to prevent the Kammuseum in Nijmegen from simply becoming a second Rijksmuseum, competing with ours. Furthermore, it's being presented as if the municipal museum in Nijmegen will simply

82615 be absorbed into the Kammuseum, thus bypassing the gentlemen in Nijmegen. I don't think this will ever happen, as the Minister is led to believe. The best, and indeed the only, good solution seems to me to be the following:
I think it would be foolish to appoint a highly paid special official solely for that Kam collection; it seems to me that this would be just the job for our friend Daniëls

82620 to perform in addition to his archivist duties. Of course, a settlement would have to be reached with the municipal museum, and he would need a few additional assistants, but I think he is absolutely the right person for this matter. We will undoubtedly have good cooperation.

82625 In this spirit, I have now arranged for His Excellency to issue a recommendation. This goes against the wishes of the departmental authorities, who have apparently been encouraged by Evelein's friends. However, I have written a piece to counter this. In that piece, I also stated that I was certain I was not alone in my conviction, and I cited you as an authority from whom, in my opinion, one would certainly obtain such advice. I don't know, of course, whether the Minister will do

82630 it, but if you are actually asked, you now know what I have written, and I am convinced you will guess the same. After all, there is no one as well-informed as Daniëls. So I have no doubt that you will want to support my advice in this matter. Sincerely,

82635 October 29, 1928 So-called new Drenthe falsifications.

Dr. A. E. van Giffen of Groningen writes to us.

In response to the article in the evening paper A, page 2, of October 12, of the Nieuwe Rotterdamsche Courant, under the heading "Rijksmuseum van Oudheden" (National Museum of Antiquities) in Leiden, about a lecture by Dr. J. H. Holwerda on Glozel.

82640 Spiennes in Drenthe thirty years ago and the accompanying announced small exhibition of old and new Drenthe falsifications, I would like to make the following

observations. That in the past, that is, in the nineties and thereabouts of the last century, urns, stone chisels, and the like were produced or imitated and sold on a large scale in Drenthe, especially in the area around Odoorn, is a well-known fact.

82645 The warehouse collections in Assen (especially earlier) and Leiden can, or could, bear all too striking testimony to this. In older newspaper editions, including those of the Nieuwe Rotterdamsche Courant and elsewhere, articles on this subject have been written by, among others, the late Mr. Sij. Gratama, Mr. J. C. van Kempen, the late Jhr. Mr. J. A. Feith, and Mr. J. G. C. Joosting. Objects made and sold at that time

82650 are also still in the possession of private individuals here and there.

However, I very definitely doubt that falsifications like the one mentioned here have continued to be produced in recent years. Over the past 15 years, I have come across several more, and twice in the last 12 years I have even been offered a similar, clumsy, and immediately recognizable forgery in Assen. But as far as I could tell,

82655 they were always remnants from earlier, aforementioned periods. It is a fact, however, that the announcement in question seems to have caused some concern, at least in some circles in Drenthe. Therefore, it seems highly desirable to me that, if my assumption is correct, this be removed as soon as possible. This is especially true since, as I have heard, Dr. Holwerda recently considered a stone chisel he

82660 purchased from Drenthe and found in the municipality of Emmen to be a forgery. Dr. J. H. Holwerda informed us of the following in response to Dr. van Giffen's letter: "In response to this letter, I can inform you that I am convinced there is no reason for any concern that may have arisen in Drenthe. The forged objects, which have

82665 apparently recently been offered specifically to the National Museum of Antiquities in Leiden, were probably not made in recent years.

May 6, 1929 INSTITUTION OF DR. J. H. HOLWERDA

On April 2, Dr. J. H. Holwerda, director of the museum, was honored in one of the galleries of the National Museum of Antiquities in Leiden. He had been associated

82670 with the institution for 25 years on Easter Monday. This tribute took place in the intimate circle of friends of the celebrant and was attended not only by the members of the honoring committee but also by the president-curator of Leiden University. Mr. Van de Sande Bakhuyzen; the secretary of the curators, Mr. Idenburg; the former president-curator, Mr. De Gyselaar; the former secretary of the curators, Mr.

82675 Boddaert; the rector magnificus, Professor Van Eysinga; the secretary of the academic senate, Professor Van Wijk, and several professors. On behalf of the commemoration committee, Mr. W. A. Beelaerts van Blokland, clerk of the Senate, spoke. The speaker

pointed out that, thanks to Dr. Holwerda's care, the museum, through the numerous acquisitions, has not degenerated into a warehouse. He noted how much better the collection in the current museum building is given more prominence than they were in the building on Breestraat. The speaker declined to name those who had assisted the director; however, he makes an exception for the late Dr. Remouchamps, sorely missed. Despite Dr. Holwerda's great merits, criticism of his work was inevitable. This was a natural consequence of his work on the road. Criticism, however, also has many positive effects, and among the grateful attendees at this tribute, Dr. Holwerda would have found many critics. The speaker expressed the expectation that the jubilarian would continue to work with courage and enthusiasm for a long time to come, in the interests of the museum and of science, to the gratitude of the critics as well. Regarding the tribute he offered on behalf of the committee, the speaker shared: Including that Dr. Holwerda had expressed the wish to receive for the museum, as a memento of this day, a small Roman cup of exceptional value, executed in the millefiori technique and made in the first century BC. The curator, Miss Bruts, recently purchased the cup at a public auction in Berlin. Along with the cup, Mr. Beelaerts van Blokland offered an album compiled by the museum staff, listing the names of the donors. Furthermore, since Dr. Holwerda had indicated that he would appreciate some financial support for his excavations, the committee—not insignificantly supported by a significant donation received specifically for this purpose from someone deeply committed to the museum—decided to present the remaining funds raised in envelopes to the jubilee recipient, under the motto "Excavation Fund." "Please accept this sum with the assurance that we await its expenditure with great interest, in the hope that you may thereby obtain the results for further solving the problem of the Netherlands' earliest civilization." Finally, as a representative of the Government, I have a particularly honorable task," Mr. Beelaerts continued. "The Government also felt it necessary to pay tribute to you today for all that you have done on behalf of the Museum entrusted to your care. For it went beyond the performance of duty. The Government considered a special token of gratitude appropriate in this case, and it believed it could best express this appreciation by awarding the medal, which is reserved exclusively for those who have made a very special contribution to the country's museums." It has pleased Her Majesty the Queen, by Her Highness's decree of March 27, 1929, to decree that you be awarded the Museum Medal in gold, and I hereby request you to accept it from me on behalf of the Government as the highest tribute on this day. (Prolonged applause.) Mr. H.J. Scharp spoke on behalf of the Royal Antiquarian Society, which, especially recently, has had excellent cooperation with the Leiden Museum and with Dr. Holwerda in particular, as the speaker noted. For placement in the museum, the speaker offered a 3rd-century Gnathia vase from southern Italy and a terracotta statue from the same period. The society's statutes do not permit gifts, and therefore the objects were loaned, which makes little difference, according to the speaker. Holwerda, touched by the great warmth he had experienced from many quarters during these days, then expressed gratitude for the tribute paid to him. The speaker especially thanked the government and Mr. Beelaerts van Blokland, who had shared the museum's joys and sorrows for over 25 years, for his heartfelt words. The speaker also devoted a few words to the memory of his colleague, Dr. Remouchamps, who passed away too early and whom he sorely missed on this day.

Response from A.E.J. Holwerda regarding metal thickness

See regarding De Stuers https://nl.wikipedia.org/wiki/Victor_de_Stuers

July 11, 1904 [...] After completing some housekeeping duties, Prof. Dr. E.A.J. Holwerda gave a lecture on Dutch antiquities in connection with the reorganization plans for the Museum of Antiquities, which he directs. The speaker then addressed the relationship between local and provincial museums and the Leiden Museum. His view is that local museums should contain the best of their region. The Leiden Museum should not be the sole source of information, but should provide specimens of everything found on our soil and also provide comparative material from abroad. All mayors in the country have already been contacted to provide information, but museum boards and private individuals should also exercise supervision. Here too, a permanent organization would be highly desirable. The speaker hoped that one day a scholar would emerge, equipped with extensive knowledge, who would devote himself exclusively to the study of Dutch antiquities; but in the meantime, everyone should do what they find appropriate.

NATIONAL MUSEUM OF ANTIQUITIES.

82745 Leiden, November 28, 1910
No. 604.

Please address your reply to the "Management of the National Museum of Antiquities in Leiden," not to specific individuals.

Esteemed Sir,

82750 May I express my sincere thanks for your letter and the two promised statuettes, which are invaluable to us in themselves, but also as proof of our interest. Our subsidy has indeed been significantly increased; ensuring that nothing worthwhile leaves our country requires considerable effort. The museum is now completely finished, including the gallery of plaster casts, and I dare say with pride that one
82755 would have to travel quite a distance outside our country to find something like it. Many a Leiden luminary from around 1860 would turn in their graves if they knew. Arentsburch will yield magnificent results; however, determining everything is a formidable task. Ultimately, a publication will be forthcoming that will enhance our reputation abroad and shed new light on our oldest history.

82760 Please accept my sincere thanks again and believe
my?? Sincerely, yours truly,
A. E. J. Holwerda

To the Right Honourable Sir Jhr Victor de Stuers

Member of the House of Representatives of the States General in The Hague

NATIONAL MUSEUM OF ANTICIPALITIES

Leiden, 11 May 1911

82770 Please address your reply to the "Management of the National Museum of Antiquities in Leiden", not to specific individuals.

Esteemed Sir

Thank you for your letter,

82775 I fully understand your doubts; 0.06 mm is not much. However, we had the thickness of the plate measured a meter later by a skilled goldsmith using a so-called plate, and he arrived at this result. After your letter, we called the man again. Same thing again. He said such coverings can be so thin because the remark [??] gives them some consistency. It's almost like paper. One must also be very careful with them. The two young men responsible for the care of that piece also considered a sash strap
82780 applied in the manner you suggest. They could have mentioned this as well. In the description of the piece itself, Dr. Evelein followed a different conjecture, as you know, and that seems somewhat plausible, although certainty is impossible. The main argument against a leather sash strap fitting seems to be that holes are only on one side of the strips, even though they are a little too long rather than too short.

82785 (This, however, is of less significance.

The three holes actually only appear on one side of the helmet. I have examined it again carefully with Dr. Evelein. A fitting over the entire length is certainly not necessary, but as I already noted, the strips are at least long enough for that. The storm straps, however, will probably not have been attached to the interior.

82790 We are very pleased that this helmet did not cross the border or end up in a private collection. My son had a tremendous effort to prevent that. It would have been unimaginable if such a piece were now in a foreign museum.

Believe me, in the meantime, yours sincerely,

Dr. A. E. J. Holwerda

82795 To the Right Honourable Mr. Jhr. Mr. Victor de Stuers in The Hague [letter P1112312]

NATIONAL MUSEUM OF ANTIQUITIES.

Leiden, May 16, 1911

82800 Please address your reply to the "Management of the National Museum of Antiquities in Leiden," not to specific individuals.

Dear Sir,

Thank you for your letter.

82805 I can fully understand your doubts; 0.06 mm is not much. However, we have the thickness of the plate through a skilled goldsmith with a so-called plate and he came up with this [=with] this result. After your letter, we called the man again. The same thing again. He said such coverings can be so thin because the remark [??] gives them some consistency. It's almost like paper. One must also be very careful with it. The two young men responsible for the care of that piece also considered a chin strap applied in the manner you suggest. They could have mentioned this as well. In the

82810 description of the piece itself, Dr. Evelein followed a different conjecture, as you know, and that seems somewhat plausible, although certainty is impossible. The fact that holes are only on one side of the strips seems particularly telling against the fitting of leather chin straps, even without them being a little too long rather than too short, seems to be the main argument. (This, however, is of less significance.

82815 The three holes actually only appear on one side of the helmet. I have examined it again carefully with Dr. Evelein. A fitting over the entire length is certainly not necessary, but as I already noted, the strips are at least long enough for that. The storm straps, however, will probably not have been attached to the interior.

82820 We are very pleased that this helmet did not cross the border or end up in a private collection. My son had a tremendous effort to prevent that. It would have been unbearable if such a piece were now in a foreign museum.

Believe me, sincerely,

Yours sincerely,

Dr. A. E. J. Holwerda

82830 [Information obtained from Hans van de Laatschot.
Available at the National Archives under folder numbers 158_0, 1006_0, and 1015_0]

J.H. Holwerda

82835 Abstract: The name Holwerda is associated in the Netherlands with the Dutch archeology. In fact it refers mainly to son Jan Hendrik, known from the popularization of the excavations in the Dutch soil during about 40 years. His father, Antonie Ewoud Jan, was professor in Greek and Greek antiquities and later

82840 director of the Rijksmuseum van Oudheden in Leiden. At a very young age Jan Hendrik enrolled at the museum of his father and became afterwards the new director. No real modern biographies of both are known, this article contains new and critical information about the role of both in some specific cases.

82845 A report of a visit to Italy and Greece of both father and son is given in the Dutch Staatscourant, the official newspaper of the Dutch government. Here we encounter the close relation between both with respect to their scientific work. Though it is impossible to prove directly faux pas of both - they date from more than a century ago! - the evidence of a cooperation in writing a thesis is sufficient to treat this here in detail.

82850 Later, in 1910, son Holwerda falsified an inscription on the just excavated Peelhelm, an extremely fine decorated Roman helmet found in Helenaveen, Deurne. This inscription STABLESIA VI was NOT present on the date that the helmet was found. In a scientific report of the Museum of April 1911 it is mentioned officially for the first time. This inscription has given rise to a whole range of theories, as can be

82855 found when searching the term with computer search engines. With the helmet nearly 40 small coins, folles or nummi, with Constantine the Great were found. They date the date that the helmet disappeared in the peat at circa 325.

And just this date makes the helmet extremely important for history, because it seems to have a direct link with the Emperor Constantine and his family that resided in Trier. We can derive from this link the idea that the helmet and the other belongings of a high-ranked Roman cavalry-officer belonged to a near kin of Constantine. His son Crispus is a candidate. Just as Constantine's wife Fausta, he was ordered to the death penalty in 326.

When there is a connection between the helmet and Crispus, an explanation can be that Constantine himself - after the Council of Nicaea in 325 and the Vicennalia in 326 - was uncertain about the future of the developing Christendom when he should die. He did not trust his son Crispus and his wife Fausta to continue his religion politics to christianize the whole Roman Empire as it developed from 324 when he defeated his last rival of the tetrarchs.

82870 This kind of thoughts should emerge in real scientific persons, they should try to find an explanation of why a Roman helmet was hidden in a not habited area. But the Holwerda's and dr. M.A. Evelein (the author of the scientific report) of the museum did not think scientifically, or they felt that it was dangerous to pay attention to the new falsified inscription.

82875

In my view Evelein is not guilty for the inscription: both his bosses backed each other and he was obliged to mention the new inscription. A few weeks after the release of the scientific report he left the museum...

82880 Almost all texts are in Dutch, and this article is written in Dutch accordingly. Father Holwerda was a member of the Koninklijke Nederlandse Akademie van Wetenschappen.

Subject:

82885 Antonie Ewoud Jan Holwerda (Gorichem, July 21, 1845 - Leiden, August 29, 1922)
Jan Hendrik Holwerda (Schiedam, December 3, 1873 - Nijmegen, March 3, 1951)

Holwerda and Dutch archaeology

82890 The name Holwerda is inextricably linked to Dutch archaeology, although his father had no formal training in it, and his son learned it primarily through daily practice through excavations. However, it is said of Jan Hendrik that he himself never held a shovel.

82895 Holwerda's father was clearly a scholar who earned his doctorate with a (probably) sound but very unremarkable dissertation entitled DISPUTATIO DE Dipositione verborum in lingua Graeca, in lingua Latina ET APUD PLUTARCHUM.

ACCEDUNT COMMENTARIOLO AD LIBROS DE ISIDE ET OSIRIDE ET DE GENIO SOCRATIS.

Incidentally, his name is ANTONIUS EWALDUS JANUS HOLWERDA.

82900 The date given is "Scribebam Schiedam anno MDCCCLXXVIII mense Aprili."
The dissertation is divided into a large section as described above and has two commentaries on the book of Isis and Osiris, and on Socrates. It comprises 156 pages, including the 24 propositions in Latin.

82905 Note that these are not inscriptions or anything similar, but grammatical peculiarities in classical writings. It is amusing that sometimes a Dutch sentence can be seen in the text as an example, such as on p. 57:
today/red // tomorrow/death.

ein alter Mann/ein junges Weib // gewisse Kinder;
better/half an egg than an empty shell.

82910 Plutarch's Moralia apparently forms the basis of a large number of paragraphs, indicated by \$. 92 paragraphs on exactly 100 pages.

82915 Clearly a dissertation for specialists, but in my opinion, few will have read the dissertation on the grammatical peculiarities discussed. It was practically very difficult to find a copy online, and the copy found is from Toronto.
In short: Father Holwerda was clearly a scholar with an excellent knowledge of Greek and Latin.

82920 When the series of excavations in Greece by teams from various countries began, Father followed the results closely. In De Gids, we find very long treatises on Olympia in 1881, Schliemann's Troy in 1882, The Attic People and the Art of Phidias in 1884, and Pre-Hellenic Royal Castles in 1887. From the history of classical philology in 1888, 1889, and 1890, and Bibliography in 1901. After 1901, articles on, among other things, intellectual life, the visual arts, and the education of our academic youth. In 1885, he wrote a book on Cypriot art.

82925 All the articles contain a wealth of information, so much so that the reader feels lost and stops reading. The description of Olympia is supposed to make you believe you are walking through ancient Olympia and witnessing fantastic events. But the author himself has not been to Olympia and apparently fabricates the events from the available scholarly literature on the excavations and from classical literature. As an example, a paragraph from this:

82930 In the evening, however, the moon grows ever fuller in the sky. Finally, the full moon is only six or seven days away, and the festival is about to begin. The preliminary exercises in the Gymnasium of Elis have already concluded. The Hellanodikes are in the Plethrion, a racecourse of that Gymnasium, to organize the procession of champions from the city to the sanctuary. Those who are the same age or were close equals in the preliminary exercises are placed next to each other. Now it is well worth going to see the champions; they are all lined up here in squads. How much one admires these sturdy men with their proud, free bearing, fully aware of their strength. One examines the people with connoisseur's delight. That powerful man over there, exceptionally developed in the chest and hands, but somewhat less so in

the other parts of the body, is a "lion-athlete"; the other, whose legs are somewhat slender compared to his mighty, awe-inspiring torso, is called an "eagle-athlete." Undoubtedly, among all these people there are also "bear-athletes," powerfully built individuals, somewhat stocky, not tall, more or less square; indeed, it is to be expected that among such a select group, one can identify the most striking representatives of each type. Now the procession sets off. Naturally, they are following the great highway, "the holy way." The theorias will also have participated in this official march to the Altiss. Numerous partygoers follow, others continue along the road through the mountains. Elis is now completely exhausted.

What do we learn from this? An absent-minded armchair scholar, with a fair amount of imagination, who enjoys using his intellect for magazine articles, but has no practical knowledge of excavations, neither in the Netherlands nor in the ancient world.

Many years later, on December 5, 1898, we read a very extensive and this time very readable article in the Staatscourant (State Gazette) entitled: REPORT by Dr. A. E. J. Holwerda, concerning the scientific journey to Italy and Greece.

This concerns a journey made by father and son together. We will return to this.

Around April 8, 1896, Father H. was appointed professor in Leiden to teach archaeology:

April 8, 1896, At Kon. By decree, Dr. A. E. J. Holwerda, a teacher at the five-year higher civic school in Leiden, was appointed professor in the Faculty of Arts and Philosophy at Leiden State University to teach archaeology and ancient history.

The following announcement is therefore noteworthy:

July 7, 1898 By royal decree: Professor J. van Leeuwen Jr., professor in the Faculty of Arts and Philosophy at Leiden State University, is relieved from teaching Greek antiquities, and Professor A. E. J. Holwerda, professor in the Faculty of Arts and Philosophy at that university, is now charged with teaching Greek antiquities.

The trip to Greece is clearly related to this appointment, but why J. van Leeuwen was suspended is unknown. However, on April 11, 1884, it was reported that J. van Leeuwen had presented himself as the poet of the Adolescentis meditatio:

The secretary further reports that Mr. J. Van Leeuwen, of Amsterdam, has presented himself as the poet of the Adolescentis meditatio, and that the retired member, Holwerda, has submitted a short annotatio critica to Philonis librum de posteritate Caini, which, according to the editorial committee's recommendation, will be included in a subsequent issue of the Reports and Communications.

Very confusingly, the aforementioned Holwerda is actually a different person. This concerns the Royal Academy of Sciences, of which a Jan Hendrik Holwerda is a dormant member. This man had the exact same name as his son H., who himself was never a member of the Academy.

Furthermore, this member is mentioned on June 24, 1885:

The reports include two contributions that were not presented at any meeting. One, written in Latin, contains critical notes by Mr. Holwerda, a retired member of the department, on the Greek text of Philo's work on Cain's descendants (Reports and Communications, 3rd series, part I, pp. 274-284); The other, written in French, is the work of Dr. H. F. C. Ten Kate Jr. It discusses the names used by the Native Americans in North America to identify themselves and other tribes (Reports and Communications, 3rd series, part I, pp. 353-363).

There is thus a third member named J.H. Holwerda, who died on April 15, 1886, in Oegstgeest. He belonged to the LITERATURE SECTION, as we can read in the Dutch State Gazette of May 15, 1886. Also, some more information is provided in the "Het nieuws van den dag" (The News of the Day) of December 14, 1886.

Father Holwerda was also interested in education, as evidenced by an article in the Soerabaijasch Handelsblad of March 7, 1888:

March 7, 1888 Dr. Holwerda discusses in the Ned. Spectator the Unfavorable results in the secondary education exams, especially in history. Of the 40 candidates who took the exam this year, only five passed. Yet, they weren't lacking in diligence; on the contrary, Mr. Holwerda himself admits that they often risk their health to meet the requirements. But it's the method of preparation that's flawed. People practically memorize books, and one book after another is devoured by those preparing for the exam, but most don't take in history. They have to know a lot, because the exams demand a lot, and it's impossible to predict in advance what questions they will be

asked.

83010 Mr. Holwerda now wants a different method of preparation; he wants to transfer the academic act exams to one of our universities. A simple preparatory exam, for which the author sets the requirements, should precede it, followed by two years of lectures, or, if there's no opportunity for that, a study program could be developed with the professors.

83015 Mr. Holwerda will certainly have given this method considerable thought; to us, and certainly to many who are less familiar with the matter, the idea seems very appealing; for it would put an end to the absurd system of examinations currently in use in secondary education, which the author so rightly condemns. The exams are the cancer of education.

83020 Father H. became a member of the Royal Academy of Sciences on May 8, 1893: May 9, 1893 May 8. At the meeting of the Royal Academy of Sciences held today, it was announced that the Minister of the Interior had confirmed the appointment of Messrs. A.E.J. Holwerda, P.A. van der Lith, and H.T. Karsten as Dutch members, and G. Maspers of Paris, Ed. Lieven of Halle, and J. Legge of Oxford as foreign members.

83025 And Father H. gave a lecture at the Academy on Eleusis: January 12, 1895. At the meeting of the Department of Language and Literature, to be held on Monday of this coming week, Dr. A.E.J. Holwerda will deliver a paper on The Sacred and the Mysteries of Eleusis.

83030 And on April 30, 1896, father H. became professor with the title of Historical Sciences, in particular those of classical antiquity; its independence and significance.

The following cryptic message can be found on October 17, 1896:
83035 The successors of Doyer, Treub, and Land were remembered and greeted, and the establishment of the chair of archaeology, held by Dr. Holwerda, was mentioned, although malicious gossip claims that a trap or a net, through whose meshes he had only accidentally slipped, was still prepared for him in the House of Representatives; Meanwhile, fellow citizens!"

83040 Son H. passed his doctoral examination in classics on October 1, 1897: LEIDEN. Second part of the candidate's examination in theology with A. C. de Regt and H. van Assendelft; second part of the candidate's examination in law with A. B. van der Laan; second part of the physics examination with J. P. Gogarn and J. A. Audier; doctoral examination in classics with J. H. Holwerda.

83045 Son H. was then 23 years old; we would consider this a fairly normal age for current studies, five years after turning 18. Clearly not a truly brilliant student, but undoubtedly intelligent.

Father and son. Only a few months after completing his studies, son H. was allowed to go on a study trip with his father to Italy, Greece, and Turkey.

83050 The aforementioned report in the Staatscourant (Government Gazette) describes the trip between December 22, 1897, and May 4, 1898, made by father Holwerda, who was allowed to take his son along. At the expense of Vollenhoven's Leiden Fund. Father and son traveled together. They spent almost two months in Greece, in Attica, from February 7th to April 2nd. From April 2nd, they visited sights in the Peloponnese for several weeks, finally reaching Constantinople/Istanbul, and then took the train (the Stamboul Express described by Graham Greene?) via Vienna to Leiden, where they arrived again on May 4th, 1898.

83055 The report reveals that several paper prints of well-known Attic inscriptions were made, as well as 700 photographs of the entire journey. These documents likely formed the basis of son Holwerda's dissertation.

83060 Regarding the Vollenhoven Fund, we find the following on November 19th, 1890:
As is known, the late Mr. H. Vollenhoven, who died in The Hague in 1889, bequeathed a fund to Leiden University, the interest from which will be used to award grants to
83065 outstanding students of that university, enabling them to further develop themselves through domestic or international travel.

The curators of Leiden University therefore call on students who wish to be considered for such a grant—regardless of their faculty—to apply by submitting a sealed petition to the secretary of the curators before January 1, 1891.

83070 The amount of the grant, as it depends on the nature of the trip, will be determined later.

83075 Sixteen months after his return, on September 25, 1899, his son Holwerda received his doctorate with his dissertation "Quaestiones de re sepulcrali apud Atticon" [or Atticos, atticos]. This Latin version does not deserve or receive much further attention; no reference at all has been found. The German (trade?) edition is occasionally mentioned, but more as a sales object.

83080 Project for private individuals. The title is then THE ATTIC GRAVES. Studies on the Attic Graves Reliefs.
And so something peculiar presents itself: the graduation date is very shortly after the visit to Greece, more than 16 months after returning home. That seems a very short time for writing a dissertation, the German version of which comprises well
83085 over 200 pages. After all, resting from a grueling journey, describing the photographs, and printing the dissertation limit the effective working time to 12 months, and that for the Latin and German versions. Moreover, the doctoral candidate is only 25 years old.

83090 It seems improbable that such a thorough dissertation—concluded here with honors — could have been written alone in such a short time by such a young person. Moreover, there is no evidence that he had already been studying this subject for years before the trip. But his father did possess the knowledge to write a dissertation — in full or in part—in a short time.

83095 Note, by the way, that son H. was never admitted to the Royal Academy of Sciences; an older person with the exact same name as his son was an active member of the Academy until around 1880.

Events during the restoration process of the Peel helmet, part 1

83100 The Peel helmet was purchased by the National Museum of Antiquities before the ownership disputes were resolved and collected on August 31, 1910. What exactly happened to the helmet afterward is virtually unknown. The only information we can read in the newspaper is that on Tuesday, December 20, the helmet was put on display in all its glory in the museum's so-called Excavation Room. And at the end of April
83105 1911, a Dutch-language scientific report by the museum's employee, Evelein, was published, which in the 1970s was described as "outdated and inadequate" in the scientific community.

Although it was known from several newspaper and magazine articles that the right cheek flap had been taken by another peat worker, this was only discovered later in
83110 Leiden. Half-hearted attempts were made afterward to purchase this part of the helmet from the unknown owner, but the mayors of Deurne and Meijel were clearly uncooperative. Therefore, a mirror image of the left cheek plate was made by a goldsmith's workshop in Leiden. Evelein's report mentions the goldsmith-worker by name, but little else is known about the owner and employee.

83115 Although Van Beurden's article does mention an inscription—the text is included as an illustration—no mention is made of the very legible Stablesia.

We can assume that the months of September, October, and November 1910 were used for the restoration. Perhaps due to the lack of clear ownership on the sales side, the restoration took quite a while, and scientific research naturally had to be conducted
83120 simultaneously.

External scholars were contacted for this purpose. Initially, Professor Hans Dragendorff from Berlin was approached, who in turn referred to Professor Oscar Bohn, also in Berlin.

The registrar of the National Museum of Antiquities writes about this:
83125 As far as I can tell, the Stablesia inscription was first mentioned in Evelein's letter to Prof. Oscar Bohn, dated January 30, 1911, was asked for his interpretation of the second inscription—written in Greek letters—on the neck protector (STABLESIA VI itself was clearly legible and found in other Roman text sources). Apparently, they had already (several weeks?) previously requested this from Prof. Hans
83130 Dragendorff of Berlin—an authority on Roman pottery and name stamps on terra sigillata. Based on Dragendorff's suggestion, Bohn was called in.

Thus, we have proof that approximately five weeks after the exhibition in the Excavation Room, there was still no explanation of the original inscription.
83135 STABLESIA apparently required no explanation...
Incidentally, this unspoken explanation is completely incorrect. Some cavalry units or commanders with "stablesiani" were known, but these bore a further designation such as iuniores or "from Africa." An army unit with serial number six never existed!

83140 **Events during the restoration process, part 2**

Nothing more is known about the restoration process than the invoice for 123 guilders, without further details of the work. The invoice is dated November 24th, so we conclude that the entire process took over two and a half months.

83145 A new cheek brace was made that still needed to be gilded. Today, it looks much smoother and more contemporary than the left cheek brace.

The helmet was therefore left in pieces on the goldsmith's worktable. The construction was studied, and photographs were taken of the pieces and other finds, which are also included in Evelein's article.

83150 Besides the new inscription "STABLESIA VI," there is another uncertainty: did the goldsmith regild the helmet at the museum's request? According to the museum's registrar, the inside of the helmet is not gilded, so we can assume that not all parts were dipped in a gold bath, because then all sides would have been evenly gilded. Unfortunately, no image or detailed description of the first two and a half months in the Peel region is known that shows any of the gilding. It is only

83155 mentioned that the helmet disintegrated during excavation, not that any gilding, for example, was knocked off. However, the helmet was wrinkled.

We can assume that the Peel helmet looked as we know it today when it was placed in the Excavation Chamber, so the work was completed a few days before Christmas.

83160 **The events during the restoration process, part 3**

The author of this article made an inscription on silver paper, which is actually 10 µm-thick aluminum foil, using various markers. This was very easy, so we can conclude that applying STABLESIA VI can be done in a few tens of seconds.

But what about the gilding?

83165 If the inscription was applied to the original surface, a trace of the underlying silver should be visible. If the groove is V-shaped and deep enough, the transition from gold to silver may be clearly visible depending on the light.

83170 If the inscription is applied and then gilded with a brush, the groove will be completely gilded.

If we look at the current situation in a photograph, we notice that the inscription "STABLESIA" replaces a decorative border that is interrupted for the length of the inscription. In April 1911, Evelein calls this decorative border "relief bands," and we read about it:

83175 The helmet rim is decorated with two parallel, convex, relief bands, between which is a border decoration similar to the outer edges of pieces a, b, and c. This runs, just as we saw from the holes for the rivets, along the entire helmet rim, including

83180 behind the nose guard; Only on the right side, at the level of the central section b, is it interrupted by an incised inscription, STABLESIA o VI o, which we will discuss later. Fig. 62 clearly shows how this interruption of the rim ornament was already made during the helmet's construction, in order to allow for the insertion of an inscription either immediately or later. Here we see that the ornament is not

83185 arbitrarily broken off, but finds its specific termination at the relevant points.

As a second inscription on our helmet, we saw, on the right side of the rim, that of Stablesia VI. It designates a division of the equites Stablesiani, a cavalry corps, which, as appears from the Notitia Dignitatum, [...]

83190 This interruption of the relief band was made by the goldsmith by beating it flat! And then the inscription could be applied. Also note that there are holes in the helmet at several points along the interruption, and that the silver base is also visible in several places. The flattening of the relief bands has seriously weakened the metal there.

83195 **Events during the restoration process, part 4, conclusions**

The inscription "STABLESIA VI" is highly suspicious; it was almost certainly applied by deputy director Holwerda Jr., after it had been replaced on a decorative edge above the renovated cheek pad. Gold paint was then most likely applied with a brush.

83200 The helmet shows numerous areas of damage on this part of the Peel helmet.

In my view—though this will likely no longer be definitively proven—son Holwerda is the main suspect, with his father and Evelein as accomplices.

Note that immediately after Evelein's report was published, he left the museum to work in The Hague. Many years later, Evelein and Holwerda Jr. switched positions in an opaque manner at the management of the Kam Museum in Nijmegen. The museum's

83205

correspondent in Roermond, Van Beurden, also later knew of the forgery but played along because, in his daily life as an antiquarian, he was no better than his client. For example, Van Beurden and Holwerda later jointly conducted research on the Church of Asselt, the results of which are now disputed.

83210

HOLWERDA, Jan Hendrik (1873-1951)

Holwerda, Jan Hendrik, archaeologist (Schiedam, December 3, 1873 - Nijmegen, March 4, 1951). Son of Antonie Ewoud Jan Holwerda, director of the National Museum of Antiquities, and Neeltje Jonkheid. Married Petronella Nicolette Jentink on December 21, 1901. No children were born from this marriage.

83215

His father was a teacher of classical languages at the grammar school in Schiedam, professor of archaeology and ancient history in Leiden from 1896, and director of the National Museum of Antiquities there from 1905 to 1918. His son would follow a roughly similar career. After completing his grammar school education in Schiedam,

83220

Holwerda enrolled in Leiden as a student of classical languages in 1892. He received his doctorate there in 1899 with a thesis entitled "Quaestiones de re sepulcrali apud Atticos." Between 1900 and 1904, he taught at the grammar schools in Alkmaar and Schiedam. From this period date a textbook entitled "Hellas en Rome. Griekse en Romeinsche archeologie" (1900) and his adaptation of A. Zeehe's "Leedboek der oude

83225

geschiedenis" (1903). In 1904, he was appointed curator at the National Museum of Antiquities in Leiden, in 1910 deputy director, and in 1919 succeeded his father as director. This directorship lasted until 1939. He was also director of the

83230

Rijksmuseum Kam in Nijmegen from 1935 to 1948. In 1910, he was appointed lecturer in prehistoric and Roman archaeology at Leiden University. His students would eventually

include W.C. Braat, F.C. Bursch, and A.E. Remouchamps. A short internship in 1905 during the excavation of a Roman castellum at Haltern on the Lippe River would prove to be a major turning point in his life. Here, for the first time in the history of archaeology, a systematic search was made for specific soil discolorations.

83235

ings, which were interpreted as traces of stakes placed in the ground, allowing the reconstruction of completely lost building remains. Holwerda brought knowledge of the 'post hole' and the significance of soil discoloration in general to the Netherlands and applied this modern excavation method to the study of burial mounds. The first excavations took place between 1906 and 1911 in the Crown Estates near Hoog Soeren in

83240

the Veluwe region at the request of Queen Wilhelmina, who had become interested in one of the burial mounds. Although Holwerda must undoubtedly be credited with introducing the knowledge of the 'post hole', all his publications demonstrate that he was not a true fieldworker. Thus, during the excavation at Arentsburg near The

83245

Hague, a difference of opinion arose between him and his assistant, A.E. van Giffen, who was more talented in this regard, regarding the documentation and interpretation of the soil traces. This ultimately led to an irreparable conflict between the two researchers around 1915. Van Giffen went to Groningen, where he founded the

83250

Biological Archaeological Institute and improved field methods. Holwerda lacked the ability for objective, unbiased observation of facts and tended to find only confirmation of what he had already anticipated before the research. Field drawings, insofar as they were preserved, are not reinterpretable. Early in his career, in 1906, he had written an unpleasant and inaccurate piece against Boeles in Bulletin 7 (1906) 130-132, concerning Frisian terp research, in which he presented himself as

83255

the representative of Dutch archaeology, somewhat surprising for someone who had been working there for only two or three years. These conflicts led to Holwerda's alienation from mainstream scholarship. Among his work are the first systematic investigation of a dolmen in 1912 and the excavations at Dorestad between 1925 and 1930. In his publication on Dorestad and the Early Middle Ages, he developed the

83260

curtis/curticula concept, which, following the large-scale excavations since 1967, led by W.A. van Es, must be considered incorrect. Among other things, his method of examining large objects through trenches played tricks on him here. Besides this excavation work and the resulting reports, Holwerda devoted his entire life to Roman

83265

Nijmegen and its surroundings (e.g., De Holdeurn). He also settled there after the death of his wife (1932), who had been a great support to him during the excavations and as an illustrator of his work. It is impossible here to list or analyze all the research and the publications that appeared quickly after the research (the latter being a great achievement). Only the "Architectural Map of the Netherlands" (1924) and "An Early Gallic Princely Grave near Oss" (1934) are mentioned here. The

83270

publications from the many urn fields in the south of the country (Riethoven, De Hamert) are still valuable for modern research. The same applies to the material publications from Arentsburg and Nijmegen, in which the systematic museum curator is

evident.

One of his most popular ideas, disseminated through textbooks, is that of the domed grave. This idea was developed during research in the Veluwe region at the beginning of his career. It was challenged in 1930 by Van Giffen, whose ideas are still considered correct today. In 1907 and 1918, Holwerda argued that there had been no Bronze Age in the Netherlands. Boeles warned in *De Gids* as early as 1920 that archaeological activities in the Netherlands were still too recently underway to allow such a conclusion; He provided a short list of bronze objects datable to the Bronze Age, a list that has only grown longer in recent times, thus demonstrating the inaccuracy of Holwerda's ideas on this subject. He himself held firm to his views. He offered a summary of his theoretical convictions four times (1907, 1918, 1925, and 1935). They remained essentially the same each time, thus demonstrating a certain rigidity on the author's part.

In summary, we get the picture of a man who, especially in the beginning, was unjustifiably overly aggressive. After the conflict with Van Giffen, he became scientifically isolated; he compensated for this with his museum and educational work, which earned him exceptional popularity, especially among laypeople, which was not entirely in keeping with his true scientific significance.

Comments on the biography of J.H. Holwerda

Jan Hendrik Holwerda had a namesake with the exact same name who, as a biblical exegete, was admitted as a member of the Royal Netherlands Academy of Arts and Sciences. His father had already been admitted as a member. Although his father had no experience with excavations, he was nevertheless appointed professor in this field at Leiden University. His trip to excavations in Italy, Greece, and Turkey in 1898—together with his son on a kind of scholarship—was therefore more of an orientation trip. A detailed account of the trip was published in the *Staatscourant* (State Gazette). See also elsewhere on the website for The Power and the Glory of Emperor Constantine. At the age of 25, son H. published a slim dissertation in Latin, and simultaneously a trade publication in German. He must have received some assistance with this dissertation and its translation... The time between the orientation trip and the doctorate was extremely short; the fact that he received his doctorate with honors is even more remarkable. The dissertation is a list of texts on epitaphs and the like, certainly not in-depth research with entirely new insights; quite the opposite. It is unforgivable that there are practically no illustrations included, so there are constant references to publications that are not readily available. It appears that father H. made an agreement with the supervisors (De Leeuw and Hartman??) regarding the evaluation of his son's dissertation. The author of this article is also almost certain that father H. actively collaborated on his son's dissertation. This pattern repeats itself later: Father H. appoints son H. as curator, then—practically simultaneously with the discovery of the Peel helmet—as deputy director, and even later, son H. succeeds his father. It's practically certain that any other applicants didn't stand a chance. Inquiries revealed that the papers relating to these three applications haven't yet been digitized (meaning scanned), so any irregularities cannot (yet) be proven.

Indeed, there were serious clashes with other scientists even before 1910, with some complaining that colleague H. was very rigid in his ideas and actions. The inscription "STABLESIA VI" on the Peel helmet is almost certainly (literally) by him, and his father and the scientist Evelein were unable to object. This leads us to

the conclusion that son H. was a forger. It was probably more of a prank, with unexpected (at least for him) consequences: it took on a life of its own.

Incidentally, the number VI was probably intended to indicate the Sixth Legion in Nijmegen, but the outside world didn't understand this. The word only appears in correspondence from late January 1911 (six months after the discovery in the Peel region). Linguistically speaking, "STABLESIA" is a very peculiar word, and even in military history, a sixth division of the Equites stablesiani never existed. If three divisions (iuniores, seniores, italianici, or similar) existed, a fourth and fifth are unknown.

Evelein left the museum immediately after the publication of his report on the Peel helmet and was appointed elsewhere. Later curators were not always successful: Bursch went to extremes by conducting excavations as an SS officer in Ukraine, without much success. He fell from grace immediately after the war.

The marriage was childless. Immediately after his wife's death, Holwerda adopted a "foster daughter," Maria den Boesterd, a museum employee, who lived with him at his home in Oegstgeest and would be his companion until his death in 1951. In 1936, they both stayed in a hotel in Berg en Dal, and when H., retired from Nijmegen, took over as director of the G.M. Kam Museum, she moved with him from the Leiden museum to the Nijmegen one. Like his wife, she worked for H., but Maria den Boesterd also wrote several scholarly articles under her own name. After her "foster father" died, she inherited the house at Eversweg 9 in Nijmegen. She herself died at the end of 1973 at the age of 61.

The author is unaware of the papers left by his son H. could shed light on the controversies H. stirred up. He wasn't taken seriously scientifically in the early years, and many of his theories were never accepted. Like his companion Van Beurden from Roermond, he was a big shot, which led to some rather strange theories. Unfortunately, we must conclude that his ideas and writings are still consulted and cited.

Son H., however, didn't develop any theory at all regarding the Peel helmet, even though it was an open goal: the coins found with the helmet and its accessories could have led him and Evelein to an important discovery from the very first report of the find, as the pastor of Helenaveen provides an accurate description of the images on the coins. The lack of investigation and the failure to respond to the letter from A. Bos, director of the N.V. Maatschappij Helenaveen, cannot be explained with certainty, but it is certain that if A. Bos had seen the helmet with the inscription, he would have immediately noticed the new inscription, and he was not the man to let it go unmentioned.

The museum in Leiden apparently has a den Boesterd collection. This collection primarily concerns the bronze objects about which Maria den Boesterd published. Whether it also contains information about her "foster father" is unknown.

In summary, we can say that Jan Hendrik Holwerda was a forger of an inscription, that his theories on all kinds of archaeological matters were often erroneous, and that his dissertation would probably not have been accepted by today's standards. Furthermore, the three appointments at the National Museum of Antiquities are also tainted. The fact that he never became a professor proves that the scientific community of the time did not entrust him with this position; they had already had enough trouble with him.

There are ample reasons to distrust any publication by son H.!

Paul Theelen

Antiquary Van Giffen at the Groninger Museum
The Groningen Ur
by Koen Kleijn
February 10, 2006

Under the title "Professor Van Giffen and the Secret of the Terps," the Groninger Museum presents its antiquarian collection as if it were a northern thriller about a headstrong professor on a steam bicycle, who achieved world fame as the founding father of Dutch antiquity.

"The Secret of the Terps" begins with Gaius Pliny the Elder (c. 23-79 AD). He described the salt marshes of Groningen and Friesland firsthand. The local population, the Chauci, he wrote, lived "on high mounds or dams which they have built with their own hands to the highest water level they have ever experienced." The Chauci had no livestock, could not grow crops, and there was nothing to hunt, except for the fish left behind at low tide. It was poor and inhospitable: "They gather mud

by hand, which they let dry more by the wind than by the sun, and with this peat they
83405 warm their food and their bodies, chilled by the north wind. They drink only
rainwater, which they keep in holes at the entrance to their houses. (...) That is
indeed how it goes: fate allows many people to live to punish them." Pliny's
observations would define the (self-)image of the north for many hundreds of years as
83410 a barren outpost, a mud pit, where Christianity had barely taken root and which was
only safely diked in during the eleventh century. Until the early modern period, the
sparse accounts of the Netherlands by Pliny and Tacitus provided the only reflection
of the local population: the Batavians and the Canineefates, the Frisians and the
Chauci, with their semi-legendary rulers Claudius Civilis, Brinio, Friso, and Gruno.
83415 These sources persisted until the eighteenth century, and with them the sense that
the history of our region truly began only with the arrival of Roman civilization.
The actual history of our habitation remained unknown for a long time. After the
eighteenth century, regional phenomena such as dolmens and terps became the subject
of research. Initially, this was done by amateur folklorists such as Daniël Riga,
83420 headmaster in Westerwijrtwerd, Arend Folmer, general practitioner in Eenrum, Rev.
Wilbrand Koppius from Den Ham, and the poet Ubel Wierda from Winsum, who also
invented the plywood skate, which he patented in February 1891 and which allowed for
both speed skating and figure skating. They carefully mapped local history and
naturally became interested in those remarkable mounds, which were rapidly excavated
83425 in the second half of the nineteenth century. The mound soil, the result of twenty
centuries of accumulated organic matter, was sought after as fertilizer, and the
impoverished region desperately needed the income.
The archaeologists observed the loss of this heritage with concern. In 1877,
attention was first paid to the issue of terps and wierden (terps) was addressed at
the Great Historical Exhibition in Leeuwarden, but without any scientific context:
83430 "The public benefits very little from it, as they don't even receive the first clue
to their question, 'What is a terp?'" wrote Groningen professor Pleyte testily. Such
scientific substantiation was lacking. Archaeology only developed at the university
level in the twentieth century. There was a chair in Archaeology and Ancient History
and Roman Antiquities in Leiden, but the discipline only flourished somewhat with the
83435 appointment, in 1904, of Dr. A.E.L. Holwerda as director of the National Museum of
Antiquities.
Holwerda had little regard for local archaeology. He considered the chairman of the
Frisian Society, the jurist Boeles, a dilettante. He had appointed his own son, Jan
Hendrik, as curator of Dutch archaeology. Together, they advised their minister not
83440 to subsidize small-scale local research. The Frisians and Groningers felt insulted.
The issue was brought to a head by Leiden Professor of Chemistry J.M. van Bemmelen
Sr. (1830-1911) in his 1907 "Consideration of the Current Position of Our Knowledge
of the Dutch Terps." He advocated a scientific approach to the excavations, under
expert supervision. Attention should be paid to geological and biological aspects, to
83445 various layers, the remains of hearths, and the remains of building materials. This
approach was a far cry from the practice of the old Holwerda, who was still one of
those archaeologists who cheerfully tackled Egyptian tombs with spade and pickaxe. He
knew nothing about archaeozoology, paleobotany, soil science, plant sociology, pollen
analysis, or the three-dimensional organization of an excavation. Time for a new
83450 generation, then: behold the student Albert (Ab) Egges van Giffen (1884-1973).
The pastor's son, Van Giffen's archaeological career began in 1908 when, as a biology
student, he joined the excavation of the Dorkwerd mound. He was an enterprising young
man, a keen observer, well-versed in biology, soil science, geology, and anatomy. And
he was diligent. With the support of Van Bemmelen, Boeles, and the Frisian Society,
83455 he bought a motorcycle—a "steam bicycle," as he himself called it—obtained his
driver's license on March 1, 1909, and subsequently visited all the excavations in
the region. He distributed cigars, pencils, and labels to the excavators to encourage
them to keep their finds and record where they were made.
His patrons soon discovered that the energetic student could also be a troublemaker.
83460 Van Giffen coolly offered 750 objects found in Friesland for sale, to the dismay of
Boeles, who had assumed his Society would receive the finds in return for the
subsidy, but this wasn't written down. Boeles had no choice and paid. Similarly, Van
Giffen "mediated" in the Groninger Museum's purchase of twelfth-century bronze
apostle heads from St. Walburg's Church in Groningen, which he himself had acquired
83465 from the diggers for a small price.

Soon the Holwerdas also caught Van Giffen's eye, and they lured him to Leiden with
the promise of a permanent position. They later regretted this decision. While Van
Giffen emerged as a promising archaeologist, he also emerged as a "short-tempered,

83470 headstrong, hot-tempered, and moody personality," who quickly found himself in bitter conflict with the bureaucratic world. The episode is recounted with taste in the exceptionally beautiful catalog ("Botsende Noorderlingen"). It is a conflict of Bordewijkian allure. The Holwerdas deny ever promising Van Giffen a permanent position. Van Giffen takes the Holwerdas to the university curators. He accuses the

83475 Holwerdas of managing the Rijksmuseum—and thus Dutch archaeology—as a private institution. He stumbles over the sale of finds; as a civil servant, Van Giffen is formally prohibited from doing so and engages an intermediary, a friendly coffee roaster from Meppel. The Holwerdas don't fall for it, much to Van Giffen's anger. He accuses Holwerda Jr. of falsifying data during the Arentsburg excavations. He

83480 slanders, schemes, and insinuates. The case eventually landed on the desk of Prime Minister Cort van der Linden, who, in the midst of war, had to personally intervene. The solution came from the north. Van Giffen's job was transferred to the Zoological Laboratory in Groningen—far from Leiden. In 1916, Van Giffen was put in charge of the excavation of the De Wierhuizen mound near Appingedam, and there began Van Giffen's Groningen victory. In no time, he became the linchpin of northern archaeology. He was the leader of the

The Association of Terp Research, inspector of the pre- and early history department of the Groninger Museum, and curator of the Drents Museum. In 1920, he founded his

83490 own Biological-Archaeological Institute. In 1939, he became a professor. The highlight is Ezingen. The excavation of the terp there was spurred by the 1929 crisis; Van Giffen arranged for the employment of unemployed people as excavators. What he uncovered was sensational. Complete farms, with poles and wattle walls still partially standing, were uncovered. Stables for fifty cattle. Wagon wheels with

83495 spokes. Roman pottery from Tunisia. Van Giffen demonstrated that the terp had been continuously inhabited since 600 BC, making it as old as Rome. Ezingen is the Pompeii of the North, Groningen's Ur, and the muddy salt marshes between Hunze and Fivel are a new "Two Rivers Land." The results are causing a stir throughout Europe. In Ezingen, the new multidisciplinary archaeology triumphs, and the Plinian image of

83500 the Netherlands is definitively overturned. The terps had been substantial and prosperous. They were not a muddy outpost of the Roman Empire, but an integral part of a civilizational area that stretched from the British Isles to the Baltic Sea, with trade, military, and cultural exchanges. That zone already existed when the Romans arrived, and when they left, it continued. With "Ezingen," Van Giffen gave the

83505 northerners their own history and cultural profile. During the occupation, the work continued unabated. After all, it was not Van Giffen's fault that the German authorities wholeheartedly supported the research into the national identity, and that those valiant mudflat inhabitants fit so well with the ideas about an ancient pan-Germanic civilization. Thanks to the Germans, the

83510 remaining mounds were designated protected archaeological heritage in 1942. In 1947, Van Giffen became the first director of the National Service for Archaeological Heritage; shortly thereafter, he was given his own chair at the University of Amsterdam and an institute that still bears his name.

In Praise of the Emperor Constantine

Introduction

I COME not forward prepared with a fictitious narrative, nor with elegance of language to captivate the ear, desiring to charm my hearers as it were, with a siren's voice; nor shall I present the draught of pleasure in cups of gold decorated with lorry flowers (I mean the graces of style) to those who are pleased with such things. Rather would I follow the precepts of the wise, and admonish all to avoid and turn aside from the beaten road, and keep themselves from contact with the vulgar crowd. I come, then, prepared to celebrate our emperor's praises in a newer strain; and, though the number be infinite of those who desire to be my companions in my present task, I am resolved to shun the common track of men, and to pursue that untrodden path which it is unlawful to enter on with unwashed feet. Let those who admire a vulgar style, abounding in puerile subtleties, and who court a pleasing and popular muse, essay, since pleasure is the object they have in view, to charm the ears of men by a narrative of merely human merits. Those, however who are initiated into the universal science, and have attained to Divine as well as human knowledge, and account the choice of the latter as the real excellence, will prefer those virtues of the emperor which Heaven itself approves, and his pious actions, to his merely human accomplishments; and will leave to inferior encomiasts the task of celebrating his lesser merits. For since our emperor is gifted as well with that sacred wisdom which has immediate reference to God, as with the knowledge which concerns the interests of men; let those who are competent to such a task describe his secular acquirements, great and transcendent as they are, and fraught with advantage to mankind (for all that characterizes the emperor is great and noble), yet still inferior to his diviner qualities, to those who stand without the sacred precincts. Let those, however, who are within the sanctuary, and have access to its inmost and untrodden recesses, close the doors against every profane ear, and unfold, as it were, the secret mysteries of our emperors character to the initiated alone. And let those who have purified their ears in the streams of piety, and raised their thoughts on the soaring wing of the mind itself, join the company which surrounds the

Sovereign Lord of all, and learn in silence the divine mysteries. Meanwhile let the sacred oracles, given, not by the spirit of divination (or rather let me say of madness and folly), but by the inspiration of Divine truth, be our instructors in these mysteries; speaking to us of sovereignty, generally: the heavenly array which surrounds the Lord of all; of that exemplar of imperial power which is before us, and that counterfeit coin: and, lastly, of the consequences which result from both. With these oracles, then, to initiate us in the knowledge of the sacred rites, let us essay, as follows, the commencement of our divine mysteries.

The Oration

CHAPTER I.

TO-DAY is the festival of our great emperor: and we his children rejoice therein, feeling the inspiration of our sacred theme. He who presides over our solemnity is the Great Sovereign himself; he, I mean, who is truly great; of whom I affirm (nor will the sovereign who hears me be offended, but will rather aprepels the gaze of every eye from his Divine majesty. His ministers are the heavenly hosts; his armies the supernal powers, angels, the companies of archangels, the chorus of holy spirits, draw from and reflect his radiance as from the fountains of everlasting light. Yea every light, and specially those divine and incorporeal intelligences whose place is beyond the heavenly sphere, celebrate this august Sovereign with lofty and sacred strains of praise. The vast expanse of heaven, like an azure veil is interposed between those without, and those who inhabit his royal mansions: while round this expanse the sun and moon, with the rest of the heavenly luminaries (like torch-bearers around the entrance of the imperial palace), perform, in honor of their sovereign, their appointed courses; holding forth, at the word of his command, an ever-burning light to those whose lot is cast in the darker regions without the pale of heaven. And surely when I remember that our own victorious emperor renders praises to this Mighty Sovereign, I do well to follow him, knowing as I do that to him alone we owe that imperial power under which we live. The pious Caesars, instructed by their father's wisdom, acknowledge him as the source of every blessing: the soldiery, the entire body of the people, both in the country and in the cities of the empire, with the governors of the several provinces, assembling together in accordance with the precept of their great Saviour and Teacher, worship him. In short, the whole family of mankind, of every nation, tribe, and tongue, both collectively and severally, however diverse their opinions on other subjects, are unanimous in this one confession; and, in obedience to the reason implanted in them, and the spontaneous and uninstructed impulse of their own minds, unite in calling on the One and only God. Nay, does not the universal frame of earth acknowledge him her Lord, and declare, by the vegetable and animal life which she produces her subjection to the will of a superior Power? The rivers, flowing with abundant stream, and the perennial fountains, springing from hidden and exhaust-less depths, ascribe to him the cause of their marvellous source. The mighty waters of the sea, enclosed in chambers of unfathomable ing currents of the winds, and the airy courses of the clouds, all reveal his presence to those to whom his Person is invisible. The all-radiant sun, who holds his constant career through the lapse of ages, owns him Lord alone, and obedient to his will, dares not depart from his appointed path. The inferior splendor of the moon, alternatively diminished and increased at stated periods, is subject to his Divine command. The beauteous mechanism of the heavens, glittering with the hosts of stars, moving in harmonious order, and preserving the measure of each several orbit, proclaims him the giver of all light: yea, all the heavenly luminaries maintaining at his will and word a grand and perfect unity of motion, pursue the track of their ethereal career, and complete in the lapse of revolving ages their distant course. The alternate recurrence of day and night, the changing seasons, the order and proportion of the universe, all declare the manifold wisdom of [his boundless power]. To him the unseen agencies which hold their course throughout the expanse of space, render the due tribute of praise. To him this terrestrial globe itself, to him the heavens above, and the choirs beyond the vault of heaven, give honor as to their mighty Sovereign: the angelic hosts greet him with ineffable songs of Praise; and the spirits which draw their being from incorporeal light, adore him as their Creator. The everlasting ages which were before this heaven and earth, with other periods beside them, infinite, and antecedent to all visible creation acknowledge him the sole and supreme Sovereign and Lord. Lastly, he who is in all, before, and after all, his only begotten, pre-existent Word, the great High Priest of the mighty God, elder than all time and every age, devoted to his Father's glory, first and alone makes intercession with him for the salvation of mankind. Supreme and pre-eminent Ruler of the universe, he shares the glory of his Father's

kingdom: for he is that Light, which, transcendent above the universe, encircles the Father's Person, interposing and dividing between the eternal and uncreated Essence and all derived existence: that Light which, streaming from on high, proceeds from that Deity who knows not origin or end, and illumines the super-celestial regions, and all that heaven itself contains, with the radiance of wisdom bright beyond the splendor of the sun. This is he who holds a supreme dominion over this whole world, who is over and in all things, and pervades all things visible and invisible; the Word of God. From whom and by whom our divinely favored emperor, receiving, as it were a transcript of the Divine sovereignty, directs, in imitation of God himself, the administration of this world's affairs.

CHAPTER II.

THIS only begotten Word of God reigns, from ages which had no beginning, to infinite and endless ages, the partner of his Father's kingdom. And [our emperor] ever beloved by him, who derives the source of imperial authority from above, and is strong in the power of his sacred title, has controlled the empire of the world for a long period of years. Again, that Preserver of the universe orders these heavens and earth, and the celestial kingdom, consistently with his Father's will. Even so our emperor whom he loves, by bringing those whom he rules on earth to the only begotten Word and Saviour renders them fit subjects of his kingdom. And as he who is the common Saviour of mankind, by his invisible and Divine power as the good shepherd, drives far away from his flock, like savage beasts, those apostate spirits which once flew through the airy tracts above this earth, and fastened on the souls of men; so this his friend, graced by his heavenly favor with victory over all his foes, subdues and chastens the open adversaries of the truth in accordance with the usages of war. He who is the pre-existent Word, the Preserver of all things, imparts to his disciples the seeds of true wisdom and salvation, and at once enlightens and gives them understanding in the knowledge of his Father's kingdom. Our emperor, his friend, acting as interpreter to the Word of God, aims at recalling the whole human race to the knowledge of God; proclaiming clearly in the ears of all, and declaring with powerful voice the laws of truth and godliness to all who dwell on the earth. Once more, the universal Saviour opens the heavenly gates of his Father's kingdom to those whose course is thitherward from this world. Our emperor, emulous of his Divine example, having purged his earthly dominion from every stain of impious error, invites each holy and pious worshiper within his imperial mansions, earnestly desiring to save with all its crew that mighty vessel of which he is the appointed pilot. And he alone of all who have wielded the imperial power of Rome, being honored by the Supreme Sovereign with a reign of three decennial periods, now celebrates this festival, not, his ancestors might have done, in honor of infernal demons, or the apparitions of seducing spirits, or of the fraud and deceitful arts of impious men; but as an act of thanksgiving to him by whom he has thus been honored, and in acknowledgment of the blessings he has received at his hands. He does not, in imitation of ancient usage, defile his imperial mansions with blood and gore, nor propitiate the infernal deities with fire and smoke, and sacrificial offerings; but dedicates to the universal Sovereign a pleasant and acceptable sacrifice, even his own imperial soul, and a mind truly fitted for the service of God. For this sacrifice alone is grateful to him: and this sacrifice our emperor has learned, with purified mind and thoughts, to present as an offering without the intervention of fire and blood, while his own piety, strengthened by the truthful doctrines with which his soul is stored, he sets forth in magnificent language the praises of God, and imitates his Divine philanthropy by his own imperial acts. Wholly devoted to him, he dedicates himself as a noble offering, a first-fruit of that world, the government of which is intrusted to his charge. This first and greatest sacrifice our emperor first dedicates to God; and then, as a faithful shepherd, he offers, not "famous hecatombs of firstling lambs," but the souls of that flock which is the object of his care, those rational beings whom he leads to the knowledge and pious worship of God.

CHAPTER III.

AND gladly does he accept and welcome this sacrifice, and commend the presenter of so august and noble an offering, by protracting his reign to a lengthened period of years, giving larger proofs of his beneficence in proportion to the emperor's holy services to himself. Accordingly he permits him to celebrate each successive festival during great and general prosperity throughout the empire, advancing one of his sons, at the recurrence of each decennial period, to a share of his own imperial power. The eldest, who bears his father's name, he received as his partner in the empire about the close of the first decade of his reign: the second, next in point of age, at the

second; and the third in like manner at the third decennial period, the occasion of
83735 this our present festival. And now that the fourth period has commenced, and the time
of his reign is still further prolonged, he desires to extend his imperial authority
by calling still more of his kindred to partake his power; and, by the appointment of
the Caesars, fulfills the predictions of the holy prophets, according to what they
83740 uttered ages before: "And the saints of the Most High shall take the kingdom." And
thus the Almighty Sovereign himself accords an increase both of years and of children
to our most pious emperor, and renders his sway over the nations of the world still
fresh and flourishing, as though it were even now springing up in its earliest vigor.
He it is who appoints him this present festival, in that he has made him victorious
over every enemy that disturbed his peace: he it is who displays him as an example of
83745 true godliness to the human race. And thus our emperor, like the radiant sun,
illuminates the most distant subjects of his empire through the presence of the
Caesars, as with the far piercing rays of his own brightness. To us who occupy the
eastern regions he has given a son worthy of himself; a second and a third
respectively to other departments of his empire, to be, as it were, brilliant
83750 reflectors of the light which proceeds from himself. Once more, having harnessed, as
it were, under the self-same yoke the four most noble Caesars as horses in the
imperial chariot, he sits on high and directs their course by the reins of holy
harmony and concord; and, himself every where present, and observant of every event,
thus traverses every region of the world. Lastly, invested as he is with a semblance
83755 of heavenly sovereignty, he directs his gaze above, and frames his earthly government
according to the pattern of that Divine original, feeling strength in its conformity
to the monarchy of God. And this conformity is granted by the universal Sovereign to
man alone of the creatures of this earth: for he only is the author of sovereign
power, who decrees that all should be subject to the rule of one. And surely monarchy
83760 far transcends every other constitution and form of government: for that democratic
equality of power, which is its opposite, may rather be described as anarchy and
disorder. Hence there is one God, and not two, or three, or more: for to assert a
plurality of gods is plainly to deny the being of God at all. There is one Sovereign;
and his Word and royal Law is one: a Law not expressed in syllables and words, not
83765 written or engraved on tablets, and therefore subject to the ravages of time; but the
living and self-subsisting Word, who himself is God, and who administers his Father's
kingdom on behalf of all who are after him and subject to his power. His attendants
are the heavenly hosts; the myriads of God's angelic ministers; the super-terrestrial
armies, of unnumbered multitude; and those unseen spirits within heaven itself, whose
83770 agency is employed in regulating the order of this world. Ruler and chief of all
these is the royal Word, acting as Regent of the Supreme Sovereign. To him the names
of Captain, and great High Priest, Prophet of the Father, Angel of mighty counsel,
Brightness of the Father's light, Only begotten Son, with a thousand other titles,
are ascribed in the oracles of the sacred writers. And the Father, having constituted
83775 him the living Word, and Law and Wisdom the fullness of all blessing, has presented
this best and greatest gift to all who are the subjects of his sovereignty. And he
himself, who pervades all things, and is every where present, unfolding his Father's
bounties to all with unsparing hand, has accorded a specimen of his sovereign power
even to his rational creatures of this earth, in that he has provided the mind of
83780 man, who is formed after his own image, with Divine faculties, whence it is capable
of other virtues also, which flow from the same heavenly source. For he only is wise,
who is the only God: he only is essentially good: he only is of mighty power, the
Parent of justice, the Father of reason and wisdom, the Fountain of light and life,
the Dispenser of truth and virtue: in a word, the Author of empire itself, and of all
83785 dominion and power.

CHAPTER IV.

BUT whence has man this knowledge, and who has ministered these truths to mortal
ears? Or whence has a tongue of flesh the power to speak of things so utterly
83790 distinct from fleshly or material substance? Who has gazed on the invisible King, and
beheld these perfections in him? The bodily sense may comprehend elements and their
combinations, of a nature kindred to its own: but no one yet has boasted to have
scanned with corporeal eye that unseen kingdom which governs all things nor has
mortal nature yet discerned the beauty of perfect wisdom. Who has beheld the face of
83795 righteousness through the medium of flesh? And whence came the idea of legitimate
sovereignty and imperial power to man? Whence the thought of absolute dominion to a
being composed of flesh and blood? Who declared those ideas which are invisible and
undefined, and that incorporeal essence which has no external form, to the mortals of
this earth? Surely there was but one interpreter of these things; the all-pervading

83800 Word of God. For he is the author of that rational and intelligent being which exists
in man; and, being himself one with his Father's Divine nature, he sheds upon his
offspring the out-flowings of his Father's bounty. Hence the natural and untaught
powers of thought, which all men, Greeks or Barbarians, alike possess: hence the
83805 perception of reason and wisdom, the seeds of integrity and righteousness, the
understanding of the arts of life, the knowledge of virtue, the precious name of
wisdom, and the noble love of philosophic learning. Hence the knowledge of all that
is great and good: hence apprehension of God himself, and a life worthy of his
worship: hence the royal authority of man, and his invincible lordship over the
83810 creatures of this world. And when that Word, who is the Parent of rational beings,
had impressed a character on the mind of man according to the image and likeness of
God, and had made him a royal creature, in that he gave him alone of all earthly
creatures capacity to rule and to obey (as well as forethought and foreknowledge even
here, concerning the promised hope of his heavenly kingdom, because of which he
himself came, and, as the Parent of his children, disdained not to hold converse with
83815 mortal men); he continued to cherish the seeds which himself had sown, and renewed
his gracious favors from above; holding forth to all the promise of sharing his
heavenly kingdom. Accordingly he called men, and exhorted them to be ready for their
heavenward journey, and to provide themselves with the garment which became their
calling. And by an indescribable power he filled the world in every part with his
83820 doctrine, expressing by the similitude of an earthly kingdom that heavenly one to
which he earnestly invites all mankind, and presents it to them as a worthy object of
their hope.

CHAPTER V.

83825 AND in this hope our divinely-favored emperor partakes even in this present life,
gifted as he is by God with native virtues, and having received into his soul the
out-flowings of his favor. His reason he derives from the great Source of all reason:
he is wise, and good, and just, as having fellowship with perfect Wisdom, Goodness,
and Righteousness: virtuous, as following the pattern of perfect virtue: valiant, as
83830 partaking of heavenly strength. And truly may he deserve the imperial title, who has
formed his soul to royal virtues, according to the standard of that celestial
kingdom. But he who is a stranger to these blessings, who denies the Sovereign of the
universe, and owns no allegiance to the heavenly Father of spirits; who invests not
himself with the virtues which become, an emperor, but overlays his soul with moral
83835 deformity and baseness; who for royal clemency substitutes the fury of a savage
beast; for a generous temper, the incurable venom of malicious wickedness; for
prudence, folly; for reason and wisdom, that recklessness which is the most odious of
all vices, for from it, as from a spring of bitterness, proceed the most pernicious
fruits; such as inveterate profligacy of life, covetousness, murder, impiety and
83840 defiance of God; surely one abandoned to; such vices as these, however he may be
deemed powerful through despotic violence, has no true title to the name of Emperor.
For how should he whose soul is impressed with a thousand absurd images of false
deities, be able to exhibit a counterpart of the true and heavenly sovereignty? Or
how can he be absolute lord of others, who has subjected himself to the dominion of a
83845 thousand cruel masters? a slave of low delights and un-governed lust, a slave of
wrongfully-extorted wealth, of rage and passion, as well as of cowardice and terror;
a slave of ruthless demons, and soul-destroying spirits? Let then, our emperor, on
the testimony of truth itself, be declared alone worthy of the title; who is dear to
the Supreme Sovereign himself; who alone is free, nay, who is truly lord: above the
83850 thirst of wealth, superior to sexual desire; victorious even over natural pleasures;
controlling, not controlled by, anger and passion. He is indeed an emperor, and bears
a title corresponding to his deeds; a VICTOR in truth, who has gained the victory
over those passions which overmaster the rest of men: whose character is formed after
the Divine original a of the Supreme Sovereign, and whose mind reflects, as in a
83855 mirror, the radiance of his virtues. Hence is our emperor perfect in discretion, in
goodness, in justice, in courage, in piety, in devotion to God: he truly and only is
a philosopher, since he knows himself, and is fully aware that supplies of every
blessing are showered on him from a source quite external to himself, even from
heaven itself. Declaring the august title of supreme authority by the splendor of his
83860 vesture, he alone worthily wears that imperial purple which so well becomes him. He
is indeed an emperor, who calls on and implores in prayer the favor of his heavenly
Father night and day, and whose ardent desires are fixed on his celestial kingdom.
For he knows that present things, subject as they are to decay and death, flowing on
and disappearing like a river's stream, are not worthy to be compared with him who is
83865 sovereign of all; therefore it is that he longs for the incorruptible and incorporeal

kingdom of God. And this kingdom he trusts he shall obtain, elevating his mind as he does in sublimity of thought above the vault of heaven, and filled with inexpressible longing for the glories which shine there, in comparison with which he deems the precious things of this present world but darkness. For he sees earthly sovereignty to be but a petty and fleeting dominion over a mortal and temporary life, and rates it not much higher than the goatherd's, or shepherd's, or herdsman's power: nay, as more burdensome than theirs, and exercised over more stubborn subjects. The acclamations of the people, and the voice of flattery, he reckons rather troublesome than pleasing, because of the steady constancy of his character, and genuine discipline of his mind. Again, when he beholds the military service of his subjects, the vast array of his armies, the multitudes of horse and foot, entirely devoted to his command, he feels no astonishment, no pride at the possession of such mighty power; but turns his thoughts inward on himself, and recognizes the same common nature there. He smiles at his vesture, embroidered with gold and flowers, and at the imperial purple and diadem itself, when he sees the multitude gaze in wonder, like children at a bugbear, on the splendid spectacle. Himself superior to such feelings, he clothes his soul with the knowledge of God, that vesture, the broidery of which is temperance, righteousness, piety, and all other virtues; a vesture such as truly becomes a sovereign. The wealth which others so much desire, as gold, silver, or precious gems, he regards to be, as they really are, in themselves mere stones and worthless matter, of no avail to preserve or defend from evil. For what power have these things to free from disease, or repel the approach of death? And knowing as he does this truth by personal experience in the use of these things, he regards the splendid attire of his subjects with calm indifference, and smiles at the childishness of those to whom they prove attractive. Lastly, he abstains from all excess in food and wine, and leaves superfluous dainties to gluttons, judging that such indulgences, I however suitable to others, are not so to him, and deeply convinced of their pernicious tendency, and their effect in darkening the intellectual powers of the soul. For all these reasons, our divinely taught and noble-minded emperor, aspiring to higher objects than this life affords, calls upon his heavenly Father as one who longs for his kingdom; exhibits a pious spirit in each action of his life; and finally, as a wise and good instructor, imparts to his subjects the knowledge of him who is the Sovereign Lord of all.

CHAPTER VI.

AND God himself, as an earnest of future reward, assigns to him now as it were tricennial crowns composed of prosperous periods of time; and now, after the revolution of three circles of ten years, he grants permission to all mankind to celebrate this general, nay rather, this universal festival. And while those on earth thus rejoice, crowned as it were with the flowers of divine knowledge, surely, we may not unduly suppose that the heavenly choirs, attracted by a natural sympathy, unite their joy with the joy of those on earth: nay, that the Supreme Sovereign himself, as a gracious father, delights in the worship of duteous children, and for this reason is pleased to honor the author and cause of their obedience through a lengthened period of time; and, far from limiting his reign to three decennial circles of years, he extends it to the remotest period, even to far distant eternity. Now eternity in its whole extent is beyond the power of decline or death: its beginning and extent alike incapable of being scanned by mortal thoughts. Nor will it suffer its central point to be perceived, nor that which is termed its present duration to be grasped by the inquiring mind. Far less, then, the future, or the past: for the one is not, but is already gone; while the future has not yet arrived, and therefore is not. As regards what is termed the present time, it vanishes even as we think or speak, more swiftly than the word itself is uttered. Nor is it possible in any sense to apprehend this time as present; for we must either expect the future, or contemplate the past; the present slips from us, and is gone, even in the act of thought. Eternity, then, in its whole extent, resists and refuses subjection to mortal reason. But it does not refuse to acknowledge its own Sovereign and Lord, and bears him as it were mounted on itself, rejoicing in the fair trappings which he bestows. And he himself, not binding it, as the poet imagined, with a golden chain, but as it were controlling its movements by the reins of ineffable wisdom, has adjusted its months and seasons, its times and years, and the alterations of day and night, with perfect harmony, and has thus attached to it limits and measures of various kinds. For eternity, being in its nature direct, and stretching onward into infinity, and receiving its name, eternity, as having an everlasting existence, and beings similar in all its parts, or rather having no division or distance, progresses only in a line of direct extension. But God, who has distributed it by intermediate sections, and has divided it, like a far

extended line, in many points, has included in it a vast number of portions; and though it is in its nature one, and resembles unity itself, he has attached to it a multiplicity of numbers, and has given it, though formless in itself, an endless variety of forms For first of all he framed in it formless matter, as a substance capable of receiving all forms. He next, by the power of the number two, imparted quality to matter, and gave beauty to that which before was void of all grace. Again, by means of the number three, he framed a body compounded of matter and form, and presenting the three dimensions of breadth, and length, and depth. Then, from the doubling of the number two, he devised the quaternion of the elements, earth, water, air, and fire, and ordained them to be everlasting sources for the supply of this universe. Again, the number four produces the number ten. For the aggregate of one, and two, and three, and four, is ten. And three multiplied with ten discovers the period of a month: and twelve successive months complete the course of the sun. Hence the revolutions of years, and changes of the seasons, which give grace, like variety of color in painting, to that eternity which before was formless and devoid of beauty, for the refreshment and delight of those whose lot it is to traverse therein the course of life. For as the ground is defined by stated distances for those who run in hope of obtaining the prize; and as the road of those who travel on a distant journey is marked by resting-places and measured intervals, that the traveler's courage may not fail at the interminable prospect; even so the Sovereign of the universe, controlling eternity itself within the restraining power of his own wisdom, directs and turns its course as he judges best. The same God, I say, who thus clothes the once undefined eternity as with fair colors and blooming flowers, gladdens the day with the solar rays; and, while he overspreads the night with a covering of darkness, yet causes the glittering stars, as golden spangles, to shine therein. It is he who lights up the brilliancy of the morning stab the changing splendor of the moon, and the glorious companies of the starry host, and has arrayed the expanse of heaven, like some vast mantle, in colors of varied beauty. Again, having created the lofty and profound expanse of air, and caused the world in its length and breadth to feel its cooling influence, he decreed that the air itself should be graced with birds of every kind, and left open this vast ocean of space to be traversed by every creature, visible or invisible, whose course is through the tracts of heaven. In the midst of this atmosphere he poised the earth, as it were its center, and encompassed it with the ocean as with a beautiful azure vesture. Having ordained this earth to be at once the home, the nurse, and the mother of all the creatures it contains, and watered it both with rain and water-springs, he caused it to abound in plants and flowers of every species, for the enjoyment of life. And when he had formed man in his own likeness, the noblest of earthly creatures, and dearest to himself, a creature gifted with intellect and knowledge, the child of reason and wisdom, he gave him dominion over all other animals which move and live upon the earth. For man was in truth of all earthly creatures the dearest to God: man, I say, to whom, as an indulgent Father, he has subjected the brute creation; for whom he has made the ocean navigable, and crowned the earth with a profusion of plants of every kind; to whom he has granted reasoning faculties for acquiring all science; under whose control he has placed even the creatures of the deep, and the winged inhabitants of the air; to whom he has permitted the contemplation of celestial objects, and revealed the course and changes of the sun and moon, and the periods of the planets and fixed stars. In short, to man alone of earthly beings has he given commandment to acknowledge him as his heavenly Father, and to celebrate his praises as the Supreme Sovereign of eternity itself. But the unchangeable course of eternity the Creator has limited by the four seasons of the year, terminating the winter by the approach of spring, and regulating as with an equal balance that season which commences the annual period. Having thus graced the eternal course of time with the varied productions of spring, he added the summer's heat; and then granted as it were a relief of toil by the interval of autumn: and lastly, refreshing and cleansing the season by the showers of winter, he brings it, rendered sleek land glossy, like a noble steed, by these abundant rains, once more to the gates of spring. As soon, then, as the Supreme Sovereign had thus connected his own eternity by these cords of wisdom with the annual circle, he committed it to the guidance of a mighty Governor, even his only begotten Word, to whom, as the Preserver of all creation, he yielded the reins of universal power. And he, receiving this inheritance as from a beneficent Father, and uniting all things both above and beneath the circumference of heaven in one harmonious whole, directs their uniform course; providing with perfect justice whatever is expedient for his rational creatures on the earth, appointing its allotted limits to human life, and granting to all alike permission to anticipate even here the commencement of a future existence. For he has taught them that beyond

this present world there is a divine and blessed state of being, reserved for those
 who have been supported here by the hope of heavenly blessings; and that those who
 84000 have lived a virtuous and godly life will remove hence to a far better habitation;
 while he adjudges to those who have been guilty and wicked here a place of punishment
 according to their crimes. Again, as in the distribution of prizes at the public
 games, he proclaims various crowns to the victors, and invests each with the rewards
 of different virtues: but for our good emperor, who is clothed in the very robe of
 84005 piety, he declares that a higher recompense of his toils is prepared; and, as a
 prelude to this recompense, permits us now to assemble at this festival, which is
 composed of perfect numbers, of decades thrice, and triads ten times repeated. The
 first of these, the triad, is the offspring of the unit, while the unit is the mother
 of number itself, and presides over all months, and seasons, and years, and every
 84010 period of time. It may, indeed, be justly termed the origin, foundation, and
 principle of all number, and derives its name from its abiding character. For, while
 every other number is diminished or increased according to the subtraction or
 addition of others, the unit alone continues fixed and steadfast, abstracted from all
 multitude and the numbers which are formed from it, and resembling that indivisible
 84015 essence which is distinct from all things beside, but by virtue of participation in
 which the nature of all things else subsists. For the unit is the originator of every
 number, since all multitude is made up by the composition and addition of units; nor
 is it possible without the unit to conceive the existence of number at all. But the
 unit itself is independent of multitude, apart from and superior to all number;
 84020 forming, indeed, and making all, but receiving no increase from any. Kindred to this
 is the triad; equally indivisible and perfect, the first of those sums which are
 formed of even and uneven numbers. For the perfect number two, receiving the addition
 of the unit, forms the triad, the first perfect compound number. And the triad, by
 explaining what equality is, first taught men justice, having itself an equal
 84025 beginning, and middle, and end. And it is also an image of the mysterious, most holy,
 and royal Trinity, which, though itself without beginning or origin, yet contains the
 germs, the reasons, and causes of the existence of all created things. Thus the power
 of the triad may justly be regarded as the first cause of all things. Again, the
 number ten, which contains the end of all numbers, and terminates them in itself, may
 84030 truly be called a full and perfect number, as comprehending every species and every
 measure of numbers, proportions, concords, and harmonies. For example, the units by
 addition form and are terminated by the number ten; and, having this number as their
 parent, and as it were the limit of their course they round this as the goal of their
 career. Then they perform a second circuit, and again a third, and a fourth, until
 84035 the tenth and thus by ten decades they complete the hundredth number. Returning
 thence to the first starting point, they again proceed to the number ten, and having
 ten times completed the hundredth number, again they recede, and perform round the
 same barriers their protracted course, proceeding from themselves back to themselves
 again, with revolving motion. For the unit is the tenth of ten, and ten units make up
 84040 a decade, which is itself the limit, the settled goal and boundary of units: it is
 that which terminates the infinity of number; the term and end of units. Again, the
 triad combined with the decade, and performing a threefold circuit of tens, produces
 that most natural number, thirty. For as the triad is in respect to units, so is the
 number thirty in respect to tens. It is also the constant limit to the course of that
 84045 luminary which is second to the sun in brightness. For the course of the moon from
 one conjunction with the sun to the next, completes the period of a month; after
 which, receiving as it were a second birth, it recommences a new light, and other
 days, being adorned and honored with thirty units, three decades, and ten triads. In
 the same manner is the universal reign of our victorious emperor distinguished by the
 84050 giver of all good, and now enters on a new sphere of blessing, accomplishing, at
 present, this tricennialian festival, but reaching forward beyond this to far more
 distant intervals of time, and cherishing the hope of future blessings in the
 celestial kingdom; where, not a single sun, but infinite hosts of light surround the
 Almighty Sovereign, each surpassing the splendor of the sun, glorious and resplendent
 84055 with rays derived from the everlasting source of light. There the soul enjoys its
 existence, surrounded by fair and unfading blessings; there is a life beyond the
 reach of sorrow; there the enjoyment of pure and holy pleasures, and a time of
 unmeasured and endless duration, extending into illimitable space; not defined by
 intervals of days and months, the revolutions of years, or the recurrence of times
 84060 and seasons, but commensurate with a life which knows no end. And this life needs not
 the light of the sun, nor the lustre of the moon or the starry host, since it has the
 great Luminary himself, even God the Word, the only begotten Son of the Almighty
 Sovereign. Hence it is that the mystic and sacred oracles reveal him to be the Sun of

righteousness, and the Light which far transcends all light. We believe that he
 84065 illumines also the thrice-blessed powers of heaven with the rays of righteousness,
 and the brightness of wisdom, and that he receives truly pious souls, not within the
 sphere of heaven alone, but into his own bosom, and confirms indeed the assurances
 which he himself has given. No mortal eye has seen, nor ear heard, nor can the mind
 84070 in its vesture of flesh understand what things are prepared for those who have been
 here adorned with the graces of godliness; blessings which await thee too, most pious
 emperor, to whom alone since the world began has the Almighty Sovereign of the
 universe granted power to purify the course of human life: to whom also he has
 revealed his own symbol of salvation, whereby he overcame the power of death, and
 triumphed over every enemy. And this victorious trophy, the scourge of evil spirits,
 84075 thou hast arrayed against the errors of idol worship, and hast obtained the victory
 not only over all thy impious and savage foes, but over equally barbarous
 adversaries, the evil spirits themselves.

CHAPTER VII.

84080 FOR whereas we are composed of two distinct natures, I mean of body and spirit, of
 which the one is visible to all, the other i invisible, against both these natures
 two kinds of barbarous and savage enemies, the one invisibly, the other openly, are
 constantly arrayed. The one oppose our bodies with bodily force the other with
 incorporeal assaults besiege the naked soul itself. Again, the visible barbarians,
 84085 like the wild nomad tribes, no better than savage beasts, assail the nations of
 civilized men, ravage their country, and enslave their cities, rushing on those who
 inhabit them like ruthless wolves of the desert, and destroying all who fall under
 their power. But those unseen foes, more cruel far than barbarians, I mean the soul-
 destroying demons whose course is through the regions of the air, had succeeded,
 84090 through the snares of vile polytheism, in enslaving the entire human race, insomuch
 that they no longer recognized the true God, but wandered in the mazes of atheistic
 error. For they procured, I know not whence, gods who never anywhere existed, and set
 him aside who is the only and the true God, as though he were not. Accordingly the
 generation of bodies was esteemed by them a deity, and so the opposite principle to
 84095 this, their dissolution and destruction, was also deified. The first, as the author
 of generative power, was honored with rites under the name of Venus: the second, as
 rich, and mighty in dominion over the human race, received the names of Pluto, and
 Death. For men in those ages, knowing no other than naturally generated life,
 declared the cause and origin of that life to be divine: and again, believing in no
 84100 existence after death, they proclaimed Death himself a universal conqueror and a
 mighty god. Hence, unconscious of responsibility, as destined to be annihilated by
 death, they lived a life unworthy of the name, in the practice of actions deserving a
 thousand deaths. No thought of God could enter their minds, no expectation of Divine
 judgment, no recollection of, no reflection on, their spiritual existence:
 84105 acknowledging one dread superior, Death, and persuaded that the dissolution of their
 bodies by his power was final annihilation, they bestowed on Death the title of a
 mighty, a wealthy god, and hence the name of Pluto. Thus, then, Death became to them
 a god; nor only so, but whatever else they accounted precious in comparison with
 death, whatever contributed to the luxuries of life. Hence animal pleasure became to
 84110 them a god; nutrition, and its production, a god; the fruit of trees, a god; drunken
 riot, a god; carnal desire and pleasure, a god. Hence the mysteries of Ceres and
 Proserpine, the rape of the latter, and her subsequent restoration, by Pluto: hence
 the orgies of Bacchus, and Hercules overcome by drunkenness as by a mightier god:
 hence the adulterous rites of Cupid and of Venus: hence Jupiter himself infatuated
 84115 with the love of women, and of Ganymede: hence the licentious legends of deities
 abandoned to effeminacy and pleasure. Such were the weapons of superstition whereby
 these cruel barbarians and enemies of the Supreme God afflicted, and indeed entirely
 subdued, the human race; erecting everywhere the monuments of impiety, and rearing in
 every corner the shrines and temples of their false religion. Nay, so far were the
 84120 ruling powers of those times enslaved by the force of error, as to appease their gods
 with the blood of their own countrymen and kindred; to whet their swords against
 those who stood forward to defend the truth; to maintain a ruthless war and raise
 unholy hands, not against foreign or barbarian foes, but against men l bound to them
 by the ties of family and affection, against brethren, and kinsmen, and dearest
 84125 friends, who had resolved, in the practice of virtue and true piety, to honor and
 worship God. Such was the spirit of madness with which these princes sacrificed to
 their demon deities men consecrated to the service of the King of kings. On the other
 hand their victims, as noble martyrs in the cause of true godliness, resolved to
 welcome a glorious death in preference to life itself, and utterly despised these

84130 cruelties. Strengthened, as soldiers of God, with patient fortitude, they mocked at death in all its forms; at fire, and sword, and the torment of crucifixion; at exposure to savage beasts, and drowning in the depths of the sea; at the cutting off and searing of limbs, the digging out of eyes, the mutilation of the whole body; 84135 they counted better than any earthly good or pleasure, for the love they bore their heavenly King. In like manner women also evinced a spirit of constancy and courage not inferior to that of men. Some endured the same conflicts with them, and obtained a like reward of their virtue: others, forcibly carried off to be the victims of violence and pollution, welcomed death rather than dishonor; while many, very many 84140 more, endured not even to hear the same threats wherewith they were assailed by the provincial governors, but boldly sustained every variety of torture, and sentence of death in every form? Thus did these valiant soldiers of the Almighty Sovereign maintain the conflict with steadfast fortitude of soul against the hostile forces of polytheism: and thus did these enemies of God and adversaries of man's salvation, 84145 more cruel far their ministers drain as it were the cup of un-righteous slaughter in honor of the demons whom they served, and prepare for them this dread and impious banquet, to the ruin of the human race. In these sad circumstances, what course should the God and King of these afflicted ones pursue? Could he be careless of the safety of his dearest friends or abandon his servants in this great extremity? Surely 84150 none could deem him a wary pilot, who, without an effort to save his fellow-mariners should suffer his vessel to sink with all her crew: surely no general could be found so reckless as to yield his own allies, without resistance, to the mercy of the foe: nor can a faithful shepherd regard with unconcern the straying of a single sheep from his flock, but will rather leave the rest in safety, and dare all things for the 84155 wanderer's sake, even, if need be, to contend with savage beasts. The zeal, however, of the great Sovereign of all was for no unconscious sheep: his care was exercised for his own faithful host, for those who sustained the battle for his sake: whose conflicts in the cause of godliness he himself approved, and honored those who had returned to his presence with the prize of victory which he only can bestow, uniting 84160 them to the angelic choirs. Others he still preserved on earth, to communicate the living seeds of piety to future generations; to be at once eye-witnesses of his vengeance on the ungodly, and narrators of the events. After this he outstretched his arm in judgment on the adversaries, and utterly destroyed them with the stroke of Divine wrath, compelling them, how reluctant soever to confess with their own lips 84165 and recant their wickedness, but raising from the ground and exalting gloriously those who had long been oppressed and disclaimed by all. Such were the dealings of the Supreme Sovereign, who ordained an invincible champion to be the minister of his heaven-sent vengeance (for our emperor's surpassing piety delights in the title of Servant of God), and him he has, proved victorious over all that opposed him, having 84170 raised him up, an individual against many foes. For they were indeed numberless, being the friends of many evil spirits (though in reality they were nothing, and hence are now no more); but our emperor is one, appointed by, and the representative of, the one Almighty Sovereign. And they, in the very spirit of impiety, destroyed the righteous with cruel slaughter: but he, in imitation of his Saviour, and knowing 84175 only how to save men's lives, has spared and instructed in godliness the impious themselves. And so, as truly worthy the name of VICTOR, he has subdued the twofold race of barbarians; soothing the savage tribes of men by prudent embassies, compelling them to know and acknowledge their superiors, and reclaiming them from a lawless and brutal life to the governance of reason and humanity; at the same time 84180 that he proved by the facts themselves that the fierce and ruthless race of unseen spirits had long ago been vanquished by a higher power. For he who is the preserver of the universe had punished these invisible spirits by an invisible judgment: and our emperor, as the delegate of the Supreme Sovereign, has followed up the victory, bearing away the spoils of those who have long since died and mouldered into dust, 84185 and distributing the plunder with lavish hand among the soldiers of his victorious Lord.

CHAPTER VIII.

84190 FOR as soon as he understood that the ignorant multitudes were inspired with a vain and childish dread of these bugbears of error, wrought in gold and silver, he judged it right to remove these also, like stumbling-stones thrown in the path of men walking in the dark, and henceforward to open a royal road, plain and unobstructed, to all. Having formed this resolution, he considered that no soldiers or military force of any sort was needed for the repression of the evil: a few of his own friends 84195 sufficed for this service, and these he sent by a simple expression of his will to

visit each several province. Accordingly, sustained by confidence in the emperor's piety and their own personal devotion to God, they passed through the midst of numberless tribes and nations, abolishing this ancient system of error in every city and country. They ordered the priests themselves, in the midst of general laughter and scorn, to bring their gods from their dark recesses to the light of day. They then stripped them of their ornaments, and exhibited to the gaze of all the unsightly reality which had been hidden beneath a painted exterior: and lastly, whatever part of the material appeared to be of value they scraped off and melted in the fire to prove its worth, after which they secured and set apart whatever they judged needful for their purposes, leaving to the superstitious worshipers what was altogether useless, as a memorial of their shame. Meanwhile our admirable prince was himself engaged in a work similar to that we have described. For at the same time that these costly images of the dead were stripped, as we have said, of their precious materials, he also attacked those composed of brass; causing those to be dragged from their places with ropes, and, as it were, carried away captive, whom the dotage of mythology had esteemed as gods. The next care of our august emperor was to kindle, as it were, a brilliant torch, by the light of which he directed his imperial gaze around, to see if any hidden vestiges of error might yet exist. And as the keen-sighted eagle in its heavenward flight is able to descry from its lofty height the most distant objects on the earth: so did he whilst residing in the imperial palace of his own fair city, discover, as from a watch-tower, a hidden and fatal snare of souls in the province of Phoenicia. This was a grove and temple, not situated in the midst of any city, or in any public place, as for splendor of effect is generally the case, but apart from the beaten and frequented road, on part of the summit of Mount Lebanon, and dedicated to the foul demon known by the name of Venus. It was a school of wickedness for all the abandoned rotaries of impurity and such as destroyed their bodies with effeminacy. Here men undeserving the name forgot the dignity of their sex, and propitiated the demon by their effeminate conduct: here too unlawful commerce of women, and adulterous intercourse, with other horrible and infamous practices, were perpetrated in this temple as in a place beyond the scope and restraint of law. Meantime these evils remained unchecked by the presence of any observer, since no one of fair character ventured to visit such scenes. These proceedings, however, could not escape the vigilance of our august emperor, who, having himself inspected them with characteristic forethought, and judging that such a temple was unfit for the light of heaven, gave orders that the building with its offerings should be utterly destroyed. Accordingly, in obedience to the imperial edict, these engines of an impure superstition were immediately abolished, and the hand of military force was made instrumental in purging the place. And now those who had heretofore lived without restraint, learned, through the imperial threat of punishment, to practice self-control. Thus did our emperor tear the mask from this system of delusive wickedness, and expose it to the public gaze, at the same time proclaiming openly his Saviour's name to all. No advocate appeared; neither god nor demon, prophet nor diviner, could lend his aid to the detected authors of the imposture. For the souls of men were no longer enveloped in thick darkness: but enlightened by the rays of true godliness, they deplored the ignorance and pitied the blindness of their forefathers, rejoicing at the same time in their own deliverance from such fatal error. Thus speedily, according to the counsel of the mighty God, and through our emperor's agency, was every enemy, whether visible or unseen, utterly removed: and henceforward peace, the happy nurse of youth, extended her reign throughout the world. Wars were no more, for the gods were not: no more did warfare in country or town, no more did the effusion of human blood, distress mankind, as heretofore, when demon-worship and the madness of idolatry prevailed.

CHAPTER IX.

AND now we may well compare the present with former things, and review these happy changes in contrast with the evils that are past, and mark the elaborate care with which in ancient times porches and sacred precincts, groves and temples, were prepared in every city for these false deities, and how their shrines were enriched with abundant offerings. The sovereign rulers of those days had indeed a high regard for the worship of the gods. The nations also and people subject to their power honored them with images both in the country and in every city, nay, even in their houses and secret chambers, according to the religious practice of their fathers. The fruit, however, of this devotion, far different from the peaceful concord which now meets our view, appeared in war, in battles, and seditions, which harassed them throughout their lives, and deluged their countries with blood and civil slaughter. Again, the objects of their worship could hold out to these sovereigns with artful

flattery the promise of prophecies, and oracles, and the knowledge of futurity: yet could they not predict their own destruction, nor forewarn themselves of the coming ruin: and surely this was the greatest and most convincing proof of their imposture.

84265 Not one of those whose words once were heard with awe and wonder, had announced the glorious advent of the Saviour of mankind, or that new revelation of divine knowledge which he came to give. Not Pythius himself, nor any of those mighty gods, could apprehend the prospect of their approaching desolation; nor could their oracles point at him who was to be their conqueror and destroyer. What prophet or diviner could

84270 foretell that their rites would vanish at the presence of a new Deity in the world, and that the knowledge and worship of the Almighty Sovereign should be freely given to all mankind? Which of them foreknew the august and pious reign of our victorious emperor, or his triumphant conquests everywhere over the false demons, or the overthrow of their high places? Which of the heroes has announced the melting down

84275 and conversion of the lifeless statues from their useless forms to the necessary uses of men? Which of the gods have yet had power to speak of their own images thus melted and contemptuously reduced to fragments? Where were the protecting powers, that they should not interpose to save their sacred memorials, thus destroyed by man? Where, I ask, are those who once maintained the strife of war, yet now behold their conquerors abiding securely in the profoundest peace? And where are they who upheld themselves

84280 in a blind and foolish confidence, and trusted in these vanities as gods; but who, in the very height of their superstitious error, and while maintaining an implacable war with the champions of the truth, perished by a fate proportioned to their crimes? Where is the giant race whose arms were turned against heaven itself; the hissings of those serpents whose tongues were pointed with impious words against the Almighty

84285 King? These adversaries of the Lord of all, confident in the aid of a multitude of gods, advanced to the attack with a powerful array of military force, preceded by certain images of the dead, and lifeless statues, as their defense. On the other, side our emperor, secure in the armor of godliness, opposed to the numbers of the

84290 enemy the salutary and life-giving Sign, as at the same time a terror to the foe, and a protection against every harm; and returned victorious at once over the enemy and the demons whom they served? And then, with thanksgiving and praise, the tokens of a grateful spirit, to the Author of his victory, he proclaimed this triumphant Sign, by monuments as well as words, to all mankind, erecting it as a mighty trophy against

84295 every enemy in the midst of the imperial city, and expressly enjoining on all to acknowledge this imperishable symbol of salvation as the safeguard of the power of Rome and of the empire of the world. Such were the instructions which he gave to his subjects generally; but especially to his soldiers, whom he admonished to repose their confidence, not in their weapons, or armor, or bodily strength, but to

84300 acknowledge the Supreme God as the giver of every good, and of victory itself. Thus did the emperor himself, strange and incredible as the fact may seem, become the instructor of his army in their religious exercises, and teach them to offer pious prayers in accordance with the divine ordinances, uplifting their hands towards heaven, and raising their mental vision higher still to the King of heaven, on whom

84305 they should call as the Author of victory, their preserver, guardian, and helper. He commanded too, that one day should be regarded as a special occasion for religious worship; I mean that which is truly the first and chief of all, the day of our Lord and Saviour; that day the name of which is connected with light, and life, and immortality, and every good. Prescribing the same pious conduct to himself, he

84310 honored his Saviour in the chambers of his palace, performing his devotions according to the Divine commands, and storing his mind with instruction through the hearing of the sacred word. The entire care of his household was intrusted to ministers devoted to the service of God, and distinguished by gravity of life and every other virtue; while his trusty body-guards, strong in affection and fidelity to his person, found

84315 in their emperor an instructor in the practice of a godly life. Again, the honor with which he regards the victorious Sign is founded on his actual experience of its divine efficacy. Before this the hosts of his enemies have disappeared: by this the powers of the unseen spirits have been turned to flight: through this the proud

84320 boastings of God's adversaries have come to nought, and the tongues of the profane and blasphemous been put to silence. By this Sign the Barbarian tribes were vanquished: through his the rites of superstitious fraud received a just rebuke: by this our emperor, discharging as it were a sacred debt, has performed the crowning good of all, by erecting triumphant memorials of its value in all parts of the world, raising temples and churches on a scale of royal costliness, and commanding all to

84325 unite in constructing the sacred houses of prayer. Accordingly these signal proofs of our emperor's magnificence forthwith appeared in the provinces and cities of the empire, and soon shone conspicuously in every country; convincing memorials of the

rebuke and overthrow of those impious tyrants who but a little while before had madly dared to fight against God, and, raging like savage dogs, had vented on unconscious buildings that fury which they were unable to level against him; had thrown to the ground and Upturned the very foundations of the houses of prayer, causing them to present the appearance of a city captured and abandoned to the enemy. Such was the exhibition of that wicked spirit whereby they sought as it were to assail God himself, but soon experienced the result of their own madness and folly. But a little time elapsed, when a single blast of the storm of Heaven's displeasure them utterly away, leaving neither kindred, nor offspring, nor memorial of their existence among men: for all, numerous as they were, disappeared as in a moment beneath the stroke of Divine vengeance. Such, then, was the fate which awaited these furious adversaries of God: but he who, armed with the salutary Trophy, had alone opposed them (nay rather, not alone, but aided by the presence and the power of him who is the only Sovereign), has replaced the ruined edifices on a greater scale, and made the second far superior to the first. For example, besides erecting various churches to the honor of God in the city which bears his name, and adorning the Bithynian capital with another on the greatest and most splendid scale, he has distinguished the principal cities of the other provinces by structures of a similar kind. Above all, he has selected two places in the eastern division of the empire, the one in Palestine (since from thence the life-giving stream has flowed as from a fountain for the blessing of all nations), the other in that metropolis of the East which derives its name from that of Antiochus; in which, as the head of that portion of the empire, he has consecrated to the service of God a church of unparalleled size and beauty. The entire building is encompassed by an enclosure of great extent, within which the church itself rises to a vast elevation, of an octagonal form, surrounded by many chambers and courts on every side, and decorated with ornaments of the richest kind. Such was his work here. Again, in the province of Palestine, in that city which was once the seat of Hebrew sovereignty, on the very site of the Lord's sepulchre, he has raised a church of noble dimensions, and adorned a temple sacred to the salutary Cross with rich and lavish magnificence, honoring that everlasting monument, and the trophies of the Saviour's victory over the power of death, with a splendor which no language can describe. In the same country he discovered three places venerable as the localities of three sacred caves: and these also he adorned with costly structures, paying a fitting tribute of reverence to the scene of the first manifestation of the Saviour's presence; while at the second cavern he hallowed the remembrance of his final ascension from the mountain top; and celebrated his mighty conflict, and the victory which crowned it, at the third. All these places our emperor thus adorned in the hope of proclaiming the symbol of redemption to all mankind; that Cross which has indeed repaid his pious zeal; through which his house and throne alike have prospered, his reign has been confirmed for a lengthened series of years, and the rewards of virtue bestowed on his noble sons, his kindred, and their descendants.

And surely it is a mighty evidence of the power of that God whom he serves, that he has held the balances of justice with an equal hand, and has apportioned to each party their due reward. With regard to the destroyers of the houses of prayer, the penalty of their impious conduct followed hard upon them: forthwith were they swept away, and left neither race, nor house, nor family behind. On the other hand, he whose pious devotion to his Lord is conspicuous in his every act, who raises royal temples to his honor, and proclaims his name to his subjects by sacred offerings throughout the world, he, I say, has deservedly experienced him to be the preserver and defender of his imperial house and race. Thus clearly have the dealings of God been manifested, and this through the sacred efficacy of the salutary Sign.

CHAPTER X.

MUCH might indeed be said of this salutary Sign, by those who are skilled in the mysteries of our Divine religion. For it is in very truth the symbol of salvation, wondrous to speak of, more wondrous still to conceive; the appearance of which on earth has thrown the fictions of all false religion from the beginning into the deepest shade, has buried superstitious error in darkness and oblivion, and has revealed to all that spiritual light which enlightens the souls of men, even the knowledge of the only true God. Hence the universal change for the better, which leads men to spurn their lifeless idols, to trample under foot the lawless rites of their demon deities, and laugh to scorn the time-honored follies of their fathers. Hence, too, the establishment in every place of those schools of sacred learning, wherein men are taught the precepts of saving truth, and dread no more those objects of creation which are seen by the natural eye, nor direct a gaze of wonder at the sun, the moon, or stars; but acknowledge him who is above all these, that invisible

84395 Being who is the Creator of them all, and learn to worship him alone. Such are the blessings resulting to mankind from this great and wondrous Sign, by virtue of which the evils which once existed are now no more, and virtues heretofore unknown shine everywhere resplendent with the light of true godliness. Discourses, and precepts, and exhortations to a virtuous and holy life, are proclaimed in the ears of all nations. Nay, the emperor himself proclaims them: and it is indeed a marvel that this 84400 mighty prince, raising his voice in the hearing of all the world, like an interpreter of the Almighty Sovereign's will, invites his subjects in every country to the knowledge of the true God. No more, as in former times, is the babbling of impious men heard in the imperial palace; but priests and pious worshipers of God together celebrate his majesty with royal hymns of praise. The name of the one Supreme Ruler 84405 of the universe is proclaimed to all: the gospel of glad tidings connects the human race with its Almighty King, declaring the grace and love of the heavenly Father to his children on the earth. His praise is everywhere sung in triumphant strains: the voice of mortal man is blended with the harmony of the angelic choirs in heaven; and the reasoning soul employs the body which invests it as an instrument for sounding 84410 forth a fitting tribute of praise and adoration to his name. The nations of the East and the West are instructed at the same moment in his precepts: the people of the Northern and Southern regions unite with one accord, under the influence of the same principles and laws, in the pursuit of a godly life, in praising the one Supreme God, in acknowledging his only begotten Son their Saviour as the source of every blessing, 84415 and our emperor as the one ruler on the earth, together with his pious sons. He himself, as a skillful pilot, sits on high at the helm of state, and directs the vessel with unerring course, conducting his people as it were with favoring breeze to a secure and tranquil haven. Meanwhile God himself, the great Sovereign, extends the right hand of his power from above for his protection, giving him victory over every 84420 foe, and establishing his empire by a lengthened period of years: and he will bestow on him yet higher blessings, and confirm in every deed the truth of his own promises. But on these we may not at present dwell; but must await the change to a better world: for it is not given to mortal eyes or ears of flesh, fully to apprehend the things of God.

84425 CHAPTER XI.
AND now, victorious and mighty Constantine, in this discourse, whose noble argument is the glory of the Almighty King, let me lay before thee some of the mysteries of his sacred truth: not as presuming to instruct thee, who art thyself taught of God; 84430 nor to disclose to thee those secret wonders which he himself, not through the agency of man, but through our common Saviour, and the frequent light of his Divine presence has long since revealed and unfolded to thy view: but in the hope of leading the unlearned to the light, and displaying before those who know them not the causes and motives of thy pious deeds. True it is that thy noble efforts for the daily worship 84435 and honor of the Supreme God throughout the habitable world, are the theme of universal praise. But those records of gratitude to thy Saviour and Preserver which thou hast dedicated in our own province of Palestine, and in that city from which as from a fountain-head the Saviour Word has issued forth to all mankind; and again, the hallowed edifices and consecrated temples which thou hast raised as trophies of his 84440 victory over death; and those lofty and noble structures, imperial monuments of an imperial spirit, which thou hast erected in honor of the everlasting memory of the Saviour's tomb the cause, I say, of these things is not equally obvious to all. Those, indeed, who are enlightened in heavenly knowledge by the power of the Divine Spirit, well understand the cause, and justly admire and bless thee for that counsel 84445 and resolution which Heaven itself inspired. On the other hand the ignorant and spiritually blind regard these designs with open mockery and scorn, and deem it a strange and unworthy thing indeed that so mighty a prince should waste his zeal on the graves and monuments of the dead. "Were it not better," such a one might say, "to cherish those rites which are hallowed by ancient usage to seek the favor of those 84450 gods and heroes whose worship is observed in every province; instead of rejecting and disclaiming them, because subject to the calamities incident to man? Surely they may claim equal honors with him who himself has suffered: or, if they are to be rejected, as not exempt from the sorrows of humanity, the same award would justly be pronounced respecting him." Thus, with important and contracted brow, might he give utterance in pompous language to his self -imagined wisdom. Filled with compassion for this 84455 ignorance, the gracious Word of our most beneficent Father freely invites, not such a one alone, but all who are in the path of error, to receive instruction in Divine knowledge; and has ordained the means of such instruction throughout the world, in every country and village, in cultivated and desert lands alike, and in every city:

84460 and, as a gracious Saviour and Physician of the soul, calls on the Greek and the
 Barbarian, the wise and the unlearned, the rich and the poor, the servant and his
 master, the subject and his lord, the ungodly, the profane, the ignorant, the evil-
 doer, the blasphemer, alike to draw near, and hasten to receive his heavenly cure.
 And thus in time past had he clearly announced to all the pardon of former
 84465 transgressions, saying, "Come unto me, all ye that labor and are heavy laden, and I
 will give you rest." And again, "I am not come to call the righteous, but sinners, to
 repentance." And he adds the reason, saying, "For they that are whole need not a
 physician, but they that are sick." And again, "I desire not the death of a sinner,
 but rather that he should repent." Hence it is only for those who are themselves
 84470 instructed in Divine things and understand the motives of that zeal of which these
 works are the result, to appreciate the more than human impulse by which our emperor
 was guided, to admire his piety toward God, and to believe his care for the memorial
 of our Saviour's resurrection to be a desire imparted from above, and truly inspired
 by that Sovereign, to be whose faithful servant and minister for good is his proudest
 84475 boast. In full persuasion, then, of thy approval, most mighty emperor, I desire at
 this present time to proclaim to all the reasons and motives of thy pious works. I
 desire to stand as the interpreter of thy designs, to explain the counsels of a soul
 devoted to the love of God. I propose to teach all men, what all should know who care
 to understand the principles on which our Saviour God employs his power, the reasons
 84480 for which he who was the pre-existent Controller of all things at length descended to
 us from heaven: the reasons for which he assumed our nature, and submitted even to
 the power of death. I shall declare the causes of that immortal life which followed,
 and of his resurrection from the dead. Once more, I shall adduce convincing proofs
 and arguments, for the sake of those who yet need such testimony: and now let me
 84485 commence my appointed task. Those who transfer the worship due to that God who formed
 and rules the world to the works of his hand; who hold the sun and moon, or other
 parts of this material system, nay, the elements themselves, earth, water, air, and
 fire, in equal honor with the Creator of them all; who give the name of gods to
 things which never would have had existence, or even name, except as obedient to that
 84490 Word of God who made the world: such persons in my judgment resemble those who
 overlook the master hand which gives its magnificence to a royal palace; and, while
 lost in wonder at its roofs and walls, the paintings of varied beauty and coloring
 which adorn them, and its gilded ceilings and sculptures, ascribe to them the praise
 of that skill which belongs to the artist whose work they are: whereas they should
 84495 assign the cause of their wonder, not to these visible objects, but to the architect
 himself, and confess that the proofs of skill are indeed manifest, but that he alone
 is the possessor of that skill who has made them what they are. Again, well might we
 liken those to children, who should admire the seven-stringed lyre, and disregard him
 who invented or has power to use it: or those who forget the valiant warrior, and
 84500 adorn his spear and shield with the chaplet of victory: or, lastly, those who hold
 the squares and streets, the public buildings, temples, and gymnasia of a great and
 royal city in equal honor with its founder; forgetting that their admiration is due,
 not to lifeless stones, but to him whose wisdom planned and executed these mighty
 works. Not less absurd is it for those who regard this universe with the natural eye
 84505 to ascribe its origin to the sun, or moon, or any other heavenly body. Rather let
 them confess that these are themselves the works of a higher wisdom, remember the
 Maker and Framer of them all, and render to him the praise and honor above all
 created objects. Nay rather, inspired by the sight of these very objects, let them
 address themselves with full purpose of heart to glorify and worship him who is now
 84510 invisible to mortal eye, but perceived by the clear and unclouded vision of the soul,
 the supremely sovereign Word of God. To take the instance of the human body: no one
 has yet conferred the attribute of wisdom on the eyes, or head, the hands, or feet,
 or other members, far less on the outward clothing, of a wise and learned man: no one
 terms the philosopher's household furniture and utensils, wise: but every rational
 84515 person admires that invisible and secret power, the mind of the man himself. How much
 more, then, is our admiration due, not to the visible mechanism of the universe,
 material as it is, and formed of the selfsame elements; but to that invisible Word
 who has moulded and arranged it all, who is the only begotten Son of God, and whom
 the Maker of all things, who far transcends all being, has begotten of himself, and
 84520 appointed Lord and Governor of this universe? For since it was impossible that
 perishable bodies, or the rational spirits which he had created, should approach the
 Supreme God, by reason of their immeasurable distance from his perfections, for he is
 unbegotten, above and beyond all creation, ineffable, inaccessible, unapproachable,
 dwelling, as his holy word assures us, in the light which none can enter; but they
 84525 were created from nothing, and are infinitely far removed from his unbegotten

Essence; well has the all-gracious and Almighty God interposed as it were an intermediate Power between himself and them, even the Divine omnipotence of his only begotten Word. And this Power, which is in perfect nearness and intimacy of union, with the Father which abides in him, and shares his secret counsels, has yet
 84530 condescended, in fullness of grace, as it were to conform itself to those who are so far removed from the supreme majesty of God. How else, consistently with his own holiness could he who is far above and beyond all things unite himself to corruptible and corporeal matter? Accordingly the Divine Word, thus connecting himself with this universe, and receiving into his hands the reins, as it were, of the world, turns and
 84535 directs it as a skillful charioteer according to his own will and pleasure, The proof of these assertions is evident. For supposing that those component parts of the world which we call elements, as earth, water, air, and fire, the nature of which is manifestly without intelligence, are self-existent; and if they have one common essence, which they who are skilled in natural science call the great receptacle, mother, and nurse of all things; and if this itself be utterly devoid of shape and figure, of soul and reason; whence shall we say it has obtained its present form and beauty? To what shall we ascribe the distinction of the elements, or the union of things contrary in their very nature? Who has commanded the liquid water to sustain the heavy element of earth? Who has turned back the waters from their downward
 84545 course, and carried them aloft in clouds? Who has bound the force of fire, and caused it to lie latent in wood, and to combine with substances most contrary to itself? Who has mingled the cold air with heat, and thus reconciled the enmity of opposing principles? Who has devised the continuous succession of the human race, and given it as it were an endless term of duration? Who has moulded the male and female form, adapted their mutual relations with perfect harmony, and given one
 84550 common principle of production to every living creature? Who changes the character of the fluid and corruptible seed, which in itself is void of reason, and gives it its prolific power? Who is at this moment working these and ten thousand effects more wonderful than these, nay, surpassing all wonder, and with invisible influence is daily and hourly perpetuating the production of them all? Surely the wonder-working and truly omnipotent Word of God may well be deemed the efficient cause of all these things: that Word who, diffusing himself through all creation, pervading height and depth with incorporeal energy, and embracing the length and breadth of the universe within his mighty grasp, has compacted and reduced to order this entire system, from
 84560 whose unreasoned and formless matter he has framed for himself an instrument of perfect harmony, the nicely balanced chords and notes of which he touches with all-wise and unerring skill. He it is who governs the sun, and moon, and the other luminaries of heaven by inexplicable laws, and directs their motions for the service of the universal whole. It is this Word of God who has stooped to the earth on which
 84565 we live, and created the manifold species of animals, and the fair varieties of the vegetable world. It is this same Word who has penetrated the recesses of the deep, has given their being to the finny race, and produced the countless forms of life which there exist. It is he who fashions the burden of the womb, and informs it in nature's laboratory with the principle of life. By him the fluid and heavy moisture is raised on high, and then, sweetened by a purifying change, descends in measured quantities to the earth, and at stated seasons in more profuse supply. Like a
 84570 skillful husbandman, he fully irrigates the land, tempers the moist and dry in just proportion, diversifying the whole with brilliant flowers, with aspects of varied beauty, with pleasant fragrance, with alternating varieties of fruits, and countless gratifications for the taste of men. But why do I dare essay a hopeless task, to recount the mighty works of the Word of God, and describe an energy which surpasses mortal thought? By some, indeed, he has been termed the Nature of the universe, by others, the World-Soul, by others, Fate. Others again have declared him to be the
 84575 most High God himself, strangely confounding things most widely different; bringing down to this earth, uniting to a corruptible and material body, and assigning to that supreme and unbegotten Power who is Lord of all an intermediate place between irrational animals and rational mortals on the one hand, and immortal beings on the other.
 84580
 CHAPTER XII.
 ON the other hand, the sacred doctrine teaches that he who is the supreme Source of good, and Cause of all things, is beyond all comprehension, and therefore inexpressible by word, or speech, or name; surpassing the power, not of language only, but of thought itself. Un-circumscribed by place, or body; neither in heaven,
 84590 nor in ethereal space, nor in any other part of the universe; but entirely independent of all things else, he pervades the depths of unexplored and secret

wisdom. The sacred oracles teach us to acknowledge him as the only true God, apart from all corporeal essence, distinct from all subordinate ministration. Hence it is said that all things are from him, but not through him. And he himself dwelling as Sovereign in secret and undiscovered regions of unapproachable light, ordains and disposes all things by the single power of his own will. At his will whatever is, exists; without that will, it cannot be. And his will is in every case for good, since he is essentially Goodness itself. But he through whom are all things, even God the Word, proceeding in an ineffable manner from the Father above, as from an everlasting and exhaustless fountain, flows onward like a river with a full and abundant stream of power for the preservation of the universal whole. And now let us select an illustration from our own experience. The invisible and undiscovered mind within us, the essential nature of which no one has ever known, sits as a monarch in the seclusion of his secret chambers, and alone resolves on our course of action. From this proceeds the only begotten word from its father's bosom, begotten in a manner and by a power inexplicable to us; and is the first messenger of its father's thoughts, declares his secret counsels, and, conveying itself to the ears of others, accomplishes his designs. And thus the advantage of this faculty is enjoyed by all: yet no one has ever yet beheld that invisible and hidden mind, which is the I parent of the word itself. In the same manner, or rather in a manner which far surpasses all likeness or comparison, the perfect Word of the Supreme God, as the only begotten Son of the Father (not consisting in the power of utterance, nor comprehended in syllables and notes of speech, nor conveyed by a voice which vibrates on the air; but being himself the living and effectual Word of the most High, and subsisting personally as the Power and Wisdom of God), proceeds from his Father's Deity and kingdom. Thus, being the perfect Offspring of a perfect Father, and the common Preserver of all things, he diffuses himself with living power throughout creation, and pours from his own fullness abundant supplies of reason, wisdom, light, and every other blessing, not only on objects nearest to himself, but on those most remote, whether in earth, or sea, or any other sphere of being. To all these he appoints with perfect equity their limits, places, laws, and inheritance, allotting to each their suited portion according to his sovereign will. To some he assigns the super-terrestrial regions, to others heaven itself as their habitation: others he places in ethereal space, others in air, and others still on earth. He it is who transfers mankind from hence to another sphere, impartially reviews their conduct here, and bestows a recompense according to the life and habits of each. By him provision is made for the life and food, not of rational creatures only, but also of the brute creation, for the service of men; and while to the latter he grants the enjoyment of a perishable and fleeting term of existence, the former he invites to a share in the possession of immortal life. Thus universal is the agency of the Word of God: everywhere present, and pervading all things by the power of his intelligence, he looks upward to his Father, and governs this lower creation, inferior to and consequent upon himself, in accordance with his will, as the common Preserver of all things. Intermediate, as it were, and attracting the created to the uncreated Essence, this Word of God exists as an unbroken bond between the two, uniting things most widely different by an inseparable tie. He is the Providence which rules the universe; the guardian and director of the whole: he is the Power and Wisdom of God the only begotten God, the Word begotten of God himself. For "In the beginning was the Word, and the Word was with God, and the Word was God. All things were made by him and without him was not any. thing made that hath been made"; as we learn from the words of the sacred writer? Through his vivifying power all nature grows and flourishes, refreshed by his continual showers, and invested with a vigor and beauty ever new. Guiding the reigns of the universe, he holds its onward course in conformity to the Father's will and moves, as it were, the helm of this mighty ship. This glorious Agent, the only begotten Son of the Supreme God, begotten by the Father as his perfect Offspring, the Father has given to this world as the highest of all goods infusing his word, as spirit into a lifeless body, into unconscious nature; imparting light and energy to that which in itself was a rude, inanimate, and formless mass, through the Divine power. Him therefore it is ours to acknowledge and regard as everywhere present, and giving life to matter and the elements of nature: in him we see Light, even the spiritual offspring of inexpressible Light: one indeed in essence, as being the Son of one Father; but possessing in himself many and varied powers. The world is indeed divided into many parts; yet let us not therefore suppose that there are many independent Agents nor, though creation's works be manifold, let us thence assume the existence of many gods. How grievous the error of those childish and infatuated advocates of polytheistic worship, who deify the constituent parts of the universe, and divide into many that system which is only one! Such conduct

resembles theirs who should abstract the eyes of an individual man, and term them the man himself, and the ears, another man, and so the head: or again, by an effort of thought should separate the neck, the breast and shoulders, the feet and hands, : or other members, nay, the very powers of sense, and thus pronounce an individual to be a multitude of men. Such folly must surely be rewarded with contempt by men of sense. Yet such is he who from the component parts of a single world can devise for himself a multitude of gods, or even deem that world which is the work of a Creator, and consists of many parts, to be itself a god: not knowing that the Divine Nature can in no sense be divisible into parts; since, if compounded, it must be so through the agency of another power; and that which is so compounded can never be Divine. How indeed could it be so, if composed of unequal and dissimilar, and hence of worse and better elements? Simple, indivisible, uncompounded, the Divine Nature exists at an infinite elevation above the visible constitution of this world. And hence we are assured by the clear testimony of the sacred Herald, that the Word of God, who is before all things, must be the sole Preserver of all intelligent beings: while God, who is above all, and the Author of the generation of the Word, being himself the Cause of all things, is rightly called the Father of the Word, as of his only begotten Son, himself acknowledging no superior Cause. God, therefore, himself is One, and from him proceeds the one only begotten Word, the omnipresent Preserver of all things. And as the many-stringed lyre is composed of different chords, both sharp and flat, some slightly, others tensely strained, and others intermediate between-the two extremes, yet all attuned according to the rules of harmonic art; even so this material world, compounded as it is of many elements, containing opposite and antagonist principles, as moisture and dryness, cold and heat, yet blended into one harmonious whole, may justly be termed a mighty instrument framed by the hand of God: an instrument on which the Divine Word, himself not composed of parts or opposing principles, but indivisible and uncompounded, performs with perfect skill, and produces a melody at once accordant with the will of his Father the Supreme Lord of all, and glorious to himself. Again, as there are manifold external and internal parts and members comprised in a single body, yet one invisible soul, one undivided and incorporeal mind pervades the whole; so is it in this creation, which, consisting of many parts, yet is but one: and so the One mighty, yea, Almighty Word of God, pervading all things, and diffusing himself with undeviating energy throughout this universe, is the Cause of all things that exist therein. Survey the compass of this visible world. Seest thou not how the same heaven contains within itself the countless courses and companies of the stars? Again, the sun is one, and yet eclipses many, nay all other luminaries, by the surpassing glory of his rays. Even so, as the Father himself is One, his Word is also One, the perfect Son of that perfect Father. Should any one object because they are not more, as well might he complain that there are not many suns, or moons, or worlds, and a thousand things beside; like the madman, who would fain subvert the fair and perfect course of Nature herself. As in the visible, so also in the spiritual world: in the one the same sun diffuses his light throughout this material earth; in the other the One Almighty Word of God illumines all things with invisible and secret power. Again, there is in man one spirit, and one faculty of reason, which yet is the active cause of numberless effects. The same mind, instructed in many things, will essay to cultivate the earth, to build and guide a ship, and construct houses: nay, the one mind and reason of man is capable of acquiring knowledge in a thousand forms: the same mind shall understand geometry and astronomy, and discourse on the rules of grammar, and rhetoric, and the healing art. Nor will it excel in science only, but in practice too: and yet no one has ever supposed the existence of many minds in one human form, nor expressed his wonder at a plurality of being in man, because he is thus capable of varied knowledge. Suppose one were to find a shapeless mass of clay, to mould it with his hands, and give it the form of a living creature; the head in one figure, the hands and feet in another, the eyes and cheeks in a third, and so to fashion the ears, the mouth and nose, the breast and shoulders, according to the rules of the plastic art. The result, indeed, is a variety of figure, of parts and members in the one body; yet must we not suppose it the work of many hands, but ascribe it entirely to the skill of a single artist, and yield the tribute of our praise to him who by the energy of a single mind has framed it all. The same is true of the universe itself, which is one, though consisting of many parts: yet surely we need not suppose many creative powers, nor invent a plurality of gods. Our duty is to adore the all-wise and all-perfect agency of him who is indeed the Power and the Wisdom of God, whose undivided force and energy pervades and penetrates the universe, creating and giving life to all things, and furnishing to all, collectively and severally, those manifold supplies of which he is himself the source. Even so one and

84725 the same impression of the solar rays illumines the air at once, gives light to the
 eyes, warmth to the touch, fertility to the earth, and growth to plants. The same
 luminary constitutes the course of time, governs the motions of the stars, performs
 the circuit of the heavens, imparts beauty to the earth, and displays the power of
 84730 God to all: and all this he performs by the sole and unaided force of his own nature.
 In like manner fire has the property of refining gold, and fusing lead, of dissolving
 wax, of parching clay, and consuming wood; producing these varied effects by one and
 the same burning power. So also the Supreme Word of God, pervading all things,
 everywhere existent, everywhere present in heaven and earth, governs and directs the
 84735 visible and invisible creation, the sun, the heaven, and the universe itself, with an
 energy inexplicable in its nature, irresistible in its effects. From him, as from an
 everlasting fountain, the sun, the moon, and stars receive their light: and he
 forever rules that heaven which he has framed as the fitting emblem of his own
 greatness. The angelic and spiritual powers, the incorporeal and intelligent beings
 which exist beyond the sphere of heaven and earth, are filled by him with light and
 life, with wisdom and virtue, with all that is great and good, from Iris own peculiar
 84740 treasures. Once more, with one and the same creative skill, he ceases not to furnish
 the elements with substance, to regulate the union and combinations, the forms and
 figures, and the innumerable qualities of organized bodies; preserving the varied
 distinctions of animal and vegetable life, of the rational and the brute creation;
 and supplying all things to all with equal power: thus proving himself the Author,
 84745 not indeed of the seven-stringed lyre, but of that system of perfect harmony which is
 the workmanship of the One world-creating Word.

CHAPTER XIII.

84750 AND now let us proceed to explain the reasons for which this mighty Word of God
 descended to dwell with men. Our ignorant and foolish race, incapable of
 comprehending him who is the Lord of heaven and earth, proceeding from his Father's
 Deity as from the supreme fountain, ever present throughout the world, and evincing
 by the clearest proofs his providential care for the interests of man; have ascribed
 the adorable title of Deity to the sun, and moon, the heaven and the stars of heaven.
 84755 Nor did they stop here, but deified the earth itself, its products, and the various
 substances by which animal life is sustained, and devised images of Ceres, of
 Proserpine, of Bacchus, and many such as these. Nay, they shrank not from giving the
 name of gods to the very conceptions of their own minds, and the speech by which
 those conceptions are expressed; calling the mind itself Minerva, and language
 84760 Mercury, and affixing the names of Mnemosyne and the Muses to those faculties by
 means of which science is acquired. Nor was even this enough: advancing still more
 rapidly in the career of impiety and folly, they deified their own evil passions,
 which it behooved them to regard with aversion, or restrain by the principles of
 self-control. Their very lust and passion and impure disease of soul, the members of
 84765 the body which tempt to obscenity, and even the very uncontrol in shameful pleasure,
 they described under the titles of Cupid, Priapus, Venus, and other kindred terms.
 Nor did they stop even here. Degrading their thoughts of God to this corporeal and
 mortal life, they deified their fellow-men, conferring the names of gods and heroes
 on those who had experienced the common lot of all, and vainly imagining that the
 84770 Divine and imperishable Essence could frequent the tombs and monuments of the dead.
 Nay, more than this: they paid divine honors to animals of various species, and to
 the most noxious reptiles: they felled trees, and excavated rocks; they provided
 themselves with brass, and iron, and other metals, of which they fashioned
 resemblances of the male and female human form, of beasts, and creeping things; and
 84775 these they made the objects of their worship. Nor did this suffice. To the evil
 spirits themselves which lurked within their statues, or lay concealed in secret and
 dark recesses, eager to drink their libations, and inhale the odor of their
 sacrifices, they ascribed the same divine honors. Once more, they endeavored to
 secure the familiar aid of these spirits, and the unseen powers which move through
 84780 the tracts of air, by charms of forbidden magic, and the compulsion of unhallowed
 songs and incantations. Again, different nations have adopted different persons as
 objects of their worship. The Greeks have rendered to Bacchus, Hercules, AEsculapius,
 Apollo, and others who were mortal men, the titles of gods and heroes. The Egyptians
 have deified Horus and Isis, Osiris, and other mortals such as these. And thus they
 84785 who boast of the wondrous skill whereby they have discovered geometry, astronomy, and
 the science of number, know not, wise as they are in their own conceit, nor
 understand how to estimate the measure of the power of God, or calculate his
 exceeding greatness above the nature of irrational and mortal beings. Hence they
 shrank not from applying the name of gods to the most hideous of the brute creation,

84790 to venomous reptiles and savage beasts. The Phoenicians deified Melcatharus, Usorus, and others; mere mortals, and with little claim to honor: the Arabians, Dularis and Obodas: the Getae, Zamolxis: the Cicilians, Mopsus: and the Thebans, Amphiaraus: in short, each nation has adopted its own peculiar deities, differing in no respect from their fellow-mortals, being simply and truly men. Again, the Egyptians with one consent, the Phoenicians, the Greeks, nay, every nation beneath the sun, have united in worshipping the very parts and elements of the world, and even the produce of the ground itself. And, which is most surprising, though acknowledging the adulterous, unnatural, and licentious crimes of their deities, they have not only filled every city, and village, and district with temples, shrines, and statues in their honor, 84795 but have followed their evil example to the ruin of their own souls. We hear of gods and the sons of gods described by them as heroes and good genii, titles entirely opposed to truth, honors utterly at variance with the qualities they are intended to exalt. It is as if one who desired to point out the sun and the luminaries of heaven, instead of directing his gaze thitherward, should grope with his hands on the ground, and search for the celestial powers in the mud and mire. Even so mankind, deceived by their own folly and the craft of evil spirits, have believed that the Divine and spiritual Essence which is far above heaven and earth could be compatible with the birth, the affections, and death, of mortal bodies here below. To such a pitch of madness did they proceed, as to sacrifice the dearest objects of their affection to their gods, regardless of all natural ties, and urged by frenzied feeling to slay their only and best beloved children. For what can be a greater proof of madness, 84800 than to offer human sacrifice, to pollute every city, and even their own houses, with kindred blood? Do not the Greeks themselves attest this, and is not all history filled with records of the same impiety? The Phoenicians devoted their best beloved and only children as an annual sacrifice to Saturn. The Rhodians, on the sixth day of the month Metageitnion, offered human victims to the same god. At Salamis, a man was pursued in the temple of Minerva Agraulis and Diomede, compelled to run thrice round the altar, afterwards pierced with a lance by the priest, and consumed as a burnt offering on the blazing pile. In Egypt, human sacrifice was most abundant. At 84805 Heliopolis three victims were daily offered to Juno, for whom king Amoses, impressed with the atrocity of the practice, commanded the substitution of an equal number of waxen figures. In Chios, and again in Tenedos, a man was slain and offered up to Omadian Bacchus. At Sparta they immolated human beings to Mars. In Crete they did likewise, offering human sacrifices to Saturn. In Laodicea of Syria a virgin was yearly slain in honor of Minerva, for whom a hart is now the substitute. The Libyans and Carthaginians appeased their gods with human victims. The Dumateni of Arabia buried a boy annually beneath the altar. History informs us that the Greeks without exception, the Thracians also, and Scythians, were accustomed to human sacrifice before they marched forth to battle. The Athenians record the immolation of the 84830 virgin children of Leus, and the daughter of Erechtheus. Who knows not that at this day a human victim is offered in Rome itself at the festival of Jupiter Latiaris? And these facts are confirmed by the testimony of the most approved philosophers. Diodorus, the epitomizer of libraries, affirms that two hundred of the noblest youths were sacrificed to Saturn by the Libyan people, and that three hundred more were voluntarily offered by their own parents. Dionysius, the compiler of Roman history, expressly says that Jupiter and Apollo demanded human sacrifices of the so-called Aborigines, in Italy. He relates that on this demand they offered a proportion of all their produce to the gods; but that, because of their refusal to slay human victims, they became involved in manifold calamities, from which they could obtain no release 84835 until they had decimated themselves, a sacrifice of life which proved the desolation of their country. Such and so great were the evils which of old afflicted the whole human race. Nor was this the full extent of their misery: they groaned beneath the pressure of other evils equally numerous and irremediable. All nations, whether civilized or barbarous, throughout the world, as if actuated by a demoniac frenzy, were infected with sedition as with some fierce and terrible disease: insomuch that the human family was irreconcilably divided against itself; the great system of society was distracted and torn asunder; and in every corner of the earth men stood opposed to each other, and strove with fierce contention on questions of law and government. Nay, more than this: with passions aroused to fury, they engaged in 84845 mutual conflicts, so frequent that their lives were passed as it were in uninterrupted warfare. None could undertake a journey except as prepared to encounter an enemy in the very country and villages the rustics girded on the sword, provided themselves with armor rather than with the implements of rural labor, and deemed it noble exploit to plunder and enslave any who belonged to a neighboring state. Nay, 84850 more than this: from the fables they had themselves devised respecting their own

deities, they deduced occasions for a vile and abandoned life, and wrought the ruin of body and soul by licentiousness of every kind. Not content with this, they even overstepped the bounds which nature had defined, and together committed incredible and nameless crimes, "men with men (in the words of the sacred writer) working un-

84860 seemliness, and receiving in themselves that recompense of their error which was due." Nor did they stop even here; but perverted their natural thoughts of God, and denied that the course of this world was directed by his providential care, ascribing the existence and constitution of all things to the blind operation of chance, or the necessity of fate. Once more: believing that soul and body were alike dissolved by

84865 death, they led a brutish life, unworthy of the name: careless of the nature or existence of the soul, they dreaded not the tribunal of Divine justice, expected no reward of virtue, nor thought of chastisement as the penalty of an evil life. Hence it was that whole nations, a prey to wickedness in all its forms, were wasted by the effects of their own brutality: some living in the practice of most vile and lawless

84870 incest with mothers, others with sisters, and others again corrupting their own daughters. Some were found who slew their confiding guests; others who fed on human flesh; some strangled, and then feasted on, their aged men; others threw them alive to dogs. The time would fail me were I to attempt to describe the multifarious symptoms of the inveterate malady which had asserted its dominion over the whole

84875 human race. Such, and numberless others like these, were the prevailing evils, on account of which the gracious Word of God, full of compassion for his human flock, had long since, by the ministry of his prophets, and earlier still, as well as later, by that of men distinguished by pious devotion to God, invited those thus desperately afflicted to their own cure; and had, by means of laws, exhortations, and doctrines

84880 of every kind, proclaimed to man the principles and elements of true godliness. But when for mankind, distracted and torn as I have said, not indeed by wolves and savage beasts, but by ruthless and soul-destroying spirits of evil, human power no longer sufficed, but a help was needed superior to that of man; then it was that the Word of God, obedient to his all-gracious Father's will, at length himself appeared, and most

84885 willingly made his abode amongst us. The causes of his advent I have already described, induced by which he condescended to the society of man; not in his wonted form and manner, for he is incorporeal, and present everywhere throughout the world, proving by his agency both in heaven and earth the greatness of his almighty power, but in a character new and hitherto unknown. Assuming a mortal body, he deigned to

84890 associate and converse with men; desiring, through the medium of their own likeness, to save our mortal race.

CHAPTER XIV.

AND now let us explain the cause for which the incorporeal Word of God assumed this

84895 mortal body as a medium of intercourse with man. How, indeed, else than in human form could that Divine and impalpable, that immaterial and invisible Essence manifest itself to those who sought for God in created and earthly objects, unable or

84900 unwilling otherwise to discern the Author and Maker of all things? As a fitting means, therefore, of communication with mankind, he assumed a mortal body, as that with which they were themselves familiar; for like, it is proverbially said, loves

84905 its like. To those, then, whose affections were engaged by visible objects, who looked for gods in statues and lifeless images, who imagined the Deity to consist in material and corporeal substance, nay, who conferred on men the title of divinity, the Word of God presented himself in this form. Hence he procured for himself this

84910 body as a thrice-hallowed temple, a sensible habitation of an intellectual power; a noble and most holy form, of far higher worth than any lifeless statue. The material and senseless image, fashioned by base mechanic hands, of brass or iron, of gold or ivory, wood or stone, may be a fitting abode for evil spirits: but that Divine form, wrought by the power of heavenly wisdom, was possessed of life and spiritual being; a

84915 form animated by every excellence, the dwelling-place of the Word of God, a holy temple of the holy God. Thus the indwelling Word conversed with and was known to men, as kindred with themselves; yet yielded not to passions such as theirs, nor owned, as the natural soul, subjection to the body. He parted not with aught of his intrinsic

84920 greatness, nor changed his proper Deity. For as the all-pervading radiance of the sun receives no stain from contact with dead and impure bodies; much less can the incorporeal power of the Word of God be injured in its essential purity, or part with any of its greatness, from spiritual contact with a human body. Thus, I say, did our common Saviour prove himself the benefactor and preserver of all, displaying his wisdom through the instrumentality of his human nature, even as a musician uses the

84925 lyre to evince his skill. The Grecian myth tells us that Orpheus had power to charm ferocious beasts, and tame their savage spirit, by striking the chords of his

instrument with a master hand: and this story is celebrated by the Greeks, and generally believed, that an unconscious instrument could subdue the untamed brute, and draw the trees from their places, in obedience to its melodious power. But he who

84925 is the author of perfect harmony, the all-wise Word of God, desiring to apply every remedy to the manifold diseases of the souls of men, employed that human nature which is the workmanship of his own wisdom, as an instrument by the melodious strains of which he soothed, not indeed the brute creation, but savages endued with reason; healing each furious temper, each fierce and angry passion of the soul, both in

84930 civilized and barbarous nations, by the remedial power of his Divine doctrine. Like a physician of perfect skill, he met the diseases of their souls who sought for God in nature and in bodies, by a fitting and kindred remedy, and showed them God in human form. And then, with no less care for the body than the soul, he presented before the eyes of men wonders and signs, as proofs of his Divine power, at the same time

84935 instilling into their ears of flesh the doctrines which he himself uttered with a corporeal tongue. In short, he performed all his works through the medium of that body which he had assumed for the sake of those who else were incapable of apprehending his Divine nature. In all this he was the servant of his Father's will, himself remaining still the same as when with the Father; unchanged in essence, unimpaired in nature, unfettered by the trammels of mortal flesh, nor hindered by his

84940 abode in a human body from being elsewhere present. Nay, at the very time of his intercourse with men, he was pervading all things, was with and in the Father, and even then was caring for all things both in heaven and earth. Nor was he precluded, as we are, from being present everywhere, or from the continued exercise of his

84945 Divine power. He gave of his own to man, but received nothing in return: he imparted of his Divine power to mortality, but derived no accession from mortality itself. Hence his human birth to him brought no defilement; nor could his impassible Essence suffer at the dissolution of his mortal body. For let us suppose a lyre to receive an accidental injury, or its chord to be broken; it does not follow that the performer

84950 on it suffers: nor, if a wise man's body undergo punishment, can we fairly assert that his wisdom, or the soul within him, are maimed or burned. Far less can we affirm that the inherent power of the Word sustained any detriment from his bodily passion, any more than, as in the instance we have already used, the solar rays which are shot from heaven to earth contract defilement, though in contact with mire and pollution

84955 of every kind. We may, indeed, assert that these things partake of the radiance of the light, but not that the light is contaminated, or the sun defiled, by this contact with other bodies. And indeed these things are themselves not contrary to nature; but the Saviour, the incorporeal Word of God, being Life and spiritual Light itself, whatever he touches with Divine and incorporeal power must of necessity

84960 become endued with the intelligence of light and life. Thus, if he touch a body, it becomes enlightened and sanctified, is at once delivered from all disease, infirmity, and suffering, and that which before was lacking is supplied by a portion of his fullness. And such was the tenor of his life on earth; now proving the sympathies of his human nature with our own, and now revealing himself as the Word of God: wondrous

84965 and mighty in his works as God; foretelling the events of the far distant future; declaring in every act, by signs, and wonders, and supernatural powers, that Word whose presence was so little known; and finally, by his Divine teaching, inviting the souls of men to prepare for those mansions which are above the heavens.

84970 CHAPTER XV.

WHAT now remains, but to account for those which are the crowning facts of all; I mean his death, so far and widely known, the manner of his passion, and the mighty miracle of his resurrection after death: and then to establish the truth of these events by the clearest testimonies? For the reasons detailed above he used the

84975 instrumentality of a mortal body, as a figure becoming his Divine majesty, and like a mighty sovereign employed it as his interpreter in his intercourse with men, performing all things consistently with his own Divine power. Supposing, then, at the end of his sojourn among men, he had by any other means suddenly withdrawn himself from their sight, and, secretly removing that interpreter of himself, the form which

84980 he had assumed, had hastened to flee from death, and afterwards by his own act had consigned his mortal body to corruption and dissolution: doubtless in such a case he would have been deemed a mere phantom by all. Nor would he have acted in a manner worthy of himself, had he who is Life, the Word, and the Power of God, abandoned this interpreter of himself to corruption and death. Nor, again, would his warfare with

84985 the spirits of evil have received its consummation by conflict. with the power of death. The place of his retirement must have remained unknown; nor would his existence have been believed by those who had not seen him for themselves. No proof

would have been given that he was superior to death nor would he have delivered mortality from the law of its natural infirmity. His name had never been heard throughout the world nor could he have inspired his disciples with contempt of death, or encouraged those who. embraced his doctrine to hope for the enjoyment of a future life with God. Nor would he have fulfilled the assurances of his own promise, nor have accomplished the predictions of the prophets concerning himself. Nor would he have undergone the last conflict of all; for this was to be the struggle with the power of death. For all these reasons, then, and inasmuch as it was necessary that the mortal body which had rendered such service to the Divine Word should meet with an end worthy its sacred occupant, the manner of his death was ordained accordingly. For since but two alternatives remained: either to consign his body entirely to corruption, and so to bring the scene of life to a dishonored close, or else to prove himself victorious over death, and render mortality immortal by the act of Divine power; the former of these alternatives would have contravened his own promise. For as it is not the property of fire to cool, nor of light to darken, no more is it compatible with life, to deprive of life, or with Divine intelligence, to act in a manner contrary to reason. For how would it be consistent, with reason, that he who had promised life to others, should permit his own body, the form which he had chosen, to perish beneath the power of corruption? That he who had inspired his disciples with hopes of immortality, should yield this exponent of his Divine counsels to be destroyed by death? The second alternative was therefore needful I mean, that he should assert his dominion over the power of death. But how? should this be a furtive and secret act, or openly performed and in the sight of all? So mighty an achievement, had it remained unknown and unrevealed, must have failed of its effect as regards the interests of men; whereas the same event, if openly declared and understood, would, from its wondrous character, redound to the common benefit of all. With reason, therefore, since it was needful to prove his body victorious over death, and that not secretly but before the eyes of men, he shrank not from the trial, for this indeed would have argued fear, and a sense of inferiority to the power of death, but maintained that conflict with the enemy which has rendered mortality immortal; a conflict undertaken for the life, the immortality, the salvation of all. Suppose one desired to show us that a vessel could resist the force of fire; how could he better prove the fact than by casting it into the furnace and thence withdrawing it entire and unconsumed? Even thus the Word of God who is the source of life to all, desiring to prove the triumph of that body over death which he had assumed for man's salvation, and to make this body partake his own life and immortality, pursued a course consistent with this object. Leaving his body for a little while, and delivering it up to death in proof of its mortal nature, he soon redeemed it from death, in vindication of that Divine power whereby he has manifested the immortality which he has promised to be utterly beyond the sphere of death. The reason of this is clear. It was needful that 1 his disciples should receive ocular proof of the certainty of that resurrection on which he had taught them to rest their hopes as a motive for rising superior to the fear of death. It was indeed most needful that they who purposed to pursue a life of godliness should receive a clear impression of this essential truth: more needful still for those who were destined to declare his name in all the world, and to communicate to mankind that knowledge of God which he had before ordained for all nations. For such the strongest conviction of a future life was necessary, that they might be able with fearless and unshrinking zeal to maintain the conflict with Gentile and polytheistic error: a conflict the dangers of which they would never, have been prepared to meet, except as habituated to the contempt of death. Accordingly, in arming his disciples against the power of this last enemy, he delivered not his doctrines in mere verbal precepts, nor attempted to prove the soul's immortality, by persuasive and probable arguments; but displayed to them in his own person a real victory over death. Such was the first and greatest reason of our Saviour's conflict with the power of death, whereby he proved to his disciples the nothingness of that which is the terror of all mankind, and afforded a visible evidence of the reality of that life which he had promised; presenting as it were a first-fruit of our common hope, of future life and immortality in the presence of God. The second cause of his resurrection was, that the Divine power might be manifested which dwelt in his mortal body. Mankind had heretofore conferred Divine honors on men who had yielded to the power of death, and had given the titles of gods and heroes to mortals like themselves. For this reason, therefore, the Word of God evinced his gracious character, and proved to man his own superiority over death, recalling his mortal body to a second life, displaying an immortal triumph over death in the eyes of all, and teaching them to acknowledge the Author of such a victory to be the only true God, even in death itself. I may allege

yet a third cause of the Saviour's death. He was the victim offered to the Supreme Sovereign of the universe for the whole human race: a victim consecrated for the need of the human race, and for the overthrow of the errors of demon worship. For as soon as the one holy and mighty sacrifice, the sacred body of our Saviour, had been slain for man, to be as a ransom for all nations, heretofore involved in the guilt of impious superstition, thenceforward the power of impure and unholy spirits was utterly abolished, and every earth-born and delusive error was at once weakened and destroyed. Thus, then, this salutary victim taken from among themselves, I mean the mortal body of the Word, was offered on behalf of the common race of men. This was that sacrifice delivered up to death, of which the sacred oracles speak: "Behold the Lamb of God, which taketh away the sin of the world." And again, as follows: "He was led as a sheep to the slaughter, and as a lamb before the shearer is dumb." They declare also the cause, saying: "He bears our sins, and is pained for us: yet we accounted him to be in trouble, and in suffering, and in affliction. But he was wounded on account of our sins, and bruised because of our iniquities: the chastisement of our peace was upon him; and by his bruises we were healed. All we as sheep have gone astray; every one has gone astray in this way; and the Lord gave him up for our sins.'" Such were the causes which led to the offering of the human body of the Word of God. But forasmuch as he was the great high priest, consecrated to the Supreme Lord and King, and therefore more than a victim, the Word, the Power, and the Wisdom of God; he soon recalled his body from the grasp of death, presented it to his Father as the first-fruit of our common salvation, and raised this trophy, a proof at once of his victory over death and Satan, and of the abolition of human sacrifices, for the blessing of all mankind.

CHAPTER XVI.

AND now the time is come for us to proceed to the demonstration of these things; if indeed such truths require demonstration, and if the aid of testimony be needful to confirm the certainty of palpable facts. Such testimony, however, shall be here given; and let it be received with an attentive and gracious ear. Of old the nations of the earth, the entire human race, were variously distributed into provincial, national, and local governments, subject to kingdoms and principalities of many kinds. The consequences of this variety were war and strife, depopulation and captivity, which raged in country and city with unceasing fury. Hence, too, the countless subjects of history, adulteries, and rapes of women; hence the woes of Troy, and the ancient tragedies, so known among all peoples. The origin of these may justly be ascribed to the delusion of polytheistic error. But when that instrument of our redemption, the thrice holy body of Christ, which proved itself superior to all Satanic fraud, and free from evil both in word and deed, was raised, at once for the abolition of ancient evils, and in token of his victory over the powers of darkness; the energy of these evil spirits was at once destroyed. The manifold forms of government, the tyrannies and republics, the siege of cities, and devastation of countries caused thereby, were now no more, and one God was proclaimed to all mankind. At the same time one universal power, the Roman empire, arose and flourished, while the enduring and implacable hatred of nation against nation was now removed: and as the knowledge of one God, and one way of religion and salvation, even the doctrine of Christ, was made known to all mankind; so at the self-same period, the entire dominion of the Roman empire being vested in a single sovereign, profound peace reigned throughout the world. And thus, by the express appointment of the same God, two roots of blessing, the Roman empire, and the doctrine of Christian piety, sprang up together for the benefit of men. For before this time the various countries of the world, as Syria, Asia, Macedonia, Egypt, and Arabia, had been severally subject to different rulers. The Jewish people, again, had established their dominion in the land of Palestine. And these nations, in every village, city, and district, actuated by some insane spirit, were engaged in incessant and murderous war and conflict. But two mighty powers, starting from the same point, the Roman empire, which henceforth was swayed by a single sovereign, and the Christian religion, subdued and reconciled these contending elements. Our Saviour's mighty power destroyed at once the many governments and the many gods of the powers of darkness, and proclaimed to all men, both rude and civilized, to the extremities of the earth, the sole sovereignty of God himself. Meantime the Roman empire, the causes of multiplied governments being thus removed, effected an easy conquest of those which yet remained; its object being to unite all nations in one harmonious whole; an object in great measure already secured, and destined to be still more perfectly attained, even to the final conquest of the ends of the habitable world, by means of the salutary doctrine, and through the aid of that Divine power which facilitates and

85120 smooths its way. And surely this must appear a wondrous fact to those who will
examine the question in the love of truth, and desire not to cavil at these
blessings. The falsehood of demon superstition was convicted: the inveterate strife
and mutual hatred of the nations was removed: at the same time One God, and the
85125 knowledge of that God, were proclaimed to all: one universal empire prevailed; and
the whole human race, subdued by the controlling power of peace and concord, received
one another as brethren, and responded to the feelings of their common nature. Hence,
as children of one God and Father, and owning true religion as their common mother,
they saluted and welcomed each other with words of peace. Thus the whole world
85130 appeared like one well-ordered and united family: each one might journey unhindered
as far as and whithersoever he pleased: men might securely travel from West to East,
and from East to West, as to their own native country: in short, the ancient oracles
and predictions of the prophets were fulfilled, more numerous than we can at present
cite, and those especially which speak as follows concerning the saving Word. "He
85135 shall have dominion from sea to sea, and from the river to the ends of the earth."
And again, "In his days shall righteousness spring up; and abundance of peace." "And
they shall beat their swords into ploughshares, and their spears into sickles: and
nation shall not take up sword against nation, neither shall they learn to war any
more.'" These words, predicted ages before in the Hebrew tongue, have received in our
85140 own day a visible fulfillment, by which the testimonies of the ancient oracles are
clearly confirmed. And now, if thou still desire more ample proof, receive it, not in
words, but from the facts themselves. Open the eyes of thine understanding expand the
gates of thought; pause awhile, and consider; inquire of thyself as though thou wert
another, and thus diligently examine the nature of the case. What king or prince in
85145 any age of the world, what philosopher, legislator, or prophet, in civilized or
barbarous lands, has attained so great a height of excellence, I say not after death,
but while living still, and full of mighty power, as to fill the ears and tongues of
all mankind with the praises of his name? Surely none save our only Saviour has done
this, when, after his victory over death, he spoke the word to his followers, and
85150 fulfilled it by the event, saying to them, "Go ye, and make disciples of all nations
in my name.'" He it was who gave the distinct assurance, that his gospel must be
preached in all the world for a true testimony to all nations, and immediately
verified his word: for within a little time the world itself was filled with his
doctrine. How, then, will those who caviled at the commencement of my speech be able
85155 to reply to this? For surely the force of ocular testimony is superior to any verbal
argument. Who else than he, with an invisible and yet potent hand, has driven from
human society like savage beasts that ever noxious and destructive tribe of evil
spirits who of old had made all nations their prey, and by the motions of their
images had practiced many a delusion among men? Who else, beside our Saviour, by the
85160 invocation of his name, and by unfeigned prayer addressed through him to the Supreme
God, has given power to banish from the world the remnant of those wicked spirits to
those who with genuine and sincere obedience pursue the course of life and conduct
which he has himself prescribed? Who else but our Saviour has taught his followers to
offer those bloodless and reasonable sacrifices which are performed by prayer and the
85165 secret worship of God? Hence is it that throughout the habitable world altars are
erected, and churches dedicated, wherein these spiritual and rational sacrifices are
offered as a sacred service by every nation to the One Supreme God. Once more, who
but he, with invisible and secret power, has suppressed and utterly abolished those
bloody sacrifices which were offered with fire and smoke, as well as the cruel and
senseless immolation of human victims; a fact which is attested by the heathen
85170 historians themselves? For it was not till after the publication of the Saviour's
Divine doctrine, about the time of Hadrian's reign, that the practice of human
sacrifice was universally abandoned. Such and so manifest are the proofs of our
Saviour's power and energy after death. Who then can be found of spirit so obdurate
as to withhold his assent to the truth, and refuse to acknowledge his life to be
85175 Divine? Such deeds as I have described are done by the living, not the dead; and
visible acts are to us as evidence of those which we cannot see. It is as it were an
event of yesterday that an impious and godless race disturbed and confounded the
peace of human society, and possessed mighty power. But these, as soon as life
departed, lay prostrate on the earth, worthless as dung, breathless, motionless,
85180 bereft of speech, and have left neither fame nor memorial behind. For such is the
condition of the dead; and he who no longer lives is nothing: and how can he who is
nothing be capable of any act? But how shall his existence be called in question,
whose active power and energy are greater than in those who are still alive? And
though he be invisible to the natural eye, yet the discerning faculty is not in
85185 outward sense. We do not comprehend the rules of art, or the theories of science, by

bodily sensation; nor has any eye yet discerned the mind of man. Far less, then, the power of God: and in such cases our judgment is formed from apparent results. Even thus are we bound to judge of our Saviour's invisible power, and decide by its manifest effects whether we shall acknowledge the mighty operations which he is even now carrying on to be the works of a living agent; or whether they shall be ascribed to one who has no existence; or, lastly, whether the inquiry be not absurd and inconsistent in itself. For with what reason can we assert the existence of one who is not? Since all allow that that which has no existence is devoid of that power, and energy, and action, for these are characteristics of the living, but the contrary is characteristic of the dead.

CHAPTER XVII.

AND now the time is come for us to consider the works of our Saviour in our own age, and to contemplate the living operations of the living God. For how shall we describe these mighty works save as living proofs of the power of a living agent, who truly enjoys the life of God? If any one inquire the nature of these works, let him now attend. But recently a class of persons, impelled by furious zeal, and backed by equal power and military force, evinced their enmity against God, by destroying his churches, and overthrowing from their foundations the buildings dedicated to his worship. In short, in every way they directed their attacks against the unseen God, and assailed him with a thousand shafts of impious words. But he who is invisible avenged himself with an invisible hand. By the single fiat of his will his enemies were utterly destroyed, they who a little while before had been flourishing in great prosperity, exalted by their fellow men as worthy of divine honor, and blessed with a continued period of power and glory, so long as they had maintained peace and amity with him whom they afterwards opposed. As soon, however, as they dared openly to resist his will, and to set their gods in array against him whom we adore; immediately, according to the will and power of that God against whom their arms were raised, they all received the judgment due to their audacious deeds. Constrained to yield and flee before his power, together they acknowledged his Divine nature, and hastened to reverse the measures which they had before essayed. Our Saviour, therefore, without delay erected trophies of this victory everywhere, and once more adorned the world with holy temples and consecrated houses of prayer; in every city and village, nay, throughout all countries, and even in barbaric wilds, ordaining the erection of churches and sacred buildings to the honor of the Supreme God and Lord of all. Hence it is that these hallowed edifices are deemed worthy to bear his name, and receive not their appellation from men, but from the Lord himself, from which circumstances they are called churches (or houses of the Lord). And now let him who will stand forth and tell us who, after so complete a desolation, has restored these sacred buildings from foundation to roof? Who, when all hope appeared extinct, has caused them to rise on a nobler scale than heretofore? And well may it claim our wonder, that this renovation was not subsequent to the death of those adversaries of God, but whilst the destroyers of these edifices were still alive; so that the recantation of their evil deeds came in their own words and edicts. And this they did, not in the sunshine of prosperity and ease (for then we might suppose that benevolence or clemency might be the cause), but at the very time that they were suffering under the stroke of Divine vengeance. Who, again, has been able to retain in obedience to his heavenly precepts, after so many successive storms of persecution, nay, in the very crisis of danger, so many persons throughout the world devoted to philosophy, and the service of God and those holy choirs of virgins who had dedicated themselves to a life of perpetual chastity and purity? Who taught them cheerfully to persevere in the exercise of protracted fasting, and to embrace a life of severe and consistent self-denial? Who has persuaded multitudes of either sex to devote themselves to the study of sacred things, and prefer to bodily nutriment that intellectual food which is suited to the wants of a rational soul? Who has instructed barbarians and peasants, yea, feeble women, slaves, and children, in short, unnumbered multitudes of all nations, to live in the contempt of death; persuaded of the immortality of their souls, conscious that human actions are observed by the unerring eye of justice, expecting God's award to the righteous and the wicked, and therefore true to the practice of a just and virtuous life? For they could not otherwise have persevered in the course of godliness. Surely these are the acts which our Saviour, and he alone, even now performs. And now let us pass from these topics, and endeavor by inquiries such as these that follow to convince the objector's obdurate understanding. Come forward, then, whoever thou art, and speak the words of reason: utter, not the thoughts of a senseless heart, but those of an intelligent and enlightened mind: speak, I say, after deep solemn converse with thyself. Who of the

sages whose names have yet been known to fame, has ever been fore-known and proclaimed from the remotest ages, as our Saviour was by the prophetic oracles to the once divinely-favored Hebrew nation? But his very birth-place, the period of his advent the manner of his life, his miracles, and words and mighty acts, were anticipated and recorded in the sacred volumes of these prophets. Again, who so present an avenger of crimes against himself; so that, as the immediate consequence of their impiety, the entire Jewish people were scattered by an unseen power, their royal seat utterly removed, and their very temple with its holy things levelled with the ground? Who, like our Saviour, has uttered predictions at once concerning that impious nation and the establishment of his church throughout the world, and has equally verified both by the event? Respecting the temple of these wicked men, our Saviour said: "Your house is left unto you desolate": and, "There shall not be left one stone upon another in this place, that shall not be thrown down." And again, of his church he says: "I will build my church upon a rock, and the gates of hell shall not prevail against it." How wondrous, too, must that power be deemed which summoned obscure and unlettered men from their fisher's trade, and made them the legislators and instructors of the human race! And how clear a demonstration of his deity do we find in the promise so well performed, that he would make them fishers of men: in the power and energy which he bestowed, so that they composed and published writings of such authority that they were translated into every civilized and barbarous language, were read and pondered by all nations, and the doctrines contained in them accredited as the oracles of God! How marvelous his predictions of the future, and the testimony whereby his disciples were forewarned that they should be brought before kings and rulers, and should endure the severest punishments, not indeed as criminals, but simply for their confession of his name! Or who shall adequately describe the power with which he prepared them thus to suffer with a willing mind, and enabled them, strong in the armor of godliness, to maintain a constancy of spirit indomitable in the midst of conflict? Or how shall we enough admire that steadfast firmness of soul which strengthened, not merely his immediate followers, but their successors also, even to our present age, in the joyful endurance of every infliction, and every form of torture, in proof of their devotion to the Supreme God? Again, what monarch has prolonged his government through so vast a series of ages? Who else has power to make war after death, to triumph over every enemy, to subjugate each barbarous and civilized nation and city, and to subdue his adversaries with an invisible and secret hand? Lastly, and chief of all, what slanderous lip shall dare to question that universal peace to which we have already referred; established by his power throughout the world For thus the mutual concord and harmony of all nations coincided in point of time with the extension of our Saviour's doctrine and preaching in all the world: a concurrence of events predicted in long ages past by the prophets of God. The day itself would fail me, gracious emperor, should I attempt to exhibit in a single view those cogent proofs of our Saviour's Divine power which even now are visible in their effects; for no human being, in civilized or barbarous nations, has ever yet exhibited such power of Divine virtue as our Saviour. But why do I speak of men, since of the beings whom all nations have deemed divine, none has appeared on earth with power like to his? If there has, let the fact now be proved. Come forward, ye philosophers, and tell us what god or hero has yet been known to fame, who has delivered the doctrines of eternal life and a heavenly kingdom as he has done who is our Saviour? Who, like him, has persuaded multitudes throughout the world to pursue the principles of Divine wisdom, to fix their hope on heaven itself, and look forward to the mansions there reserved for them that love God? What god or hero in human form has ever held his course from the rising to the setting sun, a course co-extensive as it were with the solar light, and irradiated mankind with the bright and glorious beams of his doctrine, causing each nation of the earth to render united worship to the One true God? What god or hero yet, as he has done, has set aside all gods and heroes among civilized or barbarous nations has ordained that divine honors should be withheld from all, and chimed obedience to that command: and then, though singly conflicting with the power of all, has utterly destroyed the opposing hosts; victorious over the gods and heroes of every age, and causing himself alone, in every region of the habitable world, to be acknowledged by all people as the only Son of God? Who else has commanded the nations inhabiting the continents and islands of this mighty globe to assemble weekly on the Lord's day, and to observe it as a festival, not indeed for the pampering of the body, but for the invigoration of the soul by instruction in Divine truth? What god or hero, exposed, as our Saviour was, to so sore a conflict, has raised the trophy of victory over every foe? For they indeed, from first to last, unceasingly assailed his doctrine and his people: but he who is invisible, by the exercise of a secret power, has raised his servants and the sacred

houses of their worship to the height of glory. But why should we still vainly aim at detailing those Divine proofs of our Saviour's power which no language can worthily express; which need indeed no words of ours, but themselves appeal in loudest tones to those whose mental ears are open to the truth? Surely it is a strange, a wondrous fact, unparalleled in the annals of human life; that the blessings we have described should be accorded to our mortal race, and that he who is in truth the only, the eternal Son of God, should thus be visible on earth.

CHAPTER XVIII.

THESE words of ours, however, [gracious] Sovereign, may well appear superfluous in your ears, convinced as you are, by frequent and personal experience, of our Saviour's Deity; yourself also, in actions still more than words, a her-aid of the truth to all mankind. Yourself, it may be, will vouchsafe at a time of leisure to relate to us the abundant manifestations which your Saviour has accorded you of his presence, and the oft-repeated visions of himself which have attended you in the hours of sleep. I speak not of those secret suggestions which to us are un-revealed: but of those principles which he has instilled into your own mind, and which are fraught with general interest and benefit to the human race. You will yourself relate in worthy terms the visible protection which your Divine shield and guardian has extended in the hour of battle; the ruin of your open and secret foes; and his ready aid in time of peril. To him you will ascribe relief in the midst of perplexity; defence in solitude; expedients in extremity; foreknowledge of events yet future; your fore thought for the general weal; your power to investigate uncertain questions; your conduct of most important enterprises; your administration of civil affairs; your military arrangements, and correction of abuses in all departments; your ordinances respecting public right; and, lastly, your legislation for the common benefit of all. You will, it may be, also detail to us those particulars of his favor which are secret to us, but known to you alone, and treasured in your royal memory as in secret storehouses. Such, doubtless, are the reasons, and such the convincing proofs of your Saviour's power, which caused you to raise that sacred edifice which presents to all, believers and unbelievers alike, a trophy of his victory over death, a holy temple of the holy God: to consecrate those noble and splendid monuments of immortal life and his heavenly kingdom: to offer memorials of our Almighty Saviour's conquest which well become the imperial dignity of him by whom they are bestowed. With such memorials have you adorned that edifice which witnesses of eternal life: thus, as it were in imperial characters, ascribing victory and triumph to the heavenly Word of God: thus proclaiming to all nations, with clear and unmistakable voice, in deed and word, your own devout and pious confession of his name.

Inventories of the temples at Delos

[For the scholarly articles, see <http://www.persee.fr/collection/bch>]

June 30, 1770 [...] Delos, most notable for the Oracle of Apollo and highly renowned: the remains of the Pillar of Apollo can still be seen here, as well as several large fragments and pieces of his renovated Temple, as well as the once so important City of Delos.

July 19, 1873 Reports arrive from Greece that are very important for both antiquarians and industrialists. The King has recently had excavations carried out on one of his estates near Athens, and several inscribed stones have now been discovered there, indicating that the well-known town of Dekelia once stood on that site. A French society has made highly important discoveries on the island of Delos; Among other things, the ruins of a temple have been uncovered, probably that of the famous building dedicated to Apollo.

Furthermore, it is reported that the renowned Trojan excavator, Dr. Schliemann, recently returned to Athens with a treasure of important and very valuable objects (gold and silver), which he found at a depth of 18 m at the site where he believes he has discovered Priam's palace.

September 3, 1873: Two archaeological discoveries. On the island of Delos, Mr. Burnouf, director of the French school in Athens, and one of his students discovered an ancient temple, probably of Apollo, as well as the ruins of a city.

85385 Mr. Schliemann, who has been engaged in excavations for several years on the site where Troy once stood, has returned to Athens. He made several important discoveries, not only vases and the like, but also precious gold and silver ornaments, at a depth of 18 to 19 m in the ruins of what he believes to be King Priam's palace.

85400 July 6, 1880. Divers searching for sponges near the island of Delos found a life-size copper horse at a depth of 45 m. As evidence of their discovery, they first unearthed a hoof and later one of the animal's legs. There must also have been a rider on the horse.

85415 August 14, 1882 Excavations are currently underway on Delos under the direction of Mr. Kavadias, which are yielding surprising results, especially since only a very small area has been excavated thus far. A well-preserved statue of Venus was discovered, the head of which is identical to that of Venus de Medicis. On the other hand, the body is reminiscent of the Venus of Praxiteles. A female head of great beauty was also found. Its torso has not been recovered. It is certain that this statue was damaged by barbarians or Christians. The head still bears traces of color. Other beautiful sculptures (including a small Venus statue, of which only the right hand is missing) of ancient Hellenic origin and of great originality were discovered. 85420 The Greek government intends to continue the work with greater vigor.

85425 September 1, 1882 During the excavations at the sacred lake at Dilos (or Delos), according to reports received by the Greek Ministry, interesting works have again been unearthed; Firstly, a magnificent mosaic of an unknown hand; then a colossal statue of the goddess Rome, of Melanos the Athenian; and finally, a larger-than-life statue of a kneeling warrior (not Greek, but Barbarian) of Agasius the Ephesian. In the theater, which is also being excavated, large marble tripods were found, seats used in the orchestra; and two straps, which served to support the floor of some 85430 small building on the stage. From what has been found so far, it appears that the orchestra used the same seats as those found in the Athenian Odeon of Herod the Athenian.

85435 October 6, 1882. Under the direction of the commissioner Kavadias, excavations are taking place on the island of Delos, which surprisingly yields promising results, especially considering that only a very small area has been excavated thus far. A well-preserved statue of Venus was discovered, the head of which is entirely similar to that of the Venus de Medicis. However, the body, in its entire composition, is reminiscent of the Venus of Praxiteles. Furthermore, a magnificent female head of 85440 truly classical beauty was found, though its torso has not been found. It is certain that this statue was damaged by barbarians or Christians. The head still bears traces of its color. Other beautiful sculptures (including a small statue of Venus, from which only the right hand is missing) of ancient Hellenic origin and of great originality were discovered. The Greek government intends to continue the work with 85445 greater vigor.

June 1, 1883 The sea, which over the centuries has swallowed up so much – including art treasures – has now returned a most remarkable art treasure from ancient times. From the Greek Parnassus, it appears that fishermen from Aegina, sailing to Delos to dive for sponges, found a bronze horse of larger than life-size, overgrown with mussels on all sides, at the bottom of the sea, at a depth of about 5 cubits. With great effort, they managed to break off a leg of the horse. When the leg was put up for sale in Argina, the matter came to the attention of antiquarians, and since the leg was of excellent workmanship, and it is therefore likely that the entire statue was so exquisitely crafted, efforts are now being made to have the entire horse brought to light. It is believed that the horse was originally located in Delos. It is the first large bronze horse to survive from Greek antiquity. Bronze horse statues are generally not numerous, and a Greek origin has not yet been proven.

85465 August 22, 1883 – Interesting excavations have been conducted on the Greek island of Delos.

A private house, probably dating from the Alexandrian period, has been discovered near the Apollo Theater. So far, a courtyard and twelve rooms have been unearthed. The courtyard's floor is beautifully inlaid.

85470 The gate and part of the road leading to it have also been excavated, and there is hope that, with continued investigation, an entire district of the ancient city may be discovered.

September 26, 1883 – An interesting discovery is reported from Athens. On the island of Delos, where excavations are being conducted under the direction of the French School of Athens, the remains of a private house from the time of Alexander have been discovered near the Apollo Theater. A courtyard surrounded by columns and twelve rooms have already been uncovered. The floor is inlaid with beautiful mosaics featuring flowers, fish, and other ornaments, and has a reservoir full of water in the center. The excavations are continuing diligently.

October 31, 1883 – As is known, a French company is conducting archaeological excavations in Delos, Greece, but these have been halted for some time due to a lack of labor. The reason for this must lie in the fact that the Nomasch (governor) is doing everything he can to prevent the company from excavating, as he cannot bring himself to allow others to remove the treasures of his ancestors;—a spirit that is manifesting itself throughout Greece today.

July 11, 1889 The popular games of the Greeks.
II.

We borrow another scene from the Odyssey, where Homer, in his depiction of the Phaeacians, presents us with a charming image of Ionic folk life. We see with

85515

pleasure the Princess Nausicaa on the seashore, as she dances there with her maidens, after having cleansed the linen and veils for her future bridal attire, to relax, play ball, and sing joyful songs. As gloriously as Artemis passed over the heights of Taygetus, so charming did the exalted maiden appear to the maidens. There she threw the ball at one of the maidens, but missed. Then a loud cheer arose, which awakened Odysseus, who had been washed ashore on Scheria and lay slumbering in the nearby forest. At this strange apparition, the maidens were seized with fright and fled, but Nausicaa remained standing and took pity on the unfortunate stranger, who, from a respectful distance, begged her help and wished that the gods would grant her all her heart desired: "a husband and a house, and peace and concord". "What you rightly desire," she spoke kindly to him, "you shall not lack. I will show you the city we live in, where my father Alcinus rules". After bathing and dressing properly, he was already a completely different man. He was further refreshed with food and drink before they set off together into the city. Towards sunset they reached the lovely grove of poplars dedicated to Pallas Athena. There the stranger had to wait until the others had returned home and presented him to the King. In the meantime, he prayed that he might receive love and mercy from the Phaeacians.

Admitted to the royal palace, where the country's nobles were assembled, he begged Queen Arete to be allowed to return to his homeland. The King invited him to the banquet, after which popular games would be held, so that the stranger could proclaim to his people how far the Phaeacians excelled as boxers, wrestlers, and in jumping and racing. At the appointed hour, they proceeded to the market square, where the popular festival was to take place. Many distinguished young men had arrived, eager for the contest. Among them were the three distinguished sons of Alcinus. They would test their agility against each other. From the starting point, the raceway stretched out before them. Everyone rushed towards it simultaneously. But it wasn't long before the brave hero Clytoneus was far ahead of them all, and the others, despite their exertions, lagged far behind. Then followed the difficult wrestling match, in which Euryalus excelled, triumphing over the bravest. Next, Amphialos far surpassed the others in the leaping. Elatreus triumphed in the throwing of the discus, and finally, in the fist fight, Laodamas was victorious. He then invited his friends to investigate whether the stranger was also experienced in the sport. Considering his stature and age, he had high hopes for it, but the misfortune of the shipwreck might have broken his spirit. Nevertheless, they ventured to address him through Laodamas.

"Well, O stranger, if you know how to compete, try it and cast your cares aside". But he couldn't be persuaded. Then Euryalus began to sneer and scold. "No, indeed, you don't seem to me a man skilled in the sport, but someone who constantly sails a ship, perhaps a captain of skippers who also act as merchants". This didn't make a favorable impression. Looking at him darkly, Odysseus began: "Stranger, your words are not pleasant; you are an overconfident youth. By your unseemly language you have greatly offended me. I am no stranger to the contest, as you babble. However deeply distress has bowed me, I accept the contest, for you have forced me to it". Thus speaking, he stood up and seized the discus, which was even larger, thicker, and heavier than the other discus the Phaeacians were practicing with each other. After swinging the disc around, he threw it with great force. With a loud whoosh, it flew far over the mark. "Imitate me, you young men. Anyone who dares, come and test their strength, whether with your fist, in wrestling, or in the race. I refuse no one except my host: who would gladly wrestle with their guest? I know how to strike with the bow and the javelin too. Only in the race do I fear that anyone will prevail against me, since that storm at sea has robbed my limbs of strength". But everyone around him was hushed and silent. Only Alkinos replied, "We are not particularly good at boxing or wrestling, but we are at racing and sailing. We also always love meals, singing, and dancing. Come then, masters of the dance, play for us, and let the singer Demodocus accompany you on the harp". Soon, space was cleared and the dancing area decorated. The singer took his place in the center, and around him gathered young men, in the prime of their years and skilled in the dance; how gracefully and swiftly they moved in regular steps! Odysseus was amazed. Then the blind singer rustled the strings and, to everyone's delight, began the joyful song of the love of Ares and the charming Aphrodite, and of how Hephaestus had held them captive in the cleverly wrought net. Then Laodamas was invited to dance separately with Halios. Immediately they took the elegant ball in their hands. Lo and behold, one threw it toward the shadowy clouds, leaning backward, and the other, springing from the ground, caught it deftly before he could stand again. After they had tried to throw the ball straight up, they danced there with swift steps, frequently changing places. Other youths standing nearby clapped their hands, and a loud cheer arose. Odysseus was deeply moved. "See," he addressed the King, "you boasted of having the most

excellent dancers, and you maintained your fame".

Following the example of Alcinus, the guest was now showered with rich gifts.

85585 Euryalus, too, had to try to appease him, both by word and deed. He gladly complied with the King's request and handed the stranger the metal sword, with its silver hilt and polished ivory sheath, with the winged words: "Joy to you, father and guest! If an offensive word was spoken, may the storms quickly dispel it. The gods also grant you to see your homeland and your wife again, since, far from your own, you have experienced so much suffering". "Joy to you too," replied Odysseus, "and health and blessing from the gods! May you never in the future need this sword, which you have now given me with conciliatory words".

85590 That evening, returning to the royal palace, they heard that blind singer again at dinner. Now he sang of the Trojan Horse and the fall of Troy, and of him who so courageously participated in that terrible struggle, until, strengthened by the exalted Athena, he finally triumphed. Hearing these words, Odysseus was deeply moved. He then gave his name and recounted his subsequent adventures. After bidding a hearty farewell, he boarded a spacious ship, which brought him back safe and sound to his homeland.

85600 While the Ionian Greeks had previously come from East and West, from their ancient settlements, to the Isthmus to offer communal sacrifice to the land- and sea-moving Poseidon, since their settlements on the islands of the Aegean Sea and on the nearby coasts, little Delos, surrounded as if by a circle by the Cyclopes, became the center of their worship of Apollo and gradually the common sacrificial hearth of all the Ionians. Homer knew the slender palm tree that rose there, beside the altar of the god of light.

85605 According to legend, Poseidon had caused this island to rise from the sea with a blow of his trident. Here Leto, pursued everywhere by the jealous Hera, finally found a resting place to give birth to her offspring. When she entered the island, Pindar sang in his festive song, four pillars rose from the depths of the sea to support and secure the sacred rock, which had hitherto drifted, for her and her children, Apollo and Artemis. The great lights of heaven could only have come from Zeus, the god of heaven.

85615 If light broke through from the darkness, from the twilight, then the mother of Apollo and Artemis must be this twilight, this darkness itself. The name Apollo means the warding off, and Phoebus the giving of light. From the silver bow with which he is armed, he sends his arrows, the sun's rays. With them he dispels the darkness of the night. Even the turbulent sea must obey him. When the sun pierces the dark clouds, its rays falling upon the sea and illuminating the gray waves, the spirits of darkness are banished; the sailor breathes freely again and thanks the god of light, who has saved him with his arrows. Once the dark winter is over and the glorious spring has arrived, all Ionians together celebrate the festival of the reborn light, the birth of Apollo, the god of the ever-new, ever-bright, ever-youthful light.

85620 Amidst an ever-shimmering sea, brightly illuminated by the sun's rays and sheltered from storms by the islands of Mykonos and Eheneia, the rock of Delos was dedicated to Phoebus Apollo.

85625 When Theseus landed there after his victory in Crete, where, with the help of the princess Ariadne, he had slain the Minotaur in the Labyrinth, he, at the head of the fortunately rescued youths and maidens of Athens, performed the first sacrifice to thank the god for their deliverance. He then performed with them the first round dance around the altar, "the artful play of winding arms, tripping light feet," the meandering chorus, the Geranos, which was meant to represent the many twists and turns of the labyrinth in which they had nearly perished. A branch of the sacred palm tree, under which Apollo was born, Theseus awarded as a trophy to the one who had most excelled in this game. This was roughly how the Delian Games were founded. From then on, the Ionians went there annually to celebrate in honor of Apollo and Artemis.

85635 Following the example of the chief hero of their tribe, they celebrated this festival with sacrifices and competitions. When spring had arrived, when the swallows returned, when the birdsong in the mountains and forests sang its joyful song, "in the dense, green plane trees the nightingales hid, singing love," then they prepared to be illuminated by the glorious light that radiated from Delos, which shone like a brilliant star even to the gods on Olympus from the dark earth. Then the festive embassy set sail from Athens, in the sacred Delian ship in which Theseus, the founder of their state, the father of wrestling, had first sailed to Delos. Towards the end of the ninth century BC, in the first days of May, all the Ionians from far and wide, from the coasts of Asia Minor and Greece, from Caria and Lydia, from Euboea and Attica, from the Sporades and Cyclopes, flocked in their galleys and boats to the holy land of Delos, to offer sacrifice at their common hearth on the 6th and 7th of

that month and to hold competitions in song and dance, in music and gymnastics. At one of these festivals, around the middle of the eighth century, the blind singer of Chios sang the beautiful hymn to Apollo: "O Phoebus, though many temples, shady forests, high mountain peaks, and rivers flowing into the sea are dedicated to you, yet your heart rejoices most in Delos. There the Ionians gather in long robes, with their children and their noble women. Remembering you, they delight in song and dance and contest. Whoever comes there might believe that the Ionians were free from old age and death. He will rejoice at the sight of the men and beautifully girded women and the fleet ships with their rich cargo. At the same time, the virgins of Delos, the handmaidens of the far-reaching god, praise Apollo and Leto and Artemis in song and sing the hymns of men and women of old and bring the generations of men into "delight"... With a word to the virgins who performed the dance around the altar, he concludes his hymn.

"Joy to you! Remember me also in the days to come, and when one of the inhabitants of the earth comes here, having suffered much, and asks you: who brings you the sweetest songs and who brings you the most joy? then answer immediately, with a kind word: the blind man, who inhabits rocky Chios".

The dances around the sacrificial altar consisted of simple, solemn, continuous movements and rhythmic turns, with some mimicry of the choruses or choirs that performed at the festivals. In his Greek idyll, Vosmaer, in the round dance, at the head of the maidens, has Nanno appear thus:

"Head held high, fingertips on the pleated robe.
While the toes of the feet made the supple, swaying body
float, and the narrowness of the wild flower gave a wrinkle,
Thus the beautiful maiden soared slenderly before them all".

Not only physical strength and agility, but also excellence of mind were given the opportunity on Delos to win the palm branch of victory. We have already heard the hymn to Apollo. Under the influence of the great master, who delights the gods on Olympus with his song at the phorminx, as the singers sing at the banquet of the kings of the earth, the mind became increasingly enlightened and refined. Was he not the master of all the fine arts and the leader of the Muses?

How solemnly the song sounded! With the earnestness of the highest art,
Which melts the strictly sublime into the all-enchancing beauty,
The Ionian beauty, full of refinement and eternal youth,
That indeed uplifts and moves, but does not disturb or shock,
Thus sounded the poet's words, carried and supported,
Not dominated, by the finely colored string sound.
(Vosmaer.)

For the oldest contest, the footrace, a spacious field was set aside and arranged in such a way that other physical exercises could also be held. For this purpose, two parallel heights were enclosed on one side in an arc. On the other side, at the place where the footrace began, a straight line was drawn through those heights, or a wall erected. This encampment acquired the name stadium. The Delian games would have been not unlike the contests described by Homer. Over time, however, everything became better organized and regulated. The established rules, in which the distinctive Hellenic element took shape, first emerged in the Dorian states, especially in Sparta.

A few years before the outbreak of the Persian Wars, the population of Delos was reinforced by Attic colonists. Upon the enemy's approach, they fled to Tenos, but the Persian generals invited them to return to the sacred island without fear. When their fleet was anchored there, Datis burned 300 centenars of incense in honor of Apollo, whom he took for the sun god Mithra, whose powerful protection would ensure his victory on his further voyages. The unfortunate outcome of this is well known. At the Battle of Marathon, where they were defeated by Miltiades, Theseus was seen rising from the ground to break the enemy battle lines.

For a time, the celebration of the Delian festival seems to have fallen into disrepair, until the Athenians attempted to restore it at the beginning of the Peloponnesian War in 426 BC. After the island's purification, a smaller annual festival was celebrated, and a larger one, which lasted for five years, was celebrated, and both festivals were attended by delegations from Athens, and certainly also from the other Ionian states. The magnificent Temple of Apollo at the harbor, with its rich treasures, came under the supervision and management of the Amphictyones (associations for the mutual celebration of a religious festival, etc.),

- 85715 presided over by the Athenians, of course, and to which one of their citizens was delegated annually. Recently, since 1873, the French School of Athens has conducted excavations on Delos, which will undoubtedly reveal more about this remarkable island. The ruins of the oldest temple have been discovered. Eight female statues, dating from the eighth to the fifth century BC, have been discovered and partially restored. A large number of manuscripts and a wealth of bas-reliefs and bronze
- 85720 objects from all periods of Greek art have been unearthed and transferred to the museum in Athens.

- 85735 October 15, 1894 Excavations undertaken by the French Archaeological School in Athens on the island of Delos have uncovered several walls of private residences and two marble statues of Apollo. These walls are completely covered with ancient frescoes, which date back to a very old age, yet still retain their original freshness. They depict scenes from everyday life and mythology and constitute very important documents for the art history of ancient Greece.
- 85740 October 15, 1894 Excavations on the island of Delos, where, according to myth, Latona gave birth to Apollo and Diana, will be halted due to the bad weather. During the latest excavations, two marble statues of Apollo and several walls of private houses have been uncovered, which are richly decorated with frescoes depicting scenes from
- 85745 domestic life and mythology. The frescoes are exceptionally well preserved and of great importance for the history of ancient Greek art.
- 85750 January 3, 1895 From Delos, Greece, it is reported that students of the technical school in Athens have conducted excavations there, which have unearthed magnificent ancient sculptures. Among other things, a statue of a woman is said to have been unearthed, praised as a priceless masterpiece of antiquity.
- 85755 January 19, 1895 In a vast hemisphere, walled by high and rugged rocks, in the foothills of Parnassus, on the right bank of the Kephalo-Vrysi, which rises from the source of Oastalis and, forming numerous waterfalls, winds its way through a forest of olives and laurels until it falls into the dried-up bed of the Xero-Potamo, stand three or four white houses: this is the village of Castri, which, by a miraculous twist of fate, arose on the site of Delphi, the opulent holy city, the great religious center of ancient civilization.
- 85760 For a long time, scholars have wondered whether such a renowned city could have truly vanished so completely, leaving nothing behind but a few fragments of marble scattered across the ground and a few mutilated sculptures set aside under the shade of the olive trees in the gardens; whether the Phocidian plunderers, the centurions of Sulla and Nero, the Gauls under Brennus, and the warriors of Constantinople could
- 85765 thus have reduced to nothing that immense city, consisting entirely of temples and sanctuaries, populated by thousands of statues. At the beginning of 1891, when the French Minister of Education posed that age-old question to Mr. Homolle, the current director of the Ecole française d'Athènes, he did not hesitate to reply that he was convinced that the soil of the village of Castri contained the most precious
- 85770 monuments, and he supported his opinion by mentioning the efforts made by Ottfried Müller, Wescher, Foucart, Haussoulrier, and Pomtow, and by the observations he himself had been able to make in the Delphic Valley region.
 It is to the last parliament's unfading honor that it accepted his assurance and authorized a considerable sum for this selfless undertaking, for none of the
- 85775 excavated works will leave Greece.
 An entire year was spent expropriating the farmers' houses, which had been built on the very site where the main buildings formerly stood. around the sanctuary of Apollo.
 This was accompanied by many difficulties: although 280,000 francs, intended to

85780 compensate the farmers, had immediately been deposited in the Bank of Athens, they would not allow work to begin until they had the money in hand. "Here is my field, here is my hand," said an old woman to the director; "lay drachmas on that hand, and I will give you this land". These poor people refused to believe that a signature

85785 could have any monetary value and, in their simplicity, imagined that, after turning the land upside down, they would dispute the extent of the properties they had bought off. Several times, Mr. Homolle tried to press on, but the farmers demolished the sheds in a stampede, and a bloody clash nearly broke out: patience was necessary. In October 1892, the first ditches were dug and the narrow-gauge railway, which

85790 transported the excavated soil, was laid. The initial results of the investigations were not very satisfactory. At the site of the Temple of Apollo, where it was thought they would find precious sculptures, nothing or almost nothing was found, as if—in Mr. Homolle's words—the removal of the statues had taken place according to a specific plan and prescription. In 1893, at the highest point of the sacred road, which bisected the entire city, admirable remains were suddenly uncovered, the first

85795 reparations of two years of fruitless labor: pedestals of votive offerings, marble horses, female figures, male torsos, and also terracottas, bronzes, and inscriptions, including fragments of the sanctuary's accounts, dating from the 4th century BCE. Then came the discovery of the Hymn to Apollo, which enabled Mr. Salomon Reinach to revive a musical poem that had been lost for 2,000 years. And finally, the results of

85800 the campaign of the last year, the sacrifices made by our budget were gloriously rewarded, as well as the diligence of Mr. Homolle and his collaborators, Messrs. Convert, Bourguet, Perdrizet, Millet, Conve, Jonguet-Blot, and Tournaire. The workers excavated a crossroads, where four buildings were situated: one of which

85805 formerly housed the treasure of the sacrifices offered to the Delphic god by the people of Athens; another the treasure of the Syphnians; a third the treasure of the Beotians. While they were unable to recover the talents, the gold drinking vessels, or the precious stones that had once been inside, and which had once aroused the greed of the invaders, masterpieces have been recovered that have a completely different value for the knowledge of antiquity. These include, in the Athenian

85810 treasury, a series of column decorations of astonishing art, depicting the story of Theseus; and not far from there, a Archaic Apollo, the work of an Archaic master, corresponding in every respect to another figure discovered last year; in the Syphnian treasury, the building of which has been completely restored, bas-reliefs depict sacred events.

85815 And, besides fighting warriors, horses that have the same noble and impressive bearing, the same fiery and agile movements, as those famous horses of Phidias, which adorned the Parthenon (now among the so-called Elgin Marbles, preserved in the British Museum): yet they were carved a century before those of the Athenian master

85820 and differ only in the frizzy hair of their tails and manes, a remnant of ancient tradition. Side by side, moreover, are works of art, some bearing the stamp of that ideal grace which, for us, is the highest revelation of art, and others whose unaffected stiffness, though not devoid of greatness, seems to date from more distant centuries.

85825 Yet, there is no doubt that they were all created at the same time, but the old masters, attached to the ancient traditions, worked simultaneously with the younger ones, whose conception was broader and more recent. This holds an important lesson for criticism, which is all too eager to assign each school its own narrowly defined time period.

85830 Among the very latest discoveries, noteworthy is a torso, outstanding for its grace and strength, probably the remains of a statue erected for an athlete victorious in the Pythian Games, and above all, an Antinous in marble, lacking only the arms and of particularly noble and sober execution. The casts and photograms of most of these beautiful objects were recently exhibited at the Ecole des Beaux-Arts. Later, they will be transferred to the Louvre, where they will form a separate collection, which

85835 will be expanded as the discoveries progress. The excavations are continuing, and Mr. Homolle is about to return to Greece to resume their direction. Convinced that he has not been indiscriminate since the excavation of the principal sanctuaries, whose names he has been able to ascertain from the clues provided by Pausanias, he is fully convinced that he will soon be able

85840 to offer a new and abundant harvest of monuments to antiquity and art. Will he rediscover one of those wondrous statues whose azure hue aroused the admiration of the Roman emperors? That would be a more precious discovery than even that of the fabulous offerings, destined by their wealth to fall prey to the greed of the people and piled up in that city of treasures: the golden masonry stones dedicated by

85845 Croesus, the drinking cups of King Gyges, the throne of Midas, the silver dish that

fell to Homer in a poet's contest, the golden statue of the beautiful Phryne. Little can be said in advance, but the French Ecole d'Athènes, some of whose members are even making the rarest discoveries on the island of Delos, has every right to be proud of the work it has accomplished at Delphi: it has once again given France the very true and very noble glory of enriching the entire world.
(ANDRÉ SAGLIO.)

March 19, 1895 Mixed reports.

During the excavations at Delphi, a second hymn to Apollo with musical notes was discovered, 28 lines long, which are perfectly legible. Professor Weil in Paris has restored the mutilated fragments after thorough examination. It is carved in two columns on a marble slab measuring 0.8 m by 0.61 m. It celebrates the birth of Apollo and the city of Delos, the god's arrival at Delphi, and his victory over the dragon, and concludes with a prayer for Greece and the Romans. Besides this hymn, fragments containing notes from a famous Greek war hymn, or Pään, have been discovered. However, parts of these are illegible. Reinach and Weil are attempting to reconstruct these fragments as likely as possible. Both pieces will soon be performed in Paris with orchestra and choir.

October 27, 1904 – The excavations undertaken by the French School of Athens on the island of Delos have again resulted in some very remarkable discoveries. Two statues of Silenus dating from the third century BC have been found wreathed with ivy leaves, each carries an amphora on their left shoulder, the mouth of which they hold shut with their right hand. But a group of Pan and Aphrodite, dating from the second century BC, is particularly praised. Eros, seated on Aphrodite's left shoulder, attempts to push Pan back, having seized him by one of his horns.

http://www.persee.fr/doc/bch_0007-4217_1904_num_28_1_3320

June 17, 1905 Excavations. During the archaeological research being conducted on the Greek island of Aegina by the "Basserman-Jordan Foundation" of the Bavarian Academy of Sciences, another important discovery has been made. Below the volcanic cone of Oros, the island's highest mountain, on whose summit a prehistoric city is said to have stood, a sanctuary has now been excavated, reminiscent of the famous ancient cave sanctuary of Mount Cynthos on the island of Delos. However, only its beautiful walls remain. The sanctuary on Delos was previously considered unique. A second one now exists, on Aegina. Remains of a village – 150 dwellings – dating from the Bronze Age have been excavated near Bleslau. Near the village, 400 graves were found.

August 1, 1905: Coin discovery on Delos.

During excavations on the island of Delos, the French have recently discovered four hundred silver tetradrachmas from the time of Alexander the Great, but they are exceptionally well preserved; the modeling of the heads is described as excellent. A number of drachmas were found in a house excavated at the same time. All the coins will be transferred to the Museum in Athens.

December 14, 1905 Excavations at Delos.

The director of the French school in Athens has reported on the results of the latest excavations conducted by Mr. Loubat at Delos.

The portico of Philipp has been uncovered, as well as a new section of the theater. Two documents found among the ruins are of the utmost importance. One contains the

dedication of a monument erected by Antigone Doson, King of Macedonia. The other is the text of a law regulating the sale of wood and charcoal at Delos.

- 85935 January 10, 1908, The Gazette des Beaux-Arts contains an article about excavations under the heading "A Greek Pompeii" on Delos, which were primarily executed by the French "Ecole d'Athènes" and largely at the expense of a French antiquity enthusiast, the Duke de Loubat.

- The author, A. Jarde, repeatedly notes the similarity between the architectural order and decorative motifs found on Delos and in Pompeii, without being able to determine which served as a model for the other. Images of important works of art found on
85940 Delos are included with the piece, including an Aphrodite with Pan and Eros and a Mosaic fragment.

- 85950 August 21, 1909, Review of Ancient and Modern Art.
It must have been a very peculiar sensation. For the antiquarian Gabriel Leroux, during excavations on Delos over a period of two years, a very important Greek statue gradually emerged in fragments, not in one place, but at various points between the harbor and the theater; the pieces were probably deliberately scattered, Leroux
85955 writes in the Bevue de l'Art ancien et moderne. It is a statue of Apollo, depicting the god as the conqueror of the Galatians, his left foot resting on a small stack of shields belonging to these barbarians. This representation of Apollo, with an arm raised above the head, is quite common, but it is particularly beautifully executed in this statue. Apollo is not an athlete here; he has rather something weak, almost
85960 feminine, but the flesh is beautifully rendered. The image shows that the statue is not entirely complete; some limbs are missing, and the face is also damaged.

85965 http://www.persee.fr/doc/bch_0007-4217_1909_num_33_1_3224

- July 11, 1910: The very important results of the French excavations on Delos are reported. For example, it has been discovered that in the second century BC, parallel moles had been cast into the sea from the island, forming true docks. But even more remarkable are the discoveries of the remains of a sanctuary dedicated to foreign
85970 gods. It must have been situated on a number of high terraces, to which a large open staircase led, with houses of several stories alongside, where foreigners would have lived.

85980

September 4, 1911 The Victim of the Gioconda.

85985

French newspapers recall the merits of Homolle, the director of the Louvre who was dismissed after the theft of the Gioconda. They note his significant contributions to art history, particularly regarding the excavations at Delos and Delphi, for which he received Greek and French honors.

85990

September 6, 1911 – The Gioconda.

85995

The first victim of the disciplinary measures resulting from the theft of the Gioconda was the director of the Louvre Museum, Theophile Homolle. It is understandable that the lack of vigilance is primarily attributed to the man who should actually be in charge. Yet, it is regrettable that such a respectable art scholar as Homolle should have ended his career in such a humiliating manner. Homolle made great contributions to art history, particularly as the leader of the excavations at Delos and Delphi (Greece). He spent thirty years there, and rightly, people in various circles are questioning the propriety of entrusting this museum security service to someone so outside the national social fabric. Therefore, it seems the intention is to no longer make the director, who must be an art scholar and be able to continue his studies, responsible for security, but rather to appoint a police officer assigned to him. For Homolle, whose merits were recognized with high honors by both France and Greece—whose appointment as director was undoubtedly intended as a distinction and as a care for old age—it remains a sad event to lose his honorary position at the age of 63, although one can agree that such a responsible post should neither be granted nor accepted as a sinecure.

86000

86005

December 11, 1911 The French excavations on Delos have recently been crowned with brilliant results. A deposit of no fewer than two hundred vases, dating from the seventh and sixth centuries BC, and of very diverse origins, was discovered beneath the Temple of Hera. Also of interest is the discovery of a number of blue earthenware dishes, decorated with blue, of a previously unknown type. A whole series of terracotta statues, apparently depicting Hera, also came to light.

86010

http://www.persee.fr/doc/bch_0007-4217_1911_num_35_1_3166

86020

February 28, 1912: The excavations at Delos in 1911.

These excavations were the richest of all, especially with regard to inscriptions. Holleaux notes in particular the discovery of previously unknown blue dishes decorated with figures of exceptional fineness; an admirable series of terracotta busts (probably the goddess Hera); trapdoors and canals of the waters of Ipnos; Finally, a council resolution translated into Greek, probably from 160 or 165 BC, a valuable document for the history of the Athenian occupation. Valbis has discovered a temple of Dionysius or Apollo and a road with monuments leading to it.

86025

November 27, 1912 Excavations.

86030

The French excavations on the island of Delos are now almost complete. The most interesting result after the previous report is the discovery of a building with pews along the walls, which is believed to be a synagogue. If this hypothesis is accepted, then, alongside the Egyptian and Syrian sanctuaries, the meeting place of the Jews on Delos has been discovered, thus completing the image of the sacred island where, in the last centuries before Christ, all the religions of the ancient world coexisted. ("Hbld".=Handelsblad)

86035

A victory predicted.

86040

Homolle, the director of the Louvre, who resigned due to the disappearance of the Mona Lisa, has now returned, as before his directorship, to Greece, where he previously conducted important excavations and is now director of the French School in Athens. He reports that an archaic statue of Nike has been found at Delphi on the site of the temple of Athena Prenaea, which the Greeks, because the war with Turkey had just broken out, considered a favorable omen. And weren't they right?

November 24, 1923 From the Spade school.
CXXXVIII.

86065 (Private correspondence.)
Rome, Nov.

Delos from the practical side. I.

86070 The sanctity of the place. Its myths. Pindar's celebratory song. Divine origin. The purification of the soil. Very ancient festivals. Changes in Delos's fortunes. A rich harvest of inscriptions. Financial affairs before and after. Xenophon's little capital. The exploitation of pilgrims and tourists. Restaurants and hotels kept by the priests.

86075 The Greeks considered the small, barren island, situated in the middle of the other, larger Cyclades, highly sacred. Even their first poet, Homer, has Odysseus compare the slender beauty of Nausicaa to the palm branch he once admired at the temple of the Delian Apollo.

86080 That place of worship, already known so early, later became the center of a league of nations, which had the same significance for the Greek maritime states as Delphi had for the continental powers. Tradition spun a golden web of fantastic myths around the god's birthplace. One of Homer's followers composed a "legenda aurea" for the island. Pindar, in his language, glittering and glowing like Parisian marble, hewed an unforgettable celebratory hymn in honor of the barren strip of land exalted above all other places on earth by Leto's labor pains. The beauty of this song can only be

86085 judged by its original, the content of which is roughly as follows: "Hail to you, place captivated by the power of the gods, lovely origin of the children of Leto, the shining-haired one, you, daughter of the sea, unwavering wonder on the broad bosom of the earth; mortals call you Delos, but the blessed of Olympus call you the radiant star on the dark earth... For Delos used to drift on the rocking waves, tossed by the pressure of the winds, but when Leto entered it, swept along by the pains of the approaching birth, then from the trunk of the seabed sprang upright four diamond-footed columns and supported the rocky ground with their capitals; there she beheld her lovely offspring". In plain human language, ancient mythology textbooks tell us that Hera, in her jealousy, forbade the Earth to grant Leto a place to bear her children—Zeus was their father!—and that then the will of the supreme god created a new piece of land for his beloved by fastening the formerly floating Delos to the seabed.

86095 How this legend arose, and why she chose Delos in particular, we do not know. There have been those who claim that Delos could be called floating because it appears in a different place each time a voyage through the Cyclades takes place, but you will agree with me that such down-to-earth people—the ancients called them Euhemerists—should keep their hands off myths about the gods.

86100 In short, Delos was once and for all hallowed. The barren, relatively flat patch of land was considered a territory reserved only for the gods, therefore no suffering was allowed, no war was allowed to exist on that spot, it was solely intended for the inhabitants of all the cities belonging to the "Delian" alliance. Then followed competitions in music and physical exercises, where the victors were crowned with branches of the palm tree, whose praises Homer had already sung, dances and songs by young Delian women, who imitated the accents of all Greek peoples and proclaimed the praises of the three gods: Leto, Apollo, and Artemis. Primitive customs such as a

86110 "crane dance," performed in a gallery decorated with bulls' heads, and self-mortification with rods prove that these festivals are very ancient. When the Athenians took over management of the "Delia" in 426 BC and a plague broke out in their city shortly thereafter, they feared that the jewel, whose desecration through birth and death was carefully avoided, still suffered from a stain of the

86115 past. To erase these, they dug up the small amount of humus that had accumulated on the limestone and in its crevices, and removed the bodies of former inhabitants for whom the city had apparently not yet been so sacred. Furthermore, they were no longer satisfied with one large festival every four years, but enlivened the quiet solitude, also at other times with smaller ones. Thus, the priests of the temple were given the

86120 opportunity to engage in permanent occupation. This consisted, as we shall see, not only of preparing for the reception of the numerous revelers and visitors to the associated annual fair, but also of other "administrative" activities. We know quite a bit about this latter, because more than six hundred fragments of inscriptions have been found on the island, containing the sanctuary's accounts for

86125 several centuries. Those stone-engraved accounts, when leafing through them in the Bulletin de correspondance hellénique and the Corpus Inscriptionum Graecarum, look quite forbidding, but fortunately, some scholars—first the Frenchman Homolle, last the German Schock—have been kind enough to make them more accessible. I will now recount what they found in them, but first I want to summarize the further

86130 fortunes of the holy island, because they explain how we managed to find so much. Delos was under the direct rule of the Athenians from 426 to 316, then remained independent until 166. In the latter year, the Romans, who already had a considerable say in Greek affairs, transferred the administration back to Athens. After the

86135 destruction of Corinth in 146 BC, the will of the now all-powerful city of the Tiber turned it into a major trading center and the center of the slave trade. Of this type of human, greatly devalued by the incessant wars of that time, sometimes ten thousand copies were sold a day. In 87 BC, the growing prosperity of Delos came to a sudden end. A general of King Mithradates of Pontus plundered the temple and ravaged the city with fire and sword. Delos never recovered from this blow: by the time of

86140 Emperor Hadrian, it was desolate. The art treasures were, of course, successively transported to Rome and Constantinople, but there was no interest in inscriptions at the time. That is why the French, who had been conducting archaeological research on the island since 1873, found the hundreds of stone fragments covered in letters and numbers that I mentioned to you. We also know much about the temple, the priests, and

86145 everything related to it during the period of independence (the Athenians recorded their earnings in their own city) that we would not have expected after the profound piety of the Homeric hymn in honor of Apollo of Delos and the ardent adoration of Pindar. These documents, after all, only provide the financial side of the religious coinage. That, then, is what I will show you. Homol calculates the "god's fortune" in the year 279 BC at 5.5 million drachmas. Of this, approximately 5,300,000 represent the value of the temple, the buildings for

86150 worship, and the votive offerings. In a narrower commercial sense, one could call this large sum unproductive; in fact, it was the basis of the entire subsequent business, as I hope to demonstrate shortly. Yet, only approximately 200,000 drachmas can be called "mobile". What did the administrators do with it? How did they allocate that sum?

I beg you not to be surprised by the matter-of-factness of my language; we are

86160 dealing with... bankers. After all, temples always functioned as banks in ancient Greece. This is evident not only on the Holy Island, but I can also prove it to you from your grammar school reading. Just think again of Xenophon's Anabasis. In it, the author recounts that before the expedition of the pretender Cyrus to the interior began, he entrusted his savings to Mr. Megabuzos, official of the famous Temple of Artemis at Ephesus on the occasion of the celebration of the gods in peace.

86165 It was agreed upon that if Xenophon did not return, Megabuzos would use the money for a votive offering in his name. As we know, the leader of the Ten Thousand did escape with his life and could thus tell us how Megabuzos took advantage of the opportunity they both attended the festivals at Olympia to return the depositor's money—plus the accrued interest, ça va sans dire, although Xenophon doesn't mention it. That single

86170 sentence in the simply written booklet characterizes the economic significance of the temples and the great international festivals. In a few harsh but true words: the temples were centers of monetary trade, the festivals served as periods of settlement. These transactions were particularly favored by the religious peace,

86175 which was so absolutely respected that cashiers like Megabuzos did not hesitate to

undertake long journeys with very significant sums of money in their pockets. The financial developments of such a "temple bank" now reveal the Delian inscriptions down to the smallest detail. I have already mentioned that the largest portion of the capital consisted of the temple, its outbuildings, and the votive offerings placed or deposited everywhere. This seemingly inert investment actually bore very lively fruit. The larger and richer a temple area, the longer pilgrims needed to view it in its entirety. As more works of art can be admired in a "temonos," the number of "tourists" increases, seeking more enjoyment of art than edification. Now, everyone knows that nothing makes you as hungry as visiting a museum. Visitors to the quadrennial "panegyreis"—besides pious souls and tourists, also wealthy merchants and bankers, far from averse to life's pleasures—needed... restaurants. It was therefore the duty of the priestly authorities to ensure the taming of what Homer already called the "disrespectful stomach". A duty that could easily lead to the creation of a source of income. Travelers are usually generous, especially commercial travelers. No wonder, then, that we find these in the accounts of three temple-run hestiatoria (that's what eating houses in Athens are still called!). Globetrotters seem to have been attached to decorum even then. We find it recorded that before each festival, the eating houses were meticulously inspected, the walls were whitewashed, and the doors and windows were repaired. This periodic renovation proves that in ordinary times, such a large dining space was not needed. A similar phenomenon can be observed with regard to lodging. In the year 364, we find mention of 150 beds in the temple depots. Anyone who has ever stayed in a festive city knows that this means restless nights in bathrooms, salon floors full of sleeping arrangements, and so on. Nevertheless, the administration naturally took the best possible care of the "pilgrims". The better earthly needs were met, the richer the gifts collected after the festivals from the "offering blocks" dug in the ground next to the temple doors, the richer the donations in the form of cash or land. After each successful panegyric, the treasury felt fuller. And the priests were not the men to let this wealth go to waste. let it devour!

Delos from the Practical Side. II.

Safest Investment. Land and Houses. How the Temple Came to Exploit the latter. Rapidly Changing Tenants. Industrialists and Schoolmasters. Tenements. Banking. Relations between the Secular and Spiritual Lords of Delos. The Fertilization of the Money of "Foundations". The Need for Sacrificial Animals. The Temple Menagerie and its Doves. The Manifold Uses of the latter. The Lack of Swans. How Busy the Priests Were.

According to experts, there is no more solid capital investment than that in real estate. Even more secure investments are distinguished according to the order of reliability, yet again, land from houses.

The administrators of the Delian House of God seem to have already accepted this gospel as their own; At least they began to apply it logically. Initially, outside the Temple, we only hear of "sacred domains," which the god likely received as gifts. The first "foundation" we know of, in any case, is that of the famous Athenian general Nieias. In 417 or 416 BC, he transferred a piece of land worth ten thousand drachmas (the drachma was then equivalent to the pre-World War I franc) to the administrators of the sanctuary. This "Domain" appears repeatedly in the accounts; it yielded between three and six percent interest annually. So, a safe, but not a very profitable investment, especially not in that time, one percent per month was considered normal.

The leasing of this and other landed property took place every ten years. Each time, an inventory was made of buildings, stables, herds, and, remarkably, also... doors. Was the climate of Delos so exceptionally mild? Or did no one dare steal there? The temple administration was always very strict with its farmers: it imposed heavy fines for the slightest delay in payment.

This was the first extremely cautious practice of rent cultivation, but soon the administration seems to have become less solid and began to focus on acquiring

cultivated land. The reason for this was religious. In 376, some inhabitants of Delos seem to have violated the Amphictyones, an originally sacred, later politicized association, of which we know little. The Amphictyones' helpers punished the criminals with the confiscation of their houses, which were donated to the temple. Later, other "sacred" dwellings came into his possession because debtors defaulted on their loans. Sometimes, homeowners also experienced a burst of generosity and transferred their property to the god. It is to be hoped that these were not all in the condition of the one donated by Stesileos in 378, which left the administrators with no choice but to sell to the public for demolition. An unexplained phenomenon, apparently unflattering to both parties, is that the houses changed tenants so frequently. The contract was concluded for five years and, after that period, was almost always transferred to a different name. During the independence of Delos (315-166 BC), the tenants were almost exclusively Delian; foreigners had to provide a local surety. During the preceding period, when Delos was under the control of Athens, we almost always find Athenians; After 166, when the Athenians ruled solely by the grace of the Romans, more and more Italians arrived. This is related to the Roman trade policy, which made Delos a free port to prevent a renewed flourishing of Corinth and to compete with Rhodes.

We can trace the history of twenty-six "holy houses": eight served exclusively as residences, while in the others some kind of trade was practiced. For example, we hear of a potter, a locksmith, a wool dyer, and a fish smoker. Moreover, the temple possessed two palaestras, in which, of course, gymnastics was not exclusively taught, just as in our grammar schools. One of these schools was run by the same "master" for twelve years. To encourage the zeal of the youth, the temple administration set aside from fifty to one hundred drachmas annually for "prizes". The increasingly vibrant trade increased the value of the houses and the land on which they stood. Therefore, as early as the end of the fourth century, the temple administration began adding upper floors to the workshops and shops, renting them out separately, and undertook the construction of tenements.

Increasingly, the temple took on the character of a veritable bank, making its floating capital productive in all sorts of ways. Delos became a center of monetary exchange. The secular community, which had apparently existed alongside the clergy for a long time, gratefully seized the opportunity of such a substantial savings pot in its immediate vicinity. A popular decree of 279 BC stipulated that 24,000 (later even 35,000) drachmas must always be available in the temples for the needs of the civil community. The latter seem to have frequently taken advantage of this opportunity to borrow. But the clergy did not surrender defenselessly. When the state withdrew an advance, it demanded a guarantee. Sometimes, Delos had to pledge its taxes, which in that case were deposited directly into the temple treasury. flowed; usually, the bank was satisfied with the moderate interest of ten percent.

Most private "foundations" intended to establish a capital, the interest from which was to be used to offer sacrifices to the god at specific times. The priests would not have been good financiers if they had not tried to generate more income from the sums deposited in this way. The only concession they made to the testamentary dispositions was to administer each "foundation" separately. Incidentally, this would usually have been the case with the three thousand drachmas that Echenike, daughter of Stesileos, bequeathed in her last will in 250 for an offering to Apollo and Aphrodite. We see this sum lent first to the city of Delos—the security was the "public revenues"—then to private individuals. Because these funds or their interest could not always be collected precisely on the date of the offering, the "hieropeioi" were sometimes required.

It was necessary to draw on the general temple treasury to fulfill its obligations. The temple naturally benefited most when state administrators attempted to gain its favor. They were always very generous, both in terms of "foundations" and in instituting festivals. Yet, we need not assume that these advances changed the political balance of power. Delos was and remained a neutral state. Perhaps that is precisely why the potentates, always at odds with each other and therefore usually struggling for money, were so attached to the bank, which could profit from all dynamics on the political chessboard and whose deposits were nevertheless respected by all.

But we find no traces of these "higher" financial transactions in the temple's books. They do, however, demonstrate that the priests, as befits good capitalists, were

- interested in all kinds of industrial enterprises. Thus, they levied tolls and harbor fees, operated a ferry service to Mykonos—one of the larger islands in the area—drew income, albeit very fluctuating, from searching for purple snails, and collected a fixed fee from fishermen in the "sacred pool".
- We, who are completely unaccustomed to bloody sacrifices, usually forget that a whole mass of animals must always have been available around each temple to satisfy the suddenly arising desire of the pious public to allow the celestials to enjoy the fat vapors, the only thing that rose to them from the altar. Whatever wasn't burned, as you know from Homer, ended up in human stomachs. In "more civilized" times, butchers probably intervened in this matter. I believe I once read that the people of Ephesus were actually only angry with Paul because he wanted to abolish sacrifices and thus harmed both the cattle breeders and the butchers.
- But to return to Delos. The barren island itself, of course, could not produce the animals needed for the sacrifices. So the priests were also entrusted with that care. Their records demonstrate that they handled the matter decisively. Apparently, a rich menagerie was associated with the shrine, which consisted mainly of gifts. The inhabitants of this zoo—which may have been one of the attractions—were partly sacrificed and partly sold. The latter, of course, only occurred when there was abundance or certain circumstances prevented their use as sacrifice. For example, we find that the body of a pig drowned in the sacred pool was sold for a mere penny. Birds, in particular, lived near the temple. The peacocks, gathered among them, were probably one of the attractions before they were slaughtered. There were also geese from Egypt, partridges, and especially pigeons. Not only were the eggs of the latter highly prized, but also... the guano they produced. A little sidetrack. The dove is the sacred bird of Aphrodite, the goddess of love. Now, Aphrodite enjoyed absolutely no special veneration on Delos. Yet, it was teeming with doves. Can we therefore assume that all the temples had "tilts"? They are indeed very charming creatures, especially beloved by tourists. Who doesn't remember the first fluttering flocks of doves in St. Mark's Square in Venice and the tame individuals perched on the hands of strangers, who were oh so eager to be photographed? In antiquity, beautiful statues stood in the open air at and in front of the temples. Doesn't it suddenly become clear to you why they wore a round metal plate—meniskos in Greek—on top of their heads? Wouldn't those meniskoi have served a double purpose: primarily to prevent the defilement of beauty, but also to serve as a receptacle for the highly prized waste? Incidentally, the priests would have ensured the cleaning of the temple peaks and gables before and after each festival.
- Now I can leave aside the zoo that so unexpectedly appeared before us, but not before mentioning that the accounts allocate a monthly sum for food and expressing my surprise that among all those hairy and feathered guests, not a single swan appears, even though the swan is the sacred bird of Apollo.
- Yes, the administrators of Delos' temenos certainly had plenty of work in the good old days, even outside the official festival season. They were involved in land leasing, slum landlordism, purplefishing, operated a ferry and a zoo, lent money to everyone, kings, the municipal government, and private individuals, traded in guano, etc.

Rome, December.
Delos from the Prosaic Side. III.
- Workers. The enviable fate of Greek slaves. The uniform wages of the fifth century. Numerous holidays and long labor contracts. Poorly paid temple officials. Appreciation of architectural talent. Stingy Delos and generous Delphi. Varying payments for inscription carvers. Foodstuffs and freight. Monopoly prices. Ivory and papyrus. The political price of resin.
- In the accounts of large enterprises, labor wages always occupy a prominent place. We may therefore hope to learn something from the accounts of the Delian temple about what so many consider the core of the social question. This will strike us as more ordinary than you might at first think, because you believe that slavery gave ancient society a very unique structure, making comparison with modern conditions impossible. I am putting it very formally, because in the realm of labor, we must always be completely serious, preferably tragic; Otherwise...
Let's take a sober look at the phenomenon of the "classical Greek slave". Whoever

bought a prisoner of war invested capital. Aside from all humanity—which was
86375 certainly not foreign to the Greeks—self-interest dictated maximizing the interest on
that investment, preferably so that amortization became possible before too many
years passed and the slave thus became unproductive. Now, a person can undoubtedly
work best (at that time, this didn't mean watching a machine create, but producing it
86380 themselves) when they are sufficiently fed. Therefore, the master had to give their
slave enough to eat. But even if they could work hard, that doesn't necessarily mean
they did. After all, they knew very well that their master wouldn't kill them,
because that would mean losing their capital, nor would they mistreat them severely,
because that would definitely reduce their productivity. Because the slave had to
earn more than the free laborer—remember the redemption of the purchase price—and
86385 didn't fear starvation, the latter actually came just as cheaply. Aristotle was
therefore entirely right when he called the "free" craftsmen a horde, performing
slave services for everyone, not just one.
But let me quickly leave the dangerous terrain of theoretical considerations behind
me. In the fifth century—as we learn from inscriptions from mainland Greece—
86390 construction workers earned one drachma per day: a standard wage that applied to both
the free overseer and the slaves under him.
After the fierce wars between the Greeks had caused the value of currency to decline,
craftsmen naturally had to earn more to at least somewhat approach the standard of
living before those wars. Therefore, we find that masons and carpenters at Eleusis in
86395 329 BC earned two and a half drachmas per day. I don't know why Delos could produce
more cheaply than Attica, but it's a fact that the maximum wage for skilled labor
there was two drachmas, and casual workers had to settle for much less: we even see
their wages drop by 16 percent in those years, despite the triple price of grain.
86400 Despite this high cost, it seems to have been possible to live on about one and a
half drachmas a day, but only if one could count on that amount every day.
Unfortunately, however, there were frequent feasts on the holy island. Since the free
workers also wanted to eat on those days, they insisted on monthly or annual
contracts, which at least guaranteed them against starvation.
Incidentally, the temple administration wasn't generous with its own permanent staff
86405 either! It had divided them into two classes. The lowest, which included, for
example, the flute players and the sextons, received an income of 120 drachmas per
year, which is two obols, or about fifteen cents in Dutch currency per day. The
sextons also received free clothing. Those on the second, higher scale received 180
drachmas per year, less than twenty-five cents per day. And this while the state
86410 slaves in Eleusis were allocated not only the same wages for food, but an additional
44 drachmas for clothes and shoes. The overseer of these slaves even received 280
drachmas per year, but he had to pay for his own clothes. So, the profession of slave
in the Athenian commonwealth wasn't so bad after all. The higher official class on
Delos earned 37 percent less, the lower even 47 percent less than they did. Did tips
86415 perhaps make up for the shortfall? One man on Delos, however, was better off in terms
of a fixed salary: the "architectoon," the chief architect of the temple. He received
no less than 720 drachmas annually and was therefore as financially strong as his
colleague at Eleusis. The appreciation of the intellect seems to have risen
considerably since the time of Pericles. We know from Athenian inscriptions that the
86420 architect of the Erechtheum, who was indeed one of the greatest artists the world has
ever known, had to settle for one drachma a day, exactly the same as his most foolish
slave!
In 340 BC, the chief architect of the temple area at Delphi received an unheard-of
amount: four drachmas a day. This almost unbelievably high payment for a state
86425 official coincided with a period of significant construction. The priests seem to
have understood the importance of such a position. Even stingy Delos, in such cases,
gives its architects three drachmas a day instead of two! Yet, Delphi lagged far
behind. Delphi, after all, used Aeginite currency, which was one and a half times
higher than Attic, so the four drachmas from there would have been worth six on
86430 Delos.
After 300 BC, a rapid and continuous decline in wages can be observed on Delos. A
typical example, relevant to the very material from which we draw all this
information, is that of the stonemason who created the temple inscriptions. For a
long time, this certainly not entirely foolish workman stipulated, and received, one
86435 drachma per hundred letters. This price was still paid in 302 to ascertain
Hermodikos, but later, he began to be increasingly cut back. In the same year of 302,
the same Hermodikos had to deliver 130 letters, five years later even 300! Around
250, we reach the lowest wage level. Then, the temple lords pay for an inscription—
354 lines with 42,000 letters—the sum of 120 drachmas, that is, one drachma per 350

86440 letters. But by now, the bow was apparently already too much. The inscriptions were so shamefully rushed that the commissioners became ashamed of them. They were apparently mindful of their good name with posterity and therefore, perhaps with a heavy heart, made the bold decision to return to the previous payment system. Less fortunate than the stonemason was the roofer—the man who kept the roofs of the

86445 various temple buildings in order—his wages decreased by 73 percent in half a century, and we hear of no improvement whatsoever. During the same period, food prices in Greece did fall, but ship freight increased, and intermediaries took on a higher percentage. The workers on Delos must have been in dire straits!

86450 Yes, those high freight rates would often have infuriated the islanders. The price of wine on the mainland, for example, was less than half of what the Delians were paying for it. And then there were the bricks! In 280 BC, they cost three drachmas per two hundred pieces at the factory ("they now write, I believe, "ex works"), while Delos added 7.5 drachmas freight! Other manufactured products, on the other hand, also

86455 became much more "reasonable" at their destination. For example, the fine linen robe given to the goddess Hera each year cost 40 drachmas in 306, but only 25 in 250. Sometimes, political events had a significant impact on prices. When Alexander the Great's conquests "opened" the East and Egypt to Greek trade, ivory, often used for statues, suddenly became four times cheaper. This already low price dropped by a

86460 third between 269 and 250. We do not know the cause of this remarkable phenomenon; it is assumed that the Seleucids—the rulers of Syria and its hinterland—then succeeded in ending the monopoly established by the Egyptian Ptolemies. These Ptolemies were generally very supportive of the system of "sole trade". Among other things, they reserved the production of papyrus at one point. This meant that a sheet of paper,

86465 which in 296 BC cost one obol on Delos, seventeen years later had to be paid for with one and a half to two drachmas: an increase of nine hundred to twelve hundred percent. It is no wonder that the rulers of Pergamon in Asia Minor began to focus on producing a different writing material, parchment, not yet unknown even to us. The "price fluctuation" of resin is quite remarkable. From 310 to 296 BC, the average

86470 per meter ($\frac{1}{2}$ H.L.) was 18 to 19 drachmas, whereas from 292 to 286 it was 27; the curve reached a peak of 40 in 279. Then, between 250 and 169, there was another significant decline to an average of 14.5; resin was particularly cheap in the last years before 169.

86475 These sharp fluctuations can be quite plausibly explained by political circumstances. Delos received this product exclusively from Macedonia. Macedonia, in antiquity, exhibited much the same peculiarities as in the past half century. There was never really any peace—the history of the kings before Philip and after Alexander the Great resembles a horror film played too fast. The country's production apparently suffered almost nothing. However, in 280, it suffered a formidable blow with the invasion of

86480 Gallic tribes. This crisis caused the price of resin to suddenly skyrocket. However, it soon fell back to normal. Only after 179 did the priests receive the apparently indispensable raw material for their business—it served, among other things, to make black dye and probably also for lighting—below its normal market value. This favoritism remarkably coincided with an exceptionally generous act by King Philip V.

86485 In the aforementioned year, he presented Apollo with no less than four gold wreaths worth a total of two thousand drachmas. Was he so exceptionally fond of Apollo or of the capital that was under his high protection? I venture to believe the latter, because the Macedonian king had been resting for ten years for a final battle against Rome and, of course, knew as well as other quarrelsome people that fighting requires

86490 money first, second, and third place. Whether the temple lords were swayed by the "most favored nation" clause in the export tariff on Macedonian resin and invested their good money in a very unpromising venture, I don't know. Perhaps they truly compromised and—as early as 166 BC—therefore returned Delos to Athens, which didn't hesitate for a moment to expel the Delians from their island and take over the

86495 temple's administration itself. This marks the end of the on-site recording of income and expenditure on stone, and thus of our economic reflections on the fate of this "sacred" money.

February 4, 1925 Excavations on Delos.

86500 As in previous years, the management of the National Museum of Antiquities in Leiden organized a series of archaeological lectures this winter. Last night, Brussels Professor Mayence, curator at the Musée du Cinquantenaire, opened the series of lectures. He spoke about the excavations on Delos, and in particular the temple buildings. Professor Mayence, who himself participated in these excavations for four

86505 years, began by providing an overview of the location and history of this small Greek

island, which is only about 5 km long and a few km wide. He demonstrated that the great prosperity that Delos experienced is a result of the religion that played an important role here from very early on. After all, Homer already sang the praises of this island as the mythological birthplace of Apollo and his sister Artemis. However, we lack virtually all literary information about ancient Delos. Pausanias, who left behind so many important references for other Greek centers, did not visit Delos. And the works of other Greek writers who did relate to the island have been lost. Therefore, systematic excavations were necessary. These studies were undertaken around 1880, under the direction of the Ecole française d'Athènes, and have continued with tireless zeal and extraordinary success to this day. Professor Mayence demonstrated how it is now possible, based on these investigations, to distinguish four periods in the development of Delos, ranging from approximately the 8th to the 1st century BC, during which the island alternated between prosperity, stagnation, and renewed prosperity, ultimately succumbing to violent destruction under Roman rule.

After providing an overview of the numerous temple buildings, the most important of which was dedicated to Apollo, the professor showed several striking examples of sculpture discovered during the work. He also pointed out the particular importance of the inscriptions found in the Temple of Apollo, which provide a detailed account of the temple's possessions and administration. Excellent slides enhanced this lecture, which was well-attended. Prof. Professor Mayence will give a second lecture on Friday, the 6th of this month (8:00 PM) in the lecture hall of the aforementioned Museum, on: "Les fouilles de Délos; la ville antique" (The Searches of Delos; the Ancient City).

February 8, 1925 Excavations on Delos. Professor Mayence gave his second lecture on Friday in the lecture hall of the National Museum of Antiquities in Leiden, on the excavations on the island of Delos. While his first lecture had focused primarily on the temple buildings, he now discussed the city as it gradually developed around the quarter dedicated to the cult. After emphasizing that the excavations of the city section have only revealed houses from the third, second, and first centuries BC, and nothing is known of the houses that may have stood there during the Greek period of prosperity, the speaker pointed out the irregularity of the street layout and the arrangement of the houses. This was particularly evident in the plan of the section between the temple buildings and the theater were located there. Using several examples, the professor also showed what the main street, where numerous shops were located, must have looked like, how a well-maintained sewer system was constructed beneath the heavy paving stones, and how a water supply already existed.

Finally, Professor Mayence dwelt a little longer on some of the larger houses that were excavated, such as Cleopatra's, so named after a discovered inscription, and Dionysus's, so named because this god is depicted in a magnificent mosaic that was unearthed. He briefly pointed out how the excavations at Priene and those at Delos have given us a completely different view of the Greek house as depicted by Vitruvius. Delos is particularly important for the transitional period between Greek and Roman house types. This transition from Greek to Roman is also evident in the sculptures and the wall decorations of the houses. Indeed, the decorative art of Pompeii, commonly referred to as the first style, can be found on Delos. In summary, the speaker examined the results of the immense excavation work and concluded that, although the booty of artworks remains relatively small, Delos has nevertheless significantly enriched our knowledge of civilization and the way of life in the Hellenistic and Greco-Roman periods.

May 30, 1928 DELOS. The French excavation work. On Delos, the small island in the center of the Cyclades, the French have been conducting excavations since 1876. The Ecole française d'Athènes has now completed its research on the small island, which, viewed from the summit of Mount Cynthus, which is only one hundred and twelve m high, yet dominates the surface of a land five km long and several hundred km wide, gives the impression of a barren and infertile terrain. Legend has it that Delos was initially adrift, but was bound by Zeus with diamond chains so that Latona, who wanted to escape the jealousy of Hera, Zeus's wife, would have the opportunity to give birth to Apollo and Artemis. Consequently, the island became sacred ground for the Greeks. People traveled there from far and wide to offer sacrifices to Apollo and Artemis. Apollo's temple served for a time as the treasury of the Attic maritime confederation, until the treasure was transferred to Athens in

454 BCE.

In later times, Delos again held a special position. After Rome destroyed Corinth in 146 BC, it made Delos a free port to destroy Rhodes' trade. Italian merchants came there to collect all kinds of goods brought there from various countries, especially slaves. It is said that sometimes as many as twenty thousand slaves were sold in a single day. The prosperity thus created on Delos led to the construction of a population, abundant and wealthy for the small island, that built houses. Half a century later, wealthy Delos was plundered by Mithradates, the king of Pontus, Rome's enemy, and again in 88 BC by the pirate Athenodorus. Delos fell into complete disrepair and was abandoned, and the dust of the centuries accumulated in the narrow, sloping streets and in the houses. During the French excavations, the peristyle—the inner courtyard surrounded by a colonnade—was discovered for the first time, which was also found in Pompeii, for example. Among the beautiful residences from the prosperous period must have been this, the remains of which are depicted on the photo page: the home of a certain Cleopatra and her husband Dioscorides. The forecourt is surrounded by columns of Parian marble. Further in the background, one can see the damaged statues representing their owners.

On one side of Mount Cynthus, one descends to the sacred lake, on whose western shore some primitive sculptures on pedestals—see the photo page—representing lions can be seen.

August 17, 1928 THE LOST ANCIENT WORLD DELOS

The story of prosperity and decline.

When Odysseus wanted to express his admiration for the princess who so kindly approached him, the naked shipwrecked sailor, he compared her to the slender palm tree of Delos, rising beside the altar of Apollo. Such is the age-old fame of Delos, the only island willing to offer hospitality to Leto when she was about to give birth to her son Apollo, and rewarded for this with the construction of temples and the fumes of endless sacrifices. Delos was the center of religious life, and also of the political unification of Ionian Greece. Later, under the Romans, it became for a time the center of world trade. But like the Ionians "with trailing hems" and their beautifully girdled women, the Romans also passed by, and Delos once again became a barren, barely inhabited islet, now low and insignificant. The harbor has silted up, the quays have disappeared. Where they must have been, rushes grow: large, thorny forests. Further on, it seems like a field of stones and marble blocks, from which here and there a column or base rises.

The French Archaeological Institute in Athens excavated here at the end of the last century and uncovered much that the earth hid. Unfortunately, these were not countless works of art in marble and bronze, nor famous votive offerings or temple statues. Many generations of people had already worked to destroy what earlier generations had created with love and a deep sense of art. But the foundations of buildings were exposed, and the bases of many statues, and from the inscriptions found, a part of Delian history suddenly became clear again.

As we step ashore, a delightful scent of flowers greets us: the only thing Apollo can still offer in his birthplace. Within his sacred temple precincts, directly opposite the main harbor, where Leto and Artemis also had their places of worship, nothing but the lowest rows of stones remain standing. A few centuries ago, the gigantic statue of Apollo, dedicated by the Naxians, lay stretched out on the ground here; anyone whose fate led them to Delos could pick up their ruler and later tell stories of miracles back home. But when the French began, only a hand, a piece of thigh, and the upper part of the chest and back, bearing the outline of Apollo's archaic long locks, remained. The temples can be found, but the famous altar, built from the horns of sacrificed cattle, has been permanently obliterated. It is a tangle of foundations, foundations of temples, treasuries, and colonnades. Wall lizards and larger, yellow-headed reptiles crawl over the stones, their scaled bodies rustling dryly, and the ground is strewn with a soft purple gypsophyllum. Rebuilding antiquity above these stone blocks and floral splendor is impossible; there's too little left. There, for example, lies the round base of the bronze palm tree that the Athenian Nicias once consecrated. But what did the palm look like? It has gone the way of all bronze: melted down, perhaps repurposed into kitchen utensils.

But there are places more suggestive than Apollo's ruined temenos, where there's more material left for the imagination, which longs to see, if only for a moment, the afterglow of the ancient world. Delos, always a trading port, has, like no other place of such limited size, experienced an era of material prosperity. That was when Corinth was destroyed by the Romans, and Delos became a free port, connecting trade

between East and West. Then, thousands of Italian merchants came to live there, and the Easterners—Jews and Zyrrians—moved there in droves. The large market squares are still clearly visible, where once the most important business was discussed and conducted in the shadow of the colonnades that surrounded them.

So there lies the great Roman market before us, purple with flowers: a gigantic square, outlined by poros blocks—for the columns have long since disappeared. On one side, something remains of the shops and warehouses that formed the back of the colonnades.

Here and there, a colorful patch of mosaic still shines, perhaps once the pride of the owner.

The foreign merchants also had their large meeting buildings on Delos: clubhouse and temple closely combined, for each meeting was under the protection of some deity.

Their place has been rediscovered; Of one of them, that of the merchants from Beyrout, two intact columns, topped by a piece of architrave, could still be raised: the reflection of the water, which once lay beneath the now-collapsed mosaic floor of the colonnade, ripples gently across the white marble. What a history—and what desolation!

There stands another reminder of even earlier times, when there was no Roman world power, when there was not even that wonder, the classical art of Greece. It is the row of lions, which the Naxians, following the Egyptian example, erected along the former temple path. They are ugly in shape, with their overly elongated bodies; they are broken, weathered, and worn; some have acquired the smooth heads of seals, as time has worn away everything that gave them form. Yet that incomplete, broken row is still impressive: how many centuries have passed over them, and yet they still stand there with open mouths, as if watching over Apollo's sacred lake, which lay across the road.

Alas, no one bothered the old guardians, for the lake has been desecrated: filled with malaria mosquitoes. Within the enclosure, a rusty chicken cart stands amidst freshly dumped earth and stones. And the slender palm tree has also disappeared.

"Everything flows; nothing remains," said the old philosopher.

To the left of the museum, which the French built for the found artifacts and inscriptions, we now turn into Stadionstraat: the stadium was on the other side of the island. Soon the paved road turns into a narrow footpath that winds across the fields; we open a wooden gate and climb a little further over a stone dividing wall. On top of the low ridge of the island stood the gymnasium, with a magnificent view of the sea on two sides. Along the walls, the low benches where the boys sat to rest, and where the others sat to watch, still stand. The stadium, a little further on, is clearly visible, but little remains of the seating. Only the houses that stood behind it, even further towards the sea, stand: the walls there, several m high, still stand, and we can walk through the narrow streets and look at the street altars where the father of the house offered sacrifices when returning home, so that his arrival would be blessed. They were often vividly painted with sacrificial scenes, but alas: the colors, which defied centuries, can no longer withstand full daylight after the long darkness: soon, nothing will remain of all the wall paintings except the images created during the excavations.

Near the stadium district, by the sea, stands a building that also provides evidence of Delos's international significance around 100 BC. It is a synagogue. On the excavated floor, a few votive altars of a peculiar shape, dedicated in Greek to the Most High, still stand. This monument to Jewish faith is moving amidst all that polytheism. Polytheism indeed, although this island was pre-eminently Apollo's property, for the sun god shared the worship here with many other gods; he seems not to have been jealous.

Anyone who takes the path to the summit of Delphi's (Delos's) only mountain, Cynthia, which rises just over a hundred m above the sea, will see the facade of a small temple from afar. It is a facade without a roof or side walls, but amidst so many scattered broken stones, it is nevertheless impressive. In the temple hall, a fragment of the statue of a heavily robed woman still stands. This woman, who in no way resembles an Egyptian, represented Isis; this upward path is the district of the foreign gods, who arrived with merchants from afar. Serapis, whose worship became so popular during the Roman Empire, was also worshipped there, and the mysterious Habira had a large sanctuary there. There is a small theater here, where mysteries were likely performed for a private circle of initiates; there are also banquet halls with mosaic floors, where cults gathered around the table. All foreign gods were initially tolerated by the government, and then the followers themselves took care of the maintenance of their sanctuary. Often, the capitals of the columns still bear the

- name of the donor. But after some time, the government took charge of the foreign cult. Beneath the statue of Iris, it is stated that the Athenians—rulers of Delos in that wholesale period—erected it in her honor. Thus, we see the state adopting new deities without much hesitation. The stones speak for themselves.
- A small temple of the truly Greek goddess Hera also stood here, since ancient times. To that small temple, we owe a treasure trove of vases from all periods. For damaged or very old temple vessels were never thrown on the rubbish heap: they remained dedicated to the deity, and as such, inalienable. To dispose of them, they were buried in the ground in or near the temple. Thus, beneath the floor of the Heraeum, the ancient temple inventory was discovered, which later generations no longer valued, having been replaced by more valuable items. Reminders of the religious veneration of Delos's countless inhabitants lie all the way up to the top of Cynthia: alas, nothing stands there anymore. It is a mosaic floor, or a piece of foundation, from which one must deduce what once was here.
- The summit of the mountain offers a magnificent view. Surrounding it lie the Cyclades, which form the circle around sacred Delos. Nearby is Rhenea, now almost uninhabited, where the Delians once went to die, for since the 5th century BC, no one was allowed to die, nor to be born, on this sacred ground. Over there lies Mykonos with its un-Dutch windmills, and Tinos. Further away, very hazy, for even here the view is rarely clear, lie Paros and Naxos. All are almost bare rocks, rising from the bright blue sea.
- At the foot of the mountain lay the quarters of the wealthiest merchants, the best-preserved part of the city. The walls and column shafts still stand m high: we can still walk in and out of the rooms and admire the mosaic floors. The streets along which they lay are incredibly narrow, but what did that really matter to the ancient houses, which were open inward to allow sun, wind, and street noise to enter.
- To keep away from the nuisance. Riding was out of the question on those steep slopes. And below lay Delos's principal port. In ancient times, hundreds of elegant ships arrived there for the annual ceremonies, carrying festive envoys, stately sacrificial bulls, and precious votive offerings. There also entered the wreathed triumvirate, whose return Socrates had to await before he could drink the poisoned cup. Merchandise, handicrafts from all regions came there—how we wished we had the contents of just one such ship! Much misery must have been endured there in that silted-up bay, where now a single barque lies resting in the fierce midday sun. For the Romans, in need of slaves, turned a blind eye to the pirates of the coasts of Asia Minor coming here to market their plunder. There were days when thousands of slaves were brought here and immediately sold off to an unknown future, far from home and family. Then, during the Mithridatic War, came the battle that ended it all: one of Mithridates' generals ravaged the island and killed 20,000 inhabitants. That was in 88 BC. Twenty years later, the pirates did the same thing again. After that, trade sought other avenues and abandoned the rocky island of Apollo. When the foreigners had departed and the harbors became empty, the native population gradually disappeared. And now, after all the unspeakable beauty and all the boundless misery of the ancient world, Delos lies barren and lonely again, as before the dawn of history, amidst the deep blue waters.
- A. Roes.
- January 31, 1931 THE CIVILIZATION OF DELOS. The latest bulletin of the "Association for the Promotion of Knowledge of Ancient Civilization," as we have already mentioned, contains a contribution by Emilie Haspels about the excavations on the remarkable, smallest of the Cyclades islands, Delos; remarkable because it contains the remains of the largest and most important number of ancient houses known in Greece. She visited these houses, accompanied by the excavation leaders, Messrs. Roussel, director of the Ecole Française d'Athènes, and J. Chamonard (Exploration archéologique de Delos).
- These houses are remarkable for life in a city populated by merchants from the Levant, Greece, and Italy during the Hellenistic and Roman periods. The houses of this trading city date mainly from the 2nd and 1st centuries BC. In 166 BC, Rome made Delos a free port, and the island's great economic prosperity began. And the inscriptions teach that the flourishing of trade was accompanied by an increase in population, as evidenced by the rise in rents. This heyday lasted less than a century. The city was repeatedly plundered, and a poor population then lived amid the ruins of the merchants' palaces.
- The author then recounts the renewed excavation in July and August of last year,

86770 after many years of inactivity. She describes the quadrangular block (insula) of
houses excavated last summer, near the previously excavated "House with the
Dolphins". This insula consists of four houses, one large, the other medium-sized.
86775 The large house, "the house with the masks," has a courtyard leading to four rooms
with mosaic floors. Numerous fragments of delicate mosaic have also been unearthed
from the upper floor, as well as pieces of wall paintings, lotus borders, and floral
festoons. The large hall has a regular mosaic pattern of bands folded back and forth;
On both sides, a row of tragic masks is decorated in bright colors: black, white, and
red. On each side, five masks are spaced evenly, with ivy tendrils between them; one
mask with a beard and one without, alternating.

86780 The other rooms also feature mosaics depicting birds, dolphins, and stylized leaves.
One room depicts Dionysus riding a panther, holding a thyrsus with a bandelette in
his right hand and a tambourine in his left. The description of this composition
reveals that this Dionysus has the highest decorative and aesthetic value of all the
mosaics excavated on Delos thus far.

86785 These rooms, with their beautiful mosaic floors, were naturally furnished with equal
care and artistry. But not a trace of this furniture remains, not even a fragment. It
was removed and used in the poorer period, when the remaining population lived on
Delos. Only a few smaller objects were found: fragments of marble statues, a sundial,
many shards of glass, pottery, and some children's toys. And then a mass of pottery
86790 lamps. Each room must have had these on all sides, in niches, on the walls, and on
the tables.

Besides other statues, the most important find is a standing male portrait, found in
pieces here and there, as if the later inhabitants of Delos had already been dragging
this statue around.

86795 Not so.

The least interesting aspect of Miss Haspel's description is her attempted
reconstruction of the town of Delos, where, due to the many temples and sanctuaries,
there is hardly any room for the houses crowded together. Streets are sparse, as they
slip between the houses, like irregular channels, "which the houses were kind enough
86800 to leave open to traffic".

Inscriptions and translations

86835 **IG XI.2 154 (296 BC) and IG XI.2 154 AB (296 BC) (non-stoichedon)**
<http://epigraphy.packhum.org/text/62616>

<https://web.archive.org/web/20160419062608/http://www.brynmawr.edu/classics/translations/154translation.htm>

This is the first (apparently) complete Independence inventory; it begins toward the bottom of side A and is preceded by a list of expenses, unlike other inventories which are either on a side separate from accounts or on a separate stone. The absence of a list of receipts or of a year-end balance suggests that there was at least one other stele of accounts. The absence of the Artemision treasure is surprising, and it may have been on another stele; the Temple of the Delians has been renamed the Temple of Apollo. The inventory is dominated by the silver cups stored in the Hieropoion until completion of the Apollo Temple; these are described in considerable detail and weighed, in contrast to the groupings (unweighed!) of established treasures of the Temple of the Athenians (pointedly renamed the Temple of the Seven Statues) and of the Apollo Temple. There are more than twice as many named dedicants as in 104; most have no ethnic, some undoubtedly because they are Delians. The proportion of female dedicants is somewhat lower than in 104 (21% vs 29%).

In the archonship of Phillis we took over the following from the hieropoioi Diakritos, Dexi[krates], (50) Phillis

[In the Temple of Apollo.] seventeen gold [crow]ns; gold collar [...]; gold [crow]n, dedication of Aristaichmos; three phialai [which Stesileos dedicate]d; silver rose, dedication of Dexikrates; crown [...w]hich Timokrates dedicated; silver cup; kra[ter][...]ings (55) silvered two hundred twenty; gilded [...st]aff silver. Bronze: three keys of the Temple of the Seven Statues. In a chest we received by weight various gold, weight seventy four drachmas, three obols; from this we subtracted (gold) for the crown for Leto voted by the demos, weight 20 drachmas. Weight of various silver (60) with the Chalcidian (coin) and the little moons, fifty-eight drachmas.

This is the first 'complete' Independence inventory, showing the pattern followed thereafter. It is also the first confined to one side; since the inventory is dated to Galaxion, the third month of the year, it seems likely that this side (though labelled side B) was carved before the accounts on the other side (which presumably cover the full year). Hereafter inventories hardly ever run over onto another stele as seems to have been the case with 154, though the accounts often de and though inclusion of the Chalkotheke treasure required use of the edge (side C) otherwise unparalleled. Finally, it is the first inventory to contain the treaure of the new Apollo Temple, now finally completed after almost two centuries. Interestingly, all the dedications appear to be in the Prodromos whereas none is in Prodromos of the Artemision and only the named dedications are in the Prodromos of the Temple of the Seven Statues.

87085 Aside from the long-standing rhymoi of the Artemision, objects are listed individually and described in unparalleled detail, including discrepancies noted between inscribed and "actual" weight. The treasure of the new Apollo Temple has an impressive array of dedications, including many by or in honor of the famous Delian choral society, the Deliades, often in connection with an official sacred visitation (theoria) by a foreign group and often sponsored by dynasts such as Ptolemy, 87090 Antigonos and Demetrios. Some of the "new" dedications, however, may go back to the 4th C., and one wonders where they were kept until now. [For changes **in the Artemision** treasure since the Amphictyonic period see p.??.]

 ons/287translation.htm](https://web.archive.org/web/20090408151735/http://www.brynmawr.edu/classics/translati- ons/287translation.htm)
 Our only totally intact Independence inventory. The order of objects has changed
 radically from 161 and there have been major changes in the placement and description
 of phialai: the hundreds of phialai in rhymoi and most individual phialai have
 89420 disappeared from the Artemision, as have all the phialai in H/A along with the group
 of 30 phialai (and 4 kymbia) in the Temple of the Seven Statues; the inventory ends
 with long lists of endowment phialai in the Apollo Temple, without weights but with
 sum totals.
- 89425 face A.1

Athenian Inventories

- From the formal standpoint, the Athenian inventories are frustrating: we have no
92150 complete examples; the fragments rarely overlap; few weights are preserved. On the
other hand, they include much more than the earlier inventories, which were largely
confined to precious objects, and so we learn a lot more about the contents of
sanctuaries. Also there are many more temples, partly the result of new cults gaining
footing but partly of the new inclusive approach to inventories since some of the
92155 newly listed treasures are clearly quite old (Thesmophorion, Heraion, Letoion,
Gymnasium, Samothrakion). Most of the precious items are housed in the Temples of
Apollo and Artemis (for safety?). The order is fixed; there is no reweighing. We find
hints of melting down of dedications and replacement of lost. Topographic listing of
442 has been abandoned for the old listing by metal (gold before silver in Artemis
92160 and Athenian temples; silver before gold in Apollo temple).

94895 **ACCOUNTS AND INVENTORIES OF THE TEMPLE OF APOLLO ON DELOS**
I. Délos 442

94900 The temple of Apollo on Delos was one of the greatest of the panhellenic shrines, and as such it was the recipient of dedications made by kings, cities, commanders, and private individuals from all over the Mediterranean world. It was at the same time an active financial center. Loans at interest (generally 100%) were regularly made from the great wealth of the sanctuary, houses and agricultural land owned by the temple (these often representing property confiscated from religious offenders) were rented out, and the temple itself housed not only the treasure chest of the god but the public chest of the city of Delos as well. The annually appointed officials of the sanctuary, the hieropoioi, supervised both the more standard operations of the sanctuary (e.g., sacrifices) and were responsible besides for the accumulated dedications and the various financial transactions. Each year they published their accounts on stone. These contained the records of income and expenditure, first for the god's chest and then for the public chest, and complete inventories of the dedications located in all the temples of the sanctuary. The accounts for 179 are among the best preserved and begin with the statement "Gods. [Account] of the hieropoioi who held that office for the year of the archonship of Demares, Amphoteros son of Aristetas (and) Polyxenos son of Parmenion (and) Silenos son of Silenos (and) Philippos son of Akasimbrotos". The selections presented here are as follows. A: the list of the jars of money deposited in the sacred chest during the year (I. Delos 442A.38-55; this follows the list of what these hieropoioi took over from their predecessors); B: list of monies expended from the sacred chest (442A.55-75; this is followed by the analogous accounting for the public chest); C: from the inventory of dedications in the temple of Apollo (442B.1-17); D: additions to the lists of monies received (442C - these represent late payments); E: final additions to the list of outstanding debts (442D).

94920 See <http://www.columbia.edu/itc/classics/bagnall/3995/readings/b-d2-9.htm>

A

94925 The following money also was deposited in the sacred chest during our tenure of office: a jar, on which the inscription "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Aresion, the hieropoioi Polyxenos, Philippos, Amphoteros, Silenos deposited the capital of the loan which Hermon son of Solon paid back, 605 drs. I V2 ob., and the interest he said he owed, 242 drs. I ob".; another jar, with the inscription "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Apatourion, the hieropoioi in the archonship of Phokaieus, Krittis, Nikarchos, Synonymos, Hierombrotos deposited in the temple the surplus from the account, 220 drs. 4 1/4 ob".; another jar, (with the inscription) "from the (bank) of Hellen and Mantineus, in (the archonship) of Demares, (the month) Posideon, the treasurers" Menyllos and Phokaieus deposited in the temple, in accordance with the budget, 1000 drs. toward repayment of the city's outstanding loans from the god, and 1350 drs. toward repayment of the amount advanced for the crown for King Philip" and King Massinissa I" and toward the amount still owing on the crowns in the archonship of Telesarchides"; another jar, (with the inscription) "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Posideon, the treasurers Menyllos and Phokaieus deposited 1303 drs. 3Y, ob., proceeds of the market place rents"; another jar, (with the inscription) "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Posideon, the treasurers Menyllos and Phokaieus deposited 40 drs., from the tax on boundary markers"; another jar, (with the inscription) "from the bank of Philon and Silenos, in (the archonship) of Demares, (the month) Posideon, the treasurers Menyllos and Phokaieus deposited 486 drs. 4 ob., the choregic fund"; another jar, (with the inscription) "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Posideon, the treasurers Menyllos and Phokaieus deposited 200 drs., from the tax on banks"; another jar, with the inscription "from the (bank) of Nymphodoros and Herakleides in (the archonship) of Demares, (the month) Posideon, the hieropoioi in the archonship of Telesarchides, Euboeus and Parmenion, deposited 6998 drs. 4ly, ob., the proceeds from farm rents, house rents, taxes, and interest"; another jar with the inscription "from the (bank) of Philon and Silenus, in (the archonship) of Demares, (the month) Posideon, the hieropoioi in the archonship of Telesarchides, Euboeus and Parmenion, deposited in the temple the remaining sum which according to the stele they collected from farm rents, house rents, taxes and interest, 1600 drs".; another jar, with the inscription "from the (bank) of Nymphodoros and Herakleides, in (the archonship) of Demares, (the month) Posideon, the hieropoioi

- 94960 Polyxenos, Silenos, Amphoterios, Philippos deposited 500 drs., the capital of the loan which Paches paid back on behalf of his father Diogenes and which the latter had borrowed from the hieropoioi Euboeus and Parmenion, and 60 drs., the interest he paid, saying that he owed it, for one year and two months"; another jar, with the inscription "in (the archonship) of Demares, (the month) Posideon, Menyllos and
- 94965 Phokaieus deposited in the temple 15 drs. I ob., the surplus from the (amount allocated for the Dionysiac) artists". Total of what was deposited during our tenure of office: 14,623 drs., 1 1/4 ob. Total of what was handed over to us and deposited during our tenure of office, 75,553 drs. 1/12 ob. And (total) of the copper handed over to us by the treasurers Menyllos and Phokaieus, 3733 drs. 2 ob.
- 94970 B
- In the holy month we withdrew for (expenditure on) works, in the presence of the archon of the city and the secretaries and the monthly prytaneis, (the following): a jar, with the inscription "from the (bank) of Nymphodoros and Herakleides, in (the archonship) of Telesarchides, (the month) Posideon, the hieropoioi Euboeus and
- 94975 Parmenion deposited, in accordance with the decree of the demos, the capital of the loan which Ostakos son of Ktesikles paid back, 500 drs., and the interest he said was outstanding, 20 drs. 5 ob., and the capital of the loan which Boethos son of Orthokles paid back, 500 drs., and the interest he said was outstanding, 20 drs. 5 ob., and the capital of the loan which Kaibon son of Kaibon paid back, 500 drs., and
- 94980 the interest he said was outstanding, 20 drs. 5 ob., and the capital of the loan which Theodoros son of Sosibios paid back, 500 drs., and the interest he said was outstanding, 20 drs. 5 ob". - the whole amount, 2083 drs. 2 ob.
- On the twentieth of the month Galaxion we withdrew from a jar with the inscription "from the (bank) of Nymphodoros and Herakleides, the hieropoioi in the archonship of
- 94985 Apatourios, Praximenes and Telesarchides, deposited the surplus referred to in the stele, 4349 drs. 2 ob".: from this we withdrew 1350 drs. for the crown for King Philip; the remainder in (the jar) is 2999 drs. 2 ob.; from this we withdrew for works on the fifth of the month Thargelion 2000 drs.; the remainder in the jar is 999 drs. 2 ob. And the following money also we withdrew for works in the month
- 94990 Bouphonion: a jar with the inscription "from the (bank) of Philon and Silenos, in (the archonship) of Phokaieus, (the month) Posideon, the treasurers Kaibon and Mnesikleides deposited in the temple in repayment to the god of what the city borrowed for the crown for King Philip and that for King Eumenes "I and the one (sent) to Rhodes, 1300 drs". In the month Posideon we withdrew from a jar with the
- 94995 inscription "from the (bank) of Hellen and Mantineus, in (the archonship) of Demares, (the month) Posideon, the treasurers Menyllos and Phokaieus deposited in the temple, in accordance with the budget, 1000 drs. toward repayment of the city's outstanding loans from the god, and 1350 drs. toward repayment of the amount advanced for the crown for King Philip and King Massinissa and toward the amount still owing on the
- 95000 crowns in the archonship of Telesarchides"; from this we, the hieropoioi in the archonship of Demares, withdrew 2200 drs. for work on the temple of Artemis, according to the decree of the demos; the remainder in the jar is 150 drs. In the month Posideon we withdrew from a jar with the inscription "from the (bank) of Nymphodoros and Herakleides, in (the archonship) of Demares, (the month) Posideon,
- 95005 the hieropoioi in the archonship of Telesarchides, Euboeus and Parmenion, deposited 6998 drs. 4 Y,, ob., the proceeds from farm-rents, house-rents, taxes, and interest": from this we the hieropoioi, Polyxenos, Amphoterios, Philippos, Silenos withdrew for works in the month Posideon 1120 drs. (4 ob.); the remainder in the jar is 5878 drs. ' Y, ob. In the month Posideon we withdrew 500 drs. for the loan to Euboeus,
- 95010 according to the decree of the demos, from a jar with the inscription "from the (bank) of Philon and Silenos, in (the archonship) of Demares, (the month) Aresion, the hieropoioi Polyxenos, Philippos, Silenos, Amphoterios deposited the capital of the loan which Hermon son of Solon paid back, 605 drs. I Y, ob., and the interest he said he owed, 242 drs. I ob".; the remainder in the jar is 347 drs. 2Y, ob. Total of what
- 95015 was withdrawn during our tenure of office: 11,553 drs., (2) ob. The rest we turned over to the hieropoioi after ourselves, Demetrios and Meilichides, 63,999 drs. 4 1/2 ob. We turned over also to the hieropoioi after ourselves the copper which we received from the treasurers Menyllos and Phokaieus, 3733 drs. 2 ob.
- C
- 95020 We received the following items **in the temple of Apollo** from the hieropoioi Krittis son of Nikarchos (and) Synonymos of Hierombrotos, in the presence of the boule and the secretary of the city Poseidikos son of Soteles, and the (secretary) of the hieropoioi Neokrontides son of Neokrontides, and we turned (these items) over to the hieropoioi after ourselves, Demetrios son of Timoxenos (and) Meilichides son of
- 95025 Kritoboulos, in the presence of the boule and the secretary of the city Telemnestos

son of Antigonos, and the (secretary) of the hieropoioi Timoxenos son of Timoxenos: a gold signet, with an image of Apollo in carnelian, which Stratonike 'll dedicated to Leto: weight 10 drs.; a gold necklace set with precious stones, which Stratonike dedicated to Leto, comprising 48 shield-shaped disks, and one (such disk) in two halves, and (two more) one on either side of the central piece, and 141 pendants: weight 106 drs.; a gold signet, which Stratonike dedicated to Apollo (and) Artemis, with an image of Nike; weight with the ring, 36 drs. 4 ob.; 3 miniature gold crowns, which Stratonike dedicated to the Graces, one without rings or fastenings, in pieces: weight 60 drs. 3 ob.; a gold ingot from the statue of Apollo: weight 98 drs. 3 ob.; another gold ingot from (the statues of) the three (Graces): weight 27 drs. 3 ob.; 3 gold coins of Philip; 1 of Alexander; coin from various places: weight 68 drs.; a gold drinking cup, dedication of Echenike: 3 64 weight 49 drs. 3 ob.; a gold crown of oak leaves, dedication of Lysander: 365 weight 63 drs. 3 ob.; a gold crown of ivy leaves, dedication of King Ptolemy, 366 in pieces, and five clusters: weight 107 drs.; a gold crown of bay leaves, dedication of King Demetrius: 367 weight 71 drs. 3 ob.; a gold crown of bay leaves, dedication of Polykleitos :361 weight 65 drs. 3 ob.; a gold crown of bay leaves, dedication of Philokles: 369 weight 77 drs. 3 ob.; a gold crown of ivy leaves, dedication of the Delians, three broken clusters: weight 76 drs.; a gold crown of myrtle, dedication of Lomilkos: 111 weight 21 drs. 3 ob.; a gold crown of bay leaves, dedication of King Antigonos: weight 26 drs.; golden snakeweed, dedication of Solon to Asklepios: weight 88 drs.; a gold crown of bay leaves, dedication of King Antigonos; a gold crown of bay leaves, dedication of Antipatros: weight 39 drs. 3 ob.; a gold crown of bay leaves, uninscribed: weight 37 drs.; a gold crown of bay leaves, dedication of Pharax: weight 43 drs.; a gold crown of bay leaves, dedication of Pnytagoras[?]: 3 7 1 weight 62 drs.; a new gold crown of bay leaves: weight 61 drs.; a gold ball in a case, dedication of Phila 17 1 daughter of Theodoros: weight 58 drs.; a gold crown of myrtle, dedication of Xenophantos: 171 weight 48 drs. 3 ob.; 2 tetradrachmas; one part-copper coin of Lysimachus; one coin of Antiochus; a drachma of Alexander; 18 silver signets and a small cup and handle, two with stones, one of iron: weight 34 drs.; 1 I gilt iron signets; a partly copper tetradrachm of Lysimachus; 5 phialai removed from cases: one a dedication of the Deliades, presented by the theoroi and the chief theoros Kleanax: another a dedication of the Pontic Chersonnetai, another a dedication of the Pontic Chersonnetai, another a dedication of Bacchios of Kolophon, another a dedication of the Pontic Chersonnetai - weight 480 drs.; 7 gold distaffs: weight 12 drs.; a tetradrachm of Lysimachus. (The inventory of the temple of Apollo continues for another 150 lines.)

D

From Charistias son of Antigonos (?), on behalf of his grandfather Nikomachos, the interest on the sacred money which he said his grandfather Nikomachos owed, on the loan he received from the hieropoioi Praximenes and Telesarchides, for the year of Demares, 100 drs.; and on behalf of Euthytime daughter of Diodotos, the interest he said he owed on the sacred money for the year of Demares, 39 drs. I Y, ob. From Aristoboulos son of Aristoboulos, on behalf of Orthokles son of Orthokles, the interest, arising from the guarantee made for the sacred money, which he said was his share, 80 drs. From Tlepolemos son of Amnes, the interest he said he owed on the sacred money, 101 drs. 3 ob. From Demochares son of Sotion, on behalf of Antichares son of Authosthenes, the amount (for which) he said his name had been entered by the hieropoioi in the archonship of Ariston for the cargo-discharge tax... From Diaktorides son of Aristotheos, the interest he said he owed on the sacred money, I I drs. 4 ob. From Glaukyrios son of Tharsagoras, on behalf of Ktesylis, the interest for the year of Demares, arising from the guarantee made for the sacred money, which he said Ktesylis owed, 9 drs. From Demokritos son of Parmenion, the amount (for which) he said the hieropoioi Kineas and Kallias entered his name for interest at one-sixth, 50 drs. From Phokaieus son of Leukinos, on behalf of his mother Aristako, the interest on the sacred money owing in the archonship of Demares...

E

We enter (the names of these debtors) also: Euphranor and his guarantor Aristeides son of Aristeides, (for) the amount he did not pay for rent on the sacred 'Episthenes' house,... and 24 drs. 2/3 ob.; and Dionysodoros son of Marathonios and his guarantor Demeas son of Phokritos, (for) the amount he did not pay for the ferry-toll to Rheneia, 62 drs.; and Antigonos son of Charistias, (for) the amount he did not pay for the harbor-tax, 19 drs.; and Orthokles son of Orthokles, for interest on the sacred money, one half the principal sum, 80 drs. If we have not entered any who are in debt to the god, we enter them and their guarantors as being in debt to the god.

TREASURE MAP: A GUIDE TO THE DELIAN INVENTORIES BY RICHARD HAMILTON

95095 Ann Arbor: University of Michigan Press. 2015. Pp. xiii, 479, 3 pls.
Hamilton's *TREASURE MAP*, published in 2015, is a paperback reprint of his 2000 study of the Delian and Athenian inscribed inventory lists of the classical and hellenistic periods.

95100 The bulk of the book deals with the little-studied, vast, and difficult Delian material that was mainly excavated on the island by the French School in the late nineteenth and early twentieth centuries. Despite the turmoil of two world wars, the corpus was published in an exemplary manner by legendary epigraphers F. Dürrbach, P. Roussel, and J. Coupry in the *Inscriptiones Graecae* XI,2 and *Inscriptions de Délos* volumes. It has been further studied by J. Tréheux and more recently by G. Reger and C. Prêtre among others. Translations of some texts have been provided by Prêtre et al. (in French) in *Nouveau choix d'Inscriptions de Délos: Lois, comptes et inventaires* (Athens and Paris 2002) and Hamilton (in English for the first time) in the volume under review here. Current work underway by L. Migeotte and the author of this review, among others, has aimed at improving some of the texts and providing commentaries on the objects listed.

95110 In the late 1990s Hamilton undertook the Herculean task of making some sense out of the Delian inventories. The book under review provided a much-needed "treasure map" for scholars wishing to navigate through this enormous and complex material. The introduction offers a brief overview of the history of Delos from the sixth century until its final devastation in 69 BC by pirates. It also poses the difficult question of the purpose of the inscribed annual inventories that were set up in the sanctuary from roughly 364 to shortly after 145 BC. These long and tedious texts meticulously recording dedications of varying values by dedicants from all walks of life, including rulers, the elite, and common worshippers, may appear at first glance to be a comprehensive record. A close reading of the documents suggests, however, that this was not the case, but rather, as T. Linders once put it, the texts seem to be "a symbol more than a record that the *hieropoioi* had fulfilled their duties." ¹
95115 Although I cannot pretend to have solved issues that have puzzled scholars for at least 100 years, I tend to agree with Linders and Hamilton, especially in light of the fact that my own research of the Delian texts and of excavation reports indicates that the treasures seem to have housed even more objects than the ones mentioned in the lists, and that further reorganizations of their holdings took place at later dates. The future publication of the buildings themselves by the French School will undoubtedly shed more light on this matter.

95120 Chapter One provides a discussion of the three major phases of the Delian inventories. The earliest inscribed lists were modeled after the Athenian inventories and date to the so-called Amphictyonic period, which ended in 314 BC. This was followed by the Delian independence (314-166) and eventually by the era of Athenian domination of the island that started in 166 and ended with the destruction of Apollo's sanctuary, first by Mithridates in 88 and eventually by pirates in 69. Six treasures are associated with the Amphictyonic period (Artemision, Temple of the Athenians, Temple of the Delians, bronze/iron/wood, Trireme, and Naxians). The texts that date to the period of Delian independence are much longer, significantly more detailed, and include more treasures (Artemision, Temple of Apollo, Temple of the Seven Statues, Poros Temple, Andrians, Hieropoion, Eileithyiaion, Chalkotheke, Neokorion, Temple of Hekate, Asklepieion, Temple of Aphrodite, and Graphe). Finally, the inscriptions of the Athenian period are laconic; only the fluctuating weights and not the materials of which the dedications were made are mentioned. These texts are
95140 associated with several more treasures (Andrians, Anios, Aphrodision, Apollo, Artemis on the Island, Artemision, Asklepieion, Egyptians, Eileithyiaion, Ekklesiasterion, Good Fortune, Great Gos/Samothrakeion, Gymnasium,

95150 ¹ T. Linders, "The Purpose of the Inventories", in D. Knoepfler (ed.), *Comptes et inventaires dans la cité grecque* (Neuchâtel 1988) 37-48, at 41.

95155 Heraion, Karystians, Kynthion, Letoon, Neorion, Oikos near the Diadoumenos, Oikos Near Ekklesiasterion, Poros Temple, Posideion, Prytaneion, Sarap[i]eion to Artemision, Temple of Seven Statues, Thesmophorion, and Twelve Gods). The rest of the chapter offers valuable observations on the contents, descriptions of weight, order of treasures, and shifts in the treatment of various dedications. It also offers comparisons among the phases of the treasuries and addresses questions on the completeness of the lists on the basis of Hamilton's close reading of the texts.

Chapter Two discusses in detail the five "core" treasures that Hamilton has identified as the most important, i.e., the Artemision, Athenian temple, Apollo, Hiropoion/Andrians, and Poros temple. These five housed the largest collections of precious votives, and also remained consistently used as treasures in all surviving inventory lists and presumably until the end of the sanctuary's life. Hamilton's research has shown that several reorganizations of the treasures took place within individual phases, each represented by a "master inventory", on which the rest relied, and that there was no formula for arranging the holdings of each depot. Chapter Three treats the minor Delian treasures. Chapters Two and Three together, the core of Hamilton's book, consist of a valuable catalogue of votives of the major and minor treasures based on the most important and better preserved inventories. Highlights of the catalogue include lists of objects and their life in the treasures, as deduced from the most important and better preserved inventories, as well as short commentaries and some corrections of the texts that appear in footnotes. The second part of Hamilton's book involves a similar and much-needed discussion of the treasures of the Athenian acropolis. The first chapter presents a history and short commentary on the Athenian inventories of the fifth and fourth centuries BC. and distinguishes several phases in the texts. It is followed by a lengthy catalogue of the objects in the Pronaos, Hekatompedon, the Parthenon, the Athena Treasure, the Treasure of the Other Gods, and the Old Temple. A conclusion presents a comparative study of the Delian and Athenian materials and offers important remarks: the inventory lists were not systematic and are only a reflection of the real fiscal transaction that was conducted elsewhere. Indeed, it would be a mistake to project our modern requirements for an inventory on the ancient world. Last, but not least, the lack of system did not affect the administration of the sanctuary, even though epigraphical evidence suggests that Delian audits could be confusing. On the other hand, the Athenian texts strongly suggest that they were part of a large and complex organization since their fiscal function required them to be accurate. Eight valuable appendices cover, among other things: discussions of terms and terminology; the translation of some terms, especially involving the description of precious materials, which has always been a challenge to scholars; a number of Tréheux's improved texts (ID 135, 137, 145, 147, 150, 154, and inv. 765); commentaries on the Hieropoion/Oikos of Andrians and of other non-precious Delian inventories; observations on the weighed and unweighed objects; topographic labels in major Delian inventories; an analysis of the Athenian Treasurers of the Other Gods; a list of phialae endowments; a list of the Acropolis Inventories after 341 BC.; and finally indices of objects in the Acropolis and the Delian Treasures. Hamilton's work on ancient inventories is and will remain one of the fundamental studies of these complex and difficult texts. The author should be congratulated for providing historians and art historians with an important and timely tool that allows for a more nuanced reading of these documents, a better understanding of sanctuary administration, bureaucracy, and religion, and a reference work for those studying luxury arts.

ciuitas sidona milia viii
inde sarepta milia viiii.

95610 Ibi helias ad uiduam ascendit et petiit sibi cibum.

Mutatio ad nonum milia iiii
[584] ciuitas tyro milia xii.

95615 Fit ab antiochia tyro usque milia clxxiiii, mutationes xx, mansiones xi.

Mutatio alexandroschene milia xii
mutatio ecdeppa milia xii
ciuitas ptolomaida milia viii
mutatio calamon milia xii
95620 mansio sicaminos milia iii.

[585] Ibi est mons carmelus, ibi helias sacrificium faciebat.
Mutatio certha milia viii.

95625 Fines syriae finices et palestinae.

Ciuitas caesarea palestina id est iudaea milia viii.

95630 Fit a tyro caesarea palestina milia lxxiii, mutationes ii, mansiones iii.

Ibi est balneus cornelii centurionis, qui multas elymosynas faciebat.

Inde est tertio miliario [586] mons syna, ubi fons est, in quem mulier est lauerit,
grauida fit.

95635 Ciuitas maximianopoli milia xviii
ciuitas isdradela milia x.

95640 Ibi sedit achab rex et helias prophetauit; ibi est campus, ubi dauid goliath occidit.

Ciuitas scithopoli milia xii
[587] aser, ubi fuit uilla iob milia xvi
civitas Neapoli milia xv.

95645 Ibi est mons agazaren: ibi dicunt samaritani abraham sacrificium obtulisse, et
ascenduntur usque ad summum montem gradi numero mccc.

Inde ad pedem montis ipsius locus est, cui nomen est sechim.

95650 Ibi est monumentum, ubi positus est [588] ioseph in uilla, quam dedit ei iacob pater
eius.
Inde rapta est et dina filia iacob a filiis amorreorum.

95655 Inde passus mille locus est cui nomen sechar, unde descendit mulier samaritana ad
eundem locum, ubi iacob puteum fodit, ut de eo aquam impleret, et dominus noster
iesus christus cum ea locutus est; ubi sunt et arbores platani, quas plantauit iacob,
et balneus, qui de eo puteo lauatur.

95660 Inde milia xxviii euntibus hierusalem in parte sinistra est uilla, quae dicitur
bethar.

Inde passus mille est locus, ubi iacob, cum iret in mesopotamiam, addormiuit, et ibi
est arbor amigdala, et uidit uisum et angelus cum eo luctatus est.

95665 Ibi fuit rex hieroboam, ad quem missus propheta, ut conuerteretur ad deum [589]
excelsum; et iussum fuerat prophetae, ne cum pseudopropheta, quem se cum rex
habebat, manducaret, et quia seductus est a pseudopropheta et cum eo manducauit
rediens, occurrit prophetae leo in uia et occidit eum.

95670 Inde hierusalem milia xii.

Fit a caesarea palestina hierusalem usque milia cxvi, mansiones iiii, mutationes iiii.

95675 Sunt in hierusalem piscinae magnae duae ad latus templi, id est una ad dexteram, alia ad sinistram, quas salomon fecit, interius uero ciuitati sunt piscinae gemellares quinque porticus habentes, quae appellantur behtsaida.

Ibi aegri multorum annorum sanabantur.

95680 Aquam autem habent hae piscinae in modum coccini turbatam.

Est ibi et cripta, ubi salomon daemones torquebat.

95685 Ibi est anglus [590] turris excelsissimae, ubi dominus ascendit et dixit ei is, qui temptabat eum, et ait ei dominus: non temptabis dominum deum tuum, sed illi soli seruias.

Ibi est et lapis angularis mangus, de quo dictum est: lapidem, quem reprobauerunt aedificantes, hic factus est ad caput anguli.

95690 Et sub pinna turris ipsius sunt cubacula plurima, ubi salomon palatium habebat.

Ibi etiam constat cubiculus, in quo sedit et sapientiam descripsit; ipse uero cubiculus uno lapide est tectus.

95695 Sunt ibi et excepturia magna aquae subterraneae et piscinae magno opere aedificatae.

Et [591] in aede ipsa, ubi templum fuit, quem salomon aedificauit, in marmore ante aram sanguinem zachariae ibi dicas hodie fusum; etiam parent uestigia clauorum militum, qui eum occiderunt, per totam aream, ut putes in cera fixum esse.

95700 Sunt ibi et statuae duae hadriani; est et non longe de statuas lapis pertusus, ad quem ueniunt iudaei singulis annis et unguent eum et lamentant se cum gemitu et uestimenta sua scindunt et sic recedunt.

95705 Est ibi et domus ezechiae regis iudae.

Item exeuntibus hierusalem, ut ascendas sion, in parte sinistra [592] et deorsum in ualle iuxta murum est piscina, quae dicitur siloa; habet quadriporticum; et alia piscina grandis foras.

95710 Haec fons sex diebus atque noctibus currit, septima uero die est sabbatum: in totum nec nocte nec die currit.

95715 In eadem ascenditur sion et paret ubi fuit domus caifae sacerdotis, et columna adhuc ibi est, in qua christum flagellis ceciderunt.

Intus autem intra murum sion paret locus, ubi palatium habuit dauid.

95720 Et septem synagogae, quae illic fuerunt, una tantum remansit, reliquae autem arantur et seminantur, sicut isaias propheta [593] dixit.

Inde ut eas foris murum de sion, euntibus ad portam neapolitanam ad partem dextram deorsum in ualle sunt parietes, ubi domus fuit siue praetorium pontii pilati; ibi dominus auditus est, antequam pateretur.

95725 A sinistra autem parte est monticulus golgotha, ubi dominus crucifixus est.

[594] Inde quasi ad lapidem missum est cripta, ubi corpus eius positum fuit et tertia die resurrexit; ibidem modo iussu constantini imperatoris basilica facta est, id est dominicum, mirae pulchritudinis habens ad latus excepturia, unde aqua leuatur, et balneum a tergo, ubi infantes lauantur.

95735 Item ad hierusalem euntibus ad portam, quae est contra orientem, ut ascendatur in monte oliueti, uallis, quae dicitur iosafath, ad partem sinistram, ubi sunt uineae, est et petra ubi iudas scarioth christum tradidit: a parte uero [595] dextra est arbor palmae, de qua infantes ramos tulerunt et ueniente christo substrauerunt.

- Inde non longe quasi ad lapidis missum sunt monumenta duo monubiles mirae pulchritudinis facta: in unum positus est isaias propheta, qui est uere monolitus, et
95740 in alio ezechias rex iudaeorum.
Inde ascendis in montem oliueti, ubi dominus ante passionem apostolos docuit: ibi facta est basilica iussu constantini.
- Inde non longe est monticulus, ubi dominus ascendit orare et apparuit illic moyses et
95745 helias, quando petrum [596] et iohannem se cum duxit.
- Inde ad orientem passus mille quingentos est uilla, quae appellatur bethania; est ibi cripta, ubi lazarus positus fuit, quem dominus suscitauit.
- 95750 Item ad hierusalem in hiericho milia xviii.
- Descendentibus montem in parte dextra retro monumentum est arbor sicomori, in qua zachaeus ascendit, ut christum uideret.
- 95755 A ciuitate, passus mille quingentos est ibi fons helisei prophetae.
- Antea si qua mulier ex ipsa aqua bibebat, non faciebat natos.
- Adlatum est uas fictile heliseo, misit in eo sales et uenit et stetit super fontem et
95760 dixit: haec dicit dominus: sanauit aquas has.
- Ex eo si qua mulier inde biberit, filios faciet.
- 95765 Supra eundem uero fontem [597] est domus rachab fornicariae, ad quam exploratores introierunt et occultauit eos, quando hiericho euersa est, et sola euasit.
- Ibi fuit ciuitas hiericho, cuius muros gyrauerunt cum arca testamenti filii israel et ceciderunt muri.
- Ex eo non paret nisi locus, ubi fuit arca testamenti et lapides xii, quos filii
95770 israel de iordane leuauerunt.
- Ibidem iesus filius naue circumcidit filios israel.
- Et circumcisiones eorum sepeliuit.
- 95775 Item ad hiericho ad mare mortuum milia nouem.
- Est aqua ipsius ualde amarissima, ubi in totum nullius generis piscis est nec aliqua nauis, et si qui hominum miserit se, ut natet, ipsa aqua eum uersat.
- 95780 [598] Inde ad iordane, ubi dominus a iohanne baptizatus est, milia quinque.
- Ibi est locus super flumen, monticulus in illa ripa, ubi raptus est helias in caelum.
- 95785 Item ab hierusalem euntibus behtleem milia quattuor super strata in parte dextra est monumentum, ubi rachel posita est, uxor iacob.
- Inde milia duo a parte sinistra est bethleem, ubi natus est dominus iesus christus; ibi basilica facta est iussu constantini.
- 95790 Inde non longe est monumentum ezechiel.
- Asaph, iob et iesse, dauid, salomon, et habet in ipsa cripta ad latus deorsum descendentibus hebraeis litteris scriptum nomina supra scripta.
- 95795 [599] Inde bethasora milia xiiii, ubi est fons, in quo philippus eunuchum baptizauit.
- Inde terebinto milia viiii, ubi abraham habitauit et puteum fodit sub arbore terebintho et cum angelis locutus est et cibum sumpsit; ibi basilica facta est iussu
95800 constantini mirae pulchritudinis.
- Inde terebinto cebron milia ii, ubi est memoria per quadrum ex lapidibus mirae pulchritudinis, in qua positi sunt abraham, isaac, iacob, sarra, rebecca et lia.

- 95805 [600] Item ab hierusolyma, sic:
 ciuitas nicopoli milia xxii
 ciuitas lidda milia x
 mutatio antipatrida milia x

Explicit itinerarium.

96000

AN ITINERARY

[549] An itinerary from Bordeaux to Jerusalem, and from Heraclea (Eregli) through Aulon (Valona), and through the city of Rome to Milan. As follows:

The city of Bordigala (Bordeaux), where is the river Garonne, in which the ocean ebbs and flows for one hundred leagues, more or less.

[550] Change at Stomatae (Castres) - leagues vii.

Change at Senone (Sirio, Pont de Ciron) - leagues ix.

City of Vasates (Cossio, Bazas) - leagues viii.

Change at Three Trees - leagues v.

Change at Oscineium (Houeilles ?) - leagues viii.

Change at Scotium (Sotium, Sos) - leagues viii.

Town of Elusa (Eauze) - leagues viii.

Change at Vanesia - leagues xii.

City of Auscius (Climberrum, Augusta Auscorum, Auch) - leagues viii.

Change at the sixth league - leagues vi.

Change at Hungunverrum - leagues vii.

Change at Buccones (L'Isle en Jourdain ?) - leagues vii.

[551] Change at the Temple of Jupiter - leagues vii.

City of Tolosa (Toulouse) - leagues vii.

Change at the ninth milestone - miles ix.

Change at the twentieth milestone - miles xi.

Halt at Elusio - miles ix.

Change at Sostomagus (Castelnaudary ?) - miles ix.

Town of Hebromagus (Bram) - miles x.

Change at Caedri - miles vi.

Fortress of Carcasso (Carcassonne) - miles viii.

Change at the three-hundredth milestone - miles viii.

[552] Change at Hosuerbas - miles xv.

City of Narbo (Narbonne) - miles xv.

City of Beterrae (Baeterrae, Béziers) - miles xvi.

Halt at Cessaro (Cessero, Araura, St. Thibéry) - miles xii.

Change at Forum Domiti - miles xviii.

Change at Sustantio (Sextantio, Soustantion) - miles xv.

Change at Ambrosius (Ambrussum) - miles xv.

City of Nemausus (Nîmes) - miles xv.

Change at Pons Herarus (Aerarius, Bellegarde) - miles xvi.

City of Arelate (Arles) - miles viii.

[553] Total from Bordeaux to Arles 372 miles, 30 changes, 11 halting-places.

Change at Arnago (Ernaginum, St. Gabriel) - miles viii.

Change at Bruttus alius - miles xii.
96400 Change at Alcobilis - miles xii.
City of Berytus (Beirut) - miles xii.
Change at Heldua (Khan Khulda) - miles xii.
Change at Porphyriion (Porphyreon) - miles viii.
City of Sidon (Saida) - miles viii.
96405 Thence to Sarepta - miles ix.
- Here Helias went up to the widow and begged food for himself (1Kings 17:1-16; Luke 4:23-30).
- 96410 Change at 'ad Nonum' (at the ninth milestone?) - miles iv.
[584] City of Tyre (Sur) - miles xii.
- Total from Antioch to Tyre 174 miles, 20 changes, 11 halts.
- 96415 Change at Alexandroschene - miles xii.
Change at Ecdeppa (Achzib, ez-Zib) - miles xii.
City of Ptolemais (Accho, Akka, St. Jean d 'Acre) - miles ix.
Change at Calamon - miles xii.
Halt at Sycaminos (Haifa) - miles iii.
- 96420 [585] Here is the Mount Carmel, where Helias offered sacrifice (1Kings 18:19-40).
- Change at Certa - miles viii.
- 96425 Frontier of Syria, Phoenicia, and Palestine.
- City of Caesarea Palaestinae (Kaisarieh), that is, Judaea - miles viii.
Total from Tyre to Caesarea Palaestina 73 miles, 2 changes, 3 halts.
- 96430 Here is the bath (balneus) of Cornelius the centurion who gave many alms (Acts 10:2; 47-48).
- At the third milestone from thence is the [586] mountain Syna, where there is a fountain, in which, if a woman bathes, she becomes pregnant.
- 96435 City of Maximianopolis - miles xviii.
City of Stradela (Jezreel, Zerin) - miles x.
- 96440 Here reigned King Achab (Ahab), and here Helias prophesied (1 Kings 17,1ff). Here is the field in which David slew Goliath (Ayn Jalud ?) (1 Sam 17:49-51).
- City of Scythopolis (Bethshean, Beisan) - miles xii.
[587] Aser (Teyasir), where was the house of Job - miles vi.
City of Neapolis (Nablus) - miles xv.
- 96445 Here is the Mount Gerizim. Here the Samaritans say that Abraham offered sacrifice (Mount Moriah), and one reaches the top of the mountain by steps, three hundred in number. Beyond this, at the foot of the mountain itself, is a place called Sichem. Here is a tomb in which [588] Joseph is laid, in the 'parcel of ground' (villa) which Jacob his father gave to him (Jos 24:32). From thence Dinah, the daughter of Jacob, was carried off by the children of the Amorites (Gen 34:1-31). A mile from thence is a place named Sichar, from which the woman of Samaria came down to the same place in which Jacob dug the well, to draw water from it, and our Lord Jesus Christ talked with her (John 4:1-42); in which place are plane-trees, which Jacob planted, and a bath (balneus - baptistry) which is supplied with water from the well.
- 96455 Twenty-eight miles from thence on the left hand, as one goes towards Jerusalem, is a village (villa) named Bethar (Bethel, Beitin). A mile from thence is the place where Jacob slept when he was journeying into Mesopotamia (Gen 28:10-22), and here is the almond tree; here Jacob saw the vision and the angel wrestled with him (Gen 32:22-32). Here was King Jeroboam when the prophet was sent to him, that he should turn himself to the [589] Most High God; and the prophet was ordered not to eat bread with the false prophet whom the king had with him, and because he was beguiled by the false prophet and ate bread with him, as he was returning a lion fell upon the prophet on the way and slew him (1Kings 13:1-34).
- 96460

Thence to Jerusalem - miles xii.

96465

Total from Caesarea Palaestina to Jerusalem 116 miles, 4 halts, 4 changes.

Thence to Jerusalem - miles xii.

96470

Total from Caesarea Palaestina to Jerusalem 116 miles, 4 halts, 4 changes.

There are in Jerusalem two large pools (piscinae) at the side of the temple (ad latus templi), that is, one upon the right hand, and one upon the left, which were made by Solomon; and further in the city are twin pools (piscinae gemellares), with five porticoes, which are called Bethsaida (John 5:2-18). There persons who have been sick for many years are cured; the pools contain water which is red when it is disturbed. There is also here a crypt, in which Solomon used to torture devils.

96475

Here is also the corner of [590] an exceeding high tower, where our Lord ascended and the tempter said to Him, 'If thou be the Son of God, cast thyself down from hence.' And the Lord answered, 'Thou shalt not tempt the Lord thy God, but him only shalt thou serve.' (Matt 4:1-11). There is a great corner-stone, of which it was said, 'The stone which the builders rejected is become the head of the corner.' (Matt 21:42; cfr. Ps 118:22). Under the pinnacle (pinna) of the tower are many rooms, and here was Solomon's palace. There also is the chamber in which he sate and wrote the (Book of) Wisdom; this chamber is covered with a single stone. There are also large subterranean reservoirs for water and pools constructed with great labour. And [591] in the building (in aede) itself, where stood the temple which Solomon built, they say that the blood of Zacharias (Matt 23:35; cfr. Luke 11:51) which was shed upon the stone pavement before the altar remains to this day. There are also to be seen the marks of the nails in the shoes of the soldiers who slew him, throughout the whole enclosure, so plain that you would think they were impressed upon wax. There are two statues of Hadrian, and not far from the statues there is a perforated stone, to which the Jews come every year and anoint it, bewail themselves with groans, rend their garments, and so depart. There also is the house of Hezekiah King of Judah.

96480

96485

96490

96495

Also as you come out of Jerusalem to go up Mount Sion, on the left hand, [592] below in the valley, beside the wall, is a pool which is called Siloe (John 9:1-11) and has four porticoes; and there is another large pool outside it. This spring runs for six days and nights, but on the seventh day, which is the Sabbath, it does not run at all, either by day or by night. On this side one goes up Sion, and sees where the house of Caiaphas the priest was (Mt 26:57-68), and there still stands a column against which Christ was beaten with rods. Within, however, inside the wall of Sion, is seen the place where was David's palace. Of seven synagogues which once were there, one alone remains; the rest are ploughed over and sown upon, as said [593] Isaiah the prophet (Is 1:2.4-8; Michah 3:9-12).

96500

96505

From thence as you go out of the wall of Sion, as you walk towards the gate of Neapolis, towards the right, below in the valley, are walls, where was the house or praetorium of Pontius Pilate (Matt 27:11-31). Here our Lord was tried before His passion. On the left hand is the little hill of Golgotha where the Lord was crucified (Matt 27:33-37). [594] About a stone's throw from thence is a vault (crypta) wherein His body was laid, and rose again on the third day (Matt 27:57-60; 28:1-10). There, at present, by the command of the Emperor Constantine (iussu Constantini), has been built a basilica, that is to say, a church (dominicum) of wondrous beauty, having at the side reservoirs (excepturia) from which water is raised, and a bath behind in which infants are washed (baptized).

96510

96515

Also as one goes from Jerusalem to the gate which is to the eastward, in order to ascend the Mount of Olives, is the valley called that of Josaphat. Towards the left, where are vineyards, is a stone at the place where Judas Iscariot betrayed Christ (Matt 26,36-50); on the [595] right is a palm-tree, branches of which the children carried off and strewed in the way when Christ came (Matt 31:8). Not far from thence, about a stone's-throw, are two notable tombs of wondrous beauty; in the one, which is a true monolith, lies Isaiah the prophet, and in the other Hezekiah, King of the Jews.

96520

96525

From thence you ascend to the Mount of Olives, where before the Passion, the Lord taught His disciples (Matt 24-25). There by the orders of Constantine a basilica of wondrous beauty has been built. Not far from thence is the little hill which the Lord ascended to pray, when he took Peter [596] and John with Him, and Moses and Elias

- 96530 were beheld.
- A mile and a half to the eastward is the village (villa) called Bethany. There is a vault (crypta) in which Lazarus, whom the Lord raised, was laid (John 11:1-44).
- 96535 From Jerusalem to Jericho (Ariha) - miles xviii.
- On the right hand side, as one descends from the mount, behind a tomb, is the sycamore tree into which Zacchaeus climbed that he might see Christ (Luke 19:1-10). A mile-and-a-half from the town is the fountain of Elisha. Formerly if any woman drank of it she did not bear children. Beside it lies an earthenware vessel. Elisha threw salt into it, and came and stood over the fountain and said, 'Thus saith the Lord, I have cleansed these waters, and if any woman drink of this fountain she shall bear children.' (2 Kings 2,1-22).
- 96540
- Above the same fountain [597] is the house of the harlot Rahab, to whom the spies came, and she hid them (Jos 2:1-21; Heb 11:17-40), and alone was saved when Jericho was destroyed. Here stood the city of Jericho, round whose walls the children of Israel circled with the Ark of the Covenant, and the walls fell down (Jos 6:1-25). Nothing is to be seen of it except the place where the Ark of the Covenant stood, and the twelve stones which the children of Israel brought out of Jordan (Jos 4:1-24).
- 96550 There Jesus, the son of Nave (Joshua the son of Nun), circumcised the children of Israel and buried their foreskins (Jos 5:2-9).
- From Jericho (Ariha) to the Dead sea- miles ix.
- 96555 The water of it is very bitter, and in it there is no kind of fish whatever, nor any vessel; and if a man casts himself into it in order to swim, the water turns him over.
- 96560 [598] From thence to the Jordan, where the Lord was baptized by John (Matt 3:13-17) - miles v.
- There is a place by the river, a little hill upon the further (left) bank, from which Elijah was caught up into heaven (2 Kings 2:1-15).
- 96565 From Jerusalem going to Bethlehem (Beit Lahm) - miles vi.
- On the road, on the right hand, is a tomb, in which lies Rachel, the wife of Jacob (Gen 35:16-20; Matt 2:16-18). Two miles from thence, on the left hand, is Bethlehem, where our Lord Jesus Christ was born (Matt 2:18-25; Luke 2:1-7). A basilica has been built there by the orders of Constantine. Not far from thence is the tomb of Ezekiel, Asaph, Job, Jesse, David, and Solomon, whose names are inscribed in Hebrew letters upon the wall as you go down into the vault itself.
- 96570
- [599] From thence to Bethasora (Bethzur, Beit Sur) - miles xiv.
- 96575 There is the fountain in which Philip baptized the eunuch (Acts 8:26-40).
- Thence to Terebinthus (Mamre, Ramet el-Khalil) - miles viii.
- 96580 Here Abraham dwelt, and dug a well under a terebinth tree, and spoke with angels, and ate food with them (Gen 18:1-14). Here a basilica of wondrous beauty has been built by the command of Constantine.
- From Terebinthus (Ramet el-Khalil) to Hebron (el-Khalil) - miles ii.
- 96585 Here is a monument (memoria) of square form built of stone of wondrous beauty, in which lie Abraham, Isaac, Jacob, Sara, Rebecca, and Leah (Gen 23:1-19; 25:7-10; 49:29-43).
- 96590 [600] From Jerusalem as follows:
- City of Nicopolis (Amwas) - miles xxii.
City of Lydda (Ludd) - miles x.
Change at Antipatris (Ras el-Ain) - miles x.
- 96595 Change at Betthar (Tireh) - miles x.

Naspeuringen van Paul Theelen: Constantinus Imperator

City of Caesarea (Kaisarieh) - miles xvi.

[601] Total from Constantinople to Jerusalem 1,159 miles, 69 changes, 58 halts.

96600 Also through Nicopolis (Amwas) to Caesarea (Kaisarieh) 73 miles, 5 changes, 3 halts.

Also from Heraclea (Eregli) through Macedonia.

Change at Erea (Heraeum) - miles xvi.

Halt at Registus (Resistus, Bisanthe, Rodosto) - miles xii.

96605 Change at Bedizum (Beodizum) - miles xii.

City of Apri (Ainajik) - miles xii.

[602] Change at Zesutera - miles xii.

Frontier of Europe and Rhodope.

96610

Halt at Sirogelli (Syracellae, Malgara) - miles x.

Change at Drippa - miles xiv.

Halt at Gypsela (Cypsela, Ipsala) - miles xii.

Change at Demas (Dymae, Kaladerkos) - miles xii.

96615 City of Trajanopolis - miles xiii.

Change at Unimpara (Tempyra) - miles viii.

Change at Salei - miles vii.

Change at Melalicum (Milolitum) - miles viii.

Halt at Berozicha (Brendice, Brizice) - miles xv.

96620 [603] Change at Breierophara - miles x.

City of Maximianopolis (Porsulae, Pyrsoalis, Impara, near Gumuljina) - miles x.

Change at Dio(medes's) stables (Buru Kaleh) - miles xii.

Change at Rumbodona (Kurusu Yenijeh) - miles x.

City of Epirus (Topiris, Karaguz) - miles x.

96625 Change at Purdi (Sarichoban) - miles viii.

Frontier of Rhodope and Macedonia

Halt at Hercontroma (Acontisma) - miles ix.

Change at Neapolis (Kavala) - miles ix.

96630 City of Philippi (Crenides, Filibeh) - miles x.

[604] Here Paul and Silas were imprisoned (Acts 16:23).

Change at the twelfth milestone - miles xii.

96635 Halt at Domeros (Pervista) - miles vii.

City of Amphipolis (Yeni Keui) - miles xiii.

Change at Pennana - miles x.

Change at Euripides (Arethusa, Vrastra) - miles x.

96640 Here is buried the poet Euripides.

[605] Halt at Appollonia (Polina) - miles xi.

Change at Heracleustibus (Heracleus Stibos) - miles xi.

Change at Duodea - miles xiv.

96645 City of Thessalonica (Saloniki) - miles xiii.

Change at the tenth milestone - miles x.

Change at the Bridge (over the Axius, Wardar Su) - miles x.

[606] City of Pella (Ala Kilisseh, Yenikeui), whence came Alexander the Great of Macedonia - miles x.

96650 Change at Scurio (Cyrius, Cyrrhus, Palaeo Kastro ?) - miles xv.

City of Edessa (Vodena) - miles xv.

Change at the twelfth milestone (Ostrovo) - miles xii.

Halt at Cellis - miles xvi.

Change at Grande (Florina) - miles xiv.

96655 Change at Melitonius (Dragosch) - miles xiv.

City of Heraclea (Heraclea Lyncestis, Toli Monastir) - miles xiii.

[607] Change at Parambole (Caste, Nicia) - miles xii.

Change at Brucida (Brucias, Brygias) - miles xix.

96660 Frontier of Macedonia and Epirus.

City of Cleto (Lychnidus, Ochrida) - miles xiii.

- Change at Patrae - miles xii.
Halt at Claudanum (Claudanum, Kükëseh) - miles iv.
Change at Tabernae (Tres Tabernae, Juru) - miles ix.
- 96665 Halt at Grandavia (Diana Candavia) - miles ix.
[608] Change at the crossing (of the Genusus, Sakumbi Su) - miles ix.
Halt at Hiscampis (Scampae, El Bassan) - miles ix.
Change at the fifth milestone - miles vi.
Halt at Coladiana (Clodiana, on the Devol Su) - miles xv.
- 96670 Halt at Marusium - miles xv.
Halt at Absos (on the Apous, Usumi Su) - miles xiv.
Change at Stephanaphana (Dukanasi) - miles xii.
City of Apollonia (Polina) - miles xviii.
Change at Stephana (Goritza) - miles xii.
- 96675 Halt at Aulon (Valona). Sea passage - miles x.
Halt at Aulon (Valona). Sea passage - miles x.
[609] Total from Heraclea (Eregli) through Macedonia to Aulon (Valona) 688 miles, 58 changes, 25 halts.
- 96680 Crossing the sea, a thousand stadia, which makes a hundred miles, you come to Hydrontum (Hydruntum, Otranto), and halt a mile farther.
- 96685 Change at the twelfth milestone Halt at Clipeae (Lupiae, Lecce) - miles xiii.
Change at Valentia (Baletium, Baleso) - miles xiii.
City of Brindisium (Brundisium, Brindisi) - miles xi.
Halt at Spilenees (Speluncae) - miles xiv.
Change at the tenth milestone (Pto. Villa Nova) - miles xi.
City of Leonatia (Gnatia, Egnatia, Agnazzo) - miles x.
- 96690 Change at Turres Auriliana (San Vito) - miles xv.
Change at Turres Julianae - miles ix.
City of Beroes (Barium, Bari) - miles xi.
Change at Butontones (Butuntum, Bitonto) - miles xi.
[610] City of Rubi (Ruvo) - miles xi.
- 96695 Change at the fifteenth milestone - miles xv.
City of Canusium (Canosa) - miles xv.
Change at the eleventh milestone - miles xi.
City of Serdonis (Herdonea, Ordonia) - miles xv.
City of Aecae (Troja) - miles xviii.
- 96700 Change at Aquilo - miles x.
Frontier of Apulia and Campania.
- 96705 Halt at Equus Magnus (Equus Tuticus, S. Eleuterio) - miles viii.
Change at the village of Fornum Novum (Forum Novum, Buon Albergo) - miles xii.
City of Beneventum (Benevento) - miles x.
City and halt at Claudii (Caudium, Casta Cauda) - miles xii.
Change at Novae - miles ix.
City of Capua (Capua) - miles xii.
- 96710 [611] Total from Aulon (Valona) to Capua 289 miles, 25 changes, 13 halts.
- 96715 Change at the eighth milestone - miles viii.
Change at Pons Campanus (over the Savone River) - miles ix.
City of Sonuessa (Sinuessa, Mondragone) - miles ix.
City of Menturnae (Minturnae, on the Liris) - miles ix.
City of Formi (Mola di Gaeta) - miles ix.
City of Fundi (Fondi) - miles xii.
City of Tarracina (Terracina) - miles xiii.
- 96720 Change at Mediae (Posta di Mesa) - miles x.
Change at Forum Appi (Foro Appio) - miles ix.
[612] Change at Sponsae - miles vii.
City of Aricia (Ariccia) and Albana (Albanum, Albano) - miles xvi
- 96725 Change at the ninth milestone - miles vii.
To the city of Rome - miles ix.
- Total from Capua to the city of Rome 136 miles, 14 changes, 9 halts.

96730 Total from Heraclea (Eregli) through Aulon (Valona) to the city of Rome 1,113 miles, 117 changes, 46 halts.

To the City of Mediolanum (Milan).
 Change at Rubrae (Saxa Rubra, Prima Porta) - miles ix.
 [613] Change at the twentieth milestone - miles xiv.
 96735 Change at Aqua Viva - miles xii.
 City of Utriculo, halt (Ocriculum, Otricoli) - miles xii.
 City of Narnia (Narni) - miles xii.
 City of Interamna (Terni) - miles viii.
 Change at Tres Tabernae - miles iii.
 96740 Change at Fanum Fugitivi (La Somma) - miles x.
 City of Spolitio (Spoletium, Spoleto) - miles vii.
 Change at Sacraria (Clitumnus, Le Vene) - miles viii.
 City of Trevi (Trebis, Trevi) - miles iv.
 City of Fulgini (Fulginium, Foligno) - miles v.
 96745 [614] City of Forum Flamini (S. Giovanni pro Fiamma) - miles iii.
 City of Nocerina (Nuceria, Nocera) - miles xii.
 City of Pitanis (Tadinum, Gualdo Tadino) - miles viii.
 Halt at Herbellum (Helvillum Sigillo) - miles vii.
 Change at Hesis (Aesis, Scheggia) - miles x.
 96750 Change at Cale (Cales, Cagli) - miles xiv.
 Change at Intercisa (Petra Pertusa, Passo del Furlo) - miles ix.
 [615] City of Forum Semproni (Fossombrone) - miles ix.
 Change at the eighth milestone - miles ix.
 City of Fanum Fortunae (Fano) - miles viii.
 96755 City of Pisaurum (Pesaro) - miles xxiv.

... to Riminum (Ariminum, Rimini)
 Change at Conpetus (Ad Confluentes, Savignano) - miles xii.
 City of Cesena (Caesena, Cesena) - miles vi.
 96760 [616] City of Forum Populi (Forum Popilii, Forlì) - miles vi.
 City of Forum Livi (F. Livii, Forlì) - miles vi.
 City of Faventia (Faenza) - miles v.
 City of Forum Corneli (F. Corneli, Imola) - miles x.
 City of Claternum (Claterna, S. Nicolo') - miles xiii.
 96765 City of Bononia (Bologna) - miles x.
 Change at Mediae - miles xv.
 Change at Victoriolae - miles x.
 City of Mutina (Mutina, Modena) - miles iii.
 Change at the bridge over the Secia (Tresinaro) - miles v.
 96770 City of Regio (Regium Lepidum, Reggio) - miles viii.
 Change at Canneto (Tannetum, Tanneto) - miles x.
 City of Parma (Parma) - miles viii.
 Change at the river Tarus (Taro) - miles vii.
 Halt at Fidentia (Borgo San Donnino) - miles viii.
 96775 Change at Fonticuli (Alla Fontana) - miles viii.
 City of Placentia (Piacenza) - miles xiii.
 [617] Change at Rota (Quadrata) - miles xi.
 Change at Tres Tabernae - miles v.
 City of Laude (Laus Pompeia, Lodi Vecchio) - miles ix.
 96780 Change at the ninth milestone - miles vii.
 City of Mediolanum (Milan) - miles vii.

Sum total from the city of Rome to Mediolanum (Milan) 416 miles, 42 changes, 24 halts.

96790 **ITINERARY FROM BORDEAUX TO JERUSALEM (in 333)**

INTRODUCTION.

The name of the author of the 'Itinerary from Bordeaux to Jerusalem' is unknown; he

96795 was possibly a native of Guienne, perhaps of Bordeaux itself; and he was in all probability a Christian, for, until the Holy Land is reached, the 'Itinerary' differs little from the bare official tables of the 'Antonine Itinerary'. The journey was made in 333 AD, when Flavius Valerius Dalmatius (brother of the Emperor Constantine) and Marcus Aurelius Zenophilus were joint Consuls. The 'Itinerary' is the earliest record of a pilgrimage extant, and that part of it which relates to the Holy Places 96800 is highly interesting and instructive from the marked absence of those minor traditions that collected round every sacred site during the fifth and sixth centuries. We hear nothing, for instance, of the cross and its adoration; of the lance; of the crown of thorns; or of other relics. With the single exception of the Column of the Flagellation, places made memorable by some event in sacred history are 96805 alone mentioned; and the legendary sites noticed, such as the crypt in which Solomon tortured the devils, and the chamber in which he wrote the Book of Wisdom, are connected with Jewish, not Christian history, and cluster round the Temple of the Jews, rather than round the Tomb of Christ.

The Pilgrim seems to have gone to the Holy Land like Origen, 'to search after the footsteps of Jesus, and His disciples, and the prophets'; or, perhaps, in the spirit of Constantine's mother, 'to seek knowledge of a land so worthy of veneration', and to 'render thanksgivings with prayers' on ground hallowed by the Saviour's feet, in accordance with the words of the Psalmist, 'Let us worship at the place whereon His feet have stood'. Such, at any rate, appear to have been the guiding motives of the 96815 earliest pilgrims, who were as much earnest seekers after knowledge as devotees. Alexander, the first pilgrim of whom there is any record, is stated to have gone to Palestine 'for the sake of prayer, and of obtaining knowledge of the (holy) places by inquiry'; and even as late as 386 AD we find the same view expressed more fully by Jerome, in the Epistle of Paula and Eustochium to Marcella. 'It would be tedious now 96820 to run through every age from the ascension of the Lord to the present day, and enumerate the bishops, the martyrs, the men eloquent in ecclesiastical learning, who have come to Jerusalem because they thought that they had less religion, less knowledge, and had not, as the phrase is, received the finishing stroke of their virtues, unless they had adored Christ in those places whence the Gospel had first 96825 shone forth from the Cross'. The feeling which prompted these early pilgrims to visit the Holy Land, and especially Jerusalem, has been happily caught by Keble, and faithfully expressed in the beautiful words:

'There is a spot within this sacred dale
That felt Thee kneeling — touch'd Thy prostrate brow:
One angel knows it. O might prayer avail
To win that knowledge! sure such holy vow
Less quickly from th' unstable soul would fade,
Offer'd where CHRIST in agony was laid.'

96835 Towards the close of the fourth century a change took place; pilgrimages became the fashion; and the men and women who, following the example of Paula, flocked to Jerusalem, appear, in the spirit of St. Thomas, to have required some visible and tangible evidence of our Lord's Passion to confirm their faith. For such persons the necessary aids to faith were provided in gradually increasing numbers, until, in the 96840 sixth century, we find not only the true cross, but the crown of thorns, the reed, the sponge, the lance, the cup used at the Last Supper, the stone that was rolled away from the sepulchre, and other relics of minor importance, such as the 'charger' in which John the Baptist's head was carried.

After leaving Bordeaux, the Pilgrim followed a road, which lay to the south of the Garonne to Toulouse; and it is interesting to notice that in this section of the 96845 journey the distances are given in leagues, from which it may perhaps be inferred that the Gallic league was still in common use in those parts of Gaul which lay beyond the limits of the old Roman province. At Narbonne he reached the great line of communication between Spain and Italy, and followed it thence to the first station 96850 out of Aries, where he turned aside, up the valley of the Rhone, to Valence, on the road from Vienne, over the Cottian Alps, to Milan. From Milan to Constantinople the 'Itinerary' agrees, except for a short distance, with the route laid down in the Antonine Itinerary (pp. 127-138 Wesseling). This route passed through Padua, Laybach, Pettau, Esseg, Belgrad, Nisch, Sophia, Philippopoli, Adrianople, and Eregli. The 96855 difference alluded to is in the section between Burdista (Mustafa Pasha Keupri) and Virgoli (Lule Bergas); the Pilgrim omits Adrianople, and appears to have made an excursion northwards, from Burdista, to visit some unknown point of interest, but the text is in any case defective. (Note 2, p. 10.)

The route through Asia Minor, on which Professor Ramsay has kindly contributed a

96860 valuable memoir (App. I.), coincides generally 'with the military road, which was
commonly used by the Byzantine armies in marching from Constantinople to Syria'. It
passed through Ismid, Angora, Kiz Hissar, and the famed Cilician Gates to Tarsus,
where 'the Apostle Paul was born'; and was thence continued through Adana,
96865 Alexandretta, and over the Beilan Pass to Antioch. From Antioch the 'Itinerary'
crosses the mountains to Latakieh, and thence follows the regular coast road through
Tartús, Tripoli, Beirút, Tyre, and Acre, to Caesarea Palaestina. (Comp. 'Ant. Itin.',
pp. 147-150, Wess.) At the last-named place the Pilgrim notices 'the bath of
Cornelius', which was, perhaps, a public building given to the city by Cornelius, who
appears to have been a wealthy man; that such gifts were occasionally made may be
96870 inferred from the case of the synagogue which was built by the centurion at
Capernaum.

Instead of following the direct road from Caesarea Palaestina to Jerusalem, the
Pilgrim proceeded to Jezreel, and thence by Scythopolis (Bethshean) to Neapolis
(Shechem). The object of this divergence is not explained, but it was, possibly, to
96875 complete the tour of places connected with the history of Elijah, whose remarkable
character and whose reappearance with Moses on the Mount of Transfiguration seem to
have made such a deep impression on the minds of the early Christians. In making this
détour the Pilgrim passed within a day's journey of Nazareth and the Sea of Galilee,
and it is very remarkable to find that a man who had made the long journey from
96880 Bordeaux should omit all notice of, and apparently not care to visit, places so
intimately connected with our Lord's early life and ministry. Perhaps the explanation
must be sought in the fact that men, at that time, cared more about the resurrection
and all that it implied, than they did about the localities in which Christ had
passed His life on earth; and that general interest in places like Nazareth and
96885 Capernaum was not aroused until Constantine had attracted attention to the Manger and
the Tomb by erecting magnificent churches at Bethlehem and Jerusalem.
At Neapolis the Pilgrim visited Joseph's Tomb and Jacob's Well, which appear to have
occupied then the positions now assigned to them; and, like Eusebius, he makes a
distinction between Neapolis, Sichem, and Sichar. From Neapolis he travelled along
96890 the well-known road by Bethel, where he dwells on the incidents connected with
Jacob's vision, and the fate of the prophet who was beguiled by the false prophet, to
Jerusalem.

The description of Jerusalem, though wanting in fulness, is of great interest.

96895 The writer commences with the northern end of the eastern hill, and then, in the most
methodical manner, proceeds southwards; crosses the valley, above Siloam, to the
western hill; returns north-wards; and finally passes out of the city by the east
gate to visit the Mount of Olives and Bethany. The narrative is clear and connected;
and it is hardly possible, for anyone who knows the ground, to read it without
96900 feeling that the Pilgrim from Bordeaux actually saw Constantine's buildings standing
on the site now occupied by the Church of the Holy Sepulchre. This is not the place
to discuss the theory respecting Constantine's churches, which was for many years so
ably advocated by the late Mr. James Fergusson; but it is quite impossible, as
pointed out in Appendix V., to maintain the farced construction which he placed on
96905 the passage relating to them. Jerusalem in 333 AD could not have differed greatly
from the Aelia of Hadrian; and it is not unlikely that in several essential
particulars, such as the direction of the main streets and the course of a large
section of the city wall, modern Jerusalem represents the lines upon which Aelia was
founded on the ruins of the old city destroyed by Titus. The two streets, running
96910 respectively south from the Damascus Gate, and east from the Jaffa Gate, which divide
Jerusalem into four parts, evidently follow the lines of ancient streets; and the
same may be said of the street El Wad, and of the street leading from it to St.
Stephen's Gate. If we suppose that the Pilgrim, on leaving Sion, passed along the
street east of the Church of the Holy Sepulchre towards the Damascus Gate, his
96915 narrative becomes quite clear.

The reasons for supposing that the Pool of Bethesda was situated near the north-west
angle of the Haram area, and that it is now represented by the 'souterrains'
connected with the Convent of the Sisters of Sion, are given in Appendix III; and
some notes on the site assigned to Sion in the fourth century will be found in
96920 Appendix IV. The absence of any allusion in the narrative to what may be called the
accessories of the Passion, excepting the Column of the Flagellation, has already
been noticed (p. iii.); and attention may further be drawn to the small number of
holy places connected with New Testament history which are mentioned. The list
includes Bethesda; the pinnacle of the Temple with its 'great corner-stone', rejected
96925 of the builders; Siloam; the house of Caiaphas with the Column of the Flagellation;

the Praetorium of Pilate; the place of the Crucifixion; and the Tomb; and it omits places such as the Coenaculum; the scene of St. Stephen's martyrdom; and the birthplace of the Virgin, which afterwards became widely celebrated. Beyond the limits of the city, to the east, the Pilgrim mentions the place of the betrayal (Gethsemane); the palm-tree from which branches were taken to spread in the way of Jesus (Matt. xxi. 8); the Mount of Olives on which Christ taught His disciples; the scene of the Transfiguration; and the Tomb of Lazarus at Bethany; but he makes no allusion to the Tomb of the Virgin, or to the connection of the Mount of Olives with the Ascension.

From Jerusalem the Pilgrim made two excursions; one to Jericho, the Dead Sea, and the spot where the Lord was baptized in Jordan; the other to Bethlehem, where Constantine's basilica had already been erected, and Hebron. He then proceeded by Nicopolis, Lydda, and Antipatris, to Caesarea Palaestina. At Caesarea there is a break in the 'Itinerary', which is taken up again at Heraclea (Eregli) and we are left in doubt whether the Pilgrim retraced his steps through Asia Minor, or went by sea to Constantinople. The home journey from Heraclea calls for no remark; it was made through the provinces of Rhodope, Macedonia, and Epirus to Aulon (Avlona) on the Adriatic; thence by water to Otranto, and afterwards through Brindisi, Bari, Capua, Rome, Trevi, Rimini, Bologna, Parma, and Piacenza, to Milan. At Milan, where the homeward route joins that which had been described on the outward journey, the 'Itinerary' ends.

The known MSS. [manuscripts] of the 'Itinerary' are: one of the eighth century in the library at Verona, distinguished as V.; one of the ninth century in the library at St. Gallen; and one of the tenth century in the National Library at Paris, distinguished as P. The earliest printed edition was published in 1589, and there have been eleven subsequent editions; the best critical edition is that published, with notes in German, by Dr. Tobler in 'Palaestinse Descriptiones, ex saec. iv., v., et vi'. It has not been considered advisable to add critical notes, in the English edition, to those portions of the 'Itinerary' which refer to countries beyond the limits of the Holy Land; but the names of the 'stations' are often corrupt, and the forms generally used by classical writers have therefore been given with, in some cases, the modern names. The variations in the readings of the MSS. have been noted on each page.

[...] = The perforated stone (lapis pertusus) is only mentioned by the Bordeaux Pilgrim; it has been suggested that this stone may have been the 'stone of foundation', aven sheteyah, and identical with the sakhrāh in the Dome of the Rock; but there is no clue to its position except that it was near the statues of adrian, and probably, therefore, within the limits of the Jewish Temple. After the suppression of the revolt, during the reign of Hadrian, the Jews were forbidden all approach to Jerusalem, and this prohibition remained in force until the reign of Constantine; for Eusebius states (Theoph.) that they were not allowed to set foot in the city, or view it even from a distance. The law must have been revoked soon after Constantine's accession as sole Emperor in 324 AD, for the Pilgrim (333 AD) mentions the visit of the Jews as an annual custom. The Jews now wail every Friday at the well-known Jews' wailing-place, outside the Temple enclosure. [...]

About a stone's throw from thence is avault (crypta) wherein His body was laid, and rose again on the third day. There, at present, by the command of the Emperor Constantine, has been built a basilica, that is to say, a church of wondrous beauty, having at the side reservoirs (exceptoria) from which water is raised, and a bath behind in which infants are washed (baptized).

Also as one goes from Jerusalem to the gate which is to the eastward, in order to ascend the Mount of Olives, is the valley called that of Josaphat. Towards the left, where are vineyards, is a stone at the place where Judas Iscariot betrayed Christ; on the right is a palm-tree, branches of which the children carried off and strewed in the way when Christ came. Not far from thence, about a stone's-throw, are two notable (monubiles) tombs of wondrous beauty; in the one, which is a true monolith, lies Isaiah the prophet, and in the other Hezekiah, King of the Jews.

From thence you ascend to the Mount of Olives, where before the Passion, the Lord taught His disciples. There by the orders of Constantine a basilica of wondrous beauty has been built. Not far from thence is the little hill which the Lord ascended to pray, when he took Peter and John with Him, and Moses and Elias were beheld. A mile and a half to the eastward is the village (villa) called Bethany. There is a vault (crypta) in which Lazarus, whom the Lord raised, was laid.

The full text of the passage relating to Golgotha and the Holy Sepulchre is as follows: - 'Inde ut eas foras murum de Sion, eunti ad portam Neapolitanam ad partem dextram, deorsum in valle sunt parietes, ubi domus fuit sive pretorium Pontii Pilati. Ibi Dominus auditus est, antequam pateretur. A sinistra autem parte est monticulus Golgotha, ubi Dominus crucifixus est. Inde quasi ad lapidis missum est crypta, ubi corpus ejus positum fuit, et tertio die surrexit. Ibidem modo jussu Constantini imperatoris basilica facta est, id est, dominicum mire pulchritudinis, habens ad latus exceptoria, unde aqua levatur, et balneum a tergo, ubi infantes lavantur.'

Some twenty years ago the correct interpretation of this passage, and the exact force of the words 'foras murum', were the subject of heated controversy. On the one hand, it was maintained that foras murum simply expresses the act of going outside the wall; that the 'Porta Neapolitana' was so named from its being the gate by which the road to Neapolis left Jerusalem, and that it occupied the position of the present Damascus Gate; and that the buildings in course of erection by Constantine occupied the site of the Church of the Holy Sepulchre. On the other hand, the late Mr. Fergusson contended that the Pilgrim meant 'that, passing outwards from the Sion Gate, a person going to the Neapolitan Gate, outside the wall, "foris murum", has the house of Pilate down in the valley on the right...'; and he identified the 'Porta Neapolitana' with the gate (Golden Gate) of the New Jerusalem of Eusebius; and Constantine's church with the Dome of the Rock. In his latest work, however, Mr. Fergusson, whilst maintaining his identification of Constantine's church, did not insist on the forced meaning of foras murum; and identified the 'Porta Neapolitana' with the 'Porta Speciosa' of the Middle Ages in the west wall of the Haram Area.

There can be no doubt that foras murum has not the meaning attributed to it by Mr. Fergusson, and the interpretation of Porta Neapolitana as Gate of the New City seems also somewhat strained. It must be remembered that the Holy Sepulchre was discovered in 325 AD, that the buildings of Constantine were commenced in 326 and dedicated in 335 AD, and that the Pilgrim visited Jerusalem in 333 AD, two years before the buildings were finished. It is unlikely that a town large enough to be called Neapolis had sprung up round Constantine's unfinished churches at the time of the Pilgrim's visit; and it may be remarked that though the group of buildings at the Sepulchre is often called New Jerusalem in early Christian writings, in contradistinction to the old centre of worship on Mount Moriah, it is never once called Neapolis or the New City. It seems more natural to suppose that, according to a very prevalent custom in all countries, the gate derived its name from the first important town on the road which passed out through it from the city. In this case the town would be Neapolis, whence the Pilgrim had just arrived; and I believe the text can only be explained by supposing the Porta Neapolitana to have been a gate in the north wall of the city occupying a position at, or not far from, the modern Damascus Gate. It follows from this identification that the buildings of Constantine, mentioned by the Pilgrim, occupied the site of the Church of the Holy Sepulchre; and it may be remarked that the principal points of interest in Jerusalem are described in the most methodical manner. The Pilgrim commences with the two large pools, and the Pool of Bethesda at the northern end of the Temple hill; he then proceeds southwards, and, after making a complete tour through the city, passes out by the Eastern Gate to the Valley of Jehoshaphat and the Mount of Olives. All the places are mentioned in their proper order, first from north to south, and then from south to north; the sites connected with the Temple, Siloam, the house of Caiaphas, David's palace, Golgotha and the Tomb, and the gate in the north wall (see map, p. 58). Some difficulty exists in identifying the ruins which the Pilgrim believed to be those of the Praetorium, from the fact that he places them in the valley. Several writers have supposed that he referred to the ruins of the tower Antonia at the north-west angle of the Haram Area, where modern tradition places the Praetorium. This place, however, lies so high that any ruins near it could not possibly be described as lying in a valley; and the narrative seems to demand a site not far from the western entrance of the old Cotton Bazaar (Suk el Kattanin.) For the different sites assigned to the Praetorium see Tobler (Topog. von Jerusalem, 220-229); and the English edition of Antoninus's Itinerary (note to p. 19). The view held by some recent writers is that the Praetorium, at the date of the Crucifixion, was the palace of Herod, near the Jaffa Gate, which was certainly occupied by Gessius Florus, and probably also by Pontius Pilate.

Verantwoording

- 97060 In het onderstaande bestand wordt ingegaan op details betreffende de vondst van de Peelhelm. De auteur vermoedt dat de Peelhelm een deel is van een **volledige uitrusting van een Romeinse cavalerie-officier**, omdat de kleding en wapenen van een persoon en het tuig van een paard zijn gevonden. Resten van een persoon of van een paard zijn niet gevonden. Daaruit kunnen we slechts concluderen dat de officier zelf tijdens zijn leven of dat zijn nabestaanden alle voorwerpen verstoopt hebben in het veen.
- 97065 Zodanig verstoopt dat de weinige voorbijgangers die er geweest zullen zijn, de zaken niet direct zagen liggen. Waarschijnlijk was men er zich destijds ook van bewust dat venen groeien en dat de voorwerpen in de loop der tijd onder een steeds groter veen-pakket zouden komen te liggen.
- 97070 Verrassend voor de auteur was de enorme waarde van zilveren voorwerpen, zeker als die door een zilversmid zijn bewerkt. Er waren maar weinig personen die een dergelijk fijn gedreven helm konden maken, en als zodanig was de helm extra kostbaar. Waarschijnlijk was de helm een zilver-product dat vanwege de waarde door meerdere personen is doorgegeven en gebruikt, zeker omdat de gemiddelde levensduur van een Romein destijds niet zo groot was.
- 97075 Er zijn in het gebied van Germania Inferior maar zeer weinig van dit soort voorwerpen gevonden. Veel is ongetwijfeld door de tand des tijds vernietigd en zijn de edele metalen omgesmolten.
- 97080 Enkele maanden na de vondst van de helm en de andere voorwerpen wordt het in de kranten genoemde deel van de voorwerpen door het Rijksmuseum van Oudheden in Leiden aangekocht. De verantwoordelijke functionarissen hebben de vindplaats zelf nooit bezocht of wat uitgebreider met andere personen dan de vinder zelf gesproken. Daarom is veel 'circumstantial evidence' verloren gegaan. Toch vinden we in de kranten en tijdschriften verschillende details. Tevens was er enige correspondentie naar het museum betreffende de vondst. Het meest interessant daarin is de brief die Adrianus Bos, directeur van de N.V. Maatschappij Helenaveen, anderhalf jaar na de vondst naar het museum stuurt. Daarin geeft hij een precieze beschrijving van de vondsten, we mogen aannemen van die vondsten van de eerste paar dagen. Opvallend is dat de functionarissen van het museum niet reageren in de zin van: zeer interessant, weet u waar deze voorwerpen zich nu bevinden? Men laat alles op zijn beloop: na de verwerving door aankoop lijkt de feitelijke interesse verdwenen, ongetwijfeld omdat het niet een eigen opgraving betreft.
- 97085 Een wetenschappelijke studie wordt geschreven waarin duidelijk uiteengezet wordt hoe de helm in elkaar zit, de bijvondsten worden echter summier beschreven.
- 97090
- 97095 Als zilver zo kostbaar was, en gegeven het feit dat het bezit van een paard ook maar weinigen gegeven was, is het verleidelijk te onderzoeken welke andere waardevolle voorwerpen nog meer in de ruime omgeving van de vindplaats tevoorschijn zijn gekomen. Bekend was al dat in het veen van de Peel praktisch geen oude voorwerpen zijn gevonden. In de venen in het noorden van het land en ook bijvoorbeeld in de aangrenzende venen in Duitsland zijn vanaf circa 1800 wel degelijk oude voorwerpen gevonden, zelfs een kilometers-lange houten brug over het veen, maar deze stamt al van voor de Romeinse tijd. Verder zogenaamde veen-lijken, overblijfselen van een walvis en van een paard; een bewijs dat een lichaam bewaard kan blijven als het direct na de dood in geschikte zuurstof-loze grond begraven is.
- 97100
- 97105 Als ander kostbaar voorwerp komt direct de zogenaamde **kantharos van Stevenweert** in zicht; wellicht het enige andere voorwerp van zilver uit de Romeinse tijd in de Nederlanden dat kan wedijveren met de Peelhelm. Alle Nederlandse juristen kennen de term kantharos van Stevensweert als voorbeeld van 'dwaling'; hierover is elders zeer veel te vinden. Voordat de werkelijke waarde van deze drinkbeker bekend was, hebben zich andere duistere zaken voorgedaan, die de auteur nog eens met een kritische blik heeft bekeken.
- 97110 Als de wetenschappelijke wereld rond 1950 de drinkbeker onder ogen krijgt, wordt onderzocht waar en wanneer deze gevonden is. Aangewezen worden door de zogenaamde vinder Borgers drie verschillende jaren voor de vondst en wel 1939, 1942 of 1943 en drie verschillende vindplaatsen in Stevensweert. Bij gebrek aan betere informatie is de drinkbeker toen de kantharos van Stevensweert genoemd, hoewel het volstrekt niet zeker is dat Stevensweert de echte vindplaats is.
- 97115 Naar de mening van de auteur is dit juist zeer ongeloofwaardig, want als we duiken in de kranten met de beschrijving hoe in de Maas het grind gewonnen werd rond 1940, dan komen we al snel tot de conclusie dat door de zeef- en sorteer-proces in grootte van de stenen de drinkbeker er gehavend uit zou moeten hebben gezien, wellicht al veel eerder in zijn samenstellende delen zijn uiteengevallen en nooit meer als een geheel te tonen zijn geweest. Bovendien is er geen melding gemaakt door een bemanningslid
- 97120

van het baggerschip van Bongers dat hij het voorwerp ook heeft gezien. Tevens moet
97125 men weten dat er een controleur van Rijkswaterstaat meevoer, en deze zou een
dergelijke vondst zeer zeker gemeld hebben.
In 2006 is van de hand van mevrouw Witteveen van het museum de Valkhof een boekje
geschreven over de drinkbeker. Daarin noemt ze ook wel de tegenstrijdigheden en
97130 onduidelijkheden, maar kan verder geen andere versie benoemen dan die door Bongers is
gegeven.

Zou er een verband kunnen zijn tussen de kantharos van Stevensweert en de vondst van een volledige officier-uitrusting in Helenaveen?

Uit de gegevens verstrekt door een dienstbode bij A. Bos in Helenaveen weten we dat
97135 er een geheime bergplaats was in diens woning, waarin hij door hem verworven delen
van de vondsten bewaarde. Ze heeft niet alles in detail gezien, maar heeft vooral
gesproken over leren stukken, die hij inderdaad vlak na de vondst heeft verzameld,
omdat de lokale schatzoekers daarvoor geen interesse toonden. Ook wordt elders
vermeld dat er een wijnvaatje met een kraantje en een mooi versierde drinkbeker, met
97140 een haak om aan het paardentuig te hangen, was gevonden en in bezit was van A. Bos.
Deze voorwerpen hoorden ook bij de uitrusting van een Romeins soldaat en werden op
reis door de soldaat meegevoerd.

Als we de verdwenen zilveren oren van de drinkbeker als haak zien, dan heeft de
zoektocht hiernaar wel degelijk zin.

97145 Over de drinkbeker wordt geschreven dat die bij een belangrijk persoon van de
Maatschappij Helenaveen in Loosdrecht op een jachtslot terecht gekomen zou zijn.
Naspeuringen hiernaar geven geen duidelijke aanwijzing dienaangaande, maar we komen
hieronder hier nog uitgebreid op terug. Het wijnvaatje met zilveren kraantje
overigens zou al eerder verloren gegaan zijn.

De nalatenschap van Adrianus Bos

Waarschijnlijk wordt eind 1930 directeur Bos ernstig ziek, in ieder geval zodanig dat
hij zijn dagelijkse werkzaamheden niet kan uitvoeren. In maart 1931 overlijdt hij,
tamelijk onverwacht. Hij had al een groot stuk grond gekocht op de Belgenhoek in de
97155 provincie Limburg (direct ten zuiden van de autoweg A67), waar hij later een eigen
huis hoopte te kunnen bouwen. Zie ook <http://www.belgenhoek.nl/> en
<http://www.belgenhoek.nl/page2.html>. Enkele broers, verre familie via de tak van
Gilse van der Pals, hebben dit 19 ha grote natuurgebied nu in bezit.

Want als A. Bos sterft, leeft alleen zijn schoonzus Bos-van Gilse-van der Pals nog.
97160 Zij maakt volgens overlevering het huis leeg en moet daarbij veel papieren verbrand
hebben. Ze zal bij dit werk wel zijn bijgestaan door haar dochter Annie en haar man
en haar ongetrouwde zoon Cor.

Op foto's van het interieur van de woning in Den Haag van mevrouw Bos-van Gilse van
der Pals laten geen Romeinse voorwerpen zien, wat wel niet zo verwonderlijk is. Toch
97165 mogen we aannemen dat het gehele interieur van de GENA-villa in Helenaveen bij de
schoonzus en/of de neef en nicht (met haar man) van A. Bos is terecht gekomen.
Zoon Cor komt op zijn beurt in het huis in Den Haag wonen als zijn moeder overlijdt
in 1936. Neef Cor Bos was al zeer snel na het overlijden van zijn oom benoemd tot
commissaris van de vennootschap.

97170 Dochter Annie was dus getrouwd met Rutger W.C. Baron van Boetzelaer, en mocht zich
dus Baronesse noemen. Het huwelijk was niet gelukkig, de baron zou meer interesse
hebben in het geld dan in de persoon Annie Bos.

Al snel na het overlijden van haar moeder in 1936 scheidt Annie Bos van de baron.
Deze hertrouwt al in 1938 met een Jordens en later trouwt Annie met een Groote; zij
97175 woonde nog lange tijd in Hilversum onder de naam J. Groote-Bos. Zij was intussen
grootaandeelhouder van de Maatschappij Helenaveen en bleef dat haar gehele leven, met
meer dan de helft van het aantal aandelen.

De erfenis kwam dus vrij tijdens het huwelijk van Annie Bos met R.W.C. van Boetzelaer
die later in Laren woonde. Het is verleidelijk te denken dat het merendeel van de
97180 spullen van A. Bos in het huis van de baron en baronesse is terecht gekomen, dus ook
de Romeinse voorwerpen uit de geheime kast. Als de drinkbeker zich daar bevond dan
was het duidelijk afkomstig van de vondsten rondom de Peelhelm, en alleen daarom al
uiterst waardevol. Daartegenover stond dan dat deze voorwerpen eigenlijk in een
museum thuis horen en niet in een privé-verzameling, van wie praktisch niemand wist
97185 dat die bestond.

De dienstbode die ook in de Gena-villa woonde, schrijft zich eind juli 1931 uit de
gemeente Deurne en verhuist naar Wassenaar. Daar werkt ze enige tijd als dienstbode,
maar ze komt later terug naar Helenaveen. Daar wordt ook een onechte zoon geboren,
waarbij het woord onecht later is doorgestreept.

97190

De voorwerpen kunnen dus het meest waarschijnlijk op drie plaatsen terecht zijn gekomen: bij de schoonzus Cornelia E.A. Bos-van Gilse van der Pals, haar zoon Cor Bos en bij haar dochter Johanna van Boetzelaer-Bos met echtgenoot Rutger W.C. van Boetzelaer.

97195

Waarschijnlijk had de moeder minder interesse in Romeinse antiquiteiten, de beide mannen hadden er wellicht wel belangstelling voor. Later wordt schoonzoon van Boetzelaer adjunct-conservator van het Gooisch Museum, en had dus zeker belangstelling voor kunstvoorwerpen. Na zijn scheiding van Johanna (=Annie) Bos, rond 1937, kunnen de voorwerpen ook op een vierde plaats terecht zijn gekomen. Als de schoonzus in 1936 sterft, verhuist zoon Cor naar haar woning in Den Haag, en in 1938 als van Boetzelaer hertrouwd is, hebben we weer drie mogelijke vindplaatsen.

97200

Tezelfdertijd was een medewerker van het Rijksmuseum van Oudheden te Leiden dr. F.C. Bursch assistent van de directeur Holwerda.

97205

De arrogantie van het museum blijkt wederom uit een stukje over opgravingen in de buurt van Vlodrop. Dat artikel van 28 oktober 1933 eindigt als volgt:

97210

Toen vóór een paar jaren op mijn herhaald verzoek Dr. Holwerda uit Leiden zijn assistent, den Heer Bursch, met eenige gravers naar hier zond om een gedeelte der Knippeheide te ontgraven waarin ondergeteekende vóór dien tijd reeds tal van urnen aan de oppervlakte had gebracht, en waar nu ook door den Heer Bursch weer 18 urnen werden gevonden, plus een stuk zwaard bij een Germaansche cultusplek, en ik later weer meer vindplaatsen ontdekte, heette het, dat men op deze exploitatie zou terugkomen.

97215

Dit heele gebeuren werd in een verslag in de Publications jaarg. 1932 met de volgende paar woorden vermeld "Er werd daar (d.i. Vlodrop) een merkwaardig urnenveld ontgraven, op een terrein, waarvoor verlof was verkregen (d.w.z. van den eigenaar uit België) door de welwillendheid der H.H. van Cruchten en Linssen te Roermond"

97220

(Van het feit, dat dit merkwaardig veld door ondergeteekende na veel zoeken was ontdekt, en dat het graven eerst geschiedde na mijn herhaalde correspond. met het Museum van Oudheden, werd met geen woord gerept.) Dit alles nu resumeerende, doet het wel een beetje vreemd, pijnlijk zelfs aan, achteraf te moeten vernemen, dat er eens door een bevoegd persoon zou gezegd zijn: "in de omgeving van Vl. valt niets te leeren". De lezer voelt hier zelf wel, hoe klinkklaar deze onwaarheid is.

97225

GERH. KR.

14 Dagen na het begin van de oorlog wordt deze Bursch benoemd tot hoofd van een commissie voor oudheidkundig bodemonderzoek. Er wordt direct gerept over Germaansche cultuur en men wil een inventarisatie maken per gemeente van vondsten die zich bij particulieren bevinden. En bovendien:

97230

Betreft het daarenboven unieke vondsten van waarlijk nationale beteekenis, dan zullen wij vanzelfsprekend moeite doen om deze voorwerpen een plaats te geven in het Rijksmuseum van Oudheden te Leiden, eventueel door ruiling met andere museumstukken, maar de hoofdoorzaak waarom het ons te doen is, is een volledig overzicht te hebben van hetgeen de Nederlandsche bodem aan archaeologica heeft opgeleverd en nog zal opleveren.

97235

Hoewel het met deze zaak niets te maken had, had het museum in Leiden in conservator Bursch wel een meeloper voor de Duitse zaak in huis gehaald. In februari 1941 werd hij al op de "zwarte lijst van de universiteitswereld" geplaatst en na de oorlog werd hij als hoogleraar geschorst. Hij was nl. tot hoogleraar benoemd van de universiteit van Amsterdam en had o.a. in Oekraïne in 1943 opgravingen verricht.

97240

Bij de erven van Adrianus Bos moet het bovenstaande over het melden voor inventarisatie van antieke voorwerpen bekend zijn geweest. Waarschijnlijk was dat de reden om zich te 'ontdoen' van de voorwerpen. Zij konden weten, zij wisten praktisch zeker dat de voorwerpen afkomstig waren van de uitrusting die gevonden was in 1910 in Helenaveen en dus behoorde tot de *unieke vondsten van waarlijk nationale beteekenis*.

97245

In de grote rivieren werden nu en dan antieke voorwerpen gevonden en blijkbaar heeft de eigenaar van de drinkbeker, waarschijnlijk R.W.C. van Boetzelaer, gemeend te doen voorkomen alsof de beker zo ook in de Maas is gevonden, bij de grindwinning, bijvoorbeeld in Stevensweert. Daarbij werd echter voorbij gegaan aan een nauwkeurige bestudering van de werkwijze bij de grindwinning: er kwam zoveel kracht vrij bij het baggeren en het sorteren naar grootte in draaiende trommels dat een teer voorwerp als de kantharos er nooit ongeschonden uitgekomen kon zijn.

97250

De auteur meent te kunnen concluderen dat op een of andere manier de eigenaar in contact is gekomen met Jaak Bongers die de drinkbeker na vele jaren zou moeten

97255

presenteren als een vondst uit de Maas. Dit natuurlijk tegen een fikse vergoeding en plicht tot strikte geheimhouding. Daarmee was ook de eer van de familie gered, in die zin dat de naam van Boetzelaer en Bos nooit in het nieuws zou komen als 'heler' van de drinkbeker.

97260 Het vervolg van deze zogenaamde vondst van de kantharos, nl. het ingewikkelde spel van overdracht van de beker in een familie en in het bijzonder de jarenlange rechtspraak over het eigendomsrecht ervan, hadden de erfgenaam van Bos en de nieuwe eigenaar Bongers nooit zelf kunnen bedenken. Voor hen was de waarde vanaf het allereerste begin wel duidelijk.

97265 **Resumerend:**

- De zogenaamde Peelhelm was maar een deel van een officier-uitrusting van een cavalerie-officier uit het Romeinse leger in het begin van de vierde eeuw.

97270 - Na een kort onderzoek na de vondst werd de grote waarde ervan ingezien en met financieel power-play van het Rijksmuseum van Oudheden in Leiden aangekocht. Evelein schrijft over de helm en de aanwezige vondsten een wetenschappelijk verslag dat een half jaar na verwerving door het museum uitkomt. Al direct is het een van de topstukken van het museum.

97275 - Dat er aanmerkelijk meer vondsten zijn gedaan dan die welke na enkele maanden in het museum terecht zijn gekomen, is zeker. Het museum koopt nog enkele voorwerpen aan, de directeur Bos van de N.V. Maatschappij Helenaveen meldt dit nog uitdrukkelijk in een lange brief. Ook de allereerste schriftelijke melding van dominee de Jong, twee dagen na de eerste vondst, geeft een omschrijving die niet overeenkomt met de voorwerpen die nu in het museum te vinden zijn.

97280 - Blijkbaar waren de functionarissen onmachtig en ook ongeïnteresseerd om serieus op zoek te gaan naar bijvoorbeeld de ontbrekende wangklep. Zij probeerden dat wel via de burgemeester van Deurne, maar een dergelijke voorzichtige en halfslachtige aanpak had geen succes.

97285 - Als directeur Bos in 1931 overlijdt gaan zijn bezittingen naar zijn nog levende schoonzus en/of haar kinderen. Als de schoonzus zelf overlijdt in 1936 dan komen de die bezittingen definitief in handen van haar vrijgezellen zoon en/of haar dochter en haar man.

97290 - Deze laatste scheiden dan al zeer snel. De zoon trekt in het huis van zijn moeder. De Romeinse voorwerpen zouden best bij de nu ex-schoonzoon van Boetzelaer terecht zijn gekomen.

- Hoe dan ook, direct na het begin van de bezetting komt er druk om antiquiteiten aan te melden en te laten registreren en fotograferen. Topstukken horen eigenlijk in een museum. Hierbij wordt uitdrukkelijk gewezen op het Rijksmuseum van Oudheden in Leiden; dat is de meest geschikte plaats daarvoor.

97295 - Niet iedereen was gediend van de bemoeizucht van "Leiden". Wellicht is dat de reden dat de eigenaar van de kantharos van Stevensweert - toen nog gewoon een mooi bewerkte zilveren drinkbeker - af wilde.

97300 - Op welke manier dat dan moest gebeuren? Waarschijnlijk heeft men zich laten inspireren door soortgelijke gebeurtenissen in het recente verleden. Waarschijnlijk heeft men de zogenaamde vinder Bongers zover gekregen dat hij - tegen betaling - voordeed alsof hij de vinder was op een baggermolen bij Stevensweert. Stevensweert was als vindplaats van fossielen, menselijke resten, aardewerk en wapenen al eerder in het nieuws geweest.

97305 - Een vriendelijkere uitleg kan zijn dat de bezitter van de drinkbeker beducht was dat die door de bezetter kon worden geconfisqueerd en dat hij dat wilde verhinderen door de beker af te staan aan een niet-te-verdenken persoon. Hiertegen spreekt dat hij na de oorlog de drinkbeker niet heeft terug gevraagd.

- Het is in het geheel niet zeker dat in de vierde eeuw de Maas stroomde waar nu Stevensweert ligt. Meer oostelijk ligt de Oude Maas.

97310 - Ondanks de vele onduidelijkheden en de hele nasleep van het juridisch eigendom, heeft men met Bongers' verhaal genoeg genomen, en kon veel later het Museum Kam in Nijmegen zich eigenaar noemen van de kantharos 'van Stevensweert'.

97315 - Beide voorwerpen zijn van verguld zilver, fijn versierd. Een materiaal-vergelijking zou zeer misschien iets meer duidelijkheid kunnen verschaffen over eventuele 'verwantschap'. De kantharos heeft een dergelijk onderzoek al meegemaakt. Overigens kunnen de uiterlijke kenmerken ook goed zonder veel moeite vergeleken worden.

Is de kantharos van Stevensweert een deel van de officier-uitrusting?

97320 Deze vraag lijkt waarschijnlijk dwaas, maar de auteur heeft redenen te geloven dat dat wel eens het geval zou kunnen zijn.

De kantharos is in het geheel niet in Stevensweert gevonden, want er zijn genoeg aanwijzingen dat over de exacte vindplaats en zelfs het vind-jaar door de zogenaamde vinder elke keer gelogen is. Wat daarvoor de reden zou kunnen zijn, lijkt

97325 onduidelijk.

De auteur meent dat de drinkbeker aan de zogenaamde vinder is overhandigd, met het verzoek over enige tijd het bestaan van de beker te openbaren, met een daarbij gefingeerde vindplaats en vind-jaar.

97330 De zogenaamde vinder kon dit verhaal echter niet consequent volhouden, bijvoorbeeld omdat de gehele zaak niet goed genoeg was doorgesproken. Daarbij heeft men vergeten - of is juist de gebeurtenis de aanleiding geweest tot deze cover-up - dat de talloze overstromingen van de Maas de beker erg beschadigd zouden moeten hebben. Juist in januari en februari 1926 was geheel West-Europa in de ban van hoogwater van de rivieren. Ook Stevensweert was daarvan slachtoffer: er wordt gemeld dat de Maas daar

97335 tussen 4 en 5 km breed was geworden! Onder deze omstandigheden zou een tere constructie als de drinkbeker tenminste in stukken zijn gevallen, en waarschijnlijk meegevoerd naar zee, waardoor de kantharos definitief verloren was gegaan. Neen, als de drinkbeker netjes in het veen was opgeborgen dan zou hij na vele eeuwen in praktisch onbeschadigde toestand zijn teruggevonden.

97340

Vindplaats van de kantharos van Stevensweert

Om maar met de deur in huis te vallen:

Over de vindplaats en de omstandigheden van de kantharos zijn veel twijfels. A.M. Gerhartl-Witteveen schrijft in haar publicatie van 2006:

97345 p. 48 [...] vervaardiging en levensloop van de beker.

Wat dit laatste betreft is het opvallend dat zowel op de binnen- als de buitenbeker geen beschadigingen zijn aangetroffen die het gevolg zouden kunnen zijn van verplaatsingen in stromend water, waarbij onvermijdelijk deuken en krassen zouden zijn ontstaan door het stoten tegen grind en dergelijke. Het is daarom naar onze mening weinig aannemelijk dat de vinder, J. Bongers, de kantharos tussen stenen langs de Maas heeft aangetroffen, zoals hij later heeft beweerd. Het verhaal van zijn zwager, dat Bongers de kantharos op de baggermolen heeft gevonden in enkele kluiten klei, is aannemelijker omdat de kleilaag waarin de kantharos zich op de rivierbodem bevond deze eeuwenlang heeft beschermd, totdat de baggermolen de rust verstoorte.

97355

[p. 19] *En het jaar 1939 is in 1966 uit de mond van Bongers opgetekend, toen de kantharos tijdelijk naar Stevensweert was teruggekeerd ter gelegenheid van het 700-jarig bestaan van de parochie Stevensweert. Bongers heeft toen bovendien verteld dat hij de beker niet op de baggermolen had gevonden, maar bij het jagen had zien liggen op een strook kiezel langs de Maas. Op een kaart had hij een vindplaats aangewezen op de westelijke over van de rivier, tegenover Stevensweert, op Belgisch grondgebied dus! Bongers overleed in 1969 en nam de waarheid mee in 't graf.*

97360

97365 16 oktober 1951 [...] *De kantharos in kwestie werd in 1942, dus tijdens de bezetting, gevonden te Stevensweert op ongeveer achttien kilometer van Roermond in de diepe grindbanken van de Maas. De vinder zag in het met leem overdekte en grauw roestige voorwerp niet veel bijzonders. Hij schonk het aan een particulier liefhebber van oudheden, die het onopgemerkt, dus veilig bewaarde zonder precies te vermoeden, wat het was. In 1949 liet hij de stof, waaruit de beker gemaakt was, deskundig toetsen.*

97370

24 oktober 1952 *De beker werd in 1942 door de Stevensweertenaar J. Bongers gevonden op een hoop grind gelegen op een terrein op de Koeweide te Stevensweert het waren twee in elkaar passende delen die geheel overklonterd waren door klei. Deze had zich als een huls op de buitenwand vastgezet. Hier en daar was deze huls afgebrokkeld en werd de blinkende ondergrond zichtbaar. Hij nam de beker mee naar huis, maakte hem schoon en zette hem op een commode in de huiskamer.*

97375

De zogenaamde vinder Jaak Bongers noemt maar liefst 3 verschillende vindplaatsen. Op een kaartje staat aangegeven op de Nederlandse oever, recht tegenover de plek waar de Belgisch-Nederlandse grens haaks op de Maas staat, vlakbij grenspaal 126. Deze grenspaal was trouwens al lang verdwenen. De tweede is ergens op de Belgische oever. De derde op de Koeweide, die destijds noordelijker lag op de noordelijke (westelijke) oever richting Maasbracht.

97380

97385 In coördinaten: [5,8570 en 51,1440], onbekend, [5,8740 en 51,1490].

Wellicht is de Koeweide hier op de kaart niet het bedoelde, want er zou ook nog een Stevensweertekoeweide of Stevenweertsche koeweide bestaan, maar dat maakt de zaak

niet wezenlijk anders.

Op 14 mei 1966 heeft de directeur van het Rijksmuseum Kam onder toezicht van burgemeester J. Kelleners, een gesprek gehad met de vermeende vinder. Waarschijnlijk is er geen proces-verbaal gemaakt van dit gesprek. Maar duidelijkheid heeft het niet gebracht over omstandigheden, plaats en tijd van de vondst.

Het museum het Valkhof houdt dus maar vast aan de lezing van de baggermachine. Wat dat betreft stuiten we dan op een eigenaardigheid: aannemende dat er meerdere personen op een baggervaartuig werken, zouden deze achteraf het verhaal van Bongers hebben kunnen ondersteunen, maar hiernaar is klaarblijkelijk nooit gevraagd.

De zogenaamde vinder Bongers

Al vermeld is het feit dat de zogenaamde vinder verschillende versies van de vondst heeft gedaan.

Als we de baggerindustrie bestuderen, dan werd in 1939 bijna zeker nog niet veel grind in Stevensweert opgehaald, waarschijnlijk pas vanaf de tweede helft van 1941. De bemanning bestaat vooral uit Sliedrechtse, aangevuld met lokaal personeel die er werkten als dekknecht, bakkers en wijknechts. Als Bongers de drinkbeker bij die werkzaamheden gevonden zou hebben, en direct schoongemaakt zou hebben, dan hebben anderen dat ongetwijfeld gezien. Hij zal ook niet een schoongemaakte beker in zijn jas stoppen; het is juist een voorwerp om mee te pronken. Indien er anderen op de een of andere manier bij betrokken waren dan hadden deze personen zich ongetwijfeld gemeld in de jaren vijftig toen er zoveel ophef was over de beker die toen de kantharos van Stevensweert werd genoemd! Collega's of ex-collega's zouden in die periode Bongers en waarschijnlijk ook de pers benaderd hebben om hun werkzaamheden uit te leggen en de rol van Bongers te benoemen. Dat alles is niet gebeurd.

De baggermachine haalt met emmers zand en grind uit de bodem. Deze emmers hebben een volume van tot wel een halve kubieke meter. Dan wordt de last uitgestort en komt in een reeks trommels en zeven terecht en zo wordt het grind in vier soorten gescheiden. Het zand wordt ook verzameld en het water teruggevoerd in de rivier.

De massa van het grind in de draaiende molen moet vele honderden kg zijn. Een teer, zilveren voorwerp wordt hierin vermorzeld. De delen komen zeker los van elkaar en dan is niet te verwachten dat een drinkbeker uit één stuk eruit gehaald kan worden. Als de drinkbeker met klei en zand in de molens en zeven terecht is gekomen dan kan de beker nooit zo ongeschonden tevoorschijn zijn gekomen.

Waarschijnlijk zou de drinkbeker in zijn geheel niet door de zeven komen, want de grootste zeef heeft gaten van 10 cm, maar de losse delen zouden verspreid zijn over de gesorteerde keien.

Bovendien was er voortdurend controle door een controleur van Rijkswaterstaat, zoals we lezen in de krant van 21 april 1933:

In de ruimten onder het dek, aan weerkanten van de geul voor den emmerketting, bevinden zich ruime verblijven voor machinist, molenbaas en dekpersoneel, en voor den controleur van rijkswaterstaat, die steeds aan boord moet zijn ter controle van de opgehaalde hoeveelheid specie.

Het bovenstaande en de minstens drie verschillende versies die Bongers heeft gegeven kan maar tot een enkele conclusie leiden: de drinkbeker is NIET in de Maas gevonden. Het is ook zeer merkwaardig dat hij de beker zonder tegenprestatie aan een zwager geeft en niet tijdens de ophef zich erin mengt. Hij is de aangewezen persoon om de precieze uitleg te kunnen geven, maar hij heeft dat uitdrukkelijk niet gedaan. Bij een soort ondervraging in 1966 levert hij weer een andere versie als daarvoor. Als vind-jaar wordt opgegeven 1939, 1942 of 1943. Als je de datum dan niet ergens noteert, dan weet je wel of het voor of na het begin van de inval van de Duitsers was geweest.

Elders wordt gemeld dat de kiezels in de grindwinninggebieden zo dicht op elkaar gedrukt is dat de drinkbeker volledig verpletterd zou zijn geweest.

Het waarom van zijn leugens en stilzwijgen kan niet anders zijn dat hij op de een of andere manier is omgekocht om een valse verklaring over de vondst van de beker te doen en deze zo uit te dragen.

De voorganger van Museum het Valkhof

Het museum G.M. Kam in Nijmegen heeft geen goede hand gehad bij de verwerving van topstukken. Enkele topstukken zijn op wel zeer discutabele gronden na de Tweede Wereldoorlog verworven:

Begin april 1956 was er veel te doen over de exacte vindplaats van het Trajanusbeeldje. Een jaar later had het museum het beeld nog in bezit.

Baggeraars in Xanten zouden de Kop van Trajanus verdonkeremaand hebben en daarna naar

Nijmegen gesmokkeld en verkocht hebben aan een antiquair.

97455 Ook de Phrygische Ganymedes (puer pileatus) is op twijfelachtige gronden aangekocht.

Oudheidkundig onderzoek tijdens de bezetting

Op 31 juli 1940 verschijnt de volgende mededeling in de kranten:

31 juli 1940 **MEDEWERKING VAN HET PUBLIEK GEVRAAGD.**

97460 Bij beschikking van den secretaris-generaal, waarnemend hoofd van het departement van Onderwijs, Kunsten en Wetenschappen is d.d. 24 Mei j.l. ingesteld een commissie voor het oudheidkundig bodemonderzoek in Nederland, terwijl tegelijkertijd werd ingesteld een rijksbureau voor het oudheidkundig bodemonderzoek, tot welks directeur werd benoemd dr. F. C. Bursch, conservator aan het rijksmuseum van oudheden te Leiden, als
97465 voorzitter der commissie voornoemd treedt op prof. dr. N. J. Krom, hoogleeraar aan de Leidsche Universiteit.

In tegenwoordigheid van dr. W. D. van Wijngaarden, directeur van het museum van oudheden en lid der commissie, hebben wij dezer dagen een onderhoud met deze heeren gehad, waarin zij ons doel en werkwijze der commissie en van het bureau nader hebben
97470 uiteengezet. Het gelijktijdig afgekondigde wetje, aldus dr. Bursch, bedoelt in de eerste plaats een verbod te zijn voor onbevoegden om opgravingen te verrichten en heeft ongeveer dezelfde strekking als de wet voor de monumentenzorg. De voorwerpen, welke in Nederlandschen bodem worden gevonden, zijn voor de bestudeering van de
97475 oudste geschiedenis van ons land van evenveel belang als de archiefstukken uit den lateren tijd en hebben derhalve recht op dezelfde behandeling. De eerste taak, welke de commissie zich ten doel stelde, was om na te gaan welke instellingen in ons land bevoegd zijn tot het verrichten van wetenschappelijk bodemonderzoek om vervolgens te komen tot coördinatie op dit gebied. Weliswaar werd tot dusverre in die richting ook wel gewerkt door de gewestelijke en plaatselijke musea, maar zonder samenhang.

97480 Momenteel zijn daartoe gerechtigd het rijksmuseum te Leiden en 't biologisch-archaeologisch instituut te Groningen voor het geheele land en het rijksmuseum G. M. Kam te Nijmegen voor die omgeving, althans zoolang dit museum onder leiding staat van dr. J. H. Holwerda, den vroegeren directeur van het Leidsche museum. Alle locale musea en provinciale genootschappen zullen erkenning moeten aanvragen voor het
97485 verrichten van opgravingen, welke erkenning alleen wordt verleend nadat de rijkscommissie daarover haar advies heeft uitgebracht.

Het rijksbureau is thans bezig een lijst samen te stellen van alle terreinen in ons land, welke in oudheidkundig opzicht van belang zijn, opdat bijtijds maatregelen kunnen worden genomen, wanneer het incultuur brengen van deze gronden de daarin
97490 verborgen archiefstukken dreigt verloren te doen gaan. Met behulp van deze lijst zal het in de toekomst mogelijk zijn dergelijke terreinen te beschermen. Blijkt dit niet mogelijk, dan streeft het bureau ernaar de bij ontginning te vinden resten met alle zorgen te omringen en voor het nageslacht te bewaren. Voorts ligt het in de bedoeling ook eventueele vroegere vondsten te inventariseeren, welke zich in de locale musea
97495 bevinden of waarover in de litteratuur van de laatste decennia is geschreven, zoodat het bureau te allen tijde kan nagaan, waar zich een bepaalde oudheidkundige vondst bevindt.

Daarnaast geven typische, oude namen van grondstukken vaak aanwijzingen, dat er overblijfselen uit het verleden te vinden zijn zoodat het aanbeveling verdient ook
97500 daarvan een lijst aan te leggen.

Tenslotte zijn er in bijna elke plaats wel enkele voorwerpen in particulier bezit, zooals steenen bijlen, pijlspitsen, e.d., die eveneens in teekening en foto
vastgelegd dienen te worden.

Deze omvangrijke inventarisatie, aldus dr. Bursch, kan niet tot stand komen zonder de
97505 medewerking van het groote publiek. Wij moeten overal over het geheele land verspreid onze vrijwillige medewerkers hebben, die ons van het bestaan der hierboven bedoelde terreinen in kennis stellen en ons inlichten over de in hun omgeving zich bevindende oudheidkundige vondsten. Het liefst hadden wij in elke gemeente zoo'n medewerker, het is best mogelijk, dat ons dan de vondst van de zooveel-duizendste Germaansche urne
97510 wordt gerapporteerd, maar per slot van rekening kan ook die weer aanwijzingen geven over de verbreiding der Germaansche cultuur, enz.

Binnenkort zal hiervoor de medewerking van alle burgemeesters in Nederland worden ingeroepen.

Maar daarmee zijn wij er niet, al kunnen zij ons grootelijks van dienst zijn. Wat
97515 wij noodig hebben, zijn medewerkers uit het volk zelf, die ons regelmatig op de hoogte houden, wanneer zich in hun gemeente iets bijzonders op oudheidkundig gebied voordoet. Begrijpt u mij goed: het is allermintst onze bedoeling om eventueele vondsten voor ons museum te winnen; integendeel de verspreiding van materiaal over de bestaande oudheidkamers, gewestelijke en locale musea kan de aantrekkelijkheid

- 97520 [verbeterd!] ervan slechts verhoog en evenmin willen wij, dat de rechtmatige eigenares ons hun bezit afstaan. Natuurlijk, het liefst zien wij deze voorwerpen geplaatst in een museum, omdat wij daar de grootste waarborgen hebben, dat de deskundig bewaard zullen blijven, maar deze overname zal alleen mogelijk zijn met volledige instemming van den eigenaar en
- 97525 tegen een billijke vergoeding. Betreft het daarenboven unieke vondsten van waarlijk nationale beteekenis, dan zullen wij vanzelfsprekend moeite doen om deze voorwerpen een plaats te geven in het rijksmuseum van oudheden te Leiden, eventueel door ruiling met andere museumstukken, maar de hoofdzaak waarom het ons te doen is, is een volledig overzicht te hebben van
- 97530 hetgeen de Nederlandsche bodem aan archaeologica heeft opgeleverd en nog zal opleveren. Het is de bedoeling dat vondstmeldingen in de drie noordelijke provinciën worden gericht tot prof. dr. A. E. van Giffen te Groningen en voor de rest van het land tot dr. F. C. Bursch, directeur van het rijksbureau voor het oudheidkundig
- 97535 bodemonderzoek, Rapenburg, 28, Leiden. Deze brief legt een grote druk op personen die archeologische vondsten in huis hebben en al zeker als *het unieke vondsten van waarlijk nationale beteekenis* zijn. De kantharos van Stevensweert hoort hier zeker toe!
- 97540 **Hoe past de drinkbeker in het geheel van de vondst?** De helm was zó kostbaar dat het verlies ervan voor de eigenaar een enorme strop zou zijn. Als je de sierhelm met andere voorwerpen verstoopt dan doe je dat opzettelijk. De waarde van de karanthos was - gegeven de hoeveelheid zilver - nog veel hoger. Dus gezien vanuit het gezichtspunt van degene die alle voorwerpen in het veen verstoopt,
- 97545 is het verlies wel groter, maar kon hij dat verlies gemakkelijk dragen. Ieder ander zou bij onopzettelijk verlies van een dergelijk voorwerp alle moeite doen het terug te krijgen. Je zou een vergelijking kunnen maken met een graf dat naast het lijk wordt gevuld met attributen die betrekking hebben op de overledene, en levensmiddelen voor in het
- 97550 hiernamaals. Je doet dat in de hoop dat het graf niet geplunderd wordt. Daartegen probeer je dan maatregelen te nemen. Met dergelijke gedachten zou de kantharos wel degelijk een deel van de Man en paard-uitrusting die in het veen bij Helenaveen terecht is gekomen.
- 97555 Kluijtmans schrijft: Een zilveren beker is ook nog gevonden, voorzien van een haakje om hem aan het getuig te hangen. De kantharos voldoet overduidelijk aan de beschrijving van de eerste woorden, met het haakje kan één van de oren zijn bedoeld. Deze zijn niet teruggevonden, terwijl ze volgens de geleerden wel degelijk aan de beker hoorden. Kluijtmans schijnt te
- 97560 suggereren dat de drinkbeker, net als het door hem vermelde mooi klein wijnvaasje, met een paar liter inhoud, in 1911 gevonden zijn. Al met al voldoende aanleiding om het vermoeden uit te spreken dat directeur Bos van de N.V. Maatschappij deze voorwerpen in 1911 in bezit had. Op de conferentie van 23 juni 1910 is tussen de belanghebbenden een zeer duidelijke afspraak gemaakt over de nog-niet beschreven en nog te vinden voorwerpen.
- 97565 Adrianus Bos was de aangewezen persoon om deze voorwerpen te verwerven. De Maatschappij Helenaveen voerde een nauwkeurige boekhouding, maar directeur Bos kocht de voorwerpen persoonlijk op en hield die dus uit de boeken van de vennootschap. Deze voorwerpen werden zodoende in de directeurswoning bewaard, maar zo dat slechts
- 97570 weinigen het te zien kregen, en dan nog alleen getoond door de directeur zelf. Een inventarisatie van personen die tijdens het leven van de directeur de Romeinse voorwerpen gezien kunnen hebben, heb ik ook gemaakt. Het betreft hier natuurlijk vooral de dienstboden. Jootje, of Johanna, van de Bovenkamp kwam uit Helenaveen en was in de nadagen van Bos (vanaf circa 1925) dienstbode. Van haar is het verhaal,
- 97575 overgeleverd door Kluijtmans, dat de directeur haar op een gegeven moment de inhoud van de kast heeft laten zien. Vooral de grote leren voorwerpen zijn haar toen opgevallen. Ze zal wel niet in de gelegenheid zijn geweest alles goed te bekijken, laat staan alles op te schrijven, als ze er al interesse in zou hebben. Anderen die de vondst wellicht gezien hebben zijn de commissarissen van de
- 97580 vennootschap, en dat gedurende bijna 25 jaar. Deze personen waren in het algemeen maatschappelijk gezien zeer geslaagde figuren, zoals de directeur van de Staatsspoorwegen. Zij kwamen minstens één maal per jaar naar Helenaveen voor een vergadering, die anders meestal elders gehouden werd. Op 1 juli 1910 was er een dergelijke vergadering in de villa van de directeur, dit was dus ruim 2 weken na de
- 97585 vondst, maar in de notulen van de bijeenkomst wordt er geen melding van gemaakt,

terwijl de vondst al duidelijk in de kranten was beschreven en maar op ongeveer 2 km afstand was gedaan.

Twijfels over de herkomst van de kantharos

- 97590 Rijksmuseum Kam heeft vanaf het allereerste begin getwijfeld aan het verhaal van de vermeende vinder Bongers. Hierboven is dat al verschillende malen geschreven. Dat betreft dan de oorlogsjaren en die tot circa 1950. De juridische nasleep levert nog meer informatie.
Zo lezen we in
- 97595 [1998] Het geheim van de smid door mr. W.M.J. Bekkers: [...]
Niet alleen bestaan over de herkomst en de leeftijd van de Kantharos verschillende theorieën. Dat geldt ook voor het jaar, de plaats en de omstandigheden waaronder de beker is gevonden. In de juridische literatuur en de jurisprudentie worden genoemd 1942 en 1943, terwijl Swinkels uitgaat van 1939. Hij weet dat op verzoek van drs.
- 97600 A.V.M. Hubrecht, directeur van het (toen nog) Rijksmuseum Kam van 1964 tot 1978, de burgemeester en pastoor van Stevensweert in november 1966 hebben gesproken met de vinder van de Kantharos, J. Bongers te Echt. Bongers vertelde toen dat hij de Kantharos had gevonden in januari of februari 1939 tijdens het jagen. Op een kaart gaf hij aan waar hij de beker had gevonden. Dat zou op Belgisch grondgebied zijn geweest, aan de westzijde van de Maas. Eerder had Bongers, volgens Swinkels, andere vindplaatsen opgegeven. De burgemeester heeft over dit gesprek aan Hubrecht op 14 november 1966 onder meer geschreven: '... ik geloof de heer Bongers niet of beter gezegd: hij liegt. Hij heeft reeds drie verschillende vindplaatsen van de Kantharos opgegeven. Welke is de juiste? Ik weet het niet' (7).
- 97610 7. De door Bongers in 1966 opgegeven vindplaats heeft Hubrecht niet gepubliceerd, wel het jaar 1939 als datum van de vondst (A.V.M. Hubrecht, De Kantharos van Stevensweert, in *Numaga* 13 (1966) 243-251, met foto van de heer Bongers op p. 250).
- 97615 Museum Kam en de opvolger Museum Het Valkhof hebben ook getwijfeld aan de herkomst van de drinkbeker, maar net als de juridische kant was voor het museum het bezit van belang, niet de herkomst. Toch vinden we in publicaties van het museum hierover verschillende opmerkingen.
[2006] Als Bongers de kantharos inderdaad in 1943 op de baggermolen heeft opgeraapt, heeft hij die vervolgens mee naar huis genomen en niet aangegeven. Volgens de baggervergunning moesten namelijk oudheidkundige vondsten worden gemeld en afgestaan aan het rijk. Dan ligt het ook voor de hand dat Bongers al snel heeft geprobeerd zijn vondst te gelde te maken.
- 97620 [elders 2006] Bij de voorbereiding van dit artikel hebben we de kantharos meermaals intensief bestudeerd en daarbij bijzonder gelet op aanwijzingen voor de vervaardiging en levensloop van de beker.
Wat dit laatste betreft is het opvallend dat zowel op de binnen- als de buitenbeker geen beschadigingen werden aangetroffen die het gevolg zouden kunnen zijn van verplaatsingen in stromend water, waarbij onvermijdelijk deuken en krassen zouden zijn ontstaan door het stoten tegen grind en dergelijke. Het is daarom naar onze mening weinig aannemelijk dat de vinder, J. Bongers, de kantharos tussen stenen langs de Maas heeft aangetroffen, zoals hij later heeft beweerd. Het verhaal van zijn zwager, dat Bongers de kantharos op de baggermolen heeft gevonden in enkele kluiten klei, is aannemelijker omdat de kleilaag waarin de kantharos zich op de rivierbodem bevond deze eeuwenlang heeft beschermd, totdat de baggermolen de rust verstoorde (zie p.18).
- 97630 [1972] De vondst bleef destijds vrijwel onopgemerkt: door J. Bongers werd de beker - in twee delen - tussen de stenen aan de Maas gevonden, de klei werd er afgewassen en hij werd mee naar huis genomen.
- 97635

Documenten over de familie Bongers en over het baggerbedrijf

19 december 1934 **DROEVIG ONGELUK OP DE MAAS TE STEVENSWEERT**

Vier personen te water geraakt. Eén dezer verdronk.

- 97645 Dinsdagvoormiddag tegen tien uur heeft op de Maas onder de gemeente STEVENSWEERT een droevig ongeluk plaats gevonden.
Aldaar oefent de firma van Hasselt uit Nijmegen reeds enkele jaren het baggerbedrijf uit. Zondag was er een sleepboot aangekomen om de baggermachine, welke herstellingen moest ondergaan, weg te sleepen.
Dinsdag zou zulks plaats vinden en tegen tien uur hadden een viertal opvarenden van de boot in een roeiboortje plaats genomen en voeren vanaf de baggermachine naar den oever om de tros los te maken. Zij gleden langs de kabel. Daarbij hebben ze wellicht
- 97650

op een bepaald oogenblik aan één zijde in het bootje gestaan, met het gevolg, dat dit water schepte en omsloeg, zoodat alle vier in het water vielen.

97655 De sleepboot, die bij de baggermachine lag, voer snel naar de plaats van het ongeluk, halverwege den oever, en wist twee hunner te redden; de derde had door te zwemmen den oever weten te bereiken. De vierde is jammerlijk verdronken, ondanks nog getracht werd hem te redden. Zijn lijk is nog niet gevonden.

Het slachtoffer is gehuwd en 37 jaar oud, en heet H. Peperkamp uit Doornenburg, gemeente Bemmelen in Gelderland.

97660

4 augustus 1945 **De grintbaggeraars**

DE VRIJE STEM, het orgaan van de G.O.I.W., bevat een gedegen artikel over de samenwerking in de oorlogsjaren van de Grintbaggeraars ten bate van het bouwen van de Atlanticwal.

97665 Uit dit artikel nemen wij enige cijfers over om onze lezers de kwestie duidelijk te maken.

De fa. Paes te Nijmegen produceerde in 1939 209.349 ton ... in 8 maanden van 1944 537.960 ton.

De fa. van Hasselt te Lent produceerde in 1939 270.634 ton en in 1943: 915.212 ton.

97670 De N.V. Grint Mij te Arnhem steeg van 184.291 ton in 1939 tot 483.938 ton in 1943.

Voor de N.V. van Roosmalen Transp. en Handelsmij te Maastricht waren deze cijfers: 108.905 ton en 210.851 ton.

De fa. Hovestad en Dekker te Roermond begon er in de oorlogsjaren mee en produceerde in 1943 reeds 211.421 ton.

97675 De Ballastmij de Merwede te Rotterdam produceerde in 1940 225.526 ton en in 1943: 235.205 ton.

Over al deze firma's zijn bij de Mil. Commissaris de officiële klachten ingediend.

En nu vervolgt de Vrije Stem:

Alle in Nederland geproduceerde grint werd doorverkocht door de N. V.

97680 grintverkoopkantoor te Nijmegen. Directeur dezer N.V. was de Hr. Mr. Zuidema. Genoemd kantoor heeft de distributie van grint gedurende dit tijdperk geleverd en heeft o.a. in een schrijven aan de aangesloten producenten aangemaand de productie op te voeren. Wij verzochten sluiting van dit verkoopkantoor en inbeslagname van de administratie. Dit is geschied.

97685 De Duitse firma "Niba" voerde haar productie op van 350.685 ton in 1938 tot 1.522.949 ton 1943. Deze firma heeft echter twee Nederlandse directeuren n.l. de heren Müller en van Sprang. Ook dit is zelfs nog met een grote dosis lankmoedigheid te verdragen. **Dat de Heer Müller echter benoemd is tot lid van het tribunaal te Nijmegen doet ons "enigszins vreemd aan".**

97690 Dat de heer Wagemaker als Directeur van het Grint Verkoop Kantoor meende de Duitse Wehrmacht hulp te moeten bieden kan liggen aan zijn wel zeer "zakelijke" opvattingen. Dat hij echter benoemd werd tot beheerder over Nat. Soc. vermogen doet ons alweer "enigszins vreemd aan".

97695 En de heer van Roosmalen, die zijn productie ongeveer verdubbelde, werd belast met het lichten van de door de Duitsers tot zinken gebrachte schepen in de haven van Maasbracht. Tot grote ergernis van de honderden schippers.

16 juni 1964 Aanleg gegund [...]

Van Hasselt Gendt (Gld.) 5, 5, 2, en 1 cent

97700 Niet geaccepteerd werden de inschrijvingen van {...] en van de Niba

3 april 2013 Jacobus Antonius Bongers was getrouwd met Hubertina Cornelia van der Riet (gehucht Diepstraat?). Het echtpaar woonde te Echt op de Maasbrachterweg 100. Enkele dagen voor 1 februari 1937 werd Theodorus Lucienne geboren. Deze Theo is overleden.

97705 Enkele dagen voor 8 maart 1943 werd Helena Henrica Johanna geboren.

Een (andere) zoon (van 77 of 78 jaar)

Een zoon en een dochter zouden nu in Zuid-Afrika wonen. Jan Bongers zou in Roermond wonen. Informatie verkregen via een neef van Jaak Bongers uit Stevensweert, Bernard Bongers.

97710 Jaak Bongers werd in de familie een fantast genoemd.

3 april 2013 De baggermolen waarop Jaak Bongers werkte was niet (meer) van Dekker maar van de firma van Hasselt uit Nijmegen (of Lent of Gendt). Deze firma van Hasselt had de baggermolen gekocht van Dekker. Waarschijnlijk was het een eenvoudige baggermolen, met stilstaande zeef of zeven.

97715

In het bovenstaande zijn argumenten gegeven die twijfel doen ontstaan dat de

kantharos ook werkelijk gevonden is in de gemeente Stevensweert. Hieronder worden de argumenten nog eens herhaald.

97720

- Het is in het geheel niet zeker dat in de vierde eeuw de Maas stroomde waar nu Stevensweert ligt. Meer oostelijk ligt de Oude Maas.
 - De talloze overstromingen van de Maas zouden de beker erg beschadigd moeten hebben. Juist in januari en februari 1926 was geheel West-Europa in de ban van hoogwater van de rivieren. Ook Stevensweert was daarvan slachtoffer: er wordt gemeld dat de Maas daar tussen 4 en 5 km breed was geworden! Onder deze omstandigheden zou een tere constructie als de drinkbeker tenminste in stukken zijn gevallen, en waarschijnlijk meegevoerd naar zee, waardoor de kantharos definitief verloren was gegaan.
 - Er zijn drie varianten op de omstandigheden, de vindplaats en het jaar van de vondst:

97730

En het jaar 1939 is in 1966 uit de mond van Bongers opgetekend, toen de kantharos tijdelijk naar Stevensweert was teruggekeerd ter gelegenheid van het 700-jarig bestaan van de parochie Stevensweert. Bongers heeft toen bovendien verteld dat hij de beker niet op de baggermolen had gevonden, maar bij het jagen had zien liggen op een strook kiezel langs de Maas. Op een kaart had hij een vindplaats aangewezen op de westelijke over van de rivier, tegenover Stevensweert, op Belgisch grondgebied dus!

97735

De kantharos in kwestie werd in 1942, dus tijdens de bezetting, gevonden te Stevensweert op ongeveer achttien kilometer van Roermond in de diepe grindbanken van de Maas. De vinder zag in het met leem overdekte en grauw roestige voorwerp niet veel bijzonders. Hij schonk het aan een particulier liefhebber van oudheden, die het onopgemerkt, dus veilig bewaarde zonder precies te vermoeden, wat het was. In 1949 liet hij de stof, waaruit de beker gemaakt was, deskundig toetsen.

97740

De beker werd in 1942 door de Stevensweertenaar J. Bongers gevonden op een hoop grind gelegen op een terrein op de Koeweide te Stevensweert het waren twee in elkaar passende delen die geheel overklonterd waren door klei. Deze had zich als een huls op de buitenwand vastgezet. Hier en daar was deze huls afgebrokkeld en werd de blinkende ondergrond zichtbaar. Hij nam de er mee naar huis, maakte hem schoon en zette hem op een commode in de huiskamer.

97745

97750

De zogenaamde vinder Jaak Bongers noemt dus maar liefst 3 verschillende vindplaatsen. Op een kaartje staat aangegeven op de Nederlandse oever, recht tegenover de plek waar de Belgisch-Nederlandse grens haaks op de Maas staat, vlakbij grenspaal 126. De tweede is ergens op de Belgische oever. De derde op de Koeweide, die destijds noordelijker lag op de noordelijke (westelijke) oever richting Maasbracht. In coördinaten: [5,8570 en 51,1440], onbekend, [5,8740 en 51,1490].

97755

Wellicht is de Koeweide hier op de kaart niet het bedoelde, want er zou ook nog een Stevensweeterkoeweide of Stevenweertsche koeweide bestaan, maar dat maakt de zaak niet wezenlijk anders.

97760

- Het jaar 1942 heeft Brom menen te kunnen opmaken uit een gesprek dat hij met Bongers in april 1950 heeft gevoerd, waarin die suggereerde dat de beker al een tijd bij hem op de kast had gestaan voordat hij hem aan Schoonenberg had laten zien. [...]
 - Op 14 mei 1966 heeft de directeur van het Rijksmuseum Kam onder toezicht oog van burgemeester J. Kelleners, een gesprek gehad met de vermeende vinder. Waarschijnlijk is er geen proces-verbaal gemaakt van dit gesprek. Maar duidelijkheid heeft het niet gebracht over omstandigheden, plaats en tijd van de vondst.

97765

Niet alleen bestaan over de herkomst en de leeftijd van de Kantharos verschillende theorieën. Dat geldt ook voor het jaar, de plaats en de omstandigheden waaronder de beker is gevonden. In de juridische literatuur en de jurisprudentie worden genoemd 1942 en 1943, terwijl Swinkels uitgaat van 1939. Hij weet dat op verzoek van drs. A.V.M. Hubrecht, directeur van het (toen nog) Rijksmuseum Kam van 1964 tot 1978, de burgemeester en pastoor van Stevensweert in november 1966 hebben gesproken met de vinder van de Kantharos, J. Bongers te Echt. Bongers vertelde toen dat hij de Kantharos had gevonden in januari of februari 1939 tijdens het jagen. Op een kaart gaf hij aan waar hij de beker had gevonden. Dat zou op Belgisch grondgebied zijn geweest, aan de westzijde van de Maas. Eerder had Bongers, volgens Swinkels, andere vindplaatsen opgegeven. De burgemeester heeft over dit gesprek aan Hubrecht op 14 november 1966 onder meer geschreven: '... ik geloof de heer Bongers niet of beter gezegd: hij liegt. Hij heeft reeds drie verschillende vindplaatsen van de Kantharos opgegeven. Welke is de juiste? Ik weet het niet'.

97770

97775

97780

- 31 oktober 1941 [...] Te Linne en ook te Roermond vindt men onder een dekking van enkele meters klei en zand, de kiezel soms tot een diepte van 15 à 16 M. Af en toe treft men voorhistorische vondsten aan in deze kiezellagen, o.a.

mammouthtanden en hertegeweien enz., die uit wetenschappelijk oogpunt waarde hebben.

Behalve te Roermond is ook te Stevensweert een particuliere maatschappij begonnen met de kiezelwinning. Al deze werken geven vele handen werk.

- 28 augustus 1951 *Voormelde beker heeft mijn zwager de Heer J. Bongers (...) mij voor het eerst in het najaar van negentienhonderd drie en veertig vertoond. Mijn zwager Bongers was destijds werkzaam op de baggermolen "de Dekker" welke grind baggerde in de uiterwaarden van de Maas genaamd "de Sleyen", nabij Stevensweert. Bij het vertonen van de beker deelde mijn zwager mij mede, dat enkele dagen daarvoor, toen de baggermolen was ingesteld op een graafdiepte van zestien meter beneden de waterspiegel, hij het voorwerp in twee afzonderlijke delen had opgevangen uit de afvoergoot van de molen waarin de emmers hun inhoud overstorten. Daarna had Bongers de beide delen thuis van klei en slik gereinigd en toe bleek [...]*

- Als we de baggerindustrie bestuderen, dan werd in 1939 bijna zeker nog niet veel grind in Stevensweert opgehaald, waarschijnlijk pas vanaf de tweede helft van 1941. De bemanning bestaat vooral uit Sliedrechtenaren, aangevuld met lokaal personeel die er werkten als dekknecht, bakkenschippers en walknechts. Als Bongers de drinkbeker bij die werkzaamheden gevonden zou hebben, en direct schoongemaakt zou hebben, dan hebben anderen dat ongetwijfeld gezien. Hij zal ook niet een schoongemaakte beker in zijn jas stoppen; het is juist een voorwerp om mee te pronken. Indien er anderen op de een of andere manier bij betrokken waren dan hadden deze personen zich ongetwijfeld gemeld in de jaren vijftig toen er zoveel ophef was over de beker die toen de kantharos van Stevensweert werd genoemd! Collega's of ex-collega's zouden in die periode Bongers en waarschijnlijk ook de pers benaderd hebben om hun werkzaamheden uit te leggen en de rol van Bongers te benoemen. Dat alles is niet gebeurd.

De baggermachine haalt met emmers zand en grind uit de bodem. Deze emmers hebben een volume van tot wel een halve kubieke meter. Dan wordt de last uitgestort en komt in een reeks trommels en zeven terecht en zo wordt het grind in vier soorten gescheiden. Het zand wordt ook verzameld en het water teruggevoerd in de rivier.

De massa van het grind in de draaiende molen moet vele honderden kg zijn. Een teer, zilveren voorwerp wordt hierin vermorzeld. De delen komen zeker los van elkaar en dan is niet te verwachten dat een drinkbeker uit één stuk eruit gehaald kan worden. Als de drinkbeker met klei en zand in de molens en zeven terecht is gekomen dan kan de beker nooit zo ongeschonden tevoorschijn zijn gekomen.

Waarschijnlijk zou de drinkbeker in zijn geheel niet door de zeven komen, want de grootste zeef heeft gaten van 10 cm, maar de losse delen zouden verspreid zijn over de gesorteerde keien.

Bovendien was er voortdurend controle door een controleur van Rijkswaterstaat, zoals we lezen in de krant van 21 april 1933:

In de ruimten onder het dek, aan weerkanten van de geul voor den emmerketting, bevinden zich ruime verblijven voor machinist, molenbaas en dekpersoneel, en voor den controleur van rijkswaterstaat, die steeds aan boord moet zijn ter controle van de opgehaalde hoeveelheid specie.

- Elders wordt gemeld dat de kiezels in de grind-winninggebieden zo dicht op elkaar gedrukt is dat de drinkbeker volledig verpletterd zou zijn geweest.

- Museum Kam en de opvolger Museum Het Valkhof hebben ook getwijfeld aan de herkomst van de drinkbeker, maar net als de juridische kant was voor het museum het bezit van belang, niet de herkomst.

Toch vinden we in publicaties van het museum hierover verschillende opmerkingen.

[2006] Als Bongers de kantharos inderdaad in 1943 op de baggermolen heeft opgeraapt, heeft hij die vervolgens mee naar huis genomen en niet aangegeven. Volgens de baggervergunning moesten namelijk oudheidkundige vondsten worden gemeld en afgestaan aan het rijk. Dan ligt het ook voor de hand dat Bongers al snel heeft geprobeerd zijn vondst te gelde te maken.

[elders 2006] Bij de voorbereiding van dit artikel hebben we de kantharos meermaals intensief bestudeerd en daarbij bijzonder gelet op aanwijzingen voor de vervaardiging en levensloop van de beker.

Wat dit laatste betreft is het opvallend dat zowel op de binnen- als de buitenbeker geen beschadigingen werden aangetroffen die het gevolg zouden kunnen zijn van verplaatsingen in stromend water, waarbij onvermijdelijk deuken en krassen zouden zijn ontstaan door het stoten tegen grind en dergelijke. Het is daarom naar onze mening weinig aannemelijk dat de vinder, J. Bongers, de kantharos tussen stenen langs de Maas heeft aangetroffen, zoals hij later heeft beweerd. Het verhaal van zijn zwager, dat Bongers de kantharos op de baggermolen heeft gevonden in enkele

- 97850 kluiten klei, is aannemelijker omdat de kleilaag waarin de kantharos zich op de rivierbodem bevond deze eeuwenlang heeft beschermd, totdat de baggermolen de rust verstoort (zie p.18).
[1972] De vondst bleef destijds vrijwel onopgemerkt: door J. Bongers werd de beker - in twee delen - tussen de stenen aan de Maas gevonden, de klei werd er afgewassen
- 97855 en hij werd mee naar huis genomen.
- De verwerving door Museum Kam
Het museum G.M. Kam in Nijmegen heeft geen goede hand gehad bij de verwerving van topstukken. Enkele topstukken zijn op wel zeer discutabele gronden na de Tweede Wereldoorlog verworven:
- 97860 Begin april 1956 was er veel te doen over de exacte vindplaats van het Trajanusbeeldje. Een jaar later had het museum het beeld nog in bezit. Baggers in Xanten zouden de Kop van Trajanus verdonkeremaand hebben en daarna naar Nijmegen gesmokkeld en verkocht hebben aan een antiquair.
Ook de Phrygische Ganymedes (puer pileatus) is op twijfelachtige gronden aangekocht.
- 97865 - Niet alleen zijn er geen mede-arbeiders op de baggermolen naar voren getreden die zeggen dat Bongers het voorwerp heeft gevonden, maar er zijn ook geen getuigenissen bekend van familieleden die kunnen getuigen over de kantharos ten huize Bongers.
- Noch Jaak Bongers noch familieleden e.d. zijn ooit gehoord over het voorwerp. Tenminste de auteur heeft hierover niets kunnen vinden.
- 97870 Een neef noemt Jaak Bongers anno 2013 een fantast, zo werd hij in de familie tenminste benoemd.
- De kantharos is zo broos dat hij alleen door enkele personen aangepakt mag worden. In 60 jaren kan de toestand van de drinkbeker toch niet zoveel verslechterd zijn dat hij destijds uit een baggermolen o.i.d. kwam en nu niet meer aan.
- 97875

Beesel

- 21 april 1922 **TE HUUR. "Klerkenhof" te Beesel, groot 27,80 H.A.;**
97880 te aanvaarden Paschen 1923. Inlichtingen te vragen bij P. HENDRIKS, Heijthuijsen, (Dorp 9,) op iederen Maandag. 1045
- 22 april 1922 **Weer een Limburgsche Missie-bisschop.**
Noord-Limburg mag wel trotsch zijn op de Bisschoppen, die het aan Gods Kerk schenkt.
- 97885 Behalve Mgr. Schrijnen, den Herder van het eigen Diocees, behalve Mgr. Abels van Weert (Mongolië) en Mgr. Theelen van Beesel (Bulgarije,), zijn in de laatste twee jaar niet minder dan vier zonen van Noord-Limburg tot de Bisschoppelijke waardigheid verheven: Mgr. Frederix van Afferden (China), Mgr. Schraven van Lottum (China), Mgr. Aerts van Swolgen (Ned. Nieuw Guinea) en nu Mgr. Verstraelen van Sevenum (Kleine Soenda-eilanden).
- 97890 In het pasopgerichte Ap. Vicariaat van Flores en Timor zal Mgr. Verstraelen de eerste bisschop zijn. Hij wordt dus de opvolger van den zoo tragisch overleden Mgr. Noyen, die, wel niet formeel maar toch officieus als Bisschop aangewezen, stierf op denzelfden dag, welke voor de Bisschopswijding was uitgekozen.
- 97895 Na zijn studies in het Missiehuis te Steyl voleindigd te hebben, werd Mgr. Verstraelen in St. Gabriel bij Weenen priester gewijd en in hetzelfde jaar 1907 als Missionaris naar Togo op de westkust van Afrika gezonden.
Met buitengewoon succes hebben de Steyler Paters in die voormalige Duitsche kolonie gewerkt, in de hoofdstad bouwden de negers naar het model der Steyler kerk een
- 97900 prachtige H. Hart-kerk, eender mooiste van Afrika. Jammer dat de oorlog die rustige ontwikkeling kwam verstoren; Togo werd door de Engelsche troepen bezet en de Duitsche priesters moesten de wijk nemen. Hun bisschop, Mgr. Wolf, leeft nu al acht jaar in ballingschap te Steyl.
- 97905 Ondertusschen was de E. P. Verstraelen overgeplaatst naar Ned. Oost-Indië, waar de Holl. provincie der Steyler Congregatie de Kleine Soenda-eilanden ter Evangelizeering had overgenomen. Laatstelijk bekleedde hij daar de functie van deken op het eiland Timor, terwijl de Superior generaal er op visitatie-reis, was, kwam het bericht van zijn benoeming tot Vic. Ap.
Moge het den nieuwen Bisschop mede door onze gebeden gegeven zijn, lang te arbeiden
- 97910 op den akker, die door het lijden en den dood van Mgr. Noyen en zijn heldhaftige metgezellen is vruchtbaar gemaakt.
Bisschoppelijk Missie-Comité.
- 97915 3 mei 1922 - **Naar wij vernemen zal de fanfare van Beesel haar medewerking** verleen, aan het door onze Harmonie georganiseerd concert, ten bate van de

noodlijddenden in Rusland.

4 mei 1922 DE NOOD IN RUSLAND. Eene te Beesel door den R. K. Vrouwenbond gehouden liefdadigheidsuitvoering voor hongerend Rusland heeft f250 opgebracht.

- 97920 BEESEL. — Zondag 30 April gaf de R. K. Vrouwenbond met welwillende medewerking der Fanfare alhier een liefdadigheidsuitvoering ten bate der noodlijdende bevolking in Rusland. De zaai was flink bezet. De totale opbrengst was ruim f250. Voorwaar een flinke som voor Beesel. Voordracht en muziek die het programma completeerden werden op schitterende wijze uitgevoerd. Vooral het nummer "Boertig", Congoleesch lied, opgevoerd door 'n 10-tal jonge dames, lokte een daverend applaus uit. Door de
- 97925 presidente, mej. 's Landsweers werd een kort overzicht gegeven over den heerschenden hongersnood in Rusland. Er werd een schrijven voorgelezen, van de moeders der arme streek, hetwelk bevatte, eene dringende bede tot de bevolking en vooral tot de moeders van andere lauden om opneming en ondersteuning hunner arme kleinen. Daarna dankte de presidente Bestuur, Directeur en leden der Fanfare, de dames voor hunne
- 97930 medewerking en steun. Een hartelijk woord van dank komt zeer zeker toe aan de presidente, de secretaresse en de Besturen der beide vereenigingen, voor de moeite die ze zich hebben getroost om dit schoone werk van naastenliefde tot stand te brengen en zoo goed te doen.

- 97935 24 mei 1922 [...] **Debat over rapporten en conclusies.** Dhr. Thijssen (Beesel) heeft bezwaar er tegen, dat in eene conclusie staat, dat de candidaat in wiens voordeel onregelmatigheden gepleegd zijn, van de lijst moet verdwijnen. Dhr. Willems (Nuth) komt er tegen op, dat dhr. Cremers te Roermond gezegd heeft, dat Spr. eene eigenaardige rol gespeeld heeft en deelt mede, dat dhr. Cremers
- 97940 tegen het ophangen van het politiek advies in het stemlokaal te; Nuth geprotesteerd heeft. [...]

20 januari 1923 **Colleges van Zetters.**

- Bij besluit van dhr. Commissaris der Koningin
- 97945 In Limburg zijn voor den tijd van vier jaren ?r benoemd tot leden van de Colleges van Zetters voor Rijksdirecte belastingen in:
- [...] Beesel: G. J. Theelen en F. H. H. Helden; [...]

9 februari 1923 **BEESEL-REUVER.**

- 97950 Veeverzekering. — Door de Onderlinge Veeverzekering van de afd. Beesel van den Limb. Land- en Tuinbouwbond werd op j.l. Vrijdag haar jaarlijksche algemeene vergadering gehouden. Door den voorzitter, de heer P. J. Timmermans, werd gewezen op den slechten tijd, die vooral de landbouwers en veehouders beleven en de hoop uitgesproken dat het jaar 1923 toch eindelijk eens een verbetering in den toestand mag brengen. Uit het
- 97955 door den secr.-penningmeester uitgebrachte jaarverslag bleek, dat de vereeniging in het afgelopen jaar nog al veel uitkeeringen heeft moeten doen.
- Schutterij en Fanfare.** — Door de schutterij St. Georgius & St. Sebastianus te Beesel, werd Zondag een vergadering gehouden, teneinde zich te scheiden van het fanfaregezelschap, welke vereenigingen tot dusverre gecombineerd waren. Deze
- 97960 scheiding werd door eenige leden, die van meening waren dat de fanfare op kosten der schutterij leefde, gevraagd. Uit de verschillende discussies, die gevoerd werden, bleek dat de meeste leden hiertegen waren, niettegenstaande sommige leden ook al trachtten aan te toonen, dat de beide vereenigingen goed op eigen beenen konden staan. Het bestuur, dat gedacht had een schikking in der minne te treffen zag hiertoe
- 97965 geen kans en kondigde een nieuwe vergadering aan over 14 dagen, waarin men hoopte tot een bevredigende oplossing te komen.

10 februari 1923 **RIJKSVOORJAARSKEURING VAN HENGSTEN.**

- Bij de vanwege de Provinciale Regelingscommissie voor de Paardenfokkerij in Limburg gehouden voorjaarskeuringen van hengsten, werden goedgekeurd:
- 97970 te Maastricht: Idégène van Cartils, eigenaar M. Schijns, Wittem; deze werd opgenomen in stamboek B; Pol, eigenaar Gebrs. Hollands, Gulpen. Max, eig. J. Diederens, Sittard, opgenomen in stamboek B; Albert de Velden, eig. J. Diederens, Sittard; Thomas, eig. J. Douwen Schinnen; Indien d'Emptinne, eig. Wed. J. Vroemen, Sittard en J. Vaessen, Voerendaal; Sergent de Herstal, eig. Wed. W. Nols, Eygelshoven; Garson de Wielerhof, eig. L. Heuts, Heerlen; Radical, eig. A. Bremers, Schinnen; Certain d'Enghien, eig. H. Castermans en J. Niesten, Maastricht; Finand du gros Buisson, eig. Gebrs. Rutten, Voerendaal, opgenomen in stamboek B; Mouton, eig. F. Lebouille, Hoensbroek. Afgekeurd door de Stamboekcommissie en goedgekeurd door de Rijkscommissie werden: Bill van
- 97980 Overstenhof, eig. J. Quaedvlieg, Schaesberg; Moustic de Schalven, eig. Gebrs. Theelen, Oud-Valkenburg;

te Roermond: Monteur, eig. J. van Melick, Neer; Milord, eig. Josef Reinders, Beesel; Duc van Melenborg, eig. M. Boonen, Buggenum; César van Melenborg, eig. dezelfde; Domixianus, eig. P. Geelen, Broekhuijsen; Roméo, eig. P. Nabben, Sevenum; Chris, eig. J. Obers, Sevenum; Espoir II de Griebben, eig. Mevr. P. Berger, Velp en H. Christman, Arnhem. Uitgesteld door de Stamboekcommissie werd Indigine de Kwei, eig. dezelfde.

17 februari 1923 **BEESEL-REUVER.**

De classificatie. — Burgemeester en Wethouders dezer gemeente verzochten den Minister van Financiën het dorp Reuver in een hogere klasse als bedoeld bij art. 5 der wet op de Personeele belasting te rangschikken, op grond, dat, hoofdzakelijk ten gevolge van de toename der kleiwarenindustrie, de huren te Reuver in de laatste jaren aanzienlijk zijn gestegen en ook overigens de levensstandaard in de meeste opzichten zoo hoog of hooger is dan in andere door B. en W. in hun schrijven genoemde gemeenten, die in een veel hogere klasse zijn gerangschikt. B. en W. waren van meening, dat het uit een oogpunt van billijkheid, vooral ten opzichte der arbeidersklasse, noodzakelijk was dat aan hun verzoek gunstig gevolg werd gegeven. Genoemde Minister heeft thans hierop medegedeeld dat er geen termen zijn gevonden om incidenteel in de classificatie eener gemeente wijziging te brengen doch dat bij eene eventueele algemeene herziening het verzoek in nadere overweging zal worden genomen.

24 februari 1923 **BROEDERSCHAP-SCHUTTERIJ "ST. GEORGIUS" EN "SEBASTIANUS" TE BEESEL.**

Voor buitenstaanders mag het volgende van ondergeschikt, zelfs van weinig belang zijn, maar voor de plaats zelf en zeker voor hen, die er het nauwst bij betrokken zijn, van des te meer en grooter belang.

Zoover men weet, dateert de Broederschap-Schutterij "St. Georgius" en "Sebastianus" alhier, uit de dertiende eeuw.

Aan het Koningszilver bevinden zich dan ook heden nog verschillende sierlijke massief zilveren platen uit de zestiende eeuw. Veel oudere van datum, zijn de laatste zeventig jaar door onachtzaamheid verdwenen, zoek geraakt, of verkwanzeld, zooals men beweert.

Het van ouds hier in de omstreken bekend "Drakenfeest" het z.g. "Draaksteken" is een historisch feit, dat van oudsher aan deze broederschap eigen, en sedert heugelijke jaren de hoge roem en waardevolle beteekenis voor deze schutterij is geweest, die van onze voorvaderen op kinderen en kindskinderen, overgeërfd en haar historische waarde op zeer waardige wijze heet weten te bewaren.

Het ligt ongetwijfeld nog in ieders geheugen, dat ten jare 1919, toen te Arnhem het grootsch Vaderlands Historisch Volksfeest op touw was gezet en zoo prachtig geslaagd mag heeten, er toen alom in deze gewesten, een heele roep is opgegaan, dat de Beeselsche Draakstekers met den Draak, met St. Joris en zijn gevolg bestaande uit een zestigtal leden uit onze broederschap, juichend en jubelend optogen naar Arnhem, om met hun historisch Draakstekers-vertoon, aan dat grootsche feest aldaar nog meer luister en belangstelling bij te zetten en aldaar vereeuwigd is geworden in het prachtig geïllustreerde boek, eenigen tijd daarna te Arnhem uitgegeven, welks boek een kostbaarheid is, voor wie zulk een exemplaar bezit.

Maar nog veel groter was het gejuich en gejubel, wanneer de Draakstekers aldaar na drie dagen feest te hebben gevierd, met een prachtige medaille als 1e prijs voor hoogste historische beteekenis en waarde bekroond, op Vrijdag 5 September 1919 huiswaarts keerden waarbij hier nog aan mag worden toegevoegd een som van f800 voor vrije reis, vracht- en verblijfkosten te Arnhem, [...]

2 maart 1923 **BEESEL-REUVER.**

Verkiezing Gemeenteraad. — Door Burgemeester en Wethouders is bepaald dat de verkiezing voor de leden van den Raad dezer gemeente zal plaats hebben op 22 Mei e.k. **Gemeenteraadsvergadering van 27 Febr. 1923.** — De voorzitter sprak bij deze eerste vergadering in 1923 zijn beste wenschen uit voor de leden en hoopte dat het hun gegeven mag zijn in dit jaar veel goeds tot stand te brengen, tot welzijn der gemeente. Vervolgens werden B. en W. gemachtigd de landerijen, waarvan de pacht in 1924 eindigt, opnieuw voor den tijd van 6 jaar te verpachten, mits tegen geen lagere prijs dan f20 per H.A.

De stembureaux en het hoofdstembureau voor de gemeenteraadsverkiezingen werden als volgt samengesteld: Stembureau I, de Burgemeester, Voorzitter, L. van der Velden en J. Steeghs, leden; G. Goossens, F. Rutten en H. Vossen, plaatsvervangende leden. Stembureau 2, J. Laumans, voorzitter, Jos. Korsten en P. Thijssen leden, H. Bors, H. Cremers en Jos. Thijsen pl.v. leden. Stembureau 3. F. Heldens Wz. voorzitter. F. Heldens Hz. en J. Claessen, leden; H Rutten, H. Timmermans en F. Meuter pl. v. leden. Hoofdstembureau de Burgemeester, voorzitter, J. Laumans, L. van der Velden, P.

- Thijssen, F. Heidens Wz. leden; J. Korsten J. Steeghs en F. Heldens Hz. pl. v. leden
Voortaan zal aan de stembureaux van gemeentewege geen wijn meer worden verstrekt.
- 98050 Tot leden in 't Bestuur der Teekenschool werden benoemd de heeren L. van der Velden en C. Lennaerts te Reuver.
- Het voorschot op de gemeentelijke vergoeding ex art. 101 der L. O. wet voor de bijz. lagere meisjesschool te Reuver (228 leerlingen) wordt vastgesteld op f1461.02. De gemiddelde kosten per leerling der openbare lagere scholen bedragen volgens de laatst
- 98055 vastgestelde gemeenterekening f8.01.
- Het vervolgonderwijs te Beesel zal ondanks de intrekking der Rijksvergoeding niet worden opgeheven indien de onderwijzers genegen zijn het onderwijs te geven tegen een verminderde vergoeding en de ouders een gedeelte der kosten willen dragen.
- Burgemeester en Wethouders worden gemachtigd met de Eerw. Zusters Dominicanessen te
- 98060 Reuver te onderhandelen inzake de overdracht der erfstelling Meuter. De gemeente wil alle tot de erfstelling behorende goederen met uitzondering van 't langs den tuin van den heer Van der Velden gelegen perceel bouwland hetwelk de gemeente zal behouden als vergoeding voor de door haar in 1910 betaalde successierechten en de verdere to
- 98065 dezer zake gemaakte onkosten, aan de Eerw. Zusters overdragen onder den last en de verplichting om daarop binnen een jaar na het overlijden van de laatste vruchtgebruikster een inrichting voor ouden van dagen en weeskinderen te stichten en in gebruik te nemen en ten eeuwigen dage te exploiteeren. De inrichting zal in de eerste plaats bestemd zijn voor personen uit deze gemeente. Armlastigen moeten tegen
- 98070 den kostenden prijs worden verpleegd, andere personen tegen een tarief als in soortgelijke inrichtingen in overeenkomstige gemeenten als Beesel.
- Een voorstel van den heer Steeghs om de raadszaal te Beesel beschikbaar te stellen tot het houden van bestuursvergaderingen voor de plaatselijke vereenigingen kwam niet in behandeling omreden het slechts door den heer Heldens Hz., werd ondersteund. Tegen
- 98075 beschikbaarstelling van de oude secretarie had de voorzitter bezwaar daar deze in gebruik is bij de burgerwacht, die daarop ook de geweren heeft geplaatst.
- B. en W. werden verzocht een oproeping te doen voor personen uit Beesel en Reuver die genegen en geschikt zijn om de reparatiën aan het electrisch net te verrichten. De bedoeling is voor elk dorp een aldaar wonende persoon aan te stellen.
- Een verzoek van den Ned. R. K. Tabaksbewerkersbond tot het treffen eener
- 98080 steunregeling voor werklooze leden werd, aangezien er alhier momenteel geen werkloozen in dat bedrijf zijn, aangehouden tot een volgende vergadering.
- Op een door de Markiezin de Villers te Waterloo, Beesel ingediend bezwaarschrift tegen de haar door B. en W. gestelde voorwaarden i.z. de aansluiting aan het electrisch net werd afwijzend beschikt en besloten tot handhaving der door B. en W.
- 98085 gestelde voorwaarden die hoofdzakelijk hierop neerkomen, dat alle kosten van uitbreiding en onderhoud door reclamante gedragen moeten worden.
- Den concessionarissen van de tramlijn door Offenbeek werd vergunning verleend voortaan ook van motor-tractie gebruik te maken. [...]
- 98090 6 maart 1923 **Kasteel Waterloo**
Het nieuwe kasteel Waterloo gelegen aan den Rijksweg Maastricht- Nijmegen en toebehoorende aan de Hooggeboren Vrouwe Douairiere Markiezin de Villers Grignoncourt-Van Nispen tot Sevenaer nadert zijn voltooiing. Het architectonisch fraai gebouw is een sieraad voor de streek.
- 98095 10 maart 1923 **Verboden Invoer. - BEESEL-REUVER.**
Wegens verboden invoer een een heele partij eau de Cologne van hot bekende merk 4711, werd door de militaire politie alhier aangehouden en opgebracht een zekere A. van Elberfeld (D.).
- 98100 12 mei 1923 **Aangehouden. - BEESEL-REUVER. Door de militaire politie**
alhier werden aangehouden, wegens het niet hebben van voldoende papieren, twee Duitschers uit Vorst (Pruisen) die tevens in het bezit waren van verscheidene millioenen marken, wat de politie verdacht voorkwam en aanleiding gaf om de
- 98105 Duitschers eenige dagen in verzekerde bewaring te stellen, totdat van gene zijde der grenzen bericht kwam, dat ze rechtmatig in het bezit der marken waren gekomen. Eenige dagen tevoren werden twee Duitschers uit Lobberich aangehouden wegens het frauduleus invoeren van eenige zuigers voor motorrijwielen. Ze waren niet in het bezit van geldige papieren en werden opgebracht. Procesverbaal, werd tegen hen
- 98110 opgemaakt.
- Verduistering rijwiel. - BEESEL-REUVER.** Het rijwiel waarvan dezer dagen bericht werd dat het ten nadeele van zekere D. alhier verduisterd was, is volgens ingesteld onderzoek in bewaring gegeven in een rijwielbergplaats te Roermond, alwaar D. het zal

kunnen terugbekomen.

98115 **Visserij.** — BEESEL-REUVER. Door de gemeente en rijkspolitie werden de laatste dagen eenige personen bekeurd wegens het vangen van visschen in gesloten tijd. Er wordt tevens streng gelet op het schade aanrichten aan het gras. Men zij dus gewaarschuwd.

23 mei 1923 **Koeien invoer BEESEL**

98120 De landbouwers Th. J. de V. uit Bracht (D.) en G.P. de V. van hier waren in den nacht van 18 November van het vorige jaar onder deze gemeente bekeurd wegens den invoer van 4 koeien en deswege door den Kantonrechter veroordeeld ieder tot 100 gulden boete of 50 dagen hechtenis en wat nog erger was met verbeurdverklaring der 4 in beslaggenomen koeien. Beiden waren in hooger beroep gegaan en thans stonden zij voor de Rechtbank terecht. Beiden ontkenden den invoer van koeien, zij vertelden de dieren aan de grens te hebben afgehaald en de dieren pas in ontvangst te hebben genomen toen zij ongeveer 10 Meter op Nederlandsch grondgebied waren, tot staving van die bewering hadden zij een drietal getuigen a decharge, waarvan twee verschenen gedagvaard. Als eerste getuigen werden gehoord de twee kommiezen, die in tegenstelling met de bewering de beide beklaagden pertinent verklaarden gezien te hebben, dat zij en niet de Duitschers het vee over de grens brachten. Tusschen het tijdstip dat het vee over de grens kwam en het tijdstip dat zij beiden verdachten aanhielden was het vee niet van geleiders veranderd. Als twee laatste getuigen werden gehoord twee Duitschers de verkoopers der koeien, die verklaarden dat zij en niet de koopers V. de dieren over de grens hadden geleid. Zij hadden met de koopers afgesproken dat zij 't vee op stal zouden leveren, doch door de bekeuring der ambtenaren was zulks verhinderd.

98130 Het O.M. meende zich te moeten houden aan de verklaring der beide ambtenaren en eischte bevestiging van het vonnis in eerste instantie gewezen. Beklaagdes verdediger Mr. Tripels te Roermond, achtte geen enkel motief aanwezig om de twee getuigen a décharge niet te gelooven, daar het in den bewusten nacht zeer duister was en de verbaliseerende ambtenaren zich ook konden vergissen. Pleiter was dan ook van oordeel dat hier vrijspraak moest volgen. Over 8 dagen zal de Rechtbank haar vonnis vellen.

98135

1 juni 1923 **ONDERGRAVEN.**

98145 De Duitscher, die door de politie te Beesel als verdacht van diefstal in bed arrestantenlokaal was opgesloten is uit de cel ontvlucht door den vloer op te breken en zich onder de deur door den grond een uitweg te banen. 's Morgens toen zij hem het ontbijt wilde brengen kwam de politie tot deze ontdekking en uit een daarna ingesteld onderzoek bleek dat hij al weder vrij in Duitschland rondloopt.

98150 4 augustus 1923 **BEESEL. Jubileumfeesten.**

— Ook hier zullen evenals elders ter gelegenheid van het 25-jarig Regeeringsjubileum van H.M. de Koningin feestelijkheden gehouden worden. In een tot dat doel op jl. Zondag gehouden vergadering van alle besturen der pl. vereenigingen werd een regelings-commissie benoemd, die voor een en ander moet zorg dragen. Als datum der te houden feestelijkheden werd Kermis-Woensdag 29 Augustus a.s. bepaald.

98155 **Mazelen.** — Deze zoo ernstig heerschende kinderziekte eischte in den loop dezer week niet minder dan 4 slachtoffers. Het zijn allen kinderen van nog geen twee jaar.

98160 2 januari 1924 **Priesterjubilea in 1924.**

SECULIEREN BISDOM ROERMOND.

50 jaar priester op 21 Maart. — J. P. H. Franssen, rustend pastoor van Rimborg, woont te Kerkrade; E. U. Haenen kanunnik van het kathedraal kapittel, pastoor en deken te Weert; A. F. H. Reighard, oud-directeur der Biss. Kweekschool te Echt, woont te Roermond; H. A. van de Laar, pastoor te Stevensweert.

98165 40 jaar priester op 23 Maart. — dr. G. A. H. Baunuin, kanunnik, professor aan het Groot Seminarie te Roermond; P. J. H. Beelen, pastoor te Geysteren; F. A. J. H. Bloemen, pastoor te Maasbree; J. W. Hendrix, pastoor te Beesel; J. J. H. Janssen, oud-kapelaan woont te Heerlen; A. F. Litjens, pastoor te Neer; H. R. Munnecom, pastoor te Kessel (L.); J. L. Röselaers, pastoor te Hoensbroek; P. R. H. van Boven, pastoor te Houthem-St. Gerlach; M. M. J. Verbeek, pastoor te Broeksittard. [...]

98170

6 februari 1924 — **BEESEL. Verleden Zondag hield de onderlinge Veeverzekering**

98175 van de plaatselijke afdeeling van den Limb. Land- en Tuinbouwbond alhier haar jaarvergadering. Door den secretaris-penningmeester werd het jaarverslag met rekening en verantwoording uitgebracht. Vooral in het afgelopen jaar hadden veel noodslachtingen plaats, waarvoor moest worden bijgedragen. Toen in 1922 18 noodslachtingen voorkwamen, meende men, dat dit cijfer niet gauw meer bereikt zou worden. In het afgelopen jaar kwamen echter niet minder dan 22 noodslachtingen voor,

- 98180 waarvoor ruim f5000.— werd uitgekeerd. Het groote nut der onderlinge verzekering is daarbij wel afdoende gebleken. Door den voorzitter, dhr. P. J. Timmermans, werd een terugblik op het afgelopen jaar geworpen en de leden aangespoord trouw en goed lid der vereeniging te blijven.
- 98185 Ingestort. — BEESEL. In den afgelopen nacht stortte alhier tengevolge van den storm de schuur van F. Peeters in. Ongelukken kwamen gelukkig niet voor.
- 28 februari 1924 **BEESEL. Politie. — Bij Besluit van den Minister van Justitie** zijn ingetrokken de aanstellingen van Onbezoldigd Rijksveldwachter destijds verleend aan M. Weyers en G. Niemans alhier.
- 98190 19 maart 1924 **BEESEL. Zaterdag 29 Maart hoopt de Z.Eerw. Heer J. W. Hendriks,** pastoor te Beesel zijn 40-jarig priesterfeest te vieren. De parochianen zullen dezen dag zeker niet ongemerkt voorbij laten gaan.
- 98195 22 maart 1924 — **BEESEL. Maandag hield de R. K. Vrouwenbond alhier** ter gelegenheid van den feestdag van haar patrones de H. Gertrudis haar jaarlijksche algemeene vergadering in de zaal van mej. wed. Reijnders. De vergadering was goed bezocht. Door eenige meisjes werden een paar aardige tooneelstukken uitgevoerd, die zeer in den smaak der aanwezigen vielen. De zeereerw. heer pastoor wees de vrouwen op hunne verplichtingen ten opzichte van kerk, huisgezin en maatschappij.
- 98200 28 maart 1924 **Diefstal. — BEESEL — De 42-jarige mandenmaker H. S. van hier,** thans gedetineerd, werd aangeklaagd van diefstal van twee kippen uit het hok van den landbouwer J. Niessen, alhier in den nacht, van 23 op 24 September van het vorige
- 98205 jaar gepleegd. Al spoedig was de verdenking op dezen bekl. gevallen, die met nietsdoen aan den kost trachtte te komen. En, deze verdenking was niet ongegrond, want niet alleen bleek bij onderzoek dat de ter plaatse gevonden voetsporen volkomen overeenkwamen met de klompen van beklagde; maar in zijn kippenhok liepen onder de witten ook een paar bonte kippen, volkomen gelijk aan de onvreemde. Beklaagde
- 98210 ontkende echter halsstarrig; de kippen had hij van een onbekenden Duitscher (!) gekocht vertelde hij terwijl hij in den nacht van den diefstal steeds te bed was geweest.
- De Officier van Justitie eischte zes maanden gevangenisstraf met aftrek der prevenieve hechtenis. Mr. P. Tripols te Roermond pleitte vrijspraak.
- 98215 10 april 1924 **Kiesvereeniging — BEESEL — Op een gehouden vergadering** dezer vereeniging in de zaal van Mej. Wed. Reijnders, hield het Tweede Kamerlid Hermans uit Maastricht een interessante spreekbeurt. Hij schetste in duidelijke bewoordingen hetgeen den laatsten tijd in het parlement betreffende bezuiniging, Vlootwet, kolonien en Zomertijd is behandeld en zette dienaangaande zijn standpunt uiteen. Zijn rede werd aandachtig gevolgd en mocht hij dan ook na afloop een dankbaar aplaus oogsten. Verder werden eenige huishoudelijke zaken behandeld.
- 98220 **Vee Fokkerij — BEESEL. — Door de Stierhouderij alhier werd verleden Zondag** een vergadering van veehouders belegd teneinde te geraken tot oprichting eener controle-vereeniging. De totstandkoming hiervan is in zooverre verzekerd dat zich reeds een voldoende aantal leden opgaven die in een binnenkort te houden vergadering, waarin o.m. een bestuur zal worden gekozen en ook de Rijksveeteeltconsulent Timmermans uit Roermond aanwezig zal zijn een en ander nader zullen regelen.
- 98225 6 juni 1924 **Fanfare. — BEESEL. — Toen Zondag tegen den avond bekend werd** dat onze fanfare op het concours voor Harmoniën en Fanfares te Linne, in de tweede afdeeling een len prijs had behaald was oud en jong in een ommezien op de been en werden de handen aan het werk geslagen om de bekroonde fanfare een feestelijke ontvangst te bereiden. Daverende salutschoten weerklonken en van de huizen wapperde
- 98235 de nationale driekleur. De straten werden met groen en bloemen gesierd, Aan de school werd de fanfare door een eerewacht te paard, de schutterij en een groep bruidjes verwelkomd. In optocht werd naar het Marktplaatsje getrokken. De directeur was omringd door een schaar van bruidjes, die hem zoodra hij onder luide toejuichingen de kiosk besteeg, onder het uitspreken van toepasselijke versjes bloemen aanbeden. De
- 98240 concoursstukken werden nogmaals ten gehoor gebracht, waarna dhr. Heldens-Vallen, president der Fanfare, dankte voor de hartelijke ontvangst en belangstelling die allen voor de fanfare toonden. Hij bracht hulde aan den geachten directeur, dhr. Felten uit Venlo, onder wiens bekwame leiding thans door de fanfare wederom een zoo groot succes werd behaald. Hij memoreerde de onderscheiding die verleden jaar op het
- 98245 concours te Thorn haar deel was en wees op de beteekenis van het feit om thans, in

een hoogere afdeeling, wederom een eersten prijs te behalen. Hierna werd naar het fanfare-lokaal getrokken, alwaar de Eerw. Heer Pastoor aanwezig was om de fanfare te feliciteeren. Aan den Directeur werden nog van verschillende zijden bloemen aangeboden. Tot laat werd feestgevierd om 's Maandags weer te beginnen. Na den middag werd een muzikale wandeling door het dorp gemaakt en op het Markt plein geconcentreerd. Tegen den avond bracht de fanfare "Maasoever" van Kessel een serenade en bracht hulde aan dhr. Felten, die ook van hare vereeniging Directeur is. Er heerschte tot laat in den avond een feestelijke stemming, die getuigde dat allen meeleefden met het behaald succes der fanfare.

21 juni 1924 **(Zijne Bergen en hunne oudste bewoners.)** —

Bij 't dorp Roggel ligt de Krekelberg, Ook dáár in liet het volk in oude tijden de kaboutermannekens huizen. En ook de naam Kerkelsberg houdt verband met de Sagenwereld. Immers het hiemke, kriekje of het huis- of schoorsteenkrekelkje wordt bij onze oostelijke naburen onder de dwergen genoemd, die geluk aanbrengen. Zij mochten niet gedood, en hun nachtgezing moet lijdelijk worden aangehoord. Maar vaak vertelden daar de menschen ook, dat het hiemke of het krekelkje, als dwerg, met zijn gezang een voorteken van den dood was. Daarom lezen wij ook nog in een oud Duitsch werk over folklore:

Das Heimchen zirpte klaglich
Das lange nicht gezirpt,
Gelt sagten alle Bauern,
Gelt, unser Pfarrer stirbt."

Ook zegt men in Deutschland nog van iemand, die er slecht uitziet, dat hij een hiemke heeft gegeten. In ons land en ook in onze provincie van iemand die knorrig uitziet. Welnu, volgens ouden van dagen zou er eens de jager Hoebe tusschen Asbroek en Dekeibloem in de aldaar liggende Heide op jacht zijnde, een kabouterman op eenigen afstand hebben zien gaan, die over de Asbroekerheide de richting nam van den Krekelberg, door velen ook Kerkelsberg genoemd. Deze jager zou de afkeurenswaardige wreedheid begaan hebben op het niets kwaads vermoedende ventje een gewerschot te lossen. Dodelijk getroffen stortte het neder, doch had nog de macht naar den Kerkels (Krekelberg) te loopen, waar eene menigte kabouters, die ook daar in de buurt 's nachts overal potten, pannen en ketels schuurden, hun vast verblijf hielden. Nieuwsgierig volgde de jager 't manneke, naderde den berg, waar hij eenige kabouters mistroostig hoorde lamenteeën: "O wee, onze Kyrië is dood." Deze was ook daar de overste of het hoofd, die, midden in den berg aangekomen zijnde, onmiddellijk overleed.

Sedert dien tijd heeft niemand in de omgeving van Roggel meer aard- of kaboutermannekens gezien. Het schijnt, dat ze na dit geval daar voor goed hun verblijf verlaten hebben.

De landbouwer Opheij had aan 't Nijken bij Roggel een stuk land, vol onkruid, (in Limburg "puinen" geheeten). Hij kon de wortels van dit lastige goedje maar met geen mogelijkheid er uit krijgen. De "puinen" bleven er tot groote schade der andere gewassen voortwoekeren. Op zekeren avond ging hij naar den Krekelberg om daar hard te roepen en te smeeën dat de kabouters hem toch hiermede zouden helpen. Hij had er voldoende boterhammen en pijpen met tabak bij het stuk land neergelegd, en ook de ploeg had hij er heen gebracht. En zie, 's anderendaags was 't land volkomen omgeploegd en alle daarin schuilend onkruid lag zorgvuldig op hoopjes aan 't eind van 't perceel.

Tusschen Haelen en Roggel, in de Nunhemer heide lag eens de vermaarde Gravenberg, waarover eene bijzonder interessante sage in de oude Limburgsche historie gaat en welke wij later zullen mededeelen. Welnu in dezen Gravenberg woonden een langen tijd verschillende Kabouters, die niet hooger waren dan anderhalven voet. Het waren erg gediensstige ventjes, die vooral in de nabij gelegen boerenhuizen allerlei arbeid verrichten, maar nooit iets gapten. Soms droegen zij wel de rogge, die zij in de schuur gedorschen en gezuiverd hadden op den zolder van een anderen eigenaar. Een huis, eenige minuten van dezen berg in het gehucht Mortel gelegen, moet lange jaren daarna nog aangeduid zijn als eene werkplaats dezer kaboutermannekens, die bij den arbeid welken zij in den nacht verrichtten, soms wel gehoord, doch niet gezien werden. Er zijn inwoners van Roggel, die ons voor eenige jaren meenden te kunnen verzekeren, van hunne voorouders te hebben gehoord, dat de laatste kabouters op zekeren dag genoodzaakt werden op bevel van den Paus, in woonwagens te vertrekken. Zij waren toen ten getale van twintig. Daarna heeft nooit meer iemand een kabouter gezien.

In de omstreken van Beesel, Reuver en Kessel moeten voorheen hebben gelegen de Lomberg, de Wals- en de Kruisberg *) allen bewoond door alver- of kaboutermannekens.

Van deze ventjes, die in de heide en de heuvelen in die streken hebben gewoond, waar ook eertijds grafheuvelen en andere oude voorwerpen zijn gevonden, mochten de dorpelingen langen tijd menigvuldige diensten genieten. Wanneer de boerengezinnen die

98315 diensten verlangden, kwamen doorgaans twee kabouters die verrichten. Op eene kast of tafel vonden ze een stuiver of een ander geldstuk, dat de huisgenooten daar opzettelijk voor hen neergelegd hadden. Wilden de boeren geboterd of gekarnd hebben, dan legden zij dat geld op de boterkarn. Daar bij dat werk warm water behoorde, stookte de eene kabouter het ouderwetsche haardvuur, terwijl de andere karnde. Zoo

98320 vaak de menschen de kabouters verwachtten, bereidden zij een of andere spijs vooraleer ze slapen gingen. Dit eten nuttigden de dwergen eerst, waarna zij den noodigen arbeid sprakeloos en zonder het minste gedruisch deden. Eens hadden de huisbewoners leder, in kleine stukjes gesneden, voor de kabouters op het vuur gezet, terwijl een der huisgenooten, in plaats van naar bed te gaan, op den zolder ging

98325 liggen om te zien, hoe hun die vreemde kost zou bevallen. Een der mannekens zei: "Dat is taaie fikkefak". Zij aten het evenwel op en verrichtten hun werk als gewoonlijk. Op een anderen nacht bespiedde de landbouwer Gommans het karnen der kabouters door eene spleet van de zoldering. Een der mannekens zag dat en zei tegen den andere: "Blaas die nieuwsgierige piepinus even een oog uit!" En aldus geschiedde. Toen begon

98330 eerst het karnen voor goed. Behalve dit werk kwamen zij dikwijls den vloer schuren, brood bakken, vlas zwingen en graan dorschen, dit laatste meestal in den bakoven, dien iedere boer op het land zich achter de huizing heeft gebouwd. Een boer van de Haelerhei, Giezen genaamd, wonende in een huiske, waar thans de Spiekerhof ligt, kwam eens van de St. Luciamarkt te

98335 Neeritter waar hij een trekos had gekocht, langs de heuvelen in de hei, toen hij daar een kabouter hoorde jammeren, en hem naroeven: "Ties, zeg tegen Kobus, dat Kyrië dood is." De boer ontstelde, maar zag niemand. Thuis gekomen, vertelde hij het geval, waarop een onder de tafel zittend kabouterke treurig uitriep: "Is Kyrië dood?" Verschrikt keken de huisgenooten naar de plaats vanwaar de stem kwam, doch de

98340 kabouter was verdwenen.
Vlodrop. GERH. KR.
*) Zij liggen er nog.

28 juni 1924 [...] **Zóó vertrouwelĳk zelfs stond de mensch tegenover**

98345 bovennatuurlijke wezens, dat hij ze op zijn volksfeesten uitbeeldde in een of andere figuratie, bijv. als "Pinksterbruid" of "Meikoning", ja zelfs in de gedaante van "reuzen", zooals we die heden ten dage nog in VENLO en in de Vlaamsche steden kennen of in een "draak", die bijv. in het dorpje BEESEL als een dorpsalladium bewaard wordt. In blijde zorgeloosheid en met innig vertrouwen in zijn Heiligen aanvaardde

98350 men het nog niet zoo gecompliceerde leven blijmoedig en vierde men feest, wanneer het leven op den buiten op zijn allerschoonst was, dus in de Meimaand en in den vollen midzomertijd. [...]

19 juli 1924 **De schoolgeldvermindering voor meerdere kinderen uit eenzelfde gezin.**

98355 Naar aanleiding van ons artikeltje: "Een kans die niet verzuimd worde" – waarin we erop wezen, dat Ged. Staten door den Minister van Onderwijs in de gelegenheid gesteld worden voorstellen te doen omtrent wijziging in de thans geldende schoolgeldheffing – maakt men ons opmerkzaam op een verzoekschrift, d.d. 14 dezer door B. en W. van

98360 BEESEL tot Ged. Staten dezer provincie gericht. Het adres is merkwaardig genoeg, om het hier in zijn geheel af te drukken: "Hierdoor deelen wij Uw College mede dat wij het gewenscht achten, dat de op de heffing van schoolgeld betrekking hebbende bepalingen der Lager Onderwijswet 1920 wederom worden gewijzigd in dien zin dat het toelaatbaar wordt eert gezinsreductie te

98365 verleenē. Daartoe zouden wij echter liever niet meer zien ingevoerd de in de praktijk tot veel moeilijkheden aanleiding gegeven hebbende regeling van het voormalige tweede lid van art. 62 der wet, doch de in de toepassing meer eenvoudige bepaling, dat, indien meer dan een leerling uit hetzelfde gezin gelĳktĳdig een school van dezelfde soort bezoekt, het schoolgeld slechts bedraagt: bij twee

98370 leerlingen 90, bij 3 leerlingen 80, bij 4 leerlingen 70, bij 5 leerlingen 60 en bij 6 leerlingen 50 ten honderd per leerling van hetgeen verschuldigd zou zĳn indien slechts ēēn leerling uit dat gezin de school bezoekt; terwijl, indien meer dan 6 leerlingen als bovenbedoeld een school bezoeken, slechts voor de zes oudste leerlingen schoolgeld verschuldigd is. Onder de vroegere wet moest het

98375 Gemeentebestuur, wanneer kinderen uit hetzelfde gezin verschillende scholen bezochten, doen nagaan welk kind voor een aftrek van 20, welk voor een aftrek van 40% enz. in aanmerking kwam, hetgeen zeer tijdroovend was. Bij de door ons aanbevolen regeling is bedoeld werk niet meer noodig terwijl de berekening op zich zelf ook veel

eenvoudiger is.

98380 Oppervlakkig beschouwd zou men tegen de aangegeven regeling kunnen aanvoeren, dat bij meer dan 5 schoolgaande kinderen reeds voor het zesde en volgende kind geen schoolgeld meer verschuldigd behoeft te zijn omreden het voor alle kinderen gezamenlijk verschuldigde schoolgeld bij 5 kinderen hetzelfde bedrag uitmaakt als bij 6 n.l. 300 % (5 x 60 en 6 x 50). Wij meenen echter dat het aanbeveling verdient, met 98385 het oog op de verdeeling van de opbrengst van het schoolgeld over de verschillende scholen, een zoo groot mogelijk aantal kinderen in de schoolgeldheffing te betrekken. Ook is het, omreden in de meeste gemeenten voor iedere school een apart kohier wordt opgemaakt, gewenscht dat geregeld wordt voor welke kinderen bij een grooter getal schoolgaande kinderen dan 6, het schoolgeld verschuldigd is. Wij zouden hiervoor 98390 nemen de zes oudste kinderen. Opneming in de wet van bovenstaande regeling zou door de gemeentebesturen zeer worden toegejuicht, waarom wij U beleefd verzoeken wetswijziging te bovenbedoelden zin te willen bevorderen.

98395 25 juli 1924 **Grenstekens. BEESEL—REUVER. Door de zorgen van het Gemeentebestuur** zijn op de beginpunten der verschillende wegen borden geplaatst, die het eindpunt der aangrenzende gemeente en het begin dezer gemeente aangeven. Vooral vreemde toeristen kunnen zich hierdoor gemakkelijk oriënteren. Moge in hét belang en ter bevordering van het vreemdelingenverkeer dit voorbeeld, waar noodig, 98400 navolging vinden.

26 juli 1924 **Tragisch — BEESEL. Toen de vrouw van den molenaar Theelen** Zaterdagmorgen ontwaakte vond zij haren man, die 's avonds nog gezond en wel naar bed was gegaan, stervende en was deze een uur later reeds een lijk. De overledene 98405 bereikte slechts den leeftijd van 34 jaar en laat een jonge weduwe met 2 kleine kinderen achter.

9 augustus 1924 [...] **De lucht was zwaar en zwart van onweer en terwijl** Robert zijn ros van over de Swalm voortjoeg in razende vaart, braken de elementen in al heur klacht los. Bij het felle licht, dat het zwarte zwerk verscheurde, zag hij, 98410 aan den voet van den Donderberg tusschen Kloosterhof en Rijkel bij Beesel, plotseling naast zich den jongen ridder, den geliefde zijner dochter. — Ha, brulde hij, de fortuin is mij gunstig, gij zult van Uw voornemen afzien of hier sterven! 98415 — Ik vrees Uw zwaard niet, heer Robert, antwoordde de vrome jongeling, maar vechten zal ik niet. De Hemel is mijn getuige, en zal U dwingen. — Noch hemel, noch hel vrees ik, of kunnen mij bedwingen, bulderde Robert. Sterf dan hier als een hond! [...]

98420 23 augustus 1924 **Onbewaakte Spoorweg. — BEESEL. — Naar wij vernemen** zal binnenkort de bewaking van den spoorweg-overweg te Bussereind nabij Ickenroth worden opgeheven. Er zullen waarschuwborden met rode reflectors geplaatst worden.

3 september 1924 **Ongeval — BEESEL. Zondagavond vonden de alhier** patrouilleerende Marechaussee een man op den berm van den weg "Hoogstraat" liggen. Bij onderzoek bleek het te zijn de 20-jarigen G. Meerts wiens paard kort te voren op hol was geslagen en hij van den wagen was gesprongen en een der wielen hem over de beenen was gegaan. De ontboden Geneesheer. Dr. Crasborn uit Swalmen constateerde een breuk van het linkerdijbeen en achtte overbrenging naar het Gasthuis te Venlo 98430 noodzakelijk.

6 september 1924 **Ongeluk. — BEESEL. De zoon van den landbouwer G. Meerts** alhier had Zondagavond toen hij met kar en paard eenige kermisgasten naar het station had gebracht, het ongeluk onder de kar te geraken waarbij hij een been brak. Door Dr. 98435 Crasborn van Swalmen werd onmiddellijk geneeskundige hulp verleend en werd M. 's anderendaags in het Gasthuis te Venlo opgenomen

6 september 1924 **Diefstal rijwielplaatje — BEESEL Een zekere O. van hier** die verleden Maandag zijn rijwiel eenige oogenhlikken onbeheerd liet staan kwam, toen 98440 hij zijn rijwiel weer wilde meenemen tot de mindere aangename ontdekking dat zijn rijwielbelasting-plaatje was ontvreemd.

Concert Fanfare — BEESEL Kermis-Zondag werd door de Fanfare alhier een concert met tooneeluitvoering gegeven met medewerking van de bekende humoristen, de heeren Leijendeckers uit Thorn en Giesberts uit Echt. Er werden eenige mooie

- 98445 muziekstukken uitgevoerd en door het humoristisch duo werden verschillende voordrachten en coupletten uitgevoerd, die zeer in den smaak der aanwezigen vielen. Door den president der Fanfare, dhr. F. Heldens-Vallon werd in zijn welkomswoord den verjaardag van H. M. de koningin herdacht en werd een spontaan driewerf hoera op H. M. uitgebracht. Het concert was niettegenstaande het slechte weer druk bezocht.
- 98450 Kruisverbond – BEESEL Verleden Zondag werd door den W. E Z G Heer Dr. Krijn, aalmoezenier van sociale werken, te Venlo, in een vergadering van het Kruisverbond alhier een spreekbeurt gehouden over het alcoholvraagstuk in dezen tijd. Zijn zeer interessante lezing werd door de vele aanwezigen met aandacht gevolgd en getuigde het daverende applaus dat men ten eerste voldaan was. Verschillende nieuwe leden gaven
- 98455 zich op.
- 24 september 1924 **BEESEL Alhier doen zich bij het vee van de landbouwers**
H. Evers en P. Heidens eenige gevallen van mond- en klauwzeer voor. De ziekte doet zich gelukkig nogal niet kwaadaardig voor. Op verschillende plaatsen heerscht onder
- 98460 de varkens ook de z.g. vlekziekte en zijn er reeds verscheidene afgemaakt moeten worden.
- Noodslachting BEESEL Bij den landbouwer R. moest verleden Maandag een koe worden afgemaakt. Het vleesch werd door den Keuringsdienst voor de consumptie goedgekeurd.
- 98465 26 september 1924 **Zilveren priesterfeest van Mgr. Theelen.**
Men schrijft aan de Msb.: Op 23 en 24 September herdenkt Mgr. D. Theelen, bisschop van Nicopolis in de Missie van Noord Bulgarije, het zilveren jubelfeest van zijn Priesterwijding en eerste H. Mis. Of deze dagen plechtig gevierd worden, weet ik niet; maar herdacht zullen ze ongetwijfeld worden zoowel door den jubilaris zelf als
- 98470 door zijn vele vrienden en weldoeners.
- Voor Z. D. H. zal het een verkwikking zijn in den harden werkdag des levens. Zoo vele en zoo zoete herinneringen zijn voor hem aan beide dagen verbonden! Sedert 25 jaren reeds mocht hij nu iederen morgen "opgaan tot het altaar des Heeren, tot den God, die zijn jeugd verblijdt".
- 98475 Van deze 25 jaren heeft hij er ruim 15 in het klooster doorgebracht. In het begin en wellicht ten gevolge van den oorlog werd hij geroepen om een deel van Christus' kudde te weiden in een der moeilijkste missielanden. God weet, hoe zwaar sindsdien zijn dagen zijn geweest, niet alleen tijdens den oorlog zelf met zijn gedurige verdachtmakingen, maar ook daarna en thans nog immer in een land, waar de beruchte
- 98480 Balkantoestanden hoogtij vierten. Lijden en strijden was zijn brood haast iederen dag. Toch mag hij met stille vreugde op de afgeloopen jaren terugzien. Veel goed heeft hij kunnen stichten, en niet weinig kwaad verhinderen. Dank aan den steun, die hem uit het vaderland gewerd heeft hij meerdere kerken en kapellen kunnen herstellen, vergrooten of opbouwen; zusterscholen heeft hij kunnen stichten; het kleine seminarie
- 98485 voor inlandsche geestelijken heeft hij weer in het leven geroepen; en nu onlangs mocht hij het geluk hebben dat de banden tusschen de Bulgaarsche Missie en de Hollandsche afdeeling der Passionistencongregatie nader werden aangehaald.
- Aan het heilig altaar zocht en vond hij de kracht om immer voort te gaan op den doornigen weg, waar de plicht hem riep. Bij zijn zilveren priesterfeest kunnen zijn
- 98490 vrienden hem dan ook geen beter geschenk aanbieden dan den Heer te smeeken, dat zijn dagelijksche H. Mis steeds meer en meer voor hem wordt: zijn levensbrood en levenskracht, het middel ook om zichzelf en anderen te heiligen. Moge dit feest de voorbode zijn van zijn zilveren jubelfeest als Bisschop. Het is een zware wensch, dien wij hiermee uitspreken; het is een verlenging vragen van zijn lijden en
- 98495 strijden; maar 't is ook een vermeerdering vragen van verdiensten voor den hemel. En dit is en blijft toch het voornaamste in 's menschen leven. In ieder geval: "Dominus conservet eum et vivificet eum!"
- Ziehier ten slotte een kort "curriculum vitae van Mgr. Theelen. Z. D. H. werd geboren te Beesel bij Roermond op 4 April 1877. Hij begon zijn studies op het Bisschoppelijk
- 98500 College te Weert en trad reeds vroegtijdig in bij de Passionisten; in 1893 legde hij de kloostergelofte af. Op 23 September 1899 werd hij te Bordeaux priester gewijd. Geheel onverwacht werd hij den 21en Mei 1915 benoemd tot bisschop van Nicopolis en op 15 Augustus d.a.v. te Rome gewijd. Sindsdien is hij in de Bulgaarsche missie werkzaam gebleven.
- 98505 10 oktober 1924 **De Peelvelden.**
De steenkoolvelden in de Kempen zijn belangrijk groter en liggen ook wat minder diep dan in de Peel, aldus vervolgt de Msb. zijn beschouwing over de Peelschatten. Het Kempische kolenveld beslaat 160.000 H.A., waarvan ongeveer 32.500 H. A. in concessie
- 98510 zijn, terwijl zich de Belgische Staat een drietal reserven ter grootte van een 20.000

H. A. voorbehouden heeft. De rijkdom van dit gebied wordt geschat op 8 à 10 miliard ton; de diepte der lagen varieert tusschen de 600 en 850 M. Op 1200 à 1500 M. diepte bevinden zich evenwel ook nog exploiteerbare kolenlagen.

- 98515 Ons Peelmijnveld vormt ongeveer een rechthoek gelegen tusschen de gemeenten Swalmen, Belfeld, Liessel en America, een gebied pl.m. 25 K.M lang en 10 K.M. breed. Het bestaat uit een Westelijke en een Oostelijke carboonhorst, waar tusschen een centrale slenk. Voor exploitatie komen het eerst in aanmerking de Westelijke horst (4 K.M. breed) en de centrale slenk (3 K.M. breed), over een lengte van 20 en een breedte van 7 K.M., omvattende een 14.000 tal hectaren. Het geheele kolengebied
- 98520 beslaat een oppervlakte van ongeveer 19.000 H.A. en bevat 1.766.100.000 ton steenkool, met een reserve van 799.000.000 ton op meer dan 1200 Meter diepte. Ter vergelijking zij hierbij eraan herinnerd, dat de rijkdom van het Zuid-Limburgsche kolengebied bestaat uit plus minus 3.165.000.000 ton, met een dergelijke reserve van
- 98525 600 millioen. Boringen in de omgeving van Winterswijk hebben nog aangetoond de aanwezigheid van 324.800.000 ton op groote diepte. De reserves erbij rekenende, beschikt ons land dus nog over een voorraad van een kleine 7 milliard ton. De ligging der kolenlagen in de Peel is nogal diep. Bij Swalmen werden er op 659 M. aangeboord, verder onder de volgende plaatsen op de erachter vermelde diepten: Baarlo 657, Beesel 672, Kessel 687, Kesseleyck 795, Helden 730, Beeringen 745, Maasbree 807,
- 98530 Meyel 821, Maris 837, Sevenum 840, Griendtsveen 872, America 904, Helenaveen 913. Dan beginnen de schatten van de Peel weg te zinken, bij Liessel reeds op 1316 Meter diepte en verder naar onbereikbare afgronden, 3 à 4 K.M. diep, in lagen onder Nederland doorgaande, die in Engeland weer voor menschenhanden bereikbaar worden. Ter vergelijking zij aan deze cijfers toegevoegd, dat in Zuid-Limburg de kolenlagen
- 98535 slechts 200 Meter diep liggen; de mijn Maurits heeft schachten van 330 M., terwijl in de Belgische Kempen de deklaag van kolenhoudend gesteente reeds op 400 à 600 Meter is gevonden. De diepe ligging der Peelkolen is zeer zeker een bezwaar, doch geen onoverkomelijk. De boringen, die van Rijkswegen in den lande zijn geschied tusschen 1903 en 1916 hebben gekost 2½ millioen gulden, die grootendeels zijn besteed aan de
- 98540 exploratie van de Peel. Onder Maasbree, Helden, Kessel en Reuver is de aanwezigheid aangetoond van rijke vetkolen, cokeskolen; onder Helenaveen, Meyel en Swalmen werden gaskolen gevonden. De ontginbare lagen varieeren in gezamenlijke dikte tusschen 5 en 10 Meter, al komt er ook eene voor van 12.32 M. Van Rijkswegen werden een veertigtal diepboringen verricht, waaruit de aanwezigheid
- 98545 bleek van 40 ontginbare lagen, in dikten van 40 tot 120 centimer, een enkele kwam er zelfs voor van 1.90 M. Dit lijkt al zeer bevredigend, al biedt Belgisch Limburg er nog wel dikkere, als die van Limbourg-Meuse van 2.20 M. en vooral de beroemde "belle fille" van Beeringen, een ader gelegen op een diepte van 789 M., die niet minder dan 3.20 M. dikte heeft. En hoever blijft die nog niet achter bij de nog beroemdere Ten
- 98550 Yards van midden Engeland nu uitgeput! Binnen Westelijke Horst en centrale slenk zouden 434 millioen ton gas- en vetkolen van meer dan 25% gasgehalte en 712 millioen vetkolen van 20 tot 25% aanwezig zijn, benevens 230 millioen ton beneden 20%. Het spreekt vanzelf, dat het reeds aangegeven gebied der rijke vetkolen onder de
- 98555 gemeenten Helden en Kessel wel het eerst een mijn zal zien verrijzen. Ruim 1½ jaar geleden werd dan ook een concessie daar ter plaatse bij de regeering aangevraagd. De aanwezigheid van turfkrijt, drijfzand en zoutwater in den bodem, zal de moeilijkheden bij het aanleggen der schachten niet verminderen. Onoverkomelijk zijn deze bezwaren ook niet; de ervaringen opgedaan bij de Kempische mijnen bewijzen dit
- 98560 wel. Het aantal moderne groote mijnen, gelijk nu reeds in de Kempen functionneeren, waarvoor de Peel plaats biedt, wordt berekend op 6 à 9, met een maximum productie van 1½ millioen ton per mijn en per jaar. Binnen 150 à 200 jaar zou dit kolenbekken dan uitgeput wezen.
- 98565 Aangezien de mijnschachten, gezien de gesteldheid van den bodem, die, zooals gezegd, turfkrijt, drijfzand en zoutwater bevat, volgens het veel tijd en kosten vergende bevries-systeem zullen moeten worden aangelegd, wordt de tijd, noodig voor den aanleg eener mijn, geschat op niet minder dan 10 à 15 jaren. De groote Kempische mijnen vorderden 9 tot 14 jaren, doch behalve Helchteren-Zolderen vielen voor de 5 andere de
- 98570 oorlogsjaren ertusschen gedurende welken tijd er nagenoeg niet gebouwd doch soms wel afgebroken werd. Daar was de tijd gemoeid met den aanleg der mijnen dus 5 tot 9 jaren. De schachten der Peelmijnen zouden evenwel dieper moeten wezen, hetgeen dus ook meer tijd, geld en moeite vergt.

- 98575 27 oktober 1924 **Erfstelling Meuter. — BEESEL-REUVER. Naar wij vernemen** hebben Eerwaarde Zusters Dominicanessen alhier, zich althans bereid verklaard om de

erfstelling Meuter onder de raadsbesluit van 4 Juli j.l. gestelde voorwaarden van da gemeente over te nemen, zoodat indien de overdracht door Heeren Ged. Staten wordt goedgekeurd, in het voorjaar van 1925 met de stichting van een tehuis voor ouden van dagen en weeskinderen zal worden begonnen.

8 november 1924 **BEESEL. Reeds lang werd er geklaagd, dat er veel hout** zou worden gestolen voornamelijk op Duitsch grondgebied liggend en aan inwoners dezer gemeente toebehoorend brandhout. De 37 jarige H. J. H. en de 56-jarige G. H. S. waren deswege voor den Rechter geroepen doch had alleen H. hier aan gevolg gegeven. Hij bekende het feit, maar meende dat het niet zoo erg was de waarde was niet groot, zoo luidde zijn verdediging. De eisch van den Officier van Justitie luidde tegen ieder acht dagen gevangenisstraf, de rechter evenwel legde H. een week en den niet verschenen S. twee weken gevangenisstraf op.

8 november 1924 **Hoog water — BEESEL-REUVER Tengevolge van den** buitengewonen hoogen waterstand der Maas zijn hier, evenals elders, vrij plotseling verschillende landerijen overstroomd, waardoor aan de nog niet geoogste veldvruchten veel schade is aangebracht. De bewoners der Maashuizen moesten reeds verleden Maandag hun woning verlaten en het vee elders in veiligheid brengen. Gelukkig is thans val ingetreden.

6 januari 1926 **DE OVERSTROOMING VAN BEESEL.**

HET SNELWASSEDE WATER DRONG VAN ALLE ZIJDEN OP.

Oudejaarsavond om circa 10 uur werd onder leiding van wethouder Heidens een dijk gelegd vanaf het kerkhof naar den molen der Gebr. Cuijpers, teneinde het gehucht Oud-dorp, hetwelk voor eenige jaren geteisterd werd door een grooten brand, zoo mogelijk te vrijwaren voor overstrooming. Enkele laag gelegen huizen stonden reeds onder water. Tot 4 uur in den morgen werd hard gewerkt door een vijftigtal, uit het dorp door den veldwachter opgeroepen mannen. Het water steeg echter zienderoogen en stond weldra hooger dan 1 meter tegen den dijk... De dijk mocht echter niet baten, daar het water van de noordzijde kwam opzetten en Oud-dorp weldra geheel zou overstroomen en daardoor van alle verbinding geïsoleerd zou zijn. Menschen vluchten op de zolders der hooggelegen huizen en brachten huisraad, levensmiddelen en klein-vee aldaar in veiligheid. Groote kudden rundvee en varkens werden ijlings door het opkomende water heen naar het hooger gelegen dorp gedreven.

Weldra echter steeg het water zoo hoog, dat geen verkeer meer mogelijk was en Oud-dorp een eiland vormde, waar bijna alle huizen onder water stonden. Het loeien en brullen van het angstige vee klonk huiveringwekkend over de stijgende watermassa. Heel den Nieuwjaarsdag bleef het water opzetten. Bang ging men den eersten nacht van het nieuwe jaar in. Veel vee reeds eenmaal op hooger gelegen stallen gedreven waar men het veilig waande, moest verder het dorp ingevoerd worden.

Van de groote hofsteden Enderhof, Klerkenhof en Hoosterhof, onder het gehucht Rijkel, moest het vee eveneens haastig in veiligheid gebracht worden, terwijl de bewoners op de zolders vluchtten. Doch ook dezen moesten weldra weg, daar het water met kracht door vensters en deuren naar binnen stroomde. Een vrouw schrok hierbij zoo hevig, dat men voor haar leven vreesde en de ontboden geneesheer het raadzaam oordeelde haar van de laatste H.H. Sacramenten te doen voorzien, hetgeen onmiddellijk geschiedde.

In den nacht kwam het water door de huilbeek opzetten tot midden in het dorp, de menschen moesten daar niet alleen hun vee, maar ook dat van Oud-dorp, hetgeen overal ondergebracht was, naar hooger gelegen plaatsen drijven. Om twee uur klonken noodkreten en signalen vanaf de huizen van Oud-dorp, dat van alle verbinding verstoken was; er was zelfs geen bootje voor de bewoners, om aan land te komen.

Van de overzijde der Maas kwamen schippers met hun bootjes te hulp, hetgeen tengevolge van de snelle drift van het water met groot gevaar gepaard ging. Allereerst poogde men nog vee over te zetten. Dit ging echter tengevolge van de duisternis en de snelle strooming van het water, niet. Een bootje waarachter men vee had vastgebonden sloeg om en de opvarenden geraakten te water. Daar zij zich juist boven een boomgaard bevonden, kwamen zij in een appelboom terecht en werden door een ander bootje daar vandaan gehaald. Het nog achtergebleven vee werd naar het hooger gelegen en ommuurde kerkhof gedreven, waar het vee later in een noodstal is ondergebracht.

Tegen den morgen werden de ouden van dagen met moeite door de schippers overgezet. Nog werden twee vrouwen door het dak uit een oud huis, waarvan reeds een gedeelte was ingestort, met veel moeite gered. De schippers verdienen een hartelijk woord van dank voor de door hen bewezen diensten. De grintweg door het dorp stond ruim 30 c.M. onder water. Aanhoudend werden nog kudden vee naar Bussereind, Wittenberg, Reuver en hoog gelegen plaatsen vervoerd. Zelfs het kasteel Nieuwenbroeck

liep onder. De boerderij aldaar moest ijlings ontruimd worden; het water stroomde weldra over de stallen. Het landschap levert een treurigen aanblik; groote koren- en
 98645 haverlijmen drijven op het water; voorraden bieten en koolraap drijven weg. De ingezaaide rogge spoelt van de akkers. De schade is groot. Gelukkig zijn geen menschenlevens te betreuren. Deze treurige intrede van het jaar 1926 zal den menschen nog lang heugen.

Teneinde Zondags het kerkgaan mogelijk te maken, moest een noodbrug geslagen worden
 98650 over een lengte van 20 a 30 M. Gisteren, Dinsdag had een begrafenis per boot plaats, hetgeen hier nimmer geschiedde.

6 januari 1926 **BEESEL-REUVER. — Electricisch licht. — Tengevolge van**
 98655 den hoogen waterstand is deze gemeente 3 dagen van electrischen stroom voor licht en kracht verstoken geweest, tot groot ongemak der aangeslotenen.

14 januari 1926 **BEESEL. — Na den Watersnood. — Thans kan men**
 zich eenigszins een idee vormen van de groote schade door den watersnood aangericht. De huizen kunnen wellicht grootendeels bewoond worden doch zien er treurig uit.
 98660 Meubels en kleederen werden meestal drijvende in de woningen aangetroffen. Vooral voor de landbouwers is aan akkers en velden voor duizenden guldens schade toegebracht. Hierbij nog buiten beschouwing gelaten de enorme schade toegebracht aan de in de schuren en in mijten geborgen rogge en haver. De inzet van 1926 is voorwaar voor velen diep treurig.

98665 **BEESEL-REUVER. — Electriciteitsbedrijf.** Gedurende het jaar 1925 bedroeg het aantal nieuwe aansluitingen aan het gemeentelijk electrisch net 37. Het aantal lichtaansluitingen vermeerderde te Reuver met 17, te Beesel met 2, totaal 19; het aantal krachtaansluitingen vermeerderde te Reu ver met 12 en te Beesel met 6. totaal 18, zoodat het getal aansluitingen thans bedraagt te Reuver voor licht 349, te Beesel
 98670 voor licht 133, totaal voor licht 482; te Reuver voor kracht 40, te Beesel voor kracht 30, totaal 75. Totaal voor licht en kracht 557.

15 januari 1926 **Watersnoods-comite 1926.**
 In een verleden Woensdag ten raadhuize gehouden vergadering van het plaatselijk
 98675 watersnoods-comité alhier, bestaande uit de Heeren Wethouders en voorzitters der pl. landbouwbonden, onder voorzitterschap van den heer Burgemeester, werd o.m. besloten aan de getroffen formuleren uit te reiken, waarop dezen den naar hun oordeel geleden schade kunnen opgeven zulks teneinde een voorloopig overzicht te krijgen van het totaal der schade. Deze gecontroleerde gegevens kunnen dan bij eventuele
 98680 uitkeering tot basis dienen. De formulieren zijn te Reuver verkrijgbaar ten raadhuize, vanaf a. s. Maandag, en te Beesel ten huize van den heer Schoenmakers, ambtenaar ter secretarie, op Zondag 17 dezer. De ingevulde kaarten kunnen aldaar wederom voor 26 dezer worden ingeleverd. Verder werd in principe besloten de E.E. H.H. Pastoors der parochiën te verzoeken om te willen toestaan, dat in de kerken een
 98685 algemene collecte gehouden wordt. Vooral zij, die vrij zijn gebleven van schade en last van het water, worden dringend verzocht door milde bijdragen den nood hunner medemenschen te willen lenigen.

BEESEL-REUVER. — Electriciteitsbedrijf. — Op 1 Januari 1926 waren aan het electrisch
 98690 krachtstroomnet dezer gemeente aangesloten 41 landbouwbedrijven, 9 bakkerijen, 5 meubel- en timmermanswerkplaatsen, 1 meubel- en timmerfabriek, 4 smederijen, 5 motoren voor watervoorziening, 2 schoenmakerijen, 1 slagerij, 1 wasscherij, 1 grèsbuisenfabriek, 1 drukkerij, 1 dakpannenfabriek, 1 verfwarenfabriek, 1 kt ekën beschuitfabriek en 1 roltabaksfabriek. Totaal 75 krachtaansluitingen. Bovendien was
 98695 men op dien datum bezig met de aansluiting van 1 pottenfabriek, 1 slagerij en 2 landbouwbedrijven.

BEESEL-REUVER, — Aangespoeld. — Ten raadhuize en bij den brigade-commandant der Koninklijke Marechaussee's zijn inlichtingen verkrijgbaar omtrent de navolgende
 98700 aangespoelde goederen:
 1 onderstel van een wagen, een planken varkenshok, 1 kruitwagen, 3 schuttingen van karren, waarvan 2 aan elkander bevestigd, 1 canadaboom stam van pl.m. 5 M. lengte, 1 idem van pl.m. 4 M.

98705 23 januari 1926 **BEESEL-REUVER. Aangespoeld. Alsnog is aangifte gedaan**
 van aanspoeling van een gierton van plm. 400 L. inhoud en een kruitwagen, waarvan de rechterpoot stuk is. Inlichtingen ten raadhuize en bij den Brigade-commandant der Koninklijke Marechaussee.

- 98710 26 januari 1926 **BEESEL REUVER. — Hondenbelasting. Het zal niet ondienstig** zijn er op te wijzen, dat de uitgereikte formulieren voor hondenbelasting vóór 15 Februari e.k. bij den gemeente-ontvanger, c.q. met betaling der verschuldigde belasting.
- 98715 28 januari 1926 **BEESEL. De 25-jarige G. A. L. C. van hier was** op 16 November j.l. naar Venlo geweest en had daar in strijd met zijn gewoonte, flink in het glaasje gekeken. Er was gedanst en gejoeld en hij keerde laat in den nacht, waggelend huiswaarts. Bang voor zijn ouders, had hij ook aanranding gefingeerd. Bij de brigade-commandant der Kon. Marechaussee ging hij hiervan aangifte doen; hij was
- 98720 van zijn fiets afgeslagen en deze laatste was weg. Zulks was langs den weg gebeurd. Zijn aangifte had zelfs tot gevolg, dat als vermoedelijken dader iemand uit Geldrop werd gearresteerd en gevankelijk naar Reuver gevoerd. Nu werd het toch te erg en hij kwam terug op zijn aangifte, die van a tot z gelogen was. Ook deze stond stond wegens doen van een valsche aangifte terecht. Niettegenstaande de hardhoorigheid van bekl.
- 98725 wisten en President en Officier van Justitie hem met een flinke stem aan het verstand te brengen, dat zulks alle perken te buiten ging en de Officier voegde erbij, er niet aan te denken een voorwaardelijke straf te eischen, doch hij requireerde drie maanden gevangenisstraf. Beklaagde zelf had liever drie maanden of een jaar gevangenisstraf voorwaardelijk. Uitspraak over veertien dagen.
- 98730 BEESEL-REUVER. — Ter navolging — Deze week zijn bij het watersnood-comité alhier de navolgende giften ingekomen: Markiezin de Villers Beesel f300.—; Fam. Rutten Reuver f300.—; Douariere v. Splinter Beesel f208.—; Wethouder Laumans Reuver f150. —; Burgemeester Meuter Reuver f100.—; Wethouder Heidens Beesel f100.—; J. Packbier, pastoor Reuver f100.—. Behalve bij de a.s. Zondag in de kerken te houden collecte
- 98735 kunnen ook den comité-leden tot en niet 31 Januari e.k. giften ter hand worden gesteld.
BEESEL. — Mond- en klauwzeer. — Bij den landbouwer J. Bongers, Riekkel, alhier heeft zich een geval van mond- en klauwzeer voorgedaan.
BEESEL. — Jonge Boeren. — Door de vereeniging van Jonge Boeren alhier werd in de
- 98740 algemeene jaarvergadering het jaarverslag over 1923 uitgebracht met rekening en verantwoording. Verder werden nog eenig huishoudelijke zaken behandeld.
- 1 februari 1926 **BEESEL. — Diefstal. Ten huize van de landbouwers B.** werd diefstal gepleegd. Uit een kistje waar in zien nogal heel wat geld bevond was
- 98745 f112.— ontvreemd. De aandacht der onderzoekende politie viel op den knecht S. die al spoedig door de mand zakte. Een gedeelte van het geld werd teruggevonden. De 17-jarige S. is ter beschikking der Justitie naar het Huis van Bewaring te Roermond overgebracht.
- 98750 27 februari 1926 **BEESEL-REUVER. — Rupsenverdelging, in de boomen** langs den Rijksweg is men druk bezig met het verwijderen der talrijke rupsennesten daaruit. In een algemeene bekendmaking hebben B. en W. dezer gemeente de eigenaren en gebruikers van heggen en hagen van struiken en opgaand geboomte aan hunne verplichting herinnerd om uiterlijk in de maand Maart a.s. te zorgen voor verdelging
- 98755 van rupsennesten. Wellicht ten overvloede wijzen zij er op, dat vooral de laatste jaren door rupsen enorme schade is aangericht aan veld-, tuin- en ooftgewassen en het dus van groot belang is, dat de rupsennesten tijdig en afdoende worden verdelgd. Tegen nalatigen zal strafvervolgning worden ingesteld.
- 98760 5 maart 1926 **De overstromingen in ons land.**
Een overzicht van de schade.
1300 NIEUWE HUIZEN NOODIG.
Oudejaarsavond 1925! Wanneer over eenige weken het thans nog overstroomde land zal zijn drooggemalen en wanneer na maanden — wellicht jaren — noesten arbeid de gevolgen
- 98765 van de overstromingsramp zullen zijn verdwenen, dan zullen wij toch nog verhalen van dien bangen Oudejaarsdag 1925 en van de angstige nachten en dagen, die daarop volgden. En later zal dezen dag — telkens wanneer wij, en vooral zij, die er het meest bij betrokken waren, zich gereedmaken het oude jaar uit te luiden — in de herinnering teruggebracht worden bij de Oudejaarsavondgesprekken zal hij bij nieuwe
- 98770 overstromingsrampen, wanneer deze weer eens over ons land zouden komen, worden aangehaald in krantenartikelen en misschien in herinnering gebracht door ouden van dagen, die thans als jongeren de ramp mede maakten.
Tenzij in dezen tijd zulke afdoende maatregelen genomen zijn, welke herhalingen kunnen voorkomen!

- 98775 Nu, ruim twee maanden na den doorbraak in den rechter Maasdijk bij Nederasselt, welke – naast de minder ernstige doorbraken in Zuid- en Noord-Limburg, de oorzaak is geworden van schrikkelijk veel ellende en enorme materiele schade, nu nog staat hier en daar het water in de huizen der laagst gelegen streken van het overstromingsgebied en – waar het water verdwenen is – zien wij de ernstige gevolgen
- 98780 van de ramp.
Het Persbureau Vaz Dias te Amsterdam heeft getracht een overzicht te krijgen van de schade, zooals deze thans kon worden geconstateerd, zonder overdrijving als gevolg van zenuwachtigheid en haast en gebaseerd op officieele gegevens.
Ongeveer 175 gemeenten lagen in of grenzen aan het overstromingsgebied. In het
- 98785 grootste gedeelte dezer gemeenten is geen of zeer onbelangrijke schade aangericht. Zelfs plaatsen, die midden in het water hebben gestaan, behooren hiertoe, voornamelijk in Limburg, waar 41 zoogenaamde watergemeenten zijn te weten: Arcen en Velden, Beegden, Beesel, Belfeld, Bergen, Borgharen, Broekhuizen, Buggenum, Echt, Eijsden, Elsloo, Gennep, Geulle, Grevenbicht, Gronsveld, Grubbenvorst, Herten, Horn, Itteren, Kessel, Linne, Maasbracht, Maasbree, Maasniel, Maastricht, Meerlo, Mook, Neer, Obbicht en Papenhoven, Ohé en Laak, Ottersum, Roermond, Roosteren, Stein, Stevensweert, Swalmen, Tegelen, Urmond, Venlo, Wanssum en Wessem. Het grootste
- 98790 gedeelte dezer 41 gemeenten heeft bij hoogen stand van de Maas steeds last van het water. De buitengewoon hooge waterstand en vooral de snelle was in de laatste dagen van het vorige jaar, zijn oorzaak geweest, dat ook in verscheidene Limburgsch watergemeenten belangrijke schade aangericht, zooals uit nader te noemen cijfers zal blijken.
- De cijfers omtrent de schade hebben betrekking op 63 gemeenten, omvattende 129
- 98800 steden, dorpen en gehuchten. Slechts van enkele gemeenten, waar schade werd ondervonden, ontbreken de gegevens nog, doch de eindcijfers zullen daardoor niet belangrijk worden verhoogd.
In deze 63 gemeenten bedraagt de schade aan gemeentelijke openbare wegen, werken en gebouwen f590.880,— en aan particuliere eigendom men volgens de bij de
- 98805 gemeentebesturen ingekomen aanvragen om steun f3.776.092.
Geheel vernield werden 454 huizen, terwijl 831 huizen als gedeeltelijk vernield werden opgegeven. Ongeveer 1300 huizen zullen dus door nieuwe moeten worden vervangen.
De veestapel heeft – althans wat verloren vee betreft – niet zooveel schade geleden.
- 98810 Voor zoover valt na te gaan, zijn omgekomen 172 runderen, 456 varkens en biggen, 94 geiten, 12 paarden en ongeveer 15000 stuks pluimvee.
Veel gered vee is evenwel door de geleden koude en ontberingen in waarde achteruit gegaan. De schade aan de dijken is zeer belangrijk. Het herstel van den Maasdijk nabij Nederasselt kost ongeveer f100.000.—. Met de versterking van verschillende
- 98815 dijkvakken in het Rijk van Nijmegen is omstreeks f150.000.— gemoeid, terwijl het dichten der gaten, die de genie heeft gemaakt in den Maasdijk tusschen Dreumel en Alphen ongeveer f25.000.— kost. In het land van Maas en Waal is bovendien nog ongeveer f10.000,— noodig voor het herstel der "afgeslagen" dijken.
In de provincie Limburg moet ongeveer f200,000 ten koste worden gelegd aan het
- 98820 herstel der dijken en der provinciale wegen.
De belangrijkste schade schijnt wed toegebracht te zijn aan den land- en tuinbouw. Hoe groot bijvoorbeeld de schade is, welke in het land van Maas en Waal aan den landbouw en de fruitteelt is toegebracht, kan nog niet bij benadering worden gezegd. Evenmin kan thans reeds worden vastgesteld de schade in het Rijk van Nijmegen, waar
- 98825 groote vruchtbare gebieden onder rivierzand zijn bedolven.
In 39 gemeenten, alle buiten het Land van Maas en Waal en het Rijk van Nijmegen, bedraagt de schade aan land- en tuinbouw naar schatting ongeveer f1.289.745. In de overige gemeenten kon nog geen raming worden gedaan.
Deze globale cijfers geven behalve het laatste punt een vrij juist beeld van den
- 98830 omvang der directe materiele schade, die de jongste overstroming heeft veroorzaakt. Onder de genoemde bedragen zijn nog niet inbegrepen da kosten van het vervoer en de huisvesting der bijna veertien duizend vluchtelingen, die moesten worden verzorgd, noch de verzorgingskosten voor het vee uit het overstroomde gebied, noch de schade, die de steenenindustrie heeft geleden. In een volgend artikel zullen nog nadere
- 98835 bijzonderheden omtrent de geleden schade worden medegedeeld.

22 mei 1926 **MAASBREE.** — Voor de keuring op 7 Mei 1926, werden aangegeven 23 stieren, waarvan er 20 verschenen. Afgekeurd werden 5 stieren, aangehouden geen. Goedgekeurd werden de stieren van de volgende eigenaren: 1. J. J. Bongers te Rijkel-Beesel; 2. Stierhouderij "Helden-Dorp" te Helden; 3. Stierhouderij

98840

"Panningen" te Helden-Panningen; 4. L. Smits te Maasbree; 5. dezelfde; [...] 10. A. Boonen te Neer;

98845 12 juni 1926 **BEESEL. — Not. v. Koolwijk, 15 Juni om 4.30 uur,**
bij Mej. Wed. Leon Reijnders: voornagras van 't Weerdje, Rijkelsche bemden, wegen aan de Maas.

98850 17 juni 1926 **Ernstig ongeval.**
ROERMOND. Dinsdagmorgen is de 24-jarige Jan Gielen uit Beesel op den Venlosche weg tusschen twee karren geraakt. Het slachtoffer bekwam ernstige inwendige kneuzingen en overleed spoedig na het ongeval.

98855 14 oktober 1926 **Vlekziekte. — De laatste dagen komen alhier**
verschillende gevallen van vlekziekte bij de varkens voor. Reeds zijn eenige dikke krulstaarten aan de gevreesde ziekte ten offer gevallen. Van deskundige zijde wordt beweerd, dat men over 't algemeen veel te weinig gebruik maakt van het inspuiten met serum, dat toch gedurende een bepaalden tijd een vaste waarborg is, dat de dieren gespaard blijven.

98860 8 oktober 1926 **BEESEL. Mond- en Klauwzeer.**
— Alhier heeft zich onder het vee van den landbouwer Jac. Rutten op Horsterhof een geval van mond- en klauwzeer voorgedaan.

98865 20 januari 1927 **NED. OOGSTFILM IN LIMBURG TE BEESEL.**
Zondag 30 en Maandag 31 Januari beloven voor het kleine Draakstekersdorpje Beesel belangrijke dagen te worden! Dan toch zal voor Limburg de première plaats hebben van het groote nationale en folkloristische filmwerk: "Neerland's Volksleven in den Oogsttijd" dat overal in den lande zooveel belangstelling trekt en in wetenschappelijke kringen zoo zeer wordt gewaardeerd om zijn hooge volks-cultureele beteekenis.

98870 Dhr. D. J. van der Ven, de samensteller van deze film wil door deze voorstelling de bevolking aan te bieden een bewijs van erkentelijkheid geven voor de door hem dezen zomer ondervonden medewerking en tevens hoopt hij door deze buitengewone vertooning bij de Beeselaars het bewustzijn te versterken, dat zij in het zevenjaarlijksch spel van Sint Joris met den Draak een der kostelijke gebruiken op Limburg's grondgebied hebben te behouden en te behoeden voor de vaderlandsche folklore.

98875 De belangstelling voor deze voorstelling is thans zóó groot dat het bestuur van de Schutterij Sint Joris in overleg met dhr. v. d. Ven besloten heeft twee voorstellingen te geven en wel een op Zondag 30 Januari beginnende te 6 uur en een op Maandag 31 Januari beginnende - te 7.30. Dij deze voorstellingen zal dhr. v. d. Ven persoonlijk in populaireren trant de verklarende folkloristische voordracht geven, terwijl de bekende Arnhemsche pianist dhr. Gerard Dekker, leerling van Willem Andriessen de prachtige muziek, welke prof. Julius Röntgen heeft gecomponeerd op deze nationale film ten gehoor zal brengen. Voor Limburgers zal het oud-Maastrichtsche lied: "D. haon dee weurd geslago!" zeker de aandacht trekken, terwijl ook de schoone pastorale bewerking van het Limburgsche volkslied door muzikliefhebbers zeer zal worden gewaardeerd. Meer in het bijzonder zij hier ook de aandacht gevestigd op de prachtige Drakenmarsch, welke Röntgen heeft gecomponeerd op het oude Drakenliedje en op de composities van den Limburgschen Cramignon.

98880 Waar dezen zomer meer dan 10.000 personen uit de omliggende dorpen van Roermond en Venlo naar Beesel kwamen kijken, is het niet twijfelachtig of de groote harmoniezaal, plaats biedend aan ruim 600 toeschouwers zal te klein blijken om alle belangstellenden een plaats te bieden. Door kaartenvoorverkoop aan bekende adressen in Reuver, Swalmen, Tegelen, Roermond en Venlo heeft men bereids de noodige maatregelen genomen om belangstellenden, die er vlug bij zijn de zekerheid te verschaffen van een goed plaats. Extra autobussen zullen na afloop der voorstellingen rijden naar Roermond. Venlo en tusschenliggende plaatsen.

98895 De geheele Nederlandsche pers is uitbundig in haar lof over dit filmwerk, waarin Limburg or zoo bijzonder treffende wijze vertegenwoordigd is. Niet minder dan twee van de zes afdeelingen zijn gewijd aan Limburgsche folklore. De tweede afdeeling laat het Draaksteken zien en de vijfde verplaatst ons naar Schinnen, waar we het feest van Martelgaus medemaken. Ook bekende Limburgsche personen als dhr. Hubert Jansen, Lid van Prov. Staten uit Venray burgemeester Henri Pyls uit Schinnen e.a. autoriteiten verschijnen op deze historische film.

98900 De "Tijd" schreef: "Film en muziek vormen een gave eenheid, een folkloristisch werk van den eersten rang waarvoor ieder rechtgeaard Nederlander zich laat interesseeren".
98905 Niet minder enthousiast getuigde de dichter Rernard Verhoeven in het R. K. Dagblad

voor Arnhem: "Van opzet en uitbeelding en technische uitvoering (dit laatste door de filmfabriek Orion) is de oogstfilm superieur. Een boeiend en bloeiend werk, dat den ontwerper eert."

98910 Overall trekt deze film stampvolle zalen en een enthousiast publiek. Uit een verslag in het Vaderland over de eerste voorstelling te 's-Gravenhage voor een publiek, dat het groote gebouw voor Kunsten en Wetenschappen geheel vulde, nemen wij hier alleen het zinnetje over [...]

98915 Het is voorzeker een aardig denkbeeld om de Limburgsche première te geven in het Draakstekersdorpje, waar dhr. Schoenmakers als secretaris van het St. Jorisgilde zeker aan belangstellenden alle gewenschte inlichtingen zal verschaffen.

[...] DERDE AFDEELING.

HET ZEVENJAARLIJKSCHE DRAKENFEEST TE BEESEL AAN DE MAAS.

98920 Als de oogst binnen is, worden overall op ons boerenland de oogst- of najaarskermessen gehouden. In de Hummelosche kennisviering zagen wij reeds hoe tal van handelingen nauw verband hielden met oogst-riten en ook de tafereelen van de Laag-Keppelsche en Beeselsche najaarskermessen, die aangevuld zouden kunnen worden met vele andere uit landbouw-streken, bevestigen, dat er een zeer innige samenhang bestaat tusschen najaarskermis en oogstdankfeest. Tot de vertooningen nu, die aan deze kermessen in de

98925 middeleeuwen grooten luister bijzetten, behoorde van ouds het mythologisch en folkloristisch zoo merkwaardige "Steekspel van Sint Jorus met den Draak". Op Pieter Breughel's "Sint Joriskermis" is het afgebeeld en Albrecht Dürer zag in Antwerpen den groenen draak aan een rood snoer geleid door Sint Margriet. Bergen-op-Zoom, Axel en verschillende andere Zuid-Nederlandsche plaatsen kenden hun draken-omgangen, maar

98930 thans moet men er een reis naar het landelijke dorpje Beesel aan de Maas voor over hebben om eens om de zeven jaar op Kermismaandag getuige te zijn van "De Kamp van Sint Joris tegen den Draak" of "De Redding van de Conincks-Dochter", Daar in 1919 de draak gestoken was, zou dit – der traditie getrouw – nu ook weer plaats hebben op Kermismaandag 30 Augustus 1926. Duizenden vreemdelingen – men heeft de

98935 menschenmenigte langs de hooge Maasoevers op 11–12.000 personen geschat – waren samengestroomd in het oude "Bieslo aen die Maese", waar het Draaksteken als een dramatisch gebeuren heel de bevolking in actie brengt. Veertien dagen te voren – op Zondagmiddag van "Maria Kruidwijn" (Maria Kruiden-Wijding – Maria Hemelvaart), dus op den dag, waarop men in de Maria Hemelvaartprocessie den kroedwisch als een gewijde

98940 oogstmei ronddraagt, werd door het bestuur van de St. Joris-schutterij de draak uit zijn zevenjarige bewaarplaats te voorschijn gehaald. De film heeft het moment vereeuwigd, waarop de schutterskoning, de president, secretaris en penningmeester moeizaam en met een zekere plechtstatigheid het houten krat, waarin het teenen

98945 geraamte van den draak besloten is, naar buiten dragen. De oude heer Heidens staat er als de man, die zeven jaren lang den draak in zijn schuur bewaakt heeft, vriendelijk glimlachend bij te kijken. Nu schieten ook spoedig de prinses en haar hofdames toe om met lange lappen stof het skelet te bekleeden en dan is het de taak van den schilder Henri Thijssen uit Linne – een Beeselaar van geboorte – om evenals in 1919 het nog

98950 maagdelijk-blanke drakenlichaam te beschilderen met angst-wekkende zwart-witte schubben. Als dan de zeer venijnig-groen geschilderde draken-kop opgezet is, zien we op de film den drakendrager zich steken in zijn geklauwde fel-beschilderde drakenbroek, om daarna met behulp van vele helpende handen in het draken-lichaam te kruipen, dat nu het ontvangen leven demonstreerend in een sulfer- en vlammenspuwenden adem, onheildreigend zijn scherpgepunte vlerken uitspreidt om met "op-gespannen

98955 kaeke" op buit belust te loopen naar een boschje aan de Maas. [...]

Zie [Neerland's volksleven in den oogst-tijd » Ven, D.J. van der » \[1926\] - Pag. 31 | Delpher](#)

98960 11 februari 1927 **BEESEL. – Teruggevonden. – De landbouwer M. A. alhier** vond verleden Maandag in de nabijheid van zijn huis, onder een struik een doos welke sokken en andere gebreide goederen bleek te bevatten. Hij waarschuwde de politie en toen bleek alles afkomstig van den in den nacht van Zondag op Maandag bij den winkelier Cr. te Reuver gepleegden inbraak.

98965 16 februari 1927 **BEESEL. – Stierhouderij. – De Stierhouderij "Volharding"** hield in de zaal van Mej. Reijnders alhier een vergadering, waarin o.m. besloten werd terug te komen op het in de vorige vergadering genomen besluit om een nieuwen stier aan te koopen. Met den stier, waarover de vereeniging thans beschikt, en over de resultaten waarover men algemeen zeer tevreden was kan men zich nog best een jaar behelpen. Bovendien was er overeenstemming bereikt met den tegenwoordigen

98970 stierhouder. Deze was genegen den stier wederom te houden op een voor de vereeniging

veel voordeeliger voorwaarde dan voorheen. Dhr. G. H. Hendrix verklaarde vanaf 1 Maart a.s. de functie van secretaris neer te leggen. In zijn plaats werd gekozen dhr. H. Slabbers als bestuurslid, en dhr. G. Meerts als secretaris.

98975 23 april 1927 **St. Laurentiushoeve te Reuver. Notaris Tijssen**
te St. Odiliënberg,

zal op Donderdag 28 April 1927, des nam. 2 ure, in het café A. H. Cremers te Reuver, publiek verkoopen: Gemeente Beesel. De flinke Boerderij genaamd "St. Laurentiushoeve", bewoond door G. Veltman, hoogst gunstig gelegen nabij het station Reuver, bestaande in goed onderhouden huizing, groote stallen, schuur, tuin, bouw en weiland, samen groot 1.30,90 H.A. kad. D. 1806 en 1&07. Aanvaarding 1 Mei 1927, betaling 1 Aug. 1927. Meerdere inlichtingen bij den notaris. 4841 BEESEL. — Raadslid vervallen verklaard.

98985 Ged. Staten van Limburg hebben het lid van den Raad der gemeente Beesel, dhr. H. J. H. Litjens, van zijn lidmaatschap vervallen verklaard wegens middellijke deelneming aan eene aanneming ten behoeve dier gemeente en wegens levering van materialen, waardoor dat raadslid in strijd heeft gehandeld met de bepalingen der Gemeentewet.

98990 23 mei 1927 **BEESEL. — Diefstallen. — In verband met de alhier begin**
van het vorige jaar gepleegde winkeldiefstallen is thans te GENNEP aangehouden en na gedaan onderzoek op last der justitie in het Huis van Bewaring te ROERMOND opgesloten, de woonwagenbewoonster M. T. hvr. W. LINNE.

98995 2 juni 1927 **(LANGS MAAS, ROER, SWALM EN PEEL).**

Sporen der eerste volkeren tot de Ve eeuw.

We tellen eenige duizend jaren vóór Christus geboorte: de ijstijd was voorbij. Als ook het ijs ons Limburgsche land noch van uit 't Noorden noch uit 't Zuiden was binnengedreven dan was zijne werking toch ook hier te bespeuren geweest. Vooral de

99000 Zuidelijke gletschers hadden vanaf de Ardennen machtige waterstroomen naar 't Noorden gezonden, en deze hadden diepe dalgraven geboord, die tegenwoordig nog door onze gewestelijke wateren, als Maas, Roer en Swalm doorgeloopt worden. Ook groote rotsblokken moeten wel in dien tijd in ons gebied zijn aangeland. Of nu ijs-stroomen deze op hunne ruggen verder droegen, of watervloeden ze verder deden tuimelen, dat alles is een moeilijk te beslissen vraag. Zulke blokken bevinden zich langs de

99005 grenzen tusschen Sittard, Roermond, Meynweg, Venlo.

Den ijstijd met zijn guur en streng klimaat hadden slechts weinig dieren en planten getrotseerd. Maar nu ontsproot onder de inmiddels warmere zonnestralen nieuw leven. De moerassige lage vlakten waren met rietstengels van manshoogte begroeid, waarin

99010 ontelbare zwermen van watergevogelte nestelden en broedden. De stroomen zelf waren overrijck aan visschen, op hooger gelegen plaatsen wies veelsoortig en lang gras, en de heuvelen waren met dicht woudgewas bezet.

De eerste mensen.

99015 Een voorjaarsdag was aangebroken. Purper vlamde het over de oostelijke heuvels aan den hemel op. Allengs golfde een vloed van gouden licht over het dal, en als schitterende lansen drongen de lichtstralen door den dichten nevel, die over de laagvlakten hing.

De buffel-os, die met zijn vrouwelijk dier en een kalf onder een boomgroep lag aan den rand van het moeras, verhief zich en trappelde met zijn kleine kudde weg om in het dauw-vochtige gras te grazen.

99020 Doch plotseling hief de oer-os al speurend den machtigen kop in de hoogte, zoog de lucht door de vochtige neusgaten en sloeg den scherpen blik de bosschages in. Wat was 't, dat 't kalm grazende wild zoo onrustig maakte? Was 't de beer, de bruine kasuaris of de wolf, die listige grijze hond? Neen, het was een geheel onbekende, vreemde reuk, dien de oostwind aandroeg, niet van beer en wolf, noch van vos of wilde kat. Verdrietig stampte de buffel-os met zijne machtige hoeven op den weeken weide-grond en gromde een paar malen met dreigend gebaar. Daar schalde plots een veelstemmige schreeuw: achter alle bosschen en boomen steeg hij op, en toen sprongen rondom

99030 bruingele tweebeenige gestalten naar voren. Zij zwaaiden houten speren en slingerden steenen naar den os en zijn kleine kudde. En met grimmig gebrul nam hij de vlucht. Doch meer van deze wezens met hun vreemden reuk sprongen te voorschijn en schreeuwden en zwaaiden hunne speren. Slechts aan één kant was een open piek. Daarheen begaf zich de stier, gevolgd door zijn kleine kudde. Maar terwijl hij nog met geweldige sprongen voortholde, stortte hij opeens in een diepen kuil, waarover een bedriegelijke dekking van rijzen, graszoden en mos de opening verborgen hield. En na hem tuimelde moeder en kalf hals over kop in de groeve.

- Nu sprongen allen toe, de eerste mensen, die in Roer- en Maasland kwamen. En zij omringden met woest en begeerlijk geschreeuw den val-kuil en doodden de gevangen
 99040 dieren na lange marteling, doordat zij met hunne houten speren hen van alle kanten bepiekten.
 Toen het proces eindelijk voltooid was, lieten zich ettelijke mannen naar beneden, trokken hunne steenen messen en begonnen den buit te verdeelen. En vrouwen en kinderen namen de stukken vleesch en droegen ze verder het woud in, waar onder het
 99045 beschermend getak der machtige boomreuzen hun woonstede was. Daar laaide het vuur, gevoed door hars-rijk hout van grenen en dennen. En zij braadden 't vleesch en verslonden het met begeerige beten. Ook de beenderen sloegen zij stuk en slurpten het merg eruit.
 Ja, wilde jagers waren het, die de sporen van het wild volgend, het land afstroopten.
 99050 Buffel en beer, wolf en vos sloegen zij neder, stroopten ze de vellen af en kleedden zich ermee. Uit de beenderen-splinters maakten zij pijlspitsen en naalden, om hun armzalige kleeding saam te houden. Metalen waren hun nog onbekend. Knodsen [knotsen], speren, bogen en pijlen sneden zij uit hout. Aksens, bijlen en messen, zelfs zagen maakten zij uit harden vuursteen, die zij in de stroombedden vonden. Zij sloegen de
 99055 steenen stuk en zochten uit de schreven de geschikte stukken. Deze slepen zij dan met groote moeite op andere steenen, tot zij een bijl of mes met scherpe snede hadden. De bijl klemde zij in de opening of spleet van een houten staaf, en omwikkelden dit met een dierenpees. Met eene dusdanige strijdaks vermochten zij boomen te vellen en te bewerken, ja ze zelfs tot booten uit te hollen. Dien tijd, waarin de menschen hun gereedschap uit steen plachten te maken, noemt men "het Steenen Tijdperk".
 Zeer armoedig waren ook de woningen dezer menschen. In heuvelachtige streken woonden zij in holen. Prof. Stroobant in België beweert, dat in de heidestrekken (Kempen en Nederl. Midden-Limburg) holbewoners hebben geleefd. Het waren veelal ook woongroeven,
 99065 bosschages. Ook sloegen zij uit het gesteente met groote moeite lichtende vonken, en wanneer na vele pogingen het vuur eindelijk oplaaide, dan voorzagen zij 't rijkelijk met het in groote massa aanwezige dorre hout. En hoe rijk achtten zich deze menschen al met het bezit van vuur! Zij dankten daarvoor hunne goden en eerden hen met bijzondere brandstapels op hooge heuvelen, den Aasterberg bij Echt, den Bolenberg bij
 99070 Beesel, den Donderberg bij Belfeld, den Drususberg bij Herten, den Gravenberg bij Neer, den Heesberg bij Sevenum, den Hemelsberg bij Lierop, den Lichtenberg bij Horst, de Muisberg bij Hunsel, den Reutsberg bij Beegden, den Woerenberg bij Baexem. Als echter de zon in de lente hoog steeg en hare stralen verwarmend de aarde beschenen, dan vielen zij dronken van geluk ter neder en dankten en prezen "Alvader",
 99075 die hen nooit vergat.
 Uit oude tijden verhalen ons wel half vergane en vergeelde boeken in varkensleder gebonden, oorkonden op perkament met dikke waszegels. Maar van een steentijd vermeldt noch boek noch oorkonde iets. Getuigen uit die periode zijn slechts oude steenen gereedschappen, die ook in Midden-Limburg, als te Susteren, Echt, Montfort,
 99080 Posterholt, Vlodrop, Herkenbosh, Melick, Lerop, Linne, Odiliënberg, Maasbracht, Maasniel, Swalmen en op de vorengenoemde heuvelen door graven, ploegen en beakkeren aan de oppervlakte kwamen.
 Gerh. Kr.
- 99085 21 juli 1927 **Verdronken.**
 BEESEL. Het 12-jarig zoontje van dhr. H. is bij het visschen in een sloot gevallen en verdronken.
- 99090 9 augustus 1927 **Brand door bliksem.**
 BEESEL. Zaterdag middag sloeg de bliksem in de woning van dhr. J. K. Teure. Spoedig stond de geheele boerderij in brand, die een prooi der vlammen werd.
- 99095 2 januari 1928 **BEESEL. — Verkeersstremming.**
 Wegens bouwvalligheid der brug over de beek in het dorp, moet deze plotseling vernieuwd worden. Vrijdag bleek dat een groot gedeelte van het gemetseld boog-gewelf was ingestort. De brug werd toen voor het verkeer met rij- en voertuigen afgesloten. Voor het doorgaand verkeer vanuit de richtingen Roermond en Venlo over Beesel, veroorzaakt zulks groot ongemak. De autobussen van de Nedam-garage rijden over den Rijksweg tot Bussereind tot in het dorp aan de Noordzijde der brug. Automobilisten
 99100 uit de richting Roermond, die verder dan Beesel moeten, doen goed den Rijksweg te volgen, terwijl zij, die uit de richting Venlo komen tot in het dorp kunnen komen om vervolgens over Bussereind den Rijksweg te volgen.
 25 jaar pastoor: 3 Maart: Zeereerw. heer J. W. Hendriks, geb. te Meijel,

- achtereenvolgens pastoor te Griendtsveen en te Beesel.

- 7 januari 1928 **BEESEL-REUVER. — Dienstplicht. — Tot het doen van aangifte** voor inschrijving van dienstplichtigen der lichting 1929 uit deze gemeente, waartoe in het algemeen de in 1909 geboren mannen behooren, zal extra zitting gehouden worden
- 99115 ten raadhuize te Beesel, op Maandag 9 dezer, des nam. van half zeven tot zeven uur, en ten raadhuize te Reuver op Dinsdag 10 dezer, des nam. van zes tot zeven uur. De aangifte moet geschieden door den dienstplichtigen zelve of door hunne wettige vertegenwoordigers.
- 99120 17 januari 1928 **Een heel dorp gedupeerd.** OPHEFFING AUTOBUSDIENST. BEESEL. — Met groote teleurstelling vernamen de inwoners, dat de autobusdienst der Nedam heden Maandag zal worden stopgezet. Ondanks de pogingen van het
- 99125 gemeentebestuur, van plaatselijke vereenigingen en protestvergaderingen om het dreigende gevaar in dat Beesel weer tot zijn vroeger isolement zal worden teruggebracht, af te wenden zal het gevreesde dus reeds een feit zijn. Onbegrijpelijk is het dat men zich van die klachten en wenschen niets aantrekt en men een heel dorp
- 99130 durft dupeeren omdat de Ned. spoorwegen meenen dat de autobusdienst haar concurrentie aandoet. Vanaf a.s. Maandag kunnen onze mensen, die op reis moeten, dus weer beginnen met drie kwartier te voet naar het station te Reuver of te Swalmen te
- 99135 lopen. Meent men in den Haag dat dit in overeenstemming is met de begrippen, die er in den tegenwoordigen tijd over het verkeer of de verkeersmiddelen heerschen. Moeten wij ook hier maar weer in berusten?
- 99140 BEESEL-REUVER. — Hoogtezon. Naar wij vernemen bestaan er plannen om in Reuver en ook in Beesel een hoogtezon-installatie te krijgen, een in het belang van de volksgezondheid zeer nuttig instrument en waarover men reeds lang in onze gemeente de beschikking had moeten hebben. Het is te hopen dat deze inrichting waarvan het nut door de meeste menschen nog veel te weinig wordt gekend of gewaardeerd er zeer
- 99145 spoedig zal komen. Voor de tuberculosebestrijding en ter bestrijding van vele andere ziekten en kwalen alsmede voor de bestrijding der kindersterfte is een hoogtezon-installatie van het allergrootste belang en zal het daarin belegde geld ook voor de
- gemeenschap, in den vorm van minder kosten van armenbedeeling in de toekomst honderdvoudig zijne rente opbrengen.
- 99145 BEESEL-REUVER. — Burgerwachten. — De sterkte der burgerwachten in deze gemeente bedroeg op 1 Januari jl. te Beesel 79 gewapende en 12 ongewapende leden en te Reuver 77 gewapende leden.
- 17 januari 1928 **Wegens sterfgeval boerenknecht gevraagd, zoo spoedig mogelijk,** liefst die melken kan en met paard kan omgaan. Adres Jos. Ackermans, Kuileneindestraat n. 106 Meerssen. 1977
- 27 januari 1928 **Gevraagd een KNECHT die met paarden kan omgaan,** en met alle boerenwerk op de hoogte is. Jos. Akkermans, Beesel, Klerkehof. 3007
- 99150 1 februari 1928 **L. H., 58 jaar, landbouwer te Nieuwstadt, die op 6 Juli 1927** als bestuurder van een vierwielig motorrijtuig op den openbaren weg onder Kessel, C. Vossen, caféhouder te Beesel, had aangereden waardoor deze zwaar lichamelijk letsel
- 99155 bekam en overleden is, werd door de Rechtbank vrijgesproken, van het hem primair ten laste gelegde en de Rechtbank verklaarde zich onbevoegd om van het hem secundair ten laste gelegde kennis te nemen.
- De eisch luidde dertig gulden, subsidiair dertig dagen hechtenis. Raadsman mr. Janssense advocaat te Roermond.
- 4 februari 1928 **BEESEL-REUVER, — Rupsennesten.**
- 99160 — In een algemeene bekendmaking vestigt de burgemeester dezer gemeente de aandacht van eigenaren en gebruikers van tuinen, erven en boomgaarden op hunne verplichting om, ingevolge het hieromtrent bepaalde in de algemeene politieverordening dezer gemeente, jaarlijks, vóór 1 Maart, alle rupsennesten in daarop, daarin of daarlangs
- 99165 staande heggen, struiken of boomen weg te nemen, te verzamelen en onmiddellijk te verbranden. Het is dus niet alleen genoeg als men de rupsennesten uitknipt, doch

dienen onmiddellijk verzameld en verbrand te worden. Gezien het groote belang dat hieraan verbonden is, wordt verondersteld, dat allen aan hunne verplichting zullen voldoen. Der politie is opdracht gegeven op behoorlijke naleving toe te zien.

99170 BEESEL-REUVER. — Kadaster. — Teneinde teleurstelling te voorkomen wordt bekend gemaakt, dat de ten raadhuize berustende kadastrale kaarten en leggers vanaf Vrijdag ter bijwerking naar Roermond zijn opgezonden.

13 februari 1928 **DE AUTOBUSDIENST ROERMOND-VENLO.**

Een demonstratie voor Gedep. Staten.

99175 Midden-Limburg kan maar noode, neen in het geheel niet berusten in da eenzijdig georiënteerde beslissing van den Raad van State, die tot gevolg had dat de Maasdorpen tusschen Roermond en Venlo van een welvaartsmiddel werden beroofd in den vorm van de opheffing van den autobusdienst tusschen beide genoemde steden.

99180 Geen middel laat de betrokken streek onbeproefd, om te behouden wat haar rechtens dient gelaten te worden.

De gemeentebesturen hebben geadresseerd, geprotesteerd. Beleefde brieven hielpen niet.

99185 De bevolking ging op haar achterste beenen en teekenend is de verontwaardiging van het anders zoo rustige Beesel, die zich demonstreerde in de vergadering van de burgerwacht, waar een verbolgen toon heerschte. [...]

24 maart 1928 **BEESEL REUVER. — Raadsvergadering. — De burgemeester**

99190 dezer gemeente heeft de leden van den gemeenteraad opgeroepen tot het houden eener openbare vergadering op Maandag 26 dezer, des n.m. 4 ure. ten raadhuize te Beesel. De agenda vermeldt o.m. verpachting landerijen, waarvan de pacht in 1920 vervalst, aangaan geldleenipg ad f20.000, wegverbetering op div. plaatsen, toekenning voorschotten aan de bijz. lagere scholen, en toekenning van bouwcredieten. [...]

14 april 1928 **BEESEL-REUVER. — Landverpachting. Bij de j.l. vanwege**

99195 de gemeente gehouden publieke verpachting van 34 perceelen bouwland, gelegen in het Meerlebroek, werd geen der perceelen toegewezen omdat de pachtprizen niet hoog genoeg geoordeeld werden.

20 april 1928 **DE ZALMRIJKE MAAS.**

99200 LINNE. — Deze week is nabij de stuw alhier wederom een begin gemaakt met de zalmvangst. De eerste dagen was de vangst bijzonder goed. Reeds werd een 100-tal dezer edele vischsoort buit gemaakt, te zamen een gewicht van ruim 2000 pond en een directe verkoopwaarde van ruim 3000 gulden vertegenwoordigend. Deze zalmvangst geschiedt door de familie Melis uit Beesel, in dienst van dhr. Wijnbelt uit

99205 Woudrinchem, die mede de eerste vangsten bijwoonde.

5 mei 1928 **Door een stier aangevallen.**

99210 BEESEL. Bij de Donderdag alhier plaats gehad hebbende hoofd- en premiekeuring van springstieren, heeft zich een ernstig ongeval voorgedaan. Toen namelijk de zoon van den landbouwer B. uit Heythuysen-Maxet, een stier uit den veewagen wilde halen, raakte de veer los, waarmee het leidsel verbonden was aan den neusring, dien de stier droeg om hem in bedwang te kunnen houden. De stier maakte van de hierdoor bekomen vrijheid in zijn bewegingen gebruik om den geleider onverwachts met de horens tegen den schouder te stooten, dat hij ineens in een hoek van den wagen neerviel, waar de stier hem met de horens bleef bewerken, totdat de getroffene zich met een hand vastgrijpende aan eender zijwanden van den wagen, oprichtte, waarna de stier hem op zijn horens nam en uit den wagen wierp. Hevig bloedend werd hij door de omstaanders opgenomen en in het café J. Boonen, aan het spoorwegstation alhier, waar de keuring plaats had, binnengedragen. Onmiddellijk werd de heer J. D. Smits, arts te Heijthuijsen,

99220 telefonisch ontboden, die spoedig ter plaatse verscheen. Na een langdurig onderzoek van den getroffene constateerde hij, dat deze het sleutelbeen gebroken had, terwijl 3 ribben waren ingedeukt en het benedenlijf vrij ernstig opengescheurd was. Nadat de wonden door den geneesheer dichtgemaakt en verbonden waren, werd de ongelukkige naar de ouderlijke woning overgebracht.

99225 15 februari 1929 **BEESEL. — De 25-jarige melkrijder V. van de Coöp.**

99230 Stoomzuivelfabriek uit Swalmen, wonende alhier bij zijn ouders, had Aschwoensdag het ongeluk van de melkkar af te vallen, waarbij hij blijkbaar met het hoofd op den grond is terecht gekomen. Toen hij eenigen tijd later thuis kwam oordeelden de ouders geestelijke en geneeskundige hulp noodzakelijk. Hij werd dan ook onmiddellijk van de laatste H. Sacramenten voorzien. Geneeskundige hulp mocht niet meer baten, want even

na den middag gaf hij zijn geest. Men kan zich de ontstel, «nis der geschokte ouders voorstellen.

- 99235 28 februari 1929 **WEER DE LICHTBAK. Strooper contra wachtmeester.**
In den nacht van 6 op 7 December jl. heeft de fabrieksarbeider A. V. uit Offenbeek, onder Beesel-Reuver in de heide Reuverbroek met de lichtbak gestroopt. De wachtmeester M. Erasmus had den strooper aangehouden en het stroopersgeweer in beslag willen nemen; de strooper V. had zich daartegen verzet en den maréchaussée gestompt.
- 99240 De strooper verklaarde thans voor de Rechtbank, dat de maréchaussée opeens zonder eenige voorafgaande waarschuwing, het geweer had vastgepakt onder het uiten van bedreigingen. De zaak werd uitgesteld tot 12 Maart om de maréchaussée te hooren. Intusschen kreeg de strooper een scherpe vermaning van den president mr. Coenegracht om 't stroopen met den lichtbak te laten, de grootste ongelukken kunnen er uit voortvloeien.
- 99245 9 maart 1929 **BEESEL. — Jonge Boeren. Voor de vereeniging van "Jonge Boeren"**
alhier hield dhr. Dr. Droesen uit Roermond jl. Donderdag alhier, in de zaal van Mej. Wed. Reijnders, een interessante spreekbeurt over het onderwerp: "De Taak en organisatie van de "Jonge Boeren." Spreker ving zijn rede aan met een schets van de toestanden welke vóór een goede dertig jaar terug voor den boer bestonden op het gebied van credietwezen, zuivelbereiding, voorlichting en ontwikkeling. Op dit gebied is dank zij de organisatie en wetenschap veel ten gunste der boeren bereikt. Spreker zette dan ook het groote belang der wetenschap voor den landbouw en de bestudeering daarvan door de jonge boeren uiteen. Eveneens den eisch van het zich organiseren in den tegenwoordigen tijd maakte spreker met eenige voorbeelden duidelijk. Ook op zedelijk en maatschappelijk gebied valt er veel te doen ook voor de jonge boeren. 't Gezegde van den spr. werd met aandacht gevolgd en bewees met luid applaus de instemming der aanwezigen. 't Dankwoord van den voorzitter was dan ook welverdiend.
- 99250 Er werden nog eenige vragen gesteld o.a. voor aardappelteelt, aanleg kunstweiden, bietenverbouw, etc. waarover nog van gedachten werd gewisseld. Ook werd nog gewezen op het nut van bescherming van nuttige vogels ter bestrijding der rupsenlaag, tot welke einde vanwege de vereeniging nestkastjes verkrijgbaar zullen worden gesteld. Hierna sloot de voorzitter deze leerrijke vergadering.
- 99255 28 maart 1929 **DE NEDAM-DIENST OPGEHEVEN.**
Kleine oorzaken hebben groote gevolgen.
DE ZIEKTE VAN EEN HOOFD-AMBTENAAR.
Dezer dagen is gemeld, dat de Nedam-autobussendienst Roermond-Venlo, vice versa langs beide Maasoevers, gedwongen is voorloopig zijn werkzaamheid te staken.
- 99270 Herhaaldelijk is met nadruk door ons gewezen op het gevaar van opheffing dezer verkeerslijn der Maasdorpen tusschen Roermond en Venlo.
De moeielijkheden zijn bekend: de Ned. Spoorwegen hadden beroep aangeteekend tegen de door Ged. Staten van Limburg verleende nieuwe concessie voor den autobussen-dienst Roermond-Venlo, door de Nedam-garage te Roermond.
- 99275 Gedurende negen maanden was dus het voortbestaan van den autobussen-dienst al niet geheel zeker meer, zoolang geen uitspraak was gevallen in deze.
Op 31 October 1.1. is het beroep voor den Raad van State behandeld: gemeentebesturen, volksgroepeerings (landbouwbond e.d.), de Kamers van Koophandel te Roermond en Venlo pleitten met klem van redenen voor het behoud van den bussendienst als een verkeersbelang voor de geheele streek tusschen Roermond en Venlo.
- 99280 Na de behandeling van het beroep voor den Raad van State hoorde men niets meer van het geheele geval. De autobussen-dienst bleef voortsukkelen in zijn onzeker bestaan, dat geen aanschaffing van nieuw materiaal gedoogde.
- 99285 Thans, bijna vijf maanden later, ziet de exploitant van den Nedam-dienst zich gedwongen stop te zetten: in dien tijd zijn groote sommen gelds uitgegeven aan het onderhoud der versleten bussen: iederen dag waren het aanzienlijke bedragen. Een paar chauffeurs en controleurs komen zonder werk over een paar dagen en dat alleen, omdat van uit den Haag nog steeds geen beslissing komt.
- 99290 Waarom? !... Het advies van den Raad van State gaat via het Departement van Waterstaat naar de Kroon, welke de uitspraak doet. En van het Ministerie komt de kwestie blijkbaar niet weg.
Want toen tusschen 8 en 11 Maart 1.1. door den bond van bedrijfsautohouders werd geïnformeerd hoe het zat met de beslissing kreeg men ten antwoord, dat de betrokken hoofdamtenaar der afd. vervoer en mijnwezen van het Departement van Waterstaat ziek was, en er dus geen uitsluitsel was te geven.
- 99295 Veertien dagen zijn sindsdien verlopen en vanuit den Haag zwijgt men nog steeds: de

betrokken hoofdamttenaar is blijkbaar nog altijd ziek.

Nu, na vijf maanden is men nog even ver.

99300 De Nedam-dienst kan het niet langer bolwerken en heft de autobus-verbinding op. Een 17-tal Maasdorpen raken een gemakkelijke verbinding kwijt; daarvan zijn er tien, die geen behoorlijke trein-verbinding hebben, n.l. Maasniel, Beesel, Steyl, Horn, Buggenum, Haalen, Neer, Kesseleick en Kessel. De gemeente Horn alleen is per L. T. M. gemakkelijk bereikbaar.

99305 Dat de dienst in een behoefte voorzag, blijkt wel hieruit, dat in de normale jaren met de Nedam ongeveer 400 personen per dag werden vervoerd. Moeten al deze belangen nu maar eenvoudig worden opgeofferd: kan de geheele behoud-actie van officieele personen en lichamen, van organisaties maar gewoon genegeerd worden ?...

99310 Vijf maanden lang is dat nu gebeurd! Misschien kan de ziekte van den betrokken hoofdamttenaar voor de laatste halve maand als excuus dienen. Maar het werkloos-zijn tijdens de andere vier maanden niet! Wanneer de hoofdamttenaar nu eens per ongeluk dood ging? Bleef het beroep dan in portefeuille?...

Alhoewel de heillooze, mogelijke gevolgen van het talmen in den Haag tot een feit zijn geworden, n.l. opheffing van den dienst, is de zaak niet afgeloopen.

99315 Dan zou het Departement de blaam op zich laden door zijn houding aan de beschuldiging, dat men de zaak wil laten doodbloeden, meer vasten grond te hebben gegeven.

99320 Ten respecte van de meening en de vaste overtuiging der bij deze autobuskwestie betrokken en belanghebbende bevolking, moet open en klaar de beslissing komen! En spoedig!...

Wellicht dat dan de mogelijkheid nog bestaat, dat de autobusdienst hervat kan worden.

19 april 1929 [...] **Er wordt met algemeene stemmen besloten een gedeelte**

99325 van het gemeentebosch in 't Meerlebroek groot ca. 7 H.A. te verkoopen. Zoo mogelijk de helft in het najaar 1930. Er zal overwogen worden op den vrijkomenden ondergrond weiland aan te leggen voor een gemeenteweide. Exploitatie door de gemeente wordt evenwel om verschillende redenen afgeraden en in overweging gegeven den grond aan den Boerenbond of aan de Stierhouderij te dien einde te verpachten. B. en W. zullen terzake met een voorstel tot den Raad komen.

99330 Van de pl.m. 20 H.A. bouw- en weiland in de vorige vergadering a f45.- per H.A. aan den heer Felix Bongers te Beesel verpacht wordt met goedvinden van dezen circa 5½ H.A. verpacht aan den Heer G. Veldman te Reuver en het vorig raad besluit in verband hiermede gewijzigd.

Het gras aan de losplaats te Beesel zal publiek worden verpacht.

99335 Het gemeente-verslag over 1928 wordt aangeboden. [...]

20 april 1929 **SCHADE DOOR OPSTUWING. Eigenaren van landerijen**

99340 in de gemeenten BELFELD, BEESEL, SWALMEN, MAASNIEL, ROERMOND, KESSEL, NEER EN BUGGENUM, die meenen schade te hebben geleden aan hunne gronden door opstuwing van de Maas, worden verzocht daarvan schriftelijk opgave te doen aan den Hoofdingenieur van den Rijkswaterstaat te Roermond, Willem II Singel 4.

Formulieren voor opgaven zijn kosteloos te bekomen op de gemeente-secretarieën en op het kantoor der Maaskanalisatie.

99345 24 april 1929 **VOETBAL-GENOT? 'n Punt of de knooke!**

De Rechtbank te Roermond had Dinsdag haar oordeel te vellen over voetbal-aangelegenheden in het land van BEESEL-REUVER; dit naar aanleg ding van een vervolging terzake mishandeling, zwaar lichamelijk letsel ten gevolge hebbende, tegen den voetballer P. L. Sch. uit KESSEL, die op een voetbalveld te Beesel een 99350 tegenstander zoodanig zou getrapt hebben, dat kuit- en scheenbeen beide gebroken werden en de jongeman in kwestie, zekere T. uit Kessel er ruim vier weken mooi mee was geweest.

Voor de politie waren na het gebeurde door verschillende voetballers, die op het veld aanwezig waren, verklaringen afgelegd, waaruit duidelijk bleek, dat de verdachte Sch. 99355 op zijn tegenpartij inlopende, deze had getrapt, toen de bal reeds was doorgegeven. En verder was door verschillenden bij de politie getuigd, dat vanuit het publiek rondom het Beeselsche voetbalveld de thuisspelende club herhaaldelijk op eigenaardige wijze was aangemoedigd om den 1--0 achterstand in te halen; dat even voordat het bovenvermelde incident plaats vond, was geroepen: "Peerke, laat dig neet kiste! punt of de knooke", welke hartelijke aanmoediging dan voor den verdachte Sch. bleek 99360 bestemd te zijn geweest.

De rechters konden blijkbaar zich niet voldoende verplaatsen in de mentaliteit van voetballers, zooals er tegenwoordig helaas maar al te vaak op de "sport"velden

- 99365 rondwaren: want hun verbazing was ongeveinsd, toen zij vernamen, dat de sportieve lust bij den gewonden T. door de beenbreuk geenszins gebroken was. En evenmin schenen de heeren achter de groene tafel te kunnen begrijpen, dat de getuigen allen – behalve de scheidsrechter!! – van oordeel waren, dat er slechts "forsch" gespeeld wordt.
- 99370 Wij noemen dat ruw, merkte een der rechters op, hetgeen de aanwezige sportslui in een veelbeteekend stilzwijgen deden terugtrekken. Dat de verd. Sch. tevoren reeds twee spelers der tegenpartij tegen den grond had geloopt, bleek iets onbeteekenends: dat had men in het vuur van den sportieven strijd blijkbaar niet opgemerkt; de scheidsrechter herinnerde zich niet of hij gefloten had, en de spelers hadden niets gehoord! "Nee, dat begrijp ik, dat merk je zoo niet, hè?!... ironiseerde de Officier
- 99375 van Justitie, welke spotternij den kwieken sporthelden blijkbaar ontging. De getuigenis van den scheidsrechter E. uit Venlo, die dezen wedstrijd had geleid, was intusschen merkwaardig. Op de vraag, of er ruw gespeeld was, en of hij geen termen aanwezig achtte om het spel te staken, antwoordde deze voetbal-referer, dat de wedstrijd gewoon forsch was: op die dorpen gaat het altijd zoo, 't zijn allemaal forsch luid.
- 99380 De belangstellende opmerking, van mr. Ritter dat deze scheidsrechter misschien bang was voor een zelfde pak rammel, waarop eenigen tijd te voren een college van hem was onthaald te Beesel, werd door den scheidsrechter-getuige handig omzeild. Waar intusschen door getuigenverklaringen ter terechtzitting in tegenstelling met het
- 99385 proces-verbaal niet was komen vast te staan, dat de voetballer Sch. naar zijn tegenstander had geschopt in den historischen voetbalwedstrijd Beesel-Kessel (nog niet eens een kampioenswedstrijd) vroeg het O.M. vrijspraak, echter niet voordat mr. Rieter hartgrondig zijn meening over deze voetbal geschiedenissen had gelucht: spr. kon zich met recht niet begrijpen wat voor geweldigbelangrijks er achter zou zitten, of Beesel of Kessel gewonnen had, en of de maatschappij veel belang zou hebben gehad
- 99390 bij het verloop van zulk een wedstrijd! Over veertien dagen zal de Rechtbank, waarin thans mr. Marres voor het eerst zitting had, vonnis vellen.
- 99395 30 april 1929 **BEESEL-REUVER. – Veerpontverpachting.**
– Het Gemeentebestuur heeft zich nogmaals met een adres tot den Minister van Waterstaat gewend om zoo spoedig mogelijk voorzieningen te willen treffen, op de verkeersstremming bij het veer te Kessel, tengevolge van de opstuwung dar Maas, opgeheven wordt. Voor alle rij- en voertuigen die op het oogenblik het bedoelde veer
- 99400 moeten passeeren is de toestand meer dan treurig.
- 12 september 1929 **SCHADEVERGOEDING**
De Eerste Nederl. Onderl. Paarden en Veeverz.-Maatschappij van 1900 te Den Haag Dir. Folkerts Laurens Reaelstraat 1 vergoedde op spoedige en coulante wijze de schade van
- 99405 mijn onteigend paard door tusschenkomst van haren H. Vertegenw. den Heer M. Queis, Molenweg 5 te Leijenbroek. Over deze afwikkeling ben ik uiterst tevreden. Ieder Paarden en Veehouder raad ik sterk aan dit zware risico aan deze solide Maatij. over te dragen.
- 99410 Beesel, 7 September 1929 J. Akkermans, Landbouwer
Hemelvuur in 't openveld is gratis inbegrepen.
- 14 september 1929 **BEESEL – Not. v. Koolwijk 16 Sept. 2 uur ten huize van**
dhr. J. Akkermans, landbouwgereedschappen, paardentuig, maaaimachine, enz.
- 28 november 1929 **Aspergeplanten.**
- 99415 Te koop circa 7000 extra zware aspergeplanten (Roem van Brunswijk). Te bevragen H. Thijssen-Akkermans, Beesel. 2457
- 4 oktober 1930 **Gevraagd een knecht voor dadelijk.**
Zich te melden: Reinders, Beesel Klerkenhof. 5499
- 99420 5 maart 1935 [...] **3e Nellie van Klerkenhof, 711105, geb. 1 Juli;**
M. Nella de Roobeek K 11946; eig. J. Reinders, Klerkenhof, Rijkel 43, Beesel.
- 99425 30 november 1935 **Te koop bij inschrijving: ca. 178 Canadaboomen omtrek**
tot 1.70 Meter te wassen staande op het Broekske Heijthuijsen. 11 CANADABOOMEN omtrek tot 2.80 Meter te wassen staande op Klerkenhof Beesel. Inschrijving te sturen voor 6 December bij Peeters, St. Elisabeth Nunhem alwaar verdere inlichtingen zijn te bekomen. 4231

99430 12 november 1940 **GEMEENTE BEESEL: weiland, Rijkelsebergen, G no. 1160,**
gr. 44.05 aren; in pacht bij Jos. Reijnders, Klerkenhof. Betaling: 15 Januari 1941.

Krantenartikelen over Vilgert, Schandelo en Velden van 1900 tot 1955

99435 29 juni 1878 **Op Dinsdag den 2 Juli 1878, ten verzoeke van Gerard Nelissen**
te Velden op Klein Hovens:
6 perceelen a 32 aren Rogge.
2 id. id. Haver.

99440 Vergadering aan het huis 's morgens ten 8 ure.

1 juni 1895 **Uit de hand te pachten: eene Bouwhoeve genaamd Kerkehof**
gelegen te Velden op de Velgert, groot 4 hect. 24 aren bouwen weiland, desverkiezend
meer. Te aanvaarden: de gebouwen half Mei, het weiland 1. Januari, tuin en voorland
99445 1. Maart, de bouwlanden stoppelbloot na den oogst, alles in 1896. Te bevragen bij het
Kerkbestuur van Velden.

21 mei 1904 **Es wird zur allgemeinen Kenntniss gebracht, dass:**
1. der Königliche Major im Königlichen Bayerischen II. Ulanenregiment "König", Hanns
99450 Philipp Albrecht Hubert Freiherr von Gumpenberg, wohnhaft in *Ansbach*, Kreis
Mittelfranken, Königreich Bayern, Sohn des Königlichen Bayerischen Generalleutnants
z. d. Max Freiherrn von Gumpenberg und dessen Ehefrau Therese geborenen Freiin von
Brandt, beide wohnhaft in München, Kreis Oberbayern, Eönigreich Bayern;
2. die Hedwig Wilhelmina Maria Huberta Gräfin Wolff-Metternich, ohne Beruf, wohnhaft
99455 in *Arcen-Velden*, niederländische Provinz Limburg, Tochter des Niederländischen
Kammerherrn und Gutsbesitzers Max Paul Maria Hubert Graf Wolff-Metterich und dessen
Ehefrau Mathilde Juliette Maria Antoniette geborenen Gräfin Marchant d'Ansembourg,
beide wohnhaft in Arcen-Velden, niederl. Provinz Limburg, die Ehe mit einander
eingehen wollen.
99460 Die Bekanntmachung des Aufgebots hat in den Gemeinden Ansbach und Arcen-Velden in
Holland zu geschehen.
Ansbach, am 17. Mai 1904.
Der Standesbeamte,
ANAN,

99465 i. V.
28 juli 1904 **Arcen. Dinsdag werd hier het huwelijk voltrokken**
tusschen de rijksgravin Hedwig Wolff Metternich zur Gracht en den majoor en kamerheer
in Beierschen dienst rijksvrijheer Hanns von Gumpenberg-Pöttmes-Oberbrennberg. De
bruid is de dochter van den alhier wonenden graaf Wolff Metternich zur Grach; de
99470 bruidegom is de zoon van den Beierischen luit.-generaal op non-activiteit
Rijksvrijheer Max von Gumpenberg-Pöttmes-Oberbrennberg.
Arcen was weer in feestdos, groen en bloemen, prachtige eerebogen langs den geheelen
weg, dien de stoet moest passeeren; van elk huis wapperde de driekleur. Talrijke
toeschouwers waren er heen gestroomd. Klokslag elven klonken de eerste tonen der
99475 muziek. Voorafgegaan door het gilde en de schutterij, daarna de Harmonie van Arcen,
traden de bruijom en een schitterende stoet van ongeveer vijftig paren de slotpoort
uit om zich kerkwaarts te begeven; prachtige toiletten, schitterende Deutsche
uniformen, en ten slotte de bruid, voorafgegaan door bruidjes. De nieuwbenoemde
pastoor, de weleerw. heer Schram, sprak het bruidspaar en de gasten in eene keurige
99480 Deutsche rede toe. Precies te twaalf uur was de kerkelijke plechtigheid afgelopen,
wat door een schot aangekondigd werd. De stoet zette zich in dezelfde orde weer in
beweging, maar nu volgde het bruidspaar onmiddellijk achter de muziek. Van alle
kanten klonken de vreugdeschoten. Op het binnenplein van het kasteel stond nu een
gedeelte van de stafmuziek van het 2e reg. huzaren opgesteld, die bij het
99485 binnentreden van den stoet jubeltonen deed hooren.

[Zie ook [De Marchant et d'Ansembourg - Wikipedia](#)]

3 augustus 1907 **Publieke Verpachting voor den termijn van 6 jaren**
99490 van de Landerijen, toebehoorende aan de *R. C. Kerkfabriek* van den H. Andreas te
VELDEN, op den 16. Augustus des namiddags ten 3 ure, in de café van den heer Ger.

Voorwaarden worden nader bekend gemaakt bij de verpachting.
Het R. C. parochiaal Kerkbestuur. VELDEN.
- 99500 Publieke Verpachting voor den termijn van 6 jaren, van de Landerijen, toebehoorende aan de R. C. *parochiale* Armfabriek van den O. Andreas te VELDEN, op denzelfden dag als bovenvermelde verpachting.
- 99505 31 juli 1913 **Te koop een goed Maalkalf, zwartbont, bij M. GEELLEN,**
2180 Velden, Velgert
- 99510 23 mei 1914 **Griendtsveen. Op Hemelvaartsdag bracht het zangkoor**
van 't Missiehuis van Steijl ons dorp een bezoek. Door onzen Z. E. heer Pastoor Joosten werden zij op de gulste wijze ontvangen. Onder het Lof voerde het de gewijde zangen op artistieke wijze uit. Verder werd de dag genoegelijk doorgebracht en gelooven wij wel, dat de zangers hoogst voldaan huiswaarts keerden.
- 99515 8 december 1924 **Venlo Deurwaarder RENKIEN te Venlo zal**
op Dinsdag den 9 December 1924 des nam. te 2 uur ten huize van den heer W. Derix te Velden-Velgert in het openbaar à contant verkoopen: Een mooi zoo goed als nieuw slaapkamer-ameublement bestaande uit: 2-persoonsledikant, dubbele kleerkast met laden en spiegels waschcommode met opstand en spiegel, nachtkastje. Een idem keukenameublement best. uit tafel, 6 stoelen, kast met opstand; rieten vloerkleed. Verder: een heerenrij wiel en damesrij wiel, in goeden staat; Gramaphoon met kast en 45 Gramaphoonplaten.
- 99520 Keukengerief en huishoudelijke artikelen als: complete koffie- en theeserviezen, fornuis, prachtige lamp met leuchters, specerijenstel, azijnstel, bier- en likeurkaraffen met glaasjes, ketels, potten, pannen, pendule's, vazen, schoorsteenfurnituren, beelden, schilderijen, porcelein- en aardewerk enz. Alles te
- 99525 zien ½ uur vóór den verkoop. Geen opgeld.
- 99530 4 januari 1926 [...] **Eens zelfs was dit zóó erg, dat,**
ondanks de bekwame commando's en de stevige knuisten der roeiers, het niet kon voorkomen worden, dat de Kon. sloep en de boot, waarin de beide H. H. Wethouders en wij hadden plaats genomen, op vrij stevige wijze met elkander in botsing kwamen. Door het kordate werk der mariniers liep alles goed af. H. M. toonde bij de botsing geen oogenblik angst, doch lachte toen alles weer op z'n pootjes terecht was gekomen. Men vermeedt voortaan echter de gevaarlijke plaats, vooral die, waar gevaar bestond,
- 99535 dat men door den stroom naar de rivier zou worden gedreven, wat natuurlijk buitengewoon gevaarlijk zou zijn geweest. Geroeid werd tot de Mariastraat, waarin ook een bezoek werd gebracht. Vervolgens terug naar de Molenstraat, doch de stroom was zoo sterk, dat men besloot maar weer terug te keeren. Toen werd nog geroeid door de Groote Beekstraat, waarna weer aan den Steiger werd aangelegd. In auto's werd vervolgens de tocht voortgezet. Een kijkje werd genomen op de Parade, Gasplein,
- 99540 Villapark en omliggende straten, waarna even een uitvlucht werd gemaakt naar het dorp Velden.
- Te Velden.**
- 99545 Te Velden is de toestand buitengewoon ernstig. Even voorbij het dorp is de groote rijksweg geheel overstroomd evenals al de omringende landerijen. Talrijke boerderijen, waarin veel vee staat opgeborgen, staan rondom en bijna tot het dak toe in 't water. En het is bijna onmogelijk het vee te bereiken. De bekende hengst "Landman" stond Zaterdagmiddag tot den hals in het water, doch is — naar wij vernemen — des nachts met veel moeite uit zijn netelige positie gered. Het kan wel moeilijk
- 99550 anders, of hier is veel vee omgekomen. Zekerheid is echter nog niet te krijgen. Een der booten der firma Janssen, heeft met een pont pogingen gedaan om vee te redden en heeft — naar wij hoorden — verdienstelijk werk gedaan. Te 10½ uur was men weer aan het station te Venlo terug. Direct daarna vertrok het Kon. Echtpaar naar Roermond.
- 99555 11 januari 1926 **UIT ARCEN.**
Het water is gelukkig weer grootendeels verdwenen. Zaterdagmorgen kwamen de hoeren Commissaris der Koningin, de Hoofd-ingenieur van den Waterstaat en enkele andere autoriteiten den toestand in oogenschouw nemen. Bij het opruimingswerk komt heel wat kijken. Overal zijn goederen aangedreven. Bijden Schanstoren is een houten keet met
- 99560 asfaltdak en 4 luchtkokers aangespoeld, waarschijnlijk afkomstig uit Grubbenvorst;

in de Genelsen werden een wanmolen en eene houten landrol gevonden.

Opmerkelijk was het dat de op het kerkhof in de openlucht gelegde varkens van verschillende boeren bij het slapen gaan, van iederen eigenaar, koppelsgewijze bij elkander bleven.

99565 Melk, brood, drinkwater en petroleum werden van uit het kerkhof verscheept, hetgeen, dank zij het groote aantal booten (13 stuks plus enkele platboomde booten en vlotten) waarover men hier kon beschikken, vrij geregeld ging. De tram rijdt weer, de post en de kranten worden weer geregeld besteld, zoodat het leven langzaam weer zijn gewonen gang gaat nemen.

99570 Het verkeer door de Maasstraat is op het oogenblik nog niet mogelijk, zodat auto's en andere voertuigen door de Kerkstraat en over den Boerenweg moeten rijden, daar ook in het Groene Wegske een groot gat is gedreven. Naar verluidt is er in den Rijksweg nabij kilometerpaal 90 een groot gat gespoeld, zoodat Wellerlooi niet meer te bereiken is.

99575 Van Gemeentewege zijn publicaties aangeplakt met raadgevingen voor de bevolking, in acht te nemen bij het schoonmaken der huizen.

10 februari 1928 **ZILVEREN JUBILEUM DER BOERENLEENBANK TE VELDEN.**

De president geridderd.

99580 Woensdag vierde de Boerenleenbank haar 25-jarig jubilé. Heel het dorp had zich opge+maakt om dien dag dezen gewichtigen mijlpaal in het bestaan der instelling mee te vieren. Van bijna ieder huis in het dorp wapperde de nationale driekleur en al deed 's middags het regenweer ook eenige afbreuk aan het feest in de feestzaal bleef de stemming den geheelen dag best.

99585 De dag begon als vroeg: 's Morgens om half acht had in de parochiekerk eene H. Mis voor de afgestorvenen van de Boerenleenbank plaats. Daarna werd om half tien een plechtige Hoogmis voor bestuur en leden der feestvierende vereeniging opgedragen door pastoor Joosten, den geestelijk adviseur der instelling. [...]

99590 25 februari 1928 **VELDEN. Coöp. Stoomzuivelfabriek.**

— Op de Dinsdag j.l. gehouden propagandavergadering, opgeroepen door het bestuur der Coöp. Stoomzuivelfabriek "St. Isidorus", was veel belangstelling. Na een inleidend woord van den voorzitter, nam de heer Oijen, inspecteur Z. N. Z. het woord, die het den aanwezigen duidelijk maakte, dat samenwerking noodig is, daar de tegenwoordige toestand onhoudbaar is, en hun op de gevolgen wees, indien niet tot den bouw van een nieuwe fabriek werd overgegaan. Na stemming bleek dat ruim 90 pct. der aanwezigen voorstanders waren. Voorts werd een commissie benoemd, die tot taak heeft te Velden, Lomm en Arcen nieuwe leden aan te werven, en verdere plannen voor te bereiden. Hierna sloot de voorzitter de vergadering met den christelijken groet.

99600 17 april 1928 **Plechtige eerste H. Mis te Velden.**

DE EERW. HEER F. PEETERS. Zondag droeg een van Velden's zonen, de eerw. heer F. Peeters, in de parochiekerk zijn eerste H Mis op. Was aanvankelijk de plechtigheid op Paschen bepaald, door familieomstandigheden werd deze tot Beloken Paschen uitgesteld.

99605 Het zonnetje scheen evenwel niet te willen medewerken om de feestvreugde te verhoogen, maar bleef gedurende den geheelen dag achter 'n triestige kille sneeuwvlucht verscholen. Maar niettegenstaan dit, had de buurt zich niet onbetuigd gelaten en had de Kerkstraat een feestelijk aanzien gegeven. Voor het ouderlijk huis van den nieuw gewijden Priester en voor de kerk prijken een paar mooie eerebogen. De

99610 geheele straat was keurig afgezet met groen, bloemen en guirlandes. Van alle huizen in de Kerkstraat wapperden de vlaggen. Te circa 10 uur werd te neomist aan zijn woning afgehaald en onder de vroolijke tonen der fanfare kerkwaarts geleid. Door het zangkoor werd op verdienstelijke wijze de Alissa St. Caroli Borromei gezongen. Als diaken en subdiaken fung. de zeereerw. heer Pastoor Joosten en de wel.eerw. heer

99615 kapelaan Vervoort. Door den eerw. heer Pastoor werd de neomist toegesproken en dé geloovigen gewezen op de groote eer welke een priester toekwam, als bemiddelaar tusschen God en de parochianen. Na beëindiging van den H. Dienst werd hij weer door de Fanfare huiswaarts gevoerd. Des avonds toen de Kerkstraat sierlijk met lampions verlicht was werd hem nog een serenade gebracht door de fanfare waarbij een der

99620 bestuursleden een toespraak hield. De eerw. heer Peeters dankte allen voor hun belangstelling op deze voor hem onvergetelijken dag getoond.

19 september 1928 **ARCEN. Bouwvergunningen.**

— Door B. en W. dezer gemeente werd aan den heer W. Derix te Velden vergunning verleend tot het bouwen van een woonhuis op de Velgart en aan den heer K. Nuchelmans te Thorn tot het bouwen van eene woning met café, stalling en werkplaats te Arcen

nabij den Boerenweg aldaar.

13 november 1928 **ELECTRIFICATIE VAN VELDEN**

99630 PLANNEN VOOR BOUW EN AANLEG.

Het voordeel. Gelegenheid tot inschrijving.

Vrijdagavond had in zaal Janssen te Velden de goed bezochte vergadering plaats van de Stroomverkoopmaatschappij met de ingezetenen teneinde de electrificatie van Velden nader te bespreken. De Ed. Achtb. heer Burgemeester Gubbels opende de vergadering te circa 7 uur en heette allen welkom. Hierna gaf hij het woord aan dhr. van Venetiën, die namens de Stroomverkoop Mij. de ingezetenen van Velden zou inlichten, omtrent het doel en de wijze, waarop Velden zou worden geëlectrificeerd en de kosten hieraan verbonden. Spreker begon zijn goed opgezette rede met een uitvoerig overzicht te geven van de voorbereidende werkzaamheden die noodig waren om 't electrisch net bedrijfsklaar te maken. Het eerste werk was de aanleg van een hoogspanningskabel, die via Blerick-Grubbenvorst door de Maas naar Velden gelegd zou worden. Dan dient er in de kom van het dorp een transformatorhuisje gebouwd te worden, waar de stroom, van hoge stroom in lage stroom omgezet wordt en door een laagspanningsnet of verdeelnet naar de diverse perceelen zal gevoerd worden, die van het electrisch licht gebruik wenschen te maken. Het laagspanningsnet gereed zijnde, gaat men over tot de aanleg van huisaansluitingen of dienstleidingen. Krachtens de gesloten overeenkomst der Stroomverkoopmaatschappij met de gemeente Arcen en Velden, zal door de Mij. in ieder perceel dat aangesloten wenscht te worden een gratis huisinstallatie met 2 lichtpunten en stopcontact aangelegd worden, mits de afstand van 't verdeelnet tot aan het perceel niet meer dan 20 Meter bedraagt en de leiding in 't perceel niet meer dan 8 Meter bedraagt. Bij overschrijding van dit maximum moeten de aangeslotenen de meerdere kosten zelf bekostigen.

Volgens overeenkomst zou de K. W. op 35 ct. gesteld worden en de meterhuur op 40 ct. per maand; dit laatste bij een maximum van 20 lampen. Vervolgens ging spreker over tot het bespreken van het nut en het gebruik van de electriciteit en electrische kracht in het landbouwbedrijf op het gebied van electromotoren door deze te drijven met krachtstroom. In landbouwbedrijven, waarbij men met een electromotor van max. 5 P.K. werkte, werd door de Mij. voor krachtstroom 18 cent per K. W. gerekend; bij afname van 100, 200, 300 K. W. per jaar zou de prijs respectievelijk bedragen 15, 11 en 8 cent. Ingezetenen, die derhalve dan ook van krachtstroom gebruik wenschen te maken, dienen dan echter 2 meters aan te leggen, n.l. 1 voor licht, en 1 voor kracht. Voor de laatste zou dan evenwel 80 cent per maand meterhuur berekend worden.

Verder deelde spr. mede, dat personen, die reeds voor eigen rekening een huisinstallatie aangelegd hebben, hiervoor van de Stroomverkoopmaatschappij een vergoeding ontvangen, indien de installatie althans aan de voorschriften voldoet en deugdelijk is. Spreker behandelde daarna hoe het electrische net gebouwd werd en deelde mede, dat in Schandelo ook een transformatorhuisje zou gebouwd worden, van waaruit een apart verdeelnet door dit gehucht werd aangelegd. Spr. hoopte dan ook, dat alle ingezetenen zouden inschrijven, waarvoor hun op Maandag 12 en Dinsdag 13 November van 2 tot 5 uur bij tramhalte Coppers gelegenheid zou worden gegeven, daar een beambte der Mij. hiervoor zitting zou houden. Bovendien werd aan de ingezetenen tot Zaterdag 24 November de tijd gelaten in te schrijven. Na dien datum heeft men geen recht meer op een gratis huisinstallatie met 2 lichtpunten en stopcontact. Daarna stelde spreker de gelegenheid tot het stellen van vragen, waarvan door de aanwezigen goed gebruik werd gemaakt en door spr. kort en zakelijk werden beantwoord. Hierna nam Burgemeester Gubbels het woord en dankte dhr. van Venetiën voor zijn leerzame en interessante rede en de aanwezigen voor hun groote opkomst en hoopte, dat alle inwoners van Velden de gelegenheid niet zullen laten voorbij gaan om in te schrijven. Hierna werd de vergadering gesloten.

99680 3 december 1928 **Verpachting te Velden**

Deurwaarder Renkien te Venlo zal op Woensdag 5 Dec. 1928 des voorm. 11 uur verzoeken van den Heer J. A. Rieter ten koffiehuis te Ant. v. d. 100010 13 januari 1930 **Drankwet. — Door Burgemeesters en Wethouders**

dezer gemeente werd op zijn desbetreffend verzoek, met ingang van heden, ingetrokken het verlof tot verkoop van niet sterken drank, staande ten name van den heer C. Nielissen te Velden-Schandelo.

100015 19 maart 1930 **Pastoor Joosten's bescheiden figuur.**

Evenals het rustieke dorpje.

—\$— Het Noord-Limburgsche dorpje Velden, dat onder den rook der stad Venlo ligt heeft nog niets van z'n oorspronkelijk karakter verloren. Het is eenvoudig gebleven, klein dorpje, zooals het honderd jaar geleden ook al was. Het boerenbedrijf, dat er allerwege uitgeoefend wordt, leent er zich trouwens ook niet voor om een meer stedelijk aspect te scheppen — en daarom zijnde menschen au fond zoo gebleven als ze waren. Daar heeft geen tram, geen auto, geen moderne landbouwmachine, zelfs geen

100020

radio iets aan kunnen doen. Ze zijn de eenvoudige, geloovige dorpsbewoners gebleven, die eerbied hebben voor oude traditie, voor alles, wat hun voorouders hun nalieten.

100025 In wier huizen de portretten van grootouders de beste plaats hebben gekregen in de "goeie kamer", waar zelden iemand komt – waar de oude slingerklok haar eentonig "tak-tak tak-tak" dag in dag uit voortzet – een erfstuk van de grootouders, die in hetzelfde huis, dezelfde kamer hebben gewoond met dezelfde stoelen, deze de schilderijen en dezelfde beelden van heiligen. Ook de stemming, de sfeer is dus

100030 hetzelfde gebleven; ze hangt er nog rond de muffige meubels met gedraaide pooten en den hoogen schouw met de blauwe borden in het rek. Hier pasten de mensen van honderd jaar geleden bij: de propere knipmuts en de hoepelrok zouden hier als kind in huis zijn. Toch is Velden sinds eenige weken veranderd. De hooge Amerikaansche olmen, die langs den Rijksweg stonden, zijn alle onder de bijl gevallen – een onherstelbaar

100035 verlies voor de tegenwoordige generatie. De aanblik van het dorp dat zich meer en meer langs den chaussee uitbreidde, is daardoor totaal veranderd. Niet meer die vriendelijke, statige boomen, die een dak spanden over den weg en 's zomers de heerlijke schaduw erover wierpen; niet meer het bosch van groen tegen de blauwe luchten van de lente en de zang van de vink tusschen de bladeren; ook niet meer het

100040 bonte verscheiden in den herfst of het grillige sneeuwdak in den winter. Unheimisch leeg, kaal, geplukt en... materialistisch, doet het uiterlijk nu aan. De metselaar, die aan den zijwand der oude dorpskerk, welke hooggelegen is, bezig was het voetstuk te metselen, waarop het H. Hartbeeld komt te staan, was zeker ook een vreemde in Jerusalem. Den koster wist hij niet te wonen, wèl den pastoor en dien behoeften we

100045 niet meer te zoeken. Tóch maar even naar den jubileerenden herder toe gaan om hem te zeggen, welke booze plannen we hadden. – Of we den pastoor even konden spreken? vroegen we aan de huishoudster, die een deurraampje open deed. Toen ze hoorde dat we van de "pers" waren en dat er bovendien nog een fotograaf achter me stond, schrok ze wel even. We wisten al genoeg, want pastoor Joosten houdt er niet van om lang en

100050 breed in de krant komen te staan – en dan die fotografen Binnen mochten we wel. Even wachten, dan zal ik meneer pastoor gaan roepen. In de sobere kamer viel een plak zon, een helgele kanarievogel, die in een koperen kooitje voor het raam in de zon zat, begroette de eerste lentestralen met trillend keeltje. Buiten stonden vruchtboomen in de tuinen, in afwachting van de lente, die door de Maartsche buien slechts even

100055 heenlichtte. Een deur ging open en pastoor kwam binnen. Op z'n grijze haren stond stemmig de baret. Hij rookte de pijp – een groote oliekop, misschien ook wel veertig jaren in dienst. We zijn gekomen om een foto van U te maken, zeiden we. Een poosje van zwijgen. – Neen, zeide hij toen, dat heb ik liever niet. We trachten hem z'n bescheidenheid een oogenblikje te laten varen door sterker aan te dringen. Hij trok

100060 eens aan z'n pijp. – Neen, toch niet; als er wat gebeurt, allons, dan is dat in handen van den kapelaan en het Kerkbestuur. We namen dus afscheid van den nog krassen herder en stonden spoedig weer buiten in het grillige weer van Maart. Eenzelfde figuur als het rustieke dorp, dat eenvoudig en onopgesmukt wil blijven al de jaren door...

100065 25 maart 1930 **40-jarig priesterfeest pastoor Joosten.**

Aanbieding H. Hart-monument.

VELDEN. – Het 40-jarig priesterfeest van pastoor Joosten is Maandag – zooals we reeds meldten – op passende wijze gevierd. Vele inwoners hadden de vlag uitgehangen; eveneens woei de driekleur van den toren van het stemmige kerkske. Om tien uur 's

100070 morgens werd in de fraai versierde kerk een plechtige H Mis tot dankzegging opgedragen. Hier bleek weer welk een beminde figuur de herder is; in het kerkgebouw was bijna geen plaats meer te krijgen. 's Middags, toen de dreigende luchten even vaneen braken en de regen ophield, had na het plechtig Lof de onthulling en

100075 intronisatie plaats van het prachtig H. Hartbeeld, hetwelk aan den zijkant der kerk is geplaatst. Dit kostbaar beeld is op een breed voetstuk geplaatst, dat stemming geeft aan het stille pleintje. Een geschenk van de parochianen aan hun jubileerenden herder. Toen de stoet uit de kerk zich om het beeld geplaatst had, trad kapelaan

100080 Vervoort – "die vandaag pastoor is", merkte de jubilaris geestig op – naar voren om allen gevers dank te zeggen voor hun bijdrage, waardoor den jubilaris het prachtig geschenk kon worden aangeboden. Na hem was het de jubilaris, pastoor Joosten. die het woord tot de rondom hem geschaarde parochianen richtte. Het was spr. een vreugde uit het geschenk, dat hem aangeboden werd, te kunnen opmaken, dat Velden zijn herder eert niet alleen, maar vooral dait dit getuigenis ervan aflegt, dat er een diepe

100085 godsdienstzin in hen leeft dat het geloof van hun voorouders prachtig is bewaard gebleven. "Op deze plaats", aldus spr., "werd 600 jaar na Christus de eerste kapel gebouwd". Later werd tot den bouw eener kerk overgegaan. Spr. brengt dan nog in herinnering zijn voorgangers en zegt dank aan de parochianen voor hun geschenk.

Daarna had de plechtige intronisatie plaats en zongen de kinderen onder begeleiding
100090 va fanfare eenige passende liederen.

25 maart 1930 **40-JARIG PRIESTERFEEST.**

Pastoor P. Joosten te Velden.

PLECHTIGE ONTHULLING VAN HET H. HART STANDBEELD.

100095 Velden was Maandag in feestdos gestoken. D Z.E. Heer Pastoor Joosten herdacht n.l. de dag, waarop hij voor 40 jaar tot priester werd gewijd. Van verschillende huizen wapperde vroolijk de nationale driekleur, overal viel een feestelijke stemming te bespeuren. Te circa half tien werd de jubilaris door de W.E. Heer Kapelaan Vervoort uit Velden, de E.H. Geestelijken uit Velden geboortig, verschil lende heeren

100100 geestelijken uit den omtrek, alsmede door den E.A. Heer Burgemeester, wethouder en raadsleden der gemeente Arcen en Velden aan de pastorie afgehaald en langs met de kleurige vlaggetjes versierde weg naar de parochiekerk vergezeld. Aan de met guirlandes en palmen versierde kerkingang prijkte een toepasselijk opschrift. Het kerkinterieur maar vooral het hoofd altaar, waren kwistig met palmen en bloemen

100105 versierd. Door de kinderen der Bijzondere jongens- en meisjesschool werden de jubilaris twee Engelen aangeboden, ter plaatsing op de Communiebank. De kerk was inmiddels vol gestroomd zoodat velen zich met een staanplaatsje moesten tevreden stellen. De plechtige Hoogmis werd door de jubilaris tot dankzegging opgedragen daarbij geassisteerd door de W.E. Heer Rector Janssen uit Venlo als diaken, de W-E.

100110 Heer Kapelaan Rieter uit Arcen als subdiaken en de W.E Heer Kapelaan van Velden als ceremoniarus. Het zangkoor voerde de 3-stemmige Mis van Perosi uit. Na de Hoogmis zong het zangkoor nog een Priestercantate. Te half 12 had de receptie plaats, waarvan verschillende parochianen gebruik maakten, om hun beminden herder te komen

100115 complimenteeren Gedurende de geheele dag kwamen talvan telegrammen en gelukwensen binnen. Het geschenk der Mariacongregatie bestond uit een prachtige bidstoel, die voor het Lof door een der Congreganisten werd aangeboden. Het plecht'g Lof werd door de jubilaris gecelebreerd daarbij geassisteerd door de W.E. Heer Kapelaan Kessels uit Sevenum en de W.E. Heer Kapelaan Peeters uit Mook. Door bemiddeling van Mgr J

100120 Willemsen, een priester uit Velden, te Rome verblijvend, was er des morgens een telegram uit de Vaticaanse Stad binnengekomen, onder teekend door Mgr. Kardinaal Pacelli, secretaris van Z.H. den Paus, waarbij de Z.E. Heer Pastoor Joosten gemachtigd werd, de Pauselijken Zegen te geven en hieraan een volle aflat te verbinden. Na het Lof trok men in processie naar het H. Hartbeeld, het geschenk der

100125 parochianen voor hun herder. Het weer, dat de geheele morgen een dreigende houding had aangenomen, was vlak voor de middag in een druilerige bui overgegaan maar toen de onthulling plaats vond, sijpelde de regen nog traag uit de loodgrijze regenlucht. Onder begeleiding der fanfare werd het: Aan U, o Koning der Eeuwen gezongen. De W-E.

100130 H. Kapelaan Vervoort hield vervolgens eene toespraak en verzocht Pastoor Joosten, het H. Hart monument plechtig te willen inzegenen. Nadat het doek, waarmede het beeld omhuld was, gevallen was, zegende de Z-E. Heer Pastoor het beeld plechtig en dankte allen voor het prachtige geschenk op deze, voor hem onvergetelijken dag. Nadat nog "Voor Jezus Harte zingen" en "Roomsche Blijdschap" door allen meegezongen was, was de plechtigheid afgelopen. Des avonds werd het H. Hartbeeld door een schijnwerper

100135 prachtig verlicht. Aan het voetstuk zijn twee mooie reliëfs angebracht en ter weers zijden van het beeld branden twee lantaarns dag en nacht uit devootheid voor Jezus H. Hart.

31 oktober 1930 **Smokkel-geschiedenis. — Toen een dezer avonden een Duitse**

100140 Zollbeamte een smokkelaar, welke per motorfiets uit de richting Lingsfort naderde, nabij Walbeek wilde aanhouden, en daartoe midden op den rijweg sprong, werd hij door den motorrijder, die een flinke vaart had, en waarschijnlijk niet meer voldoende heeft kunnen remmen, omver gereden, waardoor beiden ernstige verwondingen aan armen en beenen bekwamen, zoodat zij naar het ziekenhuis moesten worden vervoerd. De motorrijder had een partijtje koffie bij zich, welke in beslag genomen werd.

11 november 1930 **RAAD VAN ARCEN. Besprekingen over electriciteits-uitbreiding.**

100150 Onder voorzitterschap van den heer Gubbels, burgemeester der gemeente Arcen, vergaderde de Raad voltallig. Na de opening werden de notulen voorgelezen van de vergadering van 18 Sept. j.l. welke onveranderd werden goedgekeurd. Voor kennisgeving werden aangenomen goedkeuringsbesluiten van Ged. Staten op twee ?ningsbesluiten voor de uitbreidingen van het electrisch net te Arcen en Velden. Daarna werden voor kennisgeving aangenomen een aantal koninklijk goedgekeurde belastingverordeningen voor het volgende jaar in verband met de wijziging van de financieele verhoudingen tusschen Rijk en de gemeenten. In beginsel werd besloten medewerking te verleen aan

- 100155 den Limburgschen Land- en Tuinbouwbond om te komen tot zelfstandige destructie van afgekeurd vee en vleesch. In verband met de zeer hoge kosten werd afwijzend beschikt op het verzoek van een aantal inwoners in Genooi om electrificatie daarvan. De aanlegkosten werden geraamd op f16.500; de bijdrage in de verliezen voor deze
- 100160 aanlegkosten zouden nog hoger zijn. Aan de Stroomverkoop Maatschappij te Roermond zal alsnog worden verzocht een perceel te Schandelo aan te sluiten voor het bedrag, dat de Stroomverkoop Maatschappij daarvoor heeft opgegeven. Voor kennisgeving wordt daarna aangenomen de dankbetuiging van den heer Linssen voor de benoeming tot hoofd der O. L. school te Lomm. Besloten wordt de schoolwoning te Lomm aan den heer Linssen onderhandsch te verhuren met ingang van 1 December a.s. voor ten hoogste vijf jaar,
- 100165 onder de voorwaarden in het pachtcontract vermeld. Aan het R. K. Kerkbestuur St. Andreas te Velden, wordt voor de nieuwe schoolpomp en aanschaffing van een nieuwe kachel voor de jongensschool aldaar een crediet toegestaan van f53. Het Kohier Boomenbelasting voor het jaar 1930 wordt met algemeene stemmen vastgesteld ten bedrage van f9.65 voor de afdeeling Arcen en f1.10 voor de afdeeling Velden. De
- 100170 heeren Mulders en Boonen informeerde daarbij of een aantal boomen welke op Gemeentegronden staan en niet op het kohier zijn vermeld, eigendom der gemeente zijn. Dit zal nader worden onderzocht. Met algemeene stemmen wordt aan het Limburgsche Groene Kruis te Sittard eene subsidie tot wederopzegging verleend van f20 per jaar, ingaande met 1931 De voorzitter deelt mede, dat in het pachtcontract van den grond op
- 100175 de Horsten is opgenomen de voorwaarde dat grond welke het derde jaar voor het einde der pacht als weiland ligt niet meer gescheurd mag worden. Dit wordt met algemeene stemmen goedgekeurd. Besloten wordt tot openbare verpachting van twee perceelen bouwland te Lomm aan den Rijksweg voor den tijd van 6 jaar. Onder voorbehoud dat van het Staatsboschbeheer toestemming wordt verkregen voor het vellen van het dennenbosch
- 100180 zoover dit staat op perceel sectie C. 6995, zal worden verkocht het hout op de perceelen sectie nos. 4832, 6995 en 6460 op nader door burgemeester en wethouders te palen datum. De rekening van het Burgerlijk Armbestuur te Arcen over het jaar 1929 wordt in handen gesteld eener commissie van drie leden waarvoor de voorzitter aanwijst de heeren Mulders, Clabbers en Boonen. Ter nadere afpaling wordt aangehouden
- 100185 verkoop van het perceel struikhout aan den Rijksweg sectie C. no. 6221. Bij de Boerenleenbank te Velden zal eens geldleening worden aangegaan groot f1000 tegen ten hoogste 5 pct. per jaar af te lossen in tien jaar; voor de verbetering van den weg in het Hanik. Aan Burgemeester en Wethouders wordt machtiging verleend tot aanbesteding van den bijbouw van een derde schoollokaal te Lomm. Aan Burg. en Weth. wordt het
- 100190 noodige crediet verleend om een houten noodwoning te doen herstellen. Na de gehouden bespreking oordeelt de Raad het noodig, dat de buizen in de waterlossing in de Rietweiden te doen opruimen. De heer van Lipzig wijst erop, dat de z.g. Kolkbrug te Lomm stuk is en hersteld moet worden. Tegen het ontwerp-staatsverdrag toegezonden door den voorzitter der Straelener Veengenossenschaft, heeft de Raad geen bezwaren.
- 100195 Hieromtrent zal het advies gevraagd worden van den heer Dir. van het Rijksbureau voor Ontwatering. De heer Boonen vraagt nogmaals verbetering van verschillende veldwegen te Velden, hij is van meening, dat daaraan thans niets gebeurt. De voorzitter zegt namens Burg. en Weth. toe, in het voorjaar de Zanterdweg te doen verbeteren. De heer Clabbers vraagt naar de uitbreiding van het electrisch net ten Zuiden van Velden. De
- 100200 voorzitter deelt hem mede, dat de aangeplante bosschen de voorloopers zullen moeten verwijderd worden. Burg. en Weth. zullen hiervoor zorg dragen. Daarna gaat de vergadering in geheime zitting over.
- 27 maart 1931 **VELDEN. Landbouwcursus.**
- 100205 – Verleden Dinsdag had alhier de sluiting plaats van de tweejarige landbouwcursus. De voorzitter van den Boerenbond de heer L. Sanders, heette de aanwezigen hartelijk welkom, in het bijzonder den heer Kuypers uit Roermond, die namens den landbouwconsulent de sluiting verrichtte, den Zeer Eerw. Heer pastoor Joosten, adviseur van den Boerenbond en de heeren landbouwonderwijzers. [...]
- 100210 28 april 1931 **Auto-ongeluk te Hasselt-Velden.**
EEN ERNSTIGE BOTSING DIE NOG GOED AFLIEP.
Op den Rijksweg te Hasselt, Velden, heeft Zondagavond te circa 11 uur een auto-ongeluk plaats gehad, dat nog betrekkelijk goed is afgelopen. Op het kruispunt
- 100215 Hasselt-Schandelo-Rijksweg, kwam de luxe auto van den heer S. uit Horst, waarin tevens de heer P. R. uit Horst gezeten was, in botsing met een luxe auto komende uit de richting Venlo. In deze laatste auto zat een gezelschap uit Gennep en Cuyk. De heer S. die uit Schandelo kwam, had de auto vanaf Venlo [...]

- 100220 21 mei 1931 **VELDEN. Gouden bruiloft.**
 – Onder groote belangstelling vierde het echtpaar Janssen-Reutelingsperger alhier verleden Dinsdag haar gouden huwelijksfeest. Reeds vroeg in den morgen weerklonken vreugdeschoten over de Hasselderheide. Te 8 uur werd het jubelpaar onder de vroolijke tonen van de fanfare kerkwaarts geleid, alwaar een Hoogmis tot dankzegging werd opgedragen. Gedurende den geheelen dag kwamen de gelukwensen van heinde en verre, zoowel schriftelijk als mondeling binnen. Des avonds werd door de Fanfare nog een serenade gebracht, waarbij de president het gouden paar namens de geheele fanfare complimenteerde. Tot laat in den avond duurde de feestpret en de joeks voort.
- 100230 3 oktober 1931 **Opening café-restaurant "Hollandia".**
 – Ons dorp is thans een fraai café-restaurant rijker geworden. In de mooie boschrijke omgeving op de grens Arcen-Walbeek aan de Lingsfort is het bekende café "Hollandia" door verbouw in een ruim en schitterend café-restaurant herschapen. Geen kosten zijn er gespaard om het den bezoekers zoo aangenaam mogelijk te maken, en zeker zal deze
- 100235 uitspanning spoedig bekendheid verwerven onder de vele vreemdelingen die de mooie omstreken bezoeken. Zondag 4 October zal de feestelijke opening van het nieuw gebouwde gedeelte plaats vinden. Het schilderwerk van zaal en café, dat verzorgd is door de bekende Venlosche decorateurs Verkoelen & Holla, biedt een schitterenden aanblik. De electricische inrichting en verlichting werd geleverd door den heer H. v.
- 100240 d. Kronenberg te Arcen, terwijl de heer Verschuieren uit Venlo de sanitaire inrichting aanlegde. Wij wenschen den ondernemer J. Peters, met deze moderne en fraai aangelegde inrichting veel succes.
- 5 maart 1932 **ARCEN. Mond- en klauwzeer.**
 – Naar wij vernemen, werd wederom een geval van deze gevreesde besmettelijke veeziekte geconstateerd in deze gemeente; thans bij het vee van den landbouwer W. Geelen te Velden, Velgart.
- 5 maart 1932 **EIKENBOOMEN TE VELDEN.**
 Notaris Joosten te Venlo, zal op Dinsdag 8 Maart 1932, nam. 4 uur, in het café van den Heer G. Verbeek te Velden, ten verzoeken van het R.K. Kerkbestuur te Velden, publiek verkoopen: 37 zware en gave eikenboomen, staande: in de weide aan den Kuilsenberg, bij den Kerkenhof en op den Smitselt aan den weg naar Genooi. Aanwijzing doet de heer Jac. Nielissen, Kerkenhof, Velden.
- 100255 11 maart 1932 **DE SMOKKEL-OORLOG.**
 De centrale eenere groote smokkelorganisatie ontdekt.
 DE GEPANTSERDE AUTO WEER OP DEN WEG.
 Meende men aanvankelijk, dat de gepantserde smokkelauto, welke herhaaldelijk bij Goch de grens gepasseerd was en verleden week te Calcar in beslag werd genomen, dezelfde was die eveneens enkele malen in Walbeck gezien werd, zoo is men thans tot de conclusie gekomen, dat men hier met een tweeden pantserauto te doen heeft, waarvan de smokkelaars zich bedienen om groote hoeveelheden smokkelwaren over de Duitsche grens te voeren.
- 100260 In den nacht van Dinsdag op Woensdag is de auto bij Waldeck weder de grens gepasseerd en ondanks het hevige geweervuur, dat door de Duitsche douanebeambten op den auto werd geopend, reed deze ongestoord verder.
 Het corps der douanebeambten in het commissariaat Straelen is met ca. 25 personen uitgebreid, en er worden krachtige pogingen in het werk gesteld om deze smokkelbende op het spoor te komen.
- 100270 Deze onderzoekingen schijnen al zeer spoedig een gunstig resultaat te hebben gehad. Naar men ons mededeelde, behoort de pantserauto toe aan eene groote smokkelbende, die haar operatiebasis te Arcen nabij Venlo heeft. Ook de pantserauto heeft daar zijn garage. De auto is gepantserd met dubbele staalplaten. Tusschen deze staalplaten is een ruimte van 3 tot 4 centimeter gelaten, zoodat zelfs eene beschieting met zware karabijn-geweren doelloos is.
- 100275 De smokkelbende, die uit circa 30 personen moet bestaan, staat onder leiding van een bekend smokkelaar, zekeren K. afkomstig uit het Roergebied.
 De Duitsche justitie treedt buitengewoon streng op bij de verschillende smokkelprocessen.
- 100280 De geldboeten, welke worden opgelegd, bedragen gewoonlijk het viervoud van de waarde der in beslag genomen goederen, terwijl bovendien nog eenige weken tuchthuisstraf erbij komen.
- 100285 Wanneer het vaststaat, dat de delinquent die wegens smokkelen voor den rechter verschijnt, ook nog deel uitmaakt van eene smokkelbende, dan wordt de straf wegens

z.g. "Bandenschmuggeln" met één maand verhoogd.

26 maart 1932 **Weer een pantserauto aangehouden.**

Door zestien karabijnschoten tot stilstand gebracht. De inzittenden ontvlucht.

100290 In de omgeving van het grensdorp Walbeck bij Arcen hadden de Duitsche douanebeambten Woensdag een goede vangst.

Het schijnt, dat de douane verwittigd was van de komst van een smokkelauto, want toen een pantserauto de grens bij Walbeck in razende vaart wilde passeeren, werd plotseling van het struikgewas langs den weg uit het haltesignaal der douane gegeven.

100295 Onmiddellijk daarop werden van alle kanten schoten gelost uit karabijnen en revolvers.

De auto was in een hinderlaag gevallen.

Door de geweldige vaart van den grooten wagen wist deze echter door het cordon heen te breken. Daar de wagen door vele schoten zwaar getroffen was, werd de poging tot

100300 ontvluchting opgegeven. De inzittenden wisten in het donker in het struikgewas te ontkomen met achterlating van den wagen en rijke buit. Een lading koffie en tabak. De beambten namen een en ander in beslag.

Nog een smokkel-auto aangehouden.

Een der inzittenden gearresteerd.

100305 Onder Twisteden bij Kevelaer is Woensdag door Duitsche commiezen, die alle toegangswegen tot de Nederl. grens hadden versperd, een gepantserde auto aangehouden, waarin 1000 pond tabak was geborgen.

Op den wagen waren 40 schoten gelost, die geen doel troffen.

100310 De auto reed in een sloot, toen ze niet over de versperring kon geraken. Een der inzittenden werd gearresteerd. De chauffeur wist te ontsnappen op Nederlandsch gebied.

2 april 1932 **Slachtoffer begraven.**

100315 – Gisteren had onder zeer groote belangstelling de begrafenis plaats van den dezer dagen door een ambtenaar nabij de grens alhier doodgeschoten H. Husmann, uit Wesel, op het R. K. kerkhof te Straelen. Een muziekkapelle uit Geldern speelde treurmarschen. Na afloop der plechtigheid begaf dit gezelschap zich naar de plaats van aanhouding in Holt, waar eveneens een treurmarsch ten gehoor werd gebracht.

100320 20 april 1932 **DE SMOKKELAARS LANGS DE GRENZEN**

Nieuwe maatregelen van de douane. – Een nieuwe pantserauto.

100325 Zondag j.l. hebben de douanebeambten van het grensdistrict Dusseldorf een vergadering belegd te Dusseldorf, om de gebeurtenissen van de laatste weken te bespreken en de mogelijkheid van nieuwe maatregelen tegen de smokkelaars ter sprake te brengen. Voor het district Dusseldorf moeten er bizondere maatregelen getroffen worden, daar de smokkelhandel hier weliger bloeit dan op andere plaatsen. Versterking van manschappen bij de douane werd dan ook dringend noodzakelijk geacht.

100330 Dat deze nieuwe beambten aanstonds de handen uit de mouwen hebben gestoken, blijkt uit het feit, dat zij den eersten dag reeds een smokkelbende verrasten, die daar op in het geheel niet voorbereid scheen. De smokkelaars gingen aan den haal met achterlating van den buit. De beambten voorden op de vluchtelingen, zoodat een smokkelaar zwaar getroffen neerstortte.

100335 Er schijnt ook weer een nieuwe pantserwagen in gebruik te komen bij een smokkelbende, die haar centrum heeft in Arcen. De wagen is dubbel gepantserd.

23 april 1932 **MODERNE SMOKKELAARS.**

Men schrijft van de Zuid-Oostelijke landsgrens aan "De Tijd":

100340 De streek van Arcen en omgeving, nabij er Venlo, vormt meer dan ooit te voren thans an het middelpunt van een zeldzaam levendigen "smokkeloorlog". Aan de overzijde der grens is de Duitsche douane de laatste tijden aanzienlijk versterkt, zulks in verband met de krasse maatregelen, die genomen worden om den steeds driesteren smokkelhandel te kunnen beteugelen.

100345 Intusschen zijn de smokkelaars, grootendeels Duitschers, naar 't schijnt, niet voornemens voor de verdubbelde activiteit der rijksambtenaren uit den weg te gaan.

Men mag zeggen, dat nimmer de smokkelstrijd met zulke moderne middelen werd gevoerd als thans.

De nieuwste aller methoden is die, welke culmineert in

Pantserkolossen A en B.

100350 Deze wagens zijn voorzien van kogelvrije stalen omhulsels en er inderdaad op berekend den smokkelstrijd op energieke wijze voort te zetten. Een hunner ontwikkelt een snelheid tot, naar verzekerd wordt, 140 kilometer per uur. En deze snelheid is zoo

maar niet een kwestie van een cijfer, doch zij wordt in werkelijkheid ook gereden, als 't er op los gaat. Handgranaten hebben op deze smokkelduivels al evenmin vat als geweer- of revolverkogels. Weg- en draadversperringen moeten zij in staat zijn zijn op de meest elegante wijze "te nemen."

Naast deze smokkelauto-tractie heet het in den volksmond, dat ook

Vliegmachines

in dienst der smokkelarij zijn gesteld. In hoeverre dit juist is, valt niet precies na te gaan. Op het oogenblik is de toestand in de grensstreek zóó, dat geheel de volksfantasie op het smokkelbedrijf is ingesteld. En aangezien het van de pantserwagens naar de vliegmachines slechts een stap is, kan het zeer goed zijn, dat deze stap door de op avontuur beluste fantasie is gezet. Of het voor de volle waarheid kan worden aanvaard, blijve dus in het midden, maar men kan in stadjes en dorpen thans hooren verluiden, dat per vliegmachine de smokkel-artikelen in het land onzer Oosterburen worden binnengebracht. Dit gaat dan zóó, dat op vrij grooten afstand der grens de smokkelwaar eenvoudig naar beneden wordt geworpen om door groepen handlangers in veilige haven te worden gebracht.

De smokkelartikelen

zijn in hoofdzaak koffie, tabak, cacao, sigarettenpapier, enz. Deze smokkelhandel is op breede leest geschoeid en honderden personen, meestal werklozen, houden zich ermede bezig. Naar de regelen der smokkelwetenschap worden allerlei listen verzonnen om te trachten de Duitsche ambtenaren te overschatten. Soms organiseert men schijnbewegingen, die dienen om de douane af te leiden. Lukt de truc en wijden de ambtenaren volle aandacht aan deze quasi-smokkelgroep, dan gaat elders een echte dito met waardenvollen buit de grens over.

Zooals bij elken grenssmokkel op eenigszins uitgebreide schaal steeds het geval is geweest beteekent deze "handel" een levensgevaarlijkwerk. De ambtenaren schromen niet van de vuurwapenen gebruik te maken en nog dezer dagen is bij een vuurgevecht een smokkelaar aangeschoten en gewond neergestort.

25 juni 1932 **DE WITTE BERG, Een prachtig stukje natuur.**

Vele Venlonars zullen niet weten, waar ze dit plekje natuurschoon moeten zoeken. Op de kaart vindt men 't niet. De aanwijzingen, die men ontvangt, zijn meestal wat vaag. Ergens in de bosschen ten N. van Schandelo ligt een berg; je kunt er de torens van Venlo, Straelen, Lottum en andere plaatsen zien.

Met deze weinige gegevens gewapend, trok ik er op een Juninamiddag op uit. Een echt zomersche dag, bijna tropisch heet, drukkend van on weerswarmte. Op zulke dagen is flinke lichamelijke inspanning het beste middel om zich gezond te gevoelen.

Voorbij Velden volgde ik met de fiets een smal paadje langs den rand van het koren.

Een eenzame boerenjongen wist mij de richting te wijzen, waarin ik verder door de bosschen moest gaan; de berg was nog niet te zien. Het pad werd slechter.

Bij een ven, verscholen achter riet en struikgewas, kwamen twee boerenvrouwen in zomersche werkkleeding uit het zonnige veld terug.

Zij waren op de fiets; de jongste droeg "luchtkousen".

— Of ze mij ook konden zeggen, waar de Witte Berg was?

— Nog een eindje verder aan genen kant, jong. 't Is warm, jong'è tusschen de bosschen!

Waarlijk "verjongd" door deze ontmoeting — ik ben de vijftig reeds lang gepasseerd — zette ik mijn nasporingen voort.

Mijn moeite zou weldra beloond worden. Tusschen de stammen vertoonde zich een glinsterende watervlakte met een rijke flora. Waterlelies, waar het eerste ven vol van was, waren hier niet. Aan den anderen oever verhief zich een hoogte met gelen, zandigen top. Dat moest dus de Witte Berg zijn. Langs een omweg kon ik de gezochte plek bereiken.

Toen plotseling, op eenigen afstand, joelende mannen- en vrouwenstemmen. Zoowaar een geïmproviseerd gemengd bad in de open lucht. Menschen uit Straelen of uit Venlo? 't Was te ver af, en niet het doel van mijn tocht, om me hieromtrent zekerheid te verschaffen.

Maar de Witte Berg bleek een openbaring. Een schitterend uitzicht naar alle kanten.

Aan twee zijden uitgestrekte vennen met waterplassen en krijschende vogels; overal rondom dennen. Hier was weer een van die door de natuur gevormde plekken van ongerepte schoonheid, vermoedelijk evenals de vennen in de Peel en bij Oisterwijk in den diluvialen tijd ontstaan door slechte afwatering in een verlaten rivierbedding. Wilt gij er eens gaan kijken? Volg dan den grooten weg naar Lomm, en buig daar af in Oostelijke richting naar de Ravenvennen. De hooge zandstuiving, die ge zult zien, is de Witte Berg. R. I.

* Mag en kan dat zoo maar? (Red.)

4 juli 1932 **Auto in een waranda gereden**

OM EEN BOTSING TE VOORKOMEN.

Zaterdagavond te ca. half 10 heeft op het gevaarlijke kruispunt bij tramhalte Coppes te Velden weer een auto-ongeval plaats gehad. Uit de richting Schandelo kwam de bestelauto van dhr. A. v. d. Hombergh uit Velden. Uit de richting Nijmegen kwam met groote vaart een luxe Fiatauto, waarin twee heeren uit Amsterdam zaten. De auto van den heer Hombergh stak den Rijksweg over. De chauffeur van den Amsterdamschen auto zag het gevaar, waarin hij verkeerde, indien hij zijn gewonen weg behouden had, op het laatste moment in en gooide met kracht het stuur naar links om. Door deze manoeuvre ontweek hij wel den Veldenschen auto maar kon toch niet voorkomen, dat hij met kracht tegen de waranda van café Coppes botste, die letterlijk in puin stortte. De botsing was zoo hevig, dat de steenbrokken in de café terecht kwamen. Persoonlijke ongelukken hadden niet plaats. De auto was slechts licht beschadigd. Door de marechaussee uit Venlo werd een onderzoek ingesteld.

29 september 1932 **"Koning der smokkelaars" gepakt**

Na een hevig vuurgevecht met de Duitsche douane

Een goede vangst

De arrestant verdiende grof geld met het smokkelen van wapens

In de borst geschoten

Venlo, — Woensdag.

Het was den beampten van de Zollfahndungstelle Düsseldorf reeds lang bekend, dat een der voornaamste smokkelgroothandelaars een zekere Frits Szymanski was, die aan het smokkelfront langs de Limburg-Duitsche grens "de koning der smokkelaars" werd genoemd.

Enkele maanden geleden was deze smokkelaar berucht geworden door de onversaagdheid, waarmee hij bijna iederen dag tabak met honderden kilo's tegelijk in pantserauto's over de grens bracht, zonder dat het de douane ook maar een enkele maal gelukte den smokkelaar zelf te arresteeren. Wel werd verschillende malen de pantserauto in beslag genomen, doch even gauw verscheen "Der Frits" weer met een nieuwen auto in het veld. Ongeveer een maand geleden hoorde de douane van spionnen, dat de voormalige tabaksmokkelaar thans dit product verloochend had en nu met vernieuwde energie zich op den wapen-smokkel had geworpen, waarmee volgens zijn zeggen veel meer geld te verdienen viel.

De douane was ervan verwittigd, dat Szymanski gisteren een volle lading wapenen over de grens zou brengen. De beampten hadden overall langs de grenswegen wachtposten opgesteld, die niet van plan waren hem door te laten.

Szymanski beproefde gistermiddag den doortocht, doch hij was wel zoo slim in te zien, dat hij ditmaal niet ongehinderd de grens zou kunnen passeeren. Hij keerde met zijn auto terug naar Arcen, waar een metgezel, de Hollander Kamps uit Arcen, zich bij hem aansloot.

Gisteravond om tien uur probeerden beiden nogmaals er door te komen, hetgeen gelukte. Zij slaagden er in de grens te passeeren en stevenden naar de herberg Landsknecht in Büderich.

De beampten hadden echter spoedig lucht van de zaak gekregen en stelden derhalve alles in het werk om dezen tocht te verhinderen. Zij achtervolgden den smokkelauto en slaagden er in hem met twee andere auto's in te sluiten.

1 oktober 1932 **Twee vrouwen krijgen het met elkaar aan den stok**

Venlo, — Vrijdag.

Hedenmorgen bracht de vrouw van den smokkelaar Camps uit de smokkel-Bude aan de grens bij Arcen een bezoek aan de vrouw van den smokkelaar Szymanski. "Celli", zoo wordt de vrouw van Szymanski genoemd, verweet bij dit bezoek de vrouw van Camps, dat haar man alles verraden had. Over en weer werden beschuldigingen gedaan. Van woordenwisseling kwam het tot handtastelijkheden, totdat de vrouw van Camps ten slotte buiten de deur werd gezet. Deze uitte meerdere bedreigingen van verraad, doch ging ten slotte weg.

9 november 1932 **De broeder van den koning der smokkelaars gearresteerd.**

Theodor Szymanski, broeder van Fritz Szymanski, "den koning der [der] smokkelaars", is te Dusseldorp in hechtenis genomen. De douane-autoriteiten dezer stad hadden vernomen, dat een door Theodor Szymanski bestuurde auto de Nederlandsche grens had overschreden. [...]

24 november 1932 **Szymanski's laatste grensavontuur.**

De Poolse smokkelaar voor den rechter.

Spaansche revolvers voor een Duitsche terreur?

Wij schrijven het laatste hoofdstuk van Szymanski's avontuurlijk leven. Jammer! Want [Fritz] Szymanski was een dankbaar onderwerp. Zijn naam alleen reeds bleek in staat inspiraties op te wekken voor een middeleeuwsche avonturenroman van roofridders, in geheimzinnige schuilplaatsen, op donkere boschwegen en onbekende sluippaden. Geen enkele smokkelaffaire der laatste jaren heeft wel sterker de fantasie geprikkeld, dan zijn wapenzaakje.

"Der Fall Szymanski".

Om den persoon van dezen groot-smokkelaar is een haast onontwarbaar net geweven van fantasie en werkelijkheid. De juiste toedracht der feiten is er eenigszins door op den achtergrond geraakt.

Ondertusschen, Szymanski's rijk heeft afgedaan.

Zijn smokkel-organisatie – wellicht een der best geoutilleerden die de grensgeschiedenis gekend heeft – wist langen tijd de "klein-krieg" langs de oostelijke barrière met succes te voeren, totdat de douane het spel doorzien had en hem schaakmat zette. Enkele kopstukken die steeds in één adem met den Poolschen avonturier genoemd werden, vielen de grenspolitie in handen – Was dat de hoofdgroep? Wie zal 't zeggen? Szymanski zelf zwijgt.

Men spreekt van verraad.

Dat behoeft absoluut geen verwondering te wekken. Elke organisatie welk doel zij ook nastreeft, heeft haar spionnen, die met betaald Judaswerk den basis sloopen en zich zelf veilig weten als de instorting volgt. Zou een organisatie als een smokkelbende dan geen verraders kennen? Verraad is niets nieuws in de grenszaakjes. Men rekent zelfs met verraad aan weerszijden, zoowel bij de grensbewaking als bij de smokkelaars zelf, maar de groote vraag is telkens: Wie? Wie was 't? Men kan 't immers honderde keeren lezen. De gevallen zijn legio: 'n met kennis van menschen en zaken – het eerste nog meer noodzakelijk dan 't tweede – opgerichte smokkeltroep, loopt plotseling vast, wordt op 't meest onverwachte moment overrompeld. "Hoe was dat mogelijk?" vragen de smokkelaars zich later af. De een verdenkt de ander en het wantrouwen en de onzekerheid jaagt de troep uit elkaar. Óók Szymanski werd verraden, is er beweerd. Maar wie zal 't bewijzen? Szymanski zwijgt, de douane zwijgt; de een zal 't gissen, de ander weten. – Hedenmorgen komt bij het Sondergericht te Düsseldorf 't wapenzaakje ter tafel. Of uit verhooren en getuigenverklaringen meer vaststaande feiten naar voren zullen komen? – 't Valt te betwijfelen. De Duitsche douane schijnt op 't punt van verklaringen voor de rechtbank over meer vrijheid te beschikken dan de Nederlandsche. Men zal zich in dit opzicht nog wel 't verloop van Szymanski's laatste strafzaak (op 4 Nov. j.l.) voor de rechtbank te Elberfeld herinneren.

VENLO WERD TE "ENG".

Al werd S. hier geduld, de politie hield hem goed in het oog, doch kon tegen zijn hier te lande niet strafbaren smokkelhandel niet optreden. Meermalen werd hij gecontroleerd en nagegaan, doch nimmer kon tegen hem worden opgetreden, omdat geen strafbaar feit werd ontdekt. Ondanks deze omstandigheid achtte men den vreemdeling hier natuurlijk toch ongewenscht en werd hem begin Juli van dit jaar door den grenscommissaris het verblijf in de grens-zone ontzegd. Hierop begaf S. zich naar Luik, teneinde zich aldaar aan te melden, waartoe hij de hulp in riep van een caféhouder te Bresseau, die dit zaakje voor hem zou opknappen en daarvoor 100 francs als belooning ontving.

De poging om zich officieel in Luik te vestigen, gelukte echter niet. Hij meldde zich daarna te Blerick, alwaar hij, om te voldoen aan de benodigde formaliteiten, een kamer huurde. Op zijn aanvraag werd hem ook door het hoofd der politie aldaar een jachtacte verstrekt. S. meldde zich aan het Bevolkingsregister te Venlo af, als zijnde vertrokken naar Luik, terwijl hij clandestien op de bovenkamers aan den Kaldenkerkerweg verblijf bleef houden, om in de onmiddellijke nabijheid der grens zijn uitgebreiden koffiesmokkelhandel te kunnen blijven voortzetten.

WIE WAS SZYMANSKI?

Deze "koning der smokkelaars" werd in 1890 te Elberfeld geboren uit een Poolsch gezin, waarvan de vader een handel dreef in oud ijzer. Op jeugdige leeftijd werd de avonturier taxichauffeur en had tegelijkertijd een kleinhandel in kolen. Toen hij een jaar of vier geleden in aanraking kwam met groot-smokkelaars en van de fabelachtige winsten hoorde, die met den frauduleuze grenshandel te behalen waren, was hij spoedig besloten het pad der avontuur te gaan bewandelen. Szymanski's ondernemingsgeest had slechts een korte scholing nodig. Na enkele jaren zelf kleinere zaakjes te hebben

- 100550 opgeknapt, kon hij zijn detailsmokkelhandel spoedig uitbreiden tot een onderneming met een grootschere opzet. Na twee jaren snorden zijn eigen auto over de grenswegen en al gauw zou de Duitse douane ervaren, dat met hem een avonturier op 't pad gekomen was, die met groote geslepenheid de hinderpalen hem door de grensbewaking in den weg gelegd, wist te vermijden. De fortuin is echter nukkig. Ondanks de breed
- 100555 vertakte smokkelorganisatie met een goed geoutilleerde inlichtingendienst, die Szymanski spoedig om zijn persoon vereenigd zag, bleven hem de tegenslagen niet gespaard. De eerste buit van beteekenis, die de Duitse douanebeambten in handen viel, bestond uit 40 mille sigaretten en 50 balen koffie.
- 100560 **NAAR HOLLAND UITGEWEKEN.**
Szymanski wist telkens te ontsnappen, totdat men zijn verblijfplaats, die oorspronkelijk in Vohwinckel en naderhand in Mettmann gevestigd was, ontdekt had. Op 5 September 1931 was de politie uit Elberfeld op zijn spoor gekomen en deed 's nachts een inval in café "Schönblick" te Wuppertal, waar Szymanski overnachtte. In zijn
- 100565 slaap verrast, zag de avonturier geen uitweg meer. Zonder zich te bedenken sprong hij in nachtgewaad uit 't venster op straat en zocht in de duisternis een goed heenkomen. Na zich een nacht in de naburige bosschen te hebben schuil gehouden, wist hij naar Holland uit te wijken. Zijn compagnon en chauffeur Kurt Ritz werd bij deze gelegenheid gearresteerd. Niet minder dan 66.000 sigaretten vielen de douane in
- 100570 handen. Uit de papieren die er bij behoorden, bleek echter dat de partij reeds in eigendom was overgegaan aan den smokkelaar Sahn uit Elberfeld. Tot de arrestanten van dien nacht behoorde ook de waardin uit café "Schönblick", die Szymanski had helpen ontvluchten en zijn chauffeur Wülfig. Ruim één jaar, tot 27 September 1932, wist Szymanski nu uit de handen der douane te blijven. Dit was gedurende den tijd dat hij
- 100575 in Venlo verblijf hield. Hier vond hij oorspronkelijk compagnon-schap in een collega-smokkelaar, die eveneens uitgeweken was. Naderhand heeft hij zich van deze afgescheiden. Zijn eerste operatiebasis werd de grensstreek in de omgeving van Roermond.
- 100580 **HET SPEL MET DEN DOOD.**
De laatste periode van Szymanski's avontuurlijk leven was hiermede aangebroken. De laatste weken vóór zijn arrestatie op 27 Sept., hielden de voorspelling in. Enkele smokkeltochten — hoe goed voorbereid ook — liepen op een fiasco uit. Ofschoon de te volgen smokkelwegen, volgens informaties vrij waren, werden toch enkele belangrijke
- 100585 aanhoudingen te zijnen nadeele gedaan, zoodat de smokkelkoning aanzienlijke verliezen leed. Een grenswinkelier uit een der naburige dorpen wist Szymanski toen voor de wapensmokkel te interesseeren, waardoor met minder omslag, meer geld te verdienen viel. De Duitse relatie, in den persoon van Schankweiler zou voor het afzetgebied zorgen. — Szymanski stond in het begin afwijzend ten opzichte van de nieuwe
- 100590 smokkelplannen. Hij begreep heel goed, dat hij thans onmiddellijk ook in botsing met de Hollandsche politie zou komen en het risico van een eventueel echec dubbel zoo groot werd. Tenslotte bezweek hij voor den aandrang zijner vrienden, kocht wapens in Luik en smokkelde ze via Eijsden Limburg binnen. Het wachten was nu nog op een gunstige gelegenheid. Naar men beweert, moet Szymanski de hulp van een douane-beambte
- 100595 gehad hebben, bij 't overbrengen der wapens. In den morgen van 27 September werd de baan veilig gemaakt. Daags te voren had het plan niet kunnen uitgevoerd worden, omdat de grenswegen toen niet vrij waren.
- 100600 **DE NOODLOTTIGE DINSDAG.**
Dinsdagmorgen om half negen zou het transport beginnen. Om dit den schijn te geven van een onschuldige plezierreis, had Szymanski nog twee auto's gerequireerd. De een zou voorop rijden, de andere volgen. De verkenningsauto startte een half uur voor het eigenlijke transport. De smokkelauto, de Oakland P 16707 werd bestuurd door den 22-jarige Kurt Ritz uit Barmen. Men had in deze wagen een dubbele bodem laten
- 100605 aanbrengen, waarin de revolvers verborgen lagen. Om alle verdacht zooveel mogelijk te vermijden, hadden in deze auto de schoonmoeder, een dochtertje en een zuster van Szymanski plaats genomen.
Als dekking in den rug reed ten slotte de derde auto, waarin Schankweiler, de bestuurder en de vrouw van Szymanski gezeten waren. Alles liep vlot van stapel. Het
- 100610 passeeren der grens te Lingsfort bij Arcen bracht totaal geen moeilijkheden mee en om 10 uur had men veilig en wel Neuss bereikt. Op de afgesproken plaats stapten Szymanski met Schankweiler en Ritz in den Oakland, één auto keerde terug naar Venlo en de andere vervoerde Szymanski's familie naar Elberfeld.

IN DE VAL.

In het restaurant L. te Büderich – 10 minuten van het scheidingspunt verwijderd – zouden de wapens worden afgehaald. Bij aankomst aldaar bleek echter dat de afnemer nog niet aanwezig was. Of de smokkelaars toen reeds kwade vermoedens hadden? 't Is best mogelijk, want men besloot den wagen op een binnenweg te rijden en op een stille plek de wapens uit den dubbelen bodem in een koffer over te pakken. Nadat dit was geschied, reed men opnieuw naar genoemd café, doch op hetzelfde oogenblik naderde van de tegenovergestelde zijde een auto van het Zollfahndungsamt, welke zich dwars over den weg voor den smokkelauto posteerde.

'N LAATSTE WANHOPIGE POGING

De smokkelaars zagen onmiddellijk den ernst van den toestand in en begreep, dat ze in de val waren gelopen. Ritz poogde nog door achteruitrijden en daarna te keeren te ontkomen. Dit gelukte echter niet, want de beambten sprongen van hun wagen en zetten den smokkelauto achterna, waarbij een der beambten op de treeplank van den smokkelauto sprong. Ritz greep den beambte bij den keel, terwijl Szymanski hem het wapen, hetwelk in ruststand bleek te zijn gesteld, uit de hand sloeg. Inmiddels losten de andere beambten schoten. De smokkelaars ziende, dat hunne vrijheid nog slechts een kwestie van enkele minuten was, sprongen toen uit den auto. C. en ook Schankweiler staken al dadelijk hun handen omhoog, terwijl ook Ritz weldra was overmand. Alleen Szymanski vluchtte, doch werd door een schot getroffen. Nadat assistentie was aangerukt, werd de omgeving afgezocht en vond men den gewonden smokkelkoning. Hij werd in het burgerziekenhuis te Büderich opgenomen. Men herkende den smokkelkoning onmiddellijk en was er van overtuigd een goede vangst gedaan te hebben.

DE DUITSCHE JUSTITIE REKENT AF.

De twee maanden, die Szymanski nu in hechtenis doorbrengt, werden door de Duitse justitie druk besteed aan het voor-onderzoek en het afhandelen van andere smokkelzaakjes, waarin de avontuurlijke Pool gefaald had. Voor 14 dagen terug stond hij te Elberfeld terecht voor het nachtelijk avontuur te Wuppertal en zijn romantische vlucht uit café "Schönblick". Ofschoon toen duidelijk kwam vast te staan, dat Szymanski niets meer met de gesmokkelde 66 mille sigaretten te maken had – hij had ze diezelfde avond verkocht – moest hij zijn onbewezen aandeel in deze affaire boeten met 1 millioen mark en anderhalf jaar gevangenisstraf. Op welke gronden men dit vonnis baseerde, kwam niet aan 't licht. De als getuigen gehoorde douane-beambten verklaarden, dat zij niet gerechtigd waren mede te deelen, wie hun op de hoogte had gebracht van Szymanski's smokkelpraktijken. Men had toen een zeer sterk vermoeden, dat zijn chauffeur Kurt Ritz hem verraden had. Dit vond een eenigszins vage bevestiging, toen Ritz voor de rechtbank verklaarde, dat men hem, toen hij in voorarrest zat, beloofd had geheel vrij te laten, als hij alles opbiechtte wat hij wist. Of Ritz dit inderdaad gedaan heeft en in de verwachtingen op zijn invrijheidstelling bedrogen werd, en daarom deze verklaring aflegde, kwam niet vast te staan. 'n Feit is echter wel, dat niemand der gedagvaarde getuigen tegen deze verklaring opkwam, of zelfs protesteerde. Dat ook toen, evenals nu bij de wapensmokkel, verraad in 't spel moet zijn geweest, is zoo goed als zeker. Wanneer het Sondergericht te Düsseldorf heden echter met evenveel geheimzinnigheid als in Elberfeld onzegde verklaringen in de weegschaal werpt, dan zal er op dit punt evenmin eenige officieele helderheid komen. Alleen de vermoedens, dat een van Szymanski's vertrouwden Judaswerk verrichtte, worden er door versterkt.

6 maart 1933 Jacht op een pantserauto.

De auto met 500 kilo tabak en koffie in beslag genomen.

DE SMOKKELAARS ONTKOMEN. Zondagmiddag werd te Wetten een pantserauto gesignaleerd, die zeer waarschijnlijk bij Twisteden de grens gepasseerd was. Onmiddellijk werd vanuit het douane-kantoor Geldern de vervolging in twee richtingen met auto's en motorrijwielen opgenomen. Bij Hörtgen gelukte het een der motorrijders eenige schoten op de pantserauto te lossen, waardoor er een lek in de benzinetank ontstond. Blijkbaar van een reservetank voorzien reed de wagen door tot Lingsfort, waar de smokkelaars tenslotte door de inmiddels door het grenscommissariaat Geldern gewaarschuwde politie, genoodzaakt werden te stoppen.

De inzittenden konden ontkomen. De naam van de bestuurder is bekend zoodat zijn arrestatie wel spoedig zal volgen. De wagen was met dubbele 3-4 millimeter dikke ijzeren platen gepantserd en wel de waterkoeler en de chauffeurscabine. De auto bevatte 500 kilo tabak en koffie.

Als in oorlogstijd...

Fel vuurgevecht tusschen een pantser-smokkel-auto en de douane
Auto werd buitgemaakt

100685 Venlo, — Maandag. In den afgeloopen nacht is te Lingsfort een gepantserde smokkel-
auto aangehouden, die 1000 KG. koffie en een groote partij tabak bevatte. De wagen
werd het eerst gezien op den straatweg van de Hollandsche grensplaats Arcen naar de
Duitsche grensplaats Gelderen. Onmiddellijk werd de naburige Zohlfahndungsstelle
gealarmeerd, die met dienstauto's en motoren op onderzoek uitging. De dienstauto's
100690 der douane waren voor de eerste maal voorzien van mitrailleurs. Even voorbij
Twisteden werd de auto door een wachtpost der douanebeambten onder schot genomen. De
smokkelauto bleek goed tegen de kogels bestand te zijn. De auto suiste in volle vaart
tusschen de beambten door en sloeg de richting van Gelderen in. Hier kwam hij echter
de motor-brigade der Zohlfahndungsstelle tegen. De chauffeur van den smokkelauto
100695 gooide onmiddellijk het stuur om en trachtte langs denzelfden weg, waarlangs hij
gekomen was, te ontvluchten. Hij werd bij deze poging echter zeer gehinderd door de
scherpe salvo's uit de mitrailleurs, die op de dienstauto's der douane-beambten
gemonteerd waren.
De smokkelauto hield echter stand. Evenwel bleek het stalen pantser op den duur niet
bestand tegen de onophoudelijk afgevuurde salvo's uit de mitrailleurs. De benzinetank
100700 werd totaal stuk geschoten. Hierin hadden de smokkelaars echter voorzien.
Onmiddellijk werd een reservetank ingeschakeld, zoodat de smokkelaars opnieuw kans
kregen om te ontsnappen. Nu ontspan zich een waanzinnige race op den straatweg
Gelderen-Lingsfort, waarheen de smokkelauto trachtte te ontkomen.
Onophoudelijk losten de beambten schoten. Een der motorrijders van de
100705 Zohlfahndungsstelle slaagde er in met zijn motor langs zij den smokkelauto te komen.
Hier werden echter ook op hem vanuit den smokkelautoschoten gelost, zoodat de twee
beambten, die op den motor hadden plaats genomen, haastig uit zelfbehoud dekking
moesten zoeken.

Tot staan gebracht

100710 Reeds had de smokkelauto de grensplaats Lingsfort bereikt, nog enkele honderden
meters scheidden hem van de Hollandsche grens. De douane-beambten van Lingsfort waren
echter gewaarschuwd. Zij hadden haastig versperringen op den weg gegooid, terwijl
100715 tevens alle zijwegen met spijkerplanken gelegd waren. De smokkelauto kwam in razende
vaart op de versperringen inrijden. Een felle knal... de banden sprongen en de auto
had zich zelf vastgereden. De twee inzittende smokkelaars wisten zich al schietende
in de nabije bosschen terug te trekken, waar zij spoedig het Hollandsche grensgebied
bereikten. De gepantserde wagen, die geladen bleek met ruim 1000 K.G. koffie en
100720 tabak, is eigendom van een bekenden groot-smokkelaar uit de Hollandsche grensplaats
Arcen.

1 april 1933 **NIEUWE KERK TE VELDEN.**

Velden is een der vele zoo schilderachtig gelegen plaatsjes langs de Maas. Gekroond
wordt het door het oude kerkje, dat daar hoog troont te midden van het dorpje aan het
100725 oude, mooie marktplein. Hoe pittoresk ook gelegen, daardoor is het kerkje nog niet
goed. Het gaat hier als met veel oude huisjes: mooi om te zien, doch niet om er in te
wonen: te klein en ongeriefelijk. Zoo is het ook met de St. Andreas-kerk te Velden.
Heel Velden is een mooi plaatsje, met prachtige oude boerenhuizen en tradities.
Zoo is er nog een eeuwenoud St. Sebastiaansgilde. Er staat in de kerk een rococo-
100730 altaar van den beschermheilige der schutters. Een heel typisch gebruik is b.v., dat
de herbergiers van Kevelaer elk jaar naar St. Andreas te Velden ter beevaart komen.
Ze worden hier gul en gastvrij onthaald: logies, eten, muziek en alles vrij. Hoe oud
dit gebruik is, weet men niet. De historie van Velden — welks naam al de eeuwen door
zoo geschreven werd — is zeer zeker de moeite waard meer ontgonnen te worden: het
100735 archief der kerk bevat een schat van historische documenten en gegevens, die elke
geschiedvorschier en vriend van het oude in verrukking brengen. Wij kregen o.m. de
volgende brief in de suete suevere oude tale onder de oogen:

100740 VOLLEN AFLAET Onsen Alderheylichsten Vader Innocentius den II. vergunt Vollen Aflaet
ende vergiffenisse van alle hunne sonden, aen alle g-elooovige Christenen, die gebicht
ende gecommuniceert hebbende, sullen besoecken de Parochiale kereke van Velden (in de
welcke schoone reliquien des H.H. Apostels Andreas ende Iacobus sijn) ende aldaer
devotelijck sullen bidden voor de verheffinge van onse Moeder de H. Kercke,
eendraghtigheyt der Christene Princen, ende uytroeynge der ketterijen. Desen Aflaet
100745 sal beginnen op den avondt van S. Andreas (Patroon van de voorsz. plaats Velden,
eenen besonderen voorbidder tegen Hen hoest, kortborstigheyt ende andere sieckten)

ende sal duyren tot den somne onderganck des volgende Feestdagh: op den welcken den Goddelijcken dienst seer solemnelijck sal geschieden met de Predicatie, ende naer den middagh de Vesperen, sluytende den Aflaet met de Benedictie des Hooghw: H. Sacrament.

100750 Als men nu weet, dat Innocentius II Paus was van 1130 tot 1143, begrijpt men dat de stichting van de kerk van Velden wel zeer ver in het grijze verleden ligt.

Op de plek waar nu de kerk verrijst, moet in den heidenschen tijd een afgodstempel gestaan hebben. In de eerste Christentijden is daar toen een bedehuis opgericht

100755 geworden. De H. Apostel Andreas, die aan twee schuin gekruiste balken de marteldood stierf – de kerk heeft er 'n heel mooi beeld van – is steeds de hoofdpatroon van kerk en parochie geweest. St. Jacobus was de tweede patroon. De acte der kerkvisitatie in 1400 spreekt van een "capelle". In 1558 wordt er voor het eerst van "ecclesia" of kerk gesproken Het tegenwoordige priesterkoor is reeds aan de bestaande kapel gebouwd

100760 in 1509. In de steunbeeren van dit priesterkoor vindt men aan de buitenzijde nog een kop, overblijfsel van een antiek middeleeuwsch groot doopvont. Wanneer de toren gebouwd is, staat niet vermeld. De oudste luiklok – Maria vocor: Ik word Maria genoemd – draagt het jaartal 1419. Is de toren nog vroeger gebouwd? Het is zeer waarschijnlijk. De oorspronkelijke is n.l. een Byzantijsche, de binnenmuren gemaakt van met kalk ineengegoten keien, van buiten Limburgsche mergel. Langs de breede stroom der Maas kwamen de geloofsverkondigers naar hét Noorden, en ook de bouwmaterialen en bouwstijlen voor de eerste kerken. De oude kerk, die wel 1000 jaren oud geweest kan zijn, werd in 1857 grootendeels afgebroken: ze was te klein geworden. De muren waren van mergel en zware ijzerstaven gemetseld. De kerk werd verbreed: het

100770 priesterkoor bleef en de toren werd ingebouwd. Tot aan de galmgaten is deze blijven staan, doch helaas met een muur van buiten omkleed. Van het oude is niets meer te zien. De spits, die men van alle kanten rank ziet oprijzen – hij sluit de lange weg van Venlo naar Velden zoo mooi af – is toen verhoogd. Op 13 October 1858 werd de vergrootte en bijna geheel vernieuwe kerk in gebruik genomen, nadat ze daags te voren door Mgr. J. A. Paredis, Bisschop van Roermond, werd geconsacreerd. De bevolking is intusschen weer zoo sterk gegroeid, dat de kerk beslist te klein geworden is. De ZeerEerw. Heer Pastoor J. G. W. Joosten nam het uitstekende initiatief om tot den bouw van een grooter bedehuis over te gaan. De liefde tot het oude is echter zoo groot in hem, dat hij en Priesterkoor en toren wilde behouden. Het eerste moet echter

100780 geslachtetofferd worden, wil men een flinke, ruime kerk krijgen. Is de tegenwoordige 23 bij 14½ meter, de nieuwe wordt 45 bij 20 meter. De toren blijft staan, doch komt aan den linker-zijgevel. De nieuwe kerk zal n.l. niet meer georiënteerd gebouwd worden, doch dwars op de as der tegenwoordige. In de toren komt een zij-ingang, waarheen een trap voert op dezelfde plaats als nu. Met het oog op de restauratie van den toren

100785 wordt de vorm gewijzigd, zoodat het exterieur overeenstemt met de nieuwe kerk, zoowel wat de architectuur als grijze steenkleur betreft. Na afgekapte te zijn komt er dus nieuwe steen om en wordt het torenlichaam hooger, zoodat de spits korter wordt, in betere proportie tot het geheel. De top blijft 37 meter hoog. De hoofdingang der kerk komt aan het intieme marktplaatsje. Het H. Hartbeeld, dat zoo pieus bij het

100790 veertigjarig Priesterschap van den beminden Pastoor Joosten werd opgericht, zal voor dien ingang komen, in de as der kerk. Het moet daarom verplaatst worden. Men grijpt deze gelegenheid natuurlijk aan om het een passende architectonische omgeving' te geven. Aan ir. Jules Kaiser, onder wiens architectuur de kerk wordt gebouwd, is dit zeer goed toevertrouwd. Zoowel de perspectieffteekening hierbij, als de plattegrond –

100795 waarbij in den hoek een kleine situatie-schets staat in 't 2e blad, doen zien hoe monumentaal het daar zal staan temidden van dien breeden oprit. Men houde alles frisch en flink. Struiken en bloemen aan weerszijden op de kleine helling zullen een mooie natuurlijke omsiering geven. De oprit zelf zal ook reeds het front mooier en rijker doen worden. Men vreeze niet, dat deze oprit te steil zal zijn: de vloer der

100800 nieuwe kerk komt 80 cm. lager te liggen dan nu. Het interieur der kerk zal grootsch en ruim zijn. Alleen in de breede middenbeuk zullen de geloovigen hun plaatsen vinden. De zijbeuken zijn smal gehouden en dienen slechts als processiegangen. Allen zullen dus op het altaar de H. Handeling kunnen zien en meeleven, zooals dat toch moet. Moge een zuiver liturgisch altaar deze nog beter doen uitkomen en alie

100805 kerkmeubelen passen bij karakter en stijl dezer moderne kerk in vrij-gothischen stijl gebouwd, al behoeven daarom de oude rococo-zijaltaartjes niet verwijderd te worden: die domineeren niet. De middenbeuk krijgt haar karakteristieke vorm door de in verhouding lage en massale pijlers, waarop zich hoog de slanke kruisgewelven verheffen. Het interieur wordt uitgevoerd in een zachte gele steen, van het mooie

100810 smalle Vechtformaat, met een plint van zandsteen en een lambrizeering van geel verglaasden steen. Van Priesterkoor en doopkapel, de twee zoo voorname gedeelten der kerk, worden de wanden rijker uitgevoerd: een heel hooge plint van gele natuursteen,

de verdere muren en gewelven in blauw verglaasden steen. Het exterieur wordt gebouwd in grijze steen van hetzelfde slanke Vechtformaat, die het bij het Venlosche ziekenhuis zoo mooi doet. De kleur dezer kerk zal zich, evenals den vorm ervan, harmonieus bij het landschap aanpassen, en zoo zal ze een waardige bekroning zijn van het mooie, goede katholieke Velden.

7 april 1933 **Nazi's koopen wapenen**

(Van onzen correspondent te Venlo).

De Deutsche Zollfahndung (douane-spionage-centrale) heeft talrijke spionnen ontslagen, omdat zij deze menschen niet meer voor haar dienst gebruiken kan. Nu zwerven deze menschen in het grensgebied rond en trachten op alle mogelijke wijze hun kost te verdienen. Er zijn er ook die verraad plegen tegen hun vroegere meesters en niets komt den nazi's meer van pas dan juist dat.

Voor ons zit een vroegere spion van de Zollfahndungsstelle Düsseldorf. Hij heeft enkele jaren met succes gewerkt. Heeft meegewerkt Szymanski en Schommer ten val te brengen. Hij zocht uit, op welke dagen beide grootsmokkelaars gewoonlijk met hun auto's de grens passeerden. Achtervolgde hen vaak. Maakte hun reizen mee naar Luik en andere Belgische plaatsen, waar zij de wapenen kochten, die zij aan hun opdrachtgevers, de nazi's in Duitschland, moesten afleveren. De spion meldde Düsseldorf de komst der auto's en haar gevaarlijke lading. Gewoonlijk werd in denzelfden nacht de smokkelaar gearresteerd.

"Mit Szymanski war es damals schwierig", vertelt de spion. Even glijdt een fijne lach over zijn vermoeid en afgemat gelaat. "Vijfmaal hadden we gemeld, dat hij kwam. Vijfmaal gelukte het hem met een partij wapenen over de grens te komen. Toen zetten wij er alles op om hem te arresteren. Wij hadden ons in verbinding gesteld met een naziafdeeling nabij Düsseldorf. Van een der "Führer"—die lui zijn dillettanten op gebied van spionage—kwamen we den dag te weten, waarop een nieuwe partij zou aangevoerd worden. Wij waren actief. Het geluk was met ons en Szymanski liep in de val. Jammer was het dat slechts zoo'n kleine partij in beslag genomen werd!"

De spion vertelt nog van andere wapensmokkelaars, welke door het toedoen van spionnen gearresteerd zijn. De man blijkt een goed geheugen te hebben. Bij controle stelden we vast, dat alle namen, alle hoeveelheden en alle bijzonderheden juist overeenkwamen met hetgeen wij telkens over deze arrestaties gemeld hebben—en dit op mededeelingen van het officieele douanebureau.

Hij doet nog meer onthullingen. In den nacht van 5 op 6 Maart, den dag der rijksdagverkiezingen, werd te Lingsfort een gepantserde smokkelauto aangehouden. De wagen was het eerst signaleerd in de Deutsche grensplaats Geldern. Spionnen hadden onmiddellijk de Zollfahndungsstelle Düsseldorf met de komst van den auto op de hoogte gebracht. Men wist, dat in den wagen minstens 500 revolvers met munitie verborgen waren. Ook de Zollfahndungsstelle Düsseldorf wist dat. Zij rustte daarom voor het eerst haar dienstauto's uit met machinegeweren om tegen de smokkelaars met succes te kunnen optreden. Hoewel men zich hevig moest inspannen had men inderdaad succes. De gepantserde smokkelauto werd tot stilstand gebracht of beter: hij werd in mekaar geschoten in de buurt van Lingsfort.

Nu komt het merkwaardige. In plaats dat de Zollfahndungsstelle in haar persbericht melding maakte van deze zeldzame vangst, werd gemeld, dat een gewapende pantserauto was aangehouden, die—stereotiep als altijd—bleek te bevatten 1000 kg. koffie en tabak...! Wanneer iemand een kleine voorstelling heeft wat 1000 kg. tabak beteekenen, dan behoef ik verder niets te zeggen.

Hoe kwam de Zollfahndungsstelle erbij zoo'n prachtige aanhouding dermate te camoufleren? Dit raadsel was spoedig opgelost. De leverancier wist van de douanebeambten gedaan te krijgen, dat hij even van de telefoon mocht gebruik maken. Hij belde een bekende persoonlijkheid uit de nazikringen in Düsseldorf op, die op de Zollfahndungsstelle alles voor mekaar gebracht heeft.

"Waren deze wapenen voor de nazi's?"

"Das ist ja klar! Zij hadden deze wapenen noodig om hun gezag te handhaven, dat zij pas gekregen hadden. Nu stond de Zollfahndung onder nazi-bewind. Zij moest dus gehoorzamen. Vandaar is die fabel van de 1000 kg. tabak in de wereld gekomen!"

"Worden thans nog wapenen over de grens gebracht."

"Ik weet pertinent zeker dat in den nacht van 28 Februari op 1 Maart 1000 stuks wapenen Duitschland zijn binnengevoerd. Deze zijn bij Roermond over de grens gebracht en waren bestemd voor de gouw Düsseldorf der N.S.D.A.P."

"Koopt de nazipartij deze wapenen zelf?"

"Neen, zoo slim is de partij ook wel. Zij zelf koopt niet. Zij laat dit doen door middel van een der partijleiders. Deze partijleider stelt zich in verbinding met een bemiddelaar, een "Mittelsmann" die weer tracht in verbinding te komen met een

Belgischen of Hollandschen leverancier. Gewoonlijk wordt verbinding gezocht met een Hollandschen leverancier, omdat de Duitschers, vooral de nazi's, er niet veel voor voelen om rechtstreeks in verbinding te treden met een vroegeren vijand. En dan nog wel met wapenen! Zij zijn veel te bang, dat zij voor landverraders uitgescholden worden, wanneer zooiets uitlekt. U moet denken "Deutschland hoch!"

Deze "Mittelsmann" koopt de wapenen. Bij hem worden ze afgeleverd en hij draagt ze ten slotte over aan de partij, die ze gratis onder haar leden verdeelt. Thans hangt alles af van de Hollandsche douane. Is deze actief, dan zal het den nazi's niet gauw gelukken, groote partijen wapenen over de grens te brengen. Zijn de wapenen éénmaal op Duitsch grondgebied, dan wordt den vervoerder geen haar meer op het hoofd gekrenkt.

8 april 1933 **Autobotsing.**

— Donderdagmiddag heeft op de Rijksweg weer een autobotsing plaats gevonden. De heer D., slager uit Venlo, komende uit de richting Venlo met zijn luxe auto en de heer v. D. uit Gennep, komende uit de richting Schandelo met zijn luxe auto, botsten op het kruispunt bij tramhalte Coppes, doordat zij elkanders signalen te laat gehoord hadden en het uitzicht ter plaatse zeer belemmerd wordt, tegen elkaar op. Beide auto's liepen aanzienlijke materiele schade op. Persoonlijke ongevallen kwamen wonder boven wonder niet voor.

27 april 1933 **VELDEN. Gouden huwelijksfeest.**

— Onder groote blijken van belangstelling herdacht het echtpaar Coppes-Schreurs op de Velgert Dinsdag j.l. den dag van hun 50-jarige echtvereniging. De buurt had voor de woning van het gouden paar een eereboog opgericht en de omgeving van het huis verder kwistig met jong groen versierd. In den vroegen morgen weerklonken reeds de saluutschoten, het feestpaar ter eere. Te circa half negen werden de jubilarissen onder de vroolijke tonen der Fanfare kerkwaarts gebracht, waar door den Z.Eerw. Hr. Pastoor een plechtige H. Mis tot dankzegging werd opgedragen.

Des avonds te half zeven bracht de Fanfare nog een serenade, waarbij de President der Vereeniging het gouden echtpaar in hartelijke bewoordingen feliciteerde en de hoop uitsprak, dat over tien jaar een diamanten kroontje hun hoofd zou sieren. Een familielid dankte namens 't gouden echtpaar voor de bewezen hulde op dezen voor hen beiden onvergetelijken dag. Gedurende den ganschen dag waren tal van schriftelijke gelukwenschen binnengekomen en hadden velen van de gelegenheid gebruik gemaakt, het feestpaar mondeling te komen feliciteeren.

6 mei 1933 **De vlag, die de lading niet dekte.**

EEN HITLER-SMOKKELAUTO IN DE VAL GELOOPEN.

Aan de Duitse grens nabij het Limburgsche plaatsje Arcen, wilde Vrijdagmiddag een met hakenkruis-vlaggetjes versierde auto Deutschland binnenrijden. De Duitse grensbeambten waren echter ingelicht, dat dien middag daar een smokkelauto zou pogen binnen te dringen. Het gevolg was, dat de populaire vlaggetjes ditmaal de lading niet dekten. De auto werd aan een grondig onderzoek onderworpen, met het resultaat dat meer dan 100 k.g. voor den smokkelhandel bestemde koffie erin gevonden werden. De auto en de koffie werden in beslag genomen De smokkelaar, een Duitser, werd gearresteerd.

Een oude smokkel-rot neergeschoten.

75-JARIGE GRIJSAARD SNEUVELT AAN HET SMOKKELFRONT.

In de grensstreek tusschen Arcen en Walbeck, zagen surveilleerende douane-beambten Vrijdagmiddag een oude man door het struikgewas sluipen. Onmiddellijk riepen zij hem toe halt te houden. De oude man hield zich echter doof en vervolgde ongestoord zijn weg. Toen losten de grensbeambten een schot, waarbij ze den grijsaard in de borst troffen. Hij werd onmiddellijk naar het ziekenhuis te Geldern overgebracht, waar hij tegen den avond aan de opgelopen verwonding is overleden. Op hem werden twee pond koffie gevonden. De oude man, zekere S., was ongeveer 75 jaar en woonachtig in het Duitse plaatsje Schaephuizen.

8 mei 1933 **Verboden terugkeer in bewakingsgebied.**

Door de marechaussee alhier werden Zaterdag op de markt aangehouden een zekere J. en V., beiden uit Boxmeer afkomstig. Beide aangehouden werden enkele maanden geleden in de omgeving van Arcen bekeurd in verband met een smokkelarij van een twaalfstal automatische pistolen. In verband met deze smokkelarij is hen destijds het verblijf in het bewakingsgebied ontzegd. Wegens verboden terugkeer daarin werden zij thans door de politiemannen aangehouden en worden zij heden naar de strafgevangenis te Roermond overgebracht.

100945

19 juli 1933 **RUITER-TOURNOOI TE VELDEN.**

Deelname der verschillende Noord-Limburgsche Ruitersclubs.

VOOR VENLO DE EERSTE PRIJS BIJ DE LANDELIJKE PARADE.

100950

Zondag had onder buitengewone belangstelling van het publiek en talrijke deelname van de zijde van paardensportliefhebbers te Velden Schandelo het aangekondigde jaarlijksche ruitersfeest plaats georganiseerd door de Ruitervereeniging "Zeldenrust". Te circa drie uur trok een kleurige stoet van ruim 80 paarden, bereden door sierlijk uitgedoste ruiters vanaf de tramhalte naar het feestterrein te Schandelo om aldaar aan een vreedzame kamp deel te nemen.

100955

Verschillende zusterverenigingen uit den omtrek o.m. die uit Venlo, Blerick, America, Sevenum, Castenray, Grubbenvorst, Melderslo enz. namen aan de feesten deel. Er heerschte te 4 uur een opgewekte feeststemming toen de Fanfare met enkele flinke muziekschmieren de feestelijkheden opende.

100960

Het terrein was bij den aanvang der wedstrijden in vrij goeden staat, alhoewel het wegens de hevige regenbuien der laatste dagen eenigszins drassig was. Vooral op de bochten ondervonden de ruiters hiervan wel eenige hinder.

De toekenning der prijzen geschiedde als volgt:

Dogcar of tonneau rijden lichte paarden: 1e prijs Litjens, Horst; 2e prijs Sonnemans, Sevenum; 3e prijs Jacobs, Venlo.

100965

Dogcar rijden zware paarden: 1e prijs Wienen, Sevenum; 2e prijs Boonen, Velden; 3e prijs Wed. Leupers, Velden.

Landelijke parade: 1e prijs Ruitersclub, Venlo; 2e prijs Ruitersclub, Sevenum.

Draven zware paarden: 1e prijs Vullings, Horst; 2e prijs Wienen, Sevenum; 3e prijs Friesen, Castenray.

100970

Draven lichte paarden: 1e prijs Rambaghs, Castenray; 2e prijs Joosten, Blerick, 3e prijs Hendriks, Venlo.

Rennen zware, paarden: 1e prijs Vullings, Horst; 2e prijs Cox Grubbenvorst; 3e prijs A. Seelen, Venlo.

Rennen lichte paarden: 1e prijs Sonnemans, Sevenum; 2e prijs Strijbosch, Castenray;

100975

3e prijs A. Faessen, Venlo.

Bij de landelijke parade kon men constateeren, wat door training bereikt kon worden. De winnaars van dit nummer verwierven een dankbaar applaus van het publiek. Speciaal de Venlosche Ruitersclub dwong door haar keurig rijden ieders bewondering af. Het was echter wel bepaald jammer, dat te circa 7 uur een hevige stortregen zich ontlastte,

100980

die de renbaan in een modderplas herschiep, zoodat het laatste gedeelte van het programma tot aller teleurstelling werd afgelast. Ter opluistering was de heer Gabriëls uit Arcen met enkele renpaarden uit zijn stallen op het terrein aanwezig, maar wij konden de prestaties hiervan niet bewonderen wegens de stortregen, die als spelbreker optrad. Ook het hindernisrennen, hoogspringen enz. konden geen doorgang vinden. Ondanks deze teleurstellingen kan de ruitervereeniging "Zeldenrust" met voldoening op deze feestdag terugzien.

100985

7 oktober 1933 **VELDKRUIS BIJ KLEIN VINK OPGERICHT.**

PLECHTIGE INZEGENING DOOR Z. HOOGW. EXC. EMANUEL HAENESCH.

100990

Te Klein-Vink bij Arcen, aan den Rijksweg Venlo-Nijmegen, heeft de plechtige inzegening plaats gehad van het nieuwe veld- of wegkruis. In processie trokken de Eerw. Paters, Fraters en Broeders van het Missiehuis St. Paul, de Z. E. Rector en Broeders van het klooster Mater Dolorosa, met de scholieren van het Juvenaat St.

100995

Jozef naar het kruis. In hun midden Z. Hoogw. Exc. Mgr. Emanuel Haenesch, Vicaris van Ambaba Zuid-Afrika, die de inzegening verrichten zou. Bij het met bloemen versierde kruis gekomen, werden eenige liederen gezongen door de eerw. Paters-seminaristen.

Monseigneur had inmiddels op den verhoogden sokkel van den kruissteen plaats genomen en sprak allereerst over de beteekenis van het kruis. Hij preeke het Limburgsche volk om zijn diepen godsdienstzin, uit wier midden een vereniging gevormd is, met het

101000

doel veldkruizen te planten. Hij dankte de initiatiefnemers en medewerkers voor dit grootsche werk. De plek waar dit statige kruis zich verheft, is met Goddelijke Voorzienigheid gekozen. Nabij het groote Missiehuis waar tal van jonge krachten

worden opgeleid om straks in het groote uitgestrekte vicariaat van Mgr. nieuwe veld- en missiekruizen te planten. Onder het kruis op Golgotha stonden drie groepen van

101005

mensen. Deze groepen van mensen zijn tot op heden blijven voortbestaan: zij die het kruis liefhebben, dragen en volgen; zij die het kruis wel erkennen, doch wier wereldsche beslommingen hen steeds verder en verder van het kruis verwijderen; en zij die het kruis haten en vervolgen. Terug tot Christus en het kruis, geeft den mensch nieuwen levensmoed en hulp in deze moeilijke tijd. Hierna verrichtte

101010

Monsieur de heilige inwijding. Ondertusschen werd door de Fraters het lied "Das

Kreuz" gezongen, waarna de scholieren van het Juvenaat hunne gezangen aansloten. In processie trokken allen daarna terug. 's Anderen daags is Mgr. E. Haenesch met nog eenige broeders naar Rotterdam vertrokken om per s.s. Nyasza der Hamburg-Afrika-lijn naar zijn Heimat in het zwarte werelddeel Umbaba, zooals Mgr. dat noemde, terug te keeren.

3 november 1933 **De smokkeloorlog in N.-Limburg.**
Duitschland werkt de botersmokkelarij in de hand.
DE GRENSBEWAKING ONVOLDOENDE.

Bij het in werking treden der crisiszuivelwet, waardoor de boterprijs hier te lande aanzienlijk is gestegen, hebben de smokkelaars in de Limburgsche grensgemeenten een nieuwe bron voor den smokkelhandel gevonden.
Het is een feit, dat de margarinesmokkelarij op het oogenblik weliger tiert dan ooit te voren. De Deutsche regeering, die al het mogelijke doet, wanneer het de bevordering der eigen industrie geldt, heeft namelijk op den margarineuitvoer een premie gesteld in den vorm van nagenoeg vrijwel geheele kwijtschelding der hooge belasting op de Deutsche margarine, waardoor deze hooge belasting, voor die partijen, welke naar Holland worden geëxporteerd vrijwel is komen te vervallen. Hierdoor is de margarineprijs in Duitschland abnormaal laag.

Een ruime verdienste.

Terwijl wij hier onder den druk der crisiszuivelwet nog een slordige 120 centen voor een K.G. margarine moeten neertellen, betrekken de margarine-smokkelaars de margarine aan de overzijde van de grens voor 28 a 30 cent per K.G.. Ofschoon de gesmokkelde margarine, die niet voldoet aan de eischen der crisiszuivelwet en waarvan het vervoeren, zoowel als het voorhanden hebben een fiscale overtreding is, wordt deze door de smokkelaars voor ongeveer 70 ct. per K.G. aan de grootafnemers hier te lande afgeleverd, zoodat deze laatsten ook nog een aardig duitje op deze wijze in den zak houden. Hieruit blijkt dus dat de margarine-grootsmokkelaars ongeveer 40 cents per K.G. verdienen, zoodat het intusschen toch nog een aardig winst gevend bedrijf is om een vrachtwagen beladen met Deutsche margarine vaak slechts over enkele kilometers te vervoeren. Waar in deze crisistijd met zulk een margarinetransport en slechts matig risico een f1000,- a f1500,- kan worden verdiend, dan is het alleszins begrijpelijk, dat vrijwel het geheele smokkelaarsleger der Limburgsch-Deutsche grens, zich momenteel met dit winstgevend "margarine-vervoer" bezig houdt.

Onvoldoende grensbewaking.

De maatregelen, welke door ons kleine komiezenkorps, kunnen worden genomen, zijn ten eenenmale onvoldoende om den tegenwoordigen smokkelhandel afdoende te keeren. En indien, zooals gedurende de laatste dagen gebeurde in de omgeving van Arcen kort achter elkander een tweetal zwaar beladen vrachtauto's met margarine werden aangehouden, dan is dit succes der beambten meer aan het toeval en aan verraad, dan aan onze grensbewaking te danken. Zoowel aan uitrusting als bewapening van ons komiezenkorps, dat nog steeds met een revolver van ouderwetsch model is uitgerust ontbreekt veel — zoo niet alles — om ook maar eenigen vat van beteekenis op deze uitgebreide smokkelarij te krijgen.
Zoowel de dracht als de trefkans dezer wapenen zijn onvoldoende om tegen een smokkelauto met succes op te treden. Versnelde middelen van vervoer, welke ter bestrijding der moderne smokkelarij, die hoofdzakelijk per auto geschiedt, haagst noodzakelijk zijn ontbreken. Zij maken nog steeds van het goedkoopste vervoermiddel — den beenenwagen — gebruik, terwijl zonder toestemming zelfs het medenemen van een rijwiel op surveillance verboden is.
Waar de fiscus door deze omvangrijke margarinesmokkelarij dagelijks voor duizenden guldens aan accijns delft is de vraag gewettigd mede in verband met de bescherming onzer eigen industrie of het niet hoog tijd wordt dat de grensbewaking met een tijdelijk beambtenkorps wordt uitgebreid.

Smokkelaars op het oorlogspad.

Een feit is, dat gedurende de laatste nachten belangrijke hoeveelheden Deutsche margarine over onze Noord-Limburgsche grens het land zijn binnen gevoerd.
Enkele dagen geleden zat in een der nabije Limburgsche grensplaatsen een marechausseepatrouille in een houten keet in de nabijheid der Deutsche grens verdeckt opgesteld, om een smokkelauto, die naar was uitgelekt met Deutsche margarine de grens zou overschrijden, aan te houden. Toen de politiemannen eenigen tijd hadden post gevat naderde uit de richting der grens een man, die wel als smokkelaar bekend stond, doch waarvan men niet verwachtte, dat hij tot het ondernemen van een smokkeltransport

van eenige beteekenis in staat was.

Door de openingen der houten keet sloegen de politiemannen den verkenner gade. Zij zagen hoe de man zorgvuldig het terrein doorzocht of er ergens onraad te bespeuren viel. Eindelijk was de smokkelaar de houten keet, waarin de politiemannen zich nog

steeds schuil hadden gehouden, genaderd. Toen ook deze door den "voorlooper" aan een inspectie werd onderworpen, openden de politiemannen de deur, grepen haastig den verkenner bij zijn kraag en trokken hem bij zich in het houten huisje.

De verkenner werd gefouilleerd. Niet gering was de verwondering der politiemannen, toen zij in een notitieboekje, hetwelk de aangehoudene bij zich droeg aantekeningen vonden, dat deze oogenschijnlijk onbeduidende smokkelaar *in een week tijds ruim 20.000 K.G.* Deutsche margarine met succes het land had binnen gesmokkeld.

Korten tijd later naderde een tweede verkenner. Ook hij werd ingerekend. Het margarine-transport bleef dien nacht echter op Duitschen bodem. De auto-bestuurder, die tevergeefs op het sein "veilig" wachtte heeft kans gezien op een andere plaats ons land binnen te dringen.

Het is nog slechts kort geleden, dat in een onzer grensplaatsen het geheele kommiezen- en politiekorps werd gealarmeerd, omdat volgens zoogenaamde ingekomen betrouwbare berichten een belangrijk margarine-transport over de grens zou worden gebracht. Zoowel de kommiezen als marechaussee's en overige politiedienaren kennen de margarine-grootsmokkelaars, ongeacht of deze uit Arcen, Bergen, Siebengewald of Venlo afkomstig zijn, dan wel onder den rook van Well zijn gehuisvest. En inderdaad bewogen zich op dien belangrijken avond ook enkele van deze "kopstukken" uit de margarine-smokkelaarswereld in bedoelde plaats.

Er gebeurde echter niets. Terwijl het geheele politie- en ambtenarencorps zijn aandacht op een centraal punt had gevestigd stoven op slechts een uur gaans van deze plaats twee zware vrachtauto's, voorafgegaan door een luxe auto, ongehinderd over de grens.

101105 **Het vuurgevecht te Arcen.**

Bij deze gelegenheid slaagden de beambten er in een auto beladen met 2500 kg. Deutsche margarine in beslag te nemen. De smokkelauto was, zooals wij reeds meldden, onder valsche voorspiegelingen door de smokkelaars gehuurd in Venlo. De eigenaar, die van de heele smokkelaffaire onkundig was heeft onmiddellijk van dit feit aangifte gedaan bij de marechaussee's. Onder deze omstandigheden zal er voor den rechter waarschijnlijk niets anders op zitten, dan den auto wederom te doen teruggeven aan den rechtmatigen eigenaar.

Rest voor de smokkelaars nog het verlies der 2500 kg. margarine. Deze vertegenwoordigde een waarde van f700. Toen de beambten den in beslag genomen buit overbrachten, heeft de bestuurder van den tweeden smokkelauto kans gezien met zijn margarinetransport, hetwelk uit 3500 kg. bestond over de grens terug te vluchten. Deze zending heeft tenslotte goed de plaats van bestemming bereikt. Hier maakten de smokkelaars dus eene winst van ongeveer f1300. Wat beteekent onder deze omstandigheden – zooals op dien voor de smokkelaars noodlottigen Octobermorgen – een verlies van f700?

Voor het besturen der smokkelauto's zijn onverschrokken bestuurders zeer gezocht. Zij worden dan ook goed betaald en zijn niet zelden zelf bij het transport geïnteresseerd.

Autoverhuurders, die hun wagen voor een smokkeltransport beschikbaar stellen ontvangen hiervoor tegenwoordig als regel ongeveer f30 per rit. Meermalen wordt ook eene waarborgsom voor den auto gedeponneerd. Teneinde bij de aanhouding het verlies tot een minimum te beperken worden voor de margarine-smokkelarij hoofdzakelijk oude vrachtwagens gebezigd welke meestal slechts een waarde van f200–300 vertegenwoordigen.

Niet zelden koopen de smokkelaars hunne vroeger in beslag genomen auto's tijdens openbare verkooping van in beslag genomen goederen terug om hiermede opnieuw den strijd tegen de beambten aan te binden.

Intusschen hebben de smokkelaars gedurende de laatste weken op verscheidene plaatsen ondervonden, dat zoowel de grens- als politiebeambten strenger tegen de roekeloze smokkelchauffeurs gaan optreden en spoediger van hunne vuurwapens gebruik maken als voorheen het geval was. Vorige week nog werd op den Veldenschen weg door beambten geschoten op een taxi, die naar den zin der beambten niet spoedig genoeg voldeed aan het bevel om te stoppen. De chauffeur had, naar hij verklaarde niet tijdig het vlaggetje der ambtenaren opgemerkt. Alhoewel zich in den wagen een smokkelaarsgroepje bevond, dat waarschijnlijk eene verkenning had verricht, werd geen smokkelwaar in den wagen aangetroffen.

12 december 1933 **REISMARKEN SMOKKEL.**

Circa 50 tot 60 Venlonaren in de gevangenis te Krefeld.

- 101145 Ondanks alle verscherpte maatregelen van het Duitse grenstoezicht is het smokkelen van reismarken blijven voortgaan, zeer tot schade der waaghalzen, die bij bosjes tegelijk door de Duitse S.A.-mannen worden aangehouden en gearresteerd, wanneer ze slechts een gulden of mark uit Duitschland trachten te vervoeren boven 't toegelaten aantal.
- 101150 De laatste week zijn weer enkele Venlosche dames en heeren in Duitse grensplaatsen gearresteerd onder verdenking van devizensmokkelarij. Bij hun terugkeer uit Duitschland vonden de douanebeambten op hen een reischeque van 100 M., die geïnd was en in den pas stond aangegeven. In strijd met den opzet, dat bedragen van Duitse reismarken ook in Duitschland moeten verteerd worden, hadden de dames en heeren een kansje gewaagd om het geld over de grens te brengen. Ze werden gearresteerd en naar de strafgevangenis te Krefeld overgebracht. Naar men meedeelt, vertoeven in deze strafgevangenis meer dan 50 Venlosche ingezetenen, allen verdacht van het smokkelen van reismarken. Na een voorarrest van in doorsnee twee tot drie maanden moeten de gevangenen zich verantwoorden voor den rechter, die hun lang niet malsche straffen toedeelt. Ongeveer drie maanden geleden werd het echtpaar J. uit Venlo gearresteerd. Tot vandaag zit dit echtpaar reeds gevangen en het is nog niet voor den rechter geweest, waar het nog altijd een straf toebedeeld kan krijgen, die grooter is dan het voorarrest.
- 101165 14 mei 1934 **ERNSTIG AUTO-ONGELUK.**
Moeder en drie kinderen gewond. In den afgeloopen nacht te circa half een heeft op de Rijksweg juist bij de grensscheiding Venlo-Velden een ernstig auto-ongeluk plaats gehad. Dhr. Geurts uit Schandelo kwam met zijn luxe-auto uit de richting Venlo, toen uit de tegenovergestelde richting een andere luxe-auto naderde. Vermoedelijk doordat 101170 de auto, die uit de richting Velden naderde, de lichten niet genoeg gedempt heeft, werd dhr. Geurts verblind en reed hij tegen een langs den weg staande boom. In de auto zat behalve dhr. Geurts de echtgenoot van dhr. van den Berg uit Velden met zeven harer kinderen. Drie der kinderen, alsmede de "moeder, kregen arm- en beenverwondingen. Een der kinderen liep een hersenschudding op. De chauffeur en de 101175 andere kinderen kwamen met den schrik vrij. Dr. Paulussen en later dr. Thielen verleenden de eerste geneeskundige hulp. De auto van dhr. Geurts werd zwaar beschadigd.
- 24 juli 1934 **Eerste H. Mis van Pater Leo Steegh.**
- 101180 Tevens de Eerste H. Mis in de nieuwe Parochiekerk van den H. Andreas te Velden. Reeds vroeg in den morgen wapperde de vaderlandsche driekleur van den slanken toren der nieuwe St. Andreaskerk, ten teken, dat Velden haar reeks van Juli-feesten zou voortzetten. Pater Leo Steegh van de Congregatie der Paters van 't H. Hart, verleden 101185 Zondag door Mgr. Bux tot priester gewijd, droeg zijn eerste plechtige Hoogmis op in de nieuwe parochiekerk van zijn geboortedorp, een eer te meer, nu de pas gewijde Pater de eerste H. Mis mocht opdragen in genoemde kerk, een voorrecht dat weinig neomisten te beurt valt. Tegen half tien had zich een drom van kijklustigen verzameld op 't kruispunt aan de tramhalte, bij den prachtig versierden boog, waar door de neomist spoedig zijn joyeuse entrée zou houden in 't sierlijk getooide dorp. Het 101190 fanfarekorps in haar schitterende nieuwe uniformen stelde zich reeds op, om haar steeds gewaardeerde medewerking te verleenen.
- Uit de richting Schandelo naderden over den stoffigen weg langzaam de auto's met neomist, familie en genoodigden. De beierende klokken jubelden haar vreugdetonen over de verzamelde menigte ten teken dat de plechtigheid zou beginnen. Inmiddels 101195 arriveerden de eerw. heeren geestelijken, voorafgegaan door 'n aantal sierlijk uitgedoste misdienaars, die den nieuwgewijden Pater naar de nieuwe kerk zouden vergezellen. Nadat genoemde groep den neomist had verwelkomd, zette de zich inmiddels geformeerde stoet onder de blijde tonen der fanfare in beweging. Begunstigd door het prachtige zomerweer ging het door den met witte en gele bloemen versierden eereboog 101200 over de aan weerszijden pepavoiseerde straat de kom van 't dorp binnen, waar van alle huizen de vlaggen wapperden in den zonnigen morgen. Voor den ingang der kerk werd door een bruidje een toepasselijk gedicht voorgedragen waarna de stoet de feestelijk versierde kerk binnentrad. 't merkkelijk Zangkoor stond hier reeds opgesteld en machtig klonk 't vierstemmige: Dit is de dag, die de Heer gemaakt heeft. Hierna 101205 beklom de zeereerw. heer Pastoor Joosten 't spreekgestoelte en sprak enkele hartelijke woorden van gelukwensch tot den neomist, familie en parochianen. Hij noemde het een uitzonderlijke eer en buitengewoon voorrecht om als pasgewijd priester, de eerste H. Mis in deze nieuwe kerk te mogen opdragen. De nieuwe Pater

werd vervolgens gekleed met de kerkelijke gewaden en 'n teeken met 't nieuwe
 101210 koorklokje was 't sein, dat de groote plechtigheid een aanvang ging nemen. Pater
 Steegh werd geassisteerd door een tweetal Congregatie-genooten, terwijl de zeer eerw.
 heer Pastoor fungeerde als presbyterassistent. De weleerw. heer kapelaan Meys, leidde
 buitengewoon keurig 't achttal speciaal voor deze plechtigheid opgeleide koorknapen.
 't Zangkoor voerde verdienstelijk de veranderlijke gezangen van den 9en Zondag na
 101215 Pinksteren uit alsmede de klankvolle Missa Frederici van Gruber. Na 't Evangelie werd
 door een der Congregatie-genooten van den neomist de feestpredicatie gehouden. In
 goedgekozen woorden schetste de gewijde redenaar de hooge waarde van 't
 Priesterschap. Hierna werd het H. Misoffer weer voortgezet en volgden allen weer met
 groote aandacht de stichtende plechtigheid in de stemmige kerk. Tot slot zong het
 101220 koor na de Hoogmis een 3-stemmige Priester-Cantate. Klokslag 12 uur zette de auto's
 zich weer in beweging, toegejuicht door 'n dubbele haag van kijklustigen ging de file
 van auto's Schandelo-waarts. In den namiddag werd er door de fanfare nog een serenade
 gebracht aan Pater Steegh. De heer Linssen, voorzitter der vereeniging sprak enkele
 woorden van hulde namens het korps, waarna de toegesprokene het woord nam en heel de
 101225 parochie Velden dankte voor de eer hem bewezen en de moeiten die allen zich getroost
 hadden om dezen dag te maken tot den schoonsten van zijn leven. En thans maakt Velden
 zich weer op om a.s. Zondag voor de 2e maal in 1934 een van zijn zonen nl. Jozef
 Kroonenberghs van de orde der Paters Augustijnen zoo feestelijk mogelijk ten altare
 te begeleiden.

101230 28 juli 1934 **Wordt gevraagd voor terstond een meisje van 14-17 jaar**
 voor alle boerenwerk. J. Nilissen, Kerkenhof, Velden, Velgert 260. 3249

31 augustus 1934 **Smokkel-auto met bouillon-extracten aangehouden te Swalmen.**
 101235 Toen de alhier geplaatste ambtenaren der invoerrechten Donderdagmorgen in de vroege
 in dienst waren op den weg van Swalmen naar Bruggen, zagen zij twee auto's met
 scherpe lichten vanaf de grens komen. Op de gebruikelijke sommatie met het bekende
 douanevlaggetje gaf we bestuurder van de vrachtauto, welke gevolgd werd door een luxe
 auto, vol gas en reed weldra over de voor de smokkelaars zoo gevreesde spijkerplank.
 101240 Met een paar lekke voorbanden verdween de vrachtauto in de richting Swalmen. De
 ambtenaren volgden het spoor en troffen de vrachtauto op het gehucht Rijkel, onder de
 gemeente Beesel, onbeheerd aan.
 De wagen bleek 'n groote partij bouillon-extracten kisten en flesschen te bevatten.
 De auto, waarop als eigenaar stond vermeld Sijben, expeditie te Kessel, werd door
 101245 een takelwagen van de Nedam naar Roermond gesleept, terwijl de smokkelwaar bij den
 Rijksontvanger te Roermond werd gedeponneerd.

19 oktober 1934 [...] **Afgewezen worden, met het oog op de financiën**
 101250 dezer gemeente, de subsidies gevraagd door de Stichting het Limburgsche Landschap en
 de Stierhouderij "De Toekomst" te Velden; ook de door de N.V. Maasbuurtspoorweg
 gevraagde extra-subsidie van f500 wordt afgewezen. [...]

Bij de rondvraag wordt gewezen op noodzakelijke vernieuwing der deuren van het
 brandspuithuisje te Schandelo en verbetering van drinkwatervoorziening in de
 veldwachterswoning te Velden. [...]

101255 VELDEN. Landbouwcursus. — Dinsdagavond j.l. werd alhier de landbouwcursus der Jonge
 Boeren geopend. Aanwezig waren de zeer eerw. heer Pastoor, alsmede de besturen, 't
 Aantal cursisten bedraagt 23, terwijl de lessen worden gegeven door 't hoofd der
 school den heer J. Kroonenberg alhier.
 Ziekenfonds opgericht.

101260 — De zoo lang besproken plannen voor een op te richten Ziekenfonds zijn Woensdagavond
 in vervulling gegaan. Omstreeks 7 uur opent de weleerw heer Kapelaan de vergadering,
 welke zeer druk is bezocht, met den chr. groet en heet allen welkom. In 't kort wordt
 dan even reglement gezien, waarmede de meerderheid zich kon vereenigen, terwijl
 diverse verbeteringen in 't vooruitzicht worden gesteld, wanneer de zaak eenigen tijd

101265 heeft gefunctionneerd. Na nog even 't doel en 't nut van dit fonds te hebben
 gememoreerd, treden velen naar voren om zich als lid op te geven, zoo dat de weleerw.
 heer Kapelaan handen tekort komt en hulp moet ingeroepen worden. Na telling blijken
 al direct 196 leden te zijn ingeschreven, terwijl heden nog een 10-tal zich hebben
 aangemeld, zoodat dit fonds begint met ruim 200 leden, voorwaar een prachtig succes.

101270 Vooral zeer vele gegoede burgers zijn ingeschreven, zodoende begrijpende, dat
 hoofdmotief van dit fonds: "daadkrachtige naastenliefde" voorop is gesteld. Wegens 't
 vergevorderde uur wordt de bestuursverkiezing uitgesteld tot de volgende vergadering
 op Dinsdag 30 Oct. a.s. Tot 1 Nov. bestaat nog gelegenheid zich als lid te doen
 inschrijven tegen inleggeld van 10 cent, na dien tijd a 50 cent, bij den weleerw.

101275 heer Kapelaan, alhier.

27 oktober 1934 **Schouder gebroken.**

101280 – Terwijl de knecht van den heer G. uit Schandelo met paard en wagen bezig was, trok het paard ineens aan, zoodat hij tegen een zwaren balk werd geslingerd. Op dokters advies werd hij naar het ziekenhuis overgebracht, waar een ernstige schouderbreuk werd geconstateerd.

24 december 1934 **Wilde zwijnen.**

101285 – Door eenige bewoners uit Schandelo werden gisteren een paar wilde zwijnen ontdekt. Ofschoon eenige jagers er direct op uit trokken en somwijlen ook de dieren in 't oog kregen, mocht 't hun echter niet gelukken de zwijnen onder schot te krijgen, zoodat men zich hiermede nog enkele dagen kan amuseeren.

7 januari 1935 **Overgeplaatst.**

101290 – Met ingang van 1 Febr. a.s. is naar de standplaats Roosendaal overgeplaatst dhr. S. Pietersersma [Pietersma], Ontvanger van het Grenskantoor Lingsfort alhier, welke vele jaren hier deze betrekking heeft vervuld.

30 maart 1935 **VALSCHE 5 MARKSTUKKEN Een arrestatie te Venlo.**

101295 Gistermiddag werd door de marechaussee te Venlo de 25-jarige A. G. te Schandelo gearresteerd, terwijl deze bij een bankinstelling een 26-tal valsche muntstukken van 5 Mark trachtte in te wisselen. De man werd in de marechausseekazerne ingesloten. Vermoed wordt dat de aangehoudene deel uitmaakt van een reeds lang gezochte valsche muntersbende. In samenwerking met de Deutsche politieautoriteiten wordt thans een uitgebreid onderzoek ingesteld.

30 maart 1935 **Valsche marken in Limburg.**

101300 Man bij wisselen aangehouden.
Vrijdagmiddag vervoegde zich aan het wisselkantoor van een reisbureau de ongeveer 25-jarige A. G. uit het gehucht Schandelo onder de gemeente Arcen en Velden, die zes en twintig valsche vijfmarkstukken ter inwisseling aanbood.

101305 De kassier had spoedig ontdekt, dat de markstukken, die opvallend slecht waren nagmaakt, valsch waren. Hij stelde onmiddellijk de politie van het voorgevallene in kennis en weldra waren enkele rechercheurs op het kantoor, waar de man intusschen was opgehouden, aanwezig. G. werd hierna gearresteerd, terwijl het valsche Deutsche geld in beslag werd genomen. Bij zijn verhoor verklaarde G., in wiens ouderlijke woning te Schandelo een handel in koloniale waren wordt gedreven, dat hij het inbeslaggenomen geld moest omwisselen voor een broer, die het thuis in zijn winkel van Duitschers, die koffie hadden gekocht, in betaling zou hebben aangenomen. Hij beweerde niet te weten, dat het geld valsch was.

101315 Ondanks deze verklaring is de man voorloopig in de marechaussee-kazerne te Venlo in verzekerde bewaring gesteld. Het Deutsche bureau voor falsificaties is van een en ander op de hoogte gesteld, zoodat overkomst van een Duitschen expert wordt verwacht, ten einde naar de herkomst van het valsche geld een onderzoek in te stellen.

101320 In dit verband herinneren we er aan, dat sedert jaren in de Deutsche grensstreek bij herhaling valsche markstukken in omloop worden gebracht. Ruim een jaar geleden werd een zeer goed geoutilleerde munterswerkplaats ontdekt nabij de Deutsche grens, op Limburgsch grondgebied onder Arcen in een grenswoning, welke door een Pool was bewoond, terwijl destijds ook op Duitsch grondgebied in de nabijheid der grens een valsche munterswerkplaats werd ontdekt in een kippenhok. Alhoewel de personen, die zich met deze laatste valschmunterij onledig hielden werden gearresteerd, houdt de circulatie van valsch Duitsch geld in de grensstreek nog steeds aan en komen bij de politie herhaaldelijk klachten binnen van personen, die valsch geld in betaling hebben genomen, zoodat het vermoeden is gewettigd, dat in de grensstreek nog geheime plaatsen, alwaar valsch Duitsch geld wordt vervaardigd, aanwezig moeten zijn. De marechaussee's der Brigade alhier onder wier bewakingskring de gemeente Arcen en Velden ressorteert stellen aan deze zijde der grens een uitgebreid onderzoek in.

31 maart 1935 **OP ZOEK NAAR DE DADERS**

101335 Bij het onderzoek inzake het geval van het in omloop brengen van valsche Deutsche vijfmark-stukken, waarvan reeds melding werd gemaakt, is gebleken, dat de verklaring van den verdachten 25-jarigen jongeman uit Schandelo op waarheid berust. Twee Duitschers hebben nl. in den winkel in koloniale waren te zijnen huize 150 kg koffie besteld. Den volgenden morgen is deze partij aan de grens afgeleverd en de jongeman werd toen betaald met 26 valsche Deutsche vijf-markstukken. Men is thans op zoek naar de koopers van de koffie. De verdachte jongeman is in vrijheid gesteld.

101340

25 mei 1935 **HAUS ENTE - ARCEN (Lingsfort)**

Hiermede brengt ondergeteekende ter kennis, dat hij het mooie buitenverblijf "Haus Ente", weer heeft overgenomen. Geheel gemoderniseerd wordt het op Zondag 26 Mei opnieuw geopend. Beleefd aanbevelend G. MATTISSEN - ARCEN

2 juli 1935 **Bekanntmachung.**

Die Ehe wollen miteinander eingehen: der Handlungsgehilfe Josef Gerhard Petry, wohnhaft in Straelen Mühlenstrasse 5, und die berufslose Anna Christine Roosen, wohnhaft in Arcen, Lingsforterweg 152. Der Standesbeamte Straelen den 28 Juni 1935.

In Vertretung Panhuysen
STRAELEN, den 28 Juni 1935

8 juli 1935 **Ernstig motorongeluk onder Velden**

TWEE DOODEN EN EEN ZWAAR GEWONDE.

Zaterdagavond heeft op den rijksweg Nijmegen-Venlo onder de gemeente Arcen en Velden, ter hoogte van het postkantoor te Velden, een ernstig motorongeluk plaats gehad. Bij het oversteken van den Rijksweg is de 72-jarige timmerman J. Clabbers uit Velden door een motorrijtuig, bestuurd door den 27-jarigen mijnwerker R. Glaser uit Brunssum aangereden. De bejaarde man liep ernstige inwendige kneuzingen op en is op weg naar het ziekenhuis overleden. De mijnwerker Glaser bekam een ernstige schedelfractuur en werd in zorgwekkenden toestand naar het St. Josephziekenhuis te Venlo vervoerd, alwaar hij Zondagmiddag aan de bekomen verwondingen is bezweken. De 20-jarige Mej. A. Jüritsch, eveneens uit Brunssum afkomstig, die op de duo was gezeten, liep een dubbele beenfractuur en gapende hoofdwonde op. In bewusteloozen toestand is ook deze dame naar het ziekenhuis vervoerd. Haar toestand was Zondagavond nog ernstig. Omstreeks 9 uur Zaterdagavond bevond de bejaarde timmerman zich op weg naar zijn zoon, die een aan genoemden Rijksweg gelegen winkelhuis bewoont. Tegenover de woning van zijn zoon stak de grijsaard, die bovendien doof is, zonder achtte slaan op het verkeer, den drukken verkeersweg over. Op hetzelfde oogenblik naderde uit de richting Nijmegen met een snelheid van ongeveer 70 K.M. de motorrijder Glaser met een zware Norton motor, terwijl Mej. A. Jüritsch op de duo zat. Op het laatste oogenblik zag de oude man het gevaar in, hij aarzelde een oogenblik en liep toen door. In volle vaart reed de motorrijder den ouden man aan. Deze werd tegen den grond gesmakt, terwijl de motorrijder ongeveer 10 meter verder tegen een boom terzijde van den weg werd geslingerd. De duorijdster kwam nog iets verder tegen den muur van een huis terecht. Onmiddellijk snelden omwonenden toe. Het bleek, dat de gewonden, die allen hevig bloeddeip er ernstig aan toe waren. Het bejaarde slachtoffer werd inde woning van zijn zoon binnengedragen. Onmiddellijk werden geneeskundige en geestelijke hulp ontboden. Pastoor Joosten en Kapelaan Meijs uit Velden waren spoedig ter plaatse en verleenden geestelijken bijstand, terwijl ook de doktoren Thielen uit Arcen en Poulussen uit Venlo weldra op de plaats van het noodlottig, ongeval arriveerden. Na voorloopig verbonden te zijn, zijnde drie slachtoffers in bewusteloozen toestand naar het St. Josephziekenhuis te Venlo overgebracht. Bij aankomst aldaar bleek de timmerman Clabbers reeds te zijn overleden. In zorgwekkenden toestand werden de heide andere slachtoffers het ziekenhuis binnengedragen. Zonder tot bewustzijn te zijn gekomen is ook de mijnwerker Glaser Zondagmiddag omstreeks 1 uur overleden. Naar wij bij informatie in het ziekenhuis vernamen was de toestand van Mej. Jüritsch Zondagavond nog zeer zorgwekkend. De gemeentepolitie uit Velden en de marechaussee's uit Venlo hebben van het ongeval proces-verbaal opgemaakt. Het noodlottig ongeval bracht in het anders zoo rustige Maasdorpje een groote opschudding. Op de plek van het ongeval stonden de dorpsbewoners Zondagmorgen het gebeurde, waarbij een hunner oudste ingezetenen het leven verloor, nog drukte bespreken. Het motorrijwiel, waarmede het ongeval plaats vond, werd slechts licht beschadigd.

6 augustus 1935 **VELDEN. Plechtige Eerste H. Mis Pater Elias Theelen O.C.**

- Nog is het jubelend gebeier niet uit de lucht, of Velden ziet zich weer voor de groote eer geplaatst, een harer nieuwe priesterzonen naar 't altaar Gods te mogen geleiden, ditmaal den W. Eerw. Pater Elias Theelen van de Orde der Carmelieten, die 't aantal priesters, die het kleine Velden reeds geschonken heeft, tot negen doet stijgen. Reeds weken en weken is men bezig geweest, dit feest voor den Neomist tot een onvergetelijk te maken, waarin men dan ook wondervol is gaslaagd, want door een dergelijke versiering, met elf eerebogen, des avonds feerijk verlicht, aan te brengen, had men ongetwijfeld den jongen priester geen groter eer en vreugde kunnen verschaffen, en de gevoelens der buurtbewoners niet beter kunnen vertolken. Om kwart voor tien werd de neomist, vergezeld van zijn grijze vader en familie, aan huis afgehaald door Geestelijkheid, bruidjes, buurtbewoners en fanfare, en werd hij reeds

terstond verwelkomd door twee maagden, waarop de jonge priester zijn priesterlijken zegen schonk. Aan de kerk werd hij nogmaals verwelkomd door twee bruidjes, terwijl in de kerk door het Zangkoor een machtig driestemmig "Tu es sacerdos" van v. Schaik den jongen priester werd toegezongen. Vervolgens sprak de Z.Eerw. Heer Pastoor een gelukwensch tot den Neomist en familie. Dan werd een aanvang gemaakt met de H. Diensten. Als presbyter-assistens fungeerde Pastoor Joosten, als diaken de W. Eerw. Pater J. Linssen S.S.S., als sub-diaken de W.E. Pater J. Kronenberghs O.E.S.A., en als ceremoniarius de W.E. Frater L. Linssen S.C.J., alle 3 dorpsgenooten van den Neomist. Door het knapen- en mannenkoor werd de plechtige tweestemmige "Missae St. Antonii de Padua" van Janssen gezongen. De feestpredicatie werd gehouden door den W.Eerw. Pater Herman Joseph Denteneer O.C., die op indrukwekkende wijze de heiligheid en waardigheid van het H. Priesterschap deed uitkomen. Na de H. Mis werd door het koor een jubelend vierstemmig "Hic est sacerdos" van M. Mosmans uitgevoerd en was deze plechtigheid mede door de prachtige versiering in de kerk, alsook door de op zeer verdienstelijke wijze uitgevoerde zang, voor allen een onvergetelijke geworden. Vervolgens toog men huiswaarts, alwaar weer door meerdere bruidjes verzen werden gedeclameerd en bloemen aangeboden. Namens de buurtbewoners vertolkte dhr. J. Clabbers in een kort, doch hartelijk woord de gevoelens der omwonenden. Spr. dankte voor het geluk, dat ook zij een priester in hun midden hebben. Ten zeerste geroerd sprak dan de jonge priester, na op de eerste plaats God te hebben bedankt alsmede zijn grijze vader, vooral de Z.Eerw. Heer Pastoor, voor de vele moeite en offers, voor hem gebracht. Des avonds werd de Neomist door de Fanfare een serenade gebracht. Bij monde van wethouder van den Hombergh werd hij dan geccomplimenteerd. De jonge priester dankte voor dit eerbewijs en beloofde de Fanfare in zijn gebed niet te vergeten. Nog lang in den avond heerschte er groote vreugde in het dorp. Velden heeft weer op ondubbelzinnige wijze getoond, zijn priesters te kunnen eeren.

21 augustus 1935 **Verkeerstelling.**

— Op den van provinciaal belang verklaarden weg, loopende vanaf het dorp Arcen naar de Rijksgrens aan den Lingsfort wordt momenteel eene verkeerstelling gehouden, welke echter geen verband houdt met de plannen tot verbetering hiervan. De verbetering met asphalt-beton, waartoe bereids door den Raad werd besloten, zal afgezien van den uitslag der telling, binnenkort ter hand worden genomen. Op Zaterdag j.1. bedroeg de uitslag der gehouden telling tusschen 6 uur v.m. en 8 uur nam. Bespannen voertuigen voor vrachtvervoer 22; personenauto's 38, op Zondag 36; autobus 1; vrachtauto's 28; motorrijwielen 12, op Zondag 10; rijwielen 498, op Zondag 692; handkruiwagens, hondenkarren, enz 38, op Zondag 19; voetgangers 274, op Zondag 331.

26 augustus 1935 **FEL WOEDT NOG HET VUUR IN HET VEEN.**

De brand in de Noord-Limburgsch Duitsche grensstreek verwoestte reeds 40 H.A. (Van onzen correspondent). VENLO, 24 Aug.

— De veenbrand, die reeds enkele dagen in de Noord-Limburgsch-Duitsche grensstreek woedt, is nog steeds niet bedwongen. Vóór de bekenverbetering in deze streken waren de veengronden veel drassiger dan tegenwoordig, en daardoor ook minder brandbaar. Na de langdurige droogteperiode zijn deze beken zoo goed als uitgedroogd, waardoor groote uitgestrekte veengronden droogliggen. De veenlaag is hier op sommige plaatsen tamelijk diep, zoodat de brand hier en daar zelfs meer dan een meter diep onder den grond woekert. Aan blusschen valt onder deze omstandigheden dan ook niet te denken. Dag en nacht bewaken rijks- en gemeentepolitie de brandende terreinen en de omgeving, om onmiddellijk als de vlammen aan de oppervlakte komen en dan over de dorre gras- en heidevelden voortjagen, te kunnen ingrijpen. Ook de vrijwillige brandweercorpsen uit de Duitsche grensstreek en de arbeiders uit de werkverschaffing der Noord-Limburgsche dorpjes Velden en Arcen zijn dag en nacht in de weer om den vuurwolf te bedwingen. Vooral in het gehucht Schandelloo in de onmiddellijke nabijheid der Duitsche grens, woedt het vuur hevig. Ook op het aangrenzende Duitsche grondgebied gaat de vuurwolf hevig te keer. Uitgestrekte perceelen heidegrond zijn reeds zwart geroosterd. Vooral langs de spoorlijn naar Krefeld kent het alles vernielende vuur geen grenzen. Hier is de veenbrand op het oogenblik wel het ergst. Op grooten afstand is de scherpe brandlucht merkbaar.

19 oktober 1935 **Oefening Luchtbescherming.**

— Voor de in de namiddag van Zaterdag 26 October a.s. boven Limburg te houden oefeningen van den Luchtbeschermingsdienst zullen in deze gemeente de volgende maatregelen worden genomen. De straatverlichting in de dorp Arcen, Lomm, Schandelo en Velden, zal niet ontstoken worden dan na afloop der oefening te omstreeks half zeven. [...]

24 oktober 1935 **LANDELIJKE IDYLLE.**

Het matte licht van een vroegen wintermorgen lag over het zaaltje – over de daken lag de witte rijp en overal waren teekenen van het seizoen te bekennen, zoodat het binnen in het zaaltje, waar de hoge kachel van de warmte glom, reeds genoegelijk verwijlen was. In deze vroeg-wintersche sfeer trad een clan Veldenaren aan, of juist gezegd, ze kwamen uit het gehucht Schandelo, en nu wilden we allen wel eens weten wat deze heeren, wier gehucht reeds een verwijt aan boosheid beteekent, gedaan of mogelijk niét gedaan hadden.

Men zal niet te snel oordeelen, wanneer men een aantal lieden uit één buurt voor de kadi aantreft. Want heel achteraf blijkt met zelden, dat de schuldige van den dag niet meer schuld draagt dan de heeren. die hun genoeg hebben gevonden in het spelen van getuige. Alleen zijn zij misschien wat slimmer geweest, of hebben zij dankbaar gebruik gemaakt van "het juiste moment", een omstandigheid, waarnaar het slachtoffer wellicht tevergeefs uitkeek

Lieden van 't land knauwen soms op iets verschrikkelijks; zij zijn in staat om plannen, te smeden, ten einde één hunner gemeenschappelijk aan de galg te helpen, en zij vergeten daarbij, dat de vrede een onmisbaar element is in de samenleving. De stad stelt zich gemeenlijk die verhouding wat al te gekleurd of al te vredelievend voor – wanneer de stad naar buiten trekt en zich in de vrije natuur tusschen wiegende graanakkers en dennebosschen ophoudt, dan ziet zij in den naderenden landman, die omgeven door den vrede van de natuur, over een smal paadje gaat, het beeld van den hemel. En, wanneer dezelfde stadsmensch zoo nu en dan eens naar dit zaaltje kwam luisteren, zou hij voor goed twijfelen aan de waarde van den Volkenbond, want een heele stam kan zóó hopeloos met elkaar overhoop liggen, dat men zich een rustend kanon niet kan voorstellen

Ik wil niet zeggen, dat deze idylle uit Schandelo geheel volgens bovenstaand recept is, maar er bleek dan toch oneenigheid te bestaan – en een oneenigheid, die niet tot het object, een fazant, beperkt bleef. Het werd er niet bij verteld, doch in de zaal zweefde het ontzettende woord "veete" en dit maakte de stemming eenigszins gereserveerd. Een Schandeloër dan zou in het veld een fazant geschoten hebben, gedood en bemachtigd, luidde de verdenking, en wel op 30 September van dit jaar, toen de jacht op dit gevogelte reeds taboe was verklaard.

Hoe het nu precies in elkaar zat, bleef in de verte zweven, maar de rijksveldwachter werd in den arm genomen en die moest den dader maar eens op de bon slingeren.

En zoo geschiedde het dat Schandelo dezen morgen naar het zaaltje afgevaardigd werd. Langzaam ontknoopte zich het geval, d.w.z. we kregen te hooren, dat er méér achter zat, al konden we met ons getraind combinatievermogen de landelijke legplaatjes niet geheel aan elkaar leggen.

Als poging om den vroegtijdigen dood van de fazant voor het slachtoffer te bezwaren, steeg van voor de balie het verwijt op, dat er ook wel eens een kraai was geschoten, maar de twist raakte als in een kluwen, toen verteld werd, dat in de buurt een dochter was getrouwd en dat er menschen op die bruiloft geweest waren.

De vraag, die tenslotte van meer interesse was dan de rest, was voor ons: wat heeft een doode fazant te maken met een gezellige bruiloft in Schandelo? Er werd in dit verband wel zoo men dat noemt op den korf gestooten, maar verder bleef het geheim van het land bestaan.

Toen kwam de politiemann die zich in deze idylle gewaagd had, en hij trachtte zijn eenmaal begonnen werk tot een goed einde te brengen.

Of er ook gestroopt wordt, vroeg de rechter.

– Heel Schandelo stroomt, sprak de politiemann en daarmee maakte hij den verdediger om zoo te zeggen wakker, die op deze uitlating dan wel eens wou vernemen of deze man, zijn cliënt, ook als een strooper bekend stond...

Feitelijk was deze vraag overbodig, want waar de politiemann geen Schandeloër vrij van de zonde van stroopen genoemd had, daar behoefde men niet meer over de onschuld van één hunner te twisten.

Maar de veldwachter schrok misschien een beetje voor zijn eigen moed om de heele bevolking over één kam te scheren.

– Nee, zei hij toen, dat nou niet. Toen was de verdediger weer gerust. De balie noemde het gansche geval niet sympathiek – er zaten te veel haken en oogen aan, terwijl men niet met absolute zekerheid te weten kon komen óf de delinquent de fazant – want daar ging het nog altijd om – geschoten had. Wel was er een schot gevallen, maar zeg maar eens wie schoot, als de heele buurt, volgens den politiemann, ervoor in staat is. Zoo kwam het, dat de ambtenaar, die prikkelende gevoeligheden wilde ontwijken en die inderdaad ook zorgen blijkt te hebben voor het behoud of het herstel van den vrede ten plattelande, vrijspraak eischte. De rechter hield de gunning nog

veertien dagen vast, maar dat is slechts eerbiedwaardige traditie. Want de Schandeloër gaat niet naar de galg!

19 november 1935 **ZWARE BOERDERIJBRAND TE VELDEN.**

Hoeve door het vuur vernietigd.

TWEE KINDEREN MET MOEITE GERED.

Geld en geldswaardige papieren verbrand.

Maandagavond te ongeveer 6 uur werd de buurtschap Hasselt, gelegen onder de gemeente Velden, plotseling opgeschrikt door een uitslaande brand in de groote boerderij van J. Willemsen. In allerijl snelden de buurtbewoners naar de bedreigde hoeve.

Het bleek dat de brand was uitgebroken in de stallen welke aan de woning der boerderij zijn vastgebouwd. In de aanwezige voorraad hooi en andere voedingsartikelen vond het vuur gretig voedsel. De vlammen sloegen van alle kanten uit het gebouw.

In het gedeelte van het woonhuis, dat boven de stallingen gebouwd was, sliepen een tweetal kinderen van den eigenaar. Een bewijs voor de groote snelheid, waarmede het vuur zich uitbreidde, is wel het feit, dat men de kleinen slechts met moeite uit de vlammenzee kon redden. Het bedje van een der kinderen was reeds aan 't branden. Ondertusschen was men er ook in geslaagd het vee los te maken en uit de stallingen te drijven. Het vuur dat in zijn groote hevigheid niet te temperen was, tastte weldra het geheele woonhuis aan. Met vereende krachten sleepte men zooveel mogelijk de inboedel naar buiten.

Hoewel de brandweren van Velden, Schandelo en Arcen met alle kracht werkte, kon men het woonhuis niet behouden. Wel gelukte het hun, mede door de gunstige windrichting, een van de brandende hoeve losstaande schuur aan het vernietigende vuur te ontrukken.

Men deelde ons nog mede, dat een portefeuille, die een bedrag van ruim f200 bevatte, in het vuur gebleven was. Dit geld was de opbrengst van den verkoop van eenig vee, dat de eigenaar 's morgens nog ontvangen had. Ook de bezittingen van een inwonende broer van dhr. Willemsen, konden niet meer uit het vuur gered worden. Zijn kleeren, geld en papieren bleven in de vlammen. De heer Willemsen zelf was verzekerd, zijn broer echter niet.

De huiskapel van Mgr. Willemsen, een familielid van den eigenaar der hoeve, die een uitbouw vormde van de hoeve, wist men eveneens nog te behouden. Deze kapel was tijdens het verblijf van Mgr. Willemsen in Velden, gedurende den oorlog, toen hij niet meer naar Rome terug kon keeren, aan de hoeve vastgebouwd. Op het terrein van den brand merkten wij o.m. op wethouder van den Hombergh uit Velden.

Te ongeveer 8 uur had men het vuur zoodanig bedwongen, dat men geen verdere uitbreiding meer behoefde te vreezen.

17 maart 1936 **TWEE DUIZEND KILO KOFFIE GESMOKKELD.**

Door Deutsche douane achterhaald.

In den smokkelhandel langs de Deutsche grens valt in de laatste weken wederom een kleine opleving te bespeuren. De naar Duitschland gesmokkelde artikelen bestaan hoofdzakelijk uit koffie, tabak en sigaretten, terwijl uit Duitschland daarentegen in hoofdzaak geld, alcoholhoudende dranken en vooral Maggi frauduleus worden ingevoerd. Door een toevallige samenloop van omstandigheden zijn de Deutsche douanebeambten thans in Noord Limburg een belangrijke koffie-smokkelarij op het spoor gekomen, meldt de "N. Venl. Crt."

Enkele smokkelaars uit Venlo waren er in geslaagd met een gehuurde vrachtauto, beladen met 2000 K.G. ongebrande koffie, onder de grensgemeenten Arcen en Velden de Deutsche grens te overschrijden. Alle voorzorgsmaatregelen waren tevoren reeds genomen, zoodat het passeeren der Deutsche grens met de zwaarbeladen auto een vlot verloop had. De koffie was bestemd voor een koffiebranderij gelegen in de nabijheid van Munchen-Gladbach. De smokkelaars waren met den wagen ongeveer 25 K.M. de Deutsche grens overschreden toen zij in de nabijheid van het stadje Viersen auto-pech kregen. Bij onderzoek bleek dat het defect aan den wagen niet dadelijk te herstellen was, zoodat de chauffeur van de smokkelwagen er op uit toog om een vrachtauto op te zoeken, die de lading zou overnemen. Het gelukte den smokkelaar weldra een Duitscher te vinden, die zich bereid verklaarde tegen vergoeding de vracht naar de plaats van bestemming te brengen. Op de vraag van den Duitscher wat zich eigenlijk in de zakken bevond, antwoordden de smokkelaars, dat daarin zaadboonen waren verpakt.

Onmiddellijk na het overladen, dat geheel ongestoord kon plaats vinden, werd de wagen naar de plaats van bestemming te Munchen-Gladbach gereden.

Toen de lading aan het bestemde adres was afgeleverd keerde de Duitscher naar Viersen terug, terwijl de smokkelaars zich eveneens huiswaarts begaven. Toen echter de Deutsche chauffeur de vrachtauto waarmede hijden avond tevoren de vracht had vervoerd, den volgenden morgen wederom wilde gebruiken, bemerkte hij, dat in den

- 101605 laadbak een kleine hoeveelheid ongebrande koffieboonen lag. Hij vermoedde toen dat deze afkomstig waren van de vracht, welke hij voor de hem onbekende Hollanders vervoerd had, zoodat hij onbewust zijn medewerking had verleend aan deze belangrijke smokkel-affaire. Hij stelde de Duitsche douane-beambten van een en ander in kennis. Deze hebben zich toen onmiddellijk naar de plaats begeven, al waar de koffie was
- 101610 afgeleverd, en de geheele partij in beslag genomen, aangezien de eigenaar niet in het bezit was van de vereischte vergunning zulk een groote hoeveelheid koffie voorhanden te hebben.
- 18 maart 1936 **Velden. Sluiting 2-jarige Landbouwcursus.**
- 101615 Dhr. Sanders, voorzitter Boerenbond, opende, heette Geestelijk Adviseur, Ir. Dewez, rijkslandbouwconsulent en Ir. Bles, directeur Landbouwschool, welkom. Tevens waren besturen Boerenbond en Jonge Boeren aanwezig. De landbouwonderwijzer dhr. Kroonenberghs en Ir. Dewez stelden enkele praktische vragen, waarna de laatste nog enkele opwekkende woorden tot de cursisten sprak. Voorzitter Jonge Boeren, dhr.
- 101620 Geurts, reikte een toepasselijk woord aan de volgende heeren de diploma's uit, G. en P. Steegh, M. en K. Lommen, J. en Th. van den Haghen, G. Verbong, Jac. Lommen, H. Keltjens, J. Tiesen, H. Heldens, G. Koopmans, Jac. Leupers, Jac. van Hees, C. Verheyen, Jac. Geurts, Jac. Driessen, H. Vermeulen, M. Becker, H. Bouten, Jac. Jansen, M. Simons, H. van der Haghen en J. Theelen.
- 101625 De geestelijke adviseur, pastoor Joosten, richt ook enkele woorden tot de geslaagden, welke zij vooral vooreerst ter harte zullen nemen. Namens de cursisten dankte dhr. G. Steegh, waarna de onderwijzers aan de aangename samenwerking herinnerde en hiervoor dan ook speciaal dankte.
- 30 maart 1936 **Ploegdemonstratie Jonge Boeren.**
- 101630 – Onder een zeer groote belangstelling werd alhier door de kring van Jonge Boeren, Arcen, Lomm en Velden, ploegwedstrijden georganiseerd, waarvan ook van de zijde der deelnemers, veel animo bestond. Het perceel, waarop de wedstrijden zouden plaats hebben, was welwillend door den heer Fr. Thiessen, Schandelo, afgestaan. De wedstrijd
- 101635 had plaats in twee groepen van zes deelnemers. Voor den aanvang der wedstrijden, sprak de kring voorzitter de heer J. Geurts, een hartelijk welkomstwoord, speciaal tot de juryleden de heeren Ir. Bles en Dings, Roermond, Jac. Beeker en Fr. Theelen, Velden, alsmede de heer W. Nijskens Arcen en wees de deelnemers op het nut en doel van deze strijd, welke in de toekomst goede vruchten zal afwerpen. De directeur der
- 101640 Landbouwwinterschool dankte het Kringbestuur voor hun groote activiteit hierin betoond en gaf vervolgens een korte uiteenzetting over de grondbewerking. Alvorens een aanvang te nemen, werd de deelnemers bekend gemaakt dat ten hoogste 100 punten kunnen behaald worden, waarvan 70 punten voldoende is om een diploma te verkrijgen. Na drie uren ploegen was de strijd beëindigd en werd overgegaan tot het uitdeelen der
- 101645 prijzen. Alvorens hiertoe over te gaan, maakte de jury bekend dat in verband met de losse grond en de korte opstand het minimum te behalen punten voor een diploma was gesteld op 65. De uitslag is als volgt:
1. Geelen, Velden met 77 pnt;
 2. G. Hegger, Arcen met 75½ pnt.;
 3. J. Tax, Velden 74¾ pnt.;
 4. M. Rieter, Velden 72¾ pnt.;
 5. J. Schreven, Arcen 69½ pnt.;
 6. H. Heidens, Velden 69¼ pnt.;
 7. H. Arts, Arcen, 69 pnt.;
 8. H. Thiessen, Velden 66¾ pnt.;
 9. L. Engels, Velden 66½ pnt.;
 10. P. Steegh, Velden 66½ pnt.;
 11. W. Muijres, Velden 65¾ pnt.
- 101655 De eerste twee prijswinnaars ontvingen bovendien nog een extra souvenir. De punten zelf werden niet alleen gegeven voor de beste ploeger, maar ook werd aandacht geschonken aan het best in orde zijn van tuig en ploeg, waarop meerdere deelnemers niet ernstig hadden gelet en zich hierdoor schade berokkenden. Tot slot dankte de voorzitter J. Geurts allen voor hun bereidwilligheid en dankte vooral de jury, waarmede deze zeer leerzame dag was beëindigd.
- 101665 19 april 1936 **DUITSCHER DOUANE HOUDT AUTO MET BOLLEN AAN.**
Winstgevende smokkelarij... als het ten minste gelukt.
(Van onzen correspondent).
- 101670 VELDEN, 15 April. – Duitsche kommiezen hebben aan de grens onder Walbeck, na eerst eenige schoten te hebben gelost, een vrachtauto uit Limburg aangehouden, waarop 3000

K.G. bloembollen waren geladen, welke frauduleus Duitschland waren binnengevoerd. De auto met lading is in beslag genomen.
De bestuurder wist te ontkomen. De bollen, afkomstig uit de omgeving van Haarlem, waren bestemd voor een der groote Duitse steden. De bestuurder van den zwaarbeladen
101675 auto was onder de Limburgsche grens gemeente Arcen over de Duitse grens gereden. Nauwelijks was hij echter enkele honderden meters gevorderd of van achter een langs den weg staande woning kwamen twee gewapende kommiezen te voorschijn. Zij sommeerden den bestuurder te stoppen waaraan deze aanvankelijk geen gevolg gaf. Toen de beambten hierop het vuur op den vermoedelijke smokkelauto openden bracht de chauffeur in de
101680 nabijheid van een bosch zijn wagen tot stilstand. In allerijl sprong hij uit zijn wagen en vluchtte het struikgewas in. Weldra was hij uit het gezicht verdwenen. Behoedzaam heeft de vluchteling door het bedekte terrein de Limburgsche grens wederom opgezocht. De beambten, die dachten in den wagen een partij koffie of tabak aan te treffen, bemerkten tot hun niet geringe
101685 verbazing, dat de auto de niet onbelangrijke partij tulpen bevatte. Ten gevolge van de groote vraag naar bloembollen in Duitschland worden er in den laatsten tijd herhaaldelijk belangrijke partijen bloembollen zonder de vereischte vergunning Duitschland binnengesmokkeld. Naar wij van welingelichte zijde vernemen levert een geslaagde tocht met een dergelijk transport bloembollen die vaak van honderd tot
101690 zelfs driehonderd kilometer ver naar de groote steden in Duitschland worden vervoerd, een winst van ongeveer f1000 op. Het onderzoek naar den voortvluchtigen smokkelaar heeft geen resultaat opgeleverd.

11 mei 1936 **Gouden Echtvereeniging.**

101695 – Morgen, Dinsdag, hoopt het echtpaar P. Aerts-Hansen te Schandelo alhier hun gouden echtvereeniging te herdenken. Om 10 uur zal een plechtige H. Dienst van dankzegging worden opgedragen. De buurtbewoners zijn reeds weken in de weer, om deze heugelijke dag voor de beide oudjes tot een onvergetelijke maken.

15 mei 1936 **VELDEN. Gouden echtvereeniging.**

101700 – Door de echtelieden Aerdt-Hansen te Schandelo alhier werd Dinsdag j.l. 't feest hunner gouden echtvereeniging gevierd. Reeds weken lang was de geheele buurt in de weer geweest om dezen dag voor de beide sympathieke en geachte oudjes tot een onvergetelijke te maken, waarin men dan ook volkomen is geslaagd. De geheele voorhof was in een bloementuin herschapen, terwijl de beide eerebogen, welke 's avonds
101705 feeëriek waren geillumineerd, het geheel een schitterend effect gaven. Een hartelijk woord van dank past dan ook aan de buurt, alsmede aan het inwonend personeel, welke voor dit gebeuren kosten noch moeite gespaard hadden. Des morgens om 9 uur werden de beide oudjes, afgehaald door de fanfare en de Landelijke Rijvereeniging "Zeldenrust" – beiden in groot tenue –, ter kerke geleid,
101710 alwaar de Z. E. heer Pastoor een plechtige H. Mis van dankzegging opdroeg. Na afloop hiervan toog men weder huiswaarts, alwaar bij aankomst de traditioneele kanonschoten bulderden, om den volke kond te doen van deze blijde gebeurtenis. Bij den ingang der woning werd door twee lieve bruidjes onder opzegging van een toepasselijk gedicht, het cadeau der buurtbewoners aangeboden, 't geen op allen een
101715 diepen indruk maakte. Van de receptie maakten velen gebruik om de beminde oudjes hun gelukwensen aan te bieden, o.m. de eerw. geestelijkheid, burgemeester en wethouders en vele anderen. Des avonds om 7 uur werd door de Fanfare een serenade gebracht en werd bij monde van den president den jubilarissen een nog lang leven toegewenscht. De oudste zoon der familie dankte allen voor de groote eer, hun ouders bewezen.

101720 [Zie ook [Mooi Limburg » 16 mei 1936 - Art. 8 | Delpher](#)]

6 juni 1936 **DANKBETUIGING Aan allen, in 't bijzonder de buurtbewoners,**
onzen hartelijken dank, voor het welslagen van onzen gouden huwelijksdag.
Fam. P. AERDTS HANSEN Schandelo-Velden

101725 8 augustus 1936 **Groot concours-hippique te Velden.**
"ZELDENRUST" ALS GASTHEER.

Morgen zal het groote concours-hippique op de bekende renbaan te Schandelo-Velden plaatsvinden. Weken lang zijn reeds de noo dige voorbereidingen getroffen, zoodat,
101730 mits 't zonnetje wenscht mede te werken, een groote strijd te wachten is en talrijke vereenigingen zich in draven, rennen en springen zullen bekampen om den eereprijs. Het programma is als volgt samengesteld 1. Demonstratie viertallen; 2. Openingsrede door den voorzitter dhr. Jos. Leuptrs; 3. Rennen voor beide klassen; 4. Harddraven in twee klassen; 5. Eenspannen B. T.- 6. Eenspannene luxe; 7. Sprinconcours.

101735 Als juryleden fungeeren de heeren E. Kallen, Broekhuizen, H. Deckers, Beesel en G. Nas, Meerlo.

Het feest zal worden opgeluisterd door een prima Waldorpreproductor radio-

luidspreker, welke de bezoekers trouw op de hoogte zal houden van de diverse gebeurtenissen.

Voor al aan 't springconcours is bijzondere aandacht geschonken en bevat dit parcours een achttal deskundig geplaatste hindernissen, zoodat ook hierin een heftige strijd te verwachten is.

Rest nog te vermelden dat het aanvangsuur is gesteld op half drie, terwijl door een spoedige afwerking om zes uur de wedstrijden zullen geëindigd zijn.

26 januari 1937 **GECOMPLICEERD AUTO-ONGEVAL TE VELDEN**

Eén zwaar, en één lichtgewonde

ERNSTIGE MATERIEELE SCHADE

Maandagmorgen omstreeks half zeven heeft op den Rijksweg nabij de tramhalte Hasselt-Velden, een ernstig auto-ongeluk plaats gevonden. Omstreeks dien tijd bevond zich op den weg voor het dagelijksch vervoer naar de stad de melkkar van den heer H., geheel geladen met melkbussen. Uit de richting Arcen kwam in kalme vaart aangereden de zware trailer van de firma Kuipers uit Amsterdam. Deze, waarschijnlijk door de hevige storm en regen, welke op dit moment nedersloeg, alsmede, volgens ds verklaringen van den chauffeur, door de verblindende lichten van een tegenligger, zag de melkkar niet alvorens nog enkele meters hiervan verwijderd te zijn, zoodat hij, ondanks hevig remmen en naar links uitwijkende, de melkkar opzij aanreed, met het gevolg, dat het rad onder den wagen werd uitgereden. Kar en paard kantelde en kwamen in de tramrails terecht, zoodat de geheele kostbare lading melk, bestaande uit vele honderden liters, over den weg stroomde. De tegenligger t.w. een Ford-bestelwagen, die waarschijnlijk noch de melkkar noch de trailer gezien had, doch natuurlijk geen onheil vermoedende, gewoon z'n gang reed en de rechterzijde van den weg hield, was juist de melkkar genaderd, toen de trailer deze aanreed. Op 't oogenblik echter dat hij naar links uitzwenkte, stond ook de bestelwagen voor hem, zoodat deze in volle vaart tegen den trailer opbotste. Op dit donderend gekraak van deze wagens kwam al spoedig hulp opdagen. Het ergste was de zoon van den heer L. er aan toe, welke uit de wagen was geslingerd en buiten bewustzijn was. Na eerst naar de woning van den heer D. te zijn vervoerd, werd hij later naar het ouderlijk huis te Venlo overgebracht. Een spoedig ontboden geneesheer constateerde ernstige hersenschudding, alsmede eenige gebroken ribben en een diepe hoofdwonde. De bestelwagen zelve was geheel in elkaar gedrukt en totaal vernield. De chauffeur van de trailer kwam met den schrik vrij en had geen letsel opgelopen. De tractor echter was ook totaal vernield en geheel onbruikbaar. De voerman van de melkkar kreeg een hevige stoot van een der boomen van de kar en liep ook ernstige kneuzingen op. Ook het paard had eenige diepe schaafwonden. Omtrent de schuldvraag valt nog niets te zeggen daar de heer L. nog niet gehoord kon worden. De melkkar draagt, zooals voorgeschreven, steeds drie lichten, doch deze schijnen door den hevigen storm en regen te zijn uitgewaaid, reden waarom de chauffeur van den trailer deze kar niet heeft gezien. De heer L. draagt aan de aanrijding geen schuld, daar hij steeds de rechter zijde van den weg heeft gehouden. Wel is gebleken, dat L. pas 17 jaar oud is en derhalve nog niet in bezit van een rijbewijs. Veldwachter v. d. Ven was terstond ter plaatse, even later geassisteerd door de motor-brigade der marechaussees uit Venlo, welke proces-verbaal hebben opgemaakt en deze zaak nader zullen onderzoeken.

25 februari 1937 **VELDEN.**

Jaarvergadering Jonge Boeren. — Deze drukbezochte jaarvergadering, Dinsdag j.l. in lokaal Mooren gehouden, werd door den voorzitter met een hartelijk welkomstwoord geopend. De notulen der vorige vergadering werden onveranderd goedgekeurd. Dan volgde het uitgebreid jaarverslag van den secretaris. Het ledental is gestegen tot 63. In 't bijzonder wordt gememoreerd de uitstekend geslaagde landbouwcursus, waarbij alle leden het diploma mochten behalen, de ploegwedstrijd, de diverse excursies, en last not least het schitterend geslaagde vaandelwijdingsfeest, welks blijde dag allen steeds met vreugde zullen herdenken. Het financieel verslag is als volgt: Aan inkomsten f3026,44, aan uitgaven f2773,14. Blijft een batig saldo van f253,30. Nog te vorderen van zaad- en pootgoed de somma van f33,47, zoodat het geheele batig saldo over 't afgelopen jaar bedroeg f286,77. De handel in zaad- en pootgoed stemt ten volle tot tevredenheid en is zeer goed te noemen. Aan 't einde van zijn laatste jaarverslag, wegens zijn benoeming tot secretaris van den R. K. Boerenbond, dankte genoemde functionaris voor de hartelijke en prettige samenwerking met bestuur en leden, verklaarde ook in de toekomst op zijn hulp en medewerking te kunnen rekenen. De voorzitter thans 't woord nemende, dankte den heer Clabbers voor al hetgeen in deze negenjarige periode door hem tot stand is gebracht, wenscht hem namens alle leden ten volle geluk met deze promotie, en meent, dat juist door zijn benoeming tot

secretaris van den R. K. Boerenbond, hij de volle belooning gekregen heeft ten aanzien van de onschatbare diensten, door hem aan de Jonge Boerenvereniging bewezen. Bij monde van den heer J. Flensenbergh werden namens de kascommissie de boeken en bescheiden goedgekeurd. Gezien 't steeds toenemende ledental werd het bestuur uitgebreid met twee nieuwe leden. Gekozen werden de heeren J. Leupers en A. Korsten. Als secretaris werd door het bestuur benoemd de heer J. Bouten, Hasselt, zoodat het bestuur thans als volgt is samengesteld: J. Geurts, voorzitter, J. Bouten, secretaris-penningmeester, J. Clabbers, G. Steegh, A. Korsten en J. Leupers, terwijl als adviseerend bestuurslid van de plaatselijke afdeling van L.L.T.B. is toegevoegd de heer L. Sanders. Dan volgen de mededeelingen. Allereerst werden de prijzen voor de proefvelden van 't afgelopen jaar toegekend aan de Gebr. Geurts, Heidens, Tax en Korsten. Ook voor dit jaar werd wederom aller medewerking verzocht en tot opzichter benoemd de heer J. Bouten. Op veler verzoek zal het volgende jaar het proefveld in Schandelo worden aangelegd. Besloten werd ook dit jaar wederom excursies te organiseeren in overleg met de leden. Eveneens wordt goedgevonden met algemeene stemmen aan de nieuwe kerk alhier een gift van f7.50 te schenken. De kringtentoonstelling zal dit jaar niet doorgaan, omdat de kring Horst in Helden een zelfde organiseert. Als leden der commissie van comptabiliteit werden benoemd de heeren J. Flinsenbergh, P. Vermeulen en H. Lucassen. Degenen, welke van de bibliotheek wenschen gebruik te maken, werd bekend gemaakt, dat deze ten huize van den secretaris zal worden geplaatst. Beleefd werd verzocht de achterstallige boeken terug te brengen. Als vaandrig werd voor den tijd van één jaar benoemd de heer P. Steegh. Tot slot deelde de voorzitter mede, dat op initiatief van 't Groene Kruis een cursus voor Eerste Hulp bij Ongelukken zal worden gehouden. Hiervoor gaven zich terstond 35 deelnemers op. Men melde zich hiervoor ten spoedigste bij den heer H. Geurts.

31 maart 1937 **KIPPENHOK AFGEBRAND**

Dinsdagmorgen om vijf uur werd de melkhandelaar P. S. [=Steegh] aan den Rijksweg te Velden door buurtbewoners gewaarschuwd, dat in zijn kippenhok, staande in zijn tuin, brand was uitgebroken. Aan hulp of redding viel niet meer te denken, daar het vuur reeds een groote omvang had aangenomen. Het geheele hok brandde totaal af, waarbij de geheele inhoud met een 500 éénweeksche kuikens zijn verloren gegaan.

22 september 1937 **Drama te Velden**

Twee lijken gevonden
Gisterenmorgen heeft een landbouwer [doorgestreept] onder Velden de lijken gevonden een naar schatting ongeveer 25-jarigen jongen en meisje.
In hun nabijheid werd eveneens een geladen pistool aangetroffen.
Uit het onderzoek, dat door de marechaussees der brigade Venlo werd ingesteld, is gebleken, dat het hier een liefdesdrama betreft.
Bij onderzoek bleken het te zijn de 25 jarige J. Stein uit Brunssum, zijnde van Duitsche nationaliteit en de 22-jarige H. K. Oscheja uit Geleen-Luterade.
In het taschje van het meisje werden nog een 12 tal scherpe patronen gevonden. De lijken zijn naar het lijkenhuisje te Arcen vervoerd.
Men meldt ons nader uit Velden:
Dinsdagmorgen omstreeks 10 uur deed de landbouwer H. L. alhier een ontzettende ontdekking. Toen hij op genoemd tijdstip even wilde gaan schaften en zich daarvoor 'n rustplaats zocht achter een strooierm, gelegen op circa 200 meter van den Rijksweg, zag hij daar tot zijn grootste ontsteltenis het lichaam van een manspersoon liggen, het gelaat met bloed bevlekt.
L., welke aan misdaad dacht, stelde terstond een buurtbewoner hiervan in kennis, waarop men samen terugging, en behalve het lijk van een man, daarbij nog het ontzielde lichaam van een vrouw vond.
Veldwachter v. d. Ven, en even later de marechaussees uit Venlo, waren zeer spoedig ter plaatse. Eveneens werden terstond de burgemeester en dr. Thielen uit Arcen gewaarschuwd, welke ook beiden weldra aanwezig waren.
Bij fouilleering vond men in een portefeuille een fijn dichtgesloten enveloppe waarin een afscheidsbrief, welke gedateerd was op Maandag 20 September des namiddags klokslag half drie, zooals de brief aangaf en welke door de man was geschreven. Ook vond men een recu van een storting van 20 gld. aan hun beider kind van, zooals een foto aangaf, ongeveer één jaar, hetwelk in Zuid-Limburg in een gesticht vertoeft.
De revolver was een parabellum, van groot kaliber, hetwelk nog met zes patronen was geladen, zoodat twee patronen waren verschoten, hetgeen ook met de feiten klopte. In het handtaschje van de vrouw werd nog een patroontaschje gevonden waarin zich nog 17 patronen bevonden.

De beide lijken zijn naar het lijkenhuisje te Arcen overgebracht in afwachting van de beslissing van den Officier van Justitie inzake een eventueel sectie-onderzoek.

24 september 1937 **Het drama te Velden.**

— Nadat de beide lijken van de slachtoffers van het drama te Velden gisterenmiddag door de familieleden van beide waren herkend en toestemming tot begraven was verkregen, zijn de stoffelijke overblijfselen gisteravond ter aarde besteld op de gemeentelijke algemeene begraafplaats te Arcen.

11 oktober 1937 **Ernstig ongeval met goeden afloop.**

— Zaterdagmorgen omstreeks negen uur had nabij het kruispunt aan den Hakkesberg een ernstig ongeval plaats, hetwelk nog bijzonder goed afgelopen mag genoemd worden. Vanuit de richting Velden naderde de melkboer J. D., uit Velden, met zijn motor-driewieler, beladen met melkwaren, welke op genoemd kruispunt door een handsignaal te kennen gaf, den weg rechts naar Genooi in te slaan. In volle vaart naderde eveneens uit de richting Velden een luxe wagen met een snelheid van ongeveer 90 K.M., die op onbegrijpelijke redenen rechts trachtte te passeeren, maar daardoor den driewieler, welke juist naar rechts zwenkte, recht van voor aanreed, met het gevolg, dat de melkwagen werd opgenomen en over den weg gesmeten. Door de snelle vaart vloog de auto nog een eind door, op gelukkige wijze eenige palen passeerende en bleef dan stilstaan. De melkboer bleef op wonderbare wijze ongedeerd, zij het dan met eenige schrammen, de motor liep eenige averij op, terwijl echter een vijftig liter melk alsmede vele eieren over den weg stroomden. Ook de chauffeur met zijn wagen bekwam geen letsel. Wel meende deze galant te zijn door den melkboer, welke natuurlijk een groot schadepostje had, voor schadeloosstelling één gulden aan te bieden!

21 mei 1938 **Zilveren jubilé van den Maasbuurtspoorweg.**

Oprichting haalde talrijke Maasdorpen uit hun isolement.

Den laatsten Meimaanddag wordt het feit feestelijk herdacht.

OP 31 Mei a.s. zal het vijf en twintig jaar geleden zijn, dat de tramlijn Venlo-Nijmegen, verbindende de dorpen aan de rechterzijde van de Maas, op luisterrijke wijze in gebruik werd genomen. De toenmalige gebeurtenis was van 'n niet te onderschatten belang, omdat daarmede de Oostelijk van de Maas gelegen dorpen eensklaps uit hun isolement werden gerukt.

De oude diligence had nog tot 1880 het verkeer tusschen Venlo en Nijmegen gaande gehouden, maar nadien waren de dorpen Velden, Lomm, Arcen, Wellerlooi, Well,

Afferden, Siebengewald, Bergen en Heyen moeilijk anders te bereiken dan per stoomboot, die er een dienst van tweemaal per week op nahield. De oprichting van een dergelijke tramlijn was toentertijd werkelijk geen sinecure. Een poging in 1907 tot stichting van een Geldersch-Limburgschen spoorweg liep op een mislukking uit. Enkele jaren later werd opnieuw concessie gevraagd en verkregen tot aanleg van een tramlijn Venlo-Nijmegen. Plannen en begrotingen werden opgemaakt en het was voornamelijk de toenmalige burgemeester van Venlo, J. B. H. van Rijn, die niets ongemoeid liet om de plannen ten uitvoer te brengen. Het benodigde kapitaal, ongeveer f750.000, zou gedeeltelijk door het Rijk, gedeeltelijk door provincie en gemeenten en voor een derde deel door de bevolking der streek moeten worden opgebracht. Met heel veel moeite kreeg men echter vanuit de bevolking slechts f100.000 bij elkaar, waardoor de aanleg van de lijn voor jaren werd vertraagd, totdat eensklaps "de N.-Brabant-Duitsche Spoorweg Maatschappij zich voor de zaak begon te interesseeren en eveneens een bedrag van f100.000 in de onderneming investeerde. Hiermede waren weliswaar niet alle moeilijkheden overwonnen, doch men was toen toch zoover, dat met den bouw der lijn kon begonnen worden, nadat de N.V. Maasbuurtspoorweg definitief was gesticht.

Op 31 Mei 1913 werd de tramlijn Venlo-Nijmegen door den toenmaligen minister van Waterstaat officieel geopend en sindsdien heeft de onderneming — ondanks de minder gunstige crisisjaren — kans gezien geheel Noord-Limburg en het Zuidelijk deel van Gelderland voor zich te winnen en een uitgebreid net van tram- en autobuslijnen te exploiteeren.

Begonnen met 46 man personeel is dit in den loop van vijf en twintig jaar uitgebreid tot 160 man. Gedurende de jaren 1932 tot 1936 bleef de opbrengst beneden de kosten en werkte de onderneming met verliezen. Toen besloot de directie het roer om te gooien. Men begon een regelmatig verkeer in het leven te roepen. Ook de aard der tractie werd gewijzigd. Naast de tram kwam de autobusdienst, die spoedig een dusdanigen omvang nam, dat thans slechts 36 pct. van de geheele ontvangst voor rekening van de tram en 64 pct. voor rekening van het autobedrijf komt. De stoomtram werd gelijktijdig door Dieseltractie vervangen.

En thans, na vijf en twintig jaren kan de maatschappij met trots terugzien op de door

- 101935 haar bereikte resultaten. In den loop der jaren werd het net uitgebreid van 63 K.M. tot 180 K.M., waaronder 84 K.M. railvervoer. Het autopark der maatschappij telt momenteel 44 autobussen en 23 vrachtauto's.
- 101940 De directie van den Maasbuurtspoorweg zal 't zilveren jubileum der onderneming niet onopgemerkt laten voorbijgaan. Op 31 Mei a.s. zal er gefeest worden. Alsdan zal directeur Schaffers, tezamen met het college van commissarissen bestaande uit de heeren mr. B. Berger, burgemeester van Venlo, president-commissaris, dr. H. van Manen, directeur der Ned. Spoorwegen, Th. Rutten, Horst lid van Ged. Staten van Limburg, dr. G. van der Meulen, secretaris-generaal van Waterstaat en L. G. Wolff, oud-directeur en gedelegeerd commissaris op het hoofdbureau der maatschappij te
- 101945 Gennep recipieeren. Vele autoriteiten, die bij de opening van de tram voor 25 jaar tegenwoordig waren, zijn ook thans weer als gasten genoodigd.
- 101950 Tot een der voornaamste attracties dezer feestviering behoort de opvoering eener revue, handelende over 't wel en wee van den Maasbuurtspoorweg. Deze revue zal 31 Mei voor genoodigden en personeel der Mij. worden opgevoerd. De directie stelt verder een ieder in de gelegenheid deze revue gratis te komen zien.
- 101955 Zoo is na een kwart eeuw het simpele, zwart-rookende en roet-spuwende stoomtrammetje aanleiding geworden tot het ontstaan van een bloeiende verkeersonderneming met Dieseltractie en luxe-autobus-comfort, en is de smalle strook van Noord-Limburg benoorden Venlo en ten Oosten van de Maas opgewekt uit den slaap der vergetelheid, waarin het stukje land toenmaals dreigde te verzinken.
- 5 augustus 1938 **VELDEN. Burgerwacht schietwedstrijden.**
- Door onze burgerwacht werden schietwedstrijden gehouden, welke over vier Zondagen liepen en waarbij de drie hoogste serie's geteld werden.
- 101960 De uitslagen zijn als volgt:
- klasse A: 1. L. Engels 131 punten, 2. K. Krienen 129 punten, 3. A. de Jong 127 punten, 4. Jac. Geelen 125 punten, 5. J. Clabbers 125 punten, 6. H. In 't Zandt 124 punten, 7. J. Roefs 122 punten, 8. H. Geurts 120 punten, 9. Jean Bouten 120 punten, 10. Jacq. Clabbers 118 punten, 11. Hub. Vosbeek 101 punten, 12. G. Kronenbergh 98
- 101965 punten.
- Klasse B: 1. Herm. Heidens 131 punten, 2. G. Vosbeek 126 punten, 3. H. Martens 125 punten, 4. A. Geelen 114 punten, 5. P. in 't Zandt 113 punten, 6. P. de Jong 112 punten, J. Billekens 109 punten, 8. H. Heidens 104 punten, 9. G. Gerrits 104 punten, 10. G. in 't Zandt 97 punten, 11. H. Holthuijzen 96 punten, 12. J. Heldens 93 punten.
- 101970 Klasse C: 1. H. Clabbers 125 punten, 2. Jac. Theelen 121 punten, 3. J. Crommentuijn J.05 punten, 4. P. Lommen 96 punten, 5. Jan Geurts Hzn. 92 punten, 6. G. Vermeulen 90 punten, 7. J. Holthuijzen 57 punten, 8. H. Heidens 50 punten.
- 101975 Bij de prijsuitreiking, welke geschiedde in het clublokaal, dankte de voorzitter allen voor de prettige samenwerking, feliciteerde met het behaalde succes en reikte onder een toepasselijk woord vervolgens de prijzen uit.
- Ernstige boschbrand.**
- Door onbekende oorzaak ontstond Woensdagmiddag aan de Vosheuvel bij de grens alhier een ernstige heidebrand, welke zich aanvankelijk hevig liet aanzien. Dank zij het krachtige verweer der brandweer uit Schandelo wist men ten slotte na moeizamen arbeid het vuur te stuiten, ofschoon inmiddels toch reeds 5 H.A. bosschen waren afgebrand.
- 101980
- 9 augustus 1938 **HEMELVUUR VERNIELT EEN OOGSTKAR.**
- Voerman bewusteloos geslagen.
- 101985 Zaterdag en Zondag heeft een hevig onweer op verschillende plaatsen in Noord-Limburg ernstige ongelukken veroorzaakt. Zoo werd in Lomm een rund in de weide doodgeslagen. In Arcen ging het onweer vergezeld met een hevige regenval en hagelslag zooals men in jaren niet meer gekend heeft. De bliksem trof hier de elektrische leiding, waardoor een gedeelte van de straatverlichting defect raakte. Ook het Duitsche douanekantoor Lingsfort werd door het hemelvuur getroffen. In Siebengewald vernielde de bliksem
- 101990 verschillende radiotoestellen en enkele telefoonleidingen. In het gehucht de Belt sloeg het hemelvuur in een kar geladen met koren. Het paard was op slag dood, terwijl de kar met lading totaal verbrandde. De voerman werd eveneens getroffen en bleef een tijdlang bewusteloos langs de kar liggen.
- 101995 24 september 1938 **GRUBBENVORST.**
- Landbouwcursus. — Bij voldoende deelname zal wederom in October een landbouwcursus aanvangen. Met het oog op eventueelen dienstplicht worden ouders aangespoord hun jongens reeds van 15 tot 16 jaar te sturen; minimum leeftijd is 15 jaar. Speedige aanmelding is derhalve zeer gewenscht.
- 102000

12 oktober 1938 **Toezicht op vreemdelingen.**

— De bewaking der grenzen, hetgeen voornamelijk geschiedde door marechaussees en hulpkommiezen is thans in verband met de gebeurtenissen in het buitenland nog weer versterkt. Zoo zijn te Arcen thans een 12-tal militairen ondergebracht, en te Velden een 3-tal marechaussees en 3 militairen. De bedoeling hiervan schijnt te zijn het weren van ongewenschte vreemdelingen.

7 juli 1939 **Boerderij en aangrenzend woonhuis afgebrand.**

Totale schade ongeveer zeventuizend gulden.

Een door onbekende oorzaak ontstane brand heeft gistermiddag te Arcen een boerderij en een woonhuis in de asch gelegd. Het vuur brak omstreeks half drie uit in de schuur van den landbouwer M. van Megen. Weldra hadden de vlammen, aangewakkerd door een krachtigen wind, de boerderij bereikt. Naar alle kanten greep het vuur om zich heen, zoodat na eenigen tijd ook het aangrenzende woonhuis van de familie J. Siderius werd aangetast. De inmiddels verschenen plaatselijke brandweer restte nog slechts de taak, zich te belasten met het beschermen van de aan de andere zijde der boerderij gelegen arbeiderswoning van het gezin Reutelingsperger. De inboedel van de boerderij ging grootendeels verloren; die uit de woning van Siderius kon voor een voornaam deel zijn veiligheid worden gebracht. Zoowel de boerderij van den landbouwer van Megen als de woning van de familie Siderius brandden tot den grond toe af. In de woning, welke de brandweer onder haar bescherming had genomen, werd slechts waterschade aangericht. De totale schade zou omstreeks zeventuizend gulden bedragen. Zij wordt door verzekering gedekt.

12 december 1939 **Feest in "Sint Paul" te Arcen**

Zilveren priesterfeest Pater Herman

Op het feest van Onze Lieve Vrouw Onbevleete Ontvangenis vierde het Missiehuis St. Paul te Arcen, het 25-jarig Priesterfeest van zijn magister, den hoogerwaarden pater Herman C.M.M., oud-algemeen Overste van de Congregatie van de Missionarissen van Mariannhill. In het begin van de vorige groote oorlog werd pater Herman op 35-jarigen leeftijd priester gewijd in het moederklooster Mariannhill in Natal (Z.-A.), waar hij zijn geheele studie gemaakt had — als late roeping: hij was in de wereld als meester-timmerman — en tevens Engelsch en meerdere inheemsche talen leerde. Zoo voorbereid, kon hij onmiddellijk een zeer actief en buitengewoon succesvol missionarisleven aanvaarden, op verschillende zware posten, totdat hem, veel te vroeg een blijvende keelaandoening dwong voor de eerste maal naar Europa terug te keeren. Dit zware offer maakte hem rijp voor de verantwoordelijke taak van magister, welk ambt hij vervulde tot in 1926 het generaal kapittel hem koos tot algemeen overste van de Congregatie. Hij keerde naar zijn geliefd missieland terug, maar in 1930 eischte de sterke groei van de Congregatie het verplaatsen van het generaalat naar Europa. Na afloop van zijn ambtstijd werd hem weer de zorg voor de Mariannhiller novicen toevertrouwd in het oudste Europeesche huis St. Paul, te Arcen. Daar oefent hij door zijn voortdurende werkzaamheid, zijn opbeurende jeugdig ideale missieijver, zijn zich overal aanpassende natuurlijke eenvoud, steeds opgeruimd en hulpvaardig, voorbeeldig kloosterling en priester, een betekenissenvolle invloed uit op den geest van de Congregatie. Daarom trachtten geprofesten en novicen door een plechtige viering in kapel en refter de dag onvergetelijk te maken voor den jubilaris. De studenten zetten met hun tooneelavond de dominante in het jubelaccoord van den feestdag. Het voortreffelijk geslaagde stuk van pater Boon "Zwarte Hostieën" riep in den jubilaris weer het heimwee wakker naar zijn onvergetelijk Afrika en deed zijn missievuur vlammen in zijn dankwoorden, zoodat hij ze eindigde met den wensch: het gouden feest te mogen vieren te midden van zijn negers, aan wier zieleredding hij heel zijn leven gewijd heeft.

24 april 1940 **GOUDEN PRIESTERFEEST TE VELDEN**

Door parochie en gemeente gehuldigd.

VELDEN. — Bij stralende voorjaarszon, festijnen van jong groen en bloeiende boomen, vlaggen, slingers met geelwitte kleuren en eerepoorten heeft het Noord-Limburgsche dorpje Velden Dinsdag het gouden priesterfeest van pastoor Joosten gevierd. Heel het dorp had zich opgemaakt om zijn herder te eeren en men moet een feest als dlt meegemaakt hebben om te ervaren wat het voor de bewoners beteekent. Hier weet men nog waardeering, kleur en leven te geven aan gebeurtenissen, die voor het dorp van belang zijn. En bovenal: iedereen stelt zich erop in. Het is niet maar eventjes een gang naar de kerk in den morgen met misschien een handdruk of andere felicitatie, doch men viert hier over de geheele linie heel den dagfeest.

Tegen tien uur stelde zich aan den ingang van de pastorie een kleurige stoet op,

waarin geheel Velden vertegenwoordigd was. Schoolkinderen, bruidjes, jeugdverenigingen, de verschillende standsorganisaties, de fanfare Velden waren hierin sterk vertegenwoordigd of zoo goed als compleet. Temidden van den gouden jubilaris schreden talrijke geestelijken in den imposanten stoet kerkwaarts, o.m. deken Jul. van Oppen te Venlo, prof. Janssen van het Groot Seminarie te Roermond, een Veldenaar, pater Boots te Venlo, pastoor G. Vervoort te Sweijkuizen, verschillende Veldensche geestelijken of zij, die eenigen tijd de zielzorg in het dorp hadden waargenomen, burgemeester Gubbels te Arcen enz. Te voet ging het naar de kerk, aan welke ingang burgemeester Gubbels namens de gemeente hartelijke woorden van gelukwensch sprak. Een verrassing leverde een der schoolkinderen, een zoontje van dhr. Lenssen, die den gouden jubilaris, die zichtbaar onder den indruk was, een geestelijken ruiker namens de parochianen aanbood. Een jongetje uit de familie van pastoor Joosten bood nog een Misboek aan. De gouden jubilaris dankte, getroffen door deze attentie, met eenige hartelijke woorden. De plechtige H. Mis van dankzegging werd opgedragen door pastoor Joosten met assistentie van pater Haenen en kapelaan Rieter te Neer. Tijdens de predicatie sprak pastoor Joosten een dankwoord tot zijn parochianen. Na afloop van den kerkdienst ging de stoet weer in dezelfde volgorde naar het woonhuis van den gouden jubilaris terug. De fanfare speelde een opwekkend nummertje. Vóór het binnentreden van zijn woning ontving pastoor Joosten nog een prachtige bloemenmand uit handen van twee bruidjes. Tegen half zes hadden de schoolkinderen zich weer verzameld voor de woning van pastoor Joosten, waar zij hem een zanghulde brachten. Drie kinderen reciteerden daarna een aardig versje. Bij het plechtig lof, dat daarna in de parochiekerk werd opgedragen, toonde wederom heel het dorp zijn belangstelling. Het slot van de feestelijkheid was een serenade, welke gebracht werd door de fanfare.

27 april 1940 **TE VELDEN vierde de ZeerEerw. Heer Pastoor Joosten**

onder groote belangstelling zijn gouden priesterfeest. Hierboven links: de jubilaris op weg naar de kerk, waar een plechtige Hoogmis van dankzegging werd opgedragen. Links van hem ziet men de Zeer Geleerde Heer Prof. Janssen van het Groot-Seminarie te Roermond; rechts de Hoog Eerw. Heer Deken v. Oppen uit Venlo. Hierboven: Velden's burgemeester spreekt de jubilaris toe. Bij deze plechtige feestviering waren niet minder dan tien Veldensche geestelijken tegenwoordig, die wij vereeuwigen met de jubilaris in hun midden (Foto links) Hierna, volgen de namen dezer Veldensche priesterzonen: de Z. E. Heer pastoor Joosten, Pater Haenen O.F.M., Prof. Janssen, Kap. Rieter, Kap. Peeters, Pater Kronenberg Q.E.S.A., Pater J. Linssen S.S.S., Pater Theelen Q. Carm., Pater L. Linssen S.C.J., Kap. v. d. Haghen en Kap. J. Hofmans.

24 juni 1940 **"HIER ZIJN WE GEBOREN EN GETOGEN"**

Een gouden bruiloft in de bosschen te Arcen. - Herinneringen aan een "gouden tijd". ARCEN. - Het kan misschien alleen maar in Arcen gebeuren, dat een gouden echtpaar, zoowel man als vrouw in hetzelfde dorp, in dezelfde buurt en aan denzelfden weg geboren en getogen zijn en dat ze er na vijftig jaren huwelijk zelfs niet vandaan zijn geweest. - Hier op deze plaats, waar dit huis staat, ben ik geboren, zegt de gouden jubilaresse, mejuffrouw Johanna Clabbers, die op Zaterdag 22 Juni 1890 met Willem Toonen in het huwelijksbootje stapte.

De interviewer zegt voor zichzelf weg, dat dat sterk is: van al de gouden jubilarissen, die hij in zijn leven verslagen heeft, is er niet één, die in dat opzicht aan dit gelijk is.

Het huis, waarin het gouden paar woont, is een ruim woonhuis met café - een gezellig cafétje met een helder buffet en met vele dingen in het rond, die de gezelligheid verhoogen. - Dan moste zeker ok miene man hubbe, zegt ze vervolgens. Ja maar dan komt ge ongelegen, want die is op het veld in de boonen aan het schoefelen. - Daar gaan we dan ook maar even naar toe, zegt de man van de krant, die zich speurder begint te gevoelen. Eerst nog maar even praten... We bevinden ons dan op den Lingsforterweg, een boschweg, die naar de grens loopt. Hooge dennen wuiven hun paraplu-dak in den zomerwind tot over den weg. Er staan hooge beuken, Amerikaansche eiken en er is eikenhakhout langs den kant overal — een weelde van hout en groen, zooals alleen déze gezegende stukjes natuur in Noord-Limburg kunnen bieden. Het woonhuis van de gouden jubilarissen gaat schuil onder het zwaar geboomte. Het is hier als in een sprookje. In het dichte bosch, dat over heuvelen deint, konden de kabouters wonen - en men denkt misschien even gauw aan Roodkapje, aan het legendarische peperkoekenhuisje en aan alle schoone jeugdvertelsels meer, liefst zonder den wolf...

Er is zon, die witte plekken licht tusschen de stammen door op den bemosten grond werpt, er is net zooveel schaduw als men gaarne wenscht. Een koekoek roept dichtbij, een vink zit op een tak te zingen alsof er nu reeds feest gevierd wordt en het zoemt

en het tinkt en pinkt, van welken kant men ook luistert. Zonder einde.
 Als we aan het praten zijn, zegt de vrouw, dat we geen onbekenden zijn. We waren
 102135 immers dezen winter met het worstophalen van de schutterij ook hier... En waar is die
 andere heer, die toen bij u was? vraagt Mia, de schoondochter, die het glas vult.
 – Had hij vergeten te betalen? vragen we lachend.
 Neen, dat niet, maar die had toch dat ander feest ook meegemaakt. Toen schudde het
 huis op z'n grondvesten vanwege de uitgelaten ceremoniën van de jonge gildebroeders.
 102140 Maar koud...
 Het gouden echtpaar Toonen-Clabbers is steeds een gelukkig echtpaar geweest. Ziektes?
 Feitelijk nooit van gehoord, ik niet en mijn man ook niet. We hebben negen kinderen
 gehad, waarvan er één dood is. We zijn nog met vijf meisjes en drie jongens. De
 meisjes zijn allen getrouwd; van de jongens is de oudste het huwelijk ontlopen en de
 102145 jongste is het vorig jaar getrouwd met Mia.
 – Dat schreef d'r maar bie, zegt Mia lachend, terwijl ze een versch glas bier tapt.
 – Kunt ge nogal goed opschieten met uw schoondochter?
 – Ja, héél goed, zegt vrouw Toonen beslist.
 Dan gaan we weer verder. De op een na oudste zoon is getrouwd en die woont in
 102150 Waubach. Ja, die komt...
 De dochters zitten ver uit elkaar. De een woont in Utrecht, de oudste in
 Blitterswijk, een in Arcen (op den dijk), een in Waalwijk en de laatste woont op den
 Lingsforterweg. Allemaal zijn ze getrouwd.
 – Hoeveel kleinkinderen?
 102155 – Laat me 'ns tellen. Acht..., veertien..., twintig... vier- en twintig..., zes en
 twintig..., acht en twintig..., dertig. Ja, samen dertig kleinkinderen en allen goed
 gezond.
 De dokter heeft er slechte klanten aan. "Ikzelf heb ook nooit iets met den dokter te
 doen gehad en miene man is ook zoo hel, nooit krank geweest".
 102160 – Al ge zoo door gaat, kunt ge met gemak de diamanten bruiloft vieren!
 – Dat zei de pastoor ook al.
 Op het veld tusschen de boonen treffen we Willem Toonen den gouden jubilaris aan. Een
 energieke, opgewekte baas, die kwinkslagen opvangt en retourneert. Om ons heen
 ruischt het woud, de dennen, de eiken. Ginder tusschen het hooge hout rijst de slanke
 102165 Arcensche toren op.
 – Ik ben feitelijk begonnen als schoenmaker, zegt Willem Toonen. Dat heb ik vijf en
 twintig jaar na mienen trouw vol gehouden en toen ben ik aan den groentenhandel
 geslagen. Als hij het woord "handel" uitsprekt, lichten zijn schrandere oogen weer
 op. Ja – toen was er geld te verdienen. Er waren toen goede zaken over de grens te
 102170 maken. Er zijn jaren geweest, waarop ik meer dan driehonderd wagons petatten naar
 Duitsland bracht.
 De gouden jubilaris heeft opgehouden met schoffelen en geniet zichtbaar van de
 gedachte aan den "gouden tijd". Maar daarna werd het slechter en zoo begon hij dan
 maar met het tuinieren. Dat doet hij nu nog – een gezond vak, een mooi vak tevens,
 102175 vooral hier tusschen de ruischende bosschen.
 – Ja, ik ben hier gebooren en getrouwd, zegt hij bij wijze van bevestiging". Een
 schoone streek hier...
 We krijgen ook den gouden jubilaris in de lens.
 – Wat gebeurt er Zaterdag?
 102180 – Ja, we doen het z'n bietje onder ós. Om half negen in de Arcensche kerk een Mis van
 dankzegging en hoe het dan zal gaan weten we ook niet precies. We zijn in den tijd
 van de broodkaarten...
 Langs een fraaie laan van fijne dennen, waar arbeiders het pad bewerken, gaan we
 terug. Een vriendelijke hand wijst ons den weg. Daarheen en dan ziet ge weer in het
 102185 dorp...
 De koekoek roept in de verte als we tusschen het groen verdwijnen.

7 september 1940 **Feest in het missiehuis St. Paul te Arcen**

De kippenbroeder in het zilver en een tachtigjarige
 102190 Zondag 8 Sept. a.s. herdenkt de eerw. Br. Fulgentius C.M.M. van het Missiehuis St.
 Paul te Arcen den dag, waarop hij vóór 25 jaar geleden in het klooster trad. Toen Br.
 Fulgentius het kloosterkleed ontving, stond St. Paul nog in de kinderschoenen. Het
 was nog maar 3 jaar geleden, dat de congregatie der Missionarissen van Mariannahill
 een zelfstandige missiecongregatie werd, waarvan St. Paul in Arcen de eerste
 102195 Europeesche stichting was. Langs de toen nog bijna onbegaanbare veldweg, die vanaf de
 Rijksweg naar de Deutsche grens leidt, stond toen een hoeve die zoo goed en zoo kwaad
 als het ging tot klooster was ingericht. In dit primitieve kloostertje nu trad Er.
 Fulgentius in.

102200 Toen men er later in St. Paul over nadacht om op het gebied van het klooster een hoenderpark in te richten, was Br. Fulgentius de aangewezen man om dit werk ten uitvoer te brengen. Bijna dagelijks kan men den "kippenbroeder" in zijn bestelauto door onze stad zien rijden om de eieren bij de diverse adressen af te gaan leveren. Door zijn herhaaldelijk contact dat Br. Fulgentius met de inwoners van Venlo heeft, heeft hij zich vooral door zijn bescheiden en hartelijke manier van optreden, velen tot vriend gemaakt. Daarom meenen wij, dat het Br. Fulgentius bij zijn zilveren kloosterjubileum niet aan belangstelling uit Venlo en omgeving zal ontbreken. Naast dit kloosterjubileum viert St. Paul Zondag a.s. tevens de 80ste verjaardag van den oudsten inwoner van het Missiehuis, Br. Feliciaan. Deze stille en eenvoudige kloosterling kan met vreugde terugzien op een vruchtbaar leven in den dienst van God en het missiewerk. Zijn leven was steeds een zwoegen voor de uitbreiding van het Rijk Gods op aarde. In Nov. '91 scheepste hij zich te Vlissingen in om zich naar Zuid-Afrika te begeven, waar hij in het moederhuis van de Congregatie intrad. Na zijn noviciaat in Mariannhil voltooid te hebben, mocht Br. Feliciaan reeds aanstonds aan het directe missiewerk medewerken door bij den bouw van verschillende grootere missiekerken te helpen. Als bekwaam beeldhouwer droeg Br. Feliciaan niet weinig tot de verfraaiing van de kerken bij. Na gedurende 15 jaar op verschillende missiestaties werkzaam geweest te zijn, werd de broeder tot boekhouder van een Europeesche missieprocurer benoemd. Tot voor twee jaar heeft Br. Feliciaan dit verantwoordelijke ambt uitgeoefend. Thans leidt deze veteraan een teruggetrokken leven van innig verkeer met God en is door zijn stipte plichtsbetrachting een voorbeeld voor zijn jongere medebroeders, die eveneens in de voetsporen van dezen pionier willen treden. Br. Fulgentius zoowel als Br. Feliciaan wenschen wij beiden een hartelijk "Ad multos annos" toe.

102225 7 september 1940 **Duitsche tuinbouw nabij de Nederlandsche grens**

Naar het voorbeeld van Straelen

Uit Keulen wordt aan het Nederlandsche Perskantoor gemeld:

In het gebied van den Beneden-Rijn breidt zich de tuinbouw, met name die onder glas, voortdurend uit. In een aantal dorpen, onmiddellijk nabij de Nederlandsche grens gelegen, waant men zich in een tweede Westland. Een middelpunt van den glastuinbouw te Straelen.

— Straelen was het eerste Duitsche plaatsje, waar men met de kasteelt begon. Het plan hiertoe is uitgegaan van den eigenaar van een houtzaagmolen. De molenaar ergerde zich aan den steeds omvangrijker wordenden invoer van groenten uit Nederland. Hij spoorde eenige Nederlandsche tuinders aan, naar Straelen te komen om den boeren de groententeelt, met name den glastuinbouw, te leeren. Te Straelen werd toen de groenteteelt en de verkoop geheel naar Nederlandsch voorbeeld ingericht. Zelfs het Nederlandsche veilingstelsel met de bekende veilingklok werd overgenomen. Andere plaatsen in het gebied van den Beneden-Rijn volgden spoedig het voorbeeld van Straelen en de groenteteelt in deze gebieden is thans inderdaad aanzienlijk, ook al heeft men nog niet het bedrijf tot het peil van het Westland opgevoerd.

Men moet niet meenen, dat deze wedijver in het nadeel van Nederland is geweest. Tengevolge van den toenemende tuinbouw in het gebied van den Neder-Rijn leerde de bevolking der Duitsche steden nog meer de groenten waardeeren. Dit heeft ertoe geleid, dat de hoeveelheid groenten, die West-Duitschland thans afneemt, een veelvoud is van die van 30 jaar geleden en Nederland, ondanks de toenemende Duitsche voortbrenging, nog veel meer kan leveren dan vroeger.

102250 23 oktober 1940 **Nederlandsche Unie.**

— De propaganda en aanwervingsactie voor de Nederlandsche Unie wordt hier met kracht voortgezet. In de eerste actieweken konden reeds ruim 300 leden worden ingeschreven, waarvan alleen in Schandelo 120. Zelfs waren hier gezinnen met 8 en 9 leden, wat voor zich zelf spreekt. Dezer dagen komen ook de andere buurtschappen aan de beurt. Gezien de reeds behaalde resultaten, mag ook hier eenzelfde succes verwacht worden.

102255 6 mei 2021 De Nederlandsche Unie was een Nederlandse politieke beweging tijdens de Duitse bezetting van Nederland in de Tweede Wereldoorlog, opgericht door een driemanschap bestaande uit Louis Einthoven (hoofdcommissaris van politie in Rotterdam), Johannes Linthorst Homan (commissaris der provincie van Groningen) en Jan de Quay (regeringscommissaris van de arbeid). De Nederlandsche Unie werd in juli 1940 opgericht, en in december 1941 door de Duitse bezetter ontbonden. [...]

102260 Op haar hoogtepunt had de Nederlandsche Unie ongeveer 1 miljoen sympathisanten. Hiervan waren ongeveer 600.000 personen lid. De Nederlandsche Unie gaf het weekblad De Unie uit met een oplage van 314.000 exemplaren.

- 102265 25 oktober 1940 **Geen processie.**
— Naar werd medegedeeld zal Zondag a.s. de jaarlijksche processie naar O. L. Vrouw van Altijddurende Bijstand te Schandelo niet plaats kunnen hebben. Hiervoor zal Zaterdag om half acht ter eere van O. L. Vrouw een plechtige Hoogmis worden opgedragen.
- 102270 16 november 1940 **Hoe de storm huishield**
Nog voortdurend kwamen berichten binnen van de ernstige schade, die de storm van j.1. Donderdag in Noord-Limburg en Oost-Brabant heeft aangericht. De meeste van deze berichten maken melding van zware verliezen aan oogstmijten, van verwoestingen aan schuren en daken. Op tal van plaatsen zijn de bosschen zwaar gehavend en werden de boomgaarden geteisterd.
- PATER ONDER INSTORTENDE SACRISTIE BEDOLVEN.**
De storm heeft ook te Sambeek een slachtoffer geëischt. Toen de zeereerw. p. Redemptus zich gereed maakte om in de kapel van de zusters Redemptoristinnen het H. Misoffer op te dragen, rukte de storm een stuk van den gevel van de kapel af, viel door het dak van de sacristie, waaronder de pater als 't ware bedolven werd. Ijlings toegeschoten kerkbezoekers vonden pater Redemptus, hevig bloedend, onder het puin. Dr. Anderegg die spoedig ter plaatse was verleende geneeskundige hulp. De zeereerw. heer pastoor diende de pater de laatste H. Sacramenten toe. In zorgwekkende toestand werd de ongelukkige naar het ziekenhuis in Boxmeer overgebracht. We vernemen, dat de toestand van pater Redemptus nog zeer ernstig is. Verder heeft de storm te Sambeek vrij aanzienlijke materiele schade veroorzaakt. Een gedeelte van de woning van Th. H. stortte in. Van bijna alle huizen werden pannen afgerukt, verschillende huizen vertoonen groote gaten. Vele boomen werden ontworteld, terwijl ook de leiding van de radiocentrale het danig heeft moeten ontgelden.
- ZWARE SCHADE AAN BOSSCHEN**
In Arcen hadden wel het meeste de huizen langs den Rijksweg ten Noorden van het dorp te lijden, waar dezen zomer de 400 zware canadaboomen werden gerooid, waardoor de huizen aan dien weg zonder verdere beschutting aan den Westenwind kwamen bloot te liggen. Van velen huizen waren dan ook honderden pannen verdwenen. In het veld grenzende aan de Maas hield de storm ook groote opruiming. Alle stroo en korenrijten werden ofwel omvergeworpen of de schoven vlogen her en derwaarts over het veld en zelfs over den Rijksweg heen. Ook in de kom van het dorp moesten vele daken het geducht ontgelden, al was de schade hier betrekkelijk gering. De meeste schade leed hier echter het Jongenspatronaat. Omstreeks half acht werd hier het dak van de aangrenzende beugelbaan door een windhoos gegrepen. Het geheele dak werd van de pijlers gelicht de gevel werd omver geworpen en daarna kwam deze gevolgd door het dak op den wal terecht. Een geluk mag het wel heeten dat hier geen persoonlijke ongelukken hebben plaats gevonden, daar juist een groot aantal kinderen op weg naar de kerk even tevoren alhier een schuilplaats tegen den feilen wind hadden gezocht. Dit beteekent echter een flinke schadepost voor den eerw. heer kapelaan daar het gebouw niet tegen stormschade verzekerd was. Bij de boerderij van dhr. G. Nijskens werd een zeer hooge peereboom door den storm neer gesmaakt op de wagenbergplaats achter het huis. Deze werd geheel vernield, terwijl ook het dak van de schuur nogal schade bekam.
- Het ergst was wel de verwoesting in de verschillende bosschen rondom Arcen. Vooral het gemeentebosch aan den Rooden weg kreeg ernstige schade. Hierin zijn naar schatting meer dan 500 boomen ontworteld. Sommigen zijn op een meter boven den grond gewoon afgedraaid door wervelwinden.
- Ook de zware bosschen rondom het kasteel werden door den storm niet gespaard en menige tientallen jaren oude eik of den werd neergesmaakt, in zijn val andere boomen meesleurende. Het bosch biedt op sommige plaatsen een troostelooze aanblik. Vooral het bosch nabij het voetbalterrein aan den Lingsforterweg kreeg zware schade. Ongeveer een-derde der boomen ligt voor den grond. Arcen werd zwaar gehavend. De zware kastanjeboomen op den driesprong bij de brug over de Lingsforterbeek werden wel zwaar getroffen. Een tweetal eeuwenoude reuzen werden tegen de aarde neergeworpen daarbij de rustbank, welke alhier door de zorg van de V.V.V. Arcen werd geplaatst, meesleurende.
- Van een dezer boomen werd voorts een zware tak afgescheurd. Dit mooie plekje nabij het Kasteel, bij vele toeristen welbekend, zal er dan ook na de opruiming wel jammerlijk gehavend komen uit te zien. Met dat al bracht de storm aan heel wat handen werk en reeds in den vroegen morgen kon men verschillende aannemers bestormd zien met allerlei wagens om pannen in diverse soorten, terwijl gisteravond de dakdekkers nog

in het maanlicht bezig waren om vóór den dreigenden regen tenminste de grootste gaten in het dak te dichten.

HONDERDEN BOOMEN ONTWORTELD

De hevige storm heeft ook te Beesel heel wat schade aangericht. Verschillende wegen waren versperd van de omgevallen boomen. Op het Marktpllein viel een der statige kastanjes ten offer van den windreus. In parken, lanen en bosschen werden honderden boomen ontworteld. Bij een huis langs den Bussereindschen weg vielen vier reuze populieren waarvan twee op het dak, zoodat de takken door de slaapkamermuur drongen. Van meer dan honderd huizen werden de daken vernield. [...]

11 december 1940 **E.H.B.O.-dienst.**

— Maandagavond werd alhier voor de leden van den E.H.B.O.-dienst de laatste les gegeven door dr. Thielen van den verkorten E.H.B.O.-cursus. Een der cursisten dankte dr. Thielen voor zijn bereidwilligheid dezen cursus te hebben willen geven, waarvoor steeds een groot animo bestond. Door de luchtbeschermingsdienst te Velden zijn thans vier E.H.B.O.-posten gevestigd en wel voor Hasselt en de Voort ten huize van dhr. J. Bouten Hasselt, voor Schandelo, ten huize van dhr. J. Boonen, voor Krosselt-Genooi, ten huize van dhr. G. Holthuizen, voor het dorp bij dhr. Schlooz, Markt.

Op iedere plaats bevindt zich een complete verbandtrommel met brancard en verder toebehooren, waarin men voor aanschaffing in de gelegenheid werd gesteld, dank zij de loyale medewerking van diverse vereenigingen en de gemeente. In 't bijzonder moge hier echter dank worden gebracht aan 't plaatselijke Groene Kruis, dat zeer veel heeft bijgedragen tot het instandkomen van deze E.H.B O.-posten, waardoor eindelijk in een groote behoefte is voorzien.

13 januari 1941 **ARCEN. Loop der bevolking.**

-- Naar wij vernemen bedroeg het aantal inwoners dezer gemeente op 1 Januari dezes jaars 3822 zielen.

Hiervan woonden te Arcen: 899 mannen, 717 vrouwen, totaal 1616;
te Lomm 218 mannen, 193 vrouwen, totaal 411;
te Velden 954 mannen, 841 vrouwen, totaal 1795.
In de gemeente woonden 2071 mannen, 1751 vrouwen, totaal 3822.

Advertenties m.b.t. Vilgert, Schandelo, etc. 1940-1949

Te koop een best roodbont RUND, oud 18 mnd. en een best zwaar werkpaard B. T., mak in en bij alles. Adres Joh. Geurts, Velden, Schandelo C 221. 4128
Te koop 20 stuks W L. PULLEN, bijna aan den leg; tevens een middelzware wendelploeg. H. Geelen, Schandelo 212, 289 Velden.

Te koop een best roodbont MAALKALF Gebrs. Leupers, Schandelo, Velden. 324
Te koop ROGGE- en TARWESTROO. Adres: In 't Zandt, Velden, Schandelo. 4520
Te koop HAVER- en TARWESTROO Frans Steegh, Schandelo, 720 Velden.
Te koop circa 20 á 25000 kg. prima jonge consumptie KNOLRAAP. Jac. Boonen, Schandelo Velden. 834

Gevraagd een boerenknecht kunnende melken en een jongen om melk te venten. H. Geurts-Coppes, Schandelo 235, Velden. 1303

Gevraagd voor 1 Mei een flinke BOERENKNECHT m. alle werkz.hed. op de hoogte; liefst kunn. melken. Wed. P. Theelen, Schandelo C 208, 1962 Velden. [P. Theelen-Vosbeek]
Te koop een gladstroo DORSCHMACHINE. H. v. Wylick-Theelen, Velden Schandelo.

Te koop circa 10.000 kg. KOOLRAAP. Adres F. Thiesen, Schandelo, Velden.

- 8 januari 1942 **RUILVERKAVELING WINT VELD**
- 102555 Ook Limburg heeft een groot aantal objecten.
(Van onzen redacteur.)
Met betrekking tot de ruilverkaveling is wel eens het beeld gebruik van de olievlek, die zich over het water-oppervlak verspreidt. Als we op het oogenblik eens nagaan hoeveel de ruilverkaveling in de laatste jaren aan populariteit heeft gewonnen, dan gelooven we te kunnen zeggen, dat de beeldspraak niet misplaatst was. Het is met enkele in de provincie verspreide complexen begonnen meestal niet dan nadat bergen van conservatieve tegenmotieven waren overwonnen. Maar waar men begon, daar zagen de boeren zoo spoedig de groote voordeelen, die aan een meer economische indeeling van 't grondbezit zijn verbonden, dat de voorbeelden aanstekelijk gingen werken. En mede dank zij de voortdurende activiteit van den Cultuurtechnischen Dienst, die een reeks van jaren in de weer is om de ruilverkaveling te populariseeren, is het gaandeweg aanvragen om plannen gaan regenen. Veelal gingen die aanvragen uit van den voormaigen N.C.B., in andere gevallen van de ingelanden der betrokken gebieden zelf, van particuliere eigenaren of van gemeentebesturen.
- 102560 In ons land zijn thans 137 blokken met 156.000 HA. voor ruilverkaveling in behandeling, waarvan 36.000 H.A. in directe uitvoering. Daarvan levert Limburg 14 objecten met in totaal ongeveer 10.000 H.A., die voor het meerendeel reeds in uitvoering zijn. Noord-brabant slaat met 25 plannen voor 25.000 H.A. een bijzonder goed figuur.
- 102575 Het grootste object in Limburg is de Ospelsche Peel, waar een oppervlakte van 4500 H.A. in de verkaveling betrokken is. Voorts zijn in uitvoering de ruilverkavelingen te NUTH, POSTERHOLT. VLODROP (Aan het Broek), WEERTERBOSCH, Baxhoeve-SWALMEN. MEERLO, Heesbeemden SEVENUM, Egheler en Geuper veld, Bezels Broek en de Elsbemden. Daarenboven loopen nog aanvragen uit Waubach, Roggel-Neer en Susteren-Nieuwstadt.
- 102580 Over het geheel echter is de belangstelling voor de ruilverkaveling zoo groot, dat men van hoogerhand moet gaan overwegen het aantal aanvragen te remmen.

DE NIEUWE RUILVERKAVELINGSWET

- 102585 Het besluit van 19 Juli van het vorig jaar tot wijziging van de wet op de ruilverkaveling heeft de uitvoering van vele plannen zeer veel eenvoudiger gemaakt. Voor wie wel eens kennis heeft genomen van d3 zeer ingewikkelde procedure, die gevolgd moet worden vooraleer een verkavelingsplan op de helling staat, zal dat geen verrassing zijn. In zoo'n plan moet nu eenmaal met honderd-en-een belangen en belangetjes worden rekening gehouden. Op de speciale "wensch-zittingen", die hiervoor ten behoeve van de belanghebbenden worden gehouden, pleegt men de meest veelsoortige verlangens op te vangen. De wijziging heeft o.m. het bezwaar ondervangen dat een plan kan worden in de war gestuurd door verschillende volmaakt onbeteekenende eigendommen, meestal verkregen door erfrecht en niet door den eigenaar in gebruik genomen. In zulke gevallen kan voortaan de eigendom in contanten uit de
- 102590

102595 ruilverkavelingskas worden teruggegeven. Ook de techniek van de schatting der perceelen is gewijzigd. Was het vroeger verboden in een plan gronden op te nemen die binnen een uitbreidingsplan of binnen een bebouwde kom vallen, thans mogen ook deze gronden worden opgenomen. De vroegere toestand bracht veel bezwaren met zich, vooral daar, waar een belangrijke waterloop buiten de plannen zou vallen. De mogelijkheid tot automatische royeering van vervallen hypotheeken en tot verstrekking van voorschotten voor ontginningen, geeft nieuwe voordeelen voor de grondeigenaren. Van belang voor de spoedige uitvoering der met een ruilverkaveling gepaard gaande kunstwerken is de thans geschapen mogelijkheid om hangende diverse detailkwesties reeds bij voorbaat met de werken te beginnen. Vooral waar het complexen woesten grond

102600 betreft kan van deze mogelijkheid ten volle worden geprofiteerd. Van het grootste belang is intusschen echter de mogelijkheid om de werken in vrüij bedrijf uit te voeren. Hierdoor wordt de mogelijkheid geschapen om bij bijvoorbeeld kleine boeren in den tijd, dien zij beschikbaar hebben, werk te geven, altijd natuurlijk op zoodanige wijze, dat hun eigen bedrijfje er geen schade van ondervindt.

102610 De ervaring in deze is nog niet groot, maar men heeft de goede verwachting, dat hierdoor het gebrek aan werkkrachten, dat soms een vlotte uitvoering der werken in den weg stond, zal worden ondervangen. Aan den Cultuurtechnischen Dienst is voor dit doel een crediet toegestaan van 10 millioen.

102615 **GEEN SCHADE AAN LANDSCHAPSSCHOON**

Tenslotte nog een bijzonder aspect, dat in den laatsten tyd weer eens naar voren is gebracht. Er is betoogd, dat de mannen van den Cultuurtechnischen Dienst in hun plannen te weinig rekening houden met de eischen van het landschapsuiterlijk. Zij zijn voorgesteld als gevoellooze lieden, die het landschap als een koek in stukken verdeelen en er de lineaal hoogtij laten vieren. Voor wie eenigszins ingewijd is in de procedure der ruilverkaveling klinkt dit nog al onwaarschijnlijk. Een ruilverkaveling komt niet in uitvoering vooraleer overleg is gepleegd met of goedkeuring is verkregen van ettelijke instanties. Daarbij zijn niet alleen gemeentebesturen, waterschappen, streekplandiensten. provinciale en rijkswaterstaat, inspectie der volksgezondheid, maar ook het Staatsboschbeheer. Dit laatste heeft de bijzondere opdracht een oogje te houden op de landschapsaankleeding, als we het zoo eens noemen mogen. Zelfs al zou de Cultuurtechnische Dienst er op uit zijn om het landschap te vervlakken, dan nog zou hij daartoe dus niet gemakkelijk de gelegenheid hebben. Maar dat zulk een opzet in het geheel niet voorzit, moge o.m. blijken uit het

102620 plan voor Molenbroek (Wessem en Middelbeers), waar een breede strook langs de beek is uitgespaard, waar de beplanting ongerept blijft en waar wandelpaden zuilen worden aangelegd. Deze strook wordt dan aan de gemeente overgedragen. Veelal spaart men ook bij wegkruisingen hoekjes uit, waarop beplantingen kunnen worden aangebracht, die het landschap breken. De zorg voor het behoud van natuurschoon gaat zelfs nog verder. In

102635 de centrale ruilverkavelingscommissie zit ook een vertegenwoordiger van de commissie-Weevers, die naarstig toeziet, dat geen dingen van natuur-wetenschappelijke waarde verloren gaan. Zoo ligt in het nieuwe plan Spoordonk de fraaie "Campina" met vele in particulier bezit zijnde enclaves. Er komen boschanemonen, oeverzwaluwen en roerdompen voor en dit heele gebied wordt gaspaard en straks in handen gegeven van de

102640 Ver. tot Behoud van Natuurmonumenten. Dit alles brengt vele zorgen voor de ontwerpers mede, want zulk een flora en fauna is afhankelijk van den waterstand en daaraan mag dus niet getornd worden. Niettemin, de waarborgen zijn er dat dit inderdaad niet gebeuren zal. Dat er met dat al steeds tegenstellingen kunnen blijven tusschen wat mooi en wat doelmatig is, valt niet te bestrijden. In zulke gevallen zal de harde wet der noodzaak wel eens naar den economischen kant doorslaan. Zoo werd nog pas van

102645 hoogerhand een ruilverkaveling opgelegd voor het Scheeke onder Best, in dit geval om een soort kolonisatie van dit gebied te bevorderen. Hier waren het de wenschen der grondeigenaren, die moesten wijken voor het zwaarder wegende algemeen belang.

102650 5 mei 1942 **Biljartclub "De Poedelhaters"**.

— De einduitslag van de gehouden wedstrijden in het af geloopte seizoen om het kampioenschap der vereeniging is als volgt:

Klasse A I: G. v. d. Hombergh kampioen, gem. 4,640; 2. J. Dirkx 4,325; 3. Frans v. d. Hombergh 3,545; 4. Leo v. d. Homberg 3.520; 5. H. Kessels 3,385; 6. G Hegger 2,930;

102655 7. M. Brueren 2,655; 8 G. Zeelen 2,495; 9. Ger. Geurts 2.205.

Klasse B I: J. Hegger 2,385; 2. G. Duijf 2,105; 3. P. Theelen 2,050; 4. J. Clabbers 1,955; 5. P. Brueren 1,890; 6. H. Geurts 1,805; 7. P. Beeker 1,730; 8. J. Geurts 1,295; 9. P. in 't Zandt 1,285.

102660 **Poststation. — Vanaf 6 Mei is het hulppostkantoor alhier gewijzigd**

in een poststation. De openstellirg is vanaf dien datum van 9-11, en van 2-3 uur.

Rijwielfiefstallen. — Zondagmorgen onder de eerste H. Mis, werden alhier
een 2 tal damesrijwielen gestolen. Tot op heden van de daders geen spoor.

17 augustus 1942 **GROOT ZOMERFEEST TE ARCEN**

De Nederl. Arbeidsdienst en de jeugd
Sedert eenigen tijd is Arcen een kamp rijk van den Nederlandschen Arbeidsdienst. De groene arbeidsmannen vormen in dit Maasdorp reeds een veel en ook graag geziene verschijning. Er begint al zooiets van een bond te ontstaan tusschen de nieuwe en de oude bewoners, een band, die dezer dagen bijzonder werd versterkt, doordat de arbeidsmannen de beteekenis blijken te begrijpen van het spreekwoord "Wie snel helpt, helpt dubbel". Bij een ramp, die enkele bewoners van het dorp had getroffen, hebben de mannen zich van hun besten kant laten kennen en zooiets laat nu eenmaal niet na de verhouding hartelijker te maken. Thans staat er iets anders te gebeuren, waardoor de bevolking van Arcen en Velden en vooral de jeugd in de gelegenheid zal zijn de arbeidsmannen nog beter te leeren kennen. Op 21, 22 en 23 Augustus a.s. organiseeren de arbeidsmannen tezamen met de burgerij een zomerfeest.

HET RIJKE PROGRAM

Vrijdagavond, 21 Augustus 1942 te 19.30 wordt het feest geopend met den voetbalwedstrijd D.E.V.—N.A.D. In de rust een grootsche sportdemonstratie. Na afloop diverse wedstrijden in het hardloopen, verspringen, hoogspringen, enz., enz. De groote dag wordt echter Zaterdag, den 22sten Augustus. Na de feestelijke vlaggenparade om 8 uur in het kamp, waarbij de officieele personen van de gemeente Arcen-Velden zijn uitgenoodigd, zal om 10 uur de intocht van den Zomerkoning te Arcen plaats vinden. Om 14 uur parademarsch door het dorp. Na het inrukken op het dorpsplein, gezamenlijk optrekken naar het voetbalveld aan de Lingsforterweg alwaar omstreeks 15 uur de kinderspelen aanvangen. Dat wordt wat voor de kleintjes. Ze gaan zingen, touwtrekken, paalklimmen lierloopen, hardloopen en nog veel meer. Er zijn leuke prijsjes voor de winnaars. De dag zal besloten worden met een kampvuur op het dorpsplein. De muziek en de zanglustigen zullen hier kunnen toonen wat zij waard zijn, terwijl het programma wordt afgewisseld met declamatie, zwaarddans en samenspraken. Zondagmiddag wordt in de cantine van het Arbeidskamp te 15.00 de film "Doornroosje" gedraaid, waarbij iedereen vrij toegang heeft. Hieraan kan tevens een bezichtiging van het kamp worden vastgeknoopt, hetgeen trouwens gedurende den geheelen loop der feestelijkheden mogelijk is. Het behoeft geen betoog dat tijdens deze dagen voor de burgerij op het kamp geen grenzen bestaan. Zoowel de burgemeester als de burgerlijke vereenigingen hebben hun volledige medewerking toegezegd en samen met het initiatief van de arbeidsmannen moet dit een waarborg zijn voor het slagen van het Zomerfeest.

11 september 1942 **Veulenkeuring te Velden**

Onder zeer groote belangstelling had op "Wilshof" de 2e Veldensche veulenkeuring plaats. Er was een groote collectie veulens van goede kwaliteit aanwezig. De jury, bestaande uit de heeren Urding en Hub. Kallen, alsmede de arbiters Chr. Bertjens en E. Kallen, vervulden hun taak met kennis van zaken en kenden de prijzen als volgt toe:

- 16 januari 1945 **Schandelijke evacuatie.**
- 102780 De bevolking van Venlo, Roermond en het overige deel van bezet Limburg is op schandelijke wijze door de D. weggesleept. De "Evacuatie", die werd uitgevoerd door de Grüne Polizei, begon te Venlo op 17 Januari en te Roermond op 21 Januari. In Roermond meldden zich 2.800 mannen, bedreigd met doodstraf en gelokt met Ausweisen; ze werden allen weggevoerd. De evacuatie der overige inwoners volgde daarna. De bevolking van Schandelo kreeg midden in den nacht van 20 op 21 Jan. plotseling bevel
- 102785 naar Duitschland te vertrekken. Dit bevel kwam op 2 uur 's nachts en het dorp diende om 4 uur ontruimd te zijn. Een stoet van mannen, vrouwen, kinderen en zuigelingen trok in het holst van den ijzigen sneeuwnacht oostwaarts met achterlating van alles. De bevolking van Venlo kreeg, nadat verschillende wijken waren afgezet, een half uur om wat bezittingen bijeen te pakken. De Grüne zocht de huizen na! Nog dagelijks
- 102790 trekken uit deze streek droeve colonnes naar het Oosten. Ieder krijgt één brood voor de heele marsch mee en achter de colonne rijdt een Roode-Kruiswagentje met waterpap voor de kinderen. Niemand weet het ware over de plaats van hun bestemming.

17 maart 1945 **DE EVACUATIE VAN VENLO**

Pater Herraets sprak voor de radio-omroep Herrijzend Nederland over de evacuatie van Venlo

Venlo bevrijd! Donderdag in de late middag rolden tien Amerikaanse tanks de Kalderkerkerweg af. Vrijwel zonder schot werd de vesting Venlo overgegeven. Enkele Duitsers ontkwamen achter het stuur van kinderwagentjes waarin ze nog wat gestolen goed en hun ransels meevoerden. Het merendeel gaf zich over. Vrijdagmorgen waren de straten vol tanks, bemand met negersoldaten. Een blijde rij mensen stond langs de wegen. Geen geweldig enthousiasme; de bevolking had te veel meegemaakt. Alleen de kinderen waren enthousiast. Ze snapten niet waar Sinter-Klaas bleef. Er bleven al maar zwarte Pieten komen met lekkernij: koekjes en chocolade. Een gehavende stad en een gedecimeerde bevolking vierde toen het feest van de bevrijding. Na 13 bombardementen, waarbij de hele binnenstad verwoest was en 450 burgers gedood – na 3 maanden granaatvuur, dag in dag uit – na een maandenlange zorg: waarmee zullen we ons kleden, wat zullen we eten, hoe zullen we de kou verdrijven – na maandenlange onrust over evacuatiedreiging een werkelijke evacuatie, nadat 1200 Venlonaars gedood waren door oorlogsgeweld.

Uit Venlo werden ongeveer tienduizend personen door de Duitsers geëvacueerd. Een transport te voet van 172 personen en 6 treinen werden weggevoerd. Op last van de kerkelijke overheid moest met ieder transport een geestelijke mee gaan. Het voettransport op 14 Januari heb ik zelf als geestelijke meegemaakt. Het was bitter koud, er lag sneeuw en de wegen waren onbegaanbaar omdat het gedood had en weer was gaan vriezen. Om 8 u. moesten we aan de Pope-fabriek zijn. Men vertelde dat er zich voor het transport enkele honderden vrijwilligers hadden opgegeven; om 10 u. waren er 11 mensen die meewilden.

Maar de "Grüne Polizei" zou wel zorgen dat er vrijwilligers kwamen. Er werden bij de Maas enkele straten afgezet en een schuilkelder in de buurt, waar gedurende de winter een 5 à 600-tal mensen in gruwelijke ellende geleefd hadden, werd leeggehaald en met geweld mannen, vrouwen en kinderen op straat gedreven. Ze konden op 'n sleetje of karretje wat lijfgoed meenemen. Maar het merendeel kon dat niet, want ze hadden het niet. Het was de armste wijk van Venlo: de Rummerstraat, Schatwederstraat en Postelstraat. Tegen 11 u. stonden een troep huilende vrouwen en kinderen voor de fabriek. Onder geleide van de Grüne, met geweren gewapend, gingen we naar Straelen. Er liepen kinderen zonder kousen, zonder ondergoed, met kapotte klompen en lorren van schoenen. We kwamen maar moeilijk vooruit over de weg. Er waren vrouwen bij van over de 70 jaar, moeders met borst-kinderen van vier en zes maanden. De ober-luitenant bekende dat dit geen mannen-werk was en dat hij liever aan het front vocht dan dit beulenwerk te doen.

In Straelen pauzeerde de evacuatie van Velden, die van Noord naar Zuid gedreven werden. In Pont kwam 'n wagen van Venlo ons achterop en kregen we warme soep. Aan de baby was niet gedacht. Tegen de avond bereikten we Geldern, een dode stad onder sneeuw met verse wonden van bombardementen; huilende kinderen, moeizaam voortsjokkende mensen intens triest en droevig.

We werden in een kazerne gestopt en kregen soep en brood. Mijn vriend Hein Veger, medisch student, die in Venlo op het ziekenhuis als assistent werkte, had zich vrijwillig aangemeld als dokter de mensen bij te staan en maakte de ronde: een bloedvergiftiging, een zware breuk, 'n klein kind met zware bronchitis en natuurlijk overal stukgelopen voeten. Veel totaal uitgeputte kinderen. We moesten een wagen zien te vinden. De nacht bracht raad. Tegen 4 u. werden we wakker; op de gangen drukte, heen en weer geloop en de volgende morgen bleek al gauw waar die nachtelijke drukte voor nodig was geweest: in 't geëvacueerde Geldern was door onze mensen "georganiseerd". Ze hadden wagentjes en sleeën geleend.

Om 9 u. trokken we verder zonder dat er enig eten of drinken was verstrekt. Een van de vrouwen zei in haar sappig Venlo's: "dat ze ons er uit gesmeten hebben, allah; dat we de kou in gestuurd worden, allah; maar dat we vanmorgen geen kopje koffie hebben gekregen, dat is onmenselijk. Het is me nog nooit in mijn leven overkomen." Echt Venlose humor!

In Sonsbeek wist ik het klaar te spelen dat een katholieke instelling voor warm eten zorgde. Maar voor de "Grüne" deden ze het niet en die gaven ze niets, zeiden ze. Ik kreeg er ondergoed, schoeisel, kousen en kleren. De bevolking van het Rijnland was erg behulpzaam en goed. Morgen zijn wij aan de beurt, meenden ze.

Na een tocht van 10 à 11 uur bereikten we in 't duister Xanten. De mensen kwamen in verschillende kwartieren en werden overal uitstekend geholpen. Onze medicus-Veger speelde tegen de Nazi-instanties stevig op zijn poot en wist te bereiken dat we voor de volgende dag een boerenkar kregen voor de zieken en ouden van dagen. Een kind met

longontsteking en een met zware bronchitis bleef met de moeder in het ziekenhuis te Xanten achter.

De mensen waren doodop. Volgende morgen om 9 u. weer verder. Enkele der „Grüne Polizei“ waren uitgevallen omdat ze niet in staat waren verder te lopen, maar onze vrouwen en kinderen moesten. Onderweg liepen ze telkens uit de rij en vroegen en bedelden om eten en drinken.

We waren dien dag (Dinsdag) tegen 4 u. in Rees. We werden met 'n veerpont over de Rijn gezet. Een benauwd kwartiertje, want enkele Engelse jagers hadden dien middag kennelijk interesse voor onze colonne.

We stonden nu over de Rijn. In 'n oude zaal met smerig stroo konden onze mensen in Rees overnachten. Daar de hygiëne en zindelijkheid onder de mensen nog wel wat te wensen overliet – ze hadden maandenlang in schuilkelders opgehoopt gezeten – besloten de dokter en ik in de stad te gaan slapen. We gingen de mensen nog eens af; ze hadden vreselijk veel last van doorgelopen voeten. We vroegen en kregen melk en pap voor de kinderen.

In de stad was de ontvangst, ook bij katholieke instanties, beneden peil. Nergens plaats. De mensen waren er kennelijk bang, maar dan ook ontzettend bang. Ik moest mij overal legitimeren als priester. Vriendelijke mensen hebben wij er niet ontmoet. Ik was de dokter kwijt geraakt, zocht in ziekenhuis, maar daar was hij niet. Misschien in het Holländische lager in de Neustrasse. In de Neustrasse kende niemand het Holländische lager. Ik liep toen een gebouw binnen waarop Rode Kruis stond. Onder

militairen. Ik werd brutaal, liep een trap op naar boven en stond... voor een Nederl. uniform. Het bleek de ziekenafdeling van 'n kamp te zijn. Enkele duizenden Nederlandse jongens, in een grote West-Nederl. stad domweg op straat opgepikt, zijn in Rees in een kamp; slapen in 'n open dakpannenfabriek. Als ze opstonden zat het ijs dik op de deken. Met slaag werden ze gewekt. Wie bleef liggen was ziek, iederen dag 5 doden wegens dysenterie. Slecht voedsel, slaag. In de Neustrasse lagen er 'n honderd doodziek. Dyphterie, dysenterie, longontsteking etc. Op de vloeren een beetje stroo. Geen hoofdkussen; in hun gewone kleren, d.w.z. lompen met smerige deken. De helft ervan was katholiek. Ik hoorde biecht, reikte de H. Communie uit en sprak allen toe. Ze waren ontzettend blij en gelukkig, ze hadden tranen in de ogen. Geen

hard woord hoorde ik van hen. Ze beschuldigden zich van haat voor de vijand. Ze wilden niet haten zeiden ze. Ze wilden het dragen voor een nieuw, beter en vrij Nederland. Jongens, die avond bij jullie zal ik m'n hele leven niet vergeten. Als ik spreek en lees over martelaren denk ik voortaan aan jullie, zie ik jullie holle gezichten, smerig, met vuile baard, maar zie ik jullie ogen die zuiver, rein en sterk waren. Dat de Heer der martelaren jullie moge sterken en beschermen.

Over de stad Rees hing als het ware 'n vloek van hardheid, wreedheid. In Gelderland hoorde ik van bevoegde personen dat evacuë's uit Gennep wat water vroegen in Rees voor een vrouw die flauw viel. "In de Rijn is water genoeg, haal 't daar maar" werd hun gezegd. Het transport uit Gennep kwam er enkele maanden voor ons des nachts in stromende regen aan. Men werd in openbare schuilkelders geduwd en in portieken konden we slapen. Maar de mensen namen ze niet in huizen op. Een vrouw is er in de schuilkelder gevallen.

's Avonds ben ik naar de Venlonaars teruggegaan om de H. Mis te lezen. Ik verzekerde hun dat 't kapelleke van Genooi niet te evacueren was en een Moeder altijd bleef waken over wie daar ooit kwam en bleef wachten op een spoedige terugkeer van allen. 's Avonds ging ik nog eens naar 't Holländische lager en bleef er nog lang met de jongens praten. De volgende dag, onze laatste dag, zouden we over de grens gaan. Vanuit Gendringen kwamen boerenkarren. Zwakke kinderen en de bagage gingen daarop.

Het was nog bitter koud. We waren blij dat we Rees konden verlaten en nog blijer dat we weer in Nederland zouden zijn. Luidkeels werd 't Wilhelmus gezongen toen we de grens overtrokken, maar de "Grüne" verbood het. In Gendringen was een comité dat zich voor onze mensen uitsloofde. Een warme zaal, uitstekend eten. Enkele dagen zouden ze blijven rusten en dan per wagen en tram doorgaan naar Borculo. Men vroeg indertijd vaak en vraagt het nog: waarvoor diende die evacuatie? Er is maar één antwoord: Een demon drijft het Duitse volk naar de ondergang. De evacuatie van Limburg is duivelsspel. Ik weet er geen ander antwoord op.

En als iemand van mijn mensen mij zou kunnen horen dan had ik hem willen zeggen: De groeten uit Venlo en van Genooi, de groeten uit 'n vrije, blijde Nederlandse stad.

4 april 1945 **Mej. Fr. Rouleaux-Meurs, p.a. Groote Dijlakker 24, Bolsward,**

14 juli 1945 **De noodtoestand in Limburg**

"Daar is mijn vaderland, Limburgs dierbaar oord," zo zingen de duizenden Limburgers,

- 102925 welke weer naar hun geboorteplaats terugkeren, na 4 maanden in het noorden van ons land te hebben doorgebracht. Elk dorp en iedere stad welke zij op de terugreis passeren, is voor hen aanleiding hun volkslied opnieuw in te zetten, daarmee hun vreugde te kennen gevend over het feit, dat voor hen het moment is aangebroken, waarnaar ze zo lang met een kinderlijk verlangen hebben uitgezien. En wanneer zij dan
- 102930 bij het passeren van de Limburgse grens bij de spoorwegtunnel te Mook de woorden "welkom Limburger" te lezen krijgen, dan wordt nog eens het volkslied ingezet, uitbundiger dan te voren, en menige boer welke uiterlijk ruw en onverschillig lijkt, veeft met zijn mouw enkele tranen van blijdschap van zijn gezicht. Dan wordt het stiller en de feestvreugde moet plaats maken voor een gespannen en zwijgend
- 102935 afwachten, een gevoel van teleurstelling, een gevoel van bange hoop. Ieder verwoest dorp wakkert deze gevoelens aan. Ottersum zwaar geteisterd, Middelaar geen huis dat hersteld kan worden. Gennep één monument van verwoeste huizen. Afferden en Heyen vrijwel geheel verwoest. Arcen en Velden bieden een troosteloze blik, Venlo, dat zestien bombardementen te verduren had, en eens zo beroemd was door haar gezelligheid
- 102940 en vrolijkheid, overtreft iedere voorstelling welke men er zich van maken kan aan de hand van de beschrijvingen welke pers en radio er over gegeven hebben. Roermond doet wat de verwoestingen betreft niet voor Venlo onder, Susteren is totaal verwoest... Doch niet alleen de Oostkant van de Maas tussen Mook en Sittard is getuige van de meedogenloosheid waarmee twee grote wereldmachten elkaar hier bestreden, ook de
- 102945 Westkant kent de methoden der moderne oorlogsvoering. Blerick telt slechts weinig te herstellen huizen, Lottum, Broekhuizen, Horst, Venray alsmede vele andere grotere en kleinere dorpen in Noorden midden-Limburg doen iedere vreemde bezoeker stil worden hoeveel te meer dan hij die dit zijn dierbaar oord noemt.
- 102950 Meer dan welk deel van ons land heeft dit gebied, en meer dan welk deel van ons volk heeft dit volk de verschrikkingen van de oorlog moeten doorstaan vanaf de eerste dag dat het Rijn- en Roergebied de doelen vormden voor de aanvallen der R.A.F. hebben zij bombardementen meegemaakt, doordat luchtgevechten tussen Engelse bommenwerpers en Duitse jagers boven hun hoofden werden uitgevochten. Meer dan 2 maanden hebben zij onder het hevigste granaatvuur gelegen, waarvan velen ten slachtoffer zijn gevallen.
- 102955 Gedurende diezelfde tijd dwong de veiligheid hen in kelders te wonen. "De Groenen" zorgden er met hun razia's wel voor dat deze mensen geen al te grote rust genoten.
- In begin Januari van dit jaar trof hen de grootste ramp doordat zij ondanks sneeuw en koude, gedwongen werden alles te verlaten, om naar het Noorden van ons land te worden
- 102960 geëvacueerd, alwaar zij aan de goede, doch helaas ook aan de slechte gastvrijheid van hun landgenoten werden overgeleverd. De Deventenaren zijn getuigen geweest van de ellende welke deze mensen op hun tochten vergezeld.
- Thans zijn velen van hun weer in hun dierbaar oord aangekomen, doch dit betekent voor hen niet het einde van alle ellende, want zij staan nu voor de puinhopen van wat eens
- 102965 hun bezit was. Meer dan 25.000 stuks rundvee werden naar Duitsland gebracht, het zelfde lot ondergingen ruim 10.000 paarden.
- Alle varkens en kippen zijn verdwenen, matrassen, serviezen, keukengerei, meubels linnengoed enz. enz. eveneens weggeroofd of in onbruikbare toestand achtergelaten. In ruil hiervoor hebben de Duitsers duizende mijnen achtergelaten welke iedere dag
- 102970 slachtoffers eisen. Gezinnen werden gedood doordat mijnen in hun huizen verborgen waren. Duizende H A goede landen tuinbouwgrond moet hier braak blijven liggen aangezien van overheidswege geen pogingen zijn aangewend de hierin verborgen mijnen op te ruimen.
- De toewijzingen van materialen, grondstoffen, transportmiddelen, huisraden enz. welke
- 102975 van Overheidswege worden verstrekt zijn niet alleen geheel onvoldoende om aan de minimum behoeften te voldoen, doch hebben bij de bevolking het idee doen postvatten, dat de Overheid zelfs niet doordrongen is van de betreurenswaardige toestanden welke hier heersen.
- Is het dan te verwonderen dat er grote onrust en ontevredenheid heerst onder dit van
- 102980 nature zo tevreden volk van Noord- en Midden Limburg, een ontevredenheid die gevoed wordt door de wetenschap dat enige kilometers Oostwaarts de Duitse boer met hun paarden de grond, welke vrij is van mijnen, kan bewerken, en zich bovendien tegoed kunnen doen aan de eieren van hun kippen, het spek eten van de door hun met zorg groot gebrachte varkens, de linnenkasten met de gestolen goederen hebben aangevuld,
- 102985 om nog maar te zwijgen van de vele "Liebesgaben" welke de soldaten uit Holland voor hun familie hebben meegebracht. Ongetwijfeld zullen deze mensen met vreugde kennis genomen hebben van de grote actie door de Zeer Eerw. Heer H. de Greeve aangekondigd in zijn onlangs gehouden bijzondere lichtbaken waarin deze de Limburgers met name noemde. Doch dit kan niet voldoende zijn. Het is de plicht van de Overheid alles in
- 102990 het werk te stellen om hier zo spoedig mogelijk te hulp te komen, het liefst door hun

eigen goederen trachten op te sporen en terug te halen, waarbij zij op volledige steun van de belanghebbenden kunnen rekenen.

Laten wij van onze kant die mensen, waarmee wij zoveel medelijden hadden toen zij door onze stad trokken, niet vergeten wanneer offers voor getroffen landgenoten van ons gevraagd worden. En, ja laten we eerlijk zijn, we kunnen nog heel wat missen, zonder dat we het gemis hier van merken. En hoe is dat verhaal ook weer van Sint Martinus met zijn mantel, waarover onlangs ook in een herderlijk schrijven van enige onzer Bisschoppen gesproken werd?

20 juli 1945 **Begin Sept. hervatten wij het onderwijs**

12 december 1945 **"DE SCHRIK VAN VENLO" ZAL ALS MOORDENAAR TERECHT STAAN**
Half Januari zal, zooals reeds in het kort gemeld werd, de zaak-Berendsen voor het Bijzonder Gerechtshof terecht worden. Dit gerechtshof zal hiertoe een speciale zitting houden te Venlo. Venlo heeft immers het twijfelachtige voorrecht gehad Berendsen als commandant van de Arbeitseinsatzkontrollkommission domicilie te

verleenen. Gedurende ruim twee jaren kon de naam Berendsen in geheel Noord-Limburg bijna iedereen een nachtmerrie bezorgen. Vergezeld van een luguber groepje "politie mannen uit Ommen", trok Berendsen geregeld den boer op, op jacht naar onderduikers, radio's en verborgen piloten. Hij zoowel als zijn trawanten voerden een waar schrikbewind onder de bevolking. Als een stelletje revolverbandieten voor wie geen wet bestond en niets heilig was pleegden zij overvallen in dorpen en op afgelegen boerde rijen. Nooit wist men precies met welk doel en welke opdracht de bende op de baan was.

Berendsen zelf droeg, behalve aan zijn koppel, ook nog een revolver in elk van zijn laarzen. Zoo nu en dan had hij een holster onder zijn linker oksel bevestigd en nog een schietwapen in den borstzak. Dat hij al deze onwaarschijnlijke maatregelen nam ter eigen beveiliging, verwonderde tenslotte niemand. Zelf ging hij trotsch op zijn reputatie "de schrik van Venlo" te zijn. Zijn optreden herinnerde af en toe sterk aan de dolzinnigste scènes uit de Wild-West.

De dagvaardiging van Berendsen moet wel zoo ongeveer het midden houden tusschen een struikrooversverhaal uit den bokkenrijderstijd en de geschiedenis van een fantastischen cowboy-schurk met veel revolverknallen en opwindende jachten. Het groote verschil zal dan echter zijn, dat de historie om Berendsen droeve werkelijkheid is, of beter gezegd "was".

Zooals de P.O.D. ons mededeelde, had men nog geen juist beeld over den inhoud van de aanklacht. De voornaamste beschuldigingen zullen echter om. zijn: drie politieke moorden met voorbedachten rade. Zijn slachtoffers in deze gevallen waren: het Israëlitische echtpaar Maisonpierre-Compris, afkomstig uit Sittard en J. Kohlen uit Venlo.

Het echtpaar M. was door Berendsen en zijn bende opgespoord in Sevenum, waar het ondergedoken was. Hij hield beiden een tijdlang in arrest in het politiebureau te Venlo. Op een zekeren avond noodigde hij het echtpaar uit voor een ritje. Hij bracht hen buiten Venlo in de buurt van het z.g. Zwarte Water en schoot hen bij een boschrand zonder vorm van proces neer. Nadat hij aanvankelijk de lijken ter plaatse had laten liggen, koerde hij naderhand terug en wierp ze in de veenplas.

Het derde slachtoffer K. had Berendsen overgenomen van een Duitsch officier, die K. ten onrechte van plundering verdacht. Berendsen nam K. mee naar den Kaldenkerkerweg te Venlo, waar hij hem ter hoogte van de tramloodsen van den Maasbuurtspoorweg neerschoot. Dat hij de dader was van deze afgrijselijke moorden, heeft Berendsen reeds bekend. Voorts zullen in zijn dagvaardiging verscheidene gevallen gesignaleerd worden van arrestaties van personen, die hij voor en in het belang van den vijand verrichtte. Diverse van deze personen zijn in Nederlandsche en Deutsche concentratiekampen terecht gekomen, waarvan er verschillende niet zijn teruggekeerd. Johan Berendsen, de schrik van Venlo, is geboortig uit Avereest. Tijdens den oorlog had hij een dienstverband met de Militaire Politie. Na uit Duitsche krijgsgevangenschap te zijn ontslagen, was hij achtereenvolgens in dienst bij de Rijksveldwacht, bij de Deutsche Polizei in de Nederlanden en bekleedde hij het bandietenbaantje van commandant bij de Arbeitseinsatzkontrollkommission.

2 juli 1946 **Hij wijst een massagraf op de Hamertsche heide aan**
Vermoedelijk het graf van de zeven Limburgsche slachtoffers van de Mei-staking 1943
Oproep van den Burgemeester van Bergen tot de familieleden

Gestatten Sie, Herr Commissar, zegt Richard Nitsche met dat mengsel van slaafsheid en brutaliteit, dat men alleen van 'n Duitscher verwachten kan: gestatten Sie, zegt hij, wanneer hij verhoord wordt in een luchtig vertrek van het Venlosche politiebureau en hij pikt de peukjes uit den aschbak en vraagt een lucifer.

Het verhoor is een verstandelijk duel tusschen den ervaren Ned. commissaris en den sluwen S.D.-er, die zelf honderden Limburgers aan 'n kruisverhoor on[der]wierp, koele nuchtere Nederlanders en vertwijfelde murw gebeukte gevangenen.

Het zijn twee oude bekenden, die hier tegenover elkaar staan: hoofdinspecteur Wieriks en Hauptscharführer Nitsche destijds de eenige S.D.-er in Limburg die de Gestaposchool geheel doorloopen heeft. Die met alle praal van 't Duitse superras tijdens de bezetting in ditzelfde politiebureau zijn intrede deed.

Die, tenslotte den dood en mishandeling van tientallen Limburgers op zijn geweten heeft. Maar het is niet meer dezelfde "Herr Nitsche", deze schrale kruiperige figuur, die bedelt om de peukjes van den hoofdinspecteur...

Dat moet hij toegeven: deze behandeling is toch veel anders dan die de Duitschers hun gevangenen gaven, maar Herr Commissar begrijpt toch den nolitieman, wel...

Of hij ooit iemand geslagen had? Welneen! En, deze getuige dan? Had hij dien nooit een stomp met de kolf van het geweer gegeven? Neen, d.w.z.: alleen maar met de hand. Zeker hij wil niets voor de politie verbergen, niets tenminste wat zijn vroegere kameraden van den S.D. te Maastricht verdacht kan maken.

Op Strobl, zijn chef, die het sinistere gezelschap in den steek liet, toen zij op den dag der capitulatie naar IJmuiden vluchtten, is hij woest. "Planmäszig" waren zij daarop door de Canadeezen in een krijgsgevangenenkamp opgeborgen, waaruit hij thans door de bemoeiingen van "Herr Commissar" te voorschijn is gehaald.

Richard Nitsche schrijft een ellenlang raport in zijn cel. Als de zware grendels verschoven worden ten gerieve van den fotograaf valt het felle zonlicht naar binnen. Nitsche staat op van de schrijftafel en doet een stap naar voren als wilde hij zeggen: kan ik de heeren ergens mee van dienst zijn? En als het fototoestel uit het foudraal te voorschijn komt, heeft hij de opmerking: "Das geht ja nicht mit Leika!" Hou jij je maar aan je schrijverij, wordt hem gezegd en hij gaat weer zitten in zijn verschoten pakje van de Luftwaffe met de strakke, iets te korte broekspijpen.

Een foto voor de krant.

Hij had bij den "Herr Commissar" een dagblad gezien met zijn naam erin. Hij had om de krant gevraagd, maar het werd hem geweigerd. Hij hoefde niet alles te weten, wat van hem bekend was. Dan deden de Canadeezen het anders...

NITSCHÉ WIJST GRAVEN AAN.

Zondag trok Richard Nitsche geboeid en vergezeld van een klein aantal politiemannen door N.-Limburg waar hij "nur auf Befehl" zijn terreur heeft uitgeoefend.

Hij wist het graf van een onderduiker in Helden, het graf van een onderduiker die onder zijn commando verdacht van spionage en ondergronds werk door de Duitschers gefusilleerd en op een verborgen plek begraven was.

Dit gebeurde in Oct. 1944 toen de bevrijdingslegers reeds in Meyel stonden.

Nu zegt de gestapo-agent herhaaldelijk "Das letzte Schusz hätte in 1944 fallen müssen". Hij wist zich de plaats nauwkeurig te herinneren en gewillig grijpt hij de schop, toen men hem de boeien afnam en hij het graf zou blootleggen. Maar Nitsche kon de schop niet hanteeren, speelden zijn zenuwen hem parten? Of was het magere mannetje met sluike haren en nietszeggend gezicht te zeer verzacht in het Canadeesche krijgsgevangenenkamp, waarin hij tot voor zeer kort was ondergebracht?

Verder ging de tocht langs den O. Maasoever naar het Noorden. En waar het gezelschap stopte, tusschen Arcen en Well, lag de Hamersche heide in den stillen zomeravond.

Hier zegt men, oefenden de Duitse vliegtuigen met proefbommen; hier fusilleerden Nazi's hun ongehoorzame wehrmachtsleden. Verderop langs den randweg ligt een verbleekt schildje op het pad, waarop in afblatterende Gothische letters "Eichenweg" geschreven staat.

MASSAGRAF GEVONDEN.

Hier, in de schaduw van de eiken heeft Richard Nitsche de plaats gewezen, waar zeven Limburgers werden vermoord en begraven. Zeven onschuldigen, die over ditzelfde pad geloopt hadden, toen het bordje "Eichenweg" nog tegen den boom preikte [prijkte] en de Duitschers heer en meester meenden te zijn in Nederland.

Zonder droevige verwachtingen te willen wekken kunnen we aannemen, dat het hier de begraafplaats betreft van zeven Limburgers, die tijdens de Meistaking van 1943 door de Duitschers na een schijnproces te Maastricht, waarbij Nitsche als aanklager is opgetreden, "standrechtelijk" zijn vermoord.

103125 Nitsche wees de plaats, waar het 15 man sterke vuurpeloton der Grüne Polizei heeft gestaan.

Er werden hulzen gevonden, maar hier is de grond bezaaid met hulzen, de heide overal eender, maar een gestapo-agent heeft een getraind geheugen en tot op enkele tientallen meters nauwkeurig wist hij, waar de lichamen begraven waren.

103130 Na twee peilingen, heeft men gisterennamiddag onder leiding van burgemeester Douven de lichamen blootgelegd. Zij waren geheel gekleed. Voorts werd een bamboe wandelstok in het graf gevonden. Zoo mogelijk zullen de lichamen nog heden geïdentificeerd worden.

103135 RICHARD NITSCHKE de meest gevreesde S.D.-man uit Limburg schrijft in de Venlosche politiecel zijn lugubere memoires.

103140 De burgemeester der gemeente Bergen, waaronder Well ressorteert, richt dan ook een dringend verzoek aan de naaste familieleden van de toen terecht gestelde Limburgers zich zoo mogelijk nog heden te melden bij de marechaussee te Well.

3 juli 1946 **Het massagraf der zeven Limburgsche helden**

103145 En zoo staan er nog vier andere bekendmakingen in de dagbladen van den 3den Mei 1943, ambtenaren, mijnwerkers en arbeiders uit het Noorden, het Oosten en het Zuiden, maar Limburg heeft de langste eerelijst. In de tenlastelegging stond dat zij den arbeid, ondanks aanmaning, niet hebben hervat. Kan men in minder woorden hun nagedachtenis eeren?

103150 Het vermoeden, dat het door den Gestapo-agent Richard Nitsche op de Wellsche heide aangewezen massagraf de begraafplaats is van deze zeven Limburgsche mannen is Dinsdag bij de identificatie bevestigd. Tegen den middag arriveerde op de Wellsche heide een politiewagen, die een der hoofdschuldigen naar de plaats van den moord bracht: Richard Nitsche.

103155 De plaats ligt enkele tientallen meters van de plek, die eerder door Nitsche werd aangewezen. Ja, nu kan hij het zich nauwkeurig herinneren, ganz genau! Die berk, waar de kogelgaten nog zichtbaar zijn, is de plaats, vanwaar de veroordeelden in de Duitse geweerlopen zagen. Maar zijn woorden breken af als men besluit, hem allereerst naar het open graf to brengen, waar de zeven slachtoffers nog onaangeroerd liggen, zooals zo eens door de Grüne Polizei "begraven" werden, de gezichten naar den grond.

103160 Nitsche beklimt den rand van opgeworpen aarde en als hij naar beneden ziet, slikt hij even in neemt met zijn eene vrije hand zijn pet af. Hij doet nog een stap naar voren en wijst: Ja, dat is de stok van Bouman, Bouman vooral heeft indruk gemaakt op dezen eevoelloozen sadist. Bouman, de oud-Indisch officier die zelf steunend on zijn stok, voor zijn lotgenooten een krachtige moreele steun moet zijn geweest. Die herhaaldelijk zei: "Als we sneuvelen, vallen we op Het veld van eer". Die den

103165 blinddoek weigerde, evenals nog een van zijn medeveroordeelden, maar diens naam kan de man, die destijds als aanklager bij het Polizeistandgericht fungeerde, zich niet meer herinneren.

103170 Dan vertelt Nitsche, hoe de zaak zich heeft toegedragen. Hij wijst en gesticuleerd. Hier stelde zich op dien Zondagmiddag in Mei het 15 man sterke vuurpeleton op. Bouman die te zwak was om te staan zat op een verhooging voor den berkenboom. Naast hem stonden drie andere veroordeelden. De overigen wachtten ginds in een autobus "Ze hebben vijf minuten mogen bidden", zegt Nitsche "Da sagte der Hauptmann: es ist vorbei, und die Vier reichten einander die hand". Waar hij zelf stond, toen de schoten vielen?" Och, ik heb zooiets nog nooit gezien en ik wilde er ook niet bij zijn. Ik draaide me om en wandelde den zandweg op".

103175 Nitsche wordt weer geboeid en zet zijn pet weer op. Maar voor men hem weg brengt, wordt de gebeurtenis nogmaals in scène gezet. 15 man staan op de plaats van het vuurpeleton Nitsche waar de Hauptmann stond en voor den berkenboom stelt zich met drie anderen Dr. Hartman uit Roermond op, die samen met Bouman en de zijnen was gearresteerd. Dr. Hartman, de eenige, dio door het grillige Nazi-recht werd vrijgelaten.

103180

103185 NITSCHKE AANSCHOUWT ZIJN SLACHTOFFERS: van links naar rechts: Dr Hartman, hoofd-inspecteur Wieriks, die het onderzoek leidt en aan wiens optreden de arrestatie van Nitsche te danken is, de Gestapo-agent, inspecteur Pollaert en insp. Helsen uit Heerlen.

BEKANTMACHUNG

's-Gravenhage, 2 Mei 1943.

Der Hoehere S.S.- und Polizeifuehrer deelt mede: Het Polizeistandgericht te

Naspeuringen van Paul Theelen: Constantinus Imperator

- 103190 Maastricht heeft den 2en Mei 1943 de hierna genoemde Nederlandsche onderdanen ter dood veroordeeld: 1 den hoofd-controleur van den CCD Martinus Bouman uit Roermond, 53 jaar, 2 den adj hoofdcontroleur van den CCD Bernard Ruyters uit Heer, 51 jaar, 3 den districtsleider van den CCD Leo Brouwer uit Maastricht, 35 jaar, 4 den chemicus Johannes Bougerd uit Roermond. 30 jaar, 5 den mijnwerker Meinhardus Tempelaars uit
- 103195 Heerlerheide, 38 jaar 6 den electro-monteur Renier Savelsberg uit Heerlerheide, 48 jaar, 7 den houwer Salvatius Hendrikus Toussaint uit Amstenrade, 29 jaar. De 7 vonnissen werden door den kogel voltrokken.
- 10 juli 1946 **Oproep**
- 103200 Al wie inlichtingen kan verstrekken omtrent het optreden gedurende de Duitsche bezetting van den Hauptbeharrführer der Sicherheits Polizei Maastricht, later in Venlo: Richard Nitsche, waaruit kan blijken, dat deze zich heeft schuldig gemaakt aan eenig oorlogsmisdrijf, wordt verzocht hiervan ten spoedigste schriftelijk mededeeling te doen aan onderstaande instantie.
- 103205 Men wordt verzocht te volstaan met een korte vermelding van het misdrijf, b.v. moord, mishandeling, roof, ernstige vernieling, van den naam of de namen der slachtoffers van hun woonplaats en zoo nauwkeurig mogelijk van de plaats, waar en het tijdstip waarop dit werd gepleegd. De mededeeling dient te worden voorzien van den naam, de voornamen en de woonplaats van den aangever in blokletters. Ook indien reeds aangifte is gedaan, ingevolge een door den burgemeester gedane algemeene oproep, wordt een korte mededeeling wenschelijk geacht.
- De voorzitter der Sub-Commissie Limburg van het Bur. voor Opsporing van Oorlogsmisdadigers, de Hoofdinspecteur van Politie,
J. P. L. HELSEN
- 103215 Papenstraat 11, Maastricht
- 10 juli 1946 **Gestapo-beul Nitsch onthult moord op twee Eindhovenaren**
- Enkele dagen geleden meldden de bladen van de Limburgia-pers de ontdekking en de aanhouding in een gevangenenkamp in Duitschland van den beruchten Gestapo-beul
- 103220 Nitsche, die in de laatste bezettingsjaren vanuit zijn standplaats Venlo het Noord-Limburgsche land onveilig maakte en wien menige vreeselijke misdaad, moorden en gruwelijke mishandelingen, ten laste werden gelegd. Onmiddellijk na zijn uitlevering en overbrenging naar Venlo, begon men met een diepgaand onderzoek, dat reeds belangrijke resultaten heeft opgeleverd.
- 103225 Zoo wees hij, na enkele dagen te zijn ondervraagd, de graven aan van een zevental van zijn slachtoffers, Limburgsche illegale werkers, die na een lange gevangenschap, waarin zij op menschonteerende wijze werden gemarteld, naar een eenzame plek nabij de Duitse grens werden gevoerd en die daar door Nitsche en zijn helpers op beestachtige wijze werden afgemaakt.
- 103230 Het voortgezette onderzoek brengt nog immer nieuwe feiten aan het licht. Zoo meldt de Limburgia Pers thans, dat Nitsche de moorden op vier andere illegale werkers heeft bekend, waaronder op twee Eindhovenaren, de heeren ir. Reuchlin en de machinist der Staatsspoorwegen Jonker. De andere slachtoffers zijn een onderduiker uit Meyel, Heckman, afkomstig uit Heino (Gld.) en de employé der Electr. Mij. Roosjen uit
- 103235 Roermond. Hun graf werd op aanwijzingen van Nitsche gevonden in een kuil en een bomtrechter aan de grens bij Heruner. De heer Heckman belastte zich, onmiddellijk na de bevrijding van Meyel met het inwinnen van informaties voor de geallieerden in de Duitse linies. Acht maal ging het goed, den negenden maal werd hij gegrepen en naar Venlo gebracht, waar hij in handen van Nitsche viel. De heer Roosjen was werkzaam aan de geheime P.L.E.M.-telefoonlijn, waarmede men in verbinding stond met de bevrijde gebieden. Hij viel door verraad in de handen van den Venloschen Sicherheitsdienst. Over het droeve lot der beide Eindhovenaren geeft de Limburgia-pers de volgende aangrijpende bijzonderheden.
- 103245 Ir. Reuchlin, ingenieur der Philipsfabrieken, belastte zich vrijwel onmiddellijk na de bevrijding van onze stad met de opsporing van de trein, die, volgeladen met geroofde machines en producten van het Philipsconcern, zeer kort voor den bevrijdingsdag in de richting van Venlo was weggereden. Niet zonder grond vermoedde men, dat deze trein niet verder dan Blerick was gekomen. Tezamen met den machinist Jonker, bracht hij het, via de Engelsche linies, tot Horst, dat echter nog in
- 103250 Duitse handen was. Even over de gevaarlijke lijn achterhaalde hen reeds het noodlot; zij vielen in Duitse handen en werden naar Venlo gebracht, waar zij in de gevangenis werden opgesloten, om het verhoor van de S.D., onder commando van Nitsche te ondergaan. Tijdens het verhoor echter, wist ir. Reuchlin te ontsnappen! De Duitschers hadden n.l. vergeten de deuren te sluiten en het geluk wilde, dat zich
- 103255 juist op dat uur Britsche bommenwerpers boven de stad vertoonden, die voor de

zooveelste maal een aanval deden op de Maasbrug. In de verwarring wist ir. Reuchlin weg te glijpen. Hij zocht onmiddellijk zijn toevlucht tot de "Pope"-fabrieken, het Venlosche zusterbedrijf van de Eindhovensche Philipsfabrieken. Daar kwam hij gelukkig in contact met illegale werkers, die hem, onder den schuilnaam Maarten verborgen in het hoofdkwartier, voor de razzia's der Grünen. Onmiddellijk nam hij wederom deel aan het illegale werk, niettegenstaande hij slechts één arm had. Om herkenning zooveel mogelijk te bemoeilijken maakte men een kunstarm voor hem, waaronder hij een actetasch kon dragen. Niettegenstaande dat viel hij in November weer in de handen van de S.D., ditmaal voor goed. De Duitschers pasten nu beter op hun tellen, zoodat ontsnappen onmogelijk was geworden. Ir. Reuchlin trof in de cel wederom den heer Jonker aan.

17 November was voor de vier bovengenoemde heldhaftige vaderlanders de fatale dag. Uit de groep gevangenen, die de S.D. toen vasthield, in Venlo, zes mannen en zes vrouwen, werden zij gekozen en weggevoerd. Langen tijd daarna vond men een kunstarm terug in een der cellen en toen Venlo bevrijd was, verscheen er een oproep aan het raam van het politiebureau; men vroeg inlichtingen over een Eindhovenaar, ir. Reuchlin geheeten; hij miste een arm en was vermoedelijk op transport naar Berlijn. "Aan de Herunger grens", zoo schrijft de reporter, die tegenwoordig was bij de confrontatie van den S.D.-man met het stoffelijke overschot van zijn slachtoffers, "wees Richard Nitsch een graf aan in een dichtgegooiden bomtrechter, waarop kinderen speelden. In den bomtrechter lagen de lijken van een spoorwegman en een invalide. Nitsch stond er bij, onbewogen en mager in zijn voddige pakje..." God hebbe de ziel van deze Eindhovensche helden; moge hun offer 'n voorbeeld voor ons blijven en de moed en de overtuiging waarmede zij het brachten een troost voor hun nabestaanden.

1 april 1947 **Secretaris bisdom Roermond verraden**
MAASTRICHT, 31 Maart. — Tijdens de bezetting is de secretaris van het bisdom Roermond, drs. L. Moonen, door de Duitsers gearresteerd en daarna onder zeer tragische omstandigheden in een concentratie-kamp overleden. Deze arrestatie geschiedde door den Nederlander G. H. Holla (geb. te Arcen). Hij zal terecht staan op Maandag 21 April in Roermond, waar hij zich bovendien heeft te verantwoorden voor zijn medewerking aan het opsporen van onderduikers in Beegden, Wessem en Heel. Verder gaf hij leiding bij een razzia op onderduikers te Baexem. Ook leidde hij huiszoekingen met de Duitsers te Maasniel en te Roermond. Verschillende der gearresteerden zijn later in Duitse gevangenschap omgekomen. In deze zaak zullen 24 getuigen worden gehoord.

23 augustus 1947 **Grenscorrectie in het geding**
Met slechts 24 uren tussenruimte sprak ik twee persoonlijkeden in het Westen van Duitsland, van wie de eerste zelfs een ver buiten de grenzen van zijn land overbekend persoon was en is. Ik bedoel Dr. Konrad Adenauer, van 1917–1933 Oberbürgermeister van Keulen, die onmiddellijk door de nazi's van zijn post werd verjaagd, driemaal werd gevangen genomen, van het ene concentratiekamp naar het andere werd gesleept, ten slotte tot November 1944 door de Gestapo gevangen gehouden. Thans is hij leider van de C.D.U., de Christlich Demokratischer Union, dat is de grote christelijke partij, van conservatieven zowel als van meer vooruitstrevenden, van katholieken, zowel als van protestanten.
De andere: Max Hildebrand, Freiherr von Gumppenberg, geboren op het kasteel Arcen bij Venlo, jodenvriend en hevige anti-nazist, die niet minder geleden heeft dan de eerstgenoemde en vooral ondergronds heeft gestreden. Hij is thans perschef van de Landesregierung van Nord Rhein Westfalen, een gebied met 12 millioen inwoners. Hij is een van de oprichters van de C.D.U.-groep te Bochum en toont mij de door hem bij die oprichting gehouden rede.
Beiden zijn katholiek, beiden zijn nu eens werkelijk prettige Duitsers, en ik kan in geen van beiden de onderdaan van een ons vijandige staat zien. Zij zijn mijn medemens en ik eer hen in stilte om hun moedig gedrag tegen Hitler. Zij zijn aan mij verwant, doordat de Nederrijn nu eenmaal Nederland na stond, zoals nu nog Nederland sympathiek wordt beoordeeld door zeer velen in dit land. Beiden geneerden zich diep om wat is gebeurd en nemen geen blad voor de mond: "het was een gemene streek van de bovenste plank, dat Duitsland in Nederland binnenrukte," zegt Adenauer met een onverbiddelijke trek om zijn energieke mond. "Dat moet natuurlijk worden goedgeemaakt". "Het spreekt vanzelf, dat Nederland ons haat en het is verkeerd om te vragen, dat de Hollanders dat vergeten en vergeven moeten, want dat kan niet", zegt von Gumppenberg, die, veel jonger, de geboren edelman niet slechts in de fijnheid zijner gelaatstrekken, doch ook in de subtielheid zijner uitgesproken gedachten

verraadt.

Tot zover kunnen wij volledig samengaan: wij zijn beiden mensen, de geïnterviewde en ik. Maar dan komt opeens de afgrond: gapend en onoverbrugbaar. Een kloof wordt, als door een aardbeving, in de aarde tussen ons gereten. Die aardbeving werd veroorzaakt door een enkel woord: grenscorrectie. Bij beiden had dit woord precies dezelfde uitwerking: "Nooit kan herstel van het aangedane leed door gebiedsafstand plaats vinden. Die methode heeft tot dusver steeds weer nieuwe oorlogen gebracht. Zij smeedt het overwonnen volk aaneen en maakt het chauvinistisch. Sedert 1920 is het zelfbestemmingsrecht van ieder volk algemeen erkend. Men kan toch de mensen niet dwingen zich bij Nederland aan te sluiten. Het afgestane gebied is bovendien het enige (!) met een overschot aan landbouwproducten. Zij en de tegenwoordige leiders van het Duitse volk voelden zich zo schuldig en dat is straf genoeg."

Ik wijs er op, dat het woord "recht" vreemd klinkt uit de mond van een onderdaan van een staat, die nog 8 jaren geleden niet naar recht vroeg en half Europa aan zijn willekeur wilde onderwerpen. Ik herinner er aan, dat, waar zij de plicht tot herstel erkennen, grenscorrecties de enige manier zijn om althans iets terug te krijgen. Dan heet het: "Ja, maar nu mag er geen onrecht meer plaats vinden. Want het aan Holland aangedane leed is immers juist het gevolg van onrecht. Voortzetten van het onrecht zou de ondergrondse propaganda bevorderen en tot nieuwe uitbarstingen leiden."

29 oktober 1947 **Merkwaardige verkiezingen te Arcen en Velden**

Politieke delinquenten stemden mee

Alles wat stemgerechtigd was, is gisteren in de gemeenten Arcen en Velden in Limburg, "de gemeenten zonder raad", in beweging gekomen, om nieuwe gemeenteraadsverkiezingen te houden. Zelfs hebben politieke delinquenten gestemd, die van de kiesrechten waren uitgesloten. Hier deden zich de volgende feiten voor: Van hogerhand waren richtlijnen gegeven, dat de delinquenten niet van stemming konden worden weerhouden, maar dat ze, zodra zij hun stem uitbrachten, een strafbare handeling pleegden met alle gevolgen van dien. Zo geschiedde hier het merkwaardige, dat men een strafbare handeling kon plegen en er toch een bepaalde wettelijke sanctie op kon krijgen, want de stemmen telden wel mee. Het gaat in de gemeenten Arcen en Velden om de beslissende éne zetel, die de doorslag kan geven bij de bepaling van de plaats, waarin het nieuwe raadhuis zal worden gebouwd. In 1946 bleef Velden in de meerderheid met 971 tegen 970 stemmen. Velden had toen een grote propagandacampagne op touw gezet, maar na de verkiezingen begonnen de Arcenaren het offensief te openen. Bij de Raad van State werd bereikt, dat de verkiezingen ongeldig werden verklaard en nieuwe verkiezingen werden uitgeschreven. Gisteren heeft Arcen revanche genomen. Met taxi's en ziekenauto's uit Venlo gerequireerd, werden zieken en hulpbehoevende naar de stembokjes en daarna weer thuis gebracht. Over het gehele land verspreide Arcenaren werden opgehaald – voorzover hun naam op de kiezerslijst stond – om hun stem uit te kunnen brengen. Het resultaat van de stemming is geweest dat Arcen met 1010 stemmen tegen 996 voor Velden in de meerderheid bleef. Toen het nieuws in de Patronaatszaal waar honderden Arcenaren waren vergaderd, bekend werd, ging er een gejuich op, als bij een doelpunt in een interlandwedstrijd. In Velden is grote verslagenheid, ofschoon de leiders in het verzet tegen Arcen met verbeten aangezichten de mening uitspreken, dat een of andere dag de glorie van Velden zal terugkeren. Dreigementen worden geuit als: "Zij zullen met rotte eieren worden bekogeld, de Arcenaren, die zich in Velden vertonen! Weg met Arcen! Annexatie bij Venlo, daar moet het heen!" Inmiddels laat het zich aanzien, dat Arcen's overwinning inderdaad een Pyrrusoverwinning zal zijn. Immers, wat wil het geval? Het gehucht Lom, welks bewoners op de Arcense kiezerslijst vermeld stonden, heeft één afgevaardigde in de Raad zitten. Dit raadslid neemt de elfde plaats in. Arcen en Velden hebben elk 5 raadsleden. Het Lomse lid van de Raad zit dus op de wip. Bij staking der overige 10 stemmen, kan hij naar eigen verkiezing de beslissing forceren. En naar thans vernomen wordt, voelt het Lomse lid alleen maar voor Lom. De raadhuis kwestie interesseert hem minder. Misschien doet zich hier dus nog een oplossing voor, die zelfs Salomo in al zijn wijsheid nog tot eer zou hebben gestrekt.

31 oktober 1947 **STRIJD OM HET RAADHUIS**

Arcen en Velden opnieuw ter stembus

De strijd om de zetels in de gemeenteraden is indertijd met kracht gevoerd. Maar zo fel en spannend als in de gemeente Arcen en Velden nabij Venlo is het nergens toegegaan en, hoe vreemd het ook moge klinken, het was geen strijd tussen rechts en links. Het ging namelijk om niet meer of minder dan de plaats waar het nieuwe gemeentehuis zou verrijzen en de politieke tegenstellingen vielen in het niet bij dit belangrijk probleem. De Arcenaren stemden op de kandidaten uit eigen dorp en de

Veldenaren lieten zich al evenmin onbetuigd.

Velden won met 1 stem verschil, maar die ene stem was te laat binnengekomen en de Raad van State verklaarde de gehele verkiezing ongeldig.

Maandag togen de gemeentenaren opnieuw ter stembus. En wie niet lopen of fietsen kon, werd per auto naar de stemlokalen vervoerd als hij nog in staat was een hokje rood te maken. Heel Arcen was dol van vreugde toen bekend werd, dat Arcen 14 stemmen méér had behaald dan Velden. De vreugde was voorbarig. Nog is het pleit niet beslist. Er blijken namelijk 5 Arcenaren en 5 Veldenaren gekozen te zijn, terwijl het elfde raadslid uit het gehuchtje Lomm en dus uit neutraal gebied komt. Hij is thans een belangrijk man in de gemeente,

11 augustus 1948 **Slagers protesteren tegen aankoop Argentijns vlees**

De slagers te Venlo, Blerick, Tegelen, Arcen en Velden hebben besloten om deze week de winkels te sluiten als protest tegen het ter beschikking stellen van Argentijns bevroren vlees. Ruim zestienduizend kilo vlees is niet geaccepteerd en naar het vrieshuis te Boxmeer teruggestuurd.

9 november 1948 **Portier-telefonist werd N.S.B.burgemeester**

SCHULDIG AAN DE DOOD VAN VIJF GOEDE NEDERLANDERS.

MAASTRICHT, 8 Nov. (Eigen red.) – Voor het bijzonder gerechtshof werd Maandag bij verstek de zaak behandeld tegen de fanatieke partijman W. J. Beckers. Twaalf getuigen werden hierin gehoord en onder dezen waren drie weduwen van mannen, die niet meer uit het concentratiekamp Neuengamme waren teruggekeerd, n.l. mevr. H. P. Schillings, mevr. Veldhoven en mevr. Tersteeg. Verder was er mevr. J. P. Schillings bij, de moeder van een der slachtoffers. Een vierde weduwe, eveneens in de rechtszaal aanwezig, werd niet als getuige gehoord, ofschoon juist deze na de zitting beweerde, dat zij belangrijke dingen te zeggen had. In haar plaats was haar moeder als getuige opgeroepen, die niet veel van het geval afwist. De andere getuigen waren mr. H. Boyens, burgemeester van Eygelshoven en verder politiemannen.

De advocaat-fiscaal, mr. baron van Voorst tot Voorst, schetste Beckers als een fanatiek partijman. B. was portier-telefonist op de Domaniale Mij, daarna bij de politie, vervolgens werd hij burgemeester van Eygelshoven en later waarnemend burgemeester van Arcen en Velden. Hij was het type burgemeester, die met felheid maatregelen tegen zijn tegenstanders nam, en veel omgang met de S.D. had. Hij diende een aanklacht in tegen burgemeester mr. H. Boyens van Eygelshoven. Deze werd als burgemeester ontslagen en kreeg 5½ maand gevangenisstraf. Beckers is verantwoordelijk voor de arrestatie van een aantal lezers van het communistische verzetsblaadje "De Vonk". Hij liet vijf studenten arresteren, omdat zij een Oranje-cocarde droegen en 18 jongens, die met kalk propagandaleuzen op straat hadden geschilderd. Hij ontzag zich niet burgers te dwingen tot werk voor de Duitse militairen, en heeft ook personen overgehaald tot de arbeidsdienst. In Helden-Panningen liet hij een aantal radio's in beslag nemen, en hij liet zich tevens waarnemend burgemeester van Arcen en Velden maken, om dit salaris nog te kunnen innen. De dagvaarding noemt met name zes personen, wier arrestatie voor rekening van Beckers komt, namelijk: J. Helsman, G. Rombouts, H. A. Schillings, J. J. Schillings, J. Th. Veldhoven en Tersteeg. Van deze zes is alleen Hulsman teruggekeerd uit Duitsland. De anderen zijn alle vijf omgekomen, naar men aanneemt in Neuengamme. De advocaat-fiscaal deelde mede, dat vermoedelijk Beckers onder een andere naam in Essen verblijft. Men is met de opsporing nog bezig. De eis luidde: twintig jaar gevangenisstraf. Uitspraak over 14 dagen.

12 februari 1949 **Politiek om wille van een schoolklas**

(Van onze correspondent)

ARCEN EN VELDEN, 19 Febr. – Nu het weer pais en vree is in de Noordlimburgse Maasdorpen Arcen, Velden en Lomm, die vorig jaar hun geruchtmakende verkiezingsstrijd hebben gestreden, speelt de dorpspolitiek weer een rol. Maar nu een vredige. In de school van Lomm zitten 70 jongens en meisjes gewrongen in twee kleine schoollokalen. Om er een derde leerkracht aan te stellen in een apart lokaal, moeten er echter officieel 78 leerlingen zijn. En die zullen er komen, als het opgezette plan gelukt. Van het dozijn woningen, dat de gehele gemeente kreeg toegewezen, zullen er vier in Lomm worden gebouwd, op voorwaarde, dat zij zullen worden betrokken door twee uit Velden en twee uit Arcen [...]

4 mei 1949 – **Toen hij na een half uur spitten een nest met zes jonge vossen**

had uitgegraven slaakte de landbouwer P. A. uit Schandelo (gem. Velden), 'n blijde juichkreet. De moedervos had de laatste tijd terwille van haar jongen 's mans

kippenhok vrijwel uitgemoord. – Over moorden gesproken!

103455 – Te Arcen is een begin gemaakt met het overbrengen van het stoffelijk overschot van 52 Duitse militairen, welke in deze Noord-Limburgse gemeente nog begraven lagen. Zij worden vervoerd naar het oorlogskerkhof voor Duitsers, dat te IJsselstein, bij Venray werd aangelegd.

103460 10 mei 1949 **Venlo ziet geen voordelen in aansluiting van Velden**

Arcen heeft beste verkiezingskansen

VENLO, 8 Mei – De actie van Velden bij Gedeputeerde Staten van Limburg om aansluiting bij de gemeente Venlo te verkrijgen, heeft weinig kans van slagen. De gemeente Venlo ziet namelijk geen voordelen in een annexatie van Velden. Wel heeft Venlo

103465 belangstelling voor grenscorrecties met de gemeente Arcen en Velden. Dit is de mening van verschillende Venlose bestuurders.

De strijd tussen Arcen en Velden is bekend. De dorpsvete is acuut geworden door de actie van de Veldenaren om het verwoeste raadhuis van Arcen in Velden te herbouwen. Beide dorpen, die met Lomm één gemeente vormen, liggen namelijk zeven kilometer van elkaar verwijderd. Voor gemeentezaken moesten de Veldenaren dus steeds naar het "verre" Arcen. Dit laatste dorp kreeg echter de meerderheid in de raad der dubbele-gemeente Velden-Arcen in de tussentijdse verkiezingen voor de gemeenteraad, die wegens fraude moesten worden gehouden. Vandaag is het nieuw te bouwen raadhuis in Arcen aanbesteed.

103475 – De laagste inschrijver was de firma J. Coenders te Arcen met een bedrag van f96.930. De hoogste was T. van den Acker te Venray met een bedrag van f131.512. De gunning is aangehouden. Een kleine troost voor Velden is nog, dat er binnenkort een nood-secretarie zal verrijzen. Maar dit was de opzet van Velden natuurlijk niet. En óók dit kon de meerderheid van de raad (Arcen dus) beslissen. Ongetwijfeld zal Velden

103480 nog aan de nieuwe gemeenteraadsverkiezingen deelnemen. Van annexatie zal voorlopig wel geen sprake zijn. Met een meerderheid van 27 stemgerechtigden heeft Arcen de beste papieren voor Juni. Kan Velden bij een overwinning in de nieuwe gemeenteraad het reeds aanbestede raadhuis nog ongedaan maken? Een moeilijk probleem, waaraan door de Veldense dorpspolitici ijverig wordt gedokterd. Mogelijk is het een begin voor een

103485 nieuwe sneeuwbal, die in de komende maanden met donderend geweld langs de vredige Maasoevers zal rollen. Alleen Velden heeft voordelen bij annexatie door Venlo. De liefde kan echter niet van één kant komen. Een belangrijke factor is bijvoorbeeld, dat de nieuwe industrieterreinen voor Venlo niet in de richting Velden zijn

103490 geprojecteerd. Intussen heeft de overgrote meerderheid van de Veldenaren zich uitgesproken voor annexatie door Venlo.

4 juli 1949 **Geen sterke drank aan minderjarigen in danszalen**

De vroede vaders van de gemeente Arcen namen dezer dagen een besluit, waarbij het verboden zal zijn aan minderjarigen in danszalen en tot de 'aanhorigheden' van een

103495 zaal, waarin gedanst wordt, sterke drank te verstrekken, nadat men tot overeenstemming was gekomen, dat bier niet tot de "sterke" dranken gerekend diende te worden. Een voorstel om de jeugd beneden 18 jaar de toegang tot de danszalen te

103500 verbieden, werd echter tot een volgende vergadering aangehouden. In principe was men er wel voor doch men vreesde, dat de jeugd dan en masse naar danszalen buiten Arcen en Velden zou trekken.

24 september 1949 **Huis met bouwland en dennenbos te Velden**

H. M. J. VERHEGGEN, NOTARIS TE VENLO zal op Donderdag 6 October 1949 nam. 5 uur in café Jac. Litjens bij de kerkte Velden, publiek veilen en verkopen de navolgende

103505 onroerende goederen gelegen onder Velden, gemeente Arcen en Velden in sectie C:

A. voor de kinderen P. Beurskens-van Meegen,

Koop 1. Huis met stal, schuur, erf, boomgaard en bouwland te Velden Velgert,

plaatselijk gemerkt C 265 kadaster nos. 7113 en 3840, samen groot 47 aren 40 c.a.;

Koop 2. Bouwland aldaar, kadaster nos. 7232, groot 59 aren 20 c.a.;

103510 Koop 3. Bouwland in de Genooierheide, kadaster no. 7106, groot 20 aren 60 c.a.

B. voor mevrouw wed. A. P. Louwers-v. Erp en kinderen;

Koop 4. Dennenbos in Genooierheide, geschikt voor speeltuin, kadaster nos. 6918 en

6076, samen groot 99 aren 70 c.a.

Nadere inlichtingen bij de Notaris.

103515 4 maart 1950 **Duits grondbezit voor Nederlandse boeren**

In Limburg omvat dit verschillende honderden hectaren

VENLO, 3 Maart. – (Limb. pers.) – Reeds enige jaren leeft de boerenbevolking in de Noord-Limburgse grensstreek, die als overal elders gebrek aan land heeft, in hoop en

- 103520 vrees aangaande het op Nederlands gebied liggende Duitse grondbezit. Deze grond werd na de oorlog door de Nederlandse regering als vijandelijk vermogen beschouwd en aan het Nederlandse Beheersinstituut toevertrouwd, dat de landerijen aan gegadigden onder de Limburgse grensbevolking verpachtte.
- 103525 De grond werd in cultuur gebracht. Maar veel risico aan het op peil houden van de landerijen besteedde men niet, omdat de verpachtingen telkens slechts voor één jaar geschieden en de onzekerheid bleef bestaan, wat de uiteindelijke bestemming van de grond zou zijn. Aan deze onzekerheid is thans een einde gekomen. De verwachtingen die allengs meer zekerheid kregen, zijn thans bewaarheid: de grond zal in definitief eigendom aan de Limburgse boeren overgaan. Dat het hier om een zaak gaat, die van
- 103530 grote heilzame betekenis is voor deze streek, moge hieruit blijken, dat op deze wijze in de gemeente Bergen circa 1000 hectaren, in de gemeente Ottersum circa 50 hectaren, in Arcen en Velden circa 175 hectaren en bovendien in enige gemeenten in Midden- en Zuid-Limburg nog enige honderden hectaren van Duitse in Nederlandse handen zullen overgaan. Waar deze gronden voor driekwart niet alleen Duits eigendom, maar ook nog
- 103535 bij Duitsers in gebruik waren, zal hierdoor een aanzienlijke verruiming van bestaansmogelijkheden voor de boerenbevolking ontstaan.
- 10 mei 1950 **Limburg zonder tram**
Einde ener lijdensgeschiedenis
(Van onze correspondent)
- 103540 Maastricht, Mei
NOG enige dagen, bij het intreden der nieuwe dienstregeling van de Spoorwegen, en de laatste tram heeft in Limburg gereden. De Limburgse Tramweg-Maatschappij onttrekt dan de laatste tram, de elektrische van Heerlen naar Kerkrade, aan het verkeer en wordt
- 103545 uitsluitend exploitante van autobussen. De naam der maatschappij lijkt dan een anachronisme.
Aannemende, dat de L.T.M., waarin de Spoorwegen zoveel invloed hebben, ook wel aankan wat particulieren klaar spelen: een autobusdienst rendabel te maken, is dan een lange lijdensgeschiedenis ten einde, behoudens dan de naweeën ervan, waarmee verscheidene
- 103550 gemeenten zitten opgescheept. Volledigheidshalve herinneren wij eraan, dat niet alleen de L.T.M. tramlijnen in Limburg exploiteerde, ook de Maasbuurtspoorweg deed dit, doch het stopzetten van haar lijnen in Noord-Limburg is meer aan oorlogsgeweld te wijten geweest.
- 103555 De eerste trams op Limburgs gebied komen, in 1890, eigenlijk van Belgische zijde; het was de lijn Glons-Maastricht-Maeseyck, die maar over enige kilometers Nederlands gebied liep. Ook deze overleefde de oorlog niet. Omstreeks 1911 was er sprake van, dat de Duitse A.E.G. een elektrische tram Maastricht-Aken zou gaan exploiteren. Er kwam niets van, doch bij Maastricht ligt, verzonken in de weg naar Heer, een brede betonnen verkeersbrug als relict. In 1912 komt de eerste C.L.S.M.-lijn Venlo-Maasbree
- 103560 – Helden tot stand, smalspoor, evenals in 1915 Roermond-Kessenich; 1915–1916 Roermond – St. Odiliënberg-Vlodrop; 1918–1919 Roermond-Roggel-Meyel, later doorgetrokken tot Deurne.
- De mijnstreek begon ook actief te worden; daar werd een voor Zuid-Limburg bedoelde Tramwegmaatschappij opgericht, die echter terstond overging in de L.T.M., welke alle
- 103565 bestaande trams (een stel degelijke stroppen) overnam, die haar de bijnaam van Leeg Tot Meyel bezorgden. In 1922 startte de L.T.M. met Wijlré-Vaals, later gecombineerd met Maastricht-Gulpen, waarin het fameuze viaduct ontstond in 1925. Veertien jaar later behoorde dit technisch meesterstukje plus de lijn alweer tot het verleden: 1923 loopt de elektrische tram Sittard-Heerlen; 1924 gevolgd door lijn Emma-Brunssum
- 103570 (bijgenaamd "de moordenaar"); 1929 komt Heerlen-Kerkrade tot stand, in 1928 uitgebreid met de Locht. Tot 1931 wordt het stroomnet nog wat gecombineerd, doch dan begint de débacle.
- Dit laatste woord is niet te sterk, behalve voor de elektrische trams, die tot deze tijd rendabel waren, doch, lopende door de dichtbebouwde mijnstreek, te hinderlijk
- 103575 werden voor het gewone verkeer. Ze zijn vervangen door autobussen. Spoedig zullen de rails uit het stadsbeeld van Heerlen en Kerkrade zijn verdwenen.
- Inmiddels heeft het nu ter ziele gaande trambedrijf aan de openbare kassen miljoenen en miljoenen gekost, niet alleen door exploitatie-verliezen, doch evenzeer door
- 103580 waardeloos geworden terreinen, materialen, locomotieven, spoorwagens, enz. Bij de opening dier lijnen zal men zich wel geen illusie van te behalen winsten hebben gemaakt – de lijnen bedoelden in de eerste plaats streekbelangen te dienen –, doch dat zij zo spoedig uit de tijd zouden wezen, na 20–35 jaar, en dat ze zo formidabele stroppen zouden opleveren, kon wel niemand vermoeden. Toegegeven, de uiterst fatale tijdsomstandigheden, crisis en oorlog, zijn aan de débacle in ruime mate debet.
- 103585 Nog een paar dagen en de laatste tram heeft in Limburg gereden, doch wij zouden niet

in het vrolijke Zuiden leven, wanneer deze laatste rit niet enigermate in de Carnavalssfeer raakte. Alreeds zijn, door de treurende overlevenden, spotschriften in de vorm van rouwbrieven verspreid en naar het heet, zal de laatste tram uitgeleide worden gedaan door "Büttenredner", sprekers zoals wij die met Vastenavond wel zien opduiken in tonnen en op houten paarden. Maar de aandeelhouders zullen wél lachen als de boer die kiespijn heeft.

13 mei 1950 **VELDEN (L.)**

Wilt U in een rustige omgeving uw vakantie doorbrengen? Schrijft dan nog heden aan: V.V.V. Secretariaat Markt C 74 Velden (L.), Gemeente Arcen en Velden en wij geven U alle gewenste inlichtingen.

30 oktober 1951 **Zulke gasten kunnen we gebruiken**

Een jonge Nederlandse boer, die in een Amerikaans boerengezin is ondergebracht, is zo bij zijn gastheer en gastvrouw in de smaak gevallen, dat deze een schrijven aan het Amerikaanse ministerie van Landbouw gericht hebben, met het verzoek hem een verblijfsvergunning te verlenen opdat hij bij hen kan blijven, daar hij geknipt is voor bedrijfsleider.

Jacques van den Hombergh, Krosselt C 294, Velden bij Venlo, arriveerde 26 Maart in de Ver. Staten in het kader van het programma voor technische bijstand van de ECA. Tot 5 December blijft hij in de Ver. Staten om zich daar vertrouwd te maken met allerlei nieuwe landbouwmethoden en wat méér aan de weet te komen omtrent het Amerikaanse gemeenschapsleven.

De heer en mevrouw Lewis Howlett, uit Hartford in Michigan, bij wie Hombergh werd ondergebracht, schreven het volgende aan het ministerie van Landbouw: "Het bezoek van onze gast is voor beider partijen bijzonder goed uitgevallen. Wij proberen Jacques met kanten van de Amerikaanse samenleving te laten kennis maken en hij van zijn kant brengt ons dagelijks allerlei dingen bij, waar we geen flauwe notie van hadden. Hij is werkelijk geknipt als bedrijfsleider en wij zouden daarom graag zien, dat hij bij ons kon blijven. In dat deel van Michigan, waar wij wonen, zijn heel wat Amerikanen van Nederlandse afkomst, en het zijn allen eersterangs burgers. Wij kunnen op onze boerderijen méér van dergelijke jonge, ambitieuze, zuinige en ijverige Hollanders gebruiken."

7 november 1950 **Zekere G. H. uit Venlo is een dezer avonden op stap geweest**, met een hem onbekende jongedame. Bij zijn thuiskomst miste H. zijn portemonnaie die nog 47 gulden zou moeten bevatten. De politie is er in geslaagd de jonge dame, mej. N. H. uit Velden, op te sporen. Voor een gedeelte van het geld uit de portemonnaie had het meisje inmiddels allerlei dingen gekocht.

29 januari 1952 **VOORPROEFJE VAN CARNAVAL**

"Kieskup" van Velden vierden hun "gekke Maandag" Schiedammer tegen kippenvel

(Van onze correspondent) VELDEN, 28 Jan. — Onder het leutig opper-commando van prins Tonny d'n Ierste hebben de "kieskup" van Velden vandaag met een complete "carnavalsoptocht", een raad van elf en gemaskerd bal hun "gekke Maandag" gevierd. Met dit uitbundig voorproefje voor carnaval houden de Veldense wuillussen een eeuwenoude traditie in ere. Volgens de dorpswijzen dateert de "gekke Maandag" van Velden al van de vijftiende eeuw.

Op "gekke Maandag" zijn alle Noordlimburgse vastenavondsgekken zo'n beetje in Velden verzameld. Voorafgegaan door de luidbellende ceremonie-meester Harry Hermkens trok de "gekke Maandag"-optocht vanmiddag door de dik besneeuwde straten van het vredige Maasdorpje. Wie heeft er niet gelachen om de wagen met de bokken, rijders, die, allerzotst uitgedost, een serie hobbelpaarden op een boerenkar gespijkerd hadden. Achter de vrolijk blazende harmonie met gele mutsen en feestneuzen trok een Tiroler wuillussen bar. Een mooi stuk werk was ook de Vliegende Hollander, een grote schuit gebouwd op een vrachtwagen, met de doodskopvlag in top. Zelfs drie graden vorst kon de goede stemming in Velden niet bederven. Met onvervalste Schiedammer slaagde de raad van elf er in op de hoge wagen het kippenvel te bestrijden.

Goede sul

Het grote symbool van "gekke Maandag" is de kaas, die 40 plus en volvet op elke wagen staat geschilderd. Een Veldenaar is namelijk een kieskup; dat is een gemoedelijke bijnaam. Wat wuillus betekent is zelfs de meeste Veldenaren onbekend. Waarschijnlijk noemen ze hun kerkpatroon Sint Andreas een wuillus. Opmerkelijk is dat hetzelfde woord in Venlo de betekenis van een goede sul heeft.

Het meeste succes in de "gekke Maandagoptocht" oogstte echter de kasteelwagen "Ha ho nee", een groot kasteel dat een miezerig belastingkarretje met als opschrift "f1500?" droeg. Dat "Ha ho nee" is een dorpspolitieke grap van de Veldenaren, die het niet zo best op hun Arcense gemeentebroeders hebben voorzien. Vorig jaar had Arcen een groot festijn: "De Ha ho ja" (dat betekent harmonie Arcen 100 jaar) georganiseerd. Om onder de f1500 aan belastingschuld uit te komen, heeft de gemeenteraad van Velden en Arcen (met één Arcense stem meer in de raad) zomaar vrijdom van belasting verleend. Daar zijn Gedeputeerde Staten van Limburg echter niet mee accoord gegaan. En daar hebben ze in Velden een beetje leedvermaak over.

6 maart 1952 **Grote brand in Velden**

VENLO, 5 Maart (Limb. pers). — In de nacht van Dinsdag op Woensdag werd de landbouwer Verspay in Schandelo (Velden) gewekt door een hevig geknetter. Er bleek in de stallingen van zijn boerderij een hevige brand te woeden. De brandweren van Venlo en Velden stonden voor een bijna wanhopige taak. Ze slaagden erin het woonhuis te behouden. De schuren en stallingen gingen echter geheel in vlammen op. Zes varkens kwamen om en de hele oogst van 1951 ging verloren evenals veel materiaal. De boer was veel te laag verzekerd.

18 augustus 1952 **Brandweer werd teruggestuurd**

WETHOUDER VAN VELDEN WEIGERDE HULP UIT VENLO

Vrijdagavond heeft zich een ongewoon incident voorgedaan te Velden (L.). Nadat de commandant van de plaatselijke brandweer en een raadslid uit Velden de Venlose brandweer hadden ontboden om assistentie te verlenen bij het blussen van een brand in een landbouwschuur te Schandelo, waarin de bliksem was geslagen, rukte de Venlose brandweer terstond uit. Op de plaats van de brand aangekomen kreeg het Venlose corps echter, zo verneemt ANP van Venlose zijde, een verbod van de loco-burgemeester van Arcen en Velden, wethouder Van de Venne, om het blussingswerk mede ter hand te nemen. De wethouder was van oordeel, dat de plaatselijke brandweer het karwei alleen wel aankon. De Venlose brandweer kon onverrichterzake huiswaarts keren. Op dat moment was het Veldense corps, aldus de Venlose zijde, nog steeds niet met de blussing begonnen. De schuur, waarin een grote hoeveelheid hooi en stro opgetast lag, is uitgebrand. Naar ANP nog vernam, zal de burgemeester van Arcen en Velden een onderzoek naar de toedracht van deze gebeurtenis instellen.

22 augustus 1952 **Velden geeft zijn visie op het "brandweerincident"**

Onbevoegde riep hulp van Venlo in

Zoals gemeld heeft zich vorige week te Velden een ongewoon incident voorgedaan, toen bij een brand in een landbouwschuur de ontboden Venlose brandweer door loco-burgemeester weth. v. d. Venne onverrichterzake werd weggezonden en de blussing werd overgelaten aan de plaatselijke brandweer. Dit geval is in de gemeenteraadsvergadering van Arcen en Velden ter sprake gekomen.

Burgemeester Gubbels verklaarde, dat de wethouder in zijn recht stond toen hij de Venlose brandweer wegzond. Uit een door hem ingesteld onderzoek was gebleken, dat de Venlose brandweer was ontboden door iemand, die voorgaf namens "de brandweercommandant en een raadslid" te spreken. Spreker verklaarde, dat de gemeente de door de Venlose brandweer gemaakte kosten zal voldoen maar zal trachten die — zo nodig met gerechtelijke dwang — op de onbevoegde die de brandweer van Venlo heeft gewaarschuwd, te verhalen. Aan de landbouwschuur viel niets meer te redden, terwijl er geen gevaar voor belendende percelen bestond.

Wethouder v. d. Venne oefende critiek uit op de Veldense brandweercommandant, die zich na het brandalarm terstond naar de brand begeven had, terwijl de brandweerlieden kampten met moeilijkheden om aan een vervoermiddel voor de spuit te komen, daar de anders ter beschikking staande (particuliere) auto's toevallig niet aanwezig waren. Ook laakte hij het onoordeelkundig gebruik van het slangenmateriaal. In het midden van de brandslangenleiding had men een slecht gedeelte slang aangekoppeld, terwijl men goede stukken slang overhield, zodat later de leiding opnieuw overgeschakeld moest worden.

Een voorstel van de voorzitter om zo mogelijk met de Venlose brandweer een regeling te treffen voor de gehele brandbestrijding in de gemeente, werd door de raad met instemming begroet.

20 november 1952 **Jacht op smokkelaars had succes**

(Van onze correspondent)

Venlo, 20 November

Ambtenaren der invoerrechten en accijnzen hebben in de afgelopen nacht in samenwerking met marechaussée en rijkspolitie in het Noordlimburgse grensdorpje Arcen

een groep smokkelaars verrast. Toen de smokkelaars zich ontdekt zagen wierpen zij hun zakken met smokkelwaar, die koffie en thee bleken te bevatten, weg en kozen het hazenpad, waarna met behulp van een tweetal politiehonden een intensieve achtervolging werd ingezet. Niet minder dan zeven personen afkomstig uit Helmond en omgeving, waarvan de meesten al eerder wegens smokkelarij werden veroordeeld, werden gearresteerd en ingesloten. De smokkelwaar is in beslag genomen.

26 maart 1954 **HOEPHAPS**

De gemeenteraadsleden van Arcen en Velden keken vreemd op, toen in de raadsvergadering een mededeling van Gedeputeerde Staten van Limburg werd bekend gemaakt, dat bij de voorgenomen ontginning van het Arcens en Lommerbroek twee tot drie hectare zouden moeten worden gespaard ter bescherming van de hop. "De hop is een zeldzame vogel", verklaarde de burgemeester en dat klopte dan ook wel want verscheidene raadsleden verklaarden nog nimmer iets van een hop gehoord of gezien te hebben.

Een der raadsleden haalde echter een encyclopaedie te voorschijn, waarin inderdaad een afbeelding van de hop voorkwam. Hij las voor, dat de hop een hier te lande zeldzaam voorkomende vogel is, die zijn broedgebied vooral heeft in Zuid en Oost-Europa en in Zuid-Rusland.

Het was echter de gemeentesecretaris, die het overtuigende woord sprak: "Ze noemen de hop hier hoephaps". Toen vond de raad het in orde. (ANP).

19 maart 1965 **Weer botersmokkel aan Duitse grens - zeven arrestaties**

(Van een onzer verslaggevers)

In Kamp-Lintfort, een Duits plaatsje vlak over de Noordlimburgse grens, heeft de douane vier Nederlanders en drie Duitsers aangehouden. De mannen zouden zich al geruime tijd hebben beziggehouden met het smokkelen van boter.

Bij hun aanhouding werden acht ton boter en twee vrachtwagens in beslag genomen. De Duitse politie wenst de initialen van de gearresteerden niet bekend te maken. Zij hoopt nog meerdere arrestaties te kunnen verrichten en ook de adressen van de afnemers in Duitsland te kunnen achterhalen.

De Nederlandse boter werd illegaal naar Duitsland gebracht via een binnenweg ter hoogte Van het Limburgse plaatsje Arcen. Er is daar geen doorlaatpost. De Duitse douane noemt het wederom een bewijs, dat de bewering niet steekhoudend is als zou de smokkelarij via de zogenaamde "groene grens" weinig Of geen betekenis hebben.

OVERGANG TOT DEN 7-JARIGEN LEERPLICHT.

HERZIENING VAN 'T LEERLINGENAANTAL.

Het initiatief-voorstel van den heer Zijlstra, vond bij de Kamer steun en het werd

aangenomen.

103785 Voordat de heer Zijlstra zijn voorstel nader mocht toelichten, waren er echter, volgens de meening van den heer Ketelaar z.g. "knabbelaars", die, hoewel dit misschien niet hun rechtstreeksch doel was, werkelijk aan het knabbelen gingen aan de pas aangenomen zevenjarige leerplicht.

103790 Zoo bracht de heer Van den Heuvel met zijn amendementje om den leerplicht niet te laten eindigen voor het kind de 12½-jarige leeftijd had bereikt heel wat beroering. De heer Van den Heuvel dacht hier aan kinderen, die op een leeftijd van 5½ jaar reeds de Lagere School bezoeken.

Zeker, komt wel voor, laten we echter liever zeggen "komt wel eens voor".

103795 Als de heer Van den Heuvel werkelijk zoo bevreesd is, dat zulke leerlingen weer te vroeg de school verlaten, zou hij misschien meer gebaat zijn met hetgeen de heer Suring hem ook aanraadde n.l. dring er bij den minister op aan de L. O.-wet zoodanig te wijzigen, dat de kinderen den zesjarige leeftijd moeten bereikt hebben, voor zij op de Lagere School worden toegelaten. Laten wij toch niet gebonden worden aan de leeftijd van 12½ jaar. De kloof, tusschen onderwijs- en arbeidswet, die men reeds overbrugd waande, wordt er weer een half jaar door vergroot. Dit hiaat blijft nu ook al groot genoeg n.l. van den 13- tot 14-jarige leeftijd. Wanneer doet zich een geval voor dat een kind vroeger de school verlaten kan?

103800 Slechts wanneer de leerling op 5½-jarigen leeftijd op school komt, de leerling daarbij zeven klassen doorloopt zonder doubleeren, en daarbij nog, slechts wanneer 103805 het na de Lagere school geen ander onderwijs meer volgt.

Deze drie "wanneers", zegt de heer Suring dan ook, zijn noodzakelijk voor zoo'n uitzonderingsgeval. Trouwens het zal de kinderen heusch geen kwaad doen, maar hun eerder van groot nut zijn, als ze op 12½-jarigen leeftijd nog een klein jaartje moeten schoolloopen.

103810 Minister Waszink moest ook nog even den heer Zadelhoff gerust stellen, die bang was dat de nieuwe leerplichtwet niet zou worden nageleefd, vooral op het platte land. Onze Limburgsche minister had echter reeds geconfereerd met zijn collega's van Justitie en Arbeid, zoodat aan de wet wel de hand zal worden gehouden.

De heer Bijleveld had echter nog een juiste opmerking.

103815 Bij de invoering der zevenjarige leerplicht had men geen rekening gehouden met het feit dat kinderen die reeds met 1 April a.s. niet meer leerplichtig zijn, maar toch nog vrijwillig op de school blijven, op 1 Juli weer plotseling wel leerplichtig worden. Dit zal het geval zijn met scholen die in April overgang van klassen hebben. De heer Bijleveld wees hier werkelijk een lacune aan, en hij hoopte dan ook dat de

103820 heer Ketelaar zou merken dat hij niet bezig was met knabbelen, maar met oplossen. Zonder eenige verdere overgangsbepaling kunnen zich dan ook drie gevallen voordoen, n.l.: een kind dat in April van school gaat en leegloopt, is geheel vrij; een kind dat vrijwillig op school blijft valt op 1 Juli weer onder leerverplichting; een kind dat op een of andere manier aan het werk is gezet, zou teruggehaald moeten worden. Na 103825 nog nadere toelichting van de heer Bijleveld en Gerhard nam de regeering over het amendement-Bijleveld om een nieuw artikel in te voegen luidende:

"Indien ten aanzien van een kind op 30 Juni 1928 volgens de op dien datum geldende regelen de in artikel 1 der Leerplichtwet opgelegde verplichting is geeindigd, wordt ook na dien datum te zijnen aanzien die verplichting als geeindigd beschouwd".

103830 De leerlingenschaal

Het voorstel van wet van den heer Zijlstra over het aantal leerlingen in verband met de leerkrachten kwam dan in behandeling. Dat het 48-stelsel bij wet van 30 Juni 1924 aangenomen, als een bezuinigingsmaatregel funest heeft gewerkt op het onderwijs, mag 103835 men onderhand wel als bekend veronderstellen. Deze 48-schaal zou feitelijk geldend zijn tot 1 Januari 1930 op welke datum de schaal van artikel 28 der onderwijswet in werking treedt. De heer Rutten verklaarde zich ook voor het amendement-Zijlstra. In zijn rede wees hij vooral op het belang dat de dorpen hierbij zouden hebben. De heer Zijlstra had met zijn voorstel een soort van geleidelijken overgang op het oog naar 103840 den toestand van 1 Januari 1930. [...]

31 januari 1933 **DE ACHTJARIGE LEERPlicht VOORGESTELD.**

Sterke aandrang op schoolvoeding en -kleding.

GEEN LANDBOUWVERLOF MEER.

103845 De heer K. ter Laan, c.s., lid Van de Tweede Kamer, heeft een wetsvoorstel ingediend tot wijziging van de Leerplichtwet. De bedoeling is, dat vastgesteld worde:

"De verplichting, (n.l. die tot het volgen van onderwijs) eindigt, zoodra het kind acht jaren leerling is geweest van een lagereschool of twee aaneensluitende lagere scholen, waarvan de klassen een leertijd van acht jaar omvatten, en het alle klassen

103850 doorloopen heeft; of, indien het onderwijs aan die school of scholen gegeven wordt in klassen, die samen een langeren leertijd dan acht jaren innemen, zoodra het zoovele klassen doorloopen heeft, als samen een leertijd van acht jaren omvatten. "De verplichting eindigt in ieder geval bij het bereiken van den leeftijd van vijftien jaren. "Ten aanzien van een kind, waaraan vóór of sinds het bereiken van het zesde levensjaar huisonderwijs in den zin dezer wet wordt verstrekt, eindigt deze

103855 verplichting bij het bereiken van den leeftijd van veertien jaren, indien het kind alsdan acht achtereenvolgende jaren onderwijs heeft genoten. "Ten aanzien van het kind, dat op een later tijdstip aanvangt huisonderwijs te genieten, eindigt de verplichting bij het bereiken van den leeftijd van vijftien jaren."

103860 In de memorie van toelichting — die mede onderteeekend is door ir. J. W. Albarda, mej. S. Groeneweg, G. van der Houven en J. H. F. van Zadelhoff, allen sociaal-democratische leden der Tweede Kamer — lezen wij:

De in 1921 ingevoerde uitbreiding van den leerplicht met het zevende leerjaar heeft heilzame gevolgen gehad. Maar het voornaamste, de achtjarige leerplicht, is nog

103865 altijd niet bereikt, en daartoe achten de voorstellers nu meer dan ooit den tijd gekomen. Zij vinden in hun opvatting steun bij de geheele moderne arbeidersbeweging. Het invoeren van het achtste leerjaar behoeft niet aanstonds groot verandering te brengen in de organisatie van de volksschool. Voorstellers bepalen zich uitdrukkelijk tot het geen nu mogelijk en naar hun overtuiging dringend noodzakelijk is: inperking van den kinderarbeid en tegelijk, en mede daardoor, aanmerkelijke verbetering van het volksonderwijs en van de volksopvoeding. Tevens maken zij van de gelegenheid gebruik, om opnieuw een voorstel te doen, om te komen tot het verplicht stellen van de gelegenheid voor voeding en kleeding voor alle leerplichtige kinderen, die daaraan behoefte hebben.

103875 **Leerplicht tot veertien jaar.**

De ontwikkeling van het bedrijfsleven is in de laatste jaren buitengewoon snel gegaan; de maatschappij van heden en nog meer die van morgen eischt voor letterlijk iederen bedrijfstak jongelieden, die althans het lager onderwijs in zijn vollen

103880 omvang genoten hebben. De eisch van leerplicht tot en met het veertiende jaar klemmt te meer, omdat dit nog volstrekt niet beteekent, dat alle kinderen de acht klassen der lagere school zullen doorloopen. Immers is het aantal zeer groot der leerlingen, die in den loop der acht jaren athans wel éénmaal blijven zitten. Zeer velen zullen ook dan nog niet verder komen dan de zesde of de zevende klasse. Maar zij komen bij aanneming van dit voorstel dan toch in ieder geval één jaar verder dan nu het geval is, en ook voor hen komt het beste jaar er bij. De voorstellers geven een schematisch overzicht van den duur van den leerplicht in verschillende landen. Uit dit overzicht blijkt, dat wij in Nederland ten achter zijn bij België, Duitschland, Denemarken, Engeland en Ierland, Luxemburg, Noorwegen, Oostenrijk, Tsjecho-Slowakije, Zweden en

103890 Zwitserland.

De kosten.

Welk bedrag er noodig zijn zal voor de invoering van het achtste leerjaar is moeilijk met nauwkeurigheid te ramen. Het dichtst bij de waarheid komt men, door het aantal

103895 kinderen boven dertien jaar, die niet schoolgaan, te ramen, en dat aantal te vermenigvuldigen met het gemiddelde bedrag, dat een leerling van het lager onderwijs kost per jaar. Indien het achtste leerjaar wordt ingevoerd, is het niet te gewaagd, om aan te nemen, dat niet meer dan ongeveer 50 pct. van de kinderen in de hoogste klasse plaats zullen vinden; dat is bij benadering 62.500 leerlingen. En het is wederom niet al te gewaagd, te onderstellen, dat de helft van deze leerlingen plaats vinden kan, zonder dat er aanstonds gezorgd behoeft te worden voor nieuwe lokalen.

Het landbouwverlof.

Ten aanzien van het landbouwverlof deden de voorstellers boven reeds opmerken, dat het van zes weken ingeperkt is tot veertien dagen, en dat een leerplichtig kind gedurende de schooltijden niet meer in loondienst werken mag. De tijd is nu gekomen, om aan het geheele landbouwverlof een einde te maken.

De wegneming van het landbouwverlof is dubbel noodig bij het voorstel, dat bij dezen wordt gedaan. Het is te verwachten, dat juist de leerlingen van dertien jaar en

103910 daarboven er verre weg het meest van te lijden zullen hebben. Dit is ook in het belang van land- en tuinbouw zelf niet langer toe te laten.

Schoolvoeding en -kleeding.

Een meer dan dertigjarige practijk heeft geleerd, dat zonder verplichtstelling geen

103915 zekerheid te verkrijgen is, dat alle kinderen, die schoolvoeding en kleeding noodig

hebben, die ook zullen genieten. En dat is gebiedend noodzakelijk tot bevordering van het schoolbezoek, om het onderwijs voor die kinderen beter tot zijn recht te doen komen. Het particuliere werk op dit gebied verdient grooten dank, maar vooral is het te kort geschoten en moest de overheid bijspringen. En ook dan nog bleven op vele

103920 plaatsen de kinderen er van verstoken.

Bovendien klemt een ander bezwaar. Particuliere zorg, hoe prijzenswaardig ook, drukt op kindervoeding en kleeding het stempel van liefdadigheid, soms zelfs van armenzorg. Dit ontnemen en dit kan niet anders geschieden dan door aanvaarding van de verplichting der overheid, om er voor te zorgen.

103925 De kosten daarvan zullen niet zóó hoog zijn dat daarin eenig bezwaar gelegen wezen kan. Toch is het bedrag wel van zooveel belang, dat de helft er van voor rekening van het Rijk behoort te worden gebracht, te meer omdat in het stelsel der Lager-

103930 onderwijswet de kosten van den bouw, de inrichting en het onderhoud van de noodige nieuwe schoollokalen voor rekening van de gemeente komen. Als eenmaal vast staat, dat er alom in het land schoolruimte zijn moet voor acht leerjaren, dan is er eenige tijd noodig om daarin te voorzien, overal waar de tegenwoordig gebruikte of leegstaande

103935 lokalen de leerlingen niet allen kunnen opnemen, die voortaan een jaar langer moeten blijven. Die tijd behoeft niet overmatig lang te zijn, maar is nu toch niet op een maand na te ramen. Daarom stellen voorstellers voor, dat deze wet in werking zal treden op een nader te bepalen dag. De regeering kan dan nagaan, welke tijd vereischt wordt, om de gemeenten en de schoolbesturen in staat te stellen de nieuwe voorschriften behoorlijk uit te voeren en zij kan waken tegen onnoodige vertraging.

[The name Meuse has been changed into Maas.]

3.3 Area 3. The Maas line

104260

Geologically, the Lower Maas has much in common with the Lower Rhine, as both are part of the same river delta. Further up-stream in Limburg, however, it cuts into harder Quaternary sediments composed of coarse gravel and sand.

104265

Local subsidence means that the Maas does not erode or deposit large quantities of sediment and avulsions or lateral migration are thus far less common in the Maas delta than in the Rhine delta. Furthermore, the Rhine depends on both rain water and meltwater, whereas the Maas is only fed by rain water.

104270

This means that the discharge of water can fluctuate strongly between seasons, which surely will have affected the Maas's usability for transport.

104275

Fortifications along the Maas are a new phenomenon in the Late Roman period, and are generally taken as an indication of defence-in-depth. However, the majority of the identified sites here is located along its east-west axis, such as Cuijk, Kessel-Lith and Wijchen-Tienakker. What makes the Maas even more interesting is that at least two bridges over it are known at Cuijk and Maastricht (a third has been suggested at Kessel-Lith), a unique feature in the Netherlands. Unfortunately, however, the Maas is, like the Rhine, a volatile meandering river, and many sites are completely or partially eroded away and can only be identified by dredge finds.

104280

Again, like the Rhine, the military sites along the Maas have traditionally been identified based on written sources. Notably this concerns the comment by Ammianus Marcellinus that Emperor Julian rebuilt three forts situated on a line along the Maas in AD 358, that were destroyed by invading Franks. Several sites have been proposed in the past, including Cuijk, Blerick-Venlo, Grubbenvorst-Lottum, Heel and Kessel-Lith, several of which also appear on the Tabula Peutingeriana.

104285

3.3.1 Sites

Far fewer sites are known from the Maas relative to the Rhine, but generally speaking the evidence they have yielded seems to have been better preserved. The amount of excavations carried out on some has also helped to establish better chronologies and material culture studies.

104290

There are still some sites that are a little doubtful, however. These are the sites for which the interpretation as a military site was predominantly based on written evidence imposed upon scant archaeological evidence, such as Blerick, Grubbenvorst and Heel.

104295

Blerick has yielded some Late Roman finds in the form of a relatively high amount of stray coins from the first half of the 4th century, but no other evidence seems to exist. Its interpretation as a road fort is rooted in its location but in the absence of more concrete archaeological evidence this seems circumstantial. No Late Roman remains seem to have been found at all in Grubbenvorst-Lottum. From Heel, we only have a large Middle Roman cemetery with several stray finds of later coins and pottery from the top soil.

104300

Even though Ammianus Marcellinus is very specific in his description of the location of the supposed repaired forts, it seems that the archaeological evidence for such a string of connected forts along the Maas area is lacking, and his comments should not be taken too literally.

104305

For all the other sites, plenty of archaeological evidence is available, although in varying degrees. Kessel-Lith is the only site on the Maas based on dredge finds, although remains of walls and building materials were recovered more or less in situ. Its foundation date remains obscure, but the coin series and ceramics suggest somewhere around the middle of the 4th century and continuous activity into the early 5th century. It is generally assumed in the literature that the building remains found at Kessel represent a small fort or castellum with perhaps a bridge nearby, but the site's exact function is unclear.

104310

The three remaining sites, Cuijk, Maastricht and Wijchen-Tienakker, have all been excavated to some extent. The burgus or watchtower of Wijchen was built on the grounds of a villa complex and the ceramics from its surrounding ditch suggest a foundation date somewhere in the late 3rd or early 4th century.

104315

An unusually large amount of coin planchets from around AD 400 make it difficult to establish the end of Roman occupation here, but given the other material culture the end date would be at the end of the 4th century at the earliest. Wijchen is one of the rare sites in this thesis which was recently excavated and published in full. The castellum at Cuijk was partially excavated in the 1960's, and was never published,

104320

and Maastricht has seen numerous excavations pretty much throughout the 20th and early 21st centuries, many of which were also never published.

At Cuijk, the complex stratigraphy prevents a concrete interpretation of the site's chronology. Based on the finds, it has been suggested that the castellum may already have been founded in the late 3rd century.

Traditionally, the two building phases that have so far been recognised have been attributed to Constantine I and Valentinian I.

The bridge at Cuijk was seemingly built and rebuilt in three successive phases: AD 347/349, AD 368/9 and AD 388-398.

The dock which was part of the castellum complex has been dated to around AD 320, with subsequent continuous repairs from AD 342 to at least AD 373.

As none of the excavations at Maastricht were comprehensively published, it is difficult to establish a concise chronology for the whole site. Most authors seem to agree that the castellum was founded around AD 325, on a previously empty terrain. Its end date is a little harder to place, as the location was continuously inhabited from the 4th to the 6th century.

The inner buildings of the castellum are still poorly understood, although it does include a stone horreum.

For the bridge at Maastricht, three construction periods have been recognised: AD 334-357, AD 368-369 and AD 387-398.

3.3.2 Discussion

All in all, it seems there are four confirmed military sites in the Maas area: Kessel-Lith, Cuijk and Wijchen on its east-west axis and Maastricht way down south. Purely looking at location and the spread of these sites, no single line of defence along the Maas can be identified. Rather, it seems that its sites interlock with those along the Rhine. Wijchen and Cuijk are located within the influence sphere of Nijmegen, and Kessel-Lith forms a chain with Waal sites such as Rossum and Ewijk.

The question of course is whether these sites are all contemporary, and some overlap could be argued for. A foundation date as early as the late 3rd century has been suggested for both Wijchen and Cuijk (Kessel seems to begin much later, around the middle of the 4th century), so some correlation between the sites of the Rhine and Maas could be suggested.

The first research question of this thesis was whether traditional end dates for Middle Roman sites could be extended into the later 3rd and 4th century. This does not apply to the Maas, as all sites are newly built in this period. As said before, construction could have begun on sites such as Cuijk or Wijchen as early as the late 3rd century, but Maastricht and especially Kessel-Lith appear to have been founded in the first half of the 4th century.

Compared to the evidence from the Rhine area, the quality of archaeological evidence is rather good on the Maas. The partially eroded site of Cuijk can still be studied relatively well, and even Kessel-Lith has offered some context. Besides this geological aspect, the Maas fortifications have practically all been excavated extensively, giving us good ground plans of fortifications and defences (although not so much of the inner buildings). The only downside is that apart from Wijchen, none of these have been published in full detail, but this is a common problem elsewhere too. Stratigraphy is still often problematic (Maastricht, Cuijk) and extensive material culture studies are seriously lacking.

The small selection of material culture discussed in the appendix is already informative. From every established site in the Maas area, we have significant numbers of crossbow brooches, whereas the more doubtful sites have yielded none. Naturally, a certain amount of bias is in play here, but it also suggests that a clear relationship exists in this sub-area between fortified sites and the presence of crossbow brooches.

The coin graph of all the Maas sites combined (see below fig 7.), shows that the large influx of coins to this area starts much later than in the Rhine delta, and results in much lower numbers per site. It is interesting that the large peak around AD 270 observed from the Rhine area is largely absent here (in absolute numbers at least), and relatively few coins struck by Gallic Emperors have been found (except of course for the coin hoard in Maastricht). The relative lower numbers of circulating coins may reflect the general population decline in the MDS-area. Heeren has shown that the area became almost entirely depopulated in the later 3rd century, and that there is very little evidence to suggest inhabitation in the early or mid-4th century.

New settlements only began to appear in the area around the late 4th or early 5th century, which would correspond well with the sharp increase in coins we see at

Maastricht and to a lesser extent Wijchen.

The graph is slightly problematic, however, as it contains very few sites, with widely varying numbers of coins. Maastricht dominates the spectrum, and its extreme peak around AD 400 is not representative for other sites. Likewise, the late 4th century peak at Wijchen is a deviation. The general pattern seems that most sites show a slight peak in coins struck between AD 360-370, and show a steady influx of coins into the 390's. I have already stated above that the often-observed spike in coin issues under the House of Constantine should perhaps be interpreted rather as a general development rather than an indication for a Constantinian construction phase. The AD 360-370 peak has similarly been interpreted for various sites as a sign of a Valentinian building programme. As I have already argued in appendix 3, this could very well reflect a general increase in coin emissions, rather than signal heightened activity at individual sites.

The problem of stratigraphy and the chronology of individual sites has been highlighted already, and it appears that this is equally the case for both excavated and non-excavated sites. There is definite proof in Cuijk for at least two building phases, although it cannot be stated how much of the castellum was overhauled for the second phase. The common assumption that its first phase was constructed of wood can also not be proven, as no actual remains of wooden buildings could be found in the excavation's documentation. For Maastricht, two successive phases have also been proposed, based on peaks under certain emperors (Constantine I and Valentinian I) in the coin evidence. As long as no comprehensive study of the excavated defences and stratigraphy have been published, I am sceptical as to the validity of this argument. Coins of the House of Constantine are numerous across the Dutch river area, and may thus reflect a general increase in official emissions in the study area rather than an increased influx in one particular site. For Kessel-Lith, the evidence is insufficient to establish any detailed chronology. The relatively short and steady influx of coins during the second half of the 4th century suggests that there was only one major construction phase. The ground plan of Wijchen similarly shows a single construction phase.

None of the Maas sites are built on previous military terrains, but they do show a relation with already established activity: the burgus of Wijchen was built on a villa complex, Cuijk and Maastricht on or near thriving central settlements and Kessel-Lith was constructed of spolia from a nearby Gallo-Roman temple.

When we look at the coin series of the four identified sites in the Maas area (fig. 7), it is immediately clear that they start much later: coins pre-AD 260 are almost completely absent, and the AD 260/270 peak is fairly small. Evidence for the 4th century is consistent, however, and the drop in coin emissions from AD 378 onwards seems less pronounced. The extreme peaks in the late 4th -early 5th century at Wijchen and Maastricht are probably related to an increase in coins circulating in the Maas area generally.

At Wijchen, a large hoard of blank planchettes was found that was dated to the late 4th early 5th century. As already said above, the coin series at Maastricht seems to show continued occupation in the 5th century.

The Maas fortifications seem to pick up around the beginning of the 4th century, so slightly later than their Rhine and Waal counterparts. It is interesting to speculate as to the underlying cause for this. Did the Rhine gradually go out of use, due to climatological changes? We have far fewer sites on the Maas, which may suggest that it was not meant as a complete replacement, but rather as an extension.

Of course, it could be that Maas sites have not been preserved as well, so we should be careful in this. It is noteworthy, however, that two bridges and a port were found in this area, suggesting that the Maas was very important in this period for transport purposes. It should also be noted that two previous studies into the distribution of Late Roman belt buckles and gold coin hoards both showed an increased archaeological activity in the Maas delta as opposed to the Rhine delta, especially in the 5th century.

As such, these studies fall outside of this thesis's parameters, but it is interesting to see that that development, in which the Maas seemingly becomes more important to the Roman authorities, can perhaps already be traced back to the 4th century.

All four sites have yielded crossbow brooches, be it in varying numbers. Cuijk, Wijchen and Maastricht have all yielded four (those from Kessel-Lith could not be quantified). The fibulae from Cuijk date from the late 3rd to the second half of the 4th century, those from Wijchen to the entire 4th century, while those from Maastricht date much later, from the second half of the 4th to the second half of the 5th century.

"The Latin Civilization"

April 24, 1936 THE LATIN CIVILIZATION I
ITS SIGNIFICANCE FOR OUR REGION A PIECE OF HISTORY

As the years go by, one becomes accustomed to being surprised by nothing and to honoring the wisdom of the old Horace Flacius, who, about 1900 years ago, wrote to his friend Numicius:

"Nil admirari prope res est una Numici,
"Solaque quae potest facere et servare beatos."

Yet even the elder, who sees the ordinary "??? Those who do not usually smile indulgently at the influence of spiritual trends and parties, sometimes find their peaceful patience put to a severe test in our turbulent times when they are forced to witness the values of life, which they have learned to value highly from childhood, being dragged into the mud with ruthless audacity.

This naturally applies primarily to the transcendental goods, whose sacred protection has long been entrusted to Mother Church, which we Catholics, in these gloomy times, must defend more than ever against the partly open, partly sneaky attacks of their undisguised, or worse, cunningly crafty enemies.

But this also applies to the highest natural cultural assets of humanity, and particularly of Latin civilization. For centuries and centuries, no educated person has doubted the value of that civilization. And from its first appearance in Rome to this day, the Holy Church has considered it its duty to educate the youth, who were preparing for the holy priesthood under its care, in the language and literature of ancient Latium. But behold, nineteen centuries after Christ's death, a new "Movement" has emerged. It has trampled upon everything that had previously been held in high regard and venerable. With the loyalty to the Pope and the Bishop, which the Southern Netherlands has been able to claim for sixteen centuries, it also rejects Latin as "alien" and "contrary to the nature of the Germanic race," a group it very wrongly considers us Southerners to belong to. Therefore, it seems useful to us to examine, using established historical sources, with an unbiased and impartial eye, what Limburg was like before the arrival of the Romans and what it is now, with God's help, under the influence of Latin civilization.

What we know of prehistoric Limburg is thanks to the investigative skills of both earlier and later archaeologists, especially in recent years to that of Dr. Beckers, a physician in Beek. Their work essentially confirms what we already knew from similar research both domestically and abroad: the Limburgers of prehistoric times stood on a low level of culture; they lived in wooden and clay huts, wore very primitive jewelry, possessed few practical tools, and practiced pottery as their only known craft. 1) Only with the arrival of the Romans did higher forms of civilization enter these regions, which for over a hundred years experienced the beneficial influence of Latin colonization to a large extent. While the Rhine (even then!) served as the boundary against barbarism, the Meuse, the river in the peaceful land, was the natural conductor of higher culture. The second century AD, in particular, was a completely peaceful and safe era for the regions: unprotected country houses and farms here and there, especially in the charming hilly landscape along the Geul River, and a prosperous population lived carefree and well-protected from the threat of war. One of the centers of this Roman agricultural colony in South Limburg has already been discovered, discovered some time ago on the plateau of the present-day Ravensbosch Monastery. A large number of farmsteads, scattered throughout a wide area, were located there, with a mausoleum or burial temple at their center, where the cremated remains of the deceased were placed in stone coffins. That, under the protection of the Roman eagles, alongside a relatively high culture, great prosperity also prevailed in these regions is evident from various excavations carried out in the first quarter of this century by the late Dr. Goossens in collaboration with Professor Dr. Holwerda. Near Bocholtz, a luxurious country house ("villa") was excavated, built entirely on masonry foundations, and featuring a bathing facility as well: central heating! No, don't shake your head in disbelief, modern again. Here's what Professor Holwerda's book, page 153, literally states: Some rooms (of the excavated villa) were heated according to the well-known hypocaustal system: a double masonry floor, the upper layer of which rested on stone columns, received the warm air from a fireplace outside against the building wall, and stone pipes carried it

further up the walls. The bathing rooms were also heated this way, and even the masonry washbasin has its foundation in the ground. Thus writes the highly learned researcher, who concludes with the following: That a highly civilized Roman population inhabited our South Limburg needs no further explanation: alongside the simpler farmer, the great Roman gentleman farmer lived here, in his luxurious country house, on the same footing as he was accustomed to in classical countries. It is, in fact, virtually the same farm that is still found today as the typical Limburg farmhouse in these regions. (Editor's note: Ours in bold.) We would have nothing more to add to this—the quotes speak loud and clear!—were it not for the fact that the highly learned author had specifically drawn attention to the significance of Heerlen in this earliest period of Limburg's history. "Objects from almost the entire Roman period," he writes on page 154, "have been found in Heerlen: even from the earliest period, that of Emperor Augustus, several finds seem to have been made. And the first decades of the fourth century AD (so, more than three hundred years after Caesar Augustus, Ed.) are certainly represented by a number of objects." He then continues literally: "We believe we can deduce that Heerlen was a kind of rural town, a hub for the farming population, from the discovery of a number of pottery kilns at various points in the municipality, workshops where various types of Roman pottery were produced." "We now find this same pottery in the remains of Roman farms in Limburg: these Heerlen potters seem to have primarily worked for the farming population. Apparently, Heerlen was the place where this population went to market for its household needs." One can see that there's nothing new under the sun. For 1,800 years later, the farming population of the surrounding area still goes to market in Heerlen. If one wants to know exactly how Latin civilization in these regions came to an end, one need only read what Professor Holwerda writes at the end of his chapter on Roman land colonization: "As if a scorching breath had passed over the land, we see all that Latin life, those prosperous country houses, that truly Roman luxury in South Limburg suddenly destroyed at the beginning of the third century AD; and the same phenomenon is also observed in neighboring Belgium. Many remains still show traces of fire and brutal violence, other farms are simply abandoned: the pottery suddenly breaks off everywhere, and the coins also speak of an abandonment around the beginning of the third century. There's no doubt that a Germanic invasion here at that time suddenly destroyed Roman life, which had been able to develop undisturbed for over a hundred years, razing the country houses and driving out the population. From then on, the prosperous Limburg of the past has been an almost deserted region, repeatedly exposed to barbarian raids. No sooner had the Rhine border succumbed to a swarm of Germanic people than the first incursion of those plundering barbarian bands was enough to destroy that peaceful culture and make it disappear forever. (The boldfaced text is the author's). Tomorrow we hope to continue this instructive story and draw a number of conclusions from it. But we would like to note this now: let the N.S.B. boast of its Germanic ancestors: we feel much safer on the civilized side of the barricade! And thank God! Catholic Limburg belongs on that side, as we will demonstrate further tomorrow.

1) We have borrowed these and the following details from the excellent work of Prof. Dr. J. H. Wolwerda {Holwerda}: "Dutch Earliest History" (S. L. van Looy – Amsterdam).

April 25, 1936 In our previous article, we saw how South Limburg, after being opened to Latin civilization around the beginning of our era, experienced its beneficial influence for over two centuries, until, at the beginning of the third century AD, a furious invasion by arsonist and plundering Germanic bands violently drove the high culture of Rome from our region. But that culture certainly did not disappear completely. After all, while the countryside had been made uninhabitable for the Gallo-Roman population, in the fortified settlements they found a safe refuge from the plunder and fury of the barbarians. The rulers of the world empire, incidentally, had a paramount interest in defending the remote corner now known as South Limburg. After all, the wide highway ran straight through our region from Tongeren to Cologne, which at the time held the same strategic significance as today's bullet-straight highways. This road traversed our current province from west to east: Maastricht served as a fortified bridgehead, where the river was initially crossed by ferry and later by bridge. From there, it flowed via Meerssen through the Geuldal to Valkenburg and then most likely via Ransdaal to Heerlen, after which it led via Jülich to Cologne, where it ended at the border of barbarian land. Cologne was known to be one of the oldest and most famous Roman settlements on the Rhine: as one may recall, the fortified city was founded 20 years before Christ by Marcus Vispanius Agrippa, who gave it his name: Colonia Agrippina. For over 400 years, it remained one of the

cornerstones of the Empire! No wonder the Romans placed such great value on an uninterrupted connection between Tongeren and Cologne. Therefore, under Emperor Diocletian, they built a whole series of "casemates" – nothing new under the sun!—to protect their highway from the attacks of the warlike Germans. Only in our time have three of these casemates, which the Romans called "burgi," been discovered in these regions: the first on the Hussenberg near Geulle, the second on Rondenbosch north of Sint Gerlach, and the third on the Goudsberg between Valkenburg and Ransdaal. This last "burgus" was excavated under the care of Professor Holwerda. According to the pottery found, this small fort, measuring over twelve by nine meters, was still under military occupation in the first half of the fourth century. The discovery of coins bearing the image of Emperor Constantine also irrefutably demonstrates the maintenance of this defensive belt well into the fourth century for Rondenbosch. Thus, by following the line of irrefutable stone and metal evidence from long-gone centuries, we arrive at the era of the conversion of the Limburg population by the missionaries of Rome, particularly by Saint Sarbatus or Servatius. Rarely, if ever, is the life story of a saint so distorted over time as that of Limburg's oldest preacher of the faith. What legend tells of him is known to almost every Limburger: but what history reveals is quite different! Sarbatus was an Armenian disciple of the Church of Jerusalem: he journeyed from the holy city, where he had been ordained a priest, to the far northern border of the Empire, there to win souls for Christ. But in these regions, he did not encounter Germanic barbarians in animal skins, as is customarily portrayed in religious processions at the septennial holy festivals, but rather well-civilized Gallo-Romans, who, nevertheless, in this remote corner had mostly remained pagans even after the capital had been largely won over to Christianity. Throughout his life, he stood as a courageous soldier of Christ against the enemies who at that time besieged Mother Church: the barbarians on the other side of the imperial border, who constantly threatened invasions, the Arians, who denied the Divinity of the Redeemer, and his pagan compatriots, who were still very numerous, especially in the army. That, despite the quarrels between commanders that broke out almost every time a succession took place, order and tranquility still prevailed in the vast world empire is proven by the repeated, very long journeys the bishop-missionary undertook. During his forty-year episcopate (from 342-383), he traveled alternately to Sardica in Thrace (now Sofia in Bulgaria) and to Rimini in Italy, where he defended orthodox Church doctrine at councils; He proceeded to Antioch in Asia Minor, where he attempted in vain to bring about a reconciliation between Emperor Constantius in the East and the pretender to the throne, Magnentius, in the West, who had been proclaimed Caesar by his soldiers. He undertook the long journey "ad limina" at least three times to seek advice and assistance from the Vicar of Christ.

II (End).

But he could not prevent the Gaul Magnentius from massing his legions in the south of France to deliver a decisive blow to his rival (which he lost), from the Germans immediately seizing the favorable opportunity to attack the severely depleted garrisons of the northern cities. In the disastrous year of 354, the entire northeastern border of the Empire, from Strasbourg (Argentoratum) to Tongeren (Aduatica Tungrorum), collapsed. The casemate line was overrun and razed to the ground. And after a months-long siege, besieged Cologne was forced to surrender in the year 355. Of course, the Germans did what Germans typically did: whether one reads Ammianus Marcellimis 1) or consults the "Overvuleling van België" (The Surviving of Belgium) by the journalist Mokveld 2), it amounts to exactly the same thing: murder, arson, pillage, and virginity toute la lyre! But then Emperor Constantius appointed his nephew Julian Caesar of Gaul. The very next year, the young general (he was not yet 25!) managed to defeat the Germans in a battle on the Meuse and advanced, along the military road through Limburg and the Rhineland, to recapture the border fortress of Cologne. Then he marched south with his legions across the Rhine, and in the summer of 357, he inflicted a crushing defeat on the Allemanni at Strasbourg. He turned north again, and in 358 we find him at Tongeren, where, according to his historian, he received the submission of "the Franks, whom we call Salians," but who were never Germanic! Thus, the "pax romana" was re-established in the bishopric of Saint Servatius by one of the most stubborn and dangerous enemies of Christianity. For it was this Caesar Julian, who became Emperor two years later, who was and remained notorious to both contemporaries and posterity as "Julian the Apostate"! Perhaps an echo of the inevitable spiritual conflict between the Catholic bishop and the apostate "Führer" has come down to us in the tradition that Sarbatus moved his episcopal see to Maastricht under pressure

from malicious elements in his original residence. But be that as it may, the fact remains that the conversion of Limburg, four centuries before the rest of the Netherlands, was only possible through the influence of Latin civilization, which had already thoroughly permeated these regions when, north of the then-imperial border, our "Germanic ancestors" were still pure-bred savages.

We may recall how in the year 406 the Wandilians descended upon Gaul like an unstoppable torrent, chanting "Wandalia über alles" (Wandalia above everything) as they trampled upon the centuries-old culture of Imperial Rome. But although their Germanic trail was marked by ruins, blood, and tears, they were unable to wrest the holy faith from the hearts of the cruelly oppressed people. Limburg remained Catholic, and Limburg continued to bask in the sun of Latin civilization. For centuries, it knew no other written language than Latin. And it is under the dual and inseparable influence of Rome's religion and Rome's superior culture that the mixture of peoples and races, fused on our soil in the melting pot of centuries, has become a strong unity, loyal to sovereign and fatherland, but above all inseparably bound to its spiritual cradle: the Church of Christ, whose Vicar resides in Rome. Let our popular press then safely misuse the holy feast of Pentecost to celebrate their racial solidarity with their Germanic ancestors on the "faded old days" and to immerse themselves once again in the "old traditions"—God forbid! — of their lineage: we Catholic Southerners, who, thank God, were never Germanic, remain faithful to the Eternal City "Rome aeterna," the Mother of Latin civilization throughout the centuries!

1) Ammianus Marcellinus (330-390) is a historian of the Roman Empire in the later Imperial period. His work comprises 31 books, of which the last eighteen have been preserved. In the fourteenth book, he outlines Julian's campaign against the Germans in numerous interesting details. But his harsh, soldierly language is not easy to read, and we cannot recommend his books as entertainment.

2) "The Surrender of Belgium" was written by L. Mokveld, war correspondent for "De Tijd." The collection, "Experiences as a Dutch journalist gained during a four-month stay with the German troops in Belgium," was published in 1916 by Brusses Uitgeversmaatschappij in Rotterdam. It is a life-like account, hot off the press, without fuss, and truthful. And it is much easier to read than Ammianus Marcellinus.

April 29, 1936 THE FAITHFULNESS OF CATHOLIC LIMBURG IN PREVIOUS CENTURIES AND IN OUR DAYS

Regarding our double article on Latin civilization, we have received two esteemed comments. The first concerns the time period between the conversion of Limburg and that of the rest of the Netherlands, a time period which, according to our informant, we would have set somewhat broadly. After all, Saint Servatius became Bishop of Tongeren around 342, and Saint Willebrord was consecrated Bishop of Utrecht by Pope Sergius in the year 695. This therefore makes a difference of 353 years, not "four centuries," as we wrote. The comment is entirely correct regarding the annual figures. It should be remembered, however, that St. Servatius likely had several unknown predecessors in the episcopal see of Tongeren—after all, freedom to preach the Catholic faith was officially permitted in the Roman Empire as early as 313 by the Edict of Milan—while, on the other hand, it is certain that St. Willibrord was the first bishop of Utrecht. Moreover, the north of our country remained pagan for well over half a century after St. Willibrord's consecration, as the Frisians, who at that time occupied a large part of present-day Utrecht.

Those who ruled Holland, showed themselves so hostile to Christianity that, as late as 754, they cruelly murdered Saint Boniface, the Apostle of the Germanic people, near Dokkum. When one considers these facts, one sees that our estimate of the time between the conversion of the Southern and Northern Netherlands is not as unfounded as it might seem at first glance. The second observation from the esteemed quarter speaks of Limburg's faith. Is our region still as inseparably linked to its spiritual cradle, Rome, in our time, as it used to be during the nearly sixteen centuries that have elapsed since the arrival of Saint Servatius? Doesn't the Catholic Church in these regions also suffer from the common disease of our time: an overestimation of the material and the passive alongside an underestimation of the spiritual and eternal values of life? And hasn't Limburg's unwavering religious unity, especially in the mining region, been eroded by the influx of a multitude of dissenters, both from within and from abroad?

These are three questions we will attempt to answer to the best of our ability, based on the figures and facts known to us. Regarding the problem of religious laxity, we believe that the current generation need not fear a rational comparison with previous generations. Halfhearted and fainthearted Catholics have always existed everywhere in

all parts of the world, including in Limburg. Especially in the sixteenth century, the moral and religious situation, both here and elsewhere, was much less favorable than it is today. At that time, the moral decline among Catholics was not only more extensive, but it was also concealed and covered up to a much greater extent than it is now, including by the clergy, who themselves were affected to a regrettable degree by the moral laxity. We do not intend to go on a scandal-hunting spree in the chronicles and memoirs of that unfortunate time: which, moreover, would not cost us the least effort. But when one knows that even in well-meaning and faithful circles, sentiment was stirred against priestly celibacy, because it was not being maintained, then one will understand how far the corruption of morals had come, even among "the salt of the earth." The fact that Catholic Limburg overcame this cruellest of trials without lasting damage to the Holy Faith, which was wholly or largely lost in so many other regions, may rightly be considered convincing proof of the unwavering attachment of the inhabitants of this region to the religion and teachings of Rome. Afterward, the faithfulness of the Limburgers was repeatedly tested, by Joseph II, by the French Directory, by Napoleon, and last but not least, by King William I of the Netherlands. But neither in the eighteenth nor in the nineteenth century was there any sign of moral decay or relaxation among the clergy! And where the priests lead the faithful people in unwavering steadfastness and purity of morals, the preservation of the highest values of life is assured. Although for each of us, "suffering, struggling, and overcoming remains the daily fate."

Now a few words about the influx of dissidents to our region. As you know, there are accurate statistics on this, dating from 1930, the year of the eleventh general census. The data are therefore already more than five years old: but since then, the situation has improved rather than worsened due to the return of a large number of foreigners to their native region or homeland. We can therefore safely consider the number of dissidents, which at the time amounted to over six and a half percent (exactly 6.55 percent), as a maximum; from which it follows that Limburg is currently approximately 94 percent Catholic! This will surprise many who tend to focus only on the mining region: after all, the relationship between fellow believers and dissidents there is much less favorable! On December 31, 1930, Heerlen had over 20, Hoensbroek Nearly 24 percent of non-Catholics live in Brunssum, while Geleen-Lutterade recorded only 14 percent dissidents. All other municipalities remain below this percentage: Kerkrade has less than ten percent, and Maastricht no more than six percent, including all "non-churchgoers." It goes without saying that the rest of the province exhibits a picture of religious cohesion unlike any other region in the Netherlands. Thus, there are 52 municipalities with no more than ten dissidents. And north of Maasbracht, there are eighteen adjacent municipalities on the left bank of the Meuse with a total of 31,386 inhabitants, of whom 31,337 are Catholic! The two most populous of the twelve municipalities, where all residents are Catholic without exception, are Limbricht with 2,088, and Schimmert—the birthplace of Bishop Lemmens—with 1,766 inhabitants. Anyone who calmly and impartially examines these series of figures, which we could supplement with numerous others if desired, will come to the conclusion that the invasion of dissidents poses no significant threat to the Catholic Church in Limburg. This danger is even less, however, because the religious bond that binds them together is exceptionally weak, and the confessional divide among Protestants has also reached alarming proportions in our region. The Dutch Reformed Church, the heir to the formerly infamous State Church, which caused our ancestors so much suffering, currently comprises only 2.91 percent of the population. And this small group lives almost exclusively under the smoke of the chimneys of the State Mines. Everywhere else, their numbers are completely insignificant. Therefore, the danger for Catholic Limburg most certainly does not lie there! Where it does lie, we have already demonstrated so often that this time we will not repeat ourselves. But the danger is well known: and we are working hard to avert it.

With God's help, Limburg will also overcome National Socialism!

May 22, 1936 It is our firm principle to provide an opportunity for unhindered discussion in our columns on all open issues. Indeed, just as it is our duty to exclude false teachings on religious and moral matters from our publication, we consider it equally useful and necessary to accommodate orthodox fellow believers in the presentation of their opinions, even when they differ from ours in many respects. Therefore, we now gladly give the floor to two young foster children of our Nijmegen Alma Mater—vulgo: to two students of the Catholic University—to enable them to share

their ideas about Latin civilization and its significance for our region widely. Here is what they have to say on the matter: By analogy with "virtue in the middle," one could also say "truth in the middle," in the sense that untruth usually originates in some exaggeration or one-sidedness. This was regrettable in the follow-up articles "Latin Civilization" in the Limburgsch Dagblad of April 24th and 25th. The author saw classical culture in Limburg in danger. He took on the role of its defender, but in his impetuous zeal he killed not only its enemies, but also its allies and its entire foundation, leaving his protégé herself bare and uneasy in a plain devoid of lifeblood. The classical cultural treasure is a great asset, and dangers may loom over it, but this is no reason to distort the truth. This serves no purpose, and certainly not Limburg. The impression given by the aforementioned article is not that we should be wary of discarding cultural gifts handed down to us through the centuries, but that in past centuries the Romans were the sole bearers of culture and civilization, far superior to the murderous, burning, plundering, and virgin-desecrating barbarians, also known as Germans. That these, in a murderous rampage, eradicated that entire civilization root and branch from our region, yet left so much of it that the author can claim that we Limburgers have preserved Gallo-Roman civilization intact and were never Germans. That we must therefore stand firm against the Germanic hordes—in this case, the Germans, who, as evidenced by the World War, have remained just as murderous and uncivilized—hand in hand with our southern neighboring states. This representation is absolutely one-sided and incorrect. If we confine ourselves for the moment to the present, it is undeniable that we Limburgers, like the people of Brabant and the Dutch, are Germanic. The migration certainly had the consequence that the Germanic people advanced from the Rhine border to the coal forest, which roughly coincides with the present-day border between Flanders and Wallonia. Even the most superficial observer must be struck by the physical differences between the average Limburger and the average Walloon, and surely no one would want to claim that general civilized Dutch or the Limburgish dialect are Romance linguistic forms. And although many may still harbor a distrust of anything beyond the Moerdijk, and although many Limburgers may not feel entirely at home when walking around Delft or Zwolle, they will certainly feel like strangers in France. The Limburg people's background is core Germanic, just as the background of the entire Dutch people, the English, the German, and the Scandinavian peoples, is Germanic. However, we must take into account the fact that, due to its geographical location in (South) Limburg, of all Dutch regions, the clash of these two elements, Gallo-Roman and Germanic, has personally experienced. It borders directly to the south on the Romance-Germanic language border, which is the ultimate exponent of this friction between Gallo-Romans and Germanic peoples. The area on either side of this language border, which in Belgium roughly covers the course of the Roman road from Boulogne to Cologne, was once the major friction point on which Gallo-Romans and Germanic peoples moved in motley intermingling. The further north one moved from this line, the more numerous the Germanic peoples became and the fewer the Gallo-Romans. Towards the south, however, the Gallo-Romans became increasingly numerous, and in a corresponding measure the number of Germanic peoples diminished. Which is also self-evident: after all, the Gallo-Romans advanced from the south, while the Germanic peoples in the fourth century AD... began to descend from the North. The lines of the two centers of radiation not only touched but also slid over and through each other, resulting in the colorful amalgam we mentioned, between which, over the centuries, the language border was to emerge. This border is nothing other than the expression of the ultimate, still relative, stabilization in the opposition of these two forces. In other words, both Gallo-Roman and Germanic influences, to the extent they could advance, pushed against each other. This push and counter-push was long associated with a fluctuation of forces, but ultimately, a state of equilibrium emerged: the two opposites remained firmly pressed against each other, but each retained its own territory. South of this tangent, the Gallo-Roman element gained dominance and absorbed all that was available of Germanic; North of it, Germanic finally gained the upper hand and absorbed everything Gallo-Roman. Therefore, we find neither a purely Gallo-Roman population south of the line, nor a purely Germanic one north of it. Nevertheless, we call the population south Gallo-Roman, because that is essentially what it is, and likewise that north Germanic, because that is essentially and originally what it is.

I.

This by no means denies that both adopted much from each other and therefore have much in common. And regarding the exchange of cultural goods, it is undoubtedly true that here the Gallo-Romans, precisely because they possessed a higher culture, were

the givers par excellence, and the Germans primarily the receivers. But that did not mean all Germans became Gallo-Romans. This did, as it were, happen with the Germans who lived south of the current language border; They were absorbed into the Gallo-Roman dominance. North of the language border, however, the exact opposite happened: the Gallo-Romans who were once there were dissolved into the Germanic dominance. The population of Walloon Belgium and Northern France thus absorbed Germanic blood from the invading Franks, who perished there as such, that is, as Germans—for that is what they were; yet, they would not have left behind their name tag: France, i.e., the Empire of France, owes its name to them. Conversely, among the Limburgers and Rhinelanders, blood mixing occurred with the Gallo-Romans who were already present there, which greatly favored their national character. Moreover, they benefited most from Gallo-Roman civilization. Yet, they remained Germans nonetheless. Peoples form in an inscrutable way, but at a certain point they exist, and this existence can no longer be denied. Race, language, psychological characteristics, historical and economic ties—all work together to form a single collectivity that feels united and desires to remain so. However, cultures, guided by reason, which is fundamentally the same in all people, thus being without boundaries, expand across different peoples or segments of the population without regard to national boundaries. Not that a culture undergoes no changes on its journey of conquest. For the non-intellectual elements in humans—character, mentality, taste, and so many other factors—also contribute to the construction of a culture. And these factors are connected to the soul of people. The Romans, who carried the light of civilization into the darkness of the North, were themselves rough and hard farmers when they adopted Greek civilization in the second and third centuries BC and imprinted upon it the stamp of their own sense of justice and their own striving for practical utility. Thus, this civilization acquired a Gallic influence in France and all the lands up to the Rhine, even to Cologne, so that it is rightly called Gallo-Roman. On the other side of the Rhine lived the Germanic peoples with their very special national character and their own, albeit still low-level, culture, which we still know primarily from the Germanic law that has come down to us. In the period of the Migration of Peoples, now an exchange of Roman and Germanic cultural elements took place, in which the much superior Roman civilization had the lion's share, but was transformed into the Germanic national character. Limburg, too, preserved the Latin cultural treasure, transformed into the Germanic national character and blended with Germanic cultural elements. Classical civilization also penetrated the Northern Netherlands, but the Germanic factor remained much more dominant here than, particularly, in Limburg. In Limburg, two civilizations interpenetrated, and the classical one was preserved there the most strongly of all the regions in our country. The same thing happened in the Rhineland, which is contrasted with the land on the right bank of this river, whose civilization has remained much more purely Germanic. Instead of orienting our region one-sidedly towards the South and raising it in contempt and aversion for anything non-classical, it would be better to emphasize that the Netherlands, but Limburg and the Rhineland in particular, constitute the area where two cultures, upon which our Western civilization rests, reconciled and united. These are very elementary concepts that are assumed to be familiar to anyone who studies Latin civilization, and particularly its influence in Limburg. However, when, instead of considering the issue purely objectively, one conflates politics, sentiment, religion, and science and sacrifices them to a political standpoint, one ends up with such a one-sided view of things, as we pointed out in the aforementioned articles. Let us not follow the example of some and regard history as a piece of modeling clay, which anyone can shape and mold according to their current political or other thinking. Science exists for the sake of truth, not for the N.S.B., the Roman Catholic Church. To provide St. P. or any other parties with propaganda material. Had the author considered the matter more calmly, he certainly would not have been able to claim that the Franks were never Germanic. If he could provide even a little evidence for this, he would undoubtedly have made one of the greatest historical discoveries of the last centuries. The discovery of the foundations of several Roman villas certainly points to a highly developed civilization of the Roman colonists in these regions, but says nothing about the cultural status of the original population, who likely stood at a much lower level of development. As for the destructive effect of the Migration of Nations, the author would do well to read the book by the French author F. Lot, *La Fin du Monde Antique*, or the report of the speech delivered by Professor Gosses at the sixteenth Dutch philologists' congress, in which he states, among other things, that a peaceful infiltration of Germans had already taken place before four hundred, and that the Roman Empire, with Germanic soldiers, fought against the Germans of the Migration of Nations. We quote:

"A clear national antagonism between the inhabitants of the Empire and the Germanic people is rarely expressed, though there is, of course, a sense of hostility toward those who plundered the borderlands and toward those who arbitrarily and violently sought to establish themselves within the Empire. Yet, once such invaders had established themselves there, a passable relationship soon developed between native and foreign invaders. A few aristocratic literati might have been justified in a certain haughty contempt; the lower classes apparently felt more comfortable in a state of simple structure under a barbaric king and his followers than in the Empire, which no longer offered security, had become top-heavy due to its bureaucratic apparatus, and where people enjoyed little freedom. Moreover, only smaller Germanic bands took possession of the Empire—which they did not want to destroy; Charlemagne was the first to assume the imperial crown. Therefore, there was no question of a migration of peoples; entire tribes did not cross the Rhine. There are many more errors that could be listed in this emotionally inspired article. However, the intention is not so much to denounce errors as to present the truth without bias and without politicizing science. Limburg is Germanic with a strong Latin influence; no region in our country has preserved this as strongly as Limburg, which represents a tremendous cultural treasure for our province. This influence gives the Limburger that special nuance in their civilization that the average Dutchman, for example, so often misses. However, this should not make us close our eyes to the cultural heritage we have received from the Germanic side, nor should it cause us, because of a political form of government, to harbor a one-sided hatred against a people with whom we have so much in common. At the end of these reflections, we ask the reader to suspend his judgment until he has read our response in the next issues of our magazine.

May 23, 1936 It is easy to forgive young people for not yet devoting the meticulous care to the definition of their ideas that people usually acquire only later in life. Therefore, we are only mildly surprised that the reader is already presented with a completely incorrect representation of our train of thought in the first paragraph of the voluminous work of our Nijmegen friends, which we published in its entirety in our previous issue. Indeed, the notion that we consider "classical culture in Limburg" to be threatened is a pure fabrication. In our nearly four-column double article, we didn't mention a single word about classical Rome! And rightly so! After all, when Latin civilization penetrated our regions, the classical period in Rome was already well and truly over. True, the inhabitants of these lands had experienced a military occupation with Roman garrisons since Caesar's triumphal march through Gaul, but peaceful land colonization only began in the last years of the first century AD, reaching its peak of prosperity towards the end of the second century. However, Tacitus, the Roman historian with whom the line of classical authors ends, died in the year 119; and one can easily surmise that the influence of his works on the respectable farmers in the far north of the Empire must have been very limited in scope and very limited in its penetration. No, Limburg only became permanently acquainted with classical culture during the Renaissance, which was indeed a movement "foreign" to our region, although its influence on the more highly developed part of the nation should not be underestimated. It was not classical culture, but Gallo-Roman civilization, that prevailed in Limburg for over a hundred years. And how widely it was spread across our hills and valleys, how towering it towered above the barbarity on the other side of the Rhine, is proven far better by its remains in the soil of our region than by long and learned arguments. That this civilization was violently eradicated is firmly established by the fire marks revealed in almost all excavations, which have left their indelible mark in the marlstone time and again. And that, ultimately, after the fall of the Empire, the Christianized civilization of Rome continued to prevail in these regions, surely we do not need to teach these young people!

And therefore we repeat our final conclusion, which has remained completely untouched by the arguments of the young writers about "classical culture," and which we formulated in our April 25th issue. as follows: Limburg remained Catholic, and Limburg continued to bask in the sun of Latin civilization. For centuries, it knew no other written language than Latin. And it is under the dual and inseparable influence of Rome's religion and Rome's superior culture that the mixture of peoples and races, fused on our soil in the melting pot of centuries, has become a solid unity, loyal to sovereign and fatherland, but above all inextricably linked to its spiritual cradle: the Church of Christ, whose Vicar resides in Rome.

Against the completely distorted image that the young authors attempt to foist upon us at the beginning of their piece, they then present their own, in which they have

104985 mixed "Wahrheit und Dichtung" in a rather deft, yet by no means opaque, manner. Their argument essentially boils down to this: that the current language border also constitutes the racial border, and that we are therefore Germanic. Moreover, The Franks, who from the beginning of the fifth to the end of the ninth century—for almost five hundred years—set the tone in Gaul, and who dominated at least the north and center of the country to such an extent that it still bears the name France, were, according to the authors, without the slightest doubt, purebred Germans! And they are so convinced of this "truth" that they signal its denial in advance as "one of the greatest historical discoveries of recent centuries." On the other hand, they downplay the migration of peoples, with its devastating and destructive consequences, as a kind of peaceful penetration, which at least the lower classes were not unwelcome: besides—as they present it—"only smaller Germanic bands have taken possession of the (Roman) Empire." And then follows their final conclusion: "Limburg is Germanic with a strong Latin influence," accompanied by the sincere warning against popular hatred "because the political form of government" in the Third Reich. History is certainly not solely a sequence of facts and dates. But although, especially when writing the history of civilization and peoples, the spirit that speaks from historical data and that animates and enlivens actual events, are never neglected. Yet, facts, not fantasies, constitute the only correct and sound foundation upon which the historian must build. And now, our readers will undoubtedly have been struck by the fact that the voluminous document by our two young Nijmegen natives overflows with assertions and observations, but is completely devoid of any factual material. The current dialect of Limburg is the only fact they invoke to support their Germanophilic theses. We continue to search in vain for any positive fact or any date! Therefore, allow us to refresh the memory of the esteemed contributors and present them with the history of these regions at the time of the migration. We therefore resume the thread of our story where we left it off at the end of our article of April 25th: with the invasion of the Vandals or Wandalians in the year 406 of Our Lord. And then we see that this "small Germanic band," originating from the Oder River basin, not only razed the Roman fortresses of Coriovallum, Maastricht, and Tongeren to the ground in our region, but also ravaged Gaul with fire and sword, and, continually destroying and plundering, penetrated all the way to Spain! Here, eight years later, they were stopped in their tracks, defeated by the Romans with the support of the Visigoths, and finally pushed back into Galicia. But in 428, the Vandals undertook a second plundering raid in the increasingly decaying Roman Empire. Once again, they traveled through Pannonia (present-day Hungary), Rhetia, and Gaul to Spain, after which they crossed over to Africa two years later, from where they made all the coastal regions of the Mediterranean unsafe with their raids and plunder. What happened to them afterward, and how their national existence came to a bloody end a century later, lies beyond the scope of this article. But that the idea of a peaceful penetration by "smaller bands of Germans" pales in comparison to such brutal events, perhaps our young Germanophiles will now understand for themselves. What remained of the original population in Limburg and North Brabant after the passage of these wild hordes is easier to surmise than to describe. For to describe it truthfully, either reliable historical sources or relics in the soil were required. And both are so completely lacking that Professor Holwerda, on page 171 of his standard work on "Dutch Early History," can rightly say that "a state of desolation must have set in here." Indeed, for the entire fifth century, there exists nothing but popular tradition that names a series of successors of Saint Servatius, or perhaps invented their names later to fill the painful gap in the Episcopate of Limburg. 1) This latter supposition gains in plausibility when we consider how the devastating raid of the Vandals was followed, less than half a century later, by the even more formidable storm of the Huns under their chieftain Hetzel or Attila. This "small band," however, was not of Germanic origin, but, according to the unanimous testimony of contemporaries, of Mongolian origin, which shows that it was virtually indifferent to the Christian peoples of those days whether they were bitten by the Germanic or the Mongolian tomcat. It is known that through the collaboration of Franks and Romans, whose general Aetius was appointed commander-in-chief of the allied troops, these precursors of the Bolsheviks were decisively defeated in the Marne Valley near Chaloras in the year 451 AD. How many original "natives" remained after this double hurricane of fire and steel in this formerly so captivating region, where not only a few villas but entire villages with farmhouses, some opulently built of stone, some simple ones of wood and clay, testified to Latin culture, and where St. Servaes stood at the head of a devout Christian people, is now impossible to determine. But that despite everything, a number of Gallo-Romans must have lost their lives is evident

from the efforts the Franks made at the end of the fifth century to reclaim these regions for Latin civilization. And here we come to the crux of our argument: the origins of the Franks, about which we hope to provide a number of interesting details in the next issue.

1) The "Acta Sanctorum" names St. Agricola, St. Ursinicus, St. Designatus, St. Renatus, St. Supplicius, St. Quirillus, St. Eucherus, and St. Falco as successors of St. Servaes. But since further details of his life are either entirely or purely legendary, this nomenclature doesn't get us much further.

May 25, 1936 In our previous article, we saw that the invasions of the Vandals and Huns wiped out Latin civilization in this region, and that the areas through which the "Gccsci of God" had made its way were left behind as virtually deserted places, as is also evident from the absence of remains in the soil. Finally, we saw that this desolation ended when, in the year 491, the Franks reached and occupied Limburg from the south. The author who tells us this is St. Gregory of Tours, who wrote the history of the Franks in Latin in the second half of the following century. This Holy Bishop was born in the year 540 and in 573 was invested with the episcopal dignity, which he held until 594, the year of his death. Besides his twelve-book "Historia Francorum," we possess several other works by him, among which "De Gloria Confessorum" stands out, which, like the first, is of paramount importance for the history of these regions in the sixth century AD. And now, it is quite remarkable that this authoritative writer locates the origins of his compatriots not in the North, but rather in the Southeast. According to "the opinion of many," he writes, "the Franks originated from Pannonia" (i.e., the Hungarian plains). Now, this opinion might not have been given much weight if it were not fully supported by the "silent witnesses" found in abundance in the graves of this tribe. And here we once again encounter the tireless researcher of "early Dutch history," Professor Dr. J. H. Holwerda. It must be due to the lightheartedness of their youth that our two Nijmegen natives did not consult this work before taking up their pens to establish the Germanic origins of the Franks as an indisputable fact. After all, we had already referred with due insistence to this eminent scholar of antiquity in our first article on Latin civilization. Had the young contributors heeded this urge, they would have made the "discovery" in this work, published eighteen years ago, that, given the undeniable evidentiary value of the numerous discoveries from this period, virtually nothing remains of the alleged Germanicity of the Franks.

Professor Holwerda begins the eighteenth chapter of his source study with an explanation of the prevailing view regarding the origins of the Franks, as it can be found in all history books and booklets, both major and minor. The Franks are said to have lived north and northeast of the Lower Rhine and formed a confederacy there, which expanded more and more until all the Germanic tribes living in this region were absorbed into it. Two main groups are distinguished in this Frankish confederacy: the Ripuarians, inhabitants of the right bank of the Rhine, and the Salians, who are said to have played an important role in our country and originated from Salland in Overijssel, from where they increasingly pushed south, lured by the wealth of the Gallo-Roman regions. From our region, therefore, the Frankish influence that destroyed Roman power in Gaul would have originated. "The presentation given here," the author continues, "certainly contains nothing new for anyone, but does it also contain the truth? — When we look around in our quintessentially Frankish regions, in North Brabant or the Betuwe, for the remains of Frankish culture, we find NOTHING!" But elsewhere the antiquarians of the Ie have found more! After all, it was more than two centuries ago that that remarkable royal tomb was unearthed in Tournai, with its wealth of gifts—gold, precious stones, weapons, jewelry, and whatnot—in which a gold finger ring bearing the seal "Childerici regis" proved it was the resting place of that Frankish prince who died in the year 481. And those same characteristic objects—weapons, ornaments, pottery, and glass—all equally peculiar and undeniably recognizable, have since been recovered in almost overwhelming quantities in the vast cemeteries of northern France and Belgium, or along the Middle Rhine (p. 164). And then, using various historical sources, the scholar carefully examines what ancient writers say about the Franks. The author then refers both to the German Brenner, whom he calls "the best expert on Frankish culture," and to the ???.

Frenchman Fustel de Coulanges then concludes briefly and powerfully: "After our acquaintance with the texts of the Latin writers, we preferred to illustrate, in the words of a well-known historian, how our historical ideas regarding the Franks, however much they may have been accepted as dogma, are completely at odds with how those conquests had taken place."

"The invasion of Gaul by a Frankish people, how the formation of a Frankish confederation in our regions and the settlement of those Franks in our homeland—how all of this is nothing but a product of modern historical fantasy" (p. 109). And now, on p. 170, follows a quotation that we especially recommend to the attention of our Nijmegen friends: "That a dialect is spoken here in these regions, which our linguists are accustomed to calling Frankish, means nothing in this respect, as long as it has not been proven that this name is rightly given to this linguistic phenomenon and that the population who first spoke this language did not come to these regions either long before the fifth century or long afterward." May the esteemed contributors learn from this that linguistics is a very fine science, but that it has only relative significance for history. Whoever clearly envisions this truth is already well on the way!

But when the Franks were not "Nordic people", where did they, with their peculiar cultural forms, come from? Professor Holwerda also provides a clear and straightforward answer to this: they came from Southeast Europe, and specifically from the shores of the Black Sea. "There, in southern Russia and further in the lands north of the Balkans, in the plains of Hungary, ancient Pannonia, lies the cradle of what is so characteristic of Frankish civilization" (p. 185). We cannot possibly reproduce in detail the argument of the Leiden professor, who devoted twenty pages of his book to the description and comparison of numerous cultural remains discovered before and afterward along the long and distant path the Franks followed in their migration from the shores of the Black Sea to the banks of the Seine and Loire. We refer those interested to the interesting work, illustrated with numerous photographs, which can be found in any good library. But our younger opponents will surely already have understood that a quiet and well-considered historical perspective must lead the astute researcher to recognize that the Franks, although they were certainly not purebred Scythians (Southern Russia was then called Scythia) or Hungarians, should certainly not be called Germans. This is further confirmed by the examination of skulls from a Frankish burial ground near Katwijk, which, according to the remains, is undeniably Frankish. The anthropologist Dr. Sasse, who conducted this research with scientific rigor, expressed his disappointment at the time in the Antiquity Reports of the National Museum of Antiquities (Volume V) that "the skull types found displayed such a mixture of races." No wonder! says Professor Holwerda: "After all, history had taught him to see in the Franks purebred Germans from the North!" But he concluded that little or nothing of the typical characteristics "of Nordic people" could be found in the Franks. We will conclude for this time with a heartfelt Advice to our Nijmegen friends. It is a rather unpleasant habit these days for young people to think and speak disparagingly of the knowledge of their elders. One senses this disparagement in the way they all too often try to break the staff of the work of the elderly. But when they themselves begin to work, it usually soon becomes apparent that the youthful shortcomings of frivolity, thoughtlessness, and lack of serious study play their ugly tricks. And therefore, this is our free advice to the young people of Nijmegen: begin with a scholarly study of Limburg's history. Don't limit yourself to the cursory knowledge that a superficial reading of magazines and journals like "De Dietsche Gedachte" and similar trend-setting periodicals can provide. But consult serious and reputable authors and antiquarians; and don't try to turn your study into a kind of entertainment. Then you will be able to form a calm, thoughtful, and well-documented judgment of Latin civilization in Limburg. And then the author will It is an honor and a pleasure to exchange thoughts with you once again.

May 26, 1936 We apologize for the excessive length of our reply to the young contributors from Nijmegen, who wrongly attempted to diminish Limburg's Latin civilization and ascribe a Germanic origin to Frankish culture. However, we consider the correct knowledge of Limburg's past too important for the current generation to allow it to be buried under the delusions of a historical system distorted by "alien science." Therefore, in this final article of our new series, we are permitted to provide a brief overview of the history of these regions during the Frankish rule.

The kings.

The first to regain a foothold here after the devastating storms of the Vandals and Huns was the famous King Clovis, whose baptism on Christmas Day in 493 opened a new era in the development of Gallic Christianity. We know how this king succeeded his father, Clovis, in 481, whose famous royal tomb in Tournai we mentioned in our previous article, and how, a year later—even before his convert—he established

Frankish rule in the land of Tongeren. The low level of culture at which the few natives who survived the horrors of the Germanic and Mongolian invasions led their miserable lives in these regions is evident not only from the almost complete absence of remains from this period, but no less from a famous passage in the work "De Gloria confessorum" by St. Gregory of Tours (540-594). Here is what we read in this work about the state of decay in which the tomb of Limburg's saint, Bishop Servatius, was found by his successor in the sixth century, Saint Monulfus: "The faithful had repeatedly built a chapel from wooden beams and planks, which, however, was always destroyed by storms or collapsed of its own accord. But when, in due course, Monulfus became bishop of this city (Maastricht), he built a large temple in honor of his illustrious predecessor, which he richly decorated, and into which he had the saint's remains transferred with great pomp and splendor." (Gapul LXXII) 1) This remarkable quotation, which dates from the end of the sixth century, reveals many things: first, that approximately sixty years after the arrival of the Franks "in the land of Tongeren," on the site of Maastricht, which had been twice destroyed, a settlement had already arisen that, with a little good will, could be called a "city"; Secondly, that despite the devastating storms of migration, the memory of the first Bishop of Tricht was by no means lost; thirdly, that therefore, despite everything, "Limburg continued to bask in the sun of Latin civilization," as we rightly wrote in our April 25th issue; fourthly, that by the middle of the sixth century, this civilization had already made such progress among the relatively recently converted Franks that the son of one of their nobles could be consecrated bishop and attain the crown of sainthood; and fifthly, that simultaneously with the rise of Rome's influence, culture also rose to such an extent that the construction of a large and richly decorated temple on the tomb of St. Servatius once again bore witness to the life-giving power of the inseparable twin sisters: the Catholic Church and religious art!

Outside the influence of devastating Germanic rule, Latin civilization was able to flourish over the next three centuries amid a population undoubtedly composed of numerous disparate elements, in which the descendants of the Eburones had intermingled with Roman colonists, with a few remaining immigrants, and with the far-from-purebred Franks. But these descendants reappeared like a flower after a thunderstorm as soon as they were once again nurtured by the spiritual warmth of Roman religion and culture. Once more in Limburg's history, this culture was threatened with destruction. And once again it was the Germans who brought fire and plunder, death and destruction to these peaceful lands. "Furo Normannorum, libera nos Domine"2) sang the pious crowds as they marched in the Procession of the Cross, making the hymns of all the Saints resound through streets and squares, fields and meadows, just as they do today.

How this new and expanded edition of the old furor Teutonicus ravaged these regions is demonstrated by the telling fact that not a single monument remains from the Frankish Christian period, which lasted over three centuries in this region, although the example of St. Monulfus undoubtedly found widespread imitation. Like the Vandals or the Huns, the Normans spared not a single church or farmstead on their destructive path. And when Count Arnolf finally averted the storm at the Dyle in 951, Latin civilization could begin to rebuild what the Germanic destructiveness had burned down. Look, when one examines this series of established key facts from Limburg's past through history, one has every right to be astonished by the unreasoned parroting of the palpable fable from the Third Reich about a "Nordic race" with its own "national character," which supposedly made not only Prussia or Pomerania, but also the North and South of the Netherlands happy with the benefits of a noble character and a high-quality culture. That the NSB parrots such follies is easy to understand, and dubious.

It's easy to forgive. She is, after all, the mouthpiece of "purebred" National Socialism. But that young Catholics from good families allow themselves to be so deceived by the false illusion of German science that they retell such Germanic nursery tales with faithful faces—well, that's what we call a most ominous sign of the times. Of course, we must not "conceive hatred" for our kindred spirits in the Rhineland, who are currently paying for their attachment to the religion and civilization of Rome with the persecution and torture of the best of their priests and leaders. But we may and must detest with all the strength of our soul the "political system" that currently prevails in the Third Reich. For this system is inextricably linked to a worldview that propagates the most dangerous heresy the Church of God has ever faced in its centuries-old existence. Let our young friends

from Nijmegen, therefore, reflect deeply on this question and diligently research the historical sources. Undoubtedly, science exists for the sake of truth, not to provide some party with propaganda material. But truth resides in the chair of St. Peter in Rome, from where first Gallo-Roman civilization, and later Christianized civilization, originated on its salutary path to this region. Therefore, let us Catholics not be blinded by racial delusions and pseudo-scholarship, but exert all our strength for the untainted preservation of this civilization, which is now once again threatened by a Germanic horde of "Nordic people." And let us unreservedly follow our bishops on the path they have once again pointed out to us, which leads not to Germanism, but to "Roma aeterna," the eternal abode of Latin civilization and the seat of true and indestructible Christianity.

1) This quotation can be found, among other places, in the interesting work of Mgr. Fr. Bock, Canon of Aachen and Chaplain Willemsen, treasurer of St. Servatius in Maastricht, in which they extensively described and richly illustrated the history of the "Antiquités sacrées" in the two old collegiate churches (St. Servatius and Our Lady) (Jos. Bussel, 1873).
2) Translation: "From the wrath of the Normans, deliver us, Lord."

June 17, 1936 We received the following letter from the two Nijmegen students who had previously appeared in our newspaper:

It should be noted in advance that the following defense to the three editorial articles published in this newspaper on May 23, 25, and 26, 1936, is extremely brief, as the editors limited our space.

To the point: When our article of May 22nd spoke of "classical culture" and the editorial of May 23rd speaks of the "classical period in Rome," every high school student knows that "classical" in the second expression means something different than in the first. By ignoring this distinction in meaning, our opponent could be guilty of misleading word-juggling. We reiterate our objection to the author for presenting the complex phenomena of migration and the fall of the Western Roman Empire one-sidedly and simplistically, thereby giving a false impression to readers who are incapable of independent judgment in this case. We refer to Tijdschrift voor Geschiedenis issue 1, 1936, pp. 5-42. In addition to his own opinion, Prof. Gosses (especially on pages 7-13) includes statements by, among others, the French Fustel de Coulanges and F. Lot, the great Belgian historian Pirenne, and Bishop Salvianus. Who will accuse them of "Germanophilia"? Romantic but scientifically untenable are the views of, among others, the Germanic peoples outside the borders of the Roman Empire as "purebred savages," his idea that the Germanic invasions began only to fuel a Germanic urge for destruction. The opponent is guilty of a particularly dangerous kind of cultural Bolshevism, by having cultures or peoples "violently" "exterminated" in more than one place, only to later include them as reality in his argument.

History is not that simple, and few cultures and peoples have died a purely violent death. Even the Western Roman Empire "est mort de maladie interne," as the Frenchman F. Lot puts it. The opponent wrongly believes that our proof that the Limburgers are Germanic by origin rests on the argument "that the current language border also constitutes the racial border." We never argued this, but we did argue that the Romance-Germanic language border constitutes the border between Romance and Germanic; and this is something different. One can only surmise which unscientific conception of "race" and "Germanic" the author must be harboring. We fear that he equates Germanic with Germans or perhaps even with Nazis. The opponent brings up the Normans unnecessarily, but again one-sidedly from the perspective of an unhistorical point of view.

A single statement by a professional historian might give him pause for thought: "Our West India Company in the 17th century still clearly displays the dual aspect of a trading company and a privateering company" (Prof. Gosses). That a different historical representation of Germanic peoples, Norsemen, etc., is also possible in journalism, is demonstrated by an article "German and Roman" in the Nieuwe Eeuw of May 12th, by Sapiens. The Frankish Question: According to Caesar "de Bello Gallico" 11:4, most "Belgae" descended from the Germanic peoples on the other side of the Rhine. They had driven out the Gauls who had previously inhabited this country. Present-day Belgium was therefore inhabited by any remaining Gauls and by the invading Germanic peoples who had arrived from the north and the east. A few lines further on, Caesar mentions the Germanic tribes: Condrun, Eburones, Caerosi, and Paemoni, who, according to further reports from him and others, must have inhabited roughly the area of Belgian Limburg, Dutch Limburg, and the region between the Meuse and the Rhine. And Tacitus speaks of the Germanic Tungri, who had their center in present-day Tongeren. Along with the Betuwe and South Holland, South Limburg is the only part of the Netherlands that experienced Roman colonization. This lasted from 100 BC to approximately 200 AD, when the flourishing of Roman culture

ended. Germanic troops then repeatedly flooded Limburg, and the peace before colonization was over. Only south of the Maastricht-Heerlen line does Roman influence remain. By approximately 300 AD, the Romans had definitively abandoned everything north of this line. What happened to Limburg during the fourth century and the migration of peoples is unknown. What is certain, in any case, is that after the disappearance of the Roman colonists, only Germanic elements were added to the population of Limburg, as all the classical writers of the time (Ammianus Marcellinus, the Panegyrici, Zosimus, etc.) show that the Germans, and especially the Franks, overran the area north of the Cologne-Boulogne road. In 358, the Salians appear to have been living in Toxandria (roughly present-day North Brabant) for quite some time. The quotations cited by the opponent from the work of Professor Holwerda do not prove that the Franks were not Germanic, only that many cultural elements in Frankish civilization were borrowed from Eastern peoples such as the Scythians and Sarmatians. "People" and "culture" are not geographically coherent concepts. The Franks achieved a relatively high level of culture, enabling them to "adopt" a large part of Roman civilization, namely in Wallonia, but also in Western Flanders and Northern France. At the same time, they absorbed cultural elements from the aforementioned Eastern peoples, specifically through the mediation of the Goths. A powerful cultural current, in fact, flowed from East to West in the 4th century. This is also how the appearance of St. Servatius (an Armenian!) in Limburg can be explained (cf. Prof. van Ginniken: "Onverwachte oud-Nederlandsche aansluitingen" (Unexpected Old Dutch Connections), in *Onze Taaltuin* 1933, pp. 1-18). The opponent makes it seem as if we hadn't paid sufficient attention to the work of Prof. Holwerda, published in 1918. We can only reply that a second edition of this work appeared in 1925, which, according to the preface, became virtually a completely new book. In it, Prof. Holwerda mentions on p. 248, the Franks are explicitly called Germans, which invalidates the opponent's entire argument. The Germanic origin of the Franks is, incidentally, not doubted by any serious historian, least of all by the French (F. Lot, G. Kurth, Fustel de Coulanges). The troops of King Clovis, who occupied Limburg from the south in 491, encountered a Germanic population there; the Franks themselves under Clovis had certainly not yet been transformed into Gallo-Romans. But apart from that, Clovis's troops were small, and migrations did not occur under him. Therefore, if Gallo-Romans or Romanized Franks did come and stay, they would have been absorbed into the Germans due to their small numbers (the reverse process south of the language border). However, they brought with them the adopted Roman civilization mixed with Frankish elements, and this was precisely what developed for various reasons (the Meuse as a road, Tongeren, later Maastricht, the episcopal see, the foundation of the Roman colonization had a very significant influence in South Limburg. This succinctly demonstrates 1) that the opponent wrongly disputed the Germanic origins of the Franks and even more so of the Limburgers, and 2) the proper place that Latin civilization occupies in our region. It is regrettable that the opponent, in his article of May 26th, again raises irrelevant issues. This includes digressions about the Third Reich, the NSB, expressions such as "Nordic race," and "Germanic nursery tales," "foreign science" (sic) and the phrase about "Catholic youth, etc." All this serves to arouse suspicions in the reader, which are simply absurd. The passage about the ecclesiastical teaching authority, since this authority never ruled on the Germanic origins of Franks or Limburgers, can only foster more irresponsible associations. We cannot have any respect for this journalistic method. Nor does it demonstrate particular sensitivity that the opponent feels he should give us good advice for our scientific education, when he should know that this should be better entrusted to the University of Nijmegen than to a newspaper editorial team. Only, let us remember that "science" does not suffer from Germanophobia.

Postscript from the Editor-in-Chief.

We did not want to deny the young Nijmegen residents the opportunity for a rejoinder, even though their argument barely touches on the issues at stake, let alone resolves them. Therefore, after reading and rereading their concluding remarks, we need not alter a single word in our initial proposition:

"It is under the dual and inseparable influence of Rome's religion and Rome's superior culture that the mixture of peoples and races that have melted together on our soil in the melting pot of centuries has become a solid unity, loyal to Queen and Fatherland, but above all inseparably connected to its spiritual cradle: the Church of Christ, whose Vicar resides in Rome.

Has this main proposition been shaken by our Nijmegen friends? Or has it remained clear, distinct, and unassailable, both before and after? Have the esteemed

contributors even offered a shred of evidence that Limburg's population, whether in earlier or later centuries, was even approximately racially pure and Germanic?
 105385 Indeed, no! At most, one can differ in opinion about the extent to which the various elements in the Over time, they have been intermingled, and how large a percentage of each of the constituent parts must have been!
 The same applies to the Franks. Let the young people now go and see for themselves the artistic products of Franco-Gallic culture, and in particular the rich finds
 105390 brought to light as early as 1653 with the discovery of Childeric's royal tomb in Tournai. Then they will see that this culture bears the clearest traces of both Latin civilization—e.g., in the inscriptions—and of Eastern decorative art, but that no trace or shadow of Germanic influence can be detected in it.
 Meanwhile, these Franks were also undeniably of mixed race: their skulls prove it!
 105395 Most likely, during their long journeys, they were mixed with numerous foreign, also Germanic, elements, but certainly, through art and culture, they originally belonged to a people from the Southeast, where Germans have never lived! Professor Holwerda has demonstrated this with the evidence. Irrefutably demonstrated in the hand: and this conclusion can also be found in the second revised edition of his book! Indeed,
 105400 "a mighty cultural current moved from East to West in the fourth century," but this brought us anything but Germanic, but thoroughly Gracco-Roman civilization: Saint Servatius, called "Sarbatios" by his colleague Athanasios, is a living example of this! And the Franks, who, a hundred years after his death, revived the old, despite everything, still living tradition, provide us with a second, equally striking
 105405 example.
 Finally, the esteemed contributors are absolutely right in their assertion that it was not only a thirst for destruction that drove the Vandals and Normans on their raids: for it was also land hunger, in its most brutal form.
 And again, they are right in their assertion that the Roman Empire collapsed from
 105410 internal decay, just as, for example, the Republic of the United Provinces did on the end of the eighteenth century.
 But this seems to us the least an apology for the mischief of the barbarians during the migration, nor for that of the Sans-culottes in their invasion of our fatherland.
 105415 All this may perhaps seem "simplistic" to the esteemed contributor. But we are simply so simple-minded that we reject robbery and plunder as detestable acts of violence, regardless of by whom or when they were committed.
 And if this is to be called "misleading word-juggling," then we accept this qualification without a hint of ill humor, with an indulgent smile for the well-known
 105420 tendency to use strong words among our modern youth.
 Could the students perhaps have become a little displeased with our friendly encouragement to study?
 That would not be as surprising as it seems at first glance. For studying has traditionally been something different from being a student.
 105425 Be that as it may, we now conclude the discussion and hope to welcome the gentlemen again when they have successfully completed their studies.

LATIN PANEGYRICS USED FOR IMPERIAL PROPAGANDA AS EXEMPLIFIED BY CONSTANTINE THE GREAT

105435 Abstract
 This paper is a brief review of the development of Latin prose panegyrics in the fourth century AD. It focuses on the value of panegyrics, which were one of the most important instruments of emperor's propaganda. I analyzed two panegyrics from 310 and 311, of Constantine the Great, delivered in Trier. With the two examples I showed
 105440 whether and to what extent the official imperial policy influenced the writing of panegyrics.

INTRODUCTION
 105445 In the era of the late Empire, a festive oratory was developed as a special kind of the classical Greek oratory, whose aim was to present the achievements and the emperor himself in the best possible light in front of his subjects to whom a speech was read out. Eleven panegyrics were saved in Latin, modeled on Pliny's speech to emperor Trajan, which were used to praise Roman emperors in the period from 289 to

389 AD (Nixon and Rodgers, 1994). The emperor used encomiasts as a means of his political propaganda, so the panegyrists wrote them with the intention to be read publicly, usually during the commemorations of imperial jubilees (Nixon and Rodgers, 1994, p. 334, sq. IV) or after the emperor's victory over the enemy (Nixon and Rodgers, 1994, p. 289, sq. IX). Late Roman panegyrics were created seriously and were slowly becoming outdated. They were directed to the contemporaries, specifically to that group of residents who were able to hear them (Mac Cormack, 1976, p. 55). If historians should try to use panegyrics as a source of historical events, they would find themselves facing serious problems. Namely, panegyrists would often omit names of the enemies, avoid stating names of the cities, or follow chronology, since the aim of a panegyric was rather to praise the emperor than to describe events and present certain evidence. That is the difference between the late Roman and Pliny's panegyrics, which were meaningful, considerably more neutral, and impartial when presenting facts. In the late Roman panegyrics, events were often not shown in detail; a panegyrist would sometimes not specify them, which left room for the description of the emperor's achievements. The events were presented in a manner in which the monarch wanted them to be seen (Liebeschuetz, 1979, pp. 237-238). A panegyric was one of the instruments of propaganda which was considered to be an accurate reflection of the state policy and the emperor to whom it was dedicated. Constantine was dedicated five sermons that are an integral part of the proceedings "Latin panegyrics" (Panegyrici Latini) created during the fourth century (Nixon and Rodgers, 1994, p. 178, sq. VII; p. 212, sq. V; p. 289, sq. XII). This paper will discuss two panegyrics addressed to Constantine and given in Trier. The first sermon carrying the number VI was held in the summer of 310 AD and contains a special message expressed through the report on Constantine's vision in the Temple of Apollo (Rodgers, 1980, pp. 371-384; Warmington, 1974, pp. 371-384). The other panegyric was created in 313 AD, and it is interesting because a panegyrist was met with a new situation that had to be included - the emperor had radically changed his religious orientation. The problem lay in how to present the emperor's Christian conversion and not disappoint the audience, which also consisted of pagans (Odahl, 1990, pp. 45-63).

THE AGE OF TETRARCHS

In the years preceding the creation of the panegyrics (310 and 313 AD), the Tetrarchic system was in crisis. The territories of the Roman Empire were divided among the four rulers: Galerius controlling Illyria, Maximinus Daia controlling Asia Minor and Egypt, Maxentius holding Italy and Africa, while Constantine controlled provinces in Gaul and Germania (Mirković, 2014, pp. 152-153). Although the meeting in Carnuntum held on November 11, 308 AD was supposed to resolve the issues about the division of power, none of the actors were satisfied with the decisions of the meeting.

It was agreed that the East would still remain in control of Augustus Galerius and Caesar Maximinus Daia. In the West, Constantine was to gain the title of Caesar instead of the position of Augustus. Licinianus Licinius was proclaimed Augustus instead of Flavius Severus. Both Maximinus Daia and Constantine were dissatisfied with the titles of Caesars (SAN XII, 2008, pp. 91-93; Barnes, 1981, pp. 34-35; Leadbetter, 2009, pp. 200-205). Although Maximinus, Constantine's father-in-law, who swore an oath to be faithful to his son-in-law, he soon turned against Constantine (Pan. Lat. VI 15,6).

The Rhine limes was threatened by the Franks, so Constantine had to go to war against the barbarians. Lactantius stated that Maximinus managed to convince his son-in-law to march with a smaller number of troops, while, with the help of the remaining army, he would try to take power (Lact. De mort. pers. 29,4.). This data is confirmed by the panegyrist from 310 AD, who stated that Constantine surrendered part of his army to Maximinus (Pan. Lat. VI 14,6). However, Constantine did not do that because he trusted his father-in-law but because there was a threat from Maxentius. It was necessary to defend the southern areas of Gaul from possible attacks from Italy, which forced Maximinus to have the army under his command (Barnes, 1981, p. 34). Yet, Maximinus used this situation to proclaim himself the emperor for the third time in Arles (Pan. Lat. VI, 14-20). The panegyrist stated that the troops remained loyal to Constantine, but since the part of the army remained under the command of Maximinus, he probably managed to gain upon those who wavered presenting them with rich gifts (Pan. Lat. VI 16,2 to 17,4). As soon as Constantine learned of his father-in-law's proclamation, he rushed to Arelate. The army was partly moving on land, in order to come down the river Arar (now the Saône) by ships to its confluence into the Rhodanus (now the Rhône) in Lugdunum.

105515 Lactantius and a panegyrist from 310 AD wrote about the great speed with which Constantine and the army were moving towards Arelate. The army was so eager to deal with Maximinus that they themselves were rowing down the slow river of Arar (Lact. De mort. pers. 29,6; Pan. Lat. VI 18).

105520 Maximinus transferred from Arelate to Massilia (present Marseille), since there he could defend himself easier because the city was better fortified. Constantine's attempt to take over Massilia ended without success. The panegyrist even here tried to justify Constantine, pointing out that the emperor could have taken over Massilia, but that he wanted to prevent his soldiers, eager to get revenge, to ransack the city (Pan. Lat. VI 19, 1-20,1).

105525 The panegyrist's partiality, lack of objectivity, and attempt to present the emperor's weakness and failure as his gentleness and good intention to spare his enemies were obvious. The emperor's failure had to be covered in every way and the panegyrist did it by offering misleading information. The truth was that Constantine could not take the town with an onslaught, and he wanted to avoid the long siege of the city at all costs, so he entered into negotiations with his father-in-law. The negotiations were unsuccessful, but in the meantime, the army in the town turned against Maximinus and handed him over to Constantine, who spared his life (Lact. De mort. pers. 29,6; Pan. Lat. VI 20, 2-3). However, it must have been clear to

105530 Constantine that as long as Maximinus was alive, he would pose a threat to his power in the western provinces. This was likely the reason why he decided to put him to death. The sources tried to justify Constantine's decision and Lactantius stated that Maximinus conspired against Constantine and persuaded his daughter Fausta to kill her husband. Having caught Maximinus in the conspiracy, Constantine allowed him to choose how to die, and the former chose to be hanged (Lact. De mort. pers. 30).

105540 After his death, Maximinus was sentenced to damnatio memoriae as well, and erasure of the memory of him was conducted both in the western and eastern provinces. Since the founder of Maximinus's family was Hercules, whom Constantine also accepted after becoming related to Maximinus, after his father-in-law's execution the ties with the lineage of Hercules were severed. That was why a new origin was to be found for

105545 Constantine. It was the emperor's visit to the Temple of Apollo in today's Grand in the Vosges that the panegyrist used to associate Constantine to the new patron - god Apollo, but also to the 'new' emperor's ancestor - Claudius II Gothic. In an anonymous panegyric given in the summer of 310 in the city of Trier, Constantine's vision of Apollo was described. In modern historical science there was a controversy over two issues: whether Constantine really had a vision and, if so, what he saw or what he thought he saw (Ferj ančić, 2014, pp. 415-423 with earlier literature). Therefore, at this point we will not deal with these issues, but focus on the question: in what way was Constantine's vision presented in the panegyric supposed to

105550 serve the purpose of propaganda of the emperor's politics? The vision of Apollo had to come from Constantine himself, because it was the only way for it to be learned, and that is why it is assumed that it was the emperor himself who ordered the panegyric in which the vision should be described and introduced to the audience in Gaul. The anonymous panegyrist said at the beginning that after Maximinus' defeat and death, Constantine was on his way to Trier when he learned that the Franks, in the

105555 absence of the emperor, became restless. After learning that the barbarians calmed down, Constantine decided to turn off the road and visit the temple of Apollo in Grand in order to make a sacrifice as a sign of gratitude for the victory over Maximinus and the becalming of the Franks. The orator further alleged that in the temple Constantine saw Apollo in the company of the Goddess of Victory and then got laurel wreaths, which carried a prediction about the long rule and lifetime longer than the one the fabulous Nestor enjoyed (Pan. Lat. VI 21, 4-7).

105560 Presenting emperors as being closely associated with some of the deities was nothing out of the ordinary in the fourth century, because they were prominent figures believed (or also popularly believed) to be able to have direct contact with the deity (Bremmer, 2006, pp. 57-79). Such performance of the emperor was supposed to strengthen his position even more and provoke admiration among his subjects. Bearing in mind that it was not common for the orator to contrive such details, it is therefore assumed that Constantine himself requested to be presented in a close

105565 encounter with Apollo, a deity often identified with the Unconquered Sun (Sol Invictus), to which the emperor would turn after 310 AD, and, as evidenced by the emission of money with a presentation of this deity and the legend of the Unconquered Sun, a companion (Soli Invicto comiti) (Sutherland, 1967, pp. 102-116).

THE LATIN PANEGRIC FROM 310 AD

105580 In modern historical science there are researchers who state that the panegyric from

310 AD was actually created with the aim to win the favor of Gallic aristocracy (Bremmer, 2006, p. 16). However, if we bear in mind that Apollo revealed to Constantine that he was the emperor predestined to rule the whole world and who was solely meant to rule (teque in illius specie recognovisti, cui totius mundi regna deberi vatum carmina divina cecinerunt) (Pan. Lat. VI 21, 5-6), it is clear that the panegyric was also to be used to spread the reigning ideology. The first time the orator spoke of Constantine as the new God created for the people, he linked him to gods Bacchus and Mercury (Di boni, quid hoc est quod semper ex aliquo supremo fine mundi nova deum numina universo orbi colenda descendunt? Sic Mercurius a Nilo, cuius fluminis origo nescitur, sic Liber ab Indis prope cosciis solis orientis deos se gentibus ostendere praesentes) (Pan. Lat. VI 9.4). When introducing Apollo, who appeared to Constantine, into the panegyric, he did not equate them and used the possessive pronoun 'tuus' (your) Apollo, not 'tu, Apollo' (Vidisti enim, credo, Constantine, Apollinem tuum....) (Pan. Lat. VI 21.4).

This is precisely the reason why Barbara Saylor Rodgers made the assumption that in the temple of Apollo Constantine did not see himself in the image of the divinity itself, but in the image of the first Roman emperor Octavian Augustus (Rodgers, 1980, p. 270). Constantine was represented as young, cheerful, and handsome, and health-bringing, and he was foretold to rule the entire world, which could also apply to Octavian Augustus.

Constantine was foretold by the gods in his vision that he would rule the whole world, while in the case of Octavian the foretelling was delivered by poets, first and foremost the poet Virgil, who, in his poem "Aeneid", announced Augustus' reign as the beginning of the Golden Age. It is less important whether Constantine saw himself in the image of Apollo or Octavian Augustus. It is the moment in which the panegyric was created that is important (after Maximinus' execution) as well as the emperor's turn towards Apollo, often identified with the Unconquered Sun, which would become the new protector of the emperor.

The orator had two tasks before him - first, to justify Maximinus' execution and then to associate Constantine with some prominent emperor because he broke up the relation to the Herculian family. It was hard to prove the facts of Constantine's non-involvement with Maximinus' death, hence the orator only presented the story of Maximinus' conspiracy and spoke of his death in a direct way (Pan. Lat. VII 20, 3-4). In 307 AD, Constantine was Maximinus' son-in-law, associating himself with the Herculians, which was supposed to strengthen and secure his position in the empire and to ensure his authority in the provinces that he inherited from his father (Jones, 1964, p. 38; Barnes, 1981, p. 11). At first, father- and son-in-law acted in unity as imperatores semper Herculi (Pan. Lat. VII 2,5), but after Constantine discovered Maximinus' alleged plot and after which Maximinus killed himself, Constantine rejected protectors of the Tetrarchy, Hercules and Mars, so it became necessary for him to establish a 'relationship' with a former real emperor. Constantine decided that this should be Claudius II Gothic (268-270), a ruler who gained great fame and reputation by his victory over the Goths near Naissus. Emperor Claudius II Gothic was close enough to Constantine, speaking in terms of time, and the kinship between them could have had a real basis, but at the same time the emperor was far enough from Constantine's contemporaries in order for them to know the details of this kinship (Krsmanović-Radošević, 2004, p. 73). The anonymous panegyrist was the first to introduce this piece of information into the history and point out to the right of Constantine to rule due to his origin (Pan. Lat. VI 2-3, 2). The panegyrist said that when the emperor entered the court in Trier, destined to rule, there "ancestral lares" had already been waiting for him (Sacrum istud palatium non candidatus imperii sed designatus intrasti, confestimque te illi paterni lares successorem uidere legitimum) (Pan. Lat. VI 4,1).

By introducing Claudius II Gothic, as a descendent ruler, Constantine established the principle of dynastic succession of power, thus rejecting the tetrarchic rule of adoption of the heir to the throne. It is clear that, since Constantine wanted to secure the throne for his sons, he had to get rid of his co-rulers and independently rule the empire. Another step towards this goal was the introduction of a new patron god, and the decision was made for it to be Apollo, most often identified with the Unconquered Sun (Alföldi, 1948, 5-6). In the second half of the third century, it was believed that the Sun was the supreme deity above all others. Since the Unconquered Sun was the protector both of Claudius Gothic and Constantius, Constantine's father, it is no surprise that this deity was chosen. It is possible that the Emperor had a deep commitment to the Unconquered Sun with whom he was born and raised, so the deity was the most acceptable from the whole pantheon of the Roman gods (Ljubomirović, Stamenković-Šaranac, 2014, p. 542). Standing close to the cult of this deity which

had strong monotheistic elements, Constantine sought to openly express his aspiration for an independent ruling.

The panegyric from 310 AD was created in Gaul where the Emperor lived, with short interruptions, from 307 AD and the wedding to Fausta up to 316 AD (Barnes, 1982, pp. 67-73). The panegyrist was the court orator, spending time at the court of the emperor, and had contact with court officials. His most important role was to compose a speech that would promote imperial policy. One of the most common themes of panegyrics written in the first half of the fourth century was the imperial success in the war, that it was the emperor of practice and his military power (Mac Cormack, 1976, p. 64). Historical background of panegyrics in the age of Tetrarchy was militant and pagan and therefore panegyrics stressed precisely this side of the emperor's personality. Personal religion of the emperor at the beginning of Constantine's reign had not yet been the subject of panegyrics. Not until many years later would Eusebius make the religious orientation of the emperor officially relevant, since the emperor's religion affected the whole empire: it was no longer only his personal matter, but a means of his victory over all opponents. Eusebius pointed to a strong connection between the emperor and God, and that his attitudes had to be a part of the official cult of the emperor is also confirmed by the iconography of the official imperial art (Radošević, 1994, p. 10). Nevertheless, Constantine's biographer wrote many years later, when Constantine had already sufficiently declared himself as a Christian. At the same time, Eusebius himself was a Christian. From Eusebius' panegyrics it is clear that he was aware of the importance of the emperor's religious policies, but he included it into his work only after it had become a part of the official imperial cult. Therefore, panegyrists from the beginning of Constantine's reign, when paganism was still the official religion of the empire, believed that Constantine's conversion to Christianity was still only his personal matter and was therefore not suitable to enter into the official panegyric. The fact is that the main issue in the panegyrics was still Constantine's defense of the Rhine border and his victory over the Germans. Panegyrists believed that the defense of the Rhine was vital and Constantine was given all the credit for maintaining stability along the Rhine border (Nixon and Rodgers, 1994, pp. 30-35).

THE PANEGYRIC FROM 313 AD - AN EXPRESSION OF NEW RELIGION ORIENTATION OF EMPEROR CONSTANTINE

Another panegyric, carrying the number XII, was apparently ordered in August, in the summer of 313 in Trier (Nixon and Rodgers, 1994, p. 289, sq. XII). After the victory Constantine took over Maxentius in the battle of the Milvian Bridge on October 28, 312 AD, the emperor entered Rome, where he was welcomed as a liberator. Constantine behaved as such, repealing all the exiled usurper's opponents to return to Rome, while he showed great mercy to the supporters of his opponent (Pan. IX 5.6; 12.1). The victory over Maxentius brought Constantine control over Italy and Africa, thus these provinces were returned to the legitimate imperial ruler. Constantine's position was additionally secured thanks to the honors received from the Senate, which declared him the first Augustus (Lact. De mort. pers. 44.11). The ruler spent about two months in Rome, after which he headed towards Mediolanum, where, in the beginning of February, he met with Licinius. The meeting of the two co-rulers resulted in a politics of religious tolerance - the issuing of the Edict of Milan (Lact. De mort. pers. 48; Euseb. Hist. Eccl. X 5.1-14).

The document provided religious tolerance and freedom of creed for all religions as well as for the thus far prohibited Christianity. All gods, including the Christian God, were supposed to protect the emperor and his subjects in order to establish peace and prosperity in the empire. By the policy of religious tolerance, the two rulers, Constantine and Licinius, secured support of the ever increasing number of Christian communities, which greatly strengthened their power (Barnes, 1981, pp. 64-68). After the meeting in Mediolanum, Constantine had to face the danger that threatened the empire from the Germanic tribes on the Rhine. Namely, the Franks and the Alemanni, who lived in the area between the Rhine and the Elbe, attacked the Roman territory in Lower Germania. Constantine went straight from Mediolanum to the Rhine limes where he attacked the Alemanni and the Franks, and not only did he drive them away from the Lower Germania but he also razed the area in which they lived (Pan. Lat. IX 21, 5-23; Barnes, 1982, p. 71).

After the victory over the barbarians, the emperor went to Trier, where he was met with ceremonies celebrating all his successes, while the subjects enjoyed the emperor's arrival (adventus) (Pan. Lat. IX 18.3-20; Mac Cormack, 1981, pp. 17-89). He was honored a triumphal procession, and circuses and gladiatorial shows were held for

several days as well as games during which the beasts fought against barbarians captured during the previous battles along the Rhine (Pan. Lat. IX 23). On such an occasion only a panegyric was missing, to be publicly read and unite everyone in expressing strong praise of the emperor, which would draw the ceremony to its climax (Liebeschuetz, 1979, p. 237). Given that the panegyric was to be created as soon as possible, the task was entrusted to the experienced and famous panegyrist who celebrated Constantine in one or more previous speeches (Nixon and Rodgers, 1994, p. 288). He was probably trained in one of the famous rhetorical schools in Oton or Trier, using the style of Cicero, quoting Virgil's poetry and bringing occasional comparisons with generally known rulers and officials from the classical period, glorifying their virtues (bravery, power) and res gestae (heroic deeds) (Mac Cormack, 1976, p. 61). It is possible that the members of the imperial court advised the orator, kept him informed about the emperor's acts, and guided him towards topics that needed to be emphasized. The common motifs in all the panegyrics were propagation and praise of all the emperor's deeds and successes achieved in the previous period (Mac Cormack, 1981, pp. 1-14). Since the orator had previously written praises to Constantine, he gained some experience and practice in presenting events from the emperor's past. Yet, this time the panegyrist was met with a big problem - the emperor had radically changed his religious orientation and converted into a Christian (Mullen, 1968, pp. 81-96).

Although the first reports of Christian writers Eusebius and Lactantius on Constantine's conversion were written a few years later, the panegyrist must have heard at the court about the emperor's new protector - Christ (Odahl, 1990, p. 47). The news that Constantine used the cross as a Christian symbol on the weapons of his soldiers in the battle against Maxentius at the Milvian Bridge strongly echoed in the East, so it must have reached the West as well (Odahl, 1981, pp. 15-28). At the same time, the panegyrist also took into consideration the fact that in the Edict of Milan, which Constantine and Licinius issued in February 313, the protector of Christians was called by the general term summa Divinitas (Lact. De Mort. Pers. 44). Spending time at the court, the panegyrist had to be well informed about all the important events from the emperor's life. Although the emperor's Christian orientation during those years was not part of the official imperial cult yet, the orator might not have been allowed to completely ignore the fact of the Christian God as the emperor's patron without previously receiving the approval of the emperor himself. Sources do not mention a direct meeting between the panegyrist and the emperor, but the monarch could have suggested to the orator through court officials how he was to handle specific topics.

Description and praise of the emperor's courage during military actions could have comprised the major part of the panegyric, but even in this case the orator faced a difficult and delicate task - how to describe the divine inspiration and power that helped Constantine plan and wage the victorious wars. The panegyrist could show the new emperor's religious orientation, which would please the Christians at the court, but it would betray his longtime personal beliefs and would betray the expectations of the pagans. And while in the panegyrics written in the period of Tetrarchic policy the emperor's deeds always had a religious background, inclusion of religion in imperial politics after Constantine's conversion became impossible (Mac Cormack, 1976, p. 62). Analysis of the panegyric from 313 AD might shed some light on whether the panegyrist managed to respond to the difficult task that was set before him. The speech was divided into five parts: in the introductory section (exordium), the orator stated his observations of the emperor (Pan. Lat. IX 1); several chapters were dedicated to his previous military campaigns in Italy (Pan. Lat. IX 2-5.3); then followed the central part of the speech in which Constantine's victory in Italy and his brief stay in Rome were described (Pan. Lat. IX 5.4-21.4); several chapters were dedicated to his return to Gaul and conflict with barbarians on the Rhine (Pan. Lat. IX 21.5-23); finally, in the epilogue (peroratio), the importance of Constantine's victory and the importance of the prayer dedicated to "the highest deity" were highlighted (Pan. Lat. IX 24-26). Aware of the difficult task set before him, already in the introductory part of the speech the orator distanced himself, expressing his fear that he might not be able to properly praise the emperor's great deeds, but that he was still taking on this task because even that was better than not to speak about them at all (Pan. Lat. IX 1.1-3).

In the second part, the orator associated Constantine's name to the adjective constantia, which reflected the emperor's persistence and perseverance during the Italian expedition (Ac primum illud adripiam quod credo adhuc neminem ausum fuisse, ut ante de constantia expeditionis tuae dicam quam de laude uictoriae) (Pan. Lat. IX

2.1). Constantine marched against the enemy whose army was larger and decided to attack first because he followed the "divine command" (*divina praecepta*), while Maxentius remained faithful to the "dangerous superstition" (*superstitiosa maleficia*) (Pan. Lat. IX 4.4). Constantine entered the fight expecting a "divine promise of victory" (*promissam divinitus victoriam*) (Pan. Lat. IX 3.3). Supported by his own courage and great promise by God, the emperor dared to start a war bigger than the one waged by Alexander the Great (Pan. Lat. IX 4.4). Constantine's conquest of fortified cities in northern Italy was shown in detail, as well as the march on Rome and the Battle of the Milvian Bridge, after which the victor triumphantly entered Rome; the panegyric then showed the celebrations held in honor of Constantine. Describing Constantine's military exploits in detail, the orator skillfully avoided sensitive religious topics. Constantine's ability and skills in commanding the army, attacking a dangerous enemy while outnumbered, and treating the defeated soldiers humanely were all praised in a school-like manner (Pan. Lat. IX 6. 1-2; 15.3-6; 20.3-4).

When describing the Battle of the Milvian Bridge, the panegyrist indicated that Maxentius could have stayed in Rome within Aurelius' walls providing resistance, as he had done a few years before against Severus and Galerius (Pan. Lat. IX 16.2; Lact. De mort. pers. 26- 27). But "the great God" (*Deus summus*) and "divine thought" (*mens divina*) gave Constantine "divine advice" (*divinum consilium*) and "divine stimulus" (*divinus instinctus*), and at the same time took them away from Maxentius (Sandys, 1974, p. 127). The orator ended the central part of speech with a brief description of Constantine's triumphal entry into Rome, his speech in front of the Senate and the pardoning of the surviving enemy soldiers (Pan. Lat. IX 19.1-21.4).

The panegyrist showed a scene in which the emperor was giving gifts to Roman citizens in front of the pillars that the Senate raised in 303 AD in honor of vicennalia of Diocletian and Maximinus and decennalia of Constantius and Galerius (Pan. Lat. IX 7,6). The choice of the location was supposed to represent Constantine as the real successor of the Tetrarchy.

In the fourth part of the panegyric, preceding the conclusion, the orator briefly, without any details, described the return of Constantine to Gaul and his fight against rebellious barbarians on the Rhine (Pan. Lat. IX 21.5-23). The speech was to be ended with a sublime tone, which the speaker did. He compared the victory of Constantine over Maxentius' Romans and warlike Franks with Alexander's victories over the timid Greeks and weak Easterners and pointed out that the emperor was the most responsible for the spread of the famous achievements of his father, Constantius, in the western part of the empire (Pan. Lat. IX 24.1-3; Pan. Lat. IX 24.4-25.3).

Constantine's power and his piety were the main reasons to erect a number of statues, shields, and crowns that the people of Rome and the Senate dedicated to the emperor (Pan. Lat. IX 25.4). However, in the conclusion of the final chapter the orator had a duty to make a plea to a "supreme deity", thus facing a difficult dilemma. He decided it was the least painful not to name the deity and to address it as "the greatest creator of the Universe" (*summe rerum sator*), so he addressed him as follows: "... Your reliable power and divine thought that inspired the entire world and mingled with all the elements" (*tutem quadem vis mensque divina...quae toto infusa mundo*), or he referred to him as "a force above all the heavens, which looks down from above from a higher natural refuge" (*aliqua supra caelum potestas...quae...ex altiore naturae arce despicias*) (Pan. Lat. IX 26.1). Therefore, the panegyrist addressed the deity to whom both himself and the audience were speaking and made him a plea that concerned Constantine. Constantine was the best of all the rulers and the greatest blessing that the deity has ever bestowed upon the human race. The deity, which possessed the greatest kindness and power in itself (*summa bonitas et potestas*), enabled Constantine to perform all these good deeds (Pan. Lat. IX 26.2-5).

The panegyric from 313 AD did not mention the name of the traditional pagan gods or give any information about Constantine dedicating war trophies to pagan temples (Jones, 1949, pp. 82-83; Barnes, 1981, pp. 44-46). In the previous panegyrics dedicated to Constantine (from 307, 310, and 311) Jupiter, Hercules, Apollo, and Sol were mentioned, while their omission in the panegyric from 313 could mean that the emperor had already completely separated himself from pagan gods. However, the speaker did not mention the name of Christ anywhere, or indicate that the emperor's conversion occurred and that Constantine had used Christian symbols on the weapons and victory statues, which Christian writers would later write about. The panegyrist decided to adopt a neutral stance and rely neither on traditional paganism nor Christianity. He himself was a pagan, as were many in the audience, so his terminology had to be as vague as possible in order not to offend the Christian emperor (Barnes, 1981, pp. 44-46). With a neutral position, he still managed to

present Constantine's imperial position as divinely founded by associating the emperor with the supreme God, whom he referred to using vague terminology – the "supreme creator of the universe", "the divine thought that inspires the world", "leader and supreme power in the sky above" and "source of ultimate goodness and strength" (MacMullen, 1968, pp. 110–112; Liebeschuetz, 1979, pp. 252–291). The Triumphal arch built to honor Constantine was also raised with "God's inspiration" (Instinctu Divinitatis), which, even though it had a monotheistic connotation, once more expressed a neutral attitude in terms of the emperor's divine patron. Constantine favorably viewed the manner in which the orator presented the deity. Even though Constantine could have already sided with the Christian God, he was still ruling all of his subjects, among whom there were a large number of pagans, so he had a duty to publicly protect all religious cults (Ullmann, 1976, p. 2). In the Edict of Milan, Constantine and Licinius referred to the deity with a vague and general term *summa Divinitas*. In the letters from the period from 312 to 315, which Constantine sent to provincial regents or Christian bishops, he used phrases such as "the highest God" or "the highest deity" (*Deus summus* or *summa Divinitas*) (Odahl, 1990, p. 52). Constantine's inclination towards Christianity was confirmed by a number of laws that he passed after the publication of the Edict of Milan in 313 AD. Among other things, the emperor issued legislation that Christian clergy was dispensed from all duties of public service and all individual and property taxes and duties (CTh 16.2.2; Eusebius, *Hist. Eccl.* 10.7.1–2). All confiscated property was to be returned to the Church. Still, the monarch retained the title *Pontifex Maximus* and allowed the pagans to worship in the temples of Roman gods, but he had most of these imageries removed from the money. He allowed only the God of the Sun, *Sol*, to remain on the coins a few years longer as a kind of syncretic bridge between his Christian and pagan subjects (Alföldi, 1948, pp. 54–59). The Church, for its part, has long used the comparison of Christ with the Sun as "the Sun of Truth", "the resurrected Sun", or "the Sun of deliverance", by which it has tacitly acknowledged the influence of the cult of the Sun. Constantine's sympathy towards the God of the Sun can be interpreted as the emperor's profound commitment to the deity with which he was born and raised, but he also showed respect and consideration to the Sun because of his pagan subjects. The ruler needed the support of the pagans, because after the victory over Maxentius it was necessary to secure the favor of the Senate, which at that moment was the only body that could recognize Constantine as the first Augustus. Bearing in mind that the Senate and the Roman aristocracy did not renounce paganism, it was not in the emperor's interest to immediately sever ties with all the pagan cults (Ljubomirović, 2013, pp. 862–863).

In the years that followed, the emperor would move further away from the Unconquered Sun and openly express his allegiance to the Christian God. However, from everything stated above, it is clear that immediately after his conversion Constantine allowed the remnants of paganism to be mixed with elements of the new faith. We saw that in public letters and edicts he used neutral and ambiguous terminology to refer to God, thus not offending either pagan or Christian subjects. Since Constantine himself used such terminology, it is likely that he allowed and encouraged orators to do so as well, especially when the speeches were to be read at public ceremonies attended by both religious groups (Odahl, 1990, p. 53). The experienced orator was up to the task. Although he used the words and images of the pagan poetry and philosophy, they were sufficiently general and ambiguous to allow a Christian interpretation (Pan. Lat. IX 26.1). The speech was written in the spirit of the emperor's official announcements, while the emperor apparently liked the idea that the deity was addressed as *summa Divinitas* or *Deus summus*, for which the speaker said was ruling the whole world from the heavenly fortress. In the "Letter to Catholic Bishops in Arles" from 314 AD, Constantine addressed the deity precisely in this way, so it is believed that he was satisfied with the orator's religious notices and public performance of the panegyric from 313.

CONCLUSION

From all of the above, it can be concluded that the imperial speeches of the fourth century were a kind of political manifesto of the time in which they were written. The idea of different forms of imperial ideology were expressed through panegyrics, precisely in the panegyrics dedicated to Constantine, where the ruler was to be presented as the God's chosen, foretold to rule on Earth as his representative. Given the fact that, at the time these panegyrics were created, Constantine was still not an independent ruler and there were occasional clashes with the co-rulers, the panegyrics that belonged primarily to the propaganda genre were supposed to justify these actions and present them in a special manner. In the panegyric from 310 AD, the

anonymous orator accomplished his goal: Constantine was not associated with Maximinus' death, so he spoke only of his conspiracy, while his death occurred under unclear circumstances (Pan. Lat. VII 20.3-4). The emperor's vision in the temple of Apollo brought him closer to the cult of the Unconquered Sun most often equated with Apollo. In this way, Constantine was not separated from the pagan cults, which showed support for the pagans, but which was also an acceptable solution for the Christians because of the monotheistic properties of the cult of the Sun. With the death of Maximinus, Constantine severed his ties with the Hercules, and for the first time he derived his lineage from Claudius II Gothic in the panegyric from 310 AD and chose the Unconquered Sun to be his protector, a deity with the most monotheistic qualities. Thus, the emperor revealed the dynastic principle of heritage to the throne and for the first time publicly expressed his aspiration towards monotheistic rule.

The panegyric from 313 AD given in Trier was to celebrate Constantine's victory over Maxentius, whom the orator presented as a usurper. Constantine was to be praised and his successes were to be celebrated, because not only did he free Rome from Maxentius' oppression, but he also defended the Roman border on the Rhine. Hence, there were enough reasons for the creation of a panegyric. Using ambiguous terminology to refer to the deity, the orator was able to satisfy both the pagans and the Christians, but also the emperor himself, whose personal religious beliefs at the time could not be the subject of a publicly read panegyric. Constantine also agreed with this, because otherwise the orator could not deliver such a speech. The orators wrote for the emperor currently in power and read their panegyrics before him. Therefore, they were writing them with propagandist aims, celebrating and praising the emperor, highlighting his positive qualities and good deeds, and withholding anything that was negative.

"The Augusti and Caesars Say":

Imperial Communication in a Collegiate Monarchy

1. Introduction: the typology of the texts and the sources Roman emperors wrote or had written in their names a great many letters. An examination of imperial epistolography, however, faces a number of problems. First, emperors issued a range of pronouncements whose format and function cannot always be neatly demarcated. In particular, in the period I wish to discuss, the era of Diocletian and Constantine (284-337), the distinction between letters and edicts tends to become blurred and remains so throughout the late empire. It is not necessarily helpful, therefore, to consider only texts narrowly defined as epistolary. However, in a purely formal sense, letters are distinguished by containing a greeting to the recipient and a closing farewell, the latter usually in the emperor's own hand. Further, letters, when addressed to office-holders, often contain within them instructions regarding the dissemination of their contents, where appropriate. Edicts are general pronouncements directed at all under the authority of an office-holder (whether emperor or governor) and have an opening formula of the type, "the emperor says" (imperator dicit). Finally, private rescripts, that is replies to petitions from ordinary subjects (in contrast to replies to letters from office-holders), although addressed to the petitioner, lack formal greeting or farewell, and the emperor simply signs under it "I have replied" (rescripti). Approaches to the emperor on similar subjects might in different circumstances generate replies in different formats, since most citizens would be lucky to get a rescript (in Latin, even if they had petitioned in Greek), whereas cities or those of high rank would get a letter (in Greek, if they had written in Greek). Further, even on a single matter, the emperor might issue or there might be subsequently disseminated a range of interrelated documents of overlapping content in different formats.

The second key feature is the question of how texts are preserved. Much of the earlier Near Eastern material examined in this volume survives as original documents or even in original archives. From the Roman imperial period, letters and copy-books of lower administrators sometimes survive, as with the well-known Panopolis papyri from the reign of Diocletian, which represent archival copy-books of outgoing (September 298) and incoming (January-February 300) correspondence of the strategos of the Panopolite nome.

But we have no equivalent sources for the Roman emperors. Only one original imperial letter, with the emperor's hand-written valediction (of Theodosius II), survives from antiquity.

106040 Thus, although there exists a mass of imperial letters and pronouncements of the tetrarchic and Constantinian periods, this is at several removes from the originals, since the emperors' words have been repeatedly recycled and re-edited through legal collections and the manuscript tradition. Even so, such collections are undoubtedly still of the greatest importance, the two most significant being the Codex Theodosianus (437) and Codex Iustinianus (534). Both these provide versions, edited to greater or lesser degrees, of numerous letters to officials (Dossier no. 2), while the latter contains in addition a great many private rescripts, also variously redacted, that are addressed to petitioners (Dossier no. 4). Other important material

106050 survives because collected for use as part of Christian debate and polemic (Dossier
no. 3), often by contemporaries, as for instance by Eusebius, Bishop of Caesarea (d.
339) in his Ecclesiastical History and Life of Constantine.
As a result, in these types of Christian works a great deal of such material, where
106055 it was originally in Latin, survives generally only in Greek translation. However,
the closest to imperial originals that we have are probably contemporary copies of
imperial letters and other texts surviving on inscriptions (Dossier no. 1), more
rarely on papyrus. These can often be seen as part of a process of promulgation,
although that does not necessarily mean that such texts are unmediated, and the
106060 epigraphic format and content are likely to reflect agendas other than, or in
addition to, that of the emperor. Nonetheless, although not numerous, these
inscriptions are of the highest importance for examining one of the most complex
aspects of the epistolography of the tetrarchic period: namely imperial collegiality,
where documents, in practice emanating from one ruler, are formally issued in the
joint names of several.
106065 When we consider the nature of the exercise of government by the emperors of the
tetrarchic period we must recognize the key features of the Roman emperor's position
that were already well established, but continued to be relevant from Principate to
Dominate. Of the first importance is the fact that the emperor's power was absolute.
Almost anything the emperor said or wrote in any context or manner had come to be
106070 regarded as having the force of law. Other forms of primary legislation fell into
desuetude during the course of the Principate: first formal laws (leges) passed by
the popular assemblies, which cannot be traced beyond the reign of Nerva (AD 96-98);
then the Praetor's Edict, which ossified into a fixed form under Hadrian
(traditionally AD 131); finally decrees of the Senate (senatus consulta), which
106075 ceased to be legally significant from the time of the Severans.
The emperor's overriding power made them all redundant. As enunciated by the
classical jurists, this meant that authoritative imperial constitutions came in a
wide variety of formats.
There were edicts, which were general declarations aimed not at specific persons but
106080 at provinces or even the whole empire. There were speeches to the Senate, which had
in essence replaced leges and senatus consulta. Then there were mandata issued to
governors as standing instructions. There were letters of many types, most often
addressed to office-holders or cities, but also to individuals of high rank, usually
in response to other letters or embassies received from them. There were decrees and
106085 judgements issued for various types of hearings or public occasions. Finally, there
were subscripts or private rescripts, issued in response to petitions from
individuals, often people of no particular rank or status.

2. The responsive ruler and his rescripts

106090 This brief summary highlights a second key feature. The most formal of the above
types, those closest to deliberate acts of primary legislation, such as edicts and
orations to the senate, seem to have been relatively rare. Instead, the manner of
government can to a very great extent be characterized as one of "petition and
response." Emperors most often issued pronouncements because they were asked to do
106095 so. Thus there were officials charged with processing the incoming material and
creating the outgoing replies, namely the Masters of Letters, of Greek Letters, and
of Petitions (magistri epistularum, epistularum Graecarum, libellorum). There is no
official known to have been specifically in charge of edicts, unless perhaps it was
the Master of Memory (magister memoriae).
106100 This responsive style of government had both virtues and vices. An ideology of
beneficence meant that petitioners expected favours to be granted and victory in
legal cases to be assured. Certainly our typical epigraphic evidence from cities
under the Principate is one of favour bestowed and continually renewed. However,
emperors do indeed turn people down, though the disappointed are unlikely to
106105 advertise the fact.
Yet too often the emperor granted an exceptional favour. Of course, any legal system
needs a certain degree of flexibility, allowing for occasional derogation or
dispensation from the law.
But this was where the emperor's enormous constitutional power became a problem,
106110 threatening to undermine legal stability by creating permanent, if unintended,
modifications. Once the emperor's words were out there, they turned into a loose
cannon. It is important to remember that the citizens of a state should not be
regarded as simply passive consumers of law, people upon whom law is imposed. For
many people, a legal text was an opportunity, and a text with the emperor's authority
106115 behind it was best of all.

Private rescripts were not sent to individual petitioners, but were usually posted in batches outside the emperor's residence. The recipient or someone on their behalf would take an authenticated copy and then make what use of it they could. The most famous example is that of the villagers of Scaptopara in Thrace, who set up a monument to their legal struggle against improper exactions, a prominent feature of which was the rescript addressed to them by Gordian III dating to December 238. This bland document said little, and that little was somewhat unhelpful: Imp(erator) Caesar M(arcus) Antonius Gordianus Pius Felix Aug(ustus) uikanis per Pyrrum mil(item) conpossessore[m]. Id genus qu[a]erellae praecibus intentum an ue[rum sit deb]et iustitia praesidis potius super his quae adlegabuntur instructa discingere quam rescripto principali certam formam reportare debeas.

The emperor Marcus Antonius Gordianus, dutiful, fortunate, Augustus to the villagers through Pyrrhus, soldier and fellow-owner: With this kind of complaint submitted in a petition, the governor's sense of justice, being informed about what will be alleged, should decide whether it is true, rather than that you should take home a specific decision embodied in an imperial rescript.

However, the simple fact that their Praetorian fellow villager had successfully impetrated the rescript from the emperor on their behalf was enough for them (or even him) to wish to emphasize it. Thus they not only erected a monument, but utilized the physical layout of the inscription upon it, so that the details of the rescript and its authenticated text were in larger Latin script at the top and bottom, framing the intervening Greek.

3. Recycling rescripts

However, it was not only the intended recipient who could copy a rescript. Anyone interested might do so. For this reason, it is this type of imperial pronouncement which caused the most worry to jurists and emperors. Although favours were being continually granted, and the pressure to do so was very great, the view taken was that a rescript was intended to apply only in the case for which it was issued. It was not supposed to provide a precedent.

This, however, was difficult to control. Diocletian even ruled that rescripts containing exceptional derogations needed to be accompanied by a second imperial document, an adnotatio, certifying the grant (Cod. Iust. 8, 47, 5). Yet the case for which he made this ruling, in which he allowed a woman as solace for losing her own children to adopt her step-son, which was supposed to be legally impossible (as the rescript itself stated), did in fact set a precedent.

The text was included in subsequent legal collections, and, although it still required an imperial grant, this became accepted procedure.

A single documented exception thus allowed the creation of a precedent, albeit somewhat bounded. Emperors, in wishing to exercise beneficence, were caught between the need to ensure the stability and predictability of legal rules on the one hand and their unlimited constitutional power with its potential for law-distorting flexibility on the other. There were continual attempts, therefore, to make sure both that rescripts and adnotationes were not corruptly issued and that they applied only for the individual case in question. Yet rescripts were imaginatively recycled, and not necessarily for the purposes for which they had been granted. A famous example is Constantine's rescript on prescription of long time (praescriptio longi temporis), issued to a decurion called Agrippinus in the late 320s or early 330s, although it is only known in a Greek translation quoted in later court proceedings:

Our masters Constantine Augustus and Constantine and Constantius most noble Caesars to the decurion Agrippinus: It is our pleasure that consideration be taken also of the length of the possession to the extent that, if it is established by inquiry from them that the property(?) with which the investigation is concerned has been held for forty years, not even the grounds of the possession be investigated. It is our pleasure moreover that, since legal grounds of possession are necessary(?) only for prescription after ten or twenty years, the present holder be awarded the protection of the court (...)

This enunciates the rule that possession of property would be unchallengeably secure after forty years.

Although we do not know the details of the case or whether Agrippinus was the property holder in question, it seems to have been intended to protect possession. But in 339 it was used in a court hearing to force two long-time possessors to keep some land and its associated tax burdens. Thus it acted to the possessors' detriment. What is perhaps surprising is that no-one in the court challenges the authenticity of

the rescript. It is accepted without demur.

In the third century, at least, rescripts remained highly desirable and indeed collectable.

They tended to be short and to the point, and so served to clarify and reinforce what the legal rules were supposed to be or what exceptions were possible.

One never knew when an imperial rescript might come in handy.

All the more so as Caracalla's universal grant of citizenship in 212 had made almost all free persons in the empire into Roman citizens, subject in theory to Roman law, about which most will have been largely ignorant. However, they were perhaps willing to be informed, especially if it might be to their advantage.

Thus the desire for rescripts reached its apogee under Diocletian in the 290s with the compilation of the Gregorian and Hermogenian Codes. Neither work survives today and only recently have even fragments of a manuscript of the Gregorian Code been identified.

Assumptions about them are thus based mainly on their reuse in later legal works. As far as we can tell, both codes consisted primarily of imperial rescripts arranged under thematic titles. Hermogenian was Diocletian's Master of Petitions and, later, praetorian prefect, and his code seems to have consisted almost entirely of private rescripts which he had him-self composed for Diocletian in the years 293 and 294. It was published in a single book in 295 or not long thereafter.

Despite Hermogenian's closeness to the imperial court, it is far from clear that his code was in any formal sense official. After all, it is named after himself as a jurist, even though containing nothing but rescripts of the emperors. It is even less clear with the Gregorian Code, published also in the mid-to-late 290s. The scope of the Gregorian Code was much greater than that of the Hermogenian, as it contained material from Hadrian down to the 290s and was arranged over at least thirteen books, perhaps fifteen. Its shadowy author may have been operating outside the court and so perhaps had to rely to a considerable extent, at least for his contemporary material, upon rescripts and occasionally letters and edicts that had been publicly posted and copied. However, it has been proposed that he too served as Master of Petitions and even enjoyed access to older archives in Rome.

What is remarkable is that texts originally issued by emperors to individuals at their own request and for their use alone ended up having the equivalent of a mass (re)promulgation, and without this apparently being formal imperial policy.

4. Imperial collegiality under the First Tetrarchy

The timing of the Hermogenian Code, however, is fortuitous, if not suspicious.

Consisting as it did solely of rescripts of the emperors in the newly formed imperial college of the First Tetrarchy (inaugurated on 1st March 293), it furnished a legal collection that was, as I have noted on previous occasions, "wall-to-wall" tetrarchs. This brings us to another key feature of the tetrarchic period and the manner in which imperial texts were communicated: namely imperial collegiality. There was already a long tradition of emperors sharing some or all of their powers and titles.

Augustus had shared the tribunician power, and full co-emperors went back as far as Marcus Aurelius and Lucius Verus (161-169). When Diocletian established himself as sole emperor in 285, he appointed a close companion, Maximian, as first Caesar, then Augustus. Later, in the face of military overstretch, two Caesars were appointed in 293, forming what we call the First Tetrarchy. The immediate purpose was to allow the imperial presence in four places at once, and the 290s saw simultaneous military crises being managed concurrently and successfully. The imperial succession was also assured. Since neither Augustus had an adult son, it was their sons-in-law who were the new Caesars, thereby designated as successors in advance, ready to be promoted from Caesar to Augustus when circumstances dictated.

The effects of such collegiality on imperial communication are in one sense absolutely clear. Formal pronouncements were made in the names of all members of the imperial college.

This was already standard practice and continued to be so throughout later Roman and indeed Byzantine history.

One of the best physical manifestations of this under the First Tetrarchy is the heading to the Egyptian copy of the Prices Edict of 301, which, despite being incomplete, lists all four members of the imperial college with their full titles.

(1) [Imp(erator) Caesar C. Aurel(ius) Val(erius) Diocletianus p(ius) f(elix) inu(ictus) Aug(ustus) po]nt(ifex) max(imus)

 (3) [Britt. max. Carpic. max. Armenic. max. Medic. max. Adia]b. max. trib. p. VIIII
 coss. III nobil. Caes. DICVNT Fortunam rei publicae (...)

106260 The complete lines would have been very long (300 letters) and there is a large
 lacuna before the edictal DICVNT, with another somewhat less large lacuna after it.
 In particular, victory titles are shared between the princes. A victory won by any
 member of the college added to the titulature of each of his colleagues.

106265 This feature appears to have reached its highpoint at precisely this moment, since
 such complete collegiality of titulature does not seem to have lasted beyond 305.
 Not all documents were necessarily prefaced by such extensive titles, but
 collegiality was always maintained. References in the papyri and even martyr acts
 refer routinely to the orders of the Augusti and Caesars.

106270 Governors and other officials seem to have been fairly scrupulous in observing these
 formalities. Thus, since in theory official acts and pronouncements were not those of
 one ruler, but of four acting in harmonious concert, the manner in which they were
 issued, circulated, and displayed consistently reflects this collegiality. Indeed,
 even the physical display of sets of milestones or groups of statues, for instance as
 incorporated into monumental tetrapyla, could be used to emphasize the nature of

106275 fourfold rulership.
 The constitutional details behind this façade are more difficult to reconstruct. It
 is not clear that each member of the college had the same authority to issue
 pronouncements on behalf of the entire college.

106280 Of course, like any governor, they should have been able to issue edicts, write
 letters, and reply to petitions. Indeed, there was little point in having four
 rulers, if each could not provide a focus wherever he happened to be in residence.
 But whether each document issued was imperially authoritative and always bore the
 names of the four tetrarchs is uncertain. An Augustus probably could and did issue
 all types of pronouncement. There is some rather limited evidence for Caesars issuing

106285 rescripts and writing letters.
 Tim Barnes has argued, although he is not the first to do so, that Caesars could not
 issue collegiate edicts, and he has suggested that the famous Damascus incest edict
 of May 295, which on logistical grounds ought to have been issued by Galerius as
 Caesar, was in fact issued by Diocletian from Demessus near the Danube frontier.

106290 A further point is that Caesars did not at this time have praetorian prefects, the
 most important officials after the members of the imperial college, but what
 practical effect this had on a Caesar's administration is unknown.
 Yet the prefects mirrored the emperors and themselves acted as a college, something
 which continued down even to the sixth century.

106295 What is clear is that Diocletian, as the senior member of the college, had an
 overriding authority and issued measures designed to apply empire-wide. Further he
 did on occasion deal with governors or petitioners from areas under the immediate
 supervision of Maximian, suggesting that people in these territories did not always
 approach Maximian automatically.

106300 Thus most famously Diocletian issued a letter from Alexandria in reply to a query
 from the proconsul of Africa about the Manichees, in 297 or 302.
 But to say that the senior emperor had an overriding authority does not clarify what
 authority his colleagues had, at least in their immediate areas. It is notable that
 both the Gregorian and Hermogenian Codes contained some limited material which must

106305 have emanated from courts other than that of Diocletian.
 Before the abdication in 305, Diocletian's prestige enabled him to exercise
 considerable control over his new tetrarchic creation. Even here, however, it is not
 obvious that the measures he promulgated as senior ruler were consistently enforced.
 The effects of the first persecution edict against the Christians, issued at

106310 Nicomedia in February 303, can be seen rippling out to Palestine and then Africa.
 Yet it seems to have been applied only minimally in the territory of the Caesar
 Constantius in Gaul.
 The fourth edict (304) does not appear to have been enforced in the west at all,

as may also have been the case with the earlier Prices Edict (301).

5. Collegiality after Diocletian

Since this was the case even under Diocletian, the position after his abdication was much more fluid. I have myself recently argued, on the basis of a new interpretation of complex epigraphic evidence, that Galerius issued a series of important measures to rein in fiscal and other abuses in the summer of 305 shortly after his accession as Augustus, even though he was not the senior member of the college.

It seems clear that Galerius himself hoped to manage the college and the empire as had Diocletian and was anticipating that situation. Yet after the death of Constantius, the theoretical senior, in July 306, Galerius quickly lost control of events. Thus different rulers in different parts of the empire took rather different views of who were their colleagues and what were their relative ranks. This is most elegantly expressed in an inscription from Heraclea Sintica in Macedonia first published in 2002:

Imp. Caes. Galerius Valerius Maximianus Pius Felix Augustos (sic) pont. max. Germ. m. VI Sarm. m. V Pers. m. II Brt. m. Carp. m. V Arm. m. Med. m. Adiab. m. trib. p. XVII imp. III p.p. proc. et Galerius Valerius Maximinus Sarmaticus nobilissimus Caesar. salutem dicunt IIIIuiris et decc(urionibus) Heracleotarum.

In this letter, datable to the first months of 308, Galerius as Augustus and Maximinus as Caesar address the town council, granting the community proper city status. The caesar heading, which lists Galerius's full titles, with something more attenuated for Maximinus, shows that at this point, as a result of usurpation (Maxentius and Maximian), defection (Constantine) and death (Severus), Galerius no longer recognized any rulers from the western portion of the empire as legitimate members of the imperial college.

Such collegiate tensions continued until Constantine's victory over Licinius in 324, and can be further illustrated by the fate of Licinius's letter on military privilege in the copy known from Brigetio, issued in June 311.

This bronze copy was originally prefaced only with the phrase Exempl(um) Sacra(rum) Litterarum, as in the Durostorum copy, which latter carries just the abbreviation E S L and otherwise lacks all other diplomatic elements.

The Brigetio letter carries a greeting to Dalmatius, the commander or other official to whom the original of this copy had been addressed: Haue Dalmati, carissime nobis. The letter concludes with the imperial signature, marked in the epigraphic text thus: Et manu diuina:

Vale Dalmati, carissime nobis.

This is followed by the date: Diuo Maximiano VIII et [[et d(omino) n(ostro) Maximino Aug. II.]] coss.

IIII Idus Iunias Serdica [10th June, 311, at Sofia].

In theory, Licinius, the issuer of the letter, whose "divine hand" wrote the farewell, would have been third in the collegiate line-up after Maximinus and Constantine. Following the death of Galerius in late April or early May 311, Maximinus, who had been in the imperial college the longest (since 1st May 305), should have become the new senior emperor.

Licinius himself, who had been appointed by Galerius straight to the rank of Augustus in November 308, when Maximinus was still only Caesar, had been at that time second in the college. Subsequently, the elevation of all members of the college to the full rank of Augustus in 310 (Lactant. De mort. pers. 32) meant that Licinius, being the newest arrival, was after a short delay demoted to last place.

However, the Brigetio tablet carries no titulature to reveal the collegiate line-up or to demonstrate Licinius's view of himself and his colleagues at that precise point in June 311. The letter was widely circulated to officials both military and civil only in Licinius's Balkan territories, with orders for public display, the two copies which survive coming from Danube fortresses. After the defeat and death of Maximinus in 313, his name was erased from the consular date (indicated by the double brackets above). A heading showing the new imperial college of Constantine and Licinius was added thus:

Imp. Caes. Fla. Val. Constantinus p. f. in. Aug. p. m. tri. p. VII imp. VI cos. p.p. pcoss. et Imp. Caes. Val. [[Lici. Licinius]] p. f. in. Aug. p. m. tri. p. IIII imp. III cos. p.p. pcoss.

After Licinius's fall, his name too was erased. Despite the annulment of his acts by Constantine, this text remained valid and on display.

After all, it was still prefaced with the name of Constantine, even if he had not in fact issued it. Collegiality and conflict had some strange consequences.

6. Collegiality viewed from below

How did this affect practical administration and what did those in receipt of collegiate missives make of them? First, if documents were issued in the names of all co-rulers, was it obvious who had actually issued them? Emperors had traditionally used the first person singular of themselves, as had their Republican predecessors as holders of imperium, which contrasts with the practice of Hellenistic kings. Although there is some sign of the majestic plural in the earlier third century, it seems to have been the almost continuous existence of imperial colleges thereafter which made the plural normal, so that there was no reversion to the singular even in sole reigns, and the majestic plural became standard.

However, occasionally an emperor with colleagues will slip into the singular to emphasize his personal involvement, perhaps to indicate that it is his court to which matters must be referred.

The most remarkable case of this personal emphasis is in the letter of toleration for Christians and others issued by Licinius and posted up at Nicomedia in June 313. This opens not only with the standard talk of the emperors claiming to exercise their providentia for the advantage and safety of their subjects, but with the emperors naming themselves quite explicitly:

Cum feliciter tam ego Constantinus Augustus quam etiam ego Licinius Augustus apud Mediolanum conuenissemus atque uniuersa quae ad commoda et securitatem publicam pertinerent, in tractatu haberemus (...)

When with good fortune both I, Constantine Augustus, and I, Licinius Augustus, met at Milan, and gave consideration to all affairs that pertained to the public benefit and security (...)

This statement is of course very pointed, for Licinius' letter was issued precisely for the territories he had seized from the defeated but not yet dead Maximinus. At the time of the Milan meeting (February 313), Maximinus was at best barely a legitimate colleague, nor was he of course present. Further, his previous claim to senior status in the college had been voided, as the Senate, in probably its last constitutionally significant act, had voted the first place to Constantine shortly after the defeat of Maxentius in October 312.

Indeed, if any letters or edicts were issued at Milan, it is hard to imagine Maximinus' name being included in their headings at all. The Nicomedia letter thus emphasises both the facts of the past meeting and the present constitutional order.

Of course, someone who petitioned or wrote to the emperor will have known with which ruler he was dealing, even though any documents presented should have been addressed to the entire college, at least as the petitioner understood it to be constituted. Similarly, any reply will have come in the names of all in the college as currently recognized by the individual prince who had been approached. However, the recipient need not, other than in a purely formal sense, attribute it to the college as a whole. Ammon of Panopolis talks optimistically of the power of a letter of Diocletian to trump all other claims in a dispute over a priesthood.

No colleagues are mentioned. Everyone in Panopolis will have remembered Diocletian's visit in 298, since an imperial visit was extremely rare, and that of Diocletian may have been the last.

No-one could have been in any doubt that it was Diocletian who had been petitioned by the conflicting interested parties and who had issued the letter in reply during his stay.

7. Proactive pronouncements

I have talked about "petition and response," a pattern still clear in the tetrarchic evidence. Yet the period seems to show a more proactive side to government, with fairly aggressive promulgation of imperial initiatives. There are several features of this which can be briefly delineated.

First, long Latin texts are circulated around Greek-speaking areas, probably a sign of Latin-speaking courts permanently resident in the Greek east for the first time, and of the fact that Roman law was now the law of everyone.

In fact previously emperors had tended to correspond with eastern cities in Greek and such aggressive Latin promulgation is a relatively short-lived phenomenon.

Even during this period, however, governors might publish an imperial Latin text with an explanatory edict of their own in Greek, or even commission a translation.

In the longer term, of course, Greek percolated into the higher echelons of the administration and eventually superseded Latin, although that is quite another story. Secondly, a highly rhetorical and moralizing style becomes prominent in edicts and letters. The style of imperial texts had always varied with both format and the

personal idiosyncrasies of the officials writing them, so that even private rescripts, the most spare in nature, could be tinged with a particular official's rhetoric.

But, especially outside private rescripts, floridity now becomes the order of the day, as witness the Prices Edict preamble, the Damascus/Demessus incest edict (Collatio 6, 4), and indeed the rescript on the Manichees (Collatio 15, 3). Thirdly, the distinction of format between edicts and letters becomes blurred.

An imperial enactment could generate dozens of interrelated documents in both edictal and epistolary formats, often with overlapping or even identical content.

Unfortunately, we seldom have an imperial text in more than one form to test this, even if we know that it must have existed in others. One example is the dossier on the civic status of Orcistus.

Of the four items carved on their monument by the Orcistans, three interrelated items (petition, imperial adnotatio, imperial letter) date to 324/6. We can see how Constantine's letter to Ablabius as vicar of Asiana essentially marries the adnotatio to the Orcistans with details mirrored from the Orcistans' own petition. Another more complex example is my proposed Caesariani dossier, issued by Galerius in the summer of 305.

There were three distinct texts. First there was a letter (the 1st Caesariani decree) directing officials how to act both now and in the future.

Copies of this, presumably largely identical, were sent to the praetorian prefects (that is of each Augustus, at least in theory), the financial officials (apparently just of the issuing Augustus, in this case Galerius) and the provincial governors. Then there were also issued at the same time two edicts, one restoring confiscated goods (the 2nd Caesariani decree) and one repressing accusations (the edictum de accusationibus).

This last edict is quite clear about the documents produced and their interrelationship as described in its concluding passage:

Super his itaque omnibus tam ad praefectos nostros quam etiam ad praesides et rationalem et magistrum privatae scripta direximus, quorum exempla alio edicto nostro subdita cuiusmodi legem statutumque contineat plenissime declaratur.

And therefore on all these matters we have sent letters (sc. the 1st Caesariani decree) both to our prefects as also to the governors, rationalis, and magister privatae, copies of which subjoined to our other edict (sc. the 2nd Caesariani decree) give the fullest exposition of what sort of law and statute it contains.

The inscribed copies of these various texts all come from territory under the control of Galerius (Achaëa, Asia, Crete, Epirus, Lycia, Paphlagonia). However, these cannot be narrowly interpreted as defining the only places where promulgation actually took place, as opposed to where governors or cities were motivated, perhaps out of self interest, to erect permanent copies. The Prices Edict, of course, is famous for being the imperial text known from the most epigraphic copies, more than forty.

However, here also the spread of find-spots shows that only a small number of provinces inscribed the text (Achaëa, Crete/Cyrene and Phrygia/Caria account for all but four fragments), and even then they did not always finish it (as was the case at Stratonicea, which expires in the middle of chapter 23).

Thus we may be seeing the limits of aggressive promulgation. After all, the uneven persecution of the Christians shows how much depended not on the senior emperor's will, but on the variable enthusiasms of his colleagues, of the local authorities, and even of would-be martyrs.

Yet we also know that census decrees issued from the top to provincial governors could be enforced down to village level, as witness the work of the Syrian boundary commissioners (censitores), most of whose inscriptions are set up acknowledging the orders of the Augusti and the Caesars.

8. Epilogue

Thus the tetrarchic period shows four important features of communication: first, the pattern of petition and response, which is crucial in the generation of imperial letters and other documents; second, the overlapping form and function of documents, which cannot always be neatly demarcated, as is especially true of intertwined dossiers; third, the limitations of proactive legislation and promulgation; and finally, the complexity and ambiguity caused by texts issued jointly by multiple co-rulers. This is perhaps the most notable feature in this period of ever-shifting patterns of cooperation and conflict between emperors.

I should like to end, therefore, with a strange, even whimsical, tale of collegiality reflected in the heading to yet another epigraphic letter.

E(xemplum) S(acri) R(escripti)

Imp. Caes. Fl. Constantinus
 max. Germ. Sarm. Got. uictor
 triumph. Aug. et Fl. Constantinus
 106515 et Fl. Iul. Constantius et Fl.
 Constans.

This is from the rescript issued to the city of Hispellum, allowing the Umbrians the right to celebrate their own festival without trekking to the regional capital, Volsinii, every year and also permitting the establishment of a temple to the Flavian gens. The rescript is most often dated to 333-335, and attributed to Constantine, 106520 with his three sons as colleagues. However, this is not the only possible dating of the rescript and its heading. An alternative, although not entirely new, interpretation has recently been advocated with typical forcefulness by Tim Barnes. According to Eusebius, there was a hiatus after Constantine's death on 22nd May 337, 106525 when the government carried on as if he were still alive, while the Caesars, with no Augustus left in the imperial college to promote them, yet not trusting each other's ambitions, waited and plotted. A massacre carried out in Constantinople before the end of June removed Constantine's half-brothers and most of their male relatives, including the Caesar Dalmatius. The three sons of Constantine finally met in 106530 Pannonia, where they were jointly proclaimed Augusti on 9th September. Thus the rescript can be viewed as issued by Constans, who names the city Flavia Constans after himself, while the text studiously avoids giving the three sons any title, so that they are neither Caesar nor Augustus. The only Augustus is Constantine, apparently writing a letter some weeks or even months after he was dead. 106535 I am not certain that this interpretation is correct. However, should it be so, then this is surely one of the more bizarre epistolographic consequences of imperial collegiality.

9. Dossier of documents

106540 This dossier is designed to illustrate with full texts and English translations something of the nature of imperial communication in the third and fourth centuries. I provide examples of each of the four principal formats of pronouncement: a private letter, an official letter, an edict, and a private rescript. Further, each 106545 illustrates different aspects of the source material. Document 1 is from a contemporary inscription (not tetrarchic, but dating only a quarter of a century before Diocletian), in a partial Latin and a complete Greek version. Document 3, relating to the persecution of the Christians, is preserved in two contemporary Christian writers, one giving the original Latin, the other a Greek translation. Documents 2 and 4 are taken from the law codes, each having been first edited into an 106550 earlier code (the Theodosian and Gregorian respectively), before ending up re-edited into the Justinian Code more than two hundred years after their original issue. Documents 1 and 4, although technically different in format, are in fact very similar in subject matter and content, both reflecting individuals' attempts to avoid the heavy burdens or duties demanded of citizens. The edict, by contrast, reflects not 106555 only the rhetorical style typical of late antiquity, and the tendency to apologia surrounding confessional matters, but also the ambiguities in format that were eliding the distinctions of edict and letter.

106560 1 An epigraphic letter: the rescript of Valerian to Apellas (May 258) [Feissel 2004a = AE 2004, 1402; this replaces older editions such as Petzl 1987:no. 604.]

I Latin text

[- - -] CAOON [- - -] KA [- - -]
 [Pr]op{p}<t>er quod magistratus harum ciuitatum
 in quibus te suggeris possidere agere curam
 106565 [deben]t u<t> quod optime placuisse perspicitur perpetua
 obseruatione teneatur. Vale Apel<l>a carissime nobis.
 Data V Kal. Iun. Antiochi(ae).

II Greek text

...

Translation (composite):

Good fortune!

The emperor Caesar Publius Licinius Valerianus dutiful fortunate Augustus and the emperor Caesar Publius Licinius Gallienus dutiful fortunate Augustus and Licinius 106575 Cornelius Valerianus most noble Caesar to their Julius Apellas, greeting!

It is not in doubt that established rules are also in this matter to be observed, in that there is to be no compulsion upon the houses of senators to be troubled by the

need to provide billets. Therefore the magistrates of those cities, in which you say you have property, are to see to it that what is known to be a very fine decision is kept with continual observance. Farewell, Apellas, most dear to us!

Given at Antioch, on the fifth day before the Kalends of June (28th May 258).

This text from Smyrna is typical in both form and substance, but reflects also the needs of the recipient. Apellas is a senator seeking to affirm his immunity from compulsory billeting. A famous rescript of Severus and Caracalla on this matter dating to 204 is known from numerous epigraphic copies in Greek and Latin.

Here likewise, the original letter was most likely in Latin, with Apellas inscribing it also in Greek to make sure the message was clear in the predominant literate language of his home territory.

However, it appears that the penultimate line of the Greek with its brief lacuna does not have enough space to convey the full sense of the Latin original.

Someone of lesser rank than Apellas, like the Scaptopareni villagers mentioned earlier (or Neo in example 4 below), would petition and, if fortunate, get a private rescript in reply, posted in the city where the emperor happened to be in residence. But Apellas, as a senator, can write directly to the emperors and receive a rescript that is epistolary. Whether he personally visited the imperial court at Antioch, or was able to use official channels (e.g. via the proconsul of Asia) is unknown. The reply is fully collegiate, being in the names of all members of the imperial college (Valerian, Gallienus, and Valerian junior), even though in fact it represents the decision of Valerian alone. It is brief and to the point.

2 An official letter from the codes: Constantine to Eusebius, governor of Lycia and Pamphylia (June 313 [311 or 312]) [Cod. Theod. 13, 10, 2 = Cod. Iust. 11, 49, 1] Idem (Imp. Constantinus, in Cod. Iust.)

A. ad Eusebium u(irim) p(erfectissimum), praesidem Lyciae et Pamfyliae. Plebs urbana, sicut in Orientalibus quoque prouinciis obseruatur, minime in censibus pro capitatione sua conueniatur, sed iuxta hanc iussionem nostram immunis habeatur (Cod. Iust. ends here), sicuti etiam sub domino et parente nostro Diocletiano seniore A(ugusto) eadem plebs urbana immunis fuerat. Dat. Kal. Iun. Constantino A. III et Licinio III Conss.

The same Augustus to Eusebius, vir perfectissimus, governor of Lycia and Pamphylia. The urban plebs, as is also the rule in the provinces of Oriens, is not to be liable for its poll-tax in the census, but is to be considered exempt in accordance with this our command, just as the same urban plebs was also exempt under our lord and parent Diocletian, the retired Augustus. Given on the Kalends of June, in the consulship of Constantine Augustus for the third time and Licinius for the third time (1 June 313).

No text in the Theodosian Code records Constantine with a fellow Augustus as a colleague, and few mention his sons as Caesars, even though Constantine always had at least one colleague throughout his reign. Even as consul Licinius loses his title of Augustus, as in the subscript here. The Constantinian texts effectively conceal not just collegiality, but on occasion also the fact that a ruler other than Constantine was responsible for a measure. Several code constitutions were in reality issued by Licinius.

This measure, too, might appear to be Licinian, as an early act of beneficence after his occupation of Asia Minor following the defeat of Maximinus. However, the reference to Oriens and the fact that Diocletian is mentioned as still alive (he died c. December 312), makes Maximinus a far more probable issuer, either in June 311 (beneficence on occupying Asia Minor after the death of Galerius, to coincide with that year's census) or June 312 (a reward for petitions presented against the Christians).

The Justinian Code version is almost identical to the Theodosian version, but with the unnecessary clause about Diocletian removed.

3 An edict from Christian literary sources: Galerius' "palinode" (April 311) [Lactant. De mort. pers. 34, 1-35, 1 (Latin original); Euseb. Hist. eccl. 8, 17, 3-10 (Greek translation); cf. Rufinus, Historia ecclesiastica 8, 17, 3-10 (Latin retrotranslation from Eusebius' Greek). The Latin heading (omitted by Lactantius) is here recreated on the basis of Eusebius's Greek, with my own restoration of the missing Maximinus.]

Imp(erator) Caes(ar) Galerius Valerius Maximianus <pius felix> inuictus Augustus, pont(ifex) max(imus), Germanicus max. <VII>, Aegyptiacus max., Thebaicus max., Sarmaticus max. V, Persicus max. <III, Britannicus max.> II, Carpicus max. VI, Armenicus max., Medicus max., Adiabenicus max., trib(unicia) pot(estate) XX,

imp(erator) XVIIIII, consul VIII, p(ater) p(atriae), proc(onsul) <et Imp. Caes. Galerius Valerius Maximinus pius felix inuictus Augustus, pont. max., trib. pot. VII, imp. VI, consul, p. p., proc.> et Imp. Caes. Flavius Valerius Constantinus pius felix inuictus Augustus, pont. max., trib. pot. <VI>, imp. V, consul, p. p., proc. et Imp. Caes. Valerius Licinianus Licinius pius felix inuictus Augustus, pont. max., trib. pot. IV, imp. III, consul, p. p., proc. {provincialibus suis salutem} dicunt: Inter cetera quae pro rei publicae semper commodis atque utilitate disponimus, nos quidem uolueramus antehac iuxta leges ueteres et publicam disciplinam Romanorum cuncta corrigere atque id prouidere, ut etiam Christiani, qui parentum suorum reliquerant sectam, ad bonas mentes redirent, siquidem quadam ratione tanta eosdem Christianos uoluntas inuasisset et tanta stultitia occupasset, ut non illa ueterum instituta sequerentur, quae forsitan primum parentes eorundem constituerant, sed pro arbitrio suo atque ut isdem erat libitum, ita sibimet leges facerent quas obseruarent, et per diuersa uarios populos congregarent. denique cum eiusmodi nostra iussio extitisset, ut ad ueterum se instituta conferrent, multi periculo subiugati, multi etiam deturbati sunt <et uariis mortibus affecti> (added from Eusebius). atque cum plurimi in proposito perseuerarent ac uideremus nec diis eosdem cultum ac religionem debitam exhibere nec Christianorum deum obseruare, contemplatione mitissimae nostrae clementiae intuentes et consuetudinem sempiternam, qua solemus cunctis hominibus ueniam indulgere, promptissimam in his quoque indulgentiam nostram credidimus porrigendam, ut denuo sint Christiani et conuenticula sua componant, ita ut ne quid contra disciplinam agant. per aliam autem epistolam iudicibus significaturi sumus quid debeant obseruare. unde iuxta hanc indulgentiam nostram debebunt deum suum orare pro salute nostra et rei publicae ac sua, ut undique uersum res publica praestetur incolumis et securi uiuere in sedibus suis possint. Hoc edictum proponitur Nicomediae pridie kalendas Maias ipso (sc. Maximiano) octies et Maximino iterum consulibus.

The emperor Caesar Galerius Valerius Maximianus, dutiful, fortunate, unconquered Augustus, Chief Priest, mightiest German victor 7 times, mightiest Egyptian victor, mightiest Thebaic victor, mightiest Sarmatian victor 5 times, mightiest Persian victor thrice, mightiest British victor twice, mightiest Carpien victor 6 times, mightiest Armenian victor, mightiest Median victor, mightiest Adiabenican victor, holding the tribunician power for the 20th time, emperor for the 19th time, consul for the 8th time, Father of his Country, proconsul; and the emperor Caesar Galerius Valerius Maximinus, dutiful, fortunate, unconquered, Augustus, Chief Priest, holding the tribunician power for the 7th time, emperor for the 6th time, consul, Father of his Country, proconsul; and the emperor Caesar Flavius Valerius Constantinus, dutiful, fortunate, unconquered, Augustus, Chief Priest, holding the tribunician power for the 6th time, emperor for the 5th time, consul, Father of his Country, proconsul; and the emperor Caesar Valerius Licinianus Licinius, dutiful, fortunate, unconquered, Augustus, Chief Priest, holding the tribunician power for the 4th time, emperor for the 3rd time, consul, Father of his Country, proconsul

DECLARE:

Among all the other arrangements which we are always making for the advantage and benefit of the state, we had earlier sought to set everything right in accordance with the ancient laws and public discipline of the Romans and to ensure that the Christians too, who had abandoned the way of life of their ancestors, should return to a sound frame of mind; for in some way such self-will had come upon these same Christians, such folly had taken hold of them, that they no longer followed those usages of the ancients which their own ancestors perhaps had first instituted, but, simply following their own judgement and pleasure, they were making up for themselves the laws which they were to observe and were gathering various groups of people together in different places. When finally our order was published that they should betake themselves to the practices of the ancients, many were subjected to danger, many too were struck down. Very many, however, persisted in their determination and we saw that these same people were neither offering worship and due religious observance to the gods nor practising the worship of the god of the Christians. Bearing in mind therefore our own most gentle clemency and our perpetual habit of showing indulgent pardon to all men, we have taken the view that in the case of these people too we should extend our speediest indulgence, so that once more they may be Christians and put together their meeting-places, provided they do nothing to disturb good order. We are moreover about to indicate in another letter to governors what conditions they ought to observe. Consequently, in accordance with this indulgence of ours, it will be their duty to pray to their god for our safety and for that of the state and themselves, so that from every side the state may be kept unharmed and they may be able to live free of care in their own homes.

(Lactantius' comment) This edict was published at Nicomedia on the day before the Kalends of May, during his (sc. Galerius's) eighth consulship and the second consulship of Maximinus (30 April 311])

This text shows several features typical of edicts of this period, especially the moralizing rhetoric and the need for imperial self-justification, the latter a particular feature of texts relating to the persecution and other Christian matters. It is, however, rather shorter than other examples, such as the Prices Edict preamble or the longer letters sent by Constantine. The imperial titulature, however, is given in full form, although as preserved by Eusebius it suffers from both deliberate omission and error in transmission. The most serious loss is the absence of Maximinus, who will have been damned by the time Eusebius wrote. It is notable that only four manuscripts include Licinius, as he too was damned and later editions of the Ecclesiastical History reflect his diminished status.

Unlike the Prices Edict heading quoted earlier, victory titles are only attributed to the senior emperor (Galerius). The Lactantian text should have derived from the original edict posted up at Nicomedia. However, Maximinus did not promulgate the edict in Oriens.

Therefore, unlike Licinius's letter ending the persecution in the East, which was initially promulgated at Nicomedia with another version later displayed at Caesarea, Eusebius's text of the edict must have been obtained by some other route.

Although the text appears to be an edict, the heading in Eusebius, unless it represents mistranslation of the Latin, suggests an epistolary form greeting the provincials, typical also of Constantinian missives, and indeed the text itself refers to "another letter." This shows the confusing convergence of format at this period between edicts and letters.

A rescript from the Gregorian(?) and Justinian Codes: The tetrarchs to Neo (undated, but probably 293 or 294) [Cod. Iust. 7, 62, 7 with overlap in bold from the Fragmenta Londiniensia Anteiustiniana (Cod. Greg. 10, 11, 7?)]

Idem (sc. Imp. Diocletianus et Maximianus) AA. et CC. Neon. <Hi> qui ad ciuilia munera {uel decurionatum uel honores} deuocantur, licet uacationem a principibus acceperint, si appellationis auxilio non utantur, consensu suo nominationem confirmant. Cum igitur ad munus uocatus appellaueris, apud praesidem prouinciae iuste appellationem ostende. [The subscript with the dating clause is lost]

The same Augusti and Caesars to Neo. Those who are summoned to civic obligations or to the decurionate or to magistracies confirm their nomination by acquiescence, if they do not invoke the assistance of an appeal, even though they have been granted exemption by the emperors. Since, therefore, you have been called to an obligation and you have appealed, show before the provincial governor that your appeal is well-grounded.

This is a typical private rescript on a typical topic. It both states the law and indicates how this relates to the petitioner's circumstances. The petitioner's next step is suggested, but the rescript does not decide the issue one way or the other. The rescript survives principally through the version in the second edition (534) of the Justinian Code, and so is at least three removes from the original. The imperial titles of the First Tetrarchy are attenuated in the code format. A subscript date would have been present, but has been lost in transmission, nor is there any trace of it in the surviving London fragments. If the London fragments indeed derive from a copy of the Gregorian Code, this shows that the text was, in an earlier incarnation, present in that Code rather than the Hermogenian Code, which, comprising solely rescripts of 293 and 294, would otherwise have been the default option as the source for this rescript.

Comparing the overlapping text between the Justinian Code and the London fragments, the gap between the various fragments does not seem long enough to include the phrase "uel decurionatum uel honores," which most probably, therefore, is a Justinianic interpolation into the first edition of 529. It would have been designed to make the rescript more general and apply to a wider range of positions and duties than the ciuilia munera, which must have been the focus of the original petition and rescript.

The Value of the Stability of the Law.

A Perspective on the Role of the Emperor in Political Crises

1 Emperors and Usurpers in Conflict in Late Antiquity

The great Church father Augustine, speaking from the pulpit of the Tricilarum Basilica around 413, offered a comment on the Apostle Paul's passage Non regnet peccatum in vestro mortali corpore.□ The bishop of Hippo urged the people not to be overcome by the lust of the flesh, describing this situation as a civil war of the fifth century. Christians faced the conflict between flesh and spirit just as citizens of the empire faced the choice between a usurper, or tyrannus, and an emperor:

Languor iste tyrannus est. Si vis te tyranni esse victorem, Christum invoca imperatorem.

This disease is like a tyrant. If you want to defeat this tyrant, you shall invoke Christ the real emperor.

Augustine's speech, in its imagery, had a direct connection with the daily life of Christian believers. The bishop's audience had experienced such a clash between a usurper and the emperor; for in that very same year, Heraclianus, comes Africae, had been declared hostis publicus.

Usurpation was very frequent in the Late Empire, as depicted by the historical sources. Beside the list of triginta tyranni in the Historia Augusta,① Orosius mentions a catalogus tyrannorum in his Historiae adversus paganos when describing the usurpers Constans, Maximus, and Jovinus in the year 409. Furthermore, in Polemius Silvius' annotated Julian calendar in honor of Eucherius (Bishop of Lyon) of December 448, we find a copy of an enumeratio principum cum tyrannis, a list of Roman emperors and usurpers from Julius Caesar to Theodosius II and Valentinian III.

Usurpation in Late Antiquity took diverse forms, ranging from emperors being declared enemies of the state to rebellious generals. Nonetheless, usurpation constituted a political problem, not only a military one, because the claimant wanted to be recognized as a legitimate ruler and acted as such.

The opposition between an emperor and his rival for the title of Augustus had been a political matter since its genesis. Once such usurpers were suppressed, the legitimate emperors continued a propaganda war against their defeated opponents.□ Late imperial coinage celebrated the successes over the usurpers through depictions of the goddess Victoria promoting the triumph of the emperor.□ Monuments were another medium of representation for a legitimate ruler. The Senate built an arch at the foot of the Palatine to commemorate Constantine's victory against Maxentius at the Milvian Bridge; Theodosius I decided to erect an obelisk on the central spina of the hippodrome at Constantinople in order to celebrate his victory against the usurper Magnus Maximus.□ Finally, public ceremonies indicated the return of peace after the usurper's defeat.□ A triumph of Honorius in Rome in 416, for instance, symbolically ended the political crises caused by attempted usurpations in Gaul.

In view of these various "imperial" manifestations, sharing an intent to reaffirm the emperor's legitimacy, a question arises: what did the law say? The war of a legitimate emperor against a usurper continued on an administrative and legal level. A usurper used the same legal forms as a legitimate ruler, because he usurparet imperium.□ For example, Eugenius appointed consuls and sent his officials to Africa, and he provided grain supplies as well.□ Usurpers typically also enacted a number of statutes and/or grants of beneficia and privilegia.

Consequently, usurpation created a fracture in the legal order because emperors, after defeating their rivals, removed the effects that the usurpations had produced. The condemnation of a usurpation to oblivion was carried out with legal instruments. For the period that runs from Constantine to Theodosius II, imperial constitutions are the most vital witnesses of the actions taken by the emperors. On the one side, in public law, emperors professed to be restoring the status quo ante; in particular, they tended to order that enactments issued under the usurper should be nullified (rescissio actorum).□ On the other side, they tended to confirm all private legal acts which had been enacted during the time of "tyranny", because the danger of collapse in social and economic relationships had to be avoided.

Even if different points of view emerge from public and from private law, imperial statutes show a consistent image of what constituted a legitimate ruler. As words of the emperor himself, constitutions are part of the ideological system centred on the figure of the emperor and made up of many different elements, for example rhetorical texts as Panegyrics or images on coins. All these objects and texts played a role in the representation and promotion of imperial power to the population of the Roman empire. By examining several constitutions from the Theodosian Code, I argue in this paper that the imperial statutes promote the emperor who has vanquished a usurper as the person who re-established order and protected the stability of the law.

2 Annulling a Usurper's Legislation: Between Commands and Political Communication
Removal of a rival generally forced emperors and their administration to review the enactments that the usurper had issued. The question is not simple, as in some cases a usurper may have exercised power for a long period and over an extensive area. Constantine, to use an important example, had to solve such a situation after defeating Licinius, who had been Augustus for more than fifteen years. Constantine branded him a tyrannus—a term which defines a political enemy but also a usurper—in order to recast his own conquest of the East as a restoration of liberty and the rule of law. Constantine addressed an epistula to the praetorian prefect Constantius, ordering that all inhabitants should obey only his constitutions and the *vetus ius* because the constitutions and the *leges* of Licinius had been declared void, probably by an edictum previously issued:

Imp. Constantinus a. ad Constantium praefectum praetorio. Remotis Licini tyranni constitutionibus et legibus omnes sciant veteris iuris et statutorum nostrorum observari debere sanctionem. Proposita XVII kal. iun. Crispo III et Constantino III caess. conss.

Emperor Constantine Augustus to Constantius, Praetorian Prefect. All men shall know that the constitutions and laws of the tyrant Licinius are abolished and that the sanctions of ancient law and of Our statutes must be observed. Posted on the seventeenth day before the kalends of June in the year of the third consulship of Crispus and Constantine Caesars – May (December) 16, 324

The words used in the constitution are extremely clear. They communicate the point of view of the winner, who wants to show strength and authority.

The existing body of law from then on included ancient law followed by the enactments of Constantine, while the constitutions of the usurper completely lost their power. The vacuum that was potentially created by the deletion of Licinius' laws was filled by the constitutions of Constantine, who connected his own legislation to the ancient law (*ius vetus*), thus creating a continuation of the legal order. The constitution, however, was less effective in practice, since the historical record has preserved many traces of Licinius the legislator. Moreover, coeval Christian sources confirm that Constantine abrogated only the enactments against the church. The proclaimed complete annulment of Licinius' legislation seems rather part of the political message of the Constantinian regime, absorbed in manipulating the past and celebrating a new vision of government.

The link between the emperor and ancient law (*vetus ius*), stressed in CTh. 15.14.1, was already expressed in an earlier constitution that Constantine issued in an analogous situation in 313, namely the overthrow of Maxentius. The arrival of Constantine in Rome was followed by a widespread promotion of his person, which had to counteract the city's preference for his rival. Constantine characterized his opponent as a tyrant, providing, at the same time, a revealing self-portrait in the role of liberator urbis. In this context of vilifying Maxentius, Constantine dealt with his enactments:

Idem a. Antiocho praefecto vigilum. Quae tyrannus contra ius rescripsit non valere praecipimus, legitimis eius rescriptis minime impugnandis.

Dat. VIII id. iul. Romae Constantino a. VII et Constantio caes. conss.

The same Augustus to Antiochus, Prefect of the City Guard. We direct that if the tyrant issued any rescripts contrary to law, they shall have no validity, but his lawful rescripts shall not be impugned. Given on the eighth day before the ides of July at Rome in the year of the seventh consulship of Constantine Augustus and the consulship of Constantius Caesar. – July 8, 326; January 6, 313.

In CTh. 15.14.1, Constantine referred to the "tyrant" Licinius's enactments, *leges* and *constitutiones*. In the statute about Maxentius, the same oblivion was imposed on the imperial rescripts, i.e. the answers to petitions, that the usurper had pronounced "against the law" (*contra ius*).

However, the acts of Maxentius were not abolished in their entirety, for Constantine ordered that the lawful rescripts were not to be challenged. It is important to focus on this decision, because the lawful rescripts received their validity not only because they complied with the *ius vetus*, but also because Constantine forbade opposition against them. The constitution thus points to an implied evaluation of what valid law is. Even if the usurper as illegitimate legislator has no competence to make law, and his acts must therefore be abolished, some of his rescripts may be granted existence because the legitimate emperor gives them a new life in the world of the law. The criterion that allows these rescripts to retain their validity is their adherence to the *ius vetus*. In other words, the non-existence of the usurper's acts can be overcome by the connection between the *ius vetus* and the legitimate emperor; the former exists independently, the latter is the guarantor of the body of

law in its entirety.

The sources show that the discourse linking the emperor and the *ius* found expression in various ways, even though in terms of semantics and ideology the range was quite narrow. The virtue of justice in the legitimate ruler is more intensely denoted as opposed to the iniquity of the usurper. For instance, in October 388, Theodosius I condemned every law and verdict that Magnus Maximus❖ had conceived during his usurpation:

[Imp. Valentinianus et Theodosius et Arcadius] aaa. Trifolio praefecto praetorio. Omne iudicium, quod vafra mente conceptum iniuriam, non iura reddendo Maximus infandissimus tyrannorum credidit promulgandum, damnabimus. Nullus igitur sibi lege eius, nullus iudicio blandiatur. Dat. VI Id. Octob. Mediolano Theodosio a. II et Cynegio cons. s.

Emperors Valentinian, Theodosius, and Arcadius Augustuses to Trifolius, Praetorian Prefect. We condemn every decision which Maximus, the most nefarious of tyrants, conceived in his crafty mind and supposed that he should promulgate, thus rendering injustice instead of justice. Therefore, no man shall boast about any law or decision of the tyrant. Given on the sixth day before the ides of October at Milan in the year of the second consulship of Theodosius Augustus and the consulship of Cynegius – October 10, 388.

Maximus was described as the most nefarious and the most monstrous of the usurpers.❖ He devised laws and judgments with a wily mind, and he supposed that he should promulgate them. In reality, according to Theodosius, he was not a legitimate lawgiver, he was a source of injustice: he did wrong, rather than making law (non iura reddendo). The strong language of the constitution made the abstract idea of justice appear in the figure of Theodosius. The emperor was the personification of this principle, and his authority took away all the effects of the usurper's legal actions, in order that no-one could take advantage of any law or decision of Maximus. We can thus say that the usurper is the living sign of iniuria, i.e. the absence of the law, while the emperor is the source of the justice. The same characterization is adopted by the rhetor Pacatus. His panegyric dedicated to Theodosius has the usurper's suppression as its major theme and shows a shared back-ground with the text of the constitution. While the usurper Magnus Maximus carries with him perfidia, nefas, and iniuria, the legitimate emperor is the one who gives fides, fas and ius: Tecum fidem, secum perfidiam; tecum fas, secum nefas; tecum ius, secum iniuriam; tecum clementiam pudicitiam religionem, secum impietatem libidinem crudelitatem et omnium scelerum potremorumque vitiorum.

On your side there was loyalty, on his, treachery; you had right on your side; he, wrong; you had justice, he injustice; you had clemency, modesty, religious scruple, he impiety, lust, cruelty and a whole company of the worst crimes and vices.

Despite the technical legal contents of the laws, the style of the constitutions emulates the panegyrics and their persuasive purpose; the broad circulation of the edicts allowed the emperors to build a common and loyal consent to imperial authority among the population of the empire.□ The need for approval became more pressing when emperors had to support their legitimacy at the end of a political crisis, and the emphatic formulation of the enactments conveyed the idea of reinstating justice: Omnia penitus amputentur, quae tyrannicum tempus poterat habere tristissima; universos ergo praecipimus esse securos.

All the most unhappy circumstances which the time of the tyrant could afford shall be abolished entirely. Therefore We command that everyone shall be secure.

3 Safeguarding the Daily Life of the Empire's Inhabitants Erasing the usurper's actions in terms of public law, such as by abolishing constitutions or rescripts and removing officials who had collaborated with the tyrant, was bound to have severe repercussions. At the same time, however, emperors chose to confirm the validity of transactions by private citizens during the period of usurpation. During the reign of a usurper, people evidently concluded contracts, manumitted slaves, and litigated in the courts. In order to avoid the chaos resulting from cancelling all legal actions, emperors tried to mitigate the consequences of the *damnatio memoriae* by preserving the stability of the law.

In November 352, Constantius II issued an edict to the population of the Roman provinces and to the people of Rome, after defeating Magnentius with his troops in the Battle of Mursa Major and forcing him to retreat back to Gaul. Even though the usurper was still alive at this time, the emperor wanted to reassure the inhabitants of the empire:

Imp. Constantius A. et Constans C. ad universos provinciales et populum. Quae tyrannus vel eius iudices contra ius statuerunt, infirmari iubemus reddita

possessione expulsis, ut qui vult ab initio agat. Emancipationes autem et
 106975 manumissiones et pacta sub eo facta et transactiones valere oportet. Dat. III non.
 Nov. Mediolano Constantio A. V et Constante cons.

Emperor Constantius Augustus and Constans Caesar to all the Provincials and the
 People. We order that all the regulations established by the tyrant and his judges
 106980 contrary to law shall be invalidated. Possession shall be restored to those persons
 who were evicted, so that any person who wishes may litigate as from the beginning.
 But emancipations, manumissions, pacts, and compromises made under the tyrant, must
 remain valid.

Given on the third day before the nones of November at Milan in the year of the fifth
 consulship of Constantius Augustus and the consulship of Constans – November 3, 352.
 106985 At the opening of the constitution, the emperor ordered the invalidation of the
 regulations that Magnentius and his judges had established contrary to the law
 (contra ius). The emperor also decreed that possessions should be restored to the
 people who had been evicted. Next, however, he ordered that emancipations,
 manumissions, pacts and compromises that were made under the tyrannus were to remain
 106990 valid.

Valentinian decided to preserve the effects of the same legal acts, after commanding
 that any declaration of law and any decisions taken by judges appointed by the
 usurper Magnus Maximus should be cancelled:

[Imppp. Valentinianus, Theodosius et Arcadius] aaa. Constantiano praefecto praetorio
 106995 Galliarum ... Exceptis his tantum negotiis adque in sui integra firmitate mansuris,
 quae conventionibus pactisque finita sunt, si dolo metuve caruerunt: his quoque
 pariter exceptis, quae donatio transtulit, emancipatio liberavit, contulit manumissio
 praemia merita servitutis, quia in his omnibus voluisse sat iuris est. Dat. XVIII kal.
 feb. Mediolano Timasio et Promoto vv. cc. cons.

Emperors Valentinian, Theodosius, and Arcadius Augustuses to Constantianus,
 Praetorian Prefect of Gaul ... Only those suits shall be excepted and remain in their
 complete effectiveness which were terminated by agreements and pacts, provided that
 fraud and fear were absent. Those legal acts are likewise excepted whereby a gift was
 transferred, freedom was conferred by emancipation, or the reward of manumission was
 107005 bestowed upon meritorious slaves, because in all such matters the intention is a
 sufficient law. Given on the nineteenth day before the kalends of February at Milan
 in the year of the consulship of the Most Noble Timasius and Promotus. – January 14,
 389.

Pacts and agreements, such as gifts, emancipations, and manumissions, were to be
 107010 excepted from the sanction of invalidation, unless all these private agreements were
 the consequence of fraud and fear.□ Valentinian considered that these acts were
 effective because they were based on the will of the person he had concluded them.
 Sat iuris esse means that, even in a period where there had been no law because of
 the illegality of the usurper's reign, the citizens of the empire had preserved the
 107015 respect for the rules, which were now protected by the emperor. The emperor, in this
 way, recognized that the people had continued to be free in regulating on their own
 their economic and domestic affairs.

The opposite decision was taken when a usurper participated directly in the legal
 acts. Honorius, after suppressing the usurpation of Heraclianus and commanding his
 107020 damnatio memoriae,✧ ordered that grants of freedom were revoked and had to be redone
 because the usurper had influenced directly the will of the masters:

Impp. Honorius et Theodosius aa. Hadriano praefecto praetorio ... Libertates quoque,
 quoniam certum est scelere eius sollemnitatem consulatus esse pollutam, in melius
 revocamus, sciatque dominorum voluntas iterandum esse, quod illo auctore advertit
 107025 stare non posse; semel tamen mutatae condicionis beneficium implendum esse
 praecipimus et ita repeti manumissionum consuetudines nunc iubemus, ut nullus sub hac
 occasione incipiat nolle quod voluit. Dat. III non. aug. Ravennae post cons. Honorii
 VIII et Theodosii v. aa.

Emperors Honorius and Theodosius Augustuses to Hadrianus, pretorian prefect, we also
 107030 revoke for the better all grants of freedom, since it is certain that the legal
 formalities of the consulship were polluted by his criminality, and masters shall
 know that they must repeat their action, expressing their will, which they observe
 cannot be valid under his sponsorship. We direct, however, that the benefit of the
 changed condition of slaves must be fulfilled when the change is once made, and We
 107035 now order that the customary rites of manumission shall be so repeated that no man
 under such pretext shall begin to unwill that which he once willed. Given on the
 third day before the nones of August at Ravenna in the year after the ninth
 consulship of Honorius Augustus and the fifth consulship of Theodosius Augustus. –
 August 3, 413.

- 107040 The manumissions that Heraclianus promoted personally or that were celebrated solemnly in front of him as consul were not the free and independent desire of the masters of the freed slaves, but were polluted by the criminality of the usurper. Heraclianus' presence during the ceremony undoubtedly affected the masters' behaviour. The usurper might also have leveraged the masters' fear to induce them to
- 107045 manumit their slaves, perhaps in order to conscribe them for his own troops. Honorius renewed the decision of his predecessor Valentinian (CTh. 15.14.8), and accepted that the intention of releasing someone from slavery was legally sufficient if it was independent from the negative and illegal authority of a tyrannus. When, on the contrary, manumissions were affected by the pernicious influence of the usurper, he
- 107050 ordered that the masters had to repeat the acts. The respect of people's liberty in performing legal acts comes to light in another constitution of Honorius, dated about eighteen years before CTh. 15.14.13 to 21 April 395:
- 107055 Impp. Arcadius et Honorius aa. Andromacho praefecto Urbi. Valeat omnis emancipatio tyrannicis facta temporibus; valeat a dominis concessa libertas; valeat celebrata et actis quibuslibet inserta donatio; valeat deficientium omne iudicium; valeat universa venditio; valeant sententiae iudicum privatorum—convelli enim iudicium non oportet—quos partium elegit adsensus et compromissi poena constituit; valeant conceptae sollemniter pactiones; valeant scripturae, quibus aut fides rerum aut ratio probatur aut debitum; valeant apud quemlibet habitae spontaneae professiones; valeat deposita super instituenda lite testatio; valeat impetratio iuris communium liberorum; valeat procuratio scaevis mandata temporibus; datus tutor vel curator optineat firmitatem; valeat in sponsam perfecta largitio; doli ac vis et metus inchoata actio in tempus legitimum perseveret; bonorum admissa possessio et adfectus adeundae hereditatis obtineat et interdicti beneficium non amittat; valeat in integrum restitutionis petitum auxilium; valeat vindicatio ... identidem desiderata tribuatur; locatio et conductio inviolabilem obtineant firmitatem; interdicti beneficia tempora infausta non mutilent; postulata inofficiosi actio et inmodicarum donationum rescissio petita servetur; beneficia transacta non titubent; sacramento terminata permaneant; pignoris adque fiduciae obligatio perseveret. Stent denique omnia, quae in placitum sunt deducta privatum, nisi aut circumscriptio subveniet aut vis aut terror ostenditur. Funestorum tantum consulum nomina iubemus aboleri, ita ut his reverentia in lectione recitantium tribuatur, qui tunc in Oriente annuos magistratus victuris perpetuo sunt fascibus auspicati; tempus vero ipsum, ac si non fuerit, aestimetur, si quidem tunc
- 107070 temporis omissa aliqua praescriptio taciturnitatis etiam de illis, quae confirmavimus, non possit obponi. Dat. XI kal. mai. Mediolano Olybrio et Probino conss.
- 107080 Emperors Arcadius and Honorius Augustuses to Andromachus, Prefect of the City. Every emancipation made in the times of the tyrant shall remain valid; all grants of freedom by masters shall remain valid; all gifts made and registered in any records shall remain valid; every will of deceased persons shall remain valid; every sale shall remain valid; the decisions of private judges, chosen by the assent of the parties and appointed under penalty of a mutual promise to abide by the award, shall
- 107085 remain valid, since judgments once rendered must not be disturbed; pacts that were formally made shall remain valid; written documents by which the trustworthiness of transactions or the reason there for or debts are proved shall remain valid; declarations voluntarily made before any person shall remain valid; attestations filed for the institution of suits shall remain valid; impetrations of special
- 107090 privileges that accrue to parents on account of their common children shall remain valid; procurator ships entrusted during the untoward times shall remain valid; the appointments of tutors and curators shall retain their validity; a completed gift to a betrothed woman shall remain valid; an action for fraud or one on account of violence and intimidation, when once instituted, shall remain effective during the statutory time limits; a grant of the possession of the goods of an inheritance and the expressed will to enter on an inheritance shall prevail, and shall not lose the benefit of the interdict; the aid sought for restoration to the original condition shall remain valid; vindications shall remain valid, and any such action often
- 107095 requested shall be granted; letting and hiring shall retain inviolable effectiveness; the inauspicious times shall not mutilate the benefits of an interdict; requested actions against inofficiosity and the petitioned rescission of immoderate gifts shall be preserved; completed benefits shall not waver; transactions terminated by an oath shall remain valid; the obligation of a pledge or a trust shall persist. Finally, every transaction shall stand firm which was embodied in a private pact, unless
- 107100 either circumvention entered therein or duress or intimidation is shown. We order
- 107105

that the names of the calamitous consuls only shall be abolished, but reverence shall be paid in the public recital of readers to those persons who at that time in the Orient administered the annual magistracies under Our ever victorious fasces. The very time of the tyranny shall be considered as though it had not been, since any prescription of silence omitted at that time cannot be brought, even in regard to those matters which We have confirmed. Given on the eleventh day before the kalends of May at Milan in the year of the consulship of Olybrius and Probinus. – April 21, 395.

Addressed to Andromachus, praefectus urbis, this imperial enactment concerns the usurper Eugenius. Honorius preserved the effects of the legal acts performed by citizens during the usurpation. The emperor tried to cover all private law, and the constitution implied a very good knowledge of the praetorian edict, as the references of many of its institutions show. For contracts, both formal and informal, he listed e.g. sale, hire, agency, pledge and fiducia; for the law of succession, he cited the acquisitions of inheritance, the bonorum possessio, as well as the remedies of the heir; for the law of procedure, he remembered the litis contestatio and the in integrum restitutio; he did not forget the law of family, quoting emancipation, guardianship and gifts for marriage. The long list of legal acts ends with a general provision. The emperor recognized the validity of all acts that had not been indicated in the list and that were embodied in a private agreement (omnia, quae in placitum sunt deducta privatum), provided that they had not been concluded dolo or vi.

The constitution then resolved the problem of the formality of the acts that was the result of deleting in the documents the names of the consuls appointed by the tyrannus. The nomen consulis was a necessary requirement for an act to be legally valid, and its importance is clearly evoked by John Chrysostom.® Yet, in the present case, the emperor decreed that the omission of the consuls' names did not invalidate the contracts and all the other private regulations. Using a fictio, he denied that the praescriptio was able to invalidate these agreements, which the authority of the legislator confirmed.

From a political and ideological point of view, the constitution clearly states that there was a time of the usurper (tyrannicis temporibus / scaevius temporibus / tempora infausta), but that now the time of justice is back. Honorius wanted to erase the time of usurpation, tempus vero ipsum, ac si non fuerit, aestimetur:

the time of usurpation must be considered as having never existed, as if no usurpation had ever occurred. However, asserting that the time of the usurpation had never existed threatened the certainty and the stability of relations between the individuals. For this, the emperor gave effect to all private acts, and he based this solution on his power, which was legitimately exercised. The emperor presents himself as the only one able to guarantee the existence and effectiveness of all the actions taken by the citizens during the time of usurpation. The repetition of the verb valeat stresses that the emperor assures the serenity and the prosperity of the empire and safeguards peace among the citizens.

The idea that power is now legitimately exercised after the usurper's fall also emerges in the decision to ensure reverentiam in lectione recitantium only for legitimate consuls. In the courts of the empire, only the emperor's time would resound, while oblivion fell on the usurper's period. The same emperor emphasized this thought in CTh. 9.38.12, in which he released an act of grace for those awaiting trial and for the convicted. By celebrating the defeat of the usurper Priscus Attalus in 410, he affirmed that the state had been freed from tyrannidis iniuria, i.e. a period of no law (in-ius).

Honorius' validation of private acts answers to the need to secure the trust of his subjects in imperial power and to strengthen the period of peace after the conflict with the usurper. By doing this, he protects the principle of legal certainty, because the law is certain when the subjects can predict the consequences of their conduct and see the effects of their legal action maintained over time. This principle of law, adopted in the Roman legal system, is a constant in the political programme of all the emperors. For example, Marcianus, in a lex of 4 April 454, stated that he wanted to remove obscuritas and bring certainty to the laws:

Si quid vero in iisdem legibus latum fortassis obscurius fuerit, oportet id imperatoria interpretatione patefieri, ut omnis sanctionis removeatur ambiguum et in suam partem iuris dubia derivare litigatorum contentio alterna non possit.

If any regulation issued in the aforesaid laws should perhaps be rather obscure, it must be clarified by the interpretation of the Emperor. Thus the ambiguity of every sanction shall be removed, and the alternate contention of litigants cannot divert doubtful points of law to their own advantage.

4 The Emperor is also νόμος ἐμψυχός during Political Crises

This brief survey of texts has demonstrated how constitutions function as vehicles for the public advertisement of emperors' legitimacy after political crises caused by usurpation. Constantine and Theodosius emphasized that they restored the law, while the usurper was turned into the personification of the absence of any kind of order and justice. In addition, Valentinian and Honorius claimed that they were guardians of the stability of the rules by recognizing the validity of the legal acts of private citizens while they were subject to the power of the tyrannus.

This account traced the connection between emperors and law, which characterized all legal experience in Late Antiquity. The power of issuing enactments was not simply a prerogative of the emperor, but became one of the essential features of his persona. In Late Antique imperial ideology the emperor was not only the source of the law but the law itself.® Libanius defines the emperor as master of the law, an expression which evokes the phrase τοῦ κόσμου κύριος, used by Antoninus Pius in answering the petition of Eudemone. Themistius, in his encomium, displays Theodosius as living law and superior to all the written rules.

The ideological system that the emperors manipulated to obtain the subjects' consensus survived also during usurpations, a period where rival claims of succession in the imperial power shook the routine of the empire's life. After the removal of the defeated enemy, the language of power, through imperial constitutions, aimed to convince all inhabitants of the empire that the triumph of the emperor restored the rule of law, which had been lost under the "tyranny" of the opponent. Legislation, connected to the communicative framework of the imperial regime, promoted in a very effective way the image of an emperor as legum dominus Romanorum, iustitiae aequitatis rector.

See [\(PDF\) The Value of the Stability of the Law. A Perspective on the Role of the Emperor in Political Crises](#), in O. HEKSTER-K. VERBOVEN, *The Impact of Justice on the Roman Empire*, Brill 2019, pp. 68-85

The Limburgish national character, like the Limburgish language itself, is a fiction.

Those who have written about the nature of Limburgers up to now have always had only the inhabitants of a specific part of our southernmost province in mind.1) Prof. Dr. Jos. Schrijnen, who – as evidenced by his numerous folkloristic and dialectological studies and publications – may be considered the best expert on the character of the Limburgish land and people, believes "that Limburg, as regards farmsteads, customs, and language, is divided into a southern, central, and northern part. The South, he writes, "stands virtually alone (or is connected to southern Belgium, France, and southern Germany), the center indicates more contact with Brabant and Flanders, and the North – north of the line connecting Arcen, Sevenum, and Meijel – with the Betuwe and Saxony... The national character conforms to this division."2)

Indeed, the linguistic and folklore geographic studies of the Limburg region conducted thus far, broadly speaking, repeatedly arrive at this division as suggested by Professor Schrijnen.3)

Since our personal research into the nature of the inhabitants of the most recent Dutch region is still in full swing, we can only briefly point out differences between the aforementioned regions. We will primarily highlight those characteristics that are essential to the people of South and Central Limburg (and often also to those of North Limburg), in the hope that many who are called, in whatever capacity, to come into contact with the inhabitants of our native region will better understand the spirit of the Limburg people for the good of the region and the fatherland. Although it cannot be our intention to strive for completeness in this study, a certain depth should not be lacking, despite the intention that it must be "universally understood."

When Byvanck says that "a nation is as much a product of race as of culture and history,"4 he mentions three factors that determine not only the typology of the population of a country, but also that of a region. And if we add that the soil exerts a strong influence on race, history, and culture, then we have exposed the roots that supply the vital juices of the national character. What Bruneau observes for the Ardennes region: "The relief is based on the significance of the

determination, the origins, the history of the settlement and the colonization; The conditions for the impossibilities of nature due to the different nature of the matter for exercising their influence on the race and the language'5) also apply to

Limburg with regard to the national character.

107240 Anyone who looks at the latest geological map of this region in our 'Wortund Sachgeographie Südostniederlands und der umliegenden Gebiete'6), will immediately notice an area division that corresponds quite closely to that of Prof. Schrijnen indicated above.

107245 The fertile loess [löss] formation found in the hilly landscape south of the Sittard-Grevenbicht line, an area encompassing the present-day mining region, is associated with the period of ice formation. These water-rich, virtually treeless loess plains were eminently suitable for very early habitation due to the presence of materials (including flint) from an older period— which served to make the tools of the primitive inhabitants — as well as the loess walls.

107250 The formation of sand, gravel, and peat soils from Central and North Limburg, as well as East Brabant, up to and including Etten-Leur, is generally considered to be the deposits of the "old" Rhine and Meuse rivers, where conditions for habitation were also favorable from the outset, although the soil here — except for the river clay regions — was much more infertile than in southern Limburg. In the center and north 107255 of our region, the predominance of low terraces and river clay between Sittard-Papenhoven; Stamproy-Helden-Maasbree; Sevenum-Horst-Tienraai-Haps, as well as the middle terrace and the poor peatlands in the northwestern part, is striking.

Without a doubt, a thorough investigation of land use, toponymy, and land use will yield a classification and orientation that largely corresponds to the geological, 107260 dialectological, and folklore situation outlined. It is certain that, just as over time the inhabitants of the fertile riverside area of the Meierij founded villages closer to the Peel — including Uden, Volkel, Boekel, Handel, Gemert, Mortel, Bakel, Deurne, Liessel, Maarheeze, and Budel — a series of new villages also arose from the oldest settlements along the Meuse in North Limburg—including Maasbree, Sevenum,

107265 Horst, Venray, etc. — and that only in more recent times, with the construction of better roads, did settlements — with a highly diverse population—penetrate the Peel, including Helenaveen (1853), Griendtsveen (1860), Terraveen, IJsselstein, and Rips. Before 1820, Venray could only be reached from Deurne via winding heathland roads through the marshes. The old maps show us difficult roads, which in summer could only 107270 be used by those well-versed in the terrain, while in winter they were completely impassable.

All this points not only to a cohesiveness of the North Limburg Maas and Peel villages, but also to a strongly individual character of the Peel villages and many 107275 other places in the western part of Central and North Limburg, as well as to a more difficult existence for the inhabitants of these sandy, gravel, and peat regions. Although racial theory has often been treated so strangely in the last two decades that it significantly detracts from its scientific merit, it cannot, as the sober prehistorian Menghin has demonstrated8), be ignored when studying national character.

If, on the one hand, this scholar is of the opinion that: 'the Fundamente more ererer 107280 Wissenschaften erschüttern (müssen wird), wenn man there will be, that principle Berechtigung of Annahme zu combattreiten, that sich Race, Sprache und Kultur are simply covered', on the other hand, according to him, it is still 'a untouchable Tatsache, that is in the Jetztzeit kein Volkstum gibt, that racially pure truth'; that is why he considers 'that the Entscheidende in den Beziehungen zwischen Volkstum und Rasse, that your People are a specific Mix of Races entspricht'.9)

We have to seriously take these facts into account for the Limburg area. Studies by Bolk, Holwerda, and van Giffen, as the brunette line on the Isethne map in 107290 Schrijnen's "Nederlandsche Volkskunde" (Dutch Folklore)10) demonstrates, have proven that Homo alpinus is strongly represented in Limburg (37-41% brunettes).

The hyperbrachycephalic skull found in 1923 in the Neolithic flint workshop near Rijckholt definitely points southward regarding the origin of the South Limburg inhabitants of that period. It bears a strong resemblance to that of the Grenelleman and thus to French and Belgian finds. An invasion from the south can safely be 107295 assumed.11)

The dark type in our region cannot have originated from pure Celts, since, according to ancient authors, these had, among other things, blond or red hair and blue or gray eyes; Moreover, they "represented, as is generally accepted today, only a warlike superstructure, which has rapidly emerged in the mass of the pre-population."

Moreover, according to the exceptionally broad and instructive research of Dr. F. 107300 Petri, it is questionable whether long-dorsal people ever lived in the western areas inhabited by the Celts. According to Bijvanck, the Linear Pottery race (thus, in any case, a southern race), into which the Celts, Romans, and Germans are said to have merged, is likely responsible for the dark complexion of the South Limburg

population.

As late as the early Middle Ages, the ruling Germans in the Southern Netherlands spoke of the dark-skinned population as something inferior, which proves nothing more than that the dark type in these regions was then considered either conquered or non-indigenous.

It remains difficult to determine whether the influence of the Celts' character was significant; The same applies to the character of the Romans. The great extent of the Romans' cultural influence is beyond doubt.

That Celtic tribes from southern Germany and France invaded our country and inhabited the area south of the major rivers is proven, among other things, by the Gallic princely grave from around 500 BC near Oss. Perhaps, however, only Celticized Germans lived in South Limburg, as in Belgium. Towards the end of the second century, we find in eastern Belgium, as in South Limburg, exclusively pure Germans: the Germani Cisrhenani, to which the Eburones and the Ubii belonged, so that Homo nordicus, the so-called Norse or Teutonic race, had a considerable influence.

The Romans did not add any significant new ethnic groups to the predominantly Germanic population of South Limburg and the Kempen region. The Franks, who in the 4th century AD—advancing westward from the Peel marshes, according to Bolk—conquered the south of our country, likely absorbed the other inhabitants of those regions. The division of the Franks into Salians and Ripuarians offers no specific criteria for the Limburg national character: some claim that the former, crossing the Meuse from the west, occupied parts of the Rhine Province, while others, based on legal sources, assume the opposite. For the time being, neither the Lex Ribuarica nor toponymy studies allow for a decisive conclusion.

How far the Saxons penetrated Limburg is difficult to say. The cultural influence of this tribe, which, like the Ripuarii and Salii, did not form an ethnic unity, was felt in the north of the province, reaching as far as Venlo.

This has been demonstrated, among other things, by folkloric research by Prof. Jos. Schrijnen.¹²⁾

If we consider the archaeological finds, we observe the same trends and general territorial demarcations that we distinguished above based on anthropological and ethnological data.

The South Limburg culture from the Neolithic (3rd millennium and the first quarter of the second millennium BC) originates from the south. The finds of Banded Pottery in the Meuse Valley from Caberg to Sittard point to connections with both the south and the southeast.

The north of our region may have been influenced by the more complex cultural trends of the central part of our country, where rope, bell, collared, and Tiefschich ceramics coexist, indicating contact with Saxony, Thuringia, southern Germany, England, and the English Channel region. We come to know this part of the Netherlands during this period as a typical transit area for both population and culture.

It is striking that products of the La Tène culture, found in South Limburg, near Wychen, and in West Brabant, which point to a connection with the pottery of the Celtic tribes in Gaul, are absent from the rest of Limburg and North Brabant. In these latter areas, however, urns are found, which indicate contact with Germanic tribes in the southeast of the Lower Rhine.

Roman culture was particularly prevalent south of the major rivers, more specifically in South Limburg and near Nijmegen. Here, one can speak of a Romanization of the population.

Briefly summarizing the preceding anthropological, ethnic, and archaeological influences, we can conclude that in Limburg—apart perhaps from the Celtic element—there was no unity of orientation up to and including the time of the migrations. While we may assume southern influence throughout the entire region during the Roman period, except perhaps in the northwest, it was strongest in the south and the far north. Incidentally, the south, up to Sittard, seems to have been predominantly oriented toward Southern Europe, while the central and northern regions were most strongly oriented toward the north and east.

Limburg has been a unit since approximately 1000, even less so than in prehistoric and early history. Just as the Limburg mentality, according to Knuvelde, is largely explained by the country's geographical position, the territorial division (i.e., fragmentation) since the Middle Ages is also evident in the region's geographical situation. Here, however, the location relative to the core areas of the French, German, and later Dutch-Republican empires also exerted its influence.¹³⁾

That all the currents and factors discussed thus far have contributed to the

107370 formation of the Limburg national character goes without saying. The nature and scope
of the diachronistic data make it impossible to examine the effect of each of these
influences on our national character. Nor do we consider the time to fully analyze
and substantiate the character of the inhabitants of all parts of our region.
The characteristics we will discuss apply, as mentioned, to South and Central
107375 Limburg, unless we emphasize the special presence in a specific part of our region.
Moreover, space is limited, and therefore we will focus primarily on the
characteristics we consider most important in relation to the purpose of this work.
The Limburger, at least the South and Central Limburger, can certainly be considered
one of the primal, emotional natures. He is a man of temperament.
107380 This southern temperament is demonstrated, among other things, in the liveliness and
cheerfulness with which he conducts his high-pitched conversations, accompanying them
with more or less appropriate, vigorous gestures. The calm, thoughtful Dutchman
thinks it will end in a brawl; thus, arms wave in various directions at every
opportunity and voices run through the most "ominous" tones, but soon it turns out to
107385 be nothing more than a... lively conversation. One day, during field service, the
leader of a training class of militiamen gave the same assignment to a Limburger and
a Dutchman. When both had to explain how to proceed, the latter told his story while
staring almost impassively at the map, while the former, on the other hand, turned
from right to left and described the route to be followed with many gestures in the
107390 air. And the officer said: "Here's the Limburger."
Every "foreigner" is struck by the musicality of our fellow Limburgers, who continue
to demonstrate their dialect even after years of absence from Limburg. The ever-fiery
General Hoefer, who spent most of his life outside his native province, can no more
conceal it than the politician Jhr. Ch. Ruys de Beerenbrouck could. The Limburger is
107395 musical and loves music: in every village, every hamlet the festivities are enhanced
by a brass band. When a Limburg regiment receives its refresher marches, it marches
out after two days with music, and I assure you, there's plenty of blowing! But
hamlets and villages aren't satisfied with a brass band, so they each have a singing
club. Indeed, often the same club has both an instrumental and a vocal section.
107400 Limburgers sing just like Rhinelanders, and the further south they live, the more
they sing. During the summer evenings, not only did people "joy" (14), as in Geleen,
for example, but after work, they also gathered at some farm or home, sat on a bench
or on the ground in front of the house, and sang songs, often polyphonic, which the
whole neighborhood enjoyed. During the mobilization, the Limburg soldier would sing
107405 "to keep up the courage and to wash away the fatigue" during the day, and in the
evening, he and his comrades would give a free concert at his second home in Brabant.
When a Limburger celebrates, it's loud and exuberant. Grand festivities begin with
the firing of "kameren" (thunderbusses) and the ringing (not: ringing) of bells. He
usually finds the Dutchmen's celebrations stiff and dry, and the Northerner happily
107410 joins in the Southerner's relaxed, exuberant revelry.
It's no small feat to get a Limburger excited about something. He easily catches fire
and tackles a cause with enthusiasm,¹⁵ but, like the ancient Gauls, he also quickly
becomes depressed. If he encounters unexpected setbacks, he's quick to say: "That's
it, I'm going out of the sjutterie," or in plain Dutch: "I refuse to continue." But
107415 his attitude is completely different when his honor or justice is at stake; then he
can persevere and persevere with the stubbornness of a Frisian, and he won't yield to
anyone or anything. His temperament makes the Limburger more aggressive than
defensive, and in this, feeling and enthusiasm play such a significant role that, in
the face of unexpected disappointment, he forgets not only aggression but even
107420 defense!
His southern love of colorful display makes him a fan of shooting clubs, parades—
serious as well as comical—and processions, where he has the opportunity to
demonstrate his talents as an organizer and leader. His cheerfulness and geniality,
his élan, his quick wit, and his wit make him a qualified leader. In his external
107425 leadership, he owes much to his interactions with people from different countries and
nationalities: the location and history of his region endow him with great
adaptability. It wasn't only in ordinary village, city, or provincial life that the
Limburger demonstrated his innate organizational and leadership talents. Wasn't Dr.
Nolens a political organizer of extraordinary stature and international renown? Isn't
107430 Dr. Poels recognized as an unsurpassable, indeed irreplaceable, social leader, not
only of the famous Rolduc study weeks, but especially of the large labor movement in
Limburg, which in many respects can be considered a model for the rest of the
Netherlands as well as for other countries—especially for the mining regions?
The Limburger's intuition often plays tricks on him. It's often easier to convince
107435 him through intuition than through reason. A kind man, who impresses with his good

nature and joviality, stands a chance of garnering more votes from the council members when applying for a job than a more robust fellow who is less adept at touching the heartstrings.

It's not those who command, but those who appeal to the emotions, who have the best chance of achieving the desired effect with the Limburger. While in the North, only women are allowed to shed tears in times of joy or sorrow, in Limburg it's not at all unusual for a man to express his joy or sorrow through tears.

Limburgers excel in music and painting. In the latter, they are more poetic and romantic than the Dutch, and as language artists, they are not novelists but poets.¹⁶) They have a keen sense of touch, which, in addition to their innate tendency to imitate, makes them particularly suited to acting: every village, every hamlet, every association has a theater club. This tendency to imitate and their cheerful spirit explain their penchant for comic or caricatural imitation in language, music, and dress: carnival parades are flourishing in Limburg as well as in the Rhineland. And who doesn't know that humorous prose triumphs over seriousness?¹⁷) I would also like to connect the typical Limburgish "vreigele," which originally meant nothing more than criticizing—sometimes against one's better judgment—and gradually acquired the meaning of obstruction and political sabotage, with emotionality.

Every Dutchman knows the candor of Limburg, or at least the candor of South and Central Limburg.

If you're on the train with a Limburger for the first time and you don't give him a sour, surly impression, there's a good chance he'll tell you his entire story and that of his family in no time. The extreme of this characteristic was once shared with me by someone who, in connection with a job interview, was asked for information about a subordinate. The boss in question gave the inquirer the simple advice: "Let him come to you and talk, and I guarantee that within half an hour—perhaps unasked—you'll know everything." This is the downside: the Central and South Limburger is often inappropriately confidential, doesn't pay enough attention to whom he confides, and can hardly limit the extent of his trust. The North Limburger is more cautious in this regard; indeed, he himself gives a somewhat stern impression. This candor leads the Limburger to readily express his opinion about people and often leads to gossip of the worst kind. For a long time, in the provinces, one could not express one's opinion about people and matters in public, but only "among us": back then, criticism was "gevreigeld," meaning criticism with a fist in one's pocket, which never had any favorable effect. This was known, and yet the "vreigeleers" (literally, "fear-mongers") repeatedly gathered. Is it any wonder that they still exist in Limburg today and that people now also "vreigelt" in public?

Although this constant criticism points towards individualism, this—Waterink considers it a characteristic of the Dutch character—is not part of the Limburger's essence. The village layout, especially on the fertile soil of the south, does not indicate a self-reliance. We don't know the lonely farmsteads here, such as we find in the less fertile Saxon regions and in North Limburg. Don't think that the Limburger doesn't have his own opinions—their squabbling suggests the opposite—but... he doesn't express them easily. How could it be otherwise? For several centuries, he was politically and socially immature. As a resident of the province, he didn't have to think; others thought for him, and the results of those thoughts were communicated to him by decree.

So, even if the Limburger has defended his opinions ever so vehemently, privately or in the neighborhood club (while squabbling!), he often abandons them very easily in a public meeting when an authority, i.e., another, has stated theirs. The unconscious inferiority complex (see below) and the responsibility—which he never learned to bear, after all!—sometimes even the idea of solidarity quickly make him change his position, especially when emotional arguments are also presented.

Yet, the Limburger is exceptionally fond of freedom, a possession that neither Celt nor German wanted to forgo.¹⁹) The numerous small states of the NE, which remind us of ancient Greece, are like symbols of the desire for independence in every region of our province. However attached to authority, in Limburg, people want nothing to do with dictators; one shouldn't approach them with the "you sollst" (you so). The Limburger has had to fight too hard to preserve his inner freedom, his own nature. With a request steeped in humor or feeling, however, you can get anything from him. Major Evenwel rightly says of the soldier: "It is very easy for the commander, for example, at the start of an exercise, to rouse his Limburgers with a short speech and appeal to their abilities. Especially if a little humor is introduced into that speech, it resonates with the men, and they give their all."²⁰) A despotically decreeing mayor or priest turns the whole village against them; the administrator who

cleverly asks gets more done than he expects. The mine foreman who makes requests literally moves mountains in a short time, but he who haughtily commands and chases breeds resentment in the naturally industrious miner.

This attitude is not without its good nature. The Limburger must be able to address the mayor, the priest, or any other superior without requesting an audience a day in advance: if necessary, he must be allowed to 'bother' him in the street. I knew a mine inspector who, for goodness sake, wasn't a pushover, but considered himself a comrade of the workers and called most of them by their first names. It was precisely this good-naturedness that ensured the "inspectorate" (as he was called by the workers) had exemplary discipline and maximum work output, plus... a good atmosphere. And it certainly wouldn't be easy to replace such a supervisor with someone from the North, unless they could adapt to that friendly atmosphere. There are still plenty of mayors in Limburg who call their council members by their first names.

I am not shy about speaking their dialect, if necessary. It is well known that not so long ago, the Domaniale Mine organized a festival several times a year, in which the entire "Belegschaft" (Legship) participated, and where the management and senior officials mingled freely among the workers, chatted with them, and enjoyed a beer. The Celts and Germans are often praised for their hospitality, which, according to Schayes, is a characteristic of all primitive peoples. No matter when you enter a Limburg family home, you are welcomed; you are, as it were, briefly incorporated into the family. However, they don't offer you "a cup of coffee," as in Brabant, but a glass of beer, a shot of liquor, or a glass of wine. If it happens to be mealtime, and you happen to meet a Limburg acquaintance (and that happens quite often, because people, especially in a southern village, prefer to eat five times a day!), you have to join them at the table. And if you happen to be too far from the acquaintance's house, you absolutely have to go along to the café (there are plenty!) to be entertained. There's no region where you're so easily invited to dinner and to stay the night as in Limburg. I remember a maneuver in the south where a group of soldiers couldn't find shelter in time. In no time, there were about ten enthusiasts: "Come on, boys, you'll have a child with me to eat and sleep." Hospitality certainly explains the well-known Limburg round-giving—with all its consequences! —: when a couple enters a café, it's as if they all suddenly feel like hosts; one treats, the other returns, and often the entire "hospitality" wavers.

The urge for conviviality—a primitive trait that characterizes the southerner in particular—is very striking among Limburgers. Neither the sense of community nor the convivial atmosphere is found in the North to the extent that it is found in Limburg—except perhaps in the North. All Limburg towns have their own brass band, singing club, neighborhood and youth association, their shooting club, etc. Each of these associations has its own annual festival. Then one thinks of the ubiquitously celebrated fairs, the exuberant and sometimes extravagant carnivals; the silver, golden, and... diamond weddings, which everywhere develop into neighborhood parties; the coffee tables at baptisms, deaths, etc., where the "street residents" also sit, and one understands that there is plenty of opportunity to "make it cozy."²¹ It is striking that even the most serious, even sad, ceremonies often end "cozily." Here, too, the Limburger has retained something of the more primitive medieval person, who couldn't immediately go home after a serious game: the ending had to be happy, and therefore a clute or sotternie followed. Everything and anything is made into a party, and then one truly feels united. Especially during the fair and carnival, the porte-brisé divisions of class disappear: they are swept aside as if by the leveling mood. That the otherwise prevailing boundaries are sometimes seriously overstepped on these occasions is understandable but not defensible. Not only in the consumption of beer does the Limburger then overstep the mark, but also in their sense of duty. "If there's a fair in the Limburg soldier's village, it seems like quite a feat to get home on time. He doesn't hesitate to extend his leave by, say, a day, on his own authority. He doesn't seem to consider this a serious offense," Major Evenwel believes.

That all this encourages out-of-home behavior goes without saying. But in most of the cases cited here, we're dealing with out-of-home behavior of a certain kind. The entire neighborhood is considered one big family. In one of the houses, the young men and women gather to discuss, tell stories, play cards, sing, play tricks, and... drink a beer. And because "true" hospitality would become too expensive here, the most popular—that is, the most visited—neighbor is proclaimed the pub owner; whether the pub has a sign or not is irrelevant! This is how the many "heilige huuskes" (holy houses) in Limburg came into being. We see how a flaw can develop into a good quality, which, incidentally, is more common among Limburgers!

Sincerity, loyalty, and dedication are qualities that adorn Limburgers.

Wasn't it the sincerity that was praised on all sides in the statesman Jhr. Ch. Ruys de Beerenbrouck? Isn't Dr. Poels the personification of frank Limburg sincerity when, as a spiritual social leader at the Rolduc study week, he stands before his workers and speaks off the cuff. When he claims to simply say what he has to tell his comrades, he does nothing but give free rein to this sincerity.

But why did the great Dr. Nolens remain so silent? Was it perhaps because he had more of a northerner on his father's side? Or did he know himself so well that he knew that if he began to speak, he would likely become too frank? Was the silent one really the true Nolens? And would it apply to him, as an exception, what, according to Waterink, generally does not apply to the Limburger: "What you don't see on display, you will find inside"?22)

Just as Ruys saved our Royal House in 1918 through his Limburg loyalty, so Poels, through his loyalty to the workers—despite all the vilification—defended the social and spiritual existence of the miners with lionlike courage. And was it a coincidence that Nolens carried the motto "Utrique fidelis" in his coat of arms?

Major Evenwel says of the soldier: "Dedication to military service and the associated loyalty to his superiors is a typical characteristic of the Limburg soldier." I have never encountered this characteristic to such a strong degree in any other nationality of our population.' This officer also praises 'the unaffected honesty and simplicity', which struck him repeatedly.

When Waterink judges that the social feeling is still the strongest in the Saxon regions, that seems one-sided to me.

In my opinion, this is not the least weaker in the Limburger either. Even in our southernmost province, 'people share in days of joy and sorrow, of birth and death, of illness and need.' The women from the neighborhood not only come 'for coffee' on the day of the baptism ceremony, but they also consider it their duty to assist at the birth if necessary and, if necessary, to act as godmother or to baptize the child.23)

If someone is seriously ill, the young daughters from the neighborhood make a pilgrimage to the church or the chapel of Our Lady for nine days. When someone dies, the entire "neighborhood" goes to pray in the evening at the house of the deceased or in the church, as long as the body is "in the yard." The girls make wreaths, and the men's "neighbor duties," from the ringing of the bells to the burial of the neighbor, are determined by customary law. The entire neighborhood ('de put') or street—both men and women—attends to the funeral. Neighbors often take children who have lost their mothers into their homes for a longer or shorter period—and sometimes even permanently.24) If there is a neomist, the entire street is decorated by the young men and young women, a collection is taken in the neighborhood for a "lasting memory," and the youth are invited to the coffee table where the neomist sits.

In the event of serious offenses in the neighborhood, the entire population "administers justice." If a man abused his wife, at the end of the last century, a cart carrying a riverbank would be driven past the offender's house at night, making a tremendous racket. The so-called "kettle music" that expressed general disapproval for certain offenses still exists in many places.

This idea of neighborliness, however, also has its drawbacks. It fosters a kind of separatism. For example, in elementary school, every street "had" its own corner (the area where the boys from a particular street played). And woe betide anyone who dared to trespass on "another man's" territory: that was considered a desire for

annexation, and then... you often saw general "pushing matches," which after school often degenerated into formal youth battles, usually involving clogs and stones. If a young man from one hamlet gets into a fight with someone from another at the fair, it usually becomes a battle of hamlet against hamlet; Such a type of fighting also occurs in many places during the "torch stake" on St. Martin's Day.25)

This particularism results in council members and aldermen being appointed by hamlet in many places, which is not always in the municipality's best interest.

The Limburger is strongly attached not only to the people but also to the land around him. It may be true that, as Fons Tuinstra says, one encounters the Limburger everywhere and that he has a wandering nature—for my part, I would prefer to speak here of forced wandering or relocation due to a lack of suitable means of subsistence—yet, especially with regard to his region, he is generally a stickler for his own interests. What Blink says about the East Brabanter also applies to him: "Attachment to the land where he grew up, where he played as a boy, to the village where he goes to church... is almost nowhere as strong as here."26) If the Central Limburger works in the mine, he would rather travel by train or bicycle for a few hours every day than live in the mining region. This rigidity in his hometown doesn't seem to me to

be specifically Limburgish, nor does the extreme conservatism. It's more a typical trait of the farmer in general, which the Limburger is, after all, by nature. "The farmer sits at his school firmly".

Don't let them be discouraged, they feel close to each other, they love each other. ' says Menghin.²⁷) And this also explains the homesickness for Limburg and the Limburgish dialect. If a Limburger meets a fellow-provincial 'abroad', he greets him cheerfully in... his dialect, without thinking of social differences. 'Love for one's native region', says Major Evenwel, 'is also found in great measure in the Limburger, just as it applies to the Zeelander and the Frisian. I would say that the attachment to their native soil is even stronger among Limburgers from Roermond southward than among North Limburgers. Living in border regions, where much fighting took place and which belonged now to one prince, then to another, and finally became part of the Netherlands as a colony, has given the Limburger a sense of insecurity and inferiority. Certainly, the sense of solidarity reinforced this in him—except perhaps for the inhabitants of the area north of Arcen—but for too long he lacked the feeling of belonging to a larger entity, which gave him a greater sense of self-worth and self-confidence. Other factors contributed to the development of this inferiority complex. Until recently, the civil servants, "the gentlemen," were almost exclusively "Dutchmen," who impressed the Limburger with their "posh" language, which he didn't always understand, or at least only had a weak command of. He also felt that, due to a lack of educational opportunities, the "Dutch" were superior to him in terms of development. Not only universities and grammar schools, but even junior high and trade schools often had to be attended abroad. Generally, the "Dutch" and those who had been abroad "set the tone," despite the fact that Limburgers are born leaders! The result of all this is that, after a prolonged stay in Holland, where they had to shake off their feelings of inferiority, Limburgers react by becoming authoritarian in order to rise above them. Woe betide anyone who thinks they have to treat Limburgers condescendingly: they are a bare-bones "Dutchman" and... are out for good. Well, yes: "The Limburger is backward!" "The South is dark!" Does it surprise you that the son of a farmer, a miner, or even a minor civil servant, who has no other prospect than to plow as quickly as possible, chop coal, or perform miserable crutch work, shows little or no concern for intellectual development? Don't you understand that children who had to help their parents earn a living from an early age, who didn't go to school in the winter because of the bad roads, etc., and who in the summer—if they cared for education at all—were taught in the meadow, with a black-painted plank nailed to a tree serving as a "board," weren't very well-informed? Certainly, that's no longer the case, but that's how it was in the second half of the last century. And isn't there such a thing as an unconscious aftereffect for a few generations? And are they—despite the exceptionally good educational conditions, thanks in particular to a Dr. Moller and Dr. van Gils—weren't the prospects often such that they don't strongly stimulate educational ambitions? Does it surprise you that Limburg didn't produce many intellectuals, considering that the pressure on the population was high, property was limited, and study opportunities in our eccentric region were meager? The geographical location and the political situation were to blame! The Limburger is not to blame! It cannot be a disgrace to him! In my opinion, the publications published thus far on intelligence relations in the Netherlands do not do Limburg justice: neither Groenewegen's in the "Militaire Spectator" of 1926 nor Stuiveling's in 1935. The psychological significance of the geographical, historical, and social factors is not sufficiently addressed. Major Evenwel says: "In this respect (in intelligence), the Limburg soldier is definitely inferior to several of our compatriots... This, of course, does not in any way mean that he is inferior to his fellow soldiers in terms of academic aptitude. I have always noticed that the Limburger generally possesses a great innate inner refinement, which manifests itself, without the individual even realizing it, as soon as he comes into contact with those in his superior ranks." Ask the professors at our universities what they think of the intelligence of the Limburg student. Does the Limburger, as a result of the notoriously poor relations of previous centuries, now harbor a so-called "hatred of the north"? No, on the contrary! It goes without saying that one cannot expect him to welcome with open arms and shower them with kindnesses newcomers who do not wish to adapt to the Limburg spirit in their attitude and conduct. But he who shows that anyone who understands Limburger will find a friend in this regard—even if they fail to master the Limburgish language, the ultimate instrument for complete understanding and empathy—because of the hospitality, the accommodating attitude, and the candor of the Southerners.

Those who fail to respect them will be ostracized, and those who, in absolute

107700 conflict with Dutch interests, seek to Dutchify them will incur lasting antipathy, and sometimes even hostility. Standardization based on the Dutch model is impossible and entirely undesirable. For the Limburger is a good Dutchman and patriot, which, after Charles Thewissen's brochure,²⁸) no longer needs further argument. With a few exceptions—which, however, occur in every border region, and certainly in a region

107705 that has been a border region throughout its history—they have a great devotion to their sovereign and fatherland. And didn't the statesman, the soldier, and the ordinary citizen demonstrate this in 1918? The Limburg Prime Minister vetoed those who wanted to overthrow the Orange throne, the Limburg soldier threatened any attackers with annihilation, and the citizen sang: "Limburg and Holland remain one."

107710 I may quote the opinion of the non-Limburg Major Evenwel about the soldier here: "This (patriotism, R.) is strongly developed among the Limburgers and expresses itself in a great love for the Royal House. They are proud to be Dutch, although they do not feel at home in Holland." Respect for authority in general stems from the obedience innate to the Catholic Limburger. Obedience to God and therefore to his

107715 representatives: bishops and parents, clergy and secular leaders, is something self-evident. Major Evenwel says of the soldier that he definitely has a sense of discipline. "I would like to make an exception for the so-called politically contaminated from the mining region and the factory workers of Maastricht.... Under good leadership, especially with prolonged periods of service under arms, excellent

107720 soldiers can be made of the latter. It seems that then the foreign influences have lost much of their power and the true Limburg national character gradually resurfaces." Precisely because the Limburger is constantly reminded of the duty to obey from his youth, it is easy for any tactful superior, whoever and wherever he may be, to lead him.

107725 Although there is no scientific reason to consider Catholicism a racial condition — a possibility suggested by J.P. Kruijt²⁹) — it is a fact that Catholicism, just as it was on the Rhineland, has left its mark on the Limburg national character. "Where you have kruuts hungt woont neemes" is a typical Limburgish saying. Customs and language, which so clearly illustrate the essential nature of a people, prove the truth of this

107730 saying for our southernmost region. It was not so long ago that the miners of the Domaniale Mine, before entering the lift, would say a prayer together. When the Limburg housewife cuts a loaf of bread, she first makes the sign of the cross on it with a knife or finger. The marksmen open and close the annual shooting competition with a church service, while prayers are

107735 said under the "voeëjelsjtang" (football tongs) before firing the first shot.³⁰) To protect the harvest from the cruel forces of nature, the farmer places a consecrated palm branch or a piece of herbage in the ground at the corners of the field.³¹) In the event of a serious illness, a relative of the sick person calls the doctor, but the young women from the neighborhood simultaneously make a pilgrimage to the church or a nearby chapel of Our Lady. The Limburger doesn't celebrate their birthday, but

107740 "der nametsdaag" (the day of the saint after whom they are named). Yes, I know that the members of a neutral first-class football club insisted that a certain anniversary be marked by the attendance of a Holy Mass. The religious element is evident in thousands of expressions in the language. I'll

107745 quote a few. In the North, the servant moves; in Limburg, "maakt er Sintermeis" (= St. Remigius). In Holland, someone comes to the table when dinner is almost over; in South Limburg, when "'t bóch umjedrare" (the feast is over). If the angry father, lacking self-control, gives his naughty son a beating, then "kriet e ze jekristeliert" (screams and screams). If a young lady passes by in Kerkrade, whose

107750 petticoat happens to peek out from under her dress, one hears: "That girl has come to her vespers."³²) The fact that such expressions apply to the most diverse areas of life is evidence of the Limburger's deep connection to his faith. Although this religiosity does not always express a persistent, deep consciousness—

107755 which, in my opinion, is impossible—and although religious life—as with all our daily activities—is often routine. It's clear to a Limburger when someone deliberately tries to offend his faith; then he even becomes aggressive: consider the "Daagseraad" action a few years ago. This shows that faith is a strong binding cement that unites Limburgers. Even the most

107760 brutal miner won't tolerate an attack on his faith, though he might occasionally launch his defense with a "curse." With the acceptance of faith, the most important things are taken care of for the Limburger. Our Lord and the Saints will take care of the rest. His trust in the Highest Guidance is exceptionally strong. Besides the southern bias in his character, this explains not only his often exuberant

107765 cheerfulness and boisterous cheerfulness, but also his frequent lightheartedness and

carefreeness, as well as the resulting frivolousness, which is incomprehensible to the Northerner. From their daily intimate contact with God and the Saints often arises-unintentional-irreverence in religiosity and-especially among the South Limburgers-the so frequent occurrence of "cursing," which we also notice in France, Italy, and Spain. People invoke God and their Saints so often where special help is needed that they also use Their names as an invocation where it is inadmissible. And it is precisely this inadmissibility that the less educated and cruder are unaware of, because through frequent daily use they do not fully sense the sublimity, and the form of the words, under the influence of strong affect, usually deviates from the "ecclesiastical" soundscape. But I do not mean to justify this evil: it is a serious weakness-even if we understand the mitigating circumstances-that increasingly disappears with increasing education. And don't think that the Limburger, so steeped in Catholicism, is intolerant! I've never heard of anyone being treated unfairly or thwarted because they held different views. Nowhere are institutions of dissidents, such as schools, so readily supported as in Limburg. Relations between Catholic and Protestant clergy, as well as between Catholics and Protestants, are generally very good. But no one dares to bother a Limburger about their faith, no one should openly try to attack their faith in their own "country"... then the Limburg temperament kicks in, and its spontaneously effervescent ferocity knows no bounds, as De Dageraad (The Daily News) was shocked to discover! The Limburger also, as Tuinstra aptly puts it, "has life here at its best"; he hates hypocrisy, which he fiercely denounces with the words: "has God of the cross and shit in the temple." He respects every honest conviction, but demands the same for his own. I have already pointed out some weak traits in the Limburger's national character. Ouwerling, in his book entitled "Uit donker gewesten" (From Dark Regions), knows even more and observes, among other things, "a very high level of alcohol abuse, especially during Carnival and during the shameful Bacchante festivals, which were called fairs, but also on Sundays; a very high level of criminality..." During the mobilization-to begin with the last weak point-the Limburg soldiers, especially those of the 13th Reg., were called by the epithets ornantia: knifemen, goat riders, and Russians. The actions of the "goat riders" in South Limburg during the 18th century are notorious. The crimes committed by these gangs were truly of the worst kind. But the complex set of events raises so many questions that only a new investigation, which takes ethnological, historical, social, and psychological factors into account to a greater extent than has been done thus far, can provide a satisfactory scientific explanation of this criminological problem. Only then can one assess the role played by the Limburg national character in these terroristic, sometimes inhumane, atrocities.³³) I myself knew a few individuals in South Limburg around 1915 who were constantly looking for a fight, drank so they could start a fight, and took pleasure in stabbings. But... these were absolute exceptions and decidedly inferior types, some of whom later became respectable family men. That doesn't change the fact that a certain class of people, at least during the last century, had fighting-usually after digesting the necessary beer-in their blood. Jos. Russell tells us that around 1850, fighting was popular "between residents of neighboring municipalities... to whom the inhabitants of Geleen were well known by name and deed as courageous and bloody participants." Revenge battles ensured that the idea of war remained alive!³⁴) It can be noted, however, that these "battles" were almost exclusively attended by the lowest classes of the population. The fighting spirit was certainly present in the South Limburgers. But here, besides temperament, much must be attributed to location, history, and development.

In the south of Limburg, one war followed another; robberies and plunder were not unusual occurrences, in which mercenaries from all over the world participated. The population was completely impoverished. Given the limited development of the provinces, such facts and conditions must have had repercussions for several generations.

That Limburg was traditionally notorious for the high frequency of the crime of assault certainly finds a very important explanation in this and says something positive only about its outward civilization, but not yet about its inner civilization or intellectual nobility.

All this aligns with the important data I received from the Criminological Institute at Utrecht State University.³⁵) Statistics for the years 1901-1931 show that the three most uncomplicated crimes are more frequent in our region than in the national empire, which would then be explained by the more primitive forms of society, which must be a necessary consequence of the historical development of the country and its people. If the editor of the statistics for the Criminological Institute believes "that the high frequency of abuse in Limburg is based not only on increased alcohol

abuse, but also on differences in national character," then I believe we are dealing with a general Celtic and Germanic primitive characteristic, which, among a certain segment of the Limburg population, could not be sufficiently mitigated by the aforementioned factors. For a proper assessment, one should also compare the "refined" criminality, which is almost unknown to the Limburger. Alcohol abuse is an undeniable weakness of the Limburger. I do not wish to dismiss or excuse this either.

It is said of the Germanic people: "on buvait partout et à toute oute, en l'honneur des dieux, aux public assemblies, comme aux naissances, aux mariages et aux décès" (they could digest "mead" in considerable quantities). And the Celts? "They don't remind their life of a glass of wine." The conservative Limburger retains a fair amount of both, as evidenced, for example, by the "hero" of "De Zoondag vaan 'ne mestrechteneer" (The Sunday of the Manure Rights Honor). The Limburger doesn't serve cups of coffee outside the official coffee table, and he doesn't use them in the café either. What wine is for the Frenchman and Italian, beer is for him, which he often enjoys with his sandwich. He prefers a glass of beer to wine, and he serves it on every occasion, and often drinks both large and small beer. It seems to have happened in South Limburg that godfathers, godmothers, and midwives visited so many alehouses after a baptism that they... came home without the baptized child. In previous centuries, the rewards and fines of various associations, especially the shooting clubs, consisted of beer. For example, in the Geleen militia, founded in 1639, a member who swore during the meeting had to immediately pay "four vanes (6 liters) of beer." Expressions in Limburg dialects for overindulging in alcohol are legion. However, how little the Limburger appreciates alcohol abuse and its potentially serious consequences—not least of which stems from hospitality, temperament, social circumstances, and history—is evident from the frivolousness with which they associate religious terms with the drinking world. They go to the "heilige huuskes" (holy houses) or "kapellekes" (chapels), where they drink themselves "a spiritual rush" upon arriving at the café "Zum Himmel".

But I dare not assert whether alcohol abuse is worse in Limburg than elsewhere. In 1901, the percentage of convicted drinkers throughout the country was certainly higher than in Limburg. And let's not forget that the average Limburger is more likely to drink than the "Dutchman." And that alcohol abuse in the southernmost province is perhaps less acute than in other regions is evident not only from the aforementioned statistics but also from the assessment of Major Evenwel, who says: "In general, the Limburg soldiers I observed for many years behaved more disciplinedly off duty, even somewhat under the influence of alcoholic beverages, than, for example, their counterparts from Zeeland, North Holland, and North Brabant."

I had to base the above characterization on repeatedly observed special cases, which understandably often pertain to specific social groups that were not always named. Except in a few obvious cases, I have adhered to the nature of the masses, the less educated or more or less alogical; and even there, I have mostly chosen prominent figures (favorably or unfavorably) as my motivation. I often made the inaccuracy—and it has always been made, as far as I know—of not sharing the form in which the various characteristics mentioned become evident in other social groups. I think.

Well, that I have characterized the Limburg people, despite this forgivable one-sidedness, in this brief sketch with their favorable and unfavorable qualities, the latter of which are increasingly losing their weaknesses due to increasing national development.

May the "Dutchman" learn to appreciate the good of his southern compatriot and understand the weaknesses; may the Limburger, feeling his responsibility towards his region and the state community, cultivate the good qualities and refine the weak ones for the good of the entire Dutch people and the Dutch tribe, to which he not only gave much in the past but also, precisely because of his country and southern orientation, has much more to give today.

325 (until c. May): V[alerius?] Proculus et Anicius Paulinus

The evidence of an Egyptian papyrus and one uncorrected dating in the Theodosian Code combine to demonstrate that Proculus and Paulinus were the original consular pairing in January 325. Proculus' incomplete nomen, preserved in P.Oxy. VI 889, is convincingly restored as Valerius and the consul prior has been identified with Proculus, proconsul of Africa in 319-320.

If so, then this ordinary consulship is likely to have been a second, following an earlier suffect consulship. Alternatively, if the Valerius was borne by Proculus as the dynastic nomen of the Tetrarchs, then the consul may have been a former military commander or imperial official of Constantine's sometime ally and rival Licinius and his designation as consul prior for 325 part of the peace and abdication settlement of September 324 (cf. Diocletian's retention of Aristobulus, praetorian prefect of Carinus and cos. 285).

In either case, Proculus' removal and replacement as consul suggests that he was caught up in the political manoeuvrings that led to the execution of Licinius. On present evidence it is not possible to decide definitively between these two

- 107985 possibilities. Anicius Paulinus the consul posterior is generally presumed another member of the noble and patrician Anicii, probably a brother of Iulianus (cos. 322), and identified with Sex. Anicius Paulinus whose public career up to his prefecture of the city in 331-333 is presented in abbreviated form on a dedication from Rome (CIL VI 1680 + pp. 3173, 4732), which reads: Sex(to) Anicio Paulino procons(uli) /
- 107990 Africae, bis co(n)s(uli), praef(ecto) urb(i).
- 107995 Regard to parallels in the epigraphic Latin of Rome demonstrates that, as in the inscription honouring Rufius Albinus (discussed above) and in contrast to first-century usage, in texts of the second century and later bis almost invariably modifies the noun or phrase following it (i.e., here, consul), not that preceding it (proconsul Africae).
- Given that Paulinus did not enjoy a second ordinary consulship, this inscription is explicit evidence that his ordinary consulship of 325 was a second term by classical reckoning, having been preceded by a suffect consulship.
- 108000 **325 (from c. May): Anicius Paulinus et Ionius Iulianus**
- The peculiar nomen of Iulianus, the substitute consul posterior, as it is transmitted in the papyrus documents has aroused suspicion but little consensus as to its interpretation.
- 108005 It has generally been considered corrupt. The once fashionable identification with M. Ceionius Iulianus signo Kamenius, a future proconsul of Africa and praefectus urbi of 333,
- has been superseded by strong support for identifying the consul with Iulius Iulianus, grandfather of the emperor Julian, an equestrian official who rose to become praetorian prefect of Licinius.
- 108010 Identification with an otherwise unknown Iunius Iulianus has also been advocated. If we accept the testimony of the papyri, it is not impossible that Iulianus belongs to an otherwise unknown senatorial gens Ionia but a more elegant solution is to understand Ionius as a signum used in the papyrological formulae in place of several nomina, as attested for Populonium Proculus (= L. Aradius Valerius Proculus signo
- 108015 Populonium) for his consulship in 340.
- If Ionius Iulianus was of senatorial background, it is not possible to decide whether his ordinary consulship came as a second tenure, as with his colleague Paulinus, or as a genuine first consulship at an early stage in his career. If Iulianus was promoted from the ranks of those designated as suffects, the latter is more likely.

MANICHEISM v. MISSIONARY ACTIVITY AND TECHNIQUE

The main primary sources on the beginning of Manichean missionary work are the Cologne Mani Codex (henceforth CMC), especially pp. 107-91, ed. Koenen and Römer, pp. 76-119, and Kephalaia 1 and 76, ed. Polotsky and Böhlig, pp. 9-16, 183-88; tr. Gardner, pp. 15-22, 193-97. More information may be expected from the still unpublished Dublin Kephalaia.

The Manichean Missionary History, strictly speaking, consists of Middle Persian, Parthian, Sogdian, and Old Turkish fragments of a hagiographic description of the beginnings of the missionary journeys of Mani and his first disciples (published or indicated by Sundermann 1981, pp. 17-28, 34-49, 55-57 under nos. 1, 2.2-7, 3.1-4, 4a.1). These texts are parts of a comprehensive hagiographic and homiletic description of Mani's life and the beginnings of the Manichean church preserved in Middle Persian, Parthian, Sogdian, and Old Turkish and also in the Third Coptic Homily (ed. Polotsky, 1934, pp. 42-85; cf. Sundermann 1986a, 1986b, 1987). Some additional texts add more information on the Manichean missionary activities, such as MP. 5.1, 5.2 (Sundermann, 1981, pp. 93-95); these belong to Mani's Šābuhragān. Original Manichean traditions are also faithfully rendered in Ebn al-Nadīm's (d. ca. 995) Fehrest (ed. Flügel, pp. 51-52, 84-85; Ebn al-Nadīm, tr. Dodge, pp. 774-75). An exhaustive collection of source material on the spread of Manicheism in the Roman empire was compiled by Lieu (1988, pp. 383-99).

The beginning of Manichean missionary activities. Hardly any other religion has undertaken its missionary activities with a view to winning the world for the truth of its faith in a better designed and more systematic way than the Manichean church. According to its hagiographical tradition, as attested in the CMC (pp. 17-19, 73; ed. Koenen and Römer, pp. 10-13, 50-51; Cameron and Dewey, pp. 18-21, 56-57) and in Ebn al-Nadīm's Fehrest (ed. Flügel, pp. 50.15-51.7, 84; tr. Dodge, p. 775), the missionary work is based on a command given to Mani by his Sysygos (spiritual Twin) when he had completed his 24th year of life. According to the CMC, the command was: "You have not only been sent to this religion [of the Baptists], but to every people, every school, every town and place; for [by you this] hope will be explained and proclaimed in all [zones] and regions [of the world]. [Men] in great numbers will accept your word. So step forth and walk about; for I shall be with you as your helper and protector at every place where you are proclaiming all that has been revealed to you. So do not worry and do not be distressed" (CMC, pp. 104-05; ed. Koenen and Römer, pp. 74-75). Therefore, the worldwide mission is inseparably tied with the separation of Mani and his followers from their paternal, Elkhasaite community and with the foundation of the Manichean church. What really happened is that Mani himself came to be the first missionary of his community.

The time of Mani's first public appearance was connected by the Manichean tradition with one of the coronations of the Sasanian king Šābuhr [Šāpur] I (r. 241-272) which is dated, on the strength of the Manichean dates, to 18 or 19 April 240 (on these two dates, see with further literature Sundermann, 1990, pp. 295-2001a, pp. 103-4). This synchronism may reflect more or less exactly the actual time of the beginning of the Manichean world mission.

Manicheism in Byzantium.

We simply do not know by whom, when, and by which route Mani's gospel was taken to Asia Minor and to Byzantium, which from 330 AD was the capital of the Roman empire. We can only state that by that time Manicheism was already present there, more or less tolerated until the end of the 4th century and even supported by adherents and sympathizers in the ruling class, such as the dux, comes, and magister peditum Sebastianus (d. 378) who was supposed to be a Manichean auditor (which was, however, sheer calumny, according to Tardieu, 1988, pp. 494-500); the pagan rhetor and literate Libanius (d. 393?), who intervened in favor of the Manicheans (de Stoop, 1909, p. 70); and also the liberal Christian comes, proconsul, and praefectus praetorio Strategius Musonius (d. 371) who informed and advised the emperor Constantine the Great (r. 305-337, sole ruler from 324) on Manichean affairs. All these personalities have a Syriac background (Brown, 1969, pp. 96-97), and that points to Syria as the immediate starting point of the Manichean mission to Byzantium. <http://www.iranicaonline.org/articles/manicheism-iv-missionary-activity-and-technique->

While in exile in Cappadocia, the Arsacid Tiridates received a Roman education and acquired a good knowledge of Greek and Latin (Life of St. Gregory, Gk. version 159, 183=Ar. version 145, 176=G. Garitte, Documents pour l'étude du Livre d'Agathange,

Vatican, 1946, pp. 97, 110). His restoration appears to have been the result of a compromise agreed by Vahram II and Diocletian at some uncertain date around 286-287. Under its terms the Persians must have kept possession of the greater part of Greater Armenia, because in 293 the Sasanian Narseh was still in residence in Armenia as its "king" (Humbach and Skjærvø, op. cit., and W. B. Henning, BSOAS 14, 1952, pp. 517f.). It was only after the defeat of Narseh, now the king of kings, by the Caesar Galerius at Osxa (Oskik' in the canton of Całkotn) in Armenia that the whole of the territory passed out of Persian control and the Arsacid dynasty was definitely reinstated in Armenia under Roman suzerainty. Under another clause of the treaty signed at Nisibis in 297, the five old "Provinces" or districts of southern Armenia – Sophene, Ingilene, Arzanene, Gordyene, and Zabdicene – were ceded to the Romans (Petrus Patricius, fragment 14=Dindorf, Hist. Gr. Min. I, p. 434; cf. Ammianus Marcellinus 25.7.9; see below).

The Christian Arsacids

Tiridates III and his successors until the partition.

The reign of Tiridates II was marked by an event of far-reaching importance for Armenia's future, namely this king's adoption of Christianity as the state religion at the urging of St. Gregory the Illuminator (i.e. Baptist). The latter was probably a Greek from Cappadocia (Life, Gk. version 40=G. Garitte, Documents, p. 37) rather than a nobleman of the stock of the Suren family, as Armenian tradition maintains. At the king's behest, Gregory went to Cappadocia with an escort of naxarars to receive consecration as bishop. (The Armenian church remained dependent on the see of Caesarea until the reign of King Pap). The chronology of Armenia's conversion presents a problem. The event used to be dated about 300, but more recent scholars (notably P. Ananian "La data e le circostanze della consecrazione di S. Gregorio Illuminatore," Le Muséon 84, 1961, pp. 43-73, 317-60) tend to change the date to 314/315 – a surmise which seems probable but cannot be proved. B. MacDermot's arguments for 294 (in Revue des études arméniennes, N.S., 1971, pp. 281-358) are ingenious but not convincing. The war of Maximinus Daia in 311-312 (Eusebius, Historia ecclesiastica 9.66.3) might provide a terminus ante quem if it could be proved that "the Armenians allied to the Romans" were subjects of King Tiridates.

Nisibis

Considerable improvement must therefore have been made to its fortification under Diocletian and Constantine. Ammianus (XXV.9.1) mentions a citadel (arx) from which flew the Persian flag after the disgraceful surrender of the city in 363. Malalas (XII, p. 336.14-15) calls it "one of the towers" implying that there were several. Ammianus who knew the city well echoes the views of many in remarking that "the entire Orient might have passed into the control of Persia, had not this city with its advantageous situation and mighty walls resisted him (i.e. Šāpur II)" and the city was undoubtedly "the strongest bulwark of the Orient" (XXV.8.14). Besides the strengthening of her defenses, the morale of Nisibis' citizens was greatly raised by the growth of Christianity in this region after the conversion of Constantine. Jacob, one of the city's first bishops, was active in raising the morale of the garrison in the first siege. As Christians in Persia came to be suspected as a pro-Roman fifth-column and openly persecuted, the war between Rome and Persia acquired a new religious dimension; it was no longer a conflict of Romans versus "barbarians," but of the faithful against persecuting "heathens".

<http://www.iranicaonline.org/articles/nisibis-city-in-northern-mesopotamia>

When Hormizd II died in 309, he was succeeded by his son Adur Narseh, who, after a brief reign which lasted few months, was killed by some of the nobles of the empire. They then blinded the second, and imprisoned the third (Hormizd, who afterwards escaped to the Roman Empire). The throne was reserved for the unborn child of Hormizd II's Jewish wife Ifra Hormizd, which was Shapur II. It is said that Shapur II may have been the only king in history to be crowned in utero, as the legend claims that the crown was placed upon his mother's womb while she was pregnant.

However, according to Alireza Shapour Shahbazi, it is unlikely that Shapur was crowned as king while still in his mother's womb, since the nobles could not have known of his sex at that time. He further states that Shapur was born forty days after his father's death, and that the nobles killed Adur Narseh and crowned Shapur II in order to gain greater control of the empire, which they were able to do until Shapur II reached his majority at the age of 16.

In 337, just before the death of Constantine the Great (324-337), Shapur II, provoked by the Roman rulers' backing of Roman Armenia, broke the peace concluded in 297

between emperors Narseh (293-302) and Diocletian (284-305), which had been observed for forty years. This was the beginning of two long drawn-out wars (337-350 and 358-363) which were inadequately recorded.

After crushing a rebellion in the south, Shapur II invaded Roman Mesopotamia and captured Armenia. Apparently, nine major battles were fought. The most renowned was the inconclusive Battle of Singara (modern Sinjar, Iraq) in which Constantius II was at first successful, capturing the Persian camp, only to be driven out by a surprise night attack after Shapur had rallied his troops (344-or 348?). The most notable feature of this war was the consistently successful defence of the Roman fortress of Nisibis in Mesopotamia. Shapur besieged the fortress three times (in 338, 346, 350), and was repulsed each time.

Although victorious in battle, Shapur II could make no further progress with Nisibis un-taken. At the same time he was attacked in the east by Scythian Massagetae and other Central Asia. He had to break off the war with the Romans and arrange a hasty truce in order to pay attention to the east (350). Roughly around this time the Hunnic tribes, most likely the [...]

In any case, Christian communities had unquestionably existed in Armenia before the official conversion. In a passage in the church history of Sozomenus (*Historia ecclesiastica* 2.8.2) it is stated that the Persians began to become Christian as a result of their contacts with the Armenians and the Osrohenians; but as far as the Armenians are concerned, this is not wholly true, because the first penetration of Christianity into Iran was definitely not by way of Armenia (see M. L. Chaumont, *La diffusion du christianisme en Iran au IIIe siècle*, in Temporini and Haase, op. cit., II, forthcoming). Christianization tended to strengthen Armenia's links with the Roman empire and to set back the Iranian cultural influence.

Tiridates III, the St. Tiridates of the Armenians, worked closely with St. Gregory to spread Christianity through his kingdom and to suppress the pagan cults (described below), which nevertheless did not disappear altogether. While remaining a loyal ally of the Roman emperor, Tiridates did not break off all links with the Sasanians. Presumably he was on good terms with the prince Hormizd, who after the death of his father Hormizd II in 309 had been excluded from the throne and kept in prison until he escaped to the Armenian court (Zosimus, *Historia nova*, [ed. Mendelssohn, 1887] 2.27; see P. Peeters, in *Bulletin de l'Académie Royale de Belgique* 17, 1931, p. 37). Tiridates is said to have been killed in a plot hatched by his adversaries (text published by Alishan=Langlois, pp. 193-94; Movsēs Xorenac'i 2.92=Langlois, I, p. 131). From the sources, his death would appear to have occurred not later than 320 (see Peeters, op. cit., pp. 17, 37), but some (Markwart, *Untersuchungen* I, p. 220; R. Grousset, *Histoire de l'Arménie des origines à 1071*, 2nd ed., Paris, 1947, p. 120; Ananian, op. cit., p. 353) hold that his reign lasted until 330 or even later (Asdourian, op. cit., p. 143, places his death in 337). The view of H. Manandian reiterated by K. Toumanoff (in *Revue des études arméniennes*, 1969, pp. 263f.) that Tiridates III was succeeded by another king of the same name, Tiridates IV, seems unfounded.

Information about the successors of Tiridates, namely his son Khosrov Kotak (Kosrow the Lesser) and his grandson Tiran, is available only from the Armenian sources. Khosrov chose a site north of Artaxata on which to build a new capital, Dvin, and an aparank' (Parthian apadān) or royal palace (P'awstos 3.8=Langlois, I, pp. 216-18; Movsēs Xorenac'i 3.8=Langlois, II, pp. 136-37). The statement of Movsēs Xorenac'i that dvin was a Persian word meaning "hill" was generally doubted until V. Minorsky ("Transcaucasica," JA, 1930, pp. 41f.) drew attention to the use of dovīn with the sense of "hill" in Persian place names. Khosrov Kotak had to contend with an invasion by the Massagetae of Balāsagān, whose king, named Sanesan or Sanatruk is said to have been related to him (P'awstos 3.7=Langlois, I, pp. 215-16; Movsēs Xorenac'i, 3.9=Langlois, II, pp. 137-38). Another problem is said to have been the defection of the vitaxes (bdeašx) of Arzanene, who sought to become a vassal of the Persian king (P'awstos 3.9=Langlois, p. 216; Movsēs Xorenac'i 3.4=Langlois, II, p. 135); but this defection, the date of which is unclear, cannot really have affected the king of Armenia because Arzanene had not been Armenian for many years, having been annexed to the Roman empire under the treaty of Nisibis. King Tiran (incorrectly called Tigranes VII) seems to have had serious conflicts with the Christian clergy and is said to have put St. Gregory's successor, the catholicos Yusik, to death. In his foreign policy he was mainly concerned to placate Šāpūr II of Iran. The latter made no secret of his designs on Armenia (Libanius, *Orationes* 59.71-72; Eusebius, *Vita Constantini* 4.56), where he could count on support from some of the naxarars. Probably ca.

334/335 or perhaps a little later, Šāpūr succeeded in capturing King Tiran, his queen, and the crown prince Aršak (according to the rather picturesque account given by P'awstos 3.20=Langlois, I, pp. 229f.). Tiran is said to have been betrayed by his chamberlain (senekapet) Phisak, who delivered him to the satrap of Arzanene, Šāpūr-Varāz (on the chronology of these events, see N. H. Baynes, "Rome and Armenia in the Fourth Century," English Historical Review 25, 1910, pp. 627-28; E. Stein, Histoire du Bas-Empire I, Paris, 1959, p. 130). In 338, however, Šāpūr after his first reverse outside Nisibis agreed to the release of the royal family of Armenia and to the enthronement of Aršak, apparently at the special request of the emperor Constantius II; the matter is the subject of oracular comments by Julian (Orationes 1.20d; ed. J. Bidez, p. 34 in which the personal name of the king of Armenia is not mentioned).

<http://www.iranicaonline.org/articles/armenia-ii>

The trilingual inscription of Šābuhr at "Kaaba i Zardušt"
Res Gestae divi Saporis

Kidarites, whose king was Grumbates, make an appearance as an encroaching threat upon Sasanian territory as well as a menace to the Gupta Empire (320-500). After a prolonged struggle (353-358) they were forced to conclude a peace, and Grumbates agreed to enlist his light cavalymen into the Persian army and accompany Shapur II in renewed war against the Romans, particularly participating in the Siege of Amida in 359.

https://en.wikipedia.org/wiki/Shapur_II

Manichaeism's views on Jesus are described by historians:
Jesus in Manichaeism possessed three separate identities:

(1) Jesus the Luminous, (2) Jesus the Messiah and (3) Jesus patibilis (the suffering Jesus).

(1) As Jesus the Luminous... his primary role was as supreme revealer and guide and it was he who woke Adam from his slumber and revealed to him the divine origins of his soul and its painful captivity by the body and mixture with matter. Jesus the Messiah was a historical being who was the prophet of the Jews and the forerunner of Mani. However, the Manichaeans believed he was wholly divine. He never experienced human birth as notions of physical conception and birth filled the Manichaeans with horror and the Christian doctrine of virgin birth was regarded as equally obscene. Since he was the light of the world, where was this light, they asked, when he was in the womb of the Virgin?

(2) Jesus the Messiah was truly born at his baptism as it was on that occasion that the Father openly acknowledged his sonship. The suffering, death and resurrection of this Jesus were in appearance only as they had no salvific value but were an exemplum of the suffering and eventual deliverance of the human soul and a prefiguration of Mani's own martyrdom.

(3) The pain suffered by the imprisoned Light-Particles in the whole of the visible universe, on the other hand, was real and immanent. This was symbolized by the mystic placing of the Cross whereby the wounds of the passion of our souls are set forth. On this mystical Cross of Light was suspended the Suffering Jesus (Jesus patibilis) who was the life and salvation of Man. This mystica cruxifacio was present in every tree, herb, fruit, vegetable and even stones and the soil. This constant and universal suffering of the captive soul is exquisitely expressed in one of the Coptic Manichaean psalms.

Diocletian Emperor 284-305 and Maximian 286-305

St. Marcellinus Pope 296-304

250-350? Solinus.

The shores of the coast of Gaul were the end of the world but that the island Brittania of not inconsiderable size, might deserve the name of another world; for it stretches 800 and more miles, if we measure to the angle of Calidonia. In this fastness an altar inscribed with greek letters proves that Ulysses was driven to Calidonia.

It is surrounded by many not insignificant islands, of which Hibernia approaches it in size, inhuman in the savage practices of its inhabitants but otherwise so rich in fodder that if they were not kept off the pastures the herds would gorge themselves to the point of danger. There are no snakes there, few birds, and people who are unfreindly and warlike. When they have drained the blood of the slain the

victors smear their faces with it. They make no distinction between right and wrong. There are no bees, and if anyone sprinkles dust or pebbles from there among the hives, the swarms will leave the honeycombs... The sea which flows between the island and Brittania is rough and stormy all the year, except for a few days when it is navigable, and those who have investigated the matter estimate that it is 120 miles wide.

A rough strait also separates the island of Silura from the shore which the Brittana tribe of the Dumnonii occupy. The inhabitants of this island preserve the ancient customs; they refuse money, give and accept things, obtain their necessities by exchange rather than by purchase, are zealous in their worship of the gods, and both men and women display a knowledge of the future.

The island of Tanatus is washed by the Fretum Gallicum and is separated from the mainland of Brittania by a narrow estuary. It rejoices in fertile plains and a rich soil which is beneficial not only to itself but to other places too: for whereas it is crawled over by no snakes, earth brought from it to any other place kills snakes. there are many other islands around Brittania, of which the most distant is Thyle, where the summer solstice, when the sun is passing through the sign of cancer, there is no night, and likewise at the winter solstice no day. We hear that beyond Thyle the sea is sluggish and frozen.

The circumference of Brittania is 4,875 miles, within which there are many great rivers and hot springs (fontes calidi) richly adorned for the use of men. Over these springs the divinity of Minerva presides and in her temple the perpetual fires never whiten into ash, but when the flame declines it turns into rocky lumps.

Further to pass over in silence the large and varied wealth of mines with rich veins in which the land of Brittania abounds, there is especially the stone jet (gagates): if you ask its appearance, it is like a black gem (nigrogemmeus), if its properties, it burns with water and is quenched with oil, if its powers, when it is warmed by rubbing it attracts things set by it, like amber.

The region is partly occupied by barbarians who, even from boyhood, have pictures representing various animals put on their bodies by tattoo artists, and the marks grow on their flesh thus inscribed as they grow up.

The Cassiterides look towards the side of Celtiberia, being rich in lead. (Plumbi means lead, but plumbi albi means white lead, or tin).

SBG St. Augulus, martyred Bishop of London. The Orthodox Community of St. Constantine The Great in York keep 7 February as the feast day of the Holy Martyr Augulus (Aule) of London who died in 303.

SBG St. Ursula. Before 355. Possibly in the persecution of Diocletian and Maximian, i.e. in 300-304, certain virgins, few apparently in number, suffered martyrdom at Cologne. Their names are not recorded. The Clematian inscription makes it certain that there was a martyrdom over their bodies which had been wrecked in 355 and which he rebuilt 355-375. They may have been refugees from the persecutions in Britain who came to Batavia and then Cologne. Among them it was reported that there was a king's daughter, named Vinnosa, whom the people of Cologne called Pinnosa. A Litany in the Cathedral Library at Cologne, of the end of the ninth century, names Martha, Saula, Sambatia, Saturnina, Gregoria, and Pinnosa.

SBG St. Lleuci or Leiki or Lucia. Of this Lucia we have no information beyond that she is stated to have suffered martyrdom, with the famous British virgin and martyr, St. Ursula, with her Eleven Thousand Virgins, at Cologne.

Galerius Emperor 305-311 in association with Constantius I Chlorus & Severus II & Licinius & Constantine I & Maximinus Daza. 305-306. Eutropius.

These emperors, then, having retired from the government of the state, Constantius and Galerius were made emperors; and the Roman world was divided between them in such a manner, that Constantius had Gaul, Italy, and Africa; Galerius Illyricum, Asia, and the East; two Caesars being joined with them. Constantius, however, content with the dignity of emperor, declined the care of governing Africa. He was an excellent man, of extreme benevolence, who studied to increase the resources of the provinces and of private persons, cared but little for the improvement of the public treasury, and used to say that "it was better for the national wealth to be in the hands of individuals than to be laid up in one place of confinement." So moderate was the furniture of his house, too, that if, on holidays, he had to entertain a greater number of friends than ordinary, his dining-rooms were set out with the plate of private persons, borrowed from their several houses. By the Gauls he was not only beloved but venerated, especially because, under his government, they had escaped the suspicious prudence of Diocletian, and the sanguinary rashness of Maximian. He died

in Britain, at York, in the thirteenth year of his reign, and was enrolled among the gods.

SBG St. Coel. Coel Hen, or Coel Godebog son of Guotepauc, the son of Tecmant Godebog being his father's name, and not his epithet, which was Hen. According to these genealogies he was the father of Garbaniaun and Ceneu. King of Ayreshire. Geoffrey of Monmouth, who styles him Earl of Gloucester, says that he had only one child, Elen Luyddog, or Helen, the wife of Constantius, and the mother of Constantine the Great. However, the old Welsh saga, the Dream of Maxen Wledig, makes Elen Luyddog the daughter of Eudaf, son of Caradog, and the wife of Maxen, Emperor Maximus.

SBG St. Elen. Helen, or as in Welsh, is generally known in Welsh tradition as Elen Luyddog, or Elen of the Hosts. Elen, the British Princess, was the daughter, variously, of Eudaf ab Caradog, Octavius dux Wisseorum, Eudaf jarll Ergig ac Euas, who was ruler of either Herefordshire, Essex, Carnarvon, or Gloucester.

She was the wife of Maximus who established himself at Treves [Trier] as the capital of his portion of the Empire, and doubtless Helen was there with him. The tradition at Treves [Trier] is that the present Cathedral was the palace of the Empress Helena, which she gave up to the Church. To this day it bears evidence of having been adapted from a domestic purpose to sacred usages. The atrium, open to the sky, was only domed over comparatively late in Mediaeval times. At Treves [Trier], however, Helen the British Princess, wife of Maximus, has been confounded with Helena the mother of Constantine.

306. Eutropius.

Galerius, a man of excellent moral character, and skilful in military affairs, finding that Italy, by Constantius's permission, was put under his government, created two Caesars, Maximin, whom he appointed over the east, and Severus, to whom he committed Italy. He himself resided in Illyricum. But after the death of Constantius, Constantine, his son by a wife of obscure birth, was made emperor in Britain, and succeeded his father as a most desirable ruler. In the meantime the praetorian guards at Rome, having risen in insurrection, declared Maxentius, the son of Maximian Herculus, who lived in the *Villa Publica* not far from the city, emperor. At the news of this proceeding, Maximian, filled with hopes of regaining the imperial dignity, which he had not willingly resigned, hurried to Rome from Lucania, (which, on retiring into private life, he had chosen for his place of residence, spending his old age in a most delightful country), and stimulated Diocletian by letters to resume the authority that he had laid down, letters which Diocletian utterly disregarded. Severus Caesar, being despatched to Rome by Galerius to suppress the rising of the guards and Maxentius, arrived there with his army, but, as he was laying siege to the city, was deserted through the treachery of his soldiers.

The power of Maxentius was thus increased, and his government established. Severus, taking to flight, was killed at Ravenna. Maximian Herculus, attempting afterwards, in an assembly of the army, to divest his son Maxentius of his power, met with nothing but mutiny and reproaches from the soldiery. He then set out for Gaul, on a planned stratagem, as if he had been driven away by his son, that he might join his son-in-law Constantine, designing, however, if he could find an opportunity, to cut off Constantine, who was ruling in Gaul with great approbation both of the soldiers and the people of the province, having overthrown the Franks and Alemanni with great slaughter, and captured their kings, whom, on exhibiting a magnificent show of games, he exposed to wild beasts. But the plot being made known by Maximian's daughter Fausta, who communicated the design to her husband, Maximian was cut off at Marseilles, whence he was preparing to sail to join his son, and died a well-deserved death; for he was a man inclined to every kind of cruelty and severity, faithless, perverse, and utterly void of consideration for others.

307. Liber Britannicus. Constanst, king of Britain, was the father of Constantine, son of Eiline (*Helena*), the concubine of Constantin. Etrobus wrote that it was in the island of Britain that Constantin took sovereignty at first; for his father had exercised dominion over France and Spain in the life-time of Dioclistan.

Nennius. The fifth was Constantius the father of Constantine the Great. He died in Britain; his sepulchre, as it appears by the inscription on his tomb, is still seen near the city named Cair segont (near Carnarvon). Upon the pavement of the above-mentioned city he sowed three seeds of gold, silver and brass, that no poor person might ever be found in it. It is also called Minmanton.

307. Socrates Scholasticus. Chapter II. – *By what Means the Emperor Constantine became a Christian.*

When Diocletian and Maximian, surnamed Herculus, had by mutual consent laid aside

the imperial dignity, and retired into private life, Maximian, surnamed Galerius, who had been a sharer with them in the government, came into Italy and appointed two Cæsars, Maximin in the eastern division of the empire, and Severus in the Italian. In Britain, however, Constantine was proclaimed emperor, instead of his father Constantius, who died in the first year of the two hundred and seventy-first Olympiad, on the 25th of July. And at Rome Maxentius, the son of Maximian Herculus, was raised by the prætorian soldiers to be a tyrant rather than an emperor. In this state of things Herculus, impelled by a desire to regain the sovereignty, attempted to destroy his son Maxentius; but this he was prevented by the soldiery from effecting, and he soon afterwards died at Tarsus in Cilicia. At the same time Severus Cæsar being sent to Rome by Galerius Maximian, in order to seize Maxentius, was slain, his own soldiers having betrayed him. At length Galerius Maximian, who had exercised the chief authority, also died, having previously appointed as his successor, his old friend and companion in arms, Licinius, a Dacian by birth. Meanwhile, Maxentius sorely oppressed the Roman people, treating them as a tyrant rather than as a king, shamelessly violating the wives of the nobles, putting many innocent persons to death, and perpetrating other similar atrocities. The emperor Constantine being informed of this, exerted himself to free the Romans from the slavery under him (i.e. Maxentius), and began immediately to consider by what means he might overthrow the tyrant. Now while his mind was occupied with this great subject, he debated as to what divinity's aid he should invoke in the conduct of the war. He began to realize that Diocletian's party had not profited at all by the pagan deities, whom they had sought to propitiate; but that his own father Constantius, who had renounced the various religions of the Greeks, had passed through life far more prosperously. In this state of uncertainty, as he was marching at the head of his troops, a preternatural vision, which transcends all description, appeared to him. In fact, about that part of the day when the sun after posing the meridian begins to decline towards the west, he saw a pillar of light in the heavens, in the form of a cross, on which were inscribed these words, BY THIS CONQUER.

The appearance of this sign struck the emperor with amazement and scarcely believing his own eyes, he asked those around him if they beheld the same spectacle; and as they unanimously declared that they did, the emperor's mind was strengthened by this divine and marvellous apparition. On the following night in his slumbers he saw Christ who directed him to prepare a standard according to the pattern of that which had been seen; and to use it against his enemies as an assured trophy of victory. In obedience to this divine oracle, he caused a standard in the form of a cross to be prepared, which is preserved in the palace even to the present time: and proceeding in his measures with greater earnestness, he attacked the enemy and vanquished him before the gates of Rome, near the Mulvian bridge, Maxentius himself being drowned in the river. This victory was achieved in the seventh year of the conqueror's reign.

After this, while Licinius, who shared the government with him, and was his brother-in-law, having married his sister Constantia, was residing in the East, the emperor Constantine, in view of the great blessing he had received, offered grateful thanksgivings to God as his benefactor; these consisted in his relieving the Christians from persecution, recalling those who were in exile, liberating such as were imprisoned, and causing the confiscated property of the prescribed to be restored to them; he moreover rebuilt the churches, and performed all these things with the greatest ardor. About this time Diocletian, who had abdicated the imperial authority, died at Salona in Dalmatia.

Eusebius. Life of Constantine

CHAPTER VIII: That he conquered nearly the Whole World.

But our emperor began his reign at the time of life at which the Macedonian died, yet doubled the length of his life, and trebled the length of his reign. And instructing his army in the mild and sober precepts of godliness, he carried his arms as far as the Britons, and the nations that dwell in the very bosom of the Western ocean. He subdued likewise all Scythia, though situated in the remotest North, and divided into numberless diverse and barbarous tribes. He even pushed his conquests to the Blemmyans and Ethiopians, on the very confines of the South nor did he think the acquisition of the Eastern nations unworthy his care. In short, diffusing the effulgence of his holy light to the ends of the whole world, even to the most distant Indians, the nations dwelling on the extreme circumference of the inhabited earth, he received the submission of all the rulers, governors, and satraps of barbarous nations, who cheerfully welcomed and saluted him, sending embassies and presents, and setting the highest value on his acquaintance and friendship; insomuch that they honoured him with pictures and statues in their respective countries, and Constantine

alone of all emperors was acknowledged and celebrated by all. Notwithstanding, even among these distant nations, he proclaimed the name of his God in his royal edicts with all boldness.

Excerpta Valesiana. The Lineage of the Emperor Constantine
Diocletian ruled with Herculus Maximianus for twenty years.

Constantius, grandson of the brother of that best of emperors Claudius, was first one of the emperor's bodyguard, then a tribune, and later, governor of Dalmatia. With Galerius he was appointed Caesar by Diocletian; for he put away his former wife Helena and married Theodora, daughter of Maximianus, by whom he afterwards had six children, brothers of Constantine. But by his former wife Helena he already had a son Constantine, who was later the mightiest of emperors.

This Constantine, then, born of Helena, a mother of very common origin, and brought up in the town of Naissus, which he afterwards splendidly adorned, had but slight training in letters. He was held as a hostage by Diocletian and Galerius, and did valiant service under those emperors in Asia. After the abdication of Diocletian and Herculus, Constantius sked Galerius to return his son; but Galerius first exposed him to many dangers. For when Constantine, then a young man, was serving in the cavalry against the Sarmatians, he seized by the hair and carried off a fierce savage, and threw him at the feet of the emperor Galerius. Then sent by Galerius through a swamp, he entered it on his horse and made a way for the rest to the Sarmatians, of whom he slew many and won the victory for Galerius. Then at last Galerius sent him back to his father. But in order to avoid meeting Severus as he passed through Italy, Constantine crossed the Alps with the greatest haste, ordering the post-horses to be killed as he went on; and he came up with his father Constantius at Bononia, which the Gauls formerly called Gesoriacum. But his father Constantius, after winning a victory over the Picts, died at York, and Constantine was unanimously hailed as Caesar by all the troops.

In the meantime, two other Caesars had been appointed, Severus and Maximinus; to Maximinus was given the rule of the Orient; Galerius retained Illyricum for himself, as well as the Thracian provinces and Bithynia; Severus received Italy and whatever Herculus had formerly governed. But after Constantius died in Britain, and his son Constantine succeeded him, Maxentius, the son of Herculus, was suddenly hailed as emperor by the praetorian soldiers in the city of Rome. By order of Galerius, Severus took the field against Maxentius, but he was suddenly deserted by all his followers and fled to Ravenna. Thereupon Galerius, with a great army, came against Rome, threatening the destruction of the city, and encamped at Interamna near the Tiber. Then he sent Licinius and Probus to the city as envoys, asking that the son-in-law, that is Maxentius, should attain his desires from the father-in-law, that is Galerius, at the price of requests rather than of arms. Galerius' proposal was scorned, and having learned that through Maxentius' promises many of his own men had been led to desert his cause, he was distressed and turned back; and in order to furnish his men with whatever booty he could, he gave orders that the Flaminian Road should be plundered. Maximianus took refuge with Constantine. Then Galerius made Licinius a Caesar in Illyricum, and after that, leaving him in Pannonia, returned himself to Serdica, where he was attacked by a violent disease and wasted away so completely, that he died with the inner parts of his body exposed and in a state of corruption – a punishment for a most unjust persecution, which recoiled as a well-merited penalty upon the author of the iniquitous order. He ruled for nineteen years.

308. Zosimus.

Three years after Dioclesian died, and the reigning emperors, Constantius and Maximianus Gallerius declared Severus and Maximinus (who was nephew to Gallerius), the Caesars, giving all Italy to Severus, and the eastern provinces to Maximinus. Affairs being all regulated and the barbarians quiet, since the Romans had been so successful against them, Constantine, who was the son of Constantius by a concubine, and had previously an ambition of being emperor (but was more inflamed with that desire, since Severus and Maximinus had acquired the name and honour of Caesars), was now resolved to leave the place where he had resided, and to go to his father Constantius, who was beyond the Alps, and generally in Britain. But being apprehensive of seizure by the way, many persons being well acquainted of his anxiety for dominion, he maimed all the horses that were kept for public service, whenever he came to any stable where they were kept, except what he took for his own use. He continued to do this throughout his journey, by which means he prevented those that pursued him from going further, while he himself proceeded toward the country where his father was.

It happened that Constantius died at that time; the guards, therefore, who thought none of his legitimate children to be fit for the imperial dignity, considered that Constantine was a person capable of sustaining it, and conferred the honour upon him, in hopes of being remunerated with handsome presents. When his effigy according to custom was exhibited at Rome, Maxentius, the son of Maximianus Herculus, could not endure the sight of Constantine's good fortune, who was the son of a harlot, while himself, who was the son of so great an emperor, remained at home in indolence, and his father's empire was enjoyed by others. He therefore associated with himself in the enterprise Marcellianus and Marcellus, two military tribunes, and Lucianus, who distributed the swine's flesh, with which the people of Rome were provided by the treasury, and the court-guards called Praetoriani. By them he was promoted to the imperial throne, having promised liberally to reward all that assisted him in it. For this purpose they first murdered Abellius, because he, being prefect of the city, opposed their enterprise.

30?. Zosimus.

Maximianus Gallerius, when he had learned this, sent Severus Caesar against Maxentius with an army. But while he advanced from Milan with several legions of Moors, Maxentius corrupted his troops with money, and even the prefect of the court, Anullinus, and thereby conquered him with great ease. On which Severus fled to Ravenna, which is a strong and populous city, provided with necessaries sufficient for himself and soldiers. When Maximianus Herculus knew this, he was doubtless greatly concerned for his son Maxentius, and therefore, leaving Lucania where he then was, he went to Ravenna. Finding that Severus could not by any means be forced out of this city, it being well fortified, and stored with provisions, he deluded him with false oaths, and persuaded him to go to Rome. But on his way thither, coming to a place called the Three Tabernae, he was taken by a stratagem of Maxentius and immediately executed. Maximianus Gallerius could not patiently endure these injuries done to Severus, and therefore resolved to go from the east to Rome, and to punish, Maxentius as he deserved. On his arrival in Italy, he found the soldiers about him so treacherous, that he returned into the east without fighting a battle.

At this period Maximianus Herculus, who lamented the tumults which disturbed the public peace, came to Dioclesian who then lived at Carnutum, a town of Gallia Celtica, and endeavoured to persuade him to resume the empire, and not to suffer the government which they had preserved so long and with so much difficulty to be exposed to the madness and folly of those who had possessed themselves of it, and who had already brought it near to ruin. But Dioclesian refused to listen to him; for he wisely preferred his own quiet, and perhaps foresaw the troubles that would ensue, being a man well versed in matters of religion. Herculus therefore, perceiving that he could not prevail with him, came to Ravenna, and so returned to the Alps to meet Constantine, who lay there. And being naturally a busy faithless man, he promised his daughter Fausta to Constantine, which he performed, but persuaded him to pursue Maximianus Gallerius, who was then leaving Italy, and to lay wait for Maxentius. To all which Constantine agreed. He then left him, designing if possible to recover the empire, as he hoped to create a quarrel between Constantine and his son Maxentius. But while he attempted these things, Maximianus Gallerius assumed Licinius, as his colleague in the empire, with whose assistance he hoped to cope with Maxentius. But while Gallerius deliberated on these affairs, he died of an incurable wound, and Licinius then also claimed the sole dominion. Maximianus Herculus endeavoured, as I have said, to recover the empire by alienating the soldiers from Maxentius. For which purpose, by gifts and insinuating addresses, having brought them over to him, he endeavoured to form a conspiracy against Constantine, in which his soldiers were to join. But Fausta revealed it to Constantine, and Herculus, who was now overborne by so many disappointments, died of a distemper at Tarsus.

Maxentius, having escaped this danger, and being of opinion that he was now well enough established in the empire, sent persons into Africa, and in particular to Carthage, to carry his image about that country. But the soldiers in that country forbade it, out of regard to Maximianus Gallerius, and the respect they had for his memory, until they heard that Maxentius was coming to make war on them on the plea of an insurrection. They then went to Alexandria, but meeting with a great army with which they were not able to contend, they returned to Carthage. Maxentius, being disturbed at this, resolved to sail for Africa, and to punish the authors of the commotion. But the soothsayers having sacrificed and given him ill omens, he was afraid to go, not only because the entrails had that appearance, but also lest Alexander, who was prefect of the court in Africa, should be his enemy. To secure his passage thither from all doubt, he sent to Alexander, desiring him to send his son as

an hostage. But he, suspecting that Maxentius did not desire his son for the mere purpose of an hostage, but to deceive him, denied the request. After this, Maxentius sending other agents to him to take him off by treachery and stratagem, the plot was discovered; and the soldiers, having then got a favourable opportunity to rebel, conferred the purple robe on Alexander, though he was by birth not only a Phrygian, but a timid cowardly man, and unlit for any difficult undertaking, and was, moreover, of an advanced age.

At that time a fire happened at Rome; whether it came out of the air or earth is uncertain. It broke out in the temple of Fortune; and while the people ran to extinguish it, a soldier, speaking blasphemy against the goddess, was killed by the mob out of zeal, by which a mutiny was occasioned among the soldiers. They would have destroyed the whole city, had not Maxentius soon appeased their rage. Maxentius after this sought every occasion to make war on Constantine, and pretending grief for his father's death, of which Constantine was the cause, he designed to go towards Rhaetia, which is contiguous both to Gaul and Illyricum. For he imagined that he should subdue Dalmatia and Illyricum, by the assistance of the generals in those parts, and of the army of Licinius. But thinking it better first to arrange affairs in Africa, he raised an army, bestowing the command of it on Rufius Volusianus, prefect of the court, and sent them into Africa. He sent Zeno also along with Rufius, who was a person not only expert in military affairs, but esteemed for his courtesy and affability. On the first charge, Alexander's troops retired on a body of men in the rear, nor was the other party left unconquered by the enemy. Alexander himself was taken and strangled.

The war being thus at an end, a good opportunity was afforded to sycophants and informers of impeaching all the persons in Africa, who had good estates, as friends to Alexander: nor were any of the accused spared, but some of them put to death, and others deprived of all their possessions. After this he triumphed at Rome for the mischief done at Carthage. Such was the state of the affairs of Maxentius, who conducted himself with cruelty and licentiousness towards all the inhabitants of Italy, and even to Rome itself. Meantime Constantine, who had long been jealous of him, was then much more disposed to contention. Having therefore raised an army amongst the Barbarians, Germans, and Celts, whom he had conquered, and likewise drawn a force out of Britain, amounting in the whole to ninety thousand foot and eight thousand horse, he marched from the Alps into Italy, passing those towns that surrendered without doing them any damage, but taking by storm those which resisted. While he was making this progress, Maxentius had collected a much stronger army; consisting of eighty thousand Romans and Italians, all the Tuscans on the sea coast, forty thousand men from Carthage, besides what the Sicilians sent him; his whole force amounting to a hundred and seventy thousand foot and eighteen thousand horse.

St. Eusebius Pope 309 or 310
St. Miltiades Pope 311-314

312. Zosimus.

Both being thus prepared, Maxentius threw a bridge over the Tiber, which was not of one entire piece, but divided into two parts, the centre of the bridge being made to fasten with irons, which might be drawn out upon occasion. He gave orders to the workmen, that as soon as they saw the army of Constantine upon the juncture of the bridge, they should draw out the iron fastenings, that the enemy who stood upon it might fall into the river.

Constantine, advancing with his army to Rome, encamped in a field before the city, which was broad and therefore convenient for cavalry. Maxentius in the mean time shut himself up within the walls, and sacrificed to the gods, and, moreover, consulted the Sibylline oracles concerning the event of the war. Finding a prediction, that whoever designed any harm to the Romans should die a miserable death, he applied it to himself, because he withstood those that came against Rome, and wished to take it. His application indeed proved just. For when Maxentius drew out his army before the city, and was marching over the bridge that he himself had constructed, an infinite number of owls flew down and covered the wall. When Constantine saw this, he ordered his men to stand to their arms. And the two armies being drawn up opposite to each other, Constantine sent his cavalry against that of the enemy, whom they charged with such impetuosity that they threw them into disorder. The signal being given to the infantry, they likewise marched in good order towards the enemy. A furious battle having commenced, the Romans themselves, and their foreign allies, were unwilling to risk their lives, as they wished for deliverance from the bitter tyranny with which they were burdened; though the other troops were slain in great numbers, being either

trod to death by the horse, or killed by the foot.

As long as the cavalry kept their ground, Maxentius retained some hopes, but when they gave way, he tied with the rest over the bridge into the city. The beams not being strong enough to bear so great a weight, they broke; and Maxentius, with the others, was carried with the stream down the river.

When the news of this victory was reported in the city, none dared to shew any joy for what had happened, because many thought it was an unfounded report. But when the head of Maxentius was brought upon a spear, their fear and dejection were changed to joy and pleasure. On this occasion Constantine punished very few, and they were only some few of the nearest friends of Maxentius; but he abolished the praetorian troops, and destroyed the fortresses in which they used to reside. At length, having arranged all things in the city, he went towards Gallia Celtica; and on his way sent for Licinius to Milan, and gave him in marriage his sister Constantia, whom he had formerly promised him, when he wished him to unite with himself against Maxentius. That solemnity over, Constantine proceeded towards the Celtae. It was not long before a civil war broke out between Licinius and Maximianus, who had a severe engagement, in which Licinius at first appeared to have the disadvantage, but he presently rallied and put Maximianus to flight. This emperor, travelling through the east into Egypt, in hopes of raising a force to renew the war, died at Tarsus.

Constantine I Emperor 311-337. In association with Licinius 311-324

312. Eusebius. Life of Constantine. CHAPTER XXIV: It was by the Will of God that Constantine became possessed of the Empire.

Thus then the God of all, the Supreme Governor of the whole universe, by his own will appointed Constantine, the descendant of so renowned a parent, to be prince and sovereign: so that, while others have been raised to this distinction by the election of their fellow-men, he is the only one to whose elevation no mortal may boast of having contributed.

CHAPTER XXV: Victories of Constantine over the **Britons**.

As soon then as he was established on the throne, he began to care for the interests of his paternal inheritance, and visited with much considerate kindness all those provinces which had previously been under his father's government. Some tribes of the barbarians who dwelt on the banks of the Rhine, and the shores of the Western ocean, having ventured to revolt, he reduced them all to obedience, and brought them from their savage state to one of gentleness. He contented himself with checking the inroads of others, and drove from his dominions, like untamed and savage beasts, those whom he perceived to be altogether incapable of the settled order of civilized life. (1) Having disposed of these affairs to his satisfaction, he directed his attention to other quarters of the world, and first passed over to the **British** nations, (2) which lie in the very bosom of the ocean. These he reduced to submission, and then proceeded to consider the state of the remaining portions of the empire, that he might be ready to tender his aid wherever circumstances might require it.

312. Sozomenus. Extracts from the Ecclesiastical History

Under the government of Constantine the churches flourished and increased in numbers daily, since they were honoured by the good deeds of a benevolent and well-disposed emperor, and otherwise God preserved them from the persecutions and harassments which they had previously encountered. When the churches were suffering from persecution in other parts of the world, Constantius alone, the father of Constantine, accorded the Christians the right of worshipping God without fear. I know of an extraordinary thing done by him, which is worthy of being recorded. He wished to test the fidelity of certain Christians, excellent and good men, who were attached to his palaces. He called them all together, and told them that if they would sacrifice to idols as well as serve God, they should remain in his service and retain their appointments; but that if they refused compliance with his wishes, they should be sent from the palaces, and should scarcely escape his vengeance. When difference of judgement had divided them into two parties, separating those who consented to abandon their religion from those who preferred the honour of God to their present welfare, the emperor determined upon retaining those who had adhered to their faith as his friends and counsellors; but he turned away from the others, whom he regarded as unmanly and impostors, and sent them from his presence, judging that they who had so readily betrayed their God could never be true to their king. Hence it is probable that while Constantius was alive, it did not seem contrary to the laws for the inhabitants of the countries beyond Italy to profess Christianity, that is to say, in Gaul, in Britain, or in the region of the Pyrenean mountains as far as the Western Ocean. When Constantine succeeded to the same government, the affairs of the churches became still more brilliant...

As soon as the sole government of the Roman empire was vested in Constantine, he issued a public decree commanding all his subjects in the East to honour the Christian religion, carefully to worship the Divine Being, and to recognize that only as Divine which is also essentially so, and which has the power that endures for ever and ever: for he delights to give all good things ungrudgingly to those who zealously embrace the truth; he meets their undertakings with the best hopes, while misfortunes, whether in peace or in war, whether in public or in private life, befall transgressors. Constantine then added, but without vain boasting, that, God having accounted him as a fitting servant, worthy to reign, he had been led from the **British** sea to the Eastern provinces in order that the Christian religion might be extended, and that those who, on account of the worship of God had remained steadfast in confessions or martyrdoms, might be advanced to public honours. After making these statements, he entered upon a myriad other details by which he thought his subjects might be drawn to religion. He decreed that all acts and judgements passed by the persecutors of the church against Christianity should be revoked; and commanded that all those who, on account of their confession of Christ, had been sent to banishment - either to the isles or elsewhere, contrary to their own inclination - and all those who had been condemned to labour in the mines, the public works, the harems, the linen factories, or had been enrolled as public functionaries, should be restored to liberty. He removed the stigma of dishonour from those upon whom it had been cast, and permitted those who had been deprived of high appointments in the army, either to re assume their former place, or with an honourable discharge, to enjoy a liberal ease according to their own choice; and when he had recalled all to the enjoyment of their former liberties and customary honours, he likewise restored their possessions. In the case of those who had been slain, and whose property had been confiscated, he enacted that the inheritance should be transferred to the next of kin, or, in default of heirs, to the church belonging to the locality where the estate was situated; and when the inheritance had passed into other hands, and had become either private or national property, he commanded it to be restored. He likewise promised to resort to the fittest and best possible arrangements when the property had been purchased by the exchequer, or had been received there from by gift. These measures, as it had been said, having been enacted by the emperor, and ratified by law, were forthwith carried into execution. Christians were thus placed in almost all the principal posts of the Roman government; the worship of false gods was universally prohibited; and the arts of divination, the dedication of statues, and the celebration of pagan festivals were interdicted.

The church having been in this manner spread throughout the whole Roman world, religion was introduced even among the barbarians themselves. The tribes on both sides of the Rhine were Christianized, as likewise the **Celts** and the **Gauls** who dwelt upon the most distant shores of the ocean; the Goths, too, and such tribes as were contiguous to them, who formerly dwelt on either of the high shores of the Danube, had long shared in the Christian faith, and had changed into a gentler and more rational observance. Almost all the barbarians had professed to hold the Christian doctrine in honour, from the time of the wars between the Romans and foreign tribes, under the government of Gallienus and the emperors who succeeded him. For when an unspeakable multitude of mixed nations passed over from Thrace into Asia and overran it, and when other barbarians from the various regions did the same things to the adjacent Romans, many priests of Christ who had been taken captive, dwelt among these tribes; and during their residence among them, healed the sick, and cleansed those who were possessed of demons, by the name of Christ only, and by calling on the Son of God; moreover they led a blameless life, and excited envy by their virtues. The barbarians, amazed at the conduct and wonderful works of these men, thought that it would be prudent on their part, and pleasing to the Deity, if they should imitate those whom they saw were better; and, like them, would render homage to God. When teachers as to what should be done, had been proposed to them, the people were taught and baptised, and subsequently were gathered into churches.

c 313. Nomina Provinciarum Omnium (Laterculus Veronensis.)

The diocese of the Britanniae includes provinces to the number of six: Prima, Secunda, Maxima Caesariensis, Flavia Caesariensis. Barbarian nations which have emerged under the emperors: Scoti, Picti, Caledonii

St. Sylvester 1 Pope 314-335

After 312. Zosimus.

When he was delivered from the distractions of war, he yielded himself to

voluptuousness, and distributed to the people of Byzantium a present of corn, which is continued to this day. As he expended the public treasure in unnecessary and unprofitable buildings, he likewise built some which in a short time were taken down again, because being erected hastily they could not stand long. He likewise made a great change in the ancient magistracy. Till that time there had been only two prefects of the court, whose authority was equal; not only were the court soldiers under their controul, but those also which guarded the city, and who were stationed in its neighbourhood. The person who had the office of prefect of the court, which was esteemed the next post of honour to that of emperor, distributed the gifts of corn, and punished all offences against military discipline, as he thought convenient. Constantine altered this good institution, and of one office or magistracy formed four. To one of those prefects he committed all Egypt and Pentapolis in Libya, and all the east as far as Mesopotamia, with Cilicia, Cappadocia, Armenia, and all the coast from Pamphylia to Trapezus and the castles near Phasis; to the same person was given all Thrace and Moesia, as far as the mountains Haemus and Rhodope, and the town of Doberus. He likewise added Cyprus and all the Cyclades, except Lemnos, Imbrus, and Samothracia. To another he assigned Macedon, Thessaly, Crete, and Greece, with the adjacent islands, 154 both the Epiruses, the Illyrians, the Dacians, the Triballi, and the Pannonians as far as Valeria, besides the upper Moesia. To the third prefect he entrusted Italy and Sicily, with the neighbouring islands, and Sardinia and Corsica, together with all Africa westward of the Syrtes. To the fourth he committed all beyond the Alps, Gaul, Spain, and Britain. Having thus divided the power of these prefects, he invented other methods likewise of diminishing their influence. For as there used to be in all places, centurions, tribunes, and generals, he appointed officers called *Magistri militum*, some over the horse and others over the foot, to whom he gave authority to discipline the soldiers, and punish those that had offended, by which the power of the prefects was diminished. That this innovation was productive of great injury to public affairs both in peace and war I will immediately prove. The prefects had hitherto collected the tribute in all places by their officers, and disposed of it in war expences, the soldiers at the same time being subject to their authority, whose offences they punished at discretion. Under these circumstances, the soldiers, considering that the same person who gave them their pay had the infliction of punishments whenever they offended, did not dare to act contrary to their duty, for fear of their stipend being withheld, and of being duly punished. But now since one person is paymaster and another inspector of discipline, they act according to their own inclination.

Constantine likewise adopted another measure, which gave the Barbarians free access into the Roman dominions. For the Roman empire, as I have related, was, by the care of Dioclesian, protected on its remote frontiers by towns and fortresses, in which soldiers were placed; it was consequently impossible for the Barbarians to pass them, there being always a sufficient force to oppose their inroads. But Constantine destroyed that security by removing the greater part of the soldiers from those barriers of the frontiers, and placing them in towns that had no need of defenders; thus depriving those who were exposed to the Barbarians of all defence, and oppressing the towns that were quiet with so great a multitude of soldiers, that many of them were totally forsaken by the inhabitants. He likewise rendered his soldiers effeminate by accustoming them to public spectacles and pleasures. To speak in plain terms, he was the first cause of the affairs of the empire declining to their present miserable state.

SBG ST Cadfrawd was the same as Adelfius, who is recorded to have been present at the Council of Arles in 314, the names being "almost a translation of each other." Caerleon may have been the seat of a bishopric, as Giraldus Cambrensis maintained, and Adelfius may have been bishop of the see, but there is no clear evidence that he came from this town or district. He is called in the entry "episcopus de civitate Colonia Londinensium." There is evidently some error here. Haddan and Stubbs and others have suggested Legionensium for Londinensium, making it refer to Caerleon.

322. Annals of the Four Masters.

Fiacha Sraibhtine, after having been thirty seven years as king over Ireland, was slain by the Collas, in the battle of Dubhchomar, in Crioich Rois, in Breagh.

323. The first year of Colla Uais, son of Eochaidh Doimhlen, as king over Ireland.

324. GENNADIUS of MASSILIA

Chapter XIV. – *Letter written by the Emperor Constantine respecting the building of Churches*

"Constantinus Augustus, the great and the victorious, to Eusebius.

"I am well aware, and am thoroughly convinced, my beloved brother, that as the servants of our Saviour Christ have been suffering up to the present time from nefarious machinations and tyrannical persecutions, the fabrics of all the churches must have either fallen into utter ruin from neglect, or, through apprehension of the impending iniquity, have been reduced below their proper dignity. But now that freedom is restored, and that dragon, through the providence of God, and by our instrumentality, thrust out from the government of the Empire, I think that the divine power has become known to all, and that those who hitherto, from fear or from incredulity or from depravity, have lived in error, will now, upon becoming acquainted with Him who truly is, be led into the true and correct manner of life. Exert yourself, therefore, diligently in the reparation of the churches under your own jurisdiction, and admonish the principal bishops, priests, and deacons of other places to engage zealously in the same work; in order that all the churches which still exist may be repaired or enlarged, and that new ones may be built wherever they are required. You, and others through your intervention, can apply to magistrates and to provincial governments for all that may be necessary for this purpose; for they have received written injunctions to render zealous obedience to whatever your holiness may command. May God preserve you, beloved brother."

Thus the emperor wrote to the bishops in each province respecting the building of churches.

Chapter XX. – *Of the destruction of the temples all over the Empire.*

Now the right faithful emperor diverted his energies to resisting paganism, and published edicts in which he ordered the shrines of the idols to be destroyed. Constantine the Great, most worthy of all eulogy, was indeed the first to grace his empire with true religion; and when he saw the world still given over to foolishness he issued a general prohibition against the offering of sacrifices to the idols. He had not, however, destroyed the temples, though he ordered them to be kept shut. His sons followed in their father's footsteps. Julian restored the false faith and rekindled the flame of the ancient fraud. On the accession of Jovian he once more placed an interdict on the worship of idols, and Valentinian the Great governed Europe with like laws. Valens, however, allowed every one else to worship any way they would and to honour their various objects of adoration. Against the champions of the Apostolic decrees alone he persisted in waging war. Accordingly during the whole period of his reign the altar fire was lit, libations and sacrifices were offered to idols, public feasts were celebrated in the forum, and votaries initiated in the orgies of Dionysus ran about in goat-skins, mangling hounds in Bacchic frenzy, and generally behaving in such a way as to show the iniquity of their master. When the right faithful Theodosius found all these evils he pulled them up by the roots, and consigned them to oblivion

The Epistle of the Emperor Constantine, (extract) Quoted by Theodoretus of Cyprus.

That this impropriety should be rectified, and that all these diversities of commemoration should be resolved into one form, is the will of divine Providence, as

I am convinced you will all perceive. Therefore, this irregularity must be corrected, in order that we may no more have any thing in common with those parricides and the murderers of our Lord. An orderly and excellent form of commemoration is observed in all the churches of the western, of the southern, and of the northern parts of the world, and by some of the eastern; this form being universally commended, I engaged that you would be ready to adopt it likewise, and thus gladly accept the rule unanimously adopted in the city of Rome, throughout Italy, in all Africa, in Egypt, the Spains, the Gauls, the Britains, Libya, Greece, in the dioceses of Asia, and of Pontus, and in Cilicia, taking into your consideration not only that the churches of the places above-mentioned are greater in point of number, but also that it is most pious that all should unanimously agree in that course which accurate reasoning seems to demand, and which has no single point in common with the perjury of the Jews.

BEDE

CHAP. VIII. How, when the persecution ceased, the Church in Britain enjoyed peace till the time of the Arian heresy.

When the storm of persecution ceased, the faithful Christians, who, during the time of danger, had hidden themselves in woods and deserts and secret caves, came forth and rebuilt the churches which had been levelled to the ground; founded, erected, and finished the cathedrals raised in honour of the holy martyrs, and, as if displaying their conquering standards in all places, celebrated festivals and performed their sacred rites with pure hearts and lips. This peace continued in the Christian churches of Britain until the time of the Arian madness, which, having corrupted the whole world, infected this island also, so far removed from the rest of the world, with the poison of its error; and when once a way was opened across the sea for that plague, straightway all the taint of every heresy fell upon the island, ever desirous to hear some new thing, and never holding firm to any sure belief.

At this time Constantius, who, whilst Diocletian was alive, governed Gaul and Spain, a man of great clemency and urbanity, died in Britain. This man left his son Constantine born of Helena, his concubine, emperor of the Gauls. Eutropius writes that Constantine, being created emperor in Britain, succeeded his father in the sovereignty. In his time the Arian heresy broke out, and although it was exposed and condemned in the Council of Nicaea, nevertheless, the deadly poison of its evil spread, as has been said, to the Churches in the islands, as well as to those of the rest of the world.

325. Eusebius. Life of Constantine

CHAPTER XIX: Exhortation to follow the Example of the Greater Part of the World.

"Since, therefore, it was needful that this matter should be rectified, so that we might have nothing in common with that nation of parricides who slew their Lord: and since that arrangement is consistent with propriety which is observed by all the churches of the western, southern, and northern parts of the world, and by some of the eastern also: for these reasons all are unanimous on this present occasion in thinking it worthy of adoption. And I myself have undertaken that this decision should meet with the approval of your Sagacities, in the hope that your Wisdoms will gladly admit that practice which is observed at once in the city of Rome, and in Africa; throughout Italy, and in Egypt, in Spain, the Gauls, Britain, Libya, and the whole of Greece; in the dioceses of Asia and Pontus, and in Cilicia, with entire unity of judgement. And you will consider not only that the number of churches is far greater in the regions I have enumerated than in any other, but also that it is most fitting that all should unite in desiring that which sound reason appears to demand, and in avoiding all participation in the perjured conduct of the Jews. In fine, that I may express my meaning in as few words as possible, it has been determined by the common judgement of all, that the most holy feast of Easter should be kept on one and the same day. For on the one hand a discrepancy of opinion on so sacred a question is unbecoming, and on the other it is surely best to act on a decision which is free from strange folly and error.

CHAPTER L: Embassy and Presents from the Indians.

ABOUT this time ambassadors from the Indians, who inhabit the distant regions of the East, arrived with presents consisting of many varieties of brilliant precious stones, and animals differing in species from those known to us. These offerings they presented to the emperor, thus allowing that his sovereignty extended even to the Indian Ocean, and that the princes of their country, who rendered homage to him both by paintings and statues, acknowledged his imperial and paramount authority. Thus the Eastern Indians now submitted to his sway, as the Britons of the Western Ocean had done at the commencement of his reign.

326. Annals of the Four Masters.

The fourth year of Colla Uais, in the sovereignty of Ireland, when Muireadhach Tireach expelled him and his brothers into Alba Scotland with three hundred along with them.

327. The first year of Muireadhach Tireach in the sovereignty of Ireland.

At the end of this year the three Collas came to Ireland; and there lived not of their forces but thrice nine persons only. They then went to Muireadhach, having been instructed by a druid. And they scolded at him, and expressed evil words, that he might kill them, and that it might be on him the curse of the finghal should alight. As he did not oppose them, they tarried with him, and were faithful to him.

331. The fifth year of Muireadhach.

The battle of Achadh Leithdheirg, in Fearnmhagh, was fought by the three Collas against the Ulstermen, in which fell Fearghus Fogha, son of Fraechar Foirtriun, the last king of Ulster, who resided at Eamhain. They afterwards burned Eamhain, and the Ulstermen did not dwell therein since. They also took from the Ulstermen that part of the province extending from the Righe and Loch nEathach westwards. Colla Meann fell in this battle.

St. Marcus Pope 336**Jordanes**

This Visimar was of the stock of the Asdingi, which is eminent among them and indicates a most warlike descent, as Dexippus the historian relates. He states furthermore that by reason of the great extent of their country they could scarcely come from Ocean to our frontier in a year's time. At that time they dwelt in the land where the Gepidae now live, near the rivers Marisia, Miliare, Gilpil and the Grisia, which exceeds in size all previously mentioned. They then had on the east the Goths, on the west the Marcomanni, on the north the Hermunduli and on the south the Hister, which is also called the Danube. At the time when the Vandals were dwelling in this region, war was begun against them by Geberich, king of the Goths, on the shore of the river Marisia which I have mentioned. Here the battle raged for a little while on equal terms. But soon Visimar himself, the king of the Vandals, was overthrown, together with the greater part of his people. When Geberich, the famous leader of the Goths, had conquered and spoiled Vandals, he returned to his own place whence he had come. Then the remnant of the Vandals who had escaped, collecting a band of their unwarlike folk, left their ill-fated country and asked the Emperor Constantine for Pannonia. Here they made their home for about sixty years and obeyed the commands of the emperors like subjects. A long time afterward they were summoned thence by Stilicho, Master of the Soldiery, Ex-Consul and Patrician, and took possession of Gaul. Here they plundered their neighbors and had no settled place of abode.

St. Julius 1 Pope 337-352**Constantine II Emperor 337-340 in association with Constantius II & Constans**

337. Liber Britannicus. Constantinus, son of Constantine the Great, son of Helena, took the island of Britain, and died, and was buried at Caersegeint, i. e. Minantia, another name for that city; and letters on the gravestone point out his name, and he left three seeds in the green of that city, so that there is not a poor man in that city.

337. Zosimus.

CONSTANTIUS, after having acted towards Gallus Caesar in the manner I have related, left Pannonia to proceed into Italy. But perceiving all the Roman territories to be infested by the incursions of the Barbarians, and that the Franks, the Alemanni, and the Saxons had not only possessed themselves of forty cities near the Rhine, but had likewise ruined and destroyed them, by carrying off an immense number of the inhabitants, and a proportionate quantity of spoils; and that the Sarmatians and the Quadi ravaged without opposition Pannonia and the upper Moesia; besides which that the Persians were perpetually harassing the eastern provinces, though they had previously been tranquil in the fear of an attack from Gallus Caesar; considering these circumstances, and being in doubt what to attempt, he scarcely thought himself capable of managing affairs at this critical period. He was unwilling, however, to associate any one with himself in the government, because he so much desired to rule alone, and could esteem no man his friend. Under these circumstances he was at a loss how to act. It happened, however, that when the empire was in the greatest danger, Eusebia, the wife of Constantius, who was a woman of

extraordinary learning, and of greater wisdom than her sex is usually endowed with, advised him to confer the government of the nations beyond the Alps on Julianus Caesar, who was brother to Gallus, and grandson to Constantius. As she knew that the emperor was suspicious of all his kindred, she thus circumvented him. She observed to him, that Julian was a young man unacquainted with the intrigues of state, having devoted himself totally to his studies; and that he was wholly inexperienced in worldly business. That on this account he would be more fit for his purpose than any other person. That either he would be fortunate, and his success would be attributed to the emperor's conduct, or that he would fail and perish; and that thus Constantius would have none of the imperial family to succeed to him.

337-340.

Having done this, and restored as many captives as it was probable had been taken out of the forty cities which they had sacked, Caesar was at a loss what course to adopt, perceiving the cities to be completely ruined, and that the land had remained long without cultivation, which occasioned great scarcity of provisions among those who were delivered up by the Barbarians. For the neighbouring cities could not supply them, having themselves felt the violence of the Barbarians, and consequently having no great abundance for their own use. Having therefore deliberated on what course to pursue he formed this plan. As the Rhine discharges itself at the extremity of Germany into the Atlantic ocean, and the 170 island of **Britain** is about nine hundred stadia from its mouths, he cut timber from the woods on the banks of the river, and built eight hundred small vessels, which he sent into **Britain** for a supply of corn, and brought it up the Rhine. This was so often repeated, the voyage being short, that he abundantly supplied those who were restored to their cities with sufficiency for their sustenance, so likewise for the sowing season, and what they needed until harvest. These actions he performed when he had scarcely attained the twenty-fifth year of his age.

Constantius, perceiving that Julian was beloved by the army, for his frugality in pence and courage in war, and for the self-command he possessed in regard to riches, and the other virtues in which he excelled all persons of the age in which he lived, became envious of his great merit, and concluded that Sallustius, one of the counsellors that had been allotted to him, was the author of the policy that had acquired Julian so much honour both in military and in civil affairs. He, therefore, sent for Sallustius, as if he intended to confer the government of the eastern provinces upon him. Julian readily dismissed him, resolving to obey the emperor in all respects. Though Sallustius was removed, Julian still advanced in whatever was committed to his care; the soldiers improved in discipline as well as augmented in number, and the towns enjoyed the blessings of peace.

The Barbarians in that quarter now began almost all to despair, and expected little short of the complete destruction of all that remained alive. The **Saxons**, who exceed all the barbarians in those regions, in courage, strength and hardiness, sent out the Quadi, a part of their own body, against the Roman dominions. Being obstructed by the Franks who resided near them, and who were afraid of giving Caesar a just occasion of making another attack on them, they shortly built themselves a number of boats, in which they sailed along the Rhine beyond the territory of the Franks, and entered the Roman empire. On their arrival at Batavia, which is an island, so formed by the branches of the Rhine, much larger than any other river island, they drove out the Salii, a people descended from the Franks, who had been expelled from their own country by the Saxons. This island, though formerly subject to the Romans alone, was now in the possession of the Salii. Caesar, upon learning this, endeavoured to counteract the designs of the Quadi; and first commanded his army to attack them briskly; but not: to kill any of the Salii, or prevent them from entering the Roman territories, because they came not as enemies, but were forced there by the Quadi.

As soon as the Salii heard of the kindness of Caesar, some of them went with their king into the Roman territory, and others fled to the extremity of their country, but all humbly committed their lives and fortunes to Caesar's gracious protection. Caesar by this time perceiving that the Barbarians dared not again engage him, but were intent on secret excursions, and rapine, by which they did great damage to the country, scarcely knew how to act, until at length he invented a stratagem to confound the Barbarians. There was a man of extraordinary stature, and of courage proportioned to his size. Being by nation a Barbarian, and accustomed to plunder with the others, he had thought proper to leave his own country and go into Gallia Celtica, which was subject to the Romans.

While he was residing at Treves [Trier], which is the largest city in all the nations beyond the Alps, and saw the barbarians from beyond the Rhine, ravaging the

cities on this side of the river, and committing depredations every where without opposition, (which was before Julian was made Caesar), he resolved in himself to defend those towns. As he dared not attempt this without being supported by the law, he at first went alone into the thickest part of the woods, and waited there till the Barbarians made their incursions. In the night, when they lay intoxicated and asleep, he fell on them and slew them in great numbers, bringing their heads and shewing them to the people of the town. This he practised continually to such an extent, that he abated the keenness of the Barbarians, who though unable to guess at the cause, yet were sensible of the losses they sustained, the army diminishing daily. Some other robbers having joined this man, and their number having increased to a considerable body, Charietto, (which was the name of the man who first used (his kind of ambuscade against the Barbarians) came to Caesar, and told him the whole circumstances, which few persons knew before that time. Caesar, was at this time unable to restrain their nocturnal and clandestine incursions of the Barbarians, as they robbed in small parties, straggling from each other, and when day appeared, not one of them was visible, all hiding themselves in the woods, and subsisting on what they gained by robbery. Considering therefore the difficulty of subduing such an enemy, he determined to oppose these robbers, not with an army of soldiers, but with men of similar description.

For this reason, he sent Charietto and his band, adding to them many of the Salii, against the plundering Quadi, who though they lived on what they stole, yet were probably less expert in the art of robbing, than these men who had studied it. In the day he guarded the open fields, and killed all that escaped his robbers. He did this for a long time, until the Quadi were reduced to such extremities, and to so small a number, that they and their general surrendered themselves to Caesar, who had taken a great number of prisoners in the former excursions and engagements, and among the rest the son of their king, who was taken by Charietto. From this cause, when they so lamentably petitioned for peace, and Caesar demanded some of their chiefs as hostages, and required the king's son to be one of them; the general, or king, broke out into a most pathetic complaint, and declared with tears in his eyes that his son was one that had been lost. Caesar perceiving this compassionated his sorrow, and shewed him his son who had been nobly entertained; but told him that he would retain the youth as a hostage as well as other of the chiefs whom he had in possession. He condescended, however, to make peace with them on condition that they would never again take arms against the Romans.

Constantius II Emperor 340-361 in association with Constans 340-350

343. Anglo-saxon chronicle. This year died St. Nicolaus.

The Medusa head of Blerick

15 november 2016 **Minerva and Medusa**

Olim Medusa, puella pulchra, in terra obscura habitabat ubi neque sol neque luna apparebat. Terra obscura puellae grata non erat. Medusa igitur Minervam adoravit. "Dea sapientiae, audi me," puella misera oravit. "Juva me! Terra obscura, ubi habito, mihi grata non est. Pulchra sum; pulchram comam atque faciem pulchram habeo. Nemo autem in terra obscura me videre potest. Desidero in terra clara habitare." Dea autem Medusam juvare recusavit. Tum puella irata Minervae dixit, "Invidiosa es quod tam pulchra sum! Populum me videre non desideras!" Tum dea irata pulchram comam puellae mutavit. "Tu fuisti superba propter comam pulchram atque faciem pulchram. Ego comam tuam in serpentes mutavi," dea dixit irata. "Non jam tua coma erit pulchra. Tua facies erit pulchra, sed nemo te spectare poterit. In saxa tua facies viros mutabit."

Minerva and Medusa (Translation)

Once upon a time Medusa, a beautiful girl, was living on dark land where neither the sun nor the moon appeared. The dark land was not pleasing to the girl. Therefore Medusa adored Minerva.

"Goddess of wisdom, hear me," the miserable girl begged. "Help me! The dark land, in which I have lived, is not pleasing to me. I am beautiful; I have beautiful hair and a beautiful face. No one however is able to see me on the dark land. I want to live on bright land."

However the goddess refused to help Medusa. Then the angry girl said to Minerva, "You are jealous because I am so pretty! The people do not want you to see me!"

Then the angry goddess changed the beautiful hair of the girl.

"You were arrogant because of beautiful hair and a beautiful face. I changed your hair into serpents," said the angry goddess. Your hair will no longer be beautiful. You will be made beautiful, but no one will be able to see you. You will make men change into stone."

Commentary

Throughout this passage, the genitive case is used quite often. For example, the genitive of description is shown in the phrase, "dea sapientiae" meaning the goddess of wisdom. In addition, the imperative is utilized as well when Medusa addressed Minerva. This is an instance where the imperative is present: "Juva me!" Starting from line five to line six, a form of repetition - parallel structure is shown by the recurrence of the adjective "pulchra" and the accusative case. This line proves to be significant because of the way Medusa praises her own beauty, causing Minerva to become irritated.

Zie <https://imythology.wikispaces.com/Minerva>

25 oktober 2016 Plutarchus:

Τοιαύτη μὲν οὖν ὁρμῇ καὶ παρασκευῇ διανοίας τὸν Ἑλλησποντιον διεπέρασεν. ἀναβὰς δ' εἰς Ἴλιον, ἔθυσσε τῇ Ἀθηνᾷ καὶ τοῖς ἡρώσιν ἔσπεισε. τὴν δ' Ἀχιλλέως στήλην ἀλειψάμενος λίπα, καὶ μετὰ τῶν ἐταίρων συναναδραμὼν γυμνὸς ὥσπερ ἔθος ἐστίν, ἔστεφάνωσε, μακαρίσας αὐτὸν ὅτι καὶ ζῶν φίλου πιστοῦ καὶ τελευτήσας μεγάλου κήρυκος ἔτυχεν. ἐν δὲ τῷ περιϋέναι καὶ θεᾶσθαι τὰ κατὰ τὴν πόλιν ἐρομένου τινὸς αὐτόν, εἰ βούλεται τὴν Ἀλεξάνδρου λύραν ἰδεῖν, ἐλάχιστα φροντίζειν ἐκείνης ἔφη, τὴν δ' Ἀχιλλέως ζητεῖν, ἣ τὰ κλέα καὶ τὰς πράξεις ὕμνει τῶν ἀγαθῶν ἀνδρῶν ἐκείνος.

With such vigorous resolutions, and his mind thus disposed, he passed the Hellespont, and at Troy sacrificed to Minerva, and honoured the memory of the heroes who were buried there, with solemn libations; especially Achilles, whose gravestone he anointed, and with his friends, as the ancient custom is, ran naked about his sepulchre, and crowned it with garlands, declaring how happy he esteemed him, in having while he lived so faithful a friend, and when he was dead, so famous a poet to proclaim his actions. While he was viewing the rest of the antiquities and curiosities of the place, being told he might see Paris's harp, if he pleased, he said he thought it not worth looking on, but he should be glad to see that of Achilles, to which he used to sing the glories and great actions of brave men.

August 19, 1880. Venlo seems to be the place where the Maas River prefers to return its swallowed-up treasures. For example, in 1858 we purchased an exceptionally heavy and long sword with an ornately crafted handle, retrieved from the Maas with a fishing net between Blerick and Venlo. A few years later, no fewer than five Gothic gold agrafes, set with diamonds, sapphires, and rubies, were found in the Maas near Venlo. They were sold to various goldsmiths, from whom they came into the possession of the late Mr. Hugo Garthe, an art collector in Cologne. These valuables, publicly auctioned in May 1877, fetched astonishing prices. - Even today, Mr. Lienders, a goldsmith in Venlo, has a precious object, probably washed away by the Maas into a nearby ditch. It is a gilded plaque with a Medusa's head and other ornaments, carved in exceptionally high copper. According to a brochure by R. Gaedechens, a professor in Jena, this work of art, dating from the first century AD, would have served as a magnificent or parade shield.

April 4, 1885 [...] You have heard of the objects found and excavations on or near Venlo's territory by Messrs. Hub, Michels, Colonel Rudolph, Lieutenant Ort (currently rhythm), and foreman Frans Deserièrre, of Mr. Dr. Boetzkes (at Wambach), and of the Medusa shield owned by the Lienders family. While these gentlemen had, until now, mostly been, so to speak, "practical" practitioners, the memory naturally comes to mind of our fellow citizen, Mr. Martin Jansen, who unfortunately passed away so early, who possessed so much knowledge in the field of archaeology and, as a "theoretical" collaborator in the research, could have contributed so much. [...]

September 26, 1885 In 1872, a bronze shield was unearthed in Blerick and four objects resembling small horseshoes. The shield, a Medusa head, came into the possession of the late Mr. G. Lienders, a goldsmith from here. From the September issue of the Bulletin mensuel de numismatique et d'archéologie, by Raym. Serrure, we learn that this shield has left the country. We can state with certainty that the shield has

109280 actually been in the hands of Mr. Frans Merkins of Cologne, a lover of antiquities, for about a year now, and who will preserve it in his museum for the rest of his life.

October 6, 1934: Antiquity discoveries in Hout-Blerick in the 19th century.

109285 The small hamlet of Hout-Blerick, located fifteen minutes south of Blerick, opposite Tegelen, deserves the attention of antiquities, wrote the learned national archivist Jos. Habets in his day, specifically because of the following two discoveries: First, it is in Hout-Blerick that traces of a Belgo-Roman settlement can be found. Twenty minutes from the Maas River in the direction of Maasbree, not far from the last houses, called "Doovend," lies a field, situated higher than the rest, called Veldenkamp. This name was given in memory of one of the last owners, named Van Velden. Over an area of twelve to fifteen acres, one finds Roman antiquities, fragments of pottery and pans, building blocks, red cement, wood ash, and iron fragments. At the side of this field flows the small river called "de Breebeek," where the famous head of Medusa, which will be discussed shortly, was found. According to Greek and Roman mythology, Medusa is one of the three so-called Gorgons. These were three sisters named Sthenyo, Euryale, and Medusa.

109295 They were hideous creatures, surrounded by a belt of hissing serpents; on their heads they had dragon scales; their large, sharp teeth protruded far; their claws and wings were made of copper. So terrifying were they that their mere sight could turn a human to stone. They lived at the very edge of the Western Ocean. The hero Perseus, who led the charge against these monsters, cut off the head of Medusa, the only mortal of the three, while she lay deep in sleep. From Medusa's torso sprang the winged horse, Pegasus.

109305 Swift as the wind, Perseus, who had leaped onto the Pegasus, sped through the air and flew over Africa. Blood still dripped from Medusa's head, and the drops that fell to the earth there turned into serpents.

When Perseus wanted to rest a while with the giant Atlas, who, at the point where the Mediterranean Sea and the Atlantic Ocean meet, carried the pillars of heaven on his shoulders and was not received hospitably, he was annoyed. He held up Medusa's head to him, and Atlas was immediately transformed into a massive rock, its crown rising into the clouds. So a Medusa head was not an out-of-place symbol on a warrior's shield.

However, after this digression, let us return to the Veldenkamp and the Breebeek.

109315 Around 1861, the owner of the site was cleared of the tiles and masonry from that field and thrown into the stream. This event attracted the attention of several antiquities enthusiasts, who began perusing the ruins. In 1879, Messrs. Pleijten, curator at the Rijksmuseum in Leiden, and J. A. Ort, lieutenant in the 4th Hussar Regiment, formerly garrisoned in Venlo, conducted some excavations at that site, the results of which are unknown.

The second discovery made in the vicinity of Hout-Blerick was that of a precious Medusa head and horse harness decorations in bronze.

This discovery occurred around the autumn of 1872 in the Breebeek stream, a few meters from the Beldenkamp substructures. A worker digging in the stream discovered this treasure at a depth of 9 to 10 feet underground. He sold it to the goldsmith J. G. Lienders in Venlo, who still owned it in 1879.

109325 This treasure contains the following objects: A very beautiful "umbo," or navel from a Roman shield. It is a copper plate, fire-gilded in the shape of a discus and richly sculpted in round molding. Its diameter is 26 centimeters. The rim of the "umbo" consists of a wreath of oak leaves interspersed with acorns. The center of the navel consists of a Gorgon head in raised sculpture, exquisitely carved. It is of majestic beauty, with a terrifying appearance like all the Medusa heads. The eyes are wide open. The beautiful proportions of the face recall the beautiful Greek style. The curls of long hair encircle the head. She wears a short beard below the chin. Snakes are coiled in her hair, forming an elegant knot beneath the child. Two serpent heads emerge from beneath two small wings that adorn the hair; a third slants over the center of the forehead. On top of the head, the artist has placed a flower bud. This richly adorned head is surrounded by a wreath of oak leaves, from which hang acorns; it is similar to the one that forms the edge of the navel. Below the sculpture is a garland of leaves and small petals.

109340 The Medusa head is one of the most common representations on ancient shields. Homer places a Gorgon on the shield of Agamemnon.

Phidias appears to have decorated the shield of Minerva with the same symbol. This representation can also be seen on the shields of Mars, Achilles, Victory, the Amazons, etc., which adorn Roman and Greek vases. Several holes are found in the rim

109345

of the navel, which appear to have been made either by an arrow or by the nails that served to attach it to the shield.
 The depiction of our Medusa head is nothing unusual. The only thing worth mentioning is that it wears a short beard around the chin. But even that fact is not without antecedents. This Medusa head must date from the first century AD.
 Seven other bronze objects were found alongside the aforementioned shield navel, which were part of a horse harness. These are primarily a decoration of the collar with two rings through which the reins pass; then another set of rings for the reins. All these objects have small holes to allow the nails to pass through and show genuine traces of gilding.

Eindhoven, November 5, 2015

Dear Mr. Timmermans,

I assume that I will receive a file shortly showing details of the Medusa head. Fittings were also reportedly found, which Habets writes about, in accordance with the Golden Helmet or Peel Helmet in Helenaveen:

"Seven studded fittings from a yoke for two draft animals." From this combination of objects, pastor and national archivist Jos Habets concluded a few years after the discovery that a Roman officer, traveling with his chariot and carrying his parade shield, had driven into the stream and possibly drowned.
 Furthermore, other objects were found in Blerick and moved to Brussels. Do you know more about these, and in which Brussels museum might the urns have ended up? See article:

Hidden Treasures under Blerick [May 29, 1883]

In the Publications de la Société d'archéologie dans le duché de Limbourg, volume XVIII, Mr. Jos. Habets spoke of the search for hidden treasures near Blerick, "in which even officers from Venloo are said to have participated." Captain J.A. Ort, currently employed at the Royal Military Academy, now recounts in a short work published in Roermond under the title: "Places in Blerick where prehistoric Germanic and Roman objects have been found," what remains of this search for hidden treasure and who participated. His writing reveals that it was not officers but Mr. Franssen, pastor of Ittervoort, who searched in vain for the Roman settlement.
 The priest, who had been searching in Blerick, told the farmers that a treasure was hidden on the Römerheide there in a beautiful red earthenware pot with a lid. People began searching and digging for it, and the priest hoped to find the settlement without any expense or effort. That's why he had given the farmers the description of a Roman pot made of terra sigillata! Mr. Ort further reports that the priest had damaged funerary urns smashed and that, although a correspondent for the former Board of National Advisors for Monuments of Dutch History and Art, he sold the proceeds of his excavations to the museum in Brussels.

For some time now, I have been working on the inventory of archaeological objects (primarily Roman) in the Peel region and along the banks of the Maas in the Netherlands. Do you have the work by J.A. Ort? Paul Theelen 040-2814621

l.theelen@on.nl

November 10, 2015 Dear Mr. Theelen,

Mr. Timmermans forwarded your questions to me.

For information about the shield boss with Medusa's head and the yoke fittings found with it, I refer you to the following publications:

L. Swinkels, Medallion with Medusa's Head, in: A.A.J.J. van Pinxteren et al. (eds.), Showpieces. Venlo 650 Years as a City, Venlo 1993, 25-28

L. Swinkels, The Shield Boss of Blerick, in: M. Schrover (ed.), From Trajan to Tajiri. Collection of the Valkhof Museum, Nijmegen 2009, 58-59.

The shield boss is included in the permanent display of the Valkhof Museum. The fittings are currently on display there (until January 24) in the exhibition "High Tech Romans." Last year, Maarten Dolmans and Xavier van Dijk published articles on Roman Wood-Blerick and the shield boss in Venlo's "Katernen" no. 20 (see: http://www.academia.edu/12250706/Romeins_Hout_Blerick_Roman_Hout_Blerick_Venlo-Blerick_NL).

I am not aware of any finds from Blerick in Brussels.

Sincerely,

Louis Swinkels

Curator of Archaeology

12 november 1937

HET OUDE STADJE MEERSSEN

L. Spruyt schrijft in „Reizen en Trekken”.

Een van de oudste plaatsen van ons land is Meerssen bij Maastricht. De Romeinen hadden hier naar alle waarschijnlijkheid al een nederzetting. Maar in onze vaderlandsche geschiedenis is Meerssen de plaats van de drie en opeenvolgende verdragen, gesloten in 847, 851 en 870 tusschen de koningen van Lotharingen, Franken en Germanenland. Zij vormden een front tegen de opdringende Noormannen, die in de 9de eeuw op hun rooftochten verder Zuidwaarts kwamen en aan alle kanten het groote rijk bedreigden, dat Karel de Groote had nagelaten. Tijdens diens leven was het nooit tot een inval gekomen maar zijn opvolgers waren minder gelukkig en ook heel wat minder krachtig. In Meerssen was een palatium, een koninklijk landgoed, dat we ons gerust als vrij groot kunnen voorstellen, daar het drie vorsten met hun gevolg een tijd lang moest kunnen herbergen. In onze geschiedenis staat de bijeenkomst van 870 bekend als "het" verdrag van Meerssen, terwijl dit derde verdrag strikt genomen niet te Meerssen werd gesloten, maar ergens aan de Maas tusschen Meeren en Herstal. Acht jaar later is er nog eens een groote vorstenvergadering gehouden en hieruit mogen we wel besluiten, dat het koninklijk palatium te "Marsna" iets méér geweest is dan een primitieve burcht. In elk geval ligt hier het belangrijke punt, waar de machthebbers van het toenmalige West-Europa elkander hulp en bijstand beloofden tegen de woeste Noormannen die in de 9e eeuw een even groot gevaar voor alle beschaving waren als de Turken zeven of acht eeuwen later. Het is trouwene in deze streek geweest, niet eens zoo heel ver van Meerssen, n.l. te Asselt bij Roermond, dat de Noormannen in den winter van 881 op 886 hun kamp opsloegen, Ascloa, de basis van hun groote roof- en plundertochten in die jaren, waarbij Keulen en Aken en de Maassteden in vlammen opgingen.

Nog voor 1000 werd het Meerssensche vorstengoed paleis met omliggende landerijen, door de erfgename aan de abdij van St. Rémy te Reims geschonken. Meerssens kapel wordt kloosterkerk en op de plaats van het oude palatium verrijst een proostdij van Benedictijnen afhankelijk van de abdij te Reims. Waar de Benedictijnen zich vestigen, gaat de beschaving bloeien: zoo ook hier. Rond het klooster vormt zich een stad; de vergroote kerk, in 1250 door de monniken in Gothischen stijl herbouwd, wordt parochiekerk. In de volgende eeuwen worden vergrootingen noodzakelijk. Plunderingen, brand en verwoesting zijn over de kerk heengegaan. In de 17e eeuw, toen de Staten-Generaal poogden om in het katholieke Zuiden den officieelen godsdienst van het Noorden in te voeren, raakten de Benedictijnen hun zeggenschap over kerk en Proostdij kwijt. Toch bleef het klooster: Fransche Augustijnen namen er hun intrek en het feit dat Meerssen Fransch grondgebied, was, heeft in dien tijd althans, de verwoesting van de gebouwen verhinderd. In 1649 stortte de toren in die aan de Westzijde stond en richtte schade aan in het middenschip. Men heeft het beschadigde deel eenvoudig afgebroken en het verkorte langschip door een blindemuur afgesloten. Ook bij de groote restauraties door dr Cuypers, tusschen 1882 en 1912, is dit zo gebleven. Op 't oogenblik echter is de Meerssensche kerk vergroot en is de oorspronkelijke toestand zooveel mogelijk hersteld.

De jaren, dat Lodewijk XIV Maastricht in handen had en den Katholieken hun vrijheid van godsdienst hergaf, waren voor Meerssen een verademing. Na de vrede van Nijmegen - 1678 - werd het z.g. simultaneum ingevoerd en moesten de katholieken hun kerk met de protestanten deelen. Dit is zoo gebleven tot ongeveer 1835 toe; toen heeft de (protestantsche) koning van België, Leopold I, de kerk van Meerssen aan haar oorspronkelijke bestemming teruggegeven. De monniken waren verdwenen, de proostdij, hun oude woning, gebouwd op de fundamente van het koninklijke palatium en misschien zelfs op de resten van een Romeinsche burcht, werd in 1797 door de sansculotten gesloopt; op één stuk na lang niet het oudste deel. Dit gedeelte werd tot een landhuis vervormd, en is als "Villa Proostdij" tot op den huidigen dag te Meerssen bekend.

In 968 bestemde vrouwe Gerberga het koninklijk goed te Meerssen voor vrome doeleinden, ter herinnering aan de nagedachtenis van haar gestorven gemaal. L'histoire se répète: een paar jaar geleden stierf de laatste bewoonster van villa Proostdij en liet de bezitting na aan de Kleine Zusters van St. Joseph. Nu is er de centrale van de K. J. V. voor Limburg gevestigd en voor de tweede maal is het gebouw van wereldlijke in geestelijke handen overgegaan. Bij het restaureeren en uitbreiden van kerk en proostdij is er veel graafwerk verricht, jammer genoeg heeft men van de oude fundamente weinig teruggevonden en ook de bronzen klok, die in 1797 bij de komst der sansculotten in den tuin werd begraven, is onvindbaar gebleken.

Meerssen's kerk, aan St. Bartholomaeus gewijd, is in meer dan één opzicht merkwaardig. Over het simultaneum spraken we al. Dan bezit Meerssen aan den noordkant

een portaal, dat op een heel ongewone wijze met engelen en heiligen is versierd, ongewoon voor ons land dan altijd: alleen de St. Servaas kent een dergelijke versiering, maar aan de Fransche kerken komt ze veel voor. Aan de linkerzijde naast
109480 het hoofdaltaar bevindt zich het sacramentshuisje, in 1520 in Gothischen stijl uit hout vervaardigd en een van de merkwaardigste voorbeelden van kerkelijke kunst, die ons land rijk is. Meerssen is in heel Limburg bekend als bedevaartplaats naar het H. Sacrament. Gedurende het octaaf van Sacramentsdag trekken hier nog steeds de
109485 bedevaarten heen. Twee wonderen staan er geboekt: één van 1222, dat lang in het vergeetboek is geweest, en één van 1465, waarbij een boer op wonderbare wijze de ciborie met geconsacreerde hosties uit de brandende kerk redde. Het is met het oog op dit tweede Sacramentsmirakel, dat het sierlijke huisje gebouwd is, waarin men het H. Sacrament kon bewaren.
109490 Eens – zelfs nog in de 18de eeuw – bezat de proost van Meerssen het recht van pastoorsbenoeming, niet alleen in Meerssen zelf, maar ook in de op Staten-gebied liggende dorpen Klimmen, Schimmert, Hulsberg, Houthem, Amby en Bunde, en de vrije rijksheerlijkheid Schin-op-Geul. Niets is er meer over van de kloostergebouwen, op dat kleine gedeelte na dan. Meermalen werd de kerk gesloten, door Staatsche troepen
109495 door sansculotten. Plundering en verval, brand en zwaar weer hebben de kerk geteisterd; in de 18de eeuw bezat ze nauwelijks een dak meer. En toch: al is ons in den loop van die woelige eeuwen niets nagelaten van de boekerij der geleerde kloosterlingen, al weten we niets van hun werk voor wetenschap en kunst, één ding is gebleven; het Gothische juweel dat Meerssens kerk is. En nu men de St. Bartholomaeus
109500 weer zal kunnen zien in haar oorspronkelijke grootte, ontdaan van het overbodige en door kundige hand gerestaureerd, mag de aandacht werkelijk wel eens worden gevestigd op dit prachtige bedehuis, dat we in eigen land bezitten en dat zoo weinige toeristen, die het nabije Maastricht bezoeken, blijken te kennen.

109505 [Limburger koerier : provinciaal dagblad » 12 nov 1937 - Art. 327 | Delpher](#)

November 12, 1937 THE OLD TOWN OF MEERSSEN

L. Spruyt writes in "Reizen en Trekken".

One of the oldest places in our country is Meerssen near Maastricht. The Romans
109510 probably already had a settlement here. But in our national history, Meerssen is the place of the three successive treaties, concluded in 847, 851 and 870 between the kings of Lotharingia, Frankenland and Germania. They formed a front against the advancing Norsemen, who in the 9th century came further south on their raids and threatened on all sides the great empire that Charlemagne had left behind. During his
109515 lifetime it never came to an invasion, but his successors were less fortunate and also a lot less powerful.

In Meerssen there was a palatium, a royal estate, which we can safely imagine as quite large, since it had to be able to accommodate three princes and their entourage for a while. In our history the meeting of 870 is known as "the" treaty of Meerssen, while this third treaty was strictly speaking not concluded in Meerssen, but
109520 somewhere on the Maas between Meeren and Herstal. Eight years later there was another great meeting of princes and from this we may conclude that the royal palatium at "Marsna" was something more than a primitive castle. In any case, here lies the important point, where the rulers of the then Western Europe promised each other help
109525 and assistance against the wild Norsemen who in the 9th century were as great a danger to all civilization as the Turks seven or eight centuries later. It was certainly in this region, not even that far from Meerssen, i.e. at Asselt near Roermond, that the Normans set up camp in the winter of 881 to 886, Ascloa, the base of their great plundering and pillaging raids in those years, during which Cologne
109530 and Aachen and the Maas cities went up in flames.

Before 1000, the Meerssen princely estate was donated to the abbey of St. Rémy in Reims by the heiress. Meerssen's chapel became a monastery church and on the site of the old palatium a provostship of Benedictines dependent on the abbey in Reims rose. Where the Benedictines settled, civilization flourished: so too here. A town formed
109535 around the monastery; the enlarged church, rebuilt by the monks in Gothic style in 1250, became a parish church. In the following centuries, enlargements became necessary.

Plunder, fire and destruction passed over the church. In the 17th century, when the States General attempted to introduce the official religion of the North in the
109540 Catholic South, the Benedictines lost their authority over the church and the Provost's office. Nevertheless, the monastery remained: French Augustinians took up residence there and the fact that Meerssen was French territory, at least at that time, prevented the destruction of the buildings. In 1649, the tower on the west side

collapsed and caused damage to the nave. The damaged part was simply demolished and the shortened nave was closed off by a blind wall. This also remained the case during the major restorations by Dr Cuypers between 1882 and 1912. At the moment, however, the Meerssen church has been enlarged and the original condition has been restored as much as possible. The years that Louis XIV had Maastricht in his hands and restored the Catholics their freedom of religion were a relief for Meerssen. After the peace of Nijmegen - 1678 - the so-called simultaneum was introduced and the Catholics had to share their church with the Protestants. This continued until about 1835; then the (Protestant) king of Belgium, Leopold I, returned the church of Meerssen to its original purpose. The monks had disappeared, the provost's house, their old home, built on the foundations of the royal palatinate and perhaps even on the remains of a Roman castle, was demolished by the sans-culottes in 1797; except for one part, it was far from the oldest part. This part was transformed into a country house, and is known as "Villa Proostdij" to this day in Meerssen.

In 968, Lady Gerberga designated the royal property in Meerssen for pious purposes, in memory of the memory of her deceased husband. History repeats itself: a few years ago the last resident of villa Proostdij died and left the property to the Little Sisters of St. Joseph. Now the central office of the K. J. V. for Limburg is located there and for the second time the building has passed from secular to religious hands.

During the restoration and expansion of the church and provostry a lot of digging was done, unfortunately little of the old foundations was found and the bronze bell, which was buried in the garden in 1797 when the sans-culottes arrived, has also proven to be untraceable.

Meerssen's church, dedicated to St. Bartholomaeus, is in more than one respect remarkable. We already spoke about the simultaneum. Then Meerssen has a portal on the north side, which is decorated in a very unusual way with angels and saints, unusual for our country then always: only the St. Servaas has such decoration, but it is common in French churches. On the left side next to the main altar is the sacrament house, made of wood in 1520 in Gothic style and one of the most remarkable examples of ecclesiastical art that our country has to offer. Meerssen is known throughout Limburg as a place of pilgrimage to the Holy Sacrament. During the octave of Corpus Christi, pilgrimages still go here. Two miracles are recorded: one from 1222, which was long forgotten, and one from 1465, when a farmer miraculously saved the ciborium with consecrated hosts from the burning church. It is with this second miracle of the Sacrament in mind that the elegant little house was built, in which the Holy Sacrament could be preserved.

Once - even in the 18th century - the provost of Meerssen had the right to appoint a pastor, not only in Meerssen itself, but also in the villages of Klimmen, Schimmert, Hulsberg, Houthem, Amby and Bunde, and the free imperial lordship of Schin-op-Geul, which were situated on the States' territory. Nothing remains of the monastery buildings, except for that small part. The church was closed several times, by States troops and sans-culottes. Plunder and decay, fire and bad weather have ravaged the church; in the 18th century it hardly had a roof anymore. And yet: although nothing has been left to us of the library of the learned monks in the course of those turbulent centuries, although we know nothing of their work for science and art, one thing has remained; the Gothic jewel that is Meerssen's church. And now that St. Bartholomaeus will be able to be seen again in its original size, stripped of the superfluous and restored by a skilled hand, attention may well be drawn to this beautiful house of worship, which we have in our own country and which so few tourists who visit nearby Maastricht seem to know.

The Memorial of the Apostle and the Constantinian Basilica

by Jose Ruyschaert

The history of the tomb of the Apostle Peter at the Vatican has been enriched during the last thirty-five years since Pius XII, who at the very beginning of his pontificate, decided to extend archaeological investigations throughout the entire lower sections of the Vatican crypts and also under the papal altar. These investigations had been begun by chance at the site chosen for the burial of his predecessor, Pius XI.

Little by little, as the encrusted legends and learned theories were stripped away, the Memoria of Peter began to reappear in a more exact light, thus making possible a comparison of the monuments with ancient texts. This is the history we would like to relate, starting with the present Basilica and going back through the course of the centuries to the Basilica of Constantine, to the ancient 2nd-century necropolis and the small burial monument marking the site of Peter's tomb, and finally to the archaeological setting of the 1st century which offers a starting point.

The paradoxical character of this history stems from the fact that the small burial monument which, since the middle of the 2nd century, has never ceased to be the evidence on which this history is based, has stayed in place, despite successive raisings of the level of the ground, both in the first Basilica, built during the pontificate of Sylvester and the reign of Constantine, probably between 320 and 333, and in the present Basilica as well, built under eighteen popes from Julius II to Paul V, from 1506 to 1615. But, as is often the case, the contradiction is only an apparent one, as we shall see. The presence of the tomb has never ceased throughout the centuries to be the center of this history and its only justification.

This presence is that of a small burial monument built in the 2nd-century necropolis. It is made up of two superimposed niches forming part of a wall seven m long. The niches were made in the middle of the wall at the time of its construction, about the year 150. Originally a marble plaque supported by two small columns separated the two niches. In front of this small monument there was an enclosure measuring seven m by four. Some family monuments of the necropolis bordered part of it. That was how Peter's tomb appeared in the middle of the second century. It is easy enough to locate this modest set of constructions in the present Basilica. In fact, at the side of the small chapel called the Niche of the Palliums, under the papal altar, the small monument with niches and small columns has been discovered substantially intact, while some remains of the enclosure were discovered during excavations directly underneath the open area called the Confession which, protected by a balustrade, gives access to the Niche of the Palliums.

The tomb's first architectural setting, moreover, is now right before the eyes of visitors who descend from the Basilica into the crypts and pass through the archaeological area below those just mentioned. Thus taken suddenly from the present era into the 2nd century, the visitor walks along narrow paths hemmed in by the high family burial chambers of an ancient Roman necropolis. Having recovered from the surprise, the visitor realizes that he is walking on what was the slope of a hill. After a short climb to the north, he finds himself on the narrow main path which rises gradually towards the west in the direction of the papal altar, following the principal axis of the Basilica. As he moves on, the visitor gradually realizes that the family monuments he is passing have been demolished, more and more extensively, so that where the path ends, immediately under the papal altar, the last of the monuments consists only of a pavement and part of a wall.

Such a visit enables the visitor to form a good idea of the problems facing the architects of Constantine's time who were given the task of constructing the first Vatican Basilica. On the side of a hill where an important necropolis was located and which at that time was still being used, they managed to create an artificial plateau, by building imposing walls of substructure and by filling in the area with earth. The plateau was extended considerably beyond the site of the future Basilica. The level of the plateau was planned in such a way as to keep the small monument with niches intact and isolated at the focal point of the new structure, located directly in front of the apse. A simple burial monument in a necropolis, now closed by imperial authority, thus became the reason for the construction of a Basilica and the transformation of an entire area of what was then open country. Placed in the contemporary context of the martyria-basilicas, the way in which the Vatican Basilica was constructed is explained solely by the fact that the monument with niches was considered by the Christian community of Rome to be Peter's tomb. And without a doubt the most important result of the Vatican excavations is that it has been possible to recognize even in terms of the construction of the first Vatican Basilica the

archaeological and historical proof for a community belief which was beyond dispute: if it is a palaeo-Christian Basilica built ad corpus, that is, to serve as a martyr's tomb, then it is clearly the one built at the Vatican according to Constantine's wishes.

THE REMAINS OF PETER

One of the surprises of the excavations carried out between 1940 and 1949 under the Confession of the Vatican Basilica was the discovery - beneath the papal altar - of the site of Peter's original tomb empty and in disarray.

The Apostle's remains were strangely missing.

After his martyrdom in Nero's Circus (autumn of 64), Peter was buried a short distance away, beyond the road (Via Cornelia?) which bordered the Circus, in a place where tombs already existed. That place corresponds to the area which archaeologists today call Area P. In the course of the centuries, various monuments were placed over the modest grave of the Apostle: the so-called "Trophy of Gaius" (about the middle of the 2nd century), the monument of Constantine (after 313), the altar of Gregory the Great (590-604), the altar of Calixtus II (1119-1124), and the altar of Clement VIII (1592-1605), which is the present altar. All these monuments were built (or so it seemed at first) over an empty tomb.

At the western edge of Area P there were found remains of human bones, remains to which some people attributed a certain importance. It was subsequently shown that in fact these remains had nothing to do with Peter, differing as they did with regard to both age and sex.

But the excavations inside Constantine's monument had also revealed a characteristic loculus which had been deliberately hollowed out of an already existing wall (the wall which archaeologists today call "Wall G"), included within the Constantinian construction. Wall G is built against the back wall of the Trophy of Gaius, that is the wall which - on account of the vivid red colour of its plaster - came to be called the "Red Wall". Wall G, therefore, is later than the Red Wall, but earlier than the monument of Constantine in which it was enclosed. On the whole, Wall G can be dated to about the mid-3rd century. Inside this wall, as I have said, a secret hiding-place (the loculus) was discovered. It measured 0.77 m long by 0.29 m wide and 0.315 m high, and was lined with slabs of Greek marble.

Wall G and its hiding-place are at the center of extraordinary events, due in part to the somewhat abnormal situation in which the 1940-1949 excavations took place. The first opening made in the northern side of the Constantinian monument brought to light the north section of Wall G, covered with Christian graffiti, and, below it, the opening of the famous loculus. No detailed study of these graffiti was made either then or during the entire period of the excavations. They were deciphered and commented upon at a later time by myself, and in fact they proved to be a wonderful page of Christian spirituality in which the names of Christ, Mary and Peter are particularly prominent and their victory is acclaimed. As for the loculus, the excavators had immediately noticed that it was about half filled with plaster rubble which had fallen from above, that is from the inside of Wall G itself, and from the side, that is from a section of the adjacent Red Wall. For various reasons a systematic emptying of the loculus was not carried out immediately. However, it happened that a certain moment someone noticed that there were bone fragments mixed in with the plaster rubble inside the hiding-place, and arranged for these bones to be gathered up, put in a wooden box and placed in a nearby spot in the Vatican Grottoes, where they remained forgotten for a long time.

In the meantime, the scholars working on the excavations returned to the loculus of Wall G and naturally found it empty, except for "some remains of organic material and bone fragments mixed with earth" (these are their own words) which had remained at the bottom. It was easily perceived that the hiding-place had been made during the building of the Constantinian monument, and from this perception there sprang the theory that it had been intended for the bones of Peter. This theory was admitted, in fact, by various scholars: Father Antonio Ferrua (1952), Jerome Carcopino (1953), Father Engelbert Kirschbaum (1957) and Pasquale Testini (1957). But for the moment the theory remained only a theory. The essential element of proof was missing: the box which had been placed in the nearby spot in the Vatican Grottoes and forgotten. Since the excavators were unaware of the existence of the box, and on the other hand wished to give some explanation for the riddle of Wall G, the idea was put forward and gained increasing credence that the hiding-place had been opened during the Middle Ages on the eastern side, and that through this opening the remains of the Apostle had been taken away.

Significant in the construction of the Basilica, the small monument is no less

unusual in the 2nd century necropolis. In the first place, it is an individual building constructed in the middle of a large number of family monuments. Furthermore, it also interrupts the straight line which the others follow. In fact, the closest monuments are built around the enclosure with the small building in the center, as if it were an obstacle. Moreover, among these buildings two contemporary staircases were put in to provide access to the revered enclosure. Finally, the soil of the enclosure seems to be partly a built-up mound resting against the family monuments. The height of the mound is dictated by the height of the small monument built at a particularly steep point on the slope.

In the midst of these family monuments, therefore, the enclosure and the small building seem to answer to the desire that an already existing tomb should be preserved and integrated within the new necropolis then being developed. During the second half of the 3rd century, other plans attest to an identical wish. Two marble decorations and small walls were added to the small building, flanking it on each side. At the same time, the earth of the enclosure where, in the meantime, numerous ground burials had taken place, was covered over with a mosaic pavement. In addition, the paths to the two stairways were closed by gates.

An archaeological continuity is thus attested to, from the middle of the 2nd century when the small building was constructed up to the beginning of the 4th century which marks the start of the Basilica's construction: the Petrine identity of the small building at the beginning of the 4th century can thus be traced back historically to the middle of the 2nd century. The Vatican excavations have once again placed before our eyes the tomb as it was marked by the small building with niches before the construction of the Basilica.

These excavations have also allowed us to have a more precise idea of what visitors to the first Basilica saw, for they clarify and confirm the descriptions given by ancient texts and by a reliquary of the 5th century found at Samagher and now preserved in Venice. Isolated from the razed monuments and walls of the necropolis, the small Petrine building was located in front of the apse, in the center of the transept.

After the sides had been altered to correct irregularities in shape inherited from the 3rd century modifications, it was covered with marble decorations similar to those covering the apse. Its façade was divided into two parts. A golden cross bearing the names of Constantine and his mother Helena was placed in the upper part, and the lower section was closed with a double door. This door opened into a small area where, at least by the end of the 4th century, an opening in the floor was made, enabling visitors to lower objects on to the earth inside the small cavity below. This design, which still exists in the present Niche of the Palliums and is typical of the veneration practiced at the tombs of martyrs, is an extremely significant element of the tradition intimately linking the small monument to the site, immediately below, of Peter's tomb.

Gregory of Tours gives us a picture of a pilgrim lowering into the small shaft a cloth which would touch the Apostle's tomb and thus become a relic of it. The mediaeval liturgy placed a censer there for the whole year from 29 June to 29 June. The temporary placing of the Palliums in the niche, a custom still observed, is a further indication of the respect in which this spot was held.

Around the monument of Peter, four spiraling columns of sculpted marble connected with the balustrades, likewise of marble, formed the supports for a baldacchino crowned by architraves and arches. Two other spiraling columns at the angle of the apse were connected to the other four by two architraves. But the six columns of the baldacchino were not alone in stressing the importance of the monument of Peter in the Basilica. The plan of the Basilica itself also marks its importance. The architectural works just described are not only in front of the apse but also at the center of the transept.

This architectural fact is in itself unusual. Churches with transepts "in the form of a cross" may be familiar to us, but the historian notes that, among all the martyria-basilicas of the Near East and of Rome in Constantine's time, the Vatican is the only Basilica which has this design, a design later to be spread by the Carolingian renaissance. In the Vatican Basilica the transept was, in fact, the martyrium, the structure centered above the martyr's tomb and reserved for liturgical functions, as opposed to the five aisles reserved for the assembly of the faithful. The martyrium was a huge rectangle, 87 m by 18, separated from the aisles at the time by a large central triumphal arch decorated with a mosaic showing Constantine offering the building to the Saviour, and by four arch-shaped openings on the sides. Taken together, the naves were 91 m long and 64 m wide. Besides the six columns of the baldacchino, 100 simpler columns taken from a variety of ancient monuments (as was

- 109795 much other material for the Basilica), in groups of 22, separated the aisles, or were placed at the lateral arch-shaped openings to the transept and at both ends of the transept. The entrance of the Basilica, a portico 12 m wide, was preceded by a quadriportico 62 m by 46, reached by 35 steps.
- 109800 The wooden box containing the material removed from the hiding-place was found by me only in 1953. Besides bones, it also contained earth, flakes of red plaster, small pieces of rich fabric and two marble fragments. A note, written by a Sampietrino who took part in the first excavations and read by me clearly and in its entirety, stated that the material had been taken from the loculus of Wall G. The flakes of red
- 109805 plaster belonged to the adjacent section of the Red Wall (as can be easily understood). The fragments of marble were shown by a chemical analysis to originate from the front slab of the lining of the loculus. Both the plaster and the marble fragments clearly confirmed the statement in the note.
- 109810 The idea accredited by the excavators and then generally accepted that the loculus had been broken into during the Middle Ages meant that at that time I myself did not attribute to these remains the importance due to them. But the elementary duty of serious scientific inquiry led me to transfer them to a dry place and to the making of provisions for their systematic examination by a qualified specialist. The specialist chosen was Prof. Venerando Correnti, who then held the chair of
- 109815 anthropology at the University of Palermo and today holds the same chair at the University of Rome.
- Prof. Correnti was therefore asked in 1956 to begin his work. But before anything else he had to make a long and careful study of the skeletal remains, found in the earth on the western edge of Area P, to which (as I have stated above) a certain
- 109820 importance had hitherto been attributed. The anthropological examination showed in fact that the bones belonged to four different individuals, none of whom could be taken into consideration in connection with the problem of Peter's remains. Only in October 1962 was Prof. Correnti able to devote himself to the examination of the bones found in the loculus of Wall G. This work lasted until the end of June
- 109825 1963. Briefly, the result was the following: bones of a single individual, of male sex, sturdy build and advanced age (between 60 and 70 years old), encrusted with earth.
- This result corresponded with the historical and archaeological data. In the only loculus of Peter's monument-tomb there was in fact to be expected the presence of
- 109830 bones with these characteristics. And this precisely is what had happened. Furthermore, it had to be kept in mind that among the remains from the loculus were small fragments of rich fabric. These indicated that these bones really were the mortal remains of Peter.
- There remained a single doubt in my mind: that of the alleged opening of the loculus from the east during the Middle Ages. But it quickly vanished when a minute
- 109835 examination of the interior of the loculus, carried out at my request by the best specialists in Roman wall-construction, proved that the loculus had never been broken into from the time of Constantine until the moment when the excavators of the 1940-49 period had made the first breach of the Constantinian wall.
- 109840 Experimental analyses of the remains of fabric and of earth were also carried out. All of these tests yielded positive results. The gold was genuine; the cloth was dyed with purple made from murex; the earth matched that of the area.
- At this point it seemed reasonable to draw the following conclusions: at the time of Constantine, after the peace of the Church (313), when it was decided to arrange
- 109845 definitively the site of Peter's tomb, the bones lying in the earth under the Trophy of Gaius were collected, wrapped in a precious cloth of purple interwoven with gold and placed in a loculus specially made inside a wall (Wall G) already existing beside the Trophy. In front of this wall, enriched by the precious material inserted, another wall was built which was to be partially broken down only by the excavations
- 109850 begun in 1940. It can be added that the reason for the transfer of Peter's relics from the earth tomb to the loculus in Wall G was probably the well-founded fear that the dampness of the earth, which is notoriously very considerable in the Vatican area, would rapidly damage the venerable remains which had once been entrusted to it.
- 109855 We have roughly sketched out what was by the will of Constantine the new architectural setting for the tomb of Peter. The Basilica, demolished by the Renaissance on the pretext that it was in danger of collapse, and precisely on the spot where it rested on the highest substructures, had certainly been damaged, but just as certainly it had been improved. Canons of the Vatican, architects and artists
- 109860 have fortunately left numerous testimonies which opportunely complete the information

furnished by the recent excavations. We hesitate to stop here: certain stages of these changes, the first ones and the last, are essential to our subject matter. The solution which Constantine's architects decided upon was the best - if not the simplest - which could have been chosen for a cemetery-basilica ad corpus, which was both a grandiose burial monument built around a tomb and a cemetery set aside to receive the bodies of the dead who wished to be placed near a saint's tomb, as was done in the catacombs. This burial characteristic is certainly a primary one for the Vatican Basilica. The solution of Constantine's architects nevertheless presented a serious inconvenience, since even then the influx of pilgrims made evident the need for regular liturgical functions. The monument and its baldacchino took up too much space in the middle of the transept. To his credit, Gregory the Great solved this problem with an architectural device which respected the monument as ingeniously as had that of Constantine's architects.

The problem was to establish a permanent altar at the center of the transept, easily accessible and perfectly visible, without touching the monument. The area immediately surrounding the Petrine monument, apse included, was raised about one and a half m, while the top of the monument was transformed into an altar, without doubt the first permanent altar of the Petrine tomb. Four small columns placed on the altar allowed for the construction of a baldacchino. Nevertheless, the monument of Peter remained accessible, as before. Not only was it still completely visible from the central nave, separated from it only by the six columns of the ancient baldacchino now placed in a single row and crowned by an architrave, but also two stairways permitted direct descent from the new presbyterium. In addition, under the presbyterium an original architectural contrivance had been built. Extending along the interior of the apse wall, an almost circular corridor, reached from the transept by two doors, led to a chapel, likewise underground, built directly behind the small monument and for that reason called ad corpus in some mediaeval texts. About two m high (thus it was a little lower than the height of Constantine's construction), the new design, properly called the "Confession", gave a completely new appearance to the Memoria Petri. The ancient Basilica underwent only secondary changes. Under Gregory III, a second row of six spiraling columns of sculpted marble in the same style as the others was placed parallel to them. Under Calixtus II a new altar was constructed above that of Gregory the Great.

We noted above that the design of the Basilica with transept created at the Vatican by Constantine's architects spread throughout religious architecture from the Carolingian renaissance onwards. The architectural contrivance of Gregory, consisting of an altar-tomb and a presbyterium-crypt, imposed on the Vatican by liturgical needs and the requirements of a burial monument which was not intended to be touched, became almost instantaneously the model for builders of churches where the body of a saint was venerated, even if they did not have the problem of a pre-existing tomb in the edifice under construction. We may add that, from its time of construction onwards, the "uncovered Confession" which was to be built under Clement VIII and Paul V would become a prototype for similar constructions, imposed, and most often wrongly, on some altars in Roman Basilicas, including in the 19th century the altar of the Basilica of St. Paul-Outside-the-Walls. But it seems to be beyond our purpose to stress the different manifestations of the attraction which Peter's place of pilgrimage has had on religious architecture.

What we have hitherto described of the history of Peter's tomb at the Vatican shows that this history was dominated architecturally by a desire to keep the tomb intact. It is very tempting to state that this concern was equally dominant in the most delicate phase of this history - the construction of the present Basilica. The first measure taken at that time was dramatically of a preservative nature. In 1507, temporary walls joined to the apse wall permitted the setting up of a small construction which protected the papal altar until 1592. It was only under the pontificate of Clement VIII that the first part of the present architectural contrivance was constructed. The floor of the new Basilica, raised 3.20 m above the previous floor level, required a corresponding raising of the 13th century papal altar. A new altar, the present one, was superimposed over the altar of Callixtus II. At the same time, the "uncovered Confession" with stairways maintaining direct access to the Niche of the Palliums was also constructed. Paul V added little to its present appearance. But Clement VIII did not limit himself to external modifications of the Petrine Memoria.

At this point, it would seem appropriate to sum up, for the sake of clarity, the chief elements which have permitted the present writer to proceed to the identification of the bones in the loculus of Wall G as those of the Apostle:

1. The Constantinian monument was considered, in Constantine's day, to be the tomb of the martyr.
 2. Inside the monument-sepulchre there exists a loculus, and one only: the loculus of Wall G.
 3. This loculus was carved out of Wall G and lined with marble at the time of Constantine
 4. The loculus was never broken into from the age of Constantine until the time of the excavations (about 1941).
 5. From this loculus come the bones which were removed at the beginning of the excavations, kept without interruption in a nearby spot in the Vatican Grottoes and recovered from this spot in 1953.
 6. These bones, therefore, are the ones which were verified at the time of Constantine as the bones of Peter and place in the loculus of Wall G, inside the monument-sepulchre.
 7. The cloth of purple interwoven with gold-thread in which the bones were wrapped at that time confirms the highest dignity then attributed to the remains. The royal purple harmonizes perfectly in fact with the royal porphyry which decorates the outside of the monument.
 8. The anthropological examination of the bones - belonging to a single individual - showed that they conform perfectly to what, by tradition, we can imagine was Peter's physical appearance at the time of his martyrdom. Apart from the obvious fact that they belong to a male, the bones indicate a sturdy build and an age somewhere between 60 and 70.
 9. The earth encrusted on the bones indicates that the bones themselves originally lay in an earth-grave, and we know that Peter's first burial was in the earth.
 10. The characteristics of the earth, shown by the scientific examination, match those of the place where the original tomb was dug (marly sand), while in other parts of the Vatican area the earth is different (blue clay or yellow sand).
 11. The place of the earth-burial under the Trophy was found empty. This is in harmony with the presence of the bones, transferred about two metres higher up, in the loculus in the monument of Constantine.
- From this concise exposition it can be seen that the above elements constitute the links of a chain, joined to one another, and that chain leads to a conclusion: the bones of Peter have been identified.

Guide to Saint Peter's Basilica (stpetersbasilica.info)

Preserving the underground contrivance of Gregory the Great, he adapted it. On the outside of the almost circular corridor of Gregory, parallel to it and bordering the outside of the wall of Constantine's apse, a new circular corridor was built. Access was still assured from the crypts previously added according to the plans of Michelangelo between the floors of the two Basilicas. This new corridor, an essential element of what is called the new crypts, preserved access to the chapel ad corpus of Gregory which, since his time, had been enlarged a little and given the name "Clementine Chapel". It is in this small chapel, at the end of which still stands the small 7th century altar ad caput, as it is called, and in the two adjacent areas that the small burial building of the middle of the 2nd century presents for our reflection and devotion the first architectural testimonies preserved for us by a history which, until the recent excavations, had been concealed, as well as preserved, by the Niche of the Palliums.

Following the changes made by Clement VIII, a final architectural note needs to be made so that we can place in the new and prestigious setting of the present Basilica the ancient Memoria, which is somewhat lost in the immense space of the new edifice even while remaining its center.

Urban VIII's authority and Bernini's art carried out this final stage, through the construction of the bronze baldacchino of the altar which bids the onlooker to unite inseparably in his vision Michelangelo's dome with Peter's tomb. Eight spiraling columns which surrounded that same tomb in the ancient Basilica are included in the four pillars which support the dome and these columns, surrounding the baldacchino of bronze which was inspired by them, remain a witness to the continuity which we are striving to bring out.

It has been described above how the history of the Vatican Memoria of Peter is dominated by the constant desire to keep it intact. No less abiding is the wish to keep it visible and to ensure direct access to it. These aims seemed particularly evident in the Constantinian Basilica, both at the time of construction and during the changes of Gregory, but these desires were already asserted, as we have seen, in the middle of the 2nd century when the small burial monument with niches and columns

was built. Let us now add that these same imperatives were, at the price of a whole series of projects and plans, the final determining elements for the construction of the present Basilica.

An architectural tradition thus permits us to go back as far as the middle of the 2nd century; it is centered on a burial monument considered without interruption to be the one built above Peter's tomb. Yet our aim would remain unachieved if we did not present, in the light of the excavations made under and near the Basilica, the essential points of the record which could be described as the archaeological setting of the site of Peter's tomb in the first two centuries.

To begin with, it should be observed that, in giving a strict explanation, it would be better to talk here about the location of the tomb rather than about the tomb itself. In fact, the excavations did not discover the remains of Peter's body as it was buried after his martyrdom. Moreover, no archaeological element retrieved from the small cavity next to and below the Niche of the Palliums can be considered as belonging to a burial monument, however modest, of the 1st century. Yet it would be wrong to conclude that the recent archaeological investigations have added nothing to the history of the first decades of the tomb.

First of all, the investigations established that the 2nd century necropolis had been built beside a secondary road running directly along the northern border of the Circus of Caligula and Nero. It is equally clear that the family monuments which were part of it were built in an area already in use as a burial place. In the immediate surroundings of the Petrine monument there have been found piles of bones taken from previous tombs. These remains had been gathered together by the 2nd century masons, who did not take great pains to respect the material arrangements of the tombs in question. They seemed to be acting according to the customs prescribed by law. But this fact, hitherto hardly noticed, throws some light on what may have happened to the Petrine tomb at the moment of the construction of the small monument with niches. Under that monument only the remains of the body of the Apostle-martyr would have been collected. Did they remain there until the time of the construction of Constantine's Basilica? Had they already been moved in the middle of the 3rd century, when the monument underwent important changes? Our present purpose does not include answers to these questions.

On the other hand, it is important to stress that although this Vatican area was imperial property in the 1st century, it was then lined with roads beside which other burial grounds have been discovered. In particular, a small part of the most important one was unearthed in Vatican City at the time of the construction of a garage. It remained in use during the first four centuries and was located beside the ancient Triumphal Way. It included, in particular, two tombs which according to their inscriptions date from the reign of Nero. Further excavations have led to the discovery of some burial monuments of the Flavian age on the south side of the Circus.

But in Rome it is without doubt along the Ostian Way that the true archaeological and architectural parallel to the history we have been tracing is found: the tomb of the Apostle Paul and his two Basilicas. Concerning the second Basilica, built at the end of the 4th century and destroyed by fire at the beginning of the 19th, the reconstruction which respected the essence of its design gives us a precise enough picture. Concerning the first, built by Constantine, the excavations carried out at the time of the reconstruction tell us that it was of modest proportions. There, too, Gregory the Great raised the presbyterium and designed a crypt, limited this time to a chapel ad corpus located behind the altar and reached through a door. And, as at the Vatican, the tomb is situated in the middle of a pagan necropolis, but this time it is inside a family monument. We are obliged to end these pages dedicated to Peter's tomb by a visit to Paul's, since the true Roman pilgrimage ad limina has never consisted of anything other than a visit to the two tombs of the Apostles, "at the Vatican" and "along the Ostian Way". This was expressed at the end of the 2nd century by the priest Gaius, and at the beginning of the 5th century by the Spanish poet Prudentius - Gaius to justify a point of Roman ecclesiastical discipline and Prudentius to present the two Apostles as the guarantors of the faith of Rome. Thus the history of the two tombs has been, through nineteen centuries, a matter of parallel faithfulness to those who, by their common presence, their common preaching and their common martyrdom, "laid the foundations" of the Roman Church in the faith of Christ.

On the vault of the Constantinian apse, did not the mosaic erected by Pope Liberius exalt the divinity of Christ, as the bordering inscription indicates, and are not Peter and Paul standing together on either side of Christ in order to be the first ones in Rome to proclaim his divinity?

- 110060 Guide to Saint Peter's Basilica (stpetersbasilica.info)
- Now let us go down, step by step, to see what is under the altar. And as we go down, it is easy to see that we are also going back through the centuries.
- 110065 Under the present altar, which belongs to the time of Clement VIII (1592-1605), is the altar of Callistus II (1119-1124); lower still, that of Gregory the Great (590-604). Next we find the monument built in honor of St. Peter by the Emperor
- 110070 Constantine after his victory near the Milvian Bridge (October 28, 312) and the establishment of peace with the Church by the Edict of Milan (313 AD.). The date of this monument cannot be fixed with absolute certainty, but there are good reasons to think that it preceded the construction of the basilica (begun about 322) and perhaps it is no later than 315; that is, the year in which great holiday were held in Rome to exalt Constantine and his victory; the year in which Rome dedicated the famous Arch of Triumph which still rises majestically from its soil.
- 110075 Constantine's monument to Peter contained within its rich marble construction an earlier chapel (or, more literally, shrine) which has been brought to light by excavations. This chapel indicates, evidently, the place sacred to the Apostle, the place that Constantine considered so important and worthy of honor that he did not hesitate to build on it first his precious monument and later - at the cost of
- 110080 incalculable expense and enormous labor - the great basilica. The characteristic chapel rises from the level of the ancient necropolis already described. It stands in a little open area, a sort of small square in the middle of various tombs. (See Plate III.) This little area which, in relation to the modern basilica, is directly under the Confession, was called "Field P" by the excavators.
- 110085 It is rectangular in form (about seven meters from north to south, about four from east to west), and it lies in a place where the terrain rises quite rapidly from the south to the north, i.e. toward the Apostolic Palaces, and more gradually from the east to the west, i.e., toward the Vatican Gardens.
- 110090 Field P is bounded on the west by a wall called "Red" because of the red color of the plaster (now largely fallen off) which was used to cover it; on the south by a tomb which the excavators call S; on the east, but only in the southern half of the east section, by another tomb called O (this tomb was owned by the Matuccii and is sometimes called by their name). The northern boundary of the eastern side and all the northern boundary of the eastern side and all the northern boundary cannot be
- 110095 traced today, but there are good reasons for believing that there were once structures there which have been mostly destroyed. Behind the Red Wall ran a small street (the so-called clivus) which slopes up from the south to north and includes some sets of stairs (Fig. 24). On the other side of this clivus are the remains of two other tombs, called R and R1 by the excavators.
- 110100 The clivus gave access to the Tomb R1 and to a tomb called Q which lies behind the Red Wall with the Red Wall itself used for its eastern wall. Under the clivus runs a little gutter used for drainage and covered with a line of tiles, five of which, fortunately, bear a mark by which they can be dated. The mark mentions Aurelius Caesar (the future Emperor Marcus Aurelius) and his wife Faustina as proprietors of the furnace in which the tiles were made.¹ The tiles can therefore be dated between about 146 and 161 A.D. It was about 146 when Faustina, wife of the future Emperor Marcus Aurelius, received the title of Augusta, and in 161 Aurelius Caesar, having succeeded Antonius Pius, abandoned the name of Aurelius Caesar and took that of Marcus Aurelius.
- 110110 The essential purpose of the Red Wall seems to have been to fix the boundaries of the various burial places in the area. From this fact, it can be considered contemporary with the gutter I have mentioned, and therefore it can be dated between about 146 and 161 A.D. In round numbers, and wishing to take the latest possible date, we can say that it was built by about 160 AD.
- 110115 The most ancient of the tombs surrounding Field P is certainly Tomb O, which, as can be seen from the marble tablet over the entrance, belonged to the Matuccii family. This tomb, in which the rite of cremation was practiced, can be dated about 130, and is certainly later than 123, since a brick was found in one of its walls with a seal dating from that year.
- 110120 The Tomb S, which bounds all the southern flank of Field P, contains traces of cremation urns and of repositories for inhumation. Later than Tomb O, Tomb S is still earlier than the Red Wall, since the wall leans on it, thus barring access to Field P from the south. Therefore Tomb S can be assigned a date somewhere between 130 and 150.

Naspeuringen van Paul Theelen: Constantinus Imperator

The Tomb of St. Peter by Margherita Guarducci (stpetersbasilica.info)

The family Theelen in Neer, Asselt and Swalmen

See fot the originals <https://loegiesen.nl>
[De Sint Dionysiuskerk te Asselt](#)

[17 augustus 1275 ASSELT - Gegevens inzake de vaststelling van de grensscheiding tussen Roermond, Asselt, Swalmen en Beesel enerzijds, en Wessem, Beegden, Haelen, Horn, Buggenum en Neer anderzijds, met toestemming van graaf Reinoud [I] van Gelder.]

"In the name of the Lord, amen, the judge and sheriff of Roermond, and the entire community of Assel, Swalemen and Beesel on the one hand, and the judge and sheriff of Wessem, Beegde, Halen, Horne, Buggenum and Nere, on the other hand, to all and sundry, to whom this letter shall reach, greetings, and to know the truth: since the state of man is fragile, and the human mind is labile, it has been prudent, so that what is to be pronounced later, may be strengthened by written testimony, and may be known both by present and future generations, that we, our people, with the more ancient men of both the aforementioned lands, generally through the will, justice and consent of the illustrious prince, magnificent and powerful lord, Lord Reynold, Count of Gelderland and Zutphen, and the noble man Lord William of Horne, our dearest lords, and their officers, were moved and gathered by the precept upon one demonstration, archonship, palace and limitation which is commonly the said bewijsinge [proves], beleijdinge, selinge ende neijninge, of the boundary or road near the Mosam [Maas] de Assel, called den lijnpade [line path] of the Maas, which boundary or road said, lord Rutgerus de Assel, knight, holds in fee from the noble man lord de Horne, with all rights pertaining and dependent, namely all supreme dominion, with judgment land and Maas on both sides, and on the banks of the Maas within the boundary or road called den lijnpad, with fishing in the Maas, on both sides and banks, on this and that side of the Maas, and also with fields and accretions in the place called den Tolle, as all these things already recited together from ancient times lying and situated between the place or terminus, called der Schalen or der Lingen, above Assel, and between half an ampnim {?} in Haenssem, below below the stakes and division below, which boundary or road called die Lijnpade or feudal goods mentioned above, with all supreme dominion and judgment in the land and the Maas, with the theloric, and also with the fishing, ancient custom, adventione, palatione {?} and distinction of the aforesaid limits or fees with all their pertinents attached, as they are partly declared above, and as will be sufficiently specified below, and will be distinguished in order, with the entire and general concordance of the servants of both the aforesaid lands, theirs and ours, with the unanimous assent and consent, and they have been circumscribed and pertestified, and also by their, who are the ones who swear, with sacred touches, demonstratively distinguished, specified, perpalata, palem en notoriae divided and segregated, and the aforesaid lord Rutger, and his parents and ancestors of the same have always successively obtained and possessed the aforesaid limit, or the way already said, good feudalism from old age to old age, without being disturbed by anyone, but peacefully and quietly in every way and form of law, if..ti pns letter below expresses, explains and testifies: the first palus and the aforesaid distintis of the boundary or fee, begins above Assel at the place called der Scalero or des Lingen palat, specifies and distinguishes the boundary or way called den Lijnpad or fee on both sides and right from the Maas, and wide for a space of sixty feet, on the land, or as far as one man standing with one foot on the shore/of the Maas, and with a plough from the right throws it down on the ground, and so descending on both sides and banks of the aforesaid Maas, up to half an acre in Haensem on the above, it is to be known, whatever less just and excessive in this boundary or fee stakes and distinctions aforesaid, on the ground and the Maas, has been done, of homicides, theft, or of any excesses, causes, cases unjust, malicious and would be made by the supreme lords to infinity pertaining or relating to this same lord Rutger will judge the ten lords in the stakes and distinctions of the aforesaid boundary, or fee, before his faithful or The men who are the homage of the lord of Horne, specially summoned and requested for this purpose, will discuss and settle: because we have seen the same lord Rutger erect a gallows in the lower part of Vuthoven, on the border above the Maas itself, and hang a thief who was caught there on the stakes and distinctions of the aforesaid boundary. Furthermore, it is stated that internal or external, to the vessels, vendors, traders, or boatmen, from where they go, or from where they come to this boundary or on the stakes and distinctions of the aforesaid Maas, one person putting a guarantee can arrest the body or goods of another, aggravate, slander, claim and collect the right, but the other person putting a guarantee or surety immediately and without delay, if he approves, will be able to

110195 release himself from arrest with just causes and to resist the slanders and slanders
brought against him, to pay just and right debts, to swear against unjust, unfair and
cunning slanders, with two fingers touched, sacred, as is the law, unlike the
thieves, and customary: since/the same Lord Rutger in this limit has his own saints
from his dominion, which he is to extend to all those in need and who ask for them
110200 from the law: we also saw in this limit a standing argastus the ship with the rack in
which they were placed, bound and preserved were those who did not have the caution
or guarantors, with whom they could have federated or reconciled their causes,
complaints, excesses and their forefacts. Furthermore, all goods which are carried or
moved through this limit or the said terminus posts, in or out of ships, ascending or
110205 descending through the Maas ravine, as is the law and custom, or has been from
ancient times, are tolled and if they are to be prevented from being tolled, all
goods are to be forfeited, and in this limit some ships are to be sailed, to be
unloaded, or some goods are to be carried, or if... ships are to be filled and to be
loaded or some goods are to be loaded, first a license must be sought from the toll
110210 collector, giving him a license for loading, said eijnen Lichtveerlinc, but for
loading said eijnen Ladeveerlinc, but if he does it illegally from what... mark... he
falls into excess. Moreover, if within the limits of this limit any goods are sailed
on or off ships and are tossed about on the waves and in the waves by a strong and
impetuous wind, or by a turbulent and untempered breeze, and the sailors are
110215 thundering, or are in despair of being shipwrecked, they can and will cry out with
loud voices to the toll collector, hold the quarter by placing it on the prow of the
ship or by going out on the deck, and disembark, go out, sail and defend themselves
as much as they can and will be able to without any excess, or by being captured, but
by remaining silent, not crying out and emptying, or by unpredictably sinking by
110220 misfortune, they will fall into the excess of five marks. It should further be known
that fishing on the Maas on both shores and banks, both on this side and on that
side, begins, proceeds and ends within the aforementioned stakes, boundaries and
circumscriptions of the limits of his fee, in which Lord Rutgeus, his heirs, or the
conservator of these limits or fees, or his family, or another named person, with all
110225 the instruments of fishing, nets or nets, by means of which fish can be caught, will
be able to catch, at the required place and times, at his convenience, on those sides
and banks of the Maas, towards Assel, or towards the land of Horne, on the plain, on
both shores of the same Maas, with his nets and nets, from or by sending them in,
leading and pulling them out as often as they may indicate, and it shall seem
110230 expedient to them, even if within the stakes, boundaries and distinctions aforesaid
on that side, on the Maas side above the shore itself, on the land towards Assel or
towards the land of Horne, some aureescences have grown, were and would arise beyond
measure, the fishermen Those who inject or inject, attract or attract their nets and
nets, inside or outside the Maas, for preventing fish from escaping, may pluck and
110235 cut off in such great numbers and quantities as they, or they themselves, may need
for this purpose, and work, notwithstanding any contradictions, moreover all the
medioampnes or accretions which have accrued input, or which have arrived by way of
aurescence in the future below the gurgit/Maas, these and these, the same lord
Rutger, and his heirs, or the conservator of the aforesaid fee or their family, may
110240 pervade, distinguish and specify, pervade with trees, fortify, perstipulate and
persecute for all their convenience, good pleasure and desire, possessing them
equally in fee aforesaid, as their own property. Even if the said aurescuntiae below
the aforesaid gurgle have already been planted and sprouted integrally and
undividedly and have fallen sideways on that side of the Maas, towards Assel or
110245 towards the land of Horne, these and whatever has occurred and annexed them towards
the Maas and by the inclined aurement, all Rutger the lord or his heirs will possess
as the aforesaid fee, and will obtain. Furthermore, all aurements, which or which
have accrued in the past, or which will come to by way of accretion in the future,
arable land, lying in the place said den Toll on that side of the Maas towards the
110250 land of Horne, or from that side of the Maas towards Assel, these and this same lord
Rutger his heirs or the conservator of the said fee or their family, will be able to
pervade, pervade with trees, fortify and ixersepere, for all their convenience and
will, those than those equally possessing the fee as their own property. Moreover, it
is to be known that if any excesses, cases or forefacts are committed, or if they
110255 have been committed in those limits or fee stakes and distinctions aforesaid, which
or which the same Lord Rutger cannot judge or execute, then the Lord of Horne, as his
feudatory, will be his assistant, judge and executor in judging those excesses, cases
and forefacts, and if he is unable, from then on Earl Lossen, as his feudatory, will
be his assistant, judge and executor in judging those excesses, cases and forefacts,
110260 and if he is unable, from then Earl Lossen, as his chief feudatory, will be his

assistant, judge and executor in executing and judging those excesses, cases and forefacts. These are the demonstrations, circumscriptions, palaces, limitations, discussions, distinctions, and also proofs proven from ancient times up to now, of clarified, manifested, individually distinct and specified, and also the right of this boundary and the aforesaid fee, which and what we have always seen and heard from our predecessors, and we have understood with our oaths, sacred texts, this truly and for the truth protesting, that the aforesaid lord Rutger, and his predecessors, successively from age to age this oft-mentioned boundary called den Lijnpat, or fee, obtained and possessed, in all ways and forms preordained and authorized. In testimony of the truth of all the foregoing, by order, assent, and consent of the two most eminent men aforesaid, and the same officers, we the judges and sheriffs of Roermond and Wessem, have affixed our seals for the ninth, and to these present letters, and we William, lord of Horne and of Altena, for greater certainty and caution of all and each of the foregoing, have requested and do request the illustrious first lord Arnold, count of Los and of Ceijneij, our supreme fiefdom of the aforesaid limit and fee, and the magnificent and powerful noble man lord Reijnold, count of Gelderland, our beloved lords, that they themselves may give consent to all the circumscriptions/palations, limitations, conditions and demonstrations clearly expressed above, and nevertheless bear witness to the truth, in all and each of the foregoing, and not only by their own pendent letters to strengthen and confer that the foregoing may remain valid and unshaken, and to have the memory of the event, we have communicated the present writing with the affixation of our seal together with the seals of the aforementioned scabines, given and executed in the year of our Lord's incarnation one thousand two hundred and seventy-five, the sixteenth day of the calends of September. Herewith are attached two instruments pierced with pendent seals, the first of which is as follows.

You who will inspect the present letters, Arnold Earl of Lossie and Cynal, may you know in your lordship's safety that we have all the demonstrations, circumductions, palaces, specifications and conditions in the present letters, to which our present letters are affixed, contained, made and ordered, ratified and firm, and we give them our assent, and we confirm them as duly made, by our pierced seal for us and ours, in perpetuity in which the evident strength of all the foregoing, and our seal as a witness, given in the year of our Lord's incarnation one thousand two hundred and seventy-five, the sixteenth day of the calends of September.

The other one is transfixes in these words.

We, Count Reynold of Gerle, greetings and all the conundrums that please us and proceed from our consent, will and assent, that all demonstrations, circumductions, distinctions, specifications and conditions of the present letter, to which our present letter is appended, may remain perpetually in all their strength, unharmed, and with the vigor, as it is therein specified, and they are declared and confirmed, and they are confirmed as true, as far as is in us, by our transfixes for us and ours, in testimony of which we have caused the present letter to be strengthened with the strength of our seal, given in the year of our Lord one thousand two hundred and seventy-five, on the sixteenth kalend of September.

The present is a copy of the demonstration, circumscription, distinction, specification and condition, copied from its original and collated with the same, which agrees verbatim with both the main instrument itself and the transfixes mentioned therein, to which five seals are affixed on each side, two of green color, two of mixed color, and another rubric, which I, the undersigned, attest with my own hand, this fifth of January, the twenty-second of the sixteenth century.

Below was

Thus, witness

Oliverius in Richello and undeserving pastor, notary applied by the copy below was Franciscus Sirout, notary admitted by the council of Brabant, the prescribed copy. repeated collated. witness as preferred to agree with the original seals which are protected, on the same day, month and year."

[14 maart 1521

"Gegeven op onsen huysse to Eelssen in den jaer onss lieffe heren duysent vijffhondert ind eynentwintich op donredach nae halffasten"

ELSLOO/NEER/ASSELT - Johan van Vlodrop en Adriana van Merode verpachten de Boxweerd bij Maaswijnaarden ('Wienerte') gelegen met ingang van 1 april voor een periode van twee jaar aan Jan van den Bergh, wonend te Neer, voor jaarlijks 20 Hornse gulden.

Tevens is afgesproken dat oorkonders gedurende deze pachttermijn geen rente zullen geven wegens de lening van 210 Hornse guldens die zij van Van den Bergh hebben

opgenomen wegens een vordering door de kinderen van wijlen Seger Tessers. Na afloop van de termijn zal deze schuld alsnog worden afgelost.]

March 14, 1521

"Given at our house in Eelssen in the year of our dear lords one thousand five hundred and twenty-one on Thursday after half-fast"

ELSLOO/NEER/ASSELT - Johan van Vlodrop and Adriana van Meroide leased the Boxweerd near Maaswijnaarden ('Wienerte'), located in Neer, effective April 1st, for a period of two years to Jan van den Bergh, resident of Neer, for 20 Horn guilders annually. It was also agreed that during this lease term, no interest would accrue on the charters due to the loan of 210 Horn guilders they had taken from Van den Bergh for a claim by the children of the late Seger Tessers. This debt would be repaid at the end of the term.
